Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate failsafe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

This software or hardware and documentation may provide access to or information on content, products and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services.

1. Preface

1.1 Introduction

This user manual is designed to help you quickly get acquainted with the Islamic Fixed Assets module of Oracle FLEXCUBE.

The manual gives you an overview of the Islamic Fixed Assets module, and takes you through the various steps involved in setting up and maintaining a fixed asset.

You can obtain information specific to a particular field by placing the cursor on the relevant field, and striking <F1> on the keyboard.

1.2 Audience

This manual is intended for the following User/User Roles:

Role	Function
Back office clerk	Input functions for contracts
Back office managers/officers	Authorization functions
Product Managers	Product definition and authorization
End of Day operators	Processing during End of Day/ Beginning of Day
Financial Controller/Product Managers	Generation of reports

1.3 Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc>.

1.4 Abbreviations

Abbreviation	Description
FCC	Oracle FLEXCUBE
FI	Islamic Fixed Assets
BOD	Beginning of Day
EOD	End of Day
PO	Purchase Order
MIS	Management Information System
SLM	Straight Line Method
WDV	Written Down Value method

1.5 Organization

This manual is organized into the following chapters:

Chapter 1	<i>About this Manual</i> gives information on the intended audience. It also lists the various chapters covered in this User Manual
Chapter 2	<i>Islamic Fixed Assets - An Overview</i> is a snapshot of the features that the module provides.
Chapter 3	<i>Defining Attributes of an Islamic Fixed Asset Product</i> gives the details of the procedure to set up Islamic Fixed Asset products.
Chapter 4	<i>Maintenance for Islamic Fixed Asset</i> gives the details of the maintenances required for Islamic fixed assets.
Chapter 5	<i>Processing Islamic Fixed Assets</i> discusses the processing of the Islamic fixed asset.
Chapter 6	<i>Annexure A - Accounting Entries and Advices for the Islamic Fixed Asset Module</i> contains an event-wise list of suggested accounting entries and advices.
Chapter 7	<i>Function ID Glossary</i> has alphabetical listing of Function/Screen ID's used in the module with page references for quick navigation.

1.6 Related Documents

You may need to refer to any or all of the User Manuals while working on the Funds Transfer module:

- Procedures
- Settlements
- User Defined Fields

1.7 Glossary of Icons

This User Manual may refer to all or some of the following icons:

Icons	Function
	Exit
	Add row
	Delete row
	Option List

2. Islamic Fixed Assets - An Overview

2.1 Introduction

The Islamic Fixed Assets module is a complete front-end module of Oracle FLEXCUBE that captures and tracks the characteristics of the Islamic fixed asset of your bank. Using this module you can clearly identify the various applicable events and manage all the activities during the assets' useful lifecycle.

The product definition function, the mainstay of Oracle FLEXCUBE's design, enables you to create products for specific Islamic fixed asset that you set up. The module gives you the *flexibility* to define components (charge), restrictions (branch), preferences, events and accounting entries into 'Classes'. When defining a product, you merely need to associate it with the different classes that you have built.

2.2 Features of the Module

Definition of Classes

In Oracle FLEXCUBE, a 'Class' embodies a generic set of attributes. A class could represent any one of the following:

- a set of restrictions (branch, locations, asset category)
- a set of events and the corresponding accounting roles and heads
- a component (charge)

As part of your one-time set up, you can define several sets of classes of a particular type. In Oracle FLEXCUBE, therefore, you do not have to specify restrictions, preferences, and components every time you create a product. You only need to associate the different set of classes that you have already maintained.

This feature eliminates redundancy, and saves processing time.

The process to create a class is discussed in the Procedures User Manual of Oracle FLEXCUBE.

Creating Islamic Fixed Asset Products

When setting up the module, you can define the various parameters for the assets. For each product, you can also define 'attributes', or in other words, the terms and conditions. When a user at the bank actually processes a fixed asset, it can be associated with a product. The asset acquires the terms *defined for the product that it involves*. (However, you can allow a user to change the inherited attributes of an asset for specific transactions.)

Processing Depreciation

The depreciation charge processing will be done as part of the End of Day and Beginning of Day processing. This will process all the assets for depreciation depending on frequency of the depreciation that you specify in the Asset Category - Rule mapping maintenance screen.

3. Defining Attributes of an Islamic Fixed Asset Product

3.1 Introduction

In this chapter, we shall discuss the manner in which you can define attributes specific to the Islamic Fixed Assets product.

3.2 Maintaining Islamic Asset Product

You can access the 'Islamic Asset Product Maintenance' screen, from the Application Browser. In this screen, you can enter basic information relating to a product such as the Product Code, Product type, the Description, etc.

You can invoke this screen by typing 'FIDPRMNT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot displays the 'Islamic Asset Product Details' window. The title bar shows 'Islamic Asset Product Details' and a 'New' button. The main area contains a form with the following fields:

- Product Code *
- Product Description *
- Product Type
- Description
- Slogan
- Product Group
- Product Group Description
- Start Date
- End Date
- Remarks
- Exchange Rate Variance (%)
- Override Limit *
- Stop Limit *
- Rate Code * (dropdown)
- Rate Type Preferred *

Below the form is a horizontal array of icons: Accounting Roles, Events, Branch & Currency, MIS, Preferences, Category Restrictions, Instrument Restrictions, Charges, and Fields. At the bottom, there are fields for Maker, Checker, Mod No, Date Time, Record Status, and Authorization Status, along with an Exit button.

For any product you create in Oracle FLEXCUBE, you can define generic attributes, such as branch, location, and category, etc., by clicking on the appropriate icon in the horizontal array of icons in this screen.

You can define the attributes specific to the product in the 'Islamic Fixed Asset Product Definition' screen and the 'Islamic Fixed Asset Product Preferences' screen. In these screens, you can specify the product type and set the product preferences respectively.

For further information on the generic attributes that you can define for a product, please refer the following Oracle FLEXCUBE User Manuals:

- Products
- Charges
- User Defined Fields

Product Code

The code you assign to a product will identify the product throughout the module. The code should contain four characters. You can follow your own convention for devising the code, however, at least one of the characters should be a letter of the English alphabet.

Since the code that you define is used to identify the product, it should be unique across the modules of Oracle FLEXCUBE. For instance, if you have assigned the code 'LC01' to a particular product in this module, you cannot use it as a code in any other module.

Product Description

You can enter a brief description of the product, which will be associated with the product for information retrieval purposes.

Product Type

An important detail in defining a Islamic product is to specify the type of product you are creating. The product type identifies the basic nature of a product. In this module, you can create Portfolio funds only.

The accounting entries that are passed, the messages that are generated, and the processing of funds involving this product are determined by the type of product that you create.

Description

You can enter a brief description

Slogan

You can specify a marketing punch-line to be associated with the product. This slogan will be printed on all the advices that are sent to the customer, for an LC involving this product.

Product Group

Each product is classified under a specific group. The different groups are defined in the Product Group Definition table.

Product Group description

A brief description of the product group is displayed in the Product Group description field.

Start Date and End Date

A product can be set up for use over a specific period, by defining a start and an end date. The Issue Date of an LC involving a product should be:

- The same as or later than the Start Date.
- The same as or earlier than the End Date.

The start and end dates of a product come in handy when you are defining a product for a scheme, which is open for a specific period.

Remarks

You can enter information about the product, intended for the internal reference of your bank. The remarks are displayed when the details of the LC are displayed or printed. However, this information will not be printed on any correspondence with the customer.

3.2.1 Exchange Rate Variance (in %)

For a special customer, or in special cases, you may want to use an exchange rate (a special rate) that is *greater than* the exchange rate maintained for a currency pair. The variance is referred to as the Exchange Rate Variance.

When creating a product, you can express an Exchange Rate Variance Limit in terms of a percentage. This variance limit would apply to all funds associated with the product.

Override Limit

If the variance between the default rate and the rate input varies by a percentage that is *between* the Override Limit and the Rate Stop Limit, you can save the transaction (involving the fund) by providing an override.

Stop Limit

If the variance between the default rate and the rate input varies by a percentage greater than or equal to the Rate Stop Limit, you cannot save the transaction involving the fund.

Rate Code

For every Currency Pair and Rate Type combination you are required to maintain Buy, Sell, and Mid Rates.

You need to specify whether the Mid Rate should be used for all Cross Currency transactions or whether the Buy/Sell Rate should be used depending upon the nature of the transaction by selecting the appropriate rate from the option list available.

Rate Type Preferred

You have to specify the Rate Type that should be used for Cross Currency transactions. Click on the option list for a display of all the Rate Types maintained through the Rate Type Definition screen.

3.3 Defining Accounting Roles

Click the 'Accounting Roles' button to invoke the 'Accounting Roles' screen. Through this screen you can define accounting rules for the product you are creating.

The screenshot shows the 'Accounting Roles' window. It has a blue header bar with the title 'Accounting Roles'. Below the header, there are two groups of input fields. The first group contains 'Product Code' and 'Product Description'. The second group contains 'Class Code' and 'Class Description'. To the right of the second group is a button labeled 'Default From Class'. Below these fields is a section titled 'Roles' which contains a table. The table has four columns: 'Accounting Role', 'Role Description', 'Account Head', and 'GL Description'. The table is currently empty. At the bottom right of the window are two buttons: 'Ok' and 'Exit'.

For more information on specifying Accounting Roles, refer 'Products' User Manual under 'Modularity'.

3.4 Maintaining Events

Click the 'Events' button to invoke the 'Events' screen. Through this screen you can define events for the product you are creating.

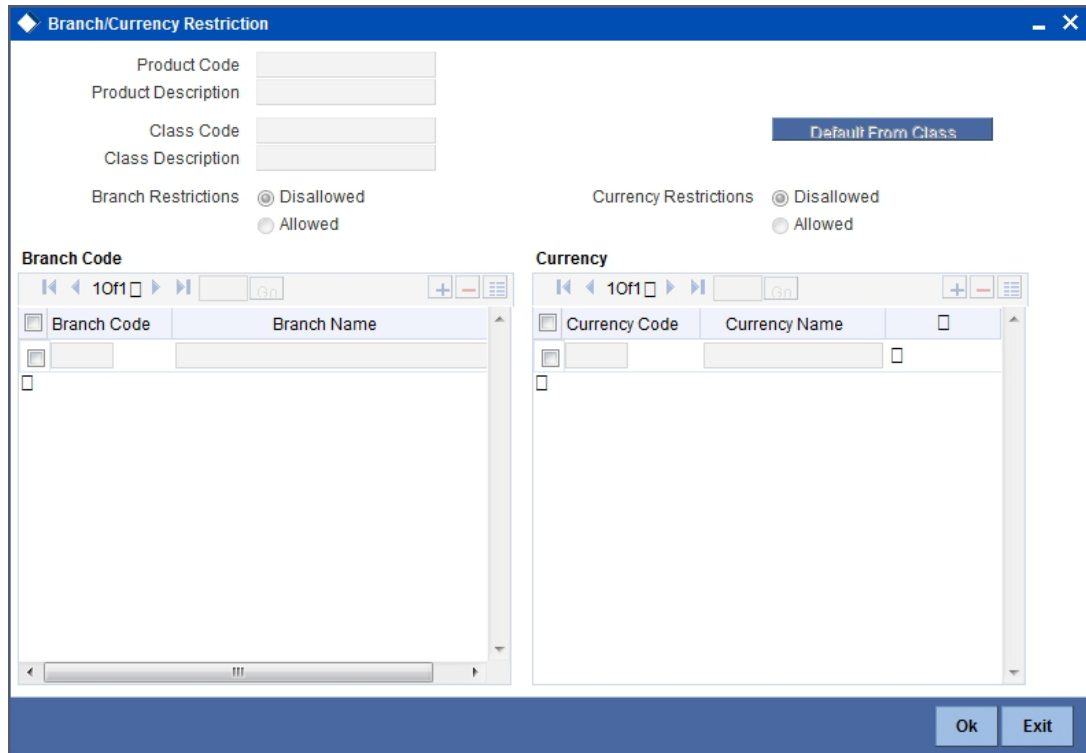

The screenshot shows the 'Events' window with the following components:

- Product Information:** Product Code and Product Description fields.
- Class Details:** Class Code and Class Description fields, with a 'Default From Class' button.
- Event Details:** A table with columns 'Event Code *' and 'Description'. The table is currently empty.
- Navigation:** Buttons for 'Accounting Entries', 'Advices', 'Ok', and 'Exit'.

For more information on specifying Event Details, refer 'Product Definition' User Manual under 'Modularity'.

