Preface

Audience

Following are the intended audience for the Oracle Financial Services Data Integration Hub (OFS DIH) Foundation Pack Extension for Oracle Banking Platform (OBP) user guide:

- ETL Developers: The ETL Developers from the IT Department of the financial services institution, who do the data sourcing.
- Business Analysts: The business analysts from the IT Department of the financial services institution, who do the mapping of the tables.

Prerequisites

- Data Integration Hub (DIH) should be installed
- OFSAA – OBP Interface should be installed
- Oracle Data Integrator environment for executing the interfaces

Related Information Sources

Along with this user manual, you can also refer to the following documents in [OHC](#) documentation Library:

1 Introduction to OBP Interface

1.1 Overview of DIH Interface

Data Integration Hub (DIH) enables to load the data from the source systems to the Oracle Financial Services Analytical Applications (OFSAA) staging tables, through logical interfaces, known as Application Data Interfaces (ADI). DIH provides a set of User Interfaces (UI), which is used to define and maintain External Data Descriptors (EDD), Application Data Interfaces, and also map the EDDs and ADIs through Connectors. The mappings can be one to one, one to many, and many-to-many.

The source systems that supply data include, the core banking systems, rating systems, modeling systems, and so on. In the absence of DIH, the data from the source systems are extracted, transformed, and loaded (ETL process) to the physical tables in Oracle Data Integrator (ODI). With DIH, the ETL activity is not replaced; but DIH serves as an abstract, logical layer to the physical tables in Oracle Data Integrator (ODI).

Oracle Financial Services Analytical applications (OFSAA) enables financial institutions to measure and meet risk-adjusted performance objectives, cultivate a risk management culture, lower the costs of compliance and regulation, and improve customer insight.

Oracle Business Platform (OBP) is designed to help banks respond strategically to today's business challenges and progressively transform their business models through industrialized business processes, driving productivity improvements across front and back offices, and reducing operating costs.

It supports banks' growth agenda through new distribution strategies including multi-brand or white labeling to tap new markets and enterprise product origination supporting multi-product and packages to drive an increased customer-to-product ratio.

1.2 Data Flow

The procedures are packaged within OBP which populates data from various tables in OBP to several landing area tables after execution. Essentially a 1:1 mapping is done between the landing area table (EDD) and OFSAA staging area table (ADI). Most of the calculations and transformations are done within these extraction routines. The DIH connector pulls data from the landing tables and populates the same in the staging area tables.

1.3 List of OBP Modules

The modules used in OBP are as follows:

- ACCOUNTING
 - CASA
 - CHANNEL
 - COLLATERAL
-

- COLLECTIONS
- CORE
- CUSTOMER
- DDA
- FACILITY
- GL
- INTEREST
- LOAN
- MITIGANT
- ORIGINATION
- PARTY
- PRODUCT
- TERM DEPOSIT
- OVERDRAFT

NOTE: The supported versions of OBP are 2.3.0.0, 2.4.0.0 and 2.6.2.0.

