Copyright © 2000, 2023, Oracle and/or its affiliates. All rights reserved.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notices are applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

CAUTION: Use only the guide downloaded from the Oracle Technology Network (OTN) (<http://www.oracle.com/technetwork/indexes/documentation/oracle-comms-tekelec-2136003.html>).
Before running upgrade on your system, access the My Oracle Support web portal (<https://support.oracle.com>) and review any Knowledge Alerts that may be related to the System Health Check or the I Upgrade.

Before beginning this procedure, contact My Oracle Support and inform them of your upgrade plans.
Refer to 0 for instructions on accessing My Oracle Support.

CHANGE HISTORY

Date	ENG Version#	Publication Revision #	Author	Description	Approved* (Yes/No)
06/07/2018	0.1		Nidhi Rani	Initial draft	No
07/09/2018	0.2		Nidhi Rani	Review comments incorporated	No
07/20/2018	0.3		Nidhi Rani	Updated according to the new approach, where it is recommended that the DB Architecture conversion from “Compact” to “Extreme” followed by RTDB restore process shall be done in a separate MTC window.	No
08/14/2018	1.0		Nidhi Rani	Prepared for publication	Yes
10/04/2018	2.0		Nidhi Rani	Fix for bug 28571524, 28610982, 28610919, 28609619, 28609335, 28611045	Yes
10/19/2018	3.0	1	G. Brookins	Prepared for publication as E96330 Revision 1	Yes
12/07/2018	4.0		Nidhi Rani	Fix for bug 28794521	Yes
07/25/2019	5.0		Geetika Agarwal	Fix for bug 29614002 and 30080839	Yes
10/10/2019	6.0		Shriya Prajapati	Fix for Bug 30009915 and 30299801	Yes
06/16/2020	7.0		Nishchal Nagpal	Fix for bug 31501569	Yes
07/09/2020	8.0		Nishchal Nagpal	Fix for Bug 31540499	Yes
03/22/2021	9.0		Mohit Chauhan	Bug 32075071 updates	Yes
06/09/2021	12	E96330-06	Mohit Chauhan	Bug 32578862 updates	Yes
20/04/2022		E96330-07	Smriti Wadhwa	Metrics change for supported number of SM cards per switch	
02/21/2023		E96330-08	Smriti Wadhwa	Changes for Bug 33580050, 33507358, 26352218 and 30958689	

*Through Formal Peer Review

1. INTRODUCTION

1.1 Purpose and Scope

This document describes methods utilized and procedures executed to perform the following tasks:

- a. An initial installation of the EPAP 16.3 application software if it is not currently installed on an in-service E5-APP-B system running a release of TPD 7.0.x or later (up to 7.6.1.x).
- b. A major software upgrade on an in-service E5-APP-B system running a release equal to TPD 7.0.x and EPAP Release 16.1.x/16.2.x
- c. An incremental software upgrade on an in-service E5-APP-B system running a release equal to TPD 7.6.x and EPAP Release 16.3.x

The audience for this document consists of Oracle customers and the following groups: Software System, Product Verification, Documentation, and Customer Service including Software Operations and NPI. This document provides step-by-step instructions to execute any MPS upgrade or installation using an ISO image.

This document does not address requirements relating to the interaction, if any, between EAGLE and MPS upgrade. This document does not address feature activation.

1.3 Software Release Numbering

Refer to Engineering Release Notes or other appropriate document with the most recent build numbers in order to identify the proper components (software loads, GPLs, etc.) that comprise the product's software release.

1.4 Acronyms

An alphabetized list of acronyms used in the document that are not included in [1]:

Table 1. Acronyms

AS	Application Server
E5-APP-B	E5 Based Application Card
E5APPB-01	E5 Based Application card installed with 300G SSD Hard Drive
E5APPB-02	E5 Based Application card installed with 480G SSD Hard Drive
OCEPAP	Oracle Communication EAGLE Provisioning Application Processor
GA	General Availability
IPM	Initial Product Manufacture
LA	Limited Availability
MPS	Multi-Purpose Server
MOS	My Oracle Support
SM	Service Module
TPD	Tekelec Platform Distribution
OSDC	Oracle Software Delivery Cloud

1.5 Terminology

Multiple servers may be involved with the procedures in this manual. Therefore, most steps in the written procedures begin with the name or type of server to which the step applies. For example:

Each step has a checkbox for every command within the step that the technician should check to keep track of the progress of the procedure.

The title box describes the operations to be performed during that step.

Each command that the technician is to enter is in 9 point Lucida Console font

1	MPS A: Verify all materials required are present	Materials are listed in Material List (Section 3.2)
---	--	---

Figure 1: Example of a step that indicates the Server on which it needs to be executed

Other terminology follows.

Table 2. Terminology

Backout (abort)	The process to take a system back to a Source Release prior to completion of upgrade to Target release. Includes preservation of databases and system configuration.
Mixed EPAP	An EPAP where both PDB and RTDB databases reside.
Non-provisionable (Non-prov) EPAP	An EPAP server hosting a Real Time DB without any provisioning interfaces to external provisioning applications. Non-Prov servers are connected to a pair of Provisionable EPAP(mixed-EPAP or PDBonly) from where they get their updates.
Provisionable EPAP	An EPAP server hosting PDB with provisioning interfaces to AS. Both Mixed EPAP and Standalone PDB are Provisionable EPAP.
Rollback	The process to take a system from a Target Release back to a Source Release including preservation of databases and system configuration.
Source release	Software release to upgrade from.

Split Mirror	<p>Systems that use software RAID instead of hardware RAID can use the software RAID mirrors as a backout mechanism.</p> <p>Conceptually in a software RAID1 with two disks there are two sides to the mirror; let them be side A and side B. For a system with multiple software RAID devices, each device will have an A side and a B side. For an upgrade with a BACKOUT_TYPE=SPLIT_MIRROR the upgrade will break the mirrors at the beginning of the upgrade and perform the upgrade on the <i>Asides</i> of the mirrors. The other sides of the mirrors (<i>B sides</i>) are left intact in their pre-upgrade state throughout the duration of the upgrade.</p> <p>When a backout is performed the system is rebooted into the same ‘backout environment’. Inside this ‘backout environment’ the RAID mirrors are rebuilt from the <i>B sides</i> of the arrays, thus restoring the system to the pre-upgrade state</p>
Standalone PDB	Also known as ‘PDB Only’, this type of EPAP shall have PDB database only. No RTDB database shall exist on the standalone PDB site.
Target release	Software release to upgrade to.
Upgrade media	USB media or ISO image for E5-APP-B.

1.6 Recommendations

This procedure should be followed thoroughly utilizing the steps as written. **When planning to run upgrade on the server, contact My Oracle Support at least 48 hours before the upgrade process has been planned to be initiated.** In the event any unexpected results are returned while executing steps in this procedure, halt the activity and contact My Oracle Support for assistance.

Please read the following notes on procedures:

1. While doing upgrade, do not open the epapconfig menu if it is not mentioned in the procedure. Do not run anything in the setup that is not documented in the install/upgrade manual.
2. Any procedure completion times are estimates. Times may vary due to differences in database size, user experience, and user preparation.
3. The shaded area within response steps must be verified in order to successfully complete that step.
4. Output displayed in the procedures’ response steps is presented. Actual output varies depending on system. Output is presented for reference only.
5. Where possible, command response outputs are shown as accurately as possible. However, exceptions may include the following:
 - Information such as *time* and *date*.

- ANY information marked with “XXXX.” Where appropriate, instructions are provided to determine what output should be expected in place of “XXXX.”
6. After completing each step and **at each point where data is recorded from the screen, the technician performing the procedure must check each step.** A checkbox has been provided beneath each step number for this purpose.
 7. Captured data is required for future support reference if My Oracle Support is not present during the execution of procedures.
 8. In procedures that require a command to be executed on a specific MPS, the command is prefaced with MPS A: or MPS B:
 9. User Interface menu items displayed in this document were correct at the time the document was published but may appear differently at time that this procedure is executed.

1.8 Requirements

- Screen logging is required throughout the procedure. These logs should be made available to My Oracle Support in the event their assistance is needed.
- Target-release USB media or ISO image

2. GENERAL DESCRIPTION

This document defines the step-by-step actions performed to execute a software upgrade of an in-service MPS running the EPAP application from the source release to the target release on **E5-APP-B-01/02**.

For the EPAP application, some steps in this procedure refer to the PDB application feature on the MPS A of the MPS pair. The EPAP application makes it optional for a newly installed MPS A node to be configured as a Provisioning (PDB) node (upgrades of MPS A nodes already configured as a provisioning node does not change this configuration).

The EPAP application can be installed and upgraded based on the table below.

Table 3 Install-Upgrade paths

TPD Release for IPM	EPAP Initial Installation Release
7.0.3.0.0_86.40.0 or later (up to 7.6.0.0.0_88.54.0)	16.3
7.0.3.0.0_86.40.0 or later (up to 7.6.1.0.0-88.55.0)	16.3.x

		TARGET RELEASE		
		16.2.0 (TPD 7.5)	16.3.0 (TPD 7.6)	16.3.1 (7.6.1)
SOURCE RELEASE	16.1.0 (TPD 7.0.3)	Major Upgrade	Major Upgrade	Major Upgrade
	16.2.0 (TPD 7.4)	NA	Major Upgrade	Major Upgrade
	16.3.0 (TPD 7.6)	NA	NA	Major Upgrade

The EPAP upgrade paths are shown in the figures below. The general timeline for all processes to perform a software incremental upgrade, from pre-upgrade backups to a final system health check, is also included below.

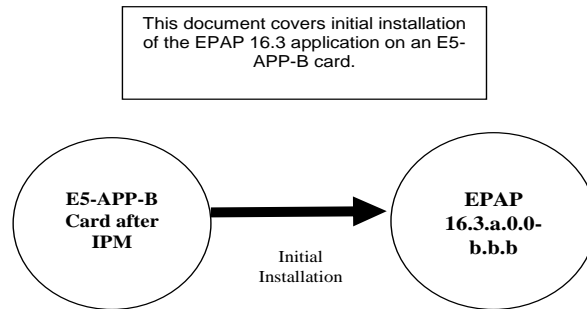

Figure 2: Initial Application Installation Path – Example shown

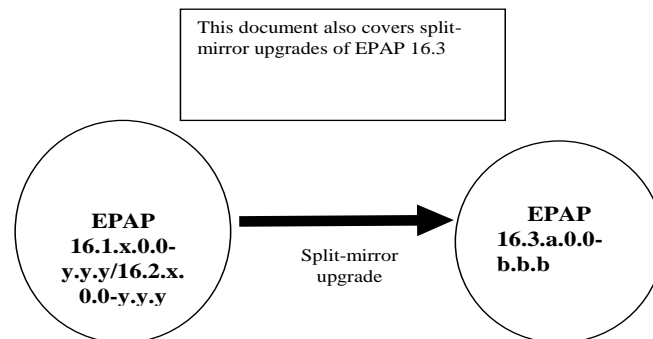

Figure 3: Major (Also known as Split Mirror) Upgrade Path Example – EPAP 16.3.a.0.0-b.b.b

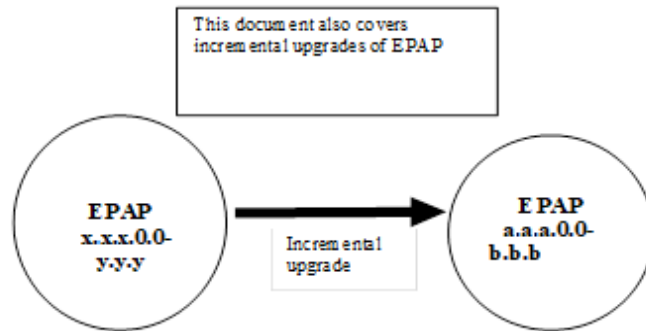

Figure 4: Incremental Upgrade Path – EPAP 16.3.a.0.0-b.b.b

2.1 Upgrading Provisionable mixed EPAP Mated Pairs

Current deployments of the EPAP support two geographically separated EPAP systems that are “mated”, meaning they communicate and replicate PDB information between the two sites. An EPAP system is a pair of MPS servers (an **A** and a **B** node). So a mated pair of EPAP systems consists of four MPS servers, an **A** and a **B** node for each EPAP system (see Figure 6: EPAP Mated Pairs). EPAP allows more than two EPAP systems in a related configuration (up to 22 Non-Provisionable MPS servers).

This document describes upgrade (and, if necessary, backout) of the EPAP software on one system, that system consisting of two MPS servers (A and B). However, for mated pairs of EPAP systems, upgrades (and backouts) must be coordinated between both the local EPAP system and the remote EPAP system and performed during the same maintenance period.

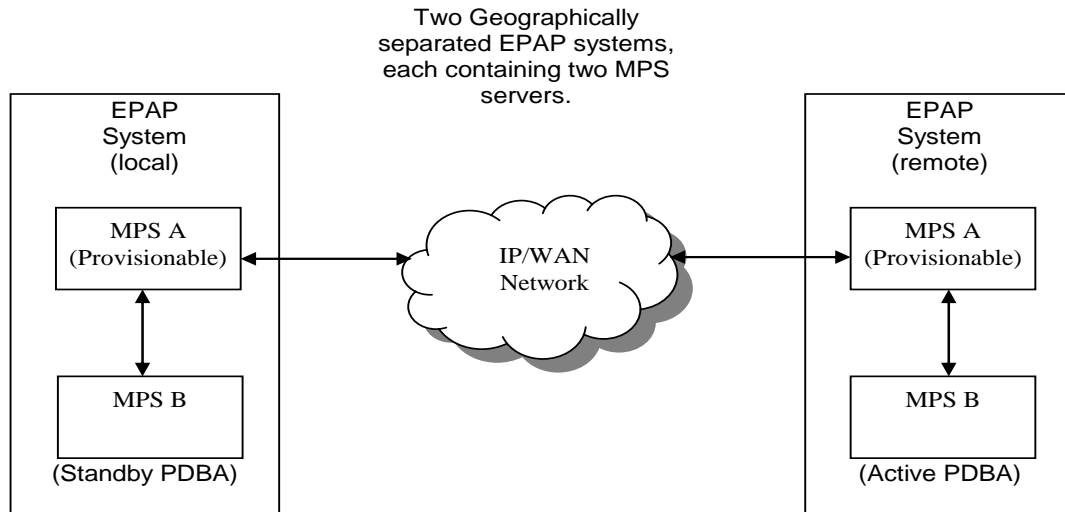

Figure 6: EPAP Mated Pairs

Upgrade of provisionable EPAP(mixed-EPAP) mated pairs must be carried out in the following order:

1. **Ensure PDB databases are at the same level. Stop all provisioning to ensure that all PDB databases are in sync before proceeding. Also, ensure that no PDB/RTDB maintenance activity is in progress and clear all scheduled activities.**
2. Local MPS-B
3. Local MPS-A (Standby PDBA)
4. Remote MPS-B
5. Remote MPS-A (Active PDBA)

When upgrade is initiated on the local MPS-B, the scripts controlling the upgrade will cause the local MPS-B to communicate using Secure-Shell to both the local MPS-A and the remote MPS-A to stop the PDBA software. The PDBAs should be restarted only after both the local and remote EPAP systems have successfully completed the upgrade.

NOTE: Since the PDBA software is not running immediately after an upgrade, the syscheck utility will alarm the fact that the PDBA is not running on the local and remote EPAP A-servers.

2.2 Backout Provisionable mixed EPAP Mated Pairs

Backout of Provisionable EPAP(mixed-EPAP) Mated Pairs should be done in the reverse order that the upgrade was performed:

1. **Identify a PDB backup that was made prior to upgrade, on the EPAP release that backout will target. Note that backout always carries the risk of losing data, should a restore from database backup become necessary.**
2. Remote MPS-A (Active PDBA)
3. Remote MPS-B
4. Local MPS-A (Standby PDBA)
5. Local MPS-B

On a backout of an upgrade, the server will remain in runlevel 3 (no applications running). The user will be required to manually reboot the server to bring it back into service and a syscheck can be performed.

2.3 Upgrading EPAP Non-Provisionable MPS Servers

EPAP Non-Provisional MPS pairs can connect to: Mixed EPAP or Standalone PDB.

2.3.1 Upgrading Non-Provisional MPS pairs in Mixed EPAP configuration

EPAP provides the ability to expand the concept of a mated pair of EPAP systems to have up to 24 EPAP systems (48 MPS servers total) configured such that two of the MPS-A servers will run the PDBA software and RTDB software both and handle provisioning (Provisionable nodes) and the other 22 MPS-B and 22 MPS-A servers will only run the RTDB software, taking their updates from the two Provisionable(mixed-EPAP or PDBonly) MPS-A servers.

An example showing 4 EPAP systems,
two of which are provisioning nodes.

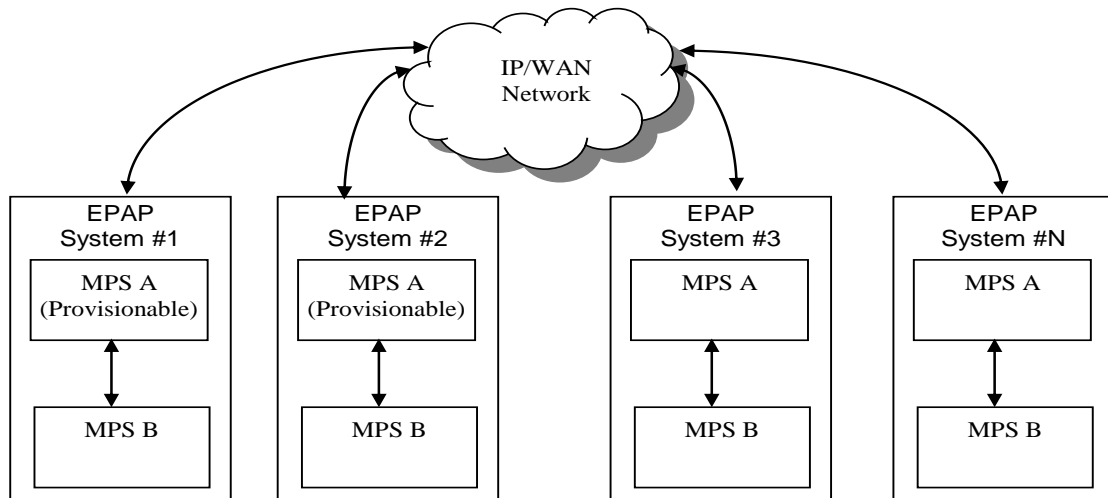

Figure 4: EPAP Mated Pairs with Non-Provisioning MPS Servers

In such a configuration, it is required that the EPAP system containing all non-provisionable MPS servers be upgraded first, before any EPAP system containing the provisionable MPS servers are upgraded.

Upgrade of such configuration must be carried out in the following order:

Non-provisionable EPAPs (All Non-Provs)

1. Non-Provisionable (MPS B)
2. Non-Provisionable (MPS A)

Mixed EPAP (with standby PDBA)

3. Mixed EPAP (MPS B)
4. Mixed EPAP (MPS A)

Mixed EPAP (with active PDBA)

5. Mixed EPAP (MPS B)
6. Mixed EPAP (MPS A)

2.3.2 Upgrading Non-Provisional MPS pairs in dual PDBonly configuration

EPAP provides the ability to separate the RTDB from PDB to create two architectures: Standalone PDB running PDB process only and Non-Provisionable running RTDB only. Up to 22 Non-Provisional EPAP mated pairs are connected to 2 Standalone PDB that are configured as Active/Standby. In such a configuration, it is required that all Non-provisionable MPS servers be upgraded first, before standalone PDB.

Upgrade of Non-prov MPS pairs in standalone PDB configuration must be carried out in the following order:

1. Non-Provisionable (MPS B)
2. Non-Provisionable (MPS A)
3. Standby PDBonly
4. Active PDBonly

2.4 Backout EPAP Non-provisionable MPS servers

EPAP Non-Provisional MPS pairs can connect to: Mixed EPAP or Standalone PDB.

2.4.1 Backout Non-Provisionable MPS pairs in dual PDBonly configuration

Backout of Non-Provisionable MPS pairs in Standalone configuration should be done in the reverse order that the upgrade was performed. Please follow the below mentioned steps for backout:

1. Active PDBonly
2. Standby PDBonly
3. Non-Provisionable (MPS A)
4. Non-Provisionable(MPS-B)

On a backout of an upgrade, the server will remain in runlevel 3 (no applications running). The user will be required to manually reboot the server to bring it back into service and a syscheck can be performed.

2.4.2 Backout Non-Provisionable MPS pairs in mixed EPAP configuration

Backout of EPAP Non-provisionable MPS pairs in mixed EPAP configuration should be done in the reverse order that the upgrade was performed:

Mixed EPAP (with active PDBA)

1. Mixed EPAP (MPS A)
2. Mixed EPAP (MPS B)

Mixed EPAP (with standby PDBA)

3. Mixed EPAP (MPS A)
4. Mixed EPAP (MPS B)

Non-provisionable EPAP

5. Non-Provisionable (MPS A)
6. Non-Provisionable (MPS B)

3. UPGRADE OVERVIEW

3.1 Upgrade Provisioning Rules

When a Provisionable EPAP mated pair is upgraded or backed out, the EPAP upgrade scripts disable provisioning when the upgrade is initiated on the first MPS server. The PDBA software remains disabled until the last server in the MPS in the mated pair has been upgraded or backed out. The user has-to enable the PDBA software, allowing provisioning, after the upgrade/backout is complete on last MPS server in an EPAP mated pair. Provisioning is not disabled during the upgrade of a Non-Provisionable MPS.