3.5 Maintaining Branch Currency

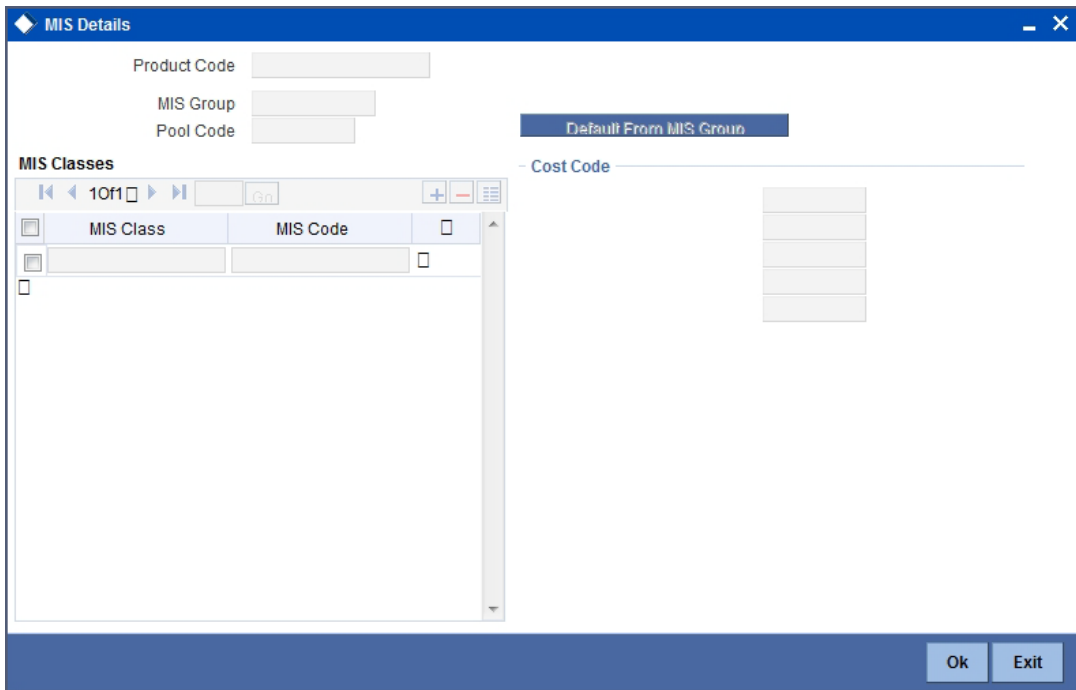

Click the 'Branch Currency' button to invoke the 'Branch/Currency Restriction' screen. Through this screen you can maintain branch currency for the product you are creating.

For more information on specifying Branch Details, refer 'Products' User Manual under 'Modularity'.

3.6 Maintaining MIS Details

Click the 'MIS' button to invoke the 'MIS Details' screen. Through this screen you can manage MIS details you are creating.

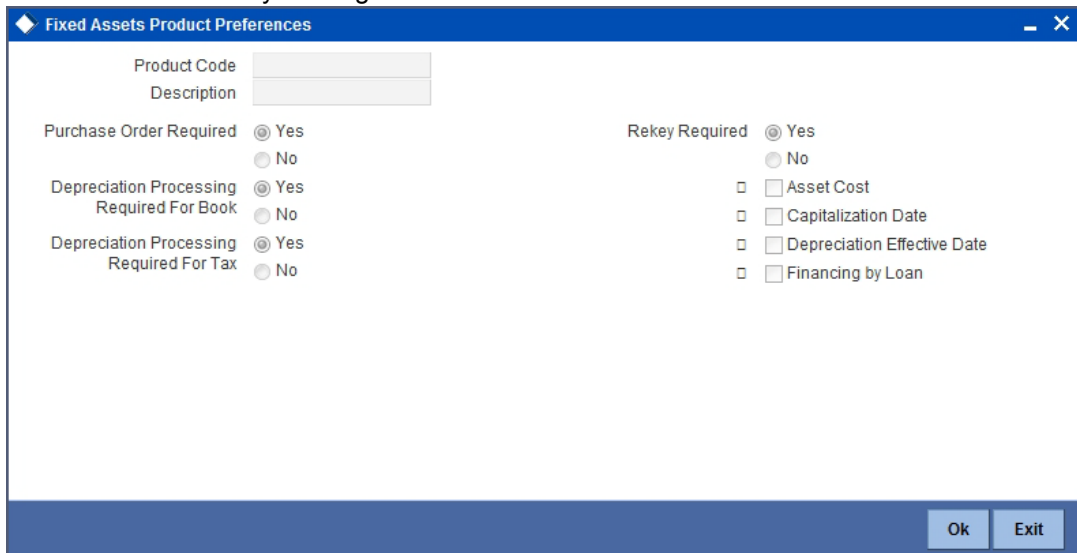

For more information on specifying MIS Details, refer 'Products' User Manual under 'Modularity'.

3.7 Specifying the Preferences of the Product

The attributes specific to an asset are defined in the Preferences screen.

You can invoke 'Fixed Assets Product Preferences' screen from the 'Islamic Assets Product Maintenance' screen by clicking on the 'Preferences' button.

Displaying the Product Code

This is the code for the product that you are defining here. The code is defaulted from the product definition screen.

Displaying the Product Description

This is the description of the product that is being defined. This is defaulted from the product definition screen.

Specifying if Purchase Order (PO) is Required

You have to indicate whether a purchase order is required or not for procuring a new asset. Choose your preference by clicking on 'Yes' or 'No' accordingly.

Note

If your preference for PO is 'Yes' then you will have to link the asset to an XP (Expense Processing) contract using 'XP Linkage' screen invoked from the 'Islamic Asset Capture Online screen'.

Specifying if Depreciation Processing is Required for the Asset

You have to mention if you want the depreciation process to be carried out for the asset. Choose your preference by clicking on 'Yes' or 'No' accordingly.

If you choose 'No', then the depreciation will not be charged for the assets which come under this product.

This data is maintained for both books of account as well as tax purposes.

Note

- Accounting entries will be passed only for book type of depreciation
 - In order to achieve the inventory tracking you need to select depreciation as 'No' and only BOOK and SALE events can be maintained
-

Specifying if Rekey is Required for the Asset

Indicate if you require any parameters to be keyed in, at the time of authorization, for the asset.

Specifying the Rekey Parameters

All operations on a Islamic fixed asset contract have to be authorized by a user other than the one who carried out the operation. Authorization is a cross checking mechanism to ensure that the entries made by a user are correct. All operations on a contract except placing it on hold, should be authorized before the beginning the End of Day operations.

You have the option of specifying whether certain important details of the contract need to be rekeyed, at the time of authorization. If you enable this option you should also specify the field that will have to be rekeyed at the time of contract authorization. You can specify any one of the following rekey fields:

- Asset Cost
- Capitalization Date
- Depreciation Effective Date

When you invoke a contract for authorization, the complete details of the contract will be displayed only after the values to the rekey fields are entered. Suppose you choose not to define any rekey fields the details of the contract will be displayed immediately once the authorizer calls the contract for authorization. The re-key option also serves as a means of ensuring the accuracy of inputs.

Financing By Loan

Check this box to indicate that the financing for the asset is done through a loan. This is maintained as 'Yes' for the *ijarah* asset products.

3.8 Specific Product Maintenance

You can define few specific restrictions for an asset at the product level. They are:

- Asset category restrictions
- Locations restrictions

3.8.1 Specifying Asset Category Restrictions

You have already categorized assets that share similar attributes in the 'Asset Category Maintenance' screen. The categorization of assets is useful for charging a common depreciation rate, generating MIS reports etc. You can also define the useful life for different categories of assets.

While creating an Islamic Fixed Asset product, you may want to establish certain controls by restricting the usage of the product to select asset categories only. You can achieve this control by maintaining restriction lists when creating a product.

Click 'Category Restrictions' button to display the 'Fixed Asset Product Category Details' screen.

The screenshot shows the 'Fixed Assets Product Category Details' window. It includes fields for Product Code, Class Code, Class Description, and Product Description. There is a 'Default From Class' button and a 'Restriction Type' section with radio buttons for 'Disallowed' and 'Allowed'. A table titled 'Category Restrictions' is present, with columns for 'Category Code *' and 'Description'. The table has one row with empty fields. At the bottom right, there are 'Ok' and 'Exit' buttons.

You can choose to specify Asset Category Restrictions either by:

- Associating the product with a Asset Category Restriction class
- By defining these restrictions specifically for the product

If you would like to associate a restrictions class to a product that you are defining, choose the 'Default From Class' button in the 'Islamic Fixed Asset Category Restriction' screen. A list of the restrictions classes that you have defined specifically for the Islamic Fixed Assets will be displayed. Choose a suitable Restrictions class.

Alternatively, you can choose to define asset category restrictions specifically for the product. In this case, you would choose not to associate restriction classes with the product. You would define restrictions for the product by:

- Specifying the List type – wherein you restrict the usage of an asset category (or asset categories as the case may be) to the product by maintaining an Allowed or Disallowed list.
- Move a Category to the Allowed/Disallowed column depending on the list type that you choose to maintain.

3.8.2 Maintaining Location Restrictions

Through the Location Code maintenance you have assigned unique location codes to identify different locations where the asset physically exists. Using the 'Fixed Assets Location Restrictions' screen you can restrict the usage of a product to specific locations. Click 'Instrument Restrictions' button to invoke the 'Fixed Assets Product Location Details' screen.

The details of all the locations that you have maintained will be displayed here. You can choose to specify the Location Restrictions either by associating the product with a Location Restriction class or by defining these restrictions specifically for the product.

3.9 Maintaining Charges Details

Click the 'Charges' button to invoke the 'Charge Details' screen. Through this screen you can manage charge details you are creating.

The steps involved in processing charges for a contract, i.e. defining charge rules, defining charge classes, associating charge classes with a product, and amending charge details to suit a contract are explained in the *Building Charge Components User Manual*.

3.10 Maintaining Fields

Click the 'Fields' button to invoke the 'Product User Defined Fields' screen. Through this screen you can manage user defined field details you are creating.

Field Number	Field Name	
		<input type="checkbox"/>
		<input type="checkbox"/>

From the list of all the fields that you created, you can choose specific fields and make them applicable to the product. Besides, you can also specify the values that should be defaulted for the field.

The list of fields and the default values that you select for a product will be apply to all transactions associated with the product.

Refer to the User Manual 'User Defined Fields' under 'Modularity for more details.

3.11 Viewing Summary for Islamic Fixed Asset Products

You can view the summary of the Islamic fixed assets products using 'Islamic Fixed Asset Product Summary' screen. You can invoke this screen by typing 'FISPRMNT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button. A screen giving all the details of the products is displayed.

You can query on records based on all or any of the following criteria:

- Authorization Status
- Record Status
- Product Code
- Product Description
- End Date
- Product Group
- Start Date
- Product Type

Click 'Search' button. The system identifies all records satisfying the specified criteria and displays the following details for each one of them:

- Authorization Status
- Record Status
- Product Code
- End Date
- Product Group

- Start Date
- Product Description

4. Maintenance for Islamic Fixed Asset

4.1 Introduction

You need to maintain certain details before you start entering the details of the assets. Therefore, you need to maintain the following information as part of processing Islamic fixed assets:

- Asset category maintenance
- Locations maintenance
- Branch Parameters
- Class(es) for locations restrictions
- Class(es) for category restrictions
- Asset category restrictions
- Rule definition

The above mentioned maintenances are separate for both Islamic Fixed Assets and Fixed Assets module.

This chapter enumerates the maintenance of the above mentioned parameters used by the Islamic Fixed Assets module in Oracle FLEXCUBE:

4.2 Maintaining Asset Category Details

In the 'Asset Category Maintenance' screen, you can group all the assets that are similar under one category. This will be useful for charging a common depreciation rate, generating MIS reports etc. You can also define the useful life for different categories of assets.

You can invoke 'Islamic Asset Category Maintenance' screen by typing 'FIDACAT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Category Code

You have to specify the unique code to identify the category for the asset. You will not be able to modify the category code once it is authorized.

Note

You can restrict usage of any asset category by disallowing the category in 'Islamic Fixed Asset Category Restriction Class Maintenance' screen.

Category Description

You have to capture a brief description about the asset category that you are defining. For example you could create a category called Land and categorize all immovable assets under this category. You could assign a description called Lands and Buildings to this category.

Main Category

You can choose the main category code for the asset from the drop down list. For example for an asset like car, you can have Vehicle as your main category. This is meant for information purposes only.

Useful Life

Mention the useful life of the asset in this field. If you select the 'Year' as your useful life unit in the next field then you have to mention the number of years the asset will be active.

If your preference is 'Month' then mention the number of months for which the asset is useful.

