2 Pre-Installation Steps & How to Apply This Maintenance Level Release?

This chapter describes the pre-installation requirements and how to apply the maintenance release Oracle Financial Services Behavior Detection Application Pack v8.1.2.0.0 Minor Release #7 8.1.2.7.0.

Topics:

- [Pre-Installation Requirements](#)
- [How to Apply This Maintenance Level Release?](#)

2.1 Pre-Installation Requirements

This section describes the pre-installation requirements. Refer to the following pre-installation prerequisites:

NOTE

- Before running the patch, perform a backup of the *\$FIC_HOME* and *ftpshare* directories and the Atomic and Config schemas.
- Take a backup of CSA area and truncate all the staging tables before the BD8127 ML application.
- OFS Behavior Detection 8.1.2.7.0 uses the BD-AM slice of Oracle FSDF 8.1.2.4.0. Refer to [APPENDIX B: OFS BD Version Compatibility List](#) for details on OFS BD Version compatibility with OFSAAI, FSDF, and OFS ECM.

1. Download the OFS Behavior Detection 8.1.2.7.0 archive file from [My Oracle Support](#) by searching for Patch ID 35958115 under the **Patches & Updates** tab. Also, ensure that the mandatory patches mentioned in the Pre-installation Requirements section of the [Oracle Financial Services Behavior Detection Release 8.1.2.7.0 Readme](#) are applied before installation.
2. Install OFSBD 8.1.2.0.0 before applying 8.1.2.7.0.

NOTE

Ignore this step if OFS BD 8.1.2.1.0, OFS BD 8.1.2.2.0, OFS BD 8.1.2.3.0, 8.1.2.4.0, 8.1.2.5.0 or 8.1.2.6.0 is already installed.

3. Apply patch for Bug 35681234 - OFSAA 8.1.2.0.0 AAI ML RELEASE #4 (8.1.2.4.0).
4. Apply patch for Enh 35829211 - Avoid Creating AAI and Some Other Related Tables While Creating Infodom through Rest-API (This step is applicable only if Know Your Customer is used with Simulation)

2.1.1 PatchConfig.xml

Table 4 lists the Placeholder Values in the PatchConfig.xml File.

Table 4: Placeholder Values in the PatchConfig.xml File

OFS BD Version	OFSAAI Version
##SCHEMA_OUT_XML_PATH##	This attribute refers to the path, which needs to be pointed to <i>OFS_BD_SCHEMA_OUTPUT.xml</i> , which was generated at the time of installation. For example: <code><BD812_Installer>/OFS_BD_PACK/schema_creator/OFS_BD_SCHEMA_OUTPUT.xml</code> .
##BIG_DATA_ENABLE##	Placeholder to enable Big Data. Enter <i>FALSE</i> .
##SCORING_PROTOCOL_SERVER_PORT##	This is the URL of the RAOR application till the port number. For example, <code><PROTOCOL://HOSTNAME:WEB_SERVER_PORT></code> .
#FSDF_UPLOAD_MODEL##	Provide the value mentioned in default.properties during BD 812 installation. Path : <code><BD812_Installer>/OFS_BD_PACK/OFS_AML/conf/default.properties</code> .
##EXECUTE_PRE_AND_POST_SCRIPTS##	This attribute is used to execute pre and post-scripts during installation. If you provide the following: <ul style="list-style-type: none"> • Value = 1: executes the pre and post-scripts. • Value = 0, skips the pre and post-scripts. In BD 8.1.2.6, it is mandatory to set the value as 1 to execute pre and post-scripts.

2.2 How to Apply This Maintenance Level Release?

This section describes how to apply this maintenance release.

To install this Maintenance Level release, follow these steps:

NOTE

If the OFS Behavior Detection 8.1.2.7.0 patch is to be installed on OFS Sanctions 8.1.2.0, then follow these steps:

- `Create table KDD_BUS_DMN_SANC as (select * from KDD_BUS_DMN);`
- `UPDATE KDD_BUS_DMN SET TF_BUS_DMN_NM=NULL;`
- Commit;
- Restore the *TF_BUS_DMN_NM* column in the *KDD_BUS_DMN* table from *NULL* to the original value after the installation is complete.

1. During OFS Behavior Detection 8.1.2.7.0 patch installation, only the FICServer (`<FIC_HOME>/ficapp/common/FICServer/bin/startofsaai.sh`) can be up and running. Stop all other OFSAAI application services (MANTAS, ICC, BD algorithms dispatcher, etc.).

