1. Deploying Oracle Banking Payments on WebLogic

1.1 Introduction

This chapter explains the steps to deploy Oracle Banking Payments application into Oracle WebLogic application server in centralized and decentralized modes. In centralized mode, branch and host are setup in a single PC. In decentralized mode, branch and host are setup in different PCs.

1.2 Building Application

For building Oracle Banking Application in centralized and decentralized modes, refer to the following chapters.

1.2.1 Building Application in Centralized Mode

Refer to the chapter 'Building Application in Centralized Mode'. This includes the following details:

- Creating Property File
- Building Centralized EAR File
- Configuring Plug-ins
- Loading Properties File

1.2.2 Building Application in Decentralized Mode

Refer to the chapter 'Building Application in Centralized Mode'. This includes the following details:

- Creating Property File
- Building Centralized EAR File
- Configuring Plug-ins
- Loading Properties File

1.3 Deploying Application in Oracle WebLogic

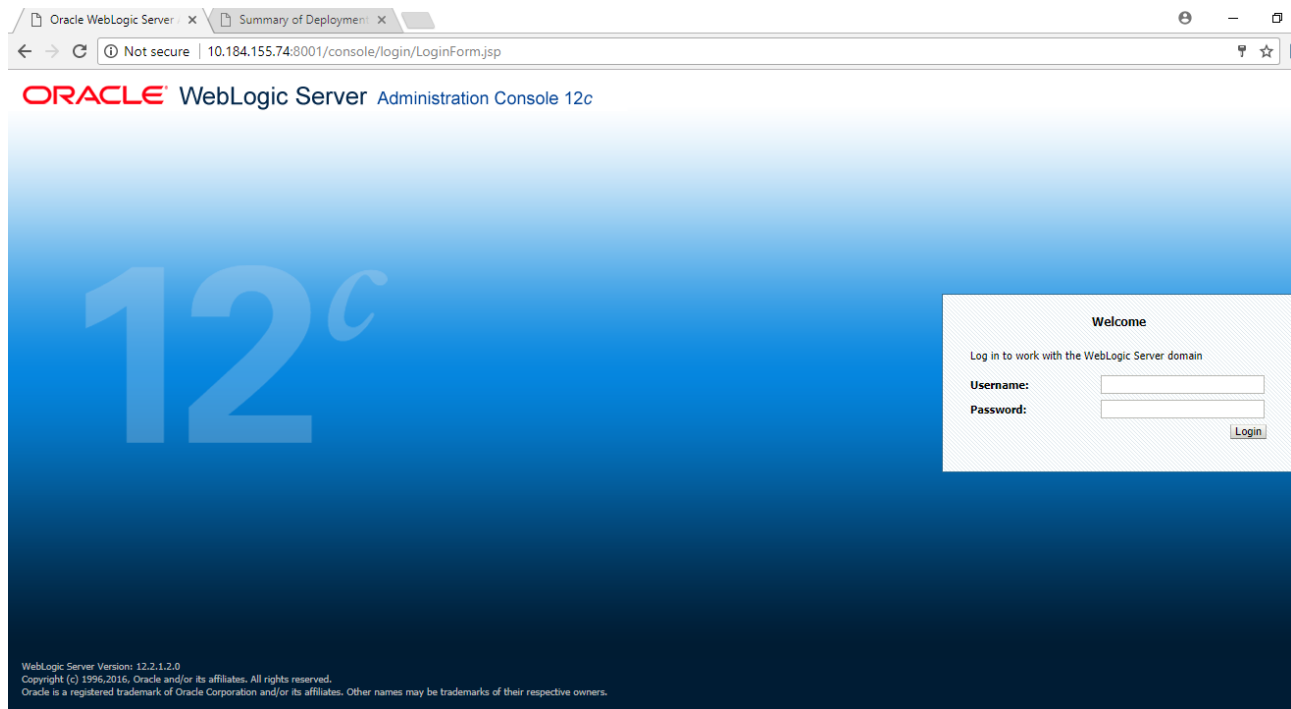

This section explains the method of deploying Oracle Banking Application Oracle WebLogic application server.

