This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, MySQL, and NetSuite are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for

and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Document Control

Table 1 lists the document control of this guide.

Table 1: Document Control

| Version Number | Revision Date | Change Log |
|----------------|---------------|--|
| 8.1.2.7.3 | July 2024 | Added the DATASTUDIO_CSP_FRAME_ANCESTORS parameter in the Table 15. |
| | | The note related to v8.1.2.7.3 has been updated in the Access the Compliance Studio Application when Gateway is Enabled section. |
| | | Added patch number for v8.1.2.7.3 in the Download the Installer Kit section. |
| 8.1.2.7.2 | July 2024 | Added new parameters such as PGX_ZEPPELIN_SCHEDULER_THREADPOOL_SIZE, AUDIT_DATASOURCE_NAME and related to Quantifind details in the Table 15. |
| | | Added patch number for v8.1.2.7.2 in the Download the Installer Kit section. |
| 8.1.2.7.1 | July 2024 | Added COMPLIANCE_STUDIO_GATEWAY_ENABLED and COMPLIANCE_STUDIO_GATEWAY_PORT parameters in the config.sh file. |
| | | Added the following sections: |
| | | Access the Compliance Studio Application when Gateway is Enabled |
| | | User Provisioning |
| | | Added patch number for v8.1.2.7.1 in the Download the Installer Kit section. |
| 8.1.2.7.0 | May 2024 | The Big Data Setup and ETL parameters are removed in the config.sh file. |
| 8.1.2.7.0 | March 2024 | Added "Oracle Database Client" in the Table 7. |
| | | Oracle Text (OT) grants are added in the Assign Grants for ER Schema and Create Graph Schema and Grant Permission sections. |
| | | The parameters such as MINICONDA_INSTALLATION_HOME, MATCHING_MECHANISM, FCC_UI_ENABLED, CANDIDATE_SELECTION_ENABLED are added in the Table 15. |

Table 1: Document Control

| Version Number | Revision Date | Change Log | |
|----------------|---------------|---|--|
| 8.1.2.7.0 | March 2024 | Added the following sections: | |
| | | Configuring Transliteration | |
| | | Assign Grants for ER Schema | |
| | | Creating the Thesaurus | |
| | | Uploading FSDF | |
| | | Configure the PGX Service (Table 20) Added a "FCC_GRAPH_M_TRXN_VIEWS" grant for Postinstallation Grants for ECM Graph in the Create Graph Schema and Grant Permission section. | |
| | | | |
| | | Added upgrade steps in the Upgrade Steps for Entity Resolution section. | |
| | | The Configure the resources.xml for Multiple ER Schemas are Configure the resources.xml for Graph Schema sections are removed as these functionalities are deprecated. | |

1 Preface

This section provides the Oracle Financial Services (OFS) Compliance Studio Installation Guide information.

Topics:

- Audience
- Related Documents
- Conventions
- Abbreviations

1.1 Audience

OFS Compliance Studio Installation Guide is intended for System Engineers who are responsible for installing and maintaining the application.

This document assumes that you have experience in installing Enterprise components and basic knowledge about the following:

- UNIX commands
- Database concepts
- Big Data concepts

1.2 Related Documents

You can strive to keep this and all other related documents updated regularly; visit the OHC Documentation Library to download the latest version available there. The list of related documents is provided here.

- Oracle Financial Services Compliance Studio Administration and Configuration Guide
- Oracle Financial Services Compliance Studio User Guide
- Oracle Financial Services Compliance Studio Matching Guide
- Oracle Financial Services Compliance Studio Data Model Guide
- Oracle Financial Services Compliance Studio Release Notes
- Oracle Financial Services Compliance Studio Use Case Guide

1.3 Conventions

Table 2 lists text conventions are used in this document.

Table 2: Document Conventions

| Convention | Meaning |
|------------|---|
| boldface | Boldface type indicates graphical user interface elements associated with an action or terms defined in text or the glossary. |
| italic | Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values. |

Table 2: Document Conventions

| Convention | Meaning |
|------------|--|
| monospace | Monospace type indicates commands within a paragraph, URLs, code in examples, file names, text on the screen, or text you enter. |
| Hyperlink | Hyperlink type indicates the links to external websites and internal document links to sections. |

Abbreviations 1.4

Table 3 lists the abbreviations used in this document.

Table 3: Abbreviations

| Abbreviation | Meaning |
|-------------------|---|
| OFS | Oracle Financial Services |
| Compliance Studio | Oracle Financial Services Compliance Studio |
| OFSAA | Oracle Financial Services Analytical Application |
| BD | Behavior Detection |
| FCDM | Financial Crime Data Model |
| ICIJ | International Consortium of Investigative Journalists |
| IDCS | Oracle Identity Cloud Service |
| ECM | Enterprise Case Management |
| SSO | Single Sign-On |
| SSH | Secure Shell |

2 Introduction

OFS Compliance Studio is an advanced analytics application that supercharges anti-financial crime programs for better customer due diligence, transaction monitoring, and investigations by leveraging the latest innovations in artificial intelligence, open-source technologies, and data management. It combines Oracle's Parallel Graph Analytics (PGX), Machine Learning for AML, Entity Resolution, and notebook-based code development. It enables Contextual Investigations in one platform with complete and robust model management and governance functionality.

This chapter provides the information required to understand the installation of the OFS Compliance Studio application.

This release (v8.1.2.7.0) of Compliance Studio can be used for the following:

- To install a new instance of Compliance Studio as follows:
 - Compliance Studio with OFSAA (Oracle Financial Services Analytical Application). Here,
 OFSAA is with Behavior Detection (BD) or Enterprise Case Management (ECM).
 - Compliance Studio without OFSAA

To upgrade an existing instance of Compliance Studio as follows:

Upgrade Compliance Studio from v8.1.2.6.0 onwards to Compliance Studio v8.1.2.7.0.

Topics:

- Installation Checklist when Studio is installed with OFSAA
- Installation Checklist when Studio is installed without OFSAA

2.1 Installation Checklist when Studio is installed with OFSAA

To complete the installation process, you must perform the steps listed in the Table 4 checklist. Use this checklist to verify whether these steps are completed or not. Click the reference link to go to the topic.

Table 4: Installation Checklist

| SI. No. | Activity | Mandatory | Description | | |
|------------|--|-----------|-------------|--|--|
| Pre-in | Pre-installation Steps | | | | |
| 1 | Install all the prerequisite Hardware and Software Requirements. | Yes | - | | |
| 2 | Setup the environmental settings (System Configuration). | Yes | - | | |

Table 4: Installation Checklist

| 3 | Download the Big Data Files | No | It is required for graph analytics and leverages fragmented data or as a datasource for models. NOTE: This prerequisite is deprecated for Legacy ETL feature. |
|--------|---|-----|---|
| 4 | Configure the OpenSearch Component | No | It is required for graph analytics and leverage fragmented data or for matching service and Entity Resolution |
| 5 | Configure the Interpreter Settings | Yes | - |
| 6 | Create the Studio Schema | Yes | - |
| 7 | Assign Grants for Studio Schema | Yes | - |
| 8 | Setup Password Stores with Oracle Wallet | Yes | - |
| 9 | Create the Credential Keystore | No | It is required for graph analytics and leverages fragmented data or as a datasource for models |
| 10 | Download the Installer Kit | Yes | - |
| Instal | lation Steps | • | |
| 1 | Extract the Installer Kit | Yes | - |
| 2 | Place Files in the Installation Directories | Yes | - |
| 3 | Generate the Public and Private Keys | Yes | - |
| 4 | Generate API token for CS API User | Yes | - |
| 5 | Place the Key Store File for Secure Batch Service | Yes | - |
| 6 | Add the Studio Service (SSL) to PGX Configuration | Yes | - |
| 7 | Configure the Extract Transfer and Load (ETL) Process | No | It is required for graph analytics and leveraging fragmented data. NOTE: This step is not applicable as Legacy ETL feature is deprecated. |
| 8 | Configure the config.sh File | Yes | - |
| 9 | Run the Compliance Studio Installer | Yes | - |
| 10 | Configure the PGX Service | Yes | - |

Table 4: Installation Checklist

| Post- | Post-Installation Steps | | |
|-------|---|-----|---|
| 1 | Verify the Installation | Yes | - |
| 2 | Start the PGX Service | Yes | - |
| 3 | Access the Compliance Studio Application when Gateway is Disabled | Yes | - |
| 4 | Perform the OFSAA Configuration for Batch Execution | No | It is required if leverage OFSAA's scheduling and executing capability. |
| 5 | Configure and Run Published Notebooks | No | It is required if leveraging OFSAA's batch execution. |

2.2 Installation Checklist when Studio is installed without OFSAA

To complete the installation process, you must perform the steps listed in the Table 5 checklist. Use this checklist to verify whether these steps are completed or not. Click the reference link to go to the topic.

Table 5: Installation Checklist

| Sl. No. | Activity | Mandatory | Details | | |
|------------|---|-----------|---------|--|--|
| Pre-i | Pre-installation Steps | | | | |
| 1 | Install all the prerequisite Hardware and Software Requirements. | Yes | - | | |
| 2 | Setup the environmental settings (System Configuration). | Yes | - | | |
| 3 | Configure the Interpreter Settings | Yes | - | | |
| 4 | Create the Studio Schema | Yes | - | | |
| 5 | See the Configure the resources.xml for Multiple ER Schemas section for more details. | Yes | - | | |
| 6 | Setup Password Stores with Oracle Wallet | Yes | - | | |
| 7 | Create the Credential Keystore | Yes | - | | |
| 8 | Download the Installer Kit | Yes | - | | |
| Insta | Installation Steps | | | | |
| 1 | Extract the Installer Kit | Yes | - | | |
| 2 | Place Files in the Installation Directories | Yes | - | | |
| 3 | Generate the Public and Private Keys | Yes | - | | |
| 4 | Generate API token for CS API User | Yes | - | | |
| 5 | Place the Key Store File for Secure Batch Service | Yes | - | | |

Table 5: Installation Checklist

| 6 | Configure the config.sh File | Yes | - |
|---|---|-----|---|
| 7 Run the Compliance Studio Installer Yes - | | - | |
| Post- | Post-Installation Steps | | |
| 1 | Verify the Installation | Yes | - |
| 2 | Access the Compliance Studio Application when Gateway is Disabled | Yes | - |

Pre-installation 3

This chapter provides information about the tasks that must be performed before installing Compliance Studio. To install Compliance Studio with OFSAA, ensure the Behavior Detection (BD) or the Enterprise Case Management (ECM) application pack is installed.

The following patches are required only when integrating with old versions for ECM:

On top of ECM 8.0.8.0.0, apply the following ECM patch for ML-ECM integrations.

8.0.8.0.28 (BUG: **31497997**)

On top of ECM 8.0.8.1.0, apply the following ECM patch for ML-ECM integrations.

8.0.8.1.4 (BUG: **33395125**)

NOTE

From ECM 8.1.1.0.0 and later versions, the above patches are not required for ML-ECM integrations.

On top of ECM 8.1.2.0.0, apply the following ECM patch for ECM-IH integration.

8.1.2.0.8 (BUG: **34337520**)

On top of ECM 8.1.2.4.0, apply the following ECM patch for ECM-IH integration.

8.1.2.4.5 (BUG: **35456951**)

Verify the AIF_USER_TS and AIF_USER_TEMP_TS are available in the BD production database server. If not, then you need to create a tablespace. For information about how to create a tablespace, see Create the Tablespace section.

After creating a tablespace, you need to provide a quota on the tablespace AIF_USER_TS and AIF_USER_TEMP_TS.

For example:

```
ALTER USER <BD ATOMIC SCHEMA USER> QUOTA <size in megabyte> ON AIF USER TS;
ALTER USER <BD ATOMIC SCHEMA USER> QUOTA <size in megabyte> ON
AIF USER TEMP TS;
```

Download the Installer Kit 3.1

To download the software as .zip files, download the latest installer **36363042** for the **v8.1.2.7.0** release from the My Oracle Support (MOS).

After downloading the installer kit (OFS COMPLIANCE STUDIO 8.1.2.7.0 LINUX.zip), unzip the file. It contains two files as follows:

```
1. <p36363042 81200 Linux-x86-64>-1of2.zip
```

2. <p36363042 81200 Linux-x86-64>-2of2.zip

You have to rename the two files as follows:

```
1. OFS COMPLIANCE STUDIO-8.1.2.7.0-1of2.zip
```

2. OFS COMPLIANCE STUDIO-8.1.2.7.0-2of2.zip

Apply the following patches on top of v8.1.2.7.0 as mentioned in the Table 6.

Table 6: Additional Patch Details

| Patch Number | Patch Version |
|--------------|---------------|
| 36537907 | v8.1.2.7.1 |
| 36752689 | v8.1.2.7.2 |
| 36804828 | v8.1.2.7.3 |

Extract the Installer Kit 3.2

To extract the downloaded .zip files, follow these steps:

1. Extract the OFS COMPLIANCE STUDIO-8.1.2.7.0-10f2.zip file from the installer in the download directory using the following command:

2. The OFS COMPLIANCE STUDIO-8.1.2.7.0-2of2.zip file should be placed in the same directory where OFS COMPLIANCE STUDIO-8.1.2.7.0-lof2.zip file is extracted.

NOTE You no need to unzip the OFS COMPLIANCE STUDIO-8.1.2.7.0-2of2.zip file.

Navigate to the download directory where the installer archive is extracted, and assign execute permission to the installer directory using the following command:

chmod -R 0755 OFS COMPLIANCE STUDIO

After extracting .zip files, the folder structure should be as follows:

OFS_COMPLIANCE_STUDIO

OFS_COMPLIANCE_STUDIO-<version>-1of2.zip

OFS_COMPLIANCE_STUDIO-<version>-2of2.zip

The Compliance Studio installer file is extracted, and the OFS_COMPLIANCE_STUDIO directory is obtained and is referred to as <COMPLIANCE_STUDIO_INSTALLATION_PATH>.

WARNING

Do not rename the application installer directory name after extraction from the archive.

Hardware and Software Requirements 3.3

The following hardware and software are required for this version of Compliance Studio. The installation environment or setup must have these requirements for an application to run smoothly and efficiently.

Table 7 lists the Hardware and Software Requirements:

Table 7: Hardware and Software Requirements

| Hardware or Software Category | Component Version |
|-------------------------------|-------------------|
| | |

Table 7: Hardware and Software Requirements

| Browser | • Chrome | |
|------------------------|--|--|
| Java Version | JDK 11.0.18 | |
| Processing Server | • RHEL 7.6+ and 8+ | |
| Database Server | Oracle Database Release 19c (19.3+)Enterprise Edition Oracle Machine Learning for R (OML4R) (formerly ORE) 1.5.1 with Open source | |
| | R or Oracle R Distribution 3.6.1 | |
| PGX (Graph) Server | RHEL 7.4+Minimum gcc library v4.8.2 | |
| OpenSearch Version | 2.3.0 NOTE: OpenSearch is not required in case the MATCHING_MECHANISM parameter is set to OT. | |
| Logstash Version | 7.16.3 Logstash should be downloaded from the link. NOTE: Logstash is not required in case the MATCHING_MECHANISM parameter is set to OT. | |
| Oracle Instant Client | instantclient-basic-linux.x64-19.8.0.0.0 NOTE : The version should be the same as the Database version, and this should be present in the processing server. | |
| Oracle Database Client | Download the LINUX.X64_193000_client_home.zip file. | |

Big Data

NOTE:

This is the prerequisite for legacy ETL which is deprecated in this release and will be removed in the next release. For Spark interpreter, this prerequisite may be required.

You can use either **Cloudera** or open-source **Apache** for a big data cluster.

If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

Table 7: Hardware and Software Requirements

| Hadoop and Spark | Kerberos authentication must be enabled for Big Data. Apache Hadoop Version 3.0.0 Apache Hive Version 2.1.1 Apache Spark Version 2.4.0 Apache Sqoop Version 1.4.7 The .profile file must be present with the SPARK_HOME and PYTHON_HOME parameters already set. |
|------------------|---|
| | NOTE: |
| | This is the prerequisite for legacy ETL which is deprecated in this release and will be removed in the next release. For Spark interpreter, this prerequisite may be required. |
| | The product is certified for Apache-Hadoop, and any vendor-specific Hadoop distributions have to confirm compliance with Apache-Hadoop standards, and if not, the vendor the customer chooses to work with for Hadoop should ensure compliance to Apache-Hadoop standards. Any issue raised on vendor-specific distributions will be fixed only if the issue is reproducible on Apache-Hadoop, Apache-Hive, and Apache-Spark. |
| Hive Connectors | Hive JDBC Connectors V 2.5.15 |
| | NOTE: |
| | This is the prerequisite for legacy ETL which is deprecated in this release and will be removed in the next release. For Spark interpreter, this prerequisite may be required. |
| Apache | • Kerberos 1.19.1 |
| | • Hadoop Version 3.0.0 |
| | • Hive Version 3.1.2 |
| | • Spark Version 2.4.8 (with Hadoop) |
| | • Sqoop Version 1.4.7 |
| | NOTE: |
| | This is the prerequisite for legacy ETL which is deprecated in this release and will be removed in the next release. For Spark interpreter, this prerequisite may be required. The .profile file must be present with the SPARK_HOME and PYTHON_HOME parameters |

Table 7: Hardware and Software Requirements

| Apache | Kerberos authentication must be enabled for the above services and ensure these services are Apache standards. |
|--------------------------|---|
| | • The product is certified for Apache-Hadoop, and any vendor-specific Hadoop distributions must confirm compliance with Apache-Hadoop standards. If not, the vendor, the customer, who chooses to work with Hadoop should comply with the Apache-Hadoop standards. Any issue raised on vendor-specific distributions will be fixed only if the issue is reproducible on Apache-Hadoop, Apache-Hive, and Apache-Spark. |
| Hadoop Security Protocol | • Kerberos 5 |
| | • Apache Sentry-2.1.0 |
| | NOTE: |
| | This is the prerequisite for legacy ETL which is deprecated in this release and will be removed in the next release. For Spark interpreter, this prerequisite may be required. |

3.3.1 System Configuration

- 1. Log in to the server as a root user.
- 2. Navigate to UNIX file path /etc/security/limits.conf to edit the file.
- 3. Add the following values at the end of the file for Compliance Studio:

```
<Username> hard nproc 65536

<Username> soft nproc 65536

For example,

compliancestudio hard nproc 65536

compliancestudio soft nproc 65536
```

3.3.2 Port Numbers for Application

You can see default port numbers for services in the **install.sh** files in <Compliance Studio Installation Path>/bin. To change the port number for service(s) in **install.sh** and in respective service(s) directories, see Appendix A - Change Port Numbers for the Applicable Services section.

3.3.3 Prerequisite Environmental Settings

The following prerequisite environmental settings must be set before beginning the installation of Compliance Studio. These settings are the configuration that a system must have for an application to run smoothly and efficiently.

Table 8 lists the Prerequisite Environmental Settings:

Table 8: Prerequisite Environmental Settings

| Category | Expected Value |
|-----------------------------|---|
| Java Settings | PATH in the.profile/.bash_profile file must be set to include the Java Runtime Environment (JDK 11) absolute path. Supported version: jdk 11.0.18 NOTE: Ensure the absolute path to JDK/bin is set at the beginning of the PATH variable. For example: PATH=/scratch/fccstudio/jdk1.8.0_261/bin:\$PATH Ensure no SYMBOLIC links to Java installation are set in the PATH variable. |
| PGX Server | The following packages must be installed or present in the server where the PGX service is installed: krb5-libs krb5-workstation procps-ng nc Execute the following command to install the packages as mentioned above: yum install -y krb5-libs krb5-workstation procps-ng nc NOTE: This is the prerequisite for legacy ETL which is deprecated in this release and will be removed in the next release. For Spark interpreter, this prerequisite may be required. If you are using a Graph pipeline, skip this configuration/kerberos packages. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster. |
| Oracle Database Settings | Oracle Processing Server ORACLE_HOME must be set in the .profile file pointing to the appropriate Oracle DB Client installation. PATH in the .profile file must be set to include the appropriate \$ORACLE_HOME/bin directory. |
| Download Directory | Indicates the directory where the product installer zip file is downloaded or copied. The user permission must be set to 755 for this directory. |
| Installation Directory | Indicates the directory where the product installer zip file is extracted, and the installation files are placed. The user permission must be set to 755 for this directory. NOTE: The Installation and the Download Directory can be the same if the product installer zip file is not copied separately to another directory. |
| OS Locale | Linux: en_US.utf8 Execute the following command to check the locale: locale -a grep -i 'en_US.utf' The locale is displayed. |

Table 8: Prerequisite Environmental Settings

| Category | Expected Value |
|-----------------------|---|
| Oracle Instant client | Install oracle instant client in the server where compliance Studio is installed and provide the configuration LD_LIBRARY_PATH in config.sh |

Download the Big Data Files 3.3.4

Download the following configuration files from the Big Data server or contact the Big Data Administrator:

| NOTE | This section is deprecated in the current release and will be removed in the future release. |
|------|---|
| | These files must be kept ready and provided in the following file structure used during Compliance Studio installation. |
| | If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster. |

Table 9 lists the required file structure:

Table 9: Required File Structure

| File Category | File Names |
|----------------|---|
| Hadoop Cluster | <pre>• core-site.xml • hive-env.sh • hive-site.xml • hadoop-env.sh • hdfs-site.xml • mapred-site.xml • yarn-site.xml • redaction-rules.json • log4j.properties • ssl-client.xml</pre> |
| Kerberos Files | topology.map topology.py krb5.conf keytab file name as mentioned in the config.sh file. |

Table 9: Required File Structure

| Additional Jars | hive-exec-*.jar.HiveJDBC4.jar. |
|-----------------|---|
| | • hive-metastore-*.jar. |
| | • hive-service-*.jar. |
| | NOTE: |
| | The version of the jars is client or user-specific. These jars can be obtained from the existing jars of the Cloudera installation. The HiveJDBC4.jar file is not available in the Cloudera installation setup. You must download the same from the Cloudera website. This is applicable only for Cloudera Cluster. For additional jars, see the Appendix C – Additional Jars – PGX and Appendix D – Additional Jars – Batch Service. |
| OS-Hadoop Jars | opensearch-spark-20_2.11-2.3.0.jar |
| | To download the opensearch-spark-20_2.11-2.3.0.jar file, follow these |
| | steps: |
| | 1. Download the ZIP file from OpenSearch 2.3.0 |
| | 2. Extract the downloaded file. |
| | 3. Navigate to the dist directory and download the opensearch-spark-20_2.11-2.3.0.jar |
| | NOTE: The version should be the same as the OpenSearch version. |

Validation Checklist 3.3.5

The Validation Checklist section provides you with the parameters that you can validate to avoid installation issues. This section explains the validation and actions that can be taken for some of the common parameters that are used in the config.sh file for the installation. The parameters that can be validated are as follows:

NOTE

If you are using a Graph pipeline, skip Cloudera parameters. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

Table 10 lists the required file structure:

Table 10: Required File Structure

| Parameters | Validation |
|---|--|
| External Service (OFSAA_SERVICE URL) | The OFSAA_Service URL can be validated by clicking the URL for verification. |
| DB Details for Studio Schema | You can log in to SQL developer and verify the DB Details for Studio Schema. |
| Compliance Studio Schema Wallet Details | You can verify the Wallet details by reviewing the steps in Verify the Connectivity of the Wallet. |

Table 10: Required File Structure

| Atomic Wallet Detail | You can verify the Wallet details by reviewing the steps in Setup Password Stores with Oracle Wallet. |
|---------------------------|--|
| Cloudera | You can verify the Cloudera details and validate them by reviewing the steps in Create the Credential Keystore. NOTE: This is the parameter for legacy ETL which is deprecated in this release and will be removed in the next release. For Spark interpreter, this parameter may be required. |
| Cloudera (SSH Connection) | Run the command ssh <hostname cloudera="" machine="" of="" the="">. You must run this command from the host where the Studio is installed. NOTE: This is the parameter for legacy ETL which is deprecated in this release and will be removed in the next release. For Spark interpreter, this parameter may be required.</hostname> |
| Cloudera (Keytab) | Run the command kinit -V <kerberos_principal> -k -t <keytab_filepath> to verify the keytab. NOTE: This is the parameter for legacy ETL which is deprecated in this release and will be removed in the next release. For Spark interpreter, this parameter may be required.</keytab_filepath></kerberos_principal> |

Configure the OpenSearch Component 3.3.6

To configure the OpenSearch component, follow these steps:

| NOTE | Ensure that a minimum of 4GB free RAM space is available for OpenSearch. If RAM is low, the shards of the OpenSearch fail, and the correct result is not fetched. |
|------|---|
| | You must manually clean the cache if facing a performance issue. |
| | Prerequisites |
| | Download the analysis-icu and analysis-phonetic plugins. You can download the plugins from the |
| | <pre><compliance_studio_installation_path>/</compliance_studio_installation_path></pre> |
| | opensearch directory. |
| | lava version should be 11 and above |

- 1. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/opensearch directory.
- 2. Untar the OpenSearch by executing the below command:

```
tar -xvzf opensearch-${<version>}.tar.gz
```

3. Install the following plugins:

<OPEN SEARCH EXTRACTED PATH>/opensearch/opensearch-<version>/bin/ opensearch-plugin install file:////<PATH>/analysis-icu-<version>.zip <OPEN SEARCH EXTRACTED PATH>/opensearch/opensearch-<version>/bin/ opensearch-plugin install file:///<PATH>/analysis-phonetic-<version>.zip

Where PATH specifies location of the plugins.

NOTE

- You can also install OpenSearch and the plugins on a different machine other than where the Compliance Studio is installed.
- The OpenSearch can be extracted in any directory outside the Compliance Studio path as well.
- 4. Navigate to the <OPEN SEARCH EXTRACTED PATH>/opensearch/opensearch-<version>/config directory.
- 5. Configure the opensearch.yml with the following variables:

Table 11 lists the parameters of opensearch.yml file:

Table 11: opensearch.yml File

| Interaction Variable Name | Significance |
|---------------------------------------|---|
| cluster.name | Indicates the name of the cluster. |
| node.name | Indicates the name given for the node. |
| path.data | Indicates the directory where you want to store the data. |
| path.logs | Indicates the directory where you want to store the logs. |
| network.host | Indicates the hostname of the machine where you want to install the OpenSearch service. |
| http.port | Indicates the port number where the OpenSearch service is installed. |
| discovery.seed_hosts | (Optional) Indicates the hostnames of the nodes of the cluster. |
| cluster.initial_cluster_manager_nodes | (Optional) Indicates the number given to the nodes of the cluster. |

6. Configure the jvm.options file as follows:

Table 12 lists Interaction variable names for Configure jvm.options File.

Table 12: Configure jvm.options File

| Interaction Variable Name | Significance |
|------------------------------|--|
| -Xms4g | Set the value for these parameters. |
| -Xmx4g | The maximum value set can be up to 50% of the RAM size of the machine. |
| | Recommended value: Less than 32GB. |
| | NOTE: |
| | -Xms4g represents 4GB. |
| | The value for -Xms and -Xmx should be same. |

- 7. After configuration changes, navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/ opensearch/opensearch-<version>/bin directory.
- 8. To start OpenSearch, execute the following command:

```
nohup ./opensearch &
```

9. To check the OpenSearch logs, execute the following command:

tail -f nohup.out

3.3.6.1 Enable SSL Configuration and Authentication

To enable SSL and Authentication for OpenSearch, configuration is required at both OpenSearch and Compliance Studio.

3.3.6.1.1 OpenSearch Configuration

To configure OpenSearch, follow these steps:

1. Download the opensearch-security plugin zip file.

For information about how to configure OpenSearch, see the OpenSearch documentation.

