3.Function ID Glossary 1		

1. About this Manual

1.1 Introduction

This manual is designed to help you to quickly get familiar with the Domestic Low Value Payments functionality of Oracle Banking Payments. It takes you through the various stages in processing a payment transaction.

1.2 Audience

This manual is intended for the following User/User Roles:

Role	Function
Payment Department Operators	Payments Transaction Input functions except Authorization.
Back Office Payment Department Operators	Payments related maintenances/Payment Transaction Input functions except Authorization
Payment Department Officers	Payments Maintenance/ Transaction Authorization
Bank's Financial Controller/ Payment Department Manager	Host level processing related setup for PM module and PM Dashboard/Query functions

1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.4 Organization

This manual is organized into the following chapters.:

Chapter	Description
Chapter 1	<i>About this Manual</i> gives information on the intended audience. It also lists the various chapters covered in this User Manual.
Chapter 2	<i>Domestic Low Value Payments</i> provides a snapshot of the local payments or payments limited to a specific region.
Chapter 3	<i>Function ID Glossary</i> has alphabetical listing of Function/Screen ID's used in the module with page references for quick navigation.

1.5 Glossary of Icons

This User Manual may refer to all or some of the following icons:

Icons	Function
	Exit

Icons	Function
	Add row
	Delete row
	Option List

2. Domestic Low Value Payments

This chapter contains the following sections:

- [Section 2.1, "Domestic Low Value Payments"](#)
- [Section 2.2, "Outgoing Transaction Input Screen"](#)
- [Section 2.4, "Authorization of Outgoing Transaction"](#)
- [Section 2.5, "ACH Outgoing Payment View"](#)
- [Section 2.6, "ACH Incoming Payments"](#)
- [Section 2.7, "ACH Incoming Payment View"](#)
- [Section 2.8, "ACH Incoming Payments Input"](#)
- [Section 2.9, "Processing R-transactions"](#)
- [Section 2.10, "R-Transactions Dispatch"](#)

2.1 Domestic Low Value Payments

Automated Clearing House Networks facilitate transmission and settlement of electronic payments originated by individuals, businesses, financial institutions and government organizations. Domestic low value payments are local payments or payments limited to a specific region. Depending on the network specifications, messages are processed in batch mode and dispatched at the specified time during the day.

Below listed functionalities for SEPA credit transfer (SCT) are explained in this user manual:

- Outgoing payment processing and message file generation
- Straight through Processing of incoming payment files

For Domestic Low value payments, the payment type is 'ACH'.

Below transaction types are supported for ACH payments:

- I – Incoming
- O - Outgoing

2.2 Outgoing Transaction Input Screen

This section contains the following topics:

- [Section 2.2.1, "Invoking ACH Outgoing Payments Screen"](#)
- [Section 2.2.2, "Main Tab"](#)
- [Section 2.2.3, "Pricing Tab"](#)
- [Section 2.2.4, "Additional Details Button"](#)
- [Section 2.2.5, "Saving of Outgoing Transaction"](#)
- [Section 2.2.6, "ACH Outgoing SOAP/REST Web services"](#)

2.2.1 Invoking ACH Outgoing Payments Screen

You can perform ACH outgoing transaction. All transactions that are entered using this screen has payment type as 'ACH' and transaction type as 'Outgoing'. You can invoke 'ACH Outgoing Payment' screen by typing 'PADOTONL' in the field at the top right corner of the

Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar..

The screenshot shows the 'Transaction Input Detailed' application window. It features a top navigation bar with a 'New' button and an 'Enter Query' field. The main area is divided into several sections: 'Transaction Reference Number *', 'User Reference Number *', 'Transaction Branch Code *', 'Host Code *', 'Source Code *', 'Network Code *', 'Source Reference Number', 'End to End ID', 'Main Pricing', 'Debtor Details', and 'Payment Details'. The 'Debtor Details' section includes fields for Debtor Account Number, Debtor Account IBAN, Account Currency, Debtor Account Branch, Debtor Name, Debit Amount, Customer No, and Customer Service Model. The 'Payment Details' section includes Booking Date, Instruction Date *, Activation Date, Instructed Currency Indicator (a dropdown menu), Instructed Currency *, Instructed Amount *, Transfer Currency *, and Transfer Amount. At the bottom, there are fields for 'UDF | MIS', 'Maker Id', 'Checker ID', 'Authorization Status', and an 'Exit' button.

You can specify the following fields:

Transaction Branch code

The system defaults the transaction branch code with the user's logged in branch code.

Host code

The system defaults the host code of transaction branch.

Source Code

For manual transactions source code is defaulted as MANL. This denotes that the it is a manually input transaction.

Network Code

The system displays the network code if only one Network is maintained with payment type as ACH for the host code. If more than one networks are present, you can select the network code from the available list of values

Transaction Reference number

The system generates the transaction reference number. For more details on the format, refer the Payments Core User Guide.

User Reference Number

The system defaults transaction reference number. However you can modify this.

End to End ID

Specify the End to End ID.

2.2.2 Main Tab

Click 'Main' tab to capture the Creditor/ Debtor/ Payments details:

The screenshot displays the Oracle Main Tab interface. At the top, there are two tabs: 'Main' (highlighted in red) and 'Pricing'. Below the tabs, the interface is divided into several sections:

- Debtor Details:** Includes fields for Debtor Account Number, Debtor Account IBAN, Account Currency, Debtor Account Branch, Debtor Name, Debit Amount, Customer No, Customer Service Model, SSI Label, Company Identifier, and Company Name.
- Payment Details:** Includes fields for Booking Date, Instruction Date (marked with a red asterisk), Activation Date, Instructed Currency Indicator (a dropdown menu showing 'Transfer Currency'), Instructed Currency (marked with a red asterisk), Instructed Amount (marked with a red asterisk), Transfer Currency (marked with a red asterisk), Transfer Amount, Exchange Rate, FX Reference Number, Credit Value Date, Debit Value Date, and Remarks.
- Creditor Details:** Includes fields for Creditor Account Number, Creditor Account IBAN, Creditor Name, and Creditor Bank Code.
- Additional Details:** A blue button labeled 'Additional Details' is located below the Creditor Details section.
- Footer:** Contains 'UDF | MIS', 'Maker Id', 'Checker ID', 'Authorization Status', 'Maker Date Stamp', 'Checker Date Stamp', and an 'Exit' button.

Specify the following details

Debtor Details

Debtor Account Number

Specify the debtor account number. Alternatively, you can select the debtor account number from the option list. The list displays all open and authorized accounts as available in External Account Maintenance.

Account IBAN

The system defaults the account IBAN based on the debtor account number field selected.

Account Currency

The system defaults account currency based on the debtor account number selected.

Account Branch

The system defaults the account branch based on the debtor account number selected.

Debtor Name

The system defaults debtor name based on the debtor account number selected.

Debit Amount

The system populates this field as the transfer amount converted in debtor account currency on enrich.

Customer

This field is defaulted as the customer ID of the Debtor account chosen.

Customer Service Model

Specifies the Customer Service Model. This is displayed if customer is linked to a service model.

SSI Label

Select the required SSI label from the list of values.

Note

This list will be populated with valid SSI Labels, applicable for the customer and the Network.

Creditor Details**Creditor Account Number**

Specify the creditor account number.

Account IBAN

Specify the creditor account IBAN.

Note

If 'IBAN Check' is enabled for the network then, you must specify creditor account IBAN and creditor details.

Creditor Name

Specify the creditor name.

Creditor Bank BIC

Specify the creditor bank code. Alternatively, you can select the creditor bank code from the option list. The list displays all open and authorized Bank Codes/BIC codes available in the local bank directory. This is listed based on the 'Bank Network Identifier' maintained for Network maintenance (PMDNWMNT).

Note

In case the Creditor Bank BIC is not specified, then the system has an additional feature by which you can use the beneficiary IBAN. However, the IBAN validation must be specified in Network maintenance (PMDNWMNT).

Conditions for resolving a Creditor Bank BIC from Beneficiary IBAN

- IBAN Validation is required for the Network
- Beneficiary IBAN adheres to the respective Country IBAN Structure as maintained in IBAN Information maintenance – ISDESBAN
- Beneficiary IBAN has valid check-digits in position 3 and 4
- IBANPLUS_REQD is set as Y in CSTB_PARAM
- Record in IBAN Plus directory

Note

For ACH Outgoing payments initiated from Upload channels like C2B, REST, SOAP & JSON over JMS, Creditor Bank BIC is resolved during STP processing.

Payment Details**Booking Date**

The system defaults the booking date as application server date.

Instruction Date

The system defaults the Instruction date as current system date. However you can select a future date as Instruction Date. Debit currency/Credit currency & Network holiday checks are applicable for Instruction Date.

Activation Date

Activation date is derived as Instruction Date – Debit Float days as maintained in Process cutoff maintenance. Holiday check is done for Activation date based on Branch holidays maintained if Branch holiday check is applicable for the Network.

Instructed Currency Indicator

Select any of the two options:

- Transfer Currency - If the Instructed currency option is 'Transfer Currency' then the Instructed amount provided will be considered as the Transfer Amount.
- Debit Currency - If the option is 'Debit Currency', then the Instructed Amount provided will be the Debit amount.

Instructed Currency

Select the currency from the LOV.

Instructed Amount

You can enter the Instructed Amount.

Credit Value Date

The system defaults as Instruction Date.

Debit Value Date

The system defaults as Activation Date.

Transfer Currency

The system defaults transfer currency if the network allows only single currency as per Network currency preferences (PMDNCMNT).

If multiple currencies are allowed then the system allows you to specify the transaction currency. Alternatively, you can select the transaction currency from the option list. The list displays all valid transaction currencies maintained in the system.

Transfer amount

Specify the transaction amount.

Exchange Rate

Specify the exchange rate if debit account currency and credit account currency is different from the transfer currency. The system retains the input value and validate the same against override and stop variances maintained in the Network preference.

If exchange rate is not specified, then the system populates the exchange rate on enrich or save, if the transfer amount is less than small FX limit maintained.

System populates exchange rate, debit amount and charge/tax amounts when you click on the Enrich Button. If exchange rate pick up or charge pick up fails, then the system throws an error. User can provide the values and proceed with the transaction.

FX Reference Number

Specify the FX Reference Number.

Remarks

Specify the internal remarks, if any.