2 Mapping the OFSAA User to OBP User Groups

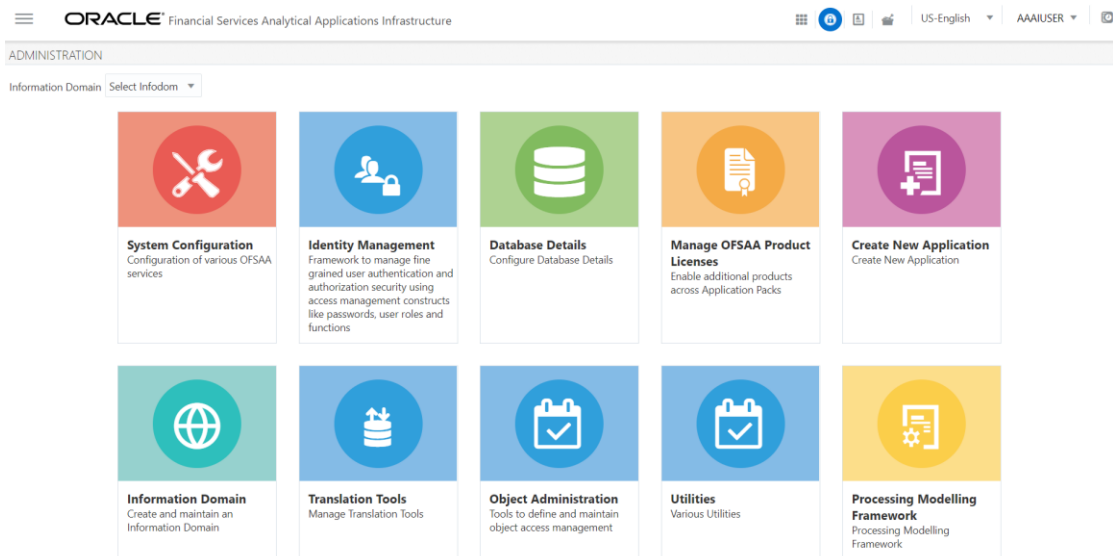

User group mapping enables you to map user(s) to specific user group which in turn is mapped to a specific Information Domain and role. Every User Group mapped to the infodom should be authorized. Else, it cannot be mapped to users.

User Group Map screen displays fields such as **User ID**, **Name**, and the corresponding **Mapped Groups**. You can view and modify the existing mappings within the **User Group Maintenance** screen.

To access User Group Mapping, from Oracle Financial Services Analytical Applications Infrastructure window, click  from the header to display the Administration tools in Tiles menu. Click Identity Management from the Tiles menu to view the Security Management window, or click  button to access the Navigation List, and click Identity Management to view the Security Management window. For details on mapping users to user groups refer to [OFSAAI User Guide](#) in OHC documentation library.

Seeded User Groups for OFSAA - OBP Interface

Name	Description
OBP Admin	User mapped to this group will have access to all the menu items for entire OBP Application. The exclusive menu's which are available only to this group users are <i>OBP Administration</i>
OBP Data Mapping	User mapped to this group will have access to OBP Data Mapping Menu
OBP Operator	User mapped to this group will have access to Orchestration and Execution Menu

3 Logging into OBP-OFSAA Interface

Access the OBP-OFSAA Interface using your login credentials (User ID and password). The built-in security system ensures that you are permitted to access the window and actions based on the authorization only.

After logging into the application, select **Interface for Oracle Banking Platform**.

Note: You should be mapped at least any one of the OBP user groups in order to get the application.

The OBP -OFSAA landing page is displayed below.

4 Prerequisites for Deploying OFSAA-OBP Connectors

The deployment process requires the below actions to be performed as prerequisites. Ensure that these requirements are met before starting the deployment using Refresh OBP interface menu.

- The user must be mapped to the user group **OBP Admin** in order to get the Refresh OBP Interface menu.
- The user should have mapped to **DIH Admin** and **DIH Data Mapping** user groups to configure the Oracle Data Integrator (ODI) settings and External Data Store respectively.

Follow the below steps:

1. Complete the ODI settings using **Settings** option in **DIH Application Administration** menu before deploying the interface.
2. Click Settings in Administration screen.

3. The ODI settings screen is displayed. Update the setting information correctly before proceeding to the deployment of OBP interface connectors.

Settings Menu	Values Required	Example
ODI User	User Name used for Login to ODI	SUPERVISOR
ODI Password	ODI Password for the ODI user to login	odipassword
Master Repository DB User	Master Repository DB Schema User Name created for ODI	DIHDEV_ODI_REPO
Master Repository DB Password	Master Repository DB Schema Password	dbpassword

Settings Menu	Values Required	Example
Master DB Driver	Oracle Driver (Use the Default)	oracle.jdbc.OracleDriver
Master DB Connection	Oracle Database JDBC URL	jdbc:oracle:thin:@10.184.135.6:1521:DIHDB
Work Repository	Repository used inside ODI	DIHREP

- A source named **OBP_STAGE_SRC** is present in **External Data Store** under **DIH Application**. Select the entry which is present as **OBP_STAGE_SRC** to **Edit**.