3.3.6.1.2 Compliance Studio Configuration

To configure Compliance Studio, follow these steps:

- 1. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- 2. Change the following property in the config.sh file:

OPEN_SEARCH_USERNAME=admin

- 3. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/ficdb /bin directory and encrypt the password (./FCCM_Studio_Base64Encoder.sh --admin) using FCCMBASEENCODER64.
- 4. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/opensearch/opensearch-<version>/config directory.
- 5. To generate admin.p12 file, execute the following command:

openssl pkcs12 -export -out admin.p12 -inkey <path to/admin-key.pem> -in
<path to/admin.pem>

To generate ca.crt file, execute the following command:

openssl x509 -outform der -in <path to/admin.pem> -out ca.crt

7. Copy the admin.p12 file and place in the following directories:

```
<COMPLIANCE STUDIO INSTALLATION PATH>/load-to-open-search/conf
<COMPLIANCE STUDIO INSTALLATION PATH>/matching-service/conf
```

- 8. Copy the ca.crt file and place in the <COMPLIANCE STUDIO INSTALLATION PATH>/ logstash/config directory.
- Configure the following parameters under OpenSearch Cluster details in the config.sh file:

OPEN_SEARCH_ENCRYPTED_PASSWORD='##ENCRYPTED_PASSWORD##'

OPEN_SEARCH_HTTPS_ENABLED=true

OPEN_SEARCH_TRUSTSTORE_FILE_NAME=admin.p12

OPEN_SEARCH_TRUSTSTORE_PASSWORD=password

NOTE

To generate an encrypted password, see the Appendix F - Generate an Encrypted Password for OpenSearch section.

10. Install the Compliance Studio.

3.3.6.2 **Cleanup for OpenSearch Indexes**

To clean up the OpenSearch indexes, run the following command:

curl -XDELETE http://<FULLY QUALIFIED HOSTNAME OF STUDIO SERVER>:<PORT of Load To Open Search Service>/load-to-open-search/idx/deleteIndex/ <INDEX NAME>

For example,

curl -XDELETE http://testserver.in.oracle.com:7053/load-to-open-search/ idx/deleteIndex/test index

NOTE

This command will work only if Compliance Studio is installed and all services are running.

Configure Logstash 3.3.7

- 1. Create a folder "logstash" inside the <COMPLIANCE STUDIO INSTALLATION PATH>.
- 2. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/Logstash.
- 3. Download Logstash tar file from the link.
- 4. Untar contents of the tar file.
- 5. Provide this folder path for the parameter "Logstash_Home" in config.sh file. The Compliance Studio installer will automatically configure the Logstash properties where necessary.

NOTE

The ca.crt file should be copied from the open search server into the Logstash Home/config path when https is enabled in OpenSearch.

Configure the Interpreter Settings 3.3.8

Before installing Compliance Studio, you must configure the interpreter settings for the following interpreters.

NOTE

Ensure to configure the settings only for the interpreters that you require.

Table 13 lists the Pre-installation Interpreter Settings:

Table 13: Pre-installation Interpreter Settings

| Interpreter | Prerequisite Settings |
|---------------|---|
| jdbc | For the required configuration, see jdbc Interpreter section in the OFS Compliance Studio Administration and Configuration Guide. |
| md | No additional configuration is required. |
| pgql | No additional configuration is required. |
| pgx-algorithm | No additional configuration is required. |
| pgx-java | No additional configuration is required. |
| pgx-python | No additional configuration is required. You can point to any other python virtual environment. |
| pyspark | For the required configuration, see Configure the PySpark Interpreter. |
| spark | For the required configuration, see Configure the Spark Interpreter. |
| fcc-python | No additional configuration is required. NOTE: From 8126, virtual environments will no longer be shipped with Compliance Studio and instead conda environment functionality will be used. These python interpreters (fcc-python, fcc-python-ml4aml, and fcc-python-sane) will be deprecated and removed in the future release but will remain in case of upgrades. |

Configure the Spark Interpreter 3.3.8.1

3.3.8.1.1 **Prerequisites for using the Spark Interpreter**

To configure Spark Interpreter, you must download the desired spark distribution from Spark's official website.

For example, spark-2.4.0-bin-hadoop2.7.tgz from the website.

Configure the Spark Interpreter can be used in several situations as follows:

- Connecting to remote spark cluster
 - With/without Kerberos
 - Custom Hadoop client configuration
 - **Custom libraries**
- Spark in local mode.

In case you want to connect to a remote spark cluster, then obtain the following files:

- Hadoop or Hive client configuration as per your use case
- Kerberos files (if applicable)
 - krb5.conf
 - keytab file

3.3.8.1.2 **Setting up spark-interpreter**

The spark interpreter requires spark distribution to start. If you do not intend to use a spark-interpreter, disable the interpreter by performing the following steps:

NOTE

If you do not intend to use a spark interpreter, disable the interpreter. You can perform the following steps.

- 1. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- 2. Open the config.sh file and set export SPARK ENABLED=false.

The default configuration of Spark is configured for yarn-client deployment mode with Kerberos enabled remote spark cluster. For local mode, skip this section and follow below.

Spark Interpreter with remote spark cluster 3.3.8.1.3

The Spark Interpreter with remote spark cluster can be performed for the following:

- Configuration with Kerberos enabled remote spark cluster:
 - krb5.conf
 - *.keytab (For example, fccstudio.keytab)
- Configuration with Kerberos disabled remote spark cluster

3.3.8.1.3.1 Configuration with Kerberos enabled remote spark cluster

1. Move the obtained Kerberos files to <COMPLIANCE STUDIO INSTALLATION PATH>/ batchservice/user/conf directory.

NOTE

- These are the same Kerberos files used for ETL.
- If extralibs directory does not exists in this path <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/mmghome/mmgstudio/interpreter-server/sparkinterpreter-<version>/extralibs, then create it.
- 2. Place the spark-<version>-bin-hadoop<version> files to <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/mmg-home/mmg-studio/ interpreter-server/spark-interpreter-<version>/extralibs directory.

For example, spark-2.4.0-bin-hadoop2.7

3. Create a folder and name as "conf" in the <COMPLIANCE STUDIO INSTALLATION PATH>/ deployed/mmg-home/mmg-studio/interpreter-server/spark-interpreter-<version>/extralibs directory.

4. Place the Hadoop or Hive client configuration files to

<COMPLIANCE STUDIO INSTALLATION PATH>/deployed/mmg-home/mmg-studio/ interpreter-server/spark-interpreter-<version>/extralibs/conf directory.

NOTE Do not remove the spark-env. sh file.

- 5. Create spark-default.conf and update the spark configurations accordingly. See the Sample spark-default.conf Configuration File section for more information.
- 6. Update spark.yarn.dist.files and spark.executorEnv.PYTHONPATH.

NOTE

The path must be the same as the path given for the downloaded spark distribution. For example: path for spark-2.4.0-bin-hadoop2.7spark distribution.

- 7. Update the spark.driver.host.
- 8. Update the spark.yarn.keytab.
- 9. Update the spark.yarn.principal.
- 10. If required, you can add an additional spark configuration.

3.3.8.1.3.2 Configuration with Kerberos disabled remote spark cluster:

1. Place the Hadoop or Hive client configuration files to

<COMPLIANCE STUDIO INSTALLATION PATH>/deployed/mmg-home/mmg-studio/ interpreter-server/spark-interpreter-<version>/extralibs/conf directory.

NOTE Do not remove the spark-env.sh file.

- 2. Create spark-default.conf and update the spark configurations accordingly. See the Sample spark-default.conf Configuration File section for more information.
- 3. Update spark.yarn.dist.files and spark.executorEnv.PYTHONPATH.

NOTE

The path must be the same as the path given for the downloaded spark distribution. For example: path for spark-2.4.0-bin-hadoop2.7 spark distribution.

- 4. Update the spark.driver.host.
- 5. Navigate to <COMPLIANCE STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmgstudio/interpreter-server/spark-interpreter-<version> /extralibs/conf directory.
- 6. Open spark-default.conf file and update spark.driver.defaultJavaOptions by removing:

```
"-Dsun.security.krb5.debug=false -
Djavax.security.auth.useSubjectCredsOnly=false -
Djava.security.krb5.conf=<COMPLIANCE STUDIO INSTALLATION PATH>/deployed/
batchservice/user/conf/krb5.conf"
```

3.3.8.1.4 Spark Interpreter in local mode

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmgstudio/interpreter-server/spark-interpreter-<version> /extralibs/conf directory.
- 2. Create spark-default.conf and update the spark configurations accordingly. See the Sample spark-default.conf Configuration File section for more information.
- 3. Open spark-default.conf file and update spark.driver.defaultJavaOptions by removing:

```
"-Dsun.security.krb5.debug=false -
Djavax.security.auth.useSubjectCredsOnly=false -
Djava.security.krb5.conf=<COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/batchservice/user/conf/krb5.conf"
```

4. Set spark.master as local[*] in interpreter configuration file.

3.3.8.1.4.1 Starting spark interpreter in local mode

To start spark interpreter in the local mode, follow these steps:

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmgstudio/bin directory.
- 2. Open startup.sh file and add following line before the line containing "counter=1";

```
nohup "$DIR"/../interpreter-server/spark-interpreter-<version>/bin/
spark-interpreter &>> <path to save the logs>/<log file name>.log &
```

Figure 1: Snapshot of startup.sh file

```
#export PLAINR_INTERPRETER_OPTS="$PLAINR_INTERPRETER_OPTS -DAPP_BASE_NAME='plainr-i
#nohup "$DIR"/../interpreter-server/plainr-interpreter-23.4.2/bin/plainr-interprete
# To start Spark interpreter
nohup "$DIR"/../interpreter-server/spark-interpreter-23.4.0/bin/spark-interpreter {
counter=1;
while [[ $counter -lt 20 ]]
do
    dsHealth='curl -s --insecure https://ofss-mum-1779.snbomprshared1.gbucdsint02bc
```

- 3. Save and close the file.
- 4. Open shutdown.sh file and add following line before the line containing "SL=".

```
I7014=`ps -eaf | grep java | grep RemoteInterpreterServer | grep 7014 |
awk '{print $2}'`
if [[ "" != "$I7014" ]];
then kill -9 $I7014;
fi
```

Figure 2: Snapshot of shutdown.sh file

```
To shutdown Spark interpreter
I7014= ps -eaf | grep java | grep RemoteInterpreterServer | grep 7014 | awk '{print $2} if [[ "" != "$17014" ]];
then kill -9 $17014;
SL=`ps -eaf | grep java | grep oracle.datastudio.starter.App | awk '{print $2}'`
if [[ "" != "$SL" ]];
then kill -9 $SL;
```

NOTE

In the above step, the port number for the spark interpreter is assumed to be 7014, the default port that comes with the installer. If a different port is used, then change the configuration accordingly.

- Save and close the file.
- 6. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- 7. Restart Compliance Studio using the following command:

```
./compliance-studio.sh -restart
```

Verify if the spark-interpreter has started using the following command:

```
netstat -nltp | grep 7014
```

Configuration 3.3.8.1.5

The Spark interpreter configuration can be divided into the following categories:

Configuration related to deployment

These properties can be set either in the Spark libraries, for example, the sparkdefaults.conf file, or through the system environment variable, SPARK_CONF.

For example, SPARK CONF="--conf spark.driver.memory=2g".

NOTE

These properties cannot be changed when the Spark interpreter is running.

Configuration related to Spark runtime control.

These properties can be set from the Interpreters page of the Compliance Studio application UI. This includes properties such as a spark.executor.memory.

NOTE

The properties related to the driver cannot be set during runtime and are considered deployment configurations. The properties related to the executors can be set during runtime. Hence, the latter option of runtime control configuration is preferred.

A list of possible properties is available in the Spark Official Documentation. All the properties prefixed with the term "zeppelin" listed in the Zeppelin Spark Configuration Document can also be set from the Interpreters page of the Compliance Studio application UI.

Configure the PySpark Interpreter 3.3.8.2

Compliance Studio uses PySpark 2.4.0. Before you begin the configurations, check the prerequisites depending on your operation mode.

Prerequisites 3.3.8.2.1

The PySpark interpreter has the same prerequisites as that as the Spark Interpreter. For more information, see Configure the Spark Interpreter. Also, all Spark components must be configured to use the same Python version.

Configuration 3.3.8.2.2

The PySpark interpreter can be configured through the Spark interpreter, with the only exception being the Python version used. By default, the Python version is set to 3 that can be changed either in the interpreter JSON files before the startup or from the **Interpreters** page of the Compliance Studio application UI during runtime by changing the following properties:

To change the value of the spark.pyspark.python property before installing the Compliance Studio, follow these steps:

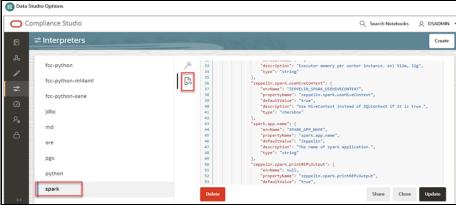

- Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/mmg-home/mmgstudio/server/builtin/interpreters/spark.json directory.
- Update the value in spark.pyspark.python property of the spark.json file.

To change the value of the spark.pyspark.python property after installing the Compliance Studio, follow these steps:

- 1. Login to the Compliance Studio application.
- 2. Launch the **CS Production** Workspace.
- 3. Click on the **User Profile** drop-down list and select **Data Studio Options.**
- 4. Click **Interpreters**.

By default, the Interpreters page lists all the available interpreters on the LHS.

Figure 3: Spark Interpreter Data Studio Options

- Click **spark** interpreter on the LHS and then click **Plain Configuration** on the RHS.
- Update the value in the spark.pyspark.python property and click **Update**.

In the Spark Interpreter Settings page of the Compliance Studio application UI (or spark.json file), change the value of the spark.pyspark.python property to the Python executable path that is to be used by the Spark executors.

In the **PySpark Interpreter Settings** page of the Compliance Studio application UI (or pyspark.json file), change the value of the zeppelin.pyspark.python property to the Python executable path that is to be used by the Spark driver.

Use the Python Virtual Environments with PySpark 3.3.8.2.3

To ensure that the two Python versions match, in case your components run on different machines, you must use the Python virtual environments with PySpark.

3.3.8.2.3.1 **Create a Virtual Environment with Conda**

NOTE

You can also use **virtualenv** to create your virtual environment instead of conda.

To create a virtual environment with Conda, follow these steps:

1. Ensure that you have conda and conda-Pack installed.

NOTE

To check if conda is installed, then execute the following command:

"conda --version"

2. Create your virtual environment using the following command:

conda create -y -n <environment-name> python=<python-version> <additional-packages>

NOTE

The <environment-name> can be chosen freely and subsequently has to be substituted in further commands.

3. Activate your virtual environment using the following command:

conda activate <environment-name>

4. Execute the following to obtain the path to your virtual environment:

which python

The obtained result is referred to as <environment-abs-path>.

5. Compress your virtual environment using the following command:

conda pack -n <environment-name> -o <environment-abs-path>/<environmentname>.tar.qz

3.3.8.2.3.2 **Update the Interpreter Properties**

The interpreter properties can either be configured in the interpreter JSON files or from the Interpreters page of the Compliance Studio application UI after starting the Compliance Studio application.

- In the **Spark Interpreter Settings** page of the Compliance Studio application UI (or spark.json), change the following:
 - Change the value of the spark.yarn.dist.archives property to <environment-abspath>/<environment-name>.tar.gz#<environment-name>
 - Change the value of the spark.pyspark.python property to ./<environmentname>/bin/python

In the **PySpark Interpreter Settings** page of the Compliance Studio application UI (or pyspark.json), change the value of the zeppelin.pyspark.python parameter to <environment-abs-path>/bin/python.

Create the Hive Schema 3.3.9

| NOTE | • | This section is deprecated in the current release and will be removed in the future release. |
|------|---|---|
| | • | If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster. |

To create a hive schema, perform the following steps:

- 1. Login to the server where **cloudera/hive** is installed.
- 2. Open a hive session in the command prompt.

hive

3. Create a new hive schema using the following script:

create database <hive schema name>;

4. Use the hive schema that is created by the following command:

Use <hive schema name>

A new hive schema is created.

Create the Tablespace 3.3.10

To create a tablespace in the Oracle Database use the scripts as described in the Table 14.

Table 14: Create Tablespace

| User | Script |
|---------------------------------|---|
| AIF_USER_TEMP_TS | CREATE TABLESPACE AIF_USER_TEMP_TS DATAFILE ' <datafile path="">' SIZE <size byte="" in=""> REUSE AUTOEXTEND ON NEXT <size in="" megabyte=""> MAXSIZE UNLIMITED;</size></size></datafile> |
| AIF_USER_TS | CREATE TABLESPACE AIF_USER_TS DATAFILE ' <datafile path="">' SIZE <size byte="" in=""> REUSE AUTOEXTEND ON NEXT <size in="" megabyte=""> MAXSIZE UNLIMITED;</size></size></datafile> |
| <studio tablespace=""></studio> | CREATE TABLESPACE <studio tablespace=""> DATAFILE '<datafile path="">' SIZE <size byte="" in=""> REUSE AUTOEXTEND ON NEXT <size in="" megabyte=""> MAXSIZE UNLIMITED;</size></size></datafile></studio> |

Table 14: Create Tablespace

| User | Script |
|-------------------------------------|---|
| <graph_schema_ts></graph_schema_ts> | CREATE TABLESPACE <graph_schema_ts> DATAFILE '<datafile path="">' SIZE <size byte="" in=""> REUSE AUTOEXTEND ON NEXT <size in="" megabyte=""> MAXSIZE UNLIMITED;</size></size></datafile></graph_schema_ts> |

NOTE

3.3.12

The tablespace size should be defined based on the size of the data.

Create the Studio Schema 3.3.11

To create a studio schema, create a new Oracle Database schema user using the following script:

CREATE USER <STUDIO SCHEMA USER> IDENTIFIED BY <PASSWORD> DEFAULT TABLESPACE <STUDIO TABLESPACE>; ALTER USER <STUDIO SCHEMA USER> QUOTA 2000M ON <STUDIO TABLESPACE>; ALTER USER <STUDIO SCHEMA USER> QUOTA <SIZE IN MEGABYTE> ON AIF USER TS; For example; ALTER USER CS812_USER QUOTA 500M ON AIF USER TS; NOTE The tablespace and quota sizes should be defined based on the size of the

Assign Grants for Studio Schema

A new Oracle Database schema (Studio schema) is created.

Grant the following permissions to the newly created Oracle Database studio schema:

- GRANT CREATE SESSION TO <STUDIO SCHEMA USER>;
- GRANT CREATE TABLE TO <STUDIO SCHEMA USER>;
- GRANT CREATE VIEW TO <STUDIO SCHEMA USER>;
- GRANT CREATE ANY TRIGGER TO <STUDIO SCHEMA USER>;
- GRANT CREATE ANY PROCEDURE TO <STUDIO SCHEMA USER>;
- GRANT CREATE SEQUENCE TO <STUDIO SCHEMA USER>;
- GRANT EXECUTE ON DBMS RLS TO <STUDIO SCHEMA USER>;
- GRANT EXECUTE ON SYS.DBMS SESSION TO <STUDIO SCHEMA USER>;
- GRANT CREATE SYNONYM TO <STUDIO SCHEMA USER>;
- GRANT EXECUTE ON DBMS REDEFINITION TO <STUDIO SCHEMA USER>;
- GRANT REDEFINE ANY TABLE TO <STUDIO SCHEMA USER>;
- GRANT CREATE MATERIALIZED VIEW TO <STUDIO SCHEMA USER>;
- GRANT SELECT ON SYS.V \$PARAMETER TO <STUDIO SCHEMA USER>;

- GRANT SELECT ON SYS.DBA FREE SPACE TO <STUDIO SCHEMA USER>;
- GRANT SELECT ON SYS.DBA TABLES TO <STUDIO SCHEMA USER>;
- GRANT SELECT ON SYS.DBA TAB COLUMNS TO <STUDIO SCHEMA USER>;
- GRANT CREATE RULE TO <STUDIO SCHEMA USER>;
- GRANT DROP ANY TRIGGER TO <STUDIO SCHEMA USER>;
- GRANT SELECT ON SYS.DBA RECYCLEBIN TO <STUDIO SCHEMA USER>;
- GRANT CREATE JOB TO <STUDIO SCHEMA USER>;
- GRANT EXECUTE ON DBMS LOCK TO <STUDIO SCHEMA USER>;
- GRANT EXECUTE ON DBMS STATS TO <STUDIO SCHEMA USER>;
- GRANT ANALYZE ANY TO <STUDIO SCHEMA USER>;
- GRANT CREATE TYPE TO <STUDIO SCHEMA USER>;
- GRANT EXECUTE ON CTXSYS.CTX DDL TO <STUDIO SCHEMA USER>;

NOTE

The following grants should be revoked after the successful installation of Compliance Studio:

- REVOKE SELECT ON SYS.DBA_RECYCLEBIN FROM <STUDIO
 SCHEMA USER>;
- REVOKE SELECT ON SYS.DBA_FREE_SPACE FROM <STUDIO
 SCHEMA USER>;

3.3.13 Assign Grants for ER Schema

Grant the following permissions to the newly created Oracle Database ER schema:

- GRANT CREATE SESSION TO <ER SCHEMA USER>;
- GRANT CREATE TABLE TO <ER SCHEMA USER>;
- GRANT CREATE VIEW TO <ER SCHEMA USER>;
- GRANT CREATE ANY TRIGGER TO <ER SCHEMA USER>;
- GRANT CREATE ANY PROCEDURE TO <ER SCHEMA USER>;
- GRANT CREATE SEQUENCE TO <ER SCHEMA USER>;
- GRANT EXECUTE ON DBMS RLS TO <ER SCHEMA USER>;
- GRANT EXECUTE ON SYS.DBMS SESSION TO <ER SCHEMA USER>;
- GRANT CREATE SYNONYM TO <ER SCHEMA USER>;
- GRANT EXECUTE ON DBMS REDEFINITION TO <ER SCHEMA USER>;
- GRANT REDEFINE ANY TABLE TO <ER SCHEMA USER>;
- GRANT CREATE MATERIALIZED VIEW TO <ER SCHEMA USER>;
- GRANT SELECT ON SYS.V \$PARAMETER TO <ER SCHEMA USER>;
- GRANT SELECT ON SYS.DBA_FREE_SPACE TO <ER SCHEMA USER>;
- GRANT SELECT ON SYS.DBA TABLES TO <ER SCHEMA USER>;

- GRANT SELECT ON SYS.DBA TAB COLUMNS TO <ER SCHEMA USER>;
- GRANT CREATE RULE TO <ER SCHEMA USER>;
- GRANT DROP ANY TRIGGER TO <ER SCHEMA USER>;
- GRANT SELECT ON SYS.DBA RECYCLEBIN TO <ER SCHEMA USER>;
- GRANT CREATE JOB TO <ER SCHEMA USER>;
- GRANT EXECUTE ON DBMS LOCK TO <ER SCHEMA USER>;
- GRANT EXECUTE ON DBMS STATS TO <ER SCHEMA USER>;
- GRANT ANALYZE ANY TO <ER SCHEMA USER>;
- GRANT CREATE TYPE TO <ER SCHEMA USER>;
- GRANT EXECUTE ON CTXSYS.CTX DDL TO <ER SCHEMA USER>;

The following grants are applicable when MATCHING_MECHANISM is set to OT in the config.sh file.

- GRANT EXECUTE ON CTXSYS.CTX_THES TO <ER SCHEMA USER>;
- GRANT MANAGE SCHEDULER TO <ER SCHEMA USER>;
- GRANT EXECUTE ON DBMS MVIEW TO <ER SCHEMA USER>;

NOTE The following grants should be revoked after the successful installation of Compliance Studio:

- REVOKE SELECT ON SYS.DBA_RECYCLEBIN FROM <ER SCHEMA USER>;
- REVOKE SELECT ON SYS.DBA_FREE_SPACE FROM <ER SCHEMA USER>;

3.3.14 Create the Sandbox Schema

NOTE This section is applicable for ML4AML features except ASC.

To create a sandbox schema, create a new Oracle Database sandbox schema user using the following script:

create user <SANDBOX SCHEMA USER>
IDENTIFIED BY <PASSWORD>
default tablespace AIF_USER_TS
temporary tablespace TEMP
profile DEFAULT
quota unlimited on AIF_USER_TS

quota unlimited on AIF_USER_TEMP_TS

NOTE

- The sandbox will always be on a different database other than the production schema.
- After creating a user for the sandbox schema, you must create a sandbox workspace. To create a sandbox workspace, see Creating a Sandbox Workspace section in the OFS Compliance Studio Administration and Configuration Guide.
- The tablespace and quota sizes should be defined based on the size of the data.

A new Oracle Database schema (Sandbox schema) is created.

3.3.15 Assign Grants for the Sandbox Schema

Grant the following permissions to the newly created Oracle Database sandbox schema:

```
GRANT CONNECT TO <SANDBOX SCHEMA USER>;

GRANT CREATE SESSION TO <SANDBOX SCHEMA USER>;

GRANT CREATE PROCEDURE TO <SANDBOX SCHEMA USER>;

GRANT CREATE SEQUENCE TO <SANDBOX SCHEMA USER>;

GRANT CREATE TABLE TO <SANDBOX SCHEMA USER>;

GRANT CREATE TRIGGER TO <SANDBOX SCHEMA USER>;

GRANT CREATE VIEW TO <SANDBOX SCHEMA USER>;

GRANT CREATE MATERIALIZED VIEW TO <SANDBOX SCHEMA USER>;

GRANT CREATE SYNONYM TO <SANDBOX SCHEMA USER>;

GRANT CREATE RULE TO <SANDBOX SCHEMA USER>;

GRANT CREATE ANY TRIGGER TO <SANDBOX SCHEMA USER>;

GRANT DROP ANY TRIGGER TO <SANDBOX SCHEMA USER>;

GRANT CREATE ANY TYPE TO <SANDBOX SCHEMA USER>;
```

3.3.16 Graph Schema

3.3.16.1 Create Graph Schema and Grant Permission

To create a Graph schema, create a new Oracle Database schema user using the following script:

CREATE USER <GRAPH SCHEMA USER> IDENTIFIED BY <PASSWORD> DEFAULT TABLESPACE <GRAPH_SCHEMA_TS>;

ALTER USER <GRAPH SCHEMA USER> QUOTA 2000M ON <GRAPH SCHEMA TS>;

For example;

```
ALTER USER GRAPH SCHEMA USER QUOTA 500M ON GRAPH SCHEMA TS;
```

NOTE

The tablespace and quota sizes should be defined based on the size of the

A new Oracle Database schema (Graph schema) will be created.

To assign grants, run the following:

Pre-installation Grants for both BD and ECM Graphs

Change the <GRAPH SCHEMA> to the graph schema created in the Create Graph Schema and Grant Permission section.

```
GRANT ANALYZE ANY TO <GRAPH SCHEMA>;
GRANT CREATE SESSION TO <GRAPH SCHEMA>;
GRANT CREATE TABLE TO <GRAPH SCHEMA>;
GRANT CREATE VIEW TO <GRAPH SCHEMA>;
GRANT CREATE ANY PROCEDURE TO <GRAPH SCHEMA>;
GRANT CREATE SEQUENCE TO <GRAPH SCHEMA>;
GRANT CREATE JOB TO <GRAPH SCHEMA>;
GRANT CREATE MATERIALIZED VIEW TO <GRAPH SCHEMA>;
GRANT EXECUTE ON DBMS SCHEDULER TO <GRAPH SCHEMA>;
GRANT EXECUTE ON DBMS_COMPARISON TO <GRAPH_SCHEMA>;
GRANT EXECUTE ON DBMS RLS TO <GRAPH SCHEMA>;
GRANT EXECUTE ON SYS.DBMS SESSION TO <GRAPH SCHEMA>;
GRANT EXECUTE ON DBMS REDEFINITION TO <GRAPH SCHEMA>;
GRANT REDEFINE ANY TABLE TO <GRAPH SCHEMA>;
GRANT SELECT ON SYS.V $PARAMETER TO <GRAPH SCHEMA>;
GRANT EXECUTE ON DBMS ISCHED TO <GRAPH SCHEMA>;
GRANT EXECUTE ON DBMS PARALLEL EXECUTE TO <GRAPH SCHEMA>;
GRANT EXECUTE ON DBMS STATS TO <GRAPH SCHEMA>;
```

NOTE The following grant is applicable when MATCHING_MECHANISM is set to OT in the config. sh file.

GRANT EXECUTE ON CTXSYS.CTX THES TO <GRAPH SCHEMA>;

• Pre-installation Grants for BD Graph

Change the <BD_ATOMIC_SCHEMA> to the underlying schema of the data source of the BD graph pipeline.

