

Oracle® Communications

Alarms and KPIs

Release 8.3

E93200

September 2018

Copyright © 2011, 2018, Oracle and/or its affiliates. All rights reserved.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

This documentation is in preproduction status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your beta trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, and timing of any features or functionality described in this document remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Contents

1 Introduction

Revision History	1-1
Overview	1-1
Scope and Audience	1-1
Manual Organization	1-1
Documentation Admonishments	1-2
Locate Product Documentation on the Oracle Help Center Site	1-2
Customer Training	1-3
My Oracle Support	1-3
Emergency Response.....	1-3

2 User Interface Introduction

User Interface Organization	2-1
User Interface Elements	2-2
Main Menu Options	2-5
Missing Main Menu options	2-11
Common Graphical User Interface Widgets	2-11
Supported Browsers.....	2-11
System Login Page	2-12
Main Menu Icons	2-13
Work Area Displays	2-14
Customizing the Splash Page Welcome Message	2-17
Column Headers (Sorting)	2-17
Page Controls	2-17
Clear Field Control.....	2-18
Optional Layout Element Toolbar.....	2-18
Filters.....	2-20
Pause Updates.....	2-22
Max Records Per Page Controls	2-22

3 Alarms, Events, and KPIs Overview

Alarms Warning	3-1
----------------------	-----

General alarms and events information	3-1
Alarms and Events Overview	3-1
Alarms Formatting Information	3-3
Alarm and Event ID Ranges	3-4
Alarm and Event Types	3-5
Active Alarms Elements	3-6
View Active Alarms	3-7
Active Alarms Data Export Elements	3-8
Export Active Alarms	3-10
Generate a Report of Active Alarms	3-12
Graph Active Alarms	3-12
Active Alarms Quick Filter	3-13
Viewing alarm and event history	3-14
Historical events data export elements	3-15
Exporting alarm and event history	3-16
Generating a report of historical alarms and events	3-17
View the File List	3-17
Opening a File	3-17
Data Export	3-18
Data Export elements	3-18
Configuring data export	3-20
Tasks	3-21
Active Tasks	3-21
Scheduled Tasks	3-25

4 Alarms and Events

IP Front End, IPFE (5000-5999)	4-1
5001 - IPFE Backend Unavailable	4-1
5002 - IPFE address configuration error	4-2
5003 - IPFE state sync run error	4-5
5004 - IPFE IP tables configuration error	4-8
5005 - IPFE Backend In Stasis	4-9
5006 - Error reading from Ethernet device. Restart IPFE process.	4-10
5007 - Out of Balance: Low	4-11
5008 - Out of Balance: High	4-12
5009 - No available servers in target set	4-14
5010 - Unknown Linux iptables command error	4-17
5011 - System or platform error prohibiting operation	4-18
5012 - Signaling interface heartbeat timeout	4-20
5013 - Throttling traffic	4-21
5100 - Traffic Overload	4-23
5101 - CPU Overload	4-24
5102 - Disk Becoming Full	4-25

5103 - Memory Overload.....	4-25
OAM (10000-10999)	4-26
10000 - Incompatible database version.....	4-26
10001 - Database backup started	4-27
10002 - Database backup completed.....	4-27
10003 - Database backup failed	4-28
10004 - Database restoration started	4-28
10005 - Database restoration completed.....	4-29
10006 - Database restoration failed	4-29
10008 - Database provisioning manually disabled	4-30
10009 - Config and Prov db not yet synchronized	4-30
10010 - Stateful db from mate not yet synchronized	4-31
10011 - Cannot monitor table.....	4-32
10012 - Table change responder failed	4-32
10013 - Application restart in progress	4-33
10020 - Backup failure	4-33
10050 - Resource audit failure.....	4-34
10051 - Route deployment failed.....	4-34
10052 - Route Discovery Failed	4-35
10053 - Route deployment failed - no available device	4-36
10054 - Device deployment failed	4-37
10055 - Device discovery failed	4-38
10073 - Server group max allowed HA role warning.....	4-39
10074 - Standby server degraded while mate server stabilizes	4-40
10075 - Application processes have been manually stopped.....	4-40
10078 - Application not restarted on standby server due to disabled failure cleanup mode	4-41
10100 - Log export started	4-42
10101 - Log export successful	4-42
10102 - Log export failed	4-43
10103 - Log export already in progress	4-43
10104 - Log export file transfer failed	4-44
10105 - Log export cancelled - user request.....	4-44
10106 - Log export cancelled - duplicate request.....	4-45
10107 - Log export cancelled - queue full	4-45
10108 - Duplicate scheduled log export task	4-46
10109 - Log export queue is full	4-47
10110 - Certificate about to expire	4-47
10111 - Certificate expired	4-49
10112 - Certificate cannot be used	4-50
10115 - Health check started	4-52
10116 - Health check successful.....	4-52
10117 - Health check failed.....	4-53

10118 - Health check not run.....	4-53
10120 - Server group upgrade started	4-54
10121 - Server group upgrade cancelled - validation failed.....	4-54
10122 - Server group upgrade successful.....	4-55
10123 - Server group upgrade failed	4-55
10124 - Server group upgrade cancelled - user request	4-56
10125 - Server group upgrade failed	4-56
10130 - Server upgrade started	4-57
10131 - Server upgrade cancelled.....	4-57
10132 - Server upgrade successful	4-58
10133 - Server upgrade failed	4-58
10134 - Server upgrade failed	4-59
10140 - Site upgrade started	4-61
10141 - Site upgrade cancelled.....	4-61
10142 - Site upgrade successful	4-62
10143 - Site upgrade failed	4-62
10144 - Site upgrade cancelled - user request.....	4-63
10145 - Site upgrade failed	4-63
10151 - Login successful	4-64
10152 - Login failed	4-64
10153 - Logout successful	4-65
10154 - User account disabled	4-65
10155 - SAML login successful	4-66
10156 - SAML login failed	4-66
10200 - Remote database reinitialization in progress	4-67
10300 - SNMP trapping not configured	4-67
IDIH (11500-11549).....	4-68
11500 - Tracing Suspended	4-68
11501 - Trace Throttling Active	4-68
11502 - Troubleshooting Trace Started	4-69
11503 - Troubleshooting Trace Stopped.....	4-69
11506 - Invalid IDIH-Trace AVP	4-70
11507 - Unable to run network trace at this site	4-71
11508 - Network Trace Configuration Error	4-71
11509 - Site Trace Configuration Error.....	4-72
11510 - Network Trace Activation Error.....	4-72
11511 - Invalid DIH HostName	4-73
SDS (14000-14999)	4-73
14100 - Interface Disabled	4-73
14101 - No Remote Connections	4-73
14102 - Connection Failed	4-74
14103 - Both Port Identical	4-74
14120 - Connection Established.....	4-75

14121 - Connection Terminated	4-75
14122 - Connection Denied	4-76
14140 - Import Throttled.....	4-76
14150 - Import Initialization Failed.....	4-77
14151 - Import Generation Failed.....	4-77
14152 - Import Transfer Failed.....	4-78
14153 - Export Initialization Failed	4-78
14154 - Export Generation Failed.....	4-79
14155 - Export Transfer Failed	4-80
14161 - Export Operation Completed.....	4-80
14160 - Import Operation Completed	4-81
14170 - Remote Audit started and in progress	4-81
14171 - Remote Audit aborted	4-82
14172 - Remote Audit failed to complete	4-82
14173 - Remote Audit completed	4-83
14174 - NPA Split pending request deleted	4-83
14175 - NPA Split activation failed	4-84
14176 - NPA Split started and is active.....	4-84
14177 - NPA Split completion failed	4-85
14178 - NPA Split completed	4-85
14179 - MSISDN deleted from Blacklist	4-86
14180 - IMSI deleted from Blacklist	4-86
14188 - PdbRelay not connected.....	4-87
14189 - PdbRelay Time Lag.....	4-87
14198 - ProvDbException	4-88
14200 - DP Stack Event Queue utilization	4-88
14301- ERA Responder Failed	4-89
SS7/Sigtran Alarms (19200-19299).....	4-90
19200 - RSP/Destination unavailable.....	4-90
19201 - RSP/Destination route unavailable.....	4-91
19202 - Linkset unavailable.....	4-92
19203 - Link unavailable.....	4-92
19204 - Preferred route unavailable	4-93
19205 - TFP received.....	4-94
19206 - TFA received	4-94
19207 - TFR received	4-95
19208 - TFC received	4-95
19209 - M3RL routing error.....	4-96
19210 - M3RL routing error - invalid NI	4-97
19211 - M3RL routing error - invalid SI.....	4-98
19217 - Node isolated - all links down	4-98
19226 - Timedout waiting for ASP-UP-ACK	4-99
19227 - Received unsolicited ASP-DOWN-ACK	4-100

19229 - Timed out waiting for ASP-ACTIVE-ACK.....	4-101
19230 - Received unsolicited ASP-INACTIVE-ACK	4-101
19231 - Received invalid M3UA message	4-102
19233 - Failed to send non-DATA message	4-103
19234 - Local link maintenance state change.....	4-104
19235 - Received M3UA error.....	4-104
19240 - Remote SCCP subsystem prohibited.....	4-105
19241 - SCCP malformed or unsupported message.....	4-107
19242 - SCCP Hop counter violation	4-107
19243 - SCCP routing failure.....	4-108
19244 - SCCP routing failure network status	4-109
19245 - SCCP GTT failure	4-109
19246 - Local SCCP subsystem prohibited	4-110
19248 - SCCP Segmentation Failure.....	4-111
19249 - SCCP Reassembly Failure	4-112
19250 - SS7 process CPU utilization.....	4-112
19251 - Ingress message rate	4-113
19252 - PDU buffer pool utilization	4-114
19253 - SCCP stack event queue utilization.....	4-115
19254 - M3RL stack event queue utilization.....	4-116
19255 - M3RL network management event queue utilization.....	4-116
19256 - M3UA stack event queue utilization.....	4-117
19258 - SCTP Aggregate Egress queue utilization.....	4-118
19259 - Operation discarded due to local resource limitation	4-119
19260 - Transaction could not be delivered to remote TCAP peer due to conditions in the network	4-119
19262 - Operation discarded due to malformed component received from remote TCAP peer	4-120
19263 - Transaction discarded due to malformed dialogue message received from local TC User.....	4-121
19264 - Transaction discarded due to malformed dialogue message from remote TCAP peer	4-121
19265 - Unexpected event received from local TC User	4-122
19266 - Unexpected event received from remote TCAP peer	4-123
19267 - Dialogue removed by dialogue cleanup timer	4-123
19268 - Operation removed by invocation timer expiry.....	4-124
19269 - Dialogue aborted by remote TCAP peer	4-125
19270 - Received unsupported TCAP message.....	4-126
19271 - Operation rejected by remote TCAP peer	4-126
19272 - TCAP active dialogue utilization.....	4-127
19273 - TCAP active operation utilization	4-128
19274 - TCAP stack event queue utilization	4-129
19275 - Return error from remote TCAP peer	4-129

19276 - SCCP Egress Message Rate.....	4-130
19281 - TCAP Routing Failure	4-131
Transport Manager Alarms and Events (19400-19419).....	4-131
19400 - Transport Down	4-131
19401 - Failed to configure Transport	4-133
19402 - Failed to connect Transport	4-133
19403 - Received malformed SCTP message (invalid length).....	4-134
19404 - Far-end closed the Transport	4-135
19405 - Transport closed due to lack of response.....	4-136
19406 - Local Transport maintenance state change	4-136
19407 - Failed to send Transport DATA Message	4-137
19408 - Single Transport Egress-Queue Utilization	4-138
19409 - Message Rejected by ACL Filtering.....	4-139
19410 - Adjacent Node IP Address state change.....	4-139
19411 - SCTP Transport closed due to failure of multihoming validation	4-140
19412 - SCTP Transport configuration mismatched for Adjacent Node IP	4-141
19413 - SCTP Transport closed due to unsupported peer address event recieved	4-141
Communication Agent, ComAgent (19420-19909)	4-142
19420 - BDFQFull.....	4-142
19421 - BDFThrotl.....	4-142
19422 - BDFInvalidPkt	4-143
19800 - Communication Agent Connection Down.....	4-143
19801 - Communication Agent Connection Locally Blocked	4-145
19802 - Communication Agent Connection Remotely Blocked.....	4-146
19803 - Communication Agent Stack Event Queue Utilization.....	4-147
19804 - Communication Agent configured connection waiting for remote client to establish connection.....	4-149
19805 - Communication Agent Failed To Align Connection	4-150
19806 - Communication Agent CommMessage Mempool Utilization.....	4-151
19807 - Communication Agent User Data FIFO Queue Utilization.....	4-153
19808 - Communication Agent Connection FIFO Queue utilization.....	4-154
19810 - Communication Agent Egress Message Discarded	4-155
19811 - Communication Agent Ingress Message Discarded	4-156
19814 - Communication Agent Peer has not responded to heartbeat	4-157
19816 - Communication Agent Connection State Changed	4-157
19817 - Communication Agent DB Responder detected a change in configurable control option parameter.....	4-158
19818 - Communication Agent DataEvent Mempool utilization.....	4-158
19820 - Communication Agent Routed Service Unavailable	4-159
19821 - Communication Agent Routed Service Degraded.....	4-160
19822 - Communication Agent Routed Service Congested	4-161
19823 - Communication Agent Routed Service Using Low-Priority Connection Group ..	4-162
19824 - Communication Agent Pending Transaction Utilization.....	4-162

19825 - Communication Agent Transaction Failure Rate	4-165
19826 - Communication Agent Connection Congested.....	4-166
19827 - SMS stack event queue utilization.....	4-167
19830 - Communication Agent Service Registration State Change	4-168
19831 - Communication Agent Service Operational State Changed	4-168
19832 - Communication Agent Reliable Transaction Failed	4-169
19833 - Communication Agent Service Egress Message Discarded	4-170
19842 - Communication Agent Resource-Provider Registered	4-170
19843 - Communication Agent Resource-Provider Resource State Changed	4-171
19844 - Communication Agent Resource-Provider Stale Status Received.....	4-171
19845 - Communication Agent Resource-Provider Deregistered	4-172
19846 - Communication Agent Resource Degraded	4-172
19847 - Communication Agent Resource Unavailable.....	4-173
19848 - Communication Agent Resource Error.....	4-174
19850 - Communication Agent Resource-User Registered	4-175
19851 - Communication Agent Resource-User Deregistered.....	4-175
19852 - Communication Agent Resource Routing State Changed.....	4-175
19853 - Communication Agent Resource Egress Message Discarded	4-176
19854 - Communication Agent Resource-Provider Tracking Table Audit Results	4-177
19855 - Communication Agent Resource Has Multiple Actives	4-177
19856 - Communication Agent Service Provider Registration State Changed.....	4-178
19857 - Communication Agent Service Provider Operational State Changed.....	4-178
19858 - Communication Agent Connection Rejected.....	4-179
19860 - Communication Agent Configuration Daemon Table Monitoring Failure	4-179
19861 - Communication Agent Configuration Daemon Script Failure	4-180
19862 - Communication Agent Ingress Stack Event Rate.....	4-182
19863 - Communication Agent Max Connections Limit In Connection Group Reached..	4-182
19864 - ComAgent Successfully Set Host Server Hardware Profile.....	4-183
19865 - ComAgent Failed to Set Host Server Hardware Profile.....	4-183
19866 - Communication Agent Peer Group Status Changed.....	4-184
19867 - Communication Agent Peer Group Egress Message Discarded.....	4-184
19868 - Communication Agent Connection Rejected - Incompatible Network	4-185
19900 - Process CPU Utilization	4-186
19901 - CFG-DB Validation Error	4-187
19902 - CFG-DB Update Failure	4-187
19903 - CFG-DB post-update Error	4-188
19904 - CFG-DB Post-Update Failure	4-189
19905 - Measurement Initialization Failure	4-190
Diameter Signaling Router (DSR) Diagnostics (19910-19999).....	4-191
19910 - Message Discarded at Test Connection.....	4-191
19911 - Test message discarded	4-191
Diameter Alarms and Events (8000-8299, 22000-22350, 22900-22999, 25600-25899)	4-192
8000 - MpEvFsmException.....	4-192

8001 - MpEvException	4-198
8002 - MpEvRxException	4-199
8003 - MpEvTxException.....	4-209
8004 - EvFsmAdState	4-214
8005 - EvFsmOpState	4-214
8006 - EvFsmException.....	4-215
8007 - EvException	4-224
8008 - EvRxException.....	4-224
8009 - EvTxException.....	4-232
8010 - MpIngressDrop	4-238
8011 - EcRate.....	4-239
8012 - MpRxNgnPsOfferedRate	4-240
8013 - MpNgnPsStateMismatch	4-241
8014 - MpNgnPsDrop	4-242
8015 - NgnPsMsgMisrouted	4-243
8016 - MpP16StateMismatch.....	4-243
8017 - MpTaskCpuCongested.....	4-244
8018 - P16MsgMisrouted	4-245
8019 - MpAnswerPriorityModeMismatch	4-245
8020 - MpRoutingThreadPoolStateMismatch	4-246
8100 - NormMsgMisrouted.....	4-246
8101 - DiagMsgMisrouted	4-247
8200 - MpRadiusMsgPoolCongested	4-248
8201 - RclRxTaskQueueCongested.....	4-248
8202 - RclItrPoolCongested.....	4-249
8203 - RclTxTaskQueueCongested.....	4-250
8204 - RclEtrPoolCongested.....	4-250
8205 - RadiusXactionFail	4-251
8206 - MpRxRadiusAllLen	4-252
8207 - MpRadiusKeyError.....	4-252
22001 - Message Decoding Failure.....	4-253
22002 - Peer Routing Rules with Same Priority	4-254
22004 - Maximum pending transactions allowed exceeded	4-254
22005 - No peer routing rule found	4-255
22007 - Inconsistent Application ID Lists from a Peer	4-256
22008 - Orphan Answer Response Received.....	4-257
22009 - Application Routing Rules with Same Priority	4-258
22010 - Specified DAS Route List not provisioned.....	4-258
22012 - Specified MCCA not provisioned.....	4-259
22013 - DAS Peer Number of Retransmits Exceeded for Copy	4-260
22014 - No DAS Route List specified.....	4-260
22016 - Peer Node Alarm Aggregation Threshold	4-261
22017 - Route List Alarm Aggregation Threshold.....	4-262

22018 - Maintenance Leader HA Notification to go Active	4-263
22019 - Maintenance Leader HA Notification to go OOS	4-264
22020 - Copy Message size exceeded the system configured size limit	4-264
22021 - Debug Routing Info AVP Enabled	4-265
22022 - Forwarding Loop Detected	4-265
22051 - Peer Unavailable	4-266
22052 - Peer Degraded	4-268
22053 - Route List Unavailable	4-269
22054 - Route List Degraded	4-270
22055 - Non-Preferred Route Group in Use.....	4-272
22056 - Connection Admin State Inconsistency Exists.....	4-273
22057 - ETG Rate Limit Degraded.....	4-274
22058 - ETG Pending Transaction Limit Degraded	4-274
22059 - Egress Throttle Group Message Rate Congestion Level changed	4-276

Introduction

This section contains an overview of the available information for DSR alarms and events. The contents include sections on the scope and audience of the documentation, as well as how to receive customer support assistance.

Revision History

Date	Description
June 2016	<ul style="list-style-type: none">• New alarms and events added for new features, DCA, U-SBR, I-SBR, and COMCOL.• KPIs added for DCA and U-SBR.

Overview

The *DSR Alarms and KPIs* documentation provides information about DSR alarms, events, and KPIs; and provides corrective maintenance procedures and other information used to maintain the system. This book contains the following:

- Information relevant to understanding alarms and events in the application
- Recovery procedures for addressing alarms and events, as necessary
- Procedures for viewing alarms and events, generating alarms reports, and viewing and exporting alarms and event history
- Information relevant to understanding KPIs in the application
- Procedure for viewing KPIs
- List of KPIs

Scope and Audience

This manual does not describe how to install or replace software or hardware.

This manual is intended for personnel who must maintain operation of the DSR. The manual lists alarms, events, and KPIs along with preventive and corrective procedures that help personnel maintain DSR.

The corrective maintenance procedures are those used in response to a system alarm or output message. These procedures are used to help detect, isolate, and repair faults.

Manual Organization

Information in this document is organized into the following sections:

- [Introduction](#) contains general information about this document, how to contact [My Oracle Support](#), and [Locate Product Documentation on the Customer Support Site](#).
- [User Interface Introduction](#) provides basic information about the DSR user interface.
- [Alarms, Events, and KPIs Overview](#) provides general information about the application's alarms, events, and KPIs.
- [Alarms and Events](#) provides information and recovery procedures for alarms and events, organized first by alarm category, and then numerically by the number that displays in the application.
- [Key Performance Indicators \(KPIs\)](#) provides detailed KPI information, organized alphabetically by KPI name.

Documentation Admonishments

Admonishments are icons and text throughout this manual that alert the reader to assure personal safety, to minimize possible service interruptions, and to warn of the potential for equipment damage.

Table 1-1 Admonishments

Icon	Description
 DANGER	Danger: (This icon and text indicate the possibility of personal injury.)
 WARNING	Warning: (This icon and text indicate the possibility of equipment damage.)
 CAUTION	Caution: (This icon and text indicate the possibility of service interruption.)

Locate Product Documentation on the Oracle Help Center Site

Oracle Communications customer documentation is available on the web at the Oracle Help Center site, <http://docs.oracle.com>. You do not have to register to access these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at <http://www.adobe.com>.

1. Access the Oracle Help Center site at <http://docs.oracle.com>.
2. Click **Industries**.
3. Under the Oracle Communications subheading, click **Oracle Communications documentation** link.

The Communications Documentation page displays. Most products covered by these documentation sets display under the headings Network Session Delivery and Control Infrastructure and Platforms.

4. Click on your product and then the release number.

A list of the documentation set for the selected product and release displays.

5. To download a file to your location, right-click the **PDF** link, select **Save target as** (or similar command based on your browser), and save to a local folder.

Customer Training

Oracle University offers training for service providers and enterprises. Visit our web site to view, and register for, Oracle Communications training at <http://education.oracle.com/communication>

To obtain contact phone numbers for countries or regions, visit the Oracle University Education web site at www.oracle.com/education/contacts

My Oracle Support

My Oracle Support (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support can assist you with My Oracle Support registration.

Call the Customer Access Support main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. When calling, make the selections in the sequence shown below on the Support telephone menu:

1. Select **2** for New Service Request
2. Select **3** for Hardware, Networking and Solaris Operating System Support
3. Select one of the following options:
 - For Technical issues such as creating a new Service Request (SR), select **1**
 - For Non-technical issues such as registration or assistance with My Oracle Support, select **2**

You are connected to a live agent who can assist you with My Oracle Support registration and opening a support ticket.

My Oracle Support is available 24 hours a day, 7 days a week, 365 days a year.

Emergency Response

In the event of a critical service situation, emergency response is offered by the Customer Access Support (CAS) main number at 1-800-223-1711 (toll-free in the US), or by calling the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. The emergency response provides immediate coverage, automatic escalation, and other features to ensure that the critical situation is resolved as rapidly as possible.

A critical situation is defined as a problem with the installed equipment that severely affects service, traffic, or maintenance capabilities, and requires immediate corrective

action. Critical situations affect service and/or system operation resulting in one or several of these situations:

- A total system failure that results in loss of all transaction processing capability
- Significant reduction in system capacity or traffic handling capability
- Loss of the system's ability to perform automatic system reconfiguration
- Inability to restart a processor or the system
- Corruption of system databases that requires service affecting corrective actions
- Loss of access for maintenance or recovery operations
- Loss of the system ability to provide any required critical or major trouble notification

Any other problem severely affecting service, capacity/traffic, billing, and maintenance capabilities may be defined as critical by prior discussion and agreement with Oracle.

User Interface Introduction

This section describes the organization and usage of the application's user interface. In it you can find information about how the interface options are organized, how to use widgets and buttons, and how filtering and other page display options work.

User Interface Organization

The user interface is the central point of user interaction within an application. It is a Web-based graphical user interface (GUI) that enables remote user access over the network to an application and its functions.

The core framework presents a common set of Main Menu options that serve various applications. The common Main Menu options are:

- Administration
- Configuration
- Alarms and Events
- Security Log
- Status and Manage
- Measurements
- Help
- Legal Notices
- Logout

Applications build upon this framework to present features and functions. Depending on your application, some or all of the following Main Menu options may display on the Network Operation, Administration, and Maintenance (**NOAM**) GUI:

- Communication Agent
- Diameter Common
- Diameter
- **UDR** (User Data Repository)
- MAP-Diameter IWF
- **RADIUS** (Remote Authentication Dial-In User Service)
- **SBR** (Session Binding Repository)

- Policy and Charging
- **DCA** (DOIC Capabilities Announcement) Framework

The DSR System OAM GUI may present even more Main Menu options as listed below. The end result is a flexible menu structure that changes according to the application needs and features activated.

- Transport Manager
- SS7/Sigtran
- RBAR (Range Based Address Resolution)
- FABR (Full Address Based Resolution)
- **GLA** (Gateway Location Application)
- MAP-Diameter IWF
- RADIUS
- SBR
- Mediation
- Policy and Charging
- DCA Framework
- IPFE (IP Front End)

Note that the System OAM (SOAM) Main Menu options differ from the Network OAM (NOAM) options. Some Main Menu options are configurable from the NOAM server and view-only from the SOAM (**SOAM**) server. This remains true for other applications.

User Interface Elements

[Table 2-1](#) describes elements of the user interface.

Table 2-1 User Interface Elements

Element	Location	Function
Identification Banner	Top bar across the web page	<p>The left side of the banner provides the following information:</p> <ul style="list-style-type: none">• Displays the company name,• product name and version, and• the alarm panel. <p>The right side of the banner:</p> <ul style="list-style-type: none">• Allows you to pause any software updates.• Links to the online help for all software.• Shows the user name of the currently logged-in user.• Provides a link to log out of the GUI.
Main Menu	Left side of screen, under banners	<p>A tree-structured menu of all operations that can be performed through the user interface. The plus character (+) indicates a menu item contains subfolders.</p> <ul style="list-style-type: none">• To display submenu items, click the plus character, the folder, or anywhere on the same line.• To select a menu item that does not have submenu items, click on the menu item text or its associated symbol.

Table 2-1 (Cont.) User Interface Elements

Element	Location	Function
Work Area	Right side of panel under status	<p>Consists of three sections: Page Title Area, Page Control Area (optional), and Page Area.</p> <ul style="list-style-type: none">• Page Title Area: Occupies the top of the work area. It displays the title of the current page being displayed, date and time, and includes a link to context-sensitive help.• Page Control Area: Located below the Page Title Area, this area shows controls for the Page Area (this area is optional). When available as an option, filter controls display in this area. The Page Control Area contains the optional layout element toolbar, which displays different elements depending on which GUI page is selected. For more information, see Optional Layout Element Toolbar.• Page Area: Occupies the bottom of the work area. This area is used for all types of operations. It displays all options, status, data, file, and query screens. Information or error messages are displayed in a message box at the top of this section. A horizontal and/or vertical scroll bar is provided when the displayed information exceeds the page area of the screen. When a user first logs in, this area displays the application

Table 2-1 (Cont.) User Interface Elements

Element	Location	Function
		user interface page. The page displays a user-defined welcome message. To customize the message, see Customizing the Login Message .
Session Banner	Across the bottom of the web page	<p>The left side of the banner provides the following session information:</p> <ul style="list-style-type: none"> • The name of the machine to which the user is connected, and whether the user is connected via the VIP or directly to the machine. • The HA state of the machine to which the user is connected. • The role of the machine to which the user is connected. <p>The right side of the banner shows the alarm panel.</p>

Main Menu Options

[Table 2-2](#) describes all main menu user interface options.

Note: The menu options can differ according to the permissions assigned to a user's login account. For example, the Administration menu options do not display on the screen of a user who does not have administrative privileges.

Note: Some menu items are configurable only on the Network OAM and view-only on the System OAM; and some menu options are configurable only on the System OAM.

Note: Some features do not display in the main menu until the features are activated.

Table 2-2 Main Menu Options

Menu Item	Function
Administration	<p>The Administration menu allows the user to:</p> <ul style="list-style-type: none">• General Options. Configure options such as password history and expiration, login message, welcome message, and the number of failed login attempts before an account is disabled• Set up and manage user accounts• Configure group permissions• View session information• Manage sign-on certificates• Authorize IP addresses to access the user interface• Configure SFTP user information• View the software versions report• Upgrade management including backup and reporting• Authenticate LDAP servers• Configure SNMP trapping services• Configure an export server• Configure DNS elements
Configuration	<p>On the NOAM, allows the user to configure:</p> <ul style="list-style-type: none">• Network Elements• Network Devices• Network Routes• Services• Servers• Server Groups• Resource Domains• Places• Place Associations• Interface and Port DSCP
Alarms and Events	<p>Allows the user to view:</p> <ul style="list-style-type: none">• Active alarms and events• Alarm and event history• Trap log
Security Log	<p>Allows the user to view, export, and generate reports from security log history.</p>
Status and Manage	<p>Allows the user to monitor the individual and collective status of Network Elements, Servers, HA functions, Databases, KPIs, system Processes, and Tasks. The user can perform actions required for server maintenance, database management, data, and ISO file management.</p>
Measurements	<p>Allows the user to view and export measurement data.</p>

Table 2-2 (Cont.) Main Menu Options

Menu Item	Function
Transport Manager (optional)	On the SOAM, allows the user to configure adjacent nodes, configuration sets, or transports. A maintenance option allows the user to perform enable, disable, and block actions on the transport entries. This option only displays with the DSR application.
Communication Agent (optional)	Allows the user to configure Remote Servers, Connection Groups, and Routed Services. The user can perform actions to enable, disable, and block connections. Also allows the user to monitor the status of Connections, Routed Services, and HA Services.
SS7/Sigtran (optional)	On the SOAM, allows the user to configure various users, groups, remote signaling points, links, and other items associated with SS7/Sigtran; perform maintenance and troubleshooting activities; and provides a command line interface for bulk loading SS7 configuration data. This option only displays with the DSR application.
Diameter Common (optional)	<p>Allows the user to view or configure:</p> <ul style="list-style-type: none"> • Dashboard, configure on the NOAM; view on both OAMs • Network Identifiers on the SOAM - MCC Ranges • Network Identifiers on the NOAM - MCCMNC and MCCMNC Mapping • MPs (on the SOAM) - editable Profile parameters and Profile Assignments <p>The DSR Bulk Import and Export functions are available on both OAMs for the data configured on that OAM.</p>
Diameter (optional)	<p>Allows the user to configure, modify, and monitor Diameter routing:</p> <ul style="list-style-type: none"> • On the NOAMP, Diameter Topology Hiding and Egress Throttle List configuration • On the SOAM, Diameter Configuration, Maintenance, Reports, Troubleshooting with IDIH, AVP Dictionary, and Diameter Mediation configuration
UDR (User Data Repository) (optional)	Allows the user to add, edit, store, and manage subscriber and pool data. The user can also monitor the import, export, and subscribing client status. This option only displays with the UDR application.

Table 2-2 (Cont.) Main Menu Options

Menu Item	Function
RBAR (Range-Based Address Resolution) (optional)	<p>Allows the user to configure the following Range-Based Address Resolution (RBAR) settings:</p> <ul style="list-style-type: none">• Applications• Exceptions• Destinations• Address Tables• Addresses• Address Resolutions• System Options <p>This is accessible from the SOAM only. This option only displays with the DSR application.</p>
FABR (Full Address Based Resolution) (optional)	<p>Allows the user to configure the following Full Address Based Resolution (FABR) settings:</p> <ul style="list-style-type: none">• Applications• Exceptions• Default Destinations• Address Resolutions• System Options <p>This is accessible from the SOAM only. This option is only available with the DSR application.</p>
Gateway Location Application (optional)	<p>On the SOAM, allows the user to perform configuration tasks, edit options, and view elements for:</p> <ul style="list-style-type: none">• Exceptions• Options <p>GLA can deploy with Policy DRA (in the same DA-MP or a separate DA-MP). This option only displays with the DSR application.</p>
MAP-Diameter Interworking (optional)	<p>On the SOAM, allows the user to perform configuration tasks, edit options, and view elements for the DM-IWF DSR Application:</p> <ul style="list-style-type: none">• DM-IWF Options• Diameter Exception <p>On the NOAMP, allows the user to perform configuration tasks, edit options, and view elements for the MD-IWF SS7 Application:</p> <ul style="list-style-type: none">• MD-IWF Options• Diameter Realm• Diameter Identity GTA• GTA Range to PC• MAP Exception• CCNDC Mapping <p>This option only displays with the DSR application.</p>

Table 2-2 (Cont.) Main Menu Options

Menu Item	Function
RADIUS (Remote Authentication Dial-In User Service) (optional)	<p>Allows the user to perform configuration tasks, edit system options, and view elements for:</p> <ul style="list-style-type: none"> • Network Options • Message Authenticator Configuration Sets • Shared Secret Configuration Sets • Ingress Status Server Configuration Sets • Message Conversion Configuration Sets • NAS Node <p>This option only displays with the DSR application.</p>
SBR (Session Binding Repository) (optional)	<p>Allows the user to perform configuration tasks, edit system options, and view elements for:</p> <ul style="list-style-type: none"> • SBR Databases • SBR Database Resizing Plans • SBR Data Migration Plans • Database Options <p>Additionally, on the NOAMP, users are allowed to perform maintenance tasks, edit options, and view elements for:</p> <ul style="list-style-type: none"> • Maintenance <ul style="list-style-type: none"> – SBR Database Status – SBR Status – SBR Database Reconfiguration Status <p>This option only displays with the DSR application.</p>
Mediation	<p>Allows the user to make routable decisions to end the reply, drop the message, or set the destination realm.</p>

Table 2-2 (Cont.) Main Menu Options

Menu Item	Function
Policy and Charging (optional)	<p>On the NOAMP, allows the user to perform configuration tasks, edit options, and view elements for:</p> <ul style="list-style-type: none"> • General Options • Access Point Names • Policy DRA <ul style="list-style-type: none"> – PCRF Pools – PCRF Sub-Pool Selection Rules – Network-Wide Options • Online Charging DRA <ul style="list-style-type: none"> – OCS Session State – Realms – Network-Wide Options • Alarm Settings • Congestion Options <p>Additionally on the NOAMP, users are allowed to perform maintenance tasks, edit options, and view elements for:</p> <ul style="list-style-type: none"> • Maintenance <ul style="list-style-type: none"> – SBR Database Status – SBR Status – SBR Database Reconfiguration Status – Policy Database Query <p>On the SOAM, allows the user to perform configuration tasks, edit options, and view elements for:</p> <ul style="list-style-type: none"> • General Options • Access Point Names • Policy DRA <ul style="list-style-type: none"> – PCRFs – Binding Key Priority – PCRF Pools – PCRF Pool to PRT Mapping – PCRF Sub-Pool Selection Rules – Policy Clients – Suspect Binding Removal Rules – Site Options • Online Charging DRA <ul style="list-style-type: none"> – OCSs – CTFs – OCS Session State – Realms • Error Codes • Alarm Settings • Congestion Options <p>This option only displays with the DSR application.</p>

Table 2-2 (Cont.) Main Menu Options

Menu Item	Function
DCA Framework (optional)	Allows the user to perform configuration tasks, edit system options, and view elements for DCA applications: <ul style="list-style-type: none"> • Custom MEALs (Measurements, Events, Alarms, and Logs) • General Options • Trial MPs assignment • Application Control • System Options
IPFE (optional)	Allows the user to configure IP Front End (IPFE) options and IP List TSAs . This is accessible from the SOAM server only. This option only displays with the DSR application.
Help	Launches the Help system for the user interface
Legal Notices	Product Disclaimers and Notices
Logout	Allows the user to log out of the user interface

Missing Main Menu options

Permissions determine which Main Menu options are visible to users. Permissions are defined through the Group Administration page. The default group, admin, is permitted access to all GUI options and functionality. Additionally, members of the admin group set permissions for other users.

Main Menu options vary according to the group permissions assigned to a user's account. Depending on your user permissions, some menu options may be missing from the Main Menu. For example, Administration menu options do not display on your screen if you do not have administrative permissions. For more information about user permissions, see *Group Administration* in the OAM section of the online help, or contact your system administrator.

Common Graphical User Interface Widgets

Common controls allow you to easily navigate through the system. The location of the controls remains static for all pages that use the controls. For example, after you become familiar with the location of the display filter, you no longer need to search for the control on subsequent pages because the location is static.

Supported Browsers

This application supports the use of Microsoft® Internet Explorer 8.0, 9.0, or 10.0.

is designed to work with most modern HTML5 compliant browsers and uses both JavaScript and cookies. Please refer to the [Oracle Software Web Browser Support Policy](#) for details

System Login Page

Access to the user interface begins at the System Login page. The System Login page allows users to log in with a username and password and provides the option of changing the password upon login. The System Login page also features a date and time stamp reflecting the time the page was last refreshed. Additionally, a customizable login message displays just below the **Log In** button.

The user interface is accessed via HTTPS, a secure form of the HTTP protocol. When accessing a server for the first time, HTTPS examines a web certificate to verify the identity of the server. The configuration of the user interface uses a self-signed web certificate to verify the identity of the server. When the server is first accessed, the supported browser warns the user that the server is using a self-signed certificate. The browser requests confirmation that the server can be trusted. The user is required to confirm the browser request to gain access.

Customizing the Login Message

Before logging in, the System Login page displays. You can create a login message that displays just below the **Log In** button on the System Login page.

Figure 2-1 Oracle System Login

ORACLE®

Oracle System Login Wed Jul 8 14:20:00 2015 EDT

Log In

Enter your username and password to log in

Username:

Password:

☐ Change password

Log In

Welcome to the Oracle System Login.

Unauthorized access is prohibited. This Oracle system requires the use of Microsoft Internet Explorer 8.0, 9.0, or 10.0 with support for JavaScript and cookies.

Oracle and Java are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

Copyright © 2010, 2015, [Oracle](#) and/or its affiliates. All rights reserved.

1. From the **Main Menu**, click **Administration > General Options**.
2. Locate **LoginMessage** in the **Variable** column.
3. Enter the login message text in the **Value** column.

4. Click **OK** or **Apply** to submit the information.

A status message displays at the top of the Configuration Administration page to inform you if the operation was successful.

The next time you log into the user interface, the login message text displays.

Accessing the DSR Graphical User Interface

In DSR, some configuration is done at the **NOAM** server, while some is done at the **SOAM** server. Because of this, you need to access the DSR graphical user interface (GUI) from two servers. Certificate Management (Single Sign-On) can be configured to simplify accessing the DSR GUI on the NOAM and the SOAM.

For information on configuring Single Sign-On certificates, see **OAM > Administration > Access Control > Certificate Management** in the DSR online help.

After the certificates have been configured, you can log into the DSR GUI on any NOAM or SOAM, and access the DSR GUI on other servers (NOAM or other SOAMs) without having to re-enter your login credentials.

1. In the browser URL field, enter the fully qualified hostname of the NOAM server, for example `https://dsr-no.yourcompany.com`.

When using Single Sign-On, you cannot use the IP address of the server.

2. When prompted by the browser, confirm that the server can be trusted.

The System Login page displays.

3. Enter the Username and Password for your account.

The DSR GUI for the NOAM displays.

4. To access the DSR GUI for the SOAM, open another browser window and enter the fully qualified hostname of the SOAM.

The DSR GUI for the SOAM displays.

You can toggle between the DSR GUI on the NOAM and the DSR GUI on the SOAM as you perform configuration tasks.

Main Menu Icons

This table describes the icons used in the Main Menu.

Table 2-3 Main Menu Icons

Icon	Name	Description
	Folder	Contains a group of operations. If the folder is expanded by clicking the plus (+) sign, all available operations and sub-folders are displayed. Clicking the minus (-) collapses the folder.

Table 2-3 (Cont.) Main Menu Icons

Icon	Name	Description
	Config File	Contains operations in an Options page.
	File with Magnifying Glass	Contains operations in a Status View page.
	File	Contains operations in a Data View page.
	Multiple Files	Contains operations in a File View page.
	File with Question Mark	Contains operations in a Query page.
	User	Contains operations related to users.
	Group	Contains operations related to groups.
	Task	Contains operations related to Tasks
	Help	Launches the Online Help.
	Logout	Logs the user out of the user interface.

Work Area Displays

In the user interface, tables, forms, tabbed pages, and reports are the most common formats.

Note: Screen shots are provided for reference only and may not exactly match a specific application's GUI.

Tables

Paginated tables describe the total number of records being displayed at the beginning and end of the table. They provide optional pagination with **First | Prev | Next | Last** links at both the beginning and end of this table type. Paginated tables also contain

action links on the beginning and end of each row. For more information on action links and other page controls, see [Page Controls](#).

Figure 2-2 Paginated Table

Displaying Records 1-1 of 1 | [First](#) | [Prev](#) | [Next](#) | [Last](#)

Action	System ID	IP Address	Permission	Action
Edit Delete	lisa	10.25.62.4	READ_WRITE	Edit Delete

Displaying Records 1-1 of 1 | [First](#) | [Prev](#) | [Next](#) | [Last](#)

Scrollable tables display all of the records on a single page. The scroll bar, located on the right side of the table, allows you to view all records in the table. Scrollable tables also provide action buttons that operate on selected rows. For more information on buttons and other page controls, see [Page Controls](#).

Figure 2-3 Scrollable Table

Sequence #	Alarm ID	Timestamp	Severity	Product	Process	NE	Server	Type	Instance	Alarm Text
3498	31201	2009-Jun-11 18:07:41.214 UTC	MAJOR	MiddleWare	procmgr	OAMPNE	teks8011006	PROC	eclipseHelp	A managed process cannot be started or has unexpectedly terminated

										Unable to resolve a hostname specified in the NodeInfo table.

[Export](#)

Note: Multiple rows can be selected in a scrollable table. Add rows one at a time using CTRL-click. Add a span of rows using SHIFT-click.

Forms

Forms are pages on which data can be entered. Forms are typically used for configuration. Forms contain fields and may also contain a combination of lists, buttons, and links.

Figure 2-4 Form Page

Username: (5-16 characters)

Group:

Time Zone:

Maximum Concurrent Logins: Maximum concurrent logins for a user (0=no limit).
[Default = 1; Range = 0-50]

Session Inactivity Limit: Time (in minutes) after which login sessions expire (0 = never).
[Default = 120; Range = 0-120]

Comment: (max 64 characters)

Temporary Password: (8-16 characters)

Re-type Password: (8-16 characters)

Tabbed pages

Tabbed pages provide collections of data in selectable tabs. Click on a tab to see the relevant data on that tab. Tabbed pages also group Retrieve, Add, Update, and Delete options on one page. Click on the relevant tab for the task you want to perform and the appropriate fields populate on the page. Retrieve is always the default for tabbed pages.

Figure 2-5 Tabbed Pages

Entire Network *	System.CPU_CoreUtilPct_Average	System.CPU_CoreUtilPct_Peak				
NOAMP	Timestamp	System CPU UtilPct Average	System CPU UtilPct Peak	System Disk UtilPct Average	System Disk UtilPct Peak	System RAM UtilPct Average
SOAM						
	10/22/2009 19:45	6.764068	44	0.520000	1	7.939407
	10/22/2009 20:00	7.143644	25	0.520000	1	8.523822

Figure 2-6 Tabbed Pages

Retrieve

Fields marked with a red asterisk (*) require a value.

Field	Value	Description
Network Entity	<input type="text"/>	* Numeric identifier for the Network Entity 1-15 DIGITS

Reports

Reports provide a formatted display of information. Reports are generated from data tables by clicking **Report**. Reports can be viewed directly on the user interface, or they can be printed. Reports can also be saved to a text file.

Customizing the Splash Page Welcome Message

When you first log into the user interface, the splash page displays. Located in the center of the main work area is a customizable welcome message. Use this procedure to create a message suitable for your needs.

1. From the **Main Menu**, click **Administration > General Options**.
2. Locate **Welcome Message** in the **Variable** column.
3. Enter the desired welcome message text in the **Value** column.
4. Click **OK** to save the change or **Cancel** to undo the change and return the field to the previously saved value.

A status message displays at the top of the page to inform you if the operation was successful.

The next time you log into the user interface, the new welcome message text displays.

Column Headers (Sorting)

You can sort a table by a column by clicking the column header. However, sorting is not necessarily available on every column. Sorting does not affect filtering.

When you click the header of a column in a table that can be sorted, an indicator displays in the column header showing the direction of the sort. See [Figure 2-8](#). Clicking the column header again reverses the direction of the sort.

Figure 2-8 Sorting a Table by Column Header

Local Node Name ▼	Realm	FQDN	SCTP Listen Port	TCP Listen Port	Connection Configuration Set	CEX Configuration Set
-------------------	-------	------	------------------	-----------------	------------------------------	-----------------------

Page Controls

User interface pages contain controls, such as buttons and links, that perform specified functions. The functions are described by the text of the links and buttons.

Note: Disabled buttons are grayed out. Buttons that are irrelevant to the selection or current system state, or which represent unauthorized actions as defined in Group Administration, are disabled. For example, **Delete** is disabled for users without Global Data Delete permission. Buttons are also disabled if, for example, multiple servers are selected for an action that can only be performed on a single server at a time.

Table 2-4 contains examples of Action buttons.

Table 2-4 Example Action Buttons

Action Button	Function
Insert	Inserts data into a table.
Edit	Edits data within a table.
Delete	Deletes data from table.
Change	Changes the status of a managed object.

Some Action buttons take you to another page.

Submit buttons, described in Table 2-5, are used to submit information to the server. The buttons are located in the page area and accompanied by a table in which you can enter information. The Submit buttons, except for **Cancel**, are disabled until you enter some data or select a value for all mandatory fields.

Table 2-5 Submit Buttons

Submit Button	Function
OK	Submits the information to the server, and if successful, returns to the View page for that table.
Apply	Submits the information to the server, and if successful, remains on the current page so that you can enter additional data.
Cancel	Returns to the View page for the table without submitting any information to the server.

Clear Field Control

The clear field control allows you to clear the value from a list. The clear field control is available only on some lists.

Click the **X** next to a list to clear the field.

Figure 2-9 Clear Field Control X

Optional Layout Element Toolbar

The optional layout element toolbar displays in the Page Control Area of the GUI.

Figure 2-10 Optional Layout Element Toolbar

The toolbar displays different elements depending on which GUI page is selected. The elements of the toolbar that can display include:

- Filter – Allows you to filter data in a table.
- Errors – Displays errors associated with the work area.
- Info – Displays information messages associated with the work area.
- Status – Displays short status updates associated with the main work area.
- Warning – Displays warnings associated with the work area.

Notifications

Some messages require immediate attention, such as errors and status items. When new errors occur, the Errors element opens automatically with information about the error. Similarly, when new status items are added, the Status element opens. If you close an automatically opened element, the element stays closed until a new, unacknowledged item is added.

Figure 2-11 Automatic Error Notification

Note: Viewing and closing an error does not clear the Errors element. If you reopen the Errors element, previously viewed errors are still in the list.

When new messages are added to Warning or Info, the styling of the element changes to indicate new messages are available. The styling of the Task element changes when a task changes state (such as, a task begins or ends).

Opening an Element in the Toolbar

Use this procedure to open an element in the optional layout element toolbar.

1. Click the text of the element or the triangle icon to open an element.

The selected element opens and overlays the work area.

2. Click X to close the element display.

Filters

Filters are part of the optional layout element toolbar and appear throughout the GUI in the Page Control Area. For more information about optional layout element toolbar functionality, see [Optional Layout Element Toolbar](#).

Filters allow you to limit the data presented in a table and can specify multiple filter criteria. By default, table rows appear unfiltered. Three types of filters are supported, however, not all filtering options are available on every page. The types of filters supported include:

- Network Element – When enabled, the Network Element filter limits the data viewed to a single Network Element.

Note: Once enabled, the Network Element filter affect all pages that list or display data relating to the Network Element.

- Collection Interval – When enabled, the collection interval filter limits the data to entries collected in a specified time range.
- Display Filter – The display filter limits the data viewed to data matching the specified criteria.

Once a field is selected, it cannot be selected again. All specified criteria must be met in order for a row to be displayed.

The style or format of filters may vary depending on which GUI pages the filters are displayed. Regardless of appearance, filters of the same type function the same.

Figure 2-12 Examples of Filter Styles

Figure 2-12 displays three examples of filter styles used in the GUI. Each example shows a set of controls for applying filters to data.

- Top Example:** Features a yellow background. It includes a 'Network Element' dropdown menu set to '- All -' with a 'Reset' button. Next to it is a 'Display Filter' section with a dropdown set to '- None -', an equals sign, a text input field, and another 'Reset' button. Below these is a 'Collection Interval' section with a text input field, a 'Days' dropdown, an 'Ending' dropdown, a date/time picker (2009 Jan 01 00:00), a 'Reset' button, and a 'Go' button.
- Middle Example:** A compact version of the first style. It shows 'Network Element: - All -' with 'Go' and 'Reset' buttons.
- Bottom Example:** Uses text input fields. It shows 'Collection Interval: 30 Seconds Ending Now 2009 - Jan - 01 00:00' with 'Go' and 'Reset' buttons. Below it, 'Display Filter: Severity = MINOR' with 'Go' and 'Reset' buttons, and a note '(LIKE wildcard: "**")'.

Filter Control Elements

This table describes filter control elements of the user interface.

Table 2-6 Filter Control Elements

Operator	Description
=	Displays an exact match.
!=	Displays all records that do not match the specified filter parameter value.
>	Displays all records with a parameter value that is greater than the specified value.

Table 2-6 (Cont.) Filter Control Elements

Operator	Description
>=	Displays all records with a parameter value that is greater than or equal to the specified value.
<	Displays all records with a parameter value that is less than the specified value.
<=	Displays all records with a parameter value that is less than or equal to the specified value.
Like	Enables you to use an asterisk (*) as a wildcard as part of the filter parameter value.
Is Null	Displays all records that have a value of Is Null in the specified field.

Note: Not all filterable fields support all operators. Only the supported operators are available for you to select.

Filtering on the Network Element

The global Network Element filter is a special filter that is enabled on a per-user basis. The global Network Element filter allows a user to limit the data viewed to a single Network Element. Once enabled, the global Network Element filter affects all sub-screens that display data related to Network Elements. This filtering option may not be available on all pages.

1. Click **Filter** in the optional layout element toolbar.
2. Select a Network Element from the **Network Element** list.
3. Click **Go** to filter on the selection or click **Reset** to clear the selection.
4. For data tables that support compound filtering, click **Add** to add another filter condition and repeat steps 2 through 4.

Multiple filter conditions are joined by an AND operator.

Records are displayed according to the specified criteria.

Filtering on Collection Interval

The Collection Interval filter allows a user to limit the data viewed to a specified time interval. This filtering option may not be available on all pages.

1. Click **Filter** in the optional layout element toolbar.
2. Enter a duration for the **Collection Interval** filter.

The duration must be a numeric value.

3. Select a unit of time from the list.

The unit of time can be seconds, minutes, hours, or days.

4. Select **Beginning** or **Ending** from the list.
5. Click **Go** to filter on the selection, or click **Reset** to clear the selection.

Records are displayed according to the specified criteria.

Filtering Using the Display Filter

Use this procedure to perform a filtering operation. This procedure assumes you have a data table displayed on your screen with the Display Filter field. This process is the same for all data tables. However, all filtering operations are not available for all tables.

Note: Display Filter does not support compound filtering. For example, you cannot filter on both severity and a server name. Try to filter on a single filter criteria, such as the server hostname for server-scoped metric cells; or the application name for St- and NE-scoped metric cells. You can also sort by congestion level (descending) to help improve your filter.

1. Click **Filter** in the optional layout element toolbar.
2. Select a field name from the **Display Filter** list.

This selection specifies the field in the table that you want to filter on. The default is **None**, which indicates that you want all available data displayed.

3. Select an operator from the operation selector list.
4. Enter a value in the value field.

This value specifies the data that you want to filter on. For example, if you specify Filter=Severity with the equals (=) operator and a value of MINOR, the table would show only records where Severity=MINOR.

5. Click **Go** to filter on the selection, or click **Reset** to clear the selection.

Records are displayed according to the specified criteria.

Note: PCA was known as PDRA and may still be seen in some filtering.

Pause Updates

Some pages refresh automatically. Updates to these pages can be paused by selecting the **Pause updates** checkbox. Uncheck the **Pause updates** checkbox to resume automatic updates. The **Pause updates** checkbox is available only on some pages.

Max Records Per Page Controls

Max Records Per Page is used to control the maximum number of records displayed in the page area. If a page uses pagination, the value of Max Records Per Page is used. Use this procedure to change the Max Records Per Page.

1. From the **Main Menu**, click **Administration > General Options**.
2. Change the value of the **MaxRecordsPerPage** variable.

Note: **Maximum Records Per Page** has a range of values from 10 to 100 records. The default value is 20.

3. Click **OK** or **Apply**.

OK saves the change and returns to the previous page.

Apply saves the change and remains on the same page.

The maximum number of records displayed is changed.

Alarms, Events, and KPIs Overview

This section provides general information about the application's alarms, events, and KPIs.

Alarms Warning

Note: For the most up-to-date information, refer to the MIB document posted with each software release on the [Oracle Software Delivery Cloud \(OSDC\)](#) site.

General alarms and events information

This section provides general information about alarms and events including an alarms overview, types of alarms/events, and alarms-related procedures.

Alarms and events are recorded in a database log table. Currently active alarms can be viewed from the Launch Alarms Dashboard GUI menu option. The alarms and events log can be viewed from the View History GUI menu option.

Note: Alarms in this manual are shared with other applications and may not display in your specific application.

Alarms and Events Overview

Alarms provide information pertaining to a system's operational condition that a network manager may need to act upon. An alarm might represent a change in an external condition, for example, a communications link has changed from connected to disconnected state. Alarms can have these severities:

- Critical application error
- Major application error
- Minor application error
- Cleared

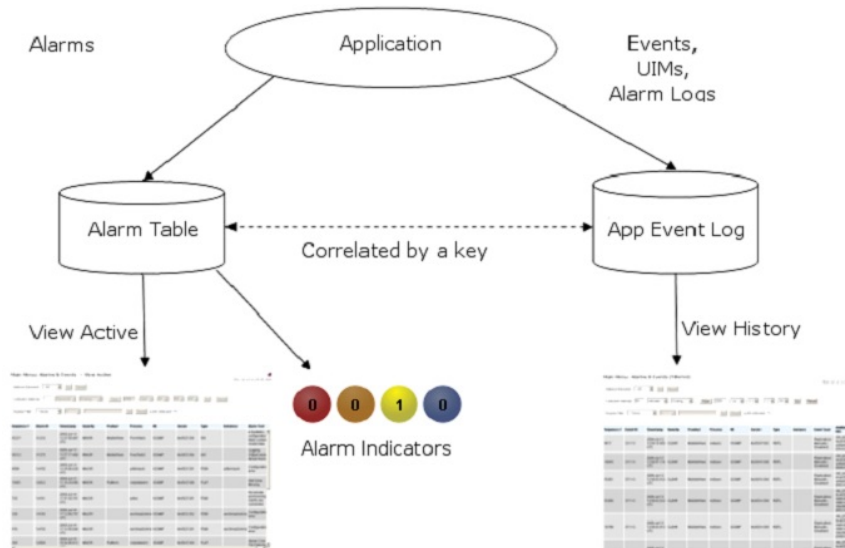

An alarm is considered inactive once it has been cleared and cleared alarms are logged on the **Alarms & Events > View History** page.

Events note the occurrence of an expected condition, such as an unsuccessful login attempt by a user. Events have a severity of Info and are logged on the View History page.

Note: Some events may be throttled because the frequently generated events can overload the MP or OAM server's system or event history log (for example, generating an event for every ingress message failure). By specifying a throttle interval (in seconds), the events display no more than once during the interval duration period (for example, if the throttle interval is 5 seconds, the event is logged no more than once every 5 seconds).

Figure 3-1 shows how Alarms and Events are organized in the application.

Figure 3-1 Flow of Alarms

Alarms and events are recorded in a database log table. Application event logging provides an efficient way to record event instance information in a manageable form, and is used to:

- Record events that represent alarmed conditions
- Record events for later browsing
- Implement an event interface for generating SNMP traps

Alarm indicators, located in the User Interface banner, indicate all critical, major, and minor active alarms. A number and an alarm indicator combined represent the number of active alarms at a specific level of severity. For example, if you see the number six in the orange-colored alarm indicator, that means there are six major active alarms. This is shown in Figure 3-2 and Figure 3-3.

Figure 3-2 Alarm Indicators Legend

	Active Critical Alarm (bright red)
	Active Major Alarm (bright orange)
	Active Minor Alarm (bright yellow)
	No active Critical Alarm (pale red)
	No active Major Alarm (pale orange)
	No active Minor Alarm (pale yellow)

	Trap count = 0 (pale blue)

Alarms Formatting Information

This section of the document provides information to help you understand why an alarm occurred and to provide a recovery procedure to help correct the condition that caused the alarm.

The information provided about each alarm includes:

- Alarm Type: the type of alarm that has occurred. For a list of alarm types, see [Alarm and Event Types](#).
- Description: describes the reason for the alarm
- Severity: the severity of the alarm
- Instance: the instance of a managed object for which an alarm or event is generated.

Note: The value in the Instance field can vary, depending on the process generating the alarm.

- HA Score: high availability score; determines if switchover is necessary
- Auto Clear Seconds: the number of seconds that have to pass before the alarm will clear itself.

Note: Some alarms and events have an Auto Clear Seconds of 0 (zero), indicating that these alarms and events do not auto-clear

- **OID:** alarm identifier that appears in SNMP traps
- **Recovery:** provides any necessary steps for correcting or preventing the alarm

Alarm and Event ID Ranges

The **Alarm ID** listed for each alarm falls into one of the process classifications listed in [Table 3-1](#).

Table 3-1 Alarm/Event ID Ranges

Application/Process Name	Alarm ID Range
IPFE	5000-5999
OAM	10000-10999
IDIH	11500-11549
SDS	14000-14999
SS7/Sigtran	19200-19299
Transport Manager	19400-19419
Communication Agent (ComAgent)	19420-19909
DSR Diagnostics	19910-19999
Diameter	8000-8299, 22000-22350, 22900-2999, 25600-25899
Range Based Address Resolution (RBAR)	22400-22424
Generic Application	22500-22599
Full Address Based Resolution (FABR)	22600-22640
PDRA (aka PCA)	22700-22799
SCEF	23000-23200
TVOE	24400-24499
CAPM	25000-25499
OAM Alarm Management	25500-25899
Platform	31000-32800
DM-IWF	33000-33024
MD-IWF	33050-33099
GLA	33100-33149
Diameter Custom Applications (DCA)	33300-33630
Independent Subscriber Binding Repository (I-SBR)	33730-33830

Table 3-1 (Cont.) Alarm/Event ID Ranges

Application/Process Name	Alarm ID Range
vSTP	70000-70999
Equipment Identity Register (EIR)	71000-71999

Alarm and Event Types

[Table 3-2](#) describes the possible alarm/event types that can be displayed.

Note: Not all applications use all of the alarm types listed.

Table 3-2 Alarm and Event Types

Type Name	Type
APPL	Application
CAF	Communication Agent (ComAgent)
CAPM	Computer-Aided Policy Making (Diameter Mediation)
CFG	Configuration
CHG	Charging
CNG	Congestion Control
COLL	Collection
DAS	Diameter Application Server (Message Copy)
DB	Database
DIAM	Diameter
DISK	Disk
DNS	Domain Name Service
DPS	Data Processor Server
ERA	Event Responder Application
FABR	Full Address Based Resolution
HA	High Availability
HTTP	Hypertext Transfer Protocol
IDIH	Integrated DIH
IF	Interface
IP	Internet Protocol
IPFE	IP Front End
LOADGEN	Load Generator

Table 3-2 (Cont.) Alarm and Event Types

Type Name	Type
LOG	Logging
MEAS	Measurements
MEM	Memory
NAT	Network Address Translation
NP	Number Portability
OAM	Operations, Administration & Maintenance
PCRF	Policy Charging Rules Function
PDRA	Policy Diameter Routing Agent
PLAT	Platform
PROC	Process
PROV	Provisioning
pSBR	Policy SBR
QP	QBus
RBAR	Range-Based Address Resolution
REPL	Replication
SCTP	Stream Control Transmission Protocol
SDS	Subscriber Database Server
SIGC	Signaling Compression
SIP	Session Initiation Protocol Interface
SL	Selective Logging
SS7	Signaling System 7
SSR	SIP Signaling Router
STK	EXG Stack
SW	Software (generic event type)
TCP	Transmission Control Protocol

Active Alarms Elements

[Table 3-3](#) describes the elements on the View Active alarms page.

Table 3-3 Active Alarms Elements

Active Alarms Element	Description
Sequence #	A system-wide unique number assigned to each alarm

Table 3-3 (Cont.) Active Alarms Elements

Active Alarms Element	Description
Alarm ID	A unique number assigned to each alarm in the system. See #unique_53 for more information.
Alarm Text	Description of the alarm. The description is truncated to 140 characters.
Note: The Alarm Text field is not truncated in exports or reports.	
Timestamp	Date and time the alarm occurred (fractional seconds resolution)
Severity	Alarm severity - Critical, Major, Minor
Product	Name of the product or application that generated the alarm
Process	Name of the process that generated the alarm
NE	Name of the Network Element where the alarm occurred
Server	Name of the server where the alarm occurred
Type	Alarm or Event Type, for example, Process, Disk, Platform. See #unique_54 for more information.
Instance	Instance of the alarm, for example, Link01 or Disk02. The Instance provides additional information to help differentiate two or more alarms with the same number. This field may be blank if differentiation is not necessary

View Active Alarms

Active alarms are displayed in a scrollable, optionally filterable table. By default, the active alarms are sorted by time stamp with the most recent alarm at the top.

Use this procedure to view active alarms.

Note: The alarms and events that appear in View Active vary depending on whether you are logged in to an NOAM or SOAM. Alarm collection is handled solely by NOAM servers in systems that do not support SOAMs.

1. Click **Alarms & Events > View Active**.
2. If necessary, specify filter criteria and click **Go**.

The active alarms are displayed according to the specified criteria.

The active alarms table updates automatically. When new alarms are generated, the table is automatically updated, and the view returns to the top row of the table.

3. To suspend automatic updates, click any row in the table.

The following message appears: (Alarm updates are suspended.)

If a new alarm is generated while automatic updates are suspended, a new message appears: (Alarm updates are suspended. Available updates pending.)

To resume automatic updates, press and hold **Ctrl** as you click to deselect the selected row.

Active Alarms Data Export Elements

[Table 3-4](#) describes the elements on the **Alarms & Events > View Active > Export** form.

Table 3-4 *Schedule Active Alarm Data Export Elements*

Element	Description	Data Input Notes
Export Frequency	Frequency at which the export occurs	Format: Option Range: Once, Fifteen Minutes, Hourly, Daily, or Weekly Default: Once Note: Depending on what upload frequency is selected, some scheduling choices may become inactive and the buttons or lists are grayed out. Note that the Fifteen Minute, Hourly, Daily, and Weekly scheduling options are only available when provisioning is enabled.

Table 3-4 (Cont.) Schedule Active Alarm Data Export Elements

Element	Description	Data Input Notes
Task Name	Name of the scheduled task.	<p>Format: Text box</p> <p>Range: Maximum length is 40 characters. Valid characters are alphanumeric, minus sign, and spaces between words. The first character must be an alpha character. The last character must not be a minus sign.</p> <p>Default: APDE Alarm Export. The default value can only be used once. For scheduled exports, the frequency is not Once, because the name must be unique.</p> <hr/> <p>Note: This field is not active if the selected export frequency is once.</p> <hr/>
Description	Optional description of the scheduled task	<p>Format: Text box</p> <p>Range: Maximum length is 255 characters; alphanumeric (a-z, A-Z, and 0-9) and minus sign (-). Description must begin with an alphanumeric character.</p> <hr/> <p>Note: This field is not active if the selected export frequency is once.</p> <hr/>
Filename Prefix	Optional export filename prefix. The extension to pre-pend the generated export file name.	<p>Format: Text box</p> <p>Range: Maximum length is 8 characters; alphanumeric (a-z, A-Z, and 0-9).</p>

Table 3-4 (Cont.) Schedule Active Alarm Data Export Elements

Element	Description	Data Input Notes
Minute	Select the minute of each hour when the data will be written to the export directory. Enabled only if Export Frequency is hourly or fifteen minutes. For a frequency of fifteen minutes, transfers occur four times per hour, and this field displays the minute of the first transfer in the hour, a value between 0 and 14.	Format: Scrolling list Range: 0 to 59 Default: 0 <hr/> Note: This field is not active if the selected export frequency is Once, Daily, or Weekly. This field is only active if the selected export frequency is Fifteen Minutes or Hourly.
Time of Day	Select the time of day when the data will be written to the export directory. Enabled only if Export Frequency is daily or weekly. Select from 15-minute increments, or fill in a specific value.	Format: Time text box Range: HH:MM with AM/PM Default: 12:00 AM <hr/> Note: This field is not active if the selected export frequency is Once, Fifteen Minutes, or Hourly. This field is only active if the selected export frequency is Daily or Weekly.
Day of Week	Select the day of week when the data will be written to the export directory. Enabled only if Export Frequency is weekly.	Format: Option Range: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, or Saturday Default: Sunday <hr/> Note: This field is active only if Weekly is selected.