2.2.3 Pricing Tab

You can view the pricing details populated by system in this screen.

The screenshot displays a web application window titled "Main Pricing". At the top, there is a navigation bar with a "Go" button and a "1 Of 1" indicator. Below this is a table with the following columns: Pricing Component, Pricing Currency, Pricing Amount, Waived, Debit Currency, and Debit Amount. The table is currently empty. At the bottom of the window, there is a footer section with fields for Maker ID, Checker ID, Authorization Status, and Date Time. An "Exit" button is located in the bottom right corner of the footer.

The following details are available:

Pricing Component

The system defaults the pricing component based on the Pricing code linked in Network Currency Preferences.

Pricing Currency

The system defaults the pricing currency.

Pricing Amount

The system defaults the pricing amount from Pricing Value Maintenance screen (PPDVLMNT) as applicable for the payment value date, Payment Source code and Debit Customer Service Model. However you can modify this value.

Note

Currency conversions related to charge computation are completed and final amount is populated component wise in the Pricing Tab.

Waived

The system defaults the waiver. However you can modify this value.

Note

If charge/tax is already waived at price value maintenances, then you cannot uncheck the waiver flag.

Debit amount

System defaults the customer debit amount for charge/tax.

UDF

Click this link to specify the user defined fields.

MIS

Click this button to specify the MIS fields.

2.2.4 Additional Details Button

Specify the additional details in this screen. Click on the 'Additional Details Button' to invoke this screen.

The screenshot shows a software window titled "ACH Outgoing Payments" with a sub-header "Additional Details". At the top, there are input fields for "Transaction Reference No", "Activation Date", "Host Code", and "Network Code". Below these are two tabs: "Debtor Creditor Details" (which is selected and highlighted in red) and "Other Details". The "Debtor Creditor Details" tab is divided into three columns of information:

- Debtor Details:** Address Line 1, Address Line 2, Country.
- Debtor Private Details:** Birth Date (with a calendar icon), Province Of Birth, City Of Birth, Country Of Birth.
- Debtor Identification:** Organization Bank ID, Organization Identification, Private Identification, Identification Issuer, Identification Scheme Code, Identification Scheme Proprietary.

Below these are three more sections, each with a similar structure:

- Ultimate Debtor Details:** Name.
- Ultimate Debtor Private Details:** Birth Date, Province Of Birth, City Of Birth, Country Of Birth.
- Ultimate Debtor Identification:** Organization Bank ID, Organization Identification, Private Identification, Identification Issuer, Identification Scheme Code, Identification Scheme Proprietary.

At the bottom, there are three more sections:

- Ultimate Creditor Details:** Name.
- Ultimate Creditor Private Details:** Birth Date, Province Of Birth, City Of Birth, Country Of Birth.
- Ultimate Creditor Identification:** Organization Bank ID, Organization Identification, Private Identification, Identification Issuer, Identification Scheme Code, Identification Scheme Proprietary.

At the bottom right of the window, there are "OK" and "Exit" buttons.

2.2.4.1 Debtor Creditor Details Tab

Specify the debtor and creditor details:

Debtor Details

Address Line 1

Specify the address of the debtor.

Address Line 2

Specify the address of the debtor.

Country

Specify the Country of residence of the debtor. Alternatively, you can select the country from the option list. The list displays all valid country codes maintained in the system.

Debtor Private Details

Birth Date

Select the date of birth of debtor from the adjoining calendar.

Province Of Birth

Specify the province of birth of the debtor.

City Of Birth

Specify the city of birth of the debtor.

Country Of Birth

Specify the country of birth of the debtor. Alternatively, you can select the country from the option list. The list displays all valid country codes maintained in the system.

Debtor Identification**Organization Bank ID**

Specify the organization bank id of debtor.

Private Identification

Specify the private identification number of debtor.

Identification Issuer

Specify the identification issuer details.

Identification Scheme Code

Specify the identification scheme code.

Identification Scheme Proprietary

Specify the identification scheme proprietary details.

Creditor Details**Address Line 1**

Specify the address of the creditor.

Address Line 2

Specify the address of the creditor.

Country

Specify the Country of residence of the creditor. Alternatively, you can select the country from the option list. The list displays all valid country codes maintained in the system.

Creditor Private Details**Birth Date**

Select the date of birth of creditor from the adjoining calender.

Province Of Birth

Specify the province of birth.

City Of Birth

Specify the city of birth of the creditor.

Country Of Birth

Specify the country of birth of the creditor. Alternatively, you can select the country from the option list. The list displays all valid country codes maintained in the system.

Creditor Identification**Organization Bank ID**

Specify the organization bank id of creditor.

Private Identification

Specify the private identification number of creditor.

Identification Issuer

Specify the identification issuer details.

Identification Scheme Code

Specify the identification scheme code.

Identification Scheme Proprietary

Specify the identification scheme proprietary details

Ultimate Debtor Details**Name**

Specify the debtor name.

Ultimate Debtor Private Details**Birth Date**

Select the debtor date of birth from the adjoining calender.

Province Of Birth

Specify the debtor province of birth.

City Of Birth

Specify the city of birth of debtor.

Country Of Birth

Specify the country of birth of the debtor. Alternatively you can select the country of birth from the option list. The list displays all valid country codes maintained in the system.

Ultimate Debtor Identification**Organization Bank ID**

Specify the organization bank id.

Private Identification

Specify the private identification number.

Identification Issuer

Specify the identification issuer details.

Identification Scheme Code

Specify the identification scheme code.

Identification Scheme Proprietary

Specify the identification scheme proprietary.

Ultimate Creditor Details**Name**

specify the creditor name.

Ultimate Creditor Private Details

Birth Date

Select the debtor date of birth from the adjoining calendar.

Province Of Birth

Specify the creditor province of birth.

City Of Birth

Specify the city of birth of creditor.

Country Of Birth

Specify the country of birth of the creditor. Alternatively you can select the country of birth from the option list. The list displays all valid country codes maintained in the system.

Ultimate Creditor Identification

Organization Bank ID

Specify the organization bank id.

Private Identification

Specify the private identification number.

Identification Issuer

Specify the identification issuer details.

Identification Scheme Code

Specify the identification scheme code.

Identification Scheme Proprietary

Specify the identification scheme proprietary.

Note

- You can provide only one of the field values for 'Organization Bank ID', 'Organization Identification' or Private Identification.
- If Identification Issuer or Identification Scheme details are present then either Organization Identification or Private Identification has to be present.
- The above mentioned validations are applicable for:
 - Debtor Identification
 - Creditor Identification
 - Ultimate Debtor Identification
 - Ultimate Creditor Identification
 - Initiating Party details

2.2.4.2 Other Details Tab

You can capture the below details in this screen.

Specify the payment details.

Note

Only one of structured Payment Details or Unstructured Payment details may be present

Creditor Reference Information**Payment Details**

Specify the payment details.

2.2.5 Saving of Outgoing Transaction

The system performs the following mandatory field checks and the referential checks during the save of ACH outgoing payment transaction. If any of the below validation fails, then the transaction is rejected with an error code.

Following fields are mandatory for requesting ACH outgoing payments:

- Host Code & Transaction Branch Code
- Network Code
- Debtor Account or Debtor IBAN
- Creditor Bank Code
- Creditor Account (or Creditor IBAN, if IBAN is mandatory for the Network)
- Creditor Name
- Transfer Currency
- Transfer Amount
- Value Date

If the source code is not MANL, then it is mandatory to specify the Source reference number.

Customer/Account status validation is done based on the status details available in External Customer maintenance/External Account maintenance.

Holiday check for instruction date is done based on the local branch holidays maintained.

Any validation failure from user interface screen throws error on transaction saving. You can check the error details from the respective error message displayed and can take re medial action before re-submitting.

2.2.6 ACH Outgoing SOAP/REST Web services

Oracle Banking Payments allows you to process the outgoing ACH payment request received from SOAP or REST web services. All the transactions created based on the requests received from SOAP/REST web services are always auto authorized.

The system picks the booking date of the transaction as the application server date. Based on the debit account number through External Account Maintenance, the system derives at the debit account name, debit currency and debit customer.

The following fields are supported for a payment instruction received through REST services:

- Source Reference Number
- Source Code
- Host Code
- Transaction Branch
- Network Code
- Debtor Account (Debtor IBAN if IBAN is mandatory for the network)
- Creditor Bank Code
- Creditor Account (Creditor IBAN if IBAN is mandatory for the network)
- Creditor Name
- Transfer Currency
- Transfer Amount
- Instruction Date

Initial validations as explained in section 2.2.5 are applicable for payment transactions received from channels as well.

If instruction date is a holiday, activation date is derived as next working day

In case of invalid accounts/bank codes, system does Bank/Account re-direction if any maintenance is available for the invalid codes.

Any validation exception moves the transaction to exception queue. For more details please refer to User Manual on Exception Queues.

2.3 ACH Outgoing Payments Summary

You can view the summary in “ACH Outgoing Payments Summary” screen. You can invoke the ACH Outgoing Payments Summary screen by typing ‘PASOTONL’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

You can search for the records using one or more of the following parameters:

- Transaction Reference Number
- Debtor Account Number
- Transaction Branch Code
- Booking Date
- Customer Service Model
- Maker ID
- Source Reference Number
- User Reference Number
- Transfer Amount
- Authorization Status
- Debtor Account Branch
- Instruction Date
- Checker ID
- Network Code
- Transfer Currency
- Activation Date
- Customer No
- Creditor Account IBAN
- Linked Transaction Reference
- End to End ID
- Authorization Status

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

2.4 Authorization of Outgoing Transaction

The transaction authorization process involves the following steps for a payment transaction with Activation date as current date:

- Network related validations
- IBAN check
- Duplicate check
- Authorization Limits Check
- Transaction cutoff time check
- Sanction check
- Computation of Charge & Tax
- Exchange rate pickup
- ECA check
- Network cutoff time check
- Debit /Credit Accounting
- Dispatch file generation
- Dispatch Accounting

This section contains the following topics:

- [Section 2.4.1, "Network Related Validations"](#)

- [Section 2.4.2, "IBAN Check"](#)
- [Section 2.4.3, "Duplicate Check"](#)
- [Section 2.4.4, "Transaction Cutoff Time Validations"](#)
- [Section 2.4.5, "Sanction Check"](#)
- [Section 2.4.6, "Computation of Charge and Tax"](#)
- [Section 2.4.7, "Small FX Limit Check and Currency Conversion"](#)
- [Section 2.4.8, "External Credit Approval Check"](#)
- [Section 2.4.9, "Network Cutoff Time Check"](#)
- [Section 2.4.10, "Debit/Credit Accounting"](#)
- [Section 2.4.11, "SEPA Credit Transfers"](#)
- [Section 2.4.12, "Dispatch Processing"](#)
- [Section 2.4.13, "Dispatch file format"](#)
- [Section 2.4.14, "Future Dated Transactions"](#)
- [Section 2.4.14, "Future Dated Transactions"](#)

2.4.1 Network Related Validations

The system validates any debtor, creditor, bank, additional details specified for a payment transaction against the valid characters allowed for the network. If any field contains invalid SEPA character, then the transaction is moved to repair queue with error details.

