## Overview & Objective

FLEXCUBE – Accelerator Pack provides pre-configured standard business products and ready to use transaction sets that a bank would want to parameterize using the FLEXCUBE application. The objective of the pack is to provide the bank a head start in the FLEXCUBE implementation so as to fast track the rollout. The module that is covered as part of this document is Retail Teller. The purpose of this document is to provide an insight into the various business products and the transaction products configured for Teller transactions in bank.

## 1. Introduction

Teller module facilitates the processing of several types of transactions like cash transactions, cheque transactions, remittance transactions, funds management transactions, Instruments and Utility payments. Hence in general it could be classified as follows:

- Retail Teller
- Clearing
- Utility Payments

Oracle FLEXCUBE provides inbuilt retail teller and utility payment products in the Retail Teller module for retail teller transactions entered through an Oracle FLEXCUBE branch. These products are factory shipped, and no new products other than these need be maintained for such retail teller transactions. You can, however, make changes to these inbuilt products, to suit your requirements, and specify any exchange rate parameters and any MIS details if needed. Clearing products are not inbuilt. Clearing transactions screens have product LOV, where user can select the product code and process the transaction as per product attributes.

## 5. Annexure – A (MDATA)

### 5.1. Savings Workflow

In Teller module, each transaction is defined as workflow with a series of steps or stages. The Workflow engine, which forms the core of Savings, guides the transaction through its various stages.

Workflow maintenance includes:

- Function Group
  - Workflow Definition
  - Default Authorizer maintenance
  - Multi Level Authorizer Maintenance
  - Email Approval
  - Branch Function Definition
- At Workflow definition level for a function id or a group user can define multiple level of authorization with a primary and secondary path. User can follow any path for authorization.
  - Also when Email Approval is Y, email would be sent to user for users having Email id maintained in User Maintenance (SSDUSRDF) screen through a scheduler for Authorization