Export Active Alarms

You can initiate a one-time export task of active alarm data or schedule periodic exports from the **Alarms and Events > View Active** page. Active alarm data can be exported immediately, or you can schedule exports to occur daily or weekly. If filtering has been applied in the View Active page, only filtered data is exported.

For each export task, the system automatically creates a CSV file of the filtered data. The file is available in the file management area until you manually delete it, or until

the file is transferred to an alternate location using the remote server data export feature. For more information about using remote server data export, see [#unique_58](#).

Alarm details can be exported to a file by clicking **Export** on the View Active page. The system automatically creates and writes the exported active alarm details to a CSV file in the file management area.

Use this procedure to export active alarms to a file, or schedule a periodic data export task of this data.

1. Click **Alarms & Events > **View Active**.**

2. Locate and select the server group tab that contains the alarms of interest.

Server groups are presented in tabular form. If the target server group is not visible in the available screen space, use the scroll right/left buttons located below the tool bar area and to the right or left of the visible tabs.

3. Click **Export.**

4. Select the **Export Frequency.** Based on this selection other fields may become active or inactive.

5. Type a **Task Name.**

This field is not active if the selected export frequency is once. For more information about **Task Name**, or any field on this page, see [Active Alarms Data Export Elements](#).

6. Optional: Type a **Description.**

This field is not active if the selected export frequency is once.

7. Optional: Type a **Filename Prefix.**

The filename prefix is prepended to the generated export file name for quick identification.

8. Select the **Minute if **Export Frequency** is fifteen minutes or hourly.**

If the selected export frequency is fifteen minutes or hourly, this is the minute of each period when the transfer is set to begin. For an export frequency of fifteen minutes, transfers occur four times per hour, and this field displays the minute of the first transfer of the hour.

9. Select the **Time of Day if **Export Frequency** is daily or weekly.**

This field is not active if the selected export frequency is once, fifteen minutes, or hourly.

10. Select the **Day of Week if **Export Frequency** is weekly.**

This field is not active if the selected export frequency is once, fifteen minutes, hourly, or daily.

11. Click **OK to initiate the active alarms export task or **Cancel** to discard the changes and return to the View Active page.**

The data export task is initiated or scheduled.

From the **Status & Manage > Files** page, you can view a list of files available for download, including the file you exported during this procedure. For more information, see [View the File List](#).

Scheduled tasks can be viewed, edited, and deleted, and reports of scheduled tasks can be generated from **Status & Manage > Tasks > Scheduled Tasks**. For more information see:

- [Editing a Scheduled Task](#)
- [Deleting a Scheduled Task](#)
- [Generating a Scheduled Task Report](#)

Note: Only one export operation at a time is supported on a single server. If an export is in progress from another GUI session when you click **Export**, a message is displayed and the export does not start. You must wait until the other export is complete before you can begin your export.

Generate a Report of Active Alarms

Use this procedure to generate a report.

1. Click **Alarms & Events > View Active**.
2. Specify filter criteria, if necessary, and click **Go**.

The active alarms are displayed according to the specified criteria. Alternately, you can select multiple rows and generate a report using those. To select multiple rows, press and hold **Ctrl** as you click to select specific rows.

3. Click **Report**.

The View Active Report can be printed or saved to a file.

4. Click **Print** to print the report.
5. Click **Save** to save the report to a file.

Graph Active Alarms

The View Active alarm screen includes the ability to produce a set of summary graphs which provide statistical summaries of the active alarms. The active alarms can be graphed based on different topology characteristics or alarm data fields by selecting one or more components from the Graph list. The graphing selections are persistent.

The active alarm graphs display as a series of stacked bar graphs, one bar stack for each server. Each bar stack shows the count of critical, major and minor alarms for the selected items in the Graph list. Multiple graphs display side-by-side for each item selected. The graphs are displayed above the active alarms grid listing.

Use this procedure to graph active alarms:

1. Click **Alarms & Events > View Active**.
2. If necessary, specify filter criteria In the Filter list and click **Go**.

The selected Filter criteria are applied to all Server Group tabs. The active alarms that meet the specified criteria display.

3. Specify one or more graphical information components from the Graph list. Valid components are listed in [Table 3-5](#).

Table 3-5 Graphical information components

Topology Components	Alarm Data Field Components
Network Element	Event ID
Server	Severity
Server Group	Product
Resource Domain	Process
Place	Server
Place Association	Type

Note: Server is both a topology component and a data field in the active alarm data grid display.

The graphs for the selected components display above the tabbed area.

4. To adjust the graph viewing area, click and hold the slider above the graph while adjusting the proportions with the mouse.
5. To remove one or more graphs, de-select the choices from the **Graph** list.

If only some choices are deselected, the deselected graphs disappear. If all choices are deselected, the graph display disappears.

Active Alarms Quick Filter

The individual information in the bar stacks of the active alarm graphs can be used to further filter the alarm information in the current Server Group tab. This allows a more focused, quick look at the alarms. The quick filter selection(s) are not persistent. The quick filter settings are cleared once the user browses away from the View Active Alarms page.

Quick filter selections from the graph are applied to the grid and all graphs displayed within the current Server Group tab of the View Active Alarms page. For example, if the portion of the stacked bar graph that displays the critical alarms is selected, the grid filters to show critical platform alarms and the summary statistics are recalculated to adjust the graphs. If additional portions of the graphs are selected, both the grid and the graphs continue to be filtered according to the selections.

Note: Although the quick filter is applied to the grid display, the quick filter criteria are not applied to generated Reports and Exports of active alarm data. Use the **Filter** list in the toolbar to filter the data.

Once active alarms have been graphed, use this procedure to apply a quick filter to active alarms in a server group:

1. To add a quick filter, select a portion of the stacked bar graph to filter. The stacked bar displays lists of active alarms by the alarm severity.

Note: Alarm severity types are displayed using the following color distinctions:

- Critical - Red
 - Major - Orange
 - Minor - Yellow
-

Upon selection, the filtered graph portion displays green to indicate it is being used as a filter.

2. Repeat the previous step as needed to filter additional portions of the remaining bar graphs.
3. To remove all quick filtering selections from the active Server Group tab, click **Clear Selections**.

The display grid and all graphs display with no quick filtering.

4. To remove individual quick filtering selections from the active Server Group tab, select the portion of the stacked bar graph that is displayed in green.

The display grid and all graphs recalculate based on the remaining selections.

Viewing alarm and event history

All historical alarms and events are displayed in a scrollable, optionally filterable table. The historical alarms and events are sorted, by default, by time stamp with the most recent one at the top. Use this procedure to view alarm and event history.

Note: The alarms and events that appear in View History vary depending on whether you are logged in to an NOAM or SOAM. Alarm collection is handled solely by NOAM servers in systems that do not support SOAMs.

1. Click **Alarms & Events > View History**.
2. If necessary, specify filter criteria and click **Go**.

Note: Some fields, such as **Additional Info**, truncate data to a limited number of characters. When this happens, a **More** link appears. Click **More** to view a report that displays all relevant data.

Historical alarms and events are displayed according to the specified criteria.

The historical alarms table updates automatically. When new historical data is available, the table is automatically updated, and the view returns to the top row of the table.

3. To suspend automatic updates, click any row in the table.

The following(Alarm updates are suspended.) message displays.

If a new alarm is generated while automatic updates are suspended, the (Alarm updates are suspended. Available updates pending.) message displays.

To resume automatic updates, press and hold **Ctrl** as you click to deselect the selected row.

Historical events data export elements

This table describes the elements on the **View History > Export** page.

Table 3-6 Schedule Event Data Export Elements

Element	Description	Data Input Notes
Task Name	Name of the scheduled task	Format: Textbox Range: Maximum length is 40 characters; alphanumeric (a-z, A-Z, and 0-9) and minus sign (-). Task Name must begin and end with an alphanumeric character.
Description	Description of the scheduled task	Format: Textbox Range: Maximum length is 255 characters; alphanumeric (a-z, A-Z, and 0-9) and minus sign (-). Description must begin with an alphanumeric character.
Export Frequency	Frequency at which the export occurs	Format: Options Range: Fifteen Minutes, Hourly, Once, Weekly, or Daily Default: Once
Minute	If hourly or fifteen minutes is selected for Upload Frequency, this is the minute of each hour when the data is written to the export directory.	Format: Scrolling list Range: 0 to 59 Default: 0
Time of Day	Time of day the export occurs	Format: Time textbox Range: 15-minute increments Default: 12:00 AM
Day of Week	Day of week on which the export occurs	Format: Options Range: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, or Saturday Default: Sunday

Exporting alarm and event history

You can schedule periodic exports of historical data from the Alarms and Events View History page. Historical data can be exported immediately, or you can schedule exports to occur daily or weekly. If filtering has been applied in the View History page, only filtered data is exported.

During data export, the system automatically creates a CSV file of the filtered data. The file will be available in the file management area until you manually delete it, or until the file is transferred to an alternate location using the Export Server feature. For more information about using Export Server, see [Data Export](#).

The details of historical alarms and events can be exported to a file by clicking the **Export** button on the View History page. The system automatically creates and writes the exported historical alarm details to a CSV file in the file management area.

If filtering has been applied in the View History page, only filtered historical alarms and events are exported. Use this procedure to export alarm and event history to a file. Use this procedure to schedule a data export task.

1. Select **Alarms & Events > View History**.
2. If necessary, specify filter criteria and click **Go**.

The historical alarms and events are displayed according to the specified criteria.

3. Click **Export**.

The Schedule Event Data Export page appears.

4. Enter the **Task Name**.

For more information about **Task Name**, or any field on this page, see [Historical events data export elements](#).

5. Select the **Export Frequency**.
6. If you selected Hourly, specify the Minutes.
7. Select the **Time of Day**.

Note: **Time of Day** is not an option if **Export Frequency** equals **Once**.

8. Select the **Day of Week**.

Note: **Day of Week** is not an option if **Export Frequency** equals **Once**.

9. Click **OK** or **Apply** to initiate the data export task.

The data export task is scheduled. From the **Status & Manage > Files** page, you can view a list of files available for download, including the alarm history file you exported during this procedure. For more information, see [#unique_70](#).

Scheduled tasks can be viewed, edited, and deleted, and reports of scheduled tasks can be generated from **Status & Manage > Tasks**. For more information see:

- [#unique_71](#)
- [#unique_72](#)
- [#unique_73](#)
- [#unique_74](#)

10. Click **Export**.

11. Click the link in the green message box to go directly to the **Status & Manage > Files** page.

• The alarm and event history is currently being exported to `Events_20090812_175538.csv`.

From the **Status & Manage > Files** page, you can view a list of files available for download, including the alarm history file you exported during this procedure. For more information, see [Opening a File](#).

Generating a report of historical alarms and events

Use this procedure to generate a report.

1. Click **Alarms & Events > View History**.
2. Specify filter criteria, if necessary, and click **Go**.

The historical alarms and events are displayed according to the specified criteria.

3. Click **Report**.

The View History Report can be printed or saved to a file.

4. Click **Print** to print the report.
5. Click **Save** to save the report to a file.

View the File List

Use this procedure to view the list of files located in the file management storage area of a server. The amount of storage space currently in use can also be viewed on the Files page.

1. From the Main menu, select **Status & Manage > Files**.
2. Select a server.

All files stored on the selected server are displayed.

Opening a File

Use this procedure to open a file stored in the file management storage area.

1. Select **Status & Manage > Files**.
2. Select an **NE Name**.

3. Click List Files.

The Status & Manage Files list page for the selected network element displays all files stored in its file management storage area.

4. Click the Filename of the file to be opened.**5. Click Open to open the file.**

Data Export

From the Data Export page you can set an export target to receive exported performance data. Several types of performance data can be filtered and exported using this feature. For more information about how to create data export tasks, see:

- [#unique_77](#)
- [Exporting alarm and event history](#)
- [Exporting KPIs](#)

From the Data Export page you can manage file compression strategy and schedule the frequency with which data files are exported.

Data Export elements

This table describes the elements on the **Administration > Remote Servers > Data Export** page.

Table 3-7 Data Export Elements

Element	Description	Data Input Notes
Hostname	Name of export server	<p>Must be a valid hostname or a valid IP address.</p> <p>Range: Maximum length is 255 characters; alphanumeric characters (a-z, A-Z, and 0-9) and minus sign. Hostname must start and end with an alphanumeric.</p> <p>To clear the current export server and remove the file transfer task, specify an empty hostname and username.</p> <p>Default: None</p>

Table 3-7 (Cont.) Data Export Elements

Element	Description	Data Input Notes
Username	Username used to access the export server	Format: Textbox Range: Maximum length is 32 characters; alphanumeric characters (a-z, A-Z, and 0-9). To clear the current export server and remove the file transfer task, specify an empty hostname and username. Default: None
Directory on Export Server	Directory path on the export server where the exported data files are to be transferred	Format: Textbox Range: Maximum length is 255 characters; valid value is any UNIX string. Default: None
Path to rsync on Export Server	Optional path to the rsync binary on the export server	Format: Textbox Range: Maximum length is 4096 characters; alphanumeric characters (a-z, A-Z, and 0-9), dash, underscore, period, and forward slash. Default: If no path is specified, the username's home directory on the export server is used
Backup File Copy Enabled	Enables or disables the transfer of the backup files	Format: Checkbox Default: Disabled (unchecked)
File Compression	Compression algorithm used when exported data files are initially created on the local host	Format: Option Range: gzip, bzip2, or none Default: gzip
Upload Frequency	Frequency at which the export occurs	Format: Option Range: fifteen minutes, hourly, daily or weekly Default: weekly
Minute	If The Upload Frequency is Hourly, this is the minute of each hour when the transfer is set to begin	Format: Scrolling list Range: 0 to 59 Default: zero

Table 3-7 (Cont.) Data Export Elements

Element	Description	Data Input Notes
Time of Day	If the Upload Frequency is Daily or Weekly, this is the time of day the export occurs	Format: Time textbox Range: HH:MM AM/PM in 15-minute increments Default: 12:00 AM
Day of Week	If Upload Frequency is Weekly, this is the day of the week when exported data files will be transferred to the export server	Format: Option Range: Sunday through Saturday Default: Sunday
SSH Key Exchange	This button initiates an SSH key exchange between the OAM server and the data export server currently defined on the page. A password must be entered before the exchange can complete.	Format: Button
Transfer Now	This button initiates an immediate attempt to transfer any data files in the export directory to the export server	Format: Button
Test Transfer	This button initiates an immediate test transfer to the data export server currently defined on the page.	Format: Button
Keys Report	This button generates an SSH Keys Report for all OAM servers.	Format: Button

Configuring data export

The Data Export page enables you to configure a server to receive exported performance and configuration data. Use this procedure to configure data export.

1. Select **Administration > Remote Servers > Data Export**.

2. Enter a **Hostname**.

See [Data Export elements](#) for details about the **Hostname** field and other fields that appear on this page.

3. Enter a **Username**.

4. Enter a **Directory Path** on the Export server.

5. (Optional) Enter the **Path to Rsync** on the Export server.

Note: Depending on the OS and implementation of the remote server, it may be required to define the path to the rsync binary on the export server but this is not common. If no path is specified, the username's home directory on the export server is used.

6. Select whether to enable the transfer of the backup file. To leave the backup disabled, do not check the box.
7. Select the **File Compression** type.
8. Select the **Upload Frequency**.
9. If you selected hourly for the upload frequency, select the **Minute** intervals.
10. If you selected daily or weekly for the upload frequency, select the **Time of Day**.
11. If you selected weekly for the upload frequency, select the **Day of the Week**.
12. If public keys were manually placed on the Export server, skip to step 14. Otherwise, click **Exchange SSH Key** to transfer the SSH keys to the Export server.

13. Enter the password.

The server attempts to exchange keys with the export server currently defined on the page. After the SSH keys are successfully exchanged, continue with the next step.

14. Click **OK** to apply the changes or **Cancel** to discard the changes.

The export server is now configured and available to receive performance and configuration data.

15. You may optionally click **Test Transfer** to confirm the ability to export to the server currently defined on the page.

The user can monitor the progress of the task by selecting the **Tasks** drop down list in the page control area.

Tasks

The Tasks pages display the active, long running tasks and scheduled tasks on a selected server. The Active Tasks page provides information such as status, start time, progress, and results for long running tasks, while the Scheduled Tasks page provides a location to view, edit, and delete tasks that are scheduled to occur.

Active Tasks

The Active Tasks page displays the long running tasks on a selected server. The Active Tasks page provides information such as status, start time, progress, and results, all of which can be generated into a report. Additionally, you can pause, restart, or delete tasks from this page.

Active Tasks elements

The Active Tasks page displays information in a tabular format where each tab represents a unique server. By default, the current server's tab is selected when the page is loaded. [Table 3-8](#) describes elements on the Active Tasks page.

Table 3-8 Active Tasks Elements

Active Tasks Element	Description
ID	Task ID
Name	Task name
Status	Current status of the task. Status values include: running, paused, completed, exception, and trapped.
Start Time	Time and date when the task was started
Update Time	Time and date the task's status was last updated
Result	Integer return code of the task. Values other than 0 (zero) indicate abnormal termination of the task. Each value has a task-specific meaning.
Result Details	Details about the result of the task
Progress	Current progress of the task

Deleting a task

Use this procedure to delete one or more tasks.

1. Click **Status & Manage > Tasks > Active Tasks**.
2. Select a server.

Note: Hovering the cursor over any tab displays the name of the server.

All active tasks on the selected server are displayed.

3. Select one or more tasks.

Note: To delete a single task or multiple tasks, the status of each task selected must be one of the following: completed, exception, or trapped.

Note: You can select multiple rows to delete at one time. To select multiple rows, press and hold Ctrl as you click to select specific rows.

4. Click **Delete**.
5. Click **OK** to delete the selected task(s).

Deleting all completed tasks

Use this procedure to delete all completed tasks.

1. Click **Status & Manage > Tasks > Active Tasks**.

2. Select a server.

Note: Hovering the cursor over any tab displays the name of the server.

All active tasks on the selected server are displayed.

3. Click **Delete all Completed**.
4. Click **OK** to delete all completed tasks.

Cancelling a running or paused task

Use this procedure to cancel a task that is running or paused.

1. Click **Status & Manage > Tasks > Active Tasks**.
2. Select a server.

Note: Hovering the cursor over any tab displays the name of the server.

All active tasks on the selected server are displayed.

3. Select a task.
4. Click **Cancel**.
5. Click **OK** to cancel the selected task.

Pausing a task

Use this procedure to pause a task.

1. Click **Status & Manage > Tasks > Active Tasks**.
2. Select a server.

Note: Hovering the mouse over any tab displays the name of the server.

All active tasks on the selected server are displayed.

3. Select a task.

Note: A task may be paused only if the status of the task is running.

4. Click **Pause**.

A confirmation box appears.

5. Click **OK** to pause the selected task.

For information about restarting a paused task, see [Restarting a task](#).

Restarting a task

Use this procedure to restart a task.

1. Click **Status & Manage > Tasks > Active Tasks**.
2. Select a server.

Note: Hovering the mouse over any tab displays the name of the server.

All active tasks on the selected server are displayed.

3. Select a paused task.

Note: A task may be restarted only if the status of the task is paused.

4. Click **Restart**.

A confirmation box appears.

5. Click **OK** to restart the selected task.

The selected task is restarted.

Active Tasks report elements

The Active Tasks [Report] page displays report data for selected tasks. [Table 3-9](#) describes elements on the Active Tasks [Report] page.

Table 3-9 Active Tasks Report Elements

Active Tasks Report Element	Description
Task ID	Task ID
Display Name	Task name
Task State	Current status of the task. Status values include: running, paused, completed, exception, and trapped.
Admin State	Confirms task status
Start Time	Time and date when the task was started
Last Update Time	Time and date the task's status was last updated
Elapsed Time	Time to complete the task
Result	Integer return code of the task. Values other than 0 (zero) indicate abnormal termination of the task. Each value has a task-specific meaning.
Result Details	Details about the result of the task

Generating an active task report

Use this procedure to generate an active task report.

1. Click **Status & Manage > Tasks > Active Tasks**.
2. Select a server.

Note: Hovering the mouse over any tab displays the name of the server.

All active tasks on the selected server are displayed.

3. Select one or more tasks.

Note: If no tasks are selected, all tasks matching the current filter criteria is included in the report.

4. Click **Report**.
5. Click **Print** to print the report.
6. Click **Save** to save the report.

Scheduled Tasks

The periodic export of certain data can be scheduled through the GUI. The Scheduled Tasks page provides you with a location to view, edit, delete, and generate reports of these scheduled tasks. For more information about the types of data that can be exported, see:

- [#unique_77](#)
- [Exporting alarm and event history](#)
- [Exporting KPIs](#)

Scheduled Tasks Elements

The Scheduled Tasks page displays information in a tabular format where each tab represents a unique server. By default, the current server's tab is selected when the page is loaded. [Table 3-10](#) describes elements on the Scheduled Tasks page.

Table 3-10 *Scheduled Tasks Elements*

Scheduled Tasks Element	Description
Task Name	Name given at the time of task creation
Description	Description of the task
Time of Day	The hour and minute the task is scheduled to run
Day-of-Week	Day of the week the task is scheduled to run

Table 3-10 (Cont.) Scheduled Tasks Elements

Scheduled Tasks Element	Description
Network Elem	The Network Element associated with the task

Editing a Scheduled Task

Use this procedure to edit a scheduled task.

1. Click **Status & Manage > Tasks > Scheduled Tasks**.
2. Select a task.
3. Click **Edit**.
4. Edit the available fields as necessary.

See [Scheduled Tasks Elements](#) for details about the fields that appear on this page.

5. Click **OK** or **Apply** to submit the changes and return to the Scheduled Tasks page.

Deleting a Scheduled Task

Use this procedure to delete one or more scheduled tasks.

1. Click **Status & Manage > Tasks > Scheduled Tasks**.
2. Select one or more tasks.
3. Click **Delete**.
4. Click **OK** to delete the selected task(s).

Generating a Scheduled Task Report

Use this procedure to generate a scheduled task report.

1. Click **Status & Manage > Tasks > Scheduled Tasks**.
2. Select one or more tasks.

Note: If no tasks are selected, all tasks matching the current filter criteria is included in the report.

3. Click **Report**.
4. Click **Print** to print the report.
5. Click **Save** to save the report.

Alarms and Events

This section provides general alarm/event information, and lists the types of alarms and events that can occur on the system. Alarms and events are recorded in a database log table. Currently active alarms can be viewed from **Alarms & Events > View Active**. The alarms and events log can be viewed from the View History option.

Note: Some of the alarms in this document are shared with other applications and may not appear in this particular product.

IP Front End, IPFE (5000-5999)

This section provides information and recovery procedures for IP Front End (IPFE) alarms, which range from 5000 to 5999.

5001 - IPFE Backend Unavailable

Alarm Group:
IPFE

Description:
The IPFE has not received any heartbeats from an application server within the heartbeat timeout interval.

Severity:
Minor

Instance:
IP address of the application server.

Note: If a heartbeat is received from the application server, this alarm clears.

HA Score:
Normal

Auto Clear Seconds:
N/A

OID:
ipfeIpfeBackendUnavailableNotify

Cause:
A DA-MP is not sending heartbeats to the IPFE.

Diagnostic Information:

Wireshark is the tool to monitor if the DAMP is sending a heartbeat to IPFE.

Follow these steps to diagnose the issues:

1. From the SO GUI, navigate to **IPFE > Configuration > Target Sets > TSA# > +** at least one DAMP server XSI IP should be present.
If yes, go to step 2.
2. Log into the IPFE server.
 - a. Ping <the DAMP server XSI IP>
 - b. Telnet <the DAMP server XSI IP> <monitoring port, default 9675>
If steps a or b fail, go to step 3.
3. ssh admusr@<DAMP server XMI>.
 - a. Run the sudo netstat -anop | grep <monitoring port, default 9675> command to see if there is a TCP listen socket on that DAMP XSI IP.
If yes, check the DAMP XSI network (hardware and software).
If no, check the configuration of the DAMP.

Recovery:

1. Check the status of the application servers by navigating to the **Status & Manage > Server** page.
2. Consult the application server's documentation for recovery steps.
3. If the application server is functioning, check for network connectivity issues between the IPFE and the application server.
4. It is recommended to contact [My Oracle Support](#) for assistance.

5002 - IPFE address configuration error

Alarm Group:

IPFE

Description:

This alarm indicates misconfiguration due to manual changes to the configuration database, configuration data importing errors, or software installation errors. In general, this error is caused by IPFE IP addresses being incorrectly configured.

Severity:

Critical

Instance:

Description of the field or fields that are incorrect.

Note: If the IPFE is able to successfully synchronize data with its peer, this alarm clears.

HA Score:

Normal

Auto Clear Seconds:

N/A

OID:

ipfeIpfeStateSyncConfigErrorNotify

Cause:

The alarm raises if IPFE IP addresses is configured incorrectly.

Main Menu: IPFE -> Configuration -> Options

Configuration Options

Variable	Value	Description
Inter-IPFE Synchronization		
IPFE-A1 IP Address	10.143.24.12 - MAKO-en1b3-IPFEA1	IPv4 or IPv6 This selection selected as
IPFE-A2 IP Address	10.143.24.32 - MAKO-en2b3-IPFEA2	IPv4 or IPv6 This selection selected as
IPFE-B1 IP Address	<unset>	IPv4 or IPv6 This selection selected as
IPFE-B2 IP Address	<unset>	IPv4 or IPv6 This selection selected as
State Sync TCP Port	19041	TCP port to
State Sync Reconnect Interval	1 *	Reconnect in [Units = sec
Gratuitous ARP Type	ARP Request *	Specify type ARP Request
Traffic Forwarding		
Application Traffic TCP Reject Option	TCP Reset *	How to reject available.

The IPFE mates state synchronization is through the connection (IPFE-A1/A2 or B1/B2 IP Address, 19041, TCP). This alarm raises when the connection is not able to be established. Following are few reasons:

- IPFE-A/B: Addresses both identical - one of the addresses is incorrect
- IPFE-A/B: Cannot open IPFE device, **/dev/recent** - xt_recent module in TPD is either missing or incorrect
- IPFE-A/B: First address bad - invalid address format

- IPFE-A/B: Second address bad - invalid address format
- IPFE-A/B: Bind error - cannot bind a socket to this interface address
- IPFE-A/B: Both addresses empty - it is not possible to leave both addresses empty when configuring from the GUI, but it is possible if data is manually entered from GCLI command
- IPFE-A/B: Only one sync address may be local - two addresses that both correspond to an interface on the same blade have been entered
- IPFE-A/B: Peer software version incompatible - the peer IPFE is on a different version

Diagnostic Information:

Collect the following data before contacting [My Oracle Support \(MOS\)](#) for assistance:

- `iqt -pE Network>Network_$(hostname)`
- `iqt -pE L3Interface>L3Interface_$(hostname)`
- Screenshot of **Configuration > Network > Devices > <All IPFE Server Tab>**.
- `iqt -pE IpfeOption>IpfeOption_$(hostname)`
- `iqt -pE IpfeOption>IpListTsa_$(hostname)`
- Screenshot of **IPFE > Configuration > Options**.
- `tr.cat ipfe.STK>ipfeSTK_$(hostname)`
- `ifconfig>ifconfig_$(hostname)`

Recovery:

1. To correct configuration errors:
 - Read and understand the alarm text. This should have sufficient information to diagnose the configuration error. As a last resort.
 - Navigate to **IPFE > Configuration > Options**.
 - Check the IPFE-A1 and IPFE-A2 IP address. You also need to check IPFE-B1 and IPFE-B2 IP addresses, if you have full 4 IPFE servers. You should select INTERNALIMI IP address here. All servers have to be the same IP type.
 - Check the State Sync TCP Port. We suggest you always use the default 19041, if possible.
2. Ping the local IMI IP address.
3. Reboot the IPFE servers, if you have permission to do so.
4. If the alarm is still there, it is recommended to contact [My Oracle Support](#) for assistance. Collect this data first:
 - Screenshots for the **Configuration > Network > Devices All IPFE Server tab** and **IPFE > Configuration > Options**.
 - `ifconfig>ifconfig_$(hostname)`

5003 - IPFE state sync run error

Alarm Group:

IPFE

Description:

The IPFE was unable to synchronize state data with its mate. This alarm is generated when the IPFE server missed the heartbeat messages from its mate, or if the mate is unavailable for any reason.

This alarm is normal when one IPFE of a pair is taken down for maintenance. In this case, the alarm is guaranteed.

If the alarm is not generated, this indicates the IPFE has detected that its mate is out of service.

DSR currently supports, at most, four IPFE servers, which are named IPFE-A1, IPFE-A2, IPFE-B1, and IPFE-B2 in the **IPFE > Configuration > Options** tab. You can configure IPFE-A1 and IPFE-A2 servers only in the small DSR system and you can add IPFE-B1 and IPFE-B2 for a big size DSR, which depends on the needs. The IPFE-A1 and IPFE-A2 are configured as mated (IPFE-B1 and IPFE-B2 are mated, if configured). The heartbeat message exchanges between the mated IPFE servers once every 500ms. If, for any reason, the IPFE server missed its mate's heartbeat message, alarm 5003 is raised. A few typical reasons are:

- Mate server is down
- Network connectivity issue
- Latency between the IPFEs
- High CPU load on the IPFE causing internal software latency in the transmission or receipt of a heartbeat message

Severity:

Critical

Instance:

One of the following strings:

- connect error - cannot connect to peer IPFE
- data read error - error reading data from peer IPFE
- data write error - error writing data to peer IPFE

Note: If the is able to synchronize state data with its mate, this alarm will clear.

HA Score:

Normal

Auto Clear Seconds:

N/A

OID:

ipfeIpfeStateSyncRunErrorNotify

Cause:

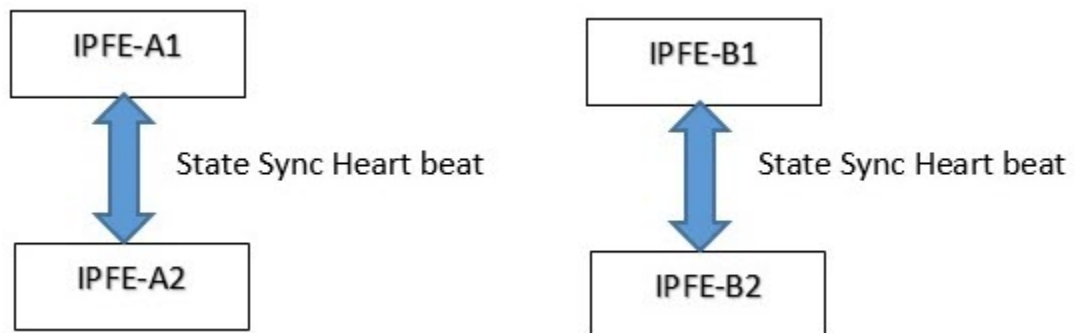

Alarm #5003 raises when the IPFE server misses the heartbeat messages from its mate, or if the mate is unavailable for any reason.

This alarm is normal when one IPFE of a pair is taken down for maintenance. In this case, the alarm is guaranteed. If the alarm is not raised since this indicates the IPFE has not detected that its mate is out of service.

DSR currently supports at the most four IPFE servers those are named IPFE-A1, IPFE-A2, IPFE-B1, and IPFE-B2 in the **IPFE->Configuration->Option tab**.

You can configure IPFE-A1 and IPFE-A2 servers only in the small DSR system and can add IPFE-B1 and IPFE-B2 for a big size DSR which depends on the needs. The IPFE-A1 and IPFE-A2 are configured as mated (IPFE-B1 and IPFE-B2 are mated if configured). The heart beat messages exchanges between the mated IPFE servers once every 500 ms. When at any reason the IPFE server missed its mate heart beat message the alarm 5003 will be raised. Following are few of the reasons like:

- Its mate IPFE server is down.
- Network connectivity issue
- Latency between the IPFEs
- High CPU load on the IPFE causing internal software latency in the transmission or receipt of a heartbeat message.

**Diagnostic Information:**

The state synchronization data exchange is through the connection between IPFE server mates (IPFE A1/A2 IP or B1/B2 IP, 19041, TCP). Wireshark can be used to diagnose if there is an state sync heartbeat message sent and received.

VE SYSTEM OAM)

Main Menu: IPFE -> Configuration -> Options

Configuration Options

Variable	Value	Description
Inter-IPFE Synchronization		
IPFE-A1 IP Address	10.143.24.12 - MAKO-en1b3-IPFEA1	IPv4 or IPv6 address of This selection is disabled as Active.
IPFE-A2 IP Address	10.143.24.32 - MAKO-en2b3-IPFEA2	IPv4 or IPv6 address of This selection is disabled as Active.
IPFE-B1 IP Address	<unset>	IPv4 or IPv6 address of This selection is disabled as Active.
IPFE-B2 IP Address	<unset>	IPv4 or IPv6 address of This selection is disabled as Active.
State Sync TCP Port	19041	TCP port to use for sync
State Sync Reconnect Interval	1 *	Reconnect interval for sync [Units = seconds; Default = 10]
Gratuitous ARP Type	ARP Request *	Specify type of gratuitous ARP Request]
Traffic Forwarding		
Application Traffic TCP Reject Option	TCP Reset *	How to reject TCP connections not available.

Recovery:

1. Check IPFE server configurations by navigating to **IPFE > Configuration > Options** and checking the IPFE server IP address. Select the IMI IP address. The Default State Sync TCP port number is 19041. If this port number is configurable in your version of the IPFE, then do not change it from the default.
2. Check the Mated IPFE connectivity.
 - ssh to IPFE-A1. ssh admusr@<IPFE-A1 XMI IP address>
 - ping <IPFE-A2 IMI Address>
 - telnet <IPFE-A2 IMI Address> 19041
 - ssh to IPFE-A2 to ping/telnet IPFE-A1
 - ssh to IPFE-B1 to ping/telnet IPFE-B2
 - ssh to IPFE-B2 to ping/telnet IPFE-B1
 - If the mated IPFE servers are reachable to each other, go to step 3
3. Reboot the IPFE servers, one by one, if possible.
 - a. Navigate to **Status & Manage > Server**.
 - b. Select the IPFE server and click **Restart**.

The, **Are you sure you want to restart application software on the following server(s)? <server name>** warning message displays.

- c. Click **OK** to continue.
- d. If rebooting does not solve the issue or you are not allowed to reboot the IPFE server, go to the next step.
4. Do CPU and userspace performance diagnostics using the commands: `top` and `mpstat -P ALL`.
5. For further assistance, it is recommended to contact [My Oracle Support](#) for assistance. Collect this data first:
 - Screenshots for the **Configuration > Network > Devices** All IPFE Server tab and **IPFE > Configuration > Options**.
 - `ifconfig>ifconfig_$(hostname)`
 - `(iqt -E IpfeOption ; iqt -E IpListTsa ;) > ipfeconfig_$(hostname)`
 - `netstat -anop | grep 19041>netstat_$(hostname)`

5004 - IPFE IP tables configuration error

Alarm Group:

IPFE

Description:

This alarm indicates misconfiguration of the Target Set due to manual changes to the configuration database or configuration data importing errors. One or more of the IP addresses configured for the application servers is not valid.

Severity:

Critical

Instance:

tsa N address misconfiguration where N is 1-16

HA Score:

Normal

Auto Clear Seconds:

N/A

OID:

ipfeIpfeIpTablesConfigErrorNotify

Cause:

One or more of the IP addresses configured for the application servers is not valid.

Diagnostic Information:

N/A.

Recovery:

1. Navigate to **IPFE > Configuration > Options**.

Note: When the target set address is configured correctly, this alarm clears.

2. From the Configuration Options screen, navigate to **IPFE > Configuration > Target Sets**.
3. Ensure there Target Set Address field contains a valid IP address.
4. Ensure there is at least one application server IP address configured in the Target Set IP List for the TSA.
5. Repeat for each TSA on the Target Set screen.

5005 - IPFE Backend In Stasis

Alarm Group:

IPFE

Description:

The IPFE has received a heartbeat packet from the application server that indicates the application server is unwilling to accept new connections. However, the application server continues to process existing connections. The application server sends a stasis heartbeat message for the following reasons:

- The application server has reached its maximum number of active Diameter connections
- The application server is congested. The application server also raises [22200 - MP CPU Congested](#).

Severity:

Minor

Instance:

IP address of the application server in stasis

HA Score:

Normal

Auto Clear Seconds:

N/A

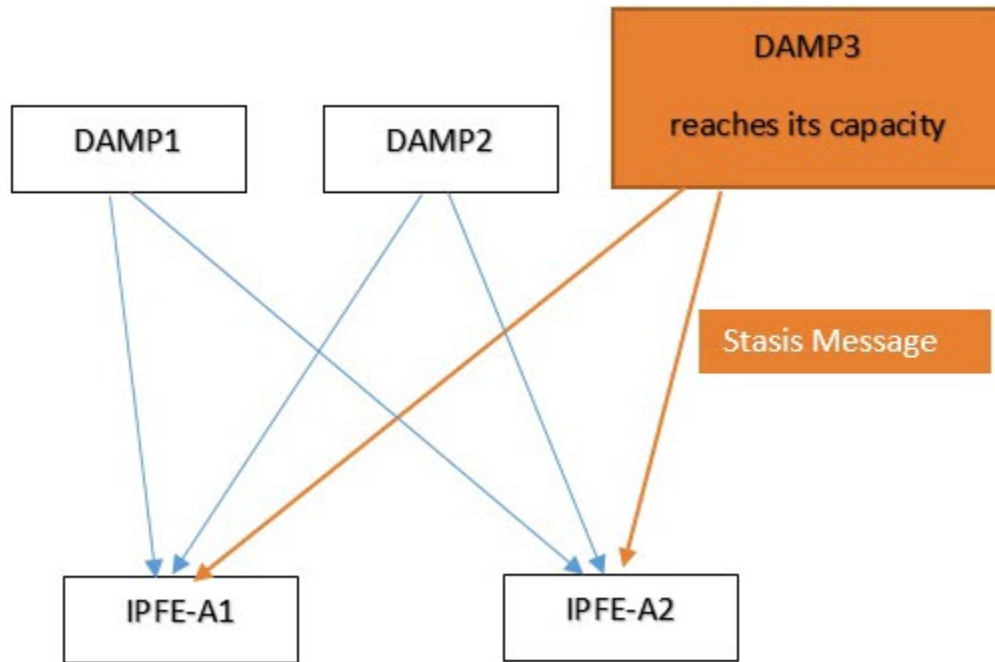

OID:

ipfeIpfeBackendInStasisNotify

Cause:

The application server has reached its maximum resource capacity.

When one or more of the DAMPs in the cluster reaches its capacity. The DAMP servers that reach their capacity sends Stasis messages to the IPFE servers.

When the IPFE servers received this stasis message, the IPFE will:

- Raise this 5005 alarm.
- Keep processing the existing connection to this stasis DAMP server.
- Route any NEW connection (TCP SYN, SCTP INIT) to other un-stasis servers in the cluster.

The IPFE clears this alarm when the IPFE server receives no more stasis message from the DAMP servers.

It usually tells that more back-end DAMP servers are required to extend the capacity when this alarm is present. Contact Oracle support team to help diagnose the issue.

Diagnostic Information:

Collect following data before contacting Oracle Support:

1. Export the alarm history.
2. `iqt -pE IpfeOption>IpfeOption_$(hostname)`
3. `iqt -pE IpListTsa>IpListTsa_$(hostname)`
4. `ipfe.STK>ipfeStk_$(hostname)`
5. Screenshot of **Diameter->Maintenance->DA-MPs->DA-MP Connectivity**.

Recovery:

1. When the IPFE receives heartbeats from the application server indicating that it is willing to accept new connections, this alarm clears.

5006 - Error reading from Ethernet device. Restart IPFE process.

Alarm Group:

IPFE

Description:

IPFE was unable to read from an ethernet device.

Note: If IPFE is able to read from the ethernet device, this alarm clears.

Severity:

Critical

Instance:

pcap <ethernet device name> or network interface devices added or removed

HA Score:

Degraded

Auto Clear Seconds:

N/A

OID:

ipfeIpfeEtherDeviceReadErrorNotify

Cause:

For old IPFE version, IPFE has to be restarted to be able to collect the data for the DSR reconfiguration like a new added Ethernet card or a deleted bond.

Diagnostic Information:

N/A.

Recovery

1. Navigate to **Status & Manage > Server**.
2. Select the IPFE server and click **Restart**.

The **Are you sure you want to restart application software on the following server(s)? <server name>** warning message displays.

3. Click **OK** to continue.

5007 - Out of Balance: Low**Alarm Group:**

IPFE

Description:

Traffic statistics reveal an application server is processing lower than average load. For example, if a TSA has three application servers, but the IPFE has only two connections open, then one of the application servers receives no traffic and thus is considered "underloaded."

Severity:

Minor

Instance:

IP address of the application server

HA Score:

Normal

Auto Clear Seconds:

N/A

OID:

ipfeIpfeBackendUnderloadedNotify

Cause:

The IPFE has an algorithm to calculate the average traffic load of the DA-MP application servers, at times the traffic on a DA-MP server may outside of the average range. When an IPFE detects that a DA-MPs traffic is unbalanced, processing a lower than average load, the IPFE server raises the 5007 alarm.

Few of the causes the IPFE to raise this alarm are:

- A new DA-MP server has just been added to a cluster.
- A DA-MP has just been stopped for maintenance or some other reason.
- The activated traffic rate is to low.

These alarms are not harmful to the system, and indicates the IPFE traffic on a DA-MP server is imbalanced for some reason. There is no impact to traffic or connections and this alarm does not cause disconnection or congestion. As new connections get established, and statistics indicate the server is no longer under loaded, alarm 5007 gets cleared.

Diagnostic Information:

Collect following data before contacting [My Oracle Support \(MOS\)](#) for assistance.

1. Export alarm history.
2. `grep * /proc/net/xt_recent* > xt_recent1_$(hostname)`
3. `grep * /proc/net/xt_recent*/*> xt_recent2_$(hostname)`
4. `tr.cat ipfe.STK>ipfeSTK_$(hostname)`
5. `iqt -pE IpfeOption>IpfeOption_$(hostname)`
6. `iqt -pE IpListTsa>IpListTsa_$(hostname)`

Recovery:

1. None required. Underloaded application servers do not impact traffic processing. This alarm clears when traffic statistics reveal the application server is no longer underloaded.
2. It is recommended to contact [My Oracle Support](#) if more assistance is needed.

5008 - Out of Balance: High

Alarm Group:

IPFE

Description:

Traffic statistics reveal an application server is processing higher than average load and does not receive new connections.

Severity:

Minor

Instance:

IP address of the overloaded application server.

Note: When traffic statistics indicate the application server is no longer overloaded, this alarm clears.

HA Score:

Normal

Auto Clear Seconds:

N/A

OID:

ipfeIpfeBackendOverloadedNotify

Cause:

The IPFE has an algorithm to calculate the average traffic load of the DA-MP application servers. At times the traffic on a DA-MP server reaches outside of the average range. When an IPFE detects that a DA-MPs traffic is unbalanced, processing a higher than average load, the IPFE server raises 5008 alarm.

Few of the causes for IPFE to raise this alarm are:

- A new DA-MP server has just been added to a cluster.
- A DA-MP has just been stopped for maintenance or some other reason.
- The activated traffic rate is too high.

These alarms are not harmful to the system, and indicates that the IPFE traffic on a DA-MP server is imbalanced for some reason. There is no impact to traffic or connections and this alarm will not cause disconnection or congestion. As new connections get established, and statistics indicate the server is no longer overloaded, alarm 5008 gets cleared.

Diagnostic Information:

Collect the following DATA before contacting [My Oracle Support \(MOS\)](#) for assistance.

1. Export alarm history.
2. `grep * /proc/net/xt_recent* > xt_recent1_$(hostname).`
3. `grep * /proc/net/xt_recent*/*> xt_recent2_$(hostname).`
4. `tr.cat ipfe.STK>ipfeSTK_$(hostname).`

5. `iqtool -pE IpfeOption>IpfeOption_$(hostname).`
6. `iqtool -pE IpListTsa>IpListTsa_$(hostname).`

Recovery:

1. IPFE monitors traffic statistics and does not assign connections to the overloaded application server until statistics indicate the server is no longer overloaded.
2. Check the status of the application servers by navigating to the **Status & Manage > Server** page.
3. Consult the application server's documentation for recovery steps.
4. It is recommended to contact [My Oracle Support](#).

5009 - No available servers in target set

Alarm Group:

IPFE

Description:

Through monitoring of the application servers, the IPFE learns no server in a target set is available. The associated measurement, TxReject, also shows counts (refer to the *DSR Measurements Reference* for details about this measurement). This alarm can be triggered during configuration of the IPFE when the target set address has been configured, but application servers have not yet been added to the target set. Setting the Monitoring Connection Timeout to a value less than 2 seconds is the primary cause of this alarm. It is recommended to leave this setting on the default of 3 seconds. Do not set to 1 second. Later releases prohibit this from being set to 1 second.

Each target set is configured with at least one backend application server (DAMP). The IPFE raises the 5009 alarm when the IPFE detects no DAMP is live. The IPFE detects the DAMP liveliness by receiving the DAMP heartbeat on time.

Severity:

Critical

Instance:

tsa N has no available servers where N is 1-16

Note: When at least one application server in a target set becomes available, this alarm clears.

HA Score:

Normal

Auto Clear Seconds:

N/A

OID:

ipfeIpfeNoAvailableAppServersNotify

Cause:

Setting the Monitoring Connection Timeout to a value less than 2 seconds is the primary cause of this alarm. It is recommended to leave this setting on the default of 3 seconds. Do not set to 1 second. Later releases prohibit this from being set to 1 second.

Each target set is configured with at least one backend application server (DAMP).

The IPFE raises the 5009 alarm when the IPFE detects no DAMP is live. The IPFE detects the DAMP liveliness by receiving the DAMP heartbeat on time. The following screen shows the IPFE monitoring the DAMP XSI port 9675 and the heartbeat is received every 3 seconds through this port.

500 (ACTIVE SYSTEM ONLY)

Main Menu: IPFE -> Configuration -> Options

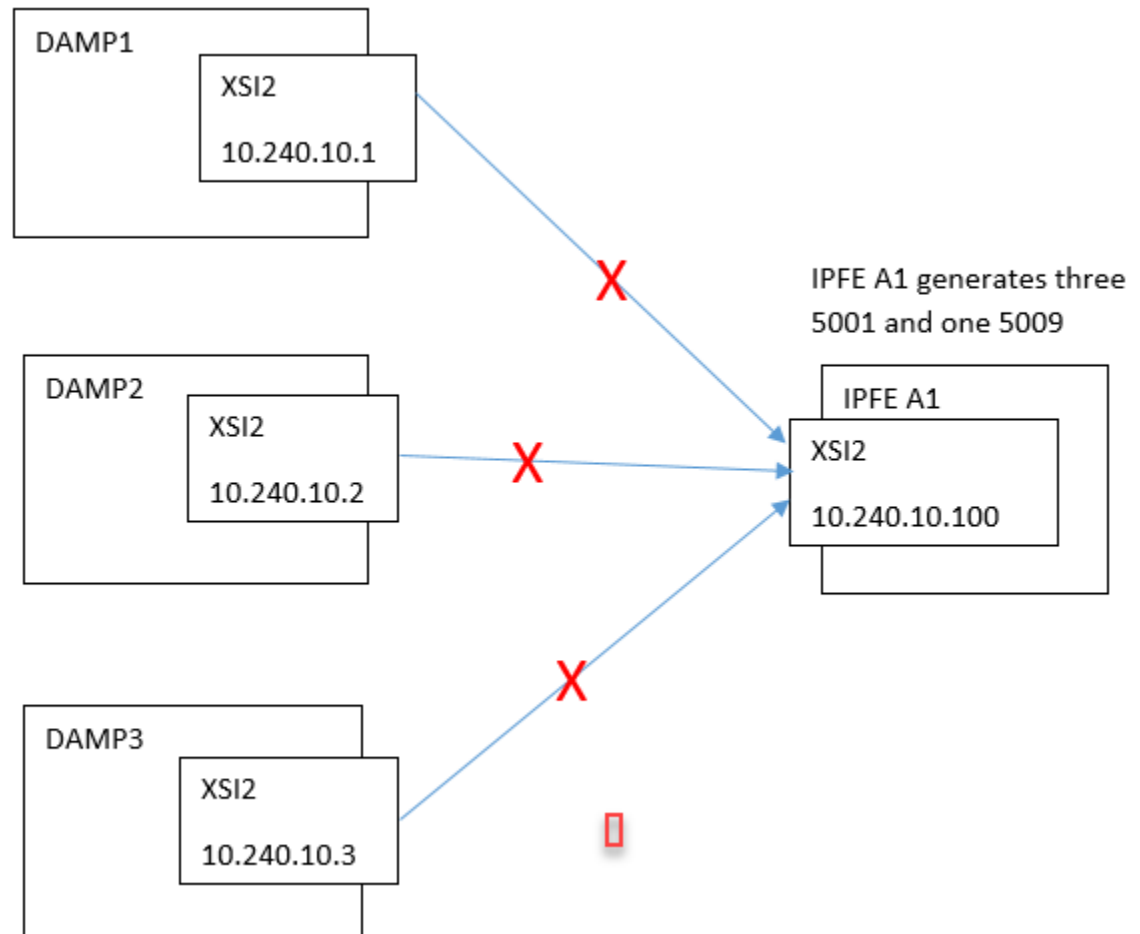

Packet Counting		
Imbalance Detection Throughput Minimum	20000 *	This is the value below regarding imbalance [Units = packets/sec]
Least Load Threshold	1 *	This value applies to This is the value below robin. [Units = packets/sec]
Cluster Rebalancing and Accounting	Enabled *	Support for cluster re measurements.
Application Server Monitoring		
Monitoring Port	9675 *	TCP port to try periodically servers. [Default = 9675]
Monitoring Connection Timeout	3 *	How long to wait for application servers for Range = 1 - 255]
Monitoring Connection Try Interval	10 *	Interval for periodic for aliveness. [Units = seconds]
Monitoring Protocol	Heartbeat *	Application liveness If any Target Set has setting cannot be changed from Heartbeat the monitoring packets.
Throttling and DoS protection		
		Overload throttling if

When the IPFE does not receive the heartbeat from a single backend DAMP the IPFE raises alarm 5001. When the IPFE does not receive the heartbeat for all backend DAMPs in its TSA List, the IPFE raises the alarm 5009.

When 5009 alarm raises, the IPFE is not able to route the connection to a backend DAMP server. This alarm is critical.

For example:

TSA1 10.240.10.162 has three backend DAMPs (DAMP1-XSI2-10.240.10.1, DAMP2-XSI2-10.240.10.2, and DAMP3-XSI2-10.240.10.3), when IPFE is not able to receive the heartbeat in time from DAMP1, alarm 5001 raises from its active IPFE server. When IPFE misses all three DAMP heartbeats, alarm 5009 raises from its active IPFE server.

Diagnostic Information:

The Wireshark is the normal tool to monitor if the DAMP is sending a heat beat to IPFE. Follow these steps to diagnose the issues:

1. From the SO GUI, navigate to **IPFE > Configuration > Target Sets > TSA# > +** at least one DAMP server XSI IP should be present. If yes, go to step 2.
2. Log into the IPFE server. - ping <the DAMP server XSI IP> - telnet <the DAMP server XSI IP> <monitoring port, default 9675>. If fail, go to step 3.
3. ssh admusr@<DAMP server XMI>. Run the `sudo netstat -anop | grep <monitoring port, default 9675>` command to see if there is a TCP listen socket on that DAMP XSI IP. If no, check the configuration of the DAMP. If yes, check the DAMP XSI network (hardware and software).

Recovery:

1. Make sure the Monitoring Connection Timeout setting is not less than 2 seconds. Change to a higher value, if required
2. From the SO GUID, navigate to **IPFE > Configuration > Target Sets**. At least on DAMP server XSI IP address should display.
3. Log into the IPFE server.

- ssh to admusr@ @<IPFE XMI IP>
 - ping <the DAMP server XSI IP>
 - telnet <the DAMP server XSI IP> <monitoring port, default 9675>
- The telnet terminal prints gibberish at even intervals. These are the raw heartbeat messages. If you see nothing, then the DSR is not sending hearbeats.
- ssh to admusr@ @<DAMP server XMI>
 - sudo netstat -anop | grep <monitoring port, default 9675> to see if there is a TCP listen socket on the DAMP XSI IP

If no, check the configuration of the DAMP

If yes, check the DAMP XSI network (switch/firewall...)

4. If application servers have been configured correctly for the target set and the application server status is healthy, it is recommended to contact [My Oracle Support](#) for assistance. Collect this data first:

- Screenshot of **IPFE > Configuration > Target Sets** edit screen.
- `ifconfig>ifconfig_$(hostname)`
- `cat /etc/sysconfig/network > network_$(hostname)`
- `cat /etc/modprobe.d/bnx2x.conf > bnx2x.conf_$(hostname)`
- `cat /etc/sysconfig/network-scripts/ifcfg-eth01`

5010 - Unknown Linux iptables command error

Alarm Group:

IPFE

Description:

The IPFE received an unknown error parsing Linux iptables output. This internal software error is generated when the iptables kernel module is updated and provides an error the IPFE wasn't coded to handle. It occurs during startup, if it occurs at all.

Severity:

Critical

Instance:

error parsing iptables output

HA Score:

Normal

Auto Clear Seconds:

N/A

OID:

ipfeIpfeErrorParsingIptablesOutputNotify

Cause:

This internal software error is generated when the iptables kernel module is updated and provides an error that the IPFE was not coded to handle. It occurs during startup, if it occurs at all.

Diagnostic Information:

N/A.

Recovery:

1. The alarm clears when the kernel output from the iptables command is parsable. If the problem persists, collect the following data and it is recommended to contact [My Oracle Support](#) for assistance.
 - From the active NO/SO GUI, navigate to **Status & Manage > Server**.
 - From the Server Status screen, select the IPFE to stop (as it occurs during startup) and click **Stop**.
 - Log into the IPFE blade as root.
 - Make a directory for holding data: `# mkdir /var/TKLC/db/filemgmt/<data_collection_directory>`
 - Change to that directory.
 - Issue the following commands with root account:
`# /sbin/iptables -vxZ -t filter -nL > iptables_filter.txt`
`# /sbin/iptables -vxZ -t mangle -nL > iptables_mangle.txt`
`# /sbin/ip6tables -vxZ -t filter -nL > ip6tables_filter.txt`
`# /sbin/ip6tables -vxZ -t mangle -nL > ip6tables_mangle.txt`
 - tar and compress the directory.
 - From the active NO/SO GUI, navigate to **Status & Manage > Server** and restart IPFE.

5011 - System or platform error prohibiting operation

Alarm Group:

IPFE

Description:

An internal software error. An IPFE attempt to interact with the TPD operating system has produced a fatally abnormal result (e.g., no network interfaces are provisioned on the system). This alarm is raised during startup by the following conditions:

- The IPFE cannot write to its Ethernet devices (denoted by the instances, error opening ethernet listeners or no network cards found).
- The IPFE receives an unknown error when accessing its Ethernet devices.
- The issuance of the service network restart command.

- The IPFE cannot assign Ethernet device queues to certain CPUs, which is denoted by the instance, Cannot update /proc/irq/N/smp_affinity setting.

Severity:

Critical

Instance:

Description of the problem.

- Error opening ethernet listeners
- No network cards found
- Cannot update /proc/irq/N/smp_affinity setting
- System has less than 16 CPUs

Note: The IPFE detects if it has been installed on a virtual machine and will not raise this alarm.

HA Score:

Normal

Auto Clear Seconds:

N/A

OID:

ipfeIpfeSystemErrorNotify

Cause:

An IPFE attempt to interact with the TPD operating system has produced a fatally abnormal result. For example, no network interfaces are provisioned on the system.

This alarm is raised during startup by the following conditions:

- The IPFE cannot write to its Ethernet devices (denoted by the instances, **error opening Ethernet listeners** or **No network cards found**).
- The IPFE receives an unknown error when accessing its Ethernet devices.
- The issuance of the **service network restart** command.
- The IPFE cannot assign Ethernet device queues to certain CPUs, which is denoted by the **Cannot update /proc/irq/N/smp_affinity setting**.

Diagnostic Information:

N/A.

Recovery:

1. If the IPFE is able to use its ethernet interfaces, this alarm will clear. If this alarm was generated by issuing a service network restart command, it should clear within 10 seconds. If it does not clear, restart the IPFE process:
 - a. Select **Status & Manage > Server**.
 - b. Select the IPFE server and click **Restart**.

The **Are you sure you want to restart application software on the following server(s)? <server name>** warning message displays.

- c. Click **OK** to continue.
2. If the alarm still does not clear, check the Ethernet devices and CPUs.
3. It is recommended to contact [My Oracle Support](#) for assistance.

5012 - Signaling interface heartbeat timeout

Alarm Group:

IPFE

Description:

Heartbeats to monitor the liveness of a signaling interface have timed out. IPFE always monitors the working condition of its mate signaling interfaces(XSI) as an entirely separate monitoring mechanism to the synchronization channel. This is done by the IPFE server sends the heartbeat message to its mate through the signaling interfaces(XSI) using the default UDP port 19041. If the heartbeat is not received in 3000ms, then the IPFE server assumes the signaling interface is out of service, and takes over traffic from its mate. At the same time the IPFE raises the alarm 5012 .

Severity:

Critical

Instance:

The name of the Ethernet interface affected, e.g., bond0.5.

HA Score:

Degraded

Auto Clear Seconds:

N/A

OID:

ipfeIpfeSignalingInterfaceNotify

Cause:

IPFE always monitors the working condition of its mate signaling interfaces (XSI) as an entirely separate monitoring mechanism to the synchronization channel. This is done by the IPFE server sending the heartbeat message to its mate through the signaling interfaces(XSI) using the default UDP port 19041. If the heartbeat is not received in 3000ms, then the IPFE server assumes the signaling interface is out of service, and takes over traffic from its mate. At the same time, the IPFE raises the alarm #5012.

Following is the example for the heartbeat message exchange between the IPFE

Diagnostic Information:

This alarm is normal for the situation where one IPFE of a mated pair has been taken down for maintenance. This alarm only needs to be acted upon if it is raised when both IPFEs are expected to be available.

1. From the alarm report to determine the issue interface (eth01, bond0.313 and so on). For example, when the alarm instance shows: IPFEA1:bond0.313. The issue interface shall be IPFEA2 (mate), bond0.313.
2. Then using the Wireshark to monitor if the Heartbeat messages is sent from IPFEA2, bond0.313 (no need to look into the message). If no, the issue is on IPFEA2. If yes, the issue shall be in the network.

Recovery:

1. Check if any manual configuration changes have been executed that remove or reset interfaces.
2. Diagnose hardware failure of interfaces, switch failure, or network outage when the issue is on the network.
3. Review currently active platform alarms.
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

5013 - Throttling traffic

Alarm Group:

IPFE

Description:

IPFE has seen traffic in excess of Global Packet Rate Limit and is dropping packets to throttle the traffic. To protect the DSR, IPFE defines a Global Packet Rate Limit set as a ingress signaling traffic rate throttle. The packet rate is accounted for on a per-local-port bases, thus each separate DSR listening port can receive each the default of 500,000 packets/second. When the IPFE is processing traffic in excess of this rate, the IPFE throttles the traffic by smoothly dropping packets in the manner of an overloaded border router. The default value of this rate throttle is 500,000 packets/second.

When traffic is approaching or exceeding its overload capacity, the alarm 5100 is raised and does not drop the packets. But when the traffic reaches this throttle, IPFE drops the packets

Severity:

Critical

Instance:

The number of packets that have been throttled

HA Score:

Degraded

Auto Clear Seconds:

N/A

OID:

ipfelpfeThrottlingTrafficNotify

Cause:

To protect the DSR, IPFE defines a Global Packet Rate Limit set as a ingress signaling traffic rate throttle. The packet rate is accounted for on a per-local-port bases, thus each separate DSR listening port can receive each the default of 500,000 packets/second. When the IPFE is processing traffic in excess of this rate, the IPFE throttles the traffic by smoothly dropping packets in the manner of an overloaded border router. The default value of this rate throttle is 500,000 packets/second.

When traffic is approaching or exceeding its overload capacity, the alarm 5100 is raised and does not drop the packets. But when the traffic reaches this throttle, IPFE drops the packets.

2. If the problem persists, it is recommended to contact [My Oracle Support](#).

5100 - Traffic Overload

Alarm Group:

IPFE

Description:

Total IPFE signaling traffic rate is approaching or exceeding its engineered capacity. IPFE defined an engineering capacity to monitor the ingress signaling traffic rate. This alarm is raised when the total IPFE signaling traffic rate is approaching or exceeding its engineered capacity. This alarm is different to the alarm 5013, No packages drop at this point.

The severity thresholds are:

- Minor: set at 245 MB/second, clear at 220 MB/second
- Major: set at 327 MB/second, clear at 302 MB/second
- Critical: set at 409 MB/second, clear at 384 MB/second

Severity:

Minor, Major, Critical

Instance:

N/A

Note: If the signaling traffic declines below the clear threshold, the alarm clears.

HA Score:

10009 - Config and Prov db not yet synchronized**Alarm Group:**

REPL

Description:

The configuration and provisioning databases are not yet synchronized. The 10009 alarm raises when DB re-initialization is attempted but fails. The re-initialization usually happens when transitioning to *A* state (one of the procmgr states, can get it from the `p1` command). DB re-initialization fails because the remote server is not in the correct state, for example, it is not in the OOS state.

This alarm can also be observed during some DSR patch installations after the DB replication is inhibited. As long as this alarm is cleared (NOT stuck) after DB replication is allowed, it is normal behavior and we expect to see the 10009 alarm when applying a patch.

Severity:

Critical

Instance:

N/A

HA Score:

Failed

Auto Clear Seconds:

This alarm does not autoclear.

OID:

oAGTCfgProvDbNoSync

Cause:

The 10009 alarm raises when DB re-initialization is attempted but fails. The re-initialization usually happens when transitioning to *A* state (one of the procmgr states, can get it from `p1` command). DB re-initialization fails because the remote server is in the incorrect state. For example, it is not in the OOS state.

This alarm also raises during a DSR patch installation after the DB replication is inhibited. As long as this alarm is cleared (NOT stuck) after DB replication is allowed, it is normal behavior and we expect to see the 10009 alarm when applying a patch.

Diagnostic Information:

Perform the following to diagnose the alarm:

- Examine the `/var/TKLC/appw/logs/Process/apwSoapServer.log` file on primary NO and possibly the remote server to investigate the reasons for failure.
- Software release information.

Recovery:

1. Monitor the replication status by navigating to **Status & Manage > Replication GUI**.
2. If alarm persists immediately after an upgrade, reboot the server once using the `sudo init 6` command on the effected server.
3. If alarm persists for more than one hour, it is recommended to contact [My Oracle Support](#).

10010 - Stateful db from mate not yet synchronized

10051 - Route deployment failed

Alarm Group:

AUD

Description:

An error occurred in the deployment of a network.

Severity:

Minor

Instance:

Route ID failed to deploy

HA Score:

Normal

Auto Clear Seconds:

0

OID:

awpss7TekelecRouteDeploymentFailedNotify

Cause:

A SOAP request from route audit thread of apwSoapServer process to the TpdProvD service failed to delete the old record when *insert new route* or *update existed network route*. The audit happens every minute. The alarm gets cleared when *insert new route* or *update existed network route* record is successful.

Diagnostic Information:

Check the following on the affected server:

- See if any network route is configured on the server (output of 'route' command).
- Check the `igt -Ep NetworkRoute` from active NOAM server to see if any network route is configured.
- Check the `igt -Ep ResourceAudit.1` from active NOAM server to see if any network route is in audit.
- Check if the apwSoapServer service is running (output of `pl` command).
- Check if the tpdProvD service is running (output of `top` or `ps` command).
- Check if there is any SOAP error in the following log files:
 - `/var/TKLC/appw/logs/Process/apwSoapServer.log`
 - `/var/TKLC/log/tpdProvD/tpdProvD.log`
- Try to identify if the problem occurred in tpdProvD or apwSoapServer.

Recovery:

1. Try restarting the apwSoapServer service on the affected server.
2. If the alarm persists, collect trace list in Diagnostic Information and it is recommended to contact [My Oracle Support](#).

10052 - Route Discovery Failed

Alarm Group:

AUD

Description:

An error occurred in the discovery of network routes.

Severity:

Minor

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0

OID:

awpss7TekelecRouteDiscoveryFailedNotify

Cause:

A SOAP request from route audit thread of apwSoapServer process to the TpdProvD service failed to get the list and details of the configured network routes. The audit happens every minute. The alarm gets cleared when the route information is received from the TpdProvD service.

