2 Introduction

OFS CRR Application assists financial institutions in information gathering, and generation and filing of SAR or STR with regulatory bodies as part of an integrated financial crime and compliance management program.

OFS CRR application provides a single, global regulatory reporting approach to address suspicious activity reporting requirements across different countries and jurisdictions. As part of this coverage, the OFS CRR supports the following:

- Pre-Defined Mapping of business information and investigation information to the applicable jurisdiction-specific regulatory reporting format.
- Different Report Formats for generating a suspicious activity report as mandated by local regulatory bodies. Some examples are PDF, XML, MS Excel, and so on.
- Pre-Configured Controls for supporting guidelines and specifications defined by the local regulatory body. This ensures compliance with SAR or STR reporting mandates and ensures error-free report submission to regulators.

OFS Compliance Regulatory Reporting Applications Pack includes the following applications:

- **Financial Services Analytical Applications Infrastructure:** This application streamlines analysis using a set of tools for data management and security administration and creates a single, consistent, enterprise-wide source of all relevant customer and financial data.
- **Financial Services Compliance Regulatory Reporting:** This application enables financial institutions to meet their regulatory reporting requirements as part of an integrated financial crime and compliance management approach and helps reduce compliance costs and manage potential exposures.