2.4.1.1 Network Character Validation for Other Outgoing Clearing messages

Network Character Validation is done for the R-transactions initiated manually for the following payment types:

- Recall request
- Recall Response
- Return of Incoming payment

This validation is done only on fields input by the user except LOV and drop-down fields.

- The Allowed Character set specified in the Special Character maintenance for the network is used for this validation.
- Error message is displayed on failure of this validation, and the request would not be saved unless the user corrects the error(s).

2.4.2 IBAN Check

If 'IBAN Validation Required' flag is checked for the network, then IBAN verification for Debtor IBAN, Creditor IBAN and creditor BIC is done against the IBAN format maintained for the respective country.

Please refer to Payments Core User manual for more details on IBAN check.

2.4.3 Duplicate Check

The duplicate check for a transaction is done during transaction processing if Duplicate check is applicable for the Source. Payment fields marked for duplicate check in Source Maintenance are matched with all the payments booked within the duplicate period. Booking date of the payments is considered for evaluating duplicate period.

Duplicate period is considered based on the number of days maintained for the source. If the maintenance is not available, then the duplicate check is not done.

If there are any matching payments with the fields identical with the payment being processed, then the payment is moved to Business Override Queue for further investigation.

2.4.4 Transaction Cutoff Time Validations

Transaction cut off time validation is based on the Transaction Cut-off Time Maintenance (PMDCTOFF) screen. Transaction cutoff time check is done only for transaction with payment activation date is current date.

Transaction Cut-off time for the payment network and Transaction Type 'Outgoing' is fetched from the maintenance for the following combination:

- Source - Specific/ALL
- Service Model - Specific/ALL
- Customer - Specific/ALL

Cut off time is derived as follows:

SI.No	Network	Transaction Type	Source	CSM	Customer
1	Network ID	Outgoing	Specific	Specific	Specific
2	Network ID	Outgoing	ALL	Specific	Specific
3	Network ID	Outgoing	Specific	Specific	ALL
4	Network ID	Outgoing	ALL	Specific	ALL
5	Network ID	Outgoing	Specific	ALL	ALL
6	Network ID	Outgoing	ALL	ALL	ALL

If payment processing time is lesser than or equal to the Cut-off date time derived, then the payment is considered as 'Pre Cut-off' payment and proceeds with further processing.

If payment save date time or payment receipt date time exceeds the Cut-off date time derived then the payment is considered as 'Post Cut-off' payment and post cut off status is updated for the transaction.

If the flag 'Move forward to next working day' is checked then Activation date of the transactions which are post cut off is moved to next business day automatically.

User is allowed to force release the transaction with today's value date from post cut off Queue. Payments released from Post Cutoff queue would not undergo transaction cut-off time checks again.

2.4.5 Sanction Check

If sanction screening is required for the Network and the customer, request is sent to External Sanction System.

If the sanction check status of the transaction is 'Approved', then further processing continues. If the contract's sanction check response status is 'Override' or 'Rejected' or 'Timed Out', then transaction is logged in 'Sanction Check Exception Queue' and the processing of the transaction is stopped at this stage.

2.4.6 Computation of Charge and Tax

Charge and tax for ACH Payment transactions are calculated based on the Pricing Code linked to Network Currency Preferences (PMDNCPRF) screen.

For more details on pricing, please refer Pricing Use Manual.

2.4.7 Small FX Limit Check and Currency Conversion

For a cross currency payment transaction where debit currency and transfer currency are different, exchange rate maintained for the transaction branch in the core system is considered.

If small FX limit is defined in Network Currency Preferences, then the auto rate pick up happens only if the transfer amount is within the small FX limit. If Small FX limit is not maintained auto rate pick up is done for all cross currency payment transactions without any limit check.

For an outgoing transaction limit check is based on the small FX limit specified in Network Preferences for transaction type 'Outgoing'.

Exchange Rate Type is based on Network preferences maintained. Buy/Sell indicator is derived by the system based on the currency pair maintenance available.

If the transfer amount is above the small FX limit specified, system checks whether External Exchange Rate is applicable in Network Preferences.

If external system is available then system interfaces with external system for receiving the exchange rate.

Payment contract is moved to Exchange Rate Queue in the following cases with proper error code details and exchange rate status:

- Exchange Rate derivation based on core system maintenance fails
- Small FX limit is breached and no external exchange rate system maintenance is available

Payment contract is moved to External Exchange Rate queue in the following cases:

- Response from External Exchange Rate system is failure or timed out

It is possible to provide exchange rate manually from Queue screen so that transaction proceeds with further processing.

2.4.8 External Credit Approval Check

Payments send debit accounting entries pertaining to payment amount and charge/tax amounts to external DDA system for credit approval.

External Credit Approval is done for all the external accounts for which 'External Credit Approval Required' flag is enabled. ECA system for the credit check is derived based on the External Account maintenance.

If the ECA response status for a payment transaction is 'Approved', then further processing continues. If ECA validation fails i.e. the status is 'Override', 'Rejected', or 'Timed out', then the transaction is logged in ECA Exception queue.

2.4.9 Network Cutoff Time Check

The system checks the network cutoff time based on the cut off time maintained for the network. The system considers the application server time for cut off time check. Transactions which failed cut off time check is moved to Post Network Cutoff Queue.

2.4.10 Debit/Credit Accounting

Debit liquidation accounting entries have both payment entries and charge/tax entries. Accounting details are handed off to accounting system with debit/credit liquidation accounting code linked at Network Currency preferences.

2.4.11 SEPA Credit Transfers

SCT batch processing mode ('Batch Processing Option') is a value-added service of the STEP2 SCT Service in which files from sending Direct Participants contain batches of Payments Messages which are already sorted per the receiving Direct Participant.

The expected benefits from this variant of the standard bulk processing are better performances, higher processing capacity and lower transaction costs.

The SCT Batch Processing mode can be used for sending Payment Messages in favour of another Direct Participant or a Reachable BIC. The sending Direct Participant is responsible for grouping the Payment Messages that are for Reachable BICs per receiving Direct Participant.

The Batch Processing Option will always route the batches to the receiving Direct Participant indicated by the sender as Instructed Agent provided that:

- Receiver is a Direct Participant listed in the STEP2 SCT Routing Table
- Receiver is entitled to receive batches
- Both the sender and receiver have configured the Bilateral Relationship with each other.

2.4.12 Dispatch Processing

The linked Direct Participant has to be stored in dispatch details as Instructed agent if the creditor agent is an indirect BIC for each payment, Batch processing is applicable for each payment record for dispatch, if the Instructed agent is enabled for Batch processing.

- If Creditor Agent is a direct participant, then the same bank will be the Instructed agent and batch processing preference can be fetched for that bank.
- All payment records for which batch processing is enabled is processed separately while generating the dispatch file.
- Records with same instructed agent creates a batch per settlement date and message type.
- A new batch is created, if the number of messages exceed the maximum number allowed for a batch.
- A new file is created for the rest of the batches, if the number of batches for a single file is exceeding the maximum allowed number of batches.
- Messages with Instructed Agents for which Batch Processing is not applicable creates a separate dispatch file in bulk mode in the existing way.
- Batch level validations:
 - Batches can contain only a single type of message
 - Batches always have a unique identifier (Message ID)

- Each batch has the same Interbank Settlement Date and Instructed Agent for all the transactions included in the Batch since these parameters are at XML Group Header level
- Multiple batches with same Settlement Date can be present in a single file
- Within a file containing different types of messages, batches follow a specific order.

The following messages types are exchanged using the Batch Processing Option:

- pacs.008: Credit transfer message
- camt.056: Recall message
- pacs.004: Return message
- camt.029: Negative answer to a Recall

Batches must be arranged in the same order of message types.

2.4.13 Dispatch file format

Dispatch files in batch processing mode has to be generated with I extension with File name as below:

2.4.13.1 File Naming convention

- EEVVSSSB BBBB BBX...X.Z
- EE must be S2 (STEP2);
- VV is the format version 03;
- SSS is the three character service identifier, SCT in this case;
- BBBB BBBB is the BIC(8) of the Direct Participant
- X...X (optional) is up to 15 characters for use by the Direct Participant; and
- Z indicates the type of the file, where: I = ICF (SCT)
- The STEP2 central system generates files with X...X fields as follows and the same will be done in FLEXCUBE -
- YYMMDDHHMMSSNNN, where:

YYMMDDHHMMSS, which is the file creation date and time, and NNN, which is an incremental number starting from 000 that is reset to 000 every time DD (date) Changes

2.4.14 Future Dated Transactions

Future dated ACH transactions are processed by separate jobs. Processing of transactions will be completed till sanction check on booking date itself. During beginning of day, future dated transaction job picks up transactions with Activation date as current date. Transaction processing starts from initial validations again, on activation date.

Future dated transactions job should be run after rate refresh and this has to be operationally handled.

2.4.15 Branch Holiday Parameter

In addition to Currency and Network Holidays, Branch holidays is considered in determining the Value date and Activation date for SWIFT, ACH, and RTGS payments.

Processing Branch holidays is considered in the Dates resolution only if a particular parameter in Network Preferences for the 'Outgoing' or 'Incoming' transaction type is checked.

This new parameter is called 'Consider Branch Holidays in Dates resolution'.

This parameter is added to this maintenance under a new sub-section called "Value Dating Preferences".