Diagnostic Information:

Check the following on the affected server:

1. See if any network route is configured on the server (output of 'route' command)
2. Check if the apwSoapServer service is running (output of 'pl' command)
3. Check if the tpdProvD service is running (output of 'top' or 'ps' command)
4. Check if there is any SOAP error in the following log files:
 - /var/TKLC/appw/logs/Process/apwSoapServer.log
 - /var/TKLC/log/tpdProvD/tpdProvD.log
5. Try to identify if the problem occurred in tpdProvD or apwSoapServer

Recovery:

1. Try restarting the apwSoapServer service on the affected server.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

10053 - Route deployment failed - no available device

Alarm Group:

AUD

Description:

A suitable device could not be identified for the deployment of a network route.

Severity:

Minor

Instance:

Route ID that failed to deploy

HA Score:

Normal

Auto Clear Seconds:

0

OID:

awpss7TekelecNoRouteDeviceNotify

Cause:

AppWorks audit tries to insert, edit, or delete a route for a device which does not exist. The audit happens every minute. The alarm clears when the AppWorks audit is able to insert, edit, or delete the route.

Diagnostic Information:

Check the following on the affected server:

- Check the `igt -Ep ResourceAudit .1` from active NOAM server to see if any network route is in audit.
- Find the device for the route.
- If the device specified is other than auto, check the user interface to see if the specified device is present.
- Check `apwSoapServer` logs for more information.

Recovery:

1. If the device specified is AUTO:
 - a. Deploy the route on a specific device instead of using the "AUTO" device.
 - b. Ensure every server in the server group has a usable device for the selected gateway.
2. If the device specified is deleted:
 - a. Recreate the missing device.
 - b. Wait for audit to re-run which shall configure the route and clear the alarm.

10054 - Device deployment failed

Alarm Group:

AUD

Description:

An error occurred in the deployment of a network device.

Severity:

Minor

Instance:

Device name that failed to deploy

HA Score:

Normal

Auto Clear Seconds:

0

OID:

awpss7TekelecDeviceDeploymentFailedNotify

Cause:

- Device Audit attempted to update a configured network interface device in the system configuration using the TpdProvD soap service which returned failure.
- Apart from any platform related issue like TpdProvD SOAP service not being ready, invalid input is the main cause of this alarm.

Diagnostic Information:

If device is added through one of the configuration interfaces, verify that the device configuration file, `/etc/sysconfig/network-scripts/ifcfg-<dev>` is not already present.

If the device is edited through one of the configuration interfaces, verify that the device configuration file, `/etc/sysconfig/network-scripts/ifcfg-<dev>` is present and is not RCS locked.

To determine the cause, look for errors in following files:

- `/var/TKLC/log/tpdProvD/tpdProvD.log`
- `/var/TKLC/appw/logs/Process/apwSoapServer.log`

Recovery:

1. If device is added using one of the configuration interfaces, delete any `/etc/sysconfig/network-scripts/ifcfg-<dev>` for the device if present.
2. If the device is edited using one of the configuration interfaces:
 - a. if the `/etc/sysconfig/network-scripts/ifcfg-<dev>` is missing, then add the device using netAdm command.
 - b. if the `/etc/sysconfig/network-scripts/ifcfg-<dev>` is RCS locked, use rcstool command to RCS unlock the file.
3. Delete the device, wait for the alarm to clear and then add it back.
4. It is recommended to contact [My Oracle Support](#) if more assistance is needed.

10055 - Device discovery failed

Alarm Group:

AUD

Description:

An error occurred in the discovery of network devices.

Severity:

Minor

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0

OID:

awpss7TekelecDeviceDiscoveryFailedNotify

Cause:

No network device could not found; more specifically, if the **/etc/sysconfig/network** scripts directory could not be read by the apwSoapServer audit.
or

A named network device could not be discovered on the system; more specifically, if the following command fails when run from the apwSoapServer audit.

```
/sbin/ip addr show <dev>
```

Diagnostic Information:

To diagnose the cause:

- Check the permissions of **/etc/sysconfig/network** scripts directory. It should be 0755 or relaxed.
- Check if the named physical network devices are present on the system.
- Check if the named device interface is configured, that is the interface files (**ifcfg-<dev>**) are present in the **/etc/sysconfig/network** scripts directory.

Recovery:

1. Correct any directory or file permissions (**/etc/sysconfig/network-scripts/***), if required.
2. If the physical device is present on the system, but it does not show up in the output of **ifconfig** command, then use the **netAdm** command to add the device to the platform configuration.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

10073 - Server group max allowed HA role warning

Alarm Group:

HA

Description:

The server group has received the maximum number of allowed HA role warnings.

Severity:

Minor

Instance:

Affected Server Group name

HA Score:

Normal

Auto Clear Seconds:

0

OID:

oAGTSgMaxAllowedHARoleWarnNotify

Recovery:

1. Log into the SO GUI and navigate to the **Status & Manage > HA**.
2. Click **Edit** and change the Max Allowed HA role of the current Standby SOAM to *Active*.
3. If you cannot perform the HA switchover, log into the server (**Status & Manage > Server**).
4. Select the active server and click **Restart** to restart the server.

HA switchover occurs.

5. Verify the switchover was successful from the active SOAM GUI, or log into the active and standby SOAMs and execute this command:

```
# ha.mystate
```

10074 - Standby server degraded while mate server stabilizes

Alarm Group:

HA

Description:

The standby server has temporarily degraded while the new active server stabilizes following a switch of activity.

Severity:

Minor

Instance:

N/A

HA Score:

Degraded

Auto Clear Seconds:

This alarm does not autoclear.

OID:

hASbyRecoveryInProgressNotify

Recovery:

1. No action required; the alarm clears automatically when standby server is recovered. This is part of the normal recovery process for the server that transitioned to standby as a result of a failover.

10075 - Application processes have been manually stopped

Alarm Group:

HA

Description:

The server is no longer providing services because application processes have been manually stopped.

Severity:

Minor

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

This alarm does not clear automatically.

OID:

hAMtceStopApplicationsNotify

Recovery:

1. If maintenance actions are complete, restart application processes on the server from the **Status & Manage > Servers** and selecting **Restart Applications** for the server that raised the alarm.

Once successfully restarted, the alarm clears.

10078 - Application not restarted on standby server due to disabled failure cleanup mode

Event Type:

HA

Description:

The applications on the standby server have not been restarted after an active-to-standby transition since h_FailureCleanupMode is set to 0.

10110 - Certificate about to expire

Alarm Group:

AUD

Description:

The certificate expires within 30 days.

Severity:

Minor

Instance:

<CertificateName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

certificateAboutToExpire

Cause:

The certificate is expired.

Certificate Management

The Certificate Management feature allows users to configure certificates for:

- **HTTPS/SSL** - Allows secure login without encountering messages about untrusted sites
- **LDAP (TLS)** - Allows the LDAP server's public key to encrypt credentials sent to the LDAP server
- **TLS/DTLS over TCP/SCTP Transport** - Allows transport layer security protocols and encryption on a per connection basis at the application layer. For example, DSR local and peer node connections
- **Single Sign-On (SSO)** - Allows users to navigate among several applications without having to re-enter login credentials
- **Certificate Authority (CA)** - A digital certificate provided by a trusted source used to make secure connections between a client and server

Note: When setting up Certificate Management, you must first assign a system domain name for the DNS configuration before importing any certificates.

If you allow a certificate to expire, the certificate becomes invalid, and you are no longer able to run secure transactions on your website. The Certification Authority (CA) prompts you to renew your SSL certificate before the expiration date.

Diagnostic Information:

Generating a Certificate Report

To generate a certificate report:

1. Click **Administration > Access Control > Certificate Management**.
2. Select the certificate for which you want to create a report.

Note: To select multiple server groups, press and hold **Ctrl** as you click to select specific rows. Alternatively, if no servers are selected then all server groups appear in the report.

3. Click **Report**.
4. Click **Print** to print the report, or click **Save** to save a text file of the report.

Recovery:

1. For details on DNS Configuration feature, see the DNS Configuration chapter in *Operation, Administration, and Maintenance (OAM) Guide*.
2. For details on Certificate Management feature, see the Certificate Management chapter in *Operation, Administration, and Maintenance (OAM) Guide*.
3. It is recommended to contact [My Oracle Support](#) for assistance.

10134 - Server upgrade failed

Alarm Group:

LOG

Description:

The server upgrade operation failed.

Severity:

Major

Instance:

<HostName>

HA Score:

Normal

Auto Clear Seconds:

0

OID:

tekelecLogServerUpgradeFailAlm

Recovery:

1. If a server upgrade fails, this alarm clears when the server upgrades successfully. Upgrade the server individually or as part of a server group or site upgrade. If more than one server in the same server group or site fails to upgrade, the server group and site upgrades may be useful because both methods will attempt to upgrade all of the failed servers within the server group or site, respectively. Upgrading all servers in a server group is useful if the server group has multiple upgrade failures. Upgrading all servers in a site is useful if servers in multiple server groups contained in a site have upgrade failures.
2. To upgrade individual servers:
 - a. Navigate to the Upgrade page (**Administration > Software Management > Upgrade**).
 - b. To upgrade a NOAM server, select the NOAM tab and proceed to [2.e](#).
 - c. To upgrade a server that is not a NOAM server, select the SOAM site tab associated with the server(s) that raised the alarm.

- d. Select the sub-tab associated with the server group containing the server(s) that raised the alarm.
- e. Select the individual server(s) and then click the **Upgrade Server** button to start the upgrade on the selected servers.

Note: Servers cannot be selected across tabs. If there are servers in multiple server groups, you must restart the server upgrade for each additional Server Group tab, or perform a server group or site upgrade.

- 3. To upgrade all servers in a server group:
 - a. Navigate to the Upgrade page (**Administration > Software Management > Upgrade**).
 - b. To upgrade a NOAM server, select the NOAM tab and proceed to [3.e](#).
 - c. To upgrade a server that is not a NOAM server, select the SOAM site tab associated with the server(s) that raised the alarm.
 - d. Select the sub-tab associated with the server group containing the server(s) that raised the alarm.
 - e. Click **Auto Upgrade** to upgrade all servers in the server group. (Do not select any servers.)

Note: The active server in the NO server group never upgrades automatically.

An alternative method to upgrade a server group that is not a NOAM server group is to upgrade selected server groups from the Entire Site sub-tab. The site upgrade form does not offer as many options as the automated server group upgrade.

To upgrade all servers in a server group using the alternative method:

- a. Navigate to the Upgrade page (**Administration > Software Management > Upgrade**).
- b. Select the SOAM site tab associated with the server(s) that raised the alarm. Remain on the Entire Site sub-tab.

Note: The Entire Site sub-tab only appears when the site contains more than one server group.

- c. Select the individual server group(s) then click the **Upgrade Server Group** button to start the upgrade on the selected server group(s).
- 4. To upgrade entire sites:
 - a. Navigate to the Upgrade page (**Administration > Software Management > Upgrade**).
 - b. Select the SOAM site tab associated with the server(s) that raised the alarm. Remain on the Entire Site sub-tab.

Note: The Entire Site sub-tab only appears when the site contains more than one server group.

- c. Click **Site Upgrade** to upgrade all server groups in the site. (Do not select any server groups.)

Auto Clear Seconds

0 (zero)

OID

apwSnmpTrappingNotConfiguredForSite

Recovery

1. The SNMP trap configuration is in SITE mode. Configure SNMP for the site <Hostname> belongs to.

IDIH (11500-11549)

This section provides information and recovery procedures for **IDIH** alarms, which range from 11500 to 11549.

11500 - Tracing Suspended

Alarm Group:

IDIH

Description:

IDIH trace has been suspended due to DA-MP (danger of) CPU congestion.

Severity:

Minor

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterTracingSuspendedAlarmNotify

Recovery:

1. No action required. Tracing will resume once the danger of CPU congestion subsides.

11501 - Trace Throttling Active

Alarm Group:

IDIH

Description:

Troubleshooting trace has been throttled on some DA-MPs due to IDIH TTR bandwidth usage exceeding provisioned limit.

Severity:

Minor

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterTracingThrottledAlarmNotify

Recovery:

1. No action required

11502 - Troubleshooting Trace Started

Event Group:

IDIH

Description:

A troubleshooting trace instance was started.

Severity:

Info

Instance:

<TraceInstanceId>

HA Score:

Normal

Throttle Seconds:

0

OID:

eagleXgDiameterIDIHTraceStartedNotify

Recovery:

1. No action required.

11503 - Troubleshooting Trace Stopped

Event Group:

IDIH

Description:

A troubleshooting trace instance was stopped.

Severity:

Info

Instance:

<TraceInstanceId>

HA Score:

Normal

Throttle Seconds:

0

OID:

eagleXgDiameterIDIHTraceStoppedNotify

Recovery:

1. No action required

11506 - Invalid IDIH-Trace AVP

Alarm Group:

IDIH

Description:

An IDIH-Trace AVP has been received with an invalid format.

Severity:

Info

Instance:

<TransConnName>

HA Score:

Normal

Throttle Seconds:

30

OID:

eagleXgDiameterInvalidIDIHTraceAvpNotify

Recovery:

1. If the message came from a peer that is not a DA-MP, verify the peer is not modifying the AVP value (peers may retain the IDIH-Trace AVP unchanged, or remove it entirely, at their discretion).
2. If the message came from a peer that is a DA-MP, it is recommended to contact [My Oracle Support](#).

11507 - Unable to run network trace at this site

Alarm Group:

IDIH

Description:

A network trace could not be run at this site because the connection or peer referenced by the trace scope value is not configured at this site. The trace will still run at sites that have this entity configured.

Severity:

Info

Instance:

<TraceName>

HA Score:

Normal

Throttle Seconds:

0

OID:

eagleXgDiameterUnableToRunNetworkTraceAtThisSiteNotify

Recovery:

1. No action required; the trace will still run at all sites that have the indicated object configured at their site.

11508 - Network Trace Configuration Error

Alarm Group:

IDIH

Description:

An error occurred during configuration of the network trace. Please delete the trace definition.

Severity:

Minor

Instance:

<TraceName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterNetworkTraceConfigurationErrorNotify

Recovery:

1. Delete the network trace that raised the alarm.

SS7/Sigtran Alarms (19200-19299)

This section provides information and recovery procedures for SS7/Sigtran alarms, ranging from 19200 - 19299.

19200 - RSP/Destination unavailable

Alarm Group:

SS7

Description:

Unable to access the SS7 Destination Point Code because the RSP status is unavailable.

Severity:

Critical

Instance:

RSP Name

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7M3rlRspUnavailableNotify

Cause:

Alarm #19200 raises when Remote Signaling Point is not accessible.

Diagnostic Information:

N/A.

Recovery:

1. RSP/Destination status can be monitored from the SOAM GUI by navigating to **SS7/Sigtran > Maintenance > Remote Signaling Points**.
 - If the RSP/Destination becomes unavailable due to a link set failure, the MP server automatically attempts to recover all links not manually disabled.
 - If the RSP/Destination becomes unavailable due to the receipt of a TFP, the route's status is periodically audited by sending RST messages to the adjacent point code which sent the TFP.
2. Navigate to **SS7/Sigtran > Maintenance > Link Sets** to check the status of linkset links to the adjacent server.

3. Navigate to **Transport Manager > Maintenance > Transport** to check the SCTP status to the adjacent server.
4. Verify IP network connectivity exists between the MP server and the adjacent servers.
5. If all the connections to adjacent server are OK, then check the connections between adjacent server and Remote Signaling Point. The specific steps depend on the adjacent server type.
6. Check the event history logs for additional SS7 events or alarms from this MP server.
7. Verify the adjacent server is not under maintenance.
8. If the problem persists, it is recommended to contact [My Oracle Support](#).

19201 - RSP/Destination route unavailable

Alarm Group:

SS7

Description:

Unable to access the SS7 Destination point code via this route.

Severity:

Minor

Instance:

<Route Name>

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7M3rlRouteUnavailableNotify

Recovery:

1. Route status can be monitored from **SS7/Sigtran > Maintenance > Remote Signaling Points**.
 - If the route becomes Unavailable due to a link set failure, the MP server will attempt to automatically recover all links not manually disabled.
 - If the route becomes Unavailable due to the receipt of a TFP, the route's status will be periodically audited by sending RST messages to the adjacent point code which sent the TFP.
2. Verify that IP network connectivity exists between the MP server and the adjacent servers.
3. Check the event history logs for additional SS7 events or alarms from this MP server.

4. Verify the adjacent server is not under maintenance.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

19202 - Linkset unavailable

Alarm Group:
SS7

Description:
The SS7 link set to an adjacent signaling point has failed.

Severity:
Major

Instance:
<LinkSetName>

HA Score:
Normal

Auto Clear Seconds:
This alarm does not autoclear.

OID:
awpss7M3rlLinksetUnavailableNotify

Recovery:

1. The MP server will attempt to automatically recover all links not manually disabled.
2. Link set status can be monitored from **SS7/Sigtran > Maintenance > Linksets**.
3. Verify that IP network connectivity exists between the MP server and the adjacent servers.
4. Check the event history logs for additional SS7 events or alarms from this MP server.
5. Verify that the adjacent server is not under maintenance.
6. If the problem persists, it is recommended to contact [My Oracle Support](#).

19203 - Link unavailable

Alarm Group:
SS7

Description:
M3UA has reported to M3RL that a link is out of service.

Severity:
Minor

Instance:

<Link Name>

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7M3rlLinkUnavailableNotify

Recovery:

1. The MP server will attempt to automatically recover all links not manually disabled.
2. Link status can be monitored from **SS7/Sigtran > Maintenance > Links**.
3. Verify that IP network connectivity exists between the MP server and the adjacent servers.
4. Check the event history logs for additional SS7 events or alarms from this MP server.
5. Verify that the adjacent server is not under maintenance.
6. If the problem persists, it is recommended to contact [My Oracle Support](#).

19204 - Preferred route unavailable

Alarm Group:

SS7

Description:

M3RL has started to utilize a lower priority (higher cost) route to route traffic toward a given destination address, because the higher priority (lower cost) route specified for that RSP/Destination has become Unavailable.

Severity:

Major

Instance:

RSP Name

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7M3rlPreferredRouteUnavailableNotify

Recovery:

1. If the preferred route becomes Unavailable due to the receipt of a TFP, the route's status will be periodically audited by sending RST messages to the adjacent point code which sent the TFP.
2. Route status can be monitored from **SS7/Sigtran > Maintenance > Remote Signaling Points**.
3. Verify that IP network connectivity exists between the MP server and the adjacent servers.
4. Check the event history logs for additional SS7 events or alarms from this MP server.
5. Verify that the adjacent server is not under maintenance.
6. If the problem persists, it is recommended to contact [My Oracle Support](#).

19205 - TFP received

Event Type:

SS7

Description:

The **TFP** message was received by **M3RL** layer; an adjacent point code has reported that it has no longer has any available routes to the **RSP**/Destination.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7M3rlTfpReceivedNotify

Recovery:

1. Monitor the RSP/Destination status from **SS7/Sigtran > Maintenance > Remote Signaling Points**.
2. Follow local procedures to determine the reason that the PC was prohibited.

19206 - TFA received

Event Type:

SS7

Description:

TFA message received by M3RL layer; an adjacent point code has reported that it has an available route to the RSP/Destination.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7M3rlTfaReceivedNotify

Recovery:

1. Monitor the RSP/Destination status from **SS7/Sigtran > Maintenance > Remote Signaling Points**.

19207 - TFR received**Event Type:**

SS7

Description:

TFR message received by M3RL layer; an adjacent point code has reported that an available route to the RSP/Destination has a restriction/limitation.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7M3rlTfrReceivedNotify

Recovery:

1. Monitor the RSP/Destination status from **SS7/Sigtran > Maintenance > Remote Signaling Points**.
2. Follow local procedures to determine the reason that the PC was prohibited.

19208 - TFC received**Event Type:**

SS7

Description:

TFC message received by M3RL layer; an adjacent or non-adjacent point code is reporting the congestion level of a RSP/Destination.

Severity:

Info

HA Score:

Normal

Throttle Seconds:

30

Instance:

N/A

OID:

awpss7M3rlTfcReceivedNotify

Recovery:

1. RSP/Destination status can be monitored from **SS7/Sigtran > Maintenance > Remote Signaling Points**.
2. Follow local procedures to determine the reason that the PC was prohibited.

19209 - M3RL routing error

Event Type:

SS7

Description:

A message was discarded due to a routing error.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7M3rlRoutingFailureNotify

Recovery:

1. Each MP's assigned point code can be monitored from **SS7/Sigtran > Configuration > Local Signaling Points**.
2. If the event was caused by:

- The DPC of an egress message is not configured as a remote signaling point, then look at the routing label in the event additional information, determine the DPC, and verify that the DPC is configured as an RSP.
 - The DPC of an egress message is configured but not available for routing, then look at the routing label in the event additional information, determine the DPC, verify that a route exists for the DPC, and use the RSP status screen to verify that a route is available for the RSP.
 - The DPC of an ingress message does not match the TPC or CPC of the MP server group, then either signaling is being misdirected by the STP toward the MP, or the MP server's LSP is misconfigured. Look at the routing label in the event additional information for the OPC and DPC of the ingress message.
3. If a high number of these errors occurs, then an internal routing table problem might exist. It is recommended to contact [My Oracle Support](#) for assistance.

19210 - M3RL routing error - invalid NI

Event Type:

SS7

Description:

The message was discarded due to a routing error. The NI (Network Indicator) value received in a message from the network is not assigned to the MP. This event is generated under the following circumstances:

- The NI in the MTP3 routing label of the ingress message is not supported for the given network signaling domain for a provisioned Local Signaling Point.
- For an ingress ANSI SCCP message, Bit-8 in the SCCP CDPA address indicator octet indicates that the CDPA is encoded as per international specifications:
 - A "0" in Bit 8 indicates that the address is international and that both the address indicator and the address are coded according to international specifications.
 - A "1" in Bit 8 indicates that the address is national and that both the address indicator and the address are coded according to national specifications.

The NI cannot be International for ANSI messages, since the ordering of the subsystem number indicator field and the point code indicator fields are in the reverse order in the ITU specification.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7M3rlRoutingFailureInvalidNiNotify

Recovery:

1. The Signaling Transfer Point or Signaling Gateway routing tables may be inconsistent with the NI assigned to the MP. You can monitor each MP's assigned NI value from **SS7/Sigtran > Configuration > Remote Signaling Points**.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19211 - M3RL routing error - invalid SI

Event Type:

SS7

Description:

The message was discarded due to a routing error. The SI value received in a message from the network is associated with a User Part that is not currently supported.

Severity:

Info

Instance:

RSP Name

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7M3rlRoutingFailureInvalidSiNotify

Recovery:

1. If the SI received is not a **0** (SNM) or **3** (SCCP), verify that the STP/SG and the point code that created the message have correct routing information.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19217 - Node isolated - all links down

Alarm Group:

SS7

Description:

All configured links are down; either failed or disabled. No M3UA signaling is possible. The node is isolated from the network. All M3UA connectivity to the SS7/Sigtran network has either failed or has been manually disabled.

Severity:

Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7M3rlNodeIsolatedAllLinkDownNotify

Cause:

Alarm #19217 raises when all the configured links are either failed or disabled.

Diagnostic Information:

N/A.

Recovery:

1. On the active SO, navigate to **SS7/Sigtran > Maintenance > Links** to check whether any of the links are manually disabled that should not be. If so, click **Enable** to enable the manually disabled links.
2. On the active SO, navigate to **Transport Manager > Maintenance > Transport** to verify the transports are enabled.
3. Go to the specific SS7MP and verify the IP address and NIC status.
4. On the specific SS7MP, verify the adjacent server IP address is available.
5. View the active alarms and event history logs by navigating to **Alarms & Events > View Active** and **Alarms & Events > View History**. Look for significant events that may affect the IP network, associations, or links.
6. If the problem persists, it is recommended to contact [My Oracle Support](#).

19226 - Timedout waiting for ASP-UP-ACK

Event Type:

SS7

Description:

When an association is in the **Enabled** administrative state, part of the association initialization involves sending an ASP-UP from the MP server and receiving an ASP-UP-ACK from the adjacent server. If ASP-UP is sent, but no ASP-UP-ACK is received within State Management ACK Timer milliseconds, this event is generated and the ASP-UP is attempted again. ASP-UP attempts will continue indefinitely until the association administrative state is set to **Blocked** or **Disabled**, or the SCTP transport fails, or the ASP-UP-ACK is received.

Severity:

Info

Instance:

<AssocName>

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7TimedOutWaitingForAspUpAckNotify

Recovery:

1. Verify the adjacent server on the Signaling Gateway is not under maintenance.
2. Verify the timer value for State Management ACK Timer is not set too short to allow the adjacent server to respond with an ASP-UP-ACK. This should be rare if the network is not congested.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

19227 - Received unsolicited ASP-DOWN-ACK**Event Type:**

SS7

Description:

The adjacent server at the specified IP address and port has sent an ASP-DOWN-ACK, but not in response to an ASP-DOWN message from the MP server. Normally this indicates that the far-end of the association is being taken down for maintenance. If the association administrative state is **Enabled**, the MP server automatically attempts to bring the association back to ASP-UP. This is done by sending an ASP-UP. The MP server continues to send ASP-UP until an ASP-UP-ACK is received, the SCTP association comes down, or the association administrative state is changed to **Blocked** or **Disabled**.

Severity:

Info

Instance:

<AssocName>

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7ReceivedUnsolicitedAspDownAckNotify

Recovery:

1. Verify that the adjacent server on the Signaling Gateway is not under maintenance.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19229 - Timed out waiting for ASP-ACTIVE-ACK

Event Type:

SS7

Description:

No ASP-ACTIVE-ACK is received in response to an ASP-ACTIVE message on the link within State Management ACK Timer milliseconds.

Severity:

Info

Instance:

<LinkName>

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7TimedOutWaitingForAspActiveAckNotify

Recovery:

1. Verify the adjacent server on the Signaling Gateway is not under maintenance.
2. Verify the timer value for State Management ACK Timer is not set too short to allow the adjacent server to respond with an ASP-ACTIVE-ACK. This should be rare if the network is not congested.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

19230 - Received unsolicited ASP-INACTIVE-ACK

Event Type:

SS7

Description:

An unsolicited ASP-INACTIVE-ACK is received on the link.

Severity:

Info

Instance:

<LinkName>

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7ReceivedUnsolicitedAspInactiveAckNotify

Recovery:

1. Verify the adjacent server on the Signaling Gateway is not under maintenance.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19231 - Received invalid M3UA message**Event Type:**

SS7

Description:

The far-end has sent an invalid M3UA message to which the MP server has responded with an M3UA ERROR message.

Severity:

Info

Instance:

<LinkName> or <AssocName> Information about the type of error and the accompanying diagnostic data is included in the event additional information.

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7ReceivedInvalidM3uaMessageNotify

Recovery:

1. Examine the M3UA error code and the diagnostic information and attempt to determine why the far-end of the link sent the malformed message.
 - Error code 0x01 indicates an invalid M3UA protocol version. Only version 1 is supported.
 - Error code 0x03 indicates an unsupported M3UA message class.
 - Error code 0x04 indicates an unsupported M3UA message type.
 - Error code 0x07 indicates an M3UA protocol error. The message contains a syntactically correct parameter that does not belong in the message or occurs too many times in the message.
 - Error code 0x11 indicates an invalid parameter value. Parameter type and length are valid, but value is out of range.
 - Error code 0x12 indicates a parameter field error. Parameter is malformed (e.g., invalid length).
 - Error code 0x13 indicates an unexpected parameter. Message contains an undefined parameter. The differences between this error and "Protocol Error"

are subtle. Protocol Error is used when the parameter is recognized, but not intended for the type of message that contains it. Unexpected Parameter is used when the parameter identifier is not known.

- Error code 0x16 indicates a missing parameter. Missing mandatory parameter, or missing required conditional parameter.
- Error code 0x19 indicates an invalid routing context. Received routing context not configured for any linkset using the association on which the message was received.

2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19233 - Failed to send non-DATA message

Event Type:

SS7

Description:

An attempt to send an M3UA non-DATA message has failed. Non-DATA messages include SSNM, ASPSM, ASPTM, and MGMT messages. The message has been discarded. Possible reasons for the failure include:

- The far-end is slow to acknowledge the SCTP packets sent by the MP server, causing the MP server's SCTP send buffer to fill up to the point where the message cannot be queued for sending.
- The socket has closed just as the send was being processed.

Severity:

Info

Instance:

<LinkName> or <AssocName>

Note: Information about the type of error and the accompanying diagnostic data is included in the event additional information.

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7FailedToSendNonDataMessageNotify

Recovery:

1. Select **Alarms & Events > View History** and check the event history logs for additional SS7 events or alarms from this MP server.
2. Verify that the adjacent server on the Signaling Gateway is not under congestion. The MP server will have alarms to indicate the congestion if this is the case.

3. If the problem persists, it is recommended to contact [My Oracle Support](#).

19234 - Local link maintenance state change

Event Type:

SS7

Description:

The link administrative state is manually changed from one administrative state to another.

Severity:

Info

Instance:

<LinkName>

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

awpss7LocalLinkMaintenanceStateChangeNotify

Recovery:

1. No action required if this was an expected change due to some maintenance activity. Otherwise, security logs can be examined on the SOAM server to determine which user changed the administrative state.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19235 - Received M3UA error

Event Type:

SS7

Description:

An M3UA ERROR message is received from the adjacent server.

Severity:

Info

Instance:

<LinkName> or <AssocName>

Note: Information about the type of error and the accompanying diagnostic data is included in the event additional information.

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7ReceivedM3uaErrorNotify

Recovery:

1. Examine the M3UA error code and the diagnostic information and attempt to determine why the far-end of the link sent the ERROR message.
 - Error code 0x01 indicates an invalid M3UA protocol version. Only version 1 is supported.
 - Error code 0x03 indicates an unsupported M3UA message class.
 - Error code 0x04 indicates an unsupported M3UA message type.
 - Error code 0x05 indicates an unsupported M3UA traffic mode.
 - Error code 0x07 indicates an M3UA protocol error. The message contains a syntactically correct parameter that does not belong in the message or occurs too many times in the message.
 - Error code 0x09 indicates an invalid SCTP stream identifier. A DATA message was sent on stream 0.
 - Error code 0x0D indicates that the message was refused due to management blocking. An ASP Up or ASP Active message was received, but refused for management reasons.
 - Error code 0x11 indicates an invalid parameter value. Parameter type and length are valid, but value is out of range.
 - Error code 0x12 indicates a parameter field error. Parameter is malformed (e.g., invalid length).
 - Error code 0x13 indicates an unexpected parameter. Message contains an undefined parameter. The differences between this error and "Protocol Error" are subtle. Protocol Error is used when the parameter is recognized, but not intended for the type of message that contains it. Unexpected Parameter is used when the parameter identifier is not known.
 - Error code 0x14 indicates that the destination status is unknown. This message can be sent in response to a DAUD from the MP server if the SG cannot or does not wish to provide the destination status or congestion information.
 - Error Error code 0x16 indicates a missing parameter. Missing mandatory parameter, or missing required conditional parameter.
 - Error code 0x19 indicates an invalid routing context. Received routing context not configured for any linkset using the association on which the message was received.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19240 - Remote SCCP subsystem prohibited

Alarm Group:

SS7

Description:

The status of remote SCCP subsystem has changed to **Prohibited**.

Severity:

Minor

Instance:

<RMU>

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7RemoteSccpSubsystemProhibitedNotify

Recovery:

1. You can monitor destination status from **SS7/Sigtran > Maintenance > Remote Signaling Points** and RMU/subsystem status from **SS7/Sigtran > Maintenance > Remote MTP3 Users**.
 - If the subsystem's status changed to **Prohibited** because SCMG received a SSP message, an audit of the status of the RMU via the SCCP subsystem status test (SST) procedure is performed.
 - If the subsystem's status changed to **Prohibited** because SCCP received a MTP-PAUSE indication from M3RL, then recovery actions of restoring the RSP/ Destination status to **Available** will be invoked by M3RL.
 - If the subsystem's status changed to **Prohibited** because SCCP received a MTP STATUS cause=unequipped user indication from M3RL, then no automatic recovery will be initiated. Only manual action at the remote node can correct a remote point code that has not been configured with SCCP.
 - If the subsystem's status changed to **Prohibited** because SCCP received a MTP STATUS cause=unknown or inaccessible indication from M3RL, then SCCP will automatically invoke subsystem status testing depending upon the network type:
 - ANSI: subsystem status testing of all RMUs associated with the point code.
 - ITU: subsystem status testing SCMG (SSN=1) associated with the point code.
2. Verify that IP network connectivity exists between the MP server and the adjacent servers.
3. Select **Alarms & Events > View History** and check the event history logs for additional SS7 events or alarms from this MP server.

4. Verify the adjacent server is not under maintenance.
5. Follow local procedures to determine the reason that the far-end SSN is down. If it is not down, but it continues to be reported as down, it is recommended to contact [My Oracle Support](#).

19241 - SCCP malformed or unsupported message

Event Type:

SS7

Description:

SCCP discarded an ingress message because the Message Type is not currently supported. The following connectionless message types are supported: UDT, XUDT, UDTS, and XUDTS. The following SCMG Message Types are supported: SSA, SSP, and SST.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7SccpMsgTypeUnrecognizedNotify

Recovery:

1. Investigate:
 - If the originator of the message is misconfigured.
 - If the network is misconfigured, causing messages to be routed to the wrong RSP/Destination.
 - If the message type is currently unsupported.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19242 - SCCP Hop counter violation

Event Type:

SS7

Description:

SCCP discarded an ingress message because a Hop Counter violation was detected.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7SccpHopCounterViolationNotify

Recovery:

1. One of the following conditions causes this error:
 - The originator of the message is setting the initial value too low.
 - The message is being rerouted too many times by the STPs, possibly because of an STP routing misconfiguration that has caused message looping.
2. It is recommended to contact [My Oracle Support](#).

19243 - SCCP routing failure

Event Type:

SS7

Description:

SCCP was unable to route or process a message during SCCP processing for reasons (other than a global title translation failure, detected SCCP loop) possibly requiring operator intervention.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7SccpRoutingFailureNotify

Recovery:

1. These failures are typically associated with invalid information received in the SCCP messages. Check for the following:
 - A misconfiguration of the SCCP at the originating or terminating node
 - Network routing misconfiguration at the STPs

2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19244 - SCCP routing failure network status

Event Type:

SS7

Description:

SCCP was unable to route or process a message during SCCP processing due to transient conditions such as RSP/destination failures and remote or local subsystem failures.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7SccpRoutingFailureNetworkStatusNotify

Recovery:

1. Monitor status on the GUI Main Menu as follows:

- Destination status from **SS7/Sigtran > Maintenance > Remote Signaling Points**.
- RMU/subsystem status from **SS7/Sigtran > Configuration > Remote MTP3 Users**.
- Local subsystem status from **SS7/Sigtran > Maintenance > Local SCCP Users**.

2. Verify that IP network connectivity exists between the MP server and the adjacent servers.
3. Check the event history logs for additional SS7 events or alarms from this MP server.
4. Verify that the adjacent server is not under maintenance.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

19245 - SCCP GTT failure

Event Type:

SS7

Description:

SCCP Global Title Translation has failed to determine a destination for a PDU. SCCP is invoking the message return procedure.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7SccpGttFailureNotify

Recovery:

1. Global title translation has failed. For the cause of the failure, look at the SCCP return cause and the called party address information in the event additional information field. Look for the following items:
 - Missing global title translation data.
 - Incorrect called party address information in the ingress message.
 - Point code paused or congested.
 - Subsystem prohibited or congested.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

19246 - Local SCCP subsystem prohibited

Alarm Group:

SS7

Description:

The status of the local SCCP subsystem has changed to **Prohibited**. This alarm is raised for one of the following conditions:

- When a new local SSN is configured and is in the disabled state.
- When a GUI maintenance operation is performed to disable the state of the local SSN.
- On a system restart where the local SSN was in disabled state prior to the system restart.

Severity:

Major

Instance:

<LSP>, <SSN>

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7SCCPLocalSubsystemProhibitedNotify

Recovery:

1. To clear the alarm:

- a. On the SOAM GUI, select **SS7/Sigtran > Configuration > Local SCCP Users**.
- b. Set the **Auto Refresh** for the page (upper right corner) to 15 so that you can view the results of your selections during this procedure. You can also click the menu option on the main menu to manually update the page.
- c. Click **Enable** to put the appropriate local SSN in the enabled state.

A confirmation message appears.

- d. Click **OK**.

The **Enable** link will be grayed out once the SSN transitions to the enabled state.

19248 - SCCP Segmentation Failure

Event Type:

SS7

Description:

SCCP Segmentation Procedure Failure

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7SccpSegmentationFailureNotify

Recovery:

1. This condition indicates segmentation procedure failure at the SCCP layer:
 - User data exceeds maximum size
 - Internal Error

2. Check the SCCP options configuration and maximum size limitations for the SS7 network.
3. It is recommended to contact [My Oracle Support](#) for assistance.

19249 - SCCP Reassembly Failure

Event Type:

SS7

Description:

SCCP Reassembly Procedure Failure

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7SccpReassemblyFailureNotify

Recovery:

1. This condition indicates reassembly procedure failure at the SCCP layer:
 - Reassembly time expired
 - Out of sequence segments
 - Internal error
2. Determine if the problem is a result of routing decision errors or latency from the SS7 network.
3. It is recommended to contact [My Oracle Support](#) for assistance.

19250 - SS7 process CPU utilization

Alarm Group:

SS7

Description:

The SS7 process, which is responsible for handling all SS7 traffic, is approaching or exceeding its engineered traffic handling capacity.

Severity:

Minor, Major, or Critical as shown in the GUI under **Alarms & Events > View Active**.

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7Ss7ProcessCpuUtilizationNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed among the remaining MPs in the server site. You can monitor MP server status from **Status & Manage > Server**.
2. The misconfiguration of STP routing may result in too much traffic being distributed to the MP. You can monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. You can monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. If all MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.
4. The SS7 process may be experiencing problems. You monitor the alarm log from **Alarms & Events > View Active**.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

19251 - Ingress message rate

Alarm Group:

SS7

Description:

The ingress message rate (messages per second) for the MP is approaching or exceeding its engineered traffic handling capacity.

Severity:

Minor, Major, Critical as shown in the GUI under **Alarms & Events > View Active**.

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7IngressMsgRateNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed among the remaining MPs in the server site. You can monitor MP server status from **Status & Manage > Server**
2. The misconfiguration of STP routing may result in too much traffic being distributed to the MP. You can monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. You can monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. If all MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

19252 - PDU buffer pool utilization

Alarm Group:

SS7

Description:

The percent utilization of the MP's PDU buffer pool is approaching its maximum capacity. If this problem persists and the pool reaches 100% utilization, all new ingress messages will be discarded.

Severity:

Minor, Major, Critical as shown in the GUI under **Alarms & Events > View Active**.

Instance:

<PoolName> Values: ANSI, ITUI, ITUN

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7PduBufferPoolUtilNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed among the remaining MPs in the server site. You can monitor MP server status from **Status & Manage > Server**.
2. The misconfiguration of STP routing may result in too much traffic being distributed to the MP. You can monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. You can monitor the ingress traffic rate of each MP from **Status &**

Manage > KPIs. If all MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.

4. A software defect may exist resulting in PDU buffers not being de-allocated to the pool when a PDU is successfully transmitted into the network. This alarm should not normally occur when no other congestion alarms are asserted. Examine the alarm log from **Alarms & Events > View Active**.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

19253 - SCCP stack event queue utilization

Alarm Group:

SS7

Description:

The percent utilization of the MP's SCCP stack event queue is approaching its maximum capacity.

Severity:

Minor, Major, Critical as shown in the GUI under **Alarms & Events > View Active**.

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

This alarm does not autoclear.

OID:

awpss7SccpStackEventQueueUtilNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed among the remaining MPs in the server site. You can view MP server status from **Status & Manage > Server**.
2. The misconfiguration of STP routing may result in too much traffic being distributed to the MP. You can monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. You can monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. If all MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.
4. If no additional congestion alarms are asserted, the SCCP Stack Event thread may be experiencing a problem preventing it from processing events from its event queue. Examine the alarm log under **Alarms & Events > View Active**.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

19254 - M3RL stack event queue utilization

Alarm Group:

SS7

Instance:

Application name

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7TcapUnexpectedMsgFromRemoteNotify

Recovery:

1. Determine if this condition indicates a software problem or unexpected TC User behavior.
2. The event additional information field includes:
 - a description of what event was received and why it was unexpected
 - what was done with the operation or dialogue as a result
 - the first 80 octets of the message starting with the MTP3 routing label
3. The message data can be used to determine the source of the malformed message.
4. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19267 - Dialogue removed by dialogue cleanup timer

Event Type:

SS7

Description:

Dialogue removed by dialogue cleanup timer.

Severity:

Info

Instance:

Application name

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7TcapDialogueRemovedTimerExpiryNotify

Recovery:

1. This event indicates that a TCAP transaction containing no components was sent, but no response was received from the remote TCAP peer.
2. The event additional information field includes:
 - the local dialogue-id
 - the number of milliseconds that elapsed between the time the message was sent and the time that the message was discarded
 - the destination point code to which the message was destined
 - the SCCP called party address to which the message was destined
3. Check for SCCP events just prior to this event indicating that a message could not be routed. If SCCP failed to route the message, verify that a route exists for the destination to which the TCAP message was being sent.
4. If no SCCP routing failure event exists, investigate why the remote TCAP peer failed to respond. The DPC and called party address can be used to determine the destination to which the message was being sent.
5. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19268 - Operation removed by invocation timer expiry

Event Type:

SS7

Description:

Operation removed by invocation timer expiry.

Info

Instance:

Application name

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7TcapOperationRemovedTimerExpiryNotify

Recovery:

1. This event indicates that a TCAP transaction containing no components was sent, but no response was received from the remote TCAP peer.
2. The event additional information field includes:
 - the local dialogue-id and invoke-id
 - the number of milliseconds that elapsed between the time the message was sent and the time that the operation was discarded
 - the destination point code to which the message was destined if the component was ever sent
 - the SCCP called party address to which the message was destined if the component was ever sent
3. Check for SCCP events just prior to this event indicating that a message could not be routed. If SCCP failed to route the message, verify that a route exists for the destination to which the TCAP message was being sent.
4. If no SCCP routing failure event exists, investigate why the remote TCAP peer failed to respond. The DPC and called party address (if present) can be used to determine the destination to which the message was being sent.
5. If the DPC and Called Party Address are not included in the additional information field, it indicates that the component was created, but never sent.
6. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19269 - Dialogue aborted by remote TCAP peer

Event Type:

SS7

Description:

Dialogue aborted by remote TCAP peer

Severity:

Info

Instance:

Application name

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7TcapDialogueAbortByRemoteNotify

Recovery:

1. This event indicates that a remote TCAP peer has aborted a dialogue.

2. The event additional information field includes:
 - the abort reason
 - the first 80 octets of the message starting with the MTP3 routing label
3. The message data can be used to determine the source of the U-Abort or P-Abort message.
4. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19270 - Received unsupported TCAP message

Event Type:

SS7

Description:

Received unsupported TCAP message

Severity:

Info

Instance:

Application name

HA Score:

Normal

Throttle Seconds:

OID:

awpss7TcapUnsupportedTCAPMsgRcvdNotify

Recovery:

1. This event indicates that an unsupported TCAP message has been received.
2. The event additional information field includes:
 - the abort reason
 - the first 80 octets of the message starting with the MTP3 routing label
3. The message data can be used to determine the source of the unsupported message.
4. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19271 - Operation rejected by remote TCAP peer

Event Type:

SS7

Description:

Operation rejected by remote TCAP peer

Severity:

Info

Instance:

Application name

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7TcapReturnRejectByRemoteNotify

Recovery:

1. This event indicates that a remote TCAP peer has rejected an operation.
2. The event additional information field includes:
 - the reject reason
 - the first 80 octets of the message starting with the MTP3 routing label
3. The message data can be used to determine the source of the message.
4. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19272 - TCAP active dialogue utilization

Alarm Group:

SS7

Description:

TCAP active dialogue utilization

Severity:

Minor, Major, Critical

Instance:

Application name

HA Score:

Normal

Auto Clear Seconds:

0 (alarm does not clear automatically)

OID:

awpss7TcapActiveDialogueUtilNotify

Recovery:

1. The percent utilization of the MP's dialogue table is approaching maximum capacity. This alarm indicates that the number of active dialogues on the MP server is higher than expected.

2. If this problem persists and the dialogue table reaches 100% utilization, all new messages will be discarded. This alarm should not normally occur when no other congestion alarms are asserted. This condition may be caused by any of the following:
 - the incoming plus outgoing rate of new dialogues is higher than expected (possibly due to poor load balancing across MP servers, or too few MP servers to handle the load)
 - the duration of the dialogues is longer than expected
 - both the rate and duration are higher than expected
 - a software problem is preventing removal of completed dialogues
3. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19273 - TCAP active operation utilization

Alarm Group:

SS7

Description:

TCAP active operation utilization

Severity:

Minor, Major, Critical

Instance:

Application name

HA Score:

Normal

Auto Clear Seconds:

0 (alarm does not clear automatically)

OID:

awpss7TcapActiveOperationUtilNotify

Recovery:

1. The percent utilization of the MP's component table is approaching maximum capacity. This alarm indicates that the number of active egress TCAP operations on the MP server is higher than expected.
2. If this problem persists and the component table reaches 100% utilization, all new egress operations will be discarded. This alarm should not normally occur when no other congestion alarms are asserted. This may be caused by any of the following:
 - the outgoing rate of new operations is higher than expected (possibly due to a higher than expected average number of operations per message)
 - the duration of the operations is longer than expected
 - both the outgoing rate and duration are higher than expected

- a software problem is preventing removal of components
3. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19274 - TCAP stack event queue utilization

Alarm Group:
SS7

Description:
TCAP stack event queue utilization

Severity:
Minor, Major, Critical

Instance:
Application name

HA Score:
Normal

Auto Clear Seconds:
0 (alarm does not clear automatically)

OID:
awpss7TcapStackEventQueueUtilNotify

Recovery:

1. The percent utilization of the MP's TCAP Stack Event Queue is approaching its maximum capacity. This alarm indicates that the number of ingress TCAP messages on the MP server is higher than expected.
2. If this problem persists and the queue reaches 100% utilization, all new ingress messages will be discarded. This alarm should not normally occur when no other congestion alarms are asserted. This may be caused by any of the following:
 - the incoming rate of new TCAP messages is higher than expected (possibly due to poor load balancing across MP servers, or too few MP servers to handle the load)
 - a software problem is causing the messages to be processed more slowly than expected
3. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19275 - Return error from remote TCAP peer

Event Type:
SS7

Description:
Return error from remote TCAP peer

Severity:

Info

Instance:

Application name

HA Score:

Normal

Throttle Seconds:

30

OID:

awpss7TcapReturnErrorFromRemoteNotify

Recovery:

1. This event indicates that a remote TCAP peer has responded to an operation using Return Error.
2. The event additional information field includes:
 - the error reason
 - the first 80 octets of the message starting with the MTP3 routing label
3. The message data can be used to determine the source of the message.
4. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19276 - SCCP Egress Message Rate

Alarm Group:

SS7

Description:

The SCCP Egress Message Rate (Message per second) for the MP is approaching or exceeding its engineered traffic handling capacity.

Severity:

Major

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (alarm does not clear automatically)

OID:

awpss7SccpEgressMsgRateNotify

Recovery:

1. This condition indicates the SS7 Stack is reaching its engineered traffic handling capacity due to egress traffic received from application.
2. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19281 - TCAP Routing Failure

Event Type:

SS7

Description:

TCAP was unable to route message due to transient conditions such as destination failure or destination unavailability

Severity:

Info

Instance:

Hostname

HA Score:

Normal

Throttle Seconds:

10

OID:

awpss7TcapRoutingFailureNotify

Recovery:

1. This condition indicates failure at the TCAP layer due to XG SS7 node removal or congestion at Communication Agent.
2. It is recommended to contact [My Oracle Support](#) for assistance if needed.

Transport Manager Alarms and Events (19400-19419)

This section provides information and recovery procedures for Transport Manager alarms and events, ranging from 19400-19499.

19400 - Transport Down

Alarm Group:

TMF

Description:

Transport Down

Severity:

Major

Instance:

<TransportName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

awptransmgrTransportDownNotify

Recovery:

1. The Active alarm instance data, which can be viewed from **Alarms & Events > View Active**, contains the Transport Name as configured in **Transport Manager > Configuration > Transport**

Additional Information for the alarm can be found in **Alarms & Events > View Active or View History** by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column. This column will include the local and remote IP addresses and ports, the administrative state, and the protocol state of the association.

This alarm is raised when:

- The association is configured and the admin state is enabled, but the SCTP transport is not in the ASP-UP protocol state for the M3UA plugin, or
- The association is configured, but the SCTP transport is not in the APP-UP state for other plugins

Note: It is normal to have an association alarm if the association is in the Blocked or Disabled administrative state.

This alarm is cleared when:

- The association received an ASP-UP-ACK from the far-end and the SCTP transport is in the ASP-UP state for the M3UA plugin, or
- The SCTP transport is an APP-UP state for other plugins, or
- The association is disabled/deleted

If an association's protocol state does not match the association's administrative state, the system will automatically attempt to recover the association if configured as Initiator and enabled. Connection attempts occur every "Connection Retry Interval" seconds, as defined in the Transport Configuration Set screen for the configuration set used by the failed association (default: 10 seconds).

Association administrative states are set from **Transport Manager > Maintenance > 'Transport'** by clicking on the desired action for the row containing the association. This screen is also used to monitor association status.

To troubleshoot:

- If the association is manually Blocked or Disabled, then no further action is necessary.
- Verify that the association's local IP address and port number are configured on the IP Signaling Gateway (Some Signaling Gateways will only accept

connections from IP addresses and ports that they are configured to accept from).

- Verify that the association's remote IP address and port correctly identify an SCTP listening port on the adjacent server.
- Verify that IP network connectivity exists between the MP server and the adjacent server.
- Check the event history logs at **Alarms & Events > View History** for additional SS7 events or alarms from this MP server.
- Verify that the adjacent server on the Signaling Gateway is not under maintenance.

2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19401 - Failed to configure Transport

Event Type:

TMF

Description:

Failed to configure Transport

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

awptransmgrFailedToConfigureTransportNotify

Recovery:

1. A Transport is configured each time the Transport attempts to connect or reconnect.
2. If transport configuration fails or the alarm persists, it is recommended to contact [My Oracle Support](#) for assistance.

19402 - Failed to connect Transport

Event Type:

TMF

Description:

Failed to connect Transport

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

60

OID:

awptransmgrFailedToConnectTransportNotify

Recovery:

1. The Transport named in the Instance field has failed in a connection attempt. If configured as an SCTP Initiator, the system will automatically attempt to recover the association/connection. Connection attempts occur every "Connection Retry Interval" seconds, as defined in the Transport Configuration Set screen for the configuration set used by the failed transport (default: 10 seconds). If configured as an SCTP or UDP Listener, no further action is taken.

To troubleshoot

- Verify that the transport's local IP address and port number are configured on the Adjacent Node (Some Nodes will only accept connections from IP addresses and ports they are configured to accept connections from).
 - Verify that the transport's remote IP address and port correctly identify an SCTP listening port on the adjacent node.
 - Verify that IP network connectivity exists between the MP and the adjacent node.
 - Verify that the timers in the transport's configuration set are not set too short to allow the connection to proceed. This should be rare if the IP network is functioning correctly.
 - Check the event history logs at **Alarms & Events > View History** for additional SS7 events or alarms from this MP server.
 - Verify the adjacent server on the Signaling Gateway is not under maintenance.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19403 - Received malformed SCTP message (invalid length)

Alarm Group:

TMF

Description:

Received malformed SCTP message (invalid length).

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

awptransmgrReceivedMalformedTransSctpMessageNotify

Recovery:

1. An SCTP message was received containing a message not valid in length.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19404 - Far-end closed the Transport

Event Type:

TMF

Description:

Far-end closed the Transport

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

10

OID:

awptransmgrFarEndClosedTheTransportNotify

Recovery:

1. The far-end of the SCTP association sent a SHUTDOWN or ABORT message to close the association. If an Initiator, the MP server automatically attempts to reestablish the connection. Connection attempts occur every "Connection Retry Interval" seconds, as defined in the Transport Configuration Set screen for the configuration set used by the failed association (default: 10 seconds). If a Listener, the MP server will only open the socket and await further messages from the far-end.

To Troubleshoot:

- Investigate the adjacent node at the specified IP address and port to determine if it failed or if it is under maintenance.

- Check the adjacent node for alarms or logs that might indicate the cause for their closing the association.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19405 - Transport closed due to lack of response

Event Type:

TMF

Description:

Transport closed due to lack of response

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

10

OID:

awptransmgrTransportClosedDueToLackOfResponseNotify

Recovery:

1. The adjacent node at the specified IP address and port failed to respond to attempts to deliver an SCTP DATA packet or SCTP heartbeat. If an SCTP Initiator, the transport is closed and the MP server automatically attempts to reestablish the connection. Connection attempts occur every **Connection Retry Interval** seconds, as defined in the Transport Configuration Set screen for the configuration set used by the failed transport (default: 10 seconds). If a Listener, the MP server will only open the socket and await further messages from the far-end.

To troubleshoot:

- Verify IP network connectivity still exists between the MP server and the adjacent server.
 - Verify the timers in the transport's configuration set are not set too short to allow the signaling to succeed. This should be rare if the IP network is functioning correctly.
 - Check the event history logs at **Alarms & Events > View History** for additional SS7 events or alarms from this MP server.
 - Verify the adjacent server on the Signaling Gateway is not under maintenance.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19406 - Local Transport maintenance state change

Event Type:

TMF

Description:

Local Transport maintenance state change

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

awptransmgrLocalTransportMaintenanceStateChangeNotify

Recovery:

1. No customer action is necessary if this was an expected change due to some maintenance activity. Otherwise, security logs can be examined on the NO/SO server to determine which user changed the administrative state.

Transport status can be viewed using **Transport Manager > Maintenance > Transport**.

2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19407 - Failed to send Transport DATA Message

Event Type:

TMF

Description:

Failed to send Transport DATA Message

Severity:

Info

Instance:

<TransportName>, <TransportAdapter>, <TransportProtocol>

HA Score:

Normal

Throttle Seconds:

10

OID:

awptransmgrFailedToSendTransDataMessageNotify

Recovery:

1. An attempt to send an SS7 M3UA/ENUM DATA message has failed. The message has been discarded.

For SCTP, Possible reasons for the failure include:

- The far-end is slow to acknowledge the SCTP packets sent by the MP server, causing the MP server's SCTP send buffer to fill up to the point where the message cannot be queued for sending.
- The socket has closed just as the send was being processed.

To Troubleshoot:

- Check the event history logs at **Alarms & Events > View History** for additional SS7 events or alarms from this MP server.
 - Verify the adjacent server on the Signaling Gateway is not under congestion. The MP server will have alarms to indicate the congestion if this is the case.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19408 - Single Transport Egress-Queue Utilization

Alarm Group:

TMF

Description:

The percent utilization of the MP's single Transport Egress-Queue is approaching its maximum capacity

Severity:

Based on defined Thresholds. Minor, Major, Critical Engineered Max Value = 1000

Instance:

<TransportName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

awptransmgrTransSingleWriteQueueUtilNotify

Recovery:

1. The percent utilization of the MP's Transport Writer Queue is approaching its maximum capacity. If this problem persists and the queue reaches 100% utilization, all new egress messages from the Transport will be discarded.

This alarm should not normally occur when no other congestion alarms are asserted. This may occur for a variety of reasons:

- An IP network or Adjacent node problem may exist preventing SCTP from transmitting messages into the network at the same pace that messages are being received from the network.
- The SCTP Association Writer process may be experiencing a problem preventing it from processing events from its event queue. The alarm log should be examined from **Main Menu > Alarms & Events**.
- If one or more MPs in a server site have failed, the traffic will be distributed amongst the remaining Mps in the server site. MP server status can be monitored from **Status & Manage > Server Status**.
- The mis-configuration of Adjacent Node IP routing may result in too much traffic being distributed to the MP. Each MP in the server site should be receiving approximately the same ingress transaction per second.
- There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each MP can be monitored from **Status & Manage > KPI Display**. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.

2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19409 - Message Rejected by ACL Filtering

Event Type:

TMF

Description:

The message is rejected based on configured Access Control List for Transport

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

10

OID:

awptransmgrMessageRejectedByAclFilteringNotify

Recovery:

1. Verify that the ENUM server's IP address is the ACL, or that the ACL is empty.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19410 - Adjacent Node IP Address state change

Event Type:

TMF

Description:

State change of an IP Address of a multihomed Adjacent Node in SCTP Transport

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

awptransmgrAdjIpAddrStateChangeNotify

Recovery:

1. Verify that IP network connectivity still exists between the MP server and the adjacent server.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19411 - SCTP Transport closed due to failure of multihoming validation

Event Type:

TMF

Description:

SCTP Transport closed due to failure of multihoming validation.

Severity:

Info

Instance:

<TransportName>, <TransportId>

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

awptransmgrSctpTransportRefusedNotify

Recovery:

1. Recheck the Adjacent Node's configure IP Address and validation mode.
2. If alarm persists, it is recommended to contact [My Oracle Support](#).

19412 - SCTP Transport configuration mismatched for Adjacent Node IP**Event Type:**

TMF

Description:

IP address advertised by an Adjacent Node in INIT/INIT-ACK chunk are different from configured IP Addresses.

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

awptransmgrSctpTransportCfgMismatchNotify

Recovery:

1. Recheck the Configured IP Address and Transport configuration and validation mode.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

19413 - SCTP Transport closed due to unsupported peer address event recieved**Alarm Group:**

TMF

Description:

SCTP Transport closed due to unsupported add/delete peer IP Address event recieved in Peer Address Notification.

Severity:

Info

Instance:

<TransportName>

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

awptransmgrTransportClosedDueToUnsupportedEventNotify

Recovery:

1. Disable SCTP Dynamic Address Reconfiguration at the Adjacent Node.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

Communication Agent, ComAgent (19420-19909)

This section provides information and recovery procedures for Communication Agent (ComAgent) alarms and events, ranging from 19800 - 19909, and lists the types of alarms and events that can occur on the system. All events have a severity of Info.

Alarms and events are recorded in a database log table. Currently active alarms can be viewed from the **Alarms & Events > View Active** GUI menu option. The alarms and events log can be viewed from the **Alarms & Events > View History** page.

19420 - BDFQFull

19800 - Communication Agent Connection Down**Alarm Group:**

CAF

Description:

This alarm indicates that a Communication Agent is unable to establish transport connections with one or more other server, and this may indicate applications on the local server are unable to communicate with all of their peers. Generally this alarm is

generated when a server or the IP network is undergoing maintenance or when a connection has been manually disabled.

Severity:

Major

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFConnectionDownNotify

Cause:

- A connection becomes down. If a connection was already down, when another connection becomes down, then the count of connections is updated, and the alarm is re-asserted.
- A connection exits the down state, and there are other down connections. Update the connection count and re-assert the alarm.

Diagnostic Information:

This alarm indicates a Communication Agent is unable to establish transport connections with one or more other servers, and this may indicate applications on the local server are unable to communicate with all of their peers. Generally this alarm is asserted when a server or the IP network is undergoing maintenance or when a connection has been manually disabled.

Following problems could exist:

- The IP network may be experiencing problems due to which the heartbeat exchange between the peers are not successful.
- There are missing route information or incorrectly configured routes in **NOAM Configuration > Network > Routes**.

Recovery:

1. Navigate to **Alarms & Events > View History** to find additional information about the alarm.

The information can be found by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.

2. Check the event history logs by navigating to **Alarms & Events > View History** for additional Communication Agent events or alarms from this MP server.
3. Navigate to **Communication Agent > Maintenance > Connection Status** to determine which connections on the server have abnormal status.
4. If the connection is manually disabled, then no further action is necessary.

5. Verify the remote server is not under maintenance.
6. Verify IP network connectivity exists between the two connection end-points.
7. Verify the connection's local IP address and port number are configured on remote node.
8. Verify the Application Process using Communication Agent plug-in is running on both ends.
9. Verify the connection's remote IP address and port correctly identify remote's listening port.
10. It is recommended to contact [My Oracle Support](#) for assistance.

19801 - Communication Agent Connection Locally Blocked

Alarm Group:
CAF

Description:

This alarm indicates that one or more Communication Agent connections have been administratively blocked at the server asserting the alarm, and this is generally done as part of a maintenance procedure. A connection that is blocked cannot be used by applications to communicate with other servers, and so this alarm may indicate that applications are unable to communicate with their expected set of peers.

Note: It is normal to have this alarm if the connection is in the Blocked administrative state on the near-side of the connection.

Severity:
Minor

Instance:
N/A

Note: This alarm is cleared when:

- Locally UNBLOCKed: An Admin Action to locally UNBLOCK the service connection and no other connection is locally blocked.
 - Deleted: The MP Server/Connection is deleted.
 - Failed: The Connection is terminated, due to Admin Disable action or Heartbeat failure or remote end initiated disconnection or any other reason.
-

HA Score:
Normal

Auto Clear Seconds:
0 (zero)

OID:

cAFConnLocalBlockedNotify

Recovery:

1. Use **Alarms & Events > View History** to find additional information about the alarm.

The information can be found by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.
2. Check the event history logs at **Alarms & Events > View History** for additional Communication Agent events or alarms from this MP server.
3. Use **Communication Agent > Maintenance > Connection Status** to determine which connections on the server have abnormal status.
4. If the expected set of connections is locally blocked, then no further action is necessary.
5. To remove a the local block condition for a connection, use the **Communication Agent > Maintenance > Connection Status** screen and click **Enable** for the desired connection.
6. It is recommended to contact [My Oracle Support](#) for assistance.

19802 - Communication Agent Connection Remotely Blocked

Alarm Group:

CAF

Description:

This alarm indicates that one or more Communication Agent connections have been administratively blocked at a remote server connected to the server, and this is generally done as part of a maintenance procedure. A connection that is blocked cannot be used by applications to communicate with other servers, and so this alarm may indicate that applications are unable to communicate with their expected set of peers.

Note: It is normal to have this alarm if the connection is in the Blocked administrative state on the far-side of the connection.

Severity:

Minor

Instance:

N/A

Note: This alarm is cleared when:

- Locally UNBLOCKed: An Admin Action to locally UNBLOCK the service connection and no other connection is locally blocked.
 - Deleted: The MP Server/Connection is deleted.
 - Failed: The Connection is terminated, due to Admin Disable action or Heartbeat failure or remote end initiated disconnection or any other reason.
-

HA Score:

Normal

Auto Clear Seconds:

0 (zero, no auto clear)

OID:

cAFConnRemoteBlockedNotify

Recovery:

1. Use **Alarms & Events > View History** to find additional information about the alarm.

The information can be found by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.

2. Check the event history logs at **Alarms & Events > View History** for additional Communication Agent events or alarms from this MP server.
3. Use **Communication Agent > Maintenance > Connection Status** to determine which connections on the server have abnormal status.
4. If the expected set of connections is locally blocked, then no further action is necessary.
5. To remove a the local block condition for a connection, use the **Communication Agent > Maintenance > Connection Status** screen and click **Enable** for the desired connection.
6. It is recommended to contact [My Oracle Support](#) for assistance.

19803 - Communication Agent Stack Event Queue Utilization

Alarm Group:

CAF

Description:

The percent utilization of the **Communication Agent** Task stack queue is approaching defined threshold capacity. If this problem persists and the queue reaches above the defined threshold utilization, the new StackEvents (Query/Response/Relay) messages for the Task can be discarded based on the StackEvent priority and Application's Global Congestion Threshold Enforcement Mode.

Severity:

Minor, Major, Critical

Instance:

<ComAgent StackTask Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFQueueUtilNotify

Cause:

This alarm raises when KPI **ComAgentQueueUtil** exceeds the thresholds defined in the **SysMetricThreshold** table .

- MINOR: ComAgentQueueUtil | CAF | - * | Current | 19803 | 60 | 50 | 3000
- MAJOR: ComAgentQueueUtil | CAF | * * | Current | 19803 | 80 | 70 | 3000
- CRITICAL: ComAgentQueueUtil | CAF | * C | Current | 19803 | 95 | 90 | 3000

Diagnostic Information:

The percent utilization of the Communication Agent Task's Queue is approaching its defined capacity. If this problem persists and the queue reaches above the defined threshold utilization, the new StackEvents (Query/Response/Relay) messages for the Task can be discarded, based on the StackEvent priority and Application's Global Congestion Threshold Enforcement Mode.

This alarm should not normally occur when no other congestion alarms are asserted. This may occur for a variety of reasons:

- An IP network or Adjacent node problem may exist preventing from transmitting messages into the network at the same pace that messages are being received from the network.
- The Task thread may be experiencing a problem preventing it from processing events from its event queue.
- The mis-configuration of Adjacent Node IP routing may result in too much traffic being distributed to the MP.
- There may be an insufficient number of MPs configured to handle the network traffic load.

