#### 1 Preface

The purpose of this document is to serve as a reference material to BD administrators with detailed steps to setup a BD instance "Clone" for the 8.1.1.x release.

#### 1.1 Background

There is a consistent need for a faster and effective approach of replicating an existing BD instance for further project developments, that is, setting up BD instances that are exact copies of the current BD instance.

#### 1.2 Prerequisites

- Refer <u>Oracle Financial Services Behavior Detection Application Pack Installation Guide</u> for the pre-requisite and software configuration details.
- Before starting the Cloning process, the software version, including the OS, should match with the existing software.
- Supporting files are attached in this pdf. To download the supporting files, open the document in Adobe Acrobat DC and click Attachment *icon at the extreme left side of the pdf screen.*

#### **1.3** Assumptions

This document assumes a working BD instance is in place. It also assumes an appropriate target system exists for the new BD setup that is being created. There is an ecosystem that is already build and exists in the target environment.

All basic software required for installation of BD applications (including infrastructure) are installed and working on the machine identified as the target BD instance. You can use the "Environment Check" utility to verify the system readiness.

#### 1.4 Audience

This reference guide is intended for administrators and implementation consultants who are responsible for cloning the BD instance.

#### **1.5** Conventions and Acronyms

Conventions	Description
Source	A Source BD system
Target	A target BD system
8.1.1.x	The BD 8x release
Configuration Schema (Config Schema)	Database schema which contains setup related configurations and metadata.
Atomic Schema	Database schema where the application data model is uploaded.

#### **Table 1: Conventions and Acronyms**

# 2 Cloning Steps

Follow below instructions to clone an Behavior Detection (BD) environment.

#### 2.1 BD database Backup and Restore (DBA TASK)

- 1. Take schema backup of the target environment to be cloned.
- 2. Export Config schema followed by Atomic schema from the source database
- 3. Ensure all the Source objects along with necessary grants imported into the target database
- **4.** Import the schema dump of the source database to the Target database. Ensure importing the Config schema first followed by Atomic schema
- **5.** Request you to maintain both source and target infrastructure with same configuration, that is, BD server configuration, Database configuration and WebSphere. Please refer install guide for pre-requisite.
- **6.** Execute the below <u>Schema level Grants.sql</u> script by login as SYSDBA user and provide necessary Config & atomic schema name.

Click Attachment <sup>@</sup> icon at the extreme left side of the pdf screen to download the <u>Schema level Grants.sql</u>.

**7.** Validate the imported objects and ensure objects are valid using the custom Script created by DBA.

#### 2.2 BD File system Export on Source Server (SYSADMIN TASK)

Place the File\_system\_export.zip outside OFSBD in the Source Environment. Unzip the same and configure <u>Environment\_Configuration.cfg</u> text file ( instructions for filling the same given in the Environment\_Configuration\_ReadMe.txt).

SRC\_ENV=<SIT1> EXTRACT\_DT=<20181025> TGT\_PWD=<scb@123> TGT\_USR\_ID=<ecmhcb2> TGT\_IP=<10.20.174.74> TGT\_DEST\_PATH=</aml/ecm2/>

**NOTE** Click Attachment *icon* at the extreme left side of the pdf screen to download the <u>Environment Configuration cfg ReadMe</u> text file.

1. Navigate to the unzipped folder and execute below command

chmod 755 \*

dos2unix \*

2. Execute the script ofsaa\_filesystem\_util.sh (in Source environment) in background to export the Source file system.

This script File System Export (Environment\_Configuration.cfg Environment\_Configuration\_ReadMe.txt, ofsaa\_filesystem\_util.sh) - will extract the Source objects and transfer to the remote server target path.

ΝΟΤΕ	<ul> <li>Click Attachment <sup>@</sup> icon at the extreme left side of the pdf screen to download the File System Export (Environment_Configuration.cfg, Environment_Configuration_ReadMe.txt, ofsaa_filesystem_util.sh)</li> </ul>
	• <u>Environment_Configuration.cfg</u> file is attached in the PDF as Environment_Configuration.cfg.txt. Download the attachment and rename the file as Environment_Configuration.cfg.

#### **2.3 BD** Cloning

- 1. Navigate to \$FIC\_HOME folder on Target.
- 2. Execute java jar PortC.jar DMP.
- **3.** A file with the name DefaultPorts.properties will be created under \$FIC\_HOME directory which will contain the ports, IPs and paths currently being used.
- **4.** Make the necessary changes to those ports, IPs, and paths in the DefaultPorts.properties file as per the Target environment.
- 5. Now run the PortC.jar utility using the java -jar PortC.jar UPD.
- 6. This will change the ports, IPs and paths in .profile (under home directory), all files under \$FIC\_HOME directory and tables in the database according to the values mentioned in DefaultPorts.properties file.

#### 2.4 BD Infrastructure Atomic Schema Password Modification

- 1. Change the RootPass value from the UI through LDAP password.
- **2.** Login to the application from the browser using SYSADMN account or any user id, which has System Administrator role mapped.
- **3.** Navigate to System Configuration > Database Details window.
- 4. Select the appropriate connection and click on edit button.

6. Edit the password in Auth String.

Auth Alias	dev_ofsaafccm	User/Principal Name	dev_ofsaafccm	
Auth String	•••••			

7. Click Save.

2.5 Updating JDBC Driver URL

The JDBC Driver must be updated in the following locations:

- \$FIC\_HOME > Ingestion manager > config > dataIngest.properites
- \$FIC\_HOME > BDF > config > install > bdf.xml
- \$FIC\_HOME > database > db\_tools > manats\_cfg > install.cfg

### 2.6 Updating Database Details

Update the database details in the install.cfg file.

## 2.7 Manual Updation of Application files after Cloning

The Application files will not be updated with the latest Source Sever host Name/DB details. These files have to be updated manually after executing the PortC command during the cloning process.

#### **File Locations:**

- \$FIC\_HOME/ficdb/bin/
- \$FIC\_HOME/ficweb/webroot/
- \$FIC\_HOME/ficweb/SCENARIO\_WIZARD/

#### 2.8 Support Contact Details

Contact Infrastructure support at https://flexsupp.oracle.com.

# **OFSAA Support**

Raise a Service Request (SR) in <u>My Oracle Support (MOS)</u> for queries related to the OFSAA applications.

#### Send Us Your Comments

Oracle welcomes your comments and suggestions on the quality and usefulness of this publication. Your input is an important part of the information used for revision.

- Did you find any errors?
- Is the information clearly presented?
- Do you need more information? If so, where?
- Are the examples correct? Do you need more examples?
- What features did you like most about this manual?

# If you find any errors or have any other suggestions for improvement, indicate the title and part number of the documentation along with the chapter/section/page number (if available) and contact the Oracle Support.

Before sending us your comments, you might like to ensure that you have the latest version of the document wherein any of your concerns have already been addressed. You can access My Oracle Support site that has all the revised/recently released documents.