2.5 ACH Outgoing Payment View

This section contains the following topics:

- [Section 2.2.1, "Invoking ACH Outgoing Payments Screen"](#)
- [Section 2.5.2, "Main Tab"](#)
- [Section 2.5.3, "Pricing Tab"](#)
- [Section 2.5.5, "Accounting Entries button"](#)

2.5.1 ACH Outgoing Payments View Screen

You can view the ACH outgoing transaction in this screen.

You can invoke "ACH Outgoing Payments" screen by typing 'PADOVIEW' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar..

The screenshot shows the 'View Detailed' window for an ACH Outgoing Payment. It features a search bar at the top with the text 'Enter Query'. Below this, there are two columns of input fields for transaction identification, including Transaction Branch Code, Host Code, Source Code, Network Code, On Us Transfer, Transaction Reference No, User Reference Number, Source Reference Number, File Reference Number, Consolidation Reference Number, Linked Transaction Reference, End to End ID, and Batch ID. The main area is divided into several sections: 'Debtor Details' (Debtor Account Number, IBAN, Currency, Name, Branch, Amount, Customer No, Service Model, Identifier, Name), 'Creditor Details' (SSI Label, Account Number, IBAN, Name, Bank Code), 'Dispatch Details' (Dispatch Status, Date, File Reference Number), 'Payment Details' (Booking Date, Instruction Date, Currency Indicator, Amount, Currency, Exchange Rate, Value Dates, FX Reference Number, Remarks), 'Transaction Status' (Transaction Status, Liquidation Status, Pre-Funded Payment, Sanction Seizure, Queue Code), and 'External System Status' (Sanction Check Status, Reference, Approval Status, Exchange Rate Status, Reference). A blue 'Additional Details' button is located between the Debtor and Dispatch sections. At the bottom, a navigation bar includes 'View Queue Action', 'UDF', 'MIS', 'View Repair Log', 'Accounting Entries', 'Maker Id', 'Checker Id', 'Authorization Status', and an 'Exit' button.

You can specify the following fields:

Transaction reference Number

Specify the transaction reference number. Alternatively, you can select the transaction reference number from the option list. The list displays all valid transaction reference numbers maintained in the system.

The system displays all the fields in the below mentioned tabs based on the transaction reference number selected.

2.5.2 Main Tab

You can view debtor/Creditor details in this screen. Click on the 'Main' tab to invoke this screen.

The screenshot shows the 'Main Tab' interface with the following sections and fields:

- Debtor Details:** Debtor Account Number, Debtor Account IBAN, Account Currency, Debtor Name, Account Branch, Debit Amount, Customer No, Customer Service Model, Company Identifier, Company Name.
- Payment Details:** Booking Date (YYYYMM-DD), Original Instruction Date (YYYYMM-DD), Instruction Date (YYYYMM-DD), Instructed Currency Indicator (Transfer Currency), Instructed Currency, Instructed Amount, Transfer Currency, Transfer Amount, Exchange Rate, Debit Value Date (YYYYMM-DD), Credit Value Date (YYYYMM-DD), FX Reference Number, Remarks.
- Creditor Details:** SSI Label.
- Dispatch Details:** Dispatch Status (dropdown), Dispatch Date, File Reference Number.
- Transaction Status:** Transaction Status (dropdown).
- External System Status:** Sanction Check Status (dropdown), Sanction Check Reference, External Credit Approval Status (dropdown), External Credit Approval Reference, External Exchange Rate Status (dropdown), External Rate Reference.

Navigation bar at the bottom includes: View Queue Action | UDF | MIS | View Repair Log | Accounting Entries. Fields: Maker Id, Checker Id, Authorization Status, Maker Date Stamp, Checker Date Stamp, and an Exit button.

2.5.3 Pricing Tab

You can view pricing details in this screen. Click on the 'Pricing' tab to invoke this screen.

The screenshot shows the 'Pricing Tab' interface with the following elements:

- Navigation:** Main | Pricing | Exceptions. A table navigation bar shows '1 Of 1' and a 'Go' button.
- Table:**

Pricing Component	Pricing Currency	Pricing Amount	Waiver	Debit Currency	Debit Amount	Cl
- Navigation bar at the bottom:** View Queue Action | UDF | MIS | View Repair Log | Accounting Entries. Fields: Maker Id, Checker Id, Authorization Status, Maker Date Stamp, Checker Date Stamp, and an Exit button.

2.5.4 Exceptions Tab

Click the Exceptions Tab to invoke this screen.

2.5.6 UDF button

Click on the 'UDF' button to invoke this screen.

The screenshot shows a window titled 'UDF' with a search bar labeled 'Enter Query' containing the text 'Transaction Reference Number *'. Below the search bar is a table with two columns: 'Field Label *' and 'Field Value'. The table is currently empty. At the bottom right of the window, there are 'Ok' and 'Exit' buttons.

You can specify user defined fields for each transaction.

Note

You can invoke 'UDF' screen by typing 'PMDTRUDF' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

2.5.7 MIS button

Click on the 'MIS' button to invoke this screen.

The screenshot shows a window titled 'MIS' with a search bar labeled 'Enter Query' containing the text 'Transaction Reference no *' and 'MIS Group'. Below the search bar are two columns of text input fields labeled 'Transaction MIS' and 'Composite MIS'. At the bottom right of the window, there are 'Ok' and 'Exit' buttons.

You can specify the MIS details in this sub-screen.

Note

You can invoke 'MIS' sub-screen by typing 'PMDTRMIS' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

2.5.8 View Queue Action Log

Click on the 'View Queue Action Log' button to invoke this screen.

Transaction Reference Number _____ Network Code _____

Transaction Reference Number	Action	Remarks	Queue Code	Authorization Status
------------------------------	--------	---------	------------	----------------------

Exit

You can View Queue Action Log details in this sub-screen.

2.5.9 View Repair Log

Click on the 'View Repair Log' button to invoke this screen.

Transaction Reference Number _____

Queue Reference No	Field Name	Old Value	Repaired Data	Error
--------------------	------------	-----------	---------------	-------

Exit

You can View Repair Log details in this sub-screen.

2.5.10 ACH Outgoing Payments View Summary

You can view the summary in “ACH Outgoing Payments View Summary” screen. You can invoke the ACH Outgoing Payments Summary screen by typing ‘PASOVIEW’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

ACH Outgoing Payments View Summary

Search Advanced Search Reset Clear All

Case Sensitive

Transaction Reference No User Reference Number Network Code
Debtor Account Number Source Code Transaction Status
Transfer Amount Transfer Currency Transaction Branch Code
Activation Date YYYYMMDD Booking Date YYYYMMDD Debit Liquidation Status
Credit Liquidation Status File Reference Number Source Reference Number

Records per page 15 1 Of 1 Go Lock Columns 0

Transaction Reference No	User Reference Number	Network Code	Debtor Account Number	Creditor Account Number	Source Code	Host Code	Transaction Status	Transfer Amount	T

Exit

You can search for the records using one or more of the following parameters:

- Transaction Reference No
- Debtor Account Number
- Transfer Amount
- Activation Date
- Credit Liquidation Status
- Queue Code
- Debtor Account IBAN
- Pre-Funded Payment
- SSI Label
- End to End ID
- User Reference Number
- Source Code
- Transfer Currency
- Booking Date
- File Reference Number
- Creditor Account IBAN
- Customer Service Model
- Creditor Account IBAN
- Consolidation Reference Number
- Linked Transaction Reference
- Linked Transaction Reference
- Network Code
- Transaction Status
- Transaction Branch Code
- Debit Liquidation Status

- Source Reference Number
- Dispatch Status
- Sanction Seizure
- Dispatch Reference Number
- Batch ID

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

2.5.11 ACH Outgoing Authorization

You can invoke 'ACH Outgoing Authorization' sub-screen by typing 'PADOTAUT' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

Specify the following fields:

Transaction Reference Number

Specify the Transaction Reference Number.

Maker ID

The system specifies the Maker ID.

Maker Date Stamp

The system specifies the Maker Date Stamp.

Field Name

The system specifies the Field Name.

Field Value

The system specifies the Field Value.

2.6 ACH Incoming Payments

2.6.1 Incoming File Upload

Background job are available for reading the incoming SCF file from the designated folder and to populate the data into staging table. File reference number is generated. Transaction details received in a single file can be identified by file reference number.

2.6.2 Branch & Host Resolution

Instructed Agent BIC in pacs.008 message is considered as transaction branch BIC. Transaction branch BIC is compared with branch codes available in Core maintenance for branches to ascertain Branch code and related Host code.

2.6.3 Network, Payment Type & Transaction Type Resolution

In File parameters Maintenance, you can specify for File type SCF and for a Host code which Network code is applicable. This Network code will be applicable for all transactions listed in the Incoming file. Payment type linked to the Network is considered as the transaction payment type.

2.6.4 Payment Value Date Resolution

Inter bank settlement date in pacs.008 message is considered as payment debit value date for incoming type of transaction.

2.6.5 Debit Account/Credit Account Resolution

Credit settlement account is the credit IBAN received in the message. This has to be a valid IBAN available in External account mapping. System derives the account number based on the IBAN from the same maintenance.

Debit Account is fetched from the accounting code maintained in Network currency preferences for the transaction type Incoming.

2.6.6 Receipt Accounting

For incoming payments file receipt accounting of the consolidated amount of pacs.008 and pacs.004 messages is supported. Receipt accounting code can be maintained in Network Currency preferences for Incoming transaction type.

Transaction account and offset account is maintained as part of accounting code itself. Event for accounting entries is 'RCLG'.

The resulting accounting entries are as following:

- Debit: CSM Nostro account
- Credit: Clearing GL

Accounting value date is settlement date a received in the file. No External Credit approval is performed for receipt accounting.

There is a provision for handing off accounting entry details to external accounting system.

2.6.7 Processing of Incoming Payments

Incoming payments are processed in PA module in the following steps:

- Initial Validations
- IBAN check for debtor account and debtor Bank BIC
- Duplicate Check
- Sanction Check
- Charge/Tax Computation
- Exchange Rate Pick up
- External Account Check
- Debit & Credit Liquidation

Debit currency is considered as transfer currency for incoming transactions

2.6.8 Incoming Payment Validations

System performs mandatory field checks & referential checks during transaction saving.

