2 Pre-Installation Requirements & How to Apply This Maintenance Level Release?

This chapter describes the pre-installation requirements and how to apply the maintenance release Oracle Financial Services Enterprise Case Management (OFS ECM) Application Pack v8.1.2.0.0 Minor Release #4 8.1.2.4.0.

Topics:

- [Pre-Installation Requirements](#)
- [How to Apply This Maintenance Level Release?](#)

2.1 Pre-Installation Requirements

This section describes the pre-installation requirements. Refer to the following pre-installation prerequisites:

NOTE Take backup of `fic_home` and `ftpshare` folders, also Atomic and Config schemas. Any customizations done must be re-applied after the installation. Refer [Files Modified Due to This Patch](#) for a list of files modified due to this Patch.

1. Configure the Server Time Zone as:

For ECM standalone installation:

- The `SERVER_TIMEZONE` parameter must be configured in the `CONFIGURATION` table in `CONFIG` schema with the correct time zone name.
 - The Date/Timestamps are displayed according to the user's browser time zone.
 - Once the user time zone is saved, the browser date is converted to the Server time zone date and saved in the database.

For Pack-on-Pack installation:

- Update the `SERVER_TIMEZONE` parameter in the `CONFIGURATION` table in `CONFIG` schema with the following query:

```
UPDATE CONFIGURATION SET PARAMVALUE='', DESCRIPTION='DB Server  
Timezone' WHERE PARAMNAME='SERVER_TIMEZONE';
```

2. Apply **Bug 34572960 - OFSAA version 8.1.2.0.0 AAI ML RELEASE #2 (8.1.2.2.0)**.
3. Apply **Bug 34943394 - Consolidated fixes for issues in OJET and QTNR on OFSAAI version 8.1.2.2.0**.
4. Apply **Bug 34913083 - Behavior Detection Version 8.1.2. ML Release #4 (8.1.2.4.0)**.

2.2 How to Apply This Maintenance Level Release?

This section describes how apply this maintenance release. Refer to the following instructions to install this patch set:

1. Load the `.profile` and make sure that `$FIC_HOME` corresponds to the proper environment where the patch application is required. Make sure that `$FIC_SERVER` is up and running.
2. Download and copy `34907686_GENERIC.zip` (in Binary mode) to the server where OFSAA is installed.

3. Navigate to <USER_PATCH_DIR> and extract the contents of the patch archive file using the following command:

NOTE

<USER_PATCH_DIR> is the directory containing the <patch>.zip file

unzip -a <name of the file to be unzipped>

For example: `unzip -a 34299828_GENERIC.zip`

The following are the contents of the folder when the folder is unzipped: PatchConfig.xml

- install.sh Setup.bin
- validateXMLInputs.jar
- MakeExecutableAction_zg_ia_sf.jar
- Case_DataModel.xml
- Readme_OFSECM_8.1.2.4.0.txt

The above “-a” option is mandatory to unzip the patch. In case you notice an error message *unzip: not found [No such file or directory]* when the package is not installed, contact your UNIX administrator to resolve this issue

4. Navigate to <USER_PATCH_DIR>/34907686/bin and grant execute (755) permission for all executables: `$ chmod 755 *`.
5. Navigate to <USER_PATCH_DIR>/34907686/conf/PatchConfig.xml and provide the following placeholder values:
 - **##SCHEMA_OUT_XML_PATH##** - This attribute refers to the path which needs to be pointed to OFS_ECM_SCHEMA_OUTPUT.xml, which was generated at the time of installation
 - **##OFS_ECM_DATA_CM_TBSP##** and **##OFS_ECM_IDX_CM_TBSP##** - These attributes refer to the Data and Index Tablespace Values available in OFS_ECM_SCHEMA_OUTPUT.xml which was generated at the time of installation.
 - **##EXECUTE_PRE_AND_POST_SCRIPTS##** -Attribute Value must be 1.
 - **##FSDF_UPLOAD_MODEL##** - If FSDF in different schemas, it must be 0, else 1.
6. Install the patch by executing the `install.sh` command: `$./install.sh`.
7. Check if the patch is applied successfully by verifying the patch install logs under <USER_PATCH_DIR>/34907686/logs. Contact [My Oracle Support](#) in case of any errors.
8. Once the patch is applied successfully, navigate to \$FIC_HOME and execute the `$./ECM_Duplicate_Jar_Removal_8124.sh` shell script to remove the older version of jar.
9. If it is a BD-ECM pack on pack setup, delete `CM_RLT_CASES.xml` from the location:
`$FIC_HOME/ficweb/webroot/WEB-INF/classes/Reports/Input/Forms/`
10. After the patch has been installed successfully, re-create and deploy the EAR/WAR file.