Source Name	Type	File Location	DB Connection	Last Modified By	Last Modified Date
OBP_STAGE_SRC	ORACLE DB	null	jdbc:oracle:thin:@SOURCEPORTSID	OPSAD	2015-03-22 10:25:00.0

- Provide the details of OBP schema user name and password where you have the Landing Tables of OBP Application. Refer to [DIH User Manual](#) for more details on External Data Store File settings.

6. Navigate to **DIH Application**, click **Menu**.

7. Click **Application Data Interface**.
8. On the RHS click **Refresh ADI**.
9. Click **Start**  icon. This refreshes all the Application Data Interfaces, and creates the Application Data Interfaces for all the staging tables present in the model which is being uploaded in the same Infodom.

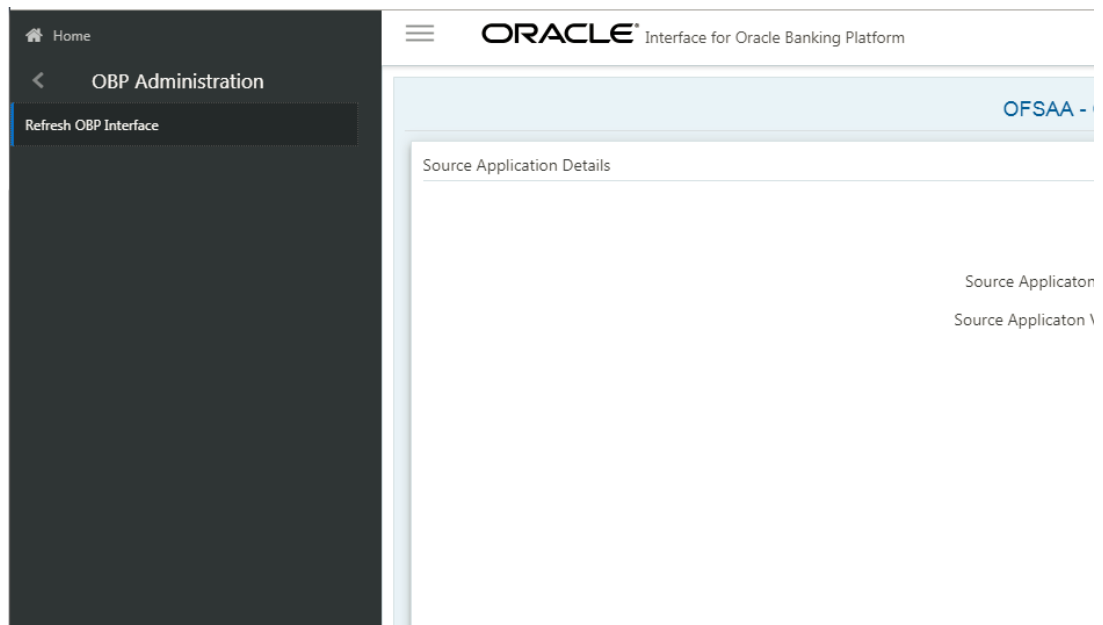

10. Navigate to **DIH Application**, click **Menu**.
11. Click **Application Data Interface**.
12. On the RHS click **Target Datastore Refresh**.
13. Click on **Start**  icon. This refreshes all available target data stores.