NOTE

The following grants are applicable for the Out-of-the-box graph pipeline only. If the user has to execute the custom graph, the same permissions have to be provided for the input tables referred in Custom Graph Pipeline.

```
GRANT SELECT ON <BD ATOMIC SCHEMA>.ACCT TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.CUST ACCT TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.ACCT BAL POSN SMRY TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.CUST TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.BACK OFFICE TRXN TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.EMP TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.CUST CUST TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.KDD CAL TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.KDD REVIEW TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.EMP ACCT TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.ACCT SMRY MNTH TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.ACCT ADDR TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.EXTERNAL ENTITY TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.CUST EMAIL ADDR TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.CUST PHON TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.CUST ADDR TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.CASH TRXN TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.LINK STAGE TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.WIRE TRXN TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.MI TRXN TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.INSTN MASTER TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.EXTERNAL ENTITY ADDR TO
<GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.DERIVED ADDRESS TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.CLIENT BANK TO <GRAPH SCHEMA>;
GRANT SELECT ON <BD ATOMIC SCHEMA>.EXTERNAL ENTITY LINK TO
<GRAPH SCHEMA>;
GRANT ANALYZE ANY TO <GRAPH SCHEMA>;
```

Pre-installation Grants for ECM Graph

Change the <ECM_ATOMIC_SCHEMA> to the underlying schema of the data source of the ECM graph pipeline.

```
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC ACCT TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC CUST ACCT TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC ACCT BAL POSN SMRY TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC CUST TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC BACK OFFICE TRXN TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC EMP TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC CUST CUST TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC EMP ACCT TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC ACCT SMRY MNTH TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC ACCT ADDR TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC EXTERNAL ENTITY TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC CUST EMAIL ADDR TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC CUST PHON TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC CUST ADDR TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC CASH TRXN TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC WIRE TRXN TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC MI TRXN TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC INSTN MASTER TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC EXTERNAL ENTITY ADDR TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC DERIVED ADDRESS TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC CLIENT BANK TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC EXTERNAL ENTITY LINK TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.KDD CASES TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.KDD CASE ACCOUNTS TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC SCENARIO MASTER TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC EVENTS TO <GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC EVENT DETAILS TO <GRAPH SCHEMA>;
```

```
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC EVENT ENTITY MAP TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC PRECASE CASE MAP TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.KDD CASE CUSTOMERS TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.KDD CASE EXTERNAL ENTITY TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.KDD CASE INSTN MASTER TO
<GRAPH SCHEMA>;
GRANT SELECT ON <ECM ATOMIC SCHEMA>.FCC CORRELATION EVENT MAP TO
<GRAPH SCHEMA>;
GRANT EXECUTE ON DBMS SCHEDULER TO <ECM ATOMIC SCHEMA>;
GRANT EXECUTE ON DBMS ISCHED TO <ECM ATOMIC SCHEMA>;
GRANT EXECUTE ON DBMS PARALLEL EXECUTE TO <ECM ATOMIC SCHEMA>;
GRANT CREATE JOB TO <ECM ATOMIC SCHEMA>;
```

Post-installation Grants for BD Graph

NOTE

The following grants should be added after completing the steps mentioned in the Importing OOB Graph Definition and related Metadata section.

```
GRANT EXECUTE ON <BD_ATOMIC_SCHEMA>.P_FCC_CS_BD_EXTERNAL_ENTITY TO <GRAPH_SCHEMA>;

GRANT SELECT ON <BD_ATOMIC_SCHEMA>.FCC_CS_BD_EXTERNAL_ENTITY TO <GRAPH_SCHEMA>;

GRANT SELECT ON <BD_ATOMIC_SCHEMA>.FCC_CS_BD_DERIVED_GROUP TO <GRAPH SCHEMA>;
```

Post-installation Grants for ECM Graph

NOTE

The following grants should be added after completing the steps mentioned in the Importing OOB Graph Definition and related Metadata section.

```
GRANT EXECUTE ON <ECM_ATOMIC_SCHEMA>.P_FCC_CS_CM_EXTERNAL_ENTITY TO <GRAPH_SCHEMA>;

GRANT SELECT ON <ECM_ATOMIC_SCHEMA>.FCC_CS_CM_EXTERNAL_ENTITY TO <GRAPH_SCHEMA>;

GRANT SELECT ON <ECM_ATOMIC_SCHEMA>.FCC_CS_CM_DERIVED_GROUP TO <GRAPH_SCHEMA>;

GRANT DELETE ON <ECM_ATOMIC_SCHEMA>.FCC_GRAPH_M_TRXN_VIEWS TO <GRAPH_SCHEMA>;
```

Post-installation Grants for both BD and ECM Graphs

NOTE

The following grants should be added after completing the steps mentioned in the Importing OOB Graph Definition and related Metadata section.

```
GRANT SELECT, INSERT, UPDATE, DELETE ON
<STUDIO SCHEMA>.FCC GRAPH M TRXN VIEWS TO <GRAPH SCHEMA>;
GRANT SELECT ON <STUDIO SCHEMA>.FCC M TABLES TO <GRAPH SCHEMA>;
GRANT SELECT ON <STUDIO SCHEMA>.FCC M COLUMNS TO <GRAPH SCHEMA>;
GRANT SELECT ON <STUDIO SCHEMA>.FCC M ATTRIBUTE TO <GRAPH SCHEMA>;
GRANT SELECT ON <STUDIO SCHEMA>.FCC M ATTRIBUTE COLUMN MAP TO
<GRAPH SCHEMA>;
GRANT SELECT ON <STUDIO SCHEMA>.FCC M COLUMNS DETAILS TO <GRAPH SCHEMA>;
GRANT SELECT ON <STUDIO SCHEMA>.FCC M MAP TO <GRAPH SCHEMA>;
GRANT SELECT ON <STUDIO SCHEMA>.MMG GRAPH SCHEMA TO <GRAPH SCHEMA>;
GRANT EXECUTE ON SYS.DBMS LOCK TO <GRAPH SCHEMA>;
GRANT EXECUTE ON CTXSYS.CTX DDL TO <GRAPH SCHEMA>;
GRANT EXECUTE ON CTX THES TO <GRAPH SCHEMA>;
```

Create Wallet for Graph Schema 3.3.16.2

See **step 4** in the Setup the Password Stores for Database User Accounts section.

NOTE

- Graph schema must be in the same database where Compliance Studio Schema is exists.
- You can refer only one Graph schema in Compliance Studio.

Entity Resolution 3.3.17

Create Entity Resolution Schema and Grant Permission 3.3.17.1

NOTE

ER schema is nothing but FSDF schema and creation of ER schema can be skipped if the FSDF schema is already available. The grants mentioned in this section are required.

To create ER schema, create a new Oracle Database schema user using the following script:

CREATE USER <ER SCHEMA USERNAME> IDENTIFIED BY <PASSWORD>;

A new Oracle Database schema (ER schema) will be created.

To assign grants, see the Assign Grants for ER Schema section.

3.3.17.2 Create a wallet for ER/FSDF schema

See **step 4** in the Setup the Password Stores for Database User Accounts section.

NOTE

- ER schema can be in the same database where CS is installed or a different database.
- You can create multiple ER schemas.

3.3.17.3 Uploading FSDF

To upload the data model, see the Creating Pre-Staging Tables in FSDF section in the OFS Compliance Studio Administration and Configuration Guide.

3.3.17.4 Configure ER schema Profile

Set the SESSIONS_PER_USER limit to UNLIMITED for ER Schema by executing the below steps:

Get the ER schema profile by executing the below query:
 select profile from dba users where username ='<ER SCHEMA USERNAME>';

2. Change the profile which is obtained from the step 1 by executing the below query:

ALTER PROFILE cprofile > LIMIT SESSIONS PER USER UNLIMITED;

3.4 Setup Password Stores with Oracle Wallet

As part of an application installation, administrators must set up password stores for database user accounts using Oracle Wallet. These password stores must be installed on the application database side. The installer handles much of this process. The administrators must perform some additional steps.

A password store for the application and application server user accounts must also be installed; however, the installer takes care of this entire process.

3.4.1 Setup the Password Stores for Database User Accounts

After the database is installed and the default database user accounts are set up, administrators must set up a password store using the Oracle Wallet. This involves assigning an alias for the username and associated password for each database user account. The alias is used later during the application installation. This password store must be created on the system where the application server and database client are installed. This section describes the steps to create a wallet and the aliases for the database user accounts. For more information on configuring authentication and password stores, see Oracle Database Security Guide.

NOTE

In this section, <wallet location> is a placeholder text for illustration purpose. Before running the command, ensure that you have already created the <wallet_location> directory where you want to create and store the wallet.

To create a wallet, follow these steps:

- 1. Log in to the server as a Linux user.
- 2. Create a wallet in the <wallet_location> using the following command:

```
mkstore -wrl <wallet location> -create
```

NOTE

The mkstore utility is included in the Oracle Database Client installation.

3. After you run the command, a prompt appears. Enter a password for the Oracle Wallet in the prompt.

Figure 4: Wallet Creation

```
bash-4.1$ mkstore -wrl
                                                                                                                -create

 our secret/Password is missing in the command line
Enter your secret/Password:
```

Create the database connection credentials for the studio schema/ER Schema alias using the following command:

```
mkstore -wrl <wallet location> -createCredential <alias-name> <database-
user-name>
```

After you run the command, a prompt appears. Enter the password associated with the database user account in the prompt. You are prompted to re-enter the password. You are prompted for the wallet password used in Step 1.

5. Create the database connection credentials for the atomic schema alias using the following command:

mkstore -wrl <wallet location> -createCredential <alias-name> <databaseuser-name>

NOTE

Creating an atomic schema is not required when installing Compliance Studio without OFSAA.

In this manner, create a wallet and associated database connection credentials for all the database user accounts.

The wallet is created in the <wallet_location> directory with the auto-login feature enabled. This feature enables the database client to access the wallet contents without using the password. For more information, see Oracle Database Security Guide.

After the wallet is created, go to the <wallet_location> directory and click **Refresh** to view the created wallet folder.

Figure 5: Location of the Created Wallet Folder

The wallet folder contains two files: ewallet.p12 and cwallet.sso.

6. In the <wallet location> directory, configure the tnsnames.ora file to include the entry for each alias name to be set up.

Figure 6: Snapshot of the tnsnames.ora file

```
tudio 808
  (DESCRIPTION
      (ADDRESS LIST =
          (ADDRESS = (PROTOCOL = TCP) (HOST =
                                                                      (PORT = 1521))
       (CONNECT DATA =
          (SERVICE_NAME =
  (DESCRIPTION =
      (ADDRESS_LIST =
          (ADDRESS = (PROTOCOL = TCP) (HOST =
                                                                      (PORT = 1521))
       (CONNECT DATA =
          (SERVICE NAME =
  (DESCRIPTION =
       (ADDRESS LIST =
          (ADDRESS = (PROTOCOL = TCP) (HOST =
                                                                      (PORT = 1521))
       (CONNECT DATA =
          (SERVICE NAME =
```

NOTE

- You can either update the existing this the existing the same of t above details or create new tnsnames.ora file and add the required entries.
- <alias-name> is a user-defined value.
- 7. Create a **sqlnet.ora** file in the wallet directory using the following content:

```
WALLET LOCATION = (SOURCE = (METHOD = FILE) (METHOD_DATA = (DIRECTORY =
<Wallet Location>)) )
SQLNET.WALLET OVERRIDE=TRUE
SSL CLIENT AUTHENTICATION=FALSE
```

Verify the Connectivity of the Wallet 3.4.2

To verify the connectivity of the wallet, follow these steps:

1. Create a sqlnet.ora file in the wallet directory using the following content:

```
WALLET LOCATION = (SOURCE = (METHOD = FILE) (METHOD DATA = (DIRECTORY =
<Wallet Location>)) )
```

```
SQLNET.WALLET OVERRIDE=TRUE
SSL CLIENT AUTHENTICATION=FALSE
```

2. Test the connectivity using the following command:

NOTE

The ORACLE_HOME used with the wallet must be the same version or higher than the wallet created.

```
$ export WALLET LOCATION=<wallet location>
$ export TNS ADMIN=<tnsnames.ora location>. If you have created a new
tnsnames.ora file, provide the location of the new file.
$ sqlplus /@<alias name>
```

The output is similar to:

```
SQL*Plus: Release 11
Connected to:
Oracle Database 12c
To verify if you are connected to the correct user:
SOL> show user
The output is similar to:
USER is "<database-user-name>"
```

Create the Credential Keystore 3.4.3

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

Credential keystore must be created for the Behavior Detection (BD) or Enterprise Case Management (ECM) Atomic schema and Compliance Studio Schema. To create a credential keystore, follow these steps:

- 1. Login as HDFS Superuser.
- 2. Create a credential keystore on HDFS using the following command:

```
hadoop credential create mydb.password.alias -provider jceks://hdfs/
user/root/oracle.password.jceks
```

3. Verify the credential keystore file using the following command:

```
hadoop credential list -provider jceks://hdfs/user/root/
oracle.password.jceks
```

4. Grant Read permission to the keystore file using the following command:

hadoop fs -chmod 744 /user/root/oracle.password.jceks

NOTE

Ensure the credential keystore file path and the alias are correctly mentioned in the config.sh file.

Copying and Adding Files 3.4.3.1

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

To copy the jar files, follow these steps:

- 1. Create the folder in the GRAPH FILES PATH parameter in a node of the big data cluster.
- 2. Create a folder called jars inside the folder that is created in the previous step.
- 3. Navigate to the <COMPLIANCE STUDIO INSTALLATION PATH>/ficdb/etlJars directory and copy all the jars in this directory into the big data node inside the folder jars.
- 4. Perform this step if https is enabled for OpenSearch:
 - a. Create a new folder with the name as **conf** in the **GRAPH_FILES_PATH** parameter in a node of the big data cluster.
 - b. Place the **admin.p12** file in the **conf** folder.

NOTE

To use the OS-Hadoop connector, download the commons-httpclient-3.0.1.jar and opensearch-spark-20_2.11-2.3.0.jar (depending on which OpenSearch version is used) files and place them in the jars folder.

This is applicable only in the case of ETL for Graph.

Create Credential Keystore for OpenSearch 3.4.3.2

Credential keystore must be created for the OpenSearch if https is enabled for OpenSearch.

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

To create a credential keystore, follow these steps:

- 1. Login as HDFS Superuser.
- 2. Create a credential keystore on HDFS using the following command:

hadoop credential create open.password.alias -value <Open search password> \

-provider jceks://hdfs/user/fccstudio/open/open.password.jceks

hadoop credential create open.keystore.password.alias -value password \

-provider jceks://hdfs/user/fccstudio/open/open.password.jceks Where,

- open.password.alias is the OpenSearch password alias name
- open.keystore.password.alias is the OpenSearch keystore password alias name
- <open search password> is OpenSearch password
- password is OpenSearch keystore password
- hdfs/user/fccstudio/open/open.password.jceks is the file path of the credential keystore
- 3. Verify the credential keystore file using the following command:

hadoop credential list -provider jceks://hdfs/user/fccstudio/open/open.password.jceks.

4. Grant Read permission to the keystore file using the following command:

hadoop fs -chmod 744 /user/fccstudio/open/open.password.jceks

NOTE

- Ensure the credential keystore file path and the alias are correctly mentioned in the config.sh file.
- The version of the open search jar should be the same as the version of OpenSearch installed.

4 Installation

Perform the following steps to complete the installation.

- Place Files in the Installation Directories
- Add Synonyms and Stopword files in OpenSearch
- Place Files in Wallet
- Generate the Public and Private Keys
- Generate API token for CS API User
- Generate Compliance Studio Server SSL Configuration Mandatory File
- Import the certificate to JDK security
- Place the Key Store File for Secure Batch Service
- Add the Studio Service (SSL) to PGX Configuration
- Configure the Extract Transfer and Load (ETL) Process
- Apply Fine-Grained access control and Redaction Changes for Compliance Studio
- Configure the config.sh File
- User Provisioning
- Run the Compliance Studio Installer
- Generate the graph-keystore.p12 File
- Configure the PGX Service
- Run ER in different workspaces

4.1 Place Files in the Installation Directories

NOTE

If you are using a Graph pipeline, skip **steps 1** and **2**. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

To place the required jars and Kerberos files in the required locations, follow these steps:

1. To place the additional jar files, follow these steps:

NOTE

This step is deprecated in the current release and will be removed in the future **release**.

- a. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/batchservice/user/ lib directory.
- b. Place the following additional jar files:
 - hive-exec-*.jar. For example, hive-exec-1.1.0.jar.
 - HiveJDBC4.jar
 - hive-metastore-*.jar. For example, hive-metastore-1.1.0.jar.
 - hive-service-*.jar. For example, hive-service-1.1.0.jar.

For additional jars, see the Appendix C – Additional Jars – PGX and Appendix D – Additional Jars – Batch Service sections.

NOTE

- The version of the jars is client or user-specific. These jars can be obtained from the existing jars of the Cloudera installation.
- The HiveJDBC4.jar file is not available in the Cloudera setup. You must download the same from the Cloudera website.
- **For upgrade scenario**: The libraries available in the previous version of Compliance Studio can be copied and placed in the new location. To place the libraries, follow step 1.
- 2. To place the Kerberos files, follow these steps:

NOTE

This step is deprecated in the current release and will be removed in the future **release**.

- a. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/batchservice/user/conf directory.
- b. Place the following Kerberos files:
 - krb5.conf
 - keytab file name as mentioned in the config.sh file.

NOTE

For upgrade scenario: The files available in the previous version of Compliance Studio can be copied and placed in the new location. To place the files, follow step 2.

- 3. Perform this step if https is enabled for OpenSearch:
 - a. Copy admin.p12 file from <OpenSearch Installation path>//config directory.
 - b. Place the admin.p12 file in <COMPLIANCE_STUDIO_INSTALLATION_PATH>/matching-service/conf directory.
 - c. Place the admin.p12 file in <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/load-to-open-search/conf directory.

4.2 Add Synonyms and Stopword files in OpenSearch

NOTE

For upgrade scenario: The Synonyms and Stopword files can be re-utilized from the previous Compliance Studio version.

To consider the similarity when performing the OpenSearch, you can add the synonyms and stopword files in the OpenSearch.

To add synonyms and stopword files in OpenSearch, perform the following steps:

- 1. Create a folder in the name of "analysis" in the <OpenSearch_Installation_path>/config directory.
- 2. You can add your synonyms and stopwords to these files and place the files in the analysis folder:

- Cardinal ordinal.txt
- Country.txt
- Gender.txt
- Namestop.txt
- Name synonym.txt
- Organisation strip.txt
- Organisation suffix.txt
- Synonym.txt
- Title.txt

NOTE

- User can decide to provide any data in the Stopword or Synonym files.
- Each Stopword must be provided in a separate line.
- All related synonyms must be provided in the same line, separated by a comma.
- All the synonyms must be provided in the same line and ensure that there are no repetitions of the synonym. For Example, rob, robi, robie, roby, robbi.

Place Files in Wallet 4.3

To place the files in the wallet in the required locations, follow these steps:

- To place the files in the wallet, follow these steps:
 - a. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>.
 - b. Create a folder 'wallet' and place the following files.
 - c. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/wallet.
 - d. Place the following files, which are being generated from the <wallet directory> in the section Setup the Password Stores for Database User Accounts:
 - tnsnames.ora
 - ewallet.p12
 - cwallet.sso
 - ewallet.p12.lck
 - cwallet.sso.lck

NOTE

This folder path will be referred to as "WALLET LOCATION" and "TNS ADMIN PATH" in config.sh while configuring Compliance Studio. If you want to maintain this name or a in a different folder, then "TNS ADMIN PATH" will be that folder location.

2. Place the **sqlnet.ora** file into the wallet and update the path for the current wallet location.

```
WALLET LOCATION =
```

4.4 Generate the Public and Private Keys

The Public and Private keys are JSON Web Tokens (JWT) that are generated for Authentication from Compliance Studio.

NOTE

If there is a need to regenerate public and private keys for any reason. The API token for CS API user has to be generated again, and the API token's new value must be provided in the **SSO_TOKEN** parameter of the config.sh file and reinstall the Compliance Studio.

To generate the keys, follow these steps:

NOTE

The following steps are mandatory for the first-time Compliance Studio installation.

- 1. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/mmg-home/bin directory.
- 2. Run the Shell Script ./key-generator.sh from the directory.

The Public and Private Keys are generated and available in the <COMPLIANCE STUDIO INSTALLATION PATH>/mmg-home/conf directory.

- 3. Copy the private.key and public.key files to the following paths:
 - <COMPLIANCE_STUDIO_INSTALLATION_PATH>/mmg-home/mmg-studio/conf directory.
 - <COMPLIANCE_STUDIO_INSTALLATION_PATH>/batchservice/conf directory.
 - <COMPLIANCE_STUDIO_INSTALLATION_PATH>/mmg-home/mmg-load-to-graph/ graph-service/conf directory.
 - <COMPLIANCE STUDIO INSTALLATION PATH>/mmg-home/mmg-ui/conf directory.

These files also be required in the Configure the PGX Service section.

4.5 Generate API token for CS API User

NOTE

In case SSO_TOKEN is regenerated and Compliance Studio is reinstalled with a new value of SSO_TOKEN, then user has to manually update the SSO_TOKEN record in the **NEXTGENEMF_CONFIG** table of the Studio Schema.

To generate the API token, follow these steps:

- 1. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/mmg-home/bin directory.
- 2. Run the shell script: ./ token-generator.sh CS API USER

This will generate the API token in the same directory as token.out.

The generated token that is required while configuring config.sh file in the path <COMPLIANCE STUDIO INSTALLATION PATH>/bin.

4.6 Generate Compliance Studio Server SSL Configuration Mandatory File

Topics:

- Generate Self-signed Certificate
- Generate Signed Certificate

4.6.1 Generate Self-signed Certificate

To generate the self-signed certificate, follow these steps:

1. Run the following jks command in the Studio Server:

keytool -J-Dkeystore.pkcs12.legacy -genkey -alias <alias> -keyalg RSA keystore <alias>.jks -dname "CN=<hostname>, OU=OR, O=OR L=OR, ST=OR,
C=OR" -ext "SAN=IP:<ip address 1>,IP:<ip address 2>"

NOTE

- ip address 2 is optional and hostname is the fully qualified host name.
- You must use the same password and alias that is provided in the config.sh file.
- 2. Specify the keystore password.
- 3. When generating the keytool ensure to provide the hostname in the first name. For example:

Question: What is your first and last name?

Answer: Provide the fully qualified studio server hostname.

For example, <hostname>.<domain name>

- 4. Specify any name for the other questions.
- 5. Specify the keystore password. The jks file is created in the Studio Server.

NOTE

You must use the same password and alias that is provided in the config.sh file.

6. Run the following jks command in the Studio Server to generate the .p12 file using the .jks file:

```
keytool -J-Dkeystore.pkcs12.legacy -importkeystore -srckeystore
<alias>.jks -destkeystore <alias name>.p12 -srcalias <alias> -
srcstoretype jks -deststoretype pkcs12
```

- 7. Specify the keystore password. The .p12 file is created in the Studio Server.
- 8. Copy the .p12 files and place in the <COMPLIANCE STUDIO INSTALLATION PATH>/mmghome/mmg-studio/conf directory.

Generate Signed Certificate 4.6.2

To generate the signed certificate, follow these steps:

- 1. Log in to the server as a Linux user.
- Generate the CSR file that describes the certificate requested and needed by the signing authority.
- 3. Openssl default configuration does not include subject alternative names by default.
- 4. SANs should be updated in cert.conf file. Additional SANs or IPs can be added through properties such as DNS.2, DNS.3, IP.1, and IP.2 in the [alt_names] section.
- 5. Once the configuration file is placed, generate the CSR file and associated private key by running the following command:

```
openssl req -new -newkey rsa: 2048 -nodes -keyout server.key -out
server.csr -config cert.conf
```

6. Provide the requested entries, and some entries can be left blank.

NOTE

You can check the CSR contains SANs by running the following command:

```
openssl req -text -noout -verify -in server.csr
```

- This step is optional only.
- 7. Request certificate from the signing authority. Once the certificate is received, convert the server.cer into PEM format if required by running the following command:

```
openssl x509 -in server.cer -out server.pem -outform PEM
```

NOTE

You can check the contents of the certificate to make sure that the SANs are included by running the following command:

```
openssl x509 -in server.pem -text
```

This step is optional only.

8. Create .p12 keystore.

NOTE

- The -name parameter must match the value of the STUDIO_SERVER_SSL_ALIAS variable from the path <COMPLIANCE_STUDIO_INSTALLATION_PATH>/bin/ config.sh
- To store the password, run the following command:

openssl pkcs12 -export -out studio_server.p12 inkey server.key -in server.pem -name
studio alias

- The password must match the value of the STUDIO_SERVER_SSL_PASSWORD variable from <COMPLIANCE_STUDIO_INSTALLATION_PATH >/bin/config.sh
- To check the keystore, run the following command:
 openssl pkcs12 -export -out studio_server.p12 inkey server.key -in server.pem -name
 studio_alias
- 9. Copy the cp studio_server.p12 file and place in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/mmg-home/mmg-studio/conf/ studio_server.p12 and <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/

This step is optional only.

mmg-home/mmg-studio/conf/studio_server.p12 directories.

10. Restart Compliance Studio. To do this, navigate to the

<COMPLIANCE_STUDIO_INSTALLATION_PATH>/bin directory and run the ./compliancestudio.sh restart

4.7 Import the certificate to JDK security

NOTE This section is required for both signed and self-signed certificates.

To import .p12 and .jks files, follow these steps:

1. Execute the following command to convert .p12 file into .cer format.

keytool -exportcert -keystore <Path of .p12 file >/<filename>.p12 storetype PKCS12 -alias <alias> -file <Path where studiop.cer file
should be created>/studiop.cer

For example,

keytool -exportcert -keystore /<COMPLIANCE_STUDIO_INSTALLATION_PATH>/
studio_server.p12 -storetype PKCS12 -alias studio_server -file /<COMPLIANCE_STUDIO_INSTALLATION_PATH>/studiop.cer

2. Execute the following command to import .cer file into jdk security.

keytool -importcert -keystore <JAVA_HOME>/lib/security/cacerts storepass changeit -alias studio_server -file <Path of studiop.cer file
created from about command>/studiop.cer

For example,

keytool -importcert -keystore /Home/fccstudio/jdk-11.0.18/lib/security/
cacerts -storepass changeit -alias studio_server -file /<COMPLIANCE_STUDIO INSTALLATION PATH>/studiop.cer

NOTE

If you need to delete certificate from the JDK then execute the following command:

keytool -delete -noprompt -alias studio_server -keystore
"<JAVA HOME>/lib/security/cacerts" -storepass "changeit"

This could be helpful if you need to re-import a new certificate in the JDK.

4.8 Place the Key Store File for Secure Batch Service

NOTE

For upgrade scenario: The files can be re-utilized from the previous version of Compliance Studio. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then .jks and .p12 files have to be generated newly by performing the steps mentioned in the section.

Place the .jks and .p12 files generated from the Generate Compliance Studio Server SSL Configuration Mandatory File section and place them in the path (batch service) <Compliance Studio Installation Path>/batchservice/conf.

NOTE

The .jks file is not required if you have signed p12 certificate. To generate signed certificate, see the Generate Signed Certificate section.

4.9 Add the Studio Service (SSL) to PGX Configuration

Adding the Studio Service (SSL) to PGX Trust Store facilitates you to apply redaction on the graph batch service and connect with PGX.

To add the Studio Service to PGX Trust Store, copy the .p12 file from <Compliance_Studio Installation_path>/mmg-studio/conf directory to the <PGX Server path>/pgx-server/conf directory.

After generating the .p12 file and adding the Studio service to the PGX trust store.

4.10 Configure the Extract Transfer and Load (ETL) Process

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

Extract Transfer and Load (ETL) is the procedure of copying data from one or more sources into a destination system that represents the data differently from the source or in a different context. Data movement and graph loading is performed using ETL.

To configure the Data Movement and Graph Load, copy the applicable FCCM_Studio_SqoopJob.sh files from the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/ficdb/bin directory and add in the <FIC HOME of OFSAA Installed Path>/ficdb/bin directory.

For more information, see the **Configure ETL** and **Execute ETL** sections in the OFS Compliance Studio Administration and Configuration Guide.

NOTE

Before running the sqoop job, ensure that the correct values are the server-config.properties file from the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/batchservice/conf directory.

4.10.1 Loading Graphs

Loading graphs to Compliance Studio can be based on the following scenarios:

4.10.1.1 Loading sample graph without running ETL

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

To load the sample graph without running ETL, perform the following steps:

- 1. Navigate to the <COMPLIANCE STUDIO INSTALLATION PATH>/sample-graph folder.
- 2. Unzip the contents of the sample-graph-8.*.zip file in the same folder.
- 3. Copy the entire path of the folder sample-graph.
- 4. Open the sample-graph-8.*.json file and paste the copied <sample-graph folder path> into the placeholder <SERVER PATH> under the parameter "uris".