1.3.1 Deploying Dependency Library “Jersey-bundle”

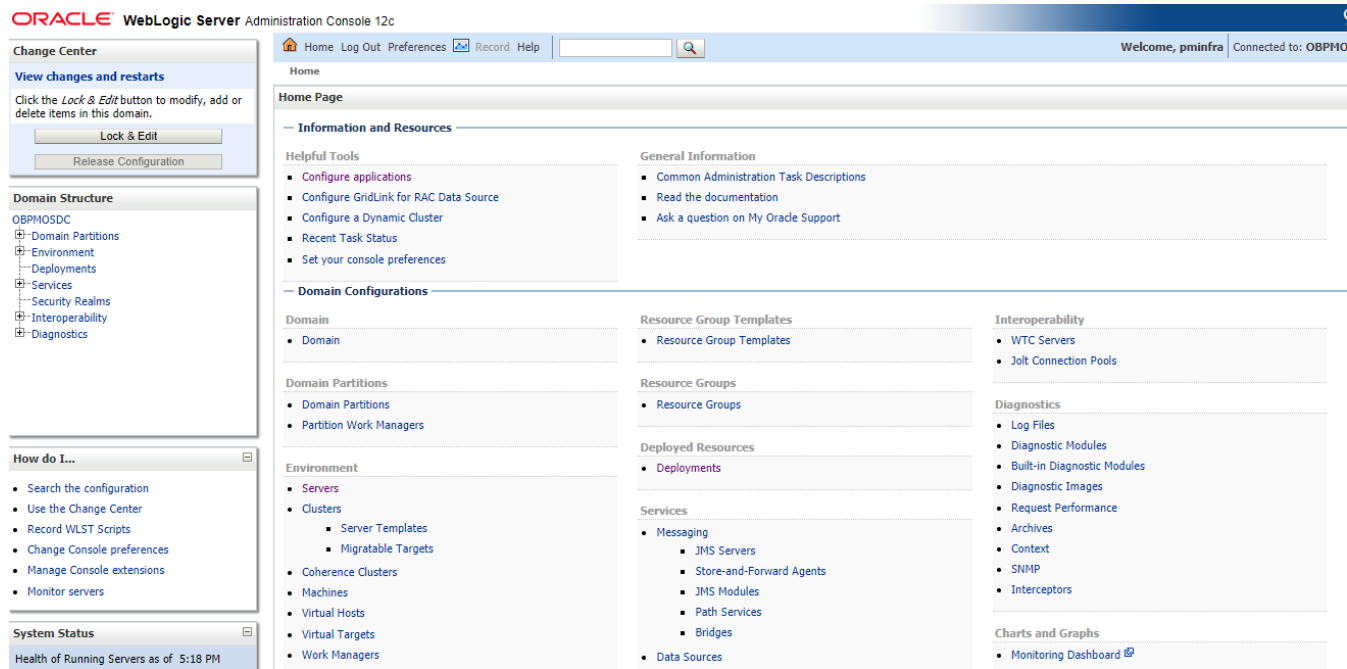

This library must be installed before deploying FCUBSApp.ear. Follow the below steps

1. Start the Administrative Console of WebLogic application server. You can start this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser. Eg: <http://10.10.10.10:1001/console>

2. The following screen is displayed:

3. Specify the WebLogic administrator user name and password. Click 'Log In'. The following screen is displayed:

Locate deployment to install and prepare for deployment

Select the file path that represents the application root directory, archive file, exploded archive directory, or application module descriptor that you want to install. You can also enter the path of the application directory or file in the Path field.

Note: Only valid file paths are displayed below. If you cannot find your deployment files, Upload your file(s) and/or confirm that your application contains the required deployment descriptors.

Path: /scratch/app/fmw12c/Oracle/Middleware/Oracle_Home/wlserver/common/deployable-libraries/jax-rs-2.0.war

Recently Used Paths:

