## **License Restrictions Warranty/Consequential Damages Disclaimer**

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure, and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or de-compilation of this software, unless required by law for interoperability, is prohibited.

## **Warranty Disclaimer**

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

## **Restricted Rights Notice**

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

## **U.S. GOVERNMENT RIGHTS**

Oracle programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data delivered to U.S. Government end users are “commercial computer software” or “commercial technical data” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data shall be subject to license terms and restrictions as mentioned in Oracle License Agreement, and to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). No other rights are granted to the U.S. Government.

## **Hazardous Applications Notice**

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

## **Third Party Content, Products, and Services Disclaimer**

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third party content, products, or services.

<b>Preface: About this Document.....</b>	<b>xxxvii</b>
Intended Audience.....	xxxvii
Organization of the Document.....	xxxvii
Conventions.....	xl
Related Documents.....	xl
Change Log.....	xli
<b>Chapter 1: Customer 360° View.....</b>	<b>45</b>
Customer 360° View.....	46
360° Search.....	46
Searching for a Person.....	51
Searching for an Account.....	52
Viewing the 360° Information of a Person.....	53
Viewing the 360° Information of an Account.....	54
Viewing Price Lists Assigned to a Person.....	54
Viewing Price Lists Assigned to an Account.....	55
Viewing Price Items Assigned to a Person.....	55
Viewing Price Items Assigned to an Account.....	56
Viewing Price Items Associated to a Product.....	56
Viewing Enrollment Details of a Product.....	57
Customer 360° Information.....	57
Customer 360° Information - Person.....	58
Person Information.....	58
Person Characteristics.....	60
Linked Accounts.....	60
Person Legal Hierarchy.....	61
Customer Contacts.....	61
Enrolled Products.....	62
Product Enrollment Information.....	62
Customer 360° Information - Account.....	63
Account Information.....	63
Account Characteristics.....	66
Account Persons.....	66
Enrolled Products.....	66
Auto Pay Details.....	67
Timeline.....	67
Billing History.....	70
Payment History.....	71
Dispute Details.....	71
Hold Details.....	72
Overdue Process Details.....	72
Customer 360° Information - Product and Pricing.....	72
Product.....	73
Associated Price Items.....	73
Price List Assignments.....	74
Price List Price Items.....	74
Effective Price Assignments for Account.....	76
Effective Price Assignments for Person.....	79

Viewing Enrollment Details of a Product.....	83
Viewing the Bill Information.....	83
Viewing Price Items Associated to a Product.....	84
Bill Information.....	85
Bill Information.....	85
Settlement Activities.....	86
Hold Details.....	86
Offset Details.....	87
Bill Line Items.....	87
Garnishment Details.....	88
Refund and Write Off Details.....	88
Dispute Details.....	89

## **Chapter 2: Invoicing Group..... 91**

Manage Invoicing Groups.....	93
Searching for a Master Account.....	93
Searching for a Member Account.....	95
Viewing the Master Account Details.....	96
Viewing the Member Account Details.....	97
Invoicing Group Maintenance — Add/Edit.....	97
Account Information.....	97
Member Accounts.....	98
Edit Member Account Assignment.....	98
Search Accounts to Add.....	99
Add Member.....	100
Adding a Member to the Master Account.....	101
Editing the Member Account Assignment Details.....	102
Removing a Member from the Master Account.....	103
Invoicing Group Information.....	104
Invoicing Group Information.....	104
Selected Member Account.....	104
Edit Member Account Assignment.....	105
Editing the Member Account Assignment Details.....	106
Removing a Member from the Master Account.....	107

## **Chapter 3: Pricing Management..... 109**

Types of Pricing.....	111
Multi Parameter Based Pricing.....	111
Price Assignment Search Mechanism.....	115
Person Relationship Type Sequence.....	117
Pricing Eligibility.....	119
Persisting Interest Rate for Rate Type Price Items.....	120
Persisting Fee for Fee Type Price Items.....	121
Repricing.....	121
Two-Dimensional Pricing.....	126
Types of Price Item Bundle.....	126
Regular Bundle.....	126
Ratio Bundle.....	128
Phantom Bundle.....	130
Parameter.....	132
Parameter (Used for Searching).....	132
Search Parameter.....	132
Searching for a Parameter.....	135
Defining a Parameter.....	135

Editing a Parameter.....	141
Deleting a Parameter.....	147
Copying a Parameter.....	148
Viewing the Parameter Details.....	154
Parameter (Used for Viewing).....	154
Parameter.....	155
Price Item.....	157
Price Item (Used for Searching).....	158
Search Price Item.....	158
Searching for a Price Item or Price Item Bundle.....	160
Defining a Price Item or Price Item Bundle.....	161
Associating a Parameter with a Price Item or Price Item Bundle.....	164
Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle.....	166
Associating a Price Item or Price Item Bundle with a Division.....	167
Defining Division-Specific Characteristics for a Price Item or Price Item Bundle..	168
Defining Division-Specific SQIs for a Price Item or Price Item Bundle.....	170
Defining a Characteristic for a Price Item or Price Item Bundle.....	171
Copying a Price Item or Price Item Bundle.....	172
Viewing the Price Item or Price Item Bundle Details.....	175
Price Item (Used for Viewing).....	176
Price Item.....	177
Parameters.....	178
Predefined Parameter Values for Price Item.....	179
Divisions.....	179
Division-Specific Characteristics for Price Item.....	180
Division-Specific SQIs for Price Item.....	180
Price Item Relationship.....	181
Editing a Price Item or Price Item Bundle.....	182
Price Item Relationship.....	185
Assigned Price Items.....	186
Viewing the Price Items or Price Item Bundles Associated with a Parent Price Item.....	188
Viewing the Price Items or Price Item Bundles Added to a Price Item Bundle.....	188
Associating a Price Item or Price Item Bundle with a Parent Price Item.....	188
Adding a Price Item or Price Item Bundle to a Price Item Bundle.....	191
Setting the Parameters for a Price Item or Price Item Bundle.....	193
Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle.....	195
Disassociating a Price Item or Price Item Bundle from a Parent Price Item.....	196
Removing a Price Item or Price Item Bundle from a Price Item Bundle.....	197
Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item.....	197
Filtering the Price Items or Price Item Bundles Added to a Price Item Bundle.....	198
Price Item Assignments.....	199
Active Price Lists where Price Item is Assigned.....	199
Persons to whom Price Item is Assigned.....	199
Accounts where Price Item is Assigned.....	200
Viewing the Price Lists, Persons, or Accounts where a Price Item is Assigned.....	200
Price List.....	201
Price List (Used for Searching).....	202
Search Price List.....	202
Price List Price Items.....	205
Searching for a Price List.....	206
Viewing Price Items Assigned to a Price List.....	207
Creating a Price List.....	207

Defining the Price List Hierarchy.....	209
Defining Characteristics for a Price List.....	211
Associating a Price List with a Division.....	212
Defining Eligibility Criteria for a Price List.....	213
Copying a Price List.....	214
Viewing the Price List Details.....	214
Price List (Used for Viewing).....	215
Price List.....	215
Eligibility Criteria.....	217
Editing a Price List.....	218
Price List Price Item Pricing.....	220
Price List Price Items.....	221
Search Price Item.....	222
Viewing Price Items Assigned to a Price List.....	227
Removing a Price Item from a Price List.....	228
Viewing a Price Item Pricing.....	228
Editing a Price Item Pricing of a Price List.....	230
Assigning a Price Item to a Price List.....	234
Defining Characteristics for a Price Item Pricing.....	238
Defining Parameters for a Price Item Pricing.....	239
Defining TFM Information in a Price Item Pricing.....	240
Price List Assignment.....	242
Price List Assignments.....	242
Price List Price Items.....	244
Search Price List for Assignment.....	245
Viewing Price Lists Assigned to an Account.....	248
Viewing Price Lists Assigned to a Person.....	249
Viewing Price Items Assigned to a Price List.....	250
Assigning a Price List to an Account.....	251
Assigning a Price List to a Person.....	254
Defining Characteristics for a Price List Assignment.....	257
Editing the Price List Assignment Details of an Account.....	258
Editing the Price List Assignment Details of a Person.....	261
Price List Assignments.....	264
Accounts where Price List is Assigned.....	264
Persons to whom Price List is Assigned.....	265
Viewing Accounts and Persons where Price List is Assigned.....	266
Persons and Accounts Eligible for Price List Assignment.....	266
Eligible Accounts.....	267
Eligible Persons.....	267
Assigning a Price List to One or More Eligible Accounts.....	268
Assigning a Price List to One or More Eligible Persons.....	270
Defining Characteristics for a Price List Assignment.....	271
Pricing (Account).....	272
Effective Price Assignments for Account.....	273
Search Price Item.....	278
Viewing Effective Price Assignments of an Account.....	283
Filtering Effective Price Assignments of an Account.....	284
Exporting Effective Price Assignments of an Account.....	285
Copying a Price Item Pricing.....	288
Viewing a Price Item Pricing.....	289
Editing a Price Item Pricing of an Account.....	291
Overriding a Price Item Pricing of an Account.....	295
Assigning a Price Item to an Account.....	299
Defining Characteristics for a Price Item Pricing.....	303
Defining Parameters for a Price Item Pricing.....	304

Defining TFM Information in a Price Item Pricing.....	305
Pricing (Person).....	306
Effective Price Assignments for Person.....	307
Search Price Item.....	312
Viewing Effective Price Assignments of a Person.....	317
Filtering Effective Price Assignments of a Person.....	318
Exporting Effective Price Assignments of a Person.....	319
Copying a Price Item Pricing.....	322
Viewing a Price Item Pricing.....	323
Editing a Price Item Pricing of a Person.....	325
Overriding a Price Item Pricing of a Person.....	329
Assigning a Price Item to a Person.....	333
Defining Characteristics for a Price Item Pricing.....	337
Defining Parameters for a Price Item Pricing.....	338
Defining TFM Information in a Price Item Pricing.....	339
Price Item Pricing (Used for Viewing).....	340
Price Item Pricing.....	341
Rate and Price Component Summary.....	344
Rate Components.....	344
Price Components.....	345
Tiering Criteria.....	346
Pricing Eligibility Criteria.....	347
Two-Dimensional Pricing.....	348
Defining a Price Item Pricing.....	349
Viewing the Price Components of a Rate Component.....	351
Viewing the Tiering Criteria of a Price Component.....	353
Viewing the Pricing Eligibility Criteria of a Price Component.....	354
Defining a Price Component for a Rate Component.....	356
Defining a Tiering Criteria for a Price Component.....	360
Defining a Pricing Eligibility Criteria for a Price Component.....	363
Editing a Price Component.....	367
Deleting a Price Component.....	370
Editing a Tiering Criteria of a Price Component.....	373
Deleting a Tiering Criteria of a Price Component.....	377
Editing a Pricing Eligibility Criteria of a Price Component.....	380
Deleting a Pricing Eligibility Criteria of a Price Component.....	387
Deleting a Price Item Pricing.....	390
Editing a Price Item Pricing.....	393
Submitting a Price Item Pricing.....	399
Overriding a Price Item Pricing.....	402
Editing the Two-Dimensional Pricing.....	403
Pricing Simulation.....	405
Search Pricing.....	405
Simulation - Effective Pricing Information.....	409
Searching Pricing Simulation for Account or Price List.....	414
Viewing Pricing Simulation.....	415
Exporting Effective Price Simulation.....	416
Eligible Price List.....	418
Search Eligible Price Lists.....	418
Rate Definition.....	420
Rate Schedule Components.....	421
Create/Edit Rate Definition.....	422
Defining Tiering Setup of a Rate Component.....	423
Editing Tiering Setup of a Rate Component.....	424
Deleting Tiering Setup of a Rate Component.....	425
Tiering Criterion.....	425

Tiering Criterion List.....	426
Edit Tiering Criterion.....	426
Create Tiering Criterion.....	427
Creating a Tiering Criterion.....	427
Editing a Tiering Criterion.....	428
Variance Parameter.....	428
Filtering the Variance Parameters.....	428
Defining a Variance Parameter.....	429
Editing a Variance Parameter.....	430
Deleting a Variance Parameter.....	430
Person to Person Relationship Type Sequence.....	431
Search Person Relationship Type Sequence for Price Item.....	432
Search Person Relationship Type Sequence for Division.....	433
Searching Relationship Type Sequence for a Division, Price Item, and Price Item Parameters.....	434
Defining Relationship Type Sequence for a Division, Price Item, and Price Item Parameters.....	435
Editing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	436
Deleting Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	438
Viewing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	438
Searching Relationship Type Sequence for a Division.....	439
Defining Relationship Type Sequence for a Division.....	440
Editing Relationship Type Sequence of a Division.....	441
Deleting Relationship Type Sequence of a Division.....	442
Viewing Relationship Type Sequence of a Division.....	442
<b>Chapter 4: Division.....</b>	<b>445</b>
Division Search.....	446
Searching for a Division.....	446
Division.....	447
Defining a Division.....	449
Associating Access Groups with a Division.....	452
Associating Price Items with a Division.....	453
Associating Price Lists with a Division.....	454
Associating Languages with a Division.....	455
Associating Invoice Currencies with a Division.....	456
Associating Person Identifier Types with a Division.....	457
Associating Algorithms with a Division.....	457
Defining Characteristics for a Division.....	461
Associating Bill Messages with a Division.....	462
Associating Party Char Types with a Division.....	463
Associating Bill Cycles with a Division.....	464
Associating Account Identifier Types with a Division.....	465
Defining Division-Specific Characteristics for a Price Item.....	466
<b>Chapter 5: Approval Workflow.....</b>	<b>469</b>
Most Commonly Used Terms.....	471
Approval Workflow Process.....	471
Prerequisites.....	473
Approval Transaction.....	475
Search Approval Transaction.....	475

Approval Transaction Log.....	479
Searching for an Approval Transaction.....	480
Viewing the Log of an Approval Transaction.....	480
Comparison: New versus Existing.....	481
Approving an Approval Transaction.....	481
Rejecting an Approval Transaction.....	482
Canceling an Approval Transaction.....	483
Modifying an Approval Transaction.....	484
Withdrawing an Approval Transaction.....	485
Resolving an Approval Transaction.....	485
Approve Price Assignment.....	486
Search.....	486
List of Price Assignments.....	489
Approve Price Assignment - Comparison: New versus Existing.....	490
Approval Transaction Log.....	492
Approving a Price Assignment for an Account.....	493
Approving a Price Assignment for a Person.....	494
Approving a Price Assignment for a Price List.....	495
Rejecting a Price Assignment for an Account.....	496
Rejecting a Price Assignment for a Person.....	497
Rejecting a Price Assignment for a Price List.....	499
Canceling a Price Assignment for an Account.....	500
Canceling a Price Assignment for a Person.....	501
Canceling a Price Assignment for a Price List.....	503
Resolve Price Assignment.....	504
Search.....	504
List of Price Assignments.....	508
Resolving a Price Assignment for an Account.....	509
Resolving a Price Assignment for a Person.....	510
Resolving a Price Assignment for a Price List.....	511
Withdrawing a Price Assignment for an Account.....	511
Withdrawing a Price Assignment for a Person.....	512
Withdrawing a Price Assignment for a Price List.....	513
Viewing the Log of an Approval Transaction.....	514
Modify Price Assignment.....	515
Search.....	515
List of Price Assignments.....	519
Modifying a Price Assignment for an Account.....	520
Modifying a Price Assignment for a Person.....	521
Modifying a Price Assignment for a Price List.....	522
Withdrawing a Price Assignment for an Account.....	522
Withdrawing a Price Assignment for a Person.....	523
Withdrawing a Price Assignment for a Price List.....	524
Viewing the Log of an Approval Transaction.....	525
Approval Workflow Group (Used for Searching).....	526
Search Approval Workflow Group.....	526
Searching for an Approval Workflow Group.....	527
Viewing the Approval Workflow Group Details.....	528
Defining an Approval Workflow Group.....	528
Adding a Business Object.....	532
Defining a Group BO Relation.....	534
Approval Workflow Group (Used for Viewing).....	535
Approval Workflow Group.....	536
Editing an Approval Workflow Group.....	538
Deleting an Approval Workflow Group.....	538
Editing a Business Object.....	539