NOTE

Ensure to replace all the placeholders with the copied path of the folder sample-graph.

5. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/pgx/pgx-server/conf directory and modify the pgx.conf file for the highlighted parameters:

6. Restart the PGX server.

4.10.1.2 Loading the graph generated from ETL

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

You can load a graph generated from ETL based on the following:

PGX fails until you have a graph generated from ETL on the HDFS. Once the graph is generated, and then as soon as the PGX server pods restart, the graph is pre-loaded to the Compliance Studio.

- Create a backup of pgx.conf. The backup can be used when the graph is generated from ETL.
- At the time of deployment, you must delete the following lines from the pgx.conf file.

],

■ The following lines must be delete multiple times.

- Proceed with the Compliance Studio deployment.
- Once the graph is generated, perform the following:
 - Replace the existing pgx.conf file with the backed up pgx.conf file
- Restart Compliance Studio.

4.10.1.3 Loading the graph generated from the Graph Pipeline

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- If you are using a Graph pipeline, skip this section. This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

You can load a graph generated from the Graph pipeline based on the following:

- 1. To configure the PGX service, see the Configure the PGX Service section.
- 2. In the <code>config.sh</code> file set the <code>LOAD_GRAPH_FROM_HDFS</code> parameter to load the graph:
 - If **True**, both the graph pipeline and legacy ETL will be loaded.
 - If **False**, the graph pipeline only will be loaded.
- 3. Start/restart the PGX service.
- 4. To refresh the graph, see the **Creating a Population Schedule** section in the OFS Compliance Studio User Guide and perform the steps from **10** to **12**.
 - The graph will be loaded.
- 5. To verify the loaded graph details, kindly create a new notebook and query the graph using pgql.

4.11 Apply Fine-Grained access control and Redaction Changes for Compliance Studio

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- This is applicable for the graph which is generated by Legacy ETL, i.e., with BigData cluster.

After generating the key store file and adding the batch service to the PGX trust store, you must configure the user mapping for the changes made in the database. For more information about configuring user mapping, see the OFS Compliance Studio Administration and Configuration Guide.

4.12 Configure the config.sh File

NOTE

For upgrade scenario: The value of highlighted parameters from the config.sh file has to be re-utilized from the previous version of Compliance Studio. If you upgrade from 8.1.2.0.* to CS 8.1.2.7.0, the additional parameters can be configured as mentioned in this section.

To configure the config.sh file for installing Compliance Studio, follow these steps:

- 1. Login to the server as a non-root user.
- 2. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/bin directory.
- 3. Configure the applicable config.sh attributes are shown in the following table. A sample config.sh file is shown below.

Figure 7: Snapshot of config.sh file

NOTE

- You must manually set the parameter value in the config.sh file.
 If a value is not applicable, enter NA and ensure that the value is not entered as NULL.
- If the parameter STUDIO_DB_SERVICE_NAME has been filled, the parameter STUDIO_DB_SID should be left **blank**, and vice versa.
- If the parameter ATOMIC_DB_SERVICE_NAME has been filled, the parameter ATOMIC_DB_SID should be left **blank**, and vice versa.

Table 15 lists configuration parameters of the config.sh file.

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|---|--|---|--|---|--|
| COMPLIANCE_STUDI O_INSTALLATION_PA TH | Indicates the path where the Compliance Studio installer file is extracted. For example, /scratch/testuser/ OFS_COMPLIANCE_STUDIO. | Yes | Yes. Provide the path where the new installer is extracted. For example, / scratch/ testuser/ OFS_COMPLIANCE_STUDIO. | Yes | Yes |
| MINICONDA_INSTALL ATION_HOME | Indicates configured path for miniconda installation. By default, the value is set to \$HOME, which refers to the user's home directory. | Yes | Yes | Yes | Yes |
| NON_OFSAA | To install Compliance Studio with OFSAA, enter "false". To install Compliance Studio without OFSAA, enter "true". | Yes Enter the value as false . | Yes Enter the value as false . | Yes Enter the value as true. | Yes Enter the value as true . |
| GRAPH_SOURCE | | | | | |
| GRAPH_SOURCE | Indicates the source database for Compliance Studio. Enter the value as BD . This is a legacy ETL parameter, and the value should always be BD. This will not impact the Graph pipeline functionality with ECM. | Yes The value of this parameter should be BD . | Yes The value of this parameter should be BD . Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter according to the BD Graph source. | Yes Enter the value as NA . | Yes Enter the value as NA . |

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|------------------------------|--|---|---|---|--|
| ECM_SCHEMA_NAME | Indicates the name of the ECM Atomic Schema. NOTE: If Legacy Graph (ETL connector job using Hadoop) is not required, then set the value as NA. | Yes The value should be name of the ECM Atomic Schema. | Yes The value should be name of the ECM Atomic Schema. Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes Enter the value as NA . | Yes Enter the value as NA . |
| FCDM_SCHEMA | This indicates the datasource for the Production workspace. The available options are ECM and BD . | Yes The value of this parameter should be provided either BD or ECM . | Yes The value of this parameter should be provided either BD or ECM . Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes Enter the value as NA . | Yes Enter the value as NA . |
| SSL Configuration | | | | | |
| STUDIO_SERVER_SSL _SECRET | Indicates the password for Studio Server P12 that is required for HTTPS configuration. | Yes | Yes. This file has to be generated newly. To create a file, see the Generate Compliance Studio Server SSL Configuration Mandatory File section. | Yes | Yes |

OFS Compliance Studio Installation Guide | 66

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|-----------------------------|--|---|--|---|--|
| STUDIO_SERVER_SSL _ALIAS | Indicates the alias name for P12 for the Studio Server. | Yes | Yes. Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| Authentication Realm | | | | | |
| AUTH_REALM | Realm indicates the functional grouping of database schemas and roles that must be secured for an application. Realms protect data from access through system privileges; realms do not give its owner or participant's additional privileges. Compliance Studio uses realm-based authorization and authentication for its users. For more information, see the Realm Based Authorization section in the OFS Compliance Studio Administration and Configuration Guide. The Compliance Studio application can be accessed using the following realms: FCCMRealm Value=AAI | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|---------------------------|--|---|---|---|--|
| AUTH_REALM | If SAML is selected as FCCSamlRealm Value, see the User Provisioning section for additional configuration. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| COOKIE_DOMAIN | The domain of the server where Compliance Studio is installed. Example: in.oracle.com | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| AAI related configuration | The Application URL of ECM/BD application. URL: http:// <server hostname="">:<application port="" url="">/ <context path=""> For example, http:// testserver.in.oracle. com:4000/BDTEST NOTE: This parameter is applicable only if AUTH_REALM is AAI.</context></application></server> | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No |

OFS Compliance Studio Installation Guide | 68

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|---|---|---|---|---|--|
| SAML The SAML-related parameters are applicable only if SAMLRealm is used in the Realm parameter. | In the case of SAML Realm, the certificate from IDP (key.cert file) is required. The certificate that is obtained from the IDP must be renamed to key.cert and placed in the <compliance_studio _installation_path="">/ mmg-home/mmg-studio/ conf directory. This certificate is used to identify the trust of the SAML response from the Identity Provider. Specify the Role Attribute name from IDP, in which the User Roles are present in the SAML response.</compliance_studio> | | | | |
| SAML_DESTINATION | Indicates the SAML IDP URL that the Identity Provider provides after creating the SAML Application. NOTE: This parameter is applicable only if AUTH_REALM is SAML. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|----------------------------|--|---|---|---|--|
| SAML_ROLE_ATTRIB UTE | Indicates the SAML client identifier provided by the SAML Administrator for the Role and Attributes information while creating the SAML application for Compliance Studio. NOTE: This parameter is applicable only if AUTH_REALM is SAML. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| SAML_LOGOUT_URL | Indicates the SAML client identifier provided by the SAML Administrator for the Logout URL information while creating the SAML application for Compliance Studio. NOTE: This parameter is applicable only if AUTH_REALM is SAML. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| Integrate with other pr | roducts | | | | |
| API_USERS | Retain the default settings. | Yes | Yes Retain Default Settings. | Yes | Yes |
| VALID_ROLES | Retain the default settings. | Yes | Yes Retain Default Settings. | Yes | Yes |
| BATCH_ROLE | Retain the default settings. | Yes | Yes Retain Default Settings. | Yes | Yes |
| MMG Service Configur | ations | | | | |
| SESSION_TOKEN_CRE DENTIALS | Retain the default settings. | Yes | Yes Retain Default Settings. | Yes | Yes |

OFS Compliance Studio Installation Guide | 70

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|----------------------------------|--|---|---|---|--|
| FCC_API_USER | Retain the default settings. | Yes | Yes Retain Default Settings. | Yes | Yes |
| SSO_TOKEN | This is the API token for FCC_API_USER. See the Generate API token for CS API User section for token value. | Yes | Yes See the Generate API token for CS API User section for token value. | Yes | Yes |
| MMG_DATASOURCE_ MAX_POOL_SIZE | Maximum connection pool size allowed for Config Data Source. 50 | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| MMG_DATASOURCE_ IDLE_TIMEOUT | Idle timeout for Config Data Source in a millisecond. 30000 | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |

OFS Compliance Studio Installation Guide | 71

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|----------------------------------|--|---|---|---|--|
| MMG_DATASOURCE_ CONN_TIMEOUT | Connection timeout for Config Data Source in milliseconds. 30000 | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| EXT_DATASOURCE_ MAX_POOL_SIZE | Maximum connection pool size allowed for Meta/Data Schemas. 50 | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| EXT_DATASOURCE_ IDLE_TIMEOUT | Idle timeout for Meta/Data Schemas in milliseconds. 30000 | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|---------------------------------|---|---|---|---|--|
| EXT_DATASOURCE_ CONN_TIMEOUT | Connection timeout for Meta/ Data Schemas in milliseconds. 30000 | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| SERVER_COOKIE_TI MEOUT | Connection timeout for server cookie in milliseconds. 86400 | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| DB Details for Studio S | chema | | <u> </u> | | |
| You must be logged in a | as SYSDBA to perform these confi | gurations. | | | |
| STUDIO_DB_HOSTN AME | Indicates the hostname of the database where the Compliance Studio schema is created. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| STUDIO_DB_PORT | Indicates the port number where the Compliance Studio schema is created. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|----------------------------|---|---|---|---|--|
| STUDIO_DB_SERVICE _NAME | Indicates the service name of the database where the Studio schema is created. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| STUDIO_DB_SID | Indicates the SID of the database where the Studio schema is created. NOTE: Set this field as blank if there is no SID for Database. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| STUDIO_DB_USERNA ME | Indicates the username of the Compliance Studio Schema (newly created Oracle Schema). | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| DB Details of Atomic S | chema | | | | |
| ATOMIC_DB_HOSTN AME | The hostname of the database where Atomic schema is present (BD/ECM config). | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| ATOMIC_DB_PORT | Port number of database where Atomic schema is present. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| ATOMIC_DB_SERVICE _NAME | The service name of the database where Atomic schema is present. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |

OFS Compliance Studio Installation Guide | 74

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|--|--|---|---|---|--|
| ATOMIC_DB_SID | Service id of database where Atomic schema is present. NOTE: Set this field as blank if there is no SID for Database. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| ATOMIC_DB_USERNA ME | Username of the Atomic schema | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| Wallet Details For information on crea | ting a wallet, see Setup Password | Stores with Oracle | e Wallet. | | |
| WALLET_LOCATION | Indicates the Compliance Studio wallet location. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| TNS_ADMIN_PATH | Indicates the path of the tnsnames.ora file where an entry for the STUDIO_ALIAS_NAME is present. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| STUDIO_ALIAS_NAM E | Indicates the Studio alias name. NOTE: Enter the alias name that was created during wallet creation. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |

OFS Compliance Studio Installation Guide | 75

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|-----------------------|--|---|---|---|--|
| ATOMIC_ALIAS_NAM E | Indicates alias name of FCDM source atomic schema given in wallet. NOTE: If Legacy Graph (ETL connector job using Hadoop) is not required, then set the value as NA. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio. | Yes | Yes |
| Logstash | | | | ı | |
| LOGSTASH_HOME | Logstash home Example: "/ <compliance_studio_i nstallation_path="">/ Logstash/logstash- 7.16.3" NOTE: See the section Configure Logstash for more details. If Graph Pipeline and Entity Resolution functionalities are not required, then set the value as NA.</compliance_studio_i> | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |

Graph Schema Configuration

NOTE:

The following parameters for graph service are mandatory for successful Compliance Studio installation, and the parameters cannot be set as blank or NA. If you do not want to use graph pipeline functionality, studio schema details should be provided for these parameters.

| GRAPH_DB_SERVER_ NAME | Indicates the Graph Database server name. | Yes | Yes | Yes | Yes |
|---------------------------|--|-----|-----|-----|-----|
| GRAPH_DB_PORT | Indicates the Graph Database server port. | Yes | Yes | Yes | Yes |
| GRAPH_DB_SERVICE _NAME | Indicates the Graph Database service name. | Yes | Yes | Yes | Yes |

OFS Compliance Studio Installation Guide | 76

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|----------------------------------|--|---|---|---|--|
| GRAPH_KEYSTORE_ PASSWORD | Indicates the password of the keystore file, which stores the password of the graph schema. NOTE: If Graph Pipeline functionality is not required, then set the value as NA. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | Yes | Yes |
| GRAPH_SCHEMA_DB _SCHEMA_NAME | Indicates the Database schema name of the graph schema. | Yes | Yes | Yes | Yes |
| GRAPH_SCHEMA_WA LLET_ALIAS | Indicates the wallet alias of the graph schema. | Yes | Yes | Yes | Yes |
| GRAPH_SCHEMA_W ALLET_LOCATION | Indicates the wallet location of the graph schema. | Yes | Yes | Yes | Yes |
| GRAPH_SCHEMA_TN S_ADMIN_PATH | Indicates the TNS admin path of the graph schema. | Yes | Yes | Yes | Yes |
| PGX_ENABLE_CP | It is used to enable or disable connection pooling for sub graph loading. The value for 'PGX_ENABLE_CP' is "true" or "false". For example, PGX_ENABLE_CP=true | Yes | Yes | Yes | Yes |
| PGX_CP_INITIAL_SIZE | Indicates the initial number of connections that are created when the pool is started. For example, 5 | Yes | Yes | Yes | Yes |

OFS Compliance Studio Installation Guide | 77

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|----------------------------|--|---|-------------------------------------|---|--|
| PGX_CP_MAX_TOTAL | Indicates the maximum number of active connections that can be allocated from this pool at the same time or negative for no limit. For example, 25 | Yes | Yes | Yes | Yes |
| PGX_CP_MAX_IDLE | Indicates the maximum number of connections that can remain idle in the pool, without extra ones being released or negative for no limit. For example, 10 | Yes | Yes | Yes | Yes |
| PGX_CP_MIN_IDLE | Indicates the minimum number of connections that can remain idle in the pool, without extra ones being created, or zero to create none. For example, 5 | Yes | Yes | Yes | Yes |
| PGX_CP_MAX_WAIT_ MILLIS | Indicates the maximum number of milliseconds that the pool will wait (when there are no available connections) for a connection to be returned before throwing an exception or -1 to wait indefinitely. For example, 3000 | Yes | Yes | Yes | Yes |

OFS Compliance Studio Installation Guide | 78

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|-------------------------------|--|---|-------------------------------------|---|--|
| PGX_CP_MIN_EVICTA BLE_IDLE | Indicates the minimum amount of time a connection may sit idle in the pool before it is closed and a new connection is created if count of connections is less than PGX_CP_MIN_IDLE. For example, PT30M | Yes | Yes | Yes | Yes |
| PGX_CP_SOFT_MIN_E VICTABLE | Indicates the minimum amount of time a connection may sit idle in the pool before it is closed and a new connection is created. For example, PT8H NOTE: The values lesser than PGX_CP_MIN_EVICTABLE_IDL E_TIME will close all the idle connection and create connection to match PGX_CP_MIN_IDLE. | Yes | Yes | Yes | Yes |
| ENABLE_MATCHING_ FOR_GRAPH | It is used to enable or disable matching for the graph. The value for is "true" or "false". For example, ENABLE_MATCHING_FOR_GR APH=true | Yes | Yes | Yes | Yes |

OFS Compliance Studio Installation Guide | 79

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|--|--|---|-------------------------------------|---|--|
| PGX_ZEPPELIN_SCHE DULER_THREADPOO L_SIZE | Indicates the threadpool size of the PGX interpreter. For example, 200 NOTE : This parameter can be configured after applying this patch 36752689 (v8.1.2.7.2) only. | No | No | No | No |
| Datasource Details | | 1 | | | |
| AUDIT_DATASOURCE_ NAME | Indicates the datasource name which points to the database schema where lHub audit log is saved. For example, GS is the datasource name which points to the Graph Schema. NOTE: This parameter can be configured after applying this patch 36752689 (v8.1.2.7.2) | No | No | No | No |
| Quantifind Details | only. | | | | |
| | rs are related to Quantifind Integra | ation with Investig | ation Hub and these are optiona | 1. | |
| ENABLE_QUANTIFIND | It is used to enable or disable the quantifind integration. | No | No | No | No |
| | The value is "true" or "false". | | | | |
| | NOTE : This parameter can be configured after applying this patch 36752689 (v8.1.2.7.2) only. | | | | |

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|-------------------------|--|---|-------------------------------------|---|--|
| QUANTIFIND_URL | Indicates the quantifind API URL. For example, https://testserver.quantifind.com NOTE: This parameter can be | No | No | No | No |
| | configured after applying this patch 36752689 (v8.1.2.7.2) only. | | | | |
| QUANTIFIND_TOKEN | Indicates the quantifind API token. NOTE : This parameter can be configured after applying this patch 36752689 (v8.1.2.7.2) only. | No | No | No | No |
| QUANTIFIND_APPNA ME | Indicates the quantifind App Name. NOTE : This parameter can be configured after applying this patch 36752689 (v8.1.2.7.2) only. | No | No | No | No |
| HTTPS_PROXY_HOST | Indicates the proxy host that is used. For example, test-proxyserver.com | No | No | No | No |
| HTTPS_PROXY_PORT | Indicates the proxy port that is used. For example, 80 | No | No | No | No |
| HTTP_PROXY_USER NAME | Indicates the proxy username used, if there is any. | No | No | No | No |
| HTTP_PROXY_PASSW ORD | Indicates the proxy password used if there is any. | No | No | No | No |

OFS Compliance Studio Installation Guide | 81

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) | | | | |
|---|---|---|---|---|--|--|--|--|--|
| PGX server configuration | | | | | | | | | |
| i.e., Interpreter, data memory limits | | | | | | | | | |
| NUM_CACHED_RESU LTSET | Indicates the cached result set. For example, 0 | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No | | | | |
| RESULTSET_EXPIRAT ION_TIME_SECS | Indicates the Result set expiration time. For example, 3600. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No | | | | |
| MAX_TOTAL_SHARE D_DATA_MEMORY_SI ZE | The absolute memory limit of shared data (includes published graphs and pinned non-referenced graphs). For example: 20G | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No | | | | |

OFS Compliance Studio Installation Guide | 82

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|--|--|---|---|---|--|
| MAX_TOTAL_PRIVAT E_DATA_MEMORY_SI ZE | The memory limit of private data (includes non-published graphs and PGQL results) relative to the total PGX engine memory limit. For example, 8G | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No |
| MAX_PER_SESSION_ DATA_MEMORY_SIZE | Absolute memory limit for any one session of the PGX engine. For example: 700M | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No |
| MAX_DATA_MEMOR Y_SIZE_DSUSRGRP | Absolute memory limit for any user of the PGX engine whose role is DSUSRGRP. For example: 2G | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No |

OFS Compliance Studio Installation Guide | 83

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|----------------------------------|--|---|---|---|--|
| MAX_DATA_MEMOR Y_SIZE_DSBATCH | Absolute memory limit for any user of the PGX engine whose role is DSBATCH. For example: 10G | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No |
| MAX_DATA_MEMOR Y_SIZE_DSINTER | Absolute memory limit for any user of the PGX engine whose role is DSINTER. For example: 5G | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No |
| MAX_DATA_MEMOR Y_SIZE_DSAPPROVER | Absolute memory limit for any user of the PGX engine whose role is DSAPPROVER. For example: 5G | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No |

OFS Compliance Studio Installation Guide | 84

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|---------------------------------|---|---|---|---|--|
| MAX_DATA_MEMOR Y_SIZE_DSUSER | Absolute memory limit for any user of the PGX engine whose role is DSUSER. For example, 5G | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No |
| Service URLs | | | | 1 | |
| PGX_SERVER_URL | Indicates the URL of the PGX server. NOTE: If SSL is enabled, the URL should be provided with https. To enable, see the Add the Studio Service (SSL) to PGX Configuration section. If SSL is disabled, the URL should be provided with http. Ensure to provide the correct hostname for the URL of the PGX service. If Legacy Graph (ETL connector job using Hadoop) and Graph Pipeline functionalities are not required, then set the value as NA. | Yes | Yes Enter the value of this parameter from the previous version of the Compliance Studio config.sh file. If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly. | No | No |

OFS Compliance Studio Installation Guide | 85

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|---|---|---|-------------------------------------|---|--|
| COMPLIANCE_STUDI O_GATEWAY_ENABLE D | True: Indicates the Compliance Studio Gateway is enabled. | Yes | Yes | Yes | Yes |
| | NOTE: This parameter is available only after applying the patch 36537907 (v8.1.2.7.1). | | | | |
| COMPLIANCE_STUDI O_GATEWAY_PORT | Indicates the Compliance Studio gateway port that is used. | Yes | Yes | Yes | Yes |
| | For example, 7071. | | | | |
| | NOTE: This parameter is available only after applying the patch 36537907 (v8.1.2.7.1). | | | | |

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|--------------------------|---|---|--|---|--|
| MATCHING_MECHANI SM | Indicates the matching mechanism for Entity Resolution and Graph. The values are OS, ES, and OT. Where OS refers to OpenSearch, ES refers to Elastic Search, and OT refers to Candidate Selection with Oracle Text matching. NOTE: For MATCHING_MECHANISM = OT, no additional installation/configuration is required as it is part of the Oracle Database. | Yes By default, the value of the parameter is OT. | Yes By default, the value of the parameter is OT . | Yes Enter the value as NA . | Yes Enter the value as NA . |
| OpenSearch Cluster De | etails | | | | |
| OPEN_SEARCH_HOS TNAME | Indicates the hostname of the server where the OpenSearch service is installed. NOTE: If Graph Pipeline and Entity Resolution functionalities are not required, then set the value as NA. | Yes | Yes The value of this parameter has to be created newly based on the OpenSearch configuration. | Yes | Yes |
| OPEN_SEARCH_PORT | Indicates the port number where the OpenSearch service is installed. NOTE: If Graph Pipeline and Entity Resolution functionalities are not required, then set the value as NA. | Yes | Yes The value of this parameter has to be created newly based on the OpenSearch configuration. | Yes | Yes |

OFS Compliance Studio Installation Guide | 89

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|--|---|---|--|---|--|
| OPEN_SEARCH_HAD OOP_CREDENTIAL_P ATH | Indicates the open search hadoop credential path. For information about path, see the Create Credential Keystore for OpenSearch section. NOTE: | Yes | Yes The value of this parameter has to be created newly based on the OpenSearch configuration. | Yes | Yes |
| | This parameter is deprecated in the current release and will be removed in the future release. | | | | |
| | It is applicable only for legacy ETL. If Graph Pipeline and Entity Resolution functionalities are not required, then set the value as NA . | | | | |
| OPEN_SEARCH_USER NAME | OpenSearch Username (Not Applicable, if https enabled is false and authentication is not supported). NOTE: | Yes | Yes The value of this parameter has to be created newly based on the OpenSearch configuration. | Yes | Yes |
| | If Graph Pipeline and Entity Resolution functionalities are not required, then set the value as NA . | | | | |

OFS Compliance Studio Installation Guide | 90

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|-------------------------------------|---|---|--|---|--|
| OPEN_SEARCH_ENCR YPTED_PASSWORD | Encrypted password (Not Applicable, if https enabled is false and authentication is not supported). NOTE: To generate an encrypted password, see the Appendix F - Generate an Encrypted Password for OPenSearch section. If Graph Pipeline and Entity Resolution functionalities are not required, then set the value as NA. | Yes | Yes The value of this parameter has to be created newly based on the OpenSearch configuration. | Yes | Yes |
| OPEN_SEARCH_HAD OOP_PASSWORD_AL IAS | Indicates the password alias for OpenSearch (Not applicable if OS OPEN_SEARCH_HT TPS_ENABLED is false). NOTE: This parameter is deprecated in the current release and will be removed in the future release. If Graph Pipeline and Entity Resolution functionalities are not required, then set the value as NA. | Yes | Yes The value of this parameter has to be created newly based on the OpenSearch configuration. | Yes | Yes |

OFS Compliance Studio Installation Guide | 91

|--|--|---|--|---|--|
| OPEN_SEARCH_KEYS TORE_HADOOP_CRE DENTIAL_ALIAS | Indicates the password alias for OpenSearch (Not applicable if OS OPEN_SEARCH_HT TPS_ENABLED is false). NOTE: This parameter is deprecated in the current release and will be removed in the future release. It is applicable only for legacy ETL. If Graph Pipeline and Entity Resolution functionalities are not required, then set the value as NA. | Yes | Yes The value of this parameter has to be created newly based on the OpenSearch configuration. | Yes | Yes |
| Additional MMG Config | | :D\#65_LIDL_6DAD | W HOME EST EMADLED. LE | | |
| | uired for these DATACATALOG_SE | RVICE_URL, SPAR | K_HOME, EST_ENABLED, and ES | o I _UI_URL parar | neters. |
| All Services | Set the value of the parameter, DEPLOY_ALL_SERVIC E, as: true for starting all services false for starting selected services. Example: Compliance Studio independent of OFSAA: set "false" for service(s): entity resolution, matching service, and load-to-open Compliance Studio lite: set "false" for service(s): fcc-pgql, fcc-pgx- algorithm, fcc-pgx-java and pgx-server | | | | |

Table 15: config.sh file

| Parameter | Significance | Installing with OFSAA (Mandatory) | Upgrading with OFSAA (Mandatory) | Installing without OFSAA (Mandatory) | Upgrading without OFSAA (Mandatory) |
|---------------------------------|---|---|-------------------------------------|---|--|
| DEPLOY_ALL_SERVIC E | True: Indicates that all services are deployed. | Yes | Yes | Yes | Yes |
| Services | | | | | |
| METASERVICE_ENAB LED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| BATCHSERVICE_ENA BLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| GRAPH_SERVICE_EN ABLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| FCC_UI_ENABLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| CANDIDATE_SELECTI ON_ENABLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| FCC_PYTHON_ENAB LED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| JDBC_ENABLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| PGX_ENABLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| ENTITY_RESOLUTIO N_ENABLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| MATCHING_SERVICE _ENABLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| LOAD_TO_OPEN_SE ARCH_ENABLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |
| MMG_SERVICE_ENA BLED | True: Indicates that the service is enabled. | Yes | Yes | Yes | Yes |

4.13 User Provisioning

NOTE

Prerequisites: Apply the patch (36537907) to enable this functionality. Pre-configure the REALM type as SAML for authentication.

The User Provisioning feature enables users and groups to be provisioned to Compliance Studio using REALM type. The types are:

- SAML for Authentication and AAI for Authorization
- SAML for Authentication and SAML for Authorization

4.13.1 SAML for Authentication and AAI for Authorization

If the REALM type is selected as **SAML for authentication and AAI for authorization**, configure these steps:

- 1. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- 2. Open the config.sh file and set the parameters as described in the Table 16.

NOTE

For parameter description, see the Configure the config.sh File section.

Table 16: Parameters of config.sh file

| Parameter | Value |
|---------------------|--|
| AUTH_REALM | SAML |
| | NOTE: |
| | This parameter is mandatory. |
| SAML_DESTINATION | Provide the IDCS-SSO URL. |
| | NOTE: |
| | This parameter is mandatory. |
| SAML_ROLE_ATTRIBUTE | Provide the group name. |
| | NOTE: |
| | This parameter is mandatory. |
| SAML_LOGOUT_URL | Provide the IDCS-SLO URL. |
| | NOTE: |
| | This parameter is mandatory. |
| AAI_URL | The value will be BD/ECM application where the USER- |
| | GROUP map/authentication is present. |
| | NOTE: |
| | This parameter is mandatory. |

- 3. Reinstall Compliance Studio.
- 4. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-ui/conf directory.