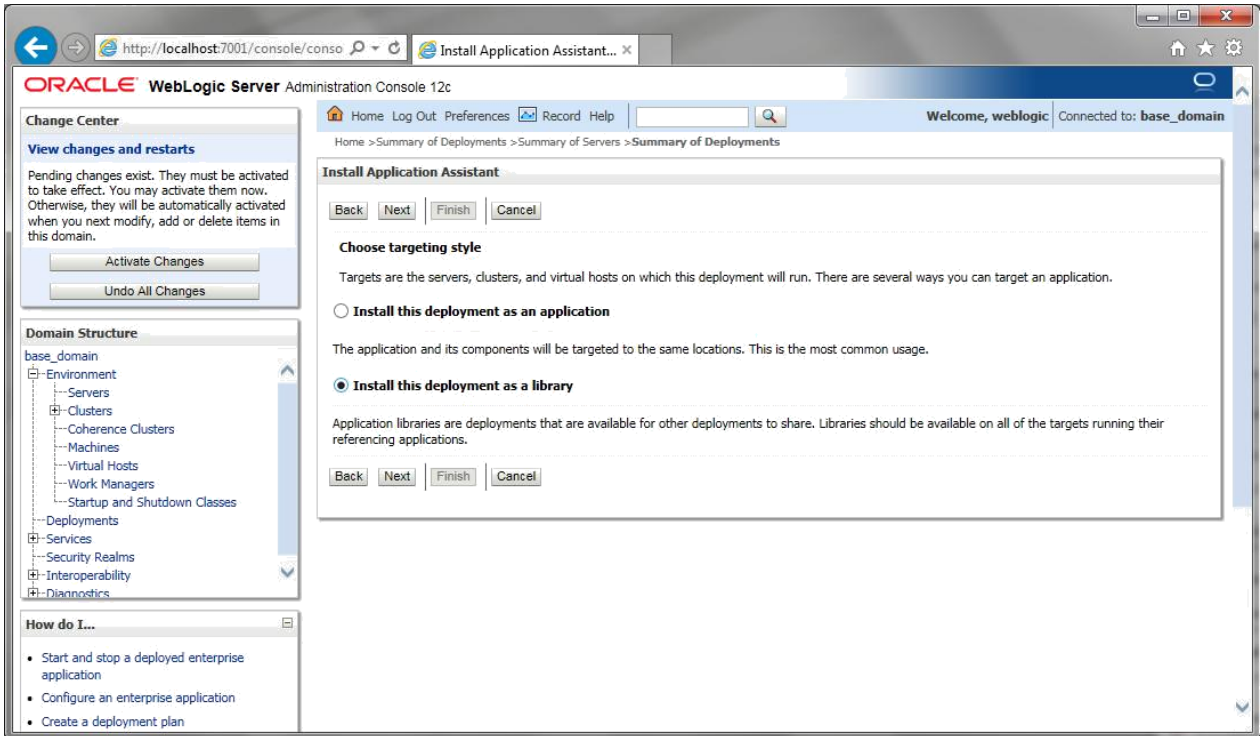

- /scratch/app/fmw12c/Oracle/Middleware/Oracle_Home/user_projects/domains/OBPMOSDC/servers/AdminServer/upload/PaymentStubs_EAR_12.5.ear/app
- /scratch/app/fmw12c/Oracle/Middleware/Oracle_Home/user_projects/domains/OBPMOSDC/servers/AdminServer/upload/OBP125OSDC_Gateway.ear/app
- /scratch/app/fmw12c/Oracle/Middleware/Oracle_Home/user_projects/domains/OBPMOSDC/servers/AdminServer/upload/OBP125OSDC.ear/app
- /scratch/app/fmw12c/Oracle/Middleware/Oracle_Home/user_projects/domains/OBPMOSDC/servers/AdminServer/upload/GWCoreServices.ear/app

This library must appear in the deployment with Type column as "Library"