2. Load the .profile and ensure that \$FIC_HOME corresponds to the proper environment where the patch application is required.
3. Download and copy *35958115_LINUX.zip/35958115_SOLARIS_SPARC.zip* (in Binary mode) to the server where OFSAA is installed.
4. Navigate to `<USER_PATCH_DIR>` and extract the contents of the patch archive file using the command:
`unzip -a <name of the file to be unzipped>`.

For example: `unzip -a 35958115_LINUX.zip/35958115_SOLARIS_SPARC.zip`

The following are the contents of the folder when the folder is unzipped:

- PatchConfig.xml
- install.sh
- Setup.bin
- validateXMLInputs.jar
- Readme_OFSBD_8.1.2.7.0.txt
- BD_FSDM_DataModel.xml
- KYC_DataModel.xml
- FSDF_DataModel.xml
- BD_EXTN.xml

NOTE `<USER_PATCH_DIR>` is the location of the `<patch>.zip` file. The `-a` option mentioned above is required to unzip the patch. If you encounter the error message `unzip: not found [No such file or directory]` when the package is not installed, contact your UNIX administrator to resolve the issue.

4. Navigate to `<USER_PATCH_DIR>/35958115/bin` and grant execute (755) permission for all executables: `$ chmod 755 *`.
5. Navigate to `<USER_PATCH_DIR>/35958115/conf/PatchConfig.xml` and provide the following placeholder values:
 - a. `##SCHEMA_OUT_XML_PATH##` - this attribute refers to the path which needs to be pointed to `OFS_BD_SCHEMA_OUTPUT.xml`, which was generated at the time of installation.
 - b. `##BIG_DATA_ENABLE##` - set the value to `FALSE`.
 - c. `##SCORING_PROTOCOL_SERVER_PORT##` - provide the server host & port. For example : `hostIP:PortNumber`.
 - d. `##FSDF_UPLOAD_MODEL##` - provide the value mentioned in default.properties during BD 812 installation. Path : `/<BD812_Installer>/OFS_BD_PACK/OFS_AML/conf/default.properties`.

- e. `##EXECUTE_PRE_AND_POST_SCRIPTS##` - Attribute value must be set to `1` to execute the prescripts and postscripts. Attribute value `0` skips the prescripts and postscripts.

NOTE As part of pre-scripts, back up tables with the naming convention `<TABLE_NAME>_8127_BACKUP`.

- 6. Install the patch by executing the command: `$./install.sh..`
- 7. Check if the patch is applied successfully by verifying the patch install logs under `<USER_PATCH_DIR>/35958115/logs`.

NOTE Contact [My Oracle Support](#) in case of any errors.

3 Post-Installation Steps

This chapter describes the post-installation steps.

Topics:

- [Mandatory Post-Installation Steps](#)
- [OFS Know Your Customer \(KYC\)](#)
- [OFS Anti-Money Laundering \(AML\)](#)
- [OFS Trade-Based Anti Money Laundering \(TBAML\)](#)
- [OFS Real Time Fraud \(RTF\)](#)
- [Configuring JIT](#)
- [Configuring Scenario Manager](#)
- [Configuring Watch List Management](#)

3.1 Mandatory Post-Installation Steps

This section describes the mandatory post-installation steps.

Perform the following post-installation steps:

1. If the deployment environment is Solaris, follow these mandatory steps to set the `gnu bin` directory in the `PATH` environment variable. For example: `export PATH=/usr/gnu/bin:$PATH`.

NOTE If the `gnu bin` directory is different, replace `/usr/gnu/bin` with the correct directory path.

2. Check the DB builder logs for successful execution of `mantas8.1.2.7.0_delta.cfg` and `delta_plat8.1.2.7.0.cfg`.

If these did not run, then execute them manually. To do so, navigate to `$FIC_HOME/database/mantas_schema/delta/oracle/8.0` and execute the following command:

```
$FIC_HOME/database/db_tools/bin/run_dbbuilder_utility.sh $FIC_HOME/database/mantas_schema/delta/oracle/8.0/mantas8.1.2.7.0_delta.cfg
```

When prompted, enter the Atomic user name and password. Then, navigate to `$FIC_HOME/database/bus_mkt_schema/delta/oracle/8.0` and execute the following command:

```
$FIC_HOME/database/db_tools/bin/run_dbbuilder_utility.sh $FIC_HOME/database/bus_mkt_schema/delta/oracle/8.0/delta_plat8.1.2.7.0.cfg
```

When prompted, enter the Atomic user name and password.