The significance of capturing this information is that if the depreciation is adhoc, the rates captured at the contract level should cover the useful life of the asset. Also, the sum of the depreciation rates should add up to hundred percent for the useful life period. However, if the depreciation is rule based, this will have no effect on the depreciation calculation.

Useful Life Unit

This is where you can mention the unit for measuring the useful life of an asset. The useful life unit can be Year or Month and this will determine the useful life mentioned in the previous field.

Calculation Criteria for Depreciation

Here you can mention whether you want to calculate the depreciation on the capitalization amount or on capitalization amount minus the residual value. You can indicate your preference by clicking against the option.

Click 'Inventory Details' tab in the 'Islamic Asset Category Maintenance' screen:

The screenshot displays the 'Islamic Asset Category Maintenance' application window. The 'Inventory Details' tab is active, showing several input fields: 'Unit Of Measurement', 'Threshold Level', 'Minimum Trade Quantity', 'Available Quantity', and 'Average Cost Per Unit'. Below these fields is a checkbox labeled 'Allow Inventory'. At the bottom of the window, there is a 'Fields' section with 'Input By' (Date Time), 'Authorized By' (Date Time), and 'Modification Number' (Authorized, Open) fields. An 'Exit' button is located in the bottom right corner.

4.2.0.1 Specifying Inventory Details

Allow Inventory

Select this option to identify category which will be used for inventory tracking.

The following details can be entered only if this option is selected.

Unit of Measurement

Specify the unit of measurement.

Threshold Level

Specify the level of threshold.

Minimum Trade Quantity

Specify the number of minimum trade quantity.

Available Quantity

The system displays the available quantity for the category.

Average Cost per Unit

The system displays the average cost per unit for the category.

4.3 Maintaining Codes for Asset Locations

Through the 'Location Code Maintenance' screen you can assign a unique location code to identify different locations where the asset physically exists.

You can invoke this screen by typing 'FIDLOCN' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows a software window titled "Location Code Maintenance". At the top, there is a menu bar with "New" and "Enter Query" options. Below the menu bar, there are two input fields: "Location Code *" and "Description *". At the bottom of the window, there is a "Fields" section with labels for "Input By Date Time", "Authorized By Date Time", and "Modification Number". There are also two checkboxes labeled "Authorized" and "Open", and an "Exit" button.

Specifying the Code for the Location

You have to capture a code to identify the particular location. You will not be able to modify it once it is authorized. You can pick this code from the 'Islamic Asset Capture' screen and the system will default the description for the location.

Note

You can restrict usage of any location by disallowing the location in 'Islamic Fixed Asset Location Restriction Class Maintenance' screen.

Specifying the Description for the Location

In this field, you can specify any general information of the location such as the name of the city, pin code etc.

4.4 Setting the Branch Parameters for the Product

You can define parameters at the branch level for functions such as depreciation period, residual value for writing off an asset, the cut off date for an asset to be included for depreciation for the particular period, etc.

You can invoke 'Branch Parameters-Islamic Fixed Assets' screen by typing 'FIDBRMNT' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Identifying the Branch Code

Select the code for the branch, for which you want to define the parameters, from the option list. Once you select the branch code, the description of the branch is defaulted in the next field.

Specifying the Date for Processing Depreciation

Here you have to mention the date on which the depreciation has to be processed. It can be either the System date or the Next Working Day – 1.

If you select the System date, the depreciation will be processed only till the day on which EOD is run. If your choice is Next Working Day – 1, then the depreciation will be processed till the last day before the next working day when the batch process is run during EOD. This is applicable only for working days within a month. For instance, if Today's Date is 10th June and the Next Working Date is 15th June, the system will pass accounting entries for contracts falling due up to 14th June during the EOD processes executed on 10th June. But, if Today's Date were 28th June and the Next Working Date happens to be 3rd July, the processing will be done only upto the 30th of June since it is the month end. The system will post the accounting entries for the first and second of July during the BOD process executed on the 3rd of July.

Note

This is with the assumption that the Accounting Period is Monthly. If it were to be Quarterly, the processing will be done till the end of the period which is the corresponding quarter.

Indicating the Depreciation Period

The calculation of depreciation for the year is based on the depreciation period, considering the cutoff period and date. You can choose the period from the option list positioned next to this field. The choices are:

- Monthly
- Quarterly
- Half-yearly

- Yearly

4.4.0.1 Indicating the Depreciation Parameters

Specifying the Depreciation Period

You need to mention the cut off date and cut off month for calculating the depreciation for the asset. If the asset is acquired before the mentioned cutoff date and cut off month, the depreciation is calculated for the full period.

If the depreciation period chosen in the previous field is Quarterly, Half Yearly or Yearly, you have to specify the cut off date and cut off month.

If the depreciation frequency chosen in the previous field is Monthly, then you need to mention only the cut off date.

The depreciation is calculated from the next period if the asset is acquired before the cut off period.

Indicating whether Amortization is Required

Specify if you want to amortize over the full period by checking the box. When an asset is acquired after the specified cut off date and month, the depreciation will be calculated from the next period and it will amortize the depreciation over the period of acquisition also.

If you leave this box unchecked, then the amortization will be done from the next period.

4.5 Maintaining Location Restrictions for Islamic Fixed Assets

You can define restrictions for certain locations that can be defaulted at the product level. You can invoke 'Islamic Fixed Assets Location Restriction Class Maintenance' screen by typing 'FIDLOCCL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows the 'Islamic Assets Location Restriction Class Maintenance' window. It includes the following elements:

- Title Bar:** Islamic Assets Location Restriction Class Maintenance
- Buttons:** New
- Form Fields:**
 - Class Code *
 - Description *
 - Module: FI (Fixed Assets)
 - Restriction Type: Allowed, Disallowed
- Table:**

Code	Description
- Fields Section:**
 - Input By Date Time
 - Authorized By Date Time
 - Modification Number
 - Authorized
 - Open
 - Exit

Identifying a Class

You can identify a location restriction class that you build with a unique ten character class code and a brief description.

You can follow your own convention for devising the code. The description that you specify is for information purposes only and will not be printed on any customer correspondence.

Choosing the Restriction Type

You can specify location restrictions either in the form of an 'Allowed' list, or in the form of a 'Disallowed' list.

When you associate a restriction class, defined as an allowed list, with a product, those locations that do not figure in the list *cannot* offer the service. If you have maintained a disallowed list for a class, locations that do not figure in it can offer the service.

Moving a location to the Allowed/Disallowed List

Under Location Restriction, two columns are displayed. They are

- Available
- Allowed /Disallowed based on the restriction type selected

The allowed or disallowed list that you view depends on the list that you choose to maintain for a class. For example, if you choose to maintain an allowed list, the column would display the location that you choose to allow.

In the 'Available' column, the location codes of all the locations that you have defined for Islamic fixed assets will be displayed. You can move a location to the allowed/disallowed column that you have maintained, using the arrow keys.

4.5.1 Viewing the Summary for Location Restrictions

You can view all the restricted locations for Islamic fixed assets using 'Islamic Assets Location Restriction Class Summary'. You can invoke the 'Islamic Assets Location Restriction Class Summary' screen by typing 'FISLOCCL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows a software application window titled "Summary". At the top, there are two dropdown menus: "Authorization Status" and "Record Status". Below these are input fields for "Class Code" and "Description", each with a search icon. A "Module" field contains the value "FI". A search bar at the bottom right contains "Search", "Advanced Search", and "Reset" buttons. Below the search bar, it says "Records per page 15" and "1 Of 1". A table header is visible with columns: "Authorization Status", "Record Status", "Class Code", "Description", and "Module". At the bottom, there are two legend boxes: "Authorization Status A - Authorized U - Unauthorized" and "Record Status C - Closed O - Open". An "Exit" button is located in the bottom right corner.

4.6 Specifying Category Restriction for Islamic Fixed Assets

An Islamic fixed asset category restriction class identifies a unique list of allowed or disallowed categories. At your head office, you can associate a product that you propose to offer with any asset category restriction class that you have maintained. The asset category restrictions defined for the class will apply to the service.

Note

Please note that any Islamic fixed asset product that your bank offers is available to all asset categories, by default, unless you specifically restrict its availability.

You will be able to define asset category restriction classes through the 'Fixed Asset Category Restriction Class Maintenance' screen. The asset category restriction classes that you define and authorize in this screen are the ones which can be used while creating the Islamic Fixed Assets products.

You can invoke 'Islamic Fixed Assets Category Restriction Class Maintenance' screen by typing 'FIDCATCL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Code	Description

An asset category restriction class is identified by a unique code and a description.

The asset category classes that you maintain have to be specific to a module in Oracle FLEXCUBE. This is because, a class maintained for one module would be unsuitable for another.

After specifying a code to identify the class, you will have to specify the Category restrictions either in the form of an Allowed List or a Disallowed List. Subsequently, you can move a location codes to the allowed/disallowed column (depending on your specification) that you have maintained, using the arrow keys.

4.6.1 Viewing the Summary for Islamic Fixed Asset Category Restriction

You can view the Islamic restricted asset categories by using 'Islamic Fixed Asset Category Restriction Class Summary' screen.

You can invoke this screen by typing 'FISCATCL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot displays the 'Summary' window with the following elements:

- Authorization Status:
- Record Status:
- Module: FI
- Class Code:
- Buttons: Search, Advanced Search, Reset
- Records per page: 15, 1 Of 1, Go
- Table Header: Authorization Status | Record Status | Module | Class Code | Description
- Legend: Authorization Status A - Authorized U - Unauthorized
- Legend: Record Status C - Closed O - Open
- Exit button

4.7 Defining Asset Rules

For every asset and category combination, you can maintain different rates for depreciation. You can record the depreciation rates for the asset category and the location combination. You can invoke 'Rule Definition – Islamic Fixed Assets' screen by typing 'FIDRULDF' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Specifying the Rule Code

Give a unique code to identify the rule you are going to define. This code cannot be modified later. You can give a brief description for the code in the description field.

Indicating the Rate for Calculating Depreciation

You have to specify rate for calculating the depreciation for the asset. This rate can be specified for time period in case the asset is dependent on capitalization. In this case, different rates have to be maintained for the first year and subsequent years.

If you have selected Independent of capitalization as your rate type, then the rate will be set for the whole useful period of the asset.

Note

The depreciation rate has to be mentioned in percentage.

Defining the Rate Type for Calculating Depreciation

If you want to have a different depreciation rates for different periods of acquisition in the first year of the asset life then chose Dependent on capitalization. In contradiction to this, you can choose Independent of capitalization to keep a single rate type through out the life of the asset.

Specifying the Start and End Dates over Periods

If the rule type is dependent on capitalization, and if the effective depreciation date falls between the Start and End date, the rates that you specify in this section of the screen will be considered for computing depreciation. Else, the value that you have specified in the Rate field will be considered.

Note

This is applicable for the first year only.

4.8 Maintaining Asset Category and Location Rule Mapping

Through the asset category – location rule mapping screen, you can map predefined depreciation rules to a combination of asset category and location. You can also define various depreciation parameters such as depreciation method for book and tax purposes, frequency of depreciation, depreciation rate type etc.

You can invoke 'Asset Category - Rule Mapping' screen by typing 'FIDRULMP' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The screenshot shows the 'Asset Category Rule Mapping' application window. At the top, there is a title bar and a 'New' button. Below this, there are two main sections: 'Booking Parameters' and 'Tax Parameters'. Each section contains a 'Method' (radio buttons for 'Straight Line Method' and 'Written Down Value'), a 'Frequency' (dropdown menu set to 'Yearly'), a 'Start Date' (dropdown menu set to '1'), and a 'Start Month' (dropdown menu set to '1'). There are also 'Asset Category' and 'Location Code' fields at the top, and a 'Rule' field at the bottom of each section. A 'Fields' section at the bottom shows 'Input By Date Time', 'Authorized By Date Time', and 'Modification Number' with checkboxes for 'Authorized' and 'Open'.

Identifying the Category for the Asset

Chose the category code for the asset from the option list available. Once you choose the asset category code, the description for the category will be displayed in the next field.

Indicating the Location Code for the Asset

You can select the location code for the asset from the given option list.

Indicating the Method for Depreciation

Here you have to indicate if you want SLM (Straight Line Method) or WDV (Written Down Value Method) as your depreciation method. Chose the method of depreciation by clicking the appropriate option.

This data is maintained for both book of accounts and tax purposes.

Specifying the Frequency for Depreciation

You need to mention the start date and the start month to determine when the first cycle of the depreciation accounting entries are to be posted.

Select the frequency for calculating of depreciation from the option list. This data is recorded for both book of accounts and tax purposes.

Indicating the Rule for Depreciation

Select the rule to be used for depreciation from the option list. This data is recorded for both book of accounts and tax purpose.

