Preface

This Preface provides supporting information for the Oracle Financial Services Compliance Regulatory Reporting (OFS CRR) Application Pack Release Notes.

This preface includes the following topics:

- [Purpose of This Document](#)
- [Intended Audience](#)
- [Related Documents](#)

Purpose of This Document

This document contains release information for the following products:

- Oracle Financial Services Analytical Applications Infrastructure (OFS AAI)
- Oracle Financial Services Compliance Regulatory Reporting (OFS CRR)

Intended Audience

This document is intended for users of Oracle Financial Services Compliance Regulatory Reporting (OFS CRR) Application Pack.

Related Documents

This section identifies additional documents related to Oracle Financial Services Compliance Regulatory Reporting (OFS CRR) Application Pack 8.0.4.0.0. You can access Oracle documentation online from the Documentation Library for OFS CRR 8.0.4.0.0 ([OTN](#)).

1 Introduction

This chapter covers following topics:

- [About Oracle Financial Services Analytical Applications \(OFSAA\)](#)
- [Components of Oracle Financial Services Compliance Regulatory Reporting \(OFS CRR\) Applications Pack](#)

1.1 About Oracle Financial Services Analytical Applications (OFSAA)

In today's turbulent markets, financial institutions require a better understanding of their risk-return, while strengthening competitive advantage and enhancing long-term customer value. Oracle Financial Services Analytical Applications (OFSAA) enable financial institutions to measure and meet risk adjusted performance objectives, cultivate a risk management culture through transparency, lower the costs of compliance and regulation, and improve insight into customer behavior.

OFSAA uses industry-leading analytical methods, shared data model and applications architecture to enable integrated risk management, performance management, customer insight, and compliance management. OFSAA actively incorporates risk into decision making, enables to achieve a consistent view of performance, promote a transparent risk management culture, and provide pervasive intelligence.

Oracle Financial Services Analytical Applications delivers a comprehensive, integrated suite of financial services analytical applications for both banking and insurance domain.

1.2 Components of Oracle Financial Services Compliance Regulatory Reporting (OFS CRR) Applications Pack

OFS CRR Application assists financial institutions in information gathering, and generation and filing of SAR reports with regulatory bodies as part of an integrated financial crime and compliance management program.

OFS CRR application provides a single, global regulatory reporting approach to address suspicious activity reporting requirements across different countries and jurisdictions. As part of this coverage, the OFS CRR supports the following:

Pre-Defined Mapping of business information and investigation information to the applicable jurisdiction-specific regulatory reporting format.

Different Report Formats for generating a suspicious activity report as mandated by local regulatory bodies. Some examples are PDF, XML, MS Excel, and so on.

Pre-Configured Controls for supporting guidelines and specifications defined by the local regulatory body. This ensures compliance with SAR reporting mandates and ensures error-free report submission to regulators.

OFS Compliance Regulatory Reporting Applications Pack includes the following applications:

- **Financial Services Analytical Applications Infrastructure:** This application streamlines analysis using a set of tools for data management and security administration and creates a single, consistent, enterprise-wide source of all relevant customer and financial data.
- **Financial Services Compliance Regulatory Reporting:** This application enables financial institutions to meet their regulatory reporting requirements as part of integrated financial crime and compliance management approach and helps reduce compliance costs and manage potential exposures.

2 Oracle Financial Services Analytical Applications Infrastructure

This chapter includes the following topics:

- [New Features](#)
- [Fixed Issues](#)
- [Limitations](#)

2.1 New Features

The following new features are supported in this release:

- **Multi-Browser Support**

OFSAAI has been enhanced to render on multiple browsers like Google Chrome and Mozilla Firefox in addition to Internet Explorer. The OFSAAI screens are now HTML 5 compliant. See [Limitations](#) section to know about the modules that are not HTML 5 compliant.

- **Model Upload**

- For Sliced and Incremental Model Upload modes, an option to perform object registration process as Incremental or Full is introduced.

- Naming Convention of constraints (PK and FK) has been changed to resolve the following issues:

- For tables with similar names which are relatively long (>27 characters) where initial few characters differ (for example, STG_COMMON_ACCOUNT_SUMMARY, FCT_COMMON_ACCOUNT_SUMMARY), the constraint names get generated as same causing an Oracle error of duplicate constraints.
- When number of foreign keys for a table is more than 100, the length of the constraint name exceeds the permissible limits allowed by Oracle Database.

Update Constraints utility (23251358) is introduced to alter the existing constraint name references according to the new convention. A unique ID gets generated for each data model entities. The new constraint name will be generated by appending the unique ID with 'FK' or 'PK' (along with a sequence for FK). For example PK on DIM_ACCOUNT will be formed as PK_101, where 101 is the unique id of DIM_ACCOUNT. Similarly, FKs on FCT_ACCOUNT_SUMMARY will be FK_206_01, FK_206_02, FK_206_03, FK_206_04, where 206 is the unique id of FCT_ACCOUNT_SUMMARY and the table has 4 FKs.

For more information on this feature, see [OFS AAI Application Pack Installation and Configuration Guide 8.0.4.0.0](#).

▪ **Object Migration Utility**

The utility has been enhanced to migrate objects with their dependent objects. For more information on the dependent objects that are migrated with the base object, see Command Line Utility for Object Migration section in the [OFSAAI 8.0.4.0.0 User Guide](#).