Because EPAP MPS pairs are generally located at geographically distinct sites, significant time may elapse between the upgrade of the Provisionable EPAP pair and the upgrade of the Non-Provisionable EPAP pairs. Non-Provisionable EPAP pairs must always be upgraded before any Provisionable EPAP MPS pairs.

The default “DB Architecture” shall be “Compact” for all types of EPAP either fresh installed or upgraded with release 16.3, which support the DB schema used in EPAP 16.1 and 16.2. Refer to section 4.2 to change DB Architecture from Compact to eXtreme.

3.2 Required Materials

- For Mixed EPAP or Non-Provisional EPAP: Two (2) target-release USB media or a target-release ISO file. For Standalone PDB: One (1) target-release USB media or a target-release ISO file
- A terminal and null modem cable to establish a serial connection.
- Write down the system configuration information.

Description	Information
PROVISIONABLE (Yes/No)	
PDBA state (Active/Standby)	
Provisioning IP (IPv4)	
Provisioning Mask (IPv4)	
Provisioning Default Router IP (IPv4)	
Provisioning IP (IPv6)	
Provisioning Netmask (IPv6)	
Provisioning Default Router IP (IPv6)	
NTP1 IP (IPv4/IPv6)	

NTP2 IP (IPv4/IPv6)	
NTP3 IP (IPv4/IPv6)	
Local VIP	
Remote VIP

Table 4: System Configuration Information

- Passwords for users on the local system:

EPAP USERS		
login	MPS A password	MPS B password
epapconfig		
epapdev (needed for backout only)		
root		
epapall (needed for GUI access)		
admusr		

Table 5. User Password Table

3.3 Installation Phases

The following table illustrates the progression of the installation process by procedure with estimated times. The estimated times and the phases that must be completed may vary due to differences in typing ability and system configuration. The phases outlined in Table 6 and Table 7 are to be executed in the order they are listed.

3.3.1 Installation Phases for Mixed and Non-Provisionable EPAP

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Connectivity setup	15	15	Set up connectivity to the MPS Servers.	Procedure 1
Verify install	5	20	Verify this should be an install.	Procedure 2
Pre-upgrade check	15	35	Verify requirements for install are met.	Procedure 3
Pre-install health check	5	40	Run the syscheck utility to verify that all servers are operationally sound.	Procedure 4
Configure Server 1A	5	45	Set hostname, designation, function and time.	Procedure 5
Configure Server 1B	5	50	Set hostname, designation, function and time.	Procedure 6
Install Servers	30	80	Install software on sides 1A and 1B	Procedure 7 Procedure 8
Configure Switches	30*	110*	Configure the Switches	Procedure 9
Post-install application processing	30	140	Perform first time configuration.	Procedure 11 Procedure 12
Post-upgrade health check	5	150	Run the syscheck utility to verify all servers are operationally sound.	Procedure 4
**Configure Auto Backup Note: Skip this step if the EPAP is configured as Non-Provisionable.	5	155	Configure Auto Backup from PDB GUI on Provisionable EPAP's, this backup will also get scheduled on attached Non-Prov sites present on the setup.	Procedure A.28

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Check EPAP-EAGLE connectivity speed	20	190	Configure and verify that EAGLE SM cards are getting auto-negotiated to 1000Mbps/Full Duplex	Procedure A.17

Table 6. Installation Phases for Mixed EPAP and Non-Provisional EPAP

***NOTE:** If configuring 4 switches, add 30 minutes to the current setup

****NOTE:** Configuring Auto backup is a compulsory step to enable PDB-RTDB translogs pruning.

3.3.2 Installation Phases for Standalone PDB

Note: In the procedures below, skip the steps which need to be executed on MPS B, since MPS B is not present in the Standalone PDB configuration".

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Connectivity setup	15	15	Set up connectivity to the MPS Servers.	Procedure 1
Verify install	5	20	Verify this should be an install.	Procedure 2
Pre-upgrade check	15	35	Verify requirements for install are met.	Procedure 3
Pre-install health check	5	40	Run the syscheck utility to verify that all servers are operationally sound.	Procedure 4
Configure Server 1A	5	45	Set hostname, designation, function and time.	Procedure 5
Install Server	30	75	Install software on sides 1A	Procedure 7
Post-install application processing	30	105	Perform first time configuration. Refer to Procedure A.14 to configure the Standalone PDB in segmented network configuration.	Procedure 11 Procedure 12
Post-upgrade health check	5	115	Run the syscheck utility to verify all servers are operationally sound.	Procedure 4
**Configure Auto Backup. Note: Perform this step once Non-Provisionable EPAPs are attached to this Standalone PDB	5	120	Configure Auto Backup from PDB GUI on Provisionable EPAP's, this backup will also get scheduled on attached Non-Prov sites present on the setup.	Procedure A.28

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Restore PDB backup (optional)	*See notes below	*See notes below	Restore EPAP 16.1/16.2 PDB backup if there is any. Note: This step is required when a mixed EPAP with release 16.1/16.2, is getting converted to PDBonly+Non-PROV in 16.3. Skip this step for initial installation of a PDBonly EPAP 16.3 where there is no dependency on previous release.	Procedure A.24

Table 7 Installation Phases for Standalone PDB

***NOTE:** The time needed to backup application data is dependent on the amount of application data. This procedure cannot specify an exact length of time since different customers have different amounts of application data.

****NOTE:** Configuring Auto backup is a compulsory step to enable PDB-RTDB translog pruning.

3.4 Major Upgrade Phases

The following table illustrates the progression of the Major upgrade process by procedure with estimated times and may vary due to differences in typing ability and system configuration. The procedures outlined in below **Table 8** are to be executed in the order they are listed.

Note: Before proceeding with the Major upgrade process, refer to section 2.1 and section 2.3 to get the overview of the EPAP setup and upgrade order.

3.4.1 Major Upgrade Phases for Mixed and Non-Provisionable EPAP

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Connectivity setup	15	15	Set up connectivity to the MPS servers.	Procedure 1
Verify Major upgrade	5	20	Verify this should be a Major upgrade.	Procedure 2
Pre-upgrade check	15	35	Verify requirements for Major Upgrade are met.	Procedure 3
Pre-upgrade health check	5	40	Run the syscheck utility to verify the MPS server is operationally sound.	Procedure 4
Assess readiness for upgrade	15	55	Assess the server's readiness for upgrade.	Procedure 14
Pre-upgrade Backup	*See notes below	*See notes below	Backup application databases and other pertinent information.	Procedure 15
Pre-upgrade system time check	5	60	Pre-upgrade system time check.	Procedure 16
Exchange the keys between active and standby PDB	05	65	Pre-upgrade keys exchange between active and standby PDB. Note: Execute this procedure only for dual mixed EPAP.	Procedure 22

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Stop the PDB software.	05	70	Stop the Pdba software before initiating upgrade. Note: This Step only necessary for provisionable EPAP(mixed-EPAP or PDBonly).Skip for Non-prov EPAP.	Procedure 25
Upgrade MPS B	30	100	Execute the upgrade procedure on MPS B.	Procedure 18
Upgrade MPS A	30	130	Execute the upgrade procedure on MPS A. Note: Time taken by this upgrade may vary depending on the DB present on setup. 75 min is valid for mixed EPAP with maximum DB, 528M.	Procedure 19
Post-upgrade health check	5	135	Run the syscheck utility to verify the MPS server is operationally sound.	Procedure 4
Increase rtVolume size.	10	145	Increase rtVolume size by executing “rtdir” script. Note: skip this step for provisionable EPAP(mixed-EPAP and PDBonly).	Procedure A.5
Start the PDB software.	10	155	Re-activate the PDB on the Provisionable MPS A servers(mixed-EPAP in this case). Note: Step only necessary during upgrade of a Provisionable mated EPAP pair (mixed EPAP + PDBonly).	Procedure 26
Configure Switches	30**	185**	Re-configure the switch and verify that EAGLE SM cards are getting auto-negotiated to 1000Mbps/Full Duplex. Note: Skip this step if speed is already set to 1000Mbps/Full Duplex.	Procedure 9

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
***Configure Auto Backup Note: Skip this step if the EPAP is configured as Non-Provisionable.	5	190	Configure Auto Backup from PDB GUI on Provisionable EPAP's, this backup will get scheduled on attached Non-Prov sites present on the setup.	Procedure A.28
Post-upgrade Backups	*See notes below	*See notes below	Backup application databases and other pertinent information.	Procedure 15
Accept the upgrade after successful soak period NOTE: If the node is to be converted from Compact to eXtreme DB architecture, delay this step until the conversion is done and sufficient soak time is given.	5	This is done in a separate MTC	Accept the upgrade on both MPS-A and MPS-B after sufficient soak period of around 1-7 days (depending upon customer provisioning volume) to see that everything works fine after the upgrade.	Procedure 21

Table 8 Major Upgrade Phases for Mixed and Non-Provisionable EPAP to support EAGLE release 46.6.0.0.0 and earlier compatible release (COMPACT feature)

***NOTE:** The time needed to backup application data is dependent on the amount of application data. This procedure cannot specify an exact length of time since different customers have different amounts of application data.

****NOTE:** If configuring 4 switches, add 30 minutes to the current setup.

*****NOTE:** Configuring Auto backup is a compulsory step to enable PDB-RTDB translog pruning. Ignore this step if auto-backup is already configured.

******NOTE:** If you are using Eagle Query Server with EPAP, you need to do a fresh installation of Eagle Query Server after upgrading EPAP to Release 16.3. See Eagle Query Server Installation Guide for installing a fresh EAGLE Query Server.

3.4.2 Major Upgrade Phases for Standalone PDB

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Connectivity setup	15	15	Set up connectivity to the MPS servers.	Procedure 1
Verify Major upgrade	5	20	Verify this should be a Major upgrade.	Procedure 2
Pre-upgrade check	15	35	Verify requirements for upgrade are met.	Procedure 3
Pre-upgrade health check	5	40	Run the syscheck utility to verify the MPS server is operationally sound.	Procedure 4
Assess readiness for upgrade	15	55	Assess the server's readiness for upgrade.	Procedure 14
Pre-upgrade Backup	*See notes below	*See notes below	Backup application databases and other pertinent information.	Procedure 15
Pre-upgrade system time check	5	60	Pre-upgrade system time check.	Procedure 16
Stop the PDB software.	05	65	Stop the Pdba software before initiating upgrade. This Step only necessary for provisionable EPAP(mixed-EPAP or PDBonly).Skip for Non-prov EPAP.	Procedure 25
Upgrade MPS A	30	95	Execute the upgrade procedure on MPS A. Note: Time taken by this upgrade may vary depending on the DB present on setup. 75 min is valid for maximum DB, 528M.	Procedure 19
Post-upgrade health check	5	100	Run the syscheck utility to verify the MPS server is operationally sound.	Procedure 4

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Start the PDB software.	10	110	Re-activate the PDB on the Provisionable MPS A servers (PDBonly in this case). Note: Step only necessary during upgrade of a Provisionable mated EPAP pair (mixed EPAP + PDBonly).	Procedure 26
**Configure Auto Backup.	5	115	Configure auto backup to schedule RTDB Auto-Backup on Non-Provisionable EPAP	Procedure A.28
Post-upgrade Backups	*See notes below	*See notes below	Backup application databases and other pertinent information.	Procedure 15
Accept the upgrade after successful soak period NOTE: If the node is to be converted from Compact to eXtreme DB architecture, delay this step until the conversion is done and sufficient soak time is given.	5	This is done in a separate MTC	Accept the upgrade on both MPS-A after sufficient soak period of around 1-7 days (depending upon customer provisioning volume) to see that everything works fine after the upgrade.	Procedure 21

Table 9 Major Upgrade Phases on Standalone PDB

***NOTE:** The time needed to backup application data is dependent on the amount of application data. This procedure cannot specify an exact length of time since different customers have different amounts of application data.

****NOTE:** Configuring Auto backup is a compulsory step to enable PDB-RTDB translog pruning.

Ignore this step if auto-backup is already configured.

*****NOTE:** If you are using Eagle Query Server with EPAP, you need to do a fresh installation of Eagle Query Server after upgrading EPAP to Release 16.3. See Eagle Query Server Installation Guide for installing a fresh EAGLE Query Server.

3.5 Incremental Upgrade Phases

The following table illustrates the progression of the incremental upgrade process by procedure with estimated times and may vary due to differences in typing ability and system configuration. The procedures outlined in below **Table 8** are to be executed in the order they are listed.

Note: Before proceeding with the incremental upgrade process, refer to section 2.1 to get the overview of the EPAP setup and upgrade order.

3.5.1 Incremental Upgrade Phases for Mixed and Non-Provisionable EPAP

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Connectivity setup	15	15	Set up connectivity to the MPS servers.	Procedure 1
Verify incremental upgrade	5	20	Verify this should be an incremental upgrade.	Procedure 2
Pre-upgrade check	15	35	Verify requirements for upgrade are met.	Procedure 3
Pre-upgrade health check	5	55	Run the syscheck utility to verify the MPS server is operationally sound.	Procedure 4
Assess readiness for upgrade	15	50	Assess the server's readiness for upgrade.	Procedure 14
Pre-upgrade Backup	*See notes below	*See notes below	Backup application databases and other pertinent information.	Procedure 15
Pre-upgrade system time check	5	60	Pre-upgrade system time check.	Procedure 16
Upgrade MPS B	30	90	Execute the upgrade procedure on MPS B.	Procedure 18
Upgrade MPS A	30	120	Execute the upgrade procedure on MPS A.	Procedure 19
Post-upgrade health check	5	125	Run the syscheck utility to verify the MPS server is operationally sound.	Procedure 4

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Start the PDB software.	10	135	Re-activate the PDB on the Provisionable MPS A server(mixed-EPAP in this case). Note: Step only necessary during upgrade of a Provisionable mated EPAP pair (mixed EPAP + PDBonly).	Procedure 26
Configure Switches	30**	205**	Re-configure the switch and verify that EAGLE SM cards are getting auto-negotiated to 1000Mbps/Full Duplex. Note: Skip this step if speed is already set to 1000Mbps/Full Duplex.	Procedure 9
Post-upgrade Backups	*See notes below	*See notes below	Backup application databases and other pertinent information.	Procedure 15

Table 9 Incremental Upgrade Phases for Mixed and Non-Provisionable EPAP

***NOTE:** The time needed to backup application data is dependent on the amount of application data. This procedure cannot specify an exact length of time since different customers have different amounts of application data.

3.5.2 Incremental Upgrade Phases for Standalone PDB

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Connectivity setup	15	15	Set up connectivity to the MPS servers.	Procedure 1
Verify incremental upgrade	5	20	Verify this should be an incremental upgrade.	Procedure 2
Pre-upgrade check	15	35	Verify requirements for upgrade are met.	Procedure 3
Pre-upgrade health check	5	55	Run the syscheck utility to verify the MPS server is operationally sound.	Procedure 4
Assess readiness for upgrade	15	50	Assess the server's readiness for upgrade.	Procedure 14
Pre-upgrade Backup	*See notes below	*See notes below	Backup application databases and other pertinent information.	Procedure 15
Pre-upgrade system time check	5	60	Pre-upgrade system time check.	Procedure 16
Upgrade MPS A	30	90	Execute the Upgrade procedure on MPS A.	Procedure 19
Post-upgrade health check	5	95	Run the syscheck utility to verify the MPS server is operationally sound.	Procedure 4
Start the PDB software.	10	105	Re-activate the PDB on the Provisionable MPS A servers (mixed-EPAP in this case). Note: Step only necessary during upgrade of a Provisionable mated EPAP pair (mixed EPAP + PDBonly).	Procedure 26
Post-upgrade Backups	*See notes below	*See notes below	Backup application databases and other pertinent information.	Procedure 15

Table 10 Incremental Upgrade Phases on Standalone PDB

***NOTE:** The time needed to backup application data is dependent on the amount of application data. This procedure cannot specify an exact length of time since different customers have different amounts of application data.

3.6 Backout Phases

Note: Before proceeding with the backout process, refer to sections 6.1 and 6.2 to get the overview of the EPAP setup and the backout order.

3.6.1 Backout Phases for Mixed and Non-Provisionable EPAP

Phase	Elapsed Time (Hours or Minutes)		Activity	Impact	Procedure
	This Step	Cum.			
Determine state of system	15-30	15-30	Investigate and determine the state of the MPS system. This may take anywhere from 15 to 30 minutes.	Cannot proceed with backout until failure analysis is complete. Some hand-fixes may be required before proceeding with backout.	Contact My Oracle Support following the instructions on the front page or the instructions on the 0
Backout MPS B only	30	45-60	If required, backout MPS B. If backout of MPS A and B is required, execute Procedure 24 . Otherwise, if backout required only on MPS B, then execute Procedure 23 .		Procedure 23
Backout MPS A and B	100	145-160	Backout MPS A and B.		Procedure 24
Post-backout health check	10	155-170	Run the syscheck utility to verify the MPS server is operationally sound.	Verify that the backout was successful.	Procedure 4
Start the PDBA software	5	160-175	Re-activate the PDB on the Provisionable MPS A servers (mixed-EPAP in this case). Note: Read the		Procedure 26

Phase	Elapsed Time (Hours or Minutes)		Activity	Impact	Procedure
	This Step	Cum.			
			instructions given in Procedure A.1 before executing the procedure.		
Configure Switches	30*	190-205*	Re-configure the switch and verify that EAGLE SM cards are getting auto-negotiated to previous speed. Note: Skip this step if speed before upgrade was 1000Mbps/Full Duplex.	Verify that speed of switch is negotiated to previous speed.	Procedure 9

Table 11. Backout Phases for Mixed and Non-Provisionable EPAP

***NOTE:** If configuring 4 switches, add 30 minutes to the current setup.

3.6.2 Backout Phases for Standalone PDB

Phase	Elapsed Time (Hours or Minutes)		Activity	Impact	Procedure
	This Step	Cum.			
Determine state of system	15-30	15-30	Investigate and determine the state of the MPS system. This may take anywhere from 15 to 30 minutes.	Cannot proceed with backout until failure analysis is complete. Some hand-fixes may be required before proceeding with backout.	Contact My Oracle Support following the instructions on the front page or the instructions on the 0.
Backout MPS A	30	45-60	Backout MPS A.		

Phase	Elapsed Time (Hours or Minutes)		Activity	Impact	Procedure
	This Step	Cum.			
					Procedure 24 step 1 through 14.
Post-backout health check	10	155-170	Run the syscheck utility to verify the MPS server is operationally sound.	Verify that the backout was successful.	Procedure 4 step 1.
Start the PDBA software	5	160-175	Re-activate the PDB on the Provisionable(PDBonly) MPS A servers.		Procedure 26

Table 12. Backout Phases for Standalone PDB

3.7 Log Files

All commands executed during an upgrade or installation, are logged in the “/var/TKLC/log/upgrade/upgrade.log” file. This log file is automatically initiated when upgrade software is invoked. This log file is rolled every time an upgrade is initiated. A total of up to five upgrade log files are stored on the server.

The upgrade wrapper script, ugwrap, logs its actions also to the “/var/TKLC/log/upgrade/ugwrap.log” file. This log file is rolled every time ugwrap is initiated. A total of up to five ugwrap log files are stored on the server.

4. DB ARCHITECTURE OVERVIEW

The default “DB Architecture” for EPAP 16.3 shall be “Compact”, which is compatible with EAGLE 46.6 or earlier releases. In order-to support EAGLE 46.7.0.0.0 EPAPX feature and DB capacity expansion, user has-to change DB Architecture from “Compact” to “eXtreme” on EPAP 16.3. In changing the DB Architecture from “Compact” to “eXtreme”, the EPAP software shall restart to support the capacity expansion. Before the change in DB Architecture on EPAP, the connecting EAGLE must upgrade to the new release with SLIC cards. Also, the user has-to enable the EPAPX feature on eagle card to support the eXtreme feature. Refer to section 4.2 to change DB Architecture from Compact to eXtreme.

4.1 Overview of DB architecture change in Customer Network

Upgrade from EPAP 16.1/16.2 to EPPA 16.3 followed by DB Architecture conversion from Compact to Extreme must be carried out in following order with different MTC window:

Phase-1 (Upgrade the EPAPs to EPAP 16.3 release in COMPACT mode):

NOTE: If the network consists of Non-PROVs and Mixed-EPAP, please refer Procedure A.26, After executing A.26, return to Phase-2 (Change the Mode from COMPACT mode to eXtreme mode for one Non-PROV site) otherwise continue with the following steps if the setup consists of StandAlonePDB + Non-PROVS.

1. First all non-PROVs should be upgraded to EPAP 16.3 in COMPACT mode. Refer to section 3.4 for the upgrade process.
2. Next the Standalone PDBs will be upgraded to EPAP 16.3 in COMPACT mode. Refer to section 3.4 for the upgrade process.