Deleting a Business Object.....	541
Editing a Group BO Relation.....	541
Deleting a Group BO Relation.....	543
Approval Workflow Chain (Used for Searching).....	543
Search Approval Workflow Chain.....	543
Searching for an Approval Workflow Chain.....	544
Viewing the Approval Workflow Chain Details.....	545
Defining an Approval Workflow Chain.....	545
Defining Approval Levels for an Approval Workflow Chain.....	546
Approval Workflow Chain (Used for Viewing).....	547
Approval Workflow Chain.....	547
Editing an Approval Workflow Chain.....	548
Deleting an Approval Workflow Chain.....	549
Approval Workflow Criterion Type (Used for Searching).....	550
Search Approval Workflow Criterion Type.....	550
Searching for an Approval Workflow Criterion Type.....	550
Viewing the Approval Workflow Criterion Type Details.....	551
Defining an Approval Workflow Criterion Type.....	551
Approval Workflow Criterion Type (Used for Viewing).....	553
Approval Workflow Criterion Type.....	553
Editing an Approval Workflow Criterion Type.....	554
Deleting an Approval Workflow Criterion Type.....	556
Approval Workflow Group Chain Linkage (Used for Searching).....	556
Search Approval Workflow Group Chain Linkage.....	556
Searching for an Approval Workflow Group Chain Linkage.....	557
Viewing the Approval Workflow Group Chain Linkage Details.....	558
Defining an Approval Workflow Group Chain Linkage.....	558
Defining Group Chain Linkage Criteria for an Approval Workflow.....	560
Defining a Field Approval Rule.....	560
Approval Workflow Group Chain Linkage (Used for Viewing).....	562
Approval Workflow Group Chain Linkage.....	563
Editing an Approval Workflow Group Chain Linkage.....	565
Deleting an Approval Workflow Group Chain Linkage.....	566
Approval Workflow Setting (Used for Searching).....	566
Search Approval Workflow Group.....	566
Searching for an Approval Workflow Group.....	567
Viewing the Approval Workflow Setting Details.....	568
Defining Approval Workflow Group Settings.....	568
Approval Workflow Setting (Used for Viewing).....	570
Approval Workflow Group Settings.....	570
Editing Approval Workflow Group Settings.....	572
Deleting Approval Workflow Group Settings.....	572
Regenerating Input and Display UI Maps.....	573
Approval Workflow Reason (Used for Searching).....	573
Approval Workflow Reason List.....	573
Filtering the Approval Workflow Reasons.....	574
Viewing the Approval Workflow Reason Details.....	575
Defining an Approval Workflow Reason.....	575
Approval Workflow Reason (Used for Viewing).....	576
Approval Workflow Reason.....	576
Editing an Approval Workflow Reason.....	577
Deleting an Approval Workflow Reason.....	578

## **Chapter 6: Multi-Currency Accounts.....579**

Creating Adjustments.....	581
---------------------------	-----

Generating Bills.....	581
Applying Payments.....	581
Monitoring Overdue Debt.....	581
Generating History.....	581

## **Chapter 7: Rules Engine..... 583**

Rule Type (Used for Searching).....	585
Search Rule Type.....	585
Searching for a Rule Type.....	586
Defining a Rule Type.....	587
Defining Input and Output Parameters for a Rule Type.....	589
Associating an Algorithm with a Rule Type.....	590
Associating a Characteristic Entity with a Rule Type.....	591
Editing a Rule Type.....	592
Deleting a Rule Type.....	594
Copying a Rule Type.....	595
Viewing the Rule Type Details.....	597
Rule Type (Used for Viewing).....	597
Rule Type.....	597
Rule.....	599
Search.....	599
Searching for a Rule.....	600
Defining a Rule.....	600
Editing a Rule.....	605
Deleting a Rule.....	609
Copying a Rule.....	610
View Rule.....	611
Rule Information.....	611
Viewing the Rule Details.....	613
Rule Check.....	613
Rule Check.....	614

## **Chapter 8: Alternate Sequential Bill Numbers..... 617**

Sequential Bill Number Generation Algorithms.....	618
C1_ALTBLLSYS.....	618
C1_ALTBLSYS1.....	618
C1_ALTBLDV.....	621
C1_ALTBLDIV1.....	621
Enabling the Alternate Sequential Bill Numbers Feature.....	624

## **Chapter 9: Currency Conversion..... 627**

Prerequisites.....	629
Bill Segment Generation.....	630
Adjustment Creation.....	631
Payment and Tender Creation.....	631
Transaction Aggregation.....	632
FT GL Creation.....	632
Currency Conversion Algorithms.....	633
C1_CURALGBS.....	634
C1_CURALGAD.....	635
C1_CURALGPY.....	637
C1_CURALGTFM.....	639
C1_EXCRTBS.....	641

C1_EXCRTAD.....	642
C1_EXCRTPY.....	644
C1_EXCRTTFM.....	646
FTFREZGLEXTN.....	649
C1_EXCRTOVRD.....	651
Exchange Rate (Used for Searching).....	652
Search Exchange Rate.....	652
Searching for an Exchange Rate.....	655
Defining an Exchange Rate.....	656
Defining Characteristics for an Exchange Rate.....	659
Editing an Exchange Rate.....	660
Deleting an Exchange Rate.....	662
Exchange Rate (Used for Viewing).....	663
Exchange Rate.....	663
Exchange Rate Log.....	665
Viewing the Exchange Rate Details.....	666

## **Chapter 10: Transaction Feed Management..... 667**

Prerequisites.....	668
Transaction Rating Before Billing.....	668
Transaction Aggregation.....	676
Header Validation.....	677
Transaction Validation and Initial Price Item Determination.....	679
Price Item Pricing Verification.....	689
Aggregation.....	693
Clean Up.....	697
Transaction Aggregation Batch Processing.....	700
Transaction Disaggregation.....	702
Transaction Disaggregation Batch Processing.....	709
Transaction Cancellation.....	710
Transaction Cancellation Batch Processing.....	713
Transaction Rollback.....	714
Feed Status Transition.....	716
Transaction Status Transition.....	717
Transaction Leg Status Transition.....	718
Transaction Data File.....	726
Error List.....	729
Feed Management Dashboard.....	765
Search - Feed Level.....	765
Division Level Information.....	767
Transaction Level Information.....	768
Transaction Leg Information.....	769
Transaction Leg Service Quantity.....	770
Transaction Leg Calculation Lines.....	770
Transaction Leg Calc Line Characteristics.....	772
Searching for a Transaction Feed.....	772
Viewing Division Level Details of a Transaction Feed.....	773
Viewing Transactions that Belong to a Division.....	773
Viewing Legs of a Transaction.....	773
Viewing the SQIs Calculated for a Transaction Leg.....	774
Viewing the Calculation Lines of a Transaction Leg.....	775
Viewing Characteristics of a Calculation Line.....	775
View Billed Transactions.....	776
Search Bill.....	776
Bill Segments.....	778

Transaction Details.....	779
SQ Details.....	780
Searching for a Bill.....	780
Viewing the Bill Segments of a Bill.....	781
Viewing Transactions for which the Bill Segment is Generated.....	781
Viewing SQIs Calculated on the Billable Charge.....	782
Transaction Details.....	782
Search.....	782
Searching for an UPLD Transaction.....	783
Searching for an INPD Transaction.....	786
Searching for an COMP Transaction.....	788
Searching for an CNCL Transaction.....	790
Searching for an EROR Transaction.....	792
Searching for an IGNR Transaction.....	794
Searching for an INVL Transaction.....	797
Viewing the Transaction Legs.....	799
Viewing Error Messages.....	801
Viewing the Transaction Details.....	801
Adding a Transaction.....	803
Copying a Transaction.....	806
Transaction Source.....	808
Search Transaction Source.....	809
Searching for a Transaction Source.....	809
Defining a Transaction Source.....	810
Editing a Transaction Source.....	811
Deleting a Transaction Source.....	811
Copying a Transaction Source.....	812
Transaction Record Type.....	813
Search Transaction Record Type.....	813
Searching for a Transaction Record Type.....	814
Defining a Transaction Record Type.....	815
Editing a Transaction Record Type.....	820
Deleting a Transaction Record Type.....	826
Copying a Transaction Record Type.....	827
Transaction Aggregation Rule.....	832
Transaction Aggregation Rules.....	832
Defining Transaction Aggregation Rule for an SQL.....	833
Editing Transaction Aggregation Rule of an SQL.....	834
Deleting Transaction Aggregation Rule of an SQL.....	835
Schedule.....	836
Search Schedule.....	836
Searching for a Schedule.....	837
Viewing the Schedule Details.....	837
Defining a Schedule.....	838
Editing a Schedule.....	839
Deleting a Schedule.....	840
Disaggregation Request (Used for Searching).....	840
Search Disaggregation Request.....	841
Searching for a Disaggregation Request.....	844
Creating a Disaggregation Request.....	847
Deleting a Disaggregation Request.....	852

## **Chapter 11: On Demand Billing..... 853**

Prerequisites.....	855
CSV File Format for Banking Usage Data.....	857

CSV File Format for Insurance Usage Data.....	859
Usage Record Status Transition.....	862
File Type.....	863
File Types.....	864
Defining a File Type.....	865
Editing a File Type.....	870
Deleting a File Type.....	875
On Demand Billing.....	876
Search.....	876
Group Files.....	878
Searching for a File Group.....	879
Defining a File Group.....	880
Editing a File Group.....	881
Deleting a File Group.....	883
Closing a File Group.....	883
Generating Adhoc Bills for a File Group.....	884
Freezing All Bills of a File Group.....	885
Freezing Selected Bills of a File Group.....	886
Viewing All Bills Generated for a File Group.....	887
Viewing Usage Data Files of a File Group.....	889
Usage Data Processing.....	889
Search.....	890
Searching for a Usage Data File.....	893
Uploading a Usage Data File.....	894
Replacing an Existing File.....	896
Viewing All Records of a Usage Data File.....	899
Viewing Valid Records of a Usage Data File.....	903
Viewing Invalid Records of a Usage Data File.....	907
Viewing Submitted Records of a Usage Data File.....	910
Viewing Processed Records of a Usage Data File.....	914
Viewing Cancelled Records of a Usage Data File.....	917
Viewing Rejected Records of a Usage Data File.....	921
Viewing Billed Records of a Usage Data File.....	924
Viewing Unbilled Records of a Usage Data File.....	928
Submitting a Valid Record.....	931
Approving a Valid Record.....	933
Rejecting a Valid Record.....	935
Cancelling a Usage Data File.....	937
Revalidating a Usage Data File.....	938
Editing a Valid, Invalid, or Rejected Usage Record.....	939
Filtering Usage Records.....	940

## **Chapter 12: Upload Validated Payment Data..... 941**

Payment Upload Process.....	942
Upload Payment Records in the Pre-Staging Area.....	942
Move Payment Records to the Staging Area.....	943
Create Payment Events and Payments.....	943
Prerequisites.....	944
CSV File Format.....	945
Payment Data File Status Transition.....	947
Payment Record Status Transition.....	947
Error Messages.....	949
Payment Upload.....	953
Search Payment Data File.....	954
Payment Data Records.....	956

Payment Data File Log.....	957
Searching for a Payment Data File.....	958
Uploading a Payment Data File.....	958
Replacing an Existing File.....	960
Cancelling a Payment Data File.....	961
Moving the Payment Records to the Staging Area.....	961
Editing a Payment Staging Record.....	962
Viewing the Records of a Payment Data File.....	963
Viewing the Log of a Payment Data File.....	963
Viewing the Error Messages.....	964

## **Chapter 13: Freeze Payments on Notification..... 965**

Freeze Payments on Notification Process.....	967
Creating Automatic Payments and Refunds.....	967
Generating a Flat File.....	967
Uploading Response from Auto Clearing House (ACH).....	967
Freezing or Canceling Automatic Payments.....	968
Voiding Refund Requests and Canceling Refund Adjustments.....	969
Generating To Do Entries.....	969
Creating Tender Controls.....	969
Prerequisites.....	970
Automatic Payment or Refund Clearing Staging Record Status Transition.....	971
EDI 824 File Format.....	971
Sample EDI 824 File Format.....	972
Automatic Payment and Refund Upload Reason.....	973
Upload Reasons.....	973
Defining an Upload Reason.....	974
Editing an Upload Reason.....	976
Deleting an Upload Reason.....	978
Automatic Payment and Refund Clearing Staging.....	978
Search Clearing Record.....	979
Associated Clearing Staging Records.....	981
Clearing Staging Upload Reasons.....	982
Clearing Staging Characteristics.....	982
Searching for a Clearing Record.....	983
Viewing the Clearing Staging Records Associated to a Clearing Record.....	983
Viewing the Upload Reason Specified in the Clearing Staging Record.....	984
Viewing the Characteristics of the Clearing Staging Record.....	984
Editing a Clearing Staging Record.....	985
Defining Characteristics for a Clearing Staging Record.....	986
Deleting a Clearing Staging Record.....	987

## **Chapter 14: Construct..... 989**

Prerequisites.....	991
Construct Status Transition.....	991
Template.....	992
Search Template.....	993
Searching for a Template.....	994
Defining a Template.....	995
Defining Characteristics for a Template.....	996
Editing a Template.....	997
Deleting a Template.....	1000
Viewing the Template Details.....	1001
Construct (Used for Searching).....	1001

Search Construct.....	1001
Searching for a Construct.....	1004
Defining a Construct.....	1005
Defining Characteristics for a Construct.....	1007
Editing a Construct.....	1008
Copying a Construct.....	1011
Viewing the Construct Details.....	1012
Construct (Used for Viewing).....	1013
Construct Information.....	1013
Include Usage/Invoice Accounts.....	1014
Include Billable Charges.....	1015
Include Adjustments.....	1015
Include Bill Segments.....	1016
Linked Accounts.....	1017
Exclude Usage/Invoice Accounts.....	1018
Including Usage Accounts in a Construct.....	1018
Including Usage and Invoice Accounts in a Construct.....	1019
Excluding Usage Accounts from a Construct.....	1020
Excluding Usage and Invoice Accounts from a Construct.....	1021
Including Billable Charges in a Construct.....	1022
Including Bill Segments in a Construct.....	1023
Including Adjustments in a Construct.....	1025
Activating a Construct.....	1026
Billing and Settlement Hierarchy.....	1026
Search Hierarchy.....	1027
Linked Accounts.....	1028
Criteria.....	1029
Viewing Person Billing Hierarchy Details.....	1029
Viewing Person Settlement Hierarchy Details.....	1030
Viewing Usage Accounts Billed through an Invoice Account.....	1030
Viewing Invoice Accounts through which a Usage Account is Billed.....	1032
Viewing Settlement Accounts through which a Usage or Invoice Account is Settled.....	1033
Viewing Settlement Hierarchy of a Invoice or Usage Account.....	1034
<b>Chapter 15: Trial Billing.....</b>	<b>1035</b>
Trial Bill (Used for Searching).....	1037
Search Trial Bill .....	1037
Searching for a Trial Bill.....	1038
Viewing the Trial Bill Details.....	1039
Trial Bill (Used for Viewing).....	1040
Trial Bill.....	1040
Trial Bill Segments.....	1041
Trial Bill Segment Calc Lines.....	1043
Trial Bill Segment SQ Details.....	1044
Trial Bill Segment Financial Details.....	1044
Printing a Trial Bill in the PDF Format.....	1045
Viewing the Segments of a Trial Bill.....	1045
Filtering the Trial Bill Segments.....	1046
Viewing the Calc Lines of a Trial Bill Segment.....	1046
Viewing the SQ Details of a Trial Bill Segment.....	1047
Viewing the Financial Details of a Trial Bill Segment.....	1048
<b>Chapter 16: Bill Tolerance.....</b>	<b>1049</b>
Prerequisites.....	1050