3. Load BD scenarios in the Database from `$FIC_HOME/Database/db_tools/bin` with the `sm_load.sh` utility. For scenarios that are provided in this patch, see [APPENDIX C: Upgrade Scenarios](#).

NOTE Contact [My Oracle Support](#) in case of any errors.

4. *Optional step:* If you have a TBAML License, load scenarios in the Database from `$FIC_HOME/Database/db_tools/bin` with the `sm_load.sh` utility.

For TBAML-specific scenarios, see [APPENDIX D: TBAML Scenarios](#).

- Once the above steps are done, create the following EAR/WAR file and redeploy this new WAR on the Web Application server. Refer to the [Oracle Financial Services Behavior Detection Applications Pack Installation Guide Release 8.1.2.0.0](#) for steps related to deployment.

NOTE For using Websphere Server, remove all the *jackson** Jars from the following folder before creating the *OFSAAI EAR/WAR* file
\$FIC_HOME/ficweb/webroot/externalib/WEB-INF/lib.

- Restart the *OFSAAI* services.

3.2 OFS Know Your Customer (KYC)

This section describes the KYC-related post-installation steps.

NOTE After a successful base installation of 8120, the DI batch must be executed before upgrading to 8127.

If OFS KYC is installed, follow these steps:

- Navigate to *\$FIC_HOME/ficapp/common/FICServer/bin* and execute the following executables after replacing the *INFODOM* placeholder:
 - `./RTIImport.sh $FIC_HOME/IPE/KYC/8.1.2.6.0/Simulation/OFS_KYC_RTIEExport_AcceleratedRereview.xml ##AMINFODOM## OFS_KYC false`
 - `./RTIImport.sh $FIC_HOME/IPE/KYC/8.1.2.6.0/Simulation/OFS_KYC_RTIEExport_ChangeInRiskModel.xml ##AMINFODOM## OFS_KYC false`
 - `./RTIImport.sh $FIC_HOME/IPE/KYC/8.1.2.6.0/Simulation/OFS_KYC_RTIEExport_ModelBasedAssessment.xml ##AMINFODOM## OFS_KYC false`
 - `./RTIImport.sh $FIC_HOME/IPE/KYC/8.1.2.6.0/Simulation/OFS_KYC_RTIEExport_RAOR_ModelBasedAssessment.xml ##AMINFODOM## OFS_KYC false`
 - `./RTIImport.sh $FIC_HOME/IPE/KYC/8.1.2.6.0/Simulation/OFS_KYC_RTIEExport_RAOR_RuleBasedAssessment.xml ##AMINFODOM## OFS_KYC false`
 - `./RTIImport.sh $FIC_HOME/IPE/KYC/8.1.2.6.0/Simulation/OFS_KYC_RTIEExport_RuleBasedAssessment.xml ##AMINFODOM## OFS_KYC false`
- Perform this step only if Oracle Financial Services Compliance Studio is installed. Do not import it if Compliance Studio is not installed.* Navigate to *\$FIC_HOME/ficapp/common/FICServer/bin* and execute the following executable after replacing the *INFODOM* placeholder.

```
./RTIImport.sh $FIC_HOME/IPE/KYC/8.1.2.6.0/Simulation/OFS_KYC_RTIEExport_AcceleratedRereview_WithAomalyDetectionML.xml ##AMINFODOM## OFS_KYC false
```
- Execute the following utility to synchronize data in SMS tables:
 - Go to *\$FIC_HOME/utility/AppPckMastSynch/bin*
 - Open putty session and run the following commands one by one:
 - `Export PackName=OFS_BD_PACK`
 - `./AppPckMastSynch.sh`

4. Once the above steps are done, create the following EAR/WAR file and redeploy this new WAR on the web application server. See the [Oracle Financial Services Behavior Detection Applications Pack Installation Guide Release 8.1.2.0.0](#) for steps related to deployment.
 - JSONToTablePersistenceUtility
 - TabletoJSONService
 - InitiateOnboardingService
 - GenerateCaseInputService