Specifying the Depreciation Type

You have to mention the type of depreciation required for the asset. The options available are Rule based, Ad-hoc and External.

If you select Rule based type of depreciation, then a fixed percentage is depreciated every year.

If you chose ad-hoc as the depreciation type then you have to maintain depreciation rates in the Depreciation Maintenance screen at the Asset Capture level. In such a scenario, the fields for rule are not applicable.

If you choose the external as depreciation type then the depreciation is processed as an external push feed from the consumer lending module, for every principal schedule on the due date.

Refer the section on Depreciation Maintenance for details on maintaining depreciation percentage for each period.

If the depreciation type is maintained as 'External' in the asset category rule mapping maintenance for the fixed asset contracts, then the system skips the depreciation processing for the asset. Instead it will process as an upload of depreciation data. This is used to upload the depreciation details for the fixed asset product which is not 'Financed by Loan'.

You can invoke 'Depreciation Input' screen by typing 'FIDEDEPRFIDEDEPR' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

The following information will be accepted for the depreciation upload:

- Contract Ref. No
- Depreciation Type → Book or Tax
- Depreciation Amount
- Depreciation Date

The screen will be as given below:

Islamic Asset Depreciation Details

New

Contract Reference

Depreciation Type

Depreciation Amount

Depreciation Date

Exit

Note

The other required information for depreciation processing is picked up from the category-location level rule maintenance.

5. Processing Islamic Fixed Assets

5.1 Introduction

In Islamic Fixed Assets module of Oracle FLEXCUBE you can capture static details such as Asset Code, Asset Cost, Date of Acquisition, Date of capitalization, Location, Asset category code etc. You cannot change the Islamic fixed asset product associated with the contract during the entire life cycle of the asset.

Islamic Fixed Assets purchase/acquisition online processing function enables you to perform the following functions:

- Copy the details of a new asset
- Amend/change the copied asset details
- Copy existing asset details for recording details of new fixed asset
- Delete/Undo of a asset record from one user to another
- Recording of individual items for an Asset
- Recording of Islamic Fixed Asset-XP contract linkages
- Any other fields may be captured using UDF

This chapter explains the processing of purchase or acquisition of an Islamic Fixed Asset.

5.1.1 Invoking the Asset Input Screen

To access the 'Islamic Fixed Asset Capture Online' screen, choose Islamic Fixed Assets from the Application Browser and then select the Detail option under Asset Capture.

The Asset capture screen consists of the following screens:

- Islamic Fixed Asset Main details
- Islamic Fixed Asset Items
- Depreciation details
- Islamic Fixed Asset-XP contract linkage
- Islamic Fixed Asset depreciation view

Each of the above mentioned screens and the data captured in each screen are explained in detail in this chapter.

5.2 Capturing the details of the Islamic Fixed Asset

You can capture the various details of the Islamic fixed asset such as asset code, asset cost, date of acquisition, date of capitalization, location, asset category code etc.

Through this screen you can associate the Islamic fixed asset to an Islamic product code and all the restrictions maintained at the product level will be enforced while you record the new asset.

You are not allowed to change the product associated with the asset during the life cycle of the asset once you have associated the product to the asset.

You can invoke 'Islamic Assets – Asset Capture' screen by typing 'FIDTRONL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button

Identifying a Product Code

Choose a product code from the option list. This option list provides all the valid products maintained through the 'Islamic Fixed Assets Product' screen. All the preferences defined at the product level will be defaulted. Once you specify the product code, the system will create the reference number in the next field for the asset.

Displaying the Contract Reference Number

The system automatically creates the reference number for the asset.

The reference number generated is a combination of branch code, product code, the Julian date of transaction input and a running serial number.

Description of the Product

Once you have selected the product code, the product description is displayed.

Displaying the User Reference number

You can enter any reference number for a Islamic Fixed Asset contract that you process. The contract will be identified through this number in addition to the contract reference number generated by the system. Two contracts cannot have the same user reference number. By default, the contract reference number generated by the system will be taken as the user reference number. You can use this number, to retrieve information relating to a contract.

Displaying Loan Account Number

The system displays the reference number of the financed finance account. You can not modify this field.

5.2.1 Capturing the Asset Details

Identifying the Category of the Asset

You can link the asset to an existing Islamic fixed asset category that is not restricted for the branch. Choose the category of the asset from the option list.

Indicating Fund Id

The fund Id will be visible only if the current branch is a fund branch. Select the Fund Id of the asset from the option list. By default, the value of 'Default Mudarabah Fund' is displayed as the Fund Id.

The settlements processing is enabled only if 'Allow Corporate Access' is checked in the 'Branch Parameters – Detail View' screen.

- If 'Allow Corporate Access' is not checked, then the settlement account would be the fund bank accounts linked to fund id.
- If 'Allow Corporate Access' is checked, then the settlement account is fetched from the settlement instruction maintenance for the counterparty.

Indicating the Vendor Code of the Asset

Specify the vendor code of the asset from the option list. The list displays all the customer codes maintained in the system.

Indicating the Location of the Asset

Identify the location at which the asset is currently stationed. The adjoining option list provides all the valid locations maintained through the 'Islamic Fixed Assets Location Restrictions' screen for Islamic fixed assets.

Describing the Asset

In this field, you can enter the description of the asset stating whether the asset is an office building or computers etc.

Specifying the Cost of the Asset

Enter the value of the asset in this field.

Identifying the Currency

This is the local currency of the branch. You will not be allowed to modify this data.

Describing the Status of the Asset

Here you have to mention the status of the asset your branch is holding. The available options are:

- Capitalized
- Work in progress

Specifying the Booking Date for the Asset

The system date is defaulted as the booking date of the asset. You will not be allowed to modify this date.

Specifying the Acquisition Date of the Asset

Mention the date on which the asset is acquired in the date/month/year format.

Specifying the Acquired Depreciation

You can specify the acquired depreciation in case of the asset being transferred from a previous branch. The system arrives at the accumulated depreciation based on the acquired depreciation that you specify as well as the depreciation calculated. The acquired depreciation is considered to track depreciation on books and not for tax purposes.

You will not be allowed to specify the acquired depreciation once you save and authorize a contract.

Residual Value

The Residual Value is taken into account for the purpose of computing the depreciation of the asset. However, you must ensure to enable the 'Asset Cost – Residual Value' option in the Asset Category screen.

Note

The total depreciation for the asset will not exceed the residual value.

Specifying the Capitalization Date

If you have selected the status of the asset as 'Capitalized' then you have to specify the date on which the asset was capitalized.

Indicating the Effective Depreciation Date

In this field, you have to mention the date from which the depreciation should be charged for the asset. The capitalization date will be taken as the default date if you do not mention the date. You can choose to change this but this date cannot be less than the capitalization date. Also this date cannot be a future date.

Indicating the Original Reference Number

This field is updated only during Islamic Fixed Asset Transfers. Transferred asset is automatically created in the branch/location on Save of transfer. This field displays the original reference number of the asset in the old branch/location. You cannot modify this number.

All other details of the transferred asset will remain the same as before except for a few conditions.

Please refer the section Asset Transfer Process for more details.

Indicating the Useful Life of the Asset

This is the unit to measure the useful life of asset (months/years). The data is defaulted from asset category maintenance. You can choose to change this unit.

Indicating the Duration of the Useful Life

This is the useful life of the asset. The data is defaulted from asset category maintenance however you can choose to change this.

Indicating Suspend Depreciation

By choosing this preference you can stop the depreciation calculation for an asset. If there is a negotiation for sale or change in RV for the asset, then choose this option to suspend the depreciation. Otherwise you can leave it unchecked.

Specifying the Depreciation Suspension Date

If you choose to suspend the depreciation then the system takes the application date as the suspension date. You will not be allowed to modify this date.

Note

ljarah fixed asset product with preference 'Financed by Loan' is not allowed.

5.2.2 Viewing the Depreciation Details

You can view the depreciation charged for the asset from this screen.

Depreciation view screen displays the depreciation details of the asset recorded for book and tax purposes.

YTD Depreciation

This field displays the depreciation charged on an asset from the start of the current financial year till the last depreciation date. This data is recorded for book and tax purpose.

No modification is allowed in this field.

Accumulated Depreciation

This field displays the depreciation charged on an asset for account book and tax purpose. The depreciation is calculated from the effective date of depreciation till the system date.

No modification is allowed in this field.

Year Open WDV

The field displays the value of the asset that was written down at the beginning of the financial year for book and tax purpose.

No modification is allowed in this field.

Current WDV

This field displays the value of the asset that was written down on the system date for book and tax purpose.

No modification is allowed in this field.

5.2.3 Viewing the Inventory Details

You can view the inventory details for the asset from this screen. Click 'Inventory Details' tab in the 'Islamic Assets- Asset Capture' screen.

**In this screen you can capture the following details:
Asset Reference Number**

The system displays the asset reference number.

Quantity

Specify the number of quantities.

Procurement Unit Price

Specify the price for procurement unit.

Available Quantity

The system displays the available quantity based on the quantity available for the contract. Initially the system will default it with Value of Quantity.

5.2.4 Recording the XP Contract Reference Linkage

When an asset is purchased against a purchase order, you can link the asset to the contracts in Expense Processing contract.

To access this screen, click 'Linkage Details' button in the 'Islamic Assets – Asset Capture' screen.

The screenshot shows a software window titled "Linkage Details". At the top, there are two input fields labeled "Asset Reference" and "Asset Description". Below these is a table with the following columns: "Expense Processing Contract Reference", "Vendor Code", "Contract Amount", and "Linked Amount". The table contains one row with empty input fields. Below the table is a "Total Linked Amount" input field. At the bottom right of the window are "Ok" and "Exit" buttons.

This screen enables you to add or delete a record.

Indicating the Reference Number for the Asset

The reference number of the asset is defaulted from the 'Islamic Assets – Asset Capture' screen. You will not be able to change this number.

Specifying the Reference Number for the XP Contract

Here you have to mention the reference number of the contract in the XP. You can pick the reference number from the option list available or you can mention the number which will be validated against the XP contract.

Displaying the Code for the Vendor

Once you choose the XP contract, the code for the vendor will be defaulted automatically.

Indicating the Contract Amount

Once you choose the XP contract, the contract amount will be defaulted automatically in this field.

Note

The XP contract amount is displayed in asset currency.

Specifying the Linked Amount

You have to specify the amount of the XP contract that has been used for the purchase of the asset.

Note

Make sure that the sum of the linked amounts for all the linked contracts is less than or equal to the actual cost of the asset.

5.2.5 Capturing the Details of the Items

This screen is used to record individual item details under a single asset code in cases where many similar assets are grouped under one category.

To access this screen, click 'Asset Details' button in the 'Islamic Assets – Asset Capture' screen.

Item Number *	Description	Item Cost	Expected Delivery Date	Delivered	Inspected	Re
				<input type="checkbox"/>	<input type="checkbox"/>	

In this screen you are allowed to add or delete an asset from the asset group.

Indicating the Reference Number for the Asset

The reference number of the asset is defaulted from the 'Islamic Assets – Asset Capture' screen. You will not be able to change this number.

Specifying the Item Identification Number

You need to enter a unique number for the asset to identify the particular asset.

Indicating the Cost of the Asset

You need to specify the cost of the individual item.

Note

Take care that the sum of all item costs does not exceed the asset cost.

Describing the Asset

You can record the general information regarding the asset in the description field.

Specifying the Delivery Date for the Asset

Mention the date on which the item is scheduled for delivery.

Note

Ensure that the delivery date is not less than the capitalization date.

Indicating the Delivery Status of the Item

Check the box if the delivery of the asset has been carried out. Keep the box unchecked to indicate that the asset has not been delivered.

Indication the Status of Inspection

If the asset has been inspected then check the box. Leave it unchecked to indicate that the asset has not undergone inspection.

Note

You will also be able to perform queries about assets delivered but not inspected and assets inspected but not capitalized, based on the delivery date and status.

Specifying the Remarks for the Asset

In this field you can enter general remarks for the asset for future reference.

5.2.6 Maintaining the Depreciation Table

You will be able to define different rates for depreciation. This is exclusively done for adhoc type of depreciation.

To access this screen, click on 'Adhoc Schedule' button in the 'Islamic Assets – Asset Capture' screen.

The screenshot shows a software window titled "Ad hoc Schedule". It features two side-by-side data entry areas. The left area is labeled "Schedule For Book" and the right area is labeled "Schedule For Tax". Both areas have a header with "Asset Reference" and "Asset Description" fields. Below these headers are two tables, each with columns for "Year" and "Rate". The tables are currently empty. Navigation controls like "Go" and "10f1" are visible above each table. At the bottom right of the window, there are "Ok" and "Exit" buttons.