2.3 US-SAR Continuing Activity Report

To use the US-SAR Continuous Activity Report feature, you must apply **34941227 - OFS CRR Application 8.1.2.4.0 ML Release**.

For configuration-related information, see the *Continuing Activity Review & Continuing Activity Report* section in [Administration and Configuration Guide](#).

3 Post-Installation Steps

This chapter describes the post-installation steps. Perform the following post-installation steps:

1. If Sanction pack is installed, then execute the following query in the Config schema and commit:

2. If *BD 8122* is installed, then execute the following query in the Config schema and update **V_ATTRIBUTE_VALUE1** with all your Case statuses:

- `SELECT t.*, t.rowid FROM AAI_AOM_APP_COMP_ATTR_MAPPING t where t.v_attr_code='mStatus' and t.n_app_id='OFS_NGECM' and APP_COMP_ATTR_MAP_ID=5;`

3. If OFS BD and ECM are on the same schema, run the following query in the Config schema and commit the changes:

```

Update PR2_PROCESS_TASK_PARAMETER set V_TASK_PARAMETER_VALUE =
replace(replace(V_TASK_PARAMETER_VALUE, '"SOURCENAME=##OFS_ECM_AML_SOURCE
##"' '"SOURCENAME=##REPLACE_SOURCENAME##"' ),
'"LOADTYPE=##OFS_ECM_AML_LOADTYPE##"' '"LOADTYPE=##REPLACE_LOADTYPE##"' )
where V_PROCESS_ID in ('1552025714669', '1552025648676', '1552025714670');

```

4. If OFS BD and ECM are on different schemas, run the following query after replacing **##REPLACE_SOURCENAME##** and **##REPLACE_LOADTYPE##** with their respective values in the Config schema and commit the changes:

```

Update PR2_PROCESS_TASK_PARAMETER set V_TASK_PARAMETER_VALUE =
replace(replace(V_TASK_PARAMETER_VALUE, '"SOURCENAME=##OFS_ECM_AML_SOURCE
##"' '"SOURCENAME=##REPLACE_SOURCENAME##"' ),
'"LOADTYPE=##OFS_ECM_AML_LOADTYPE##"' '"LOADTYPE=##REPLACE_LOADTYPE##"' )
where V_PROCESS_ID in ('1552025714669', '1552025648676', '1552025714670');

```

5. After the patch application is successful, perform the following steps to map the respective party-party relationship processes:

- a. Login to the ECM application.
- b. Navigate to **Common Tasks** -> **Rule Run Framework** -> **Process** select **Business Data Load For Oracle KYC**, and click **Edit**.
- c. Select **Component**, expand **Processes** in the list, select **ECMSEGMNT** for pagination to appear, expand **ECMSEGMNT**, and then check for required processes.

- d. Select **Oracle KYC To Consolidation Area Party Party Relationship Lookup, Oracle KYC To Consolidation Area Party Party Relationship, Oracle KYC To Consolidation Area Party Party Relationship Event**, and move them to the right side of *Tasks* in *ROOT* at the end.

NOTE

If any processes mentioned above are already mapped, make sure you correct the order of these tasks. The sequence must be as follows:

- Oracle KYC To Consolidation Area Party Party Relationship Lookup
- Oracle KYC To Consolidation Area Party Party Relationship
- Oracle KYC To Consolidation Area Party Party Relationship Event

- e. Click **Ok** and save the **Business Data Load For Oracle KYC** process.
 - f. Select **Third Party Generate Cases** and click **Edit**.
 - g. Select **Components**, expand **Load Data Rules** and **Insertion Rules**, select **EXT.ECM_Source** for pagination to appear, then expand **EXT.ECM_Source** to select the **t2t_KDD_CASE_PARTY_PARTY_RLSHP** rule.
 - h. Select the **t2t_KDD_CASE_PARTY_PARTY_RLSHP** rule and move it to the right side of *Tasks* in *ROOT*. This task must be before the *Case Completion Flag*. Save the **Process**.
 - i. Select **Precedence**, select the **t2t_KDD_CASE_PARTY_PARTY_RLSHP** rule from the drop-down, and add **f_insertcases** as precedence.
 - j. Now, select **CASE_COMPLETION_FLAG** from the **Precedence** drop-down and add the **t2t_KDD_CASE_PARTY_PARTY_RLSHP** rule as precedence.
 - k. Save the **Process**.
 - l. Navigate to Run and save **Oracle KYC Event Processing**.
6. After the patch application is successful, if you are using CS Cases, follow these steps to populate case specific attributes in the **Case Context** screen:
 - a. Login to the ECM application, navigate to *Common Tasks -> Rule Run Framework -> Process*. Select the process **BD_Create_Case** and click **Edit**.
 - b. Select **Component**, expand **Transformation Rules** in the List, expand **Database Functions-Transformations**, and double-click **Database Functions-Transformations**. Select **F_INSERT_WL_ATTR_BATCH_CS** and move them to the right side of **Tasks** in **ROOT** at the end.
 - c. Select **F_INSERT_WL_ATTR_BATCH_CS** in *Tasks* under *Root*, click the up arrow to move it between **f_insertcases** and **t2t_KDD_CASE_ACCOUNTS**, and click **OK** to save.
 - d. Select **Precedence**, select **F_INSERT_WL_ATTR_BATCH_CS** in the drop-down, and add **f_insertcases** as precedence.
 - e. Now, select **CASE_COMPLETION_FLAG** in the **Precedence** drop-down and add **F_INSERT_WL_ATTR_BATCH_CS** as precedence.