After this phase all EPAPs in the customer network are in EPAP 16.3 and are working in COMPACT mode.

Phase-2 (Change the Mode from COMPACT mode to eXtreme mode for one Non-PROV site):

Note: This step is required only when EPAP 16.3 and Eagle are to run in eXtreme mode. If EPAP and Eagle are to run in COMPACT mode, skip this phase.

Execute the procedure in the following sequence.

1. Choose one EPAP-Eagle site from the customer network, which will be converted to eXtreme mode.
2. On the EAGLE, replace all non-SLIC SCCP cards to SLIC 64-bit SCCP cards. Change stpopts:EPAPX ON.
3. On the connecting Non-Prov, change the mode from COMPACT to eXtreme. Refer section 4.2 to change DB Architecture to eXtreme. The StandalonePDB should remain in COMPACT mode at this stage.

4. Restore RTDB on Non-Prov EPAP-A (refer to Procedure A.10) and after successfully restored RTDB on EPAP-A(refer to Procedure A.11), perform reload from mate on Non-Prov EPAP-B. Reload the Eagle from EPAP. Check that the DB downloads and EPAP-Eagle network work normally. Live provisioning flows all the way to Eagle. Let the node soak for some *time-period.

Note: If everything goes well, then accept the upgrade (refer to Procedure 21 to accept the upgrade). Otherwise, roll back this node to the previous release (refer to section 6.2 to perform backout) and then reload its RTDB from a remote Non-PROV that is still in COMPACT mode.

Phase – 3 (Change the Mode from COMPACT mode to eXtreme mode for whole network):

At this stage, we have seen that EPAP and Eagle are working fine in eXtreme mode. All the remaining Non-PROVs and StandAlone PDBs will be converted to eXtreme mode now. All the remaining Non-PROVs will be converted to eXtreme mode first. After all Non-PROVs are converted to eXtreme, the StandalonePDBs will be converted to eXtreme. For every site, before converting the EPAPs, connected eagles will have EPAPx feature ON.

1. First on the EAGLE, replace all non-SLIC SCCP cards to SLIC 64-bit SCCP cards. Change stpopts:EPAPX ON.
2. On the connected Non-Prov, change the mode from Compact to eXtreme. Refer section 4.2 to change DB Architecture to eXtreme.
3. Reload the RTDB from already converted eXtreme mode RTDB in phase 2. Refer Procedure A.11.
4. Reload the Eagle SM cards from the EPAP.
5. Repeat steps 1 to 4 for all remaining Non-PROVs in the Customers network
6. Convert the StandalonePDBs to eXtreme mode.

***Note:** Allow soak period of around 1-7 days (depending upon customer provisioning volume) to see that everything works fine after the upgrade. After getting convinced that system is working fine, accept the upgrade.

4.2 Change DB Architecture from COMPACT to eXtreme to support EAGLE release 46.7.0.0.0(eXtreme feature)

The following table illustrates the progression of the movement of DB Architecture from COMPACT to eXtreme by procedure with estimated times and may vary due to differences in typing ability and system configuration. The procedures outlined in below **Table 814** are to be executed in the order they are listed.

Before proceeding with the change DB Architecture process, refer to section 4 and section 4.1 to get the overview of the DB Architecture and upgrade order.

Notes: 1. Skip this section for mixed EPAP as eXtreme feature not supported on mixed EPAP.
 2. DB Architecture cannot be reverted to COMPACT once moved to eXtreme architecture.

4.2.1 Phases to change DB Architecture to eXtreme (Standalone PDB)

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Check database before changing DB architecture to eXtreme.	40	40	Check 9dig counts for all DN/IMSI and IMEI before changing DB architecture to eXtreme.	Procedure 17
Change DB Architecture to eXtreme	40	80	Note: Skip this procedure on Mixed EPAP. Change DB Architecture from COMPACT to eXtreme. Note: If parsing gets failed at this stage then user needs to run it manually. Check Procedure A.4 to execute it manually.	Procedure 13
Accept the upgrade after successful soak period	5	This is done in a separate MTC	Accept the upgrade after sufficient soak period of around 1-7 days (depending upon customer provisioning volume) to see that everything works fine after the upgrade.	Procedure 21

Table 14 Phases to change DB Architecture to eXtreme (Standalone PDB)

4.2.2 Phases to change DB architecture to eXtreme (First Non-Prov site)

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Check database before changing DB architecture to eXtreme.	*see notes below	*see notes below	NOTE: Execute this step on attached PDBonly EPAP if not already executed. Check 9dig counts for all DN/IMSI and IMEI before changing DB architecture to eXtreme.	Procedure 17
Take backup before moving to eXtreme architecture	**See notes below	**See notes below	Take RTDB backup if not already taken, before moving to eXtreme architecture. Note: Skip this step for PDBonly.	Procedure A.7
Change DB Architecture to eXtreme	5	5	Change DB Architecture from COMPACT to eXtreme Note: EPAPX feature must be “ON” on the connected eagle before procedure 13	Procedure 13
Restore RTDB backup on Non-prov.	240	245	Restore RTDB backup on Non-prov MPS A.	Procedure A.10
Reload RTDB from mate	10	255	Reload RTDB from mate on Non-prov MPS B.	Procedure A.11

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Accept the upgrade after successful soak period	5	This is done in a separate MTC	Accept the upgrade on both MPS-A and MPS-B after sufficient soak period of around 1-7 days (depending upon customer provisioning volume) to see that everything works fine after the upgrade.	Procedure 21

Table 15 Phases to change DB Architecture to eXtreme (First Non-prov site)

***NOTE:** The time for checking database will be added for attached PDBOnly EPAP(Added in section 4.2.1).

****NOTE:** The time needed to backup application data is dependent on the amount of application data. This procedure cannot specify an exact length of time since different customers have different amounts of application data.

4.2.3 Phases to change DB architecture to eXtreme (Remaining Non-Prov sites)

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Take backup before moving to eXtreme architecture	*See notes below	*See notes below	Take RTDB backup if not already taken, before moving to eXtreme architecture. Note: Skip this step for PDBOnly.	Procedure A.7

Phase	Elapsed Time (Minutes)		Activity	Procedure
	This Step	Cum.		
Change DB Architecture to eXtreme	5	5	Change DB Architecture from COMPACT to eXtreme Note: EPAPX feature must be “ON” on the connected eagle before procedure 13	Procedure 13
Reload RTDB from remote	10	15	Reload the RTDB from remote(already in eXtreme mode) Note: Remote Non-Prov EPAP must be in eXtreme mode. (Which may be the first Non-Prov site converted in table 15 or any other remote EPAP which is already in eXtreme mode)	Procedure A.11
Reload RTDB from mate	10	25	Reload RTDB from mate on Non-prov MPS B.	Procedure A.11
Accept the upgrade after successful soak period	5	This is done in a separate MTC	Accept the upgrade on both MPS-A and MPS-B after sufficient soak period of around 1-7 days (depending upon customer provisioning volume) to see that everything works fine after the upgrade.	Procedure 21

Table 16 Phases to change DB Architecture to eXtreme (Remaining Non-Prov sites)

***NOTE:** The time needed to backup application data is dependent on the amount of application data. This procedure cannot specify an exact length of time since different customers have different amounts of application data.

5. UPGRADE PREPARATION

Procedure 1 Setting up the upgrade environment

Procedure 1: Setting up the upgrade environment

S T E P #	<p>This procedure sets up the upgrade environment. Windows are opened for both MPS servers.</p> <p>NOTE: Call My Oracle Support for assistance if modem access is the method use for upgrade.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u>.</p>	
1. <input type="checkbox"/>	Establish a connection to MPS A.	<p>If access to the MPS servers is not available through an IP network, connect to the E5-APP-B card via the serial port.</p> <p>For connecting the E5-APP-B A card, disconnect the console cable from the serial port on the E5-APP-B B card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B B card's adapter and use it for serial access. Cable part numbers - 830-1220-xx</p>
2. <input type="checkbox"/>	On the workstation, open one terminal window in preparation for establishing remote connections to the MPS servers.	Create a terminal window
3. <input type="checkbox"/>	Create a terminal window for MPS A.	Create a terminal window and give it a title of "MPS A"
4. <input type="checkbox"/>	MPS A: Enable capture file and verify the correspondent file is created.	Enable the data capture and verify that the data capture file is created at the path specified.
5. <input type="checkbox"/>	Log into MPS A.	<hostname> console login: admusr password: <password>
6. <input type="checkbox"/>	MPS A: Start screen Session.	<p>Execute the following command to start screen and establish a console session with MPS A.</p> <p>\$ screen -L</p>

Procedure 1: Setting up the upgrade environment

		If for Standalone PDB, the procedure is complete. Otherwise, continue with the next step.
7. <input type="checkbox"/>	Establish a connection to MPS B.	<p>If access to the MPS servers is not available through an IP network, connect to the E5-APP-B card via the serial port.</p> <p>For connecting the E5-APP-B B card, disconnect the console cable from the serial port on the E5-APP-B A card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B A card's adapter and use it for serial access. Cable part numbers - 830-1220-xx</p>
8. <input type="checkbox"/>	Create a terminal window for MPS B.	Create a terminal window and give it a title of "MPS B"
9. <input type="checkbox"/>	MPS B: Enable capture file and verify a correspondent file is created.	Enable the data capture and verify that the data capture file is created at the path specified.
10. <input type="checkbox"/>	Log into MPS B.	<pre><hostname> console login: admusr password: <password></pre>
11. <input type="checkbox"/>	MPS B: Start screen Session.	<p>Execute the following command to start screen and establish a console session with MPS B.</p> <pre>\$ screen -L</pre>
12. <input type="checkbox"/>	MPS A and B: Procedure Complete.	This procedure is complete.

Procedure 2 Determine if upgrade or installation is required

Procedure 2: Determine if upgrade or installation is required

S T E P	<p>This procedure executes the steps required to determine if an upgrade of the system is required or an initial application installation is required.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p>
----------------------------	---

Procedure 2: Determine if upgrade or installation is required

#	IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR UPGRADE ASSISTANCE.	
1. <input type="checkbox"/>	MPS A: Log in to MPS A.	<p>If not already logged-in, login at MPS A as 'admusr'.</p> <pre><hostname> console login: admusr password: <password></pre> <p>.</p>
2. <input type="checkbox"/>	MPS B: Log in to MPS B.	<p>If not already logged-in, login at MPS B as 'admusr'.</p> <pre><hostname> console login: admusr password: <password></pre>
3. <input type="checkbox"/>	<p>MPS B: Determine if the application is currently installed on the servers.</p> <p>(MPS B will be used to determine the current state of the servers. We will assume that the state of the A server is the same).</p>	<p>Execute an rpm query command and examine the output:</p> <pre>\$ rpm -qi TKLCepap</pre> <pre> Name : TKLCepap Relocations: (not relocatable) Version : 163.0.8 Vendor: Tekelec Release : 16.3.0.0.0_163.8.0 Build Date: Wed 27 Jun 2018 11:19:33 AM EDT Install Date: Tue 03 Jul 2018 03:41:55 AM EDT Build Host: coach-11.tekelec.com Group : Development/Build Source RPM: TKLCepap-163.0.8-16.3.0.0.0_163.8.0.src.rpm Size : 162888034 License: © TEKELEC 2005-2018 Signature : (none) Packager : <@tekelec.com> URL : http://www.tekelec.com/ Summary : Oracle Communications EPAP Package Description: This is the Oracle Communications EAGLE Application Processor(EPAP) Package. The Package installs EPAP software. EPAP provides Provisioning Database Application (PDBA on A side) and Real Time Database (RTDB).</pre>

Procedure 2: Determine if upgrade or installation is required

4. <input type="checkbox"/>	MPS B: Observe the output from the rpm query.	<p>The following is an example of what the output may look like:</p> <pre>\$ appRev Install Time: Tue Jul 3 03:52:57 2018 Product Name: EPAP Product Release: 16.3.0.0.0_163.8.0 Base Distro Product: TPD Base Distro Release: 7.6.0.0.0_88.48.0 Base Distro ISO: TPD.install-7.6.0.0.0_88.48.0-OracleLinux6.9-x86_64.iso ISO name: EPAP-16.3.0.0.0_163.8.0-x86_64.iso OS: OracleLinux 6.9</pre> <p>If the output similar-to the above example is displayed, then skip to step 6. Otherwise, proceed to the next step.</p>
5. <input type="checkbox"/>	MPS B: Installation is required if the application is not present on the server, else upgrade is required.	<p>If the application is not currently installed, output similar-to the example below will be returned from the rpm -qi command in step-3. If this is the case, then an application installation is required. Refer to section 3.3 to perform EPAP installation.</p> <pre>\$ rpm -qi TKLCepap package TKLCepap is not installed</pre> <p>Skip to step10</p>
6. <input type="checkbox"/>	MPS B: Determine which version of the application is present.	<p>Write Down the Release Number:</p> <p>Release Number: _____</p> <p>If the release number on the MPS is less than the release number on the upgrade media, then an upgrade is required.</p>
7. <input type="checkbox"/>	Determine if a major Upgrade is required.	If the current release is 16.1.x/16.2.x and target release is 16.3.y, it is a MAJOR UPGRADE .
8. <input type="checkbox"/>	Determine if an incremental Upgrade is required.	If the current release is 163.x.x and target release is 16.3.y.y (x.x is less than the number y.y on the upgrade media), it is an INCREMENTAL Upgrade .

Procedure 2: Determine if upgrade or installation is required

9. <input type="checkbox"/>	MPS A: Determine if it is Provisionable (either mixed-EPAP or PDBonly) or Non-Provisionable EPAP setup.	Execute the following command to determine if the EPAP is Provisionable(either mixed-EPAP or PDBonly) or Non-Provisionable. <pre>\$ uiEdit grep "PROVISIONABLE" "PROVISIONABLE_MPS" is set to "YES"</pre> If the above output contains “YES”, then the EPAP is Provisionable(either mixed-EPAP or PDBonly). Otherwise, the EPAP is Non-Provisionable. Write down this information. EPAP setup type: _____
10. <input type="checkbox"/>	MPS A and B: Procedure Complete.	This procedure is complete.

Procedure 3 Pre-upgrade requirements

Procedure 3: Verifying Pre-Upgrade Requirements and Capturing Upgrade Data

S T E P #	This procedure verifies that all pre-upgrade requirements have been met. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u>.	
1. <input type="checkbox"/>	Verify all required materials are present.	Verify that the materials listed in Upgrade Material List (Section 3.2) are present.
2. <input type="checkbox"/>	Verify the availability of passwords for MPS systems.	Refer to Table 5 for the list of users.
3. <input type="checkbox"/>	Review provisioning rules.	Please review the Provisioning information as defined in Section 3.1. If you do not understand in this section, contact My Oracle Support following the instructions on the front page or the in
4. <input type="checkbox"/>	Verify and close active GUI Sessions. On the menu, click User Administration->HTTP(s) Support->Terminate UI Sessions	Skip this step for fresh install. Login to EPAP GUI as uiadmin user. Terminate all the active GUI sessions from EPAP GUI.

		<div><div>A</div><div><table><thead><tr><th>Delete?</th><th>Session Id</th><th>User Id</th><th>User Name</th><th>Admin</th><th>IP Addr</th></tr></thead><tbody><tr><td><input type="radio"/></td><td>44</td><td>99</td><td>uiadmin</td><td>YES</td><td>10.250.32.216</td></tr><tr><td><input type="radio"/></td><td>45</td><td>99</td><td>uiadmin</td><td>YES</td><td>10.250.32.216</td></tr><tr><td><input type="radio"/></td><td>46</td><td>99</td><td>uiadmin</td><td>YES</td><td>10.250.32.216</td></tr></tbody></table><div>Delete Selected Active Session</div><p>Select all sessions and click on “Delete Selected Active Session” to delete all active sessions.</p></div></div>	Delete? <input type="radio"/>	46	99	uiadmin	YES	10.250.32.216																					
5. <input type="checkbox"/>	Procedure Complete.	This procedure is complete.																								

Procedure 4 System Health check

Procedure 4: System Health Check

S T E P #	<p>This procedure determines the health of the MPS System before beginning an upgrade.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR UPGRADE ASSISTANCE.</p>	
1. <input type="checkbox"/>	MPS A: Verify health of MPS A.	Execute Procedure A.1 on MPS A to verify the health of MPS A.
2. <input type="checkbox"/>	MPS B: Verify health of MPS B.	Execute Procedure A.1 on MPS B to verify the health of MPS B.
3. <input type="checkbox"/>	Procedure Complete.	This procedure is complete.

5. SOFTWARE INSTALLATION PROCEDURES

Pre install configuration and initial installation of EPAP can be done on any of the server in the mated pair in any order. These operations can be done simultaneously on both the servers.

Procedure 5 Pre-Install configuration on server A

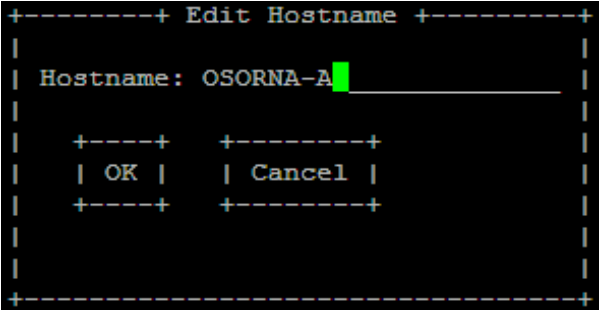

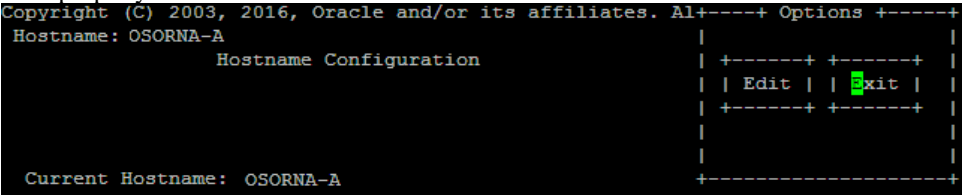

Procedure 5: Pre-Install Configuration on Server A

STEP #	This procedure provides instructions to perform pre-configuration for an initial install of the application.	
	Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.	
	IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR ASSISTANCE.	
IMPORTANT: Installation of the Operating System on an Oracle Application Server should be completed before starting installation procedure. Refer to Procedure A.13 or [4] for TPD installation guide.		
1. <input type="checkbox"/>	Connect to the Server. Note: Please connect E5-APP-B-02 card if it is PDBonly as PDBonly not supported on E5-APP-B-01 card.	If not already connected, connect to the E5-APP-B card via the serial port. For connecting the E5-APP-B A card, disconnect the console cable from the serial port on the E5-APP-B B card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B B card's adapter and use it for serial access. Cable part numbers - 830-1220-xx
2. <input type="checkbox"/>	Log in as "admusr" user.	If not already logged in, then login as "admusr": [hostname] consolelogin: admusr password: <i>password</i>
3. <input type="checkbox"/>	Start platcfg utility.	\$ sudo su - platcfg
4. <input type="checkbox"/>	Navigate to the Server Configuration screen.	Select Server Configuration and press [ENTER]

Procedure 5: Pre-Install Configuration on Server A

			<pre> +-----+ Main Menu +-----+ Maintenance ^ Diagnostics : Server Configuration # Security : Remote Consoles : Network Configuration : Exit v +-----+ </pre>
5. <input type="checkbox"/>	Navigate to the Hostname screen.	Select Hostname and press [ENTER]	<pre> ++ Server Configuration Menu ++ Hostname ^ Designation/Function # Configure Storage : Set Clock : Time Zone : Exit v +-----+ </pre>
6. <input type="checkbox"/>	Select Edit to edit the hostname.	Select Edit and press [ENTER]	<pre> +-----+ Options +-----+ +-----+ +-----+ Edit Exit +-----+ +-----+ +-----+ </pre>

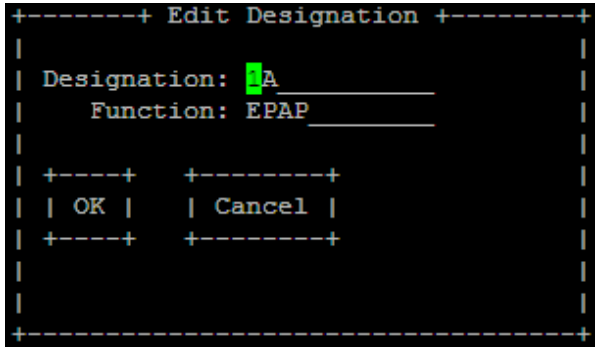

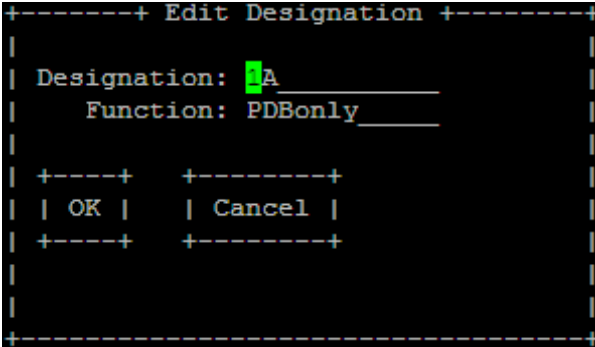

Procedure 5: Pre-Install Configuration on Server A

<p>7.</p> <input type="checkbox"/>	<p>Enter the hostname and press ok.</p>	<p>Delete the default entry and enter the Hostname as mps-xxxx-a where xxxx is the last 4 digits of server serial number. Press OK when done.</p>  <p>While connected to the serial console, some console output might come when the user is using the serial console to configure the EPAP. Those serial output are harmless and can be ignored.</p>
<p>8.</p> <input type="checkbox"/>	<p>Exit Back to the Server Configuration Menu.</p>	<p>Select EXIT to exit back to the Server Configuration Menu. Verify that the hostname has been properly set.</p> 
<p>9.</p> <input type="checkbox"/>	<p>Navigate to the Designation/Function menu option.</p>	<p>Select Designation/Function and press [ENTER]</p>