**Chapter 17: GL Account Validation..... 1053**

Static GL Account Validation.....	1054
Dynamic GL Account Validation.....	1054

**Chapter 18: Upload Validated Adjustment Data..... 1055**

Prerequisites.....	1057
CSV File Format.....	1057
Adjustment Upload Request (Without Approval) Status Transition.....	1058
Adjustment Upload Request (With Approval) Status Transition.....	1059
Algorithms Used in C1-ADJUPLD.....	1060
Adjustment Upload Request.....	1063
Search Adjustment Upload Request.....	1064
Adjustment Upload Request.....	1065
Adjustment Data Records.....	1067
Searching for an Adjustment Upload Request.....	1068
Uploading an Adjustment Data File.....	1069
Replacing an Adjustment Data File.....	1071
Cancelling an Adjustment Data File.....	1074
Creating Adjustments for an Adjustment Data File.....	1075
Submitting an Adjustment Data File for Approval.....	1076
Approving an Adjustment Data File.....	1077
Rejecting an Adjustment Data File.....	1078
Viewing the Adjustment Upload Request Details.....	1079
Viewing All Records of an Adjustment Data File.....	1080
Viewing the Log of an Adjustment Upload Request.....	1080
Adding a Log Entry for an Adjustment Upload Request.....	1081

**Chapter 19: Foreign Exchange Gain Loss..... 1083**

Foreign Exchange Gain Loss Calculation.....	1084
Prerequisites.....	1084
Foreign Exchange Gain Loss Scenarios.....	1085
Payment Scenarios.....	1085
Credit Adjustment Scenarios.....	1089
Write Off Adjustment Scenarios.....	1090
Write Up/Down Adjustment Scenarios.....	1092

**Chapter 20: Payment Request..... 1095**

Prerequisites.....	1097
Payment Request (Without Approval) Status Transition.....	1098
Payment Request (With Approval) Status Transition.....	1099
Algorithms Used in C1-PaymentRequest.....	1100
Algorithms Used in C1-PaymentTransferRequest.....	1104
Payment Request Type.....	1109
Payment Request Type List.....	1109
Payment Request Type.....	1110
Defining a Payment Request Type.....	1112
Defining Characteristics for a Payment Request Type.....	1115
Editing a Payment Request Type.....	1116
Copying a Payment Request Type.....	1119
Deleting a Payment Request Type.....	1122
Viewing the Payment Request Type Details.....	1123

Payment Request (Used for Searching).....	1123
Search Payment Request.....	1124
Searching for a Payment Request.....	1126
Viewing the Payment Request Details.....	1127
Payment Request (Used for Viewing).....	1128
Payment Request.....	1128
Payment Distribution.....	1134
Creating a Payment Creation Request.....	1136
Defining Characteristics for a Payment Tender.....	1141
Editing the Payment Amount.....	1142
Editing a Payment Request.....	1144
Deleting a Payment Request.....	1147
Distributing the Tender or Payment Amount.....	1148
Distributing and Freezing the Tender or Payment Amount.....	1149
Redistributing the Tender or Payment Amount.....	1150
Editing the Payment Segment Amount.....	1151
Freezing Payments Created Through a Payment Request.....	1153
Submitting a Payment Request for Approval.....	1154
Approving a Payment Request.....	1154
Rejecting a Payment Request.....	1156
Discarding a Payment Request.....	1158
Viewing the Log of a Payment Request.....	1158
Adding a Log Entry for a Payment Request.....	1159
Payment Event Summary.....	1160
Search Payment Event.....	1160
Payments.....	1163
Payment Segments.....	1165
Searching for a Payment Event.....	1165
Creating a Payment Transfer Request.....	1166
Cancelling a Payment Event.....	1170
Deleting a Payment Event.....	1171
Viewing Payments Created Through a Payment Event.....	1172
Cancelling a Payment.....	1172
Deleting a Payment.....	1173
Viewing Payment Segments of a Payment.....	1173
<b>Chapter 21: Account Receivable Central.....</b>	<b>1175</b>
Single Offset.....	1176
Mass Offset.....	1176
Cross Currency Offset.....	1177
Hold.....	1177
Refund.....	1178
Write Off.....	1178
Dispute.....	1178
Account Receivable Central.....	1178
Search Bill .....	1178
Bill Information.....	1182
Hold Details.....	1182
Offset Details.....	1182
Garnishment Details.....	1183
Bill Line Items.....	1183
Searching for a Bill.....	1183
Viewing the Bill Details.....	1184

**Chapter 22: Offset Request..... 1185**

Offset Request (Without Approval) Status Transition.....	1186
Offset Request (With Approval) Status Transition.....	1187
Algorithms Used in C1-OffsetRequest.....	1187
Prerequisites.....	1193
Offset Request Type.....	1194
Offset Request Type List.....	1195
Offset Request Type.....	1195
Defining an Offset Request Type.....	1198
Defining Characteristics for an Offset Request Type.....	1200
Editing an Offset Request Type.....	1201
Deleting an Offset Request Type.....	1204
Copying Offset Request Type.....	1205
Viewing the Offset Request Type Details.....	1208
Offset Request (Used for Searching).....	1208
Search Offset Request.....	1208
Searching for an Offset Request.....	1211
Viewing the Offset Request Details.....	1212
Offset Request (Used for Viewing).....	1213
Offset Request - Main.....	1213
Offset Request.....	1213
Selected Bills.....	1215
Search Bill.....	1216
View Adjustments.....	1218
Offset Request - Log.....	1219
Offset Request Log.....	1219
Creating an Offset Request.....	1219
Defining Characteristics for an Offset Request.....	1221
Filtering Credit and Debit Bills of an Offset Request.....	1222
Adding a Credit or Debit Bill to the Offset Request.....	1223
Editing an Offset Request.....	1225
Deleting an Offset Request.....	1227
Submitting an Offset Request.....	1228
Approving an Offset Request.....	1229
Rejecting an Offset Request.....	1230
Viewing the Log of an Offset Request.....	1232
Adding a Log Entry for an Offset Request.....	1232
Unapplying an Offset Request.....	1233

**Chapter 23: Funding Request..... 1235**

Prerequisites.....	1238
Funding Request (Without Approval) Status Transition.....	1238
Funding Request (With Approval) Status Transition.....	1239
Algorithms Used in C1-FundingReq.....	1240
C1-FUNDINFO.....	1241
C1-FUNDSUBMT.....	1241
C1-FUNDAPP.....	1242
C1-FUNDAPRVD.....	1242
F1-TODOCOMPL.....	1242
F1-AT-RQJ.....	1242
C1-FNDRESUBM.....	1242
C1-FUNDVAL.....	1242
C1-FUNDAPAY.....	1243

C1-FUNDADJCR.....	1243
Funding Request Type.....	1243
Funding Request Type List.....	1244
Funding Request Type.....	1245
Defining a Funding Request Type.....	1247
Defining a Characteristic for a Funding Request Type.....	1252
Editing a Funding Request Type.....	1253
Deleting a Funding Request Type.....	1259
Copying a Funding Request Type.....	1260
Viewing the Funding Request Type Details.....	1265
Funding Request (Used for Searching).....	1265
Search Funding Request.....	1266
Searching for a Funding Request.....	1268
Viewing the Funding Request Details.....	1269
Creating a Funding Request.....	1269
Funding Request (Used for Viewing).....	1270
Funding Request - Main.....	1270
Funding Request.....	1271
Selected Bills.....	1274
Funding Payment Details.....	1276
Funding Adjustments.....	1277
Search Bill.....	1277
Funding Request - Log.....	1279
Funding Request Log.....	1280
Adding a Debit or Credit Bill to a Funding Request.....	1280
Deleting a Debit or Credit Bill from a Funding Request.....	1281
Excluding a Bill from a Funding Request.....	1282
Editing a Funding Request.....	1284
Defining a Characteristic for a Funding Request.....	1285
Deleting a Funding Request.....	1286
Submitting a Funding Request.....	1287
Approving a Funding Request.....	1289
Rejecting a Funding Request.....	1291
Requesting to Resubmit a Funding Request.....	1293
Transferring the Funding Amount of a Credit Bill to a Garnishment Contract.....	1294
Viewing the Garnishment Details of a Credit Bill.....	1295
Viewing the Payments Created Through a Funding Request.....	1296
Viewing the Adjustments Created Through a Funding Request.....	1297
Viewing the Log of a Funding Request.....	1297
Adding a Log Entry for a Funding Request.....	1298

## **Chapter 24: Refund/Write Off Request..... 1301**

Refund Request (Without Approval) Status Transition.....	1303
Refund Request (With Approval) Status Transition.....	1303
Write Off Request (Without Approval) Status Transition.....	1304
Write Off Request (With Approval) Status Transition.....	1305
Algorithms Used in C1-RefundReq.....	1306
Algorithms Used in C1-WORequest.....	1311
Prerequisites.....	1315
Refund/Write Off Request Type.....	1315
Refund/Write Off Request Type List.....	1319
Refund/Write Off Request Type.....	1320
Defining a Refund or Write Off Request Type.....	1322
Defining Characteristics for a Refund or Write Off Request Type.....	1325
Editing a Refund or Write Off Request Type.....	1326

Deleting a Refund or Write Off Request Type.....	1330
Copying a Refund or Write Off Request Type.....	1330
Viewing the Refund or Write Off Request Type Details.....	1334
Refund/Write Off Request.....	1335
Search Refund/Write Off Request.....	1335

Searching Bills.....	1447
Adding Persons in a Hold Request.....	1447
Adding Accounts in a Hold Request.....	1448
Adding Bills in a Hold Request.....	1449
Adding Processes in a Hold Request.....	1449
Defining Characteristics for a Hold Request.....	1450
Editing a Hold Request.....	1451
Editing Hold Request Entities.....	1453
Deleting Hold Request Entities.....	1454
Deleting a Hold Request.....	1455
Submitting a Hold Request.....	1456
Approving a Hold Request.....	1457
Releasing a Hold Request.....	1458
Rejecting a Hold Request.....	1459
Resubmitting a Hold Request.....	1460
Viewing the Log of a Hold Request.....	1461
Adding a Log Entry for a Hold Request.....	1462

**Chapter 26: Delinquency Central..... 1465**

Prerequisites.....	1466
Delinquency Central.....	1466
Search Overdue Process.....	1466
Overdue Events.....	1471
Searching for an Overdue Process.....	1472
Viewing Events of an Overdue Process.....	1472
Viewing the Overdue Process Details.....	1473
Overdue Process Information for Account: {Account ID}.....	1473
Person Information.....	1474
Account Information.....	1474
Customer Contact Details.....	1474
Promise To Pay.....	1474
Hold Details.....	1475
Overdue Bills.....	1475
Payment Arrangement.....	1475
Search Bill.....	1476
Searching for a Bill.....	1477
Adding the Customer Contact Details.....	1477
Creating a Hold Request for an Overdue Process.....	1478
Creating a Payment Arrangement for an Overdue Process.....	1478
Defining a Promise To Pay for an Overdue Process.....	1479

**Chapter 27: Upload Request..... 1481**

Upload Request (Without Approval) Status Transition.....	1484
Upload Request (With Approval) Status Transition.....	1485
Prerequisites.....	1486
Algorithms Used in C1-BillCycleUpdateUplReq.....	1487
Algorithms Used in C1-ContractRiderUpdateUplReq.....	1492
Algorithms Used in C1-HoldUploadRequest.....	1497
Algorithms Used in C1-RefundUploadRequest.....	1504
Algorithms Used in C1-WriteOffUploadRequest.....	1508
Algorithms Used in C1-BillableChargeUploadRequest.....	1512

## **Chapter 30: Payment Agreement Request..... 1659**

Payment Agreement Request (Without Approval) Status Transition.....	1662
Payment Agreement Request (With Approval) Status Transition.....	1663
Prerequisites.....	1664
Algorithms Used in C1-PaymentAgreementRequest.....	1664
Payment Agreement Request Type.....	1665
Payment Agreement Request Type List.....	1665
Payment Agreement Request Type.....	1666
Defining a Payment Agreement Request Type.....	1669
Defining a Characteristic for a Payment Agreement Request Type.....	1672
Editing a Payment Agreement Request Type.....	1673
Deleting a Payment Agreement Request Type.....	1675
Copying a Payment Agreement Request Type.....	1676
Viewing the Payment Agreement Request Type Details.....	1678
Payment Agreement Request (Used for Searching).....	1679
Search Payment Agreement Request.....	1679
Bill Details.....	1683
Searching for a Payment Agreement Request.....	1683
Viewing the Bills Added in the Payment Agreement Request.....	1684
Viewing the Payment Agreement Request Details.....	1684
Creating a Payment Agreement Request.....	1685
Defining a Characteristic for a Payment Agreement Request.....	1686
Defining Payment Schedule for a Payment Agreement Request.....	1687
Payment Agreement Request (Used for Viewing).....	1688
Payment Agreement Request - Main.....	1689
Payment Agreement Request.....	1689
Bill Details.....	1691
Payment Schedule.....	1692
Payment Agreement Request - Bills.....	1692
Search Bills.....	1692
Payment Agreement Request - Log.....	1694
Payment Agreement Request Log.....	1694
Editing a Payment Agreement Request.....	1695
Deleting a Payment Agreement Request.....	1697
Submitting a Payment Agreement Request.....	1698
Removing an Overdue Bill from a Payment Agreement Request.....	1699
Approving a Payment Agreement Request.....	1699
Rejecting a Payment Agreement Request.....	1701
Resubmitting a Payment Agreement Request.....	1702
Filtering Overdue Bills of an Account.....	1703
Adding an Overdue Bill to a Payment Agreement Request.....	1704
Viewing the Log of a Payment Agreement Request.....	1705
Adding a Log Entry for a Payment Agreement Request.....	1706

**Chapter 31: Dispute Request.....1707**

Dispute Request (Without Approval) Status Transition.....	1713
Dispute Request (With Approval) Status Transition.....	1713
Prerequisites.....	1714
Algorithms Used in C1-DisputeRequest.....	1715
Dispute Request Type.....	1720
Dispute Request Type List.....	1723
Dispute Request Type.....	1724
Defining a Dispute Request Type.....	1726
Defining Characteristics for a Dispute Request Type.....	1729
Editing a Dispute Request Type.....	1730
Deleting a Dispute Request Type.....	1733
Copying a Dispute Request Type.....	1734
Viewing the Dispute Request Type Details.....	1736
Dispute Request (Used for Searching).....	1737
Search Dispute Request.....	1737
Searching for a Dispute Request.....	1740
Viewing the Dispute Request Details.....	1741
Creating a Dispute Request.....	1742
Defining Characteristics for a Dispute Request.....	1744
Dispute Request (Used for Viewing).....	1745
Dispute Request - Main.....	1746
Dispute Request.....	1746
Dispute Details.....	1748
Dispute Adjustments.....	1748
Previous Dispute Requests.....	1749
Dispute Request - Bills.....	1750
Search Bills.....	1750
Bill Line Items.....	1752
Dispute Request - Log.....	1752
Dispute Request Log.....	1752
Editing a Dispute Request.....	1753
Deleting a Dispute Request.....	1754
Submitting a Dispute Request.....	1755
Approving a Dispute Request.....	1756
Rejecting a Dispute Request.....	1757
Resubmitting a Dispute Request.....	1759
Editing the Dispute Details.....	1759
Deleting a Bill from the Dispute Request.....	1761
Viewing the Bill Line Items.....	1761
Adding a Bill to the Dispute Request.....	1762
Adding a Bill Line Item to the Dispute Request.....	1763
Viewing the Log of a Dispute Request.....	1765
Adding a Log Entry for a Dispute Request.....	1766