Recovery:

1. Navigate to **Main Menu > Alarms & Events** to examine the alarm log.

An IP network or Adjacent node problem may exist preventing from transmitting messages into the network at the same pace that messages are being received from the network. The Task thread may be experiencing a problem preventing it from processing events from its event queue. It is recommended to contact [My Oracle Support](#) for assistance.

2. Navigate to **Status & Manage > KPIs** to monitor the ingress traffic rate of each MP.

Each MP in the server site should be receiving approximately the same ingress transaction per second.

It is recommended to contact [My Oracle Support](#) for assistance.

3. If the MP ingress rate is approximately the same, there may be an insufficient number of MPs configured to handle the network traffic load.

If all MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.

It is recommended to contact [My Oracle Support](#) for assistance.

19804 - Communication Agent configured connection waiting for remote client to establish connection

Alarm Group:

CAF

Description:

Communication Agent configured connection waiting for remote client to establish connection. This alarm indicates that a Communication Agent is waiting for one or more far-end client MPs to initiate transport connections. Generally this alarm is asserted when a client MP or the IP network is undergoing maintenance or when a connection has been manually disabled at a client MP.

Note: It is normal to have this auto-clearing connection alarm for the remote server connections that configured manually in Client mode, but are not yet available for processing traffic.

Severity:

Minor

Instance:

N/A

Note: The alarm is cleared when a server connection exits the forming state and no other connection having server connect mode is in the forming state or the auto-clear time-out occurs.

- The MP Server/Connection is deleted
 - When connection is moved to TotallyBlocked/RemotelyBlocked/InService state from Aligning
 - Auto Clear
 - Connection is disabled
-
-

HA Score:

Normal

Auto Clear Seconds:

300 (5 min)

OID:

cAFClientConnWaitNotify

Recovery:

1. Find additional information for the alarm in **Alarms & Events > View History** by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.

The alarm is cleared only for remote server connections that are configured manually in "Client" mode. This mode is used to listen for connection requests from configured remote clients.

- The MP Server/Connection is deleted
 - When connection is moved to TotallyBlocked/RemotelyBlocked/InService state from Aligning
 - Auto Clear
 - Connection is disabled
2. Check the event history logs at **Alarms & Events > View History** for additional Communication Agent events or alarms from this MP server.
 3. Check **Communication Agent > Maintenance > Connection Status** to determine which connections on the server have abnormal status.
 4. Verify that the remote server is not under maintenance.
 5. If the connection is manually disabled at the client MP, and it is expected to be disabled, then no further action is necessary.
 6. If the connection has been manually disabled at the client MP, but it is not supposed to be disabled, then enable the connection by clicking on the 'Enable' action button on the Connection Status screen.
 7. Verify that IP network connectivity exists between the two connection end-points.
 8. Verify that the connection's local IP address and port number are configured on remote client MP.
 9. Verify that the Application Process using Communication Agent plug-in is running on both ends.
 10. Verify that the connection's remote IP address and port correctly identify remote's listening port.
 11. It is recommended to contact [My Oracle Support](#) for assistance.

19805 - Communication Agent Failed To Align Connection

Alarm Group:

CAF

Description:

The Communication Agent failed to align connection. This alarm indicates that Communication Agent has established one or more transport connections with servers that are running incompatible versions of software, and so Communication Agent is unable to complete the alignment of the connection. A connection that fails alignment cannot be used by applications to communicate with other servers, and so this alarm may indicate that applications are unable to communicate with their expected set of peers.

Severity:

Major

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFConnAlignFailedNotify

Recovery:

1. If the connection administrative action is set to 'disable', the alarm is cleared. No further action is necessary.
2. Check the event history logs at **Alarms & Events > View History** for additional Communication Agent events or alarms from this MP server.
3. Find additional information for the alarm in **Alarms & Events > View History** by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.
4. Check the event history logs at **Alarms & Events > View History** for additional Communication Agent events or alarms from this MP server.
5. Check **Communication Agent > Maintenance > Connection Status** to determine which connections on the server have abnormal status.

For each connection reporting 'Aligning' connection status, determine the servers that are endpoints, and verify that the correct software is installed on each server. If incorrect software is present, then server maintenance may be required.

6. It is recommended to contact [My Oracle Support](#) for assistance.

19806 - Communication Agent CommMessage Mempool Utilization

Alarm Group:

CAF

Description:

The percent utilization of the **Communication Agent** internal resource pool (CommMessage) is approaching its defined capacity. If this problem persists and the

usage reaches 100% utilization, **ComAgent** allocates the CommMessage objects from the heap. This should not impact the functionality, but may impact performance and/or latency.

Severity:

Critical, Major, Minor

Instance:

<ComAgent Process Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFPpoolResUtilNotify

Cause:

This alarm raises when ComAgent mempool utilization exceeds threshold limits. Minor ($\geq 60\%$), Major ($\geq 80\%$), Critical ($\geq 95\%$), % level of Max = 65535.

Diagnostic Information:

The percent utilization of the Communication Agent internal resource pool, CommMessage is approaching its defined capacity. If this problem persists and the usage reaches 100% utilization, ComAgent will allocate the CommMessage objects from the heap. This should not impact the functionality, but may impact performance and/or latency.

This alarm usually occurs when other congestion alarms are asserted. This may occur for one of the following reasons:

- An IP network or adjacent node problem may exist preventing from transmitting messages into the network at the same pace that messages are being received from the network.
- The Task thread may be experiencing a problem preventing it from processing events from its internal resource queue.
- The mis-configuration of adjacent node IP routing may result in too much traffic being distributed to the MP.
- There may be an insufficient number of MPs configured to handle the network traffic load.

Recovery:

1. Navigate to **Alarms & Events** to examine the alarm log.

An IP network or Adjacent node problem may exist preventing from transmitting messages into the network at the same pace that messages are being received from the network. The Task thread may be experiencing a problem preventing it from processing events from its internal resource queue. It is recommended to contact [My Oracle Support](#) for assistance.

2. Navigate to **Status & Manage > KPIs** to monitor the ingress traffic rate of each MP.

Each **MP** in the server site should be receiving approximately the same ingress transaction per second.

It is recommended to contact [My Oracle Support](#) for assistance.

3. If the **MP** ingress rate is approximately the same, there may be an insufficient number of **MPs** configured to handle the network traffic load.

If all **MPs** are in a congestion state then the ingress rate to the server site is exceeding its capacity.

It is recommended to contact [My Oracle Support](#) for assistance.

19807 - Communication Agent User Data FIFO Queue Utilization

Alarm Group:

CAF

Description:

The percent utilization of the Communication Agent User Data FIFO queue is approaching defined threshold capacity. If this problem persists and the queue reaches above the defined threshold utilization, the new StackEvents (Query/Response/Relay) messages for the Task can be discarded, based on the StackEvent priority and Application's Global Congestion Threshold Enforcement Mode.

Severity:

Minor, Major, Critical

Instance:

<ComAgent StackTask Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFUserDataFIFOUtilNotify

Cause:

Minor ($\geq 60\%$), Major ($\geq 80\%$), Critical ($\geq 95\%$), Percentage level of Max = 8000

Diagnostic Information:

The percent utilization of the Communication Agent User Data FIFO queue is approaching its defined capacity. If this problem persists and the queue reaches above the defined threshold utilization, the new StackEvents (Query/Response/Relay) messages for the Task can be discarded, based on the StackEvent priority and Application's Global Congestion Threshold Enforcement Mode. This alarm should not normally occur when no other congestion alarms are asserted.

Recovery:

1. Navigate to **Alarms & Events** to examine the alarm log and determine if the ComAgent worker thread may be experiencing a problem preventing it from processing events from User Data FIFO queue.

2. Navigate to **Status & Manage > KPIs** to monitor the ingress traffic rate of each MP.
 - Mis-configuration of routing may result in unbalanced traffic directed to the MP. Under balanced traffic distribution, each MP should be receiving approximately the same ingress transaction per second.
 - There may be an insufficient number of MPs configured to handle the network traffic load. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
3. There may be an issue with network that causes lot of ComAgent connection setup and handshake messages. Check network latency and stability parameters.
4. If the problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

19808 - Communication Agent Connection FIFO Queue utilization

Alarm Group:

CAF

Description:

The percent utilization of the Communication Agent Connection FIFO queue is approaching defined threshold capacity. If this problem persists and the queue reaches above the defined threshold utilization, the new ComAgent internal Connection Management StackEvents messages can be discarded based on Application's Global Congestion Threshold Enforcement Mode.

Severity:

Minor, Major, Critical

Instance:

<ComAgent StackTask Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFMxFIFOUtilNotify

Cause:

Minor ($\geq 60\%$), Major ($\geq 80\%$), Critical ($\geq 95\%$), Percentage level of Max = 1000

Diagnostic Information:

The percent utilization of the Communication Agent Connection FIFO queue is approaching its defined capacity. If this problem persists and the queue reaches above the defined threshold utilization, the new ComAgent internal Connection Management StackEvents messages can be discarded based on Application's Global Congestion Threshold Enforcement Mode. This alarm should not normally occur when no other congestion alarms are asserted.

Recovery:

1. Use **Main Menu > Alarms & Events** to determine if the ComAgent worker thread may be experiencing a problem preventing it from processing events from ComAgent Connection FIFO queue.

It is recommended to contact [My Oracle Support](#) for assistance.

2. An IP network or adjacent node problem may exist preventing transmission of messages into the network at the same pace the messages are being received from the network.
3. Navigate to **Status & Manage > KPIs** to monitor the ingress traffic rate of each MP.
 - The mis-configuration of adjacent node IP routing may result in too much traffic being distributed to the MP. Each MP in the server site should be receiving approximately the same ingress transaction per second.
 - There may be an insufficient number of MPs configured to handle the network traffic load. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. If the problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

19810 - Communication Agent Egress Message Discarded

Event Type:

CAF

Description:

The **Communication Agent** egress message is being discarded due to one of the following reasons:

- Unknown destination server
- Connection state is not InService
- Incompatible destination
- Serialization failed
- MxEndpoint send failed
- Internal error

19820 - Communication Agent Routed Service Unavailable

Alarm Group:

CAF

Description:

This alarm indicates all connections of all connection groups associated with a routed service are unavailable. This generally occurs when far-end servers have been removed from service by maintenance actions. This can also occur if all of the routed service's connections have been either disabled or blocked.

Severity:

Major

Instance:

<RoutedServiceName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFRSUnavailNotify

Cause:

When all member Connection Groups are Unavailable.

Diagnostic Information:

This alarm indicates all connections of all connection groups associated with a routed service are unavailable. This generally occurs when far-end servers have been

removed from service by maintenance actions. This can also occur if all of the routed service's connections have been either disabled or blocked. Also, if there is any disruption that can lead to loss of connectivity between the user and provider MP.

Recovery:

1. Navigate to **Communication Agent > Maintenance > Routed Service Status** to view the connection groups and connections associated with the Routed Service.
2. Navigate to **Communication Agent > Maintenance > Connection Status** to view the reasons why connections are unavailable.
3. Navigate to **Status & Manage > Server** to confirm the far-end servers have an application state of enabled, and their subsystems are operating normally.

This alarm can result from conditions at the far-end servers connected to the server that asserted this alarm.

4. Check network and reach-ability of provider server(s) from user server(s). Loss of network connectivity can lead to this alarm. In that case, the user also sees alarm 19800.
5. It is recommended to contact [My Oracle Support](#) for assistance.

19821 - Communication Agent Routed Service Degraded

Alarm Group:

CAF

Description:

This alarm indicates that some, but not all, connections are unavailable in the connection group being used by a Communication Agent Routed Service to route messages. The result is that the server that posted this alarm is not load-balancing traffic across all of the connections configured in the connection group.

Severity:

Major

Instance:

<ServiceName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFRSDegradedNotify

Recovery:

1. Use **Communication Agent > Maintenance > Routed Service Status** to view the connection groups and connections associated with the Routed Service.
2. Use **Communication Agent > Maintenance > Connection Status** to view the reasons why connections are unavailable.

3. Use **Status & Manage > Server** to confirm that the far-end servers have an application state of enabled, and that their subsystems are operating normally.

It is possible that this alarm results from conditions at the far-end servers connected to the server that asserted this alarm.

4. It is recommended to contact [My Oracle Support](#) for assistance.

19822 - Communication Agent Routed Service Congested

Alarm Group:

CAF

Description:

This alarm indicates a routed service is load-balancing traffic across all connections in a connection group, but all of the connections are experiencing congestion. Messages may be discarded due to congestion.

Severity:

Major

Instance:

<ServiceName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFRSCongestedNotify

Cause:

When the active Connection Group is congested.

Diagnostic Information:

This alarm indicates a routed service is load-balancing traffic across all connections in a connection group, but all of the connections are experiencing congestion. Messages may be discarded due to congestion. Congestion generally occurs when the far-end servers are overloaded.

Overload can be due to following:

- TCP connection has higher latency or error rate, then connection is getting into congestion state
- Far end server is receiving traffic at higher rate (may be from other servers). This triggers ComAgent congestion on far-end side.
- Application process CPU on far-end is above normal.

Recovery:

1. Navigate to **Communication Agent > Maintenance > Routed Service Status** to view the connection groups and connections associated with the Routed Service.

2. Navigate to **Communication Agent > Maintenance > Connection Status** to view the are congested and the degree to which they are congested.
3. Check the far-end of the congested connections to further isolate the cause of congestion.

If the far-end servers are overloaded, then it is possible the system is being presented a load that exceeds its engineered capacity. If this is the case, then either the load must be reduced, or additional capacity must be added.

4. It is recommended to contact [My Oracle Support](#) for assistance.

19823 - Communication Agent Routed Service Using Low-Priority Connection Group

Alarm Group:

CAF

Description:

Communication Agent routed service is routing traffic using a connection group that has a lower-priority than another connection group.

Severity:

Major

Instance:

<ServiceName>

Recovery:

1. Navigate to **Status & Manage > Server Status** to view **MP** server status.
2. Remote server is slow in responding to outstanding transaction with correlation resource in-use. The mis-configuration of **ComAgent** Server/Client routing may result in too much traffic being distributed to affected connection for MP.
3. There may be an insufficient number of server application MPs configured to handle the internal traffic load. If server application MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. Navigate to **Alarm & Events** to examine the alarm log.

The system may be experiencing network problems.
The **Communication Agent** process may be experiencing problems.
5. It is recommended to contact [My Oracle Support](#) for assistance.

19826 - Communication Agent Connection Congested**Alarm Group:**

CAF

Description:

This alarm indicates **Communication Agent** is experiencing congestion in communication between two servers and this can be caused by a server becoming overloaded or by network problems between two servers.

Severity:

Major

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFConnCongestedNotify

Cause:

- A connection becomes congested, that is congestion level (CL) increases from ConnCL0 to either ConnCL1, ConnCL2, or ConnCL3. If a connection becomes congested, and there is another congested connection, then update the connection count and re-assert the alarm.
- A connection becomes uncongested, that is congestion level (CL) decreases to ConnCL0, and there is another congested connection. Update the connection count and re-assert the alarm.

Overload can be due to:

- TCP connection has higher latency or error rate, then connection is getting into congestion state
- Far-end server is receiving traffic at higher rate (may be from other servers). This triggers ComAgent congestion on far-end side.
- Application process CPU on far-end is above normal.

Diagnostic Information:

N/A.

Recovery:

1. Navigate to **Alarms & Events > View History** to find additional information for the alarm by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.
2. Navigate to **Alarms & Events > View History** to check the event history logs for additional Communication Agent events or alarms from this MP server.
3. Navigate to **Communication Agent > Maintenance > Connection Status** to determine which connections on the server have abnormal status.
4. If the Remote MP Overload Level (OL) > 0 then determine why the remote server is congested.
 - a. Verify the remote server is not under maintenance.
 - b. Examine the remote's CPU utilization.
5. If the problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

19827 - SMS stack event queue utilization

Alarm Group:

SMS

Description:

The percent utilization of the SMS Task stack queue is approaching defined threshold capacity.

Severity:

Minor, Major, Critical

Instance:

<SMS Thread/Queue Index>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFSmsQueueUtilNotify

Recovery:

1. The system itself may be heavily loaded with work, causing this subsystem to also become overloaded. Check other system resources (ComAgent Congestion, Cpu Utilization, and Server Congestion are some examples) for signs of overload.
2. If the problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

19830 - Communication Agent Service Registration State Change

Event Type:

CAF

Description:

Communication Agent Service Registration State Change.

Severity:

Info

Instance:

<ServiceName>

HA Score:

Normal

OID:

cAFEventComAgtSvcRegChangedNotify

Recovery:

1. This event is a log of normal application startup and shutdown activity. It may provide aid during troubleshooting when compared to other events in the log.

19831 - Communication Agent Service Operational State Changed

Event Type:

CAF

Description:

Communication Agent Service Operational State Changed.

Severity:

Info

Instance:

<ServiceName>

HA Score:

Normal

OID:

cAFEventComAgtSvcOpStateChangedNotify

Recovery:

1. This event indicates that a **Communication Agent** service changed operational state, and typically results from maintenance actions.

A service can also change state due to server overload.
2. If the state change is unexpected, it is recommended to contact [My Oracle Support](#) for assistance.

19832 - Communication Agent Reliable Transaction Failed

Event Type:

CAF

Description:

Failed transaction between servers result from normal maintenance actions, overload conditions, software failures, or equipment failures.

Severity:

Info

Instance:

<ServiceName>, <RemoteIP> | <null>

- If serviceID is InvalidServiceID, then <ServiceName> is "EventTransfer".
- If <ServiceName> is "EventTransfer", then include <RemoteIP>.
- If serviceID is unknown, then <ServiceName> is null.

HA Score:

Normal

Throttle Seconds:

10

OID:

cAFEventComAgtTransFailedNotify

Recovery:

1. Use **Communication Agent > Maintenance > Connection Status** to determine if the local server is unable to communicate with another server or if servers have become overloaded.
2. Check the server's KPIs and the **Communication Agent > Maintenance > Connection Status** to trouble-shoot the cause of server overload.
3. Check the **Communication Agent > Maintenance > HA Status** that corresponds to the ServiceID in the event instance to trouble-shoot the operation of the service.
4. If the event cannot be explained by maintenance actions, it is recommended to contact [My Oracle Support](#) for assistance.

19833 - Communication Agent Service Egress Message Discarded

Event Type:

CAF

Description:

Communication Agent Service Egress Message Discarded.

Severity:

Info

Instance:

<ServiceName>

- If serviceID is unknown, then <ServiceName> is null.

HA Score:

Normal

Throttle Seconds:

10

OID:

cAFEEventRoutingFailedNotify

Recovery:

1. View the Event AddlInfo column.

Message is being discarded due to one of the reasons specified.
2. If it's a persistent condition with the status of one of the **Communication Agent** Configuration Managed Object then resolve the underlying issue with the Managed Object.
3. If the event is raised due to software condition, it's an indication that the **Communication Agent** Process may be experiencing problems.
4. Use **Main Menu > Alarms & Events** and examine the alarm log.
5. It is recommended to contact [My Oracle Support](#) for assistance.

19842 - Communication Agent Resource-Provider Registered

Event Type:

CAF

Description:

Communication Agent Resource-Provider Registered.

Severity:

Info

Instance:

<ResourceName>

HA Score:

Normal

OID:

cAFEventResourceProviderRegisteredNotify

Recovery:

1. No action required.

19843 - Communication Agent Resource-Provider Resource State Changed

Event Type:

CAF

Description:

Communication Agent Resource-Provider Resource State Changed.

Severity:

Info

Instance:

<ProviderServerName>: <ResourceName>

HA Score:

Normal

OID:

cAFEventResourceStateChangeNotify

Recovery:

1. No action required.

19844 - Communication Agent Resource-Provider Stale Status Received

Event Type:

CAF

Description:

Communication Agent Resource-Provider Stale Status Received.

Severity:

Info

Instance:

<ProviderServerName>: <ResourceName>

HA Score:

Normal

Throttle Seconds:

10

OID:

cAFEEventStaleHBPacketNotify

Recovery:

1. If this event is occurring frequently then check the **ComAgent** maintenance screens for other anomalies and to troubleshoot further.

19845 - Communication Agent Resource-Provider Deregistered

Event Type:

CAF

Description:

Communication Agent Resource-Provider Deregistered.

Severity:

Info

Instance:

<ResourceName>

HA Score:

Normal

OID:

cAFEEventResourceProviderDeRegisteredNotify

Recovery:

1. No action required.

19846 - Communication Agent Resource Degraded

Alarm Group:

CAF

Description:

Communication Agent Resource Degraded. A local application is using the resource, identified in the alarm, and the access to the resource is impaired. Some of the resource providers are either unavailable and/or congested.

Severity:

Major

Instance:

<ResourceName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFResourceCongestedNotify

Recovery:

1. Use **Communication Agent > Maintenance > HA Services Status** to determine which sub-resources are unavailable or degraded for the server that asserted the alarm.
2. Use **Communication Agent > Maintenance > Connection Status** to determine if connections have failed or have congested.
3. It is recommended to contact [My Oracle Support](#) for assistance.

19847 - Communication Agent Resource Unavailable

Alarm Group:

CAF

Description:

Communication Agent Resource unavailable. A local application needs to use a **ComAgent** resource, but the resource is unavailable. The resource can be unavailable if the local server has no **ComAgent** connections to servers providing the resource or no servers host active instances of the resource's sub-resources.

Severity:

Major

Instance:

<ResourceName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFResourceUnavailNotify

Cause:

Communication Agent Resource Unavailable. A local application needs to use a ComAgent resource, but the resource is unavailable. The resource can be unavailable

if the local server has no ComAgent connections to servers providing the resource or no servers host active instances of the resource's sub-resources.

Diagnostic Information:

N/A.

Recovery:

1. Navigate to **Communication Agent > Maintenance > Connection Status** to verify the local server is connected to the expected servers.

If the local server reports unavailable connections, then take actions to troubleshoot the cause of the connection failures.

2. If the **ComAgent** connections are InService, navigate to **Communication Agent > Maintenance > HA Services Status** to determine which servers are providing the resource.

If no servers are providing the resource, then the most likely reason is maintenance actions have removed the application from service that provides the concerned resource.

3. It is recommended to contact [My Oracle Support](#) for assistance.

19848 - Communication Agent Resource Error

Alarm Group:

CAF

Description:

Communication Agent Resource Error. Two sets of servers are using incompatible configurations for a ComAgent resource.

Severity:

Minor

Instance:

<ResourceName>

HA Score:

Normal

Auto Clear Seconds:

50

OID:

cAFResourceErrorNotify

Recovery:

1. Use **Communication Agent > Maintenance > HA Services Status** to determine which sets of servers are incompatible.

Check the incompatible servers to verify that they are operating normally and are running the expected versions of software.

2. It is recommended to contact [My Oracle Support](#) for assistance.

19850 - Communication Agent Resource-User Registered

Event Type:

CAF

Description:

Communication Agent Resource-User Registered.

Severity:

Info

Instance:

<ResourceName>

HA Score:

Normal

OID:

cAFEventResourceUserRegisteredNotify

Recovery:

1. No action required.

19851 - Communication Agent Resource-User Deregistered

Event Type:

CAF

Description:

Communication Agent Resource-User Deregistered.

Severity:

Info

Instance:

<ResourceName>

HA Score:

Normal

OID:

cAFEventResourceUserDeRegisteredNotify

Recovery:

1. No action required.

19852 - Communication Agent Resource Routing State Changed

Event Type:

CAF

Description:

Communication Agent Resource Routing State Changed.

Severity:

Info

Instance:

<ResourceName>

HA Score:

Normal

OID:

cAFEEventResourceRoutingStateNotify

Recovery:

1. No action required.

19853 - Communication Agent Resource Egress Message Discarded

Event Type:

CAF

Description:

Communication Agent Resource Egress Message Discarded.

Severity:

Info

Instance:

<ResourceName>: <SubResourceID>

Note: If the resource is unknown, then <ResourceName> is the ResourceID converted to text. The <SubResourceID> is an integer converted to text, regardless of whether it is known or unknown.

HA Score:

Normal

Throttle Seconds:

10

OID:

cAFEEventHaEgressMessageDiscardedNotify

Recovery:

1. Message is being discarded due to one of the reasons specified in Event AddlInfo.

If the condition is persistent with the status of one of the **ComAgent** Configuration Managed Objects there is an underlying issue with the Managed Object.

2. Use **Main Menu > Alarms & Events** and examine the alarm log for **ComAgent** Process problems.

3. It is recommended to contact [My Oracle Support](#) for assistance.

19854 - Communication Agent Resource-Provider Tracking Table Audit Results

Event Type:

CAF

Description:

Communication Agent Resource-Provider Tracking Table Audit Results. This event is generated when a **Resource Provider Tracking Table (RPTT)** entry with Status equal to Auditing is replaced with a new status (null, Active, Standby, Spare, OOS, etc) and there are no other RPTT entries, for this specific Resource/SR, with Status equal to Auditing.

Severity:

Info

Instance:

None

HA Score:

Normal

OID:

cAFEventHaRPTTAuditResultNotify

Recovery:

1. No action required.

19855 - Communication Agent Resource Has Multiple Actives

Alarm Group:

CAF

Description:

This alarm indicates a possible IP network disruption that has caused more than one Resource Provider to become Active. The server that asserted this alarm expects there to be only one active Resource Provider server for the Resource, but instead it is seeing more than one. During this condition the server may be sending commands to the wrong Resource Provider. This may affect applications such as CPA, PDRA.

Severity:

Major

Instance:

<ResourceName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFMultipleActivesNotify

Recovery:

1. Use **Communication Agent > Maintenance > HA Services Status** to determine which Resource Provider servers are announcing 'Active' status for the Resource.
2. Investigate possible IP network isolation between these Resource Provider servers.
3. It is recommended to contact [My Oracle Support](#) for assistance.

19856 - Communication Agent Service Provider Registration State Changed

Event Type:

CAF

Description:

The Communication Agent Service Provider Registration State has changed.

Severity:

Info

Instance:

<ServiceName>

HA Score:

Normal

OID:

cAFEventSvcProvRegStateChangedNotify

Recovery:

1. This event is a log of normal application startup and shutdown activity. It may provide aid during troubleshooting when compared to other events in the log.
2. It is recommended to contact [My Oracle Support](#) for further assistance.

19857 - Communication Agent Service Provider Operational State Changed

Event Type:

CAF

Description:

The Communication Agent Service Provider Operational State has Changed

Severity:

Info

Instance:

<ServiceName>

HA Score:

Normal

OID:

cAFEventSvcProvOpStateChangedNotify

Recovery:

1. This event indicates that a **ComAgent** service provider changed operational state, and typically results from maintenance actions. A service can also change state due to overload.
2. If the state change is unexpected, it is recommended to contact [My Oracle Support](#).

19858 - Communication Agent Connection Rejected

Event Type:

CAF

Description:

The Communication Agent receives a connection request from an unknown server.

Severity:

Info

Instance:

<RemoteIP>

HA Score:

Normal

Throttle Seconds:

1800 (30 minutes)

OID:

cAFEventSvcProvOpStateChangedNotify

Recovery:

1. Verify network routes are correctly configured for ComAgent.
2. If assistance is required, it is recommended to contact [My Oracle Support](#).

19860 - Communication Agent Configuration Daemon Table Monitoring Failure

Alarm Group:

CAF

Description:

This alarm indicates that a Communication Agent Configuration Daemon has encountered an error that prevents it from properly using server topology configuration data to configure automatic connections for the Communication Agents on MPs, and this may prevent applications on MPs from communicating.

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

CAFTableMonitorFailureNotify

Cause:

Alarm 19860 is asserted when Communication Agent Configuration Daemon is unable to monitor one or more tables that it has been configured to monitor.

Diagnostic Information:

This alarm indicates that a Communication Agent Configuration Daemon has encountered an error that prevents it from properly using server topology configuration data to configure automatic connections for the Communication Agents on MPs, and this may prevent applications on MPs from communicating.

To troubleshoot:

- Find additional information for the alarm in **Alarms & Events > View History** by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.
- Check the event history logs at **Alarms & Events > View History** for additional Communication Agent events or alarms from this server.

Recovery:

1. Use **Alarms & Events > View History** to find additional information about the alarm.

The information can be found by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.

2. Check the event history logs at **Alarms & Events > View History** for additional Communication Agent events or alarms from this MP server.
3. If conditions do not permit a forced failover of the active NOAM, it is recommended to contact [My Oracle Support](#) for assistance.
4. If conditions permit, then initiate a failover of active NOAM.

This causes the Communication Agent Configuration Daemon to exit on the originally-active NOAM and to start on the newly-active NOAM.

5. After NOAM failover completes, verify the alarm has cleared.
6. If the alarm has not cleared, it is recommended to contact [My Oracle Support](#) for assistance.

19861 - Communication Agent Configuration Daemon Script Failure

Alarm Group:

CAF

Description:

This alarm indicates a Communication Agent Configuration Daemon has encountered an error that prevents it from properly using server topology configuration data to configure automatic connections for the Communication Agents on MPs, and this may prevent applications on MPs from communicating.

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFScriptFailureNotify

Cause:

This alarm raises when the Communication Agent Configuration Daemon configuration script fails.

Diagnostic Information:

This alarm indicates a Communication Agent Configuration Daemon has encountered an error that prevents it from properly using server topology configuration data to configure automatic connections for the Communication Agents on MPs, and this may prevent applications on MPs from communicating.

To troubleshoot:

- Find additional information for the alarm in **Alarms & Events > View History** by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.
- Check the event history logs at **Alarms & Events > View History** for additional Communication Agent events or alarms from this server.

Recovery:

1. Use **Alarms & Events > View History** to find additional information about the alarm.

The information can be found by locating the row with a sequence number that matches the active alarm sequence number and viewing the Additional Info column.

2. Check the event history logs at **Alarms & Events > View History** for additional Communication Agent events or alarms from this server.
3. If conditions do not permit a forced failover of the active NOAM, it is recommended to contact [My Oracle Support](#) for assistance.

4. If conditions permit, then initiate a failover of active NOAM.

This causes the Communication Agent Configuration Daemon to exit on the originally-active NOAM and to start on the newly-active NOAM.

5. After NOAM failover completes, verify the alarm has cleared.
6. If the alarm has not cleared, it is recommended to contact [My Oracle Support](#) for assistance.

19862 - Communication Agent Ingress Stack Event Rate

Alarm Group:

CAF

Description:

The Communication Agent Ingress Stack Event Rate is approaching its defined threshold capacity.

Severity:

- Minor - if exceeding 100K on Gen8/Gen9 hardware, 75k on other hardware
- Major - if exceeding 110K on Gen8/Gen9 hardware, 80k on other hardware
- Critical - if exceeding 120K on Gen8/Gen9 hardware, 84k on other hardware

Instance:

<ServiceName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

cAFIngressRateNotify

Recovery:

1. This alarm indicates that a server is overrunning its defined processing capacity. If any of the defined threshold onset levels are exceeded, Communication Agent will discard comparatively low priority messages. Check the configuration, routing, and deployment mode capacity.
2. It is recommended to contact [My Oracle Support](#) for further assistance.

19863 - Communication Agent Max Connections Limit In Connection Group Reached

Event Group:

CAF

Description:

The maximum number of connections per connection group limit has been reached.

Severity:

Info

Instance:

<Connection group name>

HA Score:

Normal

Throttle Seconds:

10

OID:

cAFComAgentMaxConnsInConnGrpNotify

Recovery:

1. This event indicates that a connection group has already reached its maximum limit and no more connections can be added to the group. Determine what is preventing potential connections from being added to the connection group.
2. It is recommended to contact [My Oracle Support](#) for further assistance.

19864 - ComAgent Successfully Set Host Server Hardware Profile

Event Group:

CAF

Description:

ComAgent successfully set the host server hardware profile.

Severity:

Info

Instance:

None

HA Score:

Normal

OID:

cAFEventSuccessSetHostServerHWProfileNotify

Recovery:

1. This event indicates that all TPS controlling parameter values are successfully set for the host server hardware profile.
2. If needed, it is recommended to contact [My Oracle Support](#).

19865 - ComAgent Failed to Set Host Server Hardware Profile

Event Group:

CAF

Description:

ComAgent failed to set the host server hardware profile.

Severity:

Info

Instance:

None

HA Score:

Normal

OID:

cAFEventFailToSetHostServerHWProfileNotify

Recovery:

1. This event indicates that there is a failure in applying default hardware settings for ComAgent TPS controlling parameters. When default settings also fail to apply, then the factory values will be used for the TPS controlling parameters.
2. If needed, it is recommended to contact [My Oracle Support](#).

19866 - Communication Agent Peer Group Status Changed

Event Type:

CAF

Description:

The Communication Agent Peer Group operational status has changed.

Severity:

Info

Instance:

<PeerGroupName>

HA Score:

Normal

OID:

cAFEventPeerGroupStatusChangeNotify

Recovery:

1. This alarm is informational and no action is required.

19867 - Communication Agent Peer Group Egress Message Discarded

Event Type:

CAF

Description:

The Communication Agent Peer Group egress message is being discarded due to one of the following reasons:

- Unknown Peer Group
- Peer Group Unavailable
- Peer Congested
- Reliability not supported

Severity:

Info

Instance:

<PeerGroupName>

HA Score:

Normal

Throttle Seconds:

10

OID:

cAFEEventPSEgressMessageDiscardedNotify

Recovery:

1. This alarm is informational and no action is required.

19868 - Communication Agent Connection Rejected - Incompatible Network

Event Type:

CAF

Description:

Communication Agent connection rejected. Connection to the peer node is not initiated due to network incompatibility. This event will be raised on the connection initiator side when the connection initiator MP has only IPv6 IP addresses configured and Remote MP has only IPv4 IP addresses configured or when connection initiator MP has only IPv4 IP addresses configured and Remote MP has only IPv6 IP addresses configured.

Severity:

Info

Instance:

<RemoteIP>

HA Score:

Normal

OID:

cAFEEventConnectionRejectNotify

Recovery:

1. Disable both sides of the connection.

2. Configure the correct network modes on either server.
3. Restart the application on the reconfigured server.
4. Enable both sides of the connection.
5. It is recommended to contact [My Oracle Support](#) for assistance if needed.

19900 - Process CPU Utilization

Alarm Group:

STK

Description:

The process, which is responsible for handling all signaling traffic, is approaching or exceeding its engineered traffic handling capacity.

Severity:

Critical, Major, Minor

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

dbcProcessCpuUtilizationNotify

Cause:

This alarm raises when the MP is handling too much traffic and is operating in congestion.

Diagnostic Information:

N/A

Recovery:

1. Navigate to **Status & Manage > KPIs** to monitor the ingress traffic rate of each MP.
 - The mis-configuration of Server/Client routing may result in too much traffic being distributed to the MP. Each MP in the server site should be receiving approximately the same ingress transaction per second.
 - There may be an insufficient number of MPs configured to handle the network traffic load. If all MPs are in a congestion state, then the traffic load to the server site is exceeding its capacity.

2. Navigate to **Alarms & Events** to examine the alarm log.

It is recommended to contact [My Oracle Support](#) for assistance.

19901 - CFG-DB Validation Error

Alarm Group:

STK

Description:

A minor database validation error was detected on the MP server during an update. MP internal database is now out of sync with the configuration database. Subsequent database operations on the MP are ALLOWED.

Severity:

Major

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

dbcCfgDbValidationErrorNotify

Recovery:

1. An unexpected condition has occurred while performing a database update, but database updates are still enabled.

It is recommended to contact [My Oracle Support](#) for assistance.

19902 - CFG-DB Update Failure

Alarm Group:

STK

Description:

A critical database validation error was detected on the MP server during an update. MP internal database is now out of sync with the configuration database. Subsequent database operations on the MP are DISABLED.

Severity:

Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

dbcCfgDbUpdateFailureNotify

Cause:

After receiving configuration updates from GUI, the DSR application is not able to modify its Runtime Database completely and correctly. All configurations changes are verified for syntactic and semantic errors by pre-update procedures.

Poor system health or degraded application state might be one of the cause.

Diagnostic Information:

- Determine if this condition indicates a software problem or unexpected TC User behavior.
- The Event Additional Information field includes a description of the event received, cause, and the actions occurred with the operation or dialogue as a result. Dialogue removed by dialogue cleanup timer.
- Possibly an Internal Error has occurred. Perform the following:
 - Click Alarm Instance.
 - Collect the information from instance and additional Information section of raised alarm.
 - Provide this information while contacting [My Oracle Support \(MOS\)](#).

Recovery:

1. An unexpected condition has occurred while performing a database update and database updates are disabled. Try to revert back a configuration change if possible.

It is recommended to contact [My Oracle Support](#) for assistance.

19903 - CFG-DB post-update Error

Alarm Group:

STK

Description:

A minor database validation error was detected on the MP server after a database update. MP internal database is still in sync with the configuration database.

Subsequent database operations on the MP are ALLOWED.

Severity:

Major

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

dbcCfgDbPostUpdateErrorNotify

Cause:

N/A

Diagnostic Information:

N/A

Recovery:

1. An unexpected condition has occurred while performing a database update, but database updates are still enabled.

It is recommended to contact [My Oracle Support](#) for assistance.

19904 - CFG-DB Post-Update Failure

Alarm Group:

STK

Description:

A critical database validation error was detected on the MP server after a database update. MP internal database is still in sync with the configuration database. Subsequent database operations on the MP are DISABLED.

Severity:

Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

dbcCfgDbPostFailureNotify

Cause:

After receiving configuration updates from GUI, the DSR application is not able to modify its Runtime Database and fails in the post-update procedure such as verification. The error is critical, and subsequent configuration updates will not be updated in the Runtime Database.

All configurations changes are verified for syntactic and semantic errors by pre-update procedures. One of the causes for this alarm is the poor system health.

Diagnostic Information:

The alarm may raise due to an internal error. Click **Alarm Instance**. Collect the information from instance and additional Information section of raised alarm. Provide this information while contacting [My Oracle Support \(MOS\)](#).

Recovery:

1. An unexpected condition has occurred while performing a database update and database updates are disabled. Try to revert back a configuration change if possible.

It is recommended to contact [My Oracle Support](#) for assistance.

19905 - Measurement Initialization Failure

Alarm Group:

STK

Description:

A measurement object failed to initialize.

Severity:

Critical

Instance:

<measTagName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

dbcMeasurementInitializationFailureNotify

Cause:

All Measurements are bound to a specific Measurement ID or Measurement Name defined in the Internal Database. This alarm is raised when Measurement subsystem initialization has failed, which occurs only when the system (or a process) is coming up.

The alarm raises when:

- An application is trying to bind the measurement using an incorrect measurement identifier which does not exist in Database. If you have performed an upgrade or a new installation, contact [My Oracle Support \(MOS\)](#) for assistance.
- An unauthorized configuration change resulted in inconsistent data.

Diagnostic Information:

Note any configuration change made to the system which requires (or caused) a process(or system) restart. Additionally, note alarm instance and any additional information present in alarm's **Additional Info** section.

Recovery:

1. Measurement subsystem initialization has failed for the specified measurement. If alarm is raised after a configuration change, try to revert back the configuration and restart the process that raised the alarm.

If configuration changes were valid and authorized, it is recommended to contact [My Oracle Support](#) for assistance.

Diameter Signaling Router (DSR) Diagnostics (19910-19999)

This section provides information and recovery procedures for **DSR** alarms and events, ranging from 19910-19999, and lists the types of alarms and events that can occur on the system. All events have a severity of Info.

Alarms and events are recorded in a database log table. Currently active alarms can be viewed from the Launch Alarms Dashboard GUI menu option. The alarms and events log can be viewed from the Alarms & Events > View History page.

19910 - Message Discarded at Test Connection

Event Type:

DIAG

Description:

Normal traffic is being discarded because it is routed to an egress Test Connection. An egress Test Connection is given a normal message to be transmitted.

Severity:

Major

Instance:

<Connection name>

HA Score:

Normal

Auto Clear Seconds:

120

OID:

dbcNormalMessageDiscardedNotify

Recovery:

1. Update routing rules to exclude Test connections from being used for routing.

Normal traffic should be received and sent on non-test connections.

2. Change the hostname of the peer connected to the test connection.

The hostname of the peer connected to the test connection may be the destination host for the incoming normal traffic.

19911 - Test message discarded

Event Type:

DIAG

Description:

Test message is given to a non-test connection to be transmitted.

Severity:

Info

Instance:

<Connection name>

eagleXgDiameterMpEvFsmException

Recovery:

1. The DSR supports to a preconfigured maximum number of open UDP sockets (the maximum number of open UDP sockets can be accessed via **Diameter > Configuration > System Options > Maximum Open RADIUS UDP sockets per DA-MP**). One or more peers are being routed more traffic than is normally expected, or the peers are responding slowly, causing more than the usual number of UDP sockets being opened. The concerned peer can be identified using the reported connection ID. Investigate the reason for higher than normal traffic being forwarded to the peer, or why the peer is slow to respond.

eagleXgDiameterMpEvRxException

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed between the remaining MPs in the server site. **MP** server status can be monitored from the **Status & Manage > Server** page.
2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP. The ingress traffic rate of each **MP** can be monitored from the **Status & Manage > KPIs** page. Each **MP** in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each **MP** can be monitored from the **Status & Manage > KPIs** page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. A software defect may exist resulting in PDU buffers not being deallocated to the pool. This alarm should not normally occur when no other congestion alarms are asserted. The alarm log should be examined using the Alarms & Events page.
5. This event is unexpected. It is recommended to contact [My Oracle Support](#) for assistance.

OID

eagleXgDiameterMpEvRxException

Recovery:

1. It is possible to observe this event occasionally, due to the unreliable nature of the UDP transport protocol. However, if the occurrence of this event is frequent, investigate the issue further.

This event is expected when a retransmission is received from the client before a server has responded to the request, possibly a result of the client retransmitting too quickly before allowing sufficient time for a server to respond in time. Another possible cause is if one or more servers configured to handle the request are non-responsive.

2. Investigate the routing configuration to narrow down the list of servers (Peer Nodes) which are expected to handle requests from the reported server connection.
3. Evaluate whether an Egress Transaction Failure Rate alarm has been raised for any of the corresponding client connections. If so, investigate the cause of the server becoming non-responsive and address the condition.

Note: Depending on the operator's choice, the client connection may need to be Admin Disabled until the evaluation is complete, which will allow requests to be routed to other servers, depending on the routing configuration. If this is not the case, tune the client's retransmit timers to be greater than the typical turnaround time for the request to be processed by the server and for the response to be sent back to the client.

4. If the problem persists, it is recommended to contact [My Oracle Support](#).

8010 - MpIngressDrop

Alarm Group:

DIAM

Description:

An ingress message is discarded or rejected.

Severity:

Major

Instance:

<DA-MP Name>

HA Score:

Normal

Auto Clear Seconds:

30

OID:

eagleXgDiameterMpIngressDrop

Cause:

An ingress message is discarded or rejected in the following congestion scenarios:

- Connection maximum message rate exceeded (ingress control).
- DA-MP maximum message rate exceeded (ingress control).
- DA-MP CPU congestion (overload control).
- Diameter message pool congested (routing ingress).
- Signaling event pool congested (routing ingress).
- Destination DA-MP unknown (routing ingress).
- Destination DA-MP congested (routing ingress).
- DRL request message queue congested (routing ingress).
- DRL answer message queue congested (routing ingress).

Diagnostic Information:

Collect the following information to diagnose the cause before contacting Oracle Support:

- Event History on active SO server.
- Savelogs of all MPs.
- DSR logs of all MPs.

Recovery:

1. Potential causes of this alarm are:

- One or more DA-MPs are unavailable and traffic has been distributed to the remaining DA-MPs.
- One or more peers are generating more traffic than is nominally expected.
- There are an insufficient number of DA-MPs provisioned.
- One or more peers are answering slowly, causing a backlog of pending transactions.

8011 - EcRate

Alarm Group:

DIAM

Description:

Connection egress message rate threshold crossed.

Severity:

Minor, Major, Critical

Instance:

<Connection Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterEmr

Cause:

Connection egress message rate threshold crossed.

Diagnostic Information:

Collect the following information to diagnose the cause before contacting Oracle Support:

- Event History on active SO server.
- Savelogs of the MP server.
- DSR logs of the MP server.

Recovery:

1. This alarm is potentially caused when a peer has routed more traffic than is nominally expected.
2. Inability of the adjacent Diameter Peer to handle the rate of egress message traffic currently being offered on a connection.
3. TCP/SCTP buffers filling up on the egress side.

8012 - MpRxNgnPsOfferedRate

Alarm Group:

DIAM

Description:

DA-MP ingress NGN-PS message rate threshold crossed.

Severity:

Major

Instance:

MpRxNgnPsOfferedRate, DIAM

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMpRxNgnPsOfferedRateNotify

Cause:

DA-MP ingress NGN-PS message rate threshold crossed. The alarm clears when threshold crossing abates.

Diagnostic Information:

N/A

Recovery:

1. Check for one or more DA-MPs is unavailable and traffic has been distributed to the remaining DA-MPs.
2. Check for one or more peers is generating more traffic than is nominally expected.
3. Check for an insufficient number of DA-MPs provisioned.
4. This alarm clears when the threshold crossing abates.

8013 - MpNgnPsStateMismatch

Alarm Group:

DIAM

Description:

DA-MP NGN-PS administrative and operational state mismatch.

Severity:

Major

Instance:

<DA-MP Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMpNgnPsStateMismatch

Cause:

The alarm raises when the administrative state of NGN-PS is not aligned with the operational state. Alarm clears when the administrative and operational states are aligned.

Diagnostic Information:

Collect the following information to diagnose the cause before contacting Oracle Support:

- Screenshot of active SO by navigating to **Main Menu -> Diameter -> Configuration -> System Options**.
- Event History on active SO server.

Recovery:

1. This alarm is potentially caused when a DA-MP restart is required.
The alarm clears when the administrative and operational states are aligned.
2. If the NGN-PS feature is mistakenly activated, disable the feature to clear the alarm and align the operational state with administrative state .
3. If the NGN-PS feature is mistakenly de-activated, enable the feature to clear the alarm and align the operational state with administrative state.

8014 - MpNgnPsDrop

Alarm Group:

DIAM

Description:

DA-MP NGN-PS message discarded or rejected.

Severity:

Major

Instance:

<DA-MP Name>

HA Score:

Normal

Auto Clear Seconds:

30

OID:

eagleXgDiameterMpNgnPsDrop

Cause:

Each layer involved in processing an NGN-PS transaction may reject or discard a request or answer. Such scenarios include:

- Routing or application controls.
- Peer or network congestion.
- Internal processing error.
- Task queue or resource congestion or ComAgent congestion or delivery failure.
- Processing error.

Diagnostic Information:

Collect the following information to diagnose the cause before contacting Oracle Support:

- Event History on active SO server.
- Savelogs of all MPs.
- DSR logs of all MPs.

Recovery

1. Potential causes of this alarm are:

- Routing or application controls are configured incorrectly.
- Peer or network is in congestion.
- Engineering of internal resources is insufficient.

8015 - NgnPsMsgMisrouted

Alarm Group:

DIAM

Description:

NGN-PS message routed to peer DSR lacking NGN-PS support.

Severity:

Major

Instance:

<Connection Name>

HA Score:

Normal

Auto Clear Seconds

30

OID:

eagleXgDiameterNgnPsMsgMisrouted

Cause:

An NGN-PS message routed to a peer DSR lacking NGN-PS support, and will not be processed as intended.

Diagnostic Information:

Collect the following before contacting Oracle Support:

- Event history on active SO server.
- Software release information of MP's using appRev command on the MP server.

Recovery

1. Potential causes of this alarm are:

- Routing configuration is incorrect.
- Peer **DSR** has not yet been upgraded.
- Peer **DSR** has not yet operationally enabled NGN-PS.

8016 - MpP16StateMismatch

Alarm Group:

DIAM

Description:

MP P16 Support administrative and operational state mismatch.

Severity:

Major

Instance:

<MP Name>

HA Score:

Normal

Auto Clear Seconds:

30

OID:

eagleXgDiameterMpP16StateMismatch

Cause:

The administrative state of P16 support is not aligned with the operational state.

Diagnostic Information:

Collect the following before contacting Oracle Support:

- Screenshot of active SO server, **Main Menu -> Diameter -> Configuration -> System Options**.
- Event History on active SO server.

Recovery

1. Potential causes of this alarm are:

- An MP restart is required.
- If the 16 Priority Support is mistakenly activated, disable the feature to clear the alarm and align the operational state with administrative state.
- If the 16 Priority Support is mistakenly de-activated, enable the feature to clear the alarm and align the operational state with administrative state.

2. Alarm clears when the administrative and operational states are aligned.

Recovery:

1. The alarm is potentially caused by a diameter routing misconfiguration.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

8200 - MpRadiusMsgPoolCongested

Alarm Group

DIAM

Description

DA-MP RADIUS message pool utilization threshold crossed.

Severity

Minor, Major, Critical

Instance

MpRadiusMsgPool, DIAM

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

eagleXgDiameterMpRadiusMsgPoolCongested

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed between the remaining MPs in the server site. **MP** server status can be monitored from the **Status & Manage > Server** page.
2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP. The ingress traffic rate of each **MP** can be monitored from the **Status & Manage > KPIs** page. Each **MP** in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each **MP** can be monitored from the **Status & Manage > KPIs** page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. A software defect may exist resulting in PDU buffers not being deallocated to the pool. This alarm should not normally occur when no other congestion alarms are asserted. The alarm log should be examined using the Alarms & Events page.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

8201 - RclRxTaskQueueCongested

Alarm Group

Each MP in the server site should be receiving approximately the same ingress transaction per second.
4. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
5. A software defect may exist resulting in PTR buffers not being deallocated to the pool. This alarm should not normally occur when no other congestion alarms are asserted. The alarm log should be examined from the Alarms & Events page.
6. If the problem persists, it is recommended to contact [My Oracle Support](#).

8205 - RadiusXactionFail

Alarm Group

DIAM

Description

RADIUS connection transaction failure threshold crossed. The presence of this alarm indicates that the server is not responding to requests in a timely manner. A response that is not received in a timely manner constitutes a transaction failure.

Severity

Minor, Major

Instance

<Connection Name>

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

eagleXgDiameterRadiusXactionFail

Recovery:

1. Check whether there is an IP network problem, RADIUS server congestion resulting in large response times, or whether a RADIUS server failure has occurred.
2. The user may choose to Admin Disable the corresponding transport connection which will prevent the **DSR** from selecting that connection for message routing, until the cause of the alarm is determined.

8206 - MpRxRadiusAllLen

Alarm Group

DIAM

Description

RADIUS average ingress message length threshold crossed.

Severity

Minor, Major

Instance

MpRxRadiusAllLen, DIAM

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

eagleXgDiameterMpRxRadiusAllLen

Recovery:

1. Investigate traffic sources. One or more peers is sending larger messages than is nominally expected.
2. Adjust the message length thresholds if necessary.

8207 - MpRadiusKeyError

Alarm Group

DIAM

Description

DA-MP RADIUS key error. This alarm is unexpected during normal processing. The presence of this alarm indicates DSR encountered an error while accessing RADIUS encryption keys used to decrypt RADIUS shared secrets.

Severity

Critical

Instance

<DA-MP Name>

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

eagleXgDiameterMpRadiusKeyError

Recovery:

1. Synchronize the RADIUS key file.
2. Restart the DSR process. If the required keys are now available, the alarm is not raised.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22001 - Message Decoding Failure

Event Type:

DIAM

Description:

A message received from a peer was rejected because of a decoding failure. Decoding failures can include missing mandatory parameters.

Severity:

Info

Instance:

<TransConnName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterIngressMsgRejectedDecodingFailureNotify

Recovery:

1. During Diameter Request decoding, the message content was inconsistent with the "Message Length" in the message header. This protocol violation can be caused by

the originator of the message (identified by the Origin-Host AVP in the message) or the peer who forwarded the message to this node.

22002 - Peer Routing Rules with Same Priority

Event Type:

DIAM

Description:

A peer routing table search with a received Request message found more than one highest priority Peer Routing Rule match. The system selected the first rule found but it is not guaranteed that the same rule will be selected in the future. It is recommended that Peer Routing Rules be unique for the same type of messages to avoid non-deterministic routing results.

Severity:

Info

Instance:

<MPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterPeerRoutingTableRulesSamePriorityNotify

Recovery:

1. Modify one of the Peer Routing Rule Priorities using the **Diameter > Configuration > Peer Routing Rules** GUI page.

22004 - Maximum pending transactions allowed exceeded

Event Type:

DIAM

Description:

Routing attempted to select an egress transport connection to forward a message but the maximum number of allowed pending transactions queued on the connection has been reached.

Severity:

Info

Instance:

<TransConnName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMaxPendingTxnsPerConnExceededNotify

Recovery:

1. The maximum number of pending transactions for each connection is set to a system-wide default value. If this event is occurring frequently enough for a particular connection then the maximum value may need to be increased. It is recommended to contact [My Oracle Support](#) for assistance.

22005 - No peer routing rule found

Event Type:

DIAM

Description:

A message not addressed to a peer (either Destination-Host AVP was absent or Destination-Host AVP was present but was not a peer's FQDN) could not be routed because no Peer Routing Rules matched the message.

Severity:

Info

Instance:

<MPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterNoPrtRuleNotify

Cause:

Ingress-request message from a downstream peer is rejected by a Local Node when no peer-routing rules are found in the Peer Routing Table (PRT) and one of the following is true:

- The ingress-request message did not contain a Destination-Host AVP or
- The ingress-request message contained a Destination-Host AVP but did not match with any configured peer node's FQDN or
- Destination-Realm AVP value and the Application-ID in the request message header did not match with configured Realm/Application-Id in Realm Route Table

The Realm Route Table (table RealmRoute) managed object is used to perform message routing based upon the Destination-Realm and Application-ID in a request message. The Realm Route Table is dynamically configured on the active SOAM via **Diameter > Configuration > Peer Discovery > Realms**.

Diagnostic Information:

Analyze the event history and event #22005 which will have following information regarding the failure diameter message:

- <TransConnName> (Receiving connection)
- <PeerName> (Name of the receiving peer)
- <DestRealm> (Value found in Request message Destination-Realm AVP)
- <ApplicationID> (Application ID in the Request message)
- <DestHostFQDN> (FQDN found in request message Destination-Host AVP, if present)
- <OriginHostFQDN> (FQDN found in request message Origin-Host AVP)

The Diameter Ingress Transaction Exception group measurement report contains the RxNoRulesFailure (10034) measurement, which is also pegged in the same scenario.

Recovery:

1. Either the message was incorrectly routed to this node or additional Peer Routing Rules need to be added. View and update the Peer Routing Rules by navigating to **Diameter > Configuration > Peer Routing Rules**.
2. If multiple peer routing tables are used, ensure the correct table is applied for the message in question.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22007 - Inconsistent Application ID Lists from a Peer

Event Type:

DIAM

Description:

The list of Application IDs supported by a peer during the Diameter Capabilities Exchange procedure on a particular transport connection is not identical to one of the list of Application IDs received from the peer over a different available transport connection to that peer.

Severity:

Info

Instance:

<PeerName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterSupportedAppIdsInconsistentNotify

Recovery:

1. A peer with multiple transport connections has established a connection and provided a list of supported Application IDs which does match a previously established connection. This could prevent Request messages from being routed uniformly over the peer's transport connections because the decision to route a message containing an Application ID is based upon the list of Application IDs supported on each transport connection. The list of Application IDs that the peer supports on each connection can be viewed as follows:
 - a. Navigate to **Diameter > Maintenance > Connections**.
 - b. Locate the relevant Peer Node and check the supported Application IDs.
2. If Application IDs are not the same for each connection (but should be) the Application ID for any connection can be refreshed by:
 - a. Navigate to **Diameter > Maintenance > Connections**.
 - b. Locate the relevant Connection.
 - c. Disable the Connection.
 - d. Enable the Connection.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22008 - Orphan Answer Response Received

Event Type:

DIAM

Description:

An answer response was received for which no pending request transaction existed, resulting in the answer message being discarded. When a Request message is forwarded the system saves a pending transaction, which contains the routing information for the answer response. The pending transaction is abandoned if an answer response is not received in a timely fashion.

Severity:

Info

Instance:

<TransConnName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterOrphanAnswerResponseReceivedNotify

Cause:

An answer message is received without any corresponding pending transaction. The message is discarded.

Diagnostic Information:

Reasons the pending transaction is not available include:

- DSR's Tx sender buffer is filling up causing connection congestion.
- PAT expiry or total transaction life-time expiry is causing transaction timeout.

The associated measurement tag for this event is RxAnswerUnexpected (10008), which is the number of times that the DRL receives an answer message event from DCL/RCL with a valid Connection ID for which a pending transaction cannot be found.

Recovery:

1. If this event is occurring frequently, the transaction timers may be set too low. Navigate to **Diameter > Configuration > Pending Answer Timers** to view and/or modify the Pending Answer Timer, Transaction Request Lifetime, peer node settings.

22009 - Application Routing Rules with Same Priority

Event Type:

DIAM

Description:

An application routing table search with a received Request message found more than one highest priority application routing rule match. At least two application routing rules with the same priority matched an ingress Request message. The system selected the first application routing rule found.

Severity:

Info

Instance:

<MPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterApplicationRoutingTableRulesSamePriorityNotify

Recovery:

1. It is recommended that application routing rules be unique for the same type of messages to avoid unexpected routing results. Peer routing rule priorities can be modified using **Diameter > Configuration > Application Route Tables** page.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22010 - Specified DAS Route List not provisioned

Event Type:

DIAM

Description:

The DAS Route List specified by the message copy trigger point is not provisioned.

Severity:

Info

Instance:

<RouteListId>

HA Score:

Normal

Throttle Seconds:

10

Note: Because many route lists can be created on a DA-MP server, care must be taken to prevent excessive event generation with these resources.

OID:

eagleXgDiameterSpecifiedDasRouteListNotProvisionedNotify

Recovery:

1. Provisioning is incorrect/misconfigured. Verify provisioning and provision/correct provisioning.
2. If this problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

22012 - Specified MCCA not provisioned

Event Type:

DIAM

Description:

The Message Copy Config Set specified by the trigger point is not provisioned.

Severity:

Info

Instance:

<MCCA>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterSpecifiedMCCANotProvisionedNotify

Recovery:

1. Verify the configured value of MCCA with the trigger point.
2. Verify the Message Copy CfgSet (MCCA) provisioning is properly configured.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22013 - DAS Peer Number of Retransmits Exceeded for Copy

Event Type:

DIAM

Description:

The configured number of **Message Copy** retransmits has been exceeded for the DAS Peer.

Severity:

Info

Instance:

<MCCA>

HA Score:

Normal

Throttle Seconds:

10

Note: Because many route lists can be created on a DA-MP server, care must be taken to prevent excessive event generation with these resources.

OID:

eagleXgDiameterNumberOfRetransmitsExceededToDasNotify

Recovery:

1. Verify the configured value of 'Max Retransmission Attempts'
2. Verify local provisioning to connections to intended DAS peer server(s) are in service and no network issues in path(s) to intended DAS peer server(s) exist.
3. Verify DAS peer provisioning to insure proper configuration.
4. If the problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

22014 - No DAS Route List specified

Alarm Group:

DIAM

Description:

No valid DAS Route List was specified in the Message Copy Config Set.

Severity:

Info

Instance:

<RouteListId>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterNoDasRouteListSpecifiedNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#) for further assistance.

22016 - Peer Node Alarm Aggregation Threshold

Alarm Group:

DIAM

Description:

This alarm occurs when there are a critical number of peer node alarms for a single network element and it exceeds the configurable alarm threshold.

Note: The alarm thresholds are configurable using the Alarm Threshold Options tab on **Diameter > Configuration > System Options**.

When this alarm is generated, the system clears all individual peer node alarms (alarm 22051) for the peer node. These alarms can be viewed in **Alarms & Events > View Active**.

Severity:

Critical

Instance:

<NetworkElement>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPeerNodeUnavailableThresholdReachedNotify

Cause:

The number of critical peer node alarms for a single network element exceeds the configurable alarm threshold.

Diagnostic Information:

Refer to Alarm 22051- Peer Unavailable. When this alarm is reported, the system clears all the individual peer node alarms (alarm 22051) for the peer node. These alarms can be viewed in **Alarms & Events > View Active**.

Recovery:

1. Navigate to **Diameter > Maintenance > Peer Nodes** to monitor peer status.
2. Verify IP network connectivity exists between the MP server and the peer node.
3. Check the event history logs for additional DIAM events or alarms from this MP server.
4. Verify the peer is not under maintenance.
5. It is recommended to contact [My Oracle Support](#) for assistance.

22017 - Route List Alarm Aggregation Threshold

Alarm Group:

DIAM

Description:

This alarm occurs when there are a 'Critical' number of Route List alarms for the Network Element.

Note: The alarm thresholds are configurable using the Alarm Threshold Options tab on **Diameter > Configuration > System Options**.

Severity:

Critical

Instance:

<NetworkElement>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterRouteListUnavailableThresholdReachedNotify

Cause:

The alarm # 22017 raises when the total number of Route List alarms for a single NE have reached the configured Route List Failure Critical Aggregation Alarm Threshold. The alarm gets cleared when the total number of Route List alarms for a single NE have dropped to at least 20% below the configured Route List Failure Critical Aggregation Alarm Threshold.

Diagnostic Information:

For further information on this alarm:

1. Examine the alarm log from **Main Menu > Alarms & Events** on Active SOAM Server.

Main Menu: Alarms & Events -> View Active (Filtered) Wed Nov 29 01:15:40 2017 EST

Filter* Tasks Graph*

RDU03SOSG

Seq #	Event ID	Timestamp	Severity	Product	Process	NE	Server	Type	Instance
	Alarm Text								
			Additional Info						
1465	22017	2017-11-29 01:15:20.043 EST	CRITICAL	DPI	dsroom	SOAM_NE	RDU03SO-Server	DIAM	SOAM_NE
	Route List Alarm Aggregation Threshold Reached		Threshold reached						

2. Navigate to **Diameter > Maintenance > Route Lists** to find all the route lists with a problem for the specific MP.
3. A Route List's operational status is always set to the operational status of the Route Group within the Route List that is designated as the Active Route Group.
4. If all Route Groups within the route list are Unavailable, then the Route List is Unavailable and there is no Active Route Group.

Recovery:

1. Use **Main Menu > Diameter > Maintenance > Route Lists** to monitor Route List status.
2. Verify that IP network connectivity exists between the MP server and the peers.
3. Check the event history logs for additional DIAM events or alarms from this MP server.
4. Verify that the peers in the Route List are not under maintenance.
5. It is recommended to contact [My Oracle Support](#) for assistance.

22018 - Maintenance Leader HA Notification to go Active

Alarm Group:

DIAM

Description:

This alarm occurs when a DA-MP has received a notification from HA that the Maintenance Leader resource should transition to the Active role.

Severity:

Info

Instance:

<MP Node ID>

HA Score:

Normal

Throttle Seconds:

1

OID:

eagleXgDiameterDaMpLeaderGoActiveNotificationNotify

Recovery:

1. No action necessary.

22019 - Maintenance Leader HA Notification to go OOS

Alarm Group:

DIAM

Description:

This alarm occurs when a DA-MP has received a notification from HA that the Maintenance Leader resource should transition to the OOS role.

Instance:

<MP Node ID>

Severity:

Info

HA Score:

Normal

Throttle Seconds:

1

OID:

eagleXgDiameterDaMpLeaderGoOOSNotificationNotify

Recovery:

1. No action necessary.

22020 - Copy Message size exceeded the system configured size limit

Event Type:

DIAM

Description:

The generated Copy message size exceeded the max message size on the system.

Severity:

Info

Instance:

<DA-MP>

HA Score:

Normal

Throttle Seconds:

10

Note: Because many copy messages can exceed the system configured size, care must be taken to prevent excessive generation with these resources.

OID:

eagleXgDiameterCopyMessageSizeExceededNotify

Recovery:

1. Verify the size of the Request and Answer messages and see it exceeds the system set message size.

Use **Main > Diameter > Configuration > Route Lists** to correct provisioning.

2. Review provisioning and correct provisioning and see whether answers also needed to copy.

Requests and answers may be copied to DAS.

3. If this problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

22021 - Debug Routing Info AVP Enabled

Alarm Group:

DIAM

Description:

Debug Routing Info AVP is enabled.

Severity:

Minor

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDebugRoutingInfoAvpEnabledNotify

Recovery:

1. Change the `IncludeRoutingInfoAvp` parameter to *no* in the `DpiOption` table on the NO for a 2-tier system or on the SO for a 3-tier system.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22022 - Forwarding Loop Detected

Alarm Group:

DIAM

Description:

Ingress Request message received was previously processed by the local node as determined from the Route-Record AVPs received in the message.