Mandatory Fields Check

Below fields are mandatory for booking ACH incoming payment:

- Host Code
- Transaction Branch
- Network Code
- Debtor IBAN
- Debtor Bank Code
- Creditor Account
- Transfer Currency
- Transfer Amount
- Value Date

2.6.9 Referential Check & Initial Validations

Following parameters are validated with the static maintenances available for existence of the values:

- Network code: Validated against the static maintenances (PMDNWMNT) available.
- Currency Codes: Validated against open and authorized currency codes (CYDCDEFE). In Network Currency preferences, a record should be available for the Network, transaction type 'Incoming' and transaction currency.
- Host Code: This field is checked against valid host codes available in Host Code maintenance (STDHSTCD)
- Transaction Branch Code: This has to be a valid branch in core maintenance.
- Credit Customer: This is validated to check whether customer is valid and existing. If Customer status is either closed, whereabouts not known, Deceased or frozen status then the transaction is rejected.
- Customer Account status: The customer account status verification is done based on the status available in External account maintenances.
- Debtor Bank Code: Counterparty Bank is validated based on local clearing bank code maintenance (PMDBKMNT).
- Bank Network Identifier maintained for the network maintenance (PMDNWMNT) is referred by system for this. Based on the option maintained, Counterparty Bank Code is validated against SWIFT address or Local bank code available in PMDBKMNT.

Whether the network is allowed for the bank also is validated from the same maintenance.

If any of the above validation fails, transaction is rejected with proper error code. This transaction will be available in Repair queue with error details.

Network Limit Validations

Amount of the transaction should be within the minimum and maximum defined for the Network, Transaction type 'Incoming' & transaction currency combination as maintained in Network Currency Preferences (PMDNCPRF).

In case the transaction amount breaches the transaction limit specified for minimum or maximum amount, an override will be logged and this transaction will be moved to the Repair queue

IBAN Check

If 'IBAN validation required' flag is checked for the network, then IBAN verification for Debtor IBAN & debtor BIC is done against the IBAN format maintained for the respective country.

Duplicate Check

Identification of duplicate transactions done for a period as maintained in Source Maintenance.

The payment is moved to Business Override Queue for further investigation In case of a duplicate transaction.

Sanction Check

If sanction screening is required for the Network (for incoming transaction type) and the customer, request is sent to External sanction system.

System verifies whether sanction check system is applicable in Network Preferences Maintenance, for 'Incoming' transaction type and initiates sanction check validation.

Charges/tax computation

For more information refer 'Computation of Charge and Tax' section in this user manual.

Exchange Rate Pick up

Exchange Rate pick up is based on the FX limits maintained in Network preferences for transaction type 'Incoming'.

External Account Check

- External account validation is done for the credit account in External Account Check (EAC).
- If external account check fails, transaction is available in ECA Queue with error details received.

Debit and Credit Liquidation

For each transaction being processed, debit and credit liquidation are done to the respective settlement accounts. Accounting details are handed off to the accounting system for posting the entries.

2.6.10 Notifications

Following notifications are generated for incoming payments.

Notification Code	Details	Text
PM_ACH_CR_1 - Credit Notification for incoming payment -On Credit Liquidation	Credit Account	Account <Credit Account>is credited for <Credit Currency >,<Credit Amount> on <Credit Liquidation Date> for Payment Reference Number<Transaction Reference Number>. Charge or Tax component amd amount deducted details are <Charge Currency> <Charge Amount>
	Credit Account currency	
	Credit Amount	
	Credit liquidation date	
	Transaction Reference number	
	Charge/Tax debit amount	
	Charge/Tax debit currency	

2.7 ACH Incoming Payment View

This section contains the following topics:

- [Section 2.7.1, "Invoking ACH Incoming Payments Screen"](#)
- [Section 2.7.2, "Main Tab"](#)
- [Section 2.7.3, "Pricing Tab"](#)
- [Section 2.7.4, "Accounting Details Tab"](#)

2.7.1 Invoking ACH Incoming Payments Screen

You can view the ACH Incoming transaction in this screen.

You can invoke “ACH Incoming Payments” screen by typing ‘PADIVIEW’ in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar..

You can specify the following fields:

Transaction Reference Number

Specify the transaction reference number. Alternatively, you can select the transaction reference number from the option list. The list displays all valid transaction reference numbers maintained in the system.

2.7.2 Main Tab

You can view debtor/Creditor details in this screen. Click on the 'Main' tab to invoke this screen.

The screenshot displays the 'Main Tab' interface with the following sections:

- Navigation:** Main (selected), Pricing, Accounting Details, Exceptions
- Creditor Details:**
 - Creditor Account Number
 - Account Branch
 - Creditor Account IBAN
 - Creditor Name
 - Account Currency
 - Credit Amount
 - Customer No
 - Customer Service Model
- Payment Details:**
 - Booking Date (YYYY-MM-DD)
 - Instruction Date
 - Activation Date (YYYY-MM-DD)
 - Transfer Currency
 - Transfer Amount
 - Exchange Rate
 - Remarks
- Debtor Details:**
 - Debtor Account Number
 - Debtor Account IBAN
 - Debtor Name
 - Debtor Bank BIC
- Transaction Status:**
 - Transaction Status (dropdown)
 - Debit Liquidation Status (dropdown)
 - Credit Liquidation Status (dropdown)
- Additional Details:** (button)
- Pending Queue Details:**
 - Queue Code
- External System Status:**
 - Sanction Check Status (dropdown)
 - Sanction Check Reference
 - External Account Check Status (dropdown)
 - External Account Check Reference
 - External Exchange Rate Status (dropdown)
 - External Rate Reference
- View Queue Action:**
 - Maker Id
 - Checker ID
 - Authorization Status
 - Exit (button)

2.7.3 Pricing Tab

You can view pricing details in this screen. Click on the 'Pricing' tab to invoke this screen.

The screenshot displays the 'Pricing Tab' interface with the following sections:

- Navigation:** Main, Pricing (selected), Accounting Details, Exceptions
- Table:**

Pricing Component	Pricing Currency	Pricing Amount	Waiver	Debtor Account Currency	Debit Amount	Deferr
- View Queue Action:**
 - Maker Id
 - Checker ID
 - Authorization Status
 - Date Time
 - Date Time
 - Exit (button)

2.7.4 Accounting Details Tab

Click on the 'Accounting Details' tab to invoke this screen.

The screenshot shows a software interface with a top navigation bar containing tabs for 'Main', 'Pricing', 'Accounting Details' (highlighted in red), and 'Exceptions'. Below the navigation bar is a table with the following columns: 'Transaction Reference Number', 'Event Code', 'Transaction Date', 'Account', 'Account Branch', and 'Transac'. The table is currently empty. Below the table is a 'View Queue Action' section with a light blue background, containing labels for 'Maker Id', 'Checker ID', 'Authorization Status', 'Date Time', and another 'Date Time'. An 'Exit' button is located in the bottom right corner of this section.

You can view the consolidated accounting entries of the transaction.

2.7.5 UDF button

Click on the 'UDF' button to invoke this screen.

The screenshot shows a window titled 'UDF'. It has a dark header bar with standard window controls. Below the header is an 'Enter Query' section with a text input field labeled 'Transaction Reference Number *'. Underneath is a 'Fields' section containing a table with two columns: 'Field Label *' and 'Field Value'. The table is currently empty. At the bottom right of the window are 'Ok' and 'Exit' buttons.

You can specify user defined fields for each transaction.

Note

You can invoke 'UDF' screen by typing 'PMDTRUDF' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

2.7.6 MIS button

Click on the 'MIS' button to invoke this screen.

The screenshot shows a web application window titled 'MIS'. At the top, there is a header 'Enter Query'. Below the header, there are two input fields: 'Transaction Reference no *' and 'MIS Group'. The 'MIS Group' field has a 'Default' button next to it. Below the input fields, there are two columns: 'Transaction MIS' and 'Composite MIS'. Each column contains a table with five rows. At the bottom right of the window, there are 'Ok' and 'Exit' buttons.

You can specify the MIS details in this sub-screen.

Note

You can invoke 'MIS' sub-screen by typing 'PMDTRMIS' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

2.7.7 ACH Incoming Authorization

You can invoke 'ACH Incoming Authorization' sub-screen by typing 'PADITAUT' in the field at the top right corner of the Application tool bar and clicking on the adjoining arrow button. Click new button on the Application toolbar.

ACH Incoming Authorization

New Enter Query

Transaction Reference Number

Maker ID

Maker Date Stamp

Authorize

Field Name	Field Value

Exit

Specify the following fields:

Transaction Reference Number

Specify the Transaction Reference Number.

Maker ID

The system specifies the Maker ID.

Maker Date Stamp

The system specifies the Maker Date Stamp.

Field Name

The system specifies the Field Name.

Field Value

The system specifies the Field Value.

2.8 ACH Incoming Payments Input

It is now possible to manually create an ACH Incoming Payment by providing the details in the Input screen.

You can invoke the “ACH Incoming Payments Input” screen by typing ‘PADITONL’ in the field at the top right corner of the application tool bar and clicking on the adjoining arrow button.

2.8.1 Main Tab

You can view Debtor/Creditor/Payment details in this screen. Click on the ‘Main’ tab to invoke this screen.

You can specify the following fields:

Transaction Branch Code

This field is populated as user’s logged in branch

Host Code

This field is defaulted as logged in Host.

Network Code

If only one Network is maintained for with payment type as ACH for the host code, the same will be defaulted in this field.

In case multiple networks are found for the same combination, all applicable networks will be listed for the field.

Source Code

For manually input transactions, source code is defaulted as MANL.

Internal Transfer

Check this box to indicate that creditor account is internal to Bank and dispatch to Network is not applicable.

Creditor Account Number

All open and authorized accounts maintained in External Account maintenance are listed. You can select the creditor account. The list of values search page displays the Account IBAN along with Customer No & Customer Name.

Creditor Details

Creditor Account IBAN

Based on the creditor account number, IBAN appears by default in the IBAN field, if it is available.

Account Currency & Creditor Name

These fields are populated based on creditor account chosen.

Credit Amount

This field is populated as the transfer amount converted in credit account currency. The Exchange rate pick up is based on network preferences.

Debtor Details

Debtor Account Number & Account IBAN

Either debtor account number or account IBAN is mandatory. If the network is 'IBAN Check' enabled, it will be mandatory to specify debtor account IBAN

Debtor Name

Specify Debtor Name.

Debtor Bank Code

All open and authorized Bank Codes/BIC codes available in local bank directory are listed in this field. The listing is based on the 'Bank Network Identifier' maintained for Network maintenance (PMDNWMNT).