**Chapter 32: Earnings Credit Rate .....1769**

Product Lifecycle Management.....	1773
Prerequisites.....	1774
Financial Transaction Distribution Object Status Transition.....	1774
Algorithms Used in C1-FTDIST.....	1775
Earnings Credit Rate Eligibility.....	1781
Earnings Credit Rate Eligibility.....	1782
Defining Earnings Credit Rate Eligibility for an Account.....	1783

Financial Transaction Distribution Type.....	1784
Financial Transaction Distribution Type List.....	1784
Financial Transaction Distribution Type.....	1786
Defining a Financial Transaction Distribution Type.....	1788
Defining Characteristics for a Financial Transaction Distribution Type.....	1791
Editing a Financial Transaction Distribution Type.....	1792
Deleting a Financial Transaction Distribution Type.....	1794
Copying a Financial Transaction Distribution Type.....	1795
Viewing the Financial Transaction Distribution Type Details.....	1798
Financial Transaction Distribution Rule.....	1798
Financial Transaction Distribution Rule List.....	1799
Financial Transaction Distribution Rule.....	1800
Financial Transaction Distribution Rule Version List.....	1801
Financial Transaction Distribution Rule Version.....	1802
Defining a Financial Transaction Distribution Rule.....	1804
Editing a Financial Transaction Distribution Rule.....	1805
Deleting a Financial Transaction Distribution Rule.....	1807
Copying a Financial Transaction Distribution Rule.....	1807
Viewing the Financial Transaction Distribution Rule Details.....	1809
Viewing the Financial Transaction Distribution Rule Version List.....	1809
Defining a Financial Transaction Distribution Rule Version.....	1810
Including Objects in a Financial Transaction Distribution Rule Version.....	1813
Excluding Objects in a Financial Transaction Distribution Rule Version.....	1814
Associating Algorithms with a Financial Transaction Distribution Rule Version.....	1815
Editing a Financial Transaction Distribution Rule Version.....	1815
Deleting a Financial Transaction Distribution Rule Version.....	1818
Copying a Financial Transaction Distribution Rule Version.....	1819
Viewing the Financial Transaction Distribution Rule Version Details.....	1822
Expiration Cycle Extendable Lookup.....	1823
Extendable Lookup Search.....	1823
Searching for an Expiration Cycle Extendable Lookup.....	1823
Extendable Lookup (Expiration Cycle).....	1824
Extendable Lookup Value List.....	1824
Extendable Lookup Value.....	1825
Defining an Expiration Cycle.....	1826
Editing an Expiration Cycle.....	1827
Deleting an Expiration Cycle.....	1828
Copying an Expiration Cycle.....	1829
Viewing the Expiration Cycle Details.....	1830
Distribution Hierarchy Extendable Lookup.....	1831
Extendable Lookup Search.....	1831
Searching for a Distribution Hierarchy Extendable Lookup.....	1832
Extendable Lookup (Distribution Hierarchy).....	1832
Extendable Lookup Value List.....	1833
Extendable Lookup Value.....	1833
Defining a Distribution Hierarchy.....	1835
Editing a Distribution Hierarchy.....	1836
Deleting a Distribution Hierarchy.....	1837
Copying a Distribution Hierarchy.....	1838
Viewing the Distribution Hierarchy Details.....	1840
Financial Transaction Distribution Object Extendable Lookup.....	1840
Extendable Lookup Search.....	1840
Extendable Lookup (Financial Transaction Distribution Object).....	1841
Extendable Lookup Value List.....	1841
Extendable Lookup Value.....	1842
Defining a Financial Transaction Distribution Object.....	1844

Editing a Financial Transaction Distribution Object.....	1845
Deleting a Financial Transaction Distribution Object.....	1846
Copying a Financial Transaction Distribution Object.....	1847
Viewing the Financial Transaction Distribution Object Details.....	1849
Financial Transaction Distribution (Used for Searching).....	1849
Financial Transaction Distribution Search.....	1849
Searching for a Financial Transaction Distribution Object.....	1851
Viewing the Financial Transaction Distribution Object Details.....	1852

Financial Transaction Distribution - Log.....	1855
Financial Transaction Distribution Log.....	1855
Viewing the Log of a Financial Transaction Distribution.....	1856
Adding a Log Entry for a Financial Transaction Distribution.....	1856

### **Chapter 33: Deferred Revenue Recognition..... 1859**

Prerequisites.....	1861
Deferred Revenue Recognition Status Transition.....	1861
Algorithms Used in Deferred Revenue Recognition.....	1863
Deferred Revenue Recognition Template (Used for Searching).....	1868
Search Deferred Revenue Recognition Template.....	1868
Searching for a Deferred Revenue Recognition Template.....	1869
Defining a Deferred Revenue Recognition Template.....	1870
Associating Algorithms with a Deferred Revenue Recognition Template.....	1872
Associating Deferred Revenue Recognition Template With A Division.....	1873
Defining Characteristics for a Deferred Revenue Recognition Template.....	1874
Viewing the Deferred Revenue Recognition Template Details.....	1875
Deferred Revenue Recognition Template (Used for Viewing).....	1876
Deferred Revenue Recognition Template.....	1876
Editing a Deferred Revenue Recognition Template.....	1878
Deleting a Deferred Revenue Recognition Template.....	1879
Deferred Revenue Recognition (Used for Searching).....	1879
Search Deferred Revenue Recognition.....	1880
Searching for a Deferred Revenue Recognition.....	1884
Viewing the Deferred Revenue Recognition Details.....	1884
Deferred Revenue Recognition (Used for Viewing).....	1885
Deferred Revenue Recognition - Main.....	1885
Deferred Revenue Recognition.....	1885
Associated Deferred Revenue Recognitions.....	1887
Recognition Schedule.....	1888
Revenue Recognition Items.....	1888
Deferred Revenue Recognition - Log.....	1888
Deferred Revenue Recognition Log.....	1888
Editing a Deferred Revenue Recognition.....	1889
Creating the Deferred Revenue Recognition Schedule.....	1890
Defining Characteristics for a Deferred Revenue Recognition.....	1890
Adding Related Deferred Revenue Recognitions.....	1891
Editing the Deferred Revenue Recognition Schedule Details.....	1892
Viewing the Log of a Deferred Revenue Recognition.....	1893
Adding a Log Entry for a Deferred Revenue Recognition.....	1894

### **Chapter 34: Product Lifecycle Management..... 1897**

Prerequisites.....	1899
--------------------	------

Product Status Transition through User Interface.....	1899
Product Status Transition through a Batch Process.....	1900
Product Version Status Transition.....	1901
Product Enrollment Status Transition through User Interface.....	1902
Product Enrollment Status Transition through a Batch Process.....	1903
Product Service (Used for Searching).....	1905
Search Product Service.....	1905
Associated Price Items.....	1906
Searching for a Product Service.....	1906
Viewing the Product Service Price Items.....	1907
Defining a Product Service.....	1907
Associating a Product Service with a Price Item.....	1909
Defining a Characteristics for a Product Service.....	1910
Viewing the Product Service Details.....	1911
Product Service (Used for Viewing).....	1912
Product Service.....	1912
Price Items.....	1913
Editing a Product Service.....	1913
Deleting a Product Service.....	1914
Copying a Product Service.....	1915
Product (Used for Searching).....	1916
Search Product.....	1916
Product Version List.....	1918
Searching for a Product.....	1918
Viewing the Product Versions.....	1919
Viewing the Product Details.....	1919
Viewing the Product Version Details.....	1920
Defining a Product.....	1920
Associating a Product with a Division.....	1922
Defining a Product to Product Relationship.....	1922
Defining a Characteristics for a Product.....	1923
Defining a Product Version.....	1925
Adding a Product Service to a Product Version.....	1927
Adding a Standard Product to a Product Version.....	1928
Adding Add-on Services to a Product Version.....	1930
Associating a Price List with a Product Version.....	1931
Defining Eligibility Criteria for a Product Version.....	1932
Defining Characteristics for a Product Version.....	1934
Product Version (Used for Viewing).....	1935
Product Version - Main.....	1936
Product Version.....	1936
Products.....	1938
Product Services.....	1938
Add-on Product Services.....	1939
Services.....	1939
Price List.....	1940
Eligibility Criteria.....	1940
Product Version - Log.....	1942
Product Version Log.....	1942
Editing a Product Version.....	1942
Deleting a Product Version.....	1944
Copying a Product Version.....	1944
Finalizing a Product Version.....	1946
Viewing the Log of a Product Version.....	1947
Product (Used for Viewing).....	1948
Product - Main.....	1948

Product Details.....	1948
Product Version List.....	1950
Product - Log.....	1950
Product Log.....	1951
Editing a Product.....	1951
Copying a Product.....	1952
Activating a Product.....	1953
Retiring a Product.....	1953
Viewing the Log of a Product.....	1954
Product Enrollment (Used for Searching).....	1955
Search Enrollment.....	1955
Enrolled Products.....	1957
Enrolled Services.....	1958
Enrolled Standard Products.....	1958
Enrolled Add-on Services.....	1959
Searching for a Product Enrollment.....	1959
Viewing the Enrolled Products.....	1960
Viewing the Enrolled Services.....	1960
Viewing the Standard Products Included in an Enrolled Product.....	1961
Viewing the Add-on Services Enrolled with the Product .....	1961
Enrolling an Account for One or More Products and Services.....	1962
Viewing the Product Priority of an Account.....	1965
Defining Characteristics for a Product Enrollment.....	1966
Product Enrollment (Used for Viewing).....	1966
Product Enrollment - Main.....	1967
Product Enrollment.....	1967
Enrolled Products.....	1968
Enrolled Services.....	1969
Enrolled Standard Products.....	1969
Enrolled Add-on Product Services.....	1970
Product Priority.....	1970
Product Enrollment - Log.....	1971
Enrollment Log.....	1971
Viewing the Standard Products Included in an Enrolled Product.....	1971
Editing a Product Enrollment.....	1972
Copying a Product Enrollment.....	1973
Enrolling a Product Enrollment.....	1973
Unenrolling a Product Enrollment.....	1974
Viewing the Log of a Product Enrollment.....	1975

## **Chapter 35: Subscription Billing.....1977**

Prerequisites.....	1979
Subscription Type (Used for Searching).....	1979
Search Subscription Type.....	1979
Searching for a Subscription Type.....	1980
Viewing the Subscription Type Details.....	1981
Defining a Subscription Type.....	1981
Defining Characteristics for a Subscription Type.....	1984
Subscription Type (Used for Viewing).....	1985
Subscription Type.....	1985
Editing a Subscription Type.....	1988
Copying a Subscription Type.....	1990
Deleting a Subscription Type.....	1993
Account Subscription (Used for Searching).....	1993
Search Account Subscription.....	1993

Searching for an Account Subscription.....	1995
Viewing the Account Subscription Details.....	1996
Defining an Account Subscription.....	1996
Defining Characteristics for an Account Subscription.....	1999
Account Subscription (Used for Viewing).....	2000
Account Subscription - Main.....	2000
Account Subscription.....	2000
Subscription Services.....	2002
Subscription Service Charges.....	2003
Subscription Service Charge Entities.....	2003
Account Subscription Suspension History.....	2003
Account Subscription Termination Charges.....	2004
Account Subscription - Log.....	2004
Account Subscription Log.....	2004
Adding Services and Charges in the Account Subscription.....	2005
Editing an Account Subscription.....	2006
Deleting an Account Subscription.....	2007
Activating an Account Subscription.....	2008
Canceling an Account Subscription.....	2008
Editing the Subscription Service Details.....	2009
Deleting a Service from the Account Subscription.....	2010
Viewing the Charges of a Subscription Service.....	2010
Viewing Related Entities of a Subscription Service Charge.....	2011
Viewing Suspension History of the Account Subscription.....	2011
Viewing Termination Charges of the Account Subscription.....	2012
Suspending an Account Subscription.....	2012
Terminating an Account Subscription.....	2013
Resuming an Account Subscription.....	2014
Viewing the Log of an Account Subscription.....	2015

## **Appendix A: Most Commonly Used Tasks..... 2017**

Changing the Layout.....	2018
Adding a Column to the Zone.....	2018
Rearranging Columns in the Zone.....	2018
Removing a Column from the Zone.....	2018

## **Appendix B: Administration..... 2021**

UI Maps.....	2022
Creating Display UI Map for an Approval Workflow Group.....	2022
Creating Input UI Map for an Approval Workflow Group.....	2023
Feature Configurations.....	2024
Setting the C1_ACCTINFO Feature Configuration.....	2024
Setting the C1_AXENTITY Feature Configuration.....	2025
Setting the C1_DIVFUNCT Feature Configuration.....	2027
Setting the C1_EXCHRATE Feature Configuration.....	2028
Setting the C1_EXP_OVRD Feature Configuration.....	2028
Setting the C1_FINTRANOP Feature Configuration.....	2029
Setting the C1_FM Feature Configuration.....	2030
Setting the C1_MLTCURACC Feature Configuration.....	2037
Setting the C1-ODBFC Feature Configuration.....	2039
Setting the C1-PAYPORTAL Feature Configuration.....	2040
Setting the C1_PERACCT Feature Configuration.....	2042
Setting the C1_PER_REL Feature Configuration.....	2042
Setting the C1_PPARAM_FLG Feature Configuration.....	2043

Setting the C1_PRASNORDR Feature Configuration.....	2044
Setting the C1_PR_REC Feature Configuration.....	2045
Setting the C1-PYREQSRT Feature Configuration.....	2045
Setting the C1_RLENG Feature Configuration.....	2046
Setting the C1-TXNDMYID Feature Configuration.....	2047

---

# Preface

---

## About this Document

---

This document lists and describes various features in Oracle Revenue Management and Billing which can be used in the Financial Services domain. It describes all screens related to these features and explains how to perform various tasks through these screens.

## Intended Audience

---

This document is intended for the following audience:

- End-users
- System Administrators
- Consulting Team
- Implementation Team
- Development Team

## Organization of the Document

---

Each banking feature is described in a separate chapter in this document. All screens related to the feature and tasks related to the screen are explained in each chapter. This document contains the following chapters:

Chapter Number	Chapter Name	Chapter Description
Chapter 1	Customer 360° View	Explains how to view in-depth information about the person or account in the <b>Customer 360° View</b> screen. It also explains how to view the enrolled products, effective price assignments, and effective price list assignments of a person or account. In addition, it explains how to view the detailed information about the bill.
Chapter 2	Invoicing Group	Describes the invoicing group and explains how to create a master account. It also explains how to add or remove a member from a master account.
Chapter 3	Pricing Management	Explains the different concepts of the pricing model supported in the application. It explains how to define a parameter, price item, price list, tiering criterion, variance parameter, and person to person relationship type sequence. It also explains how to define pricing for a price item, how to assign a price item to a person, account, or price list, and how to assign a price list to a person or account.
Chapter 4	Division	Describes the different types of division. It also explains how to define a division.