NOTE	For using Websphere Server, remove all the jackson* Jars from the following folder before creating OFSAAI EAR/WAR file <code>\$FIC_HOME/ficweb/webroot/externalib/WEB-INF/lib</code>
-------------	---

insert into mmg_app_menu_mapping(V_APP_ID,V_MENU_CODE) select
'KYC',V_MENU_CODE from MMG_MENU;
```
13. Execute the following scripts in Behavior Detection schema:
- a. `update aai_setup_props set V_PROP_VALUE = 'TRUE' where V_PROP_NAME = 'REFERRER-POLICY-ENABLED';`
  - b. `update aai_setup_props set V_PROP_VALUE = '##Studio Server IP:Port##/' where V_PROP_NAME = 'ALLOWED-REFERRER-URLS';`  
  
**For example:** `update aai_setup_props set V_PROP_VALUE = 'http://10.34.110.111:8001/' where V_PROP_NAME = 'ALLOWED-REFERRER-URLS';`  
  
**Note:** You must enter / after the *port number*.
  - c. `Update aai_validator_expression SET v_reg_expression = '[A-Za-z0-9_]*' WHERE V_EXP_TYPE_CODE = 'data_source_exp' AND v_reg_expression = '[A-Za-z0-9_]*';`

### 3.3 OFS Anti-Money Laundering (AML)

If OFS AML is installed, follow these steps:

1. Delete the list of class files inside the `$FIC_HOME/bdf/classes` directory.
2. Steps to execute DQ scripts in different FSDF infodom are as follows:
  - a. Navigate to `FIC_HOME/database/db_tools/bin` path and execute the file `Replace_FSDF_Placeholder.sh` with FSDF infodom and FSDF segments as arguments. For example: `./Replace_FSDF_Placeholder.sh FSDFINFODOM FSDFSEGMENT`.
  - b. Copy `$FIC_HOME/database/DQScripts` to a local folder.
  - c. Log in to FSDF schema and Run the following command in SQL developer
    - `define dir="DQFiles_PATH"`  
DQFiles\_PATH - The directory path DQ files were copied in step above.  
For example: `define dir="C:\DQScripts"`
    - `Execute Execution_Order_DQ.sql`  
For example: `@&dir\Execution_Order_DQ.sql`

### 3.4 OFS Trade-Based Anti Money Laundering (TBAML)

To install TBAML, follow these steps:

1. For the new customers:
  - a. Download and install **DLP: Oracle Financial Services Behaviour Detection Application 8.1.1.0** Download Package Template (DLPT) from Oracle Software Delivery Cloud (OSDC).
  - b. Upgrade to BD 8.1.2.0 from My Oracle Support (MOS).
  - c. Apply BD 8.1.2.7 ML to install TBAML.
2. For existing BD customers who are on the BD 8.1.1.0 or BD 8.1.1.x line and newly purchased TBAML license:
  - a. Upgrade to BD 8120 from MOS.
  - b. Apply BD 8.1.2.7 ML to install TBAML.
3. For existing BD customers who are on the BD 8.1.2.0 or BD 8.1.2.x line and newly purchased TBAML license:
  - a. Apply BD 8.1.2.7 ML to install TBAML.

### 3.5 OFS Real Time Fraud (RTF)

If OFS RTF is installed, follow these steps:

1. Redeploy the war files - RTFWIRE.ear and RTFCARD.ear. Do not deploy RTFRAUD.war.

|             |                                                                  |
|-------------|------------------------------------------------------------------|
| <b>NOTE</b> | RTF CARD and WIRE are not supported on Tomcat in OFS BD 8127 ML. |
|-------------|------------------------------------------------------------------|

2. Execute steps a and b only if migration is not done as part of 8124 patch.

- a. Follow these steps to migrate existing Fraud data to the new UI. This step must be performed only once. During reinstallation, skip this step.
  - Execute the command from SYS DB: `GRANT CREATE JOB TO $ATOMIC_SCHEMA.`

**NOTE** `$ATOMIC_SCHEMA` is a place holder. Replace this with DB Atomic user name.

- In Real Time Fraud PMF Migration.sql ([MOS link](#)), replace all `$ATOMIC_SCHEMA` with current atomic schema name.

- NOTE**
- The atomic schema name is case sensitive and must be in Capital letters.
  - During upgrade from OFS BD 8123, remove the following from the Migration.sql file. This must be performed only when upgrading directly from OFS BD 812.