You can choose the appropriate bank code. This is a mandatory field.

Booking Date & Value date

Both booking date & Instruction date are defaulted as current date. Instruction date can be modified as a back date or forward date.

Transfer Currency

If the network allows only single currency as per Network currency preferences screen (PMDNCMNT), this currency will be populated as transfer currency. If multiple currencies are allowed, you can select from the list of allowed currencies.

Transfer Amount

Specifies the amount received in the incoming payment. This is a mandatory field.

Exchange Rate

If transfer currency & creditor account currency are different, then exchange rate can be provided by the user. The system retain the input value and validates the same against override and stop variances maintained in Network Preferences screen.

If exchange rate is not a user input, the system picks up the exchange rate during 'Enrich' provided the transfer amount is less than the small FX limit maintained. If the exchange rate is not available, system displays an error message.

If transfer amount is more than the small FX limit and if external exchange rate is applicable, then exchange rate pick up will happen during transaction processing.

2.8.2 Pricing Tab

You can view pricing details in this screen. Click on the 'Pricing' tab to invoke this screen.

The screenshot shows a web application window titled "ACH Incoming Payments". At the top, there are buttons for "New" and "Enter Query". Below this, there are several input fields for transaction details:

- Transaction Branch Code *
- Host Code *
- Source Code *
- Network Code *
- Transaction Reference Number *
- File Reference Number *
- Sender Transaction ID
- Incoming Message ID
- Sender End to End ID

At the bottom left, there are tabs for "Main" and "Pricing", with "Pricing" being the active tab. Below the tabs is a table with the following columns:

<input type="checkbox"/>	Component Name	Pricing Currency	Pricing Amount	Waived	Debit Currency	Debit Amount

At the bottom of the window, there are fields for "Maker ID", "Checker ID", "Authorization Status", "Maker Date Stamp", and "Checker Date Stamp". An "Exit" button is located in the bottom right corner.

2.8.3 Viewing Incoming Payments Summary

You can invoke the 'Incoming Payments Summary' screen by typing 'PASITONL' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

ACH Incoming Payments Summary

You can click 'Search' button to view all the pending functions. However, you can to filter your search based on any of the following criteria:

- Transaction Reference Number
- Creditor Account Number
- Account Branch
- Linked Transaction Reference
- File Reference Number
- Debtor Account Number
- Customer Number
- Source Reference Number
- Network Code
- Authorization Status
- Customer Service Model

When you click 'Search' button the records matching the specified search criteria are displayed.

2.8.4 ACH Incoming Payments View Summary

You can invoke the 'Incoming Payments Summary' screen by typing 'PASIVIEW' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows the 'Incoming Payments View Summary' application window. The window title is 'Incoming Payments View Summary'. It features a search bar with 'Search', 'Advanced Search', 'Reset', and 'Clear All' buttons. Below the search bar, there is a 'Case Sensitive' checkbox. The main area contains various search filters: Transaction Reference Number, Source Code, Transfer Currency, Activation Date (YYYYMM-DD), Credit Liquidation Status, Network Code, Transaction Status (dropdown), Transaction Branch Code, Booking Date (YYYYMM-DD), Sender End to End ID, Debtor Account Number, Creditor Account Number, Transfer Amount, Authorization Status (dropdown), Debit Liquidation Status (dropdown), and Queue Code (dropdown). At the bottom, there is a table with columns: Transaction Reference Number, Network Code, Debtor Account Number, Creditor Account Number, Source Code, Host Code, Transaction Status, Transfer Amount, Transfer Currency, and Transaction Reference Number. The table is currently empty. The bottom right corner has an 'Exit' button.

You can click 'Search' button to view all the pending functions. However, you can filter your search based on any of the following criteria:

- Transaction Reference Number
- Source Code
- Transfer Currency
- Activation Date
- Credit Liquidation Status
- File Reference Number
- Network Code
- Transaction Status
- Transaction Branch Code
- Booking Date
- Sender End to End ID
- Linked Transaction Reference
- Creditor Account Number
- Transfer Amount
- Authorization Status
- Debit Liquidation Status
- Queue Code
- Source Reference Number

When you click 'Search' button the records matching the specified search criteria are displayed.

2.8.5 Future Dated Incoming Payment

- Local Holiday check will be done for the future date and in case of a holiday incoming payment value date will be moved to next working day. This will be applicable for uploaded transactions only. For user input transactions, system will throw error.
- Future dated ACH incoming transactions will be processed by separate jobs.
- Processing of transactions would be completed till sanction check on booking date itself and will be stored in future dated transaction tables.
- During BOD, future dated transaction job picks up transactions with value date as current date and completes steps for processing from initial validations.

Note

Future dated transactions job should be run after rate refresh. This must be handled operationally.

2.9 Processing R-transactions

When R- transactions are received, system tries to match the transaction with the original payment sent irrespective of the original transaction status. Transactions pending in exception queues / future value queues will also be considered for matching.

If the original transaction fetched is not found or not in the expected status, system will move the R- message to an exception queue with appropriate error message.

You can verify the details of original transaction, initiate appropriate steps for moving the transaction to the required status and then re-initiate the processing of R-message.

More information on R- Messages Queue is available in the Queues User Manual.

2.9.1 Return of Incoming Payment

You can invoke the "Return of Incoming Payment" screen by typing 'PADINRTN' in the field at the top right corner of the application tool bar and clicking on the adjoining arrow button. You will be allowed to perform return operations only if the transaction processing status is Completed for incoming transactions.

Return Reference Number

The system displays the Return Reference Number by default.

Return Date

The system displays the Return Date as the current date by default.

Original Transaction Reference

You can select the Original Transaction reference of the incoming payment for which return is to be initiated. Only incoming transactions with payment type as 'ACH' and Transaction status 'Processed' are listed for this field.

On selecting the Original Transaction Reference ,the information related to the transaction is defaulted in the below listed fields:

- Network Code
- Original Transaction Type
- Original Payment Type
- End to End ID

Original Transaction Details

- Transfer Currency
- Transfer Amount
- Debtor IBAN
- Creditor IBAN
- Creditor Name
- On Us Transfer
- Debtor Bank BIC
- File Reference Number

Return Details

Return Reason Code

Specify the Return Reason Code. Alternatively, you can select the Return Reason from the option list. The list displays all valid Return Reasons maintained in the system.

Note

Only the reject codes applicable for the payment network for the operation 'Payment Return' are listed.

Return Reason

The system displays the Return Reason based on the selected Reject Code.

Originator Name

Specify the name of the Originator.

Originator Bank

Specify the Originator Bank. Alternatively, you can select the Originator Bank from the option list. The list displays all valid Originator Banks maintained in the system.

Note

You must either specify the Originator Name or the Originator Bank.

Network Reject Details

These fields are applicable while querying for a particular Return record which is rejected by the CSM

Reject Reference

The system displays the Reject Reference details.

Reject Received Date

The system displays the date on which the network reject was received.

Reject Code

The system displays the network reject code.

Reject Reason

The system displays the reason for Network Reject.

2.9.1.1 ACH Return Of Incoming Payment Summary

You can invoke the 'ACH Return Of Incoming Payment Summary' screen by typing 'PASINRTN' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

You can click 'Search' button to view all the pending functions. However, you can to filter your search based on any of the following criteria:

- Return Reference No
- Original Transaction Reference
- Debtor IBAN
- Creditor IBAN
- Return Reason Code

When you click 'Search' button the records matching the specified search criteria are displayed.

2.9.2 ACH Return Of Outgoing Payment

You can invoke the "Return of Outgoing Payment" screen by typing 'PADOTRTN' in the field at the top right corner of the application tool bar and clicking on the adjoining arrow button.

Return Reference Number

The system displays the Return Reference Number by default.

Return Date

The system displays the Return Date as the current date by default.

Original Transaction Reference

You can select the Original Transaction reference of the incoming payment for which return is to be initiated. Only incoming transactions with payment type as 'ACH' and Transaction status 'Processed' are listed for this field.

On selecting the Original Transaction Reference ,the information related to the transaction is defaulted in the below listed fields:

- Network Code
- Original Transaction Type
- Original Payment Type
- End to End ID
- File Reference Number
- Message Identification
- Return Identification

Original Transaction Details

- Transfer Currency
- Transfer Amount
- Debtor IBAN
- Creditor IBAN
- Creditor Name
- On Us Transfer
- Debtor Bank BIC
- File Reference Number
- On Us Transfer

Return Details

Return Reason Code

Specify the Return Reason Code. Alternatively, you can select the Return Reason from the option list. The list displays all valid Return Reasons maintained in the system.

Note

Only the reject codes applicable for the payment network for the operation 'Payment Return' are listed.

Return Reason

The system displays the Return Reason based on the selected Reject Code.

Originator Name

Specify the name of the Originator.

Originator Bank

Specify the Originator Bank. Alternatively, you can select the Originator Bank from the option list. The list displays all valid Originator Banks maintained in the system.

Note

You must either specify the Originator Name or the Originator Bank.

2.9.2.1 ACH Return Of Outgoing Payment Summary

You can invoke the 'ACH Return Of Outgoing Payment Summary' screen by typing 'PASOTRTN' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Return Reference	Original Transaction Reference	Authorization Status	Network Code	Return Date
------------------	--------------------------------	----------------------	--------------	-------------

You can click 'Search' button to view all the pending functions. However, you can filter your search based on any of the following criteria:

- Return Reference
- Original Transaction Reference
- Authorization Status

When you click 'Search' button the records matching the specified search criteria are displayed.

2.9.2.2 Return of Incoming Transactions Pending in Queues

- Return operation is provided in Repair queue which is applicable only for incoming transactions which are pending due to exceptions.
 - Incoming ACH payments when cancelled from any exception queue, is moved to Repair Queue. Return of the transaction can be initiated from Repair Queue.
- If payments are returned from the Repair Queue, Incoming payment accounting entries is passed with credit account as Payment Return GL maintained in Payment Currency preferences. Subsequently, payment return is processed and reversal entries are passed.

2.9.2.3 **Processing Auto Returns**

- Exceptions encountered during incoming transaction processing are checked with auto reject exception codes that are applicable for the network.
- If exception is to be treated as a auto reject of the incoming transaction, return is processed using Payment Return GL. Both incoming transaction accounting and reverse accounting are posted.