1.3.2 Deploying FCUBS Application from WebLogic Administration Console

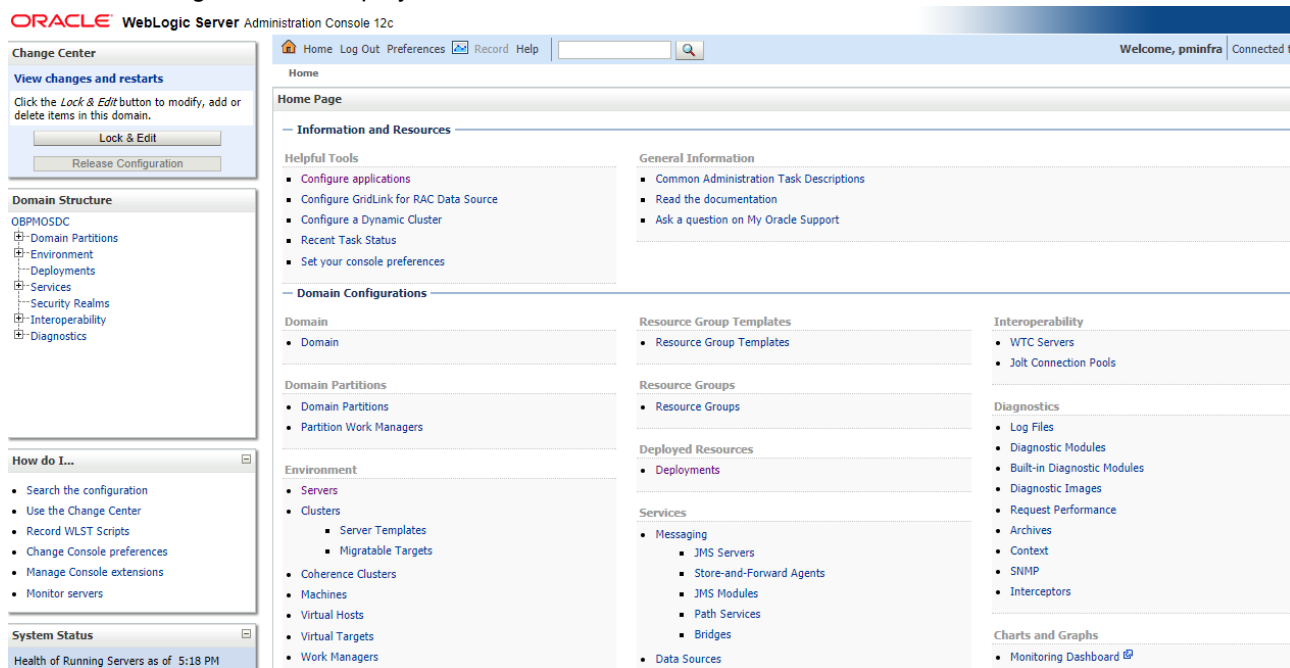

To deploy Oracle Banking Application from Oracle WebLogic administration console, follow the steps given below.

1. Start the Administrative Console of WebLogic application server. You can start this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser. Eg: http://10.10.10.10:1001/console

2. The following screen is displayed:

3. Specify the WebLogic administrator user name and password. Click 'Log In'. The following screen is displayed:

4. You need to deploy an EAR. For e.g. 'FCUBSApp.ear'. Go to 'Deployment'.

- Click 'Next'. The following screen is displayed:

Install Application Assistant

Back | **Next** | Finish | Cancel

Upload a deployment to the Administration Server

Click the Browse button below to select an application or module on the machine from which you are currently browsing. When you have located the file, click the Next button to upload this deployment to the Administration Server.

Deployment Archive: No file chosen

Upload a deployment plan (this step is optional)

A deployment plan is a configuration which can supplement the descriptors included in the deployment archive. A deployment will work without a deployment plan, but you can also upload a deployment plan now. This deployment plan archive will be a directory of configuration information packaged as a jar file. See related links for additional information about deployment plans.

Deployment Plan Archive: No file chosen

How do I...

- Start and stop a deployed enterprise application
- Configure an enterprise application
- Create a deployment plan
- Target an enterprise application to a server instance
- Test the modules in an enterprise application

System Status

- Select the application 'FCUBSApp.ear' from the list.

11. Click 'Next'. Following screen is displayed:

The screenshot shows the Oracle WebLogic Server Administration Console 12c interface. The main content area is titled "Install Application Assistant" and contains the following sections:

- Buttons:** Back, Next, Finish, Cancel.
- Choose installation type and scope:** Select if the deployment should be installed as an application or library. Also decide the scope of this deployment.
- The application and its components will be targeted to the same locations. This is the most common usage.**
- Install this deployment as an application:** Selected by default. Application libraries are deployments that are available for other deployments to share. Libraries should be available on all of the targets running their referencing applications.
- Install this deployment as a library:** Unselected.
- Install this deployment as an application, but target the components individually:** Unselected. Useful when one or more of the modules or components must have targets unique from the rest of the application.
- Select a scope in which you want to install the deployment.**
- Scope:** Global (dropdown menu).
- Buttons:** Back, Next, Finish, Cancel.

On the left side, there are three panels: "Change Center" (with "View changes and restarts" and "Release Configuration" buttons), "Domain Structure" (showing a tree view of the domain hierarchy), and "How do I..." (with a list of tasks).

