Overview & Objective

FLEXCUBE – Accelerator Pack provides pre-configured standard business products and ready to use transaction sets that a bank would want to parameterize using the FLEXCUBE application. The objective of the pack is to provide the bank a head start in the FLEXCUBE implementation so as to fast track the rollout. The module that is covered as part of this document is Payments & Collection.

The purpose of this document is to provide an insight into the various business products and the transaction products configured.

Product catalogue – Payments & Collections

1. Product Code - OPEX

1.1 Introduction – Outgoing Payment Product

1.2 Business Scenario

This Product is used to capture transactions initiated by the Debtor on behalf of its customer who wants to send funds to the beneficiary (Individual customer of an external bank).

1.3 Summary

Outgoing payment product for customer initiated transactions, features based on the network through which transaction will flow.

1.4 Synopsis

This product captures the features of the network through which the transactions are sent. This is a product for low amount clearing (Amount less than 15,000 GBP)

1.5 Detailed Coverage

The product is to be used for Outgoing payment transactions initiated by the debtor who wants to remit funds to the creditor having account in another bank. For the transactions booked using this product the debit to the initiating customer's account and the credit to the clearing will be done on the same day. The contract will be dispatched to clearing on the same day using the auto-dispatch function. The transaction amount should be between 1 GBP to 15,000.00 GBP (Both Included). Entries to the clearing NOSTRO account can be consolidated using the dispatch accounting feature. This will post debit to the clearing suspense payable GL and credit the clearing NOSTRO account for the particular clearing network.

5. Product Code – OCCD

5.1 Introduction – Outgoing Collection Product

5.2 Business Scenario

Product used to initiate a transaction by the Creditor (Individual Customer) who wants to receive funds from the Debtor (Individual customer of an external bank).

5.3 Summary

Outgoing collection product for transactions requesting funds for the beneficiary in our bank from external customers, features based on the network through which transaction is sent.

5.4 Synopsis

This product captures the features of the network through which the transactions are sent. This is a product for low amount clearing (Amount less than 2000 GBP).

5.5 Detailed Coverage

The product is to be used for outgoing collection transactions initiated by the beneficiary who requests funds from the debtor having account in another bank. For the transactions booked using this product the debit to the clearing and the credit to the customer's account will be done on the activation date. The transaction amount should be between 1 GBP to 2000.00 GBP (Both Included). The accounting entries to the customer can be consolidated by enabling the customer entry consolidation feature in product and at the agreement, and this will consolidate the entries and post a single accounting entry to the customer account.

Customer is charged percentage of transaction amount as the charge for initiating an outgoing collection. The charge basis will be premium. Rejects and Recalls received from the Debtor bank for the transaction are processed on the same day. Rejects can be received before (pre-settlement rejects) or on/after the activation date (post settlement rejects). The creditor can initiate a pre-settlement or post-settlement reversal for the transaction which is sent to the clearing. If reversal is initiated post-settlement, system will generate a new reverse of outgoing collection contract with debit to customer and credit to clearing happening on the same day. In this case, the original outgoing collection contract will be marked as reversed.

20. Product Code – OCFT

20.1 Introduction – Outgoing Collection DD - FATCA

20.2 Business Scenario

This product is used to initiate a transaction by the Creditor (Individual Customer) who wants to receive funds from the Debtor (Individual customer of an external bank) and to collect the FATCA tax based on the reportable status of creditor.

20.3 Summary

Outgoing collection product for transactions requesting funds for the beneficiary in our bank from external customers, features based on the network through which transaction is sent.

20.4 Synopsis

This product captures the features of the network through which the transactions are sent. This is a product for collection of FATCA Tax.

20.5 Detailed Coverage

The product is to be used for collecting FATCA tax on outgoing collection transactions initiated by the beneficiary who requests funds from the debtor having account in another bank. For the transactions booked using this product the debit to the clearing and the credit to the customer's account and a debit of FATCA tax amount to the customer's account and credit to the tax liability will be done on the activation date. The transaction amount should be between 1 GBP to 2000.00 GBP (Both Included).

Customer is charged percentage of transaction amount as the charge for initiating an outgoing collection. The charge basis will be premium. Rejects and Recalls received from the Debtor bank for the transaction are processed on the same day. Rejects can be received before (pre-settlement rejects) or on/after the activation date (post settlement rejects). The creditor can initiate a pre-settlement or post-settlement reversal for the transaction which is sent to the clearing. If reversal is initiated post-settlement, system will generate a new reverse of outgoing collection contract with debit to customer and credit to clearing happening on the same day. In this case, the original outgoing collection contract will be marked as reversed.

- REJT event will be fired in the original incoming collection contract on reject.

48. Product Code- DIVB

48.1 Introduction – Reversal of incoming collection Product -SEPA (B2B)

48.2 Business Scenario

Product used to process the reversal transactions received by the debtor (Corporate Customer) who had sent the funds to the creditor (Corporate customer of an external bank).

48.3 Summary

Reverse of incoming Collection product for direct debit transactions, features based on the network through which transaction will be received.

48.4 Synopsis

This product captures the features of the network through which the transactions are processed. This is a product for low amount clearing (Amount less than 999 999 999.99 EUR)

48.5 Detailed Coverage

The product is to be used for post settlement reversal of incoming collection transactions received by the debtor who has sent funds to the creditor having account in another bank. The creditor can reverse the outgoing collection that is sent, and this is processed by the debtor bank as reverse of incoming collection. For the transactions booked using this product, the credit to the customer account and the credit to the clearing suspense GL will be done on the same day and the original transaction will be marked as reversed. Customer is charged a flat amount on premium basis for processing of the reversal.

Annexure-B (Gateway Services)

Introduction

FLEXCUBE is using synchronous and asynchronous gateway services to ensure data flow from external system to FCUBS in XML format.

Business Overview

Bank can use gateway services for communicating external system to FLEXCUBE. PC module is also supporting gateway operations.

Supported Gateway Services for PC

Following gateway services are major contributor to PC Module,

- FCUBSPCService

Service Name	Service Description	Operations	Operation Description
FCUBSPCService	Payments and Collections Service	ClosePCContract	Close of Payments & Collection Contract
FCUBSPCService	Payments and Collections Service	ClosePCMaint	Close of Payments and Collection Maintenance