Severity:

Major

Instance:

<Peer Name>

HA Score:

Normal

Auto Clear Seconds:

30

OID:

eagleXgDiameterForwardingLoopDetectedNotify

Recovery:

1. An ingress request message was rejected because message looping was detected. In general, the forwarding node should not send a message to a peer that has already processed the message (it should examine the Route-Record AVPs before message forwarding). If this type of error is occurring frequently, then the forwarding node is most likely mis-routing the message. This should not be related to a configuration error because the identity of the local node is sent to the peer during the Diameter Capabilities Exchange procedure when the Connection comes into service.
2. If Path Topology Hiding is activated and Protected Network Node's Route-Records are obscured with PseudoNodeFQDN, then inter-network ingress message loop detection could reject the message if same Request message is routed back to DEA. If this type of error is occurring then the forwarding node is most likely mis-routing the message back to DEA.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22051 - Peer Unavailable

Alarm Group:

DIAM

Description:

Unable to access the Diameter Peer because all of the transport connections are down. Peer node unavailability can happen in these cases:

- All connections toward a peer are no longer candidates for routing Request messages.
- No available connections within the peer node support the Application ID. This is functionally equivalent to the peer node being unavailable.

- The Connection Priority Level (CPL) value for a resource is changed to 99, which means the operational status is Unavailable. The CPL value of a connection can be found in the active SO under **Diameter > Maintenance > Connections**.
- The number of established connections drops below the configured Minimum Connection Capacity.

Severity:

Critical

Instance:

<PeerName> (of the Peer which failed).

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPeerUnavailableNotify

Cause

The Alarm #22051 raises when the Diameter Peer is not accessible as all the transport connections are down.

Diagnostic Information

Peer node is unavailable in the following cases:

- All connections towards a peer are no longer candidates for routing Request messages.
- No available connections within the peer node support the Application ID. This is functionally equivalent to the peer node being unavailable.
- The Connection Priority Level (CPL) value for a resource is changed to 99, which means the operational status is Unavailable. The CPL value of a connection can be found in the active SO under **Diameter > Maintenance > Connections**.
- The number of established connections drops below the configured Minimum Connection Capacity.

Recovery:

1. Confirm a connection is provisioned for the peer node.
 - Peer status can be monitored from **Diameter > Maintenance > Peer Nodes**.
 - Verify IP network connectivity exists between the MP server and the peer nodes using ping, traceroute, or other means.
 - Examine the event history logs for additional DIAM events or alarms from the MP server.
 - Verify the peer is not under maintenance.
 - Verify there are connections provisioned for the peer node.

- Verify the status of all connections toward the peer node.

From the active SO GUI, navigate to **Diameter > Maintenance > Peer Nodes**.
View the Transaction Configuration Set of the peer node.

If the peer node has a corresponding Transaction Configuration Set setting,
then navigate to **Diameter > Configuration > Configuration Sets > Transaction Configuration Sets** and confirm the Application ID is supported.

2. Confirm the peer node supports the Application ID in the request message.
3. Resolve any congestion issues on the peer node.
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22052 - Peer Degraded

Alarm Group:

DIAM

Description:

The peer has some available connections, but less than its minimum connection capacity. Continued routing to this peer may cause congestion or other overload conditions.

Severity:

Major

Instance:

<PeerName> (of the Peer which is degraded)

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPeerDegradedNotify

Cause:

- If the number of available connections to peer node is less than minimum connection capacity which is default 1 per Peer Node, configured in **Main Menu > Diameter > Configuration > Peer Node**, then Peer Node Status will be degraded, and alarm 22052 raises.
- If all the connections are degraded for the peer node, then Peer Node status will be degraded and Alarm 22052 raises.

Diagnostic Information:

- Verify the number of available connection to that peer should be greater than minimum connection capacity which is default 1.
- DSR configurations on active SO

- Savelogs on active SO
- Event History on active SO

Recovery:

1. Peer status can be monitored from **Diameter > Maintenance > Peer Nodes**.
2. Verify IP network connectivity exists between the MP server and the adjacent servers.
3. Check the event history logs for additional DIAM events or alarms from this MP server.
4. Verify the peer is not under maintenance.
5. Make sure the number of available connections to that peer node is greater than minimum connection capacity configure from **Diameter > Maintenance > Peer Nodes**.
6. If the problem persists, it is recommended to contact [My Oracle Support](#).

22053 - Route List Unavailable

Alarm Group:
DIAM

Description:

All route groups with the route list are unavailable. A Route List becomes unavailable when all of its peers become unavailable and a peer becomes unavailable when all of its transport connections become unavailable.

If a Transport Connection is configured for Initiate mode, the network element periodically attempts to recover the connection automatically if its Admin State is enabled. If the Transport Connection is configured for Responder-Only mode, the peer is responsible for re-establishing the transport connection.

Examine the Event history and software release information for the route groups.

Severity:
Critical

Instance:
<RouteListName> (of the Route List which failed)

HA Score:
Normal

Auto Clear Seconds:
0 (zero)

OID:
eagleXgDiameterRouteListUnavailableNotify

Cause:
All route groups within the route list are unavailable. Monitor the Route list status from **Diameter > Maintenance > Route Lists**.

Diagnostic Information

Examine the following for the route groups:

- Event history
- Software release information

Recovery:

1. Route List status can be monitored from **Diameter > Maintenance > Route Lists**.
2. Verify IP network connectivity exists between the **MP** server and the peers.
3. Check the event history logs for additional DIAM events or alarms from this **MP** server.
4. Verify the peers in the route list not under maintenance.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22054 - Route List Degraded

Alarm Group:

DIAM

Description:

The Route List's Operational Status has changed to degraded because the capacity of the Route List's active route group has dropped below the Route List's configured minimum capacity. There are two potential causes:

1. One or more of the Route List's peers become Unavailable. A peer becomes unavailable when all of its transport connections become unavailable. If a transport connection is configured for Initiate mode, the network element periodically attempts to recover the connection if its admin state is enabled. If the transport connection is configured for responder-only mode, the peer is responsible for re-establishing the transport connection.
2. The Route Groups within the Route List may not have been configured with sufficient capacity to meet the Route List's configured minimum capacity.

Severity:

Major

Instance:

<RouteListName> (of the Route List which is degraded)

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterRouteListDegradedNotify

Cause:

There are no available Route Groups, and the Operational Status of one or more Route Groups within the Route List is degraded.

Diagnostic Information:

A Route List's operational status is always set to the operational status of the Route Group within the Route List that is designated as the Active Route Group.

DRL determines which Route Group within a Route List is designated the Active Route Group for that Route List as follows:

- If the operational status of one or more Route Groups within the Route List is Available, then the Active Route Group for the Route List is the Available Route Group with the highest priority
- If there are no Available Route Groups, and the operational status of one or more Route Groups within the Route List is Degraded, the Active Route Group is the Degraded Route Group with the highest Current Capacity. If two or more degraded Route Groups exist with equal Current Capacity, then the Active Route Group is the one with the highest Priority
- If all Route Groups within the route list are Unavailable, then the Route List is Unavailable and there is no Active Route Group

Route List	Minimum Route Group Availability Weight	Route Group	Priority	Provisioned Capacity	Current Capacity	Active / Standby	Status	Time of Last Change
RouteList1	45	- 2 RouteGroups	~	~	~	~	Unk	Unk
~	~	RouteGroup1	1	45	Unk	Unk	Unk	Unk
~	~	RouteGroup2	2	45	Unk	Unk	Unk	Unk
RouteList2	55	- 3 RouteGroups	~	~	~	~	Available	2010-Mar-02

~	~	RouteGroup19	2	90	0	Standby	Unavailable	2010-Mar-02
~	~	RouteGroup20	3	91	0	Standby	Unavailable	2010-Mar-02

Recovery:

1. Verify Route List status and configured minimum capacity from **Diameter > Maintenance > Route Lists**.
2. Verify IP network connectivity exists between the **MP** server and the peers.

3. Check the event history logs for additional DIAM events or alarms from this **MP** server.
4. Verify the peers in the Route List are not under maintenance.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22055 - Non-Preferred Route Group in Use

Alarm Group:

DIAM

Description:

The application has started to utilize a Route Group other than the highest priority Route Group to route Request messages for a Route List because the highest priority Route Group specified for that Route List has either become Unavailable or its capacity has dropped below the minimum capacity configured for the Route List while a lower priority Route Group has more capacity.

The preferred Route Group (i.e., with highest priority) is demoted from the Active Route Group to a Standby Route Group when a peer failure occurs causing the Route Group's Operational Status to change to Unavailable or Degraded. A Route Group becomes Degraded when its capacity has dropped below Route List's configured minimum capacity. A Route Group becomes Unavailable when all of its peers have an Operational Status of Unavailable or Degraded.

A Peer becomes Unavailable when all of its transport connections become Unavailable. If a Transport Connection is configured for Initiate mode, the Network Element will periodically attempt to automatically recover the connection if its Admin State is Enabled. If the Transport Connection is configured for Responder-Only mode, the peer will be responsible for re-establishing the transport connection.

Severity:

Minor

Instance:

<RouteListName> (of the concerned Route List)

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterNonPreferredRouteGroupInUseNotify

Recovery:

1. Route List status and configured minimum capacity can be monitored from **Diameter > Maintenance > Route Lists**.
2. Verify that IP network connectivity exists between the **MP** server and the peers.
3. Check the event history logs for additional DIAM events or alarms from this **MP** server.
4. Verify that the adjacent server is not under maintenance.

5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22056 - Connection Admin State Inconsistency Exists

Alarm Group:

DIAM

Description:

An operator request to change the Admin State of a transport connection was not completely processed due to an internal error. The admin state is either disabled from an egress routing perspective but the connection could not be taken out of service or the admin state is enabled from an egress routing perspective but the connection is not in service.

Severity:

Major

Instance:

<TransConnName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterConnAdminStateInconsistencyNotify

Recovery:

1. If the transport connection's Admin State is Disabled but the transport connection was not taken out of service due to an internal error do the following actions to correct the failure:
 - a. Enable the connection via the following GUI menu: **Diameter > Maintenance > Connections**
 - b. Wait for this alarm to clear.
 - c. Disable the connection via the following GUI menu: **Diameter > Maintenance > Connections**
2. If the transport connection's Admin State is Enabled but the transport connection was not taken out of service due to an internal error do the following actions to correct the failure:
 - a. Disable the connection via the following **Diameter > Maintenance > Connections**
 - b. Wait for this alarm to clear.
 - c. Enable the connection via the following GUI menu: **Diameter > Maintenance > Connections**
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22057 - ETG Rate Limit Degraded

Alarm Group:

DIAM

Description:

The ETG Rate Limit has exceeded the defined threshold.

Severity:

Major

Instance:

<ETGName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterEtgRateLimitDegradedNotify

Cause:

This alarm triggers when Rate Limiting is Enabled through active SO server menu, **Diameter > Maintenance > Egress Throttle Groups**.

- Rate Limiting Operational Status transitions from Available to Degraded.
- Rate Limiting Operational Status transitions from Inactive to Degraded.

Diagnostic Information

- Screen snapshot of active SO server through menu, **Main Menu > Diameter -> Maintenance -> Egress Throttle Groups**.
- Savelogs of all MPs.
- DSR logs of all MPs.
- Export DSR configuration on active SO server.

Recovery:

1. Check the configuration in **Diameter > Configuration > Egress Throttle Groups** to determine if the Maximum Configured rate is too low.
2. Check the Egress Message Rate at **Diameter > Maintenance > Egress Throttle Groups** and **Diameter > Maintenance > Connections** to determine if the sending Peers/Connections are offering too much traffic.
3. If the problem persists, collect the logs list in Diagnostic information and it is recommended to contact [My Oracle Support](#).

22058 - ETG Pending Transaction Limit Degraded

Alarm Group:

DIAM

Description:

The ETG Pending Transactions Limit has exceeded the defined threshold.

Severity:

Major

Instance:

<ETGName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterEtgPendingTransLimitDegradedNotify

Cause:

When Pending Transaction limiting is Enabled through Active SO, menu **Diameter -> Maintenance -> Egress Throttle Groups**, the alarm will be triggered when the following conditions met:

- Pending Transaction Limiting Operational Status transitions from Available to Degraded
- Pending Transaction Limiting Operational Status transitions from Inactive to Degraded

Diagnostic Information:

- Screen Snapshot of active SO via menu: **Main Menu > Diameter > Maintenance > Egress Throttle Groups** .
- Savelogs of all MPs.
- DSR logs of all MPs.
- Export DSR configuration.

Recovery:

1. Check the configuration in **Diameter > Configuration > Egress Throttle Groups** to determine if the Maximum Configured rate is too low.
2. Check the Egress Message Rate at **Diameter > Maintenance > Egress Throttle Groups** and **Main Menu > Diameter > Maintenance > Connections** to determine if the sending Peers/Connections are offering too much traffic.
3. Determine if the receiving Peers or Connections in the ETG are not responding with Answers in a timely manner because they are either busy or overloaded.
4. If the problem persists, collect logs in Diagnostic information and it is recommended to contact [My Oracle Support](#).

22059 - Egress Throttle Group Message Rate Congestion Level changed

Event Group:

DIAM

Description:

The Egress Throttle Group Message rate Congestion Level has changed. This will change the Request priority that can be routed on peers and connections in the ETG.

Severity:

Info

Instance:

<ETGName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterEtgRateCongestionNotify

Recovery:

1. The Maximum Configured rate may be too low. Check the configuration in **Diameter > Configuration > Egress Throttle Groups**
2. The sending Peers/Connections are offering too much traffic. Check the EMR rate at **Diameter > Maintenance > Egress Throttle Groups** and/or **Diameter > Maintenance > Connections**
3. Typically all routes to a server should be in an ETG. However, if that is not the case, alternate routes may be out of service and could cause overloading of traffic towards connections contained in this ETG. Evaluate traffic distribution to server connections and see if any alternate routes to server are unavailable causing overloading of traffic on an ETG.
4. It is recommended to contact [My Oracle Support](#) for assistance.

22060 - Egress Throttle Group Pending Transaction Limit Congestion Level changed

Event Group:

DIAM

Description:

The Egress Throttle Group Pending Transaction Limit Congestion Level has changed. This will change the Request priority that can be routed on peers and connections in the ETG.

Severity:

Info

Instance:

<ETGName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterEtgPendingTransCongestionNotify

Recovery:

1. The Maximum Configured rate may be too low. Check the configuration in **Diameter > Configuration > Egress Throttle Groups**
2. The sending Peers/Connections are offering too much traffic. Check the EMR rate at **Diameter > Maintenance > Egress Throttle Groups** and/or **Diameter > Maintenance > Connections**
3. Typically all routes to a server should be in a ETG, however if that is not the case, then those routes becoming out of service could cause overloading of traffic towards connections contained in this ETG. Evaluate traffic distribution to server connections and see if any alternate routes to server are unavailable causing overloading of traffic on an ETG.
4. The receiving Peers or Connections in the ETG are not responding with Answers in a timely manner. Check to see if they are busy or overloaded.
5. If the problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

22061 - Egress Throttle Group Monitoring stopped

Alarm Group:

DIAM

Description:

ETG Rate and Pending Transaction Monitoring is stopped on all configured ETGs

Severity:

Minor

Instance:

<DA-MP Hostname>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterEtgMonitoringStoppedNotify

Recovery:

1. Verify ComAgent links setup between DA-MPs have not gone OOS causing SMS Service to not receive Responses from DA-MP Leader under **Communication Agent > Maintenance**.
2. Verify ComAgent links are established between DA-MPs under **Communication Agent > Maintenance**
3. Verify the No-MP Leader condition in **Diameter > Maintenance > DA-MPs > Peer DA-MP Status** that at least 1 DA-MP is MP-Leader.
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22062 - Actual Host Name cannot be determined for Topology Hiding

Event Group:

Diameter

Description:

Topology Hiding could not be applied because the Actual Host Name could not be determined.

Severity:

Info

Instance:

<CfgSetName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterTopoHidingActualHostNameNotFoundNotify

Recovery:

1. Ensure that all MME/SGSN hostnames to be hidden are present in the MME/SGSN Configuration Set.
2. If any DSR Applications are activated on DSR, ensure that any specific Application Level Topology Hiding feature is not conflicting with the contents of Actual Host Names specified in the MME Configuration Set.
3. Check if the first instance of a Session-ID AVP in the Request/Answer message contains the mandatory delimited ";".
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22063 - Diameter Max Message Size Limit Exceeded

Event Type:

DIAM

Description:

The size of the message encoded by DSR has exceeded its max limits.

Severity:

Info

Instance:

<TransConnName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDiameterMaxMsgSizeLimitExceededNotify

Recovery:

1. No action required. However, if this event is seen to be incrementing consistently, it is recommended to contact [My Oracle Support](#) for assistance.

22064 - Upon receiving Redirect Host Notification the Request has not been submitted for re-routing

Event Type:

DIAM

Description:

This event indicates that the DSR has encountered a Redirect Host Notification that it can accept for processing but cannot continue processing due to some reason, such as internal resources exhaustion.

Severity:

Info

Instance:

<PeerName>

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterRxRedirectHostNotRoutedNotify

Recovery:

1. Examine the DA-MP congestion status and related measurements and take appropriate action.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22065 - Upon receiving Redirect Realm Notification the Request has not been submitted for re-routing

Event Type:

DIAM

Description:

The Redirect Realm Notification received is accepted but cannot be processed due to some reason, such as internal resources exhaustion.

Severity:

Info

Instance:

<PeerName>

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterRxRedirectRealmNotRoutedNotify

Recovery:

1. Examine the DA-MP congestion status and related measurements and take appropriate action.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22066 - ETG-ETL Scope Inconsistency

Alarm Group:

DIAM

Description:

An ETG's Control Scope is set to ETL, but the ETG is not configured against an ETL.

Severity:

Minor

Instance:

<ETG Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterEtlScopeInconsistencyNotify

Recovery:

1. Correct the configuration inconsistency by changing the Control Scope of the ETG from ETL to ETG, or by adding the ETG to an ETL.
2. If a backup image has been restored to the SOAM, but not the NOAM, restoring a consistent backup image for the NOAM should resolve the problem.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22067 - ETL-ETG Invalid Association

Event Type:

DIAM

Description:

An ETL is associated with an ETG that does not exist.

Severity:

Minor

Instance:

<ETL Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterEtgEtlInvalidAssocNotify

Recovery:

1. Correct the configuration inconsistency by updating the ETL to refer to a valid ETG, or by installing consistent backups on the NOAM and SOAM.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22068 - TtpEvDoicException

22068 - 001 - TtpEvDoicException: DOIC OC-Supported-Features AVP not received

22077 - Excessive Request Reroute Threshold Exceeded

Alarm Group:

DIAM

Description:

Request reroutes due to Answer response and/or Answer timeout having exceeded the configured onset threshold percentage on the DA-MP server.

Severity:

Major

Instance:

MpReroutePercent

HA Score:

Normal

Auto Clear Seconds:

N/A

Note: The alarm clears when the percentage of Request reroutes due to Answer Result-code matching "Reroute on Answer" and Answer Timeout drops below the configured abatement threshold and remains there for the configured abatement time. The alarm also clears when the DSR process is stopped or restarted.

OID:

eagleXgDiameterMpExcessiveRequestRerouteNotify

Recovery:

1. This alarm is an indication of reroutes exceeding the configured threshold, due to responses from the Peer Node exceeding the Pending Answer timer in DSR or due to configured "Reroute on Answer" Result codes.
2. If rerouting is triggered due to Answer Result-code:
 - a. Use measurement TxRerouteAnswerResponse to identify any peer (or set of peers) being identified as triggering reroute.
 - b. If a peer (or set of peers) is identified, validate that Reroute-on-Answer is properly configured for that peer.
 - c. Check for congestion being reported by the peer (**Diameter > Maintenance > Peer Node**).
3. If rerouting is triggered due to Answer Timeout:
 - a. Use measurement TxRerouteAnswerTimeout to identify any peer (or set of peers) being identified as timing out.
 - b. If a peer (or set of peers) is identified, verify that Pending Answer Timer and Transaction Lifetime are properly configured.
 - c. Check for congestion being reported by the peer (**Diameter > Maintenance > Peer Node**).
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22078 - Loop or Maximum Depth Exceeded in ART or PRT Search

Alarm Group:

DIAM

Description:

An ART/PRT search has resulted in either a loop between ART/PRT tables, or the search depth has exceeded the maximum allowed depth.

Severity:

Info

Instance:

<MPName>

HA Score:

Recovery:

1. If the error was a search loop, the customer should change at least one of the rules in the search sequence to avoid a loop. If the error was a maximum depth exceeded, the customer should remove one or more rules in the search sequence.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22101 - Connection Unavailable

Alarm Group:

DIAM

Description:

Connection is unavailable for Diameter Request/ Answer exchange with peer.

Note: This alarm is not raised when the Suppress Connection Unavailable alarm for a Transport Connection is set to Yes.

Alarm 22101 is generated when the connection's administrative state is enabled and the connection is not in a state where it can send or receive Diameter Requests or Answers to/from the peer. The alarm is generated when one of the following occurs.

- Connection's Admin State transitions from disabled to enabled
- Connection's Operational Status transitions from available to unavailable
- Connection's Operational Status transitions from degraded to unavailable

Severity:

Major

Instance:

<Connection Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterConnectionUnavailableAlarmNotify

Cause:

Alarm #22101 raises when the connection's administrative state is enabled and the connection is not in a state where it can send or receive Diameter Requests or Answers to/from the peer. The alarm is generated when one of the following occurs:

- Connection's Admin State transitions from disabled to enabled
- Connection's Operational Status transitions from available to unavailable
- Connection's Operational Status transitions from degraded to unavailable

Diagnostic Information:

Confirm any of following conditions is occurring:

1. A host IP interface is down
2. A host IP interface is unreachable from the peer
3. A peer IP interface is down
4. A peer IP interface is unreachable from the host

Verify the following are configured and available:

1. Remote IP availability
2. Remote server (port) availability
3. Network availability
4. Local IP route to remove
5. Local MP service availability
6. Configuration correctness, such as CEX parameter matching with remove

Recovery:

1. Confirm the host IP interface is down or unreachable from the peer.
2. Confirm the peer IP interface is down or unreachable from the host.
3. Verify the following are configured and available:
 - Remote IP availability
 - Remote server (port) availability
 - Network availability
 - Local IP route to remove
 - Local MP service availability
 - Configuration correctness, such as CEX parameter matching with remove
4. Identify the most recent Connection Unavailable event in the event log for the connection and use the Event's recovery steps to resolve the issue.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22102 - Connection Degraded

Alarm Group:
DIAM

Description:

Connection is only available for routing messages with a priority greater than or equal to the connection's congestion level. This alarm is generated when:

- Connection congestion when the DSR Tx sender buffer is at maximum capacity
- The connection's administrative state is enabled and the connection is in congestion. Requests and Answers continue to be received and processed from the peer over the connection, and attempts to send Answers to the peer still occur. The alarm is raised when one of the following occurs:
 - Connection's Operational Status transitions from available to degraded (connection has become congested or watchdog algorithm has failed)
 - Connection's Operational Status transitions from unavailable to degraded (connection has successfully completed the capabilities exchange and is performing connection proving)
- Connection egress message rate threshold has been crossed
- Diameter connection is in watchdog proving
- Diameter connection is in graceful disconnect
- Diameter peer signaled the remote is busy
- Diameter connection is in transport congestion

Severity:

Major

Instance:

<Connection Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterFsmOpStateDegraded

Cause:

This alarm is raised when:

- Connection congestion when the DSR Tx sender buffer is at maximum capacity
- The connection's administrative state is enabled and the connection is in congestion. Requests and Answers will continue to be received and processed from the peer over the connection and attempts to send Answers to the peer will still occur. The alarm is raised when one of the following occurs:
 - Connection's Operational Status transitions from available to degraded (connection has become congested or watchdog algorithm has failed)

- Connection's Operational Status transitions from unavailable to degraded (connection has successfully completed the capabilities exchange and is performing connection proving)
- Connection egress message rate threshold has been crossed
- Diameter connection is in watchdog proving
- Diameter connection is in graceful disconnect
- Diameter peer signaled that the remote is busy
- Diameter connection is in transport congestion

Diagnostic Information:

1. View the Connection Performance measurement report for the +/- 1 hour congestion event.
2. Examine the Log file by using these commands:
 - `# date >> tcp_stat_<hostname>`
 - `# cat /proc/net/tcp >> tcp_stat_<hostname>`
 - `# sleep 1`
 - `# cat /proc/net/tcp >> tcp_stat_<hostname>`
 - `# sleep 1`
 - `# cat /proc/net/tcp >> tcp_stat_<hostname>`
 - `# sleep 1`
 - `# cat /proc/net/tcp >> tcp_stat_<hostname>`
 - `# date >> tcp_stat_<hostname>`
3. Examine the output of the command, `netstat -canp --tcp | grep <remote IP:Port for conn>` for few minutes.
4. Examine the corresponding Rx buffer on the connection in question using this command: `netstat -canp --tcp | grep <remote IP:Port for conn>`. The RxBuffer value is configured using **ConnectionCfget**.
5. Examine the overall network statistics for other issues using the command, `netstat -i`.
6. Examine the overall network delay using the command ping.
7. View the software release information.

Recovery:

1. View the Connection Performance measurement report for the +/- 1 hour congestion event.
2. Examine the log file by using these commands:
 - `# date >> tcp_stat_<hostname>`

- # cat /proc/net/tcp >> tcp_stat_<hostname>
 - # sleep 1
 - # cat /proc/net/tcp >> tcp_stat_<hostname>
 - # sleep 1
 - # cat /proc/net/tcp >> tcp_stat_<hostname>
 - # sleep 1
 - # cat /proc/net/tcp >> tcp_stat_<hostname>
 - # date >> tcp_stat_<hostname>
3. Examine the output of the command `netstat -canp --tcp | grep <remote IP:Port for conn>` for few minutes.
 4. Examine the corresponding Rx buffer on the connection in question using this command: `netstat -canp --tcp | grep <remote IP:Port for conn>`. The RxBuffer value is configured using `ConnectionCfget`.
 5. Examine the overall network statistics for other issues using the command `netstat -i`.
 6. Examine the overall network delay using the command `ping`.
 7. View the software release information.
 8. Identify the most recent Connection Degraded event in the event log for the connection and use the Event's recovery steps to resolve the issue.
 9. Have the peer vendor examined their receive buffer usage during the event; if it is 0, this means the received messages were processed quickly and messages were not often stored in the receive buffer. In this case, Egress Transport Congestion was due to the peer not processing the message quickly enough (verify by examining the peer's receive buffer), or there is some delay introduced in the network
 10. If the problem persists, it is recommended to contact [My Oracle Support](#).

22103 - SCTP Connection Impaired

Alarm Group:

DIAM

Description:

One or more paths of the SCTP multi-homed connection is down.

Severity:

Minor

Instance:

<TransConnName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterSCTPConnectionImpairedAlarmNotify

Cause:

A host IP interface for one of the paths in the connection is down. One of following cases can cause this alarm:

- A host IP interface is down
- A host IP interface is unreachable from the peer
- A peer IP interface is down
- A peer IP interface is unreachable from the host
- Network path is down between one host IP and the other peer IP
- Network congestion or large latency in network (resulting loss or late arrival of packets)

Diagnostic Information:

1. Export the Diameter and IPFE configuration information from the active SOAM.
2. Retrieve the software release information.
3. Test each path in the connection to determine which one is causing the connection to be impaired.
4. Capture pcap (tcpdump) trace of packets on the local host (of the specific interface of the MP reporting the issue), or on remote peer or on IPFE (if it is TSA addressed) to see if data traffic or the heartbeat is running on the network

Recovery:

1. The alarm clears when the connection is operationally unavailable or all paths are operationally available.

Potential causes are:

- A host IP interface is down.
 - A host IP interface is unreachable from the peer.
 - A peer IP interface is down.
 - A peer IP interface is unreachable from the host.
 - Network path is down between one host IP and the other peer IP.
 - Network congestion or large latency in network (resulting loss or late arrival of packets).
2. Identify the most recent SCTP Connection Impaired event in the event log for the connection and use the event's recovery steps to resolve the issue.
 3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22104 - SCTP Peer is Operating with a Reduced IP Address Set

Alarm Group:

DIAM

Description:

The SCTP peer advertised less IP addresses than configured for the connection. If two IP addresses have been configured for the Local Node of a certain SCTP connection, but following the SCTP connection establishment the peer node has advertised only one IP address (less than the number of IP addresses configured for the local node), then Alarm 22104 is generated.

Severity:

Minor

Instance:

<TransConnName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterSCTPPeerReducedIPSetAlarmNotify

Cause:

When the operational status is Available and a connection is established over SCTP transport, the number of IP addresses advertised by the peer in INIT/INIT_ACK is less than the number of paths set by the connection configuration. For instance, the established connection has two IP addresses configured for the Local Node, but the peer node has advertised only one IP address.

Diagnostic Information:

View the networking configuration on the peer node.

Recovery:

1. When the operational status is Available and a connection is established over SCTP transport, the number of IP addresses advertised by the peer in INIT/INIT_ACK is less than the number of paths set by the connection configuration. For instance, the established connection has two IP addresses configured for the Local Node, but the peer node has advertised only one IP address.
2. The peer is not able to advertise more than one IP address either due to an error in its configuration or due to being affected by a network interface failure.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22105 - Connection Transmit Congestion

Alarm Group:

DIAM

Description:

Alarm is raised when the connection transmit buffer is congested; messages are discarded until condition clears. This error indicates the socket write cannot complete without blocking, which signals the socket buffer is currently full.

Severity:

Major

Instance:

<TransConnName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterConnectionTxCongestionAlarmNotify

Cause:

The socket write cannot complete without blocking, signaling that the socket buffer is currently full.

Diagnostic Information:

N/A.

Recovery:

1. The peer is not able to process the volume of traffic being offered on the connection. Reduce the traffic volume or increase the processing capacity on the peer.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22106 - Ingress Message Discarded: DA-MP Ingress MessageRate Control

Alarm Group:

DIAM

Description:

An ingress message is discarded due to connection (or DA-MP) ingress message rate exceeding connection (or DA-MP) maximum ingress MPS. (Deprecated by DSR 7.2 See [8010 - MplIngressDrop](#)).

Severity:

Major

Instance:

<MPHostName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterIngressMessageDiscardedAlarmNotify

Cause:

An ingress message is discarded or rejected in the following congestion scenarios:

- Connection maximum message rate exceeded.
- DA-MP maximum message rate exceeded.

Diagnostic Information:

1. From the event history, check the current message rate and the threshold rate for the diameter connection/DAMP node.
2. Check the maximum reserved ingress MPS for the DAMP on the Active SOAM server by navigating to **Diameter > Configuration > Connection Capacity Dashboard > Connection Reserved Ingress MPS Table**.
3. Ensure that the ingress MPS is less than the threshold for the diameter connection/DAMP.

Recovery:

1. The ingress MPS on the DA-MP is exceeding the MP Maximum ingress MPS. Maybe one or more DA-MPs is unavailable and traffic has been distributed to the remaining DA-MPs.
2. See if one or more peers are generating more traffic than is normally expected.
3. Make sure a sufficient number of DA-MPs is provisioned.
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22200 - MP CPU Congested

Alarm Group:

ExgStack

Description:

DA-MP CPU utilization threshold has been exceeded. Potential causes are:

- One or more peers are generating more traffic than is normally expected
- Configuration requires more CPUs for message processing than is normally expected
- One or more peers are answering slowly, causing a backlog of pending transactions
- A DA-MP has failed, causing the redistribution of traffic to the remaining DA-MPs

Severity:

Minor, Major, Critical, Warning

Instance

NA

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMpCpuCongestedNotify

Cause:

Potential causes are:

- One or more peers are generating more traffic than is normally expected.
- Configuration requires more CPUs for message processing than is normally expected.
- One or more peers are answering slowly, causing a backlog of pending transactions.
- A DA-MP has failed, causing the redistribution of traffic to the remaining DA-MPs.

Diagnostic Information:

1. Monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**.
 - a. The misconfiguration of server/client routing may result in too much traffic being distributed to the MP. Each MP in the server site should be receiving approximately the same ingress transactions per second.
 - b. There may be an insufficient number of MPs configured to handle the network traffic load. If all MPs are in congestion, then the traffic load to the server site is exceeding its capacity.
2. Examine the alarm log from **Main Menu > Alarms & Events**.
3. Examine the DA-MP status from **Status & Manage > Server**.

Recovery:

1. If one or more MPs in a server site has failed, the traffic is distributed between the remaining MPs in the server site. Monitor the **MP** server status from **Status & Manage > Server**.
2. The mis-configuration of DIAMETER peers may result in too much traffic being distributed to the MP. Monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. The Diameter Process may be experiencing problems. Examine the alarm log from **Alarms & Events**.

5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22201 - MpRxAllRate

Alarm Group:

DIAM

Description:

DA-MP ingress message rate threshold crossed.

Severity:

Minor, Major, Critical

Instance:

MpRxAllRate, DIAM

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMpRxAllRateNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed between the remaining MPs in the server site. MP server status can be monitored from the **Status & Manage > Server** page.
2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22202 - MpDiamMsgPoolCongested

Alarm Group:

DIAM

Description:

DA-MP Diameter message pool utilization threshold crossed.

Severity:

Minor, Major, Critical

Instance:

MpDiamMsgPool, DIAM

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMpDiamMsgPoolCongestedNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed between the remaining MPs in the server site. MP server status can be monitored from the **Status & Manage > Server** page.
2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. A software defect may exist resulting in PDU buffers not being deallocated to the pool. This alarm should not normally occur when no other congestion alarms are asserted. The alarm log should be examined using the Alarms & Events page.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22203 - PTR Buffer Pool Utilization

Alarm Group:

DIAM

Description:

The MP's PTR buffer pool is approaching its maximum capacity. If this problem persists and the pool reaches 100% utilization all new ingress messages will be discarded. This alarm should not normally occur when no other congestion alarms are asserted.

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed between the remaining MPs in the server site. MP server status can be monitored from the **Status & Manage > Server** page.
2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. A software defect may exist resulting in PTR buffers not being deallocated to the pool. This alarm should not normally occur when no other congestion alarms are asserted. The alarm log should be examined from the Alarms & Events page.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22204 - Request Message Queue Utilization

Alarm Group:

DIAM

Description:

The MP's Request Message Queue Utilization is approaching its maximum capacity. If this problem persists and the queue reaches 100% utilization all new ingress Request messages will be discarded. This alarm should not normally occur when no other congestion alarms are asserted.

Severity:

Minor, Major, Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterRequestMessageQueueUtilNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed between the remaining MPs in the server site. MP server status can be monitored from the **Status & Manage > Server** page.

2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. If no additional congestion alarms are asserted, the Request Task may be experiencing a problem preventing it from processing messages from its Request Message Queue. The alarm log should be examined from the **Alarms & Events** page.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22205 - Answer Message Queue Utilization

Alarm Group:

DIAM

Description:

The MP's Answer Message Queue Utilization is approaching its maximum capacity. If this problem persists and the queue reaches 100% utilization all new ingress Answer messages will be discarded. This alarm should not normally occur when no other congestion alarms are asserted.

Severity:

Minor, Major, Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterAnswerMessageQueueUtilNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed between the remaining MPs in the server site. MP server status can be monitored from the **Status & Manage > Server** page.
2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each MP can be monitored from the **Status &**

Manage > KPIs page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.

4. If no additional congestion alarms are asserted, the Answer Task may be experiencing a problem preventing it from processing messages from its Answer Message Queue. The alarm log should be examined from the **Alarms & Events** page.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22206 - Reroute Queue Utilization

Alarm Group:

DIAM

Description:

The MP's Reroute Queue is approaching its maximum capacity. If this problem persists and the queue reaches 100% utilization any transactions requiring rerouting will be rejected. This alarm should not normally occur when no other congestion alarms are asserted.

Severity:

Minor, Major, Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterRerouteQueueUtilNotify

Recovery:

1. An excessive amount of Request message rerouting may have been triggered by either connection failures or Answer time-outs. The status of connections should be examined from the **Diameter > Maintenance > Connections** page.
2. If no additional congestion alarms are asserted, the Reroute Task may be experiencing a problem preventing it from processing messages from its Reroute Queue. The alarm log should be examined using the **Alarms & Events** page.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22207 - DclTxTaskQueueCongested

Alarm Group:

DIAM

Description:

DCL egress task message queue utilization threshold crossed.

Severity:

Minor, Major, Critical

Instance:

<DA-MP Name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDclTxTaskQueueCongested

Recovery:

1. The alarm will clear when the DCL egress task message queue utilization falls below the clear threshold. The alarm may be caused by one or more peers being routed more traffic than is nominally expected.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22208 - DclTxConnQueueCongested

Alarm Group:

DIAM

Description:

DCL egress connection message queue utilization threshold crossed.

Severity:

Minor, Major, Critical

Instance:

<ConnectionName>

HA Score:

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDclTxConnQueueCongested

Recovery:

1. The alarm will clear when the DCL egress connection message queue utilization falls below the clear threshold. The alarm may be caused by peers being routed more traffic than nominally expected.
2. It is recommended to contact [My Oracle Support](#) for further assistance.

22209 - Message Copy Disabled

Alarm Group:

DIAM

Description:

Diameter Message Copy is disabled.

Severity:

Minor

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMessageCopyDisabledNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed between the remaining MPs in the server site. MP server status can be monitored from the **Status & Manage > Server** page.
2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP. The ingress traffic rate of each **MP** can be monitored from the **Status & Manage > KPIs** page. Each MP in the server site should be receiving approximately the same ingress transaction per second.
3. There may be an insufficient number of MPs configured to handle the network traffic load. The ingress traffic rate of each MP can be monitored from the **Status & Manage > KPIs** page. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
4. The Diameter Process may be experiencing problems. The alarm log should be examined using the **Alarms & Events** page.
5. If the problem persists, contact [My Oracle Support](#).

22214 - Message Copy Queue Utilization

Alarm Group:

DIAM

Description:

The DA-MP's Message Copy queue utilization is approaching its maximum capacity.

Severity:

Minor, Major, Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMsgCopyQueueUtilNotify

Recovery:

1. Reduce traffic to the MP.
2. Verify that no network issues exist between the DA-MP and the intended DAS peer(s).
3. Verify that the intended DAS peer has sufficient capacity to process the traffic load being routed to it.
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22221 - Routing MPS Rate

Alarm Group:

DIAM

Description:

Message processing rate for this MP is approaching or exceeding its engineered traffic handling capacity. The routing mps rate (MPS/second) is approaching or exceeding its engineered traffic handling capacity for the MP.

Severity:

Minor, Major, Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterRoutingMpsRateNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed amongst the remaining MPs in the server site.

MP server status can be monitored from **Status & Manage > Server Status**.

2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP.

The routing mps rate of each MP can be monitored from **Status & Manage > KPIs**. Each MP in the server site should be receiving approximately the same ingress transaction per second.

3. There may be an insufficient number of MPs configured to handle the network traffic load.

The routing mps rate of each MP can be monitored from **Status & Manage > KPIs**. If all MPs are in a congestion state then the ingress message rate to the MP is exceeding its capacity to process the messages.

4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22222 - Long Timeout PTR Buffer Pool Utilization

Alarm Group:

DIAM

Description:

The MP's Long Timeout PTR buffer pool is approaching its maximum capacity.

Severity:

Minor, Major, Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterLongTimeoutPtrBufferPoolUtilNotify

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed amongst the remaining MPs in the server site. Monitor the MP server status from **Status & Manage > Server Status**.
2. The misconfiguration of Pending Answer Timer assignment may result in excessive traffic being assigned to the Long Timeout PTR buffer Pool. View the Pending Answer Timer values via **Diameter > Configuration > Pending Answer Timers**. Examine the Pending Answer Timers assignment via the **Diameter > Configuration > Application Ids and Diameter > Configuration > Peer Nodes**.
3. The misconfiguration of Diameter peers may result in too much traffic being distributed to the MP. Monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. Each MP in the server site should be receiving approximately the same ingress transaction per second

4. There may be an insufficient number of MPs configured to handle the network traffic load. Monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. If all MPs are in a congestion state then the offered load to the server site is exceeding its capacity.
5. A software defect may exist resulting in Long Timeout PTR buffers not being de-allocated to the pool. This alarm should not normally occur when no other congestion alarms are asserted. Examine the alarm log from **Alarms & Events**.
6. If the problem persists, it is recommended to contact [My Oracle Support](#).

22223 - DA-MP Memory Utilization Threshold Crossed

Alarm Group:

DIAM

Description:

DA-MP memory utilization threshold crossed.

Severity:

Minor, Major, Critical

Instance:

System.RAM_UtilPct, DSR

HA Score:

Normal

Auto Clear Seconds:

0 (zero, no auto clear)

OID:

eagleXgDiameterMpMemCongestedNotify

Cause:

Following are the potential causes:

- One or more peers are generating more traffic than expected.
- Configuration requires more Physical Memory for message processing than expected.
- One or more peers are answering slowly, causing a backlog of pending transactions.
- A DA-MP failed, causing the redistribution of traffic to the remaining DA-MPs.

Diagnostic Information:

To diagnose the cause:

1. Monitor the ingress traffic rate of each MP from **Status & Message > KPIs**.
 - The mis-configuration of server/client routing may result in too much traffic being distributed to the MP. Each MP in the server site should be receiving approximately the same ingress transactions per second.

- There may be an insufficient number of MPs configured to handle the network traffic load. If all MPs are in congestion, then the traffic load to the server site is exceeding its capacity.
2. Examine the alarm log from **Main Menu > Alarms & Events**.
 3. Examine the DA-MP status from **Status & Manage > Server**.

Recovery:

1. Analyze and correct routing so the traffic load is balanced between MPs.
2. If all MPs are approaching or exceeding their engineered traffic handling capacity, add more MPs to the system and configure connections and routes to distribute traffic to new DA-MPs.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22224 - Average Hold Time Limit Exceeded

Alarm Group:

DIAM

Description:

The average transaction hold time has exceeded its configured limits.

This alarm is generated when KPI #10098 (TmAvgRspTime) exceeds DSR-wide engineering attributes associated with average hold time, defined in the DA-MP profile assigned to the DA- MP server. KPI #10098 is defined as the average time (in milliseconds) from when the routing layer (DRL) receives a request message from a downstream peer to the time that an answer response is sent to that downstream peer. The source measurement of KPI #10098 is the TmResponseTimeDownstreamMp (10093) measurement.

This alarm indicates the average response time (TmAvgRspTime) for messages forwarded by the Relay Agent is larger than what is defined for a deployment as per DA-MP profile assignment. One of these problems could exist:

- The IP network may be experiencing problems that are adding propagation delays to the forwarded request message and the answer response.
 - Verify the IP network connectivity exists between the MP server and the adjacent nodes.
 - View the event history logs for additional events or alarms from this MP server.
- One or more upstream nodes may be experiencing traffic overload.
- One or more MPs is experiencing traffic overload.
 - View the KPI Routing Recv Msgs/Sec.
 - View the CPU utilization of MPs by navigating to **Status & Manage > Server**.

Severity:

Minor, Major, Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterAvgHoldTimeLimitExceededNotify

Cause:

Alarm 22224 is generated when KPI #10098 (TmAvgRspTime) exceeds DSR-wide engineering attributes associated with average hold time, defined in the DA-MP profile assigned to the DA-MP server. KPI #10098 is defined as the average time (in milliseconds) from when the routing layer (DRL) receives a request message from a downstream peer to the time that an answer response is sent to that downstream peer. The source measurement of KPI #10098 is the TmResponseTimeDownstreamMp (10093) measurement.

The alarm thresholds are configurable on **Diameter Common > MPs > Profiles**.

- Average hold time minor alarm onset threshold
- Average hold time minor alarm abatement threshold
- Average hold time major alarm onset threshold
- Average hold time major alarm abatement threshold
- Average hold time critical alarm onset threshold
- Average hold time critical alarm abatement threshold

The severity of the alarm (Minor, Major, or Critical) is according to onset threshold/abatement threshold of each severity level. When the average hold time initially exceeds the average hold time for an alarm onset threshold, a minor, major, or critical alarm is triggered. When the average hold time subsequently exceeds a higher onset threshold, or drops below an abatement threshold, but is still above the minor alarm abatement threshold, the alarm severity changes based on the highest onset threshold crossed by the current average hold time.

Diagnostic Information:

If Alarm #22224 is raised, then it indicates the average response time (TmAvgRspTime) for messages forwarded by the Relay Agent is larger than the defined for a deployment as per DA-MP profile assignment. One of the following problems could exist:

- The IP network may be experiencing problems that are adding propagation delays to the forwarded request message and the answer response.
 - Verify the IP network connectivity exists between the MP server and the adjacent nodes.
 - View the event history logs for additional events or alarms from this MP server.

- The IP network may be experiencing problems that are adding propagation delays to the forwarded request message and the answer response.
- One or more upstream nodes may be experiencing traffic overload.
- One or more MPs is experiencing traffic overload.
 - View the KPI Routing Recv Msgs/Sec.
 - View the CPU utilization of MPs by navigating to **Status & Manage > Server**.

Recovery:

1. The average transaction hold time is exceeding its configured limits, resulting in an abnormally large number of outstanding transactions that may be leading to excessive use of resources like memory.
 - Reduce the average hold time by examining the configured Pending Answer Timer values and reducing any values that are unnecessarily large or small.
 - Identify the causes for the large average delay between the DSR sending requests to the upstream peers and receiving answers for the requests.
 - Confirm the peer node(s) or DSR is in overload by viewing KPI/Measurements/CPU usage and take corrective action.
 - Identify the main contributor to increased value of (T2-T1) such as a time difference between the routing layer (DRL) receiving the request to the DRL sending the answer to downstream peer.
2. The alarm thresholds are configurable on **Diameter Common > MPs > Profiles**:
 - Average hold time minor alarm onset threshold
 - Average hold time minor alarm abatement threshold
 - Average hold time major alarm onset threshold
 - Average hold time major alarm abatement threshold
 - Average hold time critical alarm onset threshold
 - Average hold time critical alarm abatement threshold

The severity of the alarm (Minor, Major, or Critical) is according to the onset threshold/abatement threshold of each severity level. When the average hold time initially exceeds the average hold time for an alarm onset threshold, a minor, major, or critical alarm is triggered. When the average hold time subsequently exceeds a higher onset threshold, or drops below an abatement threshold, but is still above the minor alarm abatement threshold, the alarm severity changes based on the highest onset threshold crossed by the current average hold time.

3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22225 - Average Message Size Limit Exceeded

Alarm Group:

DIAM

Description:

The size of the average message processed by DSR has exceeded its configured limits.

The alarm is generated when the measurement RxAvgMsgSize reaches the DSR-wide engineering attributes, defined in the DaMpProfileParameters corresponding to the MP profile being used. RxAvgMsgSize is defined as the size of the average message processed by DSR.

This alarm indicates DSR has encountered a message it can accept for processing, but might not continue processing if the message size increases more than the maximum supported message size. This increase can be due to standard diameter processing (for example, Route Record additions to requests) or due to custom processing (for example, Mediation modifying AVPs).

Severity:

Minor, Major, Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterAvgMsgSizeLimitExceededNotify

Cause:

Alarm 22225 raises when the measurement RxAvgMsgSize reaches the DSR-wide engineering attributes, defined in the DaMpProfileParameters corresponding to the MP profile being used.

RxAvgMsgSize is defined as the size of the average message processed by DSR. The alarm thresholds are configurable from **Diameter Common > MPs > Profiles**

- Average message size minor alarm onset threshold
- Average message size minor alarm abatement threshold
- Average message size major alarm onset threshold
- Average message size major alarm abatement threshold
- Average message size critical alarm onset threshold
- Average message size critical alarm abatement threshold

The severity of alarm (Minor, Major, or Critical) is according to onset/abatement threshold of each severity level. When the average message size reaches the value of the respective alarm onset/abatement threshold, within 3 seconds the alarm is raised with severity Minor, Major, or Critical, based on the value reached by the average message size.

Diagnostic Information:

This event indicates that DSR has encountered a message that it can accept for processing, but might not continue processing if the message size increases more than the maximum supported message size. This increase can be due to standard diameter

processing (for example, RouteRecord additions to requests) or due to custom processing (for example, Mediation modifying AVPs).

Recovery:

1. Examine the traffic coming from connected peers to see if any of them are sending abnormally large messages, and look for any special processing rules being applied by DSR to that message.
2. The alarm thresholds are configurable on **Diameter Common > MPs > Profiles:**
 - Average hold time minor alarm onset threshold
 - Average hold time minor alarm abatement threshold
 - Average hold time major alarm onset threshold
 - Average hold time major alarm abatement threshold
 - Average hold time critical alarm onset threshold
 - Average hold time critical alarm abatement threshold

The severity of the alarm (Minor, Major, or Critical) is according to the onset threshold/abatement threshold of each severity level. When the average hold time initially exceeds the average hold time for an alarm onset threshold, a minor, major, or critical alarm is triggered. When the average hold time subsequently exceeds a higher onset threshold, or drops below an abatement threshold, but is still above the minor alarm abatement threshold, the alarm severity changes based on the highest onset threshold crossed by the current average hold time.

3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22328 - Connection is processing a higher than normal ingress messaging rate

Alarm Group:

DIAM

Description:

The diameter connection specified in the alarm instance is processing a higher than normal ingress messaging rate.

Severity:

- Minor (if all of the following are true):
 - The average ingress MPS rate the connection is processing has reached the percentage of the connection's maximum ingress MPS rate configured for the connection minor alarm threshold.
 - The average ingress MPS rate the connection is processing has not yet reached the percentage of the connection's maximum ingress MPS rate configured for the connection major alarm threshold.
- Major (if the following are true):

- The average ingress MPS rate the connection is processing has reached the percentage of the connection's maximum ingress MPS rate configured for the connection major alarm threshold.

Instance:

The name of the diameter connection as defined by the TransportConnection table

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterIngressMpsRateNotify

Cause:

Alarm # 22328 raises the severity,

Minor (if all of the following are true):

- The average ingress MPS rate that the connection is processing has reached the percentage of the connection's maximum ingress MPS rate configured for the connection minor alarm threshold.
- The average ingress MPS rate that the connection is processing has not yet reached the percentage of the connection's maximum ingress MPS rate configured for the connection major alarm threshold.

Major (if all of the following are true):

- The average ingress MPS rate that the connection is processing has reached the percentage of the connection's maximum ingress MPS rate configured for the connection major alarm threshold.

Diagnostic Information:

To get further information regarding this issue:

1. Examine the alarm log from **Main Menu > Alarms & Events** on Active SOAM Server.

Main Menu: Alarms & Events -> View Active (Filtered)

Filter* Tasks Graph* Wed Nov 29 02:12:44 2017 EST

Seq #	Event ID	Timestamp	Severity	Product	Process	NE	Server	Type	Instance
124802	22328	2017-11-29 02:11:43.850 EST	MINOR	DPI	dsr	SOAM_NE	RDU03MP-Server	DIAM	IcRate[5], DIAM
	IcRate		GN_ABVTHRESHWRN Metric IcRate[5] above minor threshold ^4 Current: 5015 ... More...						

2. Get the Connection ID **IcRate[Connection_Id]** from Alarm Details and the corresponding Connection Name from **TransportConnectionTable** on active SOAM server.
3. Investigate the connection's remote Diameter peer (the source of the ingress messaging) to determine why they are sending the abnormally high traffic rate.

Recovery:

1. The Diameter connection specified in the Alarm Instance field is processing a higher than expected average ingress Diameter message rate. The alarm thresholds for minor and major alarms are configured in the Capacity Configuration Set used by the Diameter connection.
2. The message rate used for this alarm is an exponentially smoothed 30 second average. This smoothing limits false alarms due to short duration spikes in the ingress message rate.
3. If the alarm severity is minor, the alarm means the average ingress message rate has exceeded the minor alarm threshold percentage of the maximum ingress MPS configured for the connection.
4. If the alarm severity is major, the alarm means the average ingress message rate has exceeded the major alarm threshold percentage of the maximum ingress MPS configured for the connection.
5. This alarm is cleared when the average ingress message rate falls 5% below the minor alarm threshold, or the connection becomes disabled or disconnected. This alarm is downgraded from major to minor if the average ingress message rate falls 5% below the major alarm threshold.
6. If the average ingress message rate is determined to be unusually high, investigate the connection's remote Diameter peer (the source of the ingress messaging) to determine why they are sending the abnormally high traffic rate; otherwise, consider increasing either the connection's maximum ingress MPS rate or the connection's alarm thresholds.
7. If the problem persists, it is recommended to contact [My Oracle Support](#).

22349 - IPFE Connection Alarm Aggregation Threshold

Alarm Group:

DIAM

Description:

This alarm occurs when there are a 'Critical' number of IPFE connection alarms for the network element.

The Alarm Thresholds are configurable using the Alarm Threshold Options tab on **Diameter > Configuration > System Options**.

The IPFE connection may not be established for a variety of reasons. The operational status of this connection is displayed on the GUI as unavailable and Alarm 22101 Connection Unavailable is raised.

When the number of unavailable IPFE connections exceeds the defined threshold, IPFE Connection Failure Major/Critical Aggregation Alarm Threshold (default is 100/200), alarm 22349 is raised by the DSR.

Severity:

Major, Critical

Note: The Critical threshold may be disabled by setting the Critical Threshold to zero using the Alarm Threshold Options tab on **Diameter > Configuration > System Options**.

Instance:

<NetworkElement>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterIPFEConnUnavailableThresholdReachedNotify

Cause:

The IPFE connection may not be established for a variety of reasons. The operational status of this connection is displayed on the GUI as unavailable and Alarm 22101, Connection Unavailable is raised.

Main Menu: Diameter -> Maintenance -> Connections

Filter	Info	Tasks				
Connection Name	MP Server Hostname	Admin State	Operational Status	CPL	Operational Reason	Connecti
AA_DPD_Resp	MAKO-en1b7	Disabled	Unavailable	99	Disabled	Responde
AAabterm	MAKO-en1b7	Disabled	Unavailable	99	Disabled	Responde
AFixedCon1	MAKO-en1b7	Enabled	Unavailable	99	Connecting	Initiator O
AIPFEInit1	MAKO-en1b7	Disabled	Unavailable	99	Disabled	Initiator O
AIPFEInit2	MAKO-en1b7	Disabled	Unavailable	99	Disabled	Initiator O
APrimaryUseSecondaryIp	MAKO-en1b7	Enabled	Unavailable	99	Listening	Responde
ATsa1RTest1	MAKO-en1b7	Disabled	Unavailable	99	Disabled	Responde
ATsa1RTest2	MAKO-en1b7	Disabled	Unavailable	99	Disabled	Responde
ATsa1RTest	MAKO-en1b7	Disabled	Unavailable	99	Disabled	Responde

When the number of unavailable IPFE connections exceeds the defined threshold, IPFE Connection Failure Major/Critical Aggregation Alarm Threshold (default is 100/200), alarm 22349 is raised by the DSR.

Diagnostic Information:

Perform the following:

- Use Wireshark to capture the diameter traffic on all MPs under the concerned TSA list and the primary IPFE. Save the PCAP traffic capture generated by Wireshark.
- Verify the connection configurations (IP addresses, ports, peer node, protocol) are correct.

- Verify peer-connection configurations (protocol, remote/local IP address, remote/local port) matches local connection configurations.
- Verify the connection's transport protocol and/or port are not being blocked by a network firewall or other ACL in the network path.

Recovery:

1. Navigate to **Diameter > Maintenance > Connection** to monitor IPFE Connection status.
2. Confirm peer connection configuration (protocol, remote/local IP address, remote/local port) matches the local connection configuration.
3. Confirm the connection's transport protocol and/or port are not being blocked by a network firewall or other ACL in the network path.
4. Verify the peers in the Route List are not under maintenance.
5. Use Wireshark to analyze all the captured PCAP data to find where the message exchange is broken or failed. Wireshark should be the main tool used to diagnose the unavailable connection.
6. Based on the PCAP file, correct the configuration if the issue is on the DSR side. The Alarm will be cleared automatically when the numbers of unavailable IPFE connections are under the IPFE Connection Failure Critical/Major Aggregation Alarm Threshold.
7. If the issue is on the DSR side or you are not sure, it is recommended to contact [My Oracle Support](#) for assistance.

22350 - Fixed Connection Alarm Aggregation Threshold

Alarm Group:

DIAM

Description:

This alarm occurs when there are a critical number of fixed connection alarms for the DA-MP.

Note: The alarm thresholds are configurable using the Alarm Threshold Options tab on **Diameter > Configuration > System Options**.

Severity:

Major, Critical

Note: The Critical threshold may be disabled by setting the Critical Threshold to zero using the Alarm Threshold Options tab on **Diameter > Configuration > System Options**.

Instance:

<DA-MP-Hostname>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterConnUnavailableThresholdReachedNotify

Cause:

The alarm #22350 raises when there are a critical number of fixed connection alarms for the DA-MP.

Diagnostic Information:

To get further information regarding this issue:

1. Navigate to **Diameter > Maintenance > Connection** to find all the connections with a problem for the specific MP.
2. For each connection with a problem, verify:
 - a. The remote host is reachable from the local MP by using ssh to the MP and pinging the remote server IP (if using IP address) or server FQDN (if using FQDN)
 - b. DNS availability should be tested by pinging the DNS server IP
 - c. FQDN resolving should be tested by using nslookup to check the FQDN resolving on the MP
3. If the above tests reveal the remote host is not reachable, then verify that there is no network problem on the remote server.
4. If the remote server is reachable, then verify the processes are running correctly.
 - a. Verify the local DSR process is running by checking the `ps -ef` output
 - b. Verify the local node is listening on the correct port by using `netstat -na` and checking the correct transport type, tcp/sctp port is listening
 - c. Use Wireshark or tcpdump to capture traffic messages, and verify the connection is established (confirm the handshake process is occurring for SCTP or TCP)
5. If the port is not listening, or the handshake procedure is not occurring, then the process or server may be in trouble.
6. If the connection/association is established, then ensure that the Diameter handshake is happening and correct, by checking the Diameter CEX message exchange, for information like server FQDN, IP address, or applications supported; mismatching information causes the connection to abort.
7. If Diameter handshake is good, then observe the health of the Diameter connection by verifying the DWR messages are answered correctly.

Recovery:

1. Navigate to **Diameter > Maintenance > Connection** to monitor Fixed Connection status.

2. Confirm the peer connection configuration (protocol, remote/local IP address, remote/local port) matches the local connection configuration.
3. Confirm the connection's transport protocol and/or port are not being blocked by a network firewall or other ACL in the network path.
4. Verify the peers in the Route List are not under maintenance.
5. Navigate to **Diameter > Configuration > System Options** to check the **Alarm Threshold Options** setting. Modify the value if it is set too low.
6. It is recommended to contact [My Oracle Support](#) for assistance.

22900 - DPI DB Table Monitoring Overrun

Event Type:

DIAM

Description:

The COMCOL update sync log used by DB Table monitoring to synchronize Diameter Connection Status among all DA-MP RT-DBs has overrun. The DA-MP's Diameter Connection Status sharing table is automatically audited and re-synced to correct any inconsistencies.

Severity:

Info

Instance:

<DbTblName>

Note: <DbTblName> refers to the name of the Diameter Connection Status Sharing Table the Diameter Connection status inconsistency that was detected.

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDpiTblMonCbOnLogOverrunNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#) if this alarm is constantly being asserted and cleared.

22901 - DPI DB Table Monitoring Error

Event Type:

DIAM

Description:

An unexpected error occurred during DB Table Monitoring.

Severity:

Info

Instance:

DpiTblMonThreadName

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDpiSldbMonAbnormalErrorNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#).

22950 - Connection Status Inconsistency Exists

Alarm Group:

DIAM

Description:

Diameter Connection status inconsistencies exist among the DA-MPs in the DSR signaling NE.

Severity:

Critical

Instance:

<DbTblName> Name of the Diameter Connection Status Sharing Table where the Diameter Connection status inconsistency was detected.

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterConnStatusInconsistencyExistsNotify

Cause:

The data inconsistency might have caused due to the following reasons:

- Network issue, the change log is not distributed to the destination MP.
- Process error (update is disturbed) in executing change on the destination MP.

Diagnostic Information:

No specific diagnostic information is required if alarm clears in the next audit/sync. Analyze the error log if the problem persists.

Recovery:

1. No action necessary.

Note: DA-MP's SLDB tables are automatically audited and re-synchronized to correct inconsistencies after a log overrun has occurred. The Automatic Data Integrity Check, which was introduced in cm6.2, periodically scans almost the entire local IDB for integrity. The initial default period is 30 minutes.

22960 - DA-MP Profile Not Assigned

Alarm Group:

DIAM

Description:

This alarm is generated when a DA-MP is brought into service and a DA-MP configuration profile has not been assigned to the DA-MP during DSR installation/upgrade procedures.

Severity:

Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDaMpProfileNotAssignedNotify

Cause:

Alarm #22960 raises when a DA-MP is brought into service and a DA-MP configuration profile has not been assigned to the DA-MP during DSR installation/upgrade procedures.

Diagnostic Information:

Examine the error log in **Main Menu > Alarms & Events**.

Recovery:

1. From the DSR OAM GUI, navigate to **Diameter Common > MPs > Profile Assignments** to assign a DA-MP profile to the DA-MP.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22961 - Insufficient Memory for Feature Set

Alarm Group:

DIAM

Description:

The available memory (in kilobytes) for feature set is less than the required memory (in kilobytes). This alarm is raised when a DA-MP is brought into service and a DA-MP configured DiameterMaxMessageSize in DpiOption table value is greater than 16KB, but the available memory on DA-MP is less than 48GB.

Severity:

Critical

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterInsufficientAvailMemNotify

Cause:

Alarm #22961 raises when a DA-MP is brought into service and a DA-MP configured DiameterMaxMessageSize in DpiOption table value is greater than 16KB but the available memory on DA-MP is less than 48GB.

Diagnostic Information:

N/A.

Recovery:

1. Make additional memory available on the DA-MP for the configured DiameterMaxMessageSize.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

25805 - Invalid Shared TTG Reference

Alarm Group

DIAM

Description

Invalid Shared TTG Reference

Severity

Minor

Instance

<Route List Name>&<Route Group Name>&<TTG SG Name>&<TTG Name>

HA Score

Normal

Auto Clear Seconds

N/A

OID

eagleXgDiameterDoicInvalidSharedTtgRefNotify

Recovery

1. For the Route List named in the alarm instance, edit its configuration and delete the association to the non-existent Shared TTG. Then,
2. If desired, re-create the Shared TTG at its host site, and re-add the association to the Route List/Route Group.

Note: Because, internally, the association of a TTG to the RL/RG is based on an internal ID, (not the TTG name), it is not valid to leave the original association in the Route List configuration and simply create a new Shared TTG with original name. This will not work, as the internal ID for the original TTG will not be the same as the ID for the new TTG (even though the TTG name is the same).

25806 - Invalid Internal SOAM Server Group Designation

Alarm Group

DIAM

Description

Invalid Internal SOAM Server Group Designation

Severity

Minor

Instance

<Route List Name>&<Route Group Name>&<TTG SG Name>&<TTG Name>

HA Score

Normal

Auto Clear Seconds

N/A

OID

eagleXgDiameterDoicInvalidInternalSoamSgDesignationNotify

Recovery

1. For the Route List named in the alarm instance, edit its configuration and delete the association to the Shared TTG. This will clear the alarm. The association can simply be re-added to restore integrity to the configuration.

Range Based Address Resolution (RBAR) Alarms and Events (22400-22424)

22400 - Message Decoding Failure

Event Type:

RBAR

Description:

A message received was rejected because of a decoding failure.

Severity:

Info

Instance:

<MPName>

HA Score:

Generic Application Alarms and Events (22500-22599)

Note: These alarms are generic across the various DSR applications with some details varying depending on the application generating the alarm.

22500 - DSR Application Unavailable

Alarm Group:

APPL

Description:

DSR application is unable to process any messages because it is unavailable.

Severity:

Critical

Instance:

<DSR Application Name>

Note: The value for DSR Application Name varies depending on the DSR application generating the alarm (DCA, FABR, Policy DRA, RBAR, etc.). Use the name that corresponds to the specific DSR application in use.

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDsrApplicationUnavailableNotify

Cause:

The alarm #22500 is raises:

- When the DSR application completes initialization and determines its operational status is unavailable after changing its admin state from disabled to enabled.

- When the DSR application is in enabled state and the following DSR application operational status changes occur:
 - Available → Unavailable
 - Degraded → Unavailable

This alarm is clears:

- When DSR application is in enabled state and the following DSR application operational status changes occur:
 - Unavailable → Available
 - Unavailable → Degraded
- If the Diameter process is stopped.
- If the DSR application admin state change from Enabled > Disabled.

Diagnostic Information:

- A DSR application operation status becomes unavailable when either the Admin State is set to Disable with the Forced Shutdown option, or the Admin State is set to Disable with the Graceful Shutdown option and the Graceful Shutdown timer expires.
- A DSR application can also become unavailable when it reaches Congestion Level 3 if enabled.

Note: This alarm is NOT raised when the DSR application is shutting down gracefully or application is in Disabled state. Only the DSR Application operational status is changed to unavailable.