2.9.3 **Payments Recall**

A recall happens when an Originator Bank requests to cancel a SEPA Credit Transfer. The recall procedure must be initiated by the Originator Bank within the number of days maintained as Recall days in Network Preferences after the execution date. A recall procedure is initiated for the following reasons:

- Customer Request
- Duplicate payment
- Technical problems
- Fraudulent Credit Transfers

Note

Only outgoing payment transaction in 'Processed' and 'Future Valued' status will be allowed to be selected for recall processing.

2.9.3.1 **Recall Processing**

- If the original credit transfer message is sent in the regular bulk processing mode in STEP2 SCT Service, and the camt.056 is sent in the Batch Processing Option, the camt.056 is accepted and forwarded as Recall since the Original Group Header Information block in camt.056 messages is at transaction level and is not available in the Batch Processing Option.
- If the original credit transfer message is sent in the Batch Processing Option in STEP2 SCT Service, and the camt.056 is sent in the regular bulk processing mode, the camt.056 is rejected and the original batch is settled.

The system validates whether the original transaction is sent in Batch mode during Recall saving. The error message "Original transaction sent in Batch mode. Recall cannot be processed in bulk mode", appears if the preference has changed subsequently to Bulk mode for the Assignee bank.

2.9.3.2 **Outgoing Recall Input Screen**

You can access the Outgoing Recall Input Screen by typing PADOTRCL in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

Recall Reference Number

System defaults the recall reference number.

Recall Date

Specifies the date on which the recall was initiated. This date is defaulted as recall booking date.

Customer Initiated

Specify if the customer initiated the recall.

Original Payment Reference

Select the Original Payment Reference. All outgoing payments with payment type as 'ACH' and transaction status as 'Processed' or 'Future Valued' are listed for this field.

On selecting the Original Transaction Reference, the information related to the transaction is defaulted in the below listed fields:

- Network Code
- Original Transaction Type
- Original Payment Type
- End to End ID

Original Transaction Details

- Transfer Currency
- Transfer Amount
- Debtor IBAN
- Debtor Name
- Creditor IBAN
- Creditor Bank BIC
- File Reference Number
- On Us Transfer

Recall Reason

While initiating a Recall request, you can specify the reason for the recall. All valid reject codes applicable for the Network for the operation 'Payment Recall ' are listed for this field.

Reason Description

Based on the Reason code chosen ,reason description is defaulted.

Additional Recall Information

If the reason code entered is 'FRAD' then you can provide additional details in this field.

Originator Name

Specifies the name of the Originator.

Originator Bank

Specifies the name of the Originator Bank.

Note

Either Originator name or Originator Bank code can be captured as part of recall request

Response Details

Response details are populated if a positive response is received from Beneficiary bank.

Response Reference

Specifies the reference of the response.

Response Date

Specifies the date on which the response was created.

Reason Code

Specifies the reason code.

Reason Details

Specifies the reason for recall.

Compensation Amount

Specifies the compensation amount.

Network Reject Details

Network reject details are populated if the recall request sent is rejected by the CSM.

Reject Reference

Specifies the reference for rejection.

Reject Received Date

Specifies the date on which the reject was received.

Reject Code

Specifies the reject code.

Reject Reason

Specifies the reason for rejection.

2.9.3.3 Viewing Recall Request Summary

You can invoke the 'Recall Request Summary' screen by typing 'PASOTRCL' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows a web application window titled "Recall Request Summary". At the top, there are search options: "Search", "Advanced Search", "Reset", and "Clear All". Below this, a "Case Sensitive" checkbox is checked. There are four search input fields: "Recall Reference Number", "Recall Date", "Original Reference", and "Debtor IBAN". Below the search fields is a toolbar with "Records per page" set to 15, navigation arrows, "1 Of 1", a "Go" button, and "Lock Columns" set to 0. The main area is a table with the following columns: Recall Reference Number, Original Reference, Recall Date, Debtor IBAN, Host Code, Network Code, Recall Reason, and Transfer Currency. The table is currently empty. At the bottom right, there is an "Exit" button.

You can click 'Search' button to view all the pending functions. However, you can filter your search based on any of the following criteria:

- Recall Reference Number
- Original Reference
- Recall Date
- Debtor IBAN

When you click 'Search' button the records matching the specified search criteria are displayed.

2.9.3.4 Outgoing Recall Processing

- If you process the recall request before the dispatch of the original transaction message, it is considered as a cancellation of the original payment.
- Original transaction status is also marked as 'Cancelled' and payment liquidation entries are reversed. Entries are reversed with negative values.
- If the recall is after the message dispatch, system verifies whether Recall is initiated within the recall days specified in payment preferences. If it exceeds the recall days specified, system displays an override.

- Original transaction is marked as 'Recall Requested' and recall record is inserted in message table. camt.056 message is generated for a recall request during dispatch.
- Recall reference, recall date and recall reason is available for original transaction.
- Recall request does not have any accounting impact.

2.9.3.5 ACH Incoming Recall Response

You can access the ACH Incoming Recall Response Screen by typing PADRCRES in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

Recall Reference Number

System defaults the recall reference number.

Recall Date

Specifies the date on which the recall was initiated. This date is defaulted as recall booking date.

Customer Initiated

Specify if the customer initiated the recall.

Original Payment Reference

Select the Original Payment Reference. All outgoing payments with payment type as 'ACH' and transaction status as 'Processed' or 'Future Valued' are listed for this field.

On selecting the Original Transaction Reference, the information related to the transaction is defaulted in the below listed fields:

- Recall Response Date
- Branch Code
- Host Code
- Network Code
- Original Transaction Type

- Original Payment Type
- End to End ID
- File Reference Number
- Message Identification
- Return Identification
- Cancellation Identification

Original Transaction Details

- Transfer Currency
- Transfer Amount
- Debtor IBAN
- Debtor Name
- Creditor IBAN
- Creditor Bank BIC
- File Reference Number
- On Us Transfer

Recall Response Details

Recall Response

Select to accept or decline the response.

Response Reason

While initiating a Recall request, you can specify the reason for the recall. All valid reject codes applicable for the Network for the operation 'Payment Recall ' are listed for this field.

Reason Description

Based on the Reason code chosen reason description is defaulted.

Additional Recall Information 1-2

If the reason code entered is 'FRAD' then you can provide additional details in the fields provided.

Originator Name

Specifies the name of the Originator.

Originator Bank

Specifies the name of the Originator Bank.

Note

Either Originator name or Originator Bank code can be captured as part of recall request

Recall Request Details

Recall Reference

Specify the Recall Reference details.

Recall Date

Specify the Recall Date.

Originator Name

Specifies the name of the Originator.

Originator Bank

Specifies the name of the Originator Bank.

Response Details

Response details are populated if a positive response is received from Beneficiary bank.

Response Reference

Specifies the reference of the response.

Response Date

Specifies the date on which the response was created.

Recall Reason Code

Specifies the reason code.

Recall Reason

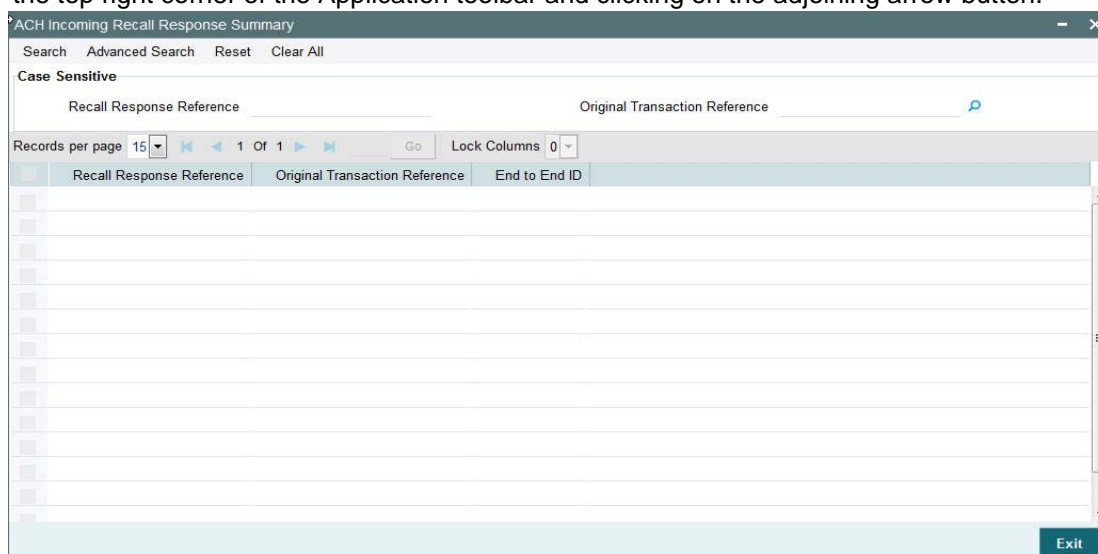

Specifies the reason for recall.

Additional Information

Specify Additional Information.

2.9.3.6 ACH Incoming Recall Response Summary

You can view the summary in “ACH Incoming Recall Response Summary” screen. You can invoke the ACH Outgoing Payments Summary screen by typing ‘PASRCRES’ in the field at the top right corner of the Application toolbar and clicking on the adjoining arrow button.

You can search for the records using one or more of the following parameters:

- Recall Response Reference

- Original Transaction Reference

Once you have specified the search parameters, click 'Search' button. The system displays the records that match the search criteria.

2.9.3.7 Negative Response for Recall Request

- On receiving a negative response camt.029 for a recall request from beneficiary bank, the system matches the same with the original transaction.
- Parent transaction is matched using the Original Transaction ID field with Transaction reference of outgoing payments in 'Recall Requested' status.
- On getting the parent transaction, further matching is done based on the following fields:
 - Transaction currency
 - Transaction Amount
 - Original debtor IBAN
 - Original Creditor IBAN
 - Original Creditor BIC
- The original transaction is marked back to 'Completed' status. Further operations are possible for this transaction.
- Response details are available as part of original transaction exception details in the view screen.
- There is no accounting impact.

2.9.3.8 Positive Response for Recall Request

If pacs.004 is received with reject reason 'FOCR' – Following Cancellation Request, as response of a recall request, then it is matched with original outgoing transactions with 'Recall Requested' status.