```
CREATE TABLE FCC_FR_RULE_ID_MAP (
 "N_OLD_RULE_ID" NUMBER(28,0) DEFAULT NULL,
 "V_TRXN_TYPE" VARCHAR2(50) DEFAULT NULL,
 "N_NEW_RULE_ID" NUMBER(28,0) DEFAULT NULL
 NOT NULL ENABLE
)
/
```

- b. If Oracle Financial Services Real Time Fraud (RTF) CARD or WIRE version <= 8.1.2.3 is installed, follow these steps for PMF migration.

**NOTE** Before installation close all pending alerts in the system. Before running the PMF migration steps, do not click on any old alerts from the UI post installation.

- From OFS RTF 8.1.2.4, Jurisdiction and Business Domain are mandatory fields. In the migration script, update the first query for WIRE\_MIG\_TASK in post installation section under --WIRE FCC\_FR\_ALERTS with the correct jurisdiction and business domain code for the old alerts. Provide the values with double single quotes ("").

For example: For giving value of 'a' for business domain and 'AMEA' for jurisdiction (values must be from BUS\_DMN\_CD in KDD\_BUS\_DMN and JRSDCN\_CD in KDD\_JRSDCN tables respectively)

```
l_sql_stmt := '
 INSERT INTO FCC_FR_ALERTS (
 N_ALERT_ID,
 T_ACTION_TAKEN,
 V_STATUS,
 JRSDCN_CD,
 BUS_DOMAIN_CD,
 V_ASSIGNEE,
```

```

 RUNTIMESTAMP,
 V_ACTION,
V_DECISION_CD,
 V_TRANS_TYPE
)
SELECT
 FCC_FR_ALERT_ID_MAP.N_NEW_ALERT_ID,
 T_ACTION_TAKEN,
 FCC_FR_TRANSACTIONS_8124_BACKUP.V_STATUS,
 'AMEA',
 'a',
 V_ASSIGNEE,
 RUNTIMESTAMP,
 V_ACTION,

CASE
WHEN T_ACTION_TAKEN IS NULL THEN NULL
ELSE V_ACTION
END,

 'WIRE'

FROM FCC_FR_TRANSACTIONS_8124_BACKUP
INNER JOIN FCC_FR_ALERT_ID_MAP ON
FCC_FR_ALERT_ID_MAP.N_TRANSACTIONSEQID =
FCC_FR_TRANSACTIONS_8124_BACKUP.N_TRANSACTIONSEQID
WHERE FCC_FR_TRANSACTIONS_8124_BACKUP.ROWID BETWEEN :start_id AND
:end_id
AND FCC_FR_ALERT_ID_MAP.V_TRXN_TYPE='WIRE';

```

### PMF Migration

- Execute in ATOMIC SCHEMA. Replace \$CONFIG\_SCHEMA with Config Schema name.

```

GRANT SELECT, UPDATE on FCC_FR_ALERT_ID_MAP to $CONFIG_SCHEMA
/

```

- Execute in CONFIG SCHEMA. Replace \$ATOMIC\_SCHEMA with Atomic Schema name.

```

CREATE OR REPLACE SYNONYM ALERT_ID_MAP FOR
$ATOMIC_SCHEMA.FCC_FR_ALERT_ID_MAP
/

```

- Ensure that PMF matches value before update. For example: If L1 PMF had OFS ECM enabled for CARD for OFS BD version < 8124, enable it. Then restart FICServer and App server before calling the command.
- Execute the updated Real Time Fraud PMF Migration.sql in the atomic schema.

- The PMF POST request is a long running process (~1100-1200 alerts/min at 10 threads, 10,000 stepsize). When the total number of records is very large, performing the migration in one go can be avoided by updating V\_STATUS in FCC\_FR\_ALERT\_ID\_MAP to 'SKIP' for records that are not to be processed at the time. Change this back to NULL before resuming.

- Migration POST request:

Address: hostname:port/\$BDCONTEXT/rest-api/FRAUDREST/  
RealTimeFraudPMFMigration

Request body for Card:

```
{
 "transactionType": "CARD", (Required)
 "Threads": 10, (Optional param, default value 10
if not provided)
 "Stepsize": 10000 (Optional param, default value
10000 if not provided)
}
```

Request body for Wire:

```
{
 "transactionType": "WIRE", (Required)
 "Threads": 10, (Optional param, default value 10
if not provided)
 "Stepsize": 10000 (Optional param, default value
10000 if not provided)
}
```

#### NOTE

Generally, increasing parallelization does not increase throughput as bottleneck is in the PMF API which is serialized. So, default values are preferred. The number of threads does not increase unless a high config box (The API was tested with 8 CPU LINUX KVM (64 total)) is used. If thread size is increased, make sure to increase the number of connections for FICMASTER in WebLogic console. This must at minimum be 5 more than the number of threads. Stepsize must be 500-1000x the number of threads.

- Status of migration can be monitored using logs or by manually checking the tables in DB.
  - For alerts which have migrated successfully/ error/ no update for card
    - `SELECT COUNT(*) FROM FCC_FR_ALERT_ID_MAP WHERE V_STATUS IS NOT NULL AND V_TRXN_TYPE = 'CARD'`
  - For alerts which are yet to migrate and are being processed for card:
    - `SELECT COUNT(*) FROM FCC_FR_ALERT_ID_MAP WHERE V_STATUS IS NULL AND V_TRXN_TYPE = 'CARD'`
  - For alerts which have migrated successfully/ error/ no update for wire:
    - `SELECT COUNT(*) FROM FCC_FR_ALERT_ID_MAP WHERE V_STATUS IS NOT NULL AND V_TRXN_TYPE = 'WIRE'`
  - For alerts which are yet to migrate and are being processed for card:

```
– SELECT COUNT(*) FROM FCC_FR_ALERT_ID_MAP WHERE V_STATUS IS NULL
AND V_TRXN_TYPE = 'WIRE'
```

## 3.6 Configuring JIT

The purpose of JIT is to manage users from LDAP/SSO. JIT is a one-way sync from LDAP/SSO source to the application. Hence all application users must be synced through JIT.

To configure JIT, follow these steps:

1. Log in as SYSADMN and make the changes to the System Configuration Details:
  - a. Select **Authentication Type** as **LDAP Authentication and SMS Authorization**.
  - b. Click **Add** and provide your LDAP Server Details and click **Save**.
  - c. Check the JIT Provisioning Enabled option.
2. If a new user is added to a group or existing user is removed from a group, in the next login, remapping of the security attributes will be done only if *JIT\_IS\_SYNC\_GRP\_ENABLED* is set to Y. Execute the following statement to enable JIT sync.

```
UPDATE CONFIGURATION set paramvalue = 'Y' where paramname
='JIT_IS_SYNC_GRP_ENABLED';
COMMIT;
```

3. In the Authentication Server (for example, SAML , LDAP etc.), Application UserGroups and Users mappings must be created.
4. In the Atomic Schema a new table *FCC\_GROUP\_SEC\_ATTR\_MAP* is introduced to configure the Security attributes mapping to the Application User Groups. Login to Atomic Schema and configure security attributes to the User groups.
  - V\_GROUP\_CD column must be populated with the User groups mapped to User.
  - For OFSBD , valid values for V\_SEC\_ATTR\_CD column are JRSDCN,ORG,BUSDMN,CORR\_ID,SCNRO\_GRP\_ID
  - For OFSBD , valid values for V\_SEC\_ATTR\_VAL column are Jurisdiction, Organization, Business domain, Correlation and Scenario Group. These are available in KDD\_JRSDCN, KDD\_ORG , KDD\_BUS\_DMN, KDD\_CORR\_RULE and KDD\_SCNRO table respectively.
5. For Configuring Security Mapping for the Pool Users, FCC\_GROUP\_SEC\_ATTR\_MAP table in Atomic Schema has been used
  - V\_GROUP\_CD column must be populated with the LORG group created
  - For OFS BD , valid values for V\_SEC\_ATTR\_CD column are JRSDCN,ORG,BUSDMN,CORR\_ID,SCNRO\_GRP\_ID
  - For OFS BD , valid values for V\_SEC\_ATTR\_VAL column are Jurisdiction, Organization, Business domain, Correlation and Scenario Group. These are available in KDD\_JRSDCN, KDD\_ORG , KDD\_BUS\_DMN, KDD\_CORR\_RULE and KDD\_SCNRO table respectively.
6. Additional User Attributes:
  - Alert Own Flag: Create ALERTOWNFLUG group in Authentication Server and map to the User. If Alert Own Flag for a User needs to be Y, then map this group to the User. If Alert Own Flag for a User needs to be N , then make sure it is not mapped to the User.

- Reporting/Line Organization: Create a User group with Prefix as ORG\_CD (from KDD\_ORG table) and suffix as LORG. For example: If TestOrgA is the Line organization then create a User group as TESTORGALORG.

**NOTE** The above Usergroup is to be created and mapped to Infodom/Segment and LINEORG Role in the OFSAA Application. It also needs to be created in Authentication Server (For example, SAML , LDAP etc.) and mapped to the User. Make sure for any User only One LORG group is mapped. If the LORG Group is mapped as part of any other Application, then there is no need to map again.

7. Log in with the New User in the Application and observe that the Security attributes mapping is done.
8. If User group mapping does not have any change and there are only Security attribute mapping changes to be done, then log in as Admin user and navigate to Batch Maintenance and create a Batch. For OFSBD, add the BD task *FN\_FCC\_JIT\_SYNCH* to it.
9. To disable a user/users disabled on Authentication Server, login with Admin user and navigate to Batch Maintenance and create a Batch.
  - For OFSBD, add the BD task *FN\_FCC\_DISABLE\_USR* to it.
  - Edit the Task, mention the User or User IDs comma separated in the Parameter section. It must be enclosed in Single Quotes. For example: 'AMSUP,KYCADMN' where AMSUP,KYCADMN are users that need to be disabled in the *KDD\_REVIEW\_OWNER* table.

## 3.7 Configuring Scenario Manager

For details on configuring the Scenario Manager, see the [Oracle Financial Services Behavior Detection Installation Guide Release 8.1.2.0.0](#).

## 3.8 Configuring Watch List Management

The table *KDD\_PRCNG\_BATCH\_JRSDCN\_MAP* has two columns *PRCSNG\_BATCH\_NM* and *JRSDCN\_CD*. This contains mapping between the columns for use by the Watch List Management UI. Ensure relevant data is available in this table. For Example:

```
INSERT INTO KDD_PRCNG_BATCH_JRSDCN_MAP (PRCSNG_BATCH_NM, JRSDCN_CD)
VALUES ('FR', 'EMEA');

INSERT INTO KDD_PRCNG_BATCH_JRSDCN_MAP (PRCSNG_BATCH_NM, JRSDCN_CD)
VALUES ('SG', 'APAC');

COMMIT;
```

To view KYC reports as an Investigation User, follow these steps:

1. Log into Application as `sysadmin`.
2. Navigate to **Function-Role Map**.
3. For `KYCINGATOR` role, map the function Reports.

For more information Function-Role Mapping see the *Function - Role Map* section in [Oracle Financial Services Analytical Applications Infrastructure User Guide](#).

## 5 Performance Tuning of Scenarios

Customers can enable Performance Tuning of Scenarios using custom hints in the Customer's environment depending on Customer data volume. Currently this feature is offered for the following seven scenarios:

- 114000122-(ML/AC) Terrorist Financing
- 114000123-(ML/EN) Terrorist Financing
- 115200003-(ML/AC) Large Depreciation of Account Value
- 115400007-(ML/EN) Large Reportable Transactions
- 114000078-(ML/CU) Patterns of Funds Transfers Between Customers and External Entities
- 114000082-(ML/EN) Patterns of Recurring Originators/Beneficiaries in Funds Transfers
- 116000079-(ML/CU) Rapid Movement of Funds - All Activity

To configure this feature, follow these steps:

1. Run the scenario job with TRACE ON.
2. Read the log of job and identify SQL that took more time and needs to be tuned. It could be Primary Rule's SQL or SQL from any Sub-Rule.
3. This SQL will be having QB\_NAME keywords with names in used subqueries.

For example: Take scenario ML-RapidMvmtFundsAllActivity.116000079.xml for analyzing. Assume this Primary Rule's dataset takes time to execute.

```
<COLUMN NAME="DATASET_ID" TYPE="NUMBER" PK="YES" NULL="NO">114012498</COLUMN>
```

```
<COLUMN NAME="DATASET_NM" TYPE="CHAR" PK="NO" NULL="NO">ML_RapidMvmtFundsAll_CU_Pri_Rem1</COLUMN>
```

And Sub Rules dataset takes time to execute

```
<COLUMN NAME="DATASET_ID" TYPE="NUMBER" PK="YES" NULL="NO">114012544</COLUMN>
```

```
<COLUMN NAME="DATASET_NM" TYPE="CHAR" PK="NO" NULL="NO">ML_RapidMvmtFundsAll_CU_Wi1m1</COLUMN>
```

In SQL, the following subqueries are named by QB\_NAME

For example:

- a. Primary Rule SQL blocks are as the following:

```
wires as (
select /*+ QB_NAME(WIRE) */
w.FO_TRXN_SEQ_ID,
w.BENEF_ACCT_ID,
w.SCND_BENEF_ACCT_ID,
w.ORIG_ACCT_ID ...
from
@MINER@.WIRE_TRXN w
```

...  
 ----

```
mitrxn as (
select /*+ QB_NAME(MI) */
m.FO_TRXN_SEQ_ID,
m.BENEF_ACCT_ID,
m.SCND_BENEF_ACCT_ID,
m.REM_ACCT_ID ...
from
@MINER@.MI_TRXN m
...

```