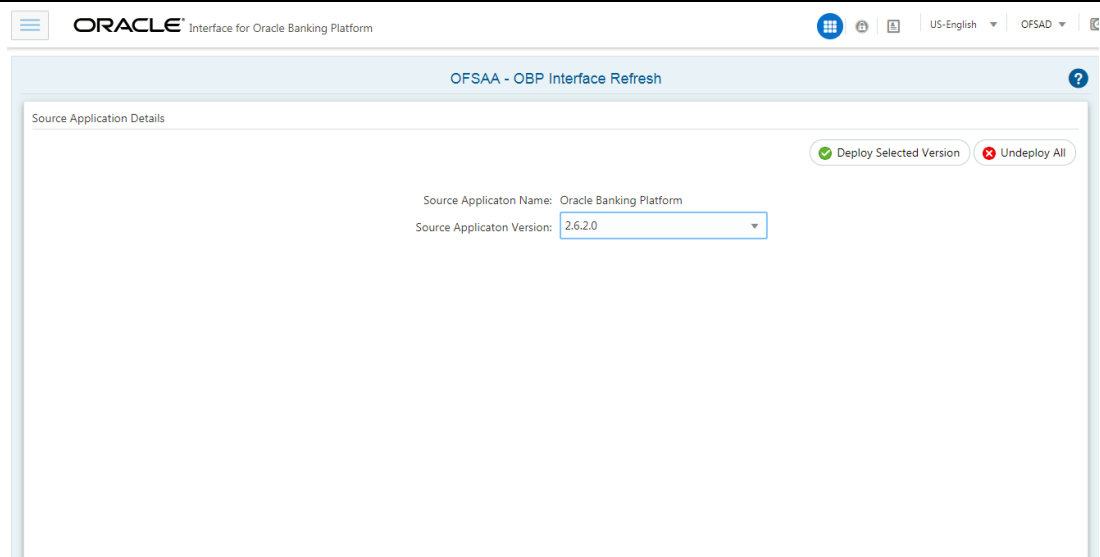

5 Deploying/ Undeploying OFSAA-OBP Connectors Using Refresh OBP Interface Menu

After the pre-requisites are complete, you can deploy the OBP connectors that map the multiple file EDD's to the corresponding ADI's, by using **Refresh OBP Interface** menu. This creates the corresponding External Data Descriptor and Connectors inside **Data Mapping** Menu of the OBP Interface.