 7. Add the **BD_ENTITY_TAG_MAP DT** under **BD_Create_Case**. Set precedence **CASE_COMPLETION_FLAG** to the **DT**.
 8. Restart the servers.

9. Perform the following steps to move the newly created SMS Functions for app pack movement:
 - a. Go to `$FIC_HOME/utility/AppPckMastSynch/bin`.
 - b. Open the `AppPckMastSynch.sh` shell file.
 - c. Replace the token `$PackName` to `OFS_ECM_PACK`.
 - d. Execute the shell file: `$./AppPckMastSynch.sh`.
 - e. After execution is complete, replace `OFS_ECM_PACK` back to `$PackName` in `AppPckMastSynch.sh` and close the file.
10. Before executing the batch, ensure that the *Customer Account* roles are configured using the **Manage Common Parameters** screen for the **Parameter Customer-Account Role** filter. This is a mandatory step to move only selected *Customer Account* roles through the batch. For more information, see the *Configuring Customer Account Role* section in [Administration and Configuration Guide](#).

NOTE

- Once precedence for tasks is defined, the tasks get executed accordingly. If there is no precedence for tasks defined, the tasks get executed normally. For more information, see the *Using Precedence* section in [Administration and Configuration Guide](#).
- If all the t2t tasks are not visible, click the **Next** arrow button in the upper right-hand corner of **Available Components** to view other tasks. The blue-colored list items can be selected and moved under the **Tasks In ROOT** section.

- l. t2t_KDD_CASE_PARTY_PARTY_RLSHP_EE

13. For JIT implementation, perform the following steps:
- a. Login as *SYSADMN* and provide the following details under the System Configuration Details:
 - i. Select **Authentication Type** as **LDAP Authentication and SMS Authorization**. Click **Add** and provide your *LDAP Server* details and save.
 - ii. Check the **JIT Provisioning Enabled** option.
 - b. Login to the LDAP Server. Create and map the Application User Groups and Users.
 - c. In the Atomic schema, a new table *FCC_GROUP_SEC_ATTR_MAP* is introduced to configure the security attributes mapping to the Application User Groups. Login to Atomic schema and configure security attributes to the User Groups.
 - i. Populate the **V_GROUP_CD** column with the User groups mapped to User in step *b* above.
 - ii. For ECM, valid values for the **V_SEC_ATTR_CD** column are *JRSDCN*, *ORG*, *BUSDMMN* and *CASETYPE*.

- iii. For ECM, valid values for the **V_SEC_ATTR_VAL** column are *Jurisdiction*, *Organization*, *Business Domain* and *Casetype* values. Ensure that those are available in the `KDD_JRSDCN` and `KDD_JRSDCN_TL`, `KDD_ORG` and `KDD_ORG_TL`, `KDD_BUS_DMN` and `KDD_BUS_DMN_TL`, `KDD_CASE_TYPE_SUBTYPE` and `KDD_CASE_TYPE_SUBTYPE_TL` tables respectively.
- d. Perform the following User Attribute configuration:
 - i. *Case Own Flag*: Create a **CMCASEOWNFLUG** group in LDAP Server and map it to the User in LDAP. If *Case Own Flag* for a user needs to be **Y**, then map this group to the user. If *Case Own Flag* for a user needs to be **N**, then make sure it is not mapped to the user.
 - ii. *Reporting/Line Organization*: Create a User group with Prefix as `ORG_CD` (from the `KDD_ORG` table) and a suffix as `LORG`. For example: if `TestOrgA` is the Line organization, create a User group as **TESTORGALORG**.

NOTE

The above User Group must be created and mapped to the Infodom/Segment and CMLINEORG Role in the OFSAA application. In LADP, it must similarly be created and mapped to the User. Ensure that only one `LORG` group is assigned to each given User. If the `LORG` group mapping is already available as part of any other Application then there is no need to map again.