12. Choose the targeting style 'Install this deployment as an application'.

13. Click 'Next'.

The following screen is displayed

The screenshot shows the Oracle WebLogic Server Administration Console 12c interface. The main content area is titled "Install Application Assistant" and contains the following sections:

- Buttons:** Back, Next, Finish, Cancel.
- Select deployment targets:** Select the servers and/or clusters to which you want to deploy this application. (You can reconfigure deployment targets later).
- Available targets for FCUBSPHNT:**
- Servers:** A table with the following rows:

Servers
<input type="checkbox"/> AdminServer
<input checked="" type="checkbox"/> OBPSP1
<input type="checkbox"/> OBPSP2
- Buttons:** Back, Next, Finish, Cancel.

On the left side, there are three panels: "Change Center" (with "View changes and restarts" and "Release Configuration" buttons), "Domain Structure" (showing a tree view of the domain hierarchy), and "How do I..." (with a list of tasks).

14. Select the target of the application. You can choose the server 'AdminServer' or 'Managed Server(s)'.

15. Click 'Next'. The following screen is displayed.

Optional Settings

You can modify these settings or accept the defaults.
* Indicates required fields

General

What do you want to name this deployment?

* Name:

Security

What security model do you want to use with this application?

DD Only: Use only roles and policies that are defined in the deployment descriptors.

Custom Roles: Use roles that are defined in the Administration Console; use policies that are defined in the deployment descriptor.

Custom Roles and Policies: Use only roles and policies that are defined in the Administration Console.

Advanced: Use a custom model that you have configured on the realm's configuration page.

Source Accessibility

How should the source files be made accessible?

Use the defaults defined by the deployment's targets

Recommended selection.

Copy this application onto every target for me

During deployment, the files will be copied automatically to the Managed Servers to which the application is targeted.

I will make the deployment accessible from the following location

Location:

Provide the location from where all targets will access this application's files. This is often a shared directory. You must ensure the application files exist in this location and that each target can reach the location.

Plan Source Accessibility

How should the plan source files be made accessible?

Use the same accessibility as the application

Recommended selection.

Copy this plan onto every target for me

During deployment, the plan files will be copied automatically to the Managed Servers to which the application is targeted.

Do not copy this plan to targets

You must ensure the plan files exist in the shared location and that each target can reach the location.

Use this page to view the general configuration of an enterprise application, such as its name, the physical path to the application files, the associated deployment plan, and so on. The table at the end of this page lists the modules (such as Web applications and EJBs) that are contained in the enterprise application. Click on the name of the module to view and update its configuration.

Name:	FCUBSPMNT	The name of this enterprise application. More Info...
Scope:	Global	Specifies if this enterprise application is accessible within the domain, as a part of a resource group template. More Info...
Path:	/scratch/app/fmw12c/Oracle/Middleware/Oracle_Home/user_projects/domains/OBPMOSDC/servers/AdminServer/upload/FCUBSPMNT.ear/app/FCUBSPMNT.ear	The path to the source of the deployable unit on the Administration Server. More Info...
Deployment Plan:	(no plan specified)	The path to the deployment plan document on the Administration Server. More Info...
Staging Mode:	(not specified)	Specifies whether a deployment's files are copied from a source on the Administration Server to the Managed Server's staging area during application preparation. More Info...
Plan Staging Mode:	(not specified)	Specifies whether an application's deployment plan is copied from a source on the Administration Server to the Managed Server's staging area during application preparation. More Info...
Security Model:	DDOnly	The security model that is used to secure a deployed module. More Info...
Deployment Order:	100	An integer value that indicates when this unit is deployed, relative to other deployable units on a server, during startup. More Info...
Deployment		A string value that indicates the principal that should be used when deploying the application. More Info...

20. Click 'Activate Changes' button on the left pane. The message 'All the changes have been activated. No restarts are necessary' is displayed.

Yes No

23. Click 'Yes'. The following screen is displayed.

The screenshot shows the Oracle WebLogic Server Administration Console. The main content area is titled "Summary of Deployments" and contains a table of installed applications. The table has the following columns: Name, State, Health, Type, Targets, Scope, Domain Partitions, and Deployment. The applications listed are:

Name	State	Health	Type	Targets	Scope	Domain Partitions	Deployment
GWCoreServices	Admin	OK	Enterprise Application	OBPServer1	Global		100
GWEJB	Active	OK	Enterprise Application	OBPServer1	Global		100
GWMDB	Active	Warning	Enterprise Application	OBPServer1	Global		100
jax-rs(2.0,2.22.1.0)	Active		Library	OBPServer1, OBPServer2	Global		100
OBP12SSUPPORT	Active	Warning	Enterprise Application	OBPServer1	Global		0
OBP12SSUPPORT_Gateway	Active	Warning	Enterprise Application	OBPServer2	Global		0
PaymentStubs_EAR_12.5	Active	Warning	Enterprise Application	OBPServer1	Global		100

This completes the deployment process.