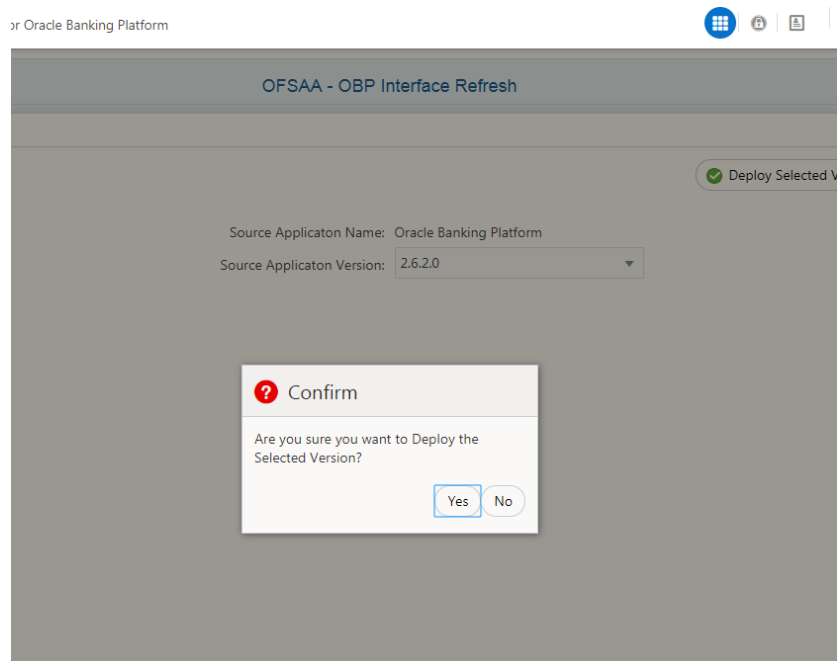

1. Navigate to the OBP application interface.
2. Select **Administration**, and click **Refresh OBP Interface**.

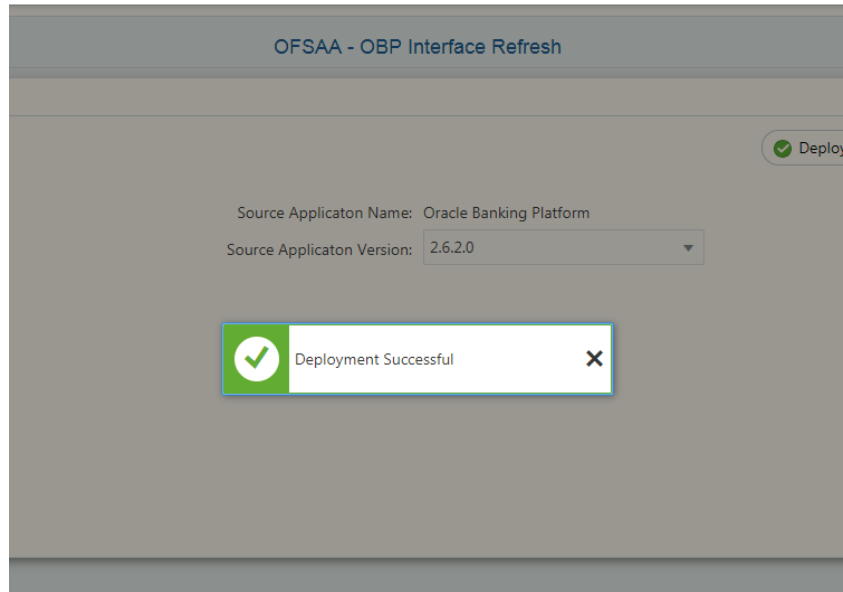

3. Select the Source App Version from the drop-down menu. OBP interface has version 2.3.0.0, 2.4.0.0 and 2.6.2.0. You can select and deploy either 2.3.0.0 or 2.4.0.0 version at a time. Version 2.6.2.0 can be deployed along with other version, as connector names are different in this version. This will deploy new set of connectors which may already be present in old version but with different name.
4. Click **Deploy Selected Version**