<b>Chapter Number</b>	<b>Chapter Name</b>	<b>Chapter Description</b>
Chapter 5	Approval Workflow	Describes the approval workflow process and explains how to perform various tasks involved in the process. It explains how to implement the approval workflow process for an entity, such as account, person, and so on. It explains how to define an approval workflow group, approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, approval workflow reasons, and approval workflow settings.
Chapter 6	Multi-Currency Accounts	Lists and describes the business processes that are enhanced to implement the multi-currency accounts feature.
Chapter 7	Rules Engine	Describes how the rules engine function. It explains how to define, execute, and maintain business rules separately from the application code.
Chapter 8	Alternate Sequential Bill Numbers	Explains how to generate alternate sequential bill numbers which are either unique throughout the system or within the division.
Chapter 9	Currency Conversion	Lists and describes the business processes where the currency conversion feature can be enabled in the system. It explains how to enable the currency conversion feature for each business process. It also explains how to create different types of exchange rates in the system.
Chapter 10	Transaction Feed Management	Describes the transaction feed management process and its sub-processes. It explains how to execute each sub-process. It also explains how to view the details of various transactions uploaded in the system. In addition, it explains how to create a transaction source, transaction record type, transaction aggregation rule, aggregation schedule, and disaggregation request.
Chapter 11	On Demand Billing	Explains how to generate adhoc bills using the on demand billing process. It explains how to create a file type and file group, how to upload a usage data file, how to generate adhoc bills for a file group, and how to freeze the adhoc bills of a file group.
Chapter 12	Upload Validated Payment Data	Explains how to upload and validate the payment records before you move them to the staging area. It also explains how to create payment events and payments using the validated payment records.
Chapter 13	Freeze Payments on Notification	Explains how the system freezes or cancels the automatic payments, voids the refund requests and cancels the refund adjustments when the review comments are received from the auto clearing house.
Chapter 14	Construct	Describes the construct based billing and settlement feature. It explains how to create templates and different types of constructs, such as invoice construct, invoice and settlement construct, and settlement construct. It also explains how to view the billing and settlement hierarchy of a person or account.
Chapter 15	Trial Billing	Explains how to generate trial bills before the actual bill is generated for an account. It also explains how to view the trial bills in the system.
Chapter 16	Bill Tolerance	Explains how to define the tolerance limit for the bill amount. It also describes how the system behaves when the difference between the previous and current bill amount exceeds the positive or negative tolerance limit.
Chapter 17	GL Account Validation	Explains how to enable the static or dynamic GL account validation feature.

Chapter Number	Chapter Name	Chapter Description
Chapter 18	Upload Validated Adjustment Data	Explains how to validate and upload an adjustment data file and create adjustments through an adjustment upload request.
Chapter 19	Foreign Exchange Gain Loss	Explains how the system calculates the foreign exchange gain loss on the payment and adjustment financial transactions.
Chapter 20	Payment Request	Explains how to create or transfer payments through a payment request.
Chapter 21	Account Receivable Central	Explains how to use the <b>Account Receivable Central</b> screen to search for a bill which you need to offset against another bill. It explains how to perform single, mass, and cross currency offset against one or more bills. It also enables you to create a hold request, refund request, write off request, and dispute request through this screen.
Chapter 22	Offset Request	Explains how to offset the bill's outstanding amount against one or more bills through an offset request. It explains how to create the offset request types and offset requests in the system.
Chapter 23	Funding Request	Describes how to change the automatic payment amount through the funding process. It explains how to create the funding request types and funding requests in the system.
Chapter 24	Refund/Write Off Request	Describes how to refund a payment or credit bill or bill line item and write off a debit bill or bill line item through a refund or write off request, respectively. It explains how to create the refund or write off request types and refund or write off requests in the system.
Chapter 25	Hold Request	Describes how to hold some processes and/or bills at the account or person level for a time period through a hold request. It explains how to create the hold request types and hold requests in the system.
Chapter 26	Delinquency Central	Explains how to track the overdue processes of a delinquent account through the <b>Delinquency Central</b> screen. It also explains how to create a hold request, payment arrangement, and promise to pay for a delinquent account from this screen.
Chapter 27	Upload Request	Explains how to do the following through an upload request: <ul style="list-style-type: none"> <li>• Update bill cycle of accounts</li> <li>• Update contract riders in contracts</li> <li>• Create hold requests, refund requests, write off requests, or billable charges</li> <li>• Reinstate the policies</li> <li>• Create sort records for bill groups</li> <li>• Create derivation and pricing parameters for bill groups</li> </ul>
Chapter 28	General Ledger (GL) Accounting Template	Describes how to override the distribution code used for creating FT GL entries using the <b>GL Accounting Template</b> feature. It explains how to create the GL accounting templates for each process and sub processes combination.
Chapter 29	Accrual	Describes how to calculate, create, and reverse accrual for accounts. It explains how to create the accrual cycles, accrual types, and accruals for the accounts in the system.

Chapter Number	Chapter Name	Chapter Description
Chapter 30	Payment Agreement Request	Describes how to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. It explains how to create the payment agreement request types and payment agreement requests in the system.
Chapter 31	Dispute Request	Describes how to track and close a dispute against a particular bill, bill segment, and/or adjustment through a dispute request. It explains how to create the dispute request types and dispute requests in the system.
Chapter 32	Earnings Credit Rate	Explains how to create the financial transaction distribution (ECR) object when the adjustment and/or bill segment financial transaction created against an ECR contract is frozen. It also explains how to distribute the credit or debit amount on the financial transaction distribution object to different accounts based on the distribution hierarchy.
Chapter 33	Deferred Revenue Recognition	Describes how to recognize the deferred revenue in the system. It explains how to create a deferred revenue recognition template for each distribution code and contract type combination. It also explains how to generate the schedule for a deferred revenue recognition. In addition, it explains how to edit the deferred revenue recognition schedule.
Chapter 34	Product Lifecycle Management	Describes the entire lifecycle of a product from inception to service and then to the retirement. It explains how to create various types of products, such as standard and packaged products. It explains how to create a product service, product, and product versions in the system. It also explains how to enroll an account for different types of products.
Chapter 35	Subscription Billing	Describes the service based billing wherein the customers pay a subscription price to have access to a product or service. It explains how to create the subscription types and subscriptions on the accounts.
Appendix A	Most Commonly Used Tasks	Lists and describes some of the common tasks that you may perform while using the application.
Appendix B	Administration	Describes how to create UI maps and set various feature configurations in the system.

## Conventions

---

The following conventions are used across this document:

Convention	Meaning
<b>boldface</b>	Boldface indicates graphical user interface elements associated with an action, or terms defined in the text.
<i>italic</i>	Italic indicates a document or book title.
Monospace	Monospace indicates information that an end-user needs to enter in the application.

## Related Documents

---

You can refer to the following documents:

<b>Document Name</b>	<b>Description</b>
<i>Oracle Revenue Management and Billing Version 2.7.0.0.0 Release Notes</i>	Provides a brief description about the new features, enhancements, UI and database level changes, supported platforms, framework upgrade, supported upgrades, and technology upgrade made in this release. It also highlights the discontinued features, bug fixes, and known issues in this release.
<i>ORMB - Transaction Feed Management - Batch Execution Guide</i>	Describes the sequence in which the batches must be executed while performing various tasks in the Transaction Feed Management module.
<i>Oracle Revenue Management and Billing Batch Guide</i>	Lists and describes various ORMB batches.
<i>Oracle Revenue Management and Billing Installation Guide</i>	Lists the application server pre-requisites, supported platforms, and software and hardware requirements for installing the Oracle Revenue Management and Billing application. It explains how to install the Oracle Revenue Management and Billing application.
<i>Oracle Revenue Management and Billing Quick Installation Guide</i>	Provides high-level information on how to install the Oracle Revenue Management and Billing (ORMB) application and selected additional software.
<i>Oracle Revenue Management and Billing Database Administrator's Guide</i>	Provides information about the Oracle Database Server and Client required for installing the Oracle Revenue Management and Billing database. It explains how to install database with and without demo data. It provides database configuration guidelines including recommended settings for the Oracle Exadata Database machine.
<i>Oracle Revenue Management and Billing Server Administration Guide</i>	Explains the Oracle Revenue Management and Billing (ORMB) architecture and technical know-how required for configuring and using the ORMB application. It explains how to configure and deploy web and business application servers. In addition, it explains how to monitor client machines, web and/or business application servers, and database connections.
<i>Oracle Revenue Management and Billing Security Guide</i>	Lists the security features available in the Oracle Revenue Management and Billing application. It explains how to configure security for the Oracle Revenue Management and Billing application using the default security features.

## Customer 360° View

---

### Topics:

- [Customer 360° View](#)
- [Customer 360° Information](#)
- [Bill Information](#)

Oracle Revenue Management and Billing provides you with the ability to quickly view in-depth information about the person by aggregating data from the application and presenting the same on a screen named **Customer 360° View**. This data can then be easily used for analysis. You can use the person or account details to view the 360° information of the person, such as:

- Basic details, characteristics, linked accounts, hierarchy, and the customer contacts of a person
- Basic details, characteristics, account persons list, automatic payment options, billing history, payment history, dispute details, hold details, and overdue processes details of the person's account
- Basic details of the bill, adjustments which are swept onto the bill, activities (such as, payment, offset, refund, or write off) through which the bill is settled, high level summary and details of the bill segments included the bill, active hold requests due to which the bill is kept on hold, offset requests through which the bill is offset against another bill, and refund and write off requests through which the bill or its bill segment is either refunded or written off.

In other words, this feature allows you to drill down to see or act on all current and historical revenue management and billing details. This allows you to professionally and efficiently handle customer inquiries and complaints at the first point of contact, raising your customer service from previously unattainable levels and reducing the associated time and cost.

## Customer 360° View

The **Customer 360° View** screen allows you to search for a person and account using various search criteria. You can then view 360° information of the person and the person's account, and vice-versa. By default, whenever you login to the application, the **Customer 360° View** screen appears. This screen consists of the following zone:

- [360° Search](#) on page 46

### 360° Search

The **360° Search** zone allows you to search a person and account using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a person or account. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person</b> option is selected.	
Division	Used to search persons or accounts which belong to a particular division.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.	
Customer Class	Used to search accounts which belongs to a particular customer class.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Person Name	Used to search a particular person. If you specify the person name while searching for an account, the system searches all accounts where the person is the main customer.	No
	<b>Note:</b> If you are searching for an account, this field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
Person ID	Used to search a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person.	Yes (Conditional)
	<b>Note:</b> If you search for a person information using the <b>Account</b> option from the <b>Search By</b> then, this field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	<b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search a person with a particular identifier.	Yes (Conditional)
	<b>Note:</b> If you search for a person information using the <b>Account</b> option from the <b>Search By</b> then, this field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	<b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Person Type	Used to search persons of a particular type.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
Segment	Used to search a person with a particular segment.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
Prospect	Used to indicates whether the person is a prospective customer or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	

Field Name	Field Description	Mandatory (Yes or No)
Address	Used to search persons with a particular address or accounts' whose main customer has a particular address.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
City	Used to search persons who belong to a particular city or accounts' whose main customer belong to a particular city.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
Phone Number	Used to search a person with a particular phone number or accounts' whose main customer has a particular phone number.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
Account ID	Used to search a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search an account with a particular identifier.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Account Category	Used to search accounts which belongs to a particular category. The valid values are: <ul style="list-style-type: none"> <li>• Invoice Account</li> <li>• Settlement Account</li> <li>• Usage Account</li> </ul>	No
Product	Used to search a particular product.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list  The Search (  ) icon appears corresponding to this field. On clicking the Search icon, the <b>Product Search</b> window appears.	No
Characteristic Type	Used to search persons, accounts or policies with a particular type of characteristic.  <b>Note:</b> This field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	No
Characteristic Value	Used to search persons, accounts or policies with a particular characteristic.  <b>Note:</b> This field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> If you specify the characteristic type as a search criteria, you have to enter the characteristics value.

**Note:**

You must specify at least one search criterion while searching for a person or account. One more search criterion is required when you are searching for a person or account using the division and/or customer class.

If you have specified any other search criterion along with the person ID or account ID, the system ignores the additional search criterion and searches using the person ID or account ID respectively.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Person Name	Displays the name of the person.
	<p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Primary Person Identifier Type	Indicates the primary identifier type associated with the person.
	<p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Primary Person Identifier	Displays the primary person identifier.
	<p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p> <p>This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Division	Indicates the division to which the account belongs.
Customer Class	Indicates the customer class to which the account belongs.
	<p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Primary Account Identifier Type	Indicates the primary identifier type associated with the account.
	<p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Account Identifier	Displays the primary account identifier.
	<p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>

Column Name	Column Description
Main Customer	Displays the name of the customer to which the account belongs.
	<b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.

**Note:** You can view the 360° information of the person or account by clicking the **View** () icon corresponding to the record in the **Search Results** section.

## **Searching for a Person**

### **Prerequisites**

To search for a person, you should have:

- Divisions, customer classes, person types, and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)

### **Procedure**

To search for a person:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Customer 360° View**.  
The **Customer 360° View** screen appears.
3. Select the **Person** option from the **Search By** list to indicate that you want to search for a person.
4. Enter the required search criteria in the **360° Search** zone.

**Note:**

You must specify at least one search criterion while searching for a person. One more search criterion is required when you are searching for a person using the division .

You must specify the division when you are searching for a person using city.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the person using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. In this screen, you can only use the ‘%’ wildcard character in the **Person Name** and **Address** fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

**Searching for an Account****Prerequisites**

To search for an account, you should have:

- Divisions, customer classes, and account identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

**Procedure**

To search for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Customer 360° View**.  
The **Customer 360° View** screen appears.
3. Select the **Account** option from the **Search By** list to indicate that you want to search for an account.
4. Enter the required search criteria in the **360° Search** zone.

**Note:**

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class.

If you have specified any other search criterion along with the account ID, the system ignores the additional search criterion and searches for the account using the account ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. In this screen, you can only use the '%' wildcard character in the **Person Name** and **Address** fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

### Person Information

The **Person Information** zone displays information about the person. It contains the following sections:

- **Main** - Displays the basic details of the person. It contains the following fields:

Field Name	Field Description
Person Information	Displays information about the person. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the person.
Person Type	Indicates the type of the person.
Date of Birth	Displays the date when the person was born.  <b>Note:</b> This field appears only when the respective data is available for the person.

- **Person Identifiers** - Lists various types of identification associated with the person. It contains the following columns:

Column Name	Column Description
Person Identifier Type	Indicates the person identifier type.
Person Identifier	Displays the value of the person identifier type.

- **Contact Information** - Displays the contact details of the person. It contains the following fields:

Field Name	Field Description
Country	Indicates the country where the person is located.
Address 1	Displays the first line of the person's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the person's address. It may contain details, such as street name.
Address 3	Displays the third line of the person's address. It may contain the landmark details.
Address 4	Displays the fourth line of the person's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the person resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
City	Displays the city where the person is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the person is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.
Email ID	Displays the e-mail ID of the person.

**Note:** The above mentioned fields appear in the **Contact Information** section only when the respective data is available for the person.

- **Deal Information** - Displays the deal details of the person received from the external system. It contains the following columns:

Column Name	Column Description
Deal ID	Displays the deal ID. This is an identifier generated in the Deal Management system (such as, Oracle Revenue Management and Billing Analytics (ORMBA)).
Relationship Manager	Indicates the professional who is working to improve the relationship with the person with respect to the deal.

Column Name	Column Description
Prospect	Indicates whether the person is a prospective customer or not. The valid values are <b>Yes</b> or <b>No</b> .
Segment	Displays the segment to which the person belongs.

- **Phone Details** - Lists the phone details of the person. It contains the following columns:

Column Name	Column Description
Phone Type	Indicates the type of the phone number.
Phone Number	Displays the phone number of the person.

### Person Characteristics

The **Person Characteristics** zone lists the characteristics defined for the person. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the person.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	<b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b> .

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

**Note:** This zone lists the person characteristics in the descending order of the effective date.

### Linked Accounts

The **Linked Accounts** zone displays all the accounts of a person. It contains the following field:

Field Name	Field Description
Search By	Used to indicate the type of search to be performed. The valid values are: <ul style="list-style-type: none"> <li>• Linked Accounts</li> </ul>

In addition to the above field, this section contains the following columns:

Column Name	Column Description
Sr. No.	Displays the sequential number of the data.
360° Degree Information	On clicking the <b>360 Degree Information</b> (  ) icon, the <b>Accounts</b> tab appears with the details of the respective account.