1.3.3 Deploying Gateway/Scheduler Applications from WebLogic Administration Console

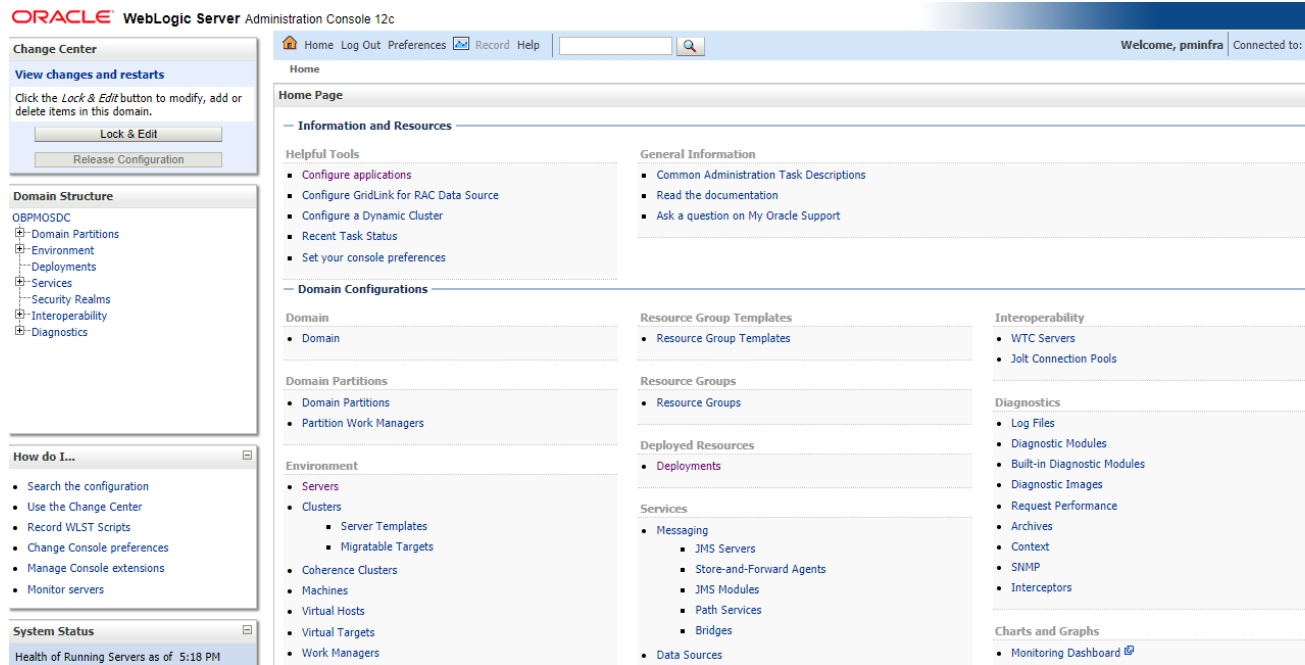

To deploy Oracle Banking Gateway/Scheduler Application from Oracle WebLogic administration console, follow the steps given below.

1. Launch Administrative Console of WebLogic application server. You can launch this by entering Oracle WebLogic Admin Console URL in the address bar in an internet browser. Eg: <http://10.10.10.10:1001/console>
2. The following screen is displayed:

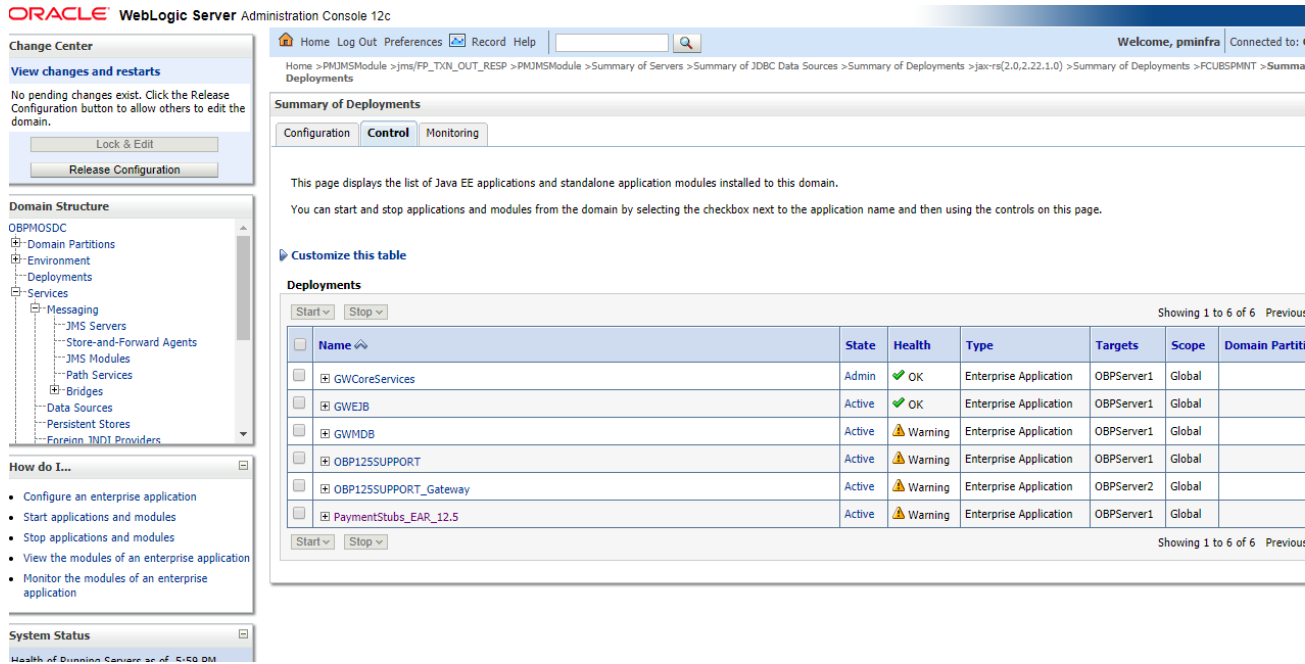

3. Specify the WebLogic administrator user name and password. Click 'Log In'.

The following screen is displayed:

4. You need to deploy an EAR. For e.g. 'GWEJB.ear'. Go to 'Deployment'.

Click 'Lock & Edit' button to enable the buttons. This action enables the buttons.

- Click 'Install' button. The following screen is displayed:

ORACLE WebLogic Server Administration Console 12c

Home > jax-rs(2.0.2.22.1.0) > Summary of Deployments > FCUBSPMNT > Summary of Deployments > GWEJB > Roles > GWEJB > Summary of Deployments > GWEJB > Summary of Deployments

Upload a deployment to the Administration Server

Click the Browse button below to select an application or module on the machine from which you are currently browsing. When you have located the file, click the Next button to upload this deployment to the Administration Server.

Deployment Archive: Choose File No file chosen

Upload a deployment plan (this step is optional)

A deployment plan is a configuration which can supplement the descriptors included in the deployment archive. A deployment will work without a deployment plan, but you can also upload a deployment plan now. This deployment plan archive will be a directory of configuration information packaged as a jar file. See related links for additional information about deployment plans.

Deployment Plan Archive: Choose File No file chosen

Back Next Finish Cancel

- Specify the EAR file path. You can use the 'Browse' button to locate the file.

9. Click 'Next'. The following screen is displayed.

ORACLE WebLogic Server Administration Console 12c

Back Next Finish Cancel

Choose installation type and scope

Select if the deployment should be installed as an application or library. Also decide the scope of this deployment.

The application and its components will be targeted to the same locations. This is the most common usage.

Install this deployment as an application

Application libraries are deployments that are available for other deployments to share. Libraries should be available on all of the targets running their referencing applications.

Install this deployment as a library

Install this deployment as an application, but target the components individually

Useful when one or more of the modules or components must have targets unique from the rest of the application.

Select a scope in which you want to install the deployment.