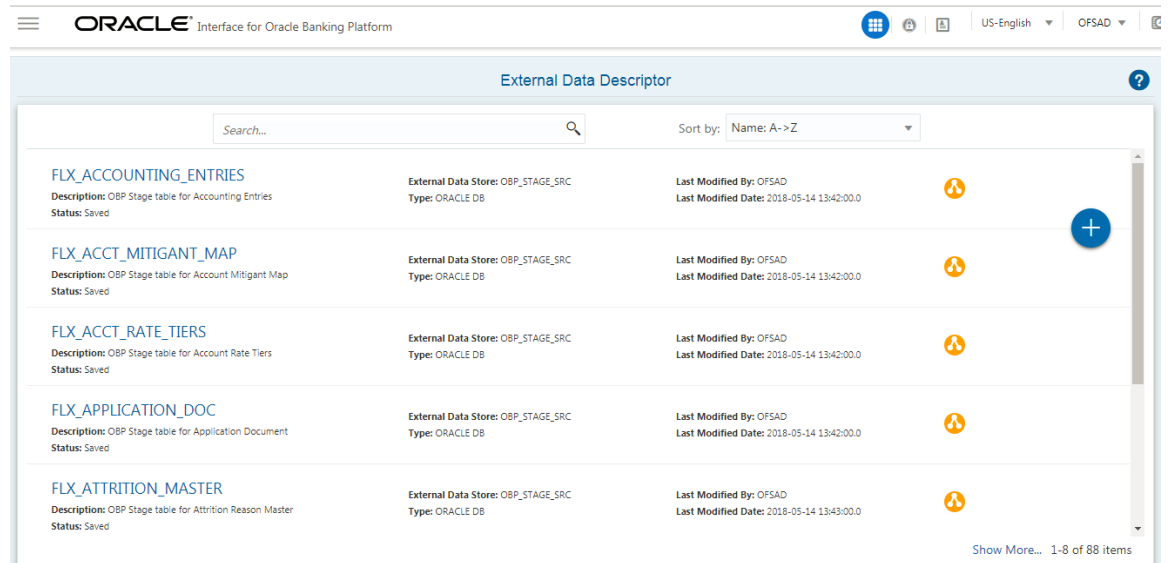

5. A message “*Are you sure you want to Deploy the Selected Version?*” is displayed. Click **Yes** to proceed.

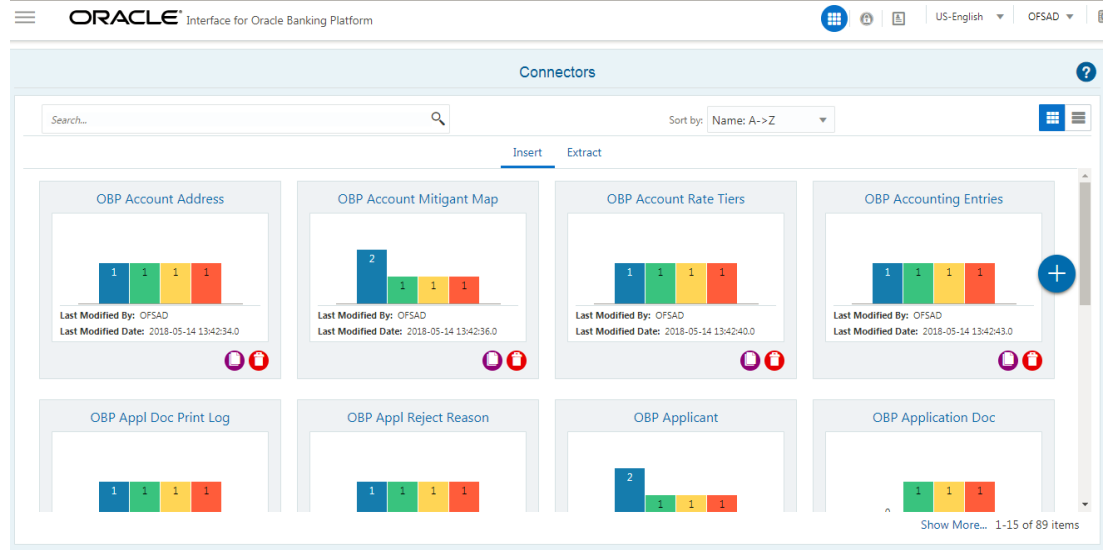

After the deployment is complete, the “*Deployment Successful*” message is displayed.

- 6. Navigate to **External Data Descriptor** and **Connectors** under **OBP Data Mapping** for checking the deployed EDDs, Connectors and the Mappings.

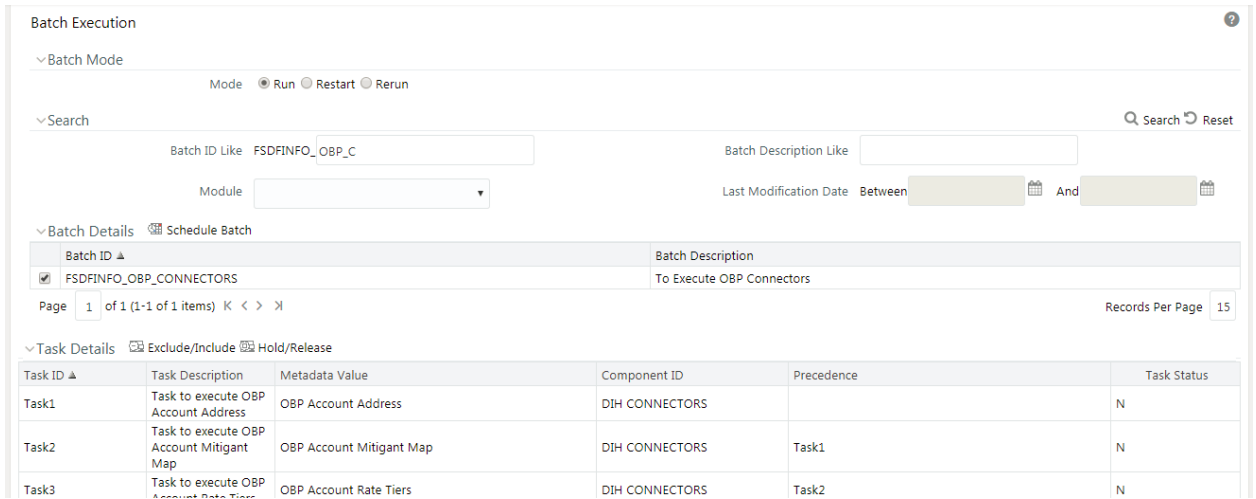

OBP External Data Descriptor

OBP Connectors

- 7. Predefined batch <INFODOM>_OBP_CONNECTORS will be created to execute the set of connectors deployed in the version 2.6.2.0.