Column Name	Column Description
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Primary Account Identifier	Displays the primary account identifier type of the account.
Division	Displays the division to which the account belongs.

### Person Legal Hierarchy

The **Person Legal Hierarchy** zone lists the following in a tree view:

- Information string of accounts where the person is the main customer
- Information string of the parent persons
- Information strings of the child persons

Displays information about the person, account, child person, and parent person in a tree view. Each node in the tree has a link. The following table indicates the information string that appears in various scenarios:

If...	Then...
The person is the main customer of an account	The account information string appears. It has a link. On clicking the link, the information of an account appears in the <b>Account</b> screen.
The person has a child	The child person information string appears. It has a link. On clicking the link, the information of the child person appears in the <b>Person</b> screen.  <b>Note:</b> The child person information string does not appear only if the end date of the child person is earlier than the system date.
The person has a parent person	The person information string appears. It has a link. On clicking the link, the information of the person appears in the <b>Person</b> screen.

You will see the **Get More...** button in the bottom of the zone only when the person hierarchy list exceeds the 25 records.

### Customer Contacts

The **Customer Contacts** zone displays information about how and when the person was contacted. It contains the following columns:

Column Name	Column Description
Customer Contact Information	Displays information about the customer contact.  <b>Note:</b> It has a link. On clicking the link, the <b>Customer Contact</b> screen appears where you can view the details of the respective customer contact.

Column Name	Column Description
Contact Date	Displays the date when the person was contacted.
Contact Type	Indicates how the person was contacted.
Comments	Displays additional information about the customer contact.

You can filter the list using various search criteria (such as, **On or Before Contact Date**, **Contact Class**, **Contact Type**, and so on) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

### Enrolled Products

The **Enrolled Products** zone displays information about products which are enrolled by a person. It contains the following fields:

Column Name	Column Description
Product	Displays the name of the product.
	<b>Note:</b> It has a link. On clicking the link, the <b>Product</b> screen appears with the details of the respective product.
Product Type	Displays the type of the product.
Product Version	Displays the version of the enrolled product.
	<b>Note:</b> It has a link. On clicking the link, the <b>Product Version</b> screen appears where you can view the details of the respective product version.

### Account Information

The **Account Information** zone displays the details of the account. It contains the following sections:

- **Main** – Displays the basic information about the account. It contains the following fields:

Field Name	Field Description
Account Information	Displays information about the account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the account.
Division	Displays the division to which the account belongs.

- **Accounting Information** – Displays various accounting related information. It contains the following columns:

Field Name	Field Description
Eligible for Accrual	Displays whether an account is eligible for accrual or not. The valid values are <b>Yes</b> or <b>No</b> .
Account on Dispute	Displays whether an account is on dispute or not. The valid values are <b>Yes</b> or <b>No</b> .
Overdue Process for Account	Displays whether an account is having overdue process or not. The valid values are <b>Yes</b> or <b>No</b> .
ECR Offset Eligibility	Displays the ECR offset eligibility.

Field Name	Field Description
ECR Expiration Cycle	Displays the ECR expiration cycle.
Accrual Cycle	Displays the description of an accrual cycle which is set for an account.
Account on Hold	Displays whether an account is in hold or not. The valid values are <b>Yes</b> or <b>No</b> .
ECR Eligibility	Displays whether an account is eligible for ECR offset or not. The valid values are <b>Yes</b> or <b>No</b> .
ECR Offset Distribution Type	Displays the ECR offset distribution type.
ECR Account Distribution Priority	Displays the ECR account distribution priority.

- **Contact Information** – Displays the contact details of the account’s main customer. It contains the following fields:

Field Name	Field Description
Address Source	Indicates which address should be used to route the account’s bills and/or quotes via the postal service.
Country	Indicates the country where the main customer is located.
Address 1	Displays the first line of the main customer’s address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the main customer’s address. It may contain details, such as street name.
Address 3	Displays the third line of the main customer’s address. It may contain the landmark details.
Address 4	Displays the fourth line of the main customer’s address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the main customer resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
City	Displays the city where the main customer is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the main customer is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.

**Note:** Only **Address Source** field appears in the **Contact Information** section when the address source of the main customer is set to **Account Override**.

- **Account Identifiers** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

- **Billing Information** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Bill Cycle	Displays the bill cycle of the account.
Last Bill	Displays the bill information string for the last bill of an account. It has a link. On clicking the link, the information of bill appears in the <b>Bill</b> screen.  <b>Note:</b> This field appears only when last bill information exists for the account.
Previous Bill	Displays the bill information string for the bill prior to the last bill of an account. It has a link. On clicking the link, the information of bill appears in the <b>Bill</b> screen.  <b>Note:</b> This field appears only when previous bill information exists for the account.
Auto Pay	Displays whether auto pay exists on an account or not. The valid values are <b>Yes</b> or <b>No</b> .
Next Bill Date	Displays the next date on which bill is scheduled to be generated for an account.  <b>Note:</b> This field appears only when next payment date exists for the account.
Pending Bill	Displays the bill information string for the pending bill of an account. It has a link. On clicking the link, the information of bill appears in the <b>Bill</b> screen.  <b>Note:</b> This field appears only when pending bill information exists for the account.

- **Financial Details** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Current Balance	Displays the current balance of the account.
Payoff Balance	Displays the payoff balance for the account.
Overdue Amount	Displays the overdue amount of the account.
Dispute Amount	Displays the dispute amount of the account.
Last Payment Information	Displays the information string for the last payment on the account. It has a link. On clicking the link, the information of payment event appears in the <b>Payment Event</b> screen.  <b>Note:</b> This field appears only when last payment exists for the account.

## Account Characteristics

The **Account Characteristics** zone lists the characteristics defined for the account. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	<b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b> .

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Account Persons

The **Account Persons** zone lists all the linked person information of the account. It contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the person.
Relationship Type	Indicates how the person is related to the account.
Main Customer	Displays whether the person is main customer or not. The valid values are <b>Yes</b> or <b>No</b> .
Financially Responsible	Displays whether the person is financially responsible or not. The valid values are <b>Yes</b> or <b>No</b> .

**Note:** You can view the 360° information of the person by clicking the **360 Degree Information** () icon corresponding to the record.

## Enrolled Products

The **Enrolled Products** zone displays information about products which are enrolled by a person. It contains the following columns:

Column Name	Column Description
Product	Displays information about the product details.
	<b>Note:</b> It has a link. On clicking the link, the screen appears with the details of the respective product.

Column Name	Column Description
Product Version	Displays the version of the enrolled product.
	<b>Note:</b> It has a link. On clicking the link, the screen appears with the details of the respective product version.
Start Date	Displays the start date of the product enrollment.
End Date	Displays the end date of the product enrollment.
Product Priority	Displays the product priority.
Product Type	Indicates the type of product.

### Auto Pay Details

The **Auto Pay Details** zone lists the automatic payment options available for the account. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the automatic payment option is effective.
End Date	Displays the date till when the automatic payment option is effective.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit card or credit card.
Last Four Digits of Card	Displays the last four digits of the debit or credit card.
	<b>Note:</b> The data appears in this column only when the external type of the auto pay source code's tender type is set to Credit Card Withdrawal.
Percentage	Indicates the percentage of automatic payment that must be made through the automatic payment option.
Priority	Indicates the order in which the automatic payment option should be considered for the effective date range.

### Timeline

The **Timeline** zone displays the following information in a graphical presentation:

- Number of regular bills created for the account in a particular month
- Number of adhoc bills created for the account in a particular month
- Number of payments created for the account in a particular month
- Number of dispute requests created for the account in a particular month
- Number of active hold requests created for the account in a particular month

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Month	Used to indicate the month till when you want to display the above stated information.	Yes
	<b>Note:</b> By default, the current month appears in this field.	

Field Name	Field Description	Mandatory (Yes or No)
Year	Used to indicate the year till when you want to display the above stated information.	Yes
	<b>Note:</b> By default, the current year appears in this field.	

Depending on the month and year specified in the above fields, the data for the respective month and previous 11 months is presented in the grid. For example, if the Month and Year is set to April 2017, then the data for the May 2016, Jun 2016, Jul 2016, Aug 2016, Sep 2016, Oct 2016, Nov 2016, Dec 2016, Jan 2017, Feb 2017, Mar 2017, and Apr 2017 appears in the grid. To view the data for a different period, you must accordingly change the month and year and then click **Search** (🔍) icon.

You can use the **Previous Year** (⏪), **Previous Month** (⏴), **Next Month** (⏵), and **Next Year** (⏩) icons to change the values specified in the above mentioned fields.

The following table indicates the data and the manner in which the data is presented in the grid:

Row Name	Row Description						
Regular Bills	<p>A small icon appears for each regular bill created for the account in the respective month. For example, if three regular bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month on which the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1"> <thead> <tr> <th>If the bill is...</th> <th>Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td>Fully Matched</td> <td>Green</td> </tr> <tr> <td>Unmatched</td> <td>Red</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding bill information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the bill.</p> <p><b>Note:</b></p> <p>If you want to display the day of the due date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>D</b>. However, if you want to display the day of the bill date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>B</b>.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the <b>C1-TL-OI-EVT</b> algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red
If the bill is...	Then the icon appears in...						
Fully Matched	Green						
Unmatched	Red						

Row Name	Row Description												
Adhoc Bills	<p>A small icon appears for each adhoc bill created for the account in the respective month. For example, if three adhoc bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month on which the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1" data-bbox="467 485 1461 638"> <thead> <tr> <th data-bbox="475 493 964 533">If the bill is...</th> <th data-bbox="972 493 1461 533">Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 541 964 581">Fully Matched</td> <td data-bbox="972 541 1461 581">Green</td> </tr> <tr> <td data-bbox="475 590 964 630">Unmatched</td> <td data-bbox="972 590 1461 630">Red</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding bill information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the bill.</p> <p><b>Note:</b></p> <p>If you want to display the day of the due date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>D</b>. However, if you want to display the day of the bill date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>B</b>.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the <b>C1-TL-OI-EVT</b> algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red						
If the bill is...	Then the icon appears in...												
Fully Matched	Green												
Unmatched	Red												
Payments	<p>A small icon appears for each payment created for the account in the respective month. For example, if one payment is created for the account in the month of Aug 2016, three payments are created in the month of Dec 2016, and four payments are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month on which the payment was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the payment:</p> <table border="1" data-bbox="467 1299 1461 1602"> <thead> <tr> <th data-bbox="475 1308 964 1348">Status</th> <th data-bbox="972 1308 1461 1348">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 1356 964 1396">Frozen</td> <td data-bbox="972 1356 1461 1396">Green</td> </tr> <tr> <td data-bbox="475 1404 964 1444">Canceled</td> <td data-bbox="972 1404 1461 1444">Red</td> </tr> <tr> <td data-bbox="475 1453 964 1493">Freezable</td> <td data-bbox="972 1453 1461 1493">Blue</td> </tr> <tr> <td data-bbox="475 1501 964 1541">Error</td> <td data-bbox="972 1501 1461 1541">Red</td> </tr> <tr> <td data-bbox="475 1549 964 1589">Incomplete</td> <td data-bbox="972 1549 1461 1589">Yellow</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding payment information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the payment.</p> <p><b>Note:</b> You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the <b>C1-TL-PY-EVT</b> algorithm.</p>	Status	Color	Frozen	Green	Canceled	Red	Freezable	Blue	Error	Red	Incomplete	Yellow
Status	Color												
Frozen	Green												
Canceled	Red												
Freezable	Blue												
Error	Red												
Incomplete	Yellow												

Row Name	Row Description												
Dispute Requests	<p>A small icon appears for each dispute request created for the account in the respective month. For example, if one dispute request is created for the account in the month of Aug 2016, three dispute requests are created in the month of Dec 2016, and four dispute request are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month on which the dispute request was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the dispute request:</p> <table border="1" data-bbox="467 453 1463 758"> <thead> <tr> <th data-bbox="475 459 964 506">Status</th> <th data-bbox="969 459 1455 506">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 512 964 558">Active</td> <td data-bbox="969 512 1455 558">Green</td> </tr> <tr> <td data-bbox="475 564 964 611">Approved</td> <td data-bbox="969 564 1455 611">Green</td> </tr> <tr> <td data-bbox="475 617 964 663">Rejected</td> <td data-bbox="969 617 1455 663">Red</td> </tr> <tr> <td data-bbox="475 669 964 716">Approval In Progress</td> <td data-bbox="969 669 1455 716">Orange</td> </tr> <tr> <td data-bbox="475 722 964 758">Draft</td> <td data-bbox="969 722 1455 758">Orange</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding dispute information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Dispute Request</b> screen appears where you can view the details of the dispute.</p> <p><b>Note:</b> You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the <b>C1-TL-DP-EVT</b> algorithm.</p>	Status	Color	Active	Green	Approved	Green	Rejected	Red	Approval In Progress	Orange	Draft	Orange
Status	Color

Approved	Green												
Rejected	Red												
Approval In Progress	Orange												
Draft	Orange												
Processes on Hold	<p>A small icon appears for each active hold request for the account in the respective month depending upon the number of processes on hold. For example, if there is one active hold request having two processes on hold for the account in the month of Aug 2016 and two active hold requests as H1 and H2, having one process on hold for H1 hold request and four processes on hold for H2 hold request for the month of Dec 2016, then two icon appears in the Aug 2016 column and five icons appear in the Dec 2016 column. A text indicating the day of the month on which an entity was kept on hold appears on the icon. The following table indicates the color in which the icon appears depending on the status of the hold request:</p> <table border="1" data-bbox="467 1272 1463 1377"> <thead> <tr> <th data-bbox="475 1278 964 1325">Status</th> <th data-bbox="969 1278 1455 1325">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 1331 964 1377">Active</td> <td data-bbox="969 1331 1455 1377">Green</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding hold information appears at the bottom of the zone. It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the dispute.</p> <p><b>Note:</b> You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the <b>C1-TL-HR-EVT</b> algorithm.</p>	Status	Color	Active	Green								
Status	Color												
Active	Green												

### Billing History

The **Billing History** zone lists all the bill information of the account. It contains the following columns:

Column Name	Column Description
Bill Information	Displays information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Bill Information</b> screen appears where you can view the details of the bill.
Bill Amount	Displays the bill amount.
Unpaid Amount	Displays the unpaid amount of the bill.
Days Past Due	Displays the number of days past after the due date.
Billing Method	Displays the method used for generating bill.

You can filter the list using the **On or before Bill Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

**Note:** You can view additional information about the bill by clicking the **View** () icon corresponding to the bill in the **Billing History** zone.

### Payment History

The **Payment History** zone lists all the payment information of the account. It contains the following columns:

Column Name	Column Description
Payment Event Information	Displays information about the payment event.  <b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the payment.
Payment Date	Displays the date when the payment was made.
Payment Amount	Displays the amount paid through the tender.
Payment Status	Displays the current status of payment. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Error</li> <li>• Freezable</li> <li>• Frozen</li> <li>• Incomplete</li> </ul>
Tender Source	Displays the tender source through which the payment was remitted.

### Dispute Details

The **Dispute Details** zone lists the dispute requests for the account. It contains the following columns:

Column Name	Column Description
Dispute Request Information	Displays information about the dispute request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Dispute Request</b> screen appears where you can view the details of the dispute request.
Dispute Amount	Displays the dispute amount.
Status	Indicates the status of the dispute request.

### Hold Details

The **Hold Details** zone lists the active hold requests due to which the account is kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the hold request.
Status	Indicates the status of the hold request.
Entity	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Bill</li> </ul>
Hold Reason	Displays the hold reason.
Hold Process	Indicates the process that is kept on hold for the entity.
Start Date	Displays the date from when the entity is kept on hold for the process.
End Date	Displays the date till when the entity is kept on hold for the process.