Procedure 5: Pre-Install Configuration on Server A

		<pre> ++ Server Configuration Menu ++ Hostname ^ Designation/Function : Configure Storage # Set Clock : Time Zone : Exit v +-----+ </pre>

Procedure 10 Procedure to Configure Sync Network Redundancy

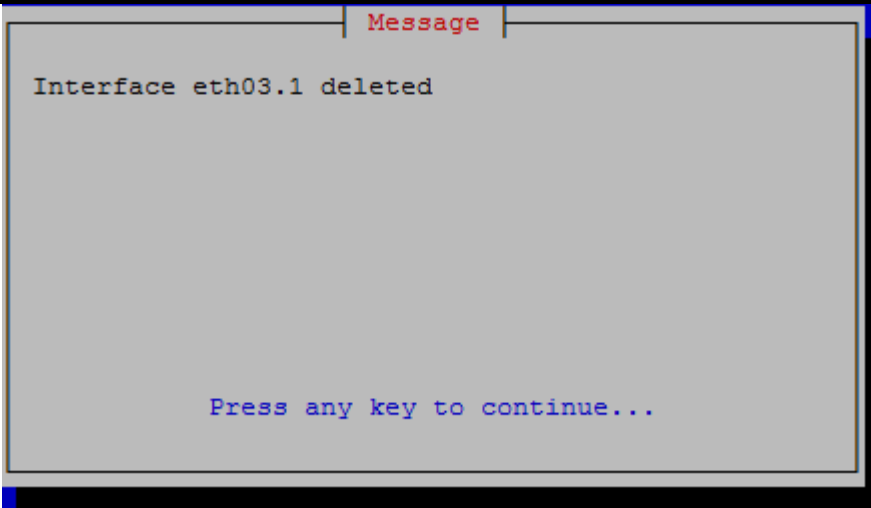

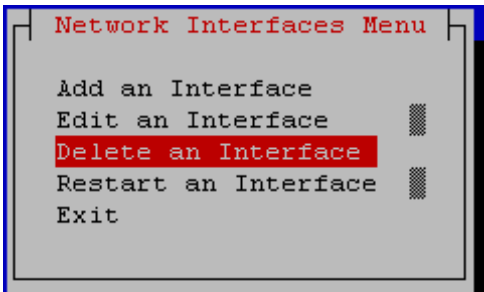

Note: This procedure will configure the E5-APP-B EPAP cards with the Sync Network Redundancy feature. This will use the Backup Provisioning Network ports, therefore the Backup Provisioning Network feature cannot be used.

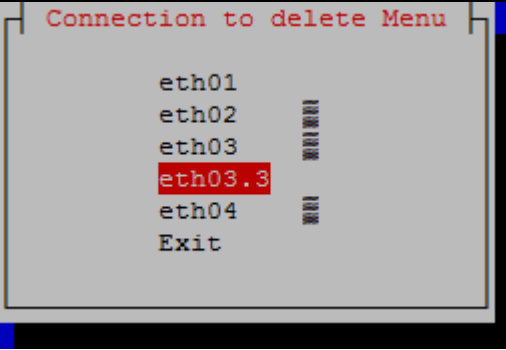

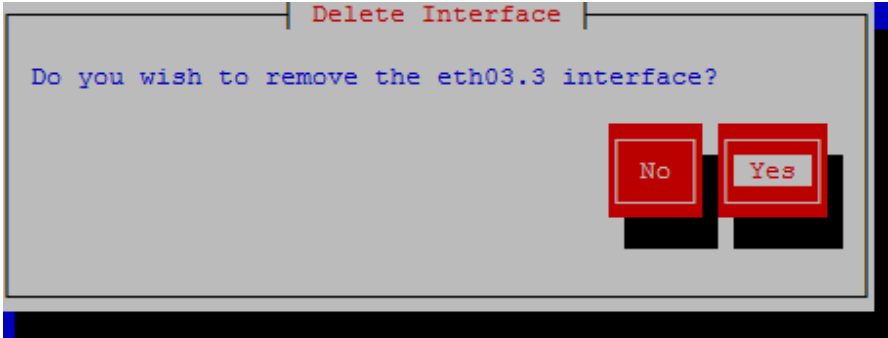

Procedure 10: Procedure to Configure Sync Network Redundancy

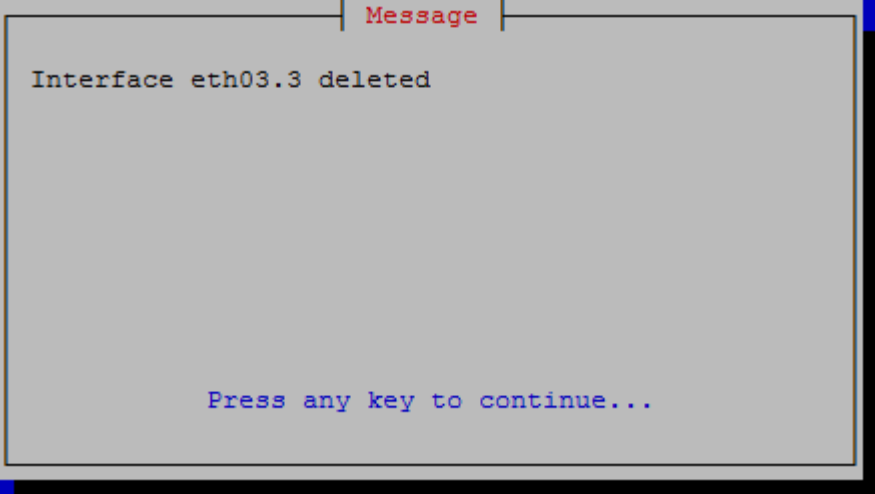

S T E P #	<p>This procedure will sync network redundancy in place of backup provisioning network.</p> <p>Note: Estimated time of completion is 90 minutes.</p>	
1. <input type="checkbox"/>	MPS A: Log in as “admusr” user to the serial console of E5-APP-B card.	<pre>[hostname] consolelogin: admusr password: password</pre>
2. <input type="checkbox"/>	MPS A: Start platcfg utility.	<pre>\$ sudo su - platcfg</pre>
3. <input type="checkbox"/>	MPS A: Navigate to the Network Configuration Menu.	<p>On the platcfg Main Menu, select Network Configuration and press [ENTER].</p> 

<p>4.</p> <input type="checkbox"/>	<p>MPS A: Navigate to the Network Interfaces Menu.</p>	<p>On the Network Configuration menu, select Network Interfaces and press [ENTER].</p> 
<p>5.</p> <input type="checkbox"/>	<p>MPS A: Navigate to the Delete an Interface Menu.</p>	<p>On the Network Interfaces Menu, select Delete an Interface and press [ENTER].</p> 
<p>6.</p> <input type="checkbox"/>	<p>MPS A: Select to delete eth03.1 and press Enter.</p>	<p>On the Connection to delete Menu, select eth03.1 and press [ENTER].</p>

		
<p>7.</p> <input type="checkbox"/>	<p>MPS A: Confirm eth03.1 interface deletion.</p>	<p>Select Yes and press [ENTER] to delete the eth03.1 interface.</p> 

		
8. <input type="checkbox"/>	<p>MPS A: Press any key to continue.</p> <p>Navigate to the Delete an Interface Menu.</p>	<p>On the Network Interfaces Menu, select Delete an Interface and press [ENTER].</p> 
9. <input type="checkbox"/>	<p>MPS A: Select to delete eth03.3 and press Enter.</p>	<p>On the Connection to delete Menu, select eth03.3 and press [ENTER].</p>

		
10. <input type="checkbox"/>	MPS A: Confirm eth03.3 interface deletion.	<p>Select Yes and press [ENTER] to delete the eth03.3 interface.</p> 

		
11. <input type="checkbox"/>	MPS A: Press any key to continue and exit out of platcfg.	<p>Select Exit and press [ENTER] to return to the Network Configuration Menu.</p> <p>Select Exit and press [ENTER] to return to the Main Menu.</p> <p>Select Exit and press [ENTER] to exit out of platcfg.</p>
12. <input type="checkbox"/>	MPS A: Verify that eth03.1 and eth03.3 are deleted.	<pre>\$ sudo netAdm show</pre> <pre>eth01</pre> <pre>eth02</pre> <pre>eth03</pre> <pre>eth04</pre> <p>The interfaces eth03.1 and eth03.3 should not be listed.</p>
13. <input type="checkbox"/>	MPS A: Take the backup of original net.conf.	<pre>\$ sudo cp /usr/TKLC/plat/etc/net.conf /usr/TKLC/plat/etc/net.conf_orig</pre>
14. <input type="checkbox"/>	MPS A: Replace the network configuration file for sync network redundancy.	<pre>\$ sudo cp /usr/TKLC/plat/etc/net.sync.conf /usr/TKLC/plat/etc/net.conf</pre> <p>cp: overwrite `/usr/TKLC/plat/etc/net.conf'? y</p>

15. <input type="checkbox"/>	MPS A A: Take the backup of original vlan.conf.	\$ sudo cp /usr/TKLC/plat/etc/vlan.conf /usr/TKLC/plat/etc/vlan.conf_orig
16. <input type="checkbox"/>	MPS A: Replace the vlan configuration file for sync network redundancy.	<p><u>E5-APP-B Card:</u></p> <p>Single Pair of Switch(18 SM Cards): vlan.sync.single_pair_switch.e5appb.conf (Ports 7 to 24 on switch 1A and ports 5 to 24 on switch 1B can be used for SM card connectivity)</p> <p>Two Pair of switches (40 SM Cards): vlan.sync.e5appb.conf (Ports 7 to 22 on switch 1A and ports 5 to 22 on switch 1B can be used for SM card connectivity, no change for switch 1C and 1D)</p> <p>For e.g., on T1200 server for Single pair of switches:</p> <p>\$ sudo cp /usr/TKLC/plat/etc/vlan.sync.single_pair_switch.t1200.conf /usr/TKLC/plat/etc/vlan.conf</p> <p>cp: overwrite `/usr/TKLC/plat/etc/vlan.conf'? y</p>
17. <input type="checkbox"/>	MPS A: Reconfigure the network interfaces.	<p>\$ sudo netAdm init</p> <p>Interface bond0 added</p> <p>Interface eth01 added</p> <p>Interface eth02 added</p> <p>Interface bond0.3 added</p> <p>Interface eth03 added</p> <p>Interface eth04 added</p> <p>Interface bond0.1 added</p> <p>Successfully configured network</p>
18. <input type="checkbox"/>	MPS A: Restart network service.	\$ sudo service network restart

19. <input type="checkbox"/>	MPS B	Repeat all the above steps on the MPS B.
20. <input type="checkbox"/>	Network Connectivity	Connect eth04 on MPS A to port 5 on Switch 1A and connect eth04 on MPS B to port 6 on Switch 1A.
21. <input type="checkbox"/>	Configure Switch 1B first and then Switch 1A using Procedure 9.	Perform Procedure 9 – Switch1B and Switch1A Configuration to configure Switch1B and then Switch1A.
22. <input type="checkbox"/>	<p>MPS A: Verify that ping mate is working.</p> <p>Also ensure that the sync redundancy is working fine by turning off one switch and running ping mate.</p>	<p>\$ ping -c 4 mate</p> <p>PING mate (192.168.2.100) 56(84) bytes of data.</p> <p>64 bytes from mate (192.168.2.100): icmp_seq=1 ttl=64 time=0.189 ms</p> <p>64 bytes from mate (192.168.2.100): icmp_seq=2 ttl=64 time=0.188 ms</p> <p>64 bytes from mate (192.168.2.100): icmp_seq=3 ttl=64 time=0.166 ms</p> <p>64 bytes from mate (192.168.2.100): icmp_seq=4 ttl=64 time=0.143 ms</p> <p>---</p> <p>--- mate ping statistics ---</p> <p>4 packets transmitted, 4 received, 0% packet loss, time 3001ms</p> <p>rtt min/avg/max/mdev = 0.143/0.171/0.189/0.022 ms</p>
23. <input type="checkbox"/>	MPS A: Reconfigure EPAP using epapconfig menu if the configuration was done before configuring sync network redundancy.	<p>\$ su - epapconfig</p> <p>Please follow the instructions written in Procedure 11.</p>
24. <input type="checkbox"/>	Procedure complete.	Procedure is complete.

Procedure 11 Configuring the application

Procedure 11: Configuring the Application

STEP #	This procedure configures the application on the server.	
	Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.	
	IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR ASSISTANCE.	
NOTE: This procedure configures the application in the IPv4 configuration. To configure the application in the IPv6 configuration, refer to [7].		
1. <input type="checkbox"/>	MPS A: Log on Server A.	[hostname] consolelogin: admusr password: password
2. <input type="checkbox"/>	MPS A: Switch user to epapconfig.	\$ sudo su - epapconfig
3. <input type="checkbox"/>	MPS A: A note of caution appears. Evaluate the conditions listed. When all the conditions are satisfied, press Return to continue.	Caution: This is the first login of the text user interface. Please review the following checklist before continuing. Failure to enter complete and accurate information at this time will have unpredictable results. <div><div>1. The mate MPS servers (MPS A and MPS B) must be powered on.</div><div>2. "Initial Platform Manufacture" for the mate MPS servers must be complete.</div><div>3. The sync network between the mate MPS servers must be operational.</div><div>4. You must have the correct password for the epapdev user on the mate MPS server.</div><div>5. You must be prepared to designate this MPS as provisionable or non-provisionable.</div></div> Press return to continue...

Procedure 11: Configuring the Application

<p>4.</p> <input type="checkbox"/>	<p>MPS A: Upon pressing Return you can now abort or proceed with the initial configuration.</p> <p>To continue with the configuration, enter Y.</p>	<p>Are you sure you wish to continue? [N]:Y</p>
<p>5.</p> <input type="checkbox"/>	<p>MPS A:</p> <p>For Mixed EPAP or Non-Provisionable EPAP: You are prompted for the epapdev, root and admusr user password on the mate MPS server in order to confirm the secure shell keys are successfully exchanged. The example shows the output generated when the correct password is entered, the secure shell keys are successfully exchanged, and the UI database is set up on MPS A and MPS B at this site.</p> <p>Type Y if this site is Provisionable(either mixed-EPAP or PDBonly), otherwise Type N.</p> <p>For Standalone PDB: You are prompted for the System Number and Network Configuration Type.</p>	<pre> Password of epapdev: ssh is working correctly. Password of root: ssh is working correctly. Password of admusr: ssh is working correctly. Password of root: ssh is working correctly. Building the initial database on side A. Stopping local slave Stopping remote slave EuiDB already exists. FIPS integrity verification test failed. Starting local slave Starting remote slave The provisioning architecture of the EPAP software allows for exactly 2 customer provisionable sites. Additional sites that are to receive the data provisioned to the provisionable sites should answer 'N' here. If there are only 2 mated sites, it is safe to answer 'Y' here. Is this site provisionable? [Y]: Y Caution: This is the first login of the text user interface. Press return to continue... Are you sure you wish to continue? [N]: Y Building the initial database on side A. Stopping local slave No preexisting EuiDB database was detected. Set EPAP System Number: ES12345678 Enter the Network Configuration Type (1 for Single, 2 for Segmented): 2 </pre>

Procedure 11: Configuring the Application

6. SOFTWARE UPGRADE PROCEDURES

Procedure 14 Assess MPS server's readiness for upgrade

Procedure14: Assess the MPS Server's Readiness for Upgrade

S T E P #	This procedure executes the steps required to assess the readiness of a system to be upgraded.	
	Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.	
	IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u> .	
1. <input type="checkbox"/>	MPS B: Log in as the user "epapdev".	<p>If not already logged-in, then log in.</p> <pre><hostname> console login: epapdev password: <password></pre>
2. <input type="checkbox"/>	MPS B: Display the /etc/hosts configuration for the pdb entities.	<p>If upgrading the first MPS B of a Provisionable mated pair, execute the following command to display the configuration of pdb entries:</p> <pre>\$ grep pdb /etc/hosts</pre> <p>Otherwise, skip to step 4.</p>
3. <input type="checkbox"/>	MPS B: Verify the correct configuration for pdb entities in the /etc/hosts file.	<p>Below is an example of the output of the grep command:</p> <pre>192.168.55.176 host1-a pdba 192.168.61.76 host2-a prova-ip pddb</pre> <p>If the command output contains 2 entries (pdba and pddb are both configured), continue to the next step .</p> <p>If the command output does not contain unique entries for pdba and pddb, contact My Oracle Support following the instructions on the front page or the instructions on the 0.</p>
4. <input type="checkbox"/>	MPS B: Determine the mysqld multi log file permissions are correct.	<p>Execute the following command to display the file properties of the mysqld_multi log file:</p> <pre>\$ ls -l /var/TKLC/epap/db/mysqld_multi.log -rw-rw-r-- 1 mysql mysql 5460 Jun 21 05:37 /var/TKLC/epap/db/mysqld_multi.log</pre>

Procedure14: Assess the MPS Server’s Readiness for Upgrade

<p>5. <input type="checkbox"/></p>	<p>MPS B: Verify the file permissions.</p>	<p>Ownerships and permissions of <code>mysqld_multi.log</code> should be set as <code>mysql:mysql</code> and <code>644</code> respectively. If it is not same as illustrated in above step 4 then change it using following command:</p> <p>Switch user to root.</p> <p>\$ su - root Password:</p> <p>Execute the following command to change the ownership: \$ chown mysql:mysql mysqld_multi.log</p> <p>Execute the following command to change the file permission: \$ chmod 644 mysqld_multi.log</p> <p>Repeat above step 4 to verify ownerships and permissions of <code>mysqld_multi.log</code> .</p> <p>Logout from the “root” user by executing the following command: \$ exit</p>
<p>6. <input type="checkbox"/></p>	<p>MPS B: Display the contents of the <code>/var/TKLC/upgrade</code> directory.</p>	<p>Execute the following command to display the presence of EPAP software ISO images:</p> <p>\$ ls -la /var/TKLC/upgrade</p> <p>Note: The file permissions and ownership may vary due to the different methods used to transfer the file.</p> <p>Below is an example of the output of the ‘ls -la’ command for EPAP16.2:</p> <pre>[root@Natal-A upgrade]# ls -la total 1785996 drwxrwxr-x. 3 root admgrp 4096 Jun 23 01:19 . dr-xr-xr-x. 21 root root 4096 Jun 23 00:00 .. -r--r----- 1 root root 904644608 Jun 23 01:19 EPAP-16.2.0.0.1_162.26.0-x86_64.iso</pre> <p>Below is an example of the output of the ‘ls -la’ command for EPAP16.1:</p>

Procedure14: Assess the MPS Server's Readiness for Upgrade

		<pre>[root@Natal-A upgrade]# ls -la total 2920036 drwxrwxr-x. 3 root admgrp 4096 Jun 23 01:34 . dr-xr-xr-x. 21 root root 4096 Jun 23 00:00 .. -r--r----- 1 root root 1161250816 Jun 23 01:34 EPAP-16.1.1.0.0_161.38.0-x86_64.iso</pre>
7. <input type="checkbox"/>	MPS B: Delete old ISO images.	<p>Switch user to root.</p> <p>\$ su - root Password:</p> <p>Remove any ISO images that are not the target software ISO image using the following command:</p> <p># rm -f /var/TKLC/upgrade/<filename></p> <p>Refer to step 6 to display the content of /var/TKLC/upgrade directory. Removed ISO should not be displayed.</p> <p>Switch to epapdev user.</p> <p># su - epapdev</p>
8. <input type="checkbox"/>	MPS B: Determine when last reboot occurred. For any server up longer than 180 days would be a candidate for reboot during a maintenance window.	<p>\$ uptime</p> <p>15:19:34 up 23 days, 3:05, 2 users, load average: 0.10, 0.13, 0.09</p>
9. <input type="checkbox"/>	MPS B: Log in as the user "admusr".	<p>\$ su - admusr Password:</p>

Procedure14: Assess the MPS Server's Readiness for Upgrade

10. <input type="checkbox"/>	MPS B: Disk Integrity step: Executing self-test on the disk.	<p>Execute the following command: \$ sudo smartctl -t short /dev/sda</p> <p>The output on E5-APP-B card would be like:</p> <pre>smartctl 5.43 2012-06-30 r3573 [x86_64-linux-2.6.32-642.6.2.el6prere17.4.0.0_88.32.0.x86_64] (local build) Copyright (C) 2002-12 by Bruce Allen, http://smartmontools.sourceforge.net === START OF OFFLINE IMMEDIATE AND SELF-TEST SECTION === Sending command: "Execute SMART Short self-test routine immediately in off-line mode". Procedure 18: Upgrade Server B

		<pre>1489042136::warning: erase unlink of /lib/modules/2.6.32-642.6.2.el6prere17.4 0.0.0_88.32.0.x86_64/modules.block failed: No such file or directory 1489042197::WARNING: /usr/TKLC/plat/etc/alarms/alarms_mps.xml has been updated.. .reparsing xml...</pre> <p>Refer to section 3.7 to know more about logging.</p>
30. <input type="checkbox"/>	MPS B: Verify the Upgrade.	<pre>\$ grep "Upgrade returned success" /var/TKLC/log/upgrade/upgrade.log</pre> <p>Verify that the message “Upgrade returned success!” is displayed. If it is not, contact My Oracle Support following the instructions on the front page or the instructions on the 0.</p> <pre>1400786220:: upgrade returned success!</pre>
31.		<p>After upgrade check for PDB_SUB_CAPACITY uiEdit variable value by below command:</p> <pre>\$ uiEdit grep -i PDB_SUB_CAPACITY "PDB_SUB_CAPACITY" is set to "528000000"</pre> <p>If it is not 528000000 on compact DB architecture, set it to 528000000 using below command.</p> <pre>\$ uiEdit "PDB_SUB_CAPACITY" "528000000" "PDB_SUB_CAPACITY" is set to "528000000"</pre>
32. <input type="checkbox"/>	MPS B: Verify that it is an Incremental Upgrade or Major upgrade	Check Procedure 2, Steps 7 and 8. If the upgrade type is a Major upgrade, proceed with the following step. If it's Incremental, proceed to step 34.
33. <input type="checkbox"/>	MPS B: Enable syscheck fs module.	<p>Execute the following command to enable the syscheck fs module.</p> <pre>\$ syscheckAdm --enable disk fs</pre>
34. <input type="checkbox"/>	MPS B: Upgrade is complete. Verify Health of MPS B.- check if this step is needed	Execute Procedure A.1 on MPS B to verify the health of MPS B.