Displaying the Asset Reference Number

The reference number of the asset and its description is defaulted from the contract input screen. You will not be able to modify this number.

Maintaining Depreciation Schedule for the Asset

You need to maintain the depreciation rate for the asset across the useful life of the asset.

Note

The depreciation rate will always be in percentage terms per annum.

You have to maintain the depreciation schedule for the asset if you have chosen 'AD-HOC' as the 'Depreciation Type' in the 'Asset Category Rule Mapping' screen.

If the useful life is in months, then also, the adhoc depreciation schedule needs to be recorded in terms of years.

Additionally, you have to ensure that you have maintained depreciation rates for all the years of Useful Life.

5.2.7 Maintaining Events

Events are maintained through the 'Events' screen. Click the 'Events' button in the 'Islamic Assets – Asset Capture' screen to invoke this screen.

The 'Event Details' window contains the following elements:

- Reference Number *
- Events table:

Event Number *	Event Date	Event Code	Description	Authorization Status	Make
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
- Message | Accounting Entries
- Exit

For more information on specifying Event Details, refer 'Products' User Manual under 'Modularity'.

5.2.8 Specifying Settlement Instructions

Through the settlement screens, you can view the fund accounts to which entries for the applicable charges and taxes are posted. These details are available in the 'Settlement Details' screen.

Click the 'Settlement' button in the 'Islamic Assets – Asset Capture' screen to invoke the 'Settlement Details' screen.

The 'Settlement Details' window contains the following elements:

- Reference Number * Component
- Account Details | Message Details | Parties | Parties | Cover Parties | Other Details | Clearing Details | Local Clearing
- IBAN Account Number
- Settlement Details table:

Component	Currency	Branch	Account	Account Currency	Dr/Cr	Original Exchange Rate	Exchange Rate	Rate
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
- Settlement Direction: D - Debit, C - Credit
- Component Description
- Signature Verification
- Ok | Exit

For more information on specifying Settlement Details, refer 'Settlements' User Manual under 'Modularity'.

5.2.9 Defining MIS Details for a Fund

Click the 'MIS' button in the 'Islamic Assets – Asset Capture' screen to invoke the 'MIS' screen.

The screenshot shows the MIS configuration window with the following fields and sections:

- Contract Reference ***: Text input field.
- MIS Group**: Text input field with a **Default** button.
- Link To Group**: checkbox.
- Input** section:
 - Link To Group**: Radio buttons for **Related Reference** and **Related Account**.
 - Related Account**: Text input field.
 - Related Reference**: Text input field.
 - MIS Head**: Text input field.
 - Rate Code**: Text input field.
 - Spread**: Text input field.
- Rate At** section:
 - Rate Type**: Dropdown menu.
 - Interest Method**: Dropdown menu.
 - Refinance Rate**: Text input field.
 - Pool Code**: Text input field.
 - Cost Code 1-5**: Five text input fields.
- Transaction MIS**: 10 rows, each with **MIS Group** and **Transaction MIS 1-10** fields.
- Composite MIS**: 10 rows, each with **MIS Group** and **Composite MIS 1-10** fields.
- Fund MIS**: 10 rows, each with **Fund MIS 1-10** fields.
- Buttons**: **Ok** and **Exit** buttons at the bottom right.

5.2.10 Maintaining Charges Details

Click the 'Charges' button to invoke the 'Charge Details' screen. Through this screen you can manage charge details you are creating.

◆ Charge Details

Contract Reference *

Charge Association

10 of 1

Creation ESN	Component *	Rule	Description	Consider as Discour
				<input type="checkbox"/>

Charge Application

10 of 1

Creation ESN	Component *	Tag Currency	Tag Amount	Charge Currency	Charge Amount

Charge Liquidation

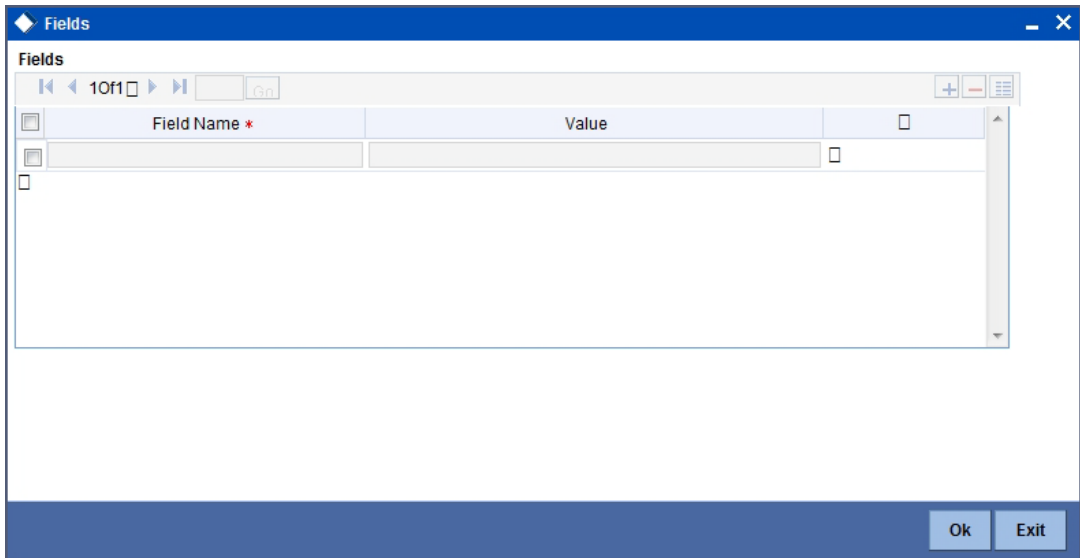

10 of 1

ESN	Component	Charge Currency	Charge Amount	Liquidated	
				<input checked="" type="checkbox"/>	<input type="checkbox"/>

Ok Exit

5.2.11 Maintaining Fields

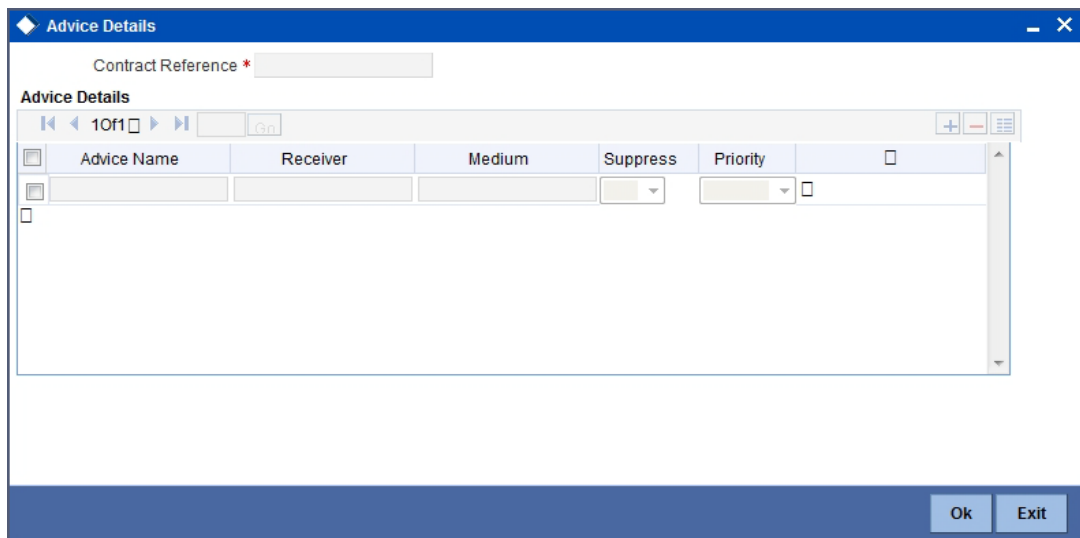

Click the 'Fields' button to invoke the 'Fields' screen. Through this screen you can manage user defined field details you are creating.

In the 'Fields' screen, you can specify the Field Name. Select the Field Name from the option list provided.

5.2.12 Maintaining Advice Details

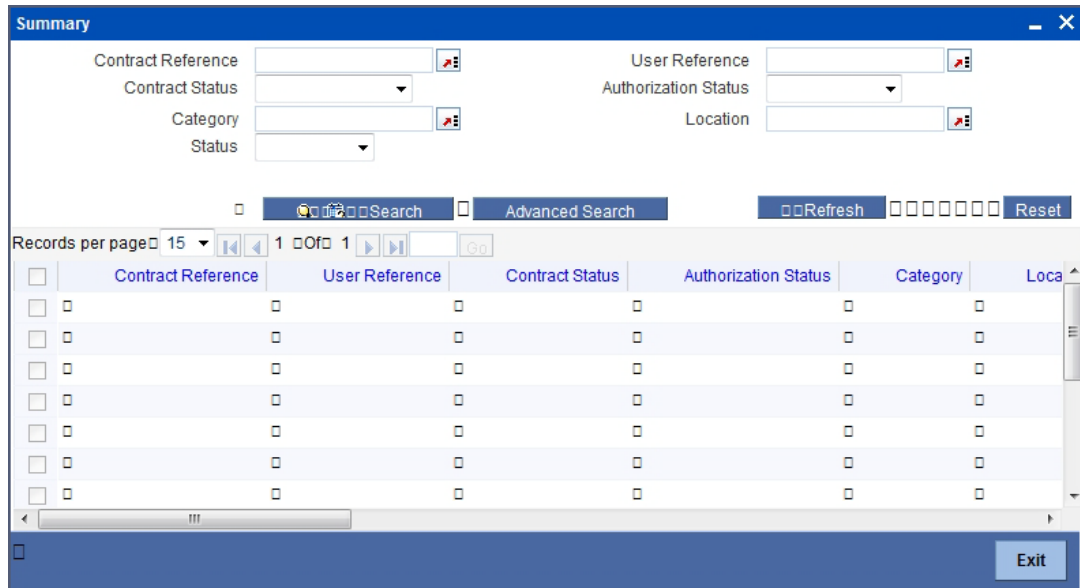

Click the 'Advices' button to invoke the 'Advice Details' screen. Through this screen you can manage user defined field details you are creating.

5.3 Viewing Summary for Islamic Fixed Asset Contracts

You can view the summary of all the Islamic fixed assets contracts using 'Islamic Fixed Asset Capture Summary' screen. You can invoke this screen by typing 'FISTRONL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

A screen giving all the details of the contracts is displayed.

5.4 Reassigning an Islamic Asset Contract to another User

A contract can be deleted only by the user who entered it. If a contract has to be deleted and the user who input it is not around to do it, you can reassign the contract to another user so that the other user can delete it. Typically, this situation may arise during End of Day operations when a contract that is not authorized has to be deleted and the user who input it has left office for the day. The access rights to reassign a contract are usually allotted to a senior user in the department.

You can perform the reassigning operation through the 'Islamic Reassign Contract' screen. You can invoke this screen by typing 'IBDTREAS' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button. The screen is displayed below.

Product

Specify the product for which you want to reassign the user. The adjoining option list displays all the products maintained for Islamic fixed assets through the 'Islamic Fixed Assets Product Maintenance' screen.

Contract Ref No

Specify the contract reference number for which you want to reassign the user. The adjoining option list displays all the contracts maintained for the product selected.

Current User Id

Current user ID is displayed in this field.

New User Id

Specify the new user to whom you want to reassign the contract.

Click 'Ok' button to save the details you entered. Click 'Delete' button if you do not want to save the details.

5.5 Specifying the Islamic Asset Transfer Details

Through the Transfer of Fixed Asset screens you can transfer a Islamic fixed asset to a different branch/ location. All the necessary details such as date of sale/transfer/write off, sale price, transfer details etc is captured through these screens.

You can invoke 'Islamic Assets –Transfer Details' screen by typing 'FIDTRTFR' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button. The screen is displayed below:

The process of transfer is automated and the transferred Islamic asset is automatically created in the branch/location on saving the transfer.

Transfer value of the asset will be the current book value of the asset itself and cannot be modified. Book Value is arrived by subtracting the accumulated depreciation from the asset cost.

Note

At least one of the two (new location and branch) must be different than current location and branch of the asset. Oracle FLEXCUBE will display an error message if this condition is not met.

The reference number of the asset is defaulted from the 'Islamic Fixed Asset Capture Online' screen. You will not be able to modify this number. To move to the next asset or previous asset, use the Up and Down arrow keys in the keyboard.

5.5.1 **Capturing the Asset Details**

Select 'New' from the Actions menu in the Application tool bar or click new icon to make a new entry for sale/write off.