### Overdue Process Details

The **Overdue Process Details** zone lists the overdue processes of the account. It contains the following columns:

Column Name	Column Description
Overdue Process Information	Displays information about the overdue process. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Overdue Process</b> screen appears where you can view the details of the overdue process.
Overdue Amount	Displays the overdue amount for the account.
Number of Overdue Bills	Displays the total number of bills that are overdue.

## Customer 360° Information - Product and Pricing

The **Pricing** tab displays details of price list and price list price items, effective price assignments for account, effective price assignments for person. It consists of the following zones:

- [Product](#) on page 73
- [Price List Assignments](#) on page 74
- [Price List Price Items](#) on page 74
- [Effective Price Assignments for Account](#) on page 76
- [Effective Price Assignments for Person](#) on page 79
- [Associated Price Items](#) on page 73

### **Product**

The **Product** zone displays information about products which are enrolled by a person. It contains the following fields:

Field Name	Field Description
Product	Displays information about the product details.  <b>Note:</b> It has a link. On clicking the link, the <b>Product</b> screen appears where you can view the details of the respective product.

**Note:** By default, the **Products** zone is displayed with the **Product Name** and **Product Version**. It also displays various **Product Service Price Items** that form a part of the product. To view the price items that are associated with the product, click the **Broadcast**  icon, corresponding to the product whose associated price items you want to view.

### **Associated Price Items**

The **Associated Price Items** zone displays information about the price items associated with the product. It contains the following columns:

Field Name	Field Description
Sequence No.	Displays the sequence number.
Pricing Information	Displays information about the pricing information of the product.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears with the details of the respective product.
Price Item	Displays the price item.

## Price List Assignments

The **Price List Assignments** zone allows you to view and filter price lists that are currently assigned to the account or person. You will not find any records in this zone if the account does not have any price lists assigned to it. This zone contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list which is assigned to the account or person.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears with the details of the respective price list.
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> <li>• Product Default Price List</li> </ul>

On clicking the **Broadcast**  icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

## Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. This zone contains the following columns:

Column Name	Column Description
Pricing Information	Displays information about the price item pricing.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can view the details of the price item pricing.

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

By default, the **Price List Price Items** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears only when you click the **Broadcast** () icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using the **Price Item**, **Effective Start Date** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

### **Related Topics**

For more information on...	See...
How to view price items assigned to a person	<a href="#">Viewing Price Items Assigned to a Person</a> on page 55
How to view price items assigned to an account	<a href="#">Viewing Price Items Assigned to an Account</a> on page 56

## Effective Price Assignments for Account

The **Effective Price Assignments for Account** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the account either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the account belongs. If required, you can filter effective price assignments using various search criteria.

### Note:

The **Effective Price Assignments for Account** zone appears when the **Customer 360° Information** is searched for account.

If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Indicates the account whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	<b>Note:</b> By default, this field is set to the system date.	
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Pending For Approval</li> <li>• Proposed</li> </ul>	No
	<b>Note:</b> By default, the <b>Active</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Product-specific default price list defined for the division</li> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> <li>• <b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Product-specific default price list defined for the division</li> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> </ul> <p><b>Note:</b> By default, the <b>No</b> option is selected.</p>	No
Price Item	<p>Used to search price assignments of a particular price item or price item bundle.</p> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.</p>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string consisting of pricing information and pricing ID for the account.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears with the details of the respective price item pricing.</p>
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	<p>Used to specify multiple parameters based on which you want to determine the pricing utilization.</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>

Column Name	Column Description
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> <li>• Product Default Price List</li> </ul>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
View Rate	<p>On Clicking the <b>View Rate</b> () icon, the <b>Effective Pricing Information</b> screen appears where you can view the details persisted rate.</p> <p><b>Note:</b> When the value of Price Item Type is defined as Rate, only then the icon would be available.</p>
Edit	<p>On clicking the <b>Edit</b> () icon, the <b>Price Item Pricing</b> screen appears where you can edit the details of the price item pricing.</p> <p><b>Note:</b> The <b>Edit</b> icon appears only when the assignment level is <b>Account Agreed</b>.</p>

Column Name	Column Description
Override	<p>On clicking the <b>Override</b>  icon, the <b>Price Item Pricing</b> screen appears where you can override the price item pricing.</p> <p><b>Note:</b></p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>Y</b>, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>N</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

**Note:** The number of records that can be displayed in the **Search Results** section is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2045.

### Effective Price Assignments for Person

The **Effective Price Assignments for Person** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the person either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the person belongs. If required, you can filter effective price assignments using various search criteria.

**Note:**

The **Effective Price Assignments for Person** zone appears when the **Customer 360° Information** is searched for person.

If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Indicates the person whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	<b>Note:</b> By default, this field is set to the current date.	
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Pending For Approval</li> <li>• Proposed</li> </ul>	No
	<b>Note:</b> By default, the <b>Active</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to indicate whether you want to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> <li>• <b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> </ul> <p><b>Note:</b> By default, the <b>No</b> option is selected.</p>	No
Price Item	<p>Used to search price assignments of a particular price item or price item bundle.</p> <p><b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.</p>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string consisting of pricing information and pricing ID for the person.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears with the details of the respective price item pricing.</p>
Price Item	Displays the price item or price item bundle code.

---

The **Bill Information** screen allows you to view:

- Basic details about the bill
- Settlement activities, such as payment, offset, refund, or write off through which the bill is settled
- Active hold requests due to which the bill is kept on hold
- Offset requests through which the bill is offset against another bill
- Bill line items of the bill
- Garnishment adjustments of the bill
- Refund and write off requests through which the bill or its bill segment is either refunded or written off
- Dispute requests due to which bill is kept on hold

It consists of the following zones:

- [Bill Information](#) on page 85
- [Settlement Activities](#) on page 86
- [Hold Details](#) on page 86
- [Offset Details](#) on page 87
- [Bill Line Items](#) on page 87
- [Garnishment Details](#) on page 88
- [Refund and Write Off Details](#) on page 88
- [Dispute Details](#)

## Bill Information

The **Bill Information** zone displays the details of the bill. It contains the following section:

- **Main** — Displays the basic information about the bill. It contains the following fields:

Field Name	Field Description
Bill Information	Displays information about the bill. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the bill.
Account Information	Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the account.

## Settlement Activities

You may settle a bill by making a payment, offsetting a bill, refunding a bill, or by writing off a bill. The **Settlement Activities** zone lists the activities related to the bill settlement. It contains the following columns:

Column Name	Column Description
Activity Date	Displays the date when the settlement activity occurred.
Activity Type	Indicates the type of the activity. The valid values are: <ul style="list-style-type: none"> <li>• Payment</li> <li>• Offset</li> <li>• Refund</li> <li>• Write Off</li> </ul>
Amount	Indicates the amount settled through the activity.
Related Object Information	Displays additional information about the activity.
Related Object ID	Displays the payment, offset request, refund request, or write off request ID depending on the type of the activity.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment, Offset Request, Refund Request, or Write Off Request</b> screen appears where you can view the details of the respective activity.

## Hold Details

The **Hold Details** zone lists the active hold requests due to which the bill is kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the hold request.

Column Name	Column Description
Status	Indicates the status of the hold request.
Entity	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Bill</li> </ul>
Entity Information	Indicates the entity for which the hold request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <p><b>Note:</b> It has a link. On clicking the link, the <b>Person, Account, or Bill</b> screen appears where you can view the details of the respective entity.</p>
Start Date	Displays the date from when the entity is kept on hold.
End Date	Displays the date till when the entity is kept on hold.

## Offset Details

The **Offset Details** zone lists the offset requests through which the bill is offset against another bill. It contains the following columns:

Column Name	Column Description
Offset Request Information	Displays information about the offset request. <p><b>Note:</b> It has a link. On clicking the link, the <b>Offset Request</b> screen appears where you can view the details of the offset request.</p>
Offset Amount	Indicates the amount of the bill which is offset.
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> <li>• Automatic</li> <li>• Manual</li> </ul>

## Bill Line Items

The **Bill Line Items** zone lists the information about the selected bill's bill line item. It contains the following columns:

Column Name	Column Description
Bill Line Item	Displays the bill line item of the selected bills. The valid value are: <ul style="list-style-type: none"> <li>• Bill Segment</li> <li>• Adjustment</li> </ul>
Bill Line Item Information	Displays information about the bill line item. <p><b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment or Adjustment</b> screen appears with the details of respective bill line item or adjustments</p>
Amount	Displays the amount of the bill line item.

Column Name	Column Description
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.

You can filter the list using the **Bill Segment Date From** and **To** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

## Garnishment Details

The **Garnishment Details** zone lists the garnishment adjustments that are created against the bill. It contains the following columns:

Column Name	Column Description
Garnishment Contract ID	Displays the garnishment contract ID. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the contract.
Garnishment Amount	Displays the garnishment amount.

## Refund and Write Off Details

The **Refund and Write Off Details** zone lists the refund and write off requests through which the bill or its bill segment is either refunded or written off. It contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Refund Request</b> or <b>Write Off Request</b> screen appears depending on whether the request is for refund or write off.
Refund/Write Off Amount	Displays the total refund or write off amount.
Status	Indicates the status of the refund or write off request.
Action	Indicates whether the request is created for refund or write off. The valid values are: <ul style="list-style-type: none"> <li>• Refund</li> <li>• Write Off</li> </ul>
Account Information	Displays additional information about the account for which the refund or write off request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the account.

Column Name	Column Description
Created By	Indicates the user who has created the refund or write off request.

You can filter the list using the **Action** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

## Dispute Details

The **Dispute Details** zone lists the dispute requests for the account. It contains the following columns:

Column Name	Column Description
Dispute Request Information	Displays information about the dispute request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Dispute Request</b> screen appears where you can view the details of the dispute request.
Dispute Amount	Displays the dispute amount.
Status	Indicates the status of the dispute request.

## Invoicing Group

---

### Topics:

- [Manage Invoicing Groups](#)
- [Invoicing Group Maintenance — Add/Edit](#)
- [Invoicing Group Information](#)

Invoicing group allows you to combine the charges for multiple accounts onto one bill for each billing period. It consists of the following:

- **Master Account** - The group level account that controls the billing.
- **Member Accounts** - The accounts whose bills are aggregated at the group level.

The following figure is a graphical representation of an invoicing group:

You can create an invoicing group by adding member accounts to the master account. An account can be the master account in the invoicing group only when its **Invoice Group Account** characteristic type is set to **Y**. On the other hand, an account can be added as a member to the master account only when its **Invoice Group Account** characteristic type is set to **N**.

**Note:** You can define the Invoice Group Account characteristic for the account only when the **Invoice Group Account** option type in the **C1\_ACCTINFO** feature configuration is set. If the **Invoice Group Account** option type in the **C1\_ACCTINFO** feature configuration is not set, you will not be able to indicate whether the account is a master or member account. For more information, refer to [Setting the C1\\_ACCTINFO Feature Configuration](#) on page 2024.

There is no restriction on the number of accounts that can be added to the master account. The accounts in the invoicing group can belong to different persons and may have different currencies, but they should be from the same banking division and person hierarchy. If the member accounts have a different invoice currency from the master account, the member account's charges will be converted to the master account's currency during billing.

Balances are maintained at the master account level. Bills are added to the master account's balance, and payments are subtracted from that balance. However, the charges can be traced back to the originating member accounts. The master account cannot have charges of its own; all charges come from the member accounts. However, when an account does not belong to any master account, it is billed individually with its charges appearing on the bill.

The contracts linked at the member level are duplicated at the master level when member accounts are added to the master account. However, note that only contracts which are eligible for billing are duplicated at the master level. Once a contract is duplicated at the master level, you need to activate the contract at the master level. Otherwise, the charges will be billed to the member account instead of the master account.

## Manage Invoicing Groups

The **Manage Invoicing Groups** screen allows you to search for the master and member accounts using various search criteria. Through this screen, you can navigate to the **Invoicing Group Maintenance – Add/Edit** and **Invoicing Group Information** screens.

This screen contains the following two sections:

- Search Criteria
- Search Results

### Searching for a Master Account

#### Prerequisites

To search for a master account, you should have:

- Divisions, billing cycles, and customer classes defined in the application
- Master accounts created in the application

#### Procedure

To search for a master account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Manage Invoicing Groups**.

The **Manage Invoicing Groups** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoicing Group Assignment Type	Used to indicate whether you want to search for a master or member account.	Yes
Account ID	Used to specify the account ID.	No
Division	Used to specify the division whose accounts you want to search.	No
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the person whose accounts you want to search.	Yes (Conditional) <b>Note:</b> If you specify the billing cycle or person class as a search criteria, you have to specify the person name.
Billing Cycle	Used to specify the billing cycle during which the account is billed.	No
Person Class	Used to specify the customer class of the account.	No

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter Account ID and Person Name (which are in different criteria groups), the system searches using Account ID, which appears before Person Name.

**Note:** You must specify at least one search criterion while searching for a master account.

3. Select **Master** from the **Invoicing Group Assignment Type** list.
4. Specify the search criteria in any of the criteria groups.
5. Click **Search**.

The master accounts that meet the search criteria and to which you have access based on the account's access group appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Account ID	Displays the master account ID. <b>Note:</b> It has a link. On clicking the link, the <b>Invoicing Group Maintenance – Add/Edit</b> screen appears where you can view the details of the respective master account.
Account Identifier Type	Displays the account identifier type of the master account.
Account Identifier	Displays the value of the account identifier type.
Account Currency	Displays the invoice currency of the master account.
Division	Displays the division to which the master account belongs.
Person Name	Displays the name of the main customer.
Customer Class	Displays the customer class of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.

<b>Manage Invoicing Groups</b> screen	<a href="#">Manage Invoicing Groups</a> on page 93

## Searching for a Member Account

### Prerequisites

To search for a member account, you should have:

- Divisions, billing cycles, and customer classes defined in the application
- Accounts added as a member to the master accounts

### Procedure

To search for a member account:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, click **Manage Invoicing Groups**.

The **Manage Invoicing Groups** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoicing Group Assignment Type	Used to indicate whether you want to search for a master or member account.	Yes
Account ID	Used to specify the account ID.	No
Division	Used to specify the division whose accounts you want to search.	No
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Person Name	Used to specify the person whose accounts you want to search.	Yes (Conditional) <b>Note:</b> If you specify the billing cycle or customer class as a search criteria, you have to specify the person name.
Billing Cycle	Used to specify the billing cycle during which the account is billed.	No
Customer Class	Used to specify the customer class of the account.	No

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter Account ID and Person Name (which are in different criteria groups), the system searches using Account ID, which appears before Person Name.

**Note:** You must specify at least one search criterion while searching for a member account.

3. Select **Member** from the **Invoicing Group Assignment Type** list.
4. Specify the search criteria in any of the criteria groups.
5. Click **Search**.

The member accounts that meet the search criteria and to which you have access based on the account's access group appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Account ID	Displays the member account ID. <b>Note:</b> It has a link. On clicking the link, the <b>Invoicing Group Information</b> screen appears where you can view the details of the respective member account.
Account Identifier Type	Displays the account identifier type of the member account.
Account Identifier	Displays the value of the account identifier type.
Account Currency	Displays the invoice currency of the member account. <b>Note:</b> If the member account has a different invoice currency from the master account, the member account's charges will be converted to the master account's currency during billing.
Division	Displays the division to which the member account belongs.
Person Name	Displays the main person of the member account.
Customer Class	Displays the customer class of the member account.
Master Account Identifier Type	Displays the primary account identifier type of the master account.
Master Account Identifier	Displays the value of the primary account identifier type.
Master Person Name	Displays the main person of the master account.
Billing Cycle	Displays the billing cycle during which the member account is billed.