Procedure 18: Upgrade Server B

		<p>If this is a Major Upgrade, the syscheck utility will report the “3000000000000002 – Server Internal Disk Error” alarm as the disk mirroring is in progress. The alarm will be cleared after the completion of disk mirroring.</p> <p>Also, the syscheck utility will report the “5000000000000002 - Server Application Process Error” alarm as the Erap processes are not running after the upgrade.</p> <p>Verify that no unexpected alarms are noted.</p> <p>Note: Disk mirroring does not start until the upgrade is accepted.</p> <p>If it is major upgrade Proceed with Procedure A.18 to upgrade SSL certificate.</p>
35. <input type="checkbox"/>	MPS B: Verify that if alarm to accept upgrade is present.	<p>To verify alarm to accept upgrade execute following command:</p> <p>\$ alarmMgr --alarmStatus grep tpdServerUpgradePendingAccept</p> <p>Following output shall be observed:</p> <p>SEQ: 5 UPTIME: 112 BIRTH: 1498203542 TYPE: SET ALARM: TKSPLATMI33 tpdServerUpgradePendingAccept 1.3.6.1.4.1.323.5.3.18.3.1.3.33 32532 Processing Error Configuration Error</p> <p>Note: Disk mirroring does not start until the upgrade is accepted.</p>
36. <input type="checkbox"/>	Reconnect console cable.	On E5-APP-B card, reconnect the console cable between the serial port labeled 'S0' on E5-APP-B B card's adapter and the serial port labeled 'S1' on the E5-APP-B A card's adapter. Cable part numbers - 830-1220-xx
37. <input type="checkbox"/>	Procedure complete.	Procedure is complete.

Procedure 19 Upgrade server A

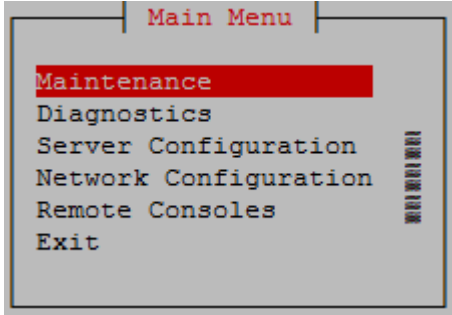

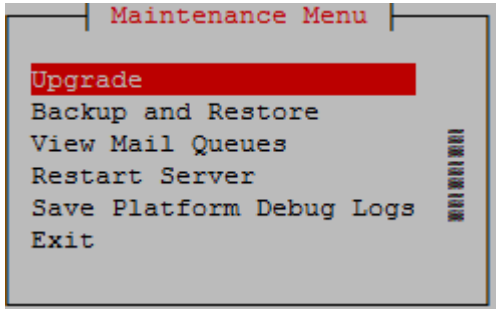

Procedure19: Upgrade Server A

STEP #	This procedure upgrades the MPS-A server in the EPAP System.	
	Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.	
	IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u> .	
1. <input type="checkbox"/>	MPS A: Determine media available for upgrade.	Perform Procedure A.12 or use an EPAP ISO image to perform upgrade.
2. <input type="checkbox"/>	Establish a connection to MPS A.	<p>If access to the MPS servers is not available through an IP network, connect to the E5-APP-B card via the serial port.</p> <p>For connecting the E5-APP-B A card, disconnect the console cable from the serial port on the E5-APP-B B card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B B card's adapter and use it for serial access. Cable part numbers - 830-1220-xx</p> <p>Skip to step 6, if connected through serial console.</p>
3. <input type="checkbox"/>	<p>Create a terminal window and establish a connection by logging into MPS B.</p> <p>Log in to MPS B.</p>	<p>In a newly created terminal window labeled "MPS B", connect directly into MPS B.</p> <p># ssh epapdev@<MPS B> Password: <password></p>
4. <input type="checkbox"/>	<p>MPS B: Start screen session.</p> <p>MPS B: Connect to the console of MPS A.</p>	<p>Execute the following commands to start screen and establish a console session to MPS A.</p> <p>#su - root Password:</p> <p>\$ screen -L</p> <p>Execute the following command on E5-APP-B:</p> <p>\$ sudo minicom mate</p>

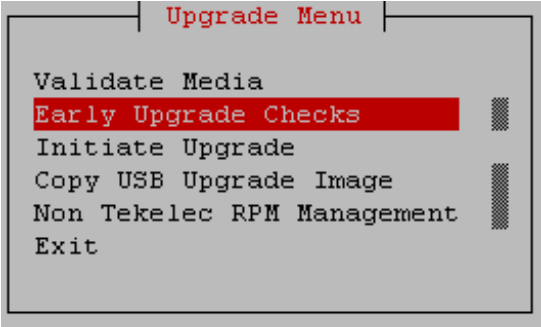

Procedure19: Upgrade Server A

		If above command fails then refer to Procedure A.27.
5. <input type="checkbox"/>	MPS A: Login prompt is displayed.	<hostname> console login: Note: Hit enter if no login prompt is displayed.
6. <input type="checkbox"/>	MPS A: Log in to the server as the user "epapdev".	<hostname> console login: epapdev password: <password>
7. <input type="checkbox"/>	MPS A: Verify that it is an Incremental Upgrade. or a Major Upgrade	Check Procedure 2, Steps 7 and 8. If the upgrade type is Major upgrade, proceed with the following step. If it's Incremental, proceed to step 10.
8. <input type="checkbox"/>	MPS A: Disable syscheck fs module.	\$ su - root Password: Execute the following command to disable the syscheck fs module. # syscheckAdm --disable disk fs
9. <input type="checkbox"/>	MPS A: Create upgrade.conf for splitting mirrors if this is a Major upgrade.	Create a file (if not already created) and add the line "BACKOUT_TYPE=SPLIT_MIRROR" (to trigger the split mirror upgrade) by executing the following steps: 1. # vi /usr/TKLC/plat/etc/upgrade/upgrade.conf 2.If file already contains some white listed alarms then append below line at the end of the file, otherwise add it to first line: BACKOUT_TYPE=SPLIT_MIRROR NOTE: Not performing this step will prevent any successful backout. Execute the following command to verify that the above command has been executed successfully: # cat /usr/TKLC/plat/etc/upgrade/upgrade.conf The output should be: [root@MPS-B ~]# cat /usr/TKLC/plat/etc/upgrade/upgrade.conf BACKOUT_TYPE=SPLIT_MIRROR

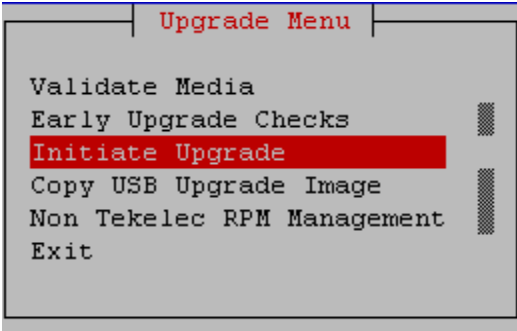

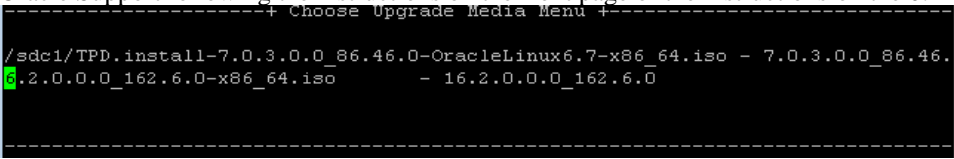

Procedure19: Upgrade Server A

		<code># su - admusr</code>
10. <input type="checkbox"/>	MPS A: Execute the platcfg menu.	<code>\$ sudo su - platcfg</code>
11. <input type="checkbox"/>	MPS A: Select the Maintenance submenu.	<p>The platcfg Main Menu appears. On the Main Menu, select Maintenance and press [ENTER].</p>  <pre> Main Menu ----- Maintenance Diagnostics Server Configuration Network Configuration Remote Consoles Exit </pre>
12. <input type="checkbox"/>	MPS A: Select the Upgrade submenu.	<p>Select the Upgrade menu and press [ENTER].</p>  <pre> Maintenance Menu ----- Upgrade Backup and Restore View Mail Queues Restart Server Save Platform Debug Logs Exit </pre>
13. <input type="checkbox"/>	MPS A: Select the Early Upgrade Checks submenu.	Select the “Early Upgrade Checks” menu to verify that the system is ready for upgrade.

Procedure19: Upgrade Server A

		<div data-bbox="746 257 1289 582">  </div> <p>If the Early Upgrade Checks fail due to the NTP related alarms, then execute step 15. Otherwise, skip to step 16.</p> <p>Contact My Oracle Support following the instructions on the front page or the instructions on the 0, if the early upgrade checks fail, due to any other reason.</p>
<p>14.</p> <p><input type="checkbox"/></p>	<p>MPS A: White List NTP Alarms</p>	<ol style="list-style-type: none"> 1) If the Early Upgrade Checks fail due to the NTP related alarms, then ignore the NTP alarms using the following commands: <ol style="list-style-type: none"> e. Exit the platcfg menu f. Change to root user using the “su –“ command. g. <code>vim /usr/TKLC/plat/etc/upgrade/upgrade.conf</code> h. Edit the following line to include the NTP related alarms. <code>EARLY_CHECK_ALARM_WHITELIST=TKSPLATMI2</code> <p>For example – To whitelist the NTP alarm “tpdNTPDaemonNotSynchronizedWarning” which has the alarm code TKLCPLATMI10, the above mentioned line should be edited as <code>EARLY_CHECK_ALARM_WHITELIST=TKSPLATMI2,TKSPLATMI10</code></p> <p>Note: There should not be any space between two alarms i.e. between TKSPLATMI2 and TKSPLATMI10</p> 2) If the Early Upgrade Checks fail due to “Server Default Route Network Error”, then this alarm shall be whitelisted in upgrade.conf file. To whitelist this alarm which has the alarm code TKSPLATMA14, the above mentioned line should be edited as <code>EARLY_CHECK_ALARM_WHITELIST=TKSPLATMI2,TKSPLATMI10,TKSPLATMA14</code>

Procedure19: Upgrade Server A

15. <input type="checkbox"/>	MPS A: Select Initiate Upgrade.	Select the Initiate Upgrade menu and press [ENTER]. 
16. <input type="checkbox"/>	MPS A: Select the Upgrade Media.	<p>The screen will display a message that it is searching for upgrade media. Once the upgrade media is found, an Upgrade Media selection menu will be displayed similar to the example shown below.</p> <p>Select the upgrade media on ISO image. There should only be one selection available, as shown in the example below. If there is more than one selection available, contact My Oracle Support following the instructions on the front page or the instructions on the 0.</p> 
17. <input type="checkbox"/>	MPS A: Upgrade proceeds.	The screen displays the following, indicating that the upgrade software is first running the early upgrade checks, and then proceeding with the upgrade.

Procedure19: Upgrade Server A

		<pre>Replacing <seconds> with the value from the log. Starting Early Upgrade Checks at 1448399773 Running earlyUpgradeChecks() for Upgrade::EarlyPolicy::TPDEarlyChecks upgrade policy... Verified server is not pending accept of previous upgrade Hardware architectures match Install products match. Whitelisted alarms: Verified server is alarm free! Verified all raid mirrors are synced. Early Upgrade Checks Have Passed! Early Upgrade Checks finished at 1448399780 Initializing upgrade information...</pre>
18. <input type="checkbox"/>	MPS A: Upgrade proceeds.	<p>Many informational messages will come across the terminal screen as the upgrade proceeds.</p> <p>Finally, after upgrade is complete, the server will reboot.</p>
19. <input type="checkbox"/>	MPS A: Upgrade completed.	<p>After the final reboot, Press Enter , the screen will display the login prompt, as shown in the example below.</p> <pre>Starting smartd: [OK] Daemon is not running... AlarmMgr daemon is not running, delaying by 1 minute TKLChwmgmtcli stop/pre-start, process 9750 TPDhpDiskStatus stop/pre-start, process 9782 Oracle Linux Server release 6.9 Kernel 2.6.32-696.20.1.el6prere17.6.0.0.0_88.47.0.x86_64 on an x86_64 Arica-A login: █</pre>
20. <input type="checkbox"/>	MPS A: Log in to the server as the user "epapdev".	<p><hostname> console login: epapdev password: <password></p> <p>Note: The SSH login for root shall get enabled after the upgrade.</p>

24. <input type="checkbox"/>	MPS A: Verify that it is an Incremental Upgrade. or Major Upgrade	Check Procedure 2, Steps 7 and 8. If the upgrade type is Major upgrade, proceed with the following step. If it's Incremental, proceed to step 26.
25. <input type="checkbox"/>	MPS A: Enable syscheck fs module.	<p>\$ su - root Password:</p> <p>Execute the following command to enable the syscheck fs module.</p> <p># syscheckAdm --enable disk fs</p>
26. <input type="checkbox"/>	MPS A: Upgrade is complete. Verify Health of MPS A.- check if this step is needed	<p>Execute Procedure A.1 on MPS A to verify the health of MPS A.</p> <p>On a Provisionable(mixed-EPAP or PDBonly) MPS, expect that the syscheck utility will alarm the fact that the PDBA software is not running. This will appear as a “5000000000000002 – Server Application Process Error” alarm.</p> <p>If this is a Major Upgrade, the syscheck utility will report the “3000000000000002 – Server Internal Disk Error” alarm as the disk mirroring is in progress. The alarm will be cleared after the completion of disk mirroring.</p> <p>Verify that no unexpected alarms are noted.</p> <p>If it is major upgrade, Proceed with Procedure A.18 to upgrade SSL certificate.</p>

Procedure19: Upgrade Server A

27. <input type="checkbox"/>	MPS A: Verify that if alarm to accept upgrade is present.	<p>To verify alarm to accept upgrade execute following command:</p> <p>\$ alarmMgr --alarmStatus grep tpdServerUpgradePendingAccept</p> <p>Following output shall be observed:</p> <pre>SEQ: 5 UPTIME: 112 BIRTH: 1498203542 TYPE: SET ALARM: TKSPLATMI33 tpdServerUpgradePendingAccept 1.3.6.1.4.1.323.5.3.18.3.1.3.33 32532 Processing Error Configuration Error</pre> <p>Note: Disk mirroring does not start until the upgrade is accepted.</p>
28. <input type="checkbox"/>	MPS B: Loginn as epapdev user.	<p><hostname> console login: epapdev</p> <p>password: <password></p>
29. <input type="checkbox"/>	MPS B: Reboot MPS B server.	<p>Reboot MPS-B to disable the root login.</p> <p>Switch to root user.</p> <p>\$ su – root</p> <p>Password:</p> <p>Reboot the server:</p> <p>\$ reboot</p> <p>Wait til the reboot gets completed.</p>
30. <input type="checkbox"/>	MPS A: Enable PDBA proxy and VIP features.	<p>If PDBA Proxy Enabled = Yes, in the step 14 of Procedure 18, then execute Procedure A.20 to enable Epap PDBA Proxy and VIP Features. Otherwise, skip this step.</p>
31. <input type="checkbox"/>	MPS A: Check services for query server.	<p>\$ epapdb -c queryserver</p> <p>If query server is not configured i.e. INFO: No Query Server Configured, then skip this step otherwise Execute Procedure A.22 to restart MYSQL service for PDB on query server.</p>
32. <input type="checkbox"/>	Reconnect console cable.	<p>On E5-APP-B card, reconnect the console cable between the serial port labeled 'S0' on E5-APP-B A card's adapter and the serial port labeled 'S1' on the E5-APP-B B card's adapter. Cable part numbers - 830-1220-xx</p>

Procedure19: Upgrade Server A

33. <input type="checkbox"/>	Procedure is complete.	Procedure is complete. Note: If upgrading an EPAP Provisionable mated pair and you have just completed this procedure for the Local MPS A and MPS B. Repeat the same procedures to upgrade the Remote Pair. See Section 2.1 for more information.

Procedure 20 Reboot EAGLE Cards

Procedure 20: Reboot EAGLE Cards

<p>This procedure reboots EAGLE cards to reload new RTDB.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u>.</p>		
EAGLE: reboot all SM cards to reload new RTDB.	Login onto the connected EAGLE. Reboot 1 SM card on the EAGLE and verify that it comes back to an IS-NR/Active state. Then boot the rest of the EAGLE SM cards over 4 batches (booting 1/4 of the cards at a single time).	
Procedure is complete	Procedure is complete.	

Procedure 21 Accept Upgrade

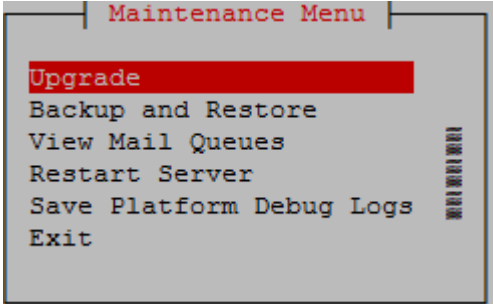

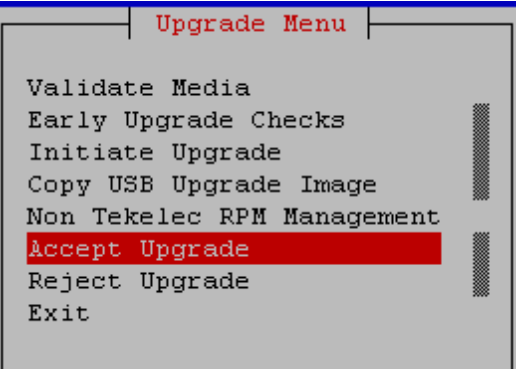

Note: If the upgrade is accepted, Backout cannot be performed.

Procedure 21: Accept upgrade

S T E P #		<p>This procedure accept the upgrade to perform the upgrade process.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u>.</p>
1. <input type="checkbox"/>	MPS: Login as admusr.	<p>Login as admusr if not already logged in.</p> <p><hostname> login: admusr</p> <p>Password:</p> <p>Note: The console logon may preceed by many lines of reboot output.</p>
2. <input type="checkbox"/>	MPS: Verify if alarmMgr process running.	<p>\$ sudo ls /var/run/alarmMgr</p> <p>If the file exists, proceed to the next step.</p> <p>If the file does not exist, contact Oracle Customer Service.</p>
3. <input type="checkbox"/>	MPS: Execute the platcfg menu.	<p>\$ sudo su – platcfg</p>
4. <input type="checkbox"/>	MPS: Select the Maintenance submenu.	<p>The platcfg Main Menu appears.</p> <p>On the Main Menu, select Maintenance and press [ENTER].</p> <div data-bbox="794 1037 1243 1350" data-label="Image"> <p>The screenshot shows a terminal window titled 'Main Menu'. Inside, there is a list of options: 'Maintenance', 'Diagnostics', 'Server Configuration', 'Network Configuration', 'Remote Consoles', and 'Exit'. The 'Maintenance' option is highlighted with a red background bar. To the right of the list, there are several vertical bars of varying heights, likely representing a progress or status indicator.</p> </div>

Note: If the upgrade is accepted, Backout cannot be performed.