```
Cust_Accounts as
(SELECT /*+ QB_NAME(ACCT) */
c.CUST_SEQ_ID,
ac.PRMRY_CUST_INTRL_ID as CUST_INTRL_ID,
ac.ACCT_INTRL_ID,
c.CUST_EFCTV_RISK_NB,
ac.ACCT_OPEN_DT
FROM
@MINER@.ACCT ac,
@MINER@.CUST c
...

```

- b. Sub Rule SQL blocks are as the following:

```
SELECT /*+ QB_NAME(WIRE_ORG) */
c.CUST_INTRL_ID as CUST_INTRL_ID,
w.FO_TRXN_SEQ_ID
FROM
@MINER@.WIRE_TRXN w,
@MINER@.ACCT ac,
@MINER@.CUST c
...

```

```

SELECT /*+ QB_NAME(WIRE_BEN) */
c.CUST_INTRL_ID as CUST_INTRL_ID,
w.FO_TRXN_SEQ_ID
FROM
@MINER@.WIRE_TRXN w,
@MINER@.ACCT ac,
@MINER@.CUST_ACCT ca,
@MINER@.CUST c,
@MINER@.CUST_ACCT_ROLE car
...

```

These names allow us to set the hints for used tables by parameter in *KDD\_INSTALL\_PARAM*. For example:

- Based on analysis of Explain plan of the tuned SQL, some hints can significantly improve the performance.
- Say it was concluded after due analysis that hint PARALLEL for ACCT table and FULL hint for WIRE\_TRXN should be used in both Primary and Sub-Rule SQL.
- Insert parameter which will add needed hints to code of the dataset.
- The names of subqueries where hints need to be added are /\*+ QB\_NAME(ACCT) \*/ and /\*+ QB\_NAME(WIRE) \*/ for primary and /\*+ QB\_NAME(WIRE\_ORG) \*/ and /\*+ QB\_NAME(WIRE\_BEN) \*/ for Sub-Rule.

Add following parameter to *KDD\_INSTALL\_PARAM*.

For example: Sample insert query to insert values in *KDD\_INSTALL\_PARAM*

```

Insert into KDD_INSTALL_PARAM (PARAM_ID, PARAM_NM, ATTR_1_CD,
ATTR_1_VALUE_TX, ATTR_2_CD, ATTR_2_VALUE_TX) values
(449, 'DLY', 'rule_matcher.primaryrule.hint.116000079', '/*+
PARALLEL(@ACCT, ac) FULL(@WIRE, w) */
','rule_matcher.subrule.hint.116000079', '/*+ PARALLEL(@WIRE_ORG, ac)
FULL(@WIRE_BEN, w) */);
commit;
```

**NOTE** The above used hints are for illustrative purpose only.

4. When these jobs are run again, these hints will be added to scenario SQL. This can be checked in scenario log.

**NOTE** Continue this tuning process till the desired result is achieved.

## 6 JAVA Upgrade

### NOTE

1. From BD 8.1.1.0 onwards, JAVA11 is supported with the following web servers:
  - Weblogic 14.1.x.x
  - Apache Tomcat 9.0.xx
2. Existing web servers must be re-configured/re-installed with JAVA11.

#### Topics:

- [Configuring Existing JAVA8 Environments](#)
- [Configuring New JAVA11 Environments](#)

### 6.1 Configuring Existing JAVA8 Environments

To upgrade from JAVA8 to JAVA11, follow these steps:

1. Install the JAVA11 in the server.
2. Use the following command to list the files and note the file names:

```
grep -r -l '/scratch/jdk1.8.0_161' (Change the JAVA path accordingly).
```

### NOTE

The above command must be executed in the *\$FICHOME*.

3. Modify the listed files from JAVA8 to JAVA11.
4. Use the following command to change from JAVA8 to JAVA11.
 

```
grep -r -l 'OLDPATH/jdk1.8.0_161' . | sed "s|^|\"|g" | sed "s|\$|\"|g" | xargs sed -i "s|OLDPATH/jdk1.8.0_161|NEWPATH/jdk-11.0.11|g" (Change the JAVA paths accordingly).
```
5. Update the JAVA8 path with JAVA11 in the *.profile*.
6. Re-create and re-deploy the OFSAA EAR/WAR file and Restart the OFSAA App Server and Web Server.

### 6.2 Configuring New JAVA11 Environments

To create new environment with JAVA11, follow these steps:

1. Configure and complete the installation of BD 8.1.2.0.0 with JAVA11.

### NOTE

Do not bring up the environment until BD 8.1.2.7.0 is applied and configured.

2. Follow the steps described in [Pre-Installation Steps & How to Apply This Maintenance Level Release?](#) for applying BD 8.1.2.7.0.