5. Open the application.properties file and add the following lines at the last:

#Fetching User-Groups from AAI using Bearer Token

aai.client.id=#client#

aai.client.secret=#secret#

aai.enable.fetchgroups=#true#/#false#

6. Replace the placeholder value as described in the Table 17.

Table 17: Parameter of application.properties file

| Parameter | Value |
|------------------------|--|
| aai.client.id | Provide Instance Name (STP_ACC_NM) of the Bearer Token. To get the instance name, see the Generating the Bearer Token section. |
| aai.client.secret | Provide the Bearer token (STP_ACC_TKN). To get the secret, see the Generating the Bearer Token section. |
| aai.enable.fetchgroups | Set the value as true for AAI authorization |
| aai.auth.url | Provide the AAI_URL. |

7. Perform Step 5 and Step 6 in application.properties file in the below location to take care of configuration whenever reinstall is required.

<COMPLIANCE STUDIO INSTALLATION PATH>/mmg-home/mmg-ui/conf

8. Restart Compliance Studio.

SAML for Authentication and SAML for Authorization 4.13.2

If the REALM type is selected as SAML for authentication and SAML for authorization, configure these steps:

- 1. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- 2. Open the config.sh file and set the parameters as described in the Table 18.

NOTE For parameter description, see the Configure the config.sh File section.

Table 18: Parameters of config.sh file

| Parameter | Value |
|---------------------|---------------------------|
| AUTH_REALM | SAML |
| SAML_DESTINATION | Provide the IDCS-SSO URL. |
| SAML_ROLE_ATTRIBUTE | Provide the group name. |
| SAML_LOGOUT_URL | Provide the IDCS-SLO URL. |

- 3. Reinstall Compliance Studio.
- 4. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/mmg-home/mmg-ui/ conf directory.
- 5. Open the application.properties file and add the following lines at the last:

```
#Fetching User-Groups from AAI using Bearer Token
```

```
aai.client.id=#client#
aai.client.secret=#secret#
aai.enable.fetchgroups=#true#/#false#
```

6. Replace the placeholder value as described in the Table 19.

Table 19: Parameter of application.properties file

| Parameter | Value |
|------------------------|---|
| aai.client.id | Retain the placeholder as it is |
| aai.client.secret | Retain the placeholder as it is |
| aai.enable.fetchgroups | Set the value as false for SAML authorization |
| | NOTE: |
| | This parameter is mandatory. |

7. Perform Step 5 and Step 6 in application.properties file in the below location to take care of configuration whenever reinstall is required.

```
<COMPLIANCE STUDIO INSTALLATION PATH>/mmg-home/mmg-ui/conf
```

8. Restart Compliance Studio.

Generating the Bearer Token 4.13.3

Bearer Token is required to configure the Compliance Studio for authentication and authorization.

To generate the bearer token, follow these steps:

- 1. Login to the BD/ECM application as **sysadmin**.
- 2. Select **Configure Instance Access Token** from the **System Configuration**.
- 3. Click **Add**. The Configure Instance Access Token window is displayed.

ORACLE US-English ■ Configure I ■ Configure Instance Access Token Generate Token Close * Instance Name TEST123 ■ Configur + Add ■ Instance Access Token Details STP_ACC_NM=TEST123 Instance Nar STP_ENC_STR=VEVTVDEyMzpjMmQxZjYzMy1lMzU3LTRmYmQtYTNhYy0zOWE3MTdiMzEwZGY STP_ACC_TKN=c2d1f633-e357-4fbd-a3ac-39a717b310df TESTOSPATO

Figure 8: Configure Instance Access Token

- Provide the **Instance Name.**
- Click Generate token. The Configure Instance Access Token Details are displayed.
- 6. Copy the **STP_ACC_NM** and **STP_ACC_TKN** for configuration.
- 7. Click **Close** to exit the screen.

Run the Compliance Studio Installer 4.14

This section provides the install, reinstall, start, restart and stop of the services.

The Compliance Studio application is installed with or without OFSAA, depending on the configuration provided in the config. sh file. The Compliance Studio application and all the interpreters are started.

After completing the Compliance Studio installation, the script displays a URL that can be used to access the Compliance Studio Application.

Installing for first time 4.14.1

For first-time installation, you can pass argument '-i' or '--install'.

To run the Compliance Studio installer, follow these steps:

- 1. Navigate to the <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- 2. Run the following command with a Linux user where Compliance Studio is installed:

```
./compliance-studio.sh -i
./compliance-studio.sh --install
```

This will copy the whole compliance studio into the folder 'deployed' and then replaces the placeholders. Now, you can start Compliance Studio.

NOTE

- Run these commands only from <COMPLIANCE STUDIO INSTALLATION PATH>/bin.
- It should not be run from <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/ bin.
- Upon executing ./compliance-studio.sh -i command. A deployed folder is created that copies all the folders. And replaces placeholders inside the deployed folder.

Congratulations! Your installation is complete.

NOTE

For any help on installation commands, Run

./compliance-studio.sh --help

Starting Compliance Studio 4.14.2

NOTE

If any service fails to start, you need to wait 10 minutes to see the log file for the failure reason. After 20 minutes, the console will display the message as "Compliance Studio may have partially initiated or has encountered a startup failure," in meantime you should not stop any activities.

- Switch to the Compliance Studio UNIX user home directory and run the user profile.
- Switch to Compliance Studio installed bin directory and run the following command:

```
./compliance-studio.sh --start
```

This will start the application and, on successful installation, will make the sensitive details blank in config.sh.

NOTE

If any of the services are not started/running and failed due to lock, perform the following:

- 1. Log in to Studio schema.
- 2. Run the following command to Truncate tables:

```
TRUNCATE TABLE DATABASECHANGELOGLOCK;
TRUNCATE TABLE DATABASECHANGELOGLOCK MMG;
```

- 3. Log in to BD/ECM schema.
- 4. Run the following command to Truncate tables:

```
TRUNCATE TABLE DATABASECHANGELOGLOCK;
```

5. Start the Compliance Studio.

Stopping Compliance Studio 4.14.3

To stop the application, you can run pass argument '-k' or '--stop'. Example:

./compliance-studio.sh --stop

Restarting Compliance Studio 4.14.4

To restart the application, you can run pass argument '-r' or '--restart'. Example:

./compliance-studio.sh --restart

Reinstalling Compliance Studio 4.14.5

NOTE

Reinstalling Compliance Studio removes the value of SSO_TOKEN from the NEXTGENEMF_CONFIG table in the Studio Schema. After reinstallation is completed, replace value in the table manually and then start Compliance

In case if you need to reinstall compliance Studio due to the wrong configuration or need to update configuration details. Then:

- Stop the Compliance Studio
- Update the config. sh file. Do not forget to reconfigure the sensitive details which were removed earlier.

To restart the application, you can run pass argument '-R' or '--reinstall'. Example:

./compliance-studio.sh --reinstall

Once reinstallation is done, you can start the application.

Generate the graph-keystore.p12 File 4.15

NOTE

Before creating the graph-keystore.p12 file, ensure that the graph service is up and running.

To generate the graph-keystore.p12 file, follow these steps;

- Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/mmg-home/mmgload-to-graph/graph-service/utility/bin directory.
- 2. Execute the following command:
 - ./CreatePasswordlessKeystore.sh
- 3. You need to enter the following values:
 - a. **Wallet Alias**: Enter the wallet alias of graph schema.
 - b. **Password:** Enter the graph schema password.
 - c. **Keystore Alias**: Enter an alias name for keystore.
- 4. The graph-keystore.p12 file is generated and available in the <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/mmg-home/mmg-load-tograph/graph-service/conf directory.

5. Copy the graph-keystore.p12 file and place in the <PGX_HOME>/pgx/pgx-server/conf directory.

NOTE

- If you do not have any graph schema then create an empty file with a name "graph-keystore.p12" and place it in the <PGX_HOME>/pgx/pgx-server/deployed/conf directory.
- The path where the pgx-server-<version>.zip file is unzipped is referred to as <PGX HOME>.
- If you are updating credentials then copy the updated graph-keystore.p12 file and place in the <PGX_HOME>/pgx/pgx-server/conf directory.

4.16 Configure the PGX Service

NOTE

PGX service can be configured on the same server where Compliance Studio is installed or on a different server.

To install PGX service, follow these steps:

NOTE

If you are using a Graph pipeline, skip Step 4, Step 5, and Step 6.

This is applicable only in the case of legacy Graph ETL, which requires a Big Data cluster.

- Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/pgx/pgx-server/ directory.
- 2. Perform the following:
 - If PGX service is to be installed on the same server where Compliance Studio is installed, extract the pgx-server-<version>.zip file.
 - If PGX service is to be installed on a different server, follow these steps:
 - Copy the pgx-server-<version>. zip file to the PGX server.
 - Extract the pgx-server-<version>.zip file.

NOTE

The path where the pgx-server-<version>.zip file is unzipped and it is referred to as <PGX HOME>.

- 3. Navigate to the <PGX HOME>/pgx-server/conf directory and copy the following files:
 - studio_server.p12 file, for more information where to obtain this file, see the Generate Compliance Studio Server SSL Configuration Mandatory File section.
 - graph-keystore.p12 file, for more information where to obtain this file, see the Generate the graph-keystore.p12 File section.

public.key file, for more information where to obtain this file, see the Generate the Public and Private Keys section.

NOTE

If applicable, configure the following properties.

In the server.conf file, configure the following properties:

- enable_tls: false
- enable_client_authentication: false
- The property value is true by default, which means that the SSL certificate is enabled and recommended. Change to false only if you do not have the SSL certificate enabled.
- 4. Replace the following Kerberos Files in the <PGX HOME>/pgx-server/conf/kerberos directory:

krb5.conf

keytab file name as mentioned in the config.sh file.

NOTE

This step is deprecated in the current release and will be removed in the future release.

For upgrade scenario: Use files from the previous version of CS.

- 5. Replace the following Hadoop configuration files in the <PGX HOME>/pgx-server/conf/ hadoop cluster directory:
 - core-site.xml
 - hadoop-env.sh
 - hdfs-site.xml
 - log4j.properties
 - ssl-client.xml
 - topology.map
 - topology.py
 - hive-site.xml
 - yarn-site.xml
 - redaction-rules.json
 - hive-env.sh
 - mapred-site.xml

For additional jars, see Appendix C – Additional Jars – PGX section. Contact your administrator to get the files.

NOTE

This step is deprecated in the current release and will be removed in the future release.

For upgrade scenario: Use files from the previous version of CS.

6. Copy all the obtained jars into <PGX_HOME>/pgx-server/conf/hdfs_libs directory.

NOTE This step is deprecated in the current release and will be removed in the future release.

For upgrade scenario: Use files from the previous version of CS.

7. Navigate to the <PGX_HOME>/pgx-server/bin directory and configure the config.sh file as described in the Table 20.

Table 20: Config.sh file for PGX

| Interaction Variable Name | Significance | |
|---------------------------------|---|--|
| PGX Server Memory Configuration | | |
| PGX_SERVER_OFF_HEAP_MB | Indicates the maximum off-heap memory size in megabytes (mainly used for storing graphs except for their string properties) that PGX tries to respect. Recommended Value: 42% of the PGX server memory limit size above. | |
| PGX_SERVER_ON_HEAP_MB | Indicates the maximum and minimum heap memory size (mainly used for storing graphs' string properties) for the Java process of PGX. Recommended Value: 58% of the PGX server memory limit size above. | |
| PGX_SERVER_YOUNG_SPACE_MB | Indicates the amount of young space (new space) configured for the java heap. | |
| External Service Configuration | | |
| GRAPH_SERVICE_URL | It indicates external service configuration where the Graph service is available. | |
| | For example, | |
| | https:// <compliance fully="" hostname="" qualified="" studio="">:7059/graph-service</compliance> | |
| GRAPH_KEYSTORE_PASSWORD | Indicates the password of the keystore file, which stores the password of the graph schemas. | |
| PGX SSL Configuration | | |
| PGX_SERVER_SSL_ENABLED | By default, the property value is true which means the SSL certificate is enabled and recommended. NOTE: | |
| | Change it to false only if you do not required the SSL certificate. | |
| PGX_SERVER_KEYSTORE_ALIAS | It indicates the alias name provided when generating a self- signed server keystore for PGX. | |
| PGX_SERVER_KEYSTORE_FILE_PATH | It indicates the absolute path of the server_keystore.jks file, which is generated during Generating a Self-Signed Server Keystore for PGX. | |

Table 20: Config.sh file for PGX

| Interaction Variable Name | Significance | |
|------------------------------|--|--|
| PGX_SERVER_KEYSTORE_PASSWORD | It Indicates the password created while generating a Self-signed server keystore for PGX. | |
| Advance Configuration | | |
| SHUTDOWN_GRACE_PERIOD | It indicates the grace period in minutes for the graceful shutdown of the PGX Server. To set value, uncomment and set the value. | |
| | NOTE: | |
| | The value should be an integer. | |
| | If the value is less than 1, then force shutdown is triggered immediately. | |

You can generate graph-keystore.p12 file after starting the Compliance Studio. For upgrade scenario: Enter the value of this parameter from the previous version of Compliance Studio config.sh file (PGX service). If you are upgrading from 8.1.2.0.* to CS 8.1.2.7.0, then update this parameter accordingly.

8. Navigate to the <PGX_Installation_Path>/pgx-server/bin directory and run any one of the following commands:

```
./pgx-server.sh -install
Or
./pgx-server.sh -i
```

Figure 9: PGX start service

```
SLF4J: See http://www.slf4j.org/codes.html#multiple_bindings for an explanation.

Oct 08, 2021 11:01:54 AM org.apache.jasper.servlet.TldScanner scanJars

INFO: At least one JAR was scanned for TLDs yet contained no TLDs. Enable debug logging for this 1

g unneeded JARs during scanning can improve startup time and JSP compilation time.

SLF4J: Class path contains multiple SLF4J bindings.

SLF4J: Found binding in [jar:file: /tmp/pgx server7325961773484200210/ROOT/WEB-INF/lib/log4j-slf4j-
SLF4J: See http://www.slf4j.org/codes.ntml#multiple_pindings for an explanation.
```

9. Start the PGX service.

To start the PGX service, follow these steps:

- a. Navigate to the path where the PGX service is installed.
- b. Navigate to the following directory where the start service for PGX is located:

```
<PGX Installation Path>/pgx-server/bin
```

c. Run any one of the following commands:

```
./pgx-server.sh --start
Or
./pgx-server.sh -s
```

10. Stop the PGX service.

To stop the PGX service, run any one of the following commands:

```
./pgx-server.sh --stop
Or
./pgx-server.sh -k
```

11. Force stop the PGX service.

To force stop the PGX service, run any one of the following commands:

```
./pgx-server.sh --force-stop
Or
./pgx-server.sh -f
```

- 12. Restart the PGX service.
- 13. Reinstall the PGX service.

To reinstall the PGX service, run any one of the following commands:

```
./pgx-server.sh -reinstall
Or
./pgx-server.sh -R
```

4.17 Generating Certificate for PGX Server

We recommend getting a certificate issued by a certificate authority (CA), which is trusted by your organization for the Linux server where the PGX server will be installed. If a CA certificate is not available, then generate it. To generate the certificate for PGX Server, see the Generating a Self-Signed Server Keystore section.

4.17.1 Generating a Self-Signed Server Keystore

To generate a self-signed server keystore by executing the following command:

```
1. keytool -genkey -alias pgx -keyalg RSA -keystore server_keystore.jks
```

2. Provide the requested details.

For example:

Enter keystore password:

Re-enter new password:

What is your first and last name?

[Unknown]: my.hostname.domain.com

What is the name of your organizational unit?

[Unknown]: OU

What is the name of your organization?

[Unknown]: MyOrganization

What is the name of your City or Locality?

[Unknown]: MyTown

What is the name of your State or Province?

[Unknown]: MyState

What is the two-letter country code for this unit?

[Unknown]: US

Is CN= my.hostname.domain.com, OU=OU, O=MyOrganization, L=MyTown, ST=MyState, C=US correct?

[no]: yes

4.17.2 Configuring PGX Server

Users need to update config.sh file for configuring the PGX server. For more information, see the Table 20.

4.17.2.1 Trust Compliance Studio's SSL certificate

To trust Compliance Studio's SSL certificate, follow these steps:

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmgstudio/conf directory.
- 2. Obtain the Compliance Studio's SSL certificate, "studio server.p12".
- 3. Generate the certificate in '.cer' format using "studio_server.p12" by executing the following command:

```
keytool -exportcert -keystore <keystore path> -storepass <keystore
password> -storetype PKCS12 -alias studio_server -file <ca_cert_dir>/
studio server.cer
```

4. Import the generated certificate to JAVA CA certs by executing the following command:

```
keytool -importcert -keystore $JAVA_HOME/lib/security/cacerts -storepass
changeit -alias studio_server -file <ca_cert_dir>/studio_server.cer
```

NOTE

Replace <keystore path> with the absolute path of "studio_server.p12" and replace <ca_cert_dir> with the directory where studio_server.cer should be generated.

4.17.3 Configuring Compliance Studio Server

Users need to trust PGX Server's certificate for configuring the Compliance Studio server.

4.17.3.1 Trust PGX Server's certificate

To trust PGX Server's certificate, follow these steps:

- 1. Copy the "ca_certificate.pem" from the PGX server to the Compliance Studio server.
- 2. Import the copied certificate to the java ca certs by executing the following command:

keytool -import -trustcacerts -keystore \$JAVA_HOME/lib/security/cacerts
-storepass changeit -alias pgx -file /path/of/ca_certificate.pem noprompt

NOTE

Replace /path/of/ca_certificate.pem " with the path where the certificate is copied.

- 3. If the PGX server keystore is generated, copy the "server_keystore.jks" from the PGX server to the Compliance Studio server.
- 4. Import the copied keystore to the java ca certs by executing the following command:

keytool -importkeystore -srckeystore /path/of/server_keystore.jks destkeystore \$JAVA_HOME/lib/security/cacerts -deststorepass changeit srcstorepass <keystore password> -noprompt

NOTE

Replace <keystore password> with the password generated while creating the pgx server keystore.

- 5. Update the PGX URL to set it as "https" using the following steps:
 - a. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
 - b. Open the config.sh file and update the "PGX_SERVER_URL" as https://<FQDN of PGX Server>:7007
 - c. Reinstall Compliance Studio.

OR

To Update the PGX URL in an alternative way as follows:

- a. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-load-to-graph/graph-service/conf directory.
- b. Open the application.yml and update the PGX_SERVER_URL.
- c. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-studio/server/builtin/interpreters directory.
- d. Open the pgx.json and update the PGX URL in the pgx interpreter's JSON file.
- 6. Restart Compliance Studio.

4.18 Run ER in different workspaces

- 1. The ER Data Schema and Compliance Studio Schema should be in the same wallet. For more information on how to create a wallet, see Create a wallet for ER/FSDF schema section.
- 2. Update the following details for ER schema in the resources.xml file. The file can be found in: <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/ficdb/conf.

Example:

```
    id="ER2_CSA_ABCD"
    name="jdbc/erdataschema"
    auth="Container"
    type="javax.sql.DataSource"
    driverClassName="oracle.jdbc.OracleDriver"
    url="jdbc:oracle:thin:@ER2_CSA_ABCD"
    connectionProperties= "oracle.net.wallet_location
    =<WALLET_PATH/ABCD>;

oracle.net.tns_admin=<WALLET_PATH/ABCD>;"
    maxTotal="5"
    maxIdle="0"
    maxWaitMillis="-1" >
</Resource>
```

NOTE

Log in as either an SYS user or DBA user and grant these permissions to the ER schema created.

- 3. Ensure that the pre-staging and output tables are present in the given ER Data Schema.
 - a. The following are the pre-staging table names by version:
 - i. FSDF 81270:
 - STG_PARTY_MASTER_PRE
 - STG_PARTY_DETAILS_PRE
 - STG_DELETED_PARTIES_PRE
 - STG_CUSTOMER_IDENTIFCTN_DOC_PRE
 - STG_ADDRESS_MASTER_PRE
 - STG_PARTY_ADDRESS_MAP_PRE
 - STG_PARTY_PHONE_MAP_PRE
 - STG_PARTY_EMAIL_MAP_PRE
 - FCC_ER_MAPPING
 - FCC_ER_MANUAL_MAPPING
 - b. The following are the output table names by version:
 - ii. FSDF 81270:
 - STG_PARTY_MASTER
 - STG_PARTY_DETAILS
 - STG_PARTY_EMAIL_MAP

- STG_ADDRESS_MASTER
- STG_PARTY_ADDRESS_MAP
- STG_PARTY_PHONE_MAP
- STG_CUSTOMER_IDENTIFCTN_DOC
- FCC_ER_MAPPING
- FCC_ER_OUTPUT

5 Post-installation Steps when OFSAA is installed

On successful installation of Compliance Studio, you must perform the following post-installation configurations.

ATTENTION

For the utility shell script and patch for Security Alert CVE-2021-44228, see Appendix E – Apache Log4j Security Alert CVE-2021-44228 Patch Details section.

Topics:

- Verify the Installation
- Access the Compliance Studio Application when Gateway is Disabled
- Access the Compliance Studio Application when Gateway is Enabled
- Perform the OFSAA Configuration for Batch Execution
- Configure and Run Published Notebooks
- Importing OOB Graph Definition and related Metadata
- Additional Grants for Graph Schema
- Registering the Conda Environment
- Configuring Transliteration
- Creating the Thesaurus

NOTE

Before running the post-installation steps, an SSH connection to the Big Data server must be configured.

5.1 Verify the Installation

To verify the Compliance Studio installation with OFSAA, check the log files in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/logs directory. If all the servers are up and running, it indicates that the installation is complete.

WARNING

If you notice any errors in the log files, do not proceed further. Contact My Oracle Support (MOS) provide the applicable error code and log files.

If the installation of Compliance Studio is unsuccessful, you must reinstall the application after performing the cleanup tasks. For more information, see Reinstalling Compliance Studio.

5.2 Access the Compliance Studio Application when Gateway is Disabled

To access the Compliance Studio UI when gateway is disabled, follow these steps:

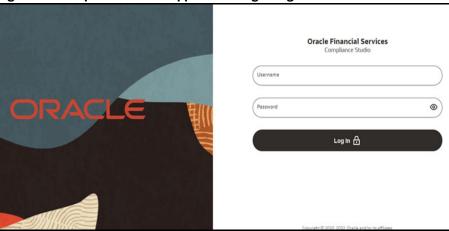

1. Enter the URL in the following format in the web browser:

https://<Host Name>:<Port Number>/cs/home

Here <Port Number> is 7001 for the Compliance Studio application installed on-premise.

The Compliance Studio application login page is displayed.

Figure 10: Compliance Studio Application Login Page

2. Enter the Username and Password.

For Creating Users, Groups, and Mappings in AAI. See Appendix E – Create Users, Groups, and Mappings section.

3. Click Login.

After you access the application, you can view the ready-to-use notebooks. To check if you have been assigned any roles, create a notebook. If you cannot create a notebook, contact My Oracle Support (MOS).

Access the Compliance Studio Application when Gateway is 5.3 Enabled

ATTENTION

- **Prerequisites**: Apply the patch 36537907 (v8.1.2.7.1) to enable this functionality.
- This section is not applicable after applied this patch 36804828 (v8.1.2.7.3).

The Compliance Studio Gateway serves as the central routing point for accessing the UI, ensuring a consistent origin for the Compliance Studio Uls. The introduction of the gateway addresses the security risks and inconsistencies by centralizing access and enhancing security.

This implementation, achieved via Spring Cloud Gateway, consolidates all UI access through a single port. By doing so, the gateway enforces security headers to mitigate clickjacking vulnerabilities. Specifically, it sets the Content Security Policy (CSP) with the frame-ancestors 'self' directive, ensuring that the UI can only be embedded within the same origin.

NOTE

Make sure that COMPLIANCE STUDIO GATEWAY PORT and Datastudio default port should be opened in the firewall.

To access the Compliance Studio UI when gateway is enabled, follow these steps:

The following steps are mandatory whenever reinstall is triggered in the Compliance Studio.

1. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-ui/conf directory.

ATTENTION

Make sure that you have taken backup of this application.properties file before updating any changes.

2. Open the application.properties file and update value for mmg.datastudio.ui.url as https://<hostname>:<Datastudio Port>/cs.

For example, https://testserver.com:7008/cs

3. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-gateway/conf/routes directory.

ATTENTION

Make sure that you have taken backup of this mmg-routes.csv file before updating any changes.

4. Open mmg-routes.csv file and remove this line

"datastudio_route,datastudio,cs,https://<Hostname>:<Datastudio Port>/cs/

- 5. **Save** the file.
- 6. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-studio/conf directory.

ATTENTION

Make sure that you have taken backup of this application.yml file before updating any changes.

7. Open the application.yml file and update the directives parameter as follows:

```
"frame-ancestors 'self' https://
<Hostname>:<Compliance Studio Gateway Port>"
```

This parameter allows Datastudio UI to be embedded as iFrame in any external application and this controls the allowed origins where datastudio UI can be embedded.

In case of ECM-IH integration use case, update the directives parameter as follows:

```
"frame-ancestors 'self' https://
<Hostname>:<Compliance_Studio_Gateway_Port> http://
<ecm webserver hostname>:<ecm ui port>"
```

8. Restart Compliance Studio services.

```
After restart, the Compliance Studio URL will be https://
<Hostname>:<COMPLIANCE STUDIO GATEWAY PORT>/cs/home.
```

5.3.1 Configure SAML Authentication

NOTE

This section is applicable only when AUTH_REALM is SAML.

To configure SAML Authentication, follow these steps:

1. Navigate to the following directories:

```
<COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-ui/conf
<COMPLIANCE STUDIO INSTALLATION PATH>/mmg-home/mmg-ui/conf
```

2. Open the application.properties file and update port number in the following parameters:

```
saml.auth.sp.entity=https://<Hostname>:<COMPLIANCE_STUDIO_GATEWAY_PORT>/
cs
saml.auth.consumerserviceurl=https://
<Hostname>:<COMPLIANCE_STUDIO_GATEWAY_PORT>/cs/home

For example,
saml.auth.sp.entity=https://<Hostname>:7071/cs
saml.auth.consumerserviceurl=https://<Hostname>:7071/cs/home
```

3. In IDCS configurations for Compliance Studio UI, update the Assertion consumer URL as https://<Hostname>:<COMPLIANCE STUDIO GATEWAY PORT>/cs/home.

For example, Assertion consumer URL: https://<Hostname>:7071/cs/home.

NOTE

For Datastudio UI, keep the existing configuration as it is.

4. Restart Compliance Studio services.

```
After restart, the Compliance Studio URL will be https://
<Hostname>:<COMPLIANCE STUDIO GATEWAY PORT>/cs/home.
```

5.4 Perform the OFSAA Configuration for Batch Execution

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- This configuration is not applicable for Compliance Studio installed without OFSAA.

To perform OFSAA configuration for batch execution, follow these steps:

- 1. Copy the files in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/bin directory to the server where the BD or ECM pack is installed and to the \$FIC_DB_HOME/bin directory of the OFSAA setup.
- 2. Execute the following command to grant Execute permission to the files:

```
chmod +x <filenames>
```

3. Copy all the files from the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/lib directory into the \$FIC DB HOME/lib directory.

See the OFS Compliance Studio Administration and Configuration Guide for running Compliance Studio Batches.

5.5 Configure and Run Published Notebooks

NOTE

- This is deprecated in the current release and will be removed in the future release.
- This configuration is not applicable for Compliance Studio installed without OFSAA.

To perform the configuration required to run published notebooks, copy the required FCCM_Studio_NotebookExecution.sh file from the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/bin directory into the <FIC HOME of OFSAA Installed Path>/deployed/ficdb/bin directory.

For information on running published notebooks, see the Executing Published Notebook section in the OFS Compliance Studio Administration and Configuration Guide.