Procedure 21: Accept upgrade

5. <input type="checkbox"/>	MPS: Select the Upgrade submenu.	Select the Upgrade menu and press [ENTER]. 
6. <input type="checkbox"/>	MPS: Select the Upgrade submenu.	If you have not already accepted the upgrade, do so now, otherwise skip this step. 

Note: If the upgrade is accepted, Backout cannot be performed.

Procedure 21: Accept upgrade

		 <p>NOTE: If you still observe the accept upgrade message even after the disks get mirrored properly after accepting the upgrade for the first time, follow the steps mentioned in APPENDIX A.30 to remove the false accept upgrade alarm from the system.</p>
7. <input type="checkbox"/>	Procedure is complete	Procedure is complete.

Procedure 22 Keys exchange between active and standby PDB

Procedure 22: Keys exchange between active PDB and standby PDB

S T E P #	This procedure Exchange the keys between active and remote PDB. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u> .	
1.	MPS A: Login to Active PDB EPAP as the user “epapdev”.	If not already logged-in, then login at MPS A of active PDB EPAP: <hostname> console login: epapdev password: <password>
2. <input type="checkbox"/>	MPS A: Verify that PDB entry are present in known_hosts file.	Execute following command to verify that pdb entry present in known_hosts file: \$ cat ./ssh/known_hosts
3. <input type="checkbox"/>	MPS A: Exchange the keys from Active PDB	Execute the following command on Active PDB: \$ ssh epapdev@<remote PDB IP> Are you sure you want to continue connecting (yes/no)? <yes> Password: Snapshot for reference: [epapdev@Recife-A ~]\$ ssh epapdev@10.75.141.104 FIPS integrity verification test failed. The authenticity of host '10.75.141.104 (10.75.141.104) ' can't be established. RSA key fingerprint is d4:d5:94:c6:57:1a:30:25:bc:b0:67:f9:f7:07:c6:68. Are you sure you want to continue connecting (yes/no)? yes Warning: Permanently added '10.75.141.104' (RSA) to the list of known hosts. epapdev@10.75.141.104's password:
4.	MPS A: Login to Standby PDB EPAP as the user “epapdev”.	If not already logged-in, then login at MPS A of standby PDB EPAP: <hostname> console login: epapdev password: <password>

Procedure 22: Keys exchange between active PDB and standby PDB

5. <input type="checkbox"/>	MPS: Exchange the keys from Standby PDB	Repeat the step 2 and step3 to exchange the keys from standby PDB as well.
6. <input type="checkbox"/>	Procedure is complete	Procedure is complete.

THIS COMPLETES THE UPGRADE

6. SOFTWARE RECOVERY PROCEDURES

Execute this section only if there is a problem and it is desired to revert back to the pre-upgrade version of the software.

Warning: Do not attempt to perform these backout procedures without first contacting the My Oracle Support, following the instructions on the front page or the instructions on the 0.

NOTE: These recovery procedures are provided for the backout of an Upgrade ONLY (i.e., from a failed 16.3.y release to the previously installed 16.3.x release). Backout of an initial installation is not supported.

6.1 Backout Setup

The reason to execute a backout has a direct impact on any backout preparation that must be done. Since the reason cannot be known ahead of time, no definitive procedure can be written.

My Oracle Support personnel will have to have login access to the affected MPS server, probe the server for the root cause of the problem, and execute whatever setup or cleanup is necessary in order to prepare the MPS server for backout.

6.2 Perform Backout

No matter the initial cause of the upgrade problem, once all necessary corrective steps have been taken to prepare for the backout, then the following procedure can be executed to perform a backout. Refer to section 2.2 and section 2.4 for the Backout process overview.

Procedure 23 Server B Backout

Procedure23: Server B Backout

S T E P #	<p>This procedure provides instructions to perform backout on MPS B server.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>Note: Execute this procedure if only MPS B has been upgraded successfully and MPS A is still at the pre-upgrade release.</p> <p>Note: If the upgrade has been accepted, this procedure cannot be executed.</p>	
1. <input type="checkbox"/>	<p>Terminate all previous connections (ssh).</p>	<p>If not already connected, connect to the E5-APP-B card via the serial port.</p> <p>For connecting the E5-APP-B B card, disconnect the console cable from the serial port on the E5-APP-B A card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B A cards adapter and use it for serial access. Cable part numbers - 830-1220-xx</p> <p>Skip to step 5, if connected through serial console.</p>
2. <input type="checkbox"/>	<p>Create a terminal window and establish a connection by logging into MPS A.</p> <p>Log in to MPS A.</p>	<p>In a newly created terminal window labeled "MPS B – from MPS A", connect directly into MPS A.</p> <p># ssh admusr@<MPS A> Password: <password></p>
3. <input type="checkbox"/>	<p>MPS A: Verify that the state of PDBA Proxy Feature is No.</p> <p>Note: Skip this step for Non-Prov and PDBonly EPAP.</p>	<p># sudo su - epapconfig</p>

4.	<input type="checkbox"/> MPS A: Clear PDB replication logs	If PDBA Proxy Enabled = Yes then Execute Procedure A.29 to clear replication logs Otherwise, if PDBA Proxy Enabled = No, then skip this step.

Procedure23: Server B Backout

5. <input type="checkbox"/>	MPS A: Start screen session MPS A: Connect to the console of MPS B.	Execute the following commands to start screen and establish a console session to MPS B. \$ screen -L Execute the following command on E5-APP-B: \$ sudo minicom mate If above command fails then refer to Procedure A.27.
6. <input type="checkbox"/>	MPS B: Login prompt is displayed.	<hostname> console login: Note: Hit enter if no login prompt is displayed.
7. <input type="checkbox"/>	MPS B: Log in to the server as user “admusr”.	If not already logged-in, then log in. <hostname> console login: admusr Password: <password>
8. <input type="checkbox"/>	MPS B: Change directory.	Change to root user. \$ su - root Password: Change to the backout directory. # cd /var/TKLC/backout
9. <input type="checkbox"/>	MPS B: Execute the backout.	Execute the following command to initiate the backout: Note: Before starting the backout, make sure that all USB devices are removed from the card. # ./reject NOTE: When backout operation asks if you would like to proceed with backout, answer “Y”.

Procedure23: Server B Backout

		<pre> Verifying that backout is possible. Checking for stale RPM DB locks... Current platform version: 7.4.0.0.0-88.32.0 Continue backout? [y/N]: </pre>
10. <input type="checkbox"/>	MPS B: Backout proceeds.	<p>Many informational messages will come across the terminal screen as the backout proceeds.</p> <p>Finally, after backout is complete, a message will be displayed stating that a reboot is required.</p> <p>If this is a backout of a <i>major</i> upgrade, skip to step 12. DO NOT INITIATE A REBOOT MPS-B at this time.</p> <p>If this is a backout of an <i>incremental</i> upgrade, the server will be at runlevel 3 and no applications are running. Proceed to the next step to verify the backout and manually reboot the server.</p>
11. <input type="checkbox"/>	MPS B: Verify the Backout	<p>Examine the upgrade logs in the directory <code>/var/TKLC/log/upgrade</code> and verify that no errors were reported.</p> <pre># grep -i error /var/TKLC/log/upgrade/upgrade.log</pre> <p>Examine the output of the above commands to determine if any errors were reported.</p> <p>Refer to section 3.7 to know more about logging.</p>
12. <input type="checkbox"/>	MPS B: Verify the Backout.	<p>If the backout was <i>not</i> successful and errors were recorded in the logs, then contact My Oracle Support following the instructions on the front page or the instructions on the 0 for further instructions.</p> <p>If the backout <i>was</i> successful, then continue with the following step.</p>
13. <input type="checkbox"/>	MPS B: Reboot the MPS.	<p>Perform the following commands to reboot the MPS:</p> <pre># init 6</pre>

Procedure23: Server B Backout

14. <input type="checkbox"/>	MPS B: Reboot completed.	<p>On a backout of a major upgrade, the server will reboot several times as part of backout. Re-mirroring of the disks will occur in the background – do not initiate a reboot until this process has completed.</p> <p>On a backout of an incremental upgrade, the user has initiated a reboot.</p>
15. <input type="checkbox"/>	MPS B: Login to MPS B.	<p>If the login prompt appears, continue on to step 16.</p> <p>If the login prompt does not appear due to disconnect, go to step 14.</p>
16. <input type="checkbox"/>	<p>Create a terminal window and establish a connection by logging into MPS A.</p> <p>Log into MPS A.</p>	<p>In a newly created terminal window labeled “MPS B – from MPS A”, connect directly into MPS A.</p> <p># ssh epapdev@<MPS A> Password: <password></p>
17. <input type="checkbox"/>	MPS A: Rejoin previous screen session on MPS B.	<p>Execute the following command to disconnect and then rejoin previous screen session:</p> <p>\$ screen -dr</p>
18. <input type="checkbox"/>	MPS B: Verify Health of MPS B.	<p>Execute Procedure A.1 on MPS B to verify the health of MPS B.</p>
19. <input type="checkbox"/>	MPS B: Sync the time on both MPS A and MPS B.	<p>Sync the time on both MPS A and B if it is different.</p> <p>Login to MPS A: <hostname> console login: epapdev Password: <password></p> <p>Check date time on MPS A using following command: \$ date Sat Jul 7 01:35:18 EDT 2018</p> <p>Login to MPS B: <hostname> console login: epapdev Password: <password></p> <p>Check date time on MPS B using following command: \$ date Sat Jul 7 01:35:18 EDT 2018</p>

Procedure23: Server B Backout

		<p>If both are not same then set the date time value on MPS B same as of MPS A. Use following command:</p> <p>First switch user to root: \$ su – root Password:</p> <p>Execute command to set date on MPS B as bellow:</p> <p># date -s <data-time of MPS A></p> <pre>[root@Natal-B ~]# date -s "Sat Jul 7 02:05:41 EDT 2018" Sat Jul 7 02:05:41 EDT 2018 [root@Natal-B ~]#</pre> <p>Done.</p>
20. <input type="checkbox"/>	MPS B: Clear MySQL replication error banner message, if any	<p>Execute the following command to check for MySQL replication error: \$ manageBannerInfo -l</p> <p>Examine the output of the above command to determine if any errors were reported related to MySQL replication such as:</p> <p>MySQL data replication error detected; Attempting to restart Attempt to restart MySQL replication failed</p> <p>Execute the following command to copy the EuiDB database from B server to A server to clear any of the above observed MySQL replication error.</p> <p>Note: This utility should be executed only with epapdev user.</p> <p>\$ /usr/TKLC/epap/config/resetReplication Resetting MySql Replication This script will fix EuiDB replication by copying the database from one side of the pair to the other side and then resetting the MySql replication pointers. Are you sure you want to reset replication? (y/n) y</p>

Procedure23: Server B Backout

		<p>Which side do you want to copy FROM? (A/B) [B]: B Copy the EuiDB from B to A? (y/n) y Removing the index and info files from EPAP A Replication files successfully removed from the mate server. Connecting to local DB Connecting to mate DB Copying EuiDB to mate Stopping local slave Stopping mate slave Resetting local master Resetting mate master Resetting local slave Resetting mate slave Starting local slave Starting mate slave Resetting MySQL Replication Completed</p> <p>If there is a failure in resetReplication, execute following commands:</p> <pre>\$ mysql -uroot -p<MySQL password> -e "GRANT ALL ON EuiDB.* to elapdev@localhost IDENTIFIED by '<password>'"</pre> <pre>\$ mysql -uroot -p<MySQL password> -e "GRANT ALL ON EuiDB.* to elapdev@mate IDENTIFIED by '<password>'"</pre> <p>Execute the following command to verify that the banner messages related to the replication error are cleared after some time.</p> <pre># manageBannerInfo -l</pre>
21. <input type="checkbox"/>	MPS B: Verify Health of MPS B	<p>Execute Procedure A.1 on MPS B to verify the health of MPS B.</p> <p>If backout of major upgrade was performed, the syscheck utility will report the “3000000000000002 – Server Internal Disk Error” alarm as the disk mirroring is in progress.</p> <p>The alarm will be cleared after the completion of disk mirroring.</p>

Procedure23: Server B Backout

22. <input type="checkbox"/>	Reconnect console cable.	On E5-APP-B card, reconnect the console cable between the serial port labeled 'S0' on E5-APP-B B card's adapter and the serial port labeled 'S1' on the E5-APP-B A card's adapter. Cable part numbers - 830-1220-xx
23. <input type="checkbox"/>	Procedure complete.	This procedure is complete.

The application should now be running at the original software release level

Procedure 24 Backout both Server A and B

Procedure24: Backout both MPS A and B

S T E P #	This procedure provides instructions to perform backout on both MPS A and MPS B servers.	
	Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.	
	Note: Execute this procedure only if both MPS A and MPS B have been upgraded or partially upgraded and you wish to backout both servers to the previous version.	
	Note: If the upgrade has been accepted, this procedure cannot be performed.	
1. <input type="checkbox"/>	Terminate all previous connections (ssh).	<p>If not already connected, connect to the E5-APP-B card via the serial port.</p> <p>For connecting the E5-APP-B A card, disconnect the console cable from the serial port on the E5-APP-B B card's adapter. The cable should be disconnected at the point where it connects to the serial port labeled 'S1' on the E5-APP-B B card's adapter and use it for serial access. Cable part numbers - 830-1220-xx</p> <p>Skip to step 6, if connected through serial console.</p>
2. <input type="checkbox"/>	Create a terminal window and establish a connection by logging into MPS B.	In a newly created terminal window labeled " MPS A – from MPS B ", connect directly into MPS B.

Procedure24: Backout both MPS A and B

	Log into MPS B.	# ssh admusr@<MPS B> Password: <password>
3. <input type="checkbox"/>	MPS B: Start screen session. MPS B: Connect to the console of MPS A.	Execute the following commands to start screen and establish a console session to MPS A. \$ screen -L Execute the following command on E5-APP-B: \$ sudo minicom mate If above command fails then refer to Procedure A.27.
4. <input type="checkbox"/>	MPS A: Login prompt is displayed.	<hostname> console login: Note: Hit enter if no login prompt is displayed.
5. <input type="checkbox"/>	MPS A: Log in to the server as user “admusr”.	Log in as ‘admusr’ <hostname> console login: admusr Password: <password>
6. <input type="checkbox"/>	MPS A: Verify that the state of PDBA Proxy Feature is No. Note: Skip this step for Non-Prov and PDBonly EPAP.	# sudo su - epapconfig

		<pre> /-----EPAP Configuration Menu-----\ /-----\ 1 Display Configuration ----- 2 Configure Network Interfaces Menu ----- 3 Set Time Zone ----- 4 Exchange Secure Shell Keys ----- 5 Change Password ----- 6 Platform Menu ----- 7 Configure NTP Server ----- 8 PDB Configuration Menu ----- 9 Security ----- 10 SNMP Configuration ----- 11 Configure Alarm Feed ----- 12 Configure Query Server ----- 13 Configure Query Server Alarm Feed ----- 14 Configure SNMP Agent Community ----- 15 Mate Disaster Recovery ----- e Exit \-----/ </pre> <p> Enter Choice: 1 EPAP A Provisioning Network IP Address = 192.168.61.115 EPAP B Provisioning Network IP Address = 192.168.61.116 Provisioning Network Netmask = 255.255.255.0 </p>

30. <input type="checkbox"/>	MPS B: Reboot the MPS.	<p>Perform the following commands to reboot the MPS:</p> <p>\$ init 6</p>
31. <input type="checkbox"/>	MPS B: Login to MPS B.	<p>If the login prompt appears, skip to step 32.</p> <p>If the login prompt does not appear due to disconnect, go to step 30.</p>
32. <input type="checkbox"/>	<p>Create a terminal window and establish a connection by logging into MPS A.</p> <p>Log into MPS A</p>	<p>In a newly created terminal window labeled “MPS B – from MPS A”, connect directly into MPS A.</p> <p># ssh epapdev@<MPS A> Password: <password></p>

Procedure24: Backout both MPS A and B

33. <input type="checkbox"/>	MPS A: Rejoin previous screen session on MPS B	Execute the following command to disconnect and then rejoin previous screen session: \$ screen -dr
34. <input type="checkbox"/>	MPS B: Sync the time on both MPS A and MPS B.	<p>Sync the time on both MPS A and B if it is different.</p> <p>Login to MPS A: <hostname> console login: epapdev Password: <password></p> <p>Check date time on MPS A using following command: \$ date Sat Jul 7 01:35:18 EDT 2018</p> <p>Login to MPS B: <hostname> console login: epapdev Password: <password></p> <p>Check date time on MPS B using following command: \$ date Sat Jul 7 01:35:18 EDT 2018</p> <p>If both are not same then set the date time value on MPS B same as of MPS A. Use following command:</p> <p>First switch user to root: \$ su - root Password:</p> <p>Execute command to set date on MPS B as bellow:</p> <p># date -s <data-time of MPS A></p> <pre>[root@Natal-B ~]# date -s "Sat Jul 7 02:05:41 EDT 2018" Sat Jul 7 02:05:41 EDT 2018 [root@Natal-B ~]#</pre> <p>Done.</p>

Procedure24: Backout both MPS A and B

35. <input type="checkbox"/>	MPS B: Log in to the server as user “epapdev”.	<hostname> console login: epapdev Password: <password>
36. <input type="checkbox"/>	MPS B: Clear MySQL replication error banner message, if any	<p>Execute the following command to check for MySQL replication error:</p> <pre>\$ manageBannerInfo -l</pre> <p>Examine the output of the above command to determine if any errors were reported related to MySQL replication such as:</p> <p>MySQL data replication error detected; Attempting to restart Attempt to restart MySQL replication failed</p> <p>Execute the following command to copy the EuiDB database from B server to A server to clear any of the above observed MySQL replication error.</p> <p>Note: This utility should be executed only with epapdev user</p> <pre>\$ /usr/TKLC/epap/config/resetReplication</pre> <pre>Resetting MySql Replication This script will fix EuiDB replication by copying the database from one side of the pair to the other side and then resetting the MySql replication pointers. Are you sure you want to reset replication? (y/n) y Which side do you want to copy FROM? (A/B) [B]: B Copy the EuiDB from B to A? (y/n) y Removing the index and info files from EPAP A Replication files successfully removed from the mate server. Connecting to local DB Connecting to mate DB Copying EuiDB to mate Stopping local slave Stopping mate slave Resetting local master Resetting mate master Resetting local slave Resetting mate slave Starting local slave Starting mate slave Resetting MySql Replication Completed</pre> <p>If there is a failure in resetReplication, execute following commands:</p>

Procedure24: Backout both MPS A and B

		<pre>\$ mysql -uroot -p<MySQL password> -e "GRANT ALL ON EuIDB.* to elapdev@localhost IDENTIFIED by '<password>'"</pre> <pre>\$ mysql -uroot -p<MySQL password> -e "GRANT ALL ON EuIDB.* to elapdev@mate IDENTIFIED by '<password>'"R</pre> <p>Execute the following command to verify that the banner messages related to the replication error are cleared after some time.</p> <pre>\$ manageBannerInfo -l</pre>
37. <input type="checkbox"/>	MPS B: Verify Health of MPS B	Execute Procedure A.1 on MPS B to verify the health of MPS B.
38. <input type="checkbox"/>	MPS A: Check RTDB and PDB database levels.	Check the result of Step 6. If the RTDB and PDBA database levels were NOT same prior to backout, execute Procedure A.9 to perform an RTDB reload from PDBA.
39. <input type="checkbox"/>	Reboot EAGLE Cards.	<p>If the DB levels on EPAP and EAGLE matches and there is no alarm on EAGLE related to “RTDB reload is required”, go to step 37.</p> <p>Reboot 1 SM card on the EAGLE and verify that it comes back to an IS-NR/Active state.</p> <p>If this is a Non-Provisionable EPAP, boot the rest of the EAGLE SM cards over 4 batches (booting 1/4 of the cards at a single time).</p> <p>If this is a Provisionable(mixed EPAP or PDBonly) EPAP, and the second MPS A on which backout has been executed, reboot the rest of the cards on both local and remote sides over 4 batches (booting 1/4 of the cards at a single time).</p>
40. <input type="checkbox"/>	Procedure is complete.	This procedure is complete.