Recovery:

1. Display and monitor the DSR application status by navigating to **Diameter > Maintenance > Applications** in the SO GUI. Verify the Admin State is set as expected.
2. A DSR application operation status becomes unavailable when either the Admin State is set to disable with the Forced Shutdown option, or the Admin State is set to disable with the Graceful Shutdown option and the Graceful Shutdown timer expires.
3. A DCA application that defines a logical-to-physical U-SBR DB mapping becomes unavailable if the U-SBR DBs are not enabled or their sub-resources are unreachable. The status of the U-SBR DBs can be monitored from **SBR > Maintenance > SBR DB Status**.

Note: A DCA application can also become unavailable if there are no production or trial versions available. Trial DA-MPs run the production version if a trial version is not available. Non-Trial DA-MPs run only the production version.

4. Check the Event History logs for additional DIAM events or alarms for this MP server.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

22501 - DSR Application Degraded

Alarm Group:

APPL

Description:

Unable to forward requests to the DSR application because it is degraded.

Severity:

Major

Instance:

<DSR Application Name>

Note: The value for DSR Application Name varies depending on the DSR application generating the alarm (DCA, PCA, FABR, Policy DRA, RBAR, etc.). Use the name that corresponds to the specific DSR application in use.

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDsrApplicationDegradedNotify

Cause:

The alarm #22501 raises when the DSR application is in enabled state and the following DSR Application Operational Status changes occur:

- Available → Degraded
- Unavailable → Degraded

This alarm is cleared when the DSR application is in enabled state and following DSR Application Operational Status changes occur:

- Degraded → Available
- Degraded → Unavailable

Diagnostic Information:

- A DSR application becomes degraded when the DSR application becomes congested if enabled. This alarm is NOT raised when the DSR application is shutting down gracefully or application is in the disabled state.

- DSR application status can be monitored from **Diameter > Maintenance > Applications**. Verify the admin state is set as expected.. Check the Event History logs for additional DIAM events or alarms from this MP server.

Recovery:

1. Display and monitor the DSR application status by navigating to **Diameter > Maintenance > Applications** in the SO GUI. Verify the Admin State is set as expected.
2. A DSR application becomes degraded when the DSR application becomes congested, if enabled.

Note: This alarm is NOT raised when the DSR application is shutting down gracefully or application is in the disabled state. Only the DSR application operational status is changed to unavailable.

3. Check the Event History logs for additional DIAM events or alarms for this **MP** server.
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22502 - DSR Application Request Message Queue Utilization

Alarm Group:

APPL

Description:

The DSR Application Request Message Queue Utilization is approaching its maximum capacity.

Severity:

Minor, Major, Critical

Instance:

<Metric ID>, <DSR Application Name>

Note: The value for Metric ID for this alarm varies (RxPdraRequestMsgQueue, RxCpaRequestMsgQueue, or RxDcaRequestMsgQueue[<DcaDalId.dalId>], for example) depending on which DSR application generates the alarm (CPA, DCA, FABR, Policy DRA, RBAR, etc.). Use the ID that corresponds to the specific DSR application in use.

Note: The value for DSR Application Name will vary depending on the DSR application generating the alarm (CPA, DCA, FABR, PCA, Policy DRA, RBAR, etc.). Use the name that corresponds to the specific DSR application in use.

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDsrApplicationRequestQueueUtilNotify

Cause:

Alarm #22502 is raises:

- When DSR Application Request Message Queue Utilization is approaching its maximum capacity.
- If this problem persists and the queue reaches 100% utilization all new ingress Request messages will be discarded.

Diagnostic Information:

To get further information regarding this issue:

1. Examine the alarm log from **Main Menu > Alarms & Events** on the active SOAM server.

Main Menu: Alarms & Events -> View Active (Filtered)

Wed Nov 29 04:27:52 2017 EST

Filter* Tasks Graph*									
RDU03S0SG									
Seq #	Event ID	Timestamp	Severity	Product	Process	NE	Server	Type	Instance
125713	Alarm Text		Additional Info						
	22502	2017-11-29 04:27:27.384 EST	MAJOR	DPI	dsr	SOAM_NE	RDU03MP-Server	APPL	RxDcaRequestMsgQueue[DSA], DCA
DSR Application Request Message Queue Utilization			GN_ABVTHRESHWRN Metric RxDcaRequestMsgQueue[DSA] above major threshold ^A... More...						

2. This alarm should not normally occur when no other congestion alarms are asserted.

Recovery:

1. Display and monitor the DSR application status by selecting **Diameter > Maintenance > Applications** in the SO GUI. Verify the Admin State is set as expected.

The DSR application's Request Message Queue Utilization is approaching its maximum capacity. This alarm should not normally occur when no other congestion alarms are asserted.

2. Application Routing might be mis-configured and is sending too much traffic to the DSR Application. Verify the configuration by selecting **Diameter > Configuration > Application Route Tables** in the SO GUI.
3. If no additional congestion alarms are asserted, the DSR application task might be experiencing a problem that is preventing it from processing messages from its Request Message Queue. Examine the Alarm log in **Alarms & Events** on the active SOAM server.
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22503 - DSR Application Answer Message Queue Utilization

Alarm Group:

APPL

Description:

The DSR Application Answer Message Queue Utilization is approaching its maximum capacity.

Severity:

Minor, Major, Critical

Instance:

<Metric ID>, <DSR Application Name>

Note: The value for Metric ID for this alarm varies (RxPdraAnswerMsgQueue, RxCpaAnswerMsgQueue, or RxDcaRequestMsgQueue[<DcaDalId.dalId>], for example) depending on which DSR application generates the alarm (CPA, DCA, FABR, Policy DRA, RBAR, etc.). Use the ID that corresponds to the specific DSR application in use.

Note: The value for the DSR Application Name varies depending on the DSR application generating the alarm (CPA, PCA, FABR, Policy DRA, RBAR, DCA, etc.). Use the name that corresponds to the specific DSR application in use.

HA Score:

Normal

Auto Clear Seconds:

Full Address Based Resolution (FABR) Alarms and Events (22600-22640)

22600 - Message Decoding Failure

Event Type:

FABR

Description:

Message received was rejected because of a decoding failure. While parsing the message, the message content was inconsistent with the "Message Length" in the message header. These protocol violations can be caused by the originator of the message (identified by the Origin-Host AVP in the message), the peer who forwarded the message to this node, or any intermediate node that modifies the message.

Severity:

3. It is recommended to contact [My Oracle Support](#) for assistance.

22603 - No Routing Entity Address AVPs

Event Type:

FABR

Description:

Message could not be routed because no address AVPs were found in the message and the Routing Exception was configured to send an Answer response.

Severity:

Info

Instance:

<AddrResolution>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterFabrNoRoutingEntityAddrAvpNotify

Recovery:

1. If this event is considered abnormal, then validate which AVPs are configured for routing with the Application ID and Command Code using **FABR > Configuration > Address Resolutions**.
2. The currently provisioned Application Routing Rules can be viewed using **Diameter > Configuration > Application Route Tables**.
3. It is recommended to contact [My Oracle Support](#) for assistance.

22604 - No Valid User Identity Addresses Found

Event Type:

FABR

Description:

No valid User Identity Address is found in the configured AVPs contained in the ingress message. FABR searches for a valid Routing Entity address in the ingress Diameter message based on a Routing Entity Preference List assigned to the ordered pair (Application ID, Command Code) via user-defined configuration. This event is raised if a valid Routing Entity address cannot be found using any of the Routing Entity types in the Routing Entity Preference List and if the Routing Exception Action associated with this failure is set to Send Answer response .

Severity:

Info

Instance:

<AddrResolution>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterFabrNoValidUserIdentityAddrFoundNotify

Cause:

FABR searches for a valid Routing Entity address in the Ingress Diameter Message based on a **Routing Entity Preference** List assigned to the ordered pair (Application ID, Command Code) via user-defined configuration. This event raises if a valid **Routing Entity** address cannot be found using any of the **Routing Entity** types in the **Routing Entity Preference** List and if the **Routing Exception Action** associated with this failure is set to **Send Answer Response**.

Diagnostic Information:

Alarm #22604 raises if FABR is unable to decode the user configured AVPS from the **Ingress Diameter Message** and yield a routing entity address. This may be a normal event or an event associated with mis-provisioned address resolution configuration. If this event is considered abnormal, then the user should validate which AVPs are configured for routing with the Application ID and Command Code using the FABR GUI screen.

The associated measurement tag for this event is **RxFabrResolFailNoValidAddr (10633)**. This holds the number of request messages received with at least Routing Entity Address AVP, but no valid Routing Entity Addresses were found.

Recovery:

1. If this event is considered abnormal, then navigate to **FABR > Configuration > Address Resolutions** to validate which AVPs are configured for routing with the Application ID and Command Code.
2. Navigate to **Diameter > Configuration > Application Route Tables** to view the currently provisioned Application Routing rules.
3. It is recommended to contact [My Oracle Support](#) for assistance.

22605 - No Destination address is found to match the valid User Identity address

Event Type:

FABR

Description:

Message could not be routed because the valid user identity address extracted from the message did not resolve to a destination address. The Routing Exception was configured to send an Answer response. Please verify the provisioning in the address resolution table and the data provided in the SDS corresponding to this address/resolution entry.

The FABR address resolution table entry may be misconfigured or the destination address associated with User Identity address from the message and the destination type configured in the address resolution table may be missing from the address mapping configuration. The destination address associated with User Identity address derived may be missing from the address mapping configuration on DP/SDS.

Severity:

Info

Instance:

<AddrResolution>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterFabrNoAddrFoundAtDpNotify

Recovery:

1. Validate the address resolution table entry and verify that a valid destination address is associated with the user identity address by using DP configuration.

For additional information, see Subscriber Database Server online help.

2. It is recommended to contact [My Oracle Support](#) for assistance.

22606 - Database or DB connection error

Event Type:

The destination address associated with User Identity address derived is blacklisted in the address mapping configuration on DDR.

2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22631 - FABR DP Response Task Message Queue Utilization

Alarm Group:

FABR

Description:

The FABR Application's DP Response Message Queue Utilization is approaching its maximum capacity.

Severity:

Minor, Major, Critical

Instance:

RxFabrDpResponseMsgQueue, FABR

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterFabrAppDpResponseMessageQueueUtilizationNotify

Recovery:

1. This alarm may occur due to persistent overload conditions with respect to database response processing.
2. It is recommended to contact [My Oracle Support](#) for assistance.

22632 - ComAgent Registration Failure

Alarm Group:

FABR

Description:

FABR application is unavailable and DSR cannot successfully process FABR traffic.

Severity:

Critical

Instance:

Full Address Based Resolution

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterComAgentRegistFailNotify

Cause:

This alarm is raised when ComAgent fails to register:

- Service with DPService.
 - The DPService routed service entry missing in ComAgent table.
 - FABR routing service has been enabled on the MP blade, but DP routed service entry is not present in the ComAgtRoutedService table on MP blade.
- ServiceNotificationHandler after the successful ComAgent service registration.

Diagnostic Information:

1. Check the ComAgtRoutedService table entries, by running the below command on the MP1 command prompt. `iqt -p -s' | ' ComAgtRoutedService`
2. Entry corresponding to the DP routed service used by FABR must be present with `id=11` and `name=DPService`. For example: `11 | DPService | No | Yes | 0`

Recovery:

1. Check the ComAgtRoutedService table entries, by running the below command on the MP1 command prompt.

```
iqt -p -s' | ' ComAgtRoutedService
```

2. Entry corresponding to the DP routed service used by FABR must be present with `id=11` and `name=DPService`. For example:

```
11 | DPService | No | Yes | 0
```

3. Disable the FABR application to clear the ComAgent Service Registration Failure alarm.

4. Check the ComAgtRoutedService table on NOAM server blade to identify if there is any mismatch with the MP blade.
5. Check the ComAgtRoutedService table on SOAM server blade to identify if there is any mismatch with the MP blade (in case of 3-tier architecture).
6. If DP routed service entry is not present, then add it to the MP blade using the `ivi` command (after turning off the inetrep using `pm.set off inetrep`), then restart the inetrep process.

Afterwards, please restart the DSR process by running `pm.set off dsr;` followed by `pm.set on dsr;` on MP blade command prompt.

7. It is recommended to contact [My Oracle Support](#) for assistance.

Recovery:

1. The availability of the Policy DRA function to receive and process ingress messages is based on its administration state (Enabled or Disabled) and the status of the SBR Binding and Session resources.
2. The availability of the Online Charging DRA function to receive and process ingress messages is based on its administration state (Enabled or Disabled), OCS configuration, and the status of the SBR Session resource.
3. The PCA function is unavailable to receive and process ingress messages for one of the following reasons:
 - "Insufficient Binding SBR Resources" - The number of Binding SBR sub-resources available is less than the minimum number required. Refer to the Recovery steps for Alarm [22722 - Policy Binding Sub-resource Unavailable](#), which will also be asserted.
 - "Insufficient Session SBR Resources" - The number of Session SBR sub-resources available is less than the minimum number required. Refer to the Recovery steps for Alarm [22723 - Policy and Charging Session Sub-resource Unavailable](#), which will also be asserted.
 - "No OCSs Configured at Site" - At least one OCS is required to be locally configured. Use the SOAM GUI Main Menu **Policy and Charging > Configuration > Online Charging DRA > OCSs** to configure an OCS at the site.
 - "Session DB has not been created" - A Session SBR Database must be configured for each Policy and Charging Mated Sites Place Association. Use the Network OAM GUI Main Menu **Policy and Charging > Configuration > SBR Databases** to configure a Session SBR Database.
 - "Binding DB has not been created" - For P-DRA, a Binding SBR Database must be configured. Use the Network OAM GUI Main Menu **Policy and Charging > Configuration > SBR Databases** to configure a Binding SBR Database.
 - "Session DB's admin state is not Enabled" - A Session SBR Database must be Enabled for each Policy and Charging Mated Sites Place Association where signaling is to be processed. Use the Network OAM GUI Main Menu **Policy and Charging > Maintenance > SBR Database Status** to Enable a Session SBR Database.
 - "Binding DB's admin state is not Enabled" - For P-DRA, a Binding SBR Database must be Enabled. Use the Network OAM GUI Main Menu **Policy and Charging > Maintenance > SBR Database Status** to Enable a Binding SBR Database.
4. It is recommended to contact [My Oracle Support](#) for assistance if needed.

22710 - SBR Sessions Threshold Exceeded**Alarm Group:**

SBR

Description:

The number of SBR sessions threshold for a Policy and Charging Mated Sites Place Association has been exceeded.

Severity:

Minor, Major, Critical

Instance:

<SbrDatabaseName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSbrActSessThreshNotify

Cause:

The number of session records stored in the policy session database has exceeded the minor, major, or critical alarm threshold percentage of the calculated session capacity for the topology.

Diagnostic Information:

Check the event or alarm information on the active SOAM and analyze the error trace on this SBR server.

Recovery:

1. The session database specified in the Instance field is nearing the limit on the number of session records. Alarm severity is determined by the number of session records stored in the policy session database exceeding the alarm threshold percentage of the calculated session capacity for the topology.
2. If the alarm assert thresholds are improperly configured, they can be configured on a network-wide basis on the NOAM from the **Policy DRA > Configuration > Alarm Settings**.
3. In general, the system should be sized to host the expected number of concurrent sessions per policy subscriber.
4. If the system is nearing 100% capacity, it is recommended to contact [My Oracle Support](#) for further assistance.

22711 - SBR Database Error

Alarm Group:

SBR

Description:

An error occurred during a SBR database operation.

Severity:

Info

Instance:

<SbrServerType>, <SbrSgNameDbType> (I-SBR)

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterPSBRDbOpFailNotify

Recovery:

1. An unexpected, internal error was encountered while the SBR database was being accessed. This error may occur for a variety of reasons:
 - a. The database is filled to capacity
 - b. Database inconsistency between NO and SO tables caused by a database restore operation. This issue is corrected by the SBR audit.
2. It is recommended to contact [My Oracle Support](#) for further assistance.

22712 - SBR Communication Error

Alarm Group:

SBR

Description:

The SBR received an error or timeout response from Communication Agent when sending a stack event to another SBR server.

Severity:

Info

Instance:

<SbrServerType>, <SbrDbType> (I-SBR)

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterPSBRStkEvFailComAgentNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#) for further assistance.

22713 - SBR Alternate Key Creation Error

Alarm Group:

SBR

Description:

Failed to create an Alternate Key record in the Binding database.

Severity:

Info

Instance:

Session SBR

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterPSBRAltKeyCreateFailNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#) for further assistance.

22714 - SBR RAR Initiation Error

Alarm Group:

SBR

Description:

SBR encountered an error while processing PCA initiated RAR requests.

Severity:

Info

Instance:

Session SBR

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterPSBRRARInitiationErrNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#) for further assistance.

22715 - SBR Audit Suspended

Alarm Group:

SBR

Description:

SBR DB (Binding, Session, or Universal) auditing has been suspended because the Session Integrity send rate is more than the engineering configurable threshold, or due to a congestion condition on either the local server reporting the alarm or on a remote server being queried for auditing purposes.

Severity:

Minor

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSBRAuditSuspendedNotify

Recovery:

1. If the Binding DB server is not locally congested, this alarm indicates that auditing is suspended only on the remote Session servers being queried by Binding for auditing purposes that are congested. The audit cleans up stale records in the database. Prolonged suspension of the audit could result in the exhaustion of memory resources on a binding or session SBR server. Investigate the causes of congestion on the SBR servers (see Alarm [22725 - SBR Server In Congestion](#)).
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22716 - SBR Audit Statistics Report

Event Group:

SBR

Description:

This report provides statistics related to SBR session or binding table audits. Each SBR server generates this event upon reaching the last record in a table. The statistics reported are appropriate for the type of table being audited. This report also provides hourly statistics related to the Pending RAR report.

Severity:

Info

Instance:

<PcaTableName>, <SbrSgName> (I-SBR)

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

eagleXgDiameterPSBRAuditStatisticsReportNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#).

22717 - SBR Alternate Key Creation Failure Rate

Alarm Group:

SBR

Description:

SBR Alternate Key Creation Failure rate exceeds threshold.

Severity:

Minor, Major, Critical

Instance:

PsbrAltKeyCreationFailureRate, SBR

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSBRAltKeyCreationFailureRateNotify

Recovery:

1. If the further assistance is needed, it is recommended to contact [My Oracle Support](#).

22718 - Binding Not Found for Binding Dependent Session Initiate Request

Event Group:

PCA

Description:

Binding record is not found for the configured binding keys in the binding dependent session-initiation request message.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

60

OID:

pdraPdraBindingRecordNotFoundNotify

Recovery:

1. Check the Policy and Charging GUI Main Menu **Policy and Charging > Configuration > Binding Key Priority** on the subscriber key priorities to ensure the configuration is correct.
2. Using the Binding Key Query Tool, check if a binding exists for the binding keys at **Policy DRA > Configuration > Binding Key Priority**.

22719 - Maximum Number of Sessions per Binding Exceeded**Event Group:**

PCA

Description:

A Binding capable session initiation request failed because this subscriber already has the maximum number of sessions per binding.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

60

OID:

pdraPdraMaxSessionsReachedNotify

Recovery:

1. Determine if the existing sessions are valid. The existing sessions may be displayed using the Binding Key Query Tool to obtain all relevant information including session IDs and PCEF FQDNs.
2. If the sessions exist in the P-DRA but not on the PCEF(s), it is recommended to contact [My Oracle Support](#).

22720 - Policy SBR To PCA Response Queue Utilization Threshold Exceeded**Alarm Group:**

PCA

Description:

The SBR to PCA Response Queue Utilization Threshold Exceeded

Severity:

Minor, Major, Critical

Instance:

RxPcaSbrEventMsgQueue, PCA

HA Score:

Normal

OID:

pdraPdraPsbrResponseQueueUtilizationNotify

Auto Clear Seconds:

0 (zero)

Recovery:

1. If one or more MPs in a server site have failed, the traffic will be distributed amongst the remaining MPs in the server site. Monitor the MP server status from **Status & Manage > Server Status**
2. The mis-configuration of Diameter peers may result in too much traffic being distributed to the MP. Monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**

Each MP in the server site should be receiving approximately the same ingress transaction per second.

3. There may be an insufficient number of MPs configured to handle the network load. Monitor the ingress traffic rate of each MP by selecting **Status & Manage > KPIs**.

If MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.

4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22721 - Policy and Charging Server In Congestion

Alarm Group:

PCA

Description:

The Policy and Charging Server is operating in congestion. Average Policy and Charging ingress messages rate exceeds the configured threshold. The thresholds are based on the engineered system value for Ingress Message Capacity.

Severity:

Minor, Major, Critical

Instance:

PCA

HA Score:

Normal

OID:

pdraPdraCongestionStateNotify

Auto Clear Seconds:

0 (zero)

Cause

This alarm raises when the Average Policy and Charging ingress messages rate exceeds the configured threshold. The thresholds are based on the engineered system value for Ingress Message Capacity.

Diagnostic Information:

- The alarm thresholds for **DSR Application Ingress Message Rate** are configured network wide on Network OAM using the **Policy DRA > Configuration > Alarm Settings** and **Congestion Options** screens.
- Monitor the ingress traffic rate of each MP by selecting **Main Menu > Status & Manage > KPIs**. If MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.

Recovery:

1. Adjust the alarm threshold parameters. Verify the configuration by navigating to the Congestion Options on **Policy DRA > Configuration > Alarm Settings**.
2. There may be an insufficient number of MPs configured to handle the network load. Monitor the ingress traffic rate of each MP by selecting **Status & Manage > KPIs**.

If MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.

3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22722 - Policy Binding Sub-resource Unavailable

Alarm Group:

PCA

Description:

One or more Policy binding sub-resources are not available.

Severity:

- Major: When a Binding SBR Database is prepared or enabled and at least one server group that has a range of binding sub-resources is not available
- Critical: When a Binding SBR Database is prepared or enabled and all of the binding sub-resources are not available, i.e., all server groups hosting the sub-resources are not available.

Instance:

<ResourceDomainName>

HA Score:

Normal

OID:

pdraPdaraBindingSubresourceUnavailableNotify

Auto Clear Seconds:

0 (zero)

Recovery:

1. At the NOAM, navigate to the SBR Database Status screen at **Policy and Charging > Maintenance > SBR Database Status** and locate the SBR Database specified in the Alarm Additional Information. The database's Operational Status and the Operational Reason values associated with resource users and resource providers are displayed.
2. Click on the row for the Database Name. If the Resource User Operational Reason has a colored cell, the lower-left pane on the status screen will display information about which resource users are having problems accessing the database. If the Resource Provider Operational Reason has a colored cell, the lower-right pane on the status screen will display information about which resource providers are unable to provide service.
3. If the Resource Provider pane on the lower right is empty, look for ComAgent connection Alarms. If ComAgent connection alarms exist, follow the Recovery steps for those alarms to troubleshoot further. If there are no ComAgent connection alarms, review the configuration of Resource Domains, Places, and Place Associations using the NOAM GUI and verify that they are provisioned as expected:
 - **Configuration > Resource Domains**
 - **Configuration > Places**
 - **Configuration > Place Associations**
4. Click the Database Name hyperlink to go to the SBR Database Configuration View screen, filtered by the SBR Database Name. Make note of the Resource Domain configured for the SBR Database.
5. Navigate to the ComAgent HA Services Status screen at **Communication Agent > Maintenance > HA Service Status** and locate the Resource with name equal to that configured as the Resource Domain for the SBR Database.
6. Click the HA Services Status row for the Resource, which will have further detailed information about the Communication Agent's problem.
7. It is recommended to contact [My Oracle Support](#) for assistance if needed.

22723 - Policy and Charging Session Sub-resource Unavailable

Alarm Group:

PCA

Description:

One or more Policy and Charging session sub-resources are not available.

Severity:

- Major: When a Session SBR Database is prepared or enabled and at least one of the server groups hosting session sub-resources is not available.

- **Critical:** When a Session SBR Database is prepared or enabled and all of the server groups hosting session sub-resources are not available.

Instance:

<ResourceDomainName>

HA Score:

Normal

OID:

pdraPdraSessionSubresourceUnavailableNotify

Auto Clear Seconds:

0 (zero)

Recovery:

1. At the NOAM, navigate to the SBR Database Status screen at **Policy and Charging > Maintenance > SBR Database Status** and locate the SBR Database specified in the Alarm Additional Information. The database's Operational Status and the Operational Reason values associated with resource users and resource providers are displayed.
2. Click on the row for the Database Name. If the Resource User Operational Reason has a colored cell, the lower-left pane on the status screen will display information about which resource users are having problems accessing the database. If the Resource Provider Operational Reason has a colored cell, the lower-right pane on the status screen will display information about which resource providers are unable to provide service.
3. If the Resource Provider pane on the lower right is empty, look for ComAgent connection Alarms. If ComAgent connection alarms exist, follow the Recovery steps for those alarms to troubleshoot further. If there are no ComAgent connection alarms, review the configuration of Resource Domains, Places, and Place Associations using the NOAM GUI and verify that they are provisioned as expected:
 - **Configuration > Resource Domains**
 - **Configuration > Places**
 - **Configuration > Place Associations**
4. Click the Database Name hyperlink to go to the SBR Database Configuration View screen, filtered by the SBR Database Name. Make note of the Resource Domain configured for the SBR Database.
5. Navigate to the ComAgent HA Services Status screen at **Communication Agent > Maintenance > HA Service Status** and locate the Resource with name equal to that configured as the Resource Domain for the SBR Database.
6. Click the HA Services Status row for the Resource, which will have further detailed information about the Communication Agent's problem.
7. It is recommended to contact [My Oracle Support](#) for assistance if needed.

22724 - Policy SBR Memory Utilization Threshold Exceeded

Alarm Group:

SBR

Description:

The SBR server memory utilization threshold has been exceeded.

Severity:

Minor, Major, Critical

Instance:

Policy and Charging mated Sites Place Association Name

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSbrMemUtilNotify

Cause:

Policy pSBR server memory utilization threshold has been exceeded.

This alarm's assert conditions are defined by the following default parameters:

- **Minor:** pSBR memory utilization threshold > 70%
- **Major:** pSBR memory utilization threshold > 80%
- **Critical:** pSBR memory utilization threshold > 90%

Diagnostic Information:

- The pSBR exceeds the engineered memory utilization levels.
- Do not raise pSBR memory Alarm 22724 on non-pSBR servers.
- Check the server memory usage.

Recovery:

1. Change threshold parameters.
2. If this condition persists, it may be necessary to allocate more memory for pSBR.
3. It is recommended to contact [My Oracle Support](#) for further assistance.

22725 - SBR Server In Congestion

Alarm Group:

SBR

Description:

The SBR server is operating in congestion.

Severity:

- Minor: CL_1
- Major: CL_2
- Critical: CL_3

Instance:

Policy and Charging mated Sites Place Association Name, <SbrSgName> (I-SBR)

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSbrServerInCongestionNotify

Recovery:

1. Application Routing might be mis-configured and is sending too much traffic to the DSR Application. Verify the configuration by selecting **Diameter > Configuration > Application Route Tables**.
2. There may be an insufficient number of MPs configured to handle the network load. Monitor the ingress traffic rate of each MP by selecting **Status & Manage > KPIs**.

If MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22726 - SBR Queue Utilization Threshold Exceeded

Alarm Group:

SBR

Description:

The SBR stack event queue utilization threshold has been exceeded. The alarm is asserted for three separate stack event queues (PsbrSisTaskQMetric, PsbrSisSendRarTaskQMetric, and PsbrInvokeSisRspHandlerTaskQMetric) in Binding and Session SBR servers.

Severity:

Minor, Major, Critical

Instance:

SBR

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSbrStackEvQUtilNotify

Cause:

The alarm is asserted for the separate stack event queues as following:

- PsbrBindingTaskQMetric
- PsbrSessionTaskQMetric
- PsbrAuditStackEventTaskQMetric
- PsbrTableWatcherTaskQMetric
- PsbrSisTaskQMetric
- PsbrSisSendRarTaskQMetric
- PsbrInvokeSisRspHandlerTaskQMetric
- PsbrSisRspHandlerTaskQMetric

Each stack event queue has its configurable threshold parameters.

Default values as following:

- Assert conditions:
 - **Minor:** pSBR stack event queue utilization threshold > 80%
 - **Major:** pSBR stack event queue utilization threshold > 90%
 - **Critical:** pSBR stack event queue utilization threshold > 100%
- Clear conditions:
 - **Minor:** pSBR stack event queue utilization threshold <= 70%
 - **Major:** pSBR stack event queue utilization threshold <= 85%
 - **Critical:** pSBR stack event queue utilization threshold <= 95%

Diagnostic Information:

To further diagnose the issue:

- Check the event/alarm information on the active SOAM and analyze the error trace on this SBR server.
- Collect Savelogs on this SBR server.
- Event History on the active SOAM server.

Recovery:

1. If this condition persists, collect the Savelogs under Diagnostic information on the SBR server and it is recommended to contact [My Oracle Support](#) for further assistance.

22727 - SBR Initialization Failure

Alarm Group:

SBR

Description:

The SBR server process failed to initialize.

Severity:

Critical

Instance:

Policy DRA Mated Sites Place Association Name

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSbrInitializationFailureNotify

Cause:

- Any of the ComAgent registration calls for either session resource or binding resource fails during the pSBR initialization.
- Unable to calculate the number of Session or Binding Sub-resource.
- Unable to initialize the SBR internal resource. For example, PsbrHaMgr.

Diagnostic Information:

- Check the event/alarm information on the active SOAM and analyze the error trace on this SBR server.
- Collect Savelogs on this SBR server.
- Event history on the active SOAM server.

Recovery:

1. If this condition persists, collect the Savelogs under Diagnostic information on the SBR server and it is recommended to contact [My Oracle Support](#) for further assistance

22728 - SBR Bindings Threshold Exceeded

Alarm Group:

SBR

Description:

The number of bindings threshold has been exceeded.

Severity:

Minor, Major, Critical

Instance:

<SbrDatabaseName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSbrActBindThreshNotify

Cause:

The Binding Region specified in the Instance field is nearing the expected number of binding records for this network.

Diagnostic Information:

The alarm thresholds for Binding Capacity alarms are configured network wide on Network OAM using the "Policy DRA > Configuration > Alarm Settings" screen.

- If the alarm severity is minor, the alarm means that the number of binding records stored in Binding Region has exceeded the minor alarm threshold percentage of the calculated binding capacity for the topology.
- If the alarm severity is major, the alarm means that the number of binding records stored in Binding Region has exceeded the major alarm threshold percentage of the calculated binding capacity for the topology.
- If the alarm severity is major, the alarm means that the number of binding records stored in Binding Region has exceeded the major alarm threshold percentage of the calculated binding capacity for the topology.

Recovery:

1. The binding database specified in the Instance field is nearing the limit on the number of binding records. The alarm threshold percentages can be modified as desired by the network operator at the NOAM using **Policy and Charging > Configuration > Alarm Settings**.
2. If a given alarm severity is unwanted, the alarm severity may be suppressed by checking the Suppress checkbox for that alarm severity.
3. It is recommended to contact [My Oracle Support](#) to discuss plans for system growth if this alarm continues to be asserted under normal operating conditions.

Note: It is expected, but not guaranteed, that the system will continue to function beyond the tested maximum number of subscribers with bindings.

22729 - PCRF Not Configured

Alarm Group:

PCA

Description:

PCRF Not Configured

Severity:

Major

Instance:

Policy Binding Region Place Association Name

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

pdraPcrfNotConfiguredNotify

Cause:

This alarm raises when the P-DRA completes initialization and determines that the PCRF's are not configured.

Diagnostic Information:

- Check the NOAM GUI at **Main Menu > Policy and Charging > Configuration > Policy DRA** for further PCRF configuration.
- Check for any missing configuration or capture this screen for further analysis.

Recovery:

1. Check the NOAM GUI at **Policy and Charging > Configuration > Policy DRA** for further PCRF configuration.
2. Check the event history logs in **Alarms & Events**.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

22730 - Policy and Charging Configuration Error

Alarm Group:

PCA

Description:

Policy and Charging message processing could not be successfully completed due to a configuration error.

Severity:

Major

Instance:

<ConfigurationError>

HA Score:

Normal

OID:

pdraPdraConfigErrorNotify

Auto Clear Seconds:

300 (5 minutes)

Cause:

- The session initiation request message was received with a missing or un-configured APN.
- Binding capable session initiation answers was coming from an unconfigured PCRF.
- The binding independent session initiation request was routed to an OCS that is not configured.

Diagnostic Information:

- Check DSR configuration
- Check Diameter message PCAP.

Recovery:

1. If there is an unconfigured PCRF, it means the binding capable session initiation request was routed to a PCRF that is not configured in **Policy and Charging > Configuration > Policy DRA > PCRFs** at the site where the request was received. This indicates a mismatch between the PCRF's configuration and the routing configuration. If the PCRF is a valid choice for the request, configure the PCRF in **Policy and Charging > Configuration > Policy DRA > PCRFs**. If the PCRF is not valid for the request, correct the routing table or tables included the PCRF.

Also see measurement RxBindCapUnknownPcrf in the DSR Measurement Reference.

2. If there is an unconfigured APN and if the APN string is valid, configure the APN at the NOAM using the **Policy and Charging > Configuration > Access Point Names** screen. If the APN string is not valid, investigate the policy client to determine why it is sending policy session initiation requests using the invalid APN.

Also see measurements RxBindCapUnknownApn and RxBindDepUnknownApn in the *DSR Measurement Reference*.

3. If there is a missing APN, investigate the policy client to determine why it is sending policy session initiation requests with no APN.

Also see measurements RxBindCapMissingApn and RxBindDepMissingApn in the *DSR Measurement Reference*.

4. If there are no PCRFs configured, configure PCRFs at the SOAM GUI for the site using **Policy and Charging > Configuration > PCRFs**.
5. If there is an unconfigured OCS, it means that the binding independent session initiation request was routed to an OCS that is not configured in **Policy and Charging > Configuration > Online Charging DRA > OCSs**. This indicates a mismatch between the OCSs configuration and the routing configuration. If the OCS named in the alarm additional information is a valid choice for the request, configure the OCS at the SOAMP using **Policy and Charging > Configuration >**

Online Charging DRA > OCSs. If the OCS is not valid for the request, correct the routing table or tables included the OCS.

6. It is recommended to contact [My Oracle Support](#).

22731 - Policy and Charging Database Inconsistency

Alarm Group:

PCA

Description:

The Policy and Charging database inconsistency exists due to an internal data error or internal database table error.

Severity:

Major

Instance:

<PcaFunctionName>

HA Score:

Normal

Auto Clear Seconds:

60

OID:

pdraPdramDbInconsistencyExistsNotify

Recovery:

1. Check the error history logs for the details of the data inconsistency.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

22732 - SBR Process CPU Utilization Threshold Exceeded

Alarm Group:

SBR

Description:

The SBR process on the indicated server is using higher than expected CPU resources.

Severity:

Minor, Major, Critical

Instance:

psbr.cpu, SBR

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSbrProcCpuThreshNotify

Cause:

Policy SBR Process CPU Utilization Threshold has been exceeded. The Policy SBR process on the indicated server is using higher than expected CPU resources.

Diagnostic Information:

This alarm's assert conditions are defined by the following parameters:

- **Minor:** pSBR process CPU utilization threshold > 60%
- **Major:** pSBR process CPU utilization threshold > 66%
- **Critical:** pSBR process CPU utilization threshold > 72%

See the alarm history of the event for the current CPU utilization. Ensure that the utilization is less than the threshold values

Recovery:

1. If this condition persists, it may be necessary to deploy more policy signaling capacity.
2. It is recommended to contact [My Oracle Support](#) for further assistance.

22733 - SBR Failed to Free Binding Memory After PCRF Pooling Binding Migration

Alarm Group:

SBR

Description:

The SBR failed to free binding memory after PCRF Pooling binding migration.

Severity:

Minor

Instance:

N/A

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterPSBRPostMigrationMemFreeNotify

Recovery:

1. On systems upgraded from a release where Policy DRA was running, but that did not support PCRF Pooling, to a release that supports PCRF Pooling, binding data is migrated from the tables used by the old release to tables used by the new release. Once this migration process completes on a given binding policy SBR, a script is automatically executed to free memory for the old tables. If this script should fail for any reason to free the memory, this alarm is asserted.

2. If additional assistance is needed, it is recommended to contact [My Oracle Support](#).

22734 - Policy and Charging Unexpected Stack Event Version

Alarm Group:

PCA

Description:

A Policy and Charging server received a stack event with an unexpected down-version.

Severity:

Major

Instance:

N/A

HA Score:

Normal

OID:

pdraPdraUnexpectedSEDownVersionNotify

Auto Clear Seconds:

300 (5 minutes)

Cause:

A Policy and Charging server received a stack event with an unexpected down-version. One of the SBRs is running on an older version of DSR software.

Diagnostic Information:

From the event history, view the details of this alarm. Determine which server/server group the alarm was raised for.

Recovery:

1. From the NOAM GUI at **Policy and Charging > Maintenance > SBR Status**, find the Resource Domain Name to which the stack event was being sent.
2. Expand all Server Groups having that Resource Domain name to see which Server Group hosts the ComAgent Sub Resource.
3. The Server with Resource HA Role of "Active" is likely the server that has the old software (unless a switch-over has occurred since the alarm was asserted). In any case, one of the servers in the Server Group has old software. The software version running on each server can be viewed from **Administration > Upgrade**. The "Hostname" field is the same as the Server Name on the SBR Status screen
4. Find the server or servers running the old software and upgrade those servers to the current release and accept the upgrade.
5. If additional assistance is needed, it is recommended to contact [My Oracle Support](#).

22735 - Policy DRA session initiation request received with no APN

Event Group:

PDRA

Description:

A Policy DRA session initiation request was received with no APN.

Severity:

Info

HA Score:

Normal

Instance:

None

Throttle Seconds:

30

OID:

pdraPdraSessInitReqWithNoApnNotify

Recovery:

1. Investigate why the policy client named by the Origin-Host FQDN in the additional information field is not including the Called-Station-ID AVP and correct it to include the APN.
2. Investigate why the policy client named by the Origin-Host FQDN in the additional information field is not including the Called-Station-ID AVP and correct it to include the APN. Or have that policy client include another binding correlation key that can be used to find the binding
3. Examine associated measurements RxBindCapMissingApn and RxBindDepMissingApn (refer to the *DSR Measurements Reference* for details about these measurements).
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

22736 - SBR failed to free shared memory after a PCA function is disabled

Alarm Group:

SBR

Description:

SBR failed to free shared memory after a PCA function is disabled

Severity:

Minor

HA Score:

Normal

Instance:

<PcaFunctionName>

Auto Clear Seconds:

0 (zero)

OID:

pdraPSBRPostPcaFunctionDisableMemFreeNotify

Recovery:

1. If the problem persists, it is recommended to contact [My Oracle Support](#).

22737 - Configuration Database Not Synced

Alarm Group:

PCA

Description:

Configuration Database is not synced between the System OAM and Network OAMP.

Severity:

Minor

Instance:

Site name of SOAM server which asserted this alarm

HA Score:

Normal

OID:

pdraPcaConfDbNotSyncedNotify

Auto Clear Seconds:

0 (zero)

Recovery:

1. Make note of all **Status & Manage > Database Resote** operations (if any) at NOAM or SOAM within a day of the occurrence of alarm.
2. Gather all configuration changes (Insert, Edit, or Delete) for PCRFs, Policy Clients, OCSs, CTFs via Security Log from the time the database restore was executed until the present. If there was no database restore performed, then start from the time the alarm was first asserted until the present.
3. If additional assistance is needed, it is recommended to contact [My Oracle Support](#).

22738 - SBR Database Reconfiguration State Transition

Event Group:

SBR

Description:

This event is generated any time a state transition occurs in a SBR Database Resizing or Data Migration Plan. This includes both state transitions due to a user clicking a button on the SBR Database Reconfiguration Status screen and internal state transitions.

Severity:

Info

Instance:

<SbrReconfigurationPlanName>, <SbrReconfigurationPlanName> (I-SBR)

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

eagleXgDiameterPsbrReconfigStateTransitionNotify

Recovery:

1. This event records the time and conditions under which an SBR Database Reconfiguration Plan (identified in the event instance field) undergoes a state transition. The event additional information includes details such as the previous state, current state, and whether the "Force" option was chosen. This event can be used to obtain a timeline of the entire history of a given reconfiguration plan.

22740 - SBR Reconfiguration Plan Completion Failure

Alarm Group:

SBR

Description:

Failed to successfully complete an SBR Reconfiguration Plan.

Note: When an SBR Reconfiguration Plan is completed by the user clicking **Complete**, or **Force Complete** on the SBR Reconfiguration Status GUI, database updates are performed to finalize the reconfiguration plan as follows. If any of these updates fail, this alarm shall be asserted.

- Condition 1: Failed to update the Resource Domain of the SBR Database to point to the Target Resource Domain of the Resizing Plan on completion of a Resizing Plan.
 - Condition 2: Failed to mark the Initial SBR Database so that it is no longer the default database for the Place Association on completion of a Data Migration Plan.
 - Condition 3: Failed to mark the Target SBR Database as the default database for the Place Association on completion of a Data Migration Plan.
 - Condition 4: Failed to enable the Target SBR Database on completion of a Data Migration Plan.
 - Condition 5: Failed to disable the Initial SBR Database on completion of a Data Migration Plan.
-

Severity:

- Minor: Condition 5
- Critical: Conditions 1-4

eagleXgDiameterPSbrReconfigConditionsErrorNotify

Recovery:

1. The SBR Reconfiguration plan specified in the Alarm Instance was not successfully completed, possibly leaving the SBR Database in an abnormal state. Make note of the specific reason for the alarm, and it is recommended to contact [My Oracle Support](#) for assistance.

22741 - Failed to route PCA generated RAR

Event Group:

PCA

Description:

Unable to Route RAR generated at PCA

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterPcaGeneratedRARRouteErrNotify

Recovery:

1. Use Destination-Host to identify the locally generated RAR routing failures and correct the respective configurations. If the DRL provides an error message, it will be displayed with this event, which will have a 3-digit internal error code.

22742 - Enhanced Overload Control AdminState Mismatch

Event Type

PCA

Description

Enhanced Overload Control administrative and operational states are mismatched.

Severity

Major

Instance

None

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

eagleXgDiameterEnhancedOverloadCtrlAdminStateMismatch

Recovery

1. A change of the Enhanced Overload Control mode configuration (from Enable to Disable or vice versa) requires DA-MPs and/or SBR MPs restarted withing the NO. Verify if the relevant servers are restarted intended by the EOC Mode configuration.

22743 - PCA Server Congested Due to Composite Resource Congestion

Event Type

PCA

Description

PCA Server Congested Due to Composite Resource Congestion.

Severity

Minor, Major, Critical

Instance

None

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

eagleXgDiameterPcaCongestionStateNotify

Recovery

The PCA server is congested because at least one of the PCA resources is congested.

1. The Application Routing Table may be configured incorrectly and too much traffic was sent to PCA. Verify the configuration via **Diameter > Configuration > Application Routing Rules**.
2. A burst of ingress traffic from the network. There may be insufficient number of DA-MPs configured to handle the network load. The ingress traffic rate of each DA-MP can be monitored from **Status & Manage > KPIs**. If DA-MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.
3. It is recommended to contact [My Oracle Support](#) for assistance if needed.

22750 - Enhanced Suspect Binding Removal Feature Enabled**Event Group:**

SBR

Description:

The Enhanced Suspect Binding Feature is enabled.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

eagleXgDiameterEnhSuspBindingFeatEnabledNotify

Recovery:

1. No action required.

22751 - Binding Audit Suppression by Suspect Binding Removal**Alarm Group:**

SBR

Description:

The binding SBR audit function is suppressed by the Enhanced Suspect Binding Removal feature.

Severity:

Minor

Instance:

PCA

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

Recovery:

1. If this condition persists, it may indicate a failure of a PCRF or the need to change the configuration of the Suspect Binding Removal Rules.
2. It is recommended to contact [My Oracle Support](#) for further assistance.

SCEF (23000-23200, 102801-115001, 390000)

This section provides information and recovery procedures for SCEF alarms, which range from 23000-23200, 102801-115001, and 390000.

23150 - Diameter Application Not Supported

Event Type:

SCEF

Description:

Diameter message received was not processed as it contained an unsupported Application Identifier.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

300

OID:

N/A

Recovery:

1. It is recommended to contact [My Oracle Support](#) for assistance.

23152 - Universal SBR Sub-Resource Unavailable

Alarm Group:

SCEF

Description:

One or more Universal SBR sub-resources are unavailable

Severity:

Critical, Major

Instance:

<ResourceDomainName>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

scefUsbrSubresourceUnavailableNotify

Cause:

This alarm is cleared if any of the following conditions are met:

- When a relevant Universal SBR Database administrative state is Disable and the Operational Status is Providers Detaching or Disable
- When a relevant Universal SBR Reconfiguration Plan administrative state is Cancel and the Operational Status is Providers Detaching From Target and the resource user has received notification (from ComAgent) that all of the initial sub-resources are available
- When a relevant Universal SBR Reconfiguration Plan administrative state is Complete and the Operational Status is Providers Detaching From Initial and the resource user has received notification (from ComAgent) that all of the target sub-resources are available
- The application process (dsr) on the server that asserted the alarm is shut down
- The SCEF application on the server that asserted the alarm is manually Disabled

Diagnostic Information:

N/A

Recovery:

1. It is recommended to contact [My Oracle Support](#) for assistance.

23153 - Diameter Command Code not supported

Event Type:

SCEF

Description:

Diameter message received was not processed as it contained an unsupported Command Code.

Severity:

Info

Instance:

N/A

HA Score:

Normal

Throttle Seconds:

300

OID:

N/A

Recovery:

Computer Aided Policy Making, CAPM (25000-25499)

This section provides information and recovery procedures for the Computer-Aided Policy Making (CAPM) feature (i.e., Diameter Mediation) alarms and events, ranging from 25000 - 25499, and lists the types of alarms and events that can occur on the system. All events have a severity of Info.

Alarms and events are recorded in a database log table. Currently active alarms can be viewed from the Launch Alarms Dashboard GUI menu option. The alarms and events log can be viewed from the **Alarms & Events > View History** page.

25000 - CAPM Update Failed

Event Type:

CAPM

Description:

The Rule Template failed to update because of syntax errors. The Additional Info of the Historical alarm includes the name of the Rule Template that failed to be updated. When the alarm is caused by CAPM Rule Template which contains a syntax error, it may not be raised immediately after applying the template, but may occur when the first Rule has been provisioned and committed.

Severity:

Minor

Instance:

<ruleset> or <ruleset:rule-id>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterCapmUpdateFailedNotify

Recovery:

1. Check the CAPM Rule Template and verify that the left-hand side term of each condition contains a valid Linking-AVP or Select expression.

A typical problem can be a non-existing expression, or syntax error of a custom-defined Select expression. If the CAPM Rule Template contains a syntax error, create a new Rule Template by copying and modifying the existing one, then deleting the old Rule Template.

2. Verify also that the recently provisioned data of the Rule Template does not contain a syntax error, i.e., the regular expressions are correct, the fields expecting numbers contain only numbers, etc.

25001 - CAPM Action Failed

Event Type:

CAPM

Description:

When a new Rule Template is created, a failure occurs when performing the action.

Severity:

Info

Instance:

<ruleset> or <ruleset:rule-id>

HA Score:

Normal

Throttle Seconds:

30

OID:

eagleXgDiameterCapmActionFailedNotify

Recovery:

1. Check the reasons the action failed. It may be a lack of system resources to perform an action, or the action may refer to a part of the message that is not available.

25002 - CAPM Exit Rule Template

Event Type:

CAPM

Description:

When Action Error Handling is set to 'immediately exit from the rule template' for the given Rule Template and a failure occurs when performing the action, processing of the Rule Template is stopped.

Severity:

Info

Instance:

<ruleset> or <ruleset:rule-id>

HA Score:

Normal

Throttle Seconds:

30

OID:

eagleXgDiameterCapmExitRuleFailedNotify

Recovery:

1. No action required.

25003 - CAPM Exit Trigger

Event Type:

CAPM

Description:

When Action Error Handling is set to 'immediately exit from the trigger point' for the given Rule Template and a failure occurs when performing the action, processing of the Rule Template is stopped (subsequent templates within the trigger point are also skipped).

Severity:

Info

Instance:

<ruleset> or <ruleset:rule-id>

HA Score:

Normal

Throttle Seconds:

30

OID:

eagleXgDiameterCapmExitTriggerFailedNotify

Recovery:

1. No action required.

25004 - Script failed to load

Alarm Type:

CAPM

Description:

Script syntax error

Severity:

Minor

Instance:

<script name>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterCapmScriptLoadingFailedNotify

Recovery:

1. Check for syntax errors in the script

25005 - CAPM Generic Event**Event Type:**

OAM Alarm Management (25500-25899)

This section provides information and recovery procedures related for alarms and events related to OAM Alarm Management, ranging from 25500 - 25899, that can occur on the system. All events have a severity of Info.

Alarms and events are recorded in a database log table. Currently active alarms can be viewed from the Launch Alarms Dashboard GUI menu option. The alarms and events log can be viewed from the Alarms & Events > View History page.

25500 - No DA-MP Leader Detected Alarm

Alarm Group:

DIAM

Description:

This alarm occurs when no active DA-MP leaders have been detected.

Severity:

Critical

Instance:

<NetworkElement>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterNoDaMpLeaderDetectedNotify

Cause:

The alarm # 25500 raises:

- When No Active DA-MP leaders are reported by the maintenance leader.
- When there is a single DA-MP and DSR process is stopped.
- When there are multiple DA-MPs, DSR process is stopped and there is ComAgent Connection failure between two or more DA-MP's.

The alarm clears when maintenance leader reports a single active DA-MP leader.

Diagnostic Information:

1. Examine the alarm log from **Main Menu > Alarms & Events** on Active SOAM Server.

Main Menu: Alarms & Events -> View Active (Filtered)

Filter* ▼ Tasks ▼ Graph* ▼

RDU03SOSG

| Seq # | Event ID | Timestamp | Severity | Product | Process | NE |
|-------|--------------------------|-----------------------------|--------------------------|---------|---------|--------|
| | Alarm Text | | Additional Info | | | |
| 1313 | 25500 | 2017-11-28 01:48:19.319 EST | CRITICAL | DSROAM | dsroam | SOAM_N |
| | No DA-MP Leader Detected | | No DA-MP Leader Detected | | | |

- This alarm is raised against the Network Element when no DA-MPs report themselves as **Leader**.

Recovery:

- Verify the MP operational status of the DA-MP from the **Diameter > Maintenance > DA-MP** active SOAM screen.
 - Verify the # Peer MPs Unavailable column displays 0 for each DA-MP server.
 - Verify all DA-MP servers are available in individual DA-MP server tabs on the **Diameter > Maintenance > DA-MP** active SOAM screen.
 - Verify ComAgent inter-MP connections (auto) are in the InService state on the **Communication Agent > Maintenance > Connection Status** screen.
- If the problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

25510 - Multiple DA-MP Leader Detected Alarm

Alarm Group:

DIAM

Description:

This alarm occurs when multiple active DA-MP leaders have been detected.

Severity:

Critical

Instance:

<NetworkElement>

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMultipleDaMpLeadersDetectedNotify

Cause:

The alarm #25510 raises:

- When more than one DA-MP report themselves as **Leader**.
- When DSR process is running on all DA-MPs and ComAgent Connection is down between two or more DA-MP's.

The alarm clears when maintenance leader reports a single active DA-MP leader.

Diagnostic Information:

- This alarm is raised against the Network Element when multiple DA-MPs report themselves as **Leader**.
- Examine the alarm log from **Main Menu > Alarms & Events** on Active SOAM Server.
- When this alarm is raised Existing IPFE Connection, Route List, and Peer Node alarms will be cleared.
- New IPFE Connection, Route List, and Peer Node alarms are suppressed.

Recovery:

1. Verify the MP operational status of the DA-MP from the **Diameter > Maintenance > DA-MP** active SOAM screen.
 - a. Verify the # Peer MPs Unavailable column displays 0 for each DA-MP server.
 - b. Verify all DA-MP servers are available in individual DA-MP server tabs on the **Diameter > Maintenance > DA-MP** active SOAM screen.
 - c. Verify ComAgent inter-MP connections (auto) are in the InService state on the **Communication Agent > Maintenance > Connection Status** screen.
2. If the problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

25800 - Peer Discovery Failure

Alarm Group:

DIAM

Description:

Peer discovery failure.

Severity:

Minor

Instance:

Discover_Realm_{realm_name} where {realm_name} is the full configured name of the Realm whose discovery has failed.

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDpdRealmDiscoveryFailedNotify

Recovery:

1. Analyze event [25801 - Peer Discovery Configuration Error Encountered](#) that has the same instance to identify the error(s).
2. Verify the DSR and DNS configurations and fix any configuration error(s).
3. Administratively refresh the Realm.
4. It is recommended to contact [My Oracle Support](#) for assistance.

25801 - Peer Discovery Configuration Error Encountered

Event Type:

DIAM

Description:

Peer discovery configuration error encountered.

Severity:

Info

Instance:

Discover_Realm_{realm_name} where {realm_name} is the full configured name of the Realm whose discovery has encountered a configuration error.

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

eagleXgDiameterDpdConfigErrorNotify

Recovery:

1. Depending on the specific error code, follow the appropriate recovery steps.

Note: One likely cause is the number of instances of a managed object type is at capacity, and no new instances can be created. The user can delete unused instances of the MO type to free up capacity and try the Realm discovery again.

2. It is recommended to contact [My Oracle Support](#) for assistance.

25802 - Realm Expiration Approaching

Alarm Group:

DIAM

Description:

Realm expiration approaching.

Severity:

Minor, Major

Instance:

Discover_Realm_{realm_name} where {realm_name} is the full configured name of the Realm whose expiry is approaching.

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDpdConfigErrorNotify

Recovery:

1. Administratively disable the Realm.
2. Administratively extend the Realm.
3. Administratively refresh the Realm.
4. It is recommended to contact [My Oracle Support](#) for assistance.

25803 - Peer Discovery - Inconsistent Remote Host Port Assignment

Event Type:

DIAM

Description:

Peer discovery - inconsistent remote host port assignment.

Severity:

Info

Instance:

Discover_Realm_{realm_name} where {realm_name} is the full configured name of the Realm whose discovery has encountered inconsistent remote host port assignment.

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

eagleXgDiameterDpdInconsistentPortAssignmentNotify

Recovery:

1. No action required. The DNS records for the Realm being discovered must be corrected by the Realm's DNS administrator.

25804 - Peer Discovery State Change

Event Type:

DIAM

Description:

Peer discovery state change.

Severity:

Info

Instance:

Discover_Realm_{realm_name} where {realm_name} is the full configured name of the Realm whose discovery state has changed.

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

eagleXgDiameterDpdInconsistentPortAssignmentNotify

Recovery:

1. No action required.

Platform (31000-32800)

This section provides information and recovery procedures for the Platform alarms, ranging from 31000-32800.

31000 - S/W fault

Alarm Group:

SW

Description:

Program impaired by s/w fault

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolSwFaultNotify

Recovery:

1. No action is required. This event is used for command-line tool errors only.

31001 - S/W status

Alarm Group:

SW

Description:

Program status

Severity:

Info

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolSwStatusNotify

Recovery:

1. No action required.

31002 - Process watchdog failure

Alarm Group:

SW

Description:

Process watchdog timed out.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

comcolProcWatchdogFailureNotify

Recovery:

1. Alarm indicates a stuck process was automatically recovered, so no additional steps are needed.
2. If this problem persists, collect savelogs ,and it is recommended to contact [My Oracle Support](#).

31003 - Tab thread watchdog failure

Alarm Group:

SW

Description:

Tab thread watchdog timed out

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolThreadWatchdogFailureNotify

Cause:

This alarm is caused by an application thread which fails to respond to the platform process management subsystem heartbeat within the defined time period. The actual cause may vary depending on the differing threads and defined time periods.

Diagnostic Information:

Collect the following data before contacting [My Oracle Support \(MOS\)](#) for assistance.

- iqt -Ep PmControl on the issuing server.

- Savelogs_Platform on the issuing server.
- Alarm history from active SOAM server.

Recovery:

1. Alarm indicates an application failed to respond to the platform process management subsystem heartbeat within the defined period. Export event history for the given process to narrow the actual cause.
2. If this problem persists, collect Savelogs and it is recommended to contact [My Oracle Support](#).

31100 - Database replication fault

Alarm Group:

SW

Description:

The database replication process is impaired by a software fault.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

eagleXgDsrDbRepToSlaveFailureNotify

Recovery:

1. Export event history for the affected server and inetsync task.
2. It is recommended to contact [My Oracle Support](#).

31101 - Database replication to slave failure

Alarm Group:

REPL

Description:

Database replication to a slave database has failed. This alarm is generated when:

- The replication master finds the replication link is disconnected from the slave.

- The replication master's link to the replication slave is OOS, or the replication master cannot get the slave's correct HA state because of a failure to communicate.
- The replication mode is relayed in a cluster and either:
 - No nodes are active in cluster, or
 - None of the nodes in cluster are getting replication data.

Severity:

Critical

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolDbRepToSlaveFailureNotify

Cause:

Alarm 31101 raises when:

- The replication master finds the replication link is disconnected from the slave.
- The replication master's link to the replication slave is OOS, or the replication master could not get the slave's correct HA state as a failure to communicate.
- The replication mode is relayed in a cluster and either:
 - No nodes are active in cluster, or
 - None of the nodes in cluster are getting replication data.

Diagnostic Information:

1. Verify the path for all services on a node:
 - a. In a command interface, type `path.test -a <toNode>` to test the paths for all services.
2. In a command interface, use the path test commands to test the communication between nodes:
 - a. Run the command, `igt -pE NodeInfo` to get the node ID
 - b. Then, run the command, `path.test -a <nodeid>` to test the paths for all services
3. Examine the Platform save logs on all MPs, SO, and NO:
 - a. Run the command, `sudo /usr/TKLC/plat/sbin/save logs_plat`

- ### Recovery:

- ## 31102 - Database replication from master failure

REPL

Database replication from a master database has failed. This alarm is generated when the replication slave finds the replication link is disconnected from the master.

Minor

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

Normal

300

comcolDbRepFromMasterFailureNotify

Alarm 31102 raises when the replication slave finds the replication link is disconnected from the master.

1. Verify the path for all services on a node:
 - a. In a command interface, run the command, `path.test -a <toNode>` to test the paths for all services.
2. In a command interface, use the path test command to test the communication:

- a. Run the command, `iqt -pE NodeInfo` to get the node ID
 - b. Run the command, `path.test -a <nodeid>` to test the communication path
3. Examine the Platform savelogs on all MPs, SO, and NO:
 - a. Run the command, `sudo /usr/TKLC/plat/sbin/savelogs_plat`
 - b. The plat savelogs are in the `/tmp` directory.

Recovery:

1. Verify the path for all services on a node by typing `path.test -a <toNode>` in a command interface to test the paths for all services.
2. Use the path test command to test the communication between nodes by typing `iqt -pE NodeInfo` to get the node ID. Then type `path.test -a <nodeid>` to test the paths for all services.
3. Examine the Platform savelogs on all MPs, SO, and NO by typing `sudo /usr/TKLC/plat/sbin/savelogs_plat` in the command interface. The plat savelogs are in the `/tmp` directory.
4. Indicates replication subsystem is unable to contact a server, due to networking issues or because the server is not available. Investigate the status of the server and verify network connectivity.
5. If no issues with network connectivity or the server are found and the problem persists, it is recommended to contact [My Oracle Support](#).

31103 - DB replication update fault

Alarm Group:

REPL

Description:

Database replication process cannot apply update to database.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolDbRepUpdateFaultNotify

Recovery:

1. This alarm indicates a transient error occurred within the replication subsystem, but the system has recovered, so no additional steps are needed.
2. If the problem persists, collect savelogs, and it is recommended to contact [My Oracle Support](#).

31104 - DB replication latency over threshold

Alarm Group:
REPL

Description:
Database replication latency has exceeded thresholds.

Severity:
Major

Instance:
May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:
Normal

Auto Clear Seconds:
300

OID:
eagleXgDsrDbRepLatencyNotify

Recovery:

1. If this alarm is raised occasionally for short time periods (a couple of minutes or less), it may indicate network congestion or spikes of traffic pushing servers beyond their capacity. Consider re-engineering network capacity or subscriber provisioning.
2. If this alarm does not clear after a couple of minutes, it is recommended to contact [My Oracle Support](#).

31105 - Database merge fault

Alarm Group:
SW

Description:
The database merge process (inetmerge) is impaired by a s/w fault

Severity:
Minor

Instance:
May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolDbMergeFaultNotify

Recovery:

1. This alarm indicates a transient error occurred within the merging subsystem, but the system has recovered, so no additional steps are needed.
2. If the problem persists, collect savelogs, and it is recommended to contact [My Oracle Support](#).

31106 - Database merge to parent failure

Alarm Group:

COLL

Description:

Database merging to the parent Merge Node has failed.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

comcolDbMergeToParentFailureNotify

Cause:

DB merging to the Parent Merge Node has failed.

Diagnostic Information:

- Check if the states are either **Active** or **Standby** (for example, none are DownConnecting or Auditing).
- Check if there are issues with merging or replication or with communication. Can the primary active NO talk to the server with the issue and visa versa. run the command `path.test` command.

Note: If checking information for an MP server, also check it's SOAM server that it would merge to or receive replicated data from:

- `soapstat -w`
- `irepstat -w`
- `inetmstat -w`
- `path.test -a -r`

Note: In older releases, the '-r' option is not available.

- `cat /var/tmp/dbreinitstate`

Recovery:

1. This alarm indicates the merging subsystem is unable to contact a server, due to networking issues or because the server is not available. Investigate the status of the server and verify network connectivity.
2. If no issues with network connectivity or the server are found and the problem persists, it is recommended to contact [My Oracle Support](#).

31107 - Database merge from child failure

Alarm Group:

COLL

Description:

Database merging from a child Source Node has failed.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolDbMergeFromChildFailureNotify

Recovery:

1. This alarm indicates the merging subsystem is unable to contact a server, due to networking issues or because the server is not available. Investigate the status of the server and verify network connectivity.

2. If no issues with network connectivity or the server are found and the problem persists, it is recommended to contact [My Oracle Support](#).

31108 - Database merge latency over threshold

Alarm Group:

COLL

Description:

Database merge latency has exceeded thresholds.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolDbMergeLatencyNotify

Recovery:

1. If this alarm is raised occasionally for short time periods (a couple of minutes or less), it may indicate network congestion or spikes of traffic pushing servers beyond their capacity. Consider re-engineering network capacity or subscriber provisioning.
2. If this alarm does not clear after a couple of minutes, it is recommended to contact [My Oracle Support](#).

31109 - Topology config error

Alarm Group:

DB

Description:

Topology is configured incorrectly.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolTopErrorNotify

Recovery:

1. This alarm may occur during initial installation and configuration of a server. No action is necessary at that time.
2. If this alarm occurs after successful initial installation and configuration of a server, it is recommended to contact [My Oracle Support](#).

31110 - Database audit fault**Alarm Group:**

SW

Description:

The Database service process (idbsvc) is impaired by a s/w fault.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolDbAuditFaultNotify

Recovery:

1. Alarm indicates an error occurred within the database audit system, but the system has recovered, so no additional steps are needed.
2. If this problem persists, collect savelogs, and it is recommended to contact [My Oracle Support](#).

31111 - Database merge audit in progress**Alarm Group:**

COLL

Description:

Database Merge Audit between mate nodes in progress

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolDbMergeAuditNotify

Recovery:

1. No action required.

31112 - DB replication update log transfer timed out

Alarm Group:

REPL

Description:

DB Replicated data may not have transferred in the time allotted.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

30

OID:

comcolDbRepUpLogTransTimeoutNotify

Recovery:

1. No action required.
2. It is recommended to contact [My Oracle Support](#) if this occurs frequently.

31113 - DB replication manually disabled

Alarm Group:

REPL

Description:

DB Replication Manually Disabled

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

comcolDbReplicationManuallyDisabledNotify

Recovery:

1. No action required.

31114 - DB replication over SOAP has failed

Alarm Group:

REPL

Description:

Database replication of configuration data via **SOAP** has failed.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

3600

OID:

comcolDbReplicationSoapFaultNotify

Recovery:

1. This alarm indicates a SOAP subsystem is unable to connect to a server, due to networking issues or because the server is not available. Investigate the status of the server and verify network connectivity.
2. If no issues with network connectivity or the server are found and the problem persists, it is recommended to contact [My Oracle Support](#).

31115 - Database service fault

Alarm Group:

SW

Description:

The Database service process (idbsvc) is impaired by a s/w fault.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

comcolDbServiceFaultNotify

Recovery:

1. Alarm indicates an error occurred within the database disk service subsystem, but the system has recovered, so no additional steps are needed.
2. If this problem persists, collect savelogs, and it is recommended to contact [My Oracle Support](#).

31116 - Excessive shared memory

Alarm Group:

MEM

Description:

The amount of shared memory consumed exceeds configured thresholds.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

eagleXgDsrExcessiveSharedMemoryConsumptionNotify

Recovery:

1. This alarm indicates a server has exceeded the engineered limit for shared memory usage and there is a risk the application software will fail. Because there is no automatic recovery for this condition, it is recommended to contact [My Oracle Support](#).