5.6 Importing OOB Graph Definition and related Metadata

To import the OOB graph definition and related metadata, follow the sections:

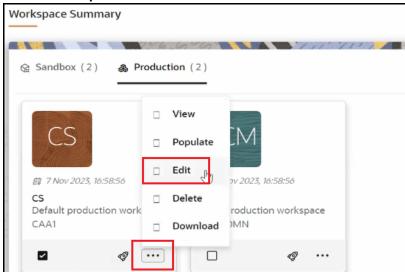

- Creating the Graph Data Store
- Importing OOB Graphs
- Registering Graph Data Store
- Initializing Metadata Indexes
- Initializing Schemas
- Starting OpenSearch
- Initializing OOB Graph Batch Schedules
- Creating Passwordless Keystore File
- Start the PGX Service

5.6.1 Creating the Graph Data Store

To create a data store of the graph, follow these steps:

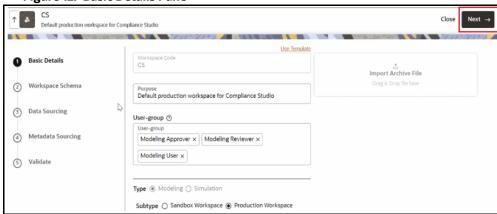

1. Log in to the Compliance Studio UI.

Figure 11: CS Workspace

- 2. On the CS workspace, click the **Action** icon.
- 3. Click **Edit**. The **Basic Details** pane is displayed.

Figure 12: Basic Details Pane

4. Click **Next**. The **Workspace Schema** pane is displayed.

Figure 13: Workspace Schema Pane

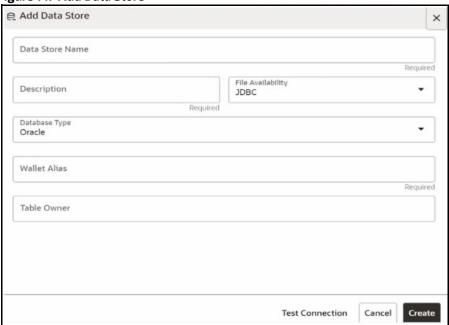

NOTE

By default, studio schema is mapped to the workspace and you need to map graph schema and graph data store respectively for using graph functionality.

5. Click **Create Data Store .** The **Add Data Store** pane is displayed.

Figure 14: Add Data Store

6. Enter the **Name** and **Description** of the data store for the graph.

NOTE Retain default settings in the **File Availability** and **Database Type** dropdown lists.

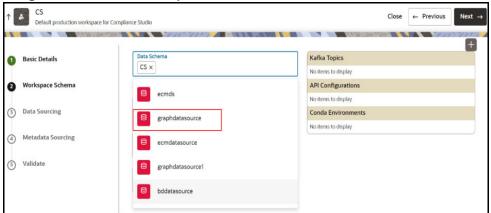

- 7. Enter the Wallet Alias.
- 8. Enter the Oracle Database schema name in the **Table Owner**.

9. Click Test Connection.

A **Success** confirmation message is displayed.

10. Click **Create**. The Data Store is saved successfully.

Figure 15: Data Schema Drop-down List

- 11. Select graph data store from the **Data Schema** drop-down list.
- 12. Click **Next**. The **Data Sourcing** pane is displayed.
- 13. Click **Next**. The **Metadata Sourcing** pane is displayed.
- 14. Click **Update**. The data store for the graph is updated successfully in the CS workspace.
- 15. Click **Close** to exit the process.

5.6.1.1 Creating Data Store for OOB graphs

If users are planning to use the OOB graph "FINANCIAL_CRIME_GLOBAL_GRAPH" based on the ECM data model or "FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION" based on the BD data model, then create the additional data store.

For "FINANCIAL_CRIME_GLOBAL_GRAPH," create the additional data store for ECM's Atomic Schema. This will be required later in the schedule part. To create additional data store, see the Creating the Graph Data Store section.

For "FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION," create the additional data store for BD's Atomic Schema. This will be required later in the schedule part. To create additional data store, see the Creating the Graph Data Store section.

NOTE

This is not applicable in case of v81250.

./importGraph.sh

5.6.2 Importing OOB Graphs

NOTE

- If you want to import both graphs, execute the following command:
- If you need any help about graphs, execute the following command:
 ./importGraph.sh -h

To import OOB graphs, follow these steps:

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/graphmetadata/bin directory.
- 2. If **ENABLE_MATCHING_FOR_GRAPH** parameter is set to "false" in the config.sh file file, then import the graph as follows:
 - a. If you are importing "FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION" OOB graph, then execute the following command:

```
./importGraph.sh -b
```

b. If you are importing "FINANCIAL_CRIME_GLOBAL_GRAPH" OOB graph, then execute the following command:

```
./importGraph.sh -e
```

- 3. If **ENABLE_MATCHING_FOR_GRAPH** parameter is set to "true" in the config.sh file file, then import the graph as follows:
 - a. If you are importing "FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION" OOB graph with matching component enabled, then execute the following command:

```
./importGraph.sh -b
```

(OR)

If you are importing "FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION" OOB graph with matching component disabled, then execute the following command:

```
./importGraph.sh -b -sm
```

b. If you are importing "FINANCIAL_CRIME_GLOBAL_GRAPH" OOB graph with matching component enabled, then execute the following command:

```
./importGraph.sh -e
```

(OR)

If you are importing "FINANCIAL_CRIME_GLOBAL_GRAPH" OOB graph with matching component disabled, then execute the following command:

```
./importGraph.sh -e -sm
```

NOTE

If you want to import both graphs with matching component disabled, execute the following command:

```
./importGraph.sh -sm
```

The OOB graphs are imported to the Compliance Studio UI.

5.6.2.1 Importing OOB Graphs through Compliance Studio UI

NOTE This

This section is optional.

Users can also import OOB graphs through Compliance Studio UI as well.

To import OOB graph through Compliance Studio UI, follow these steps:

 Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/graphmetadata/graph directory. 2. Download zip file from the ECM and BD folders.

NOTE

- If ENABLE_MATCHING_FOR_GRAPH parameter is set to "true" in the config.sh file file, then navigate to the "with_matching" directory.
- If ENABLE_MATCHING_FOR_GRAPH parameter is set to "false" in the config.sh file file, then navigate to the "without_matching" directory.

Import graph from the graph summary screen in the Compliance Studio workspace. For more information, see **Adding a Graph Pipeline** section in the OFS Compliance Studio User Guide.

NOTE

Customization in OOB Graph Definition

If any manual customization is applied before the upgrade, then recheck and evaluate whether these changes are still in place after the upgrade. If changes are not available, reapply the customization wherever required.

5.6.3 Registering Graph Data Store

To register graph data store, follow these steps:

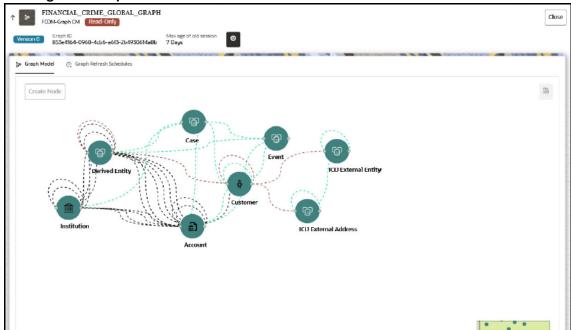

- 1. Log in to the Compliance Studio and navigate to the workspace summary.
- 2. On the **Modeling** menu, click **Graphs**. The Graph Summary page is displayed.

Figure 16: Graph Summary

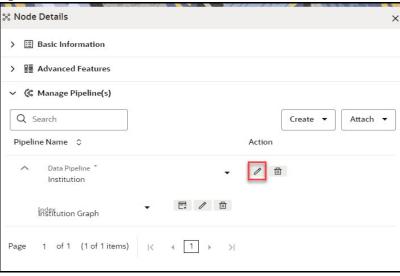

3. On any graph, click the **Action** icon and select **Edit** to view the graph.

Figure 17: Graph Model

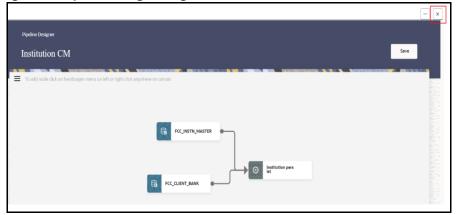

4. To edit the Node, hover over the **Node** icon and click **Edit**. The Node Details page is displayed.

Figure 18: Node Details

5. Expand Manage Pipeline(s) and click **Edit** icon on the data pipeline to view the Pipeline Designer page.

Figure 19: Pipeline Designer Page

6. You need to wait for the UI to load, **Close** Pipeline Designer page and then **Close** the graph panel.

5.6.4 Initializing Metadata Indexes

NOTE Before executing the script, OpenSearch should be up and running.

To initialize metadata indexes, follow these steps:

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/graphmetadata/bin directory.
- 2. Execute the following command:
 - ./CreateMetadataIndexes.sh

The metadata indexes will be created.

NOTE

- If **ENABLE_MATCHING_FOR_GRAPH** parameter is set to "false" in the config.sh file file, then skip the Step 2.
- Before executing the command, if metadata indexes are available for OpenSearch, then it will not be updated until F_IS_RECENTLY_CHANGED column values are set to "Y" in the FCC_IDX_M_LOOKUP table.

5.6.5 Initializing Schemas

To initialize schemas, follow these steps:

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/graphmetadata/bin directory.
- 2. If you are using "FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION" OOB graph, then execute the following command:
 - ./InitializeBDSchema.sh -bdw <bd atomic wallet alias>
- 3. If you are using "FINANCIAL_CRIME_GLOBAL_GRAPH" OOB graph, then execute the following command:
 - ./InitializeECMSchema.sh -w <ecm schema wallet alias>

4. To initialize graph schema based on the selected OOB graphs, execute the following commands: For initializing FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION,

```
./InitializeGraphSchema.sh -gw <graph_wallet_alias> -bs <bd_schema_name> For initializing FINANCIAL_CRIME_GLOBAL_GRAPH,
```

```
./InitializeGraphSchema.sh -gw <graph_wallet_alias> -es
<ecm schema name>
```

For initializing FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION and FINANCIAL_CRIME_GLOBAL_GRAPH in the **same** graph schema,

```
./InitializeGraphSchema.sh -gw <graph_wallet_alias> -es
<ecm schema name> -bs <bd schema name>
```

5.6.6 Starting OpenSearch

To start OpenSearch, follow these steps;

- Navigate to the <OPEN_SEARCH_EXTRACTED_PATH>/opensearch/opensearch-<version>/bin directory.
- 2. Execute the following command:

```
nohup ./opensearch &
```

NOTE

To check the OpenSearch logs, execute the following command:

tail -f nohup.out

5.6.7 Initializing OOB Graph Batch Schedules

NOTE

If you want help on the graph batch schedule, then execute the following commands:

- ./InitializeOOBGraphBatchScheduleECM.sh -h
- ./InitializeOOBGraphBatchScheduleBD.sh -h

To initialize OOB graph batch schedules, follow these steps:

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/graphmetadata/bin directory.
- 2. If **ENABLE_MATCHING_FOR_GRAPH** parameter is set to "false" in the config.sh file file, then initialize the graph batch schedule as follows:
 - a. If you are initializing "FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION" schedule, then execute the following command:
 - ./InitializeOOBGraphBatchScheduleBD.sh -bw <datasource name of the BD atomic schema> -s <start_date> -e <end_date> -gd <graph_datasource> -u <complianceStudioUserName>
 - b. If you are initializing "FINANCIAL_CRIME_GLOBAL_GRAPH" schedule, then execute the following command:

./InitializeOOBGraphBatchScheduleECM.sh -ew <datasource name of the ECM atomic schema> -s <start_date> -e <end_date> -gd <graph_data-source> -u <complianceStudioUserName>

NOTE

The format of start date and end date should be yyyy_mm_dd.

The dates present in the batch schedule are only used to filter transaction edges. All the nodes are considered irrespective of the dates, and the dates are used to control the volume of transactions to be processed in a batch.

For example, if a customer has millions of transactions for each date, then instead of one batch that processes the complete date range, they can execute multiple batches in slices (let's say 3 months) for better performance, monitoring, and less resource constraint, etc.

By default, the graph has a retention period of 1 year which means transactions with a date older than 1 year will be ignored by the graph. So, if you want all the older transactions in the graph, then edit the OOB graph and update the retention period of transaction edges (pluggable edges) accordingly before executing the graph batch.

- 3. If **ENABLE_MATCHING_FOR_GRAPH** parameter is set to "true" in the config.sh file file, then initialize the graph batch schedule as follows:
 - a. If you are initializing "FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION" schedule with matching component enabled, then execute the following command:
 - ./InitializeOOBGraphBatchScheduleBD.sh -bw <datasource name of the BD atomic schema> -s <start_date> -e <end_date> -gd <graph_datasource> -u <complianceStudioUserName>

(OR)

If you are initializing "FINANCIAL_CRIME_GLOBAL_GRAPH_BEHAVIOUR_DETECTION" schedule with matching component disabled, then execute the following command:

- ./InitializeOOBGraphBatchScheduleBD.sh -bw <datasource name of the BD atomic schema> -s <start_date> -e <end_date> -gd <graph_datasource> -u <complianceStudioUserName> -sm
- b. If you are initializing "FINANCIAL_CRIME_GLOBAL_GRAPH" schedule with matching component enabled, then execute the following command:
 - ./InitializeOOBGraphBatchScheduleECM.sh -ew <datasource name of the ECM atomic schema> -s <start_date> -e <end_date> -gd <graph_data-source> -u <complianceStudioUserName>

(OR)

If you are initializing "FINANCIAL_CRIME_GLOBAL_GRAPH" schedule with matching component disabled, then execute the following command:

./InitializeOOBGraphBatchScheduleECM.sh -ew <datasource name of the ECM atomic schema> -s <start_date> -e <end_date> -gd <graph_data-source> -u <complianceStudioUserName> -sm

5.6.8 Creating Passwordless Keystore File

To create a passwordless keystore file, see the Generate the graph-keystore.p12 File section.

Start the PGX Service 5.6.9

To start the PGX service, follow these steps;

- Navigate to the <PGX INSTALLATION PATH>/pgx/pgx-server/bin directory.
- 2. Execute the following command:

```
./pgx-server.sh -s
```

The PGX service is up and running.

NOTE

To verify if PGX service is up, check the logs.

Additional Grants for Graph Schema 5.7

For post-installation grants of the graph schema, see the Create Graph Schema and Grant Permission section.

Registering the Conda Environment 5.8

NOTE

The User should not delete the seeded conda environment.

The Compliance Studio installer has three pre-configured conda environments as follows:

- default 8.1.2.7.0
- sane 8.1.2.7.0
- ml4aml 8.1.2.7.0

These conda environment must be registered to see them for a user.

To register the conda environment, follow these steps:

- 1. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- 2. Execute the following command:

```
./compliance-studio.sh -e
(OR)
```

./compliance-studio --enroll

NOTE

- You can also register a conda environment in the Compliance Studio UI. For more information on registering a conda environment, see the **Registering a Conda Environment** section in the OFS Compliance Studio User Guide.
- Map the functions and roles for the conda environment. For more information, see the **Functions and Roles required to perform CRUD operations for Conda** section in the OFS Compliance Studio Administration and Configuration Guide.

5.9 Configuring Transliteration

NOTE

- This section is applicable only when APPLY_TRANSLITERATION flag is set to True and MATCHING_MECHANISM is set to OT.
- There is no additional configuration required for OpenSearch.

Prerequisites

Make sure that JAVAVM is added before loading the jar, class, or any java-related files.

To add JAVAVM, follow these steps:

- 1. Login to Sys/Admin.
- 2. Execute the following SQL script:

```
SELECT status FROM DBA_REGISTRY
WHERE comp_id = 'JAVAVM';

---O/P
--- Status
--- Valid
SELECT dbms_java.get_jdk_version
FROM DUAL;

---O/P
---JDK Version
---1.8.0 351
```

You can go once you get the corresponding O/P showing JAVAVM is installed.

3. If you are not getting the corresponding O/P, then execute the following SQL script:

4. Provide the create procedure permission grant and execute the following grant to the user/schema(AMLDD):

```
GRANT CREATE PROCEDURE TO <DATA_SCHEMA_NAME>
```

To configure transliteration, follow these steps:

NOTE Users should execute the following steps in a separate terminal.

1. Download the Oracle Client zip file.

2. Unzip the Oracle client zip in a separate folder.

NOTE

The path where the LINUX.X64 193000 client home.zip file is unzipped and it is referred to as "ORACLE_CLIENT_PATH".

3. Set the ORACLE_HOME.

NOTE

ORACLE_HOME refers to the path where oracle database client is unzipped.

4. Navigate to the <code>ORACLE_CLIENT_PATH</code> directory and modify the load java by executing the following command:

```
sed -i -e "s|/scratch/app/user/product/19.0.0/
clienthome 1|##ORACLE CLIENT PATH##|g" bin/loadjava
```

5. To compile the java class with the icu4j plugin, execute the following command:

##ORACLE_CLIENT_PATH##/jdk/bin/javac -cp ##ICU4j_PATH## ##TRANSLATOR_JAVA_PATH##

NOTE

##ICU4j_PATH## refers to path where icu4j jar is placed and ##TRANSLATOR_JAVA_PATH## refers to the path where Translator.java file is placed.

These files are available in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/candidate-selection/utility/transliteration directory.

6. Navigate to the <code>ORACLE_CLIENT_PATH/bin</code> directory and perform loadjava operation by executing the following command:

```
./loadjava -thin -user <Username>/
<Password>@<Hostname>:<Port>:<ServiceName> -resolve -verbose -force
##ICU4j PATH## ##TRANSLATOR CLASS PATH##
```

NOTE

Replace the following placeholders:

- <Username > specifies the username of the data schema. For example, username of the ER schema or Graph schema.
- <Username > specifies the username of the data schema. For example, username of the ER schema or Graph schema.
- <Password> specifies the password of the ER schema or graph schema.
- <Hostname> specifies the database server's hostname of the data schema.
- <Port> specifies the database port.
- <ServiceName> specifies the service parameter of the database.
- ##ICU4j_PATH## refers to this

<COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/
candidate-selection/utility/transliteration/
icu4j-72.1.jar path.

NOTE

- ##TRANSLATOR_CLASS_PATH## refers to this
 <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/
 candidate-selection/utility/transliteration/
 Translator.java path.
- 7. If you use a Data Schema wallet from this <code>ORACLE_CLIENT_PATH/bin</code> directory, perform loadjava operation by executing the following command.

./loadjava -thin -user <Username>/<Password>@##WALLET_ALIAS## -resolve -verbose -force ##ICU4j PATH## ##TRANSLATOR CLASS PATH##

NOTE

This step is optional and Set export TNS_ADMIN=##WALLET_ALIAS_PATH##.

5.10 Creating the Thesaurus

A thesaurus is required to execute the Graph and Entity Resolution batches.

NOTE

- This section is applicable when MATCHING_MECHANISM is set to OT
- There is no additional configuration required for OpenSearch.
- For a fresh installation, there is no thesaurus available in the database.

For Graph

To create a thesaurus in the graph schema, follow these steps:

- 1. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/graph-metadata/bin directory.
- 2. Execute the following command:

```
./CreateDBThesaurus.sh -h
```

The script has two options:

- Create: This option helps to generate the pre-seeded thesaurus in the database.
- Reset: This option helps the user to update the pre-existing thesaurus. If there is any
 change in the data, the user can run the script with a reset flag, and the thesaurus will be
 updated.

If it is CREATE mode, refer to the example below.

```
./CreateDBThesaurus.sh -c -gd <GRAPH DATASOURCE NAME>
```

If it is RESET mode, refer to the example below.

./CreateDBThesaurus.sh -r -gd <GRAPH DATASOURCE NAME>

NOTE

• If you want to verify whether thesaurus is created or not, then execute the following command:

select * from ctx_user_thesauri;

- If thesaurus is created, you can see it in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/workspace/dbThesaurus directory.
- To DELETE thesaurus, execute the following command in the data schema:

```
BEGIN
CTX_THES.DROP_THESAURUS('THESAURUS_NAME');
END
```

- Users need to delete/drop the thesaurus from the database manually. You can find all the thesaurus details, including thesaurus owner and name, inside the ctx_thesauri table in the data schema. Only the owner of that thesaurus can drop/delete it.
- Only one thesaurus can be created in one Database server with the specified thesaurus name.

For Entity Resolution

To create a thesaurus in the ER schema, follow these steps:

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/candidate-selection/utility/bin directory.
- 2. Execute the following command:

./CreateDBThesaurus.sh <DATA_SCHEMA_ALIAS> <PATH TO STORE PRE-PROCESSED FILES GENERATED BY UTILITY> <MODE>

For example:./CreateDBThesaurus.sh ER_SCHEMA_ALIAS /user/thesaurusFiles CREATE

The script has two options:

- Create: This option helps to generate the pre-seeded thesaurus in the database.
- Reset: This option helps the user to update the pre-existing thesaurus. If there is any
 change in the data, the user can run the script with a reset flag, and the thesaurus will be
 updated.

NOTE

Only one thesaurus can be created in one Database server with the specified thesaurus name.

6 Post-installation Steps when OFSAA is Not Installed

On successful installation of Compliance Studio, you must perform the following post-installation configurations.

ATTENTION

For the utility shell script and patch for Security Alert CVE-2021-44228, see Appendix E – Apache Log4j Security Alert CVE-2021-44228 Patch Details section.

Topics:

- Verify the Installation
- Start the PGX Service
- Access the Compliance Studio Application

NOTE

Before running the post-installation steps, an SSH connection to the Big Data server must be configured.

6.1 Verify the Installation

To verify the Compliance Studio installation without OFSAA, check the log files in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/logs directory. If all the servers are up and running, it indicates that the installation is complete. Also, ensure all the interpreters are displayed and the JDBC interpreter is working on the Compliance Studio application home page.

WARNING

If you notice any errors in the log files, do not proceed further. For additional information, see the Frequently Asked Questions in Compliance Studio section first and Contact My Oracle Support (MOS) provide the applicable error code and log files.

If the installation of Compliance Studio is unsuccessful, you must reinstall the application after performing the cleanup tasks. For more information, see Reinstalling Compliance Studio.

6.2 Start the PGX Service

To start the PGX service, follow these steps:

- 1. Navigate to the path where the PGX service is installed.
- 2. Navigate to the following directory where the start service for PGX is located:

```
<PGX Installation Path>/pgx-server/bin
```

3. Run the following command:

```
./pgx-server.sh --start
```

For more information, see the OFS Compliance Studio Administration and Configuration Guide.

6.3 Access the Compliance Studio Application

To access Compliance Studio, follow these steps:

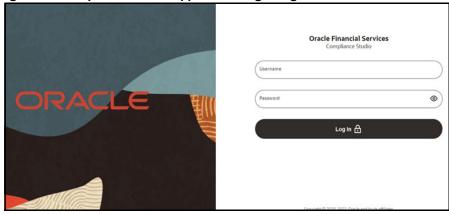

1. Enter the URL in the following format in the web browser:

https://<Host_Name>:<Port_Number>/cs/home

Here <Port Number> is **7001** for the Compliance Studio application installed on-premise.

The Compliance Studio application login page is displayed.

Figure 20: Compliance Studio Application Login Page

- 2. Enter the **Username** and **Password**.
- 3. Click Login.

After you access the application, you can view the ready-to-use notebooks. To check if you have been assigned any roles, create a notebook. If you cannot create a notebook, contact My Oracle Support (MOS).

7 Upgrade

Follow these steps to upgrade an existing instance of Compliance Studio.

Topics:

- Pre-upgrade Steps
- Upgrade Steps with OFSAA
- Cleanup for Upgrade
- Stop the PGX Service
- Stop the Compliance Studio Installer
- Upgrade Steps without OFSAA
- Configure Python Interpreter Settings
- Configure Interpreters after Upgrade
- Upgrade Steps for Graph Pipeline
- Upgrade Steps for Scenario Conversion Utility
- Changes in OOB Match Ruleset after Upgrade

Customization in Entity Resolution

If any customization is applied before the upgrade, then re-check and evaluate whether these changes are still in place after the upgrade. If changes are not available, re-apply the customization wherever required.

Out-of-the-box rules should not be edited for customizations. If there are any customizations, create a copy of out-of-the-box pipeline definitions to apply any customizations otherwise the customizations will not persist when upgraded.

If out-of-the-box pipeline definitions are modified for any customizations, follow these steps to preserve the customizations:

- 1. Before upgrade, create a copy of the modified/customized pipeline definitions.
- Merge the customizations into upgraded out-of-the-box pipeline definitions appropriately after the successful upgrade of Compliance Studio 8.1.2.7.0.

For any clarifications, contact My Oracle Support (MOS).

7.1 Pre-upgrade Steps

To do pre-upgrade, follow these steps:

- Stop the existing Compliance Studio service. To stop, see the Stopping Compliance Studio section.
- 2. Stop the pgx server. To stop, see the Stop the PGX Service section.

7.2 Upgrade Steps with OFSAA

This section describes generic steps for the upgrade. For specific upgrades, see Cleanup for Upgrade section.

Table 16 provides the steps to upgrade Compliance Studio with OFSAA.

Table 21: Upgrade Steps with OFSAA

| Sl. No. | Activity |
|-------------------------|---|
| Pre-installation Steps | |
| 1 | Hardware and Software Requirements |
| 2 | Download the Installer Kit |
| Installation Steps | |
| 1 | Extract the Installer Kit |
| 2 | Configure the OpenSearch Component |
| 3 | Add Synonyms and Stopword files in OpenSearch |
| 4 | Place Files in the Installation Directories |
| 5 | Generate the Public and Private Keys |
| 6 | Generate API token for CS API User |
| 7 | Generate Compliance Studio Server SSL Configuration Mandatory File |
| 8 | Import the certificate to JDK security |
| 9 | Place the Key Store File for Secure Batch Service |
| 10 | Configure the Extract Transfer and Load (ETL) Process NOTE: |
| | This step is deprecated in the current release and will be removed in the future release. |
| 11 | Additional Grants for Studio Schema (See Assign Grants for Studio Schema) |
| 12 | Additional Grants for ER Schema (See Assign Grants for Studio Schema) |
| 13 | Create Graph Schema and Grant Permission |
| 14 | Configure the config.sh File |
| 15 | Generate the graph-keystore.p12 File |
| 16 | Configure the PGX Service |
| 17 | Run the Compliance Studio Installer |
| Post-Installation Steps | |
| 1 | Verify the Installation |
| 2 | Cleanup for Upgrade |

Table 21: Upgrade Steps with OFSAA

| 3 | Generate Compliance Studio Server SSL Configuration Mandatory File |
|----|--|
| 4 | Stop the PGX Service |
| 5 | Stop the Compliance Studio Installer |
| 6 | Configure the SSH Connection – See OFS Compliance Studio Administration and Configuration Guide |
| 7 | Configure the Schema Creation – See OFS Compliance Studio Administration and Configuration Guide. NOTE: This is applicable only if you want to load a graph using the Legacy ETL, i.e., the Hadoop cluster. |
| 8 | Configure the ICIJ Data – See OFS Compliance Studio Administration and Configuration Guide. NOTE: This is applicable only if you want to load a graph using the Legacy ETL, i.e., the Hadoop cluster. |
| 9 | Start the PGX Service |
| 10 | Starting Compliance Studio |
| 11 | Configure the Graph Pipeline (Importing OOB Graph Definition and related Metadata) |
| 12 | Configure the Entity Resolution |
| 13 | Uploading FSDF |
| 14 | Access the Compliance Studio Application |

7.3 Cleanup for Upgrade

This section provides cleanup steps for the upgrade.

7.3.1 Perform Extract Transfer and Load (ETL) Cleanup

NOTE This section is deprecated in the current release and will be removed in the future release.

To perform the ETL cleanup, follow these steps:

- Extract the contents of the installer archive file in the download directory using the unzip -a <Compliance_Studio_Installer_Archive_File>.zip. The Compliance Studio installer file is extracted in the <COMPLIANCE STUDIO INSTALLATION PATH> directory.
- Configure the applicable parameters in the config.sh file. For more information, see Configure the config.sh File.
- Generate the keystore file. For more information, see Generate Compliance Studio Server SSL Configuration Mandatory File.

7.3.2 Perform Cleanup for Templates

NOTE

This is applicable only if you want to use the new FCGM Default Template. Otherwise, the template will not be updated.

To delete the templates, perform the following:

- 1. Log in to the Compliance Studio application.
- 2. Launch the **CS Production** Workspace.
- 3. Click on the **User Profile** drop-down list and select **Data Studio Options**.
- 4. Click Templates.