The application should now be running at the original software release level

Procedure 25 Stop the Pdba software

Procedure 25: Stop the PDBA Software

STEP #	This procedure stop the PDBA software before major upgrade. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.	
	IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u> .	
If backout has been performed, then execute this procedure ONLY after backout on all MPS servers in the entire set of E. Otherwise, skip this procedure until all MPS servers have been backed out.		
1. <input type="checkbox"/>	MPS A: Log in to the server as user “epapdev”.	<hostname> console login: epapdev Password: <password>
2. <input type="checkbox"/>	MPS A: Verify Health of MPS A.	If not done already, execute Procedure A.1 on MPS A to verify the health of MPS A. Expect that the syscheck utility will report the ‘Server Application Process Error’ alarm for the fact that the PDBA software is not running. Besides the PDBA not running alarm, verify that no other abnormalities are reported.
3. <input type="checkbox"/>	MPS A: Verify that Pdba software running or not.	Execute the command below to find if the pdba is running or not: \$ ps -aef grep pdba grep -v “grep” If the output contains an entry for the pdba, as shown below, then move to the next step. [epapdev@MPS A ~]\$ ps -aef grep pdba epapdev 23890 10248 0 Apr07 ? 00:01:18 /opt/TKLCappl/bin/pdba Otherwise, skip the next step as Pdba software already stopped.
4. <input type="checkbox"/>	MPS A: Turn off the PDBA_REMOTE_PDBI_ALLOWED flag to	Execute the command below to find the current status of PDBA_REMOTE_PDBI_ALLOWED flag. [epapdev@Natal-A ~]\$ uiEdit grep -i PDBA_REMOTE_PDBI_ALLOWED

Procedure 25: Stop the PDBA Software

	stop provisioning during upgrade. Note: This step must be performed in case of upgrade and PDBA software needs to be restarted, for this change to take effect.	Turn off the PDBA_REMOTE_PDBI_ALLOWED flag. Skip this step if there is no output or output command is "PDBA_REMOTE_PDBI_ALLOWED" is set to "OFF" [epapdev@Natal-A ~]\$ uiEdit PDBA_REMOTE_PDBI_ALLOWED OFF "PDBA_REMOTE_PDBI_ALLOWED" is set to "OFF"
5. <input type="checkbox"/>	MPS A: Stop the Pdba software.	Run the following command: [epapdev@Natal-A ~]\$ service Pdba stop ~~ /etc/init.d/Pdba stop ~~ PDBA application stopped.
6. <input type="checkbox"/>	MPS A: Verify that Pdba software running or not	Repeat above step 3.
7. <input type="checkbox"/>	Procedure complete.	This procedure is complete.

Procedure 26 Restart PDBA Software (Post-Backout and Post-Upgrade)

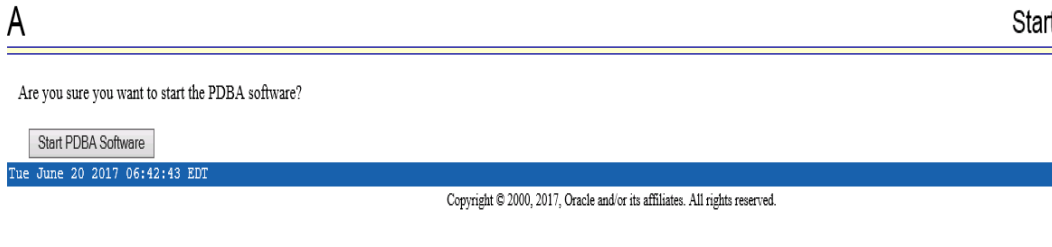

When upgrade is initiated on the first MPS-B, the PDBA software process is stopped on the MPS-A servers configured as **Provisionable**(mixed-EPAP or PDBonly). The PDBA software is intentionally left stopped, and so the operator performing the upgrade must restart the PDBA software after all MPS servers in a set of EPAP systems have been upgraded.

WARNING: If a backout of the MPS A and B units is conducted sometime after an upgrade has successfully completed and after Provisioning has been re-enabled, then the only method of PDB restoration is from backup file. In this case, any new data provisioned since the successful completion of the upgrade will be lost and will need to be re-provisioned.

Procedure 26: Restart the PDBA Software Post-Backout and Post-Upgrade

S T E P #	<p>This procedure restarts the PDBA software after upgrade of all associated MPS systems has been completed.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u>.</p>
<p>If backout has been performed, then execute this procedure ONLY after backout on all MPS servers in the entire set of EL. Otherwise, skip this procedure until all MPS servers have been backed out.</p>	
1. <input type="checkbox"/>	<p>Local MPS A: Log in to the server as user "epapdev".</p> <p><hostname> console login: epapdev Password: <password></p>
2. <input type="checkbox"/>	<p>Local MPS A: Verify Health of MPS A.</p> <p>If not done already, execute Procedure A.1 on MPS A to verify the health of MPS A.</p> <p>Expect that the syscheck utility will report the 'Server Application Process Error' alarm for the fact that the PDBA software is not running. Besides the PDBA not running alarm, verify that no other abnormalities are present.</p>
3. <input type="checkbox"/>	<p>MPS A: Turn on the PDBA_REMOTE_PDBI_ALLOWED flag to enable PDB to accept updates from remote PDBI.</p> <p>Note: This step must be performed in case of upgrade and PDBA software needs to be restarted, for this change to take effect.</p> <p>Execute the command below to find the current status of PDBA_REMOTE_PDBI_ALLOWED flag:</p> <pre>[epapdev@Natal-A ~]\$ uiEdit grep -i PDBA_REMOTE_PDBI_ALLOWED</pre> <p>Turn on the PDBA_REMOTE_PDBI_ALLOWED flag. Skip this step if output of the above command shows "PDBA_REMOTE_PDBI_ALLOWED" is set to "ON"</p> <pre>[epapdev@Natal-A ~]\$ uiEdit PDBA_REMOTE_PDBI_ALLOWED ON</pre> <p>"PDBA_REMOTE_PDBI_ALLOWED" is set to "ON"</p>
4. <input type="checkbox"/>	<p>Local MPS A: Restart the PDBA software.</p> <p>On the menu, click PDBA->Process</p> <p>Execute the command below to find if the pdba is running or not:</p> <pre>\$ ps -aef grep pdba grep -v "grep"</pre> <p>If the output contains an entry for the pdba, as shown below, then skip to the next step.</p>

Procedure 26: Restart the PDBA Software Post-Backout and Post-Upgrade

	Control->Start PDBA software	<pre>[epapdev@MPS A ~]\$ ps -aef grep pdba grep -v "grep"</pre> <pre>epapdev 23890 10248 0 Apr07 ? 00:01:18 /opt/TKLCAppl/bin/pdba</pre> <p>Otherwise, Login to EPAP GUI by uiadmin user and start PDBA software.</p> 
5. <input type="checkbox"/>	Local MPS A: Verify PDBA is running.	Execute Procedure A.1 on MPS A to verify the health of MPS A. Verify that syscheck does not show PDBA is not running.
6. <input type="checkbox"/>	Remote MPS A: Log in to the server as user "epapdev".	<pre><hostname> console login: epapdev</pre> <pre>Password: <password></pre>
7. <input type="checkbox"/>	Remote MPS A: Verify Health of MPS A.	<p>Execute Procedure A.1 on MPS A to verify the health of MPS A.</p> <p>Expect that the syscheck utility will alarm the fact that the PDBA software is not running. This will result in a "5000000000000002 -- Server Application Process Error" alarm. Besides the PDBA not running, verify that no other abnormalities are noted.</p>
8. <input type="checkbox"/>	<p>Remote MPS A: Restart the PDBA software.</p> <p>On the menu, click PDBA->Process Control->Start PDBA software</p>	<p>Execute the command below to find if the pdba is running or not:</p> <pre>\$ ps -aef grep pdba grep -v "grep"</pre> <p>If the output contains an entry for the pdba, as shown below, then skip to the next step.</p> <pre>epapdev 23890 10248 0 Apr07 ? 00:01:18 /opt/TKLCAppl/bin/pdba</pre> <p>Otherwise, Login to EPAP GUI by uiadmin user and start PDBA software.</p>

Procedure 26: Restart the PDBA Software Post-Backout and Post-Upgrade

		<div><div>A</div><div>Start PDBA Software</div><div>Are you sure you want to start the PDBA software?</div><div>Start PDBA Software</div><div>Tue Jun 20 2017 06:42:43 EDT</div><div>Copyright © 2000, 2017, Oracle and/or its affiliates. All rights reserved.</div></div>
9. <input type="checkbox"/>	Remote MPS A: Verify PDBA is running.	Execute Procedure A.1 on MPS A to verify the health of MPS A. Verify that syscheck does <i>not</i> show PDBA is <i>not</i> running.
10. <input type="checkbox"/>	Procedure complete.	This procedure is complete.

THIS COMPLETES THE BACKOUT

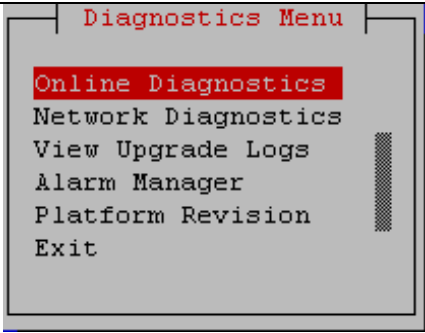

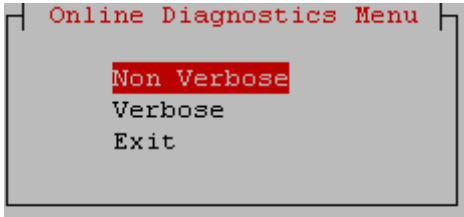

APPENDIX A GENERIC PROCEDURES

Procedure A.1 Perform System Health Check

ProcedureA.1: Perform System Health Check

S T E P #	This procedure performs a system health check on any MPS server.	
	Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.	
	IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u> .	
	1. <input type="checkbox"/>	Log in as the admusr user. <hostname> console login: admusr Password: <password>
	2. <input type="checkbox"/>	Execute the platcfg menu. \$ sudo su - platcfg
3. <input type="checkbox"/>	Select the Diagnostics submenu.	<p>The platcfg Main Menu appears. On the Main Menu, select Diagnostics and press [ENTER].</p>  <p>The screenshot shows a terminal window titled 'Main Menu'. It contains a list of options: Maintenance, Diagnostics (highlighted with a red bar), Server Configuration, Security, Remote Consoles, Network Configuration, and Exit. There are vertical bars on the right side of the menu.</p>
4. <input type="checkbox"/>	Select the Online Diagnostics submenu.	Select the Online Diagnostics submenu and press [ENTER].

ProcedureA.1: Perform System Health Check

		
5. <input type="checkbox"/>	Select the Non-Verbose option.	<p>Select the Non-Verbose option and press [ENTER].</p> 
6. <input type="checkbox"/>	Examine the output of the Online Diagnostics.	Example output shown below. Examine the actual output of the Online Diagnostics.

ProcedureA.1: Perform System Health Check

8. <input type="checkbox"/>	Server clean-up to create space.	<p>Execute the following command:</p> <pre>\$ df -h /var/TKLC</pre> <p>The output may look like:</p>

ProcedureA.1: Perform System Health Check

		<pre>[admusr@hostname ~]\$ df -h /var/TKLC Filesystem Size Used Avail Use% Mounted on /dev/mapper/vgroot-plat_var_tklc 3.9G 2.2G 1.5G 60% /var/TKLC</pre> <p>Verify that there is at least 600M in the Avail column. If not, clean up files until there is space available.</p> <p>CAUTION: Make sure you know what files you can remove safely before cleaning up. It is recommended that you only clean up files in the /var/TKLC/upgrade directory as this is a platform owned directory that should only contain ISO images. This directory should not be expected to contain images for any length of time as they can get purged.</p> <p>Also, execute the following command to check space in ‘/lib/module’ directory.</p> <p>\$ df -h /lib/modules</p> <pre>[admusr@hostname ~]\$ df -h /lib/modules Filesystem Size Used Avail Use% Mounted on /dev/mapper/vgroot-plat_root 976M 397M 529M 43% /</pre> <p>Verify that the Use% column does not exceed the value 80%.</p>
9. <input type="checkbox"/>	Procedure complete.	Return to the procedure that you came here from.

Procedure A.2 Validate Upgrade Media

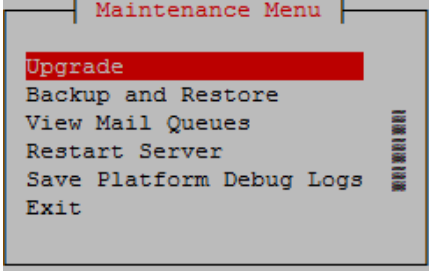

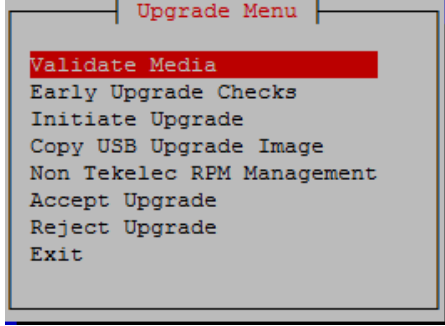

This procedure is used to execute a validation of the Upgrade Media (typically an ISO image) separately from executing an upgrade. The upgrade process automatically validates the upgrade media. However, sometime the user may wish to perform just a validation before proceeding with upgrade, thus the reason for this separate process.

Validation could be performed on MPS A or B, however, this procedure specifies MPS X for simplicity.

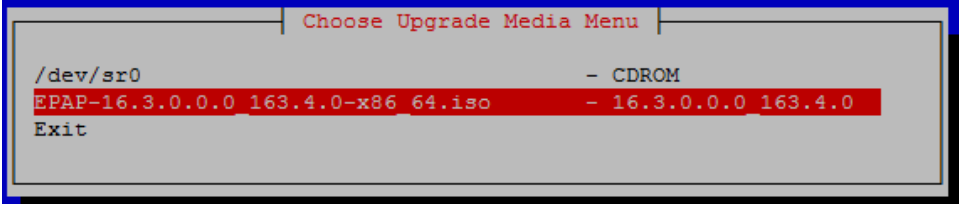

ProcedureA.2: Validate the Upgrade Media

S T E P #	<p>This procedure provides instructions to perform a validation of the upgrade media on the MPS X server. This procedure assumes that the E5-APP-B card IPM procedure has been executed and the user has an EPAP Upgrade ISO image available.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>UPGRADE ASSISTANCE</u>.</p>	
1. <input type="checkbox"/>	MPS X: If necessary, log in to the server as the user “admusr”.	<p>If not already logged in to the MPS server, then login as user “admusr”.</p> <pre><hostname> console login: admusr password: <password></pre>
2. <input type="checkbox"/>	MPS X: Execute the platcfg menu.	<pre>\$ sudo su - platcfg</pre>
3. <input type="checkbox"/>	MPS X: Select the Maintenance submenu.	<p>The platcfg Main Menu appears. On the Main Menu, select Maintenance and press [ENTER].</p>  <p>The screenshot shows a terminal window titled 'Main Menu'. Inside, there is a list of options: 'Maintenance' (highlighted with a red bar), 'Diagnostics', 'Server Configuration', 'Network Configuration', 'Remote Consoles', and 'Exit'. A vertical bar of asterisks is on the right side of the menu.</p>
4. <input type="checkbox"/>	MPS X: Select the Upgrade submenu.	<p>Select the Upgrade menu and press [ENTER].</p>

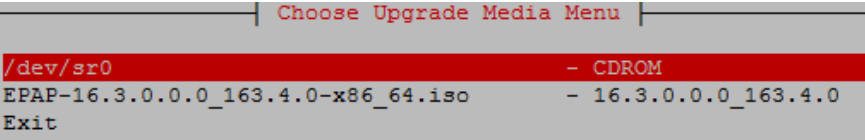

ProcedureA.2: Validate the Upgrade Media

			 <p>Maintenance Menu</p> <ul style="list-style-type: none"> Upgrade Backup and Restore View Mail Queues Restart Server Save Platform Debug Logs Exit
5. <input type="checkbox"/>	MPS X: Select the Validate Media selection.	Select the Validate Media menu and press [ENTER].	 <p>Upgrade Menu</p> <ul style="list-style-type: none"> Validate Media Early Upgrade Checks Initiate Upgrade Copy USB Upgrade Image Non Tekelec RPM Management Accept Upgrade Reject Upgrade Exit
6. <input type="checkbox"/>	MPS X: Output from the Validate Media selection.	<p>The screen will display a message that it is searching for upgrade media. Once the upgrade media is found, an Upgrade Media selection menu will be displayed similar to the example shown below.</p> <p>If the upgrade media is not found, follow Procedure A.12 to copy the upgrade ISO.</p> <p>Select the upgrade media or ISO image. There should only be one selection available, as shown in the example below. If there is more than one selection available, contact My Oracle Support following the instructions on the front page or the instructions on the 0</p>	

ProcedureA.2: Validate the Upgrade Media

		 <p>The screenshot shows a terminal window titled "Choose Upgrade Media Menu". It contains three lines of text: "/dev/sr0 - CDROM", "EPAP-16.3.0.0.0_163.4.0-x86_64.iso - 16.3.0.0.0_163.4.0", and "Exit". The second line is highlighted with a red background.</p>
7. <input type="checkbox"/>	MPS X: View the Validation results.	The results of the validation will be displayed, similar to the example below. Press the “enter” key to continue.

ProcedureA.2: Validate the Upgrade Media

9. <input type="checkbox"/>	Procedure complete.	Return to the procedure that you came here from.

Procedure A.25 Conversion from Prov(mixed EPAP) to Non-Prov

The procedure is kept to ensure that the references in the document are not changed.

Procedure A.26 Conversion from mixed EPAP to StandalonePDB+Non-Prov EPAP

Note: A new card would be needed for this conversion. The conversion can be done through various way where one of them is described below.

Assuming, there is a mixed EPAP on 16.1/16.2 release.

Execute the below mentioned steps to perform this conversion:

On Mixed EPAP:

1. Take PDB backup. Refer to Procedure A.6 to perform PDB backup.
2. Take RTDB backup. Refer to Procedure A.7 to perform RTDB backup.

3. Take the “uiEdit” output and the “Display Configuration” output, and store it for later use.
\$uiEdit
\$ su – epapconfig
Choose the “Display Configuration” option.
4. Make a fresh Non-PROV setup in EPAP 16.3. Refer to the “Installation Phases for Mixed EPAP and Non-Provisional EPAP” table (Table 6).
5. Use the values stored in step-3 above from uiEdit and “Display Configuration” to restore the configuration values, for example, PROV IP address.
At this stage PROV setup is converted to Non-PROV.
Now, execute steps 9 and 10 mentioned below for Non-PROV (On Non-Prov setup)

On PDBonly (fresh installation on new card)

6. Install EPAP 16.3 ISO on new card. Refer to section 3.3.2 to perform installation.
7. Attach this PDBonly with Non-Prov EPAP(converted in step 4).
8. Restore PDB backup(taken in step 1) on PDBonly setup. Refer to Procedure A.24 to restore the PDB backup.

On Non-Prov setup:

9. Restore RTDB backup (taken in step 2) on Non-Prov MPS-A. Refer to Procedure A.10 to restore RTDB backup.
10. Perform reload from mate on Non-Prov MPS-B. Refer to Procedure A.11 to perform reload from mate.

So far, all three setups are in COMPACT mode. Refer to section 4 to change the DB Architecture from COMPACT to eXtreme.

Procedure A.27 Procedure to add/edit the /etc/minirc.mate file

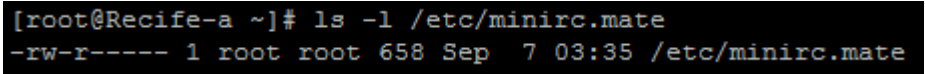

NOTE: This procedure is needed in following cases:

1. If “minicom mate” fails due to data curruption or some body deleted the file /etc/minirc.mate. Or,
2. If ttyS1 is not working, then edit the file /etc/minirc.mate to use ttyS3 or ttyS4.