Depending on the reference number you choose, the details for the asset will be defaulted in the following fields:

- Asset Description – the general information regarding the asset in this free format text field
- Asset Cost – the cost of the individual item
- Category – the code of the category under which the asset is placed

- Location – the location code where the asset is currently stationed
- Accumulated Depreciation – the accumulated depreciation from previous branch in case of transfer
- Current Book Value – the written down value of the asset as on date for books of accounts

Note

Any transfer has to be authorized before the end of day.

5.5.2 Capturing the Transfer Details

Indicating the New Reference Number

This is the asset reference number of the asset created in the new branch/location and you will not be allowed to modify the number.

This number is automatically generated by the system when you save the contract.

Specifying the New Branch

This is the branch where the asset is to be transferred. This field is mandatory for asset transfer. Select the branch from the option list.

Specifying the New Location

This is the location to which the asset is to be transferred. This field is mandatory for asset transfer. Select the branch from the option list.

5.5.3 Asset Transfer Process

The following conditions are mandatory for asset transfer –

- The category - location rule mapping for the new location should be rule based
- If only the branch is being changed and not the location, the existing category – location depreciation type can be ad hoc. In this case ad hoc schedules will be copied from the old asset to the new asset.
- If the location is being changed, then the new category – location combination should have depreciation type as rule based. Old category – location combination can have ad hoc depreciation. Transfer is possible only if the new category location rule mapping has the same rule type as the old category.
- In branch parameters, depreciation period, cut off date and cut off period fields should have the same value in both the old and the new branches.
- If the asset is being transferred to a new branch, the new branch should have exactly the same definition of financial year and financial periods. If not, it might result in erroneous depreciation calculation.
- While doing an asset transfer, system will check the preferences maintained at the branch parameters level to complete or reverse depreciation for the period in which the asset is being transferred to a new branch/location.
- If the asset is being transferred after the cut off date, then depreciation will be completed for the current period in the transferor branch. Further depreciation will happen in the transferee branch for rest of the depreciation period in the current financial year.
- If the asset is being transferred on or before the cut off date, any depreciation which might have happened in the current period will be reversed out for the transferor branch. Further depreciation from the current period onwards will happen in the transferor branch according to the category –location rule maintenance for the new location (in case the location has changed).

- The original reference number for the transferred asset will be the original reference number of the asset in the old branch/location.
- All other details of the asset will be the same as they were before transfer except for the following:
 - Acquired depreciation – This will be updated with the total depreciation amount (Accumulated depreciation) for the asset in the previous branch/location
 - Ad hoc Schedules – The new asset created will not have ad hoc depreciation schedules if the asset is transferred to a new location as the new category – location combination must allow for rule based depreciation. If the location is the same, then the original ad hoc schedules will be replicated to the new asset.
 - Asset Acquisition date will be the transfer date
 - In case a capitalized asset is transferred, capitalization date will be the transfer date else it will not be updated (if asset is transferred in WIP stage)
 - In case a capitalized asset is transferred, effective depreciation date will be the transfer date else it will not be updated (if asset is transferred in WIP stage)

The new asset created will be automatically authorized once the transfer of the asset is authorized. Till such time, the new asset cannot be modified independently. After authorization of the transfer, the new asset created will be independent of the original transferred asset.

On deletion of the transfer, the new asset created will also be deleted.

Note

- Transfer of asset is not allowed for fixed assets 'Financed by Loan'
 - If you have selected 'Allow Inventory' option in the 'Islamic Fixed Asset Category Maintenance' screen then the transferring of asset will not be allowed for the contracts.
-

Refer the examples in the accounting entry process in the Appendix manual for the above two scenarios.

5.6 Specifying the Islamic Asset Write Off details

You can write off the bad assets using the 'Islamic Assets - Write Off Details' screen. You can invoke this screen by typing 'FIDTRWRF' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Indicating the Reference Number of the Asset

The reference number of the asset is defaulted from the 'Islamic Fixed Asset Capture Online' screen. You will not be able to modify this number. To move to the next asset or previous asset, use the Up and Down arrow keys in the keyboard.

Asset Details

Click on the 'New' icon in the toolbar or select 'New' from the Actions menu to make a new entry for sale/write off.

Depending on the reference number you choose, the details for the Islamic fixed asset will be defaulted in the following fields:

- Asset Description - the general information regarding the asset in this free format text field
- Asset Cost - the cost of the individual item
- Category – the code of the category under which the asset is placed
- Location – the location code where the asset is currently stationed
- Accumulated Depreciation – the accumulated depreciation from previous branch in case of transfer
- Current Book Value – the written down value of the asset as on date for books of accounts

Transaction Details

You can specify the following details here:

Indicating the Value Date

This is the date on which the asset is written off. This date will always be the system date and you will not be allowed to modify this date.

Specifying the Value of the Sale/Write-off

For a Write off, this value will be the current book value and is not modifiable.

Identifying the Officer in Charge

For write off, you have to mention the name of the officer in charge of the sale or transfer of the asset. This data is recorded for general information purpose.

Remarks

You can enter general remarks for the asset in this free format text field for information purposes.

Note

Any write off has to be authorized before the end of day and Write off is not allowed for fixed assets 'Financed by Loan'.

5.6.1 Maintaining Events

Events are maintained through the 'Events' screen. Click the 'Events' button in the 'Islamic Assets - Write Off Details' screen to invoke this screen.

Event Number	Event Code	Event Date
--------------	------------	------------

5.6.2 Specifying Settlement Instructions

Through the settlement screens, you can view the fund accounts to which entries for the applicable charges and taxes are posted. These details are available in the 'Settlement Details' screen.

Click the 'Settlement' button in the 'Islamic Assets - Write Off Details' screen to invoke the 'Settlement Details' screen.

For more information on specifying Settlement Details, refer 'Settlements' User Manual under 'Modularity'.

5.6.3 Defining MIS Details for a Fund

Click the 'MIS' button in the 'Islamic Assets - Write Off Details' screen to invoke the 'MIS' screen.

5.6.4 Maintaining Charges Details

Click the 'Charges' button to invoke the 'Charge Details' screen. Through this screen you can manage charge details you are creating.

◆ Charge Details

Contract Reference *

Charge Association

10f1

Creation ESN	Component *	Rule	Description	Consider as Discour
				<input type="checkbox"/>

Charge Application

10f1

Creation ESN	Component *	Tag Currency	Tag Amount	Charge Currency	Charge Amount

Charge Liquidation

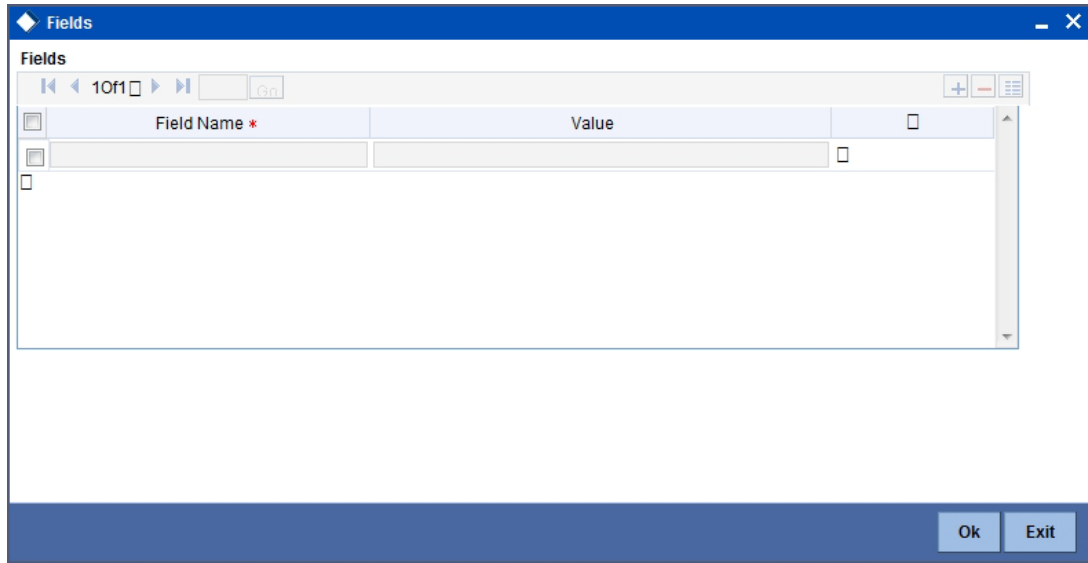

10f1

ESN	Component	Charge Currency	Charge Amount	Liquidated	
				<input checked="" type="checkbox"/>	<input type="checkbox"/>

Ok Exit

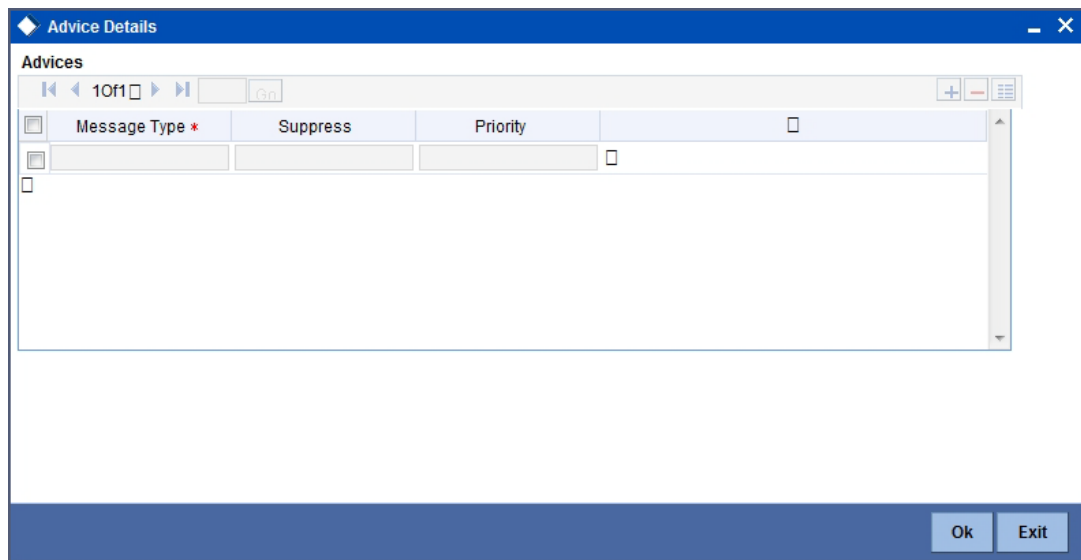

5.6.5 Maintaining Fields

Click the 'Fields' button to invoke the 'Fields' screen. Through this screen you can manage user defined field details you are creating.

5.6.6 Maintaining Advice Details

Click the 'Advices' button to invoke the 'Advice Details' screen. Through this screen you can manage user defined field details you are creating.

5.7 Specifying the Islamic Asset Sale Details

You can sell the Islamic fixed asset by using 'Islamic Asset – Sales Details' screen. You can invoke this screen by typing 'FIDTRSLE' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Indicating the Reference Number of the Asset

The reference number of the asset is defaulted from the 'Islamic Fixed Asset Capture Online' screen. You will not be able to modify this number. To move to the next asset or previous asset, use the Up and Down arrow keys in the keyboard.

Capturing the Asset Details

Click on the 'New' icon in the toolbar or select 'New' from the Actions menu to make a new entry for sale/write off.

Depending on the reference number you choose, the details for the Islamic fixed asset will be defaulted in the following fields:

- Asset Description - the general information regarding the asset in this free format text field
- Quantity To Sell – the selling quantity of the asset for the contracts which are created for categories with 'Allow Inventory' option is selected in the 'Islamic Fixed Asset Category Maintenance' screen.
- Asset Cost - the cost of the individual item
- Category – the code of the category under which the asset is placed
- Location – the location code where the asset is currently stationed
- Accumulated Depreciation – the accumulated depreciation from previous branch in case of transfer
- Current Book Value – the written down value of the asset as on date for books of accounts

Capturing the Transaction Details Customer

Specify the CIF id of the customer to whom the asset is sold and the SALE event will be fired for selected customer.

Value Date

This is the date on which the asset is sold. In case of a sale, the default date will be the system date and you can choose to change this date.

Value of the Sale/Write-off

This is the net sale value of the asset. This field is mandatory if the asset is being sold.

Officer in Charge

For sale of an asset, you have to mention the name of the officer in charge of the sale or transfer of the asset. This data is recorded for general information purpose.

Remarks

You can enter general remarks for the asset in this free format text field for information purposes.