By default, the Templates page lists all the available templates.

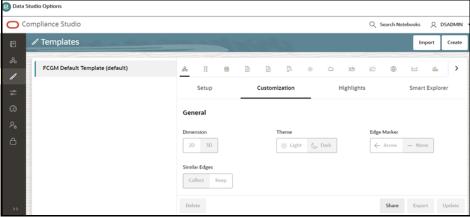

You can see the following templates among all the templates:

- FCGM Default Template (default)
- FCGM Default Template

You should delete the **FCGM Default Template** that is without **(default).**

5. Click the **FCGM Default Template** on the LHS. The default details are displayed on the RHS:

Figure 21: Template screens

- 6. Click **Delete** on the RHS. A confirmation message is displayed for deletion.
- 7. Click **Delete**. The template will be deleted.

7.3.3 Perform Cleanup for Interpreters

NOTE

- Ensure that the following interpreters are deleted:
 - fcc-jdbc
 - fcc-ore
 - fcc-pyspark
 - fcc-spark-scala
 - fcc-spark-sql
- For 8.1.2.0.0 and later versions, you can rename the fcc interpreter variants in all cases except for the different Python Virtual Environments, so simpler interpreter's names will be used.
- The steps in this section explain removing the fcc versions before installing the generic versions

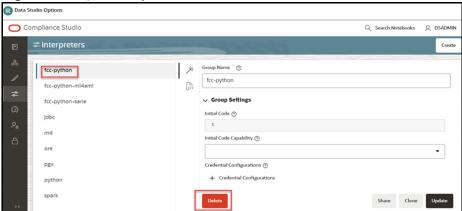

NOTE

- See Create an Interpreter Variant in the OFS Compliance Studio Administration and Configuration Guide on creating new interpreter variants if you want to use the notebooks that use the deleted interpreter name.
- For example, if the notebook has an fcc-jdbc paragraph, and these
 paragraphs' interpreter cannot be replaced with jdbc, you can create/
 clone an interpreter variant of jdbc with the name fcc-jdbc.

To delete the interpreter, perform the following:

- 1. Log in to the Compliance Studio application.
- 2. Launch the **CS Production** Workspace.
- 3. Click on the **User Profile** drop-down list and select **Data Studio Options**.
- 4. Click Interpreters.
- 5. By default, the Interpreters page lists all the available interpreters.
- 6. Click the **fcc-jdbc** interpreter on the LHS. The default configured interpreter variant is displayed on the RHS:

Figure 22: fcc-jdbc interpreter screen

- 7. Click **Delete** on the RHS. A confirmation message is displayed for deletion.
- 8. Click **Delete**. The template will be deleted.
- 9. Repeat the steps 4, 5, and 6 for the following interpreters:
 - fcc-ore.
 - fcc-pyspark,
 - fcc-spark-scala
 - fcc-spark-sql

7.3.4 Perform Cleanup for Entity Resolution

You can follow the approach based on the following scenario:

In case of resetting Entity Resolution completely, see the **Resetting Entity Resolution Back to Day 0** section in the OFS Compliance Studio Administration and Configuration Guide.

In case of detailed cleanup steps to continue with Entity Resolution, you can contact My Oracle Support (MOS).

7.3.5 Perform Cleanup in the Manual Decisioning UI

To load graph in the Manual Decisioning UI after upgrade, follow these steps:

- 1. Log in to Compliance Studio schema.
- Truncate the FCC_ER_PARAGRAPH_MANUAL table.
 This will delete all records which contains the paragraph IDs.

7.4 Stop the PGX Service

To stop the PGX service, follow these steps:

- 1. Navigate to the path where the PGX service is installed.
- 2. Navigate to the following directory where the start service for PGX is located:

<PGX_Installation_Path>/pgx/pgx-server/bin

3. Run./pgx-server.sh --stop.

7.5 Stop the Compliance Studio Installer

To stop the Compliance Studio installer, follow these steps:

- 1. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/bin/directory.
- 2. Run./compliance-studio.sh -k

7.6 Upgrade Steps without OFSAA

Table 22 lists the steps to upgrade Compliance Studio without OFSAA.

Table 22: Upgrade Steps without OFSAA

| Sl. No. | Activity |
|-------------------------|---|
| Pre-installation Steps | |
| 1 | Download the Installer Kit |
| Installation Steps | |
| 1 | Extract the Installer Kit |
| 2 | Place Files in the Installation Directories |
| 3 | Generate API token for CS API User |
| 4 | Generate the Public and Private Keys |
| 5 | Place the Key Store File for Secure Batch Service |
| 6 | Configure the config.sh File |
| 7 | Run the Compliance Studio Installer |
| Post-Installation Steps | |
| 1 | Stop the Compliance Studio Installer |
| 2 | Add the Python Packages to Compliance Studio - See OFS Compliance Studio Administration and Configuration Guide |
| 3 | Configure the SSH Connection – See OFS Compliance Studio Administration and Configuration Guide |
| 4 | Starting Compliance Studio |
| 5 | Access the Compliance Studio Application |

7.7 Configure Python Interpreter Settings

To use a python interpreter in an upgraded environment, you need to configure the following:

Zeppelin.python:

<COMPLIANCE STUDIO INSTALLATION PATH>/deployed/python-packages/
defaultVirtualEnv/bin/python3

Initialization:

```
import os; os.environ['TNS_ADMIN'] = '<WALLET_LOCATION>';
from ds_interpreter_client.context.ds_context import PyDataStudioContext
ds = PyDataStudioContext()
```

To configure, perform the following:

- 1. Login to the Compliance Studio application.
- 2. Launch the **CS Production** Workspace.
- 3. Click on the **User Profile** drop-down list and select **Data Studio Options**.
- 4. Click Interpreters.
 - By default, the Interpreters page lists all the available interpreters.
- 5. Click the **fcc-python** interpreter on the LHS. The default configured interpreter variant is displayed on the RHS:

Figure 23: fcc-python interpreter screen

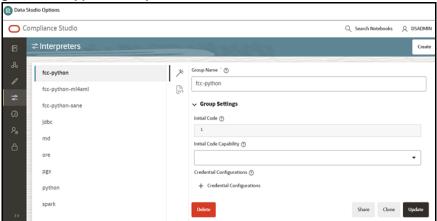

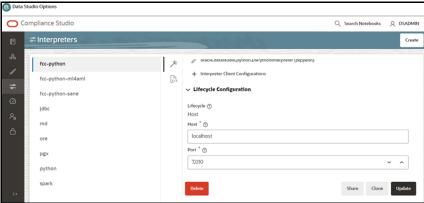

Figure 24: Interpreters

7.8 Configure Interpreters after Upgrade

To change port numbers after the upgrade, follow these steps:

1. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-studio/server/builtin/interpreters directory.

The interpreter's .json files are available.

For example,

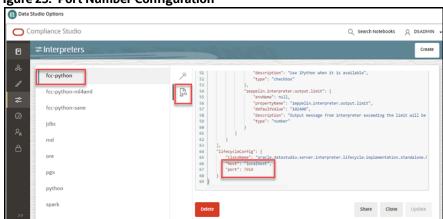

2. Click the fcc-python.json file to view the port number which has to be modified in the Compliance Studio application.

To configure interpreters after the upgrade, perform the following:

- 1. Login to the Compliance Studio application.
- 2. Launch the **CS Production** Workspace.
- 3. Click on the **User Profile** drop-down list and select **Data Studio Options**.
- 4. Click Interpreters.

By default, the Interpreters page lists all the available interpreters on the LHS.

Figure 25: Port Number Configuration

- 5. Click **fcc-python** interpreter on the LHS and then click **Plain Configuration** on the RHS.
- Update the port number as per the fcc-python.json file.
 Similarly, modify all the port numbers available on the Interpreters page with respect to JSON files.

7.8.1 Configuring Conda Environment

To configure conda environment, see the Registering the Conda Environment section.

7.8.2 Manual Steps for Configuring Python Interpreter

To configure python interpreter (fcc-python, fcc-python-ml4aml, and fcc-python-sane) manually, follow these steps:

- 1. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed directory where v8.1.2.5.0 is installed.
- 2. Copy **python-packages** folder and place it in the <compliance_studio_installation_path>/deployed directory where v8.1.2.7.0 is installed.

- 3. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-service/conf directory.
- 4. Open the application.properties file and update the mmg.python_interpreter property as fcc-python,fcc-python-ml4aml,python.
 - $For example, mmg.python_interpreter = fcc-python, fcc-python-ml4aml, python$
- 5. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/bin directory.
- 6. Open the config.sh file and update the **MMG_PYTHON_INTERPRETER** property as fcc-python,fcc-python-ml4aml,python.
 - For example, MMG_PYTHON_INTERPRETER=fcc-python,fcc-python-ml4aml,python
- 7. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- 8. Open the install.sh file and update the MMG_PYTHON_INTERPRETER property as fcc-python,fcc-python-ml4aml,python.
 - For example, **MMG_PYTHON_INTERPRETER**=fcc-python,fcc-python-ml4aml,python
- 9. Restart Compliance Studio.

7.8.3 Download Supported Version for Spark and Pyspark Interpreters

After upgrade, you can download supported version for spark and pyspark interpreters.

NOTE

The supported version for spark and pyspark interpreters is **3.0.3** and **above**.

7.8.4 Updating PGQL and PGX-algorithm Interpreters

After upgrade, you need to update class for pgql and pgx-algorithm interpreters.

To update the class for pgql and pgx-algorithm interpreters, follow these steps:

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmgstudio/server/builtin/interpreters directory.
- 2. Open the pgx. json file.
- 3. Update "CLASS" for pgql interpreter as follows:

```
"CLASS": "oracle.datastudio.interpreter.PgqlInterpreter"
```

4. Update "CLASS" for pgx-algorithm interpreter as follows:

```
"CLASS": "oracle.datastudio.interpreter.PgxAlgorithmInterpreter"
```

5. Restart Compliance Studio.

After restarting, if these interpreters are not working then you need to update class manually in the Compliance Studio UI.

To update class for pgql and pgx-algorithm interpreters in the Compliance Studio UI, follow these steps:

- 1. Login to the Compliance Studio application.
- 2. Launch the **CS Production** Workspace.

- 3. Click on the **User Profile** drop-down list and select **Data Studio Options**.
- 4. Click Interpreters.

By default, the Interpreters page lists all the available interpreters on the LHS.

Figure 26: Update the Class Path

- 5. Click **pgx** interpreter on the LHS and then click **Plain Configuration** on the RHS.
- 6. Update "CLASS" for pgql interpreter as follows:

```
"CLASS": "oracle.datastudio.interpreter.PgqlInterpreter"
```

7. Update "CLASS" for pgx-algorithm interpreter as follows:

```
"CLASS": "oracle.datastudio.interpreter.PgxAlgorithmInterpreter"
```

- 8. Click Update.
- 9. Restart Compliance Studio.

7.9 Upgrade Steps for Graph Pipeline

NOTE

If the graph is executed on the version v8.1.2.5.0, then you need to execute the OOB graph batch schedule. To execute OOB graph batch schedule, see the Initializing OOB Graph Batch Schedules section.

To upgrade the graph pipeline, follow these steps:

ATTENTION When upgrading from v8.1.2.4.0 to v8.1.2.6.0, the following steps are required.

- Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/ GraphPipeline-Cleanup-Scripts directory.
- 2. Cleanup the existing graph using the following scripts:

```
GraphPipeline cleanup day0 in studioschema.sql
```

It should be executed from the Compliance Studio schema.

GraphPipeline cleanup day0 in graphschema.sql

It should be executed from the graph schema. For more information, see the **Resetting Graph Pipeline Back to Day 0** section in the OFS Compliance Studio Administration and Configuration

Guide.

cleanup es indexes.sh

It should be executed from previous version (v8.1.2.1.0 or v8.1.2.3.0) of the Compliance Studio.

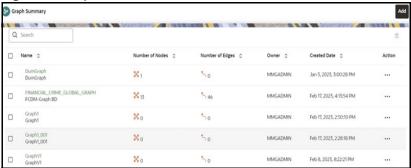

- 3. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ficdb/graph-metadata/upgrade directory.
- 4. Execute the following command to upgrade the new graph model:

update-oob-graph.sh

- 5. Restart PGX server.
- 6. Login to Compliance Studio.
 - a. Launch the **CS Production** Workspace.
 - b. Under Modeling, click Graphs.

The new OOB graph pipeline is displayed in the graph summary page.

Figure 27: Graph

c. Update the OOB graph refresh schedules for the new graph pipeline.

To create a Graph Refresh Schedules, see **Creating Graph Refresh Schedules** section in the OFS Compliance Studio User Guide.

7.9.1 Changes in Similarity Edges after Upgrade

After the upgrade from v8.1.2.5.0 to v8.1.2.7.0, the following Similarity Edges are not available in the Compliance Studio graph.

- Cust is similar to Cust
- Cust is similar to Derived Entity
- Derived Entity is similar to Derived Entity

NOTE

If the above three similarity edge providers are utilized in CS 8.1.2.5.0 graph pipelines, then after the upgrade, these similarity edge providers should be added manually to the graph definition of CS 8.1.2.7.0. To add graph definition manually, see Creating an Edge section (refer to step 8) in the OFS Compliance Studio User Guide.

7.9.2 Upgrade Steps for BD Graph

After upgrading to CS 8.1.2.7.0, the user needs to cleanup the CS 8.1.2.5.0 graph. Import graph definition of CS 8.1.2.7.0 and then begin graph pipeline execution from day 0. For more information, see the Importing OOB Graph Definition and related Metadata section.

7.10 Upgrade Steps for Entity Resolution

ATTENTION

- This section is applicable when Entity Resolution batches are executed in the previous version of the Compliance Studio and upgrading from MATCHING_MECHANISM = OS in CS 8.1.2.6.0 to MATCHING_MECHANISM = OS in CS 8.1.2.7.0.
- If you upgrade from MATCHING_MECHANISM = OS in CS 8.1.2.6.0 to MATCHING_MECHANISM = OT in CS 8.1.2.7.0, you should contact My Oracle Support (MOS).

To update metadata schema, follow these steps:

 Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/ficdb/upgrade/8.1.2.7.0/ UpgradeMetaSchema.

NOTE

The following steps are applicable to the below case:

• Compliance Studio is upgraded to 8.1.2.7.0 and users want to perform Entity resolution batches in 8.1.2.7.0.

The following steps are not applicable to the below case:

- If it is a Standalone installation of Compliance Studio 8.1.2.7.0.
- 2. Log in to metadata schema.

NOTE

Add the customized columns in C CREATE FULL_TABLE_QUERY.sql before executing the script as per The match rule.

3. Execute C CREATE FULL TABLE QUERY.sql script.

This script will create the full table in the C_CREATE_FULL_TABLE_QUERY column in the FCC_STUDIO_ER_QUERIES table.

4. Add the following scripts in the V_MAKE_TABLE_QUERIES column in the FCC_STUDIO_ER_QUERIES table.

```
DECLARE V_EXISTS NUMBER;

BEGIN

SELECT COUNT (1) INTO V_EXISTS FROM USER_INDEXES WHERE

TABLE_NAME = 'FCC_ER_FULL' AND INDEX_NAME =
'FCC_ER_FULL_CONCAT_NAME_IND';

IF V_EXISTS >0 THEN

EXECUTE IMMEDIATE 'DROP INDEX FCC_ER_FULL_CONCAT_NAME_IND ';

END IF;
```

```
END;

&&

DECLARE V_EXISTS NUMBER;

BEGIN

SELECT COUNT (1) INTO V_EXISTS FROM USER_INDEXES WHERE

TABLE_NAME = 'FCC_ER_FULL' AND INDEX_NAME = 'IND_UI_SEARCH';

IF V_EXISTS = 0 THEN

EXECUTE IMMEDIATE 'create index IND_UI_SEARCH on

fcc_er_full(CONCAT_NAME)

indextype is ctxsys.context

parameters (''datastore CTXSYS.DEFAULT_DATASTORE LEXER mylex wordlist kgram SYNC( ON COMMIT)'') parallel 8';

END IF;

END;
```

NOTE

Add the customized columns in UPDATE_QUERIES.sql before executing the script as per the match rule.

5. Execute the UPDATE QUERIES.sql script.

This script will create an idx view table in the QUERIES column in the FCC_STUDIO_ER_QUERIES table.

To update ER/FSDF schema, follow these steps:

 Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/ficdb/upgrade/8.1.2.7.0/ UpgradeFSDFSchema.

NOTE

The following steps are applicable to the below case:

• Compliance Studio is upgraded to 8.1.2.7.0 and users want to perform Entity resolution batches in 8.1.2.7.0.

The following steps are not applicable to the below case:

- If it is a Standalone installation of Compliance Studio 8.1.2.7.0.
- Log in to ER/FSDF schema.
- 3. Execute UPGRADE ER SCHEMA.sql script.

This script will add additional text columns for incorporating the date and dob columns in FCC_ER_FULL table.

4. Execute the DROP_FCC_ER_FULL_CONCAT_NAME_IND.sql script.

This script will drop FCC_ER_FULL_CONCAT_NAME_IND index from the FCC_ER_FULL table.

7.11 Upgrade Steps for Scenario Conversion Utility

For upgrade steps of the Scenario Conversion Utility, see **Using Scenario Conversion Utility** section in the OFS Compliance Studio User Guide.

7.12 Changes in OOB Match Ruleset after Upgrade

After the upgrade, the user can see the following new OOB match rulesets in the Match Ruleset UI.

- Customer to External Entity ICIJ Match CM
- Customer to External Entity ICIJ Match BDG
- Customer To External Address ICIJ Match CM
- Customer To External Address ICIJ Match BDG

NOTE

- The ICIJ match rulesets from CS 8.1.2.5.0 will have no impact on the graph batches whether they are enabled/disabled.
- The remaining rulesets on the Match Ruleset UI are not functional and these rulesets' functionality will be replaced by External Entity ICIJ and External Address ICIJ rulesets, respectively.

For example, all the external entities' matches use External Entity ICIJ match and all the external entities' address matches use External Address ICIJ match.

7.13 ASC Use Case

- The installer will handle all cases required for an upgrade. No mandatory manual cleanup is required.
- Any folders created under the previous version of Compliance Studio will be visible to the user. The notebooks in this folder cannot be executed. You may choose to clean up this folder.

8 Reinstall Compliance Studio for Cleanup of Studio and BD/Atomic Schema

NOTE

All the user data created after Compliance Studio installation, such as notebooks and customization will be cleaned.

If the installation of Compliance Studio is unsuccessful, you must reinstall the application after performing the required cleanup tasks.

To reinstall Compliance Studio for cleanup of Studio and BD/Atomic schema, follow these steps:

- 1. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/bin directory to update config.sh file.
- 2. Perform the database cleanup for the following schemas:

Table 23 lists Schemas applicable for cleanup.

Table 23: Schemas applicable for cleanup

| Schema | Applicable for Compliance Studio with OFSAA | Applicable for Compliance Studio without OFSAA |
|--|---|--|
| Clean up for Compliance Studio Schema | Yes | Yes |
| Cleanup for BD or ECM Atomic Schema | Yes | No |

3. Run the following command:

./compliance-studio.sh -k and ./compliance-studio.sh -R

4. Reinstall Compliance Studio.

Topics:

- Clean up for Compliance Studio Schema
- Cleanup for BD or ECM Atomic Schema

8.1 Clean up for Compliance Studio Schema

To clean up the Studio schema, follow these steps:

1. Drop the existing Compliance Studio schema and create a new Studio schema.

NOTE The username and password credentials of the Compliance Studio Schema in the wallet files must be updated accordingly. (If applicable)

2. Grant permission to the newly created Oracle Database Schema. For more information about grant, see the Assign Grants for Studio Schema section.

NOTE Note that the tablespace size can be as per the user's requirement.

8.2 Cleanup for BD or ECM Atomic Schema

To clean up the BD or ECM Atomic schema, follow these steps:

- 1. Login to the BD or ECM Atomic Schema.
- 2. Truncate the DATABASECHANGELOG and DATABASECHANGELOGLOCK tables using the following command:

TRUNCATE TABLE DATABASECHANGELOGLOCK;
TRUNCATE TABLE DATABASECHANGELOG;

9 Frequently Asked Questions (FAQs) and Error Dictionary

This section consists of resolutions to the frequently asked questions and error codes noticed during the Compliance Studio installation.

The Compliance Studio installer performs all the pre-requisite validation checks during installation. Any error encountered in the process is displayed with an appropriate Error Code. You can refer to the Error Dictionary to find the exact cause and resolution to rectify the error.

9.1 Frequently Asked Questions in Compliance Studio

You can refer to the Frequently Asked Questions, which are developed with interest to help you resolve some of the Compliance Studio Installation and configuration issues. This intends to share problem resolution knowledge to a few of the known issues. This is not an official support document and just attempts to share problem resolution knowledge to a few known issues.

1. Why does my console show an unsuccessful message during wallet creation?

You can check if you have run the following commands correctly. For more information on wallet creation, see Setup Password Stores with Oracle Wallet.

```
a. mkstore -wrl <wallet_location> -create //creates a wallet in the specified
location
```

```
b. mkstore -wrl <wallet_location> -createCredential <alias-name>
<database-user-name> //creates an alias in the studio schema
```

C. mkstore -wrl <wallet_location> -createCredential <alias-name>
<database-user-name> //creates an alias in the atomic schema

d. mkstore -wrl <wallet_location> -createCredential <alias-name>
<database-user-name> //creates an alias in the config schema

If your issue is still not resolved, contact My Oracle Support (MOS).

2. Where can I find my created wallet?

Your wallet will be in the directory you have set as your wallet location.

If your issue is still not resolved, contact My Oracle Support (MOS).

3. When should I create a Database link, and if yes, how do I do it?

Create a Database link to connect the Atomic and Config database schemas to the Studio database schema if the databases are different. You must create the link in the Studio database.

In the following example, a link has been created from the config schema to the atomic schema by running the following script:

```
create public database link <studio database link>
connect to <Config Schema>
identified by password
using ' (DESCRIPTION = ADDRESS_LIST = (ADDRESS = (PROTOCOL = TCP) (HOST = <host name> (PORT = <port number>)) (CONNECT_DATA = (SERVICE_NAME = <service name>))) ';

Config schema : <Config Schema>/password
```

```
' (DESCRIPTION = ADDRESS_LIST = (ADDRESS = (PROTOCOL = TCP) (HOST = <host name> (PORT = <port number>)) (CONNECT_DATA = (SERVICE_NAME = <service name>))) ';
```

After running the script, run the FCDM connector and ICIJ connector jobs.

4. Why does my installed studio setup not have any notebooks?

Some default notebooks are ready to use when you install Compliance Studio. If you do not see any notebooks when you log in to the application, you may not be assigned any roles. Check the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/logs directory to see if you have been assigned any roles, and if not, contact your administrator.

If your issue is still not resolved, contact My Oracle Support (MOS).

5. What can I do if the schema creation fails?

If the Atomic schema creation fails, login to the BD and ECM Atomic schemas and run the following query:

```
select * from fcc orahive datatypemapping;
```

The $fcc_orahive_datatypemapping$ table must not have duplicate data types.

If the Compliance Studio schema creation fails, login as a Studio user and run the following query:

```
select * from fcc datastudio schemaobjects
```

Run the following query to replace all Y values with ":

```
update fcc datastudio schemaobjects set SCHEMA OBJ GENERATED=''
```

After the schema creation is successful, the value of the SCHEMA_OBJ_GENERATED attribute changes to Y.

You can also check for errors in the application log file in the <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/logs directory.

If your issue is still not resolved, contact My Oracle Support (MOS).

6. What can I do if the Import_training_model batch execution fails?

Batch execution status always displays success in case of success or failure.

```
You can also check for errors in the application log file in the <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/logs directory.
```

According to the log details, you can fix the failure and rerun the same batch.

7. Why is the PGX Server not starting?

The PGX server starts only after the FCDM tables are created after the FCDM connector job is run. Check if all FCDM tables are created, and start the PGX server. You can also check for any errors in the application log file in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/ deployed/logs directory.

If your issue is still not resolved, contact My Oracle Support (MOS).

8. What should I do if there is a below Error while selecting edges in manual Decision UI?

```
java.lang.IllegalStateException: Unable to create
PgxSessionWrapperjava.lang.IllegalStateException: Unable to create
PgxSessionWrapper at
oracle.datastudio.interpreter.pgx.CombinedPgxDriver.getOrCreateSession(C

```

You can perform the following steps as a workaround -

- d. Export the "Manual Decision" Notebook
- e. Add the link parameter just below Description

For example, "link": "manual Decision",

Figure 28: link parameter

```
[ {
    "name" : "manual Decision",
    "description" : null,
    "link": "manualDecision",
    "tags" : null,
    "version" : "5",
    "layout" : "zeppelin",
    "type" : "Default",
    "readOnly" : false,
```

- f. Truncate the table "fcc_er_paragraph_manual" in Studio Schema.
- g. Import the modified notebook again.
- 9. What should I do when the result set is truncated if the size goes above '102400' bytes?
 - a. Perform the following steps:
 - b. Login to Compliance Studio.
 - c. Navigate to interpreter zeppelin.interpreter.output.limit.

Figure 29: Interpreter zeppelin parameter

d. Set the value to the required size.

- e. Restart the Studio Application.
- 10. What should I do when the spark interpreter is not working?
 - a. Log in to the server where Compliance Studio is installed.
 - b. Navigate to \$SPARK_HOME directory. If the path is not set, then navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-studio/inter-preter-server/spark-interpreter-<version>/extralibs directory.
 - c. Export the following environment variables:

```
export HADOOP_CONF_DIR=<HADOOP Configuration Directory path>
export SPARK_HOME=<SPARK CLIENT DIRECTORY path>
export SPARK_CONF_DIR=<spark-defaults.conf directory path >
export SPARK_SUBMIT_OPTS="-Djava.security.krb5.conf=<kerberos directory path>/krb5.conf"
```

- d. Run the following commands for specific cases:
 - The result of the following command should be Pie value. (It ensures that the client is configured successfully.

```
./bin/run-example --master yarn SparkPi 10
```

 The result of the following command is displayed as a Pie value. (It ensures that the client can successfully connect to the remote cluster

```
./bin/spark-submit --class org.apache.spark.examples.SparkPi --
master yarn <SPARK_HOME/examples/jars/>/spark-examples_<Ver-
sion>.jar 10
```

For example, in case of spark 2.11-2.4.0, the command is as follows:

```
./bin/spark-submit --class org.apache.spark.examples.SparkPi --
master yarn <SPARK_HOME/examples/jars/>/spark-examples_2.11-
2.4.0.jar 10
```

The result of the following command displays the list of databases that exist in HIVE.

```
./bin/spark-submit --class org.apache.spark.sql.hive.thrifts-erver.SparkSQLCLIDriver --master yarn -e "Show databases"
```

 The result of the following command ensures that the client can query from the HIVE schema.

```
./bin/spark-submit --class org.apache.spark.sql.hive.thrifts-
erver.SparkSQLCLIDriver --master yarn -e "select * from
<hiveSchema>.<tableName> limit 10"
```

11. How can I increase the memory of entity resolution and matching services?

For more information on increasing memory of entity resolution and matching services, see the **Appendix - Setting Memory of Entity Resolution and Matching Services** in the OFS Compliance Studio Administration and Configuration Guide.

12. What should I do when a runtime error occurs while executing a paragraph in Compliance Studio?

When Compliance Studio is just started (restart/upgrade/fresh installation), every interpreter gives a runtime error for the first time. Re-run the paragraph to get a result.

In addition, a user with admin privileges has to run a dummy notebook with a simple paragraph of all the used interpreters once.

13. What should I do if I encounter an error on the login?

If you log in to Compliance Studio for the first time, log out and log back in to resolve the error.