On getting the parent transaction, further matching is done for the following fields:

- Transaction Currency
- Transaction Amount
- Original Debtor IBAN
- Original Creditor IBAN
- Original Creditor BIC

Original transaction is marked as Returned. Return of the outgoing payment transaction is processed.

ECA and accounting related to incoming return is done.

No further action is allowed for a Recall Accepted transaction. Acceptance details are available for viewing.

- Return accounting will be original settlement amount and charges will be debited separately. Customer debit account will be the charge recovery account and charge amount will be the amount mentioned in incoming message. Reversal details will be sent to DDA system for external account check along with charge details. Accounting entries will be handed off to accounting system.
- Accounting code and derived based on the price code linked for third party charges in payment currency preferences for transaction type 'Outgoing'.

2.9.3.9 Incoming Recall Upload

- When an incoming camt.056 is received from CSM, matching of the details with original incoming transaction is done.
- Original transaction ID is mapped with Relate Reference field of incoming transactions which are processed in 'Processed' status.
- On successful matching with a parent transaction, further matching will be done with the following fields:
 - Transaction Currency
 - Transaction Amount
 - Original debtor IBAN
 - Original Creditor IBAN
 - Original Creditor BIC
- Incoming recall request is uploaded on successful matching and will be available in Incoming Recall Screen. You can manually accept or refuse the recall request from this screen.

Recall days validation is done for incoming recall message camt.056 received for payments sent.

If the validation is failed, the R-message will be logged in the R-message queue with the exception details.

User will be able to process camt.029 negative response from the queue screen by providing appropriate reject code.

2.9.3.10 Recall Response Input Screen

You can access the Recall Response Input Screen by typing PADITRCL in the field in the top right corner of the application tool bar and clicking on the adjoining arrow button.

Recall requests received by the Beneficiary Bank are available in this screen. You can query the records and provide positive/negative response to the Originating Bank.

You can query the available records by providing the Incoming Recall reference number.

The following details is defaulted:

- Incoming Recall Date
- Branch Code
- Host Code
- Network Code
- Original Payment Reference
- Original Transaction Details
- Transfer Currency
- Transfer Amount
- Debtor IBAN
- Creditor IBAN
- Creditor Name
- Bank BIC
- File Reference Number
- On Us Transfer

You can unlock the record and provide the recall response details:

Recall Response

You can either accept or reject the recall request received.

Reject Reason

The applicable reject code for the action can be selected

Reason Description

Reason description is populated based on the Reject reason chosen.

Charge Amount

If the recall request is accepted you can mention the charge amount applicable. This amount is reduced from the payment amount while returning the funds.

On clicking Process Charge button, the system defined charge is defaulted. The charge is populated based on the Recall Acceptance Price code maintenance for the transaction type 'Incoming' in Network Currency Preferences. You can override the defaulted charge.

2.9.3.11 ACH Recall Response Summary

You can invoke the ACH Recall Response Summary screen by typing 'PASITRCL' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

Original Transaction Type

The system displays the Original Transaction Type when you click on **New**.

Recall Reference Number

System defaults the recall reference number.

Recall Date

Specifies the date on which the recall was initiated. This date is defaulted as recall booking date.

Customer Initiated

Specify if the customer initiated the recall.

Original Payment Reference

Select the Original Payment Reference. All outgoing payments with payment type as 'ACH' and transaction status as 'Processed' or 'Future Valued' are listed for this field.

On selecting the Original Transaction Reference, the information related to the transaction is defaulted in the below listed fields:

- Network Code
- Original Transaction Type
- Original Payment Type
- End to End ID

Original Transaction Details

- Transfer Currency
- Transfer Amount
- Debtor IBAN
- Debtor Name
- Creditor IBAN
- Creditor Bank BIC
- File Reference Number
- On Us Transfer

Recall Reason

While initiating a Recall request, you can specify the reason for the recall. All valid reject codes applicable for the Network for the operation 'Payment Recall ' are listed for this field.

Reason Description

Based on the Reason code chosen ,reason description is defaulted.

Additional Recall Information

If the reason code entered is 'FRAD' then you can provide additional details in this field.

Originator Name

Specifies the name of the Originator.

Originator Bank

Specifies the name of the Originator Bank.

Note

Either Originator name or Originator Bank code can be captured as part of recall request

2.9.4.2 ACH Incoming Recall Request Summary

You can invoke the 'Incoming Payments Summary' screen by typing 'PASINRCL' in the field at the top right corner of the application toolbar and clicking the adjoining arrow button. Click new button on the Application toolbar.

The screenshot shows a web application window titled "ACH Incoming Recall Request Summary". At the top, there is a search toolbar with buttons for "Search", "Advanced Search", "Reset", and "Clear All". Below this is a "Case Sensitive" checkbox. The main area contains four search criteria: "Recall Reference Number", "Original Transaction Reference", "File Reference Number", and "Authorization Status", each with a text input field and a magnifying glass icon. Below the search fields is a table with the same four columns. The table is currently empty. At the bottom right of the window, there is an "Exit" button.

You can click 'Search' button to view all the pending functions. However, you can to filter your search based on any of the following criteria:

- Recall Reference Number
- Original Transaction Reference
- File Reference Number
- Authorization Status

When you click 'Search' button the records matching the specified search criteria are displayed.

2.9.4.3 Incoming Recall Processing

- While processing a Recall response, it will be validated whether response is being sent within the response days specified in Network preferences. If it exceeds the recall days specified, system displays an override.
- Acceptance of recall triggers return of original incoming and related details gets inserted in message table for sending return message in pacs.004 format.
- Refusal of recall sends out camt.029

2.9.4.4 Outgoing Positive Response to Recall

- On processing outgoing positive response to recall, system validates whether reject reason input is FOCR when recall response type is 'Accept'.
- On tabbing out of the reason code field, charge is populated based on the Recall Acceptance Price code maintenance for the transaction type 'Incoming' in Payment Currency Preferences.
- You can modify the populated charge amount.

- Return accounting is processed with original settlement amount. Charges are processed separately. GL mentioned in price accounting code is the charge recovery account and charge amount is the amount mentioned in incoming message.
- Reversal details is sent to DDA system for external credit approval. Any failure moves the transaction to ECA queue.
- Accounting entries are handed off to accounting system.

2.9.5 Handling Network Rejects

Credit Validation File (CVF) is received from CSM for every ICF file to the sending Direct Participant indicating the success or failure of the validation process. A pre-settlement Reject message from CSM can be received in the form of pacs.002S2 report for any message originated by a bank:

- Outgoing Payments – Pacs.008
- Return of Incoming Payments – Pacs.004
- Positive Response to Payment Cancellation Requests – Pacs.004
- Cancellation of Outgoing Payments – Camt.056
- Negative Response to Payment Cancellation Requests – Camt.029

The bulks which are partially accepted or rejected status 'PART' will be processed automatically by system.

2.9.5.1 Reject of Outgoing Payment

Original transaction has to be in processing 'Processed' status with same dispatch details as in incoming reject report .On processing the network reject,

- Transaction status of parent transaction will be marked as 'Network Rejected'.
- The accounting entries are reversed with negative amounts .Accounting posting will be with event REVR. This action will be auto-authorized.
- No further action is allowed on such transaction.

The Reject Reference Number, Reject date and reject code and reason will be available in Outgoing Transaction View screen.

2.9.5.2 Reject of Recall Request

In case this is rejected from the network , Original Transaction ID is matched with original recall reference. Original recall has to be in 'Recall Requested' status with same dispatch details as in incoming report.

Network Reject Processing

- The reject details will be updated in the Recall Screen. Reject reference, Reject date, Reject code and reason will get updated for the recall request.
- The recall status will be marked as 'Network Rejected'. No further processing possible on the existing recall request.
- Parent transaction will be moved back to processing 'Processed' status.
- A new recall request is possible for parent transaction

Reject reference, Reject date, Reject code and reason can be viewed for original parent transaction. When a new recall is initiated, these details will be nullified.

2.9.5.3 Reject of Incoming Payment Return

Original Transaction ID is matched with original return reference. Original payment transaction has to be in 'Returned' status with return transaction dispatch details as in incoming report.

- The accounting entries posted with RETN event are reversed. Return transaction status is updated to 'Network Rejected'.
- Parent transaction status is updated back as 'Processed' being the status prior to return operation.
- Reject reference, reject date, reject code and reason can be viewed from outgoing transaction view screen.
- Return of the parent transaction can again be initiated. Reject details pertaining to previous return are nullified in the view screen.

2.9.5.4 Reject of Positive Response to Recall

On receiving a network reject of positive response to Recall, Original Transaction ID is matched with original transaction reference. Original payment transaction has to be in 'Returned' status, recall status has to be 'Approved' with return transaction dispatch details as in incoming report.

- Return of Incoming Payment will be marked as 'Network Rejected'. The accounting entries posted with RETN event will be reversed.
- Parent transaction will be marked as processing 'Recalled' status as the subsequent return operation is reversed.
- The recall status of the recall request will be updated back to the status prior to the approval action, namely "Recall Requested", enabling further approval or refusal on the same recall request.

2.9.5.5 Reject of Negative Response of Recall

Once the Recall request for Incoming Payment is refused, camt.029 will be sent to originating bank. In case, this is rejected from the network, network reject on the negative response of recall request. On receiving the network reject, Original Transaction ID is matched with original transaction reference. Original payment transaction has to be in 'Processed' status, recall status has to be 'Refused' with return transaction dispatch details as in incoming report

- The recall status of the recall request will be updated back to the status prior to the approval action, namely "Recall Requested", enabling further approval or refusal on the same recall request.

Note

- Bulks with status 'RJCT' will not be automatically processed by system. This needs to be operationally handled.
- If no original transaction is found for the reject report received, then the system will mark the message as an error and will be moved to the Message Mapping Queue table.
- Suppression of processing at bulk level will not be supported for partially rejected bulks.
- There will not be any file level accounting passed for network rejects. This has to be operationally handled.

2.10 R-Transactions Dispatch

- The Network cutoff check will be done for all R-transactions listed above. If the Network Cutoff is over, R transaction processing date is moved to next Network business day.
- Reversal accounting entries, if applicable, are posted on the current day itself with value date as the new date derived.
- R-Transaction details will be logged in the dispatch table with dispatch date as next Network business day.
- Dispatch file generated for the first cycle on the dispatch date will include these R-transactions.