31117 - Low disk free

Alarm Group:

DISK

Description:

The amount of free disk is below configured thresholds.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

300

OID:

eagleXgDsrLowDiskFreeNotify

Recovery:

1. Remove unnecessary or temporary files from partitions.
2. If there are no files known to be unneeded, it is recommended to contact [My Oracle Support](#).

31118 - Database disk store fault

Alarm Group:

DISK

Description:

Writing the database to disk failed

Severity:

Description:

A managed process cannot be started or has unexpectedly terminated.

Severity:

Major

Instance:

May include process name

HA Score:

Normal

Auto Clear Seconds:

300

OID:

eagleXgDsrProcNotRunningNotify

Cause:

Internal error occurs and application shut down abruptly. A managed process cannot be started or has been terminated unexpectedly .

Diagnostic Information:

1. If this alarm is observed during installation of DSR system, and alarm instance is EXGSTACK_Process, make sure the DAMP Profile Assignment procedure is complete on the active SOAM for all DA-MPs.
2. During application start and shutdown, a temporary error may result while restarting the application.
 - a. The alarm automatically clears in 300 seconds if it was caused by a temporary error that no longer exists now.
 - b. The alarm exists, if the error is not recovered.
3. If alarm is raised after any unapproved configuration change, try to revert back the configuration and check if alarm clears.

Note: In a few cases, the alarm may stay for more than 300 seconds even if error condition is corrected. In such cases, wait for 300 seconds after corrective actions, before reporting it.

Recovery:

1. This alarm indicates a managed process cannot be started and has unexpectedly terminated.
2. It is recommended to contact [My Oracle Support](#).

31202 - Unkillable zombie process

Alarm Group:

PROC

Description:

A zombie process exists that cannot be killed by procmgr. procmgr no longer manages this process.

Recovery:

1. View alarms dashboard for other active alarms on this server.
2. Follow corrective actions for each individual alarm on the server to clear them.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

31227 - HA availability status failed

Alarm Group:

HA

Description:

The high availability status is failed due to raised alarms.

Severity:

Critical

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

N/A

OID:

eagleXgDsrHaAvailFailedNotify

Cause:

This alarm raises when there are alarms with haScore="FAILED", and displayed in the GUI.

Diagnostic Information:

- Get the `iqt -E RecentAlarmEv.1` result on active SO server.
- Get Savelogs on active SO server.
- Get `err.show` output on active SO server.

Recovery:

1. View alarms dashboard for other active alarms on this server.
2. Follow corrective actions for each individual alarm on the server to clear them.
3. If the problem persists, collect logs in Diagnostic information and it is recommended to contact [My Oracle Support](#).

31228 - HA standby offline

Alarm Group:

HA

Description:

High availability standby server is offline.

Severity:

Critical

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrHaStandbyOfflineNotify

Cause:

There are HA heartbeat messages among the servers. If the servers, such as NO and SO, cannot get the HA heartbeat from its mate even after trying several times, the alarm raises. The default interval time is 250 ms. The alarm raises after retrying five times.

Diagnostic Information:

To diagnose the alarm further, perform the following:

- The platform savelogs on active NO and SO servers.
- Get `iqt -E HaCfg` from active NO and SO servers.

Recovery:

1. If loss of communication between the active and standby servers is caused intentionally by maintenance activity, the alarm can be ignored. It clears automatically when communication is restored between the two servers.
2. If communication fails at any other time, look for network connectivity issues and it is recommended to contact [My Oracle Support](#), if needed.
3. A workaround for this problem is to increase the failCount values for all server groups in the HaCfg table. Bumping it from 5 to 10 should solve the problem. Check with the application team before applying this workaround. Run the `iset -ffailCount=10 HaCfg` command on the active NO where "1=1".

Note: This command is disruptive and causes active servers in the entire topology to lose service for about one minute while HA is reconfigured. A new server may be selected as active after the change is applied. If less disruption is required, you can apply the change one server group at a time as an alternative.

31229 - HA score changed

Alarm Group:

Instance:
May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:
Normal

Auto Clear Seconds:
0 (zero)

OID:
eagleXgDsrTpdDeviceIfFailureNotify

Cause:
This alarm indicates either the IP bond is not configured or down.

Diagnostic Information:

- Syscheck can be manually executed in the following methods:
 - Login as syscheck. When logging in, syscheck runs and then the login connection is dropped. This account does not have shell access.
 - From the root account, the Command Line Interface can be utilized directly.
 - Execute `syscheck -h` for usage information.
 - In DSR 6.0 and later, from the admusr account the Command Line Interface can be used directly when called using `sudo`.
 - Execute `syscheck -h` for usage information.
 - Using the platcfg user interface.

Note: In versions later than TPD 6.5, root access using SSH is disabled. The admusr should be used instead. If the command is to be run as admusr, `sudo` must be prepended to the command and the full path to the command must be used.

- `sudo /usr/TKLC/plat/bin/netAdm query --device=<bondX>`

- `sudo /usr/TKLC/plat/bin/netAdm query --device=<slave device>`
- `cat /proc/net/bonding/bondX`, where X is bond designation
- `ethtool <slave device>`

Recovery:

1. Run `syscheck` in verbose mode by executing `syscheck -h` for usage information.
2. Investigate the failed bond and slave devices configuration using `netAdm query`:
 - `sudo /usr/TKLC/plat/bin/netAdm query --device=<bondX>`
 - `sudo /usr/TKLC/plat/bin/netAdm query --device=<slave device>`
3. Determine if the failed bond and slave devices have been administratively shut down or have operational issues:
 - `cat /proc/net/bonding/bondX`, where X is bond designation
 - `ethtool <slave device>`
4. If bond and slaves are healthy, attempt to administratively bring bond up:
 - `ifup bondX`
5. If condition persists, contact [My Oracle Support](#) and provide the system health check output and output of steps 1 through 4.
6. It is recommended to contact [My Oracle Support](#) to request hardware replacement.

32113 - Uncorrectable ECC memory error

Alarm Group:
PLAT

Description:
This alarm indicates the chipset has detected an uncorrectable (multiple-bit) memory error the ECC (Error-Correcting Code) circuitry in the memory is unable to correct.

Alarm ID:
TKSPLATCR14

Cause:
This alarm indicates chipset has detected an uncorrectable (multiple-bit) memory error the ECC (Error-Correcting Code) circuitry in the memory is unable to correct.

Diagnostic Information:
Syscheck can be manually executed using the following methods:

- Login as syscheck. When logging in, syscheck runs and the login connection is dropped. This account does not have shell access.
- From the root account the Command Line Interface can be used directly.
 - Execute `syscheck -h` for usage information.
- In DSR 6.0 and later, from the admusr account the Command Line Interface can be used directly when called using `sudo`.
 - Execute `syscheck -h` for usage information.
- Through the platcfg user interface.

Note: In versions later than TPD 6.5, root access using SSH is disabled. The admusr should be used instead. If the command needs to be run as admusr, sudo must be prepended to the command and the full path to the command must be used.

Recovery:

1. It is recommended to contact [My Oracle Support](#) to request hardware replacement.

32114 - SNMP get failure

Alarm Group:
PLAT

Description:
The server failed to receive SNMP information from the switch.

Severity:
Critical

Instance:
May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:
Normal

Auto Clear Seconds:
0 (zero)

OID:

eagleXgDsrTpdSNMPGetFailureNotify

Alarm ID:

TKSPLATCR15

Cause:

This alarm indicates the server failed to get SNMP information from the device configured in the SNMPGET syscheck test.

Diagnostic Information:

Syscheck can be manually executed using the following methods:

- Login as syscheck. When logging in, syscheck runs and the login connection is dropped. This account does not have shell access.
- From the root account the Command Line Interface can be used directly.
 - Execute `syscheck -h` for usage information.
- In DSR 6.0 and later, from the admusr account the Command Line Interface can be used directly when called using `sudo`.
 - Execute `syscheck -h` for usage information.
- Using the platcfg user interface.

Note: In versions later than TPD 6.5, root access using SSH is disabled. The admusr should be used instead. If the command needs to be run as admusr, `sudo` must be prepended to the command and the full path to the command must be used.

Recovery:

1. Verify the device is active and responds to the ping command.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

32115 - TPD NTP daemon not synchronized failure

Alarm Group:

PLAT

Description:

This alarm indicates the server's current time precedes the timestamp of the last known time the server's time was good.

Severity:

Critical

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdNTPDaemonNotSynchronizedFailureNotify

Alarm ID:

TKSPLATCR16

Cause:

The server's current time precedes the timestamp of the last known time when the server's time was good.

Diagnostic Information:

N/A.

Recovery:

1. Verify NTP settings and NTP sources are providing accurate time.
 - a. Ensure ntpd service is running with correct options: -x -g.
 - b. Verify the content of the /etc/ntp.conf file is correct for the server.
 - c. Type /usr/sbin/ntpdc -c sysinfo to check the current state of the ntpd daemon.
 - d. Verify the ntp peer configuration; execute ntpq -np; and analyze the output. Verify peer data, such as tally code (first column before remote), remote, refid, stratum (st), and jitter, are valid for server.
 - e. Execute ntpstat to determine the ntp time synchronization status. If not synchronized or the stratum is not correct for server, then ping the ntp peer to determine if peer can be reached.
2. If ntp peer is reachable, then restart the ntpd service.
3. If problem persists, then a reset of the NTP date may resolve the issue.

Note: Before resetting the ntp date, the applications may need to be stopped; and subsequent to the ntp reset, the application restarted.

- a. Reset ntpd:
 - `sudo service ntpd stop`
 - `sudo ntpdate <ntp server IP>`
 - `sudo service ntpd start`
4. Confirm recommended NTP topology and strategy.
 - No fewer than three references are recommended.

- If selecting a different number, the number should be odd.
 - No intermediate reference should be on a virtualized server.
 - Additional recommendations and topology are available in the NTP strategy section in the *DSR Hardware and Software Installation 1/2* customer document.
5. If the problem persists, it is recommended to contact [My Oracle Support](#).

32116 - TPD server's time has gone backwards

OID:

eagleXgDsrNtpOffsetCheckFailureNotify

Alarm ID:

TKSPLATCR18

Cause:

The NTP offset of the server currently being synced to is greater than the critical threshold.

Diagnostic Information:

Run `ntpstat` command to diagnose the alarm.

Recovery:

1. Verify NTP settings and NTP sources can be reached.
 - a. Ensure `ntpd` service is running using `ps -ef | grep ntpd` or `service ntpd status`.
 - b. Verify the content of the `/etc/ntp.conf` file is correct for the server.
 - c. Type `/usr/sbin/ntpd -c sysinfo` to check the current state of the `ntpd` daemon.
 - d. Verify the `ntp` peer configuration; execute `ntpq -p`; and analyze the output. Verify peer data, such as tally code (first column before remote), remote, refid, stratum (st), and jitter, are valid for server.
 - e. Execute `ntpstat` to determine the `ntp` time synchronization status. If not synchronized or the stratum is not correct for server, then ping the `ntp` peer to determine if the peer can be reached.
2. If `ntp` peer is reachable, then restart the `ntpd` service.
3. If problem persists, then a reset of the NTP date may resolve the issue.

Note: Before resetting the `ntp` date, the applications may need to be stopped; and subsequent to the `ntp` reset, the application restarted.

- a. To reset date:
 - `sudo service ntpd stop`
 - `sudo ntpdate <ntp server IP>`
 - `sudo service ntpd start`
4. Confirm to recommended NTP topology and strategy.
 - No fewer than three references are recommended.
 - If selecting a different number, the number should be odd.

- No intermediate reference should be a virtualized server.
- Additional recommendations and topology are available in the NTP strategy section in the *DSR Hardware and Software Installation 1/2* customer document.

5. If the problem persists, it is recommended to contact [My Oracle Support](#).

32300 - Server fan failure

Alarm ID:

TKSPLATMA8

Recovery:

1. Run syscheck in verbose mode.
2. Determine processes using swap.

Note: One method to determine the amount of swap being used by process is:

```
grep VmSwap /proc/<process id>/status
```

3. It is recommended to contact [My Oracle Support](#) and provide the system health check output and process swap usage.

32308 - Server provisioning network error

Alarm Group:

PLAT

Description:

This alarm indicates the connection between the server's ethernet interface and the customer network is not functioning properly.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdProvNetworkErrorNotify

Alarm ID:

TKSPLATMA9

Recovery:

1. Verify that a customer-supplied cable labeled TO CUSTOMER NETWORK is securely connected to the appropriate server. Follow the cable to its connection point on the local network and verify this connection is also secure.
2. Test the customer-supplied cable labeled TO CUSTOMER NETWORK with an Ethernet Line Tester. If the cable does not test positive, replace it.
3. Have your network administrator verify that the network is functioning properly.
4. If no other nodes on the local network are experiencing problems and the fault has been isolated to the server or the network administrator is unable to determine the exact origin of the problem, it is recommended to contact [My Oracle Support](#).

32309 - EAGLE network A error

Alarm Group:

PLAT

Description:

Uncorrectable ECC Memory Error -- This alarm indicates the chipset has detected an uncorrectable (multiple-bit) memory error the ECC (Error-Correcting Code) circuitry in the memory is unable to correct.

Severity:

Critical

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdEagleNetworkAErrorNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) to request hardware replacement.

32310 - EAGLE network B error

Alarm Group:

PLAT

Description:

Uncorrectable ECC Memory Error -- This alarm indicates the chipset has detected an uncorrectable (multiple-bit) memory error the ECC (Error-Correcting Code) circuitry in the memory is unable to correct.

Severity:

Critical

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdEagleNetworkBErrorNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) to request hardware replacement.

32311 - Sync network error

Alarm Group:

PLAT

Description:

Uncorrectable ECC memory error -- This alarm indicates the chipset has detected an uncorrectable (multiple-bit) memory error the ECC (Error-Correcting Code) circuitry in the memory is unable to correct.

Severity:

Critical

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdSyncNetworkErrorNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) to request hardware replacement.

32312 - Server disk space shortage error

Alarm Group:

PLAT

Description:

This alarm indicates one of these conditions has occurred:

- A file system has exceeded a failure threshold, which means that more than 90% of the available disk storage has been used on the file system.
- More than 90% of the total number of available files have been allocated on the file system.
- A file system has a different number of blocks than it had when installed.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdDiskSpaceShortageErrorNotify

Alarm ID:

TKSPLATMA13

Recovery:

1. Run syscheck in verbose mode.
2. Examine contents of identified volume in syscheck output to determine if any large files are in the file system. Delete unnecessary files, or move files off of server. Capture output from `du -sx <file system>`.
3. Capture output from `df -h` and `df -i` commands.
4. Determine processes using the file system(s) that have exceeded the threshold.
5. It is recommended to contact [My Oracle Support](#) and provide the system health check output and provide additional file system output.

32313 - Server default route network error

Alarm Group:

PLAT

Description:

This alarm indicates the default network route of the server is experiencing a problem.

Caution: When changing the network routing configuration of the server, verify the modifications will not impact the method of connectivity for the current login session. The route information must be entered correctly and set to the correct values. Incorrectly modifying the routing configuration of the server may result in total loss of remote network access.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdDefaultRouteNetworkErrorNotify

Recovery:

1. Run syscheck in verbose mode.
2. If the syscheck output is: The default router at <IP_address> cannot be pinged, the router may be down or unreachable. Do the following:
 - a. Verify the network cables are firmly attached to the server and the network switch, router, hub, etc.
 - b. Verify the configured router is functioning properly. Check with the network administrator to verify the router is powered on and routing traffic as required.
 - c. Check with the router administrator to verify that the router is configured to reply to pings on that interface.
 - d. Rerun syscheck.
 - e. If the alarm has not been cleared, it is recommended to collect the syscheck output and contact [My Oracle Support](#).

3. If the syscheck output is: The default route is not on the provisioning network, it is recommended to collect the syscheck output and contact [My Oracle Support](#).
4. If the syscheck output is: An active route cannot be found for a configured default route, it is recommended to collect the syscheck output and contact [My Oracle Support](#).

32314 - Server temperature error

Alarm Group:

PLAT

Description:

The internal temperature within the server is unacceptably high.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdServerTemperatureError

Alarm ID:

TKSPLATMA15

Recovery:

1. Ensure nothing is blocking the fan intake. Remove any blockage.
2. Verify the temperature in the room is normal. If it is too hot, lower the temperature in the room to an acceptable level.

Note: Be prepared to wait the appropriate period of time before continuing with the next step. Conditions need to be below alarm thresholds consistently for the alarm to clear. It may take about ten minutes after the room returns to an acceptable temperature before the alarm cleared.

3. Run syscheck.
 - a. If the alarm has been cleared, the problem is resolved.
 - b. If the alarm has not been cleared, continue troubleshooting.
4. Replace the filter.

Note: Be prepared to wait the appropriate period of time before continuing with the next step. Conditions need to be below alarm thresholds consistently for the alarm to clear. The alarm may take up to five minutes to clear after conditions improve. It may take about ten minutes after the filter is replaced before syscheck shows the alarm cleared.

5. Re-run syscheck.
 - a. If the alarm has been cleared, the problem is resolved.
 - b. If the alarm has not been cleared, continue troubleshooting.
6. If the problem has not been resolved, it is recommended to contact [My Oracle Support](#).

32315 - Server mainboard voltage error

Alarm Group:

PLAT

Description:

This alarm indicates one or more of the monitored voltages on the server main board have been detected to be out of the normal expected operating range.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdServerMainboardVoltageError

Alarm ID:

TKSPLATMA16

Recovery:

1. Run syscheck in verbose mode.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#) and provide the system health check output.

32316 - Server power feed error

Alarm Group:

PLAT

Description:

This alarm indicates one of the power feeds to the server has failed. If this alarm occurs in conjunction with any Breaker Panel alarm, there might be a problem with the breaker panel.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdPowerFeedErrorNotify

Alarm ID:

TKSPLATMA17

Recovery:

1. Verify all the server power feed cables to the server that is reporting the error are securely connected.
2. Check to see if the alarm has cleared
 - If the alarm has been cleared, the problem is resolved.
 - If the alarm has not been cleared, continue with the next step.
3. Follow the power feed to its connection on the power source. Ensure that the power source is ON and that the power feed is properly secured.
4. Check to see if the alarm has cleared
 - If the alarm has been cleared, the problem is resolved.
 - If the alarm has not been cleared, continue with the next step.
5. If the power source is functioning properly and the wires are all secure, have an electrician check the voltage on the power feed.
6. Check to see if the alarm has cleared
 - If the alarm has been cleared, the problem is resolved.
 - If the alarm has not been cleared, continue with the next step.
7. If the problem has not been resolved, it is recommended to contact [My Oracle Support](#).

32317 - Server disk health test error

Alarm Group:

PLAT

Description:

Either the hard drive has failed or failure is imminent.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdDiskHealthErrorNotify

Alarm ID:

TKSPLATMA18

Recovery:

1. Run syscheck in verbose mode.
2. Replace the hard drives that have failed or are failing.
3. Re-run syscheck in verbose mode.
4. Perform the recovery procedures for the other alarms that may accompany this alarm.
5. If the problem has not been resolved, it is recommended to contact [My Oracle Support](#) and provide the system health check output. .

32318 - Server disk unavailable error

Alarm Group:

PLAT

Description:

The smartd service is not able to read the disk status because the disk has other problems that are reported by other alarms. This alarm appears only while a server is booting.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdDiskUnavailableErrorNotify

Alarm ID:

TKSPLATMA19

Recovery:

1. Run syscheck in verbose mode.
2. It is recommended to contact [My Oracle Support](#) and provide the system health check output.

32319 - Device error

Alarm Group:

PLAT

Description:

This alarm indicates the off-board storage server had a problem with its disk volume filling up.

Severity:

Major

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdDeviceErrorNotify

Alarm ID:

TKSPLATMA20

Recovery:

1. It is recommended to contact the [My Oracle Support](#).

32320 - Device interface error

Alarm Group:

PLAT

Description:

This alarm indicates the IP bond is either not configured or down.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdDeviceIfErrorNotify

Alarm ID:

TKSPLATMA21

Recovery:

1. Run syscheck in verbose mode.
2. Investigate the failed bond and slave devices configuration:
 - a. Navigate to `/etc/sysconfig/network-scripts` for the persistent configuration of a device.
3. Determine if the failed bond, and slave devices, has been administratively shut down or has operational issues:
 - a. `cat /proc/net/bonding/bondX`, where X is bond designation
 - b. `ethtool <slave device>`
4. If bond, and slaves, are healthy attempt to administratively bring bond up:
 - a. `ifup bondX`
5. If the problem has not been resolved, it is recommended to contact [My Oracle Support](#) and provide the system health check output and the output of the above investigation.

32321 - Correctable ECC memory error

Alarm Group:

PLAT

Description:

This alarm indicates that chipset has detected a correctable (single-bit) memory error that has been corrected by the ECC (Error-Correcting Code) circuitry in the memory.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdEccCorrectableError

Alarm ID:

TKSPLATMA22

Recovery:

1. No recovery necessary.
2. If the condition persists, verify the server firmware. Update the firmware if necessary, and re-run syscheck in verbose mode. Otherwise if the condition persists and the firmware is up to date, contact the hardware vendor to request hardware replacement.

32322 - Power supply A error

Alarm Group:

PLAT

Description:

This alarm indicates the power supply 1 (feed A) has failed.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdPowerSupply1Error

Alarm ID:

TKSPLATMA23

Recovery:

1. Verify nothing is obstructing the airflow to the fans of the power supply.

2. Run syscheck in verbose mode. The output provides details about what is wrong with the power supply.
3. If the problem persists, it is recommended to contact [My Oracle Support](#) and provide the syscheck verbose output. Power supply 1 (feed A) probably needs to be replaced.

32323 - Power supply B error

Alarm Group:

PLAT

Description:

This alarm indicates the power supply 2 (feed B) has failed.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdPowerSupply2Error

Alarm ID:

TKSPLATMA24

Recovery:

1. Verify nothing is obstructing the airflow to the fans of the power supply.
2. Run syscheck in verbose mode. The output provides details about what is wrong with the power supply.
3. If the problem persists, it is recommended to contact [My Oracle Support](#) and provide the syscheck verbose output. Power supply 2 (feed B) probably needs to be replaced.

32324 - Breaker panel feed error

Alarm Group:

PLAT

Description:

This alarm indicates the server is not receiving information from the breaker panel relays.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdBrkPnlFeedErrorNotify

Alarm ID:

TKSPLATMA25

Recovery:

1. Verify the same alarm is displayed by multiple servers:
 - If this alarm is displayed by only one server, the problem is most likely to be with the cable or the server itself. Look for other alarms that indicate a problem with the server and perform the recovery procedures for those alarms first.
 - If this alarm is displayed by multiple servers, go to the next step.
2. Verify the cables that connect the servers to the breaker panel are not damaged and are securely fastened to both the alarm interface ports on the breaker panel and to the serial ports on both servers.
3. If the problem has not been resolved, it is recommended to contact [My Oracle Support](#) to request that the breaker panel be replaced.

32325 - Breaker panel breaker error

Alarm Group:

PLAT

Description:

This alarm indicates a power fault has been identified by the breaker panel. The LEDs on the center of the breaker panel (see [Figure 4-1](#)) identify whether the fault occurred on the input power or the output power, as follows:

- A power fault on input power (power from site source to the breaker panel) is indicated by one of the LEDs in the PWR BUS A or PWR BUS B group illuminated red. In general, a fault in the input power means power has been lost to the input power circuit.

Note: LEDs in the PWR BUS A or PWR BUS B group that correspond to unused feeds are not illuminated; LEDs in these groups that are not illuminated do not indicate problems.

- A power fault on the output power (power from the breaker panel to other frame equipment) is indicated by either BRK FAIL BUS A or BRK FAIL BUS B is illuminated red. This type of fault can be caused by a surge or some sort of power degradation or spike that causes one of the circuit breakers to trip.

Figure 4-1 Breaker Panel LEDs

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdBrkPnlBreakerErrorNotify

Alarm ID:

TKSPLATMA26

Recovery:

1. Verify the same alarm is displayed by both servers. The single breaker panel normally sends alarm information to both servers:

- If this alarm is displayed by only one server, the problem is most likely with the cable or the server itself. Look for other alarms that indicate a problem with the server and perform the recovery procedures for those alarms first.
 - If this alarm is displayed by both servers, go to the next step.
2. For each breaker assignment, verify the corresponding LED in the PWR BUS A group and the PWR BUS B group is illuminated green.

Figure 4-2 Breaker Panel Setting

If one of the LEDs in the PWR BUS A group or the PWR BUS B group is illuminated red, a problem has been detected with the corresponding input power feed. Perform these steps to correct this problem:

- Verify the customer provided source for the affected power feed is operational. If the power source is properly functioning, have an electrician remove the plastic cover from the rear of the breaker panel and verify the power source is indeed connected to the input power feed connector on the rear of the breaker panel. Correct any issues found.
- Check the LEDs in the PWR BUS A group and the PWR BUS B group again.
 - a. If the LEDs are now illuminated green, the issue has been resolved. Proceed to step 4 to verify the alarm has been cleared.
 - b. If the LEDs are still illuminated red, continue to the next sub-step.
- Have the electrician verify the integrity of the input power feed. The input voltage should measure nominally -48VDC (that is, between -41VDC and -60VDC). If the supplied voltage is not within the acceptable range, the input power source must be repaired or replaced.

Note:

Make sure the voltmeter is connected properly. The locations of the BAT and RTN connections are in mirror image on either side of the breaker panel.

If the measured voltage is within the acceptable range, the breaker panel may be malfunctioning. The breaker panel must be replaced.

- Check the LEDs in the PWR BUS A group and the PWR BUS B group again after the necessary actions have been taken to correct any issues found.
 - a. If the LEDs are now illuminated green, the issue has been resolved; proceed to step 4 to verify the alarm has been cleared.
 - b. If the LEDs are still illuminated red, skip to step 5 .

3. Check the BRK FAIL LEDs for BUS A and for BUS B.
 - If one of the BRK FAIL LEDs is illuminated red, then one or more of the respective Input Breakers has tripped. (A tripped breaker is indicated by the toggle located in the center position.) Perform the following steps to repair this issue:
 - a. For all tripped breakers, move the breaker down to the open (OFF) position and then back up to the closed (ON) position.
 - b. After all the tripped breakers have been reset, check the BRK FAIL LEDs again. If one of the BRK FAIL LEDs is still illuminated red, run syscheck and contact [My Oracle Support](#).
4. If all of the BRK FAIL LEDs and all the LEDs in the PWR BUS A group and the PWR BUS B group are illuminated green, there is most likely a problem with the serial connection between the server and the breaker panel. This connection is used by the system health check to monitor the breaker panel for failures. Verify both ends of the labeled serial cables are properly secured. If any issues are discovered with these cable connections, make the necessary corrections and continue to the next step to verify the alarm has been cleared, otherwise it is recommended to run syscheck and contact [My Oracle Support](#).
5. Run syscheck.
 - If the alarm has been cleared, the problem is resolved.
 - If the problem has not been resolved, it is recommended to contact [My Oracle Support](#).

32326 - Breaker panel monitoring error

Alarm Group:

PLAT

Description:

This alarm indicates a failure in the hardware and/or software that monitors the breaker panel. This could mean there is a problem with the file I/O libraries, the serial device drivers, or the serial hardware itself.

Note: When this alarm occurs, the system is unable to monitor the breaker panel for faults. Thus, if this alarm is detected, it is imperative the breaker panel be carefully examined for the existence of faults. The LEDs on the breaker panel are the only indication of the occurrence of either alarm:

- 32324 – Breaker panel feed error
- 32325 – Breaker panel breaker error

until the breaker panel monitoring error has been corrected.

Severity:

Major

Instance:

Recovery:

1. Run syscheck in verbose mode.
2. Determine what process and address reports a state of SYN_RECV and collect data:
 - `netstat -nap`
3. It is recommended to contact [My Oracle Support](#) and provide the system health check output and collected data.

32337 - Flash program failure

Alarm Group:

PLAT

Description:

This alarm indicates there was an error while trying to update the firmware flash on the E5-APP-B cards.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdFlashProgramFailureNotify

Alarm ID:

TKSPLATMA38

Recovery:

1. It is recommended to contact [My Oracle Support](#).

32338 - Serial mezzanine unseated

Alarm Group:

PLAT

Description:

This alarm indicates a connection to the serial mezzanine board may not be properly seated.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdSerialMezzUnseatedNotify

Alarm ID:

TKSPLATMA39

Recovery:

1. Ensure both ends of both cables connecting the serial mezzanine card to the main board are properly seated into their connectors.
2. It is recommended to contact [My Oracle Support](#) if reseating the cables does not clear the alarm.

32339 - TPD max number of running processes error

Alarm Group:

PLAT

Description:

This alarm indicates the maximum number of running processes has reached the major threshold.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdMaxPidLimitNotify

Alarm ID:

TKSPLATMA40

Recovery:

1. Run syscheck in verbose mode.
2. Execute `ps tree` to see what pids are on the system and what process created them. Collect the output of command and review the output to determine the process responsible for the alarm.
3. It is recommended to contact [My Oracle Support](#) and provide the system health check output and pid output.

32340 - TPD NTP daemon not synchronized error

Alarm Group:

PLAT

Description:

This alarm indicates the server is not synchronized to an NTP source and has not been synchronized for an extended number of hours and has reached the major threshold.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdNTPDaemonNotSynchronizedErrorNotify

Alarm ID:
TKSPLATMA41

Recovery:

1. Verify NTP settings and NTP sources can be reached.
 - a. Ensure ntpd service is running.
 - b. Verify the content of the /etc/ntp.conf file is correct for the server.
 - c. Verify the ntp peer configuration; execute `ntpq -p` and analyze the output. Verify peer data, such as tally code (first column before *remote*), remote, refid, stratum (st), and jitter, are valid for server.
 - d. Execute `ntpstat` to determine the ntp time synchronization status. If not synchronized or the stratum is not correct for server, then ping the ntp peer to determine if peer can be reached.
2. If ntp peer is reachable, restart the ntpd service.
3. If problem persists, then resetting the NTP date may resolve the issue.

Note: Before resetting the ntp date, the applications may need to be stopped and, subsequent to the ntp reset, the application restarted.

- a. To reset date:
 - `sudo service ntpd stop`
 - `sudo ntpdate <ntp server IP>`
 - `sudo service ntpd start`
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

32341 - TPD NTP daemon not synchronized error

Alarm Group:
PLAT

Description:
This alarm indicates the server is not synchronized to an NTP source and has never been synchronized since the last configuration change.

Severity:
Major

Instance:
May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:
Normal

Auto Clear Seconds:

Recovery:

1. Run syscheck in verbose mode.
2. Verify firmware is up to date for the server, if not up to date, upgrade firmware and re-run syscheck in verbose mode.
3. It is recommended to contact [My Oracle Support](#) and provide the system health check output.

32345 - Server upgrade snapshot(s) invalid

Alarm Group:

PLAT

Description:

This alarm indicates the upgrade snapshot(s) are invalid and backout is no longer possible.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdUpgradeSnapshotInvalidNotify

Alarm ID:

TKSPLATMA46

Recovery:

1. Run accept to remove invalid snapshot(s) and clear alarms.
2. If the alarm persists, it is recommended to contact [My Oracle Support](#).

32346 - OEM hardware management service reports an error

Alarm Group:

PLAT

Description:

This alarms indicates the OEM hardware management service reports an error.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdOEMHardware

Alarm ID:

TKSPLATMA47

Recovery:

1. Run syscheck in verbose mode.
2. It is recommended to contact [My Oracle Support](#) and provide the system health check output.

32347 - The hwmgmtcliStatus daemon needs intervention

Alarm Group:

PLAT

Description:

This alarms indicates the hwmgmtcliStatus daemon is not running or is not responding.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdHWMGMTCLIProblemNotify

Alarm ID:

TKSPLATMA47

Recovery:

1. Run syscheck in verbose mode.
2. Verify the firmware is up to date for the server, if not up to date, upgrade firmware and re-run syscheck in verbose mode.

3. Determine if the hwmgmt process is running. If not running, verify it was not administratively stopped.
 - Execute `service hwmgmt status` to produce output indicating the process is running.
 - If not running, attempt to start process `service hwmgmt status`.
4. Determine if the TKLChwmgmtcli process is running. If not running, verify it was not administratively stopped.
 - Execute `status TKLChwmgmtcli` to produce output indicating the process is running.
 - If not running, attempt to start process `start TKLChwmgmtcli`.
5. Verify there are no hwmgmt error messages in `/var/log/messages`. If there are this could indicate the Oracle utility is hung. If hwmgmt process is hung, proceed with next step.
6. It is recommended to contact [My Oracle Support](#) and provide the system health check output.

32348 - FIPS subsystem problem

Alarm Group:

PLAT

Description:

This alarm indicates the FIPS subsystem is not running or has encountered errors.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdFipsSubsystemProblemNotify

Recovery:

1. Run syscheck in verbose mode.
2. It is recommended to contact [My Oracle Support](#) and provide the system health check output.

32349 - File tampering

Alarm Group:

PLAT

Description:

This alarm indicates HIDS has detected file tampering.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdHidsFileTamperingNotify

Recovery:

32350 - Security process terminated

Alarm Group:

PLAT

Description:

This alarm indicates the security process monitor is not running.

Severity:

Major

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDsrTpdSecurityProcessDownNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#).

32500 - Server disk space shortage warning

Alarm Group:

PLAT

Description:

This alarm indicates that one of the following conditions has occurred:

- A file system has exceeded a warning threshold, which means that more than 80% (but less than 90%) of the available disk storage has been used on the file system.
- More than 80% (but less than 90%) of the total number of available files have been allocated on the file system.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdDiskSpaceShortageWarning

Alarm ID:

TKSPLATMI1

Recovery:

1. Run syscheck in verbose mode.
2. Examine contents of identified volume in syscheck output to determine if any large files are in the file system. Delete unnecessary files, or move files off of server. Capture output from "du -sx <file system>".
3. Capture output from "df -h" and "df -i" commands.
4. Determine processes using the file system(s) that have exceeded the threshold.
5. It is recommended to contact [My Oracle Support](#), provide the system health check output, and provide additional file system output.

32501 - Server application process error

Alarm Group:

PLAT

Description:

This alarm indicates that either the minimum number of instances for a required process are not currently running or too many instances of a required process are running.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdApplicationProcessError

Alarm ID:

TKSPLATMI2

Recovery:

1. Run syscheck in verbose mode.
2. If the alarm has been cleared, then the problem is solved.
3. If the alarm has not been cleared, determine the run level of the system.
 - If system run level is not 4, determine why the system is operating at that run level.
 - If system run level is 4, determine why the required number of instances processes are not running.
4. For additional assistance, it is recommended to contact [My Oracle Support](#) and provide the syscheck output.

32502 - Server hardware configuration error

Alarm Group:

PLAT

Description:

This alarm indicates one or more of the server's hardware components are not in compliance with specifications. Refer to the appropriate hardware manual.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdHardwareConfigError

Alarm ID:

TKSPLATMI3

Recovery:

1. Run syscheck in verbose mode.
2. Contact the hardware vendor to request a hardware replacement.

32503 - Server RAM shortage warning

Alarm Group:

PLAT

Description:

This alarm is generated by the **MPS** syscheck software package and is not part of the TPD distribution.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdRamShortageWarning

Alarm ID:

TKSPLATMI4

Recovery

1. Refer to MPS-specific documentation for information regarding this alarm.
2. It is recommended to contact [My Oracle Support](#).

32504 - Software configuration error

Alarm Group:

PLAT

Description:

This alarm is generated by the MPS syscheck software package and is not part of the PLAT distribution.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdSoftwareConfigError

Recovery

1. It is recommended to contact [My Oracle Support](#).

32505 - Server swap space shortage warning

Alarm Group:

PLAT

Description:

This alarm indicates the swap space available on the server is less than expected. This is usually caused by a process that has allocated a very large amount of memory over time.

Note: For this alarm to clear, the underlying failure condition must be consistently undetected for a number of polling intervals. Therefore, the alarm may continue to be reported for several minutes after corrective actions are completed.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdSwapSpaceShortageWarning

Alarm ID:

TKSPLATMI6

Recovery:

1. Run syscheck in verbose mode.
2. Determine which processes are using swap.
 - a. List application processes and determine the process ID.
 - b. Determine how much swap each process is using. One method to determine the amount of swap being used by process is:
 - `grep VmSwap /proc/<process id>/status`
3. It is recommended to contact [My Oracle Support](#), provide the system health check output, and process swap usage.

32506 - Server default router not defined

Alarm Group:

PLAT

Description:

This alarm indicates the default network route is either not configured or the current configuration contains an invalid IP address or hostname.

Caution: When changing the server's network routing configuration, it is important to verify the modifications do not impact the method of connectivity for the current login session. It is also crucial this information not be entered incorrectly or set to improper values. Incorrectly modifying the server's routing configuration may result in total loss of remote network access.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdDefaultRouteNotDefined

Alarm ID:

TKSPLATMI7

Recovery:

1. Run syscheck in verbose mode.
2. If the syscheck output is: The default router at <IP_address> cannot be pinged, the router may be down or unreachable. Do the following:
 - a. Verify the network cables are firmly attached to the server and the network switch, router, hub, etc.
 - b. Verify the configured router is functioning properly. Check with the network administrator to verify the router is powered on and routing traffic as required.
 - c. Check with the router administrator to verify the router is configured to reply to pings on that interface.
 - d. Rerun syscheck.
3. If the alarm has not cleared, it is recommended to collect the syscheck output and contact [My Oracle Support](#).

32507 - Server temperature warning

Alarm Group:

PLAT

Description:

This alarm indicates the internal temperature within the server is outside of the normal operating range. A server fan failure may also exist along with the Server Temperature Warning.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdServerTemperatureWarning

Alarm ID:

TKSPLATMI8

Recovery:

1. Ensure nothing is blocking the fan intake. Remove any blockage.

2. Verify the temperature in the room is normal. If it is too hot, lower the temperature in the room to an acceptable level.

Note: Be prepared to wait before continuing with the next step. Conditions need to be below alarm thresholds consistently for the alarm to clear. It may take about ten minutes after the room returns to an acceptable temperature before the alarm cleared.

3. Run syscheck.
4. Replace the filter (refer to the appropriate hardware manual).

Note: Be prepared to wait before continuing with the next step. Conditions need to be below alarm thresholds consistently for the alarm to clear. It may take about ten minutes after the filter is replaced before the alarm cleared.

5. Run syscheck.
6. If the problem has not been resolved, it is recommended to contact [My Oracle Support](#).

32508 - Server core file detected

Alarm Group:
PLAT

Description:
This alarm indicates that an application process has failed and debug information is available.

Severity:
Minor

Instance:
May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:
Normal

Auto Clear Seconds:
0 (zero)

OID:
tpdServerCoreFileDetected

Alarm ID:
TKSPLATMI9

Recovery:

1. It is recommended to contact [My Oracle Support](#) to create a service request.
2. On the affected server, execute this command:

```
ll /var/TKLC/core
```

Add the command output to the service request. Include the date of creation found in the command output.

3. Attach core files to the [My Oracle Support](#) service request.
4. The user can remove the files to clear the alarm with this command:

```
rm -f /var/TKLC/core/<coreFileName>
```

32509 - Server NTP daemon not synchronized

Alarm Group:

PLAT

Description:

This alarm indicates the NTP daemon (background process) has been unable to locate a server to provide an acceptable time reference for synchronization.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdNTPDeamonNotSynchronizedWarning

Alarm ID:

TKSPLATMI10

Recovery:

1. Verify NTP settings and that NTP sources can be reached.
 - a. Ensure ntpd service is running.
 - b. Verify the content of the /etc/ntp.conf file is correct for the server.
 - c. Verify the ntp peer configuration; execute `ntpq -p` and analyze the output. Verify peer data, such as tally code (first column before *remote*), remote, refid, stratum (st), and jitter, are valid for server.
 - d. Execute `ntpstat` to determine the ntp time synchronization status. If not synchronized or the stratum is not correct for server, then ping the ntp peer to determine if peer can be reached.
2. If ntp peer is reachable, restart the ntpd service.

3. If problem persists, then resetting the NTP date may resolve the issue.

Note: Before resetting the ntp date, the applications may need to be stopped and, subsequent to the ntp reset, the application restarted.

- a. To reset date:

- `sudo service ntpd stop`
- `sudo ntpdate <ntp server IP>`
- `sudo service ntpd start`

4. If the problem persists, it is recommended to contact [My Oracle Support](#).

32510 - CMOS battery voltage low

Alarm Group:

PLAT

Description:

The presence of this alarm indicates the CMOS battery voltage has been detected to be below the expected value. This alarm is an early warning indicator of CMOS battery end-of-life failure, which causes problems if the server is powered off.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

TKSPLATMI21

Recovery:

1. Verify NTP settings and that NTP sources can be reached.
 - a. Ensure ntpd service is running.
 - b. Verify the content of the /etc/ntp.conf file is correct for the server.
 - c. Verify the ntp peer configuration; execute `ntpq -p` and analyze the output. Verify peer data, such as tally code (first column before *remote*), remote, refid, stratum (st), and jitter, are valid for server.
 - d. Execute `ntpstat` to determine the ntp time synchronization status. If not synchronized or the stratum is not correct for server, then ping the ntp peer to determine if peer can be reached.
2. If ntp peer is reachable, restart the ntpd service.
3. If problem persists, then resetting the NTP date may resolve the issue.

Note: Before resetting the ntp date, the applications may need to be stopped and, subsequent to the ntp reset, the application restarted.

- a. To reset date:
 - `sudo service ntpd stop`
 - `sudo ntpdate <ntp server IP>`
 - `sudo service ntpd start`
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

32521 - SAS presence sensor missing

Alarm Group:

PLAT

Description:

This alarm indicates the T1200 server drive sensor is not working.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

sasPresenceSensorMissing

Alarm ID:

TKSPLATMI22

Recovery:

1. It is recommended to contact [My Oracle Support](#) to get a replacement sensor.

32522 - SAS drive missing

Alarm Group:

PLAT

Description:

This alarm indicates the number of drives configured for this server is not being detected.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

sasDriveMissing

Alarm ID:

TKSPLATMI23

1. It is recommended to contact [My Oracle Support](#).

32523 - DRBD failover busy

Alarm Group:

PLAT

Description:

This alarm indicates a DRBD synchronization is in progress from the peer server to the local server. The local server is not ready to act as the primary DRBD node, since its data is not up to date.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdDrbdFailoverBusy

Alarm ID:

TKSPLATMI24

Recovery

1. A DRBD synchronization should not take more than 15 minutes to complete. Please wait for approximately 20 minutes, and then check if the DRBD sync has completed. If the alarm persists longer than this time, it is recommended to contact [My Oracle Support](#).

32524 - HP disk resync

Alarm Group:

PLAT

Description:

This minor alarm indicates that the HP disk subsystem is currently resynchronizing after a failed or replaced drive, or some other change in the configuration of the HP disk subsystem. The output of the message will include the disk that is resynchronizing and the percentage complete. This alarm should eventually clear once the resync of the disk is completed. The time it takes for this is dependent on the size of the disk and the amount of activity on the system.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdHpDiskResync

Alarm ID:

TKSPLATMI25

Recovery:

1. Run syscheck in verbose mode.
2. If the percent recovering is not updating, wait at least 5 minutes between subsequent runs of syscheck.
3. If the alarm persists, it is recommended to contact [My Oracle Support](#) and provide the syscheck output.

32525 - Telco fan warning

Alarm Group:

PLAT

Description:

This alarm indicates the Telco switch has detected an issue with an internal fan.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdTelcoFanWarning

Alarm ID:

TKSPLATMI26

Recovery:

1. Contact the vendor to get a replacement switch. Verify the ambient air temperature around the switch is as low as possible until the switch is replaced.

Note: [My Oracle Support](#) personnel can perform an `snmpget` command or log into the switch to get detailed fan status information.

32526 - Telco temperature warning

Alarm Group:

PLAT

Description:

This alarm indicates the Telco switch has detected the internal temperature has exceeded the threshold.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdTelcoTemperatureWarning

Alarm ID:

TKSPLATMI27

Recovery:

1. Lower the ambient air temperature around the switch as low as possible.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

32527 - Telco power supply warning

Alarm Group:

PLAT

Description:

This alarm indicates the Telco switch has detected that one of the duplicate power supplies has failed.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdTelcoPowerSupplyWarning

Alarm ID:

TKSPLATMI28

Recovery:

1. Verify the breaker was not tripped.
2. If the breaker is still good and problem persists, it is recommended to contact [My Oracle Support](#) who can perform a `snmpget` command or log into the switch to determine which power supply is failing. If the power supply is bad, the switch must be replaced.

32528 - Invalid BIOS value

Alarm Group:

PLAT

Description:

This alarm indicates the HP server has detected that one of the setting for either the embedded serial port or the virtual serial port is incorrect.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdInvalidBiosValue

Alarm ID:

TKSPLATMI29

Recovery:

1. Change the BIOS values to the expected values which involves re-booting the server. It is recommended to contact [My Oracle Support](#) for directions on changing the BIOS.

32529 - Server kernel dump file detected

Alarm Group:

PLAT

Description:

This alarm indicates the kernel has crashed and debug information is available.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdServerKernelDumpFileDetected

Alarm ID:

TKSPLATMI30

Recovery:

1. Run syscheck in verbose mode.
2. It is recommended to contact [My Oracle Support](#).

32530 - TPD upgrade failed

Alarm Group:

PLAT

Description:

This alarm indicates a TPD upgrade has failed.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

OID:

TpdServerUpgradeFailed

Alarm ID:

TKSPLATMI31

Recovery:

1. It is recommended to contact [My Oracle Support](#).

32531 - Half open socket warning limit

Alarm Group:

PLAT

Description

This alarm indicates the number of half open TCP sockets has reached the major threshold. This problem is caused by a remote system failing to complete the TCP 3-way handshake.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdHalfOpenSocketWarning

Alarm ID:

TKSPLATMI32

Recovery:

1. Run syscheck in verbose mode.
2. It is recommended to contact [My Oracle Support](#).

32532 - Server upgrade pending accept/reject

Alarm Group:

PLAT

Description:

This alarm indicates an upgrade occurred but has not been accepted or rejected yet.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdServerUpgradePendingAccept

Alarm ID:

TKSPLATMI33

Recovery:

1. Follow the steps in the application procedure to accept or reject the upgrade.

32533 - TPD max number of running processes warning

Alarm Group:

PLAT

Description:

This alarm indicates the maximum number of running processes has reached the minor threshold.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdMaxPidWarning

Alarm ID:

TKSPLATMI34

Recovery:

1. Run syscheck in verbose mode.
2. It is recommended to contact [My Oracle Support](#).

32534 - TPD NTP source is bad warning

Alarm Group:

PLAT

Description:

This alarm indicates an NTP source has been rejected by the NTP daemon and is not being considered as a time source.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdNTPSourceIsBad

Alarm ID:

TKSPLATMI35

Recovery:

1. Verify NTP settings and that NTP sources can be reached.
 - a. Ensure ntpd service is running.
 - b. Verify the content of the /etc/ntp.conf file is correct for the server.
 - c. Verify the ntp peer configuration; execute `ntpq -p` and analyze the output. Verify peer data, such as tally code (first column before *remote*), remote, refid, stratum (st), and jitter, are valid for server.
 - d. Execute `ntpstat` to determine the ntp time synchronization status. If not synchronized or the stratum is not correct for server, then ping the ntp peer to determine if peer can be reached.
2. If ntp peer is reachable, restart the ntpd service.
3. If problem persists, then resetting the NTP date may resolve the issue.

Note: Before resetting the ntp date, the applications may need to be stopped and, subsequent to the ntp reset, the application restarted.

a. To reset date:

- `sudo service ntpd stop`

- `sudo ntpdate <ntp server IP>`
- `sudo service ntpd start`

4. If the problem persists, it is recommended to contact [My Oracle Support](#).

32535 - TPD RAID disk resync

Alarm Group:

PLAT

Description:

This alarm indicates the RAID logical volume is currently resyncing after a failed/replaced drive, or some other change in the configuration. The output of the message includes the disk that is resyncing. This alarm should eventually clear once the resync of the disk is completed. The time it takes for this is dependent on the size of the disk and the amount of activity on the system (rebuild of 600G disks without any load takes about 75 minutes).

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdDiskResync

Alarm ID:

TKSPLATMI36

Recovery:

1. Run syscheck in verbose mode.
2. If this alarm persists for several hours (depending on a load of a server, rebuilding an array can take multiple hours to finish), it is recommended to contact [My Oracle Support](#).

32536 - TPD server upgrade snapshot(s) warning

Alarm Group:

PLAT

Description:

This alarm indicates the upgrade snapshot(s) are above configured threshold and either accept or reject of LVM upgrade has to be run soon, otherwise snapshots become full and invalid.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdUpgradeSnapshotWarning

Alarm ID:

TKSPLATMI37

Recovery:

1. Run accept or reject of current LVM upgrade before snapshots become invalid.
2. It is recommended to contact [My Oracle Support](#).

32537 - FIPS subsystem warning event

Alarm Type:

PLAT

Description:

This alarm indicates the FIPS subsystem requires a reboot to complete configuration.

Severity:

Minor

Instance:

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

tpdFipsSubsystemWarning

Recovery

1. If alarm does not clear on its own, it is recommended to contact [My Oracle Support](#).

32538 - Platform data collection error

Alarm Group

PLAT

Description

Platform data collection error.

Severity

Minor

Instance

May include AlarmLocation, AlarmId, AlarmState, AlarmSeverity, and bindVarNamesValueStr

DM-IWF (33000-33024)

This section provides information and recovery procedures for **DM-IWF** alarms and events, ranging from 33000 to 33024, and lists the type of alarms and events that can occur on the system.

Alarms and events are recorded in a database log table. Currently active alarms can be viewed from the Launch Alarms Dashboard GUI menu option. The alarms and events log can be viewed from the **Alarms & Events > View History** page.

33000 - MAP-to-Diameter Service Registration Failure on DA-MP

Alarm Group:

DIWF

Description:

DM-IWF application was unable to register for MAP-to-Diameter transaction service. No MAP-to-Diameter transactions can be routed to this DA-MP.

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDmiwfAppComagentProviderRegistrationFailureNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#) for assistance.

33001 - Diameter-to-MAP Service Registration Failure on DA-MP**Alarm Group:**

DIWF

Description:

DM-IWF application was unable to register for Diameter-to-MAP transaction service. Diameter-to-MAP transactions cannot be serviced by this DA-MP.

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDmiwfAppComagentUserRegistrationFailureNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#) for assistance.

33002 - DM-IWF DA-MP not associated with a Place**Alarm Group:**

DIWF

Description:

DM-IWF DA-MP server is not associated with an AppWorks Place.

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDmiwfAppServerPlaceFailureNotify

Recovery:

1. If the server is not associated with an AppWorks place, Admin Disable DM-IWF on the DA-MP server, add the server to an appropriate AppWorks Place, and then Admin Enable DM-IWF on the DA-MP server.
2. It is recommended to contact [My Oracle Support](#) for further assistance.

33003 - Insufficient memory for DM-IWF

Alarm Group:

DIWF

Description:

DA-MP does not have sufficient memory to support DM-IWF

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDmiwfAppInsufficientMemoryFailureNotify

Recovery:

1. If the VM:Database DA-MP profile is applied to the DA-MP (**Diameter > Configuration > DA-MPs > Profile Assignments**), verify that the DA-MP has at least 24GB of physical memory.
2. If the G6:Database or G6:Session DA-MP profile is applied to the DA-MP (**Diameter > Configuration > DA-MPs > Profile Assignments**), verify that the DA-MP has at least 48GB of physical memory.
3. If the G7:Database, G8:Database, G7:Session or G8:Session DA-MP profile is applied to the DA-MP (**Diameter > Configuration > DA-MPs > Profile Assignments**), verify that the DA-MP has at least 64GB of physical memory.
4. If the DA-MP does not have sufficient physical memory to support a profile, it is recommended to contact [My Oracle Support](#) for further assistance on how to upgrade memory.

33004 - DM-IWF Transaction Response Queue Utilization

Alarm Group:

DIWF

Description:

The DM-IWF Transaction Response Queue Utilization is approaching its maximum engineered capacity.

Severity:

Minor, Major, Critical

Instance:

RxDmiwfTranRspMsgQueue, DM-IWF

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDmiwfAppTransactionResponseQueueUtilizationNotify

Recovery:

1. This alarm should not normally occur when no other congestion alarms are asserted. If no additional congestion alarms are asserted, the DSR Application Task might be experiencing a problem that is preventing it from processing message from its transaction response queue. Examine the Alarm log in **Alarms & Events**.
2. It is recommended to contact [My Oracle Support](#) for assistance.

33005 - DM-IWF PTR Pool Utilization

Alarm Group:

DIWF

Description:

The DM-IWF PTR Pool Utilization is approaching its maximum engineered capacity. DM-IWF allocates a pending transaction record (PTR) for every pending Diameter-to-MAP and MAP-to-Diameter transaction. If this problem persists and the pool reaches 100% utilization, all new ingress messages will be discarded. This alarm should not normally occur when no other congestion alarms are asserted.

Severity:

Minor, Major, Critical

Instance:

RxDmiwfTranRspMsgQueue, DM-IWF

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDmiwfAppPTRPoolUtilizationNotify

Recovery:

1. Examine the Alarm log in Alarms & Events and evaluate whether the DSR Application Task might be experiencing a problem processing the messages. The rate of messages being processed by DM-IWF can be monitored from the from **Status & Manage > KPIs** page
2. If one or more DA-MPs in a server site have failed, this may result in too much traffic being forwarded to the DM-IWF instance reporting this alarm. DA-MP server status can be monitored from the **Status > Manage > Server**.
3. If one or more DM-IWF instances configured in a server site are unable to provide service, this may result in too much traffic being forwarded to the DM-IWF instance reporting this alarm. DM-IWF application admin state can be monitored from **Diameter > Maintenance > Applications**. DM-IWF service provider status can be monitored from **Communication Agent > Maintenance > Routed Services Status**
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

33006 - MD-IWF Service Congestion

Event Group:

DIWF

Description:

DM-IWF could not forward a Request to MD-IWF due to MD-IWF Service Congestion.

Severity:

Info

Instance:

<DAMPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfServiceCongestedNotify

Recovery:

1. The number of SS7-MPs that act as providers for the MAP Routed Service might be insufficient to service the offered ingress load. MAP Routed Service ("MDIWFSvc") provider status can be monitored from **Communication Agent > Maintenance > Routed Services Status**.

2. If the problem occurs frequently, it is recommended to contact [My Oracle Support](#).

33007 - MD-IWF Error

Event Group:

DIWF

Description:

DM-IWF received notification indicating ComAgent Error/Timeout or MD-IWF Application generated Failure Response.

Severity:

Info

Instance:

<DAMPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfErrorNotify

Recovery:

1. If the problem persists, it is recommended to contact [My Oracle Support](#).

33008 - DM-IWF maximum pending transactions allowed exceeded

Event Group:

DIWF

Description:

DM-IWF rejected either a Diameter-to-MAP or MAP-to-Diameter transaction because it was unable to allocate a pending transaction record (PTR) for the transaction. DM-IWF allocates a PTR for every pending Diameter-to-MAP and MAP-to-Diameter transaction. If this problem persists and the pool reaches 100% utilization, all new ingress messages will be discarded. This alarm should not normally occur when no other congestion alarms are asserted.

Severity:

Info

Instance:

<DAMPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDmiwfMaxPendTransactionsAllowedExceededNotify

Recovery:

1. Examine the Alarm log in Alarms & Events and evaluate whether the DSR Application Task might be experiencing a problem processing the messages. The rate of messages being processed by DM-IWF can be monitored from the **Status & Manage > KPIs** page
2. If one or more DA-MPs in a server site have failed, this may result in too much traffic being forwarded to the DM-IWF instance reporting this alarm. DA-MP server status can be monitored from the **Status & Manage > Server**.
3. If one or more DM-IWF instances configured in a server site are unable to provide service, this may result in too much traffic being forwarded to the DM-IWF instance reporting this alarm. DM-IWF application admin state can be monitored from **Diameter > Maintenance > Applications**. DM-IWF service provider status can be monitored from **Communication Agent > Maintenance > Routed Services Status**
4. If the problem persists, it is recommended to contact [My Oracle Support](#).

33009 - DM-IWF unexpected Answer response received from a SS7-MP

Event Group:

DIWF

Description:

No pending transaction was found for the Answer response received from SS7-MP. When a Request message is forwarded to an SS7-MP, DM-IWF creates a pending transaction record (PTR). The PTR is abandoned if an Answer response is not received in a timely fashion.

Severity:

Info

Instance:

<DAMPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDmiwfUnexpectedAnswerRspReceivedFromSS7MPNotify

Recovery:

1. If this event is occurring frequently, the MAP Response Timeout may be set too low. The MAP Response Timeout value can be reviewed via **MAP-Diameter IWF > Configuration > MD-IWF Options** screen.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

33010 - MD-IWF ComAgent Connection exhausted

Event Group:

DIWF

Description:

DM-IWF failed to receive a Diameter Answer in response to a Diameter Request that was forwarded to MD-IWF Routed Service, in a timely fashion.

Severity:

Info

Instance:

<DAMPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDmiwfMapComAgentConnectionExhaustedNotify

Recovery:

1. If this event is occurring frequently, the MAP Response Timeout may be set too low. The MAP Response Timeout value can be reviewed via **MAP-Diameter IWF > Configuration > MD-IWF Options** screen.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

33011 - DM-IWF Answer Timeout

Event Group:

DIWF

Description:

DM-IWF failed to receive a Diameter Answer in response to a Diameter Request that was forwarded to **MD-IWF** Routed Service, within the DM-IWF Pending Answer Timer expiration.

Severity:

Info

Instance:

<DAMPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDmiwfAnswerTimeoutNotify

Recovery:

1. Diameter-to-MAP timeouts are most likely caused by excessive SS7 network delays. It's possible that the MAP Origination Transaction Timer value is set too low. The MAP Origination Transaction Timer value setting can be viewed via the following GUI screen: **MAP Interworking > Configuration > Options (MD-IWF tab)**.
2. If the problem persists, it is recommended to contact [My Oracle Support](#).

33012 - DM-IWF encode decode error

Event Group:

DIWF

Description:

The decoder has reported an error causing the Request to be discarded.

Severity:

Info

Instance:

<DAMPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDmiwfDecodeErrorNotify

Recovery:

1. If the problem persists, it is recommended to contact [My Oracle Support](#).

33013 - DRL queue exhaustion

Event Group:

DIWF

Description:

DM-IWF failed to forward a Diameter message to DRL due to DRL queue exhaustion.

Severity:

Info

Instance:

<DAMPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDrlQueueExhaustionNotify

Recovery:

1. If the problem persists, it is recommended to contact [My Oracle Support](#).

Note: This measurement should not occur unless the MP is experiencing local congestion as indicated by Alarms 22000 - Local MP Congestion, 22201 - Ingress Message Rate, 22204 - Request Message Queue Utilization, and 22205 - Answer Message Queue Utilization. Refer to the *DSR Alarms and KPIs Reference* for details about these alarms.

33014 - Incompatible DA-MP Profile for DM-IWF

Alarm Group:

DIWF

Description:

DA-MP has been assigned a profile that is incompatible with DM-IWF

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterDmiwfAppIncompatibleProfileFailureNotify

Recovery:

1. If the DA-MP has been assigned a DA-MP profile (**Diameter > Configuration > DA-MPs > Profile Assignments**) other than those listed below, apply a compatible profile and restart DSR (**Status & Manage > Server > Restart**).
 - G6:Database
 - G7:Database
 - G8:Database
 - VM:Database

- G6:Session
 - G7:Session
 - G8:Session
2. If the DA-MP has been assigned a compatible profile and the problem persists, contact [My Oracle Support](#) for assistance.

33015 - DM-IWF Diameter message size exceeded maximum supported size

Event Group:

DIWF

Description:

DM-IWF failed to forward the Diameter message to SS7-MP because the message size exceeds supported maximum message size.

Severity:

Info

Instance:

<DAMPName>

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterDmiwfMaxDiameterMsgSizeExceededNotify

Recovery:

1. Occurrence of this event indicates that diameter message received has size that exceeds maximum diameter message size supported by MAP-Diameter Interworking function and therefore be handled as "Internal Processing Error". Source of these requests can be tracked using "Origin Host", "Application Id" and "Command Code".

MD-IWF (33050-33099)

This section provides information and recovery procedures for **MD-IWF** alarms and events, ranging from 33050 to 33099, and lists the type of alarms and events that can occur on the system.

Alarms and events are recorded in a database log table. Currently active alarms can be viewed from the Launch Alarms Dashboard GUI menu option. The alarms and events log can be viewed from the **Alarms & Events > View History** page.

33050 - MD-IWF Ingress Message Rate

Alarm Group:

MIWF

Description:

The ingress message rate for the MD-IWF Application is approaching or exceeding its engineered traffic handling capacity.

Severity:

Minor, Major, Critical

Instance:

RxMdIwfIngressMsgRate, MD-IWF

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdIwfIngressMsgRateNotify

Recovery:

1. The Application Routing Table may be mis-configured and sending too much traffic to the DM-IWF DSR Application. Verify the configuration via **Diameter > Configuration > Application Route Tables**.
2. There may be an insufficient number of MPs configured to handle the network load. Monitor the ingress traffic rate of each MP from **Status & Manage > KPIs**. If MPs are in a congestion state, then the offered load to the server site is exceeding its capacity.
3. It is recommended to contact [My Oracle Support](#) for further assistance.

33051 - MD-IWF Application Degraded or Unavailable

Alarm Group:

MIWF

Description:

MD-IWF Application operational status is Degraded or Unavailable.

Severity:

Major, Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdIwfApplDegradedOrUnavailableNotify

Recovery:

1. An MD-IWF Application operational status becomes Degraded when either the Admin State is set to disabled with the forced shutdown option or the Admin State is set to disabled with the graceful shutdown option and the graceful shutdown timer expires.
2. The MD-IWF Application can also become Degraded when it reaches Congestion Level 1, 2, or 3 if enabled.

Note: This alarm will NOT be raised when the MD-IWF application is shutting down gracefully or application is in Disabled state. Only the MD-IWF Application operational status will be changed to Unavailable.

3. An MD-IWF Application operational status becomes Unavailable when either the Admin State is set to disabled with the forced shutdown option or the Admin State is set to disabled with the graceful shutdown option and the graceful shutdown timer expires.
4. The MD-IWF Application can also become Unavailable when it is isolated from the SS7 network.

Note: This alarm will NOT be raised when the MD-IWF application is shutting down gracefully or application is in Disabled state. Only the MD-IWF Application operational status will be changed to Unavailable.

5. Monitor the MD-IWF Application status can be monitored from **Diameter > Maintenance > Applications**. Verify the admin state is set as expected.
6. Check the event history logs for additional events or alarms from this SS7-MP server.
7. If the problem persists, it is recommended to contact [My Oracle Support](#).

33052 - MD-IWF Notified that DM-IWF Service Status is Down

Alarm Group:

MIWF

Description:

The MD-IWF is notified via ComAgent that the rolled-up DM-IWF Service Status is Down.

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdIwfUserSvcDownNotify

Recovery:

1. Investigate the status of all DA-MP servers. As this status is a rolled-up status, it indicates that no DA-MP servers are able to be a provider of the DM-IWF ComAgent Routed Service.
2. It is recommended to contact [My Oracle Support](#) for further assistance.

33053 - MD-IWF DiamTrans Task Queue Utilization

Alarm Group:

MIWF

Description:

The MD-IWF Application DiamTrans Task Queue Utilization is approaching its maximum capacity.

Severity:

Minor, Major, Critical

Instance:

RxMdIwfDiamTransMsgQueue (TaskID), MD-IWF

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdIwfDiamTransQueueUtilNotify

Recovery:

1. The Application Routing Table may be mis-configured and sending too much traffic to the DM-IWF DSR Application. Verify the configuration via **Diameter > Configuration > Application Route Tables**.
2. If no additional congestion alarms are asserted, the MD-IWF Application Task may be experiencing a problem preventing it from processing messages from its DiamTrans Task Queue. Examine the alarm log from **Alarms & Events**.
3. It is recommended to contact [My Oracle Support](#) for further assistance.

33054 - MD-IWF MapTrans Task Queue Utilization

Alarm Group:

MIWF

Description:

The MD-IWF Application MapTrans Task Queue Utilization is approaching its maximum capacity.

Severity:

Minor, Major, Critical

Instance:

RxMdIwfMapTransMsgQueue (TaskId), MD-IWF

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdIwfMapTransQueueUtilNotify

Recovery:

1. The Application Routing Table may be mis-configured and sending too much traffic to the DM-IWF DSR Application. Verify the configuration via **Diameter > Configuration > Application Route Tables**.
2. If no additional congestion alarms are asserted, the MD-IWF Application Task may be experiencing a problem preventing it from processing messages from its DiamTrans Task Queue. Examine the alarm log from **Alarms & Events**.
3. It is recommended to contact [My Oracle Support](#) for further assistance.