Note

- Any sale has to be authorized before the end of day and Sale of asset is not allowed for fixed assets 'Financed by Loan'
 - SALE event will be fired only for the cost of selected quantity and not for the full asset cost
 - The status of the asset contract will be changed to 'S- Sold' only when the full quantity is sold out. However it will remain in 'W-In Stock' status if partial quantity is sold out.
-

5.7.1 Maintaining Events

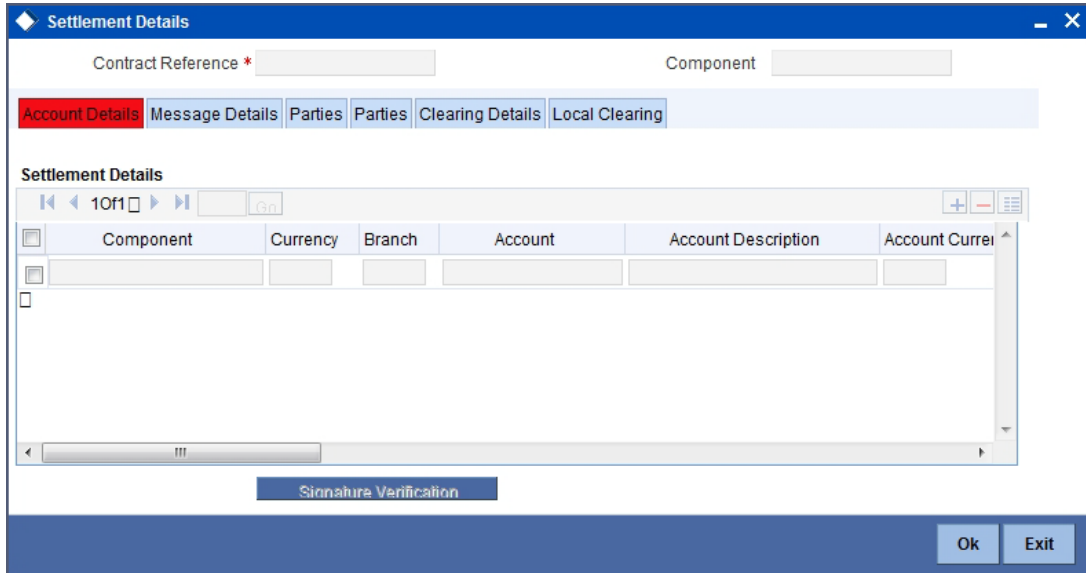

Events are maintained through the 'Events' screen. Click the 'Events' button in the 'Islamic Asset – Sales Details' screen to invoke this screen.

The screenshot shows a software interface for maintaining events. The window has a title bar with a diamond icon and the text 'Main'. Below the title bar is a 'Reference Number *' field. The main area is titled 'Events' and contains a table with the following columns: 'Event Number *', 'Event Date', 'Event Code', 'Description', and 'Authorization Status'. The table is currently empty. At the bottom of the window, there are two tabs: 'Accounting Entries' and 'Messages'. An 'Exit' button is located in the bottom right corner.

For more information on specifying Event Details, refer 'Products' User Manual under 'Modularity'.

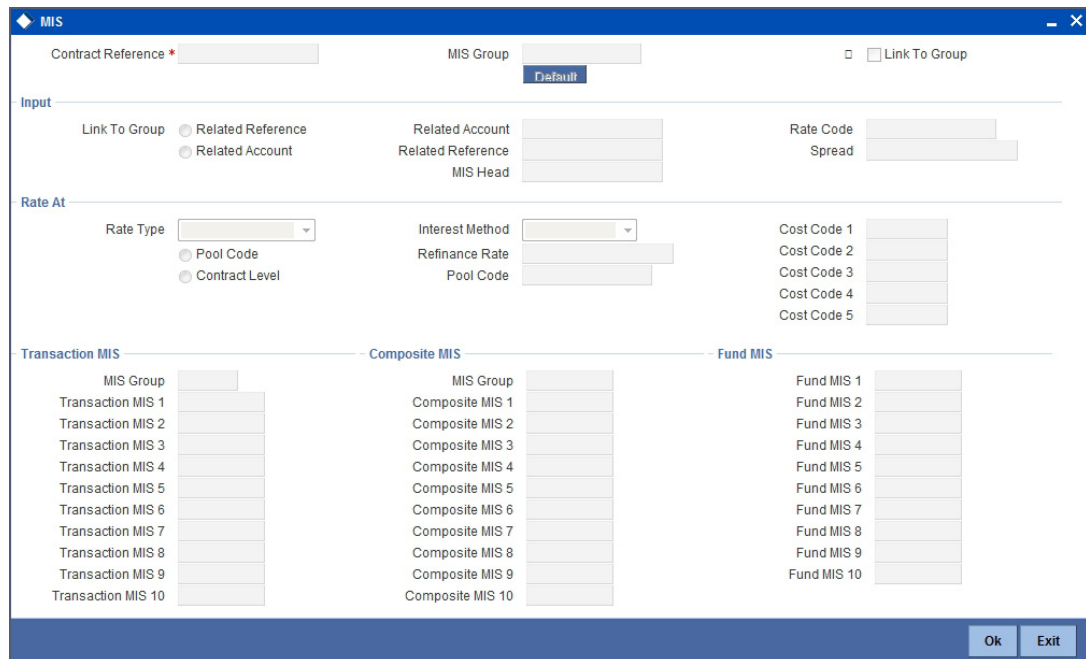

5.7.2 Specifying Settlement Instructions

Through the settlement screens, you can view the fund accounts to which entries for the applicable charges and taxes are posted. These details are available in the 'Settlement Details' screen. Click the 'Settlement' button in the 'Islamic Asset – Sales Details' screen to invoke the 'Settlement Details' screen.

5.7.3 Defining MIS Details for a Fund

Click the 'MIS' button in the 'Islamic Asset – Sales Details' screen to invoke the 'MIS' screen.

5.7.4 Maintaining Charges Details

Click the 'Charges' button to invoke the 'Charge Details' screen. Through this screen you can manage charge details you are creating.

Charge Details

Contract Reference *

Charge Association

Creation ESN	Component *	Rule	Description	Consider as Discour
				<input type="checkbox"/>

Charge Application

Creation ESN	Component *	Tag Currency	Tag Amount	Charge Currency	Charge Amount

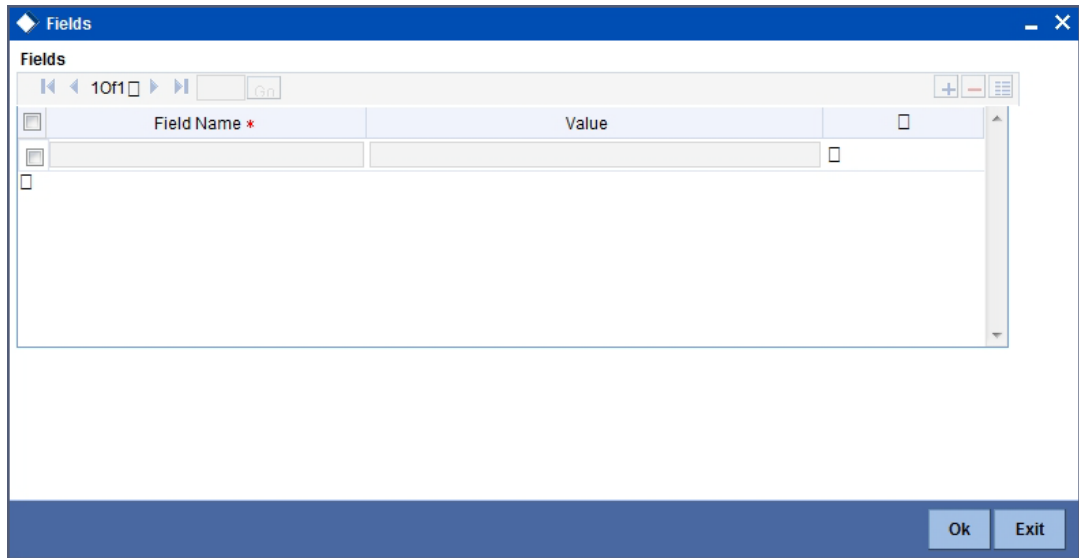

Charge Liquidation

				<input checked="" type="checkbox"/>	<input type="checkbox"/>

Ok Exit

5.7.5 Maintaining Fields

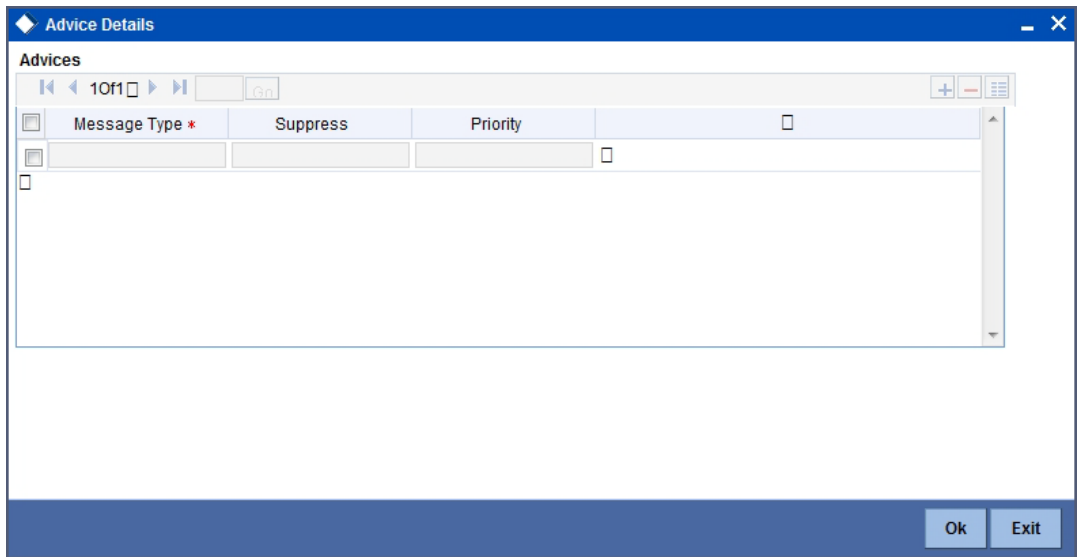

Click the 'Fields' button to invoke the 'Fields' screen. Through this screen you can manage user defined field details you are creating..

In the 'Fields' screen, you can specify the Field Name. Select the Field Name from the option list provided.

5.7.6 Maintaining Advice Details

Click the 'Advices' button to invoke the 'Advice Details' screen. Through this screen you can manage user defined field details you are creating.

5.8 Viewing Fixed Asset Delivered but not Inspected

You can view the details of the Islamic fixed assets delivered but which are not yet inspected using 'Islamic Assets Delivered but not inspected' screen. You can invoke this screen by typing 'FISQDLIN' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button. The screen giving all the details of the fixed assets which are delivered but not inspected is displayed.

You can perform the following operations using this screen:

- Unlock
- Modify
- Copy
- Delete
- Close

5.9 Viewing Fixed Asset Drill Down Query

You can query the details for GL at category level by using 'Islamic Assets Drill Down Query' screen.

You can invoke this screen by typing 'FIDQDRIL' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

- Close

5.11 Invoking the Batch Process

Batches are run automatically. In the mandatory programs, all batches whichever are required will be maintained in sequence and that is triggered automatically as based on the maintenance in the 'Mandatory Batch Program Maintenance' screen.

You can invoke this screen by typing 'EIDMANPE' in the field at the top right corner of the Application tool bar and clicking the adjoining arrow button.

Module

Choose the module code from the adjoining option list.

Function Identification

Choose the function ID of batch that you wish to run. The adjoining option list displays all batch processes available for the module.

Select the appropriate one.

You can configure the batch to be run at various stages of day like EOD, EOTI etc.

For further details about this screen, refer the chapter 'Setting- up Mandatory Programs for EOD' in the AEOD User Manual

6. Annexure A - Accounting Entries and Advices

6.1 Introduction

This section contains details of the suggested accounting entries that can be set up, for the Islamic Fixed Asset module of Oracle FLEXCUBE. The details of the suggested accounting entries are listed event-wise.

6.2 Events

The following is an exhaustive list of events that can take place during the lifecycle of a contract. In the subsequent paragraphs we shall examine the accounting entries and advices for each of the events listed below.

Event Code	Event Description	Remarks
BOOK	Booking an Islamic Fixed Asset contract (Mandatory)	All Types
CAPT	Capitalization of an asset	All Types
DEPR	Depreciation Processing for Booking	All Types
AMND	Amendment of a contract	All Types
SALE	Sale of an asset	All Types
WROF	Islamic Fixed Asset Write off	All Types
DPTX	Depreciation for Tax purposes (no accounting entries are passed for this event)	All Types
REVC	Reversal of a contract	All Types
TSFR	Transfer of Asset	
DEAW	Depreciation Wash	
DEWR	Depreciation Wash Reversal	

6.3 Amount Tags

The amount tags listed below are hard-coded in Oracle FLEXCUBE.