▪ **Data Management Tools**

The DMT Data Mapping JAVA Engine has been enhanced to support Define Once – Execute Anywhere. A metadata that has been originally defined as a T2T, can at run time be executed like a H2H or H2T or T2H. Additional run time parameters EXEC_ENV_SOURCE and EXEC_ENV_TARGET have been introduced which contain information on the Run-Time Source and Run-Time Target. These run time parameters are passed through Operations or RRF module.

▪ **Data Quality Framework**

- For Data Quality Control Total Check Rule, Group by Join Condition has been introduced as an additional input to define the order in which the LHS and RHS columns should be compared.
- Data Quality Rule can be defined on Derived Entities.

▪ **Business Metadata Management**

- Hierarchy resave utility (runit.sh) has been enhanced with an additional option to exclude hierarchies from resaving.
- Dataset ANSI Join supports up to 12000 characters.
- Creation of Derived Entity now implicitly creates a Dataset.

▪ **System Configuration and Identity Management**

- A new command line utility has been introduced to migrate:
 - Users registered in LDAP server to OFSAA
 - Users in LDAP to a user group mapping in OFSAA
 - User Groups in OFSAA to LDAP server.
- User Group Name field has been added in User Group Maintenance window.
- SFTP authentication with Public Key Infrastructure (PKI) has been implemented.

▪ **Process Modelling Framework**

- Command Line Object Migration utility supports migration of PMF Process (object ID is 8000).
- Copy feature is introduced for Workflow definition.

- Search functionality is introduced in Inbox.
- Feature to revoke active delegations is introduced.
- Ability to Send Email (Consolidated or Individual) for the task or notification is introduced.
- Ability to reassign the task from Inbox is introduced.
- Support for attaching document to the PMF activity has been introduced.
- **Questionnaire**
 - Generic Questionnaire framework has been introduced.
 - Configure attributes with data from dimension tables, SQL queries or from a set of predefined static values. These attributes are dynamically displayed in Questionnaire.
 - Create questionnaire by defining attributes across various components. Three types of Questionnaire are supported- Basic, Decision Tree and Score based.
 - Dynamic Answer options can be defined for single-choice and multiple-choice questions.
- **Forms Framework**
 - A new column has been introduced in FORMS_APP_FILTER table to validate mandatory parameters in application filter.
 - Contextual help is available for KBD controls.
 - A configuration has been added for hiding or displaying the backend (top) search across all the hierarchies in Hierarchy Browser.
 - Slider control has been introduced with the control type "30".
- **Forms Manager**
 - For number control, default decimal point field is introduced.
 - FMloglevel flag is introduced in the configuration table based on which logs will be written into the error table.
 - Command line object migration utility now supports migration of Page (object ID is 1127).

2.2 Fixed Issues

The following table lists the fixed issues:

Component	Sub Component	Bug No	Subject

2.3 Limitations

- Dataset creation hangs if it has huge number of entities selected with ANSI Join.
- In case of Google Chrome and Mozilla Firefox, the base window is not closed after launch of Login page due to the browser security model.
- The following modules will be supported only in IE:
 - Metadata Browser
 - Data Entry Forms and Queries
 - Essbase Cube
 - Metadata Archive/Restore
- Email does not get triggered from PMF workflow, in case Webserver is WebSphere and it is HTTPS environment.
- Online help for Questionnaire is not available.
- Sequencing of Questions and sections does not work in Questionnaire module.
- Viewing Business Process Flow diagram uploaded in Post Load Changes displays the download window twice.

3 Oracle Financial Services Compliance Regulatory Reporting

3.1 New Features

This release includes the following:

- [Canada Suspicious Transaction Report](#)
- [Russian Suspicious Transaction Report](#)

3.1.1 Canada Suspicious Transaction Report

Following are the features of Canada STR:

- Transfers data from Enterprise Case Management (ECM) and Alert Management to CRR: Enables the application to transfer data from ECM and Alert Management applications to CRR application. This reduces duplicate data entry.
- Enables users to update the information in the report wherever required: Enables you to update the information that is obtained from ECM and Alert Management applications if required.
- Defines workflow: Allows the report to go through the approval process resulting in corrected and verified reports which are submitted to the regulator.
- Submits Final Report: Enables the application to generate final report in the format as required by regulator, which can then be downloaded and submitted to the regulator.
- Managing Acknowledgements: Enables you to handle the information provided by the regulator as an acknowledgement for submitting the final STR report.
- Creating Manual STR: Enables you to create a manual report from CRR application by providing all the information as data does not get transferred from ECM application.

3.1.2 Russian Suspicious Transaction Report

Following are the features of Russian STR:

- Transfers data from ECM and Alert Management to CRR: Enables the application to transfer data from ECM and Alert Management applications to CRR application. This reduces duplicate data entry.
- Enables users to update the information in the report wherever required: Enables you to update the information that is obtained from ECM and Alert Management applications if required.

- **Defines workflow:** Allows the report to go through the approval process resulting in corrected and verified reports which are submitted to the regulator.
- **Creating Manual STR:** Enables you to create a manual report from CRR application by providing all the information as data does not get transferred from ECM application.