33055 - MD-IWF DAMPInterface Task Queue Utilization

Alarm Group:

MIWF

Description:

The MD-IWF Application DAMPInterface Task Queue Utilization is approaching its maximum capacity.

Severity:

Minor, Major, Critical

Instance:

RxMdIwfDampInterfaceMsgQueue, MD-IWF

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdIwfDampInterfaceQueueUtilNotify

Recovery:

1. The Application Routing Table may be mis-configured and sending too much traffic to the DM-IWF DSR Application. Verify the configuration via **Diameter > Configuration > Application Route Tables**.

2. If no additional congestion alarms are asserted, the MD-IWF Application Task may be experiencing a problem preventing it from processing messages from its DAMPInterface Task Queue. Examine the alarm log from **Alarms & Events**.
3. It is recommended to contact [My Oracle Support](#) for further assistance.

33056 - MD-IWF ComAgent Provider Registration Failure on SS7-MP

Alarm Group:
MIWF

Description:
MD-IWF Application was unable to register with ComAgent as a provider of the MDIWFSvc service. No Diameter-to-MAP transactions can be routed to this SS7-MP.

Severity:
Critical

Instance:
None

HA Score:
Normal

Auto Clear Seconds:
0 (zero)

OID:
eagleXgDiameterMdIwfComAgentProviderRegisFailureNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#) for further assistance.

33057 - MD-IWF ComAgent User Registration Failure on SS7-MP

Alarm Group:
MIWF

Description:
MD-IWF application was unable to register with **ComAgent** as a user of the DMIWFSvc service. MAP-to-Diameter transactions cannot be processed by this SS7-MP.

Severity:
Critical

Instance:
None

HA Score:
Normal

Auto Clear Seconds:
0 (zero)

OID:

eagleXgDiameterMdIwfComAgentUserRegisFailureNotify

Recovery:

1. It is recommended to contact [My Oracle Support](#) for further assistance.

33058 - MD-IWF DiamToMap PTR Utilization

Alarm Group:

MIWF

Description:

The MD-IWF Application DiamToMap PTR Utilization is approaching its maximum engineered capacity.

Severity:

Minor, Major, Critical

Instance:

EvMdIwfDiam2MapPtrUtil, MD-IWF

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdIwfDiamToMapPtrUtilNotify

Recovery:

1. A DiamToMap PTR is allocated for every pending Diameter-to-Map transaction. The PTR size is engineered based on an average transaction holding size. If the PTRs becomes depleted, no new transactions can be processed by the MD-IWF application.
2. PTR exhaustion is most likely caused by long delays in the Diameter or SS7 networks. PTR exhaustion problems can be reduced/eliminated by reducing the MAP timer values.
3. View the current MAP timers from **MAP-Diameter IWF > Configuration > MD-IWF Options**.
4. It is recommended to contact [My Oracle Support](#) for further assistance.

33059 - MD-IWF MapToDiam PTR Utilization

Alarm Group:

MIWF

Description:

MD-IWF Application MapToDiam PTR Utilization is approaching its maximum engineered capacity.

Severity:

Minor, Major, Critical

Instance:

EvMdlwfMap2DiamPtrUtil, MD-IWF

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdlwfMapToDiamPtrUtilNotify

Recovery:

1. A MapToDiam PTR is allocated for every pending MAP-to-Diameter transaction. The size of the PTR size is engineered based on an average transaction holding size. If the PTRs become depleted, no new transactions can be processed by the MD-IWF application.
2. Determine if there are long delays in the Diameter or SS7 networks. PTR pool exhaustion can be reduced or eliminated by reducing the MAP timer values.
3. The current MAP timers can be viewed in the GUI at **MAP Interworking > Configuration > MD-IWF Options**.
4. It is recommended to contact [My Oracle Support](#) for further assistance.

33060 - SS7-MP Profile Not Assigned

Alarm Group:

MIWF

Description:

An SS7-MP configuration profile has not been assigned to this SS7-MP

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterSs7MpProfileNotAssignedNotify

Recovery

1. If the SS7-MP has been assigned an MP Profile from an SO GUI **Diameter Common > MPs > Profile Assignment** other MD-IWF, apply a compatible profile and restart the mapiwf process from **Status & Manage > Server**.
2. If the SS7-MP has been assigned a compatible profile already, it is recommended to contact [My Oracle Support](#) for further assistance.

33062 - Insufficient Memory for MD-IWF

Alarm Group:

MIWF

Description:

SS7-MP does not have sufficient memory to support MD-IWF.

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdIwfInsufficientMemoryForMdiwfNotify

Recovery

1. If MD-IWF was mistakenly activated, deactivate MD-IWF.
2. If the SS7-MP does not have sufficient physical memory, upgrade the memory.
3. It is recommended to contact [My Oracle Support](#) for further assistance.

33063 - MD-IWF SS7-MP not associated with a Place

Alarm Group:

MIWF

Description:

The MD-IWF SS7-MP server is not associated with an AppWorks Place.

Severity:

Critical

Instance:

None

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterMdIwfSs7MpNotAssocWithPlaceNotify

Recovery

1. Set the MD-IWF admin state to Disabled on the SS7-MP server.
2. If the server is not associated with an AppWorks place, add the server to an appropriate AppWorks Place. Then set the MD-IWF admin state to Enabled on the SS7-MP server.
3. It is recommended to contact [My Oracle Support](#) for further assistance.

33065 - MD-IWF Resource Exhaustion

Event Group:

MIWF

Description:

MD-IWF Application is unable to process a message due to resource exhaustion.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Auto Clear Seconds:

300 seconds (5 minutes)

OID:

eagleXgDiameterMdIwfResourceExhaustionNotify

Recovery

1. Check to see if any of the following resource utilization alarms are present on the SS7-MP. If so, follow the steps specified for the given alarm.
 - [33053 - MD-IWF DiamTrans Task Queue Utilization](#)
 - [33054 - MD-IWF MapTrans Task Queue Utilization](#)
 - [33055 - MD-IWF DAMPInterface Task Queue Utilization](#)
 - [33058 - MD-IWF DiamToMap PTR Utilization](#)
 - [33059 - MD-IWF MapToDiam PTR Utilization](#)
 - [22202 - MpDiamMsgPoolCongested](#)
2. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33066 - MD-IWF orphan Diameter Answer message received

Event Group:

MIWF

Description:

MD-IWF Application received a Diameter Answer message for which no Pending Transaction record exists.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfOrphanDiamAnswerNotify

Recovery

1. When MD-IWF sends a Diameter Request message to a DA-MP, it allocates a PTR and starts a timer (value is user configurable). The pending transaction is abandoned if a Diameter Answer response is not received within the user-configurable time limit. If this event is occurring frequently, the timer may be set too low. The Diameter Response Timeout value can be viewed via the **MAP-Diameter IWF > Configuration > MD-IWF Options** NO GUI Screen.
2. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33067 - MD-IWF orphan MAP Response message received

Event Group:

MIWF

Description:

MD-IWF Application received a MAP response message for which no Pending Transaction record exists.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfOrphanMapResponseNotify

Recovery

1. If this event is occurring frequently, the configurable MAP Response timer may be set too low. The MAP Response Timeout value can be viewed via the NO GUI **MAP-Diameter IWF > Configuration > MD-IWF Options**.
2. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33068 - MD-IWF MAP Response timeout**Event Group:**

MIWF

Description:

MD-IWF Application sent a MAP request message to the SS7 network, but timed out waiting for the MAP response.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfMapResponseTimeoutNotify

Recovery

1. Diameter-to-MAP timeouts are most likely caused by excessive SS7 network delays. It is possible that the MAP Response Timeout value is set too low.
2. The configured MAP Response Timeout value can be viewed via **MAP-Diameter IWF > Configuration > MD-IWF Options**.
3. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33069 - MD-IWF Diameter Answer timeout**Event Group:**

MIWF

Description:

MD-IWF Application sent a Diameter Request message to the DA-MP, but timed out waiting for the Diameter Answer.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfDiamAnswerTimeoutNotify

Recovery

1. MAP-to-Diameter timeouts could be caused by delays in the Diameter network. It is possible that the Diameter Response Timeout value is set too low.
2. The configured Diameter Response Timeout value can be viewed via the NO GUI **MAP-Diameter IWF > Configuration > MD-IWF Options**.
3. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33070 - MD-IWF Generated Diameter Answer error message due to Diameter Exception

Event Group:

MIWF

Description:

An error occurred while MD-IWF Application was processing a Diameter Request message, causing it generate a Diameter Answer error message.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfGeneratedDiamErrorAnswerNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) if assistance is needed.

33071 - MD-IWF Generated MAP Error Response due to MAP exception

Event Group:

MIWF

Description:

An error occurred while MD-IWF Application was processing a MAP request message, causing it generate a MAP response error message.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfGeneratedMapErrorResponseNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) if assistance is needed.

33072 - MD-IWF received TCAP Notice from SS7 network

Event Group:

MIWF

Description:

MD-IWF Application received a TCAP Notice from the SS7 network.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfTcapNoticeRecdNotify

Recovery

1. A TC-Notice informs the TCAP Application that the network service provider is unable to provide the requested service.

33073 - MD-IWF admin state set to Enabled

Event Group:

MIWF

Description:

MD-IWF Application admin state was changed to Enabled on the SS7-MP

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfAdminStateEnabledNotify

Recovery

1. No action required.

33074 - MD-IWF admin state set to Disabled

Event Group:

MIWF

Description:

MD-IWF Application admin state was changed to Disabled on the SS7-MP

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfAdminStateDisabledNotify

Recovery

1. No action required.

33075 - MD-IWF received ComAgent error or DM-IWF NACK

Event Group:

MIWF

Description:

MD-IWF sent a Diameter Request message to DM-IWF that resulted in a ComAgent error / timeout or in a DM-IWF NACK.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfRcvdComAgtErrorOrDmiwfNckNotify

Recovery

1. No action required.

33076 - MD-IWF received Diameter Answer from unexpected DA-MP

Event Group:

MIWF

Description:

MD-IWF received Diameter Answer from unexpected DA-MP

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfDiamAnsRcvdFrmUnexcpDaMpNotify

Recovery

1. This error is not expected to occur. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33077 - MD-IWF address translation failed

Event Group:

MIWF

Description:

MD-IWF was not able to perform address translation due to a lookup error in a configuration table, or else due to a missing or unexpected parameter/AVP.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfAddressTranslationFailedNotify

Recovery

1. If address translation failed due to a lookup error in a configuration table, then analyze the configuration table to see if there is missing or incorrect data.
2. If address translation failed due to missing or unexpected MAP parameter or Diameter AVP value, then analyze the message to see if it is correct.
3. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33078 - MD-IWF received Diameter EIR message but Destination-Host AVP not present or not found in mapping table

Event Group:

MIWF

Description:

MD-IWF Application received a Diameter EIR message but the Destination-Host AVP was either 1) not present or 2) the Destination-Host AVP value was not present in table DiamIdentityGta.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfDiamEirRecdDestHostNotPresentNotify

Recovery

1. For case 1, investigate why the Destination-Host AVP was not present in the message. The DSR expects this AVP to be present.
2. For case 2, check to see if table DiamIdentityGta is configured correctly. It is possible the given Destination Host should be present in this table. This table is configured on the NO GUI via **MAP-Diameter IWF > Configuration > Diameter Identity GTA**.
3. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33079 - MD-IWF message translation failed**Event Group:**

MIWF

Description:

MD-IWF attempt to perform message translation was unsuccessful.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfMessageTranslationFailedNotify

Recovery

1. Based on the Translation Error Details, examine the message being translated and attempt to identify the reason for the failure
2. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33080 - EDL failure occurred while MD-IWF attempted to encode a Diameter message**Event Group:**

MIWF

Description:

EDL failure occurred while MD-IWF attempted to encode a Diameter message.

Severity:

Info

Instance:

mapiwf

HA Score:

Normal

Throttle Seconds:

10

OID:

eagleXgDiameterMdIwfDiamEirRecdDestHostNotPresentNotify

Recovery

1. Examine the EDL error text in order to determine the reason for failure, If the encode failure is due to exceeding the maximum supported Diameter message size, and this event is being raised frequently, then it may be necessary to increase the engineering configurable parameter (DiameterMaxMessageSize in table MapIwfLongConfig) for maximum Diameter message size.
2. It is recommended to contact [My Oracle Support](#) for assistance if needed.

GLA (33100-33149)

This section provides information and recovery procedures for **GLA** alarms and events, ranging from 33100 to 33149, and lists the type of alarms and events that can occur on the system.

Alarms and events are recorded in a database log table. Currently active alarms can be viewed from the Launch Alarms Dashboard GUI menu option. The alarms and events log can be viewed from the **Alarms & Events > View History** page.

33100 - GLA Message Decoding Failure

Event Group:

GLA

Description:

Message received was rejected because of a decoding failure.

Severity:

Info

Instance:

"MP"

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterGlaMessageDecodingFailureNotify

Recovery:

1. While parsing the message, one of the following conditions occurred:
 - The message content was inconsistent with the "Message Length" in the message header.
 - The IMSI contained in the User-Name AVP was considered invalid due to length.
 - The MSISDN contained in the MSISDN AVP was considered invalid due to length.
2. These protocol errors can be caused by the originator of the message (identified by the Origin-Host AVP in the message) or the peer who forwarded the message to this node. Collect a trace containing the GGR, and determine which node is causing the invalid data.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

33101 - GLA Incorrect Application ID or Command Code

Event Group:

GLA

Description:

Message received was rejected because the Application ID was not GL (16777321) or the Command Code was not GGR (8388655).

Severity:

Info

Instance:

"MP"

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterGlaIncorrectApplIdOrCmdCodeNotify

Recovery:

1. Examine the Application Routing Rules that direct traffic to GLA and verify that the Application ID is set to GL (16777321) and the Command Code is set to GGR (8388655) for all Application Routing Rules referring to GLA.

33102 - GLA Missing Subscriber ID

Event Group:

GLA

Description:

Message received was rejected because it did not contain an IMSI or an MSISDN in a Subscription-ID AVP.

Severity:

Info

Instance:

"MP"

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterGlaMissingSubscriberIdNotify

Recovery:

1. Verify that the Originator (identified by the Origin-Host AVP in the message) is generating Diameter Requests with either User-Name AVP or MSISDN AVP being present.
2. If this condition is met, inspect each element between the **GQC** and **GWS** to determine if Subscriber information within the Request is being modified.

33103 - GLA Communication Agent Error

Event Group:

GLA

Description:

GLA was unable to communicate with the pSBR-Binding due to a communications error.

Severity:

Info

Instance:

"MP"

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterGlaComAgentErrorNotify

Recovery:

1. Examine the current state of the pSBR-B via the **Communication Agent > Maintenance > HA Service Status** screen.
2. Examine the status of the Reporting server's BindingRd to verify that all SubResources are Available. This action will provide information about Availability and Congestion of each SubResource.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

33104 - GLA Duplicate Subscriber ID

Event Group:

GLA

Description:

Message received was rejected because it contained both a User-Name AVP and a MSISDN AVP

Severity:

Info

Instance:

"MP"

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterGlaDuplicateSubscriberIdNotify

Recovery:

1. Verify that the Originator (identified by the Origin-Host AVP in the message) is generating Diameter Requests with either User-Name AVP or MSISDN AVP being present.
2. Inspect each element between teh GQC and GQS to determine which node is inserting bot AVPs and correct that node so that only one AVP is included in the GGR.

33105 - Routing Attempt failed due to queue exhaustion

Event Group:

GLA

Description:

Message could not be routed because the internal "Answer Message Queue" to the DSR Relay Agent was full.

Severity:

Info

Instance:

"MP"

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterGlaRoutingAttemptFailureDrlQueueExhNotify

Recovery:

1. This condition should not occur unless the DSR is experiencing severe congestion due to excessive traffic levels arriving on the DRL Answer Queue.
2. GL traffic should be diverted from the DA-MP to other DA-MPs in the DSR, or to another DSR.

33106 - GLA Communication Agent Timeout

Event Group:

GLA

Description:

GLA was unable to communicate with the pSBR-Binding and the query timed out.

Severity:

Info

Instance:

"MP"

HA Score:

Normal

Throttle Seconds:

60

OID:

eagleXgDiameterGlaComAgentTimeoutNotify

Recovery:

1. Examine the current state of the pSBR-B via the **Communication Agent > Maintenance > HA Service Status** screen.

2. Examine the status of the Reporting server's BindingRd to verify all SubResources are Available. This action will provide information about Availability and Congestion of each SubResource.
3. If the problem persists, it is recommended to contact [My Oracle Support](#).

33120 - Policy SBR Binding Sub-Resource Unavailable

Alarm Group:
GLA

Description:
GLA is unable to communicate with Policy SBR-Binding. One or more binding sub-resources are unavailable.

Severity:

- Major: When at least one server group that has a range of binding sub-resources is not available, but at least the minimum number of binding sub-resources is still available.
- Critical: When fewer than the minimum number of binding sub-resources are not available.

Instance:
GLA

HA Score:
Normal

Auto Clear Seconds:
0 (zero)

OID:
eagleXgDiameterGlaBindingSubresourceUnavailableNotify

Recovery

1. Monitor the Policy DRA Binding Resource on the GLA NO at **Configuration > Resource Domains**.
2. Determine if some of the pSBR-B MPs are unavailable or out-of-service. In this case, all DA-MPs and all pSBR-B MPs will also report ComAgent connection alarms.
3. Determine if there is a WAN outage. In this case, DA-MPs should also report ComAgent connection alarms to remote pSBR-Bs, and local pSBR-Bs should report ComAgent connection alarms to remote DA-MPs.
4. Determine if there is a network routing issue. In this case, one or a few DA-MPs may report a ComAgent connection against a limited number of pSBR-Bs.
5. If the problem persists, it is recommended to contact [My Oracle Support](#) for assistance.

33121 - GLA pSBR-B Response Task Message Queue Utilization

Alarm Group:

GLA

Description:

GLA's pSBR-B Response Message Queue Utilization is approaching its maximum capacity.

Severity:

Minor, Major, Critical

Instance:

RxGlaResponseMsgQueue, GLA

HA Score:

Normal

Auto Clear Seconds:

0 (zero)

OID:

eagleXgDiameterGlaRespTaskMessageQueueUtilizationNotify

Recovery

1. Determine if the GLA pSBR Response Task is mis-configured (e.g., Smaller response task queue size/fewer number of response task threads as compared to the request task threads).
2. Determine if the GLA pSBR Response Task has encountered a problem preventing it from processing messages from its Task Message Queue even if no additional congestion alarms are asserted.
3. If the problem persists, it is recommended to contact [My Oracle Support](#) for additional assistance.

Diameter Custom Applications (DCA) Framework Alarms and Events (33300-33630)

This section provides information and recovery procedures for differentiated DCA Framework alarms, which range from 33300 to 33630.

33300 - Create Application Version Failure

Event Type

DCA

Description

Dsroam failed to create application version on DcaLifecycleSoam table.

Severity

Info

Instance

DcaLifecycleNoam.verId

HA Score

Normal

Throttle Seconds

60

OID

dcaDcaCreateAppVersionFailureNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) for assistance.

33301 - Update Config Data Failure**Event Type**

DCA

Description

Dsroam failed to synchronize configuration data on SO.

Severity

Info

Instance

ApplicationId.name

HA Score

Normal

Throttle Seconds

60

OID

dcaDcaUpdateConfigDataFailureNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) for assistance.

33302 - Delete Application Version Failure**Event Type**

DCA

Description

Dsroam failed to delete application version from DcaLifecycleSoam table.

Severity

Info

Instance

DcaLifecycleSoam.verId

HA Score

Normal

Throttle Seconds

60

OID

dcaDcaDeleteAppVersionFailureNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) for assistance.

33303 - U-SBR Event Queue Utilization

Alarm Group

DCA

Description

The DSR Application U-SBR Event Queue Utilization is approaching its maximum capacity.

Severity

Minor, Major, Critical

Instance

RxDcaSbrEventMsgQueue [<DcaDalId.dalId>], DCA

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

dcaDSRAppSbrEventMessageQueueUtilizationNotify

Recovery

1. The DSR Application's U-SBR Result Message Queue is approaching its maximum capacity. This alarm typically does not occur when no other congestion alarms are asserted. The alarm may occur for a variety of reasons:

The processing of the U-SBR results by the DCA app indicate that the DCA app is overly CPU-intensive. The alarm may also be the result of the DCA app sending too many U-SBR queries per Diameter message, which may be avoided by storing variables in the Diameter transaction context. In both cases the business logic shall be reviewed and optimized.

If no additional congestion alarms are asserted, the DSR Application Task may be experiencing a problem preventing it from processing messages from its U-SBR Event Message Queue. Examine the alarm log from **Alarms & Events**.

2. It is recommended to contact [My Oracle Support](#) for assistance if needed.

33304 - DCA Runtime Errors

Alarm Group

DCA

Description

The script generated runtime errors.

Severity

Critical

InstanceThe DCA App short name (*DcaDalId.shortName*) prefixed with "DCA:" and thread pool (Request, Answer or SBR Event)**HA Score**

Normal

Auto Clear Seconds

60

OID

dcaDSRAppRuntimeErrorNotify

Recovery

1. The error message generated by the Perl interpreter is included in the alarm's additional info.

Fix the error accordingly and recompile the Perl script, or replace the Trial/Production version (depending on whether the DA-MP is a Trial DA-MP or not) with another script version.

Note: Because the compilation occurs in parallel while the previously compiled script is still running (and hence keeps raising the alarm), a successful compilation will not immediately clear the alarm. There will be an auto clear latency of 20 seconds that will clear the alarm.

33305 - DCA Procedure Not Found

Alarm Group

DCA

Description

The Perl interpreter attempts to invoke a non-existent procedure.

Severity

Critical

InstanceThe DCA App short name (*DcaDalId.shortName*) prefixed with "DCA:" and thread pool (Request, Answer or SBR Event)

HA Score

Normal

Auto Clear Seconds

60

OID

dcaDSRAppProcedureNotFoundNotify

Recovery

1. The name of the missing procedure is include in the alarm's additional info.

The procedure names involved are either the configured Diameter request and answer event handler names (**Main Menu > DCA Framework > <Application Name> > General Options** on the NOAM) or the callback names coded in the Perl script.

Possible resolutions are:

- a. Fix the procedure names in the Perl script and re-compile the Perl script
- b. Fix the procedure names in the configuration
- c. Replace the Trial/Production version (depending on whether the DA-MP is a Trial DA-MP or not) with another script version.

Note: Because the compilation occurs in parallel while the previously compiled script is still running (and hence keeps raising the alarm,) a successful compilation will not immediately clear the alarm. There will be an auto clear latency of 20 seconds that will clear the alarm.

33306 - U-SBR Resolution Failure

Alarm Group

DCA

Description

The U-SBR DB logical name could not be resolved to a physical U-SBR DB.

Severity

Critical

Instance

The DCA App short name (*DcaDalId.shortName*) prefixed with "DCA:"

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

dcaDSRAppUsbrResFailureNotify

Recovery

1. This alarm occurs because the L2P mapping for a DCA Application is incomplete in the sense that none of the physical U-SBR DBs provisioned (for one or more logical U-SBR DBs) is located in the same Place Association with the MP that raises the alarm.
2. Ensure that a physical U-SBR DB has been configured for each Place Association and that all the physical U-SBR DBs have been included in the L2P mapping by checking:
 - **Main Menu > DCA > <DCA Application Name> > Application Control > <Version Name> > SBR Database Name Mapping** (on the NOAM)
 - **Main Menu > Session Binding Repository > Configuration > SBR Databases**

33307 - Diameter Message Routing Failure Due To Full DRL Queue**Event Type**

DCA

Description

Diameter message routing failure due to full DRL queue. Diameter egress message could not be sent because the DRL queue is full.

Severity

Info

Instance

The DCA App short name (*DcaDalld.shortName*) prefixed with "DCA:"

HA Score

Normal

Throttle Seconds

60

OID

dcaEgressMsgRouteFailureDueToDrlQueueExhaustedNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) for assistance.

33308 - DCA to U-SBR ComAgent Error**Event Type**

DCA

Description

DCA failed to send query to U-SBR due to ComAgent Error.

Severity

Info

Instance

The DCA App short name (*DcaDalld.shortName*) prefixed with "DCA:"

HA Score

Normal

Throttle Seconds

60

OID

dcaComAgentSendFailureNotify

Recovery

1. It is recommended to contact [My Oracle Support](#) for assistance.

33309 - DCA Script Compilation Error

Alarm Group

DCA

Description

The script generates compilation errors.

Severity

Critical

Instance

The DCA App short name (*DcaDalld.shortName*) prefixed with "DCA:"

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

dcaDSRAppCompileErrorNotify

Recovery

1. The error message generated by the Perl interpreter is included in the alarm's additional info.

Fix the error accordingly and recompile the Perl script, or replace the Trial/ Production version (depending on whether the DA-MP is a Trial DA-MP or not) with another script version.

33310 - U-SBR Sub-resource Unavailable

Alarm Group

DCA

Description

One or more U-SBR server groups hosting a U-SBR DB are unavailable.

Severity

Major, Critical

Instance

The DCA App short name (*DcaDalld.shortName*) prefixed with "DCA:" and the U-SBR DB logical name (*DcaLogicalSbr.logSbrDb*)

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

dcaDSRSubresourceUnavailableNotify

Recovery

1. Monitor U-SBR resources at **Configuration > Resource Domains**.
2. It is recommended to contact [My Oracle Support](#) for assistance.

33311 - DCA Application Reloaded

Event Type

DCA

Description

The DCA application script has been successfully re-compiled and re-loaded.

Severity

Info

Instance

The DCA App short name (*DcaDalld.shortName*) prefixed with "DCA:"

HA Score

Normal

Throttle Seconds

0 (zero)

OID

dcaDcaAppReloadedNotify

Recovery

1. No action required.

33312 - DCA Script Generation Error

Alarm Group

DCA

Description

The script could not be saved in the /tmp/appworks_temp directory.

Severity

Critical

Instance

The DCA App short name (*DcaDalld.shortName*) prefixed with "DCA:"

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

dcaDSRAppScriptGenerationErrorNotify

Recovery

1. Ensure that enough space is available on the partition where /tmp/appworks_temp resides and re-initiate the script compilation.

33313 - DCA U-SBR Logical Name Mismatch

Alarm Group

DCA

Description

No mapping has been provisioned for the U-SBR logical name.

Severity

Critical

Instance

The DCA App short name (*DcaDalld.shortName*) prefixed with "DCA:" and thread pool (Request, Answer, or SBR Event)

HA Score

Normal

Auto Clear Seconds

60

OID

dcaDSRUsbrLogicalNameErrorNotify

Recovery

1. Fix either the logical U-SBR name in the script or the Logical-to-Physical U-SBR DB names mapping (**Main Menu > DCA Framework > <Application Name> > Application Control > <Version Name> > SBR Database Name Mapping** on the NOAM). The physical U-SBR DBs configured in the network are listed in **Main Menu > SBR > Configuration > SBR Databases**. The script must be recompiled.

Note: Because the compilation occurs in parallel while the previously compiled script is still running (and hence keeps raising the alarm), a successful compilation will not immediately clear the alarm. There will be an auto clear latency of 20 seconds that will clear the alarm.

33314 - Custom MEAL differentiation error

Alarm Group
DCA

Description

The differentiation, un-differentiation, or update process of a Custom MEAL has been interrupted and will be retried in 10 seconds

Severity
Minor

Instance

The DCA App short name (*DcaDalId.shortName*) prefixed with "DCA:"

HA Score
Normal

Auto Clear Seconds
0 (zero)

OID
DcaCustomMealDiffErrorNotification

Recovery

1. If the alarm does not clear on its own, it is recommended to contact [My Oracle Support](#) for assistance.

Independent SBR Alarms and Events (12003-12010, 33730-33830)

12003 - SBR congestion state

Event Type:

SBRA

Description :

The SBR application is in a congested state and is shedding operations. The Sbr.RxIngressMsgQueueAvg measurement shows the average percentage of queue length utilization, which is used to determine congestion.

Severity:

Minor, Major, Critical

Instance:

Sbr.RxIngressMsgQueueMetric[subId], SBR

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

sbrCongestionState

Cause:

The SBR application is in a congested state due to high traffic load.

Diagnostic Information:

The SBR queue congestion alarm can have default onset and abatement thresholds based on average ingress queue percentage utilization. See in the event history the threshold percentage for queue utilization. Additional capacity may be required to service the traffic load. Contact [My Oracle Support](#) for support.

Recovery:

1. If congestion falls below the clear threshold, this alarm clears. The SBR congestion status exceeds the alarm threshold. Additional capacity may be required to service the traffic load. It is recommended to contact [My Oracle Support](#) for assistance.

12007 - SBR active sess binding threshold

Event Type:

SBRA

Description:

The SBR application has exceeded its active Session Binding threshold. The configuration, Maximum active session bindings, is used to calculate the percentage.

Severity:

Minor, Major, Critical

Instance:

Sbr.EvCurrentSessionMetric, SBR

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

sbrActiveSessBindThreshold

Cause:

The SBR active session bindings count exceeds the alarm threshold which means the number of bindings and sessions are more than the configured limits.

Diagnostic Information:

Additional capacity may be required to service the traffic load. View additional information in the event history. Contact [My Oracle Support](#) for support.

Recovery:

1. If total active session bindings fall below the clear threshold, this alarm clears.
2. Navigate to **CPA > Configuration > SBR** to increase the maximum active session bindings configuration if it is too low.

12010 - SBR proc term

Event Type:

SBRA

Description:

The SBR application has stopped.

Severity:

Minor, Major, Critical

Instance:

<Sbr>

HA Score:

Normal

Throttle Seconds:

0 (zero)

OID:

pfeSbrProcTermNotify

Cause:

The SBR process monitored by the process manager has terminated. This should cause a switch over of the standby SBR server to active.

Diagnostic Information:

- Look for additional information in the event history.
- Contact My Oracle Support (MOS) for support.

Recovery:

1. When an active SBR is terminated as indicated by this alarm, its standby becomes active. The Process Manager automatically attempts to restart the terminated process. If the Process Manager fails to start the terminated process, it raises the alarm again. The standby that became active remains active until it is placed into standby mode again.
 - a. Check the status of the terminated SBR by navigating to **Status & Manage > Server**.
 - b. If the Process Manager cannot restart the process, it is recommended to contact [My Oracle Support](#) for assistance.

33730 - U-SBR database audit statistics report

Event Type

I-SBR

Description

U-SBR database audit statistics report.

Severity

Info

Instance

<SbrSgName>

HA Score

Normal

Throttle Seconds

0 (zero)

OID

ipfeSbrProcTermNotify

Recovery

1. This report provides statistics related to Universal SBR table audits. Each SBR server generates this event upon reaching the last record in a table. The statistics reported are appropriate for the type of table being audited.

vSTP Alarms and Events (70000-70060, 70100-70999)

70000 - Association Down

Alarm Group

vSTP

Description

Association down

Severity

Major

Instance

<AssocName>

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

vSTPVstpassociationDownNotify

Recovery

1. If the association is manually disabled, then no further action is needed.
2. Verify the association's local IP address and port number are configured on the remote ASP.
3. Verify the association's remote IP address and port are correctly identify a remote ASP.

4. Verify that IP network connectivity exists between the MP server and the remote ASP.
5. Check the event history logs at **Alarms & Events > View History** for additional SS7 events or alarms from this MP server.
6. Verify the remote ASP is not under maintenance.
7. It is recommended to contact [My Oracle Support](#) for assistance if needed

70001 - Link Down

Alarm Group

vSTP

Description

Link down

Severity

Minor

Instance

<LinkName>

HA Score

Normal

Auto Clear Seconds

0 (zero)

OID

vSTPLinkDownNotify

Recovery

1. If the association hosting the link or the link itself is manually disabled, then no further action is needed.
2. Verify alarm [70000 - Association Down](#) is not raised for the association hosting the link. If the alarm is raised, refer to the recovery steps for that alarm.
3. Verify RCs are configured properly at associated linkset.
4. Check the event history logs at **Alarms & Events > View History** for additional SS7 events or alarms from this MP server.
5. Verify that the remote ASP is not under maintenance.
6. It is recommended to contact [My Oracle Support](#) for assistance if needed

70002 - RSP/Destination Unavailable

Alarm Group

vSTP

Description

HLRR is unable to access the SS7 Destination Point Code because the RSP status is Unavailable.

Severity

Critical

Instance

<RSPName> (of the RSP/Destination which failed)

HA Score

Normal

Auto Clear Seconds

N/A

OID

vSTPMtp3RouteUnavailableNotify

Recovery

1. If the RSP/Destination becomes Unavailable due to a Linkset failure, the M3UA attempts to automatically recover all links not manually disabled or blocked.
2. If the RSP/Destination becomes Unavailable due to the receipt of a TFP, MTP3 periodically audits the route's status by sending an RSP message to the adjacent point code which sent the TFP.
3. Monitor the RSP/Destination at **SS7/SIGTRAN > Maintenance > Remote Signaling Points**.
4. Verify IP network connectivity exists between the MP server and the adjacent servers.
5. Check the event history logs at **Alarms & Events > View History** for additional SS7 events or alarms from this MP server.
6. It is recommended to contact [My Oracle Support](#) for assistance if needed

70003 - RSP/Destination Route Unavailable

Alarm Group

vSTP

Description

HLRR is unable to access the SS7 Destination Point Code using this route.

Severity

Minor

Instance

<RouteName>

HA Score

Normal

Auto Clear Seconds

N/A

OID

vSTPMtp3RouteUnavailableNotify

Recovery

1. If the route becomes Unavailable due to a Linkset failure, the M3UA attempts to automatically recover all links not manually disabled or blocked.
2. If the route becomes Unavailable due to the receipt of a TFP, MTP3 periodically attempts to validate the route using the MTP3 signaling-route-set-test procedure.
3. Monitor the route status at **SS7/SIGTRAN > Maintenance > Remote Signaling Points**.
4. Verify IP network connectivity exists between the MP server and the adjacent servers.
5. Check the event history logs at **Alarms & Events > View History** for additional SS7 events or alarms from this MP server.
6. It is recommended to contact [My Oracle Support](#) for assistance if needed

Recovery

1. Examine the M3UA error code and the diagnostic information and attempt to determine why the far-end of the link sent the malformed message.
 - Error code 0x01 indicates an invalid M3UA protocol version. Only version 1 is supported.
 - Error code 0x03 indicates an unsupported M3UA message class.
 - Error code 0x04 indicates an unsupported M3UA message type.
 - Error code 0x07 indicates an M3UA protocol error. The message contains a syntactically correct parameter that does not belong in the message or occurs too many times in the message.
 - Error code 0x11 indicates an invalid parameter value. Parameter type and length are valid, but value is out of range.
 - Error code 0x12 indicates a parameter field error. Parameter is malformed (such as invalid length).
 - Error code 0x13 indicates an unexpected parameter. Message contains an undefined parameter. The differences between this error and Protocol Error are subtle. Protocol Error is used when the parameter is recognized, but not intended for the type of message that contains it. Unexpected Parameter is used when the parameter identifier is not known.
 - Error code 0x16 indicates a missing parameter. Missing mandatory parameter, or missing required conditional parameter.
 - Error code 0x19 indicates an invalid routing context. Received routing context not configured for any linkset using the association on which the message was received.

70058 - Received M3UA ERROR

Event Group

vSTP

Description

Received M3UA ERROR

Severity

Info

Instance

If message can be mapped to a link, then <LinkName>. Otherwise, <AssociationName>

HA Score

Normal

Throttle Seconds

10

OID

vSTPVstpReceivedM3uaErrorNotify

Recovery

1. Examine the M3UA error code and the diagnostic information and attempt to determine why the far-end of the link sent the ERROR message.
 - Error code 0x01 indicates an invalid M3UA protocol version. Only version 1 is supported.
 - Error code 0x03 indicates an unsupported M3UA message class.
 - Error code 0x04 indicates an unsupported M3UA message type.
 - Error code 0x05 indicates an unsupported M3UA traffic mode.
 - Error code 0x07 indicates an M3UA protocol error. The message contains a syntactically correct parameter that does not belong in the message or occurs too many times in the message.
 - Error code 0x09 indicates an invalid SCTP stream identifier. A DATA message was sent on stream 0.
 - Error code 0x0D indicates that the message was refused due to management blocking. An ASP Up or ASP Active message was received, but refused for management reasons.
 - Error code 0x11 indicates an invalid parameter value. Parameter type and length are valid, but value is out of range.
 - Error code 0x12 indicates a parameter field error. Parameter is malformed (such as invalid length).
 - Error code 0x13 indicates an unexpected parameter. Message contains an undefined parameter. The differences between this error and Protocol Error are subtle. Protocol Error is used when the parameter is recognized, but not intended for the type of message that contains it. Unexpected Parameter is used when the parameter identifier is not known.
 - Error code 0x14 indicates that the destination status is unknown. This message can be sent in response to a DAUD from the MP server if the SG cannot or does not wish to provide the destination status or congestion information
 - Error code 0x16 indicates a missing parameter. Missing mandatory parameter, or missing required conditional parameter.
 - Error code 0x19 indicates an invalid routing context. Received routing context not configured for any linkset using the association on which the message was received.

Key Performance Indicators (KPIs)

This section provides general information about **KPIs** and lists the KPIs that can appear on the **Status & Manage > KPIs** GUI page.

General KPIs information

This section provides general information about KPIs, the **Status and Manage > KPIs** page, and how to view KPIs.

KPIs overview

Key Performance Indicators (KPIs) allow you to monitor system performance data, including CPU, memory, swap space, and uptime per server. This performance data is collected from all servers within the defined topology.

The KPI display function resides on all OAM servers. Servers that provide a GUI connection rely on KPI information merged to that server. The Network OAMP servers maintain status information for all servers in the topology. System OAM servers have reliable information only for servers within the same network element.

The Status and Manage KPIs page displays performance data for the entire system. KPI data for the entire system is updated every 60 seconds. If data is not currently being collected for a particular server, the KPI for that server will be shown as N/A.

KPIs

The **Status & Manage > KPIs** page displays KPIs for the entire system. KPIs for the server and its applications are displayed on separate tabs. The application KPIs displayed may vary according to whether you are logged in to an NOAM server or an SOAM server.

KPIs server elements

This table describes KPIs that display regardless of server role.

Table 5-1 KPIs Server Elements

| KPIs Status Element | Description |
|---------------------|--|
| Network Element | The network element name (set up on the Configuration > Network Elements page) associated with each Server Hostname. |
| Server Hostname | The server hostname set up on the Configuration > Servers page. All servers in the system are listed here. |
| Server Indicators | |

Table 5-1 (Cont.) KPIs Server Elements

| KPIs Status Element | Description |
|---------------------|---|
| CPU | Percentage utilization of all processors on the server by all software as measured by the operating system. |
| RAM | Percentage utilization of physical memory on the server by all software as measured by TPD. |
| Swap | Percentage utilization of swap space on the server by all software as measured by TPD. |
| Uptime | The total amount of time the server has been running. |

Viewing KPIs

Use this procedure to view KPI data.

1. Navigate to **Status & Manage > KPIs**.

For details about the KPIs displayed on this page, see the application documentation.

2. Click **KPI Filter** and specify filter options to see KPI data relevant to an application.
3. Click **Go** to filter on the selection.

Note: The application KPIs displayed may vary according to whether you are logged in to an NOAM server or an SOAM server. Collection of KPI data is handled solely by NOAM servers in systems that do not support SOAMs.

KPIs data export elements

This table describes the elements on the KPIs > Export page.

Table 5-2 Schedule KPI Data Export Elements

| Element | Description | Data Input Notes |
|------------------|--------------------------------------|---|
| Export Frequency | Frequency at which the export occurs | Format: Radio button
Range: Fifteen Minutes, Hourly, Once, Weekly, or Daily
Default: Once |

Table 5-2 (Cont.) Schedule KPI Data Export Elements

| Element | Description | Data Input Notes |
|-------------|---|--|
| Task Name | Name of the scheduled task | Format: Textbox
Range: Maximum length is 40 characters; alphanumeric (a-z, A-Z, and 0-9) and minus sign (-). Task Name must begin and end with an alphanumeric character. |
| Description | Description of the scheduled task | Format: Textbox
Range: Maximum length is 255 characters; alphanumeric (a-z, A-Z, and 0-9) and minus sign (-). Description must begin with an alphanumeric character. |
| Minute | If hourly or fifteen minutes is selected for Upload Frequency, this is the minute of each hour when the data will be written to the export directory. | Format: Scrolling list
Range: 0 to 59
Default: 0 |
| Time of Day | Time of day the export occurs | Format: Time textbox
Range: 15-minute increments
Default: 12:00 AM |
| Day of Week | Day of week on which the export occurs | Format: Radio button
Range: Sunday, Monday, Tuesday, Wednesday, Thursday, Friday, or Saturday
Default: Sunday |

Exporting KPIs

You can schedule periodic exports of security log data from the KPIs page. KPI data can be exported immediately, or you can schedule exports to occur daily or weekly. If filtering has been applied in the KPIs page, only filtered data is exported.

During data export, the system automatically creates a CSV file of the filtered data. The file will be available in the file management area until you manually delete it, or until the file is transferred to an alternate location using the **Export Server** feature. For more information about using Export Server, see [Data Export](#).

Use this procedure to schedule a data export task.

1. Select **Status & Manage > KPIs**.
2. If necessary, specify filter criteria and click **Go**.

The KPIs display according to the specified criteria.

3. Click **Export**.

4. Enter the **Task Name**.

For more information about **Task Name**, or any field on this page, see [KPIs data export elements](#).

5. Select the **Export Frequency**.

6. If you selected Hourly, specify the Minutes.

7. Select the **Time of Day**.

Note: **Time of Day** is not an option if **Export Frequency** equals **Once**.

8. Select the **Day of Week**.

Note: **Day of Week** is not an option if **Export Frequency** equals **Once**.

9. Click **OK** or **Apply** to initiate the KPI export task.

From the **Status & Manage > Files** page, you can view a list of files available for download, including the file you exported during this procedure. For more information, see [#unique_1078](#).

Scheduled tasks can be viewed, edited, and deleted, and reports of scheduled tasks can be generated from **Status & Manage > Tasks**. For more information see:

- [#unique_71](#)
- [#unique_72](#)
- [#unique_73](#)
- [#unique_74](#)

Computer Aided Policy Making (CAPM) KPIs

The KPI values associated with CAPM are available using **Status & Manage > KPIs**.

Table 5-3 CAPM KPIs

| Variable | Description |
|------------------------|--|
| Processing time [μSEC] | Average processing time (in microseconds) of Rule Template on a per Rule Template basis. |
| Active Templates | Number of Rule Templates that are in Active state. |
| Test Templates | Number of Rule Templates that are in Test state. |
| Development Templates | Number of Rule Templates that are in Development state. |

Table 5-3 (Cont.) CAPM KPIs

| Variable | Description |
|------------|--|
| Match Rule | References one element in the arrayed measurement. |

Communication Agent (ComAgent) KPIs

The KPI values associated with ComAgent are available using **Status & Manage > KPIs**.

Table 5-4 Communication Agent KPIs

| Variable | Description |
|--------------------------------|--|
| User Data Ingress message rate | The number of User Data Stack Events received by ComAgent. |
| Broadcast Data Rate | The overall data broadcast rate on the server. |

DCA Custom MEAL KPIs

The KPI values associated with DCA are visible using **Status & Manage > KPIs**. There are 25 scalar basic templates, 25 scalar Rate templates, 25 arrayed Basic templates, and 25 arrayed Rate templates.

Table 5-5 DCA Custom MEAL KPIs

| Variable | Description |
|--------------------|------------------------|
| DcaCustomMeal.name | DcaCustomMeal.kpiDescr |

DCA Framework KPIs

The KPI values associated with DCA are visible using **Status & Manage > KPIs**.

Table 5-6 DCA Framework KPIs

| Variable | Description |
|---------------------------|---|
| Ingress Message Rate | Average Ingress Message Rate (messages per second) of Diameter messages received by the DCA Application |
| U-SBR Query Rate | Average U-SBR Query Rate (Stack Events per second successfully sent to the U-SBR) |
| Runtime Errors Rate | Instant Runtime Error Rate (runtime errors per second during the last sampling interval) |
| U-SBR Query Failure Rate | Average rate of ComAgent errors encountered when attempting to send an U-SBR query |
| Transactions Error Answer | Diameter transactions that a DCA App relay answers with error |

Table 5-6 (Cont.) DCA Framework KPIs

| Variable | Description |
|------------------------------|--|
| Completed Transactions | Diameter transactions that a DCA App successfully relays |
| Transactions Discard Request | Diameter transactions that a DCA App terminates by discarding the request |
| Max Perl Main Opcodes | Maximum number of opcodes executed by the Perl script main part |
| Max Perl Handler Opcodes | Maximum number of opcodes executed by the Perl script event handlers |
| Opcode Quota Exceed | Diameter transactions that a DCA App terminates per second because the maximum number of opcodes is exceeded |

Diameter (DIAM) KPIs

The KPI values associated with Diameter are available using **Status & Manage > KPIs**.

Table 5-7 DIAM KPIs

| Variable | Description |
|---------------------------|---|
| MsgCopyTxQueueUtilization | Percentage of utilization of the Message Copy Tx Queue |
| Average Response Time | The average time from when routing receives a request message from a peer to when routing sends an answer message to that peer. |
| Transaction Success Rate | Percentage of Diameter and RADIUS transactions successfully completed on a DA-MP server with respect to the offered load. |

DM-IWF KPIs

The KPI values associated with DM-IWF are visible using **Status & Manage > KPIs**

Table 5-8 DM-IWF KPIs

| Variable | Description |
|--------------------------------|--|
| Ingress Msg Rate | Average number of MAP-Diameter Interworking messages processed per second on a DA-MP. This includes messages received from DRL and messages received from SS7-MPs. |
| Diameter-to-MAP Trans Msg Rate | Average number of Diameter-to-MAP transaction messages processed per second. |
| MAP-to-Diameter Trans Msg Rate | Average number of MAP-to-Diameter transaction messages processed per second. |

DP KPIs

Table 5-9 DP KPIs

| Variable | Description |
|----------------------------|---|
| DpsQueryRate | Total number of queries received per second |
| DpsMsisdnQueryRate | Total number of MSISDN queries received per second |
| DpsImsiQueryRate | Total number of IMSI queries received per second |
| DpsNaiQueryRate | Total number of NAI queries received per second |
| DpsExtIdQueryRate | The total number of External Identifier Queries Received per second |
| DpsFailedQueryRate | Total number of queries failed per second |
| DpsNotFoundQueryRate | Total number of queries with Not Found responses per second |
| DpsMsisdnNotFoundQueryRate | Total number of MSISDN queries with Not Found responses per second |
| DpsImsiNotFoundQueryRate | Total number of IMSI queries with Not Found responses per second |
| DpsNaiNotFoundQueryRate | Total number of NAI queries with Not Found responses per second |
| DpsNExtIdNotFoundQueryRate | The total number of External Identifier Queries with Not Found Responses per second |
| DpsResponseSent | Total number of responses sent per second |
| DpsIngressQueue | DP Ingress Queue percentage full |
| DpsMsisdnBlacklistedRate | Total number of MSISDN Queries with Blacklisted Responses per second |
| DpsImsiBlacklistedRate | Total number of IMSI Queries with Blacklisted Responses per second |

Equipment Identity Register (EIR) KPIs

The KPI values associated with SCEF are visible using **Status & Manage > KPIs**.

Table 5-10 Diameter EIR KPIs

| Variable Number | Name | Description |
|-----------------|---------------------------|--|
| 20900 | RxDeirMsgRate | Incoming ECR rate. Ingress message rate (messages per second) utilization on a MP server for EIR. The ingress message rate is the number of Diameter messages that were successfully received by EIR per second. |
| 20901 | TxDeirMsgRate | Outgoing ECA rate. Egress message rate (messages per second) utilization on a MP server for EIR. The egress message rate is the number of Diameter messages that were successfully sent by EIR per second. |
| 20902 | DeirDbQueryRate | UDR DB Query rate. Database query rate EIR. The Database query rate is the number of query sent from EIR to the UDR database per second. |
| 20903 | DeirDbSuccessResponseRate | UDR DB success rate. Database response rate for EIR. The Database response rate is the number of successful lookup result received by EIR from UDR database per second. |
| 20904 | DeirMsgSuccessRate | EIR success message rate (messages per second) on an MP server. The success message rate is the number of ingress Diameter messages that are processed by EIR and answered with a success (2xxx) result code. |
| 20905 | DeirRequestMsgQueue | EIR's Request stack task queue utilization |
| 20906 | DeirUdrResponseMsgQueue | EIR's Response stack task queue utilization |
| 20907 | DeirLoggingQueue | EIR's Logging stack task queue utilization |
| 20908 | DeirLoggingRate | EIR Logging rate |

Table 5-11 SS7 EIR KPIs

| Variable Number | Name | Description |
|-----------------|--------------------------|----------------------------------|
| 21030 | SS7 EIR Recv Msgs/Sec | SS7 EIR MSUs received per second |
| 21031 | SS7 EIR Xmit Msgs/Sec | SS7 MSUs transmitted per second |
| 21032 | SS7 EIR DB request rate | SS7 EIR DB Tx rate |
| 21033 | SS7 EIR DB response rate | SS7 EIR DB Rx rate |

GLA KPIs

The KPI values associated with GLA are visible using **Status & Manage > KPIs**.

Table 5-12 GLA KPIs

| Variable | Description |
|----------------------|--|
| Ingress Message Rate | Average Ingress Message Rate (messages per second) utilization on an MP server for this DSR Application. The Ingress Message Rate is the number of ingress Diameter messages that are selected for processing by the ART and sent to the DSR Application for processing. |
| Success Message Rate | GLA Success Message Rate (messages per second) on an MP server. The Success Message Rate is the number of ingress Diameter messages that are processed by GLA and answered with a success (2xxx) result code). |

IDIH KPIs

The KPI values associated with the IDIH will be visible via the GUI **Status & Manage > KPIs**

Table 5-13 IDIH KPIs

| Variable | Description |
|--------------------------------|---|
| DSR-DIH TTR Bandwidth (KB/sec) | Average bandwidth used by DSR in sending TTRs (including trace start and stop messages) to DIH in Kbytes per second |

IP Front End (IPFE) KPIs

The KPI values associated with IPFE are visible using **Status & Manage > KPIs**.

Table 5-14 IPFE KPIs

| Variable | Description |
|------------------|--|
| CPU % | Total CPU used by the IPFE process |
| Memory Total | Absolute memory used by the IPFE process |
| Memory % | Percent memory used by the IPFE process |
| Mem. Heap | Total heap allocated by the IPFE process |
| IPFE Packets/Sec | The average number of packets per second the IPFE receives |
| IPFE MBytes/Sec | The average number of megabytes per second the IPFE receives |

MD-IWF KPIs

The KPI values associated with MD-IWF are visible using **Status & Manage > KPIs**.

Table 5-15 MD-IWF KPIs

| Variable | Description |
|----------------------------------|---|
| Ingress Message Rate | Average number of MAP-Diameter Interworking messages processed per second on a SS7-MP. Includes MAP msgs received from SS7 network, and Diameter msgs received from DA-MPs. |
| Diameter-to-MAP Ingress Msg Rate | Average number of MAP-Diameter Interworking messages processed per second that result from Diameter-originated transactions. Includes the initial Diameter Request msg and all resulting MAP msgs that are received. |
| MAP-to-Diameter Ingress Msg Rate | Average number of MAP-Diameter Interworking messages processed per second that result from MAP-originated transactions. Includes the initial MAP Request msg and all resulting MAP and Diameter msgs that are received. |
| Diameter Ingress Message Rate | Average number of Diameter messages (both Requests and Answers) received per second from DA-MPs. |
| MAP Ingress Message Rate | Average number of MAP messages (both requests and responses) received per second from SS7 network. |

Message Processor (MP) KPIs

The KPI values associated with MP are available using **Status & Manage > KPIs**.

Table 5-16 MP KPIs

| Variable | Description |
|-------------------------------|--|
| Avg CPU Utilization | Percentage of CPU utilization by the Diameter process on a DA-MP server. |
| Offered Load (MPS) | Offered load on a DA-MP server, corresponding to the message rate before policing by capacity and congestion controls. |
| Accepted Load (MPS) | Accepted load on a DA-MP server, corresponding to the message rate after policing by capacity and congestion controls. |
| Message Processing Load (MPS) | Average message processing load (messages per second) on a MP server. The message processing load is the number of Diameter messages that are routed, including Reroute and MsgCopy. |

Full Address Based Resolution (FABR) KPIs

The KPI values associated with FABR are available using **Status & Manage > KPIs**.

Table 5-17 FABR KPIs

| Variable | Description |
|--------------------------|--|
| Ingress Message Rate | Ingress Message Rate (messages per second) utilization on a MP server for the FABR application. The Ingress Message Rate is the number of ingress Diameter messages that were successfully received by the FABR application. |
| Resolved Message Rate | Resolved Message Rate (messages per second) utilization on a MP server. The Resolved Message Rate is the number of ingress Diameter messages that are successfully resolved to a Destination by the FABR application. |
| DP Response Time Average | Average DP response time is the average time (in milliseconds) it takes to receive a DP response after sending the corresponding DP query. |

Platform KPIs

The KPI values associated with Platform are available using **Status & Manage > KPIs**.

Table 5-18 Platform KPIs

| Variable | Description |
|----------|---|
| CPU | Percentage utilization of all processors on the server by all software as measured by the operating system. |
| RAM | Percentage utilization of physical memory on the server by all software as measured by TPD. |
| Swap | Percentage utilization of swap space on the server by all software as measured by TPD. |
| Uptime | The total amount of time(days HH:MM:SS) the server has been running. |

Policy and Charging Application (PCA) KPIs

The KPI values associated with PCA are available using **Status & Manage > KPIs**.

Table 5-19 PCA KPIs

| Variable | Description |
|-----------------------------|--|
| PCA Ingress Message Rate | Number of Diameter messages including both requests and answers received by PCA from the Diameter Routing Layer per second. |
| P-DRA Ingress Message Rate | Number of Diameter messages including both requests and answers received by P-DRA from the Diameter Routing Layer per second. |
| OC-DRA Ingress Message Rate | Number of Diameter messages including both requests and answers received by OC-DRA from the Diameter Routing Layer per second. |

Process-based KPIs

Table 5-20 Process-based KPIs

| Variable | Description |
|------------------------|--|
| provimport.Cpu | CPU usage of provimport process |
| provimport.MemHeap | Heap memory usage of provimport process |
| provimport.MemBasTotal | Memory usage of provimport process |
| provimport.MemPerTotal | Percent memory usage of provimport process |
| provexport.Cpu | CPU usage of provexport process |
| provexport.MemHeap | Heap memory usage of provexport process |

Table 5-20 (Cont.) Process-based KPIs

| Variable | Description |
|------------------------|---|
| provexport.MemBasTotal | Memory usage of provexport process |
| provexport.MemPerTotal | Percent memory usage of provexport process |
| pdbrelay.Cpu | CPU usage of pdbrelay process |
| pdbrelay.MemHeap | Heap memory usage of pdbrelay process |
| pdbrelay.MemBasTotal | Memory usage of the pdbrelay process |
| pdbrelay.MemPerTotal | Percent memory usage of pdbrelay process |
| pdbaudit.Cpu | CPU usage of pdbaudit process |
| pdbaudit.MemHeap | Heap memory usage of pdbaudit process |
| pdbaudit.MemBasTotal | Memory usage of the pdbaudit process |
| pdbaudit.MemPerTotal | Percent memory usage of pdbaudit process |
| pdba.Cpu | CPU usage of pdba process |
| pdba.MemHeap | Heap memory usage of pdba process |
| pdba.MemBasTotal | Memory usage of pdba process |
| pdba.MemPerTotal | Percent memory usage of pdba process |
| xds.Cpu | CPU usage of xds process |
| xds.MemHeap | Heap memory usage of xds process |
| xds.MemBasTotal | Memory usage of xds process |
| xds.MemPerTotal | Percent memory usage of xds process |
| dpserver.Cpu | CPU usage of dpserver process on DP |
| dpserver.MemHeap | Heap memory usage of dpserver process on DP |
| dpserver.MemBaseTotal | Memory usage of the dpserver process on DP |
| dpserver.MemPerTotal | Percent memory usage of dpserver on DP |
| era.Cpu | CPU usage of era process |
| era.MemHeap | Heap memory usage of era process |
| era.MemBasTotal | Memory usage of era process |
| era.MemPerTotal | Percent memory usage of era process |

Provisioning KPIs

Table 5-21 Provisioning KPIs

| Variable | Description |
|--------------------|---|
| ProvConnections | The number of provisioning client connections currently established. A single connection includes a client having successfully established a TCP/IP connection, sent a provisioning connect message, and having received a successful response. |
| ProvMsgsReceived | The number of provisioning messages per second that have been received from all sources except import files. |
| ProvMsgsImported | The number of provisioning messages per second imported from files. |
| ProvMsgsSuccessful | The number of provisioning messages per second that have been successfully processed and a success response sent to the requestor. |
| ProvMsgsFailed | The number of provisioning messages per second that have failed to be processed due to errors and a failure response sent to the requestor. |
| ProvMsgsSent | The number of provisioning message responses sent per second to the requestor. |
| ProvMsgsDiscarded | The number of provisioning messages discarded per second. provisioning messages are discarded due to connection shutdown, server shutdown, server's role switching from active to standby, or transaction not becoming durable within the allowed amount of time. |
| ProvTxnCommitted | The number of provisioning transactions per second that have been successfully committed to the database (memory and on disk) on the active server of the primary SDS cluster. |
| ProvTxnFailed | The number of provisioning transactions per second that have failed to be started, committed, or aborted due to errors. |
| ProvTxnAborted | The number of provisioning transactions aborted per second. |
| ProvTxnActive | The number of provisioning transactions that are currently active (normal transaction mode only). |

Table 5-21 (Cont.) Provisioning KPIs

| Variable | Description |
|-------------------------|--|
| ProvTxnNonDurable | The number of transactions that have been committed, but are not yet durable. Responses for the associated requests are not sent until the transaction has become durable. |
| ProvRelayMsgsSent | The number of relayed provisioning messages sent per second. |
| ProvRelayMsgsSuccessful | The number of relayed provisioning messages per second that were successful at the HLRR. |
| ProvRelayMsgsFailed | The number of relayed provisioning messages per second that failed at the HLRR. |
| ProvRemoteAuditMsgsSent | The number of IMSI and MSISDN records audited per second. |
| ProvRelayTimeLag | Time in seconds between timestamps of last record PdbRelay processed and latest entry in the Command Log. |
| ProvDbException | The number of DB Exception errors per second. |

Range Based Address Resolution (RBAR) KPIs

The KPI values associated with RBAR are available using **Status & Manage > KPIs**.

Table 5-22 RBAR KPIs

| Variable | Description |
|---------------------------|---|
| Avg Resolved Message Rate | Average Resolved Message Rate (messages per second) utilization on a MP server. The Resolved Message Rate is the number of ingress Diameter messages that are successfully resolved to a Destination by the RBAR application. |
| Ingress Message Rate | Average Ingress Message Rate (messages per second) utilization on a MP server for this DSR application. The Ingress Message Rate is the number of ingress Diameter messages that were successfully received by the DSR application. |

SCEF KPIs

The KPI values associated with SCEF are visible using **Status & Manage > KPIs**.

Table 5-23 SCEF KPIs

| Variable | Description |
|------------------------------|---|
| Monitoring CFG Requests Rate | Rate at which SCS/ AS is submitting T8 Monitoring Configuration Requests to SCEF application. |
| Monitoring RPT Received Rate | Rate at which SCEF application is receiving Monitoring Reports from HSS/MME/SGSN. |
| Monitoring RPT Received Rate | Rate at which SCEF application is sending T8 Monitoring Notifications to SCS/ AS. |

SS7/Sigtran KPIs

Table 5-24 SS7/Sigtran KPIs

| Variable | Description |
|-----------------------------|--|
| SCCP Recv Msgs/Sec | SCCP messages received per second. |
| SCCP Xmit Msgs/Sec | SCCP messages transmitted per second. |
| SS7 Process CPU Utilization | The average percent of SS7 Process CPU utilization on an MP server. |
| Ingress Message Rate | The Ingress Message Rate is the number of non-SNM message that M3UA attempts to queue in the M3RL Stack Event Queue. |
| M3RL Xmit Msgs/Sec | M3RL DATA MSUs/Sec sent. |
| M3RL Recv Msgs/Sec | M3RL DATA MSUs/Sec received. |

Subscriber Binding Repository (SBR) KPIs

The KPI values for SBR are visible using **Status & Manage > KPIs**.

Table 5-25 SBR KPIs

| Variable | Description |
|-----------------------------|--|
| SBR Memory Utilization | SBR memory utilization (0-100%) |
| SBR Process CPU Utilization | SBR Process CPU Percent Utilization (0-100%) |

Table 5-26 SBR-Binding KPIs

| Variable | Description |
|----------------------------|--|
| SBR Policy Bindings (IMSI) | Total number of subscribers with at least one binding (IMSI) |
| SBR Binding DB Read Rate | Number of SBR Binding DB reads per second |
| SBR Binding DB Write Rate | Number of SBR Binding DB writes per second |

Table 5-26 (Cont.) SBR-Binding KPIs

| Variable | Description |
|-------------------------------|--|
| SBR Alt Key Bindings (MSISDN) | Total number of subscribers with at least one Alternate Key binding (MSISDN) |
| SBR Alt Key Bindings (IPv4) | Total number of subscribers with an Alternate Key binding (IPv4) |
| SBR Alt Key Bindings (IPv6) | Total number of subscribers with an Alternate Key binding (IPv6) |

Table 5-27 SBR-Session KPIs

| Variable | Description |
|----------------------------------|--|
| SBR Policy Sessions | Number of Active SBR Policy Sessions |
| SBR Policy Session DB Read Rate | Number of SBR Policy Session DB reads per second |
| SBR Policy Session DB Write Rate | Number of SBR Policy Session DB writes per second |
| SBR Online Charging Sessions | Number of Active SBR Online Charging Sessions |
| SBR OC Session DB Read Rate | Number of SBR Online Charging Session DB reads per second |
| SBR OC Session DB Write Rate | Number of SBR Online Charging Session DB writes per second |

U-SBR KPIs

The KPI values associated with Universal SBR are visible using **Status & Manage > KPIs**.

Table 5-28 U-SBR KPIs

| Variable | Description |
|----------------------------------|--|
| GenericCreateStateRate | Rate of ingress GenericCreateState stack events messages received by the U-SBR server. |
| GenericCreateOrReadStateRate | Rate of ingress of GenericCreateOrReadState events processed by the U-SBR Server |
| GenericReadStateRate | Rate of ingress of GenericReadState events processed by the U-SBR Server |
| GenericUpdateStateRate | Rate of ingress of GenericUpdateState events processed by the U-SBR Server |
| GenericConcurrentUpdateStateRate | Rate of ingress of GenericConcurrentUpdateState events processed by the U-SBR Server |

Table 5-28 (Cont.) U-SBR KPIs

| Variable | Description |
|--------------------------------|--|
| GenericDeleteStateRate | Rate of ingress of GenericDeleteState events processed by the U-SBR Server |
| GenericErrRecObsoletedRate | Rate of received GenericConcurrentUpdateState events by the U-SBR Server that lead to a result event with the error code set to GenericErrRecObsoleted |
| GenericTotalRequestsRate | Rate of received GenericState events by the U-SBR Server |
| GenericErrMalformedRequestRate | Rate of Generic State events that could not be decoded by the U-SBR Server |
| GenericErrRate | Rate of GenericState events that could not be processed by the U-SBR Server and were replied with a GenericErr code |

vSTP KPIs

The KPI values associated with Universal SBR are visible using **Status & Manage > KPIs**.

Table 5-29 vSTP KPIs

| Variable | Description |
|------------------------------|--|
| VSTP Process CPU Utilization | Average percent VSTP Process CPU utilization (0-100%) on a MP server |
| SCCP Xmit Msgs/Sec | SCCP messages transmitted per second |
| SCCP Recv Msgs/Sec | SCCP messages received per second |
| M3RL Xmit Msgs/Sec | MTP3 DATA MSUs transmitted per second |
| M3RL Recv Msgs/Sec | MTP3 DATA MSUs received per second |
| M3UA Xmit Msgs/Sec | M3UA DATA MSUs transmitted per second |
| M3UA Recv Msgs/Sec | M3UA DATA MSUs received per second |
| M2PA Xmit Msgs/Sec | M2PA DATA MSUs transmitted per second |
| M2PA Recv Msgs/Sec | M2PA DATA MSUs received per second |
| SS7 EIR Recv Msgs/Sec | EIR Check IMEI received per second |
| SS7 EIR Xmit Msgs/Sec | EIR Check IMEI response transmitted per second |
| EIR DB Response Msgs/Sec | EIR DB response received per second |
| EIR DB Request Msgs/Sec | EIR DB request transmitted per second |