ProcedureA.27: Procedure to add/edit the /etc/minirc.mate file

S T E P #	This procedure will add/edit the file /etc/minirc.mate.	
	Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

Procedure A.30 Resolve the false accept upgrade alarm situation

<p>This procedure is used to resolve the false accept upgrade alarm situation from the system.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR ASSISTANCE.</p>	
1. Blankout the /etc/motd file	> /etc/motd
2. Add an entry "export POST_UPGRADE_ACTION=ACCEPT" in the upgrade info file.	echo "export POST_UPGRADE_ACTION=ACCEPT" >> /var/TKLC/log/upgrade/upgrade.info
3. Clear the false alarm "TKSPLATMI33"	<p>You will see the following alarm in alarmStatus.</p> <p>a. alarmMgr --alarmStatus</p> <p>[One output example below:]</p> <p>SEQ: 7 UPTIME: 356 BIRTH: 1524100682 TYPE: SET ALARM:</p> <p>TKSPLATMI33 tpdServerUpgradePendingAccept 1.3.6.1.4.1.323.5.3.1</p> <p>8.3.1.3.33 3253</p> <p>2 Processing Error Configuration Error</p> <p>b. To clear the alarm, run the following command:</p> <p>alarmMgr --clear TKSPLATMI33</p>

APPENDIX B INTERCONNECTION DIAGRAM

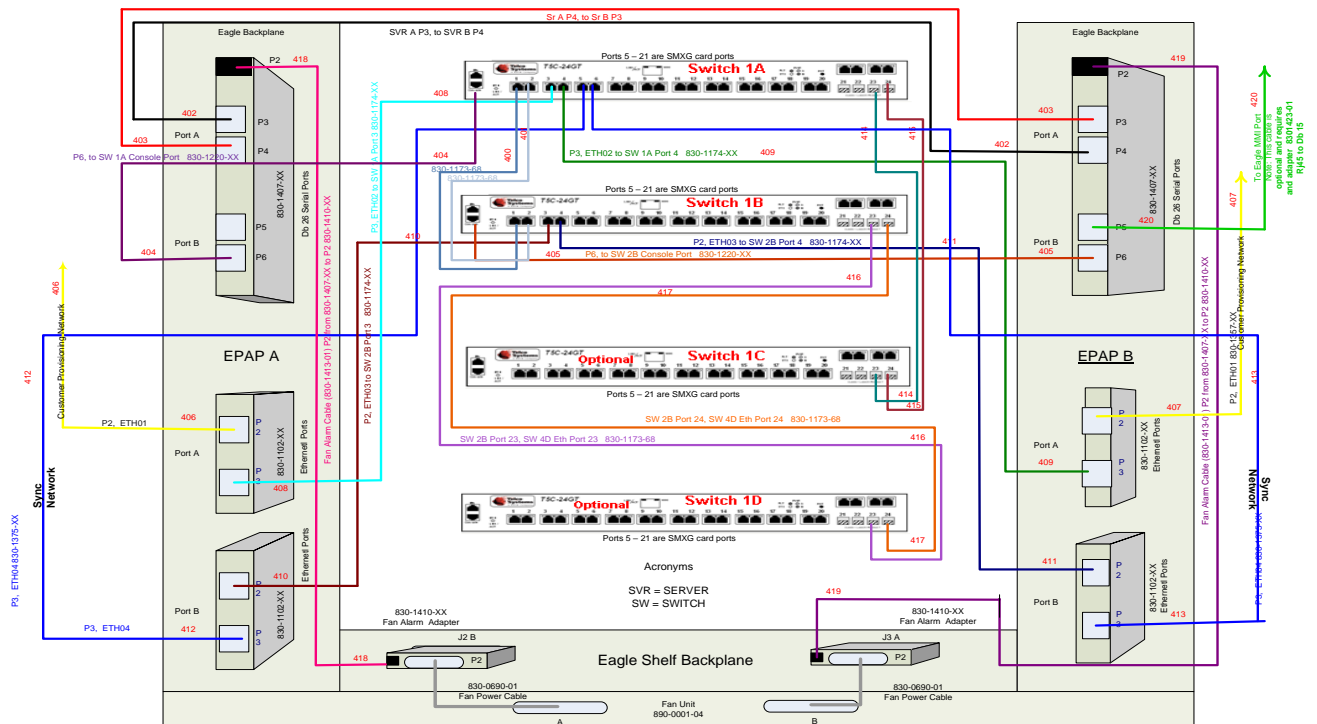

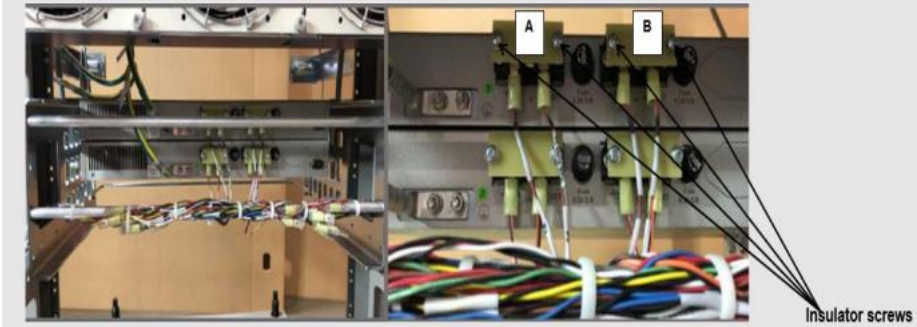

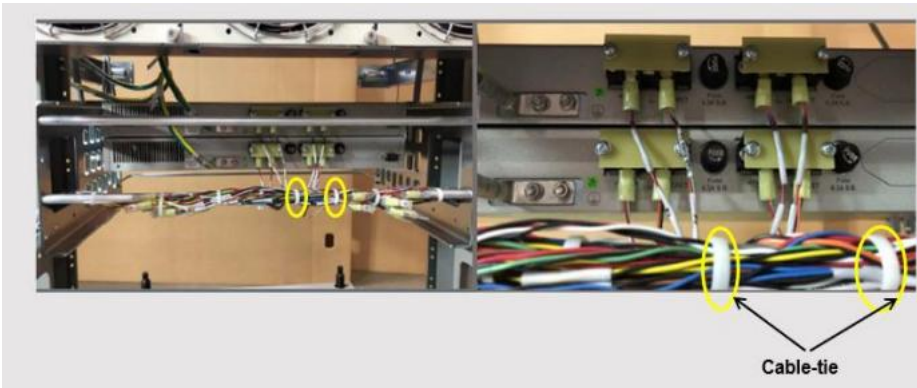

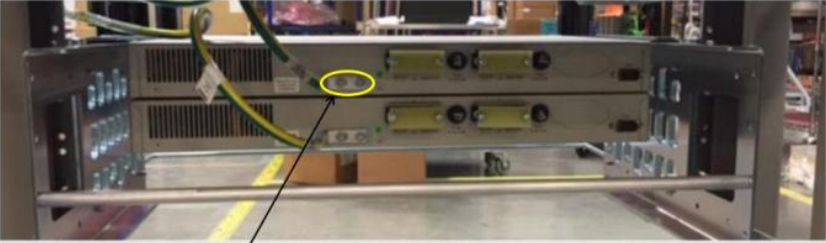

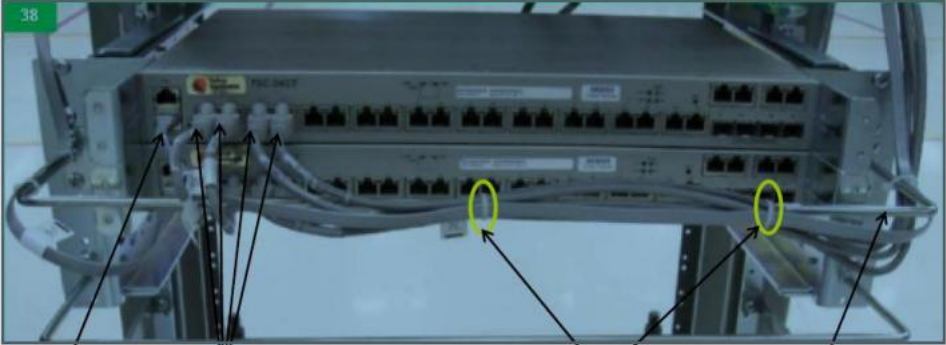

Figure 7: Interconnectivity Diagram for Sync Network Redundancy (Eth04 used for Sync Network)

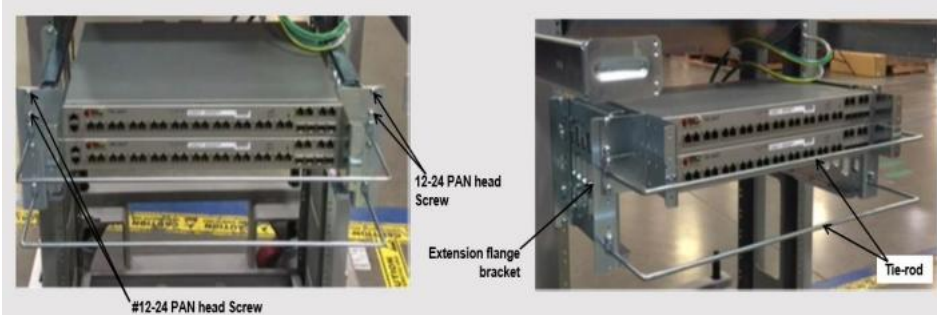

APPENDIX C TELCO TO CISCO SWITCH REPLACEMENT

SWITCH REPLACEMENT

S T E P #	<p>This procedure is for replacing the Telco switch with the Cisco switch.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>ASSISTANCE</u>.</p>	
	<p>The following tools are required to perform this procedure:</p> <ul style="list-style-type: none">• Ground Strap (Wrist or Heel)• #2 Phillips Screwdriver• #3 Phillips Screwdriver• 1/4" Nut Driver or Socket• 5/16" Nut Driver or Socket• Diagonal Wire Cutter (to cut Tie-wraps)• Multi Meter• Tie Wraps• Electrical Tape• Cable Tags/Marker (to label all cables)	
1. <input type="checkbox"/>	Disable and disconnect switch power	<p>Tools required: Ground Strap, #2 Phillips Screwdriver, Multi Meter, and Diagonal Wire Cutter</p> <p>a. At the fuse panel, locate the fuse positions for the switch being removed. To power down the Switch, remove the fuses for both A and B feeds.</p> <p>b. Once the switch is off, unscrew and remove the terminal-block insulator covers from both terminals blocks A and B.</p> <p>c. With covers removed, using a Multi Meter, ensure that there is no power.</p> <p>d. Ensure that the power leads are marked -48V & RTN.</p> <p>e. With the cables marked, one at a time, remove the power cable and tape the terminal ring. Repeat these steps until all power connections are removed.</p>

		 <p>Note: This procedure will reference replacing the Switch #1 location (top). Same procedure is applicable for other switch locations.</p>  <p>Note: For the replacement switch, if required, more cable slack/length can be added if the cableties are cut from the Tie-rod. See Step 8.</p>
<p>2.</p> <p><input type="checkbox"/></p>	<p>Disconnect ground cable from switch</p>	<p>Tools required: Ground Strap and 5/16" Nut Driver or Socket</p> <ol style="list-style-type: none"> Remove the Switch Ground Wire from the grounding point, by loosening and removing Hex nut, Flat washer, and External tooth washer. Leave Ground Wire dangling. Do not disconnect ground wire attached to cabinet/frame. <p>Note: Hardware removed, nut, and washers are NOT required on the replacement switch.</p>

		 <p>Switch Ground Wire Connection</p>
<p>3. □</p>	<p>Disconnect Front ENET and Console Cables</p>	<p>Tools required: Diagonal Wire Cutters</p> <p>Note: This procedure will reference replacing the Switch #1 location (Top). The same procedure used for other switch locations.</p> <ol style="list-style-type: none"> Make sure that all the cables are labeled and are in the correct position that they are terminated at. If not, ensure to mark or label before starting any removal. Disconnect the Console and Ethernet cables from Telco switch being replaced. Leave the cables dangling. (Optional) If cable management tie-rod is mounted to the switch being replaced, it may be necessary to cut or remove the cable-ties, holding the cables from the Tie-rod.  <p>Console cable Ethernet cable Cable-tie Tie-rod</p>

<p>4.</p> <p><input type="checkbox"/></p>	<p>Remove the Switch being replaced</p>	<p>Tools required: Ground Strap and #3 Phillips Screwdriver</p> <ol style="list-style-type: none"> Remove the four (4) PAN head screws (Two (2) on either side of the switch). If there is no support under the switch, take care to support the switch while removing the screws. Remove the Switch from the Eagle rack. Keep the screws safely set aside. Required for mounting the new switch. <p>Note: If Tie-rod is attached via the screws being removed, then the Tie-rod needs to be set aside for reattachment when the replacement Switch is installed.</p> 
<p>5.</p> <p><input type="checkbox"/></p>	<p>Assemble the replacement Cisco Switch</p>	<p>Tools required: Ground Straps and #2 Phillips Screwdriver</p> <p>Attach the mounting brackets with Cisco switch assembly.</p> <ol style="list-style-type: none"> Locate the supplied mounting brackets and screws from the Switch package

- b. Align the mounting bracket to the switch using four mounting holes.

Note: Bracket with labels to be mounted on the right side of the switch.

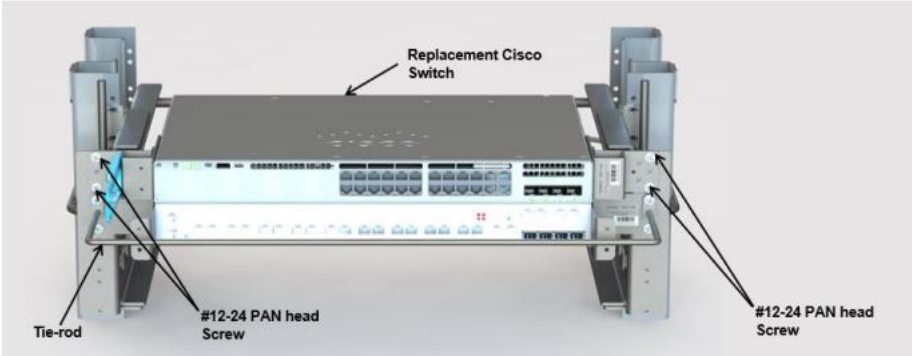

- c. Insert four screws, supplied with each switch, and tighten.

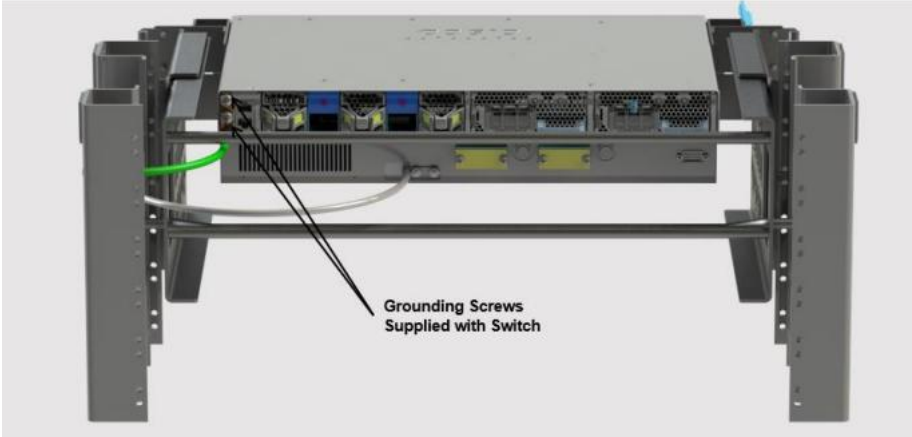

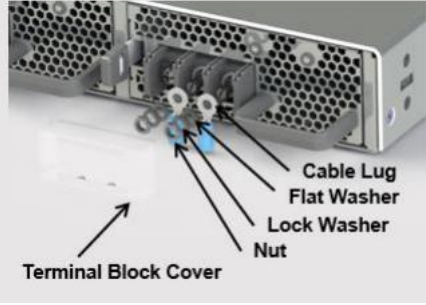

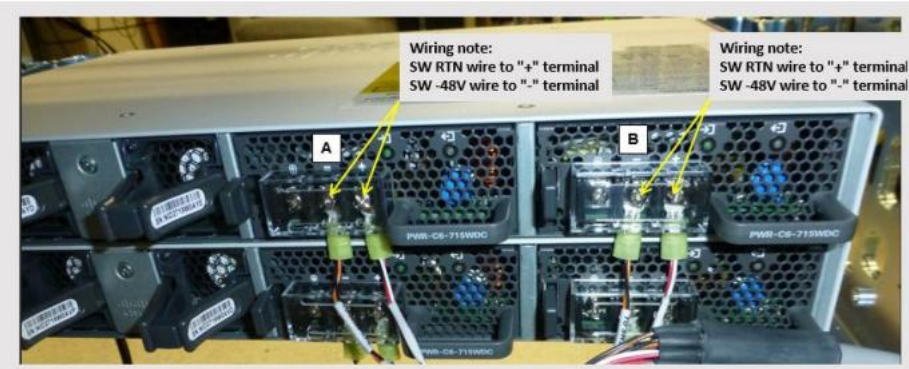

- d. Repeat the steps b and c for the other side of the switch.

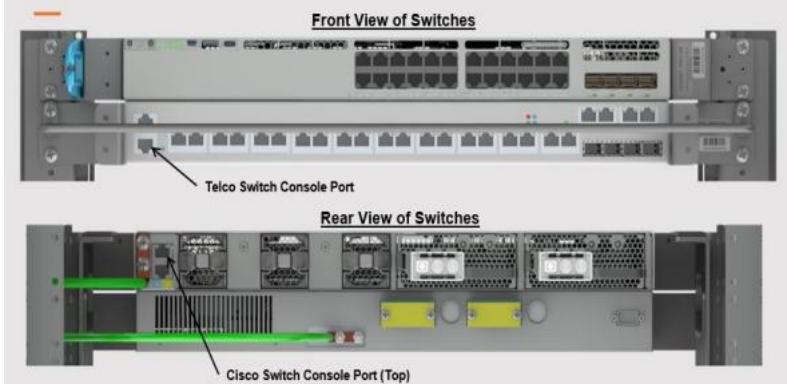

- e. Attach optional Cable Manager.

- I. Locate Cable Manager and Screw from replacement Switch packaging.
- II. Attach the Cable Manager to the rack mounting bracket using the supplied screw.

		
6. <input type="checkbox"/>	Install replacement Cisco Switch	<p>Tools required: Ground Straps and #3 Phillips Screwdriver</p> <p>a. Align Replacement Cisco Switch in the slot where the original switch was removed.</p>  <p>b. Using screws removed from step 4, insert the four (4) PAN head screws (Two (2) on either side of the switch) and tighten.</p> <p>Note: If Tie-rod was removed in step 4, reattach at this time.</p>
7. <input type="checkbox"/>	Reattach the ground cable	<p>Tools required: Ground Straps and #2 Phillips Screwdriver</p> <p>Reattach the chassis ground wire (from Step 3) to switch where shown. Use Screws provided with replacement Cisco Switch.</p>

		 <p>In Replacement Switch Container, locate grounding screw packet with PN 48-2381-01.</p> 
8. <input type="checkbox"/>	Connect power to the replacement Cisco Switch	Tools required: Ground Strap and 1/4" Nut Driver a. Remove terminal block cover.

		 <p>b. Remove Nuts and Washers from studs on A feed terminal block. c. Install the lugs from the power cable (A) to switch terminal block A. d. Secure the nuts after inserting flat washer and lock washer on top of the cable lug. e. Ensure connections to terminal block are as follows: SW RTN wire to "+" terminal, SW -48V wire to "-" terminal.</p>  <p>f. Reattach protective cover. g. Repeat the above steps for the B feed connection.</p>
<p>9.</p> <p><input type="checkbox"/></p>	<p>Reattach Console Cable and Ethernet Cables</p>	<p>Tools required: Ground Strap</p> <p>a. Plug-in the console port cable to the Replacement Switch.</p> <p>Note: The Console port on the New Cisco Switch is on the rear side where the power is applied.</p>

		 <p>Front View of Switches</p> <p>Telco Switch Console Port</p> <p>Rear View of Switches</p> <p>Cisco Switch Console Port (Top)</p> <p>b. Plug-in the Ethernet cables to Replacement Cisco Switch.</p> <p>Note: The Switch locations are marked on cable from Step 3.</p>
10. <input type="checkbox"/>	Reapply power	<p>a. Double check all the connections are in their proper place and are secure.</p> <p>b. Reinstall the A and B feed power fuses (removed in Step 1) one at a time.</p> <p>c. Check the switch power supply LED to ensure power is up. Then, install the other fuse and again check power supply LED.</p>  <p>The replacement switch is now ready to be set up and configured.</p>
11. <input type="checkbox"/>	Configure the new Cisco Switch	Refer to the following procedure “Switch Configuration” to configure the new Cisco Switch.

SWITCH CONFIGURATION

S T E P #	<p>This procedure configures the Cisco Switches on an Installed E5-APP-B EPAP Server Pair.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>IF THIS PROCEDURE FAILS, CONTACT MY ORACLE SUPPORT AND ASK FOR <u>ASSISTANCE</u>.</p>	
<p>1.</p> <input type="checkbox"/>	<p>Make the cross-over cable connections.</p>	<p>NOTE: THIS IS IMPORTANT.</p> <p>a. CONNECT the cross-over cable from Port 1 of Switch1A to Port 1 of Switch1B.</p> <p>b. DISCONNECT the cross-over cable from Port 2 of Switch1A to Port 2 of Switch1B.</p> <p>Similarly, while Configuring Switch1C and Switch1D, disconnect the cable from port 24 and connect back post configuration is done.</p> <p>Note:</p> <ul style="list-style-type: none"> • Switch configuration should only be attempted by a skilled technician and not by all. • All uplinks should be removed while switch configuration. • There should not be any loop in the switches during their configuration. • Switch1B must be configured first.
<p>2.</p> <input type="checkbox"/>	<p>Do minicom to enter the Cisco switch console. Command – “minicom switch1A” for the console cable connected to MPS-A and for console cable connected to MPS-B use</p>	<p>[root@Donut-B epapall]# [root@Donut-B epapall]# minicom switch1B</p>

	"minicom switch1B".	
3. <input type="checkbox"/>	MPS X: Do not enter in the initial config dialog in the freshly connected Cisco switch.	Autoinstall will terminate if any input is detected on console --- System Configuration Dialog --- Would you like to enter the initial configuration dialog? [yes/no]:no

APPENDIX F MY ORACLE SUPPORT

My Oracle Support (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support can assist you with My Oracle Support registration.

Call the Customer Access Support main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. When calling, make the selections in the sequence shown below on the Support telephone menu:

- For Technical issues such as creating a new Service Request (SR), select **1**.
- For Non-technical issues such as registration or assistance with My Oracle Support, select **2**.
- For Hardware, Networking and Solaris Operating System Support, select **3**.

You are connected to a live agent who can assist you with My Oracle Support registration and opening a support ticket.

My Oracle Support is available 24 hours a day, 7 days a week, 365 days a year.