Scope: Global

Back Next Finish Cancel

12. Choose the targeting style 'Install this deployment as an application'.

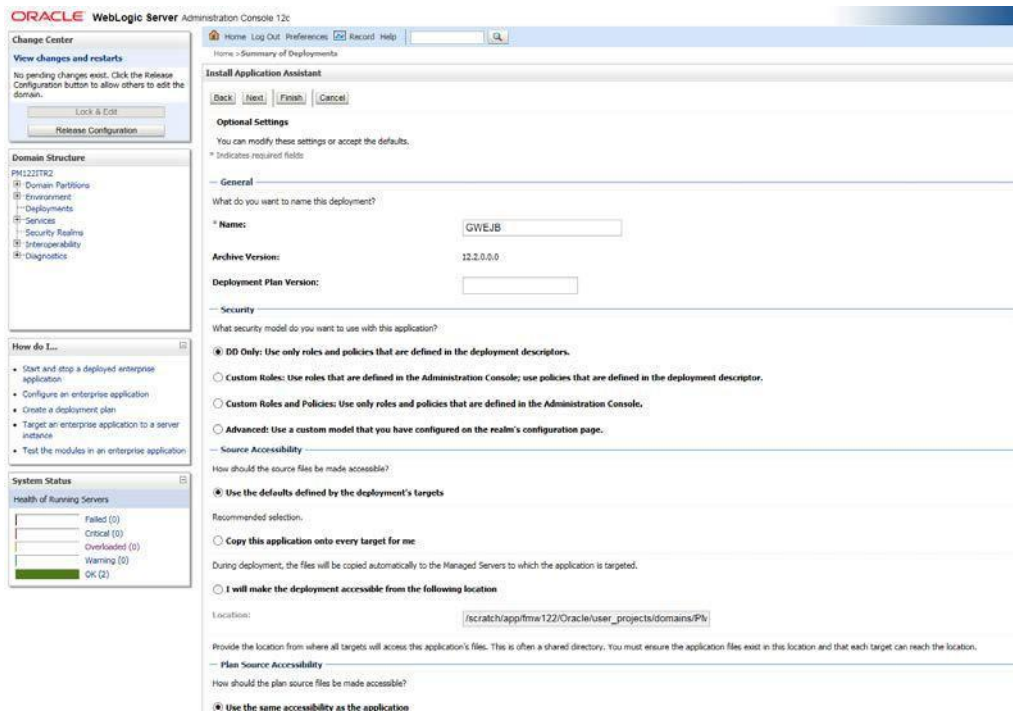

13. Click 'Next'.

The following screen is displayed

14. Select the target of the application. You can choose the server 'AdminServer' or 'Managed Server(s)'.

15. Click 'Next'. The following screen is displayed.

16. Check the deployment name.

The remaining portion of the screen is shown below:

Name: GWEJB

Archive Version: 12.2.0.0.0

Deployment Plan Version:

Security
What security model do you want to use with this application?

DD Only: Use only roles and policies that are defined in the deployment descriptors.

Custom Roles: Use roles that are defined in the Administration Console; use policies that are defined in the deployment descriptor.

Custom Roles and Policies: Use only roles and policies that are defined in the Administration Console.

Advanced: Use a custom model that you have configured on the realm's configuration page.

Source Accessibility
How should the source files be made accessible?

Use the defaults defined by the deployment's targets

Recommended selection.

Copy this application onto every target for me
During deployment, the files will be copied automatically to the Managed Servers to which the application is targeted.

I will make the deployment accessible from the following location

Location: /scratch/app/fmw122/Oracle/user_projects/domains/Pk

Provide the location from where all targets will access this application's files. This is often a shared directory. You must ensure the application files exist in this location and that each target can reach the location.

Plan Source Accessibility
How should the plan source files be made accessible?

Use the same accessibility as the application

Recommended selection.

Copy this plan onto every target for me
During deployment, the plan files will be copied automatically to the Managed Servers to which the application is targeted.

Do not copy this plan to targets
You must ensure the plan files exist in the shared location and that each target can reach the location.

[Back](#) [Next](#) [Finish](#) [Cancel](#)

17. Check whether the deployment location is accessible or not.

The following screen is displayed.

ORACLE WebLogic Server Administration Console 12c

Home -> Summary of Deployments

Install Application Assistant

[Back](#) [Next](#) [Finish](#) [Cancel](#)

Review your choices and click Finish
Click Finish to complete the deployment. This may take a few moments to complete.

Additional Configuration
In order to work successfully, this application may require additional configuration. Do you want to review this application's configuration after completing this assistant?

Yes, take me to the deployment's configuration screens.

No, I will review the configuration later.