Amount Tag	Description
FA_CAPT_AMT	Asset Cost Capitalized
FA_DEPR_ACC	Accumulated depreciation
FA_DEPR_ADD	Additional depreciation to be charged
FA_DEPR_RED	Reduction in depreciation amount already charged

FA_SALE_AMT	Net Sale Value
FA_SALE_LOS	Loss on account of sale (Book Value-Sale Value)
FA_SALE_PFT	Profit on account of Sale
FA_WRTO_AMT	Amount Written Off (Book Value)
FA_TSFR_AMT	Transfer Amount (Asset Amount – Accumulated Depreciation)
FA_ASST_AMT	Asset Cost Capitalized
FA_DEPR_ACQ	Acquired depreciation to be charged
FA_- DEPR_WASH	Depreciation Wash Amount

In addition to these you can define amount tags as per your requirements for charges that will be attached to the product.

6.3.1 **Amount Tags and their Usage during Various Events**

Listed below are the various Events along with the Amount Tags that would be used during the respective events.

Event	Amount Tag	Explanation of the Amount Tags
BOOK	FA_CAP-T_AMT	Asset Cost
DEPR	FA_- DEPR_ADD	Additional depreciation to be charged on account of increase in depreciation rate or change in depreciation method or change in capitalization date
	FA_- DEPR_RED	Reduction in cumulative depreciation on account of reduction in rate, change in capitalization date or change in depreciation method
CAPT	FA_CAP-T_AMT	Asset Cost capitalized
AMND	-	-
SALE	FA_- SALE_AMT	Net Sale Value
	FA_- SALE_LOS	Loss on Account of Sale (Book Value-Net Sale Value)
	FA_- SALE_PFT	Profit on Account of Sale (Net Sale Value-Book Value)
	FA_- DEPR_ACC	Accumulated depreciation

WRTO	FA_WR- TO_AMT	Amount Written off (Book Value)
	FA_CAP- T_AMT	Asset Cost capitalized
	FA_- DEPR_ACC	Accumulated depreciation
TSFR	FA_- DEPR_ACC	Accumulated depreciation
	FA_TS- FR_AMT	Transfer Amount (Asset Amount – Accumulated Depreciation)

6.4 Accounting Roles

In this section we have provided a list of sample accounting roles that can be used for all types of products in the Islamic Fixed Asset module:

Accounting Role	Description	Role Type
FAASSETACC	Asset Account	Asset
FAWIPACC	Work-In-Progress Account	Liability
FACUSTACC	Customer Account	Customer
FADEPREXP	Depreciation Account	Expense
FAACCDEPRLIB	Accumulated depreciation Acct	Liability
FASALEEXP	Loss on Sale Account	Expense
FASALEINC	Profit on Sale Account	Income
FAWRTOEXP	Asset Written Off Account	Expense
FATSFRACT	Transfer Account	Asset

6.5 Event-wise Accounting Entries and Advices

In the subsequent sections we have defined suggested accounting entries and advices for each of the events in the life-cycle of a contract.

6.5.0.1 **BOOK: Booking**

Accounting Entries

Condition	Accounting Role	Amount Tag	Dr/Cr
No PO required	FAWIPACC	FA_ASST_AMT	Dr
for Purchase	FACUSTACC	FA_ASST_AMT	Cr

The following accounting entries are passed for this event for Islamic inventory tracking:

Accounting Role	Amount Tag	Dr/Cr
FAWIPACC	FA_ASST_AMT	Dr
FACUSTACC	FA_ASST_AMT	Cr

6.5.0.2 **CAPT: Capitalization of Asset**

Accounting Entries

Condition	Accounting Role	Amount Tag	Dr/Cr
None	FAASSETACC	FA_CAPT_AMT	Dr
	FAWIPACC	FA_CAPT_AMT	Cr

6.5.0.3 **DEPR: Depreciation Processing**

Condition	Accounting Role	Amount Tag	Dr/Cr
Increase in depreciation	FADEPREXP	FA_DEPR_ADD	Dr
	FAACCDEPRLIB	FA_DEPR_ADD	Cr
Decrease in depreciation	FAACCDEPRLIB	FA_DEPR_RED	Dr
	FADEPREXP	FA_DEPR_RED	Cr
If Acquired depreciation is entered	FAWIPACC	FA_DEPR_ACQ	Dr
	FAACCDEPRLIB	FA_DEPR_ACQ	Cr

6.5.0.4 **DEAW: Depreciation Wash**

This event is used to wash off the depreciation that has been accumulated because of the depreciation entries posted during every principal payment schedule in the loan transaction and this event would be triggered from Manual or auto liquidation of a loan resulting in the final liquidation of the loan account.

The following accounting entries are passed for this event:

Accounting Role	Amount Tag	Dr /Cr
FAACCDEPRLIB WASH (Accumulated Leasing Depreciation Account)	FA_DEPR	Dr
FAASSETACC	FAASSETACC	Cr

6.5.0.5 **DEWR: Depreciation Wash Reversal**

This event is used to reverse the wash entries posted during the final settlement of the loan. This will be invoked when we reverse the final payment of the loan and this event would be triggered from on reversing of the liquidation of a loan which had resulted in the final liquidation of the loan.

The following accounting entries are passed for this event:

Accounting Role	Amount Tag	Dr /Cr
FAACCDEPRLIB(Accumulated Leasing Depreciation Account)	-FA_DEPR_WASH	Dr
FAASSETACC	-FA_DEPR_WASH	Cr

6.5.0.6 **AMND: Amendment of the Contract**

No Accounting Entries need to be captured at this stage since all the adjustments to be done will be taken care of by the depreciation processing event.

6.5.0.7 **SALE: Sale of Asset**

Condition	Accounting Role	Amount Tag	Dr/Cr
Loss on Sale	FAACCDEPRLIB	FA_DEPR_ACC	Dr
	FACUSTACC	FA_SALE_AMT	Dr
	FASALEEXP	FA_SALE_AMT	Dr
	FAASSETACC	FA_CAPT_AMT	Cr
Profit on Sale	FAACCDEPRLIB	FA_DEPR_ACC	Dr
	FACUSTACC	FA_SALE_AMT	Dr
	FASALEINC	FA_SALE_AMT	Cr
	FAASSETACC	FA_CAPT_AMT	Cr

In Oracle FLEXCUBE, all Credit and Debit entries have to be paired up. So the entries will be as follows:

Condition	Accounting Role	Amount Tag	Dr/Cr
Loss on Sale	FACUSTACC	FA_CAPT_AMT	Dr
	FAASSETACC	FA_CAPT_AMT	Cr
	FAACCDEPRLIB	FA_DEPR_ACC	Dr
	FACUSTACC	FA_DEPR_ACC	Cr
	FASALEEXP	FA_SALE_AMT	Dr
	FACUSTACC	FA_SALE_AMT	Cr
Profit on Sale	FACUSTACC	FA_CAPT_AMT	Dr
	FAASSETACC	FA_CAPT_AMT	Cr
	FAACCDEPRLIB	FA_DEPR_ACC	Dr
	FACUSTACC	FA_DEPR_ACC	Cr
	FACUSTACC	FA_SALE_AMT	Dr
	FASALEINC	FA_SALE_AMT	Cr

The following accounting entries are passed for this event for Islamic inventory tracking:

Accounting Role	Amount Tag	Dr/Cr
FACUSTACC	FA_SALE_AMT	Dr
FAWIPACC	FA_SALE_AMT	Cr

Advices

A Payment message would be generated for the customer to whom the asset is sold.

6.5.0.8 WRTO: Islamic Fixed Asset Write off

Condition	Accounting Role	Amount Tag	Dr/Cr
None	FAACCDEPRLIB	FA_DEPR_ACC	Dr
	FAWRTOEXP	FA_WRTO_AMT	Dr
	FAASSETACC	FA_CAPT_AMT	Cr

Since all debit and credit entries have to be paired up in Oracle FLEXCUBE, the entries will be reflected as follows:

Condition	Accounting Role	Amount Tag	Dr/Cr
-----------	-----------------	------------	-------

None	FAWRTOEXP	FA_CAPT_AMT	Dr
	FAASSETACC	FA_CAPT_AMT	Cr
	FAACCDEPRLIB	FA_DEPR_ACC	Dr
	FAWRTOEXP	FA_DEPR_ACC	Cr

6.5.0.9 **TSFR: Transfer of Asset from One Branch/Location to another**

The Transfer event is automated and the transferred asset will be automatically created in the branch/location on save of transfer.

This event will be triggered when the asset is transferred from one branch/ location to another.

The Accounting entry setup for the asset in Transferor and Transferee branch will be as described below.

1) Asset still in WIP stage

Transferor branch – Event TSFR

DR/ CR	Accounting Role		Amount Tag	
	Role	Description	Tag	Description
DR	FATS-FRACC	Transfer Account (Transferee Branch)	FA_ASST_AMT	Original Asset cost
CR	FAWI-PACC	Work in Progress Account (Transferor Branch)	FA_ASST_AMT	Original Asset cost

Transferee Branch – Event BOOK

DR/CR	Accounting Role		Amount Tag	
	Role	Description	Tag	Description
DR	FAWIPACC	Work in Progress Account (Transferee Branch)	FA_ASST_AMT	Original Asset cost
CR	FACUSTACC	Customer Account	FA_ASST_AMT	Original Asset cost
DR	FAWIPACC	Work in Progress Account (Transferee Branch)	FA_TSFR_AMT	Original Asset cost
CR	FATSFRACC	Transfer Account (Transferor Branch)	FA_TSFR_AMT	Original Asset cost

Only the second set of entries will be passed in case of an asset transfer.

1) Capitalized Asset

Transferor branch – Event TSFR

DR/CR	Accounting Role		Amount Tag	
	Role	Description	Tag	Description
DR	FATSFRACC	Transfer Account (Transferee Branch)	FA_ASST_AMT	Original Asset cost
CR	FASSTACC	Asset Account (Transferor Branch)	FA_ASST_AMT	Original Asset cost
DR	FAACCDEPRLIB	Accumulated depreciation Account	FA_DEPR_ACC	Accumulated Dep.
CR	FATSFRACC	Transfer Account (Transferee Branch)	FA_DEPR_ACC	Accumulated Dep.

Transferor Branch – Event DEPR (Along with TSFR)

DR/ CR	Accounting Role		Amount Tag	
	Role	Description	Tag	Description
DR	FADEPREXP	Dep. Expense	FA_DEPR_ADD	Depreciation Addition
CR	FAAC-CDEPRLIB	Accumulated depreciation Account	FA_DEPR_ADD	Depreciation Addition
DR	FAAC-CDEPRLIB	Accumulated depreciation Account	FA_DEPR_RED	Depreciation Reduction
CR	FADEPREXP	Dep. Expense	FA_DEPR_RED	Depreciation Reduction

Transferee Branch – Event BOOK

DR/ CR	Accounting Role		Amount Tag	
	Role	Description	Tag	Description
DR	FAWI-PACC	Work in Progress Account (Transferee Branch)	FA_ASST_AMT	Original Asset cost
CR	FACUST ACC	Customer Account	FA_ASST_AMT	Original Asset cost

DR	FAWI-PACC	Work in Progress Account (Transferee Branch)	FA_TSFR_AMT	Original Asset cost – Acquired Depreciation
CR	FATS-FRACC	Transfer Account (Transferor Branch)	FA_TSFR_AMT	Original Asset cost - Acquired Depreciation

Only the second set of entries will be passed in case of an asset transfer.

Transferee Branch – Event DEPR (Along with BOOK)

DR/ CR	Accounting Role		Amount Tag	
	Role	Description	Tag	Description
DR	FAWIPACC	Work in Progress Account (Transferee Branch)	FA_-DEPR_ACQ	Acquired Depreciation
CR	FAACCDEPRLIB	Accumulated depreciation Account	FA_-DEPR_ACQ	Acquired Depreciation

Capitalization entries will be passed as usual for the new asset.

6.5.1 Advices

The following details the possible advices and the stage at which the advices are generated for the Accounting entries:

Advice Code	Advice Description	Receiver
PAYMENT_MESSAGE	Payment Message	Counterparty

This advice is generated on Book Event (If PO required is 'N' at product level) and on Sale Event.

On transfer of an asset, a transfer advice called FA_TRANSFER will be generated. Following details will be available in the transfer advice –

- Original asset reference
- Transferor Branch
- Transferee Branch
- Accumulated depreciation
- Asset Cost
- Current Book Value
- Date of Transfer

The receiver of the advice will be the Walk in Customer for the Transferor Branch.