Note: Precedence is set and Task execution will be sequential through this batch.

5.1 Known Warnings

The following list of attributes in FSDF have data length smaller than source data model (OBP) and Nullable in Source data model (OBP) and Not Nullable in target data model (FSDF).

In case of data error due to data length, follow one of the following steps:

- a. Increase target column length as needed, validate its impact on Apps before making the change.
- b. Modify the connector to apply transformation to trim the source data to target structure.
- c. Source is expected to have data for the columns those are mapped to Not Null columns of target
- d. CERTAIN DQ CHECK OF FSDF MAY NOT BE APPLICABLE FOR OBP CONNECTORS.

Refer the [Mismatches_OBP.xlsx](#) for more information.

6 Undeploying OFSAA-OBP Connectors Using Refresh OBP Interface Menu

You can use the **Undeploy All** button to undeploy the connectors. Use the undeploying feature in the following scenarios.

6.1 Deploying Upgraded Source Version

If there is an upgraded source application (OBP) available, you can undeploy the existing version of the connector, and redeploy the same by selecting the available upgraded source version. The current available source version for OBP connector supports OBP versions 2.3.0.0, 2.4.0.0 and 2.6.2.0.

Note: You can deploy only one source version at a time. You need to upgrade the source, undeploy the version and deploy the required version.

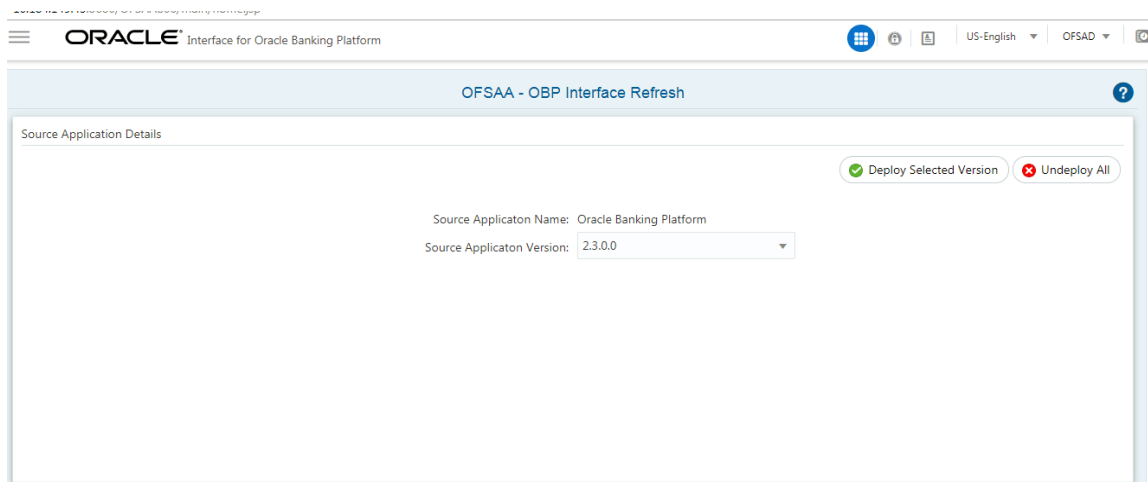

6.2 Changes in ODI / External Data Store Settings

If there is a change in the ODI/ External Data Store settings, then you can undeploy the connectors. Modify the settings and redeploy to obtain the latest connector settings.

Note: You cannot undeploy the connectors if any of the Connector/External Data Descriptor is in published mode. Unpublish all the Connector/External Data Descriptor before proceeding with undeployment.

Follow the below steps to undeploy:

1. Click **Undeploy All** to undeploy the Connector version.

2. A message *“Are you sure you want to Undeploy All?”* is displayed. Click Yes to proceed.

3. After the undeployment is complete, the *“Successfully Deployed All”* message is displayed.