- 14. How can I retain the logs after restarting the Compliance Studio?
 - a. Log in to the Compliance Studio.
 - b. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
 - c. Open the compliance-studio.sh file and modify the following for service(s) as per your requirement:

Search with "\$LOGS_FOLDER" text for each service and add > (Greater than) special character and space before the text as specified below:

```
"$DEPLOY APP HOME"/<service name>/bin/<service name> >>
"$LOGS FOLDER"/<service name>.log
For example, batchservice, entity-resolution
function start services() {
  service=$1
  case $service in
  batchservice)
    export JAVA OPTS="-Djavax.net.ssl.trustStore=$DEPLOY APP HOME/
mmg-home/mmg-studio/conf/<studio server>
    -Djavax.net.ssl.trustStorePassword=$STUDIO SERVER SSL PASSWORD"
    sh "$DEPLOY APP HOME"/batchservice/bin/batchservice >>
"$LOGS FOLDER"/batchservice.log 2>&1 &
    unset JAVA OPTS
    ;;
  entity-resolution)
    export JAVA OPTS=<JAVA Options>
    export ER LOG PATH="$COMPLIANCE STUDIO INSTALLATION PATH/
deployed"
    export ER LOG LEVEL=INFO
    export LD LIBRARY PATH="$COMPLIANCE STUDIO INSTALLATION PATH/
deployed/python-packages/saneVirtualEnv/lib/python<version>/site-
packages/jep:$COMPLIANCE STUDIO INSTALLATION PATH/deployed/python-
packages/saneVirtualEnv/lib/":$LD LIBRARY PATH
    export PATH ORG=$PATH
    export PATH=$DEPLOY APP HOME/python-packages/saneVirtualEnv/
bin: $PATH
    export TNS ADMIN=$TNS ADMIN PATH
    export PYTHONPATH ORG=$PYTHONPATH
```

```
export PYTHONPATH="$DEPLOY_APP_HOME"/python-packages/
saneVirtualEnv/lib/python<version>/site-packages:$PYTHONPATH_ORG
    sh "$DEPLOY_APP_HOME"/entity-resolution/bin/entity-resolution >>
"$LOGS_FOLDER"/entity-resolution.log &
    unset JAVA_OPTS
    export PATH=$PATH_ORG
    ...
```

d. For load to OpenSearch, you need to add one more > (Greater than) special character as specified below:

```
sh "$DEPLOY_APP_HOME"/load-to-open-search/bin/load-to-open-search
>>"$DEPLOY APP HOME"/logs/load-to-open-search.log &
```

e. Restart Compliance Studio. To do this, run the following command:

```
./compliance-studio.sh -restart
Or
./compliance-studio.sh -r script
```

15. What should I do if the following error message is displayed while starting Compliance Studio services?

```
Java Memory error: unable to create new native thread
```

The user should perform the following steps:

- a. Login to the Linux server as a root user where Compliance Studio is installed.
- b. Open/etc/security/limits.conf file.
- c. Add the following parameters in the file:

```
soft nofile 65536
```

hard nofile 65536

linux username> soft nproc 10240

@svrtech soft memlock 500000

@svrtech hard memlock 500000

- d. Save the file.
- e. Restart the Compliance Studio.
- 16. What should I do when unable to refresh Graph and fail due to the following error?

```
Failed to load graph '<Graph name>' in PGX server: http://
<hostname>:7007

08:22:54.878 [se-nio-7059-exec-1] ERROR
s.fccm.graphService.service.GraphExecutorService - Failed to refresh PGX
Graph, <Graph name>, in all PGX servers
```

- a. Stop the PGX server.
- b. Log in to Studio schema.

- c. Delete the entries that are related to the graph in the tables **fcc_graph_m_config_json** and **fcc_pgx_m_config**
- d. Start the PGX server.
- a. Re-execute the Batch for the Graph pipeline or Refresh the Graph task. See the **Managing Graph Pipeline** section in the OFS Compliance Studio User Guide.
- 17. What should I do if there is a below error in the umm-service logs?

```
[29-06-22 07:30:48,095 GMT AM] [INFO] [WEB] [UMM] [NA] [GETUSERSESSION] Exception occurred while getting x-auth-token in initSession method of GetUserSession classjavax.net.ssl.SSLKeyException: Hostname verification failed: HostnameVerifier=weblogic.security.utils.SSLWLSHostnameVerifier, hostname=129.80.90.202.
```

Perform the steps provided in the https://docs.oracle.com/middleware/1213/wls/WLACH/taskhelp/security/DisableHostNameVerification.html link.

- 18. What should I do when upgrading the version JDK 11.0.13 to 11.0.15 using shell script? To upgrade bundled JDK, perform the following steps:
 - a. Use the wget command to download jdk 11.0.15 from the https://www.oracle.com/java/technologies/javase/jdk11-archive-downloads.html link.
 - b. Change the directory where mmg-studio is installed and navigate to <COMPLIANCE_STU-DIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-studio/interpreter-server/pgx-interpreter-bundledJRE-<version>.
 - c. Run the ./update-jdk.sh [-j JDK11_HOME] [-o OUTPUT_DIR] script. <JDK11_HOME> specifies the downloaded JDK11 path, and <OUTPUT_DIR> specifies where the updated interpreter is saved.
 - d. Replace the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/ mmg-studio/interpreter-server/pgx-interpreter-bundledJRE-<version> directory with the <OUTPUT DIR>/pgxjava.
- 19. What should I do when unable to update the SSO token to the latest value while reinstalling the Compliance Studio?

The user should perform the following steps:

- a. Log in to Studio schema.
- b. Edit the table NEXTGENEMF_CONFIG and change the SSO token to the proper value.
- c. Commit the changes.
- d. Restart the Compliance Studio.
- 20. What should I do If it is a time-out issue observed in the Graph Pipeline?

The user should perform the following steps:

- a. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-pipeline/pipeline/data-pipeline-service-<version>/conf/application.properties directory.
- b. Change the value from 1200000 to 120000000 in the server.jetty.connection-idle-timeout= property file.

- c. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-pipeline/pipeline-service-<version>/conf/application.properties directory
- d. Change the value from 1200000 to 120000000 in the server.jetty.connection-idle-timeout= property file.

21. What should I do if there is a below error in the Graph Pipeline?

```
08/Aug/2022 10:21:26,761- [LoggerConnection] LoggerConnection: Trying to
fetch connection for log.
 08/Aug/2022 10:21:26,761- [LoggerConnection] LoggerConnection: isJNDI

```

This error is displayed only when the OpenSearch index does not have the proper data.

- a. Fix the data in the pre tables and cleanup the ER schema.
- b. Re-run the job again. To run the job, see **Perform Matching** section in the OFS Compliance Studio Administration and Configuration Guide.
- 23. What should I do if interpreter settings are changed after restarting the Compliance Studio? To retain the interpreter settings, follow these steps:
 - a. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-studio/conf directory.
 - b. Open the application.yml file and change the value of **overwrite-builtin** to **false** in the interpreter parameter.

NOTE While upgrading Compliance Studio, you should change the value to **true**.

- c. Restart Compliance Studio.
- 24. How to upgrade the python virtual environment for the fcc-python interpreter?

To upgrade, follow these steps:

- a. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- b. Open the compliance-studio.sh file and modify the **PYTHONPATH** variable in the default fcc-python interpreter as per your requirement:

For example,

```
export PYTHONPATH=<absolute/path/to/virtual-environment-or-python-
installation-folder/lib/python<version>>/site-
packages:$PYTHONPATH ORG
```

25. What should I do if ER Bulk similarity job fails due to metadata indices?

To load the indices, follow these steps:

- a. Execute the following cleanup scripts:
 - ER Run Bulk Similarity Job.sh
 - ER Create And Load Data Into Index.sh
- b. Delete the indices.
- c. Verify that the indices are deleted completely.
- d. Set the **F_IS_RECENTLY_CHANGED** flag to **Y** in the **fcc_idx_m_lookup**, and **fcc_idx_m_-matching_lookup** tables.
- e. Execute ER Create And Load Data Into Index.sh.
- f. Ensure all the indices are created (Generally, it should create 19).
- g. If all the indices are available, then execute the ER Run Bulk Similarity Job.sh.
- 26. Unable to open UI (Ruleset details, Manual Decisioning and Merge and Split Global Entities) in the Firefox browser?

The reason could be:

a. Compliance Studio UI does not open in the Firefox browser if self-signed certificates are used while installation.

27. The UI (Ruleset details, Manual Decisioning and Merge and Split Global Entities) takes more time to load in other browsers?

The reason could be:

- a. The Compliance Studio UI screens are not cached if self-signed certificates are used and it takes time to load screen every time.
- 28. What should I do if the workspaces are not displayed and below error is encountered in the server.log?

```
12:02:16.272 [se-nio-7008-exec-2] ERROR er.network.base.exception.ExceptionHandlerAdvice - Internal server error.
```

io.jsonwebtoken.security.SignatureException: JWT signature does not match locally computed signature. JWT validity cannot be asserted and should not be trusted.

To resolve the error, follow these steps:

- a. Generate the public and private keys. For more information, see the Generate the Public and Private Keys section.
- b. Replace the keys in the paths as mentioned in the Generate the Public and Private Keys section.
- c. Generate the SSO (API) token. For more information, see the Generate API token for CS API User section.
- d. Replace token in the config.sh file. For more information, see parameter "SSO_TOKEN" in the Table 14.
- e. Stop Compliance Studio.
- f. Reinstall Compliance Studio.
- g. Replace the value of SSO_TOKEN in the nextgenemf_config table in the studio schema.
- h. Start Compliance Studio.
- 29. What should I do if a particular patch version is not applied to the CS build?

To apply the patch, follow the step:

- a. You must manually delete the entry for that particular patch version from the **FCC_COMPLIANCE_STUDIO_PATCHES** table in the Studio Schema.
- 30. How to configure a new/cloned interpreter?

To configure a new/cloned interpreter, follow these steps:

- a. Create a new/clone an existing interpreter in the UI.
- b. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-studio/bin directory.
- c. Open startup.sh file and add following line before the line containing "counter=1";

```
nohup <path_to_interpreter_binary_file> &>> <path_to_save_the_logs>/
<log file name>.log &
```

Figure 30: Snapshot of startup.sh file

- d. Save and close the file.
- e. Open shutdown.sh file and add following line before the line containing "SL=".

```
I8004=`ps -eaf | grep java | grep RemoteInterpreterServer | grep 8004
| awk '{print $2}'`
if [[ "" != "$I8004" ]];
then kill -9 $I8004;
fi
```

Figure 31: Snapshot of shutdown.sh file

```
# To shutdown Spark interpreter
18004=`ps -eaf | grep java | grep RemoteInterpreterServer | grep 8004 | awk '{print $2}'`
if [[ "" != "$18004" ]];
then kill -9 $18004;
fi

SL=`ps -eaf | grep java | grep oracle.datastudio.starter.App | awk '{print $2}'`
if [[ "" != "$SL" ]];
then kill -9 $SL;
fi
```

NOTE

In the above steps, the port number for the new/cloned interpreter is assumed to be 8004, the default port that comes with the installer. If a different port is used, then change the configuration accordingly.

- f. Save and close the file.
- g. Navigate to <COMPLIANCE STUDIO INSTALLATION PATH>/bin directory.
- h. Restart Compliance Studio using the following command:

```
./compliance-studio.sh -restart
```

i. Verify if the spark-interpreter has started using the following command:

```
netstat -nltp | grep 8004
```

31. What should I do if import failed in the Graph Pipeline?

After installation, query the table FCC_M_PIPELINE_IMPORT_LOG to check the imported pipeline status. The _V_IMPORT_STATUS_ column denotes the status and should be 'SUCCESS' for all the imported pipelines.

If any pipelines have the status of 'FAILED,' perform the following steps to reimport:

- a. Find the entry for the failed pipeline in the **FCC_M_EXTERNALSERVICE_RUN** table of this **_C_TABLELIST_** column.
- b. Remove that entry from the table. If the entry is not there, skip this step.

- c. Navigate to <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-pipeline/pipeline/data-metadata-job-<version>/bin directory.
- d. Run the import metadata.sh shell script using the following command:
 - ./import metadata.sh
- e. Once the script is executed, verify the status in the **FCC_M_PIPELINE_IMPORT_LOG** to ensure that the status is a success.
- 32. How do I update the BE_PORT value after reinstalling the Compliance Studio?

To update the BE_PORT value, follow these steps:

- a. Login to Compliance Studio schema.
- b. Open the **NEXTGENEMF_CONFIG** table.
- verify the V_NAME columns (EMFSTUDIO_SERVICE_URL and BASE_URL).
 If "BE_PORT" is not replaced, change V_VALUE to the required port number or set it to the default port value. i.e., 7002.
- d. Restart the Compliance Studio.
- 33. What should I do if delta matches are not reflected in the sub graph (OOB)?

To reflect delta matches in the sub graph, follow these steps:

- a. Re-run the Refresh Graph task.
- b. Restart the PGX and then load the sub graph.

10 Appendix A - Change Port Numbers for the Applicable Services

Change the port number in the applicable files as shown in the following sections. And also, update the respective port numbers in the **install.sh** in <COMPLIANCE STUDIO INSTALLATION PATH>/bin.

WARNING

You must re-install and restart Compliance Studio after changing the service(s) with the new port number.

NOTE

Only follow this if you want to update the port number of the service(s).

Topics:

- Server
- Batchservice and Metaservice
- Interpreter Service
- PGX Service
- Graph Service
- Matching Service
- Entity Resolution Service

10.1 Server

To change the port number for the server, go to the **application.yml** file in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/mmg-home/mmg-studio/conf/ directory and edit the following values with the new port, for example, 7008:

- authserviceUrl: "http://<hostname>:<port>/authservice"
- metaserviceUrl: "http://<hostname>:<port>/metaservice"
- erserviceUrl: "http://<hostname>:<port>"
- batchserviceUrl: "https://<hostname>:<port>/batchservice"
- mmgServiceUrl: "https://<hostname>:<port>/cs"

10.2 Batchservice and Metaservice

To change the port number for the Batchserviceserver, go to the <code>server-config.properties</code> file in the <code><COMPLIANCE_STUDIO_INSTALLATION_PATH>/batchservice/conf/</code> directory and edit the following values with the new port.

- server.http.port:7043
- server.shutdownPort:7044

Follow this step to make the same changes to the Metaservice server.

10.3 Interpreter Service

To change the port number for the Interpreter service, follow these steps:

- 1. Navigate to the install.sh file in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/bin directory and edit the port number of the required service.
- 2. Reinstall and restart the service.

10.4 PGX Service

To change the port number for the PGX service, go to the server.conf file in the <PGX installation Path>/pgx-server/conf/ directory and update the new port number as **7007**.

10.5 Graph Service

To change the port number for the Graph service, go to the application.yml file in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/mmg-home/mmg-load-to-graph/graph-service/conf directory and update the new port number. By default, it is set as **7059**.

10.6 Matching Service

To change the port number for the matching service, go to the application.yml file in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/matching-service/conf directory and update the new port number as **7049**.

10.7 Entity Resolution Service

To change the port number for the entity resolution service, go to the application.yml file in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/entity-resolution/conf directory and update the new port number 7051.

11 Appendix B – Spark or PySpark Interpreter

This section provides additional details for Spark or PySpark Interpreter.

Topics:

- Spark Interpreter User Impersonation
- Sample spark-default.conf Configuration File

To set up an additional Spark or PySpark interpreter, for example, to connect to two different external clusters at the same time, follow these steps:

1. Create a start-script for the second Spark interpreter.

NOTE This is an optional step.

a. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/interpreters/bin directory and create a new start-script called start-spark2-interpreter.sh using the following command:

```
cp start-spark-interpreter.sh start-spark2-interpreter.sh
```

- b. Edit the start-spark2-interpreter.sh file in the <COMPLIANCE_STUDIO_INSTALLATION_-PATH>/deployed/interpreters/bin/ directory to update:
 - i. Port number to a new port number that is not in use (for example, 7030)
 - ii. Rename the log file, search for the text, .log and give a new name to the log (for example, from spark.log to spark2.log).
- c. Edit the start-all-interpreters.sh file in the <COMPLIANCE_STUDIO_INSTALLATION PATH>/interpreters/bin/ directory as follows:
 - i. Search for the text sh "\$DEPLOY_APP_HOME"/interpreters/bin/start-spark-interpreter.sh &
 - ii. Add an additional entry with sh "\$DEPLOY_APP_HOME"/interpreters/bin/ start-spark2-interpreter.sh &

NOTE

For the **2nd Spark** interpreter variant, use start-spark2-interpreter.sh, when configuring for a 3rd variant, use as start-spark3-interpreter.sh etc.

- 2. Create the interpreter JSON for the additional Spark interpreter.
 - a. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/interpreters/conf directory and create the new interpreter JSON called spark2.json using the following command:

```
cp spark.json spark2.json
```

- b. Edit the spark2.json file in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/ deployed/interpreters/conf/ directory as follows:
 - i. Update the following parameter values:

```
group: <new-spark-interpreter-name>,
name: <new-spark-interpreter-name>,
groupSettings.initialCodeCapability: <new-spark-interpreter-name>,
```

```
port: 7030 (the port chosen in the step 1),
         capabilities.name: <new-spark-interpreter-name>,
         capabilities.button.label: <new-spark-interpreter-name>,
3. After the update, the file will look like the following:
   [
     {
       "group": "spark",
       "name": "spark",
       "className": "org.apache.zeppelin.spark.SparkInterpreter",
       "groupSettings": {

```
"type": "string"
      },
      "zeppelin.spark.enableSupportedVersionCheck": {
        "envName": null,
        "propertyName": "zeppelin.spark.enableSupportedVersionCheck",
        "defaultValue": true,
        "description": "Do not change - developer only setting, not for
production use",
        "type": "checkbox"
      },
      "zeppelin.spark.uiWebUrl": {
        "envName": null,
        "propertyName": "zeppelin.spark.uiWebUrl",
        "defaultValue": "",
        "description": "Override Spark UI default URL",
        "type": "string"
      },
      "zeppelin.spark.useNew": {
        "envName": null,
        "propertyName": "zeppelin.spark.useNew",
        "defaultValue": true,
        "description": "Whether use new spark interpreter
implementation",
        "type": "checkbox"
      },
      "zeppelin.spark.ui.hidden": {
        "envName": null,
        "propertyName": "zeppelin.spark.ui.hidden",
        "defaultValue": false,
        "description": "Whether to hide spark ui in zeppelin ui",
        "type": "checkbox"
      },
  "zeppelin.interpreter.output.limit": {
        "envName": null,
        "propertyName": "zeppelin.interpreter.output.limit",
        "defaultValue": "102400",
```

```
"description": "Output message from interpreter exceeding the
limit will be truncated",
        "type": "number"
     }
},
"initialCode": [],
"editor": {
      "language": "scala",
      "editOnDblClick": false
}
}
```

- 4. Create the interpreter JSON for the second PySpark interpreter.
 - a. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/interpreters/conf directory and create the new interpreter JSON called pyspark2.json using the following command:

```
cp pyspark.json pyspark2.json
```

- b. Edit the pyspark2.json file in the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/ deployed/interpreters/conf/ directory as follows:
 - Update the following parameter values:

```
group: <new-spark-interpreter-name>,
name: <new-spark-interpreter-name>,
groupSettings.initialCodeCapability: <new-spark-interpreter-name>,
port: 7030 (the port chosen in the step 1),
capabilities.name: <new-spark-interpreter-name>,
capabilities.button.label: <new-spark-interpreter-name>,
```

5. After the update, the file will look like the following:

```
"highlightLanguage": "python",
        "button": {
          "defaultCode": "print('Hello World')",
          "icon": "icon-python",
          "label": "PySpark"
        "formEscapeCharacter": "$"
      }
    ],
    "properties": {
      "zeppelin.pyspark.python": {
        "envName": "PYSPARK PYTHON",
        "propertyName": null,
        "defaultValue": "python3",
        "description": "Python executable to run pyspark with",
        "type": "string"
      },
      "zeppelin.pyspark.useIPython": {
        "envName": null,
        "propertyName": "zeppelin.pyspark.useIPython",
        "defaultValue": false,
        "description": "whether use IPython when it is available",
        "type": "checkbox"
      },
  "zeppelin.interpreter.output.limit": {
        "envName": null,
        "propertyName": "zeppelin.interpreter.output.limit",
        "defaultValue": "102400",
        "description": "Output message from interpreter exceeding the
limit will be truncated",
        "type": "number"
    },
    "initialCode": []
  }
1
```

NOTE

If you try to connect two interpreters to different external clusters when setting the environment variables, $SPARK_HOME$ and $HADOOP_CONF_DIR$, as part of providing custom Spark libraries in Yarn Mode, ensure that you append the environment variables to the respective Spark interpreter start-scripts.

6. Restart Compliance Studio. To do this, navigate to the

```
<COMPLIANCE_STUDIO_INSTALLATION_PATH>/bin/ directory and run the ./compliance-
studio.sh -restart or ./compliance-studio.sh -r script
```

11.1 Spark Interpreter User Impersonation

Configure the Spark cluster and Studio to allow proxy users.

Add the below properties and values in core-site.xml in the Spark cluster as well as Studio and restart the Spark cluster and Studio:

Configure the Spark interpreter to run the spark-submit job as the currently logged-in user.

Add the below property in spark.json:

```
"zeppelin.spark.run.asLoginUser": {
    "envName": null,
    "propertyName": "zeppelin.spark.run.asLoginUser",
    "defaultValue": true,
    "description": "Whether run spark job as the zeppelin login user, it is only applied when running spark job in hadoop yarn cluster and shiro is enabled",
    "type": "checkbox"
}
```

NOTE

There will be only a single keytab used by all Spark interpreter runs.

11.2 Sample spark-default.conf Configuration File

Here is the sample code block for creating spark-default.conf file:

```
spark.driver.port 30303
spark.blockManager.port 31313
spark.driver.bindAddress 0.0.0.0
spark.yarn.dist.files <COMPLIANCE STUDIO INSTALLTION PATH>/deployed/mmg-home/
mmg-studio/interpreter-server/spark-interpreter-<version>/extralibs/spark-
<version>-bin-hadoop<version>/python/lib/pyspark.zip,<COMPLIANCE STUDIO</pre>
INSTALLTION PATH>/deployed/mmg-home/mmg-studio/interpreter-server/spark-
interpreter-<version>/extralibs/spark-<version>-bin-hadoop<version>/python/
lib/py4j-0.10.7-src.zip
spark.executorEnv.PYTHONPATH pyspark.zip:py4j-0.10.7-src.zip
spark.driver.defaultJavaOptions "-Dsun.security.krb5.debug=false -
Djavax.security.auth.useSubjectCredsOnly=false -
Djava.security.krb5.conf=<COMPLIANCE STUDIO INSTALLATION PATH>/deployed/
batchservice/user/conf/krb5.conf"
spark.driver.host <FQDN HOSTNAME>
spark.yarn.keytab < COMPLIANCE STUDIO INSTALLATION PATH>/deployed/
batchservice/user/conf/fccstudio.keytab
spark.yarn.principal <KRBS PRINCIPAL>
spark.yarn.kerberos.relogin.period 1m
```

NOTE

- **FQDN_HOSTNAME** stands for compliance Studio Fully Qualified hostname, and **KRBS_PRINCIPAL** stands for Kerberos principal.
- For example, the Spark version is **spark-2.4.0-bin-hadoop2.7.**

Appendix C – Additional Jars – PGX

PGX-Server does not include Hadoop-client for reading graphs from HDFS.

NOTE

- This section is deprecated in the current release and will be removed in the future release.
- This section can be skipped if the deployer intends to use only ready to use sample-graph or PGX server without ETL.

When deploying Studio, you must obtain the following libraries. These libraries can be obtained from your existing big data cluster or the internet. The following list of jars is for **Hadoop-client 3.0.0-cdh6.3.0**. These libraries are referred to as 'hdfs-libs'.

NOTE

The following Jar files for your reference. you can use the similar **hdfs-libs** jars based on your Big Data cluster.

Table 24 lists required libraries:

Table 24: List of libraries

| accessors-smart-1.2.jar | jaxb-api-2.2.11.jar |
|----------------------------------|---|
| aopalliance-1.0.jar | jaxb-impl-2.2.3-1.jar |

14 Appendix E – Create Users, Groups, and Mappings

This AAI User Provisioning SQL Scripts Generator Utility allows you to use AAI for authN in the Compliance Studio. Identity administrators can create new user groups/roles, perform appropriate roles, usergroup and domain mapping, and so on.

This is provided as a SQL generator utility. This SQL scripts is executed in the AAI's config schema to create the required metadata.

You must execute this script multiple times against each username. Also, generate the merge scripts accordingly.

Execute the following command from <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/ <mmg-home>/bin directory.

./userprovisioning-script-generator.sh <user> <comma separated listof user groups or ALL> <infodom> <segment>

Sample Commands:

- ./userprovisioning-script-generator.sh SCRIPTUSER ALL OFSAAAIINFO EMFLD
- ./userprovisioning-script-generator.sh SCRIPTUSER MDLREV,MDLUSR,IDENTITY ADMIN OFSAAAIINFO EMFLD

Table 26 list the pre-configured groups in the Compliance Studio.

Table 26: Pre-configured Group

| User Group | Description |
|-------------|---|
| IDNTYADMN | Identity Administrator group |
| IDNTYAUTH | Identity Authorizer group |
| MDLREV | The Modeling Reviewer Group. |
| | Users mapped to this group have access to the menu items in the application that are related to model review activities. |
| MDLAPPR | The Modeling Approver Group. |
| | Users mapped to this group have the rights to approve models created by the users. |
| MDLBATCHUSR | The Modeling Batch User. Scheduler can use this Group for executing batches. |
| | The Workspace Administrator Group. |
| WKSPADMIN | Users mapped to this group have access to create and populate workspaces. For viewing the landing page this group is required. |
| | The Modeling User Group. |
| MDLUSR | Users mapped to this group have access to all the menu items in the application that is related to model creation. |
| DSUSRGRP | Data Studio User Group . |
| | This User Group provide access to modify Interpreter configurations. |

Table 26: Pre-configured Group

| User Group | Description |
|-------------|--|
| | The Graph Administrator Group. |
| GRPADMIN | Users mapped to this group have access to all the menu items in the application related to graph as well as Pipeline/Refresh graphs related health services. |
| | The Graph User Group. |
| GRPUSR | Users mapped to this group have access to all the menu items in the application related to graph as well as Pipeline/Refresh graphs related health services. |
| DSREDACTGRP | Roles for applying redaction in graph. This group will be applicable to only those users for whom graph redaction is required. |
| | NOTE: |
| | This group has to be created manually in AAI and map it to the users. |
| ERADMIN | Entity resolution admin group. |
| | NOTE: |
| | This group has to be created manually in AAI and map it to the users. |
| ERUSER | Entity resolution user group. |
| | NOTE: |
| | This group has to be created manually in AAI and map it to the users. |

Appendix F - Generate an Encrypted Password for OpenSearch

To generate encrypted passwords required during configuration, i.e., while configuring encrypted passwords. For example, OPEN_SEARCH_ENCRYPTED_PASSWORD.

To generate an encrypted password, follow these steps:

- 1. Set the export <code>FIC_DB_HOME</code> path in the <code><COMPLIANCE_STUDIO_INSTALLATION_PATH>/</code> field directory.
- 2. Run the echo \$FIC DB HOME command.

Appendix G - Disable Initialization in fcc-python-sane Interpreter

To disable the fcc-python-sane interpreter, follow these steps:

- 1. Navigate to the following directories and update the **MMG_PYTHON_INTERPRETER** property as MMG_PYTHON_INTERPRETER=fcc-python,fcc-python-ml4aml
 - <COMPLIANCE STUDIO INSTALLATION PATH>/bin/install.sh
 - <COMPLIANCE STUDIO INSTALLATION PATH>/deployed/mmg-home/bin/config.sh
 - <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-service/ bin/config.sh
- 2. Navigate to the <COMPLIANCE_STUDIO_INSTALLATION_PATH>/deployed/mmg-home/mmg-service/conf/application.properties directory.
- 3. Update the **mmg.python_interpreter** property as mmg.python_interpreter=fcc-python,fcc-python-ml4aml.
- 4. Restart Compliance Studio.

OFSAA Support

Raise a Service Request (SR) in My Oracle Support (MOS) for queries related to OFSAA applications.

Send Us Your Comments

Oracle welcomes your comments and suggestions on the quality and usefulness of this publication. Your input is an important part of the information used for revision.

- Did you find any errors?
- Is the information clearly presented?
- Do you need more information? If so, where?
- Are the examples correct? Do you need more examples?
- What features did you like most about this manual?

If you find any errors or have any other suggestions for improvement, indicate the title and part number of the documentation along with the chapter/section/page number (if available) and contact the Oracle Support.

Before sending us your comments, you might like to ensure that you have the latest version of the document wherein any of your concerns have already been addressed. You can access My Oracle Support site which has all the revised/recently released documents.