- e. The `FCC_GROUP_SEC_ATTR_MAP` table in Atomic Schema is used for Configuring Security Mapping for the Pool Users.
 - i. The **V_GROUP_CD** column must be populated with the `LORG` group created in *step ii* in *point d* above.
 - ii. For ECM, valid values for the **V_SEC_ATTR_CD** column are *JRSDCN*, *BUSDMN* and *CASETYPE*.
 - iii. For ECM, the valid values for the **V_SEC_ATTR_VAL** column are *Jurisdiction*, *Business Domain* and *Casetype* values. Ensure that those are available in the `KDD_JRSDCN` and `KDD_JRSDCN_TL`, `KDD_ORG` and `KDD_ORG_TL`, `KDD_BUS_DMN` and `KDD_BUS_DMN_TL`, `KDD_CASE_TYPE_SUBTYPE` and `KDD_CASE_TYPE_SUBTYPE_TL` tables respectively.
- f. Login with the New User in the Application and observe the security attributes mapping all done. Users can view pages based on their Roles and the Cases based on the security attribute mapping.
- g. For an existing user:
 - i. If extra User groups are mapped in the LDAP Server, then once the User logs in to the application, confirm that the security attributes mapping is done. Also, ensure that the Users can view pages based on their Roles and can see the Cases based on the security attribute mapping.
 - ii. If few User groups are unmapped in the LDAP server, then:
 - Unmap the User groups from the application
 - Follow the step under *point iii*:
 - iii. If User group mapping does not have any change and there are only changes in security attribute mapping to be done:
 - Login with Admin user. Navigate to **Batch Maintenance** and create a **Batch**. For ECM, add the ECM task **FCC_ECM_JIT_SYNCH** to it.

- Execute the *Batch* via the **Batch Execution** screen. This can be monitored via the **Batch Monitor** screen. Once the *Batch* is executed, it will sync up the security attributes mapping for all the users in the `kdd_review_owner` table
- h. To disable a user/user(s) disabled on LDAP, log in with Admin user, navigate to **Batch Maintenance** and create a **Batch**.
 - i. For ECM, add the ECM task **FCC_ECM_JIT_DIS_USR** to it.
 - ii. Edit the Task. Mention the User/User IDs, separated by commas, in the **Parameter** section. This has to be enclosed in Single Quotes. For example: `CMSUP, CASEANA` where `CMSUP, CASEANA` are users who need to be disabled in the `kdd_review_owner` table.
- 14. To display the status of historical migrated FCCM alerts in related events, navigate to **Atomic Schema** and run the procedure `P_ECM_EVENT_MIGRATED_STATUS_POPULATION`.
- 15. To view the next periodic re-review on the **kyc case context** screen update end *Point/DnextRereviewDate* in ECM UI as follows:
 - a. Go to **Case Management Configuration** then to the **Open Manage Common Parameters** screen.
 - b. Select **Deployment Based** from the **Parameter Category** drop-down.
 - c. Select **KYC Deployment**.
 - d. Update **Attribute 8 Value** with `http://hostname:portnumber/contextname/restapi/kycrest/DnextRereviewDate` end pointed.
- 16. To create Customer Screening events based on the Quantifind output JSON file, update the endpoint in the properties file. Perform the following steps to make the update:
 - a. Go to `<<FICDB>>/conf/`.
 - b. Open the `ECMQuantifindBulkService.properties` file.
 - c. Update **ECM_SERVICE_URL** with `http://hostname:portnumber/contextname/rest-api/CMRestService/RealTimeCaseCreationService/saveEvents`.
- 17. To access the `AIF_ANOMALY_SCORE` and `AIF_ANOMALY_SCORE_ECM_DETAILS` tables available in BD schema from ECM schema, when BD and ECM setups are not pack on pack. Create synonyms using the following scripts.
 - a. If KYC and ECM are in the same DB, execute the following scripts:
 - i. Create or replace synonym `AIF_ANOMALY_SCORE` for `&&bd_schema_owner..AIF_ANOMALY_SCORE`;
 - ii. Create or replace synonym `AIF_ANOMALY_SCORE_ECM_DETAILS` for `&&bd_schema_owner..AIF_ANOMALY_SCORE_ECM_DETAILS`;
 - b. If KYC and ECM are in different DB, replace the `AMDBLINK` with the DB link of the current setup in the following scripts and execute them. `@AMDBLINK` is a placeholder.
 - i. Create or replace synonym `AIF_ANOMALY_SCORE` for `AIF_ANOMALY_SCORE@AMDBLINK`;
 - ii. Create or replace synonym `AIF_ANOMALY_SCORE_ECM_DETAILS` for `AIF_ANOMALY_SCORE_ECM_DETAILS@AMDBLINK`;
- 18. Navigate to `$(FIC_HOME)/ECM_Common_Scripts/Tags/Transaction` and execute `Tag_utility.sql` in Atomic Schema.