## Viewing the Master Account Details

### Procedure

To view the master account details:

1. Search for the master account in the **Manage Invoicing Groups** screen.
2. In the **Search Results** section, click the link in the **Account ID** column corresponding to the master account whose details you want to view.

The **Invoicing Group Maintenance – Add/Edit** screen appears.

- View the accounts that are already added to the master account in the **Member Accounts** zone.

<b>Invoicing Group Maintenance – Add/Edit</b> screen	<a href="#">Invoicing Group Maintenance — Add/Edit</a>
<b>Member Accounts</b> zone	<a href="#">Member Accounts</a>

## Viewing the Member Account Details

### Procedure

To view the member account details:

- Search for the member account in the **Manage Invoicing Groups** screen.
- In the **Search Results** section, click the link in the **Account ID** column corresponding to the member account whose details you want to view.

The **Invoicing Group Information** screen appears.

- View the member account details in the **Selected Member Account** zone, and its master account details in the **Invoicing Group Information** zone.

<b>Selected Member Account</b> zone	<a href="#">Selected Member Account</a> on page 104

## Invoicing Group Maintenance — Add/Edit

The **Invoicing Group Maintenance – Add/Edit** screen allows you to view the details of the master account. It also allows you to add, edit, and remove member accounts from the master account. This screen consists of the following zones:

- [Account Information](#) on page 97
- [Member Accounts](#) on page 98
- [Edit Member Account Assignment](#) on page 98
- [Search Accounts to Add](#) on page 99
- [Add Member](#) on page 100

### Account Information

The **Account Information** zone displays the details of the master account. This zone contains the following fields:

Field Name	Field Description
Invoicing Group Assignment Type	Indicates that the selected account is a master account.
Person Name	Displays the name of the main customer.
Primary Account Identifier	Displays the primary account identifier type of the master account along with its value.
Customer Class	Displays the customer class of the master account.
Account Currency	Displays the invoice currency of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.
Division	Displays the division to which the master account belongs.

**Note:** All fields in the **Account Information** zone are read-only.

## Member Accounts

The **Member Accounts** zone lists the member accounts of the master account. This zone contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the member account.
Account Identifier	Displays the value of the primary account identifier type.
Account Currency	Displays the invoice currency of the member account. <b>Note:</b> During billing, the charges for the member account are calculated in this currency and then converted to the master account's currency.
Effective Start Date	Displays the date from when the charges for the member account appears on the bill of the master account.
Effective End Date	Displays the date till when the charges for the member account appears on the bill of the master account.
Person Name	Displays the name of the main customer.
Customer Class	Displays the customer class of the member account.
Billing Cycle	Displays the billing cycle during which the member account is billed. <b>Note:</b> If the account is removed from the master account, it will be billed during this billing cycle.

On clicking the **Broadcast**  icon corresponding to the member account, the **Edit Member Account Assignment** zone appears with the details of the respective member account.

## Edit Member Account Assignment

The **Edit Member Account Assignment** zone allows you to edit the assignment details of the member account. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to modify the date from when you want the charges for the member account to appear on the bill of the master account.	Yes
	<b>Note:</b> You can modify the date only when it is a future date.	
Invoicing Group Assignment Type	Indicates that the account is a member account.	Not applicable
Effective End Date	Used to modify the date till when you want the charges for the member account to appear on the bill of the master account.	No
	<b>Note:</b> You can modify the date only when it is not a past date.	
Primary Account Identifier	Displays the primary account identifier type of the member account along with its value.	Not applicable

**Note:** If a bill is already generated for the master account, you cannot modify the effective start and end dates.

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Remove Member	Used to remove the member from the master account.

By default, the **Edit Member Account Assignment** zone does not appear in the **Invoicing Group Maintenance – Add/Edit** screen. It appears only when you click the **Broadcast**  icon corresponding to the member account in the **Member Accounts** zone.

## Search Accounts to Add

The **Search Accounts to Add** zone lists accounts defined within the division and person hierarchy to which the master account belongs. The list also includes those accounts that are already added to the master account. You can filter the accounts using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to specify the account ID.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Person Name	Used to specify the person whose accounts you want to search.	No
Billing Cycle	Used to specify the billing cycle of the account.	No
Customer Class	Used to specify the customer class of the account.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Customer Name	Displays the name of the main customer.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account Currency	Displays the invoice currency of the account.
Division	Displays the division to which the account belongs.
Customer Class	Displays the customer class of the account.
Billing Cycle	Displays the billing cycle during which the account is billed.

On clicking the **Broadcast**  icon corresponding to the account, the **Add Member** zone appears with the details of the respective account.

### Related Topics

For more information on...	See...
How to add a member to the master account	<a href="#">Adding a Member to the Master Account</a> on page 101

## Add Member

The **Add Member** zone allows you to add a member to the master account. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Displays the name of the main customer.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Primary Account Identifier	Displays the primary account identifier type of the account along with its value.	Not applicable
Account Currency	Displays the invoice currency of the account.	Not applicable
Customer Class	Displays the customer class of the account.	Not applicable
Effective Start Date	Used to specify the date from when you want the charges for the member account to appear on the bill of the master account.  <b>Note:</b> The effective start date should be earlier than or equal to the member account's contract end date.	Yes
Billing Cycle	Displays the billing cycle during which the account is billed.	Not applicable

This zone contains the following button:

Button Name	Button Description
Save	Used to add a member to the master account.

By default, the **Add Member** zone does not appear in the **Invoicing Group Maintenance – Add/Edit** screen. It appears only when you click the **Broadcast**  icon corresponding to the account in the **Search Accounts to Add** zone.

### **Related Topics**

For more information on...	See...
How to add a member to the master account	<a href="#">Adding a Member to the Master Account</a> on page 101

## **Adding a Member to the Master Account**

### **Prerequisites**

To add a member to the master account, you should have:

- Accounts within the same banking division and person hierarchy where the value of the **Invoice Group Account** characteristic type is set to **N**
- Accounts with active contracts

**Note:** You cannot add an account as a member to a master account if that account is already a member of another master during that overlapping period.

### **Procedure**

To add a member to the master account:

1. Access the **Invoicing Group Maintenance – Add/Edit** screen.
2. In the **Search Accounts to Add** zone, click the **Broadcast**  icon corresponding to the account that you want to add to the master account.  
The **Add Member** zone appears.
3. Enter the date from when you want the charges for the member account to appear on the bill of the master account in the **Effective Start Date** field.

**Note:** The effective start date should be earlier than or equal to the member account's contract end date.

4. Click **Save**.

The account is added to the master account. The contracts at the member level are duplicated at the master level.

**Note:** Once a contract is duplicated at the master level, you need to activate the contract at the master level. Otherwise, the charges will be billed to the member account instead of the master account.

## Editing the Member Account Assignment Details

**Procedure**

You can edit the member account assignment details from both the **Invoicing Group Maintenance – Add/Edit** and **Invoicing Group Information** screens. To edit the member account assignment details:

1. Do either of the following:

If you want to	Then
Edit the member account assignment details from the <b>Invoicing Group Maintenance – Add/Edit</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group Maintenance – Add/Edit</b> screen.</li> <li>2. In the <b>Member Accounts</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account whose assignment details you want to edit.</li> </ol>
Edit the member account assignment details from the <b>Invoicing Group Information</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group Information</b> screen.</li> <li>2. In the <b>Selected Member Account</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account whose assignment details you want to edit.</li> </ol>

The **Edit Member Account Assignment** zone appears.

2. Modify the effective start and end dates, if required.

**Note:**

The effective start date should be earlier than or equal to the member account's contract end date. And, the effective end date cannot be earlier than the effective start date.

If a bill is already generated for the master account, you cannot modify the effective start and end dates.

**3. Click Save.**

The changes are saved.

<b>Edit Member Account Assignment</b> zone	<a href="#">Edit Member Account Assignment</a> on page 98

## Invoicing Group Information

The **Invoicing Group Information** screen allows you to view the details of the member account. It also allows you to edit and remove the member account from the master account. This screen consists of the following zones:

- [Invoicing Group Information](#) on page 104
- [Selected Member Account](#) on page 104
- [Edit Member Account Assignment](#) on page 105

## Invoicing Group Information

The **Invoicing Group Information** zone displays the master account details of the member account. This zone contains the following fields:

Field Name	Field Description
Invoicing Group Assignment Type	Indicates that this zone displays information about the member's master account.
Person Name	Displays the name of the main customer.
Primary Account Identifier	Displays the primary account identifier type of the master account along with its value.
Customer Class	Displays the customer class of the master account.
Account Currency	Displays the invoice currency of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.
Division	Displays the division to which the master account belongs.

**Note:** All fields in the **Invoicing Group Information** zone are read-only.

## Selected Member Account

The **Selected Member Account** zone displays the details of the member account. This zone contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the member account.
Account Identifier	Displays the value of the primary account identifier type.

Column Name	Column Description
Account Currency	Displays the invoice currency of the member account.
	<b>Note:</b> During billing, the charges for the member account are calculated in this currency and then converted to the master account's currency.
Effective Start Date	Displays the date from when the charges for the member account appears on the bill of the master account.
Effective End Date	Displays the date till when the charges for the member account appears on the bill of the master account.
Person Name	Displays the name of the main customer.
Customer Class	Displays the customer class of the member account.
Billing Cycle	Displays the billing cycle during which the member account is billed.
	<b>Note:</b> If the member account is removed from the master account, it will be billed during this billing cycle.

On clicking the **Broadcast**  icon corresponding to the member account, the **Edit Member Account Assignment** zone appears with the details of the respective member account.

## Edit Member Account Assignment

The **Edit Member Account Assignment** zone allows you to edit the assignment details of the member account. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to modify the date from when you want the charges for the member account to appear on the bill of the master account.	Yes
	<b>Note:</b> You can modify the date only when it is a future date. The effective start date should be earlier than or equal to the member account's contract end date.	
Invoicing Group Assignment Type	Indicates that the account is a member account.	Not applicable
Effective End Date	Used to modify the date till when you want the charges for the member account to appear on the bill of the master account.	No
	<b>Note:</b> You can modify the date only when it is not a past date. The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Primary Account Identifier	Displays the primary account identifier type of the member account along with its value.	Not applicable

**Note:** If a bill is already generated for the master account, you cannot modify the effective start and end dates.

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Remove Member	Used to remove the member from the master account.

By default, the **Edit Member Account Assignment** zone does not appear in the **Invoicing Group Information** screen. It appears only when you click the **Broadcast**  icon corresponding to the member account in the **Selected Member Account** zone.

## Editing the Member Account Assignment Details

### Procedure

You can edit the member account assignment details from both the **Invoicing Group Maintenance – Add/Edit** and **Invoicing Group Information** screens. To edit the member account assignment details:

1. Do either of the following:

If you want to	Then
Edit the member account assignment details from the <b>Invoicing Group Maintenance – Add/Edit</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group Maintenance – Add/Edit</b> screen.</li> <li>2. In the <b>Member Accounts</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account whose assignment details you want to edit.</li> </ol>
Edit the member account assignment details from the <b>Invoicing Group Information</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group Information</b> screen.</li> <li>2. In the <b>Selected Member Account</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account whose assignment details you want to edit.</li> </ol>

The **Edit Member Account Assignment** zone appears.

2. Modify the effective start and end dates, if required.

**Note:**

The effective start date should be earlier than or equal to the member account's contract end date. And, the effective end date cannot be earlier than the effective start date.

If a bill is already generated for the master account, you cannot modify the effective start and end dates.

3. Click **Save**.

The changes are saved.

## **Removing a Member from the Master Account**

### **Procedure**

You can remove a member from the master account through both the **Invoicing Group Maintenance – Add/Edit** and **Invoicing Group Information** screens. To remove a member from the master account:

1. Do either of the following:

<b>If you want to</b>	<b>Then</b>
Remove a member from the master account through the <b>Invoicing Group Maintenance – Add/Edit</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group Maintenance – Add/Edit</b> screen.</li> <li>2. In the <b>Member Accounts</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account that you want to remove from the master account.</li> </ol>
Remove a member from the master account through the <b>Invoicing Group Information</b> screen	<ol style="list-style-type: none"> <li>1. Access the <b>Invoicing Group Information</b> screen.</li> <li>2. In the <b>Selected Member Account</b> zone, click the <b>Broadcast</b>  icon corresponding to the member account that you want to remove from the master account.</li> </ol>

The **Edit Member Account Assignment** zone appears.

**2. Click Remove Member.**

The member is removed from the master account.

Oracle Revenue Management and Billing allows you to define prices for price item and services offered to the customers. These prices are either standard prices defined in the price lists or override prices that are specific to a customer or an account. The system allows you to define prices at various levels in a customer hierarchy (for example, at the account level, main customer level, or at the parent customer level). You can also define prices in the account's price list, main customer's price list, parent customer's price list, price list's parent price list. As prices can be defined at multiple places, the order in which the system searches for effective price item pricing will affect the price charged to the customer. The search order is configurable, and can vary with each division. You need to define the search order in the price assignment search algorithm (which is also known as crawling algorithm) and then attach the algorithm to the division. You can change the search order at any time.

You need to define the price assignment search algorithm using the C1\_PRASN algorithm type. The price assignment search algorithm is used while:

- Listing effective price item pricing for an account or a customer
- Fetching effective price item pricing while creating recurring and non-recurring bill segments
- Fetching effective post processing pricing while creating post processing bill segments
- Fetching effective price item pricing in the **Price Item Pricing Verification (C1-TXNVP)** batch

For more information about the price assignment search algorithm, see [Price Assignment Search Mechanism](#) on page 115.

Since a global customer is not associated to any division, the system cannot determine the price assignment search order for a global customer. Hence, the default search order is defined for global customers through the **C1\_PRASNORDR** feature configuration. You can change this default search order, if required.

The prices that are specific to a customer or an account are referred to as customer agreed or account agreed prices, respectively. You can override these agreed prices. Customer agreed or account agreed prices are effective for a particular duration and do not expire until you manually specify the end date. However, if you set the **Expire Override Switch** option type of the **C1\_EXP\_OVRD** feature configuration to **Y**, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the **Expire Override Switch** option type of the **C1\_EXP\_OVRD** feature configuration to **N**.

The system allows you to define the following types of pricing:

- Flat Pricing
- Tiered Pricing

For more information about the types of pricing, see [Types of Pricing](#) on page 111.

The price for a price item or service may differ depending upon various transaction, customer or account attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. This multi parameter based pricing feature enables the price analyst to define price item and its parameters which influence pricing. You can then define pricing for the price item based on these parameters. Bundles are offered to customers to provide discounted rates. You can also define pricing for bundles based on multiple parameters. To enable the multi parameter based pricing feature, you must set the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration to **True**. For more information about the multi parameter based pricing feature, see [Multi Parameter Based Pricing](#) on page 111.

## Types of Pricing

The system allows you to define the following types of pricing:

- **Flat Pricing** — Used when you want to charge a fixed price per unit to the customer.
- **Tiered Pricing** — Used when standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization. For example, CG Limited uses wire transfer services provided by a large bank. If CG Limited initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If CG Limited initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, the following tiered pricing is defined:

Quantity Range	Rate (\$) per transfer
0 – 1000	5
1000+	3

You can define two types of tiered pricing:

- **Step Tiered Pricing** — The rate of the first tiering range is used to calculate the charge for the maximum quantity in the range, and for incremental service quantity utilization, the rate of the progressive tiering range is used. This happens till the utilized quantity is exhausted. For example, when you define the following step tiered pricing for Price Item A and the user consumes 60,000 units of the same, the system will charge the first 45,000 units at \$2 per unit and the remaining 15,000 units at \$1 per unit:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

- **Threshold Tiered Pricing** — The rate of the tiering range within which the service quantity utilization falls is used to calculate the charge for the entire volume. For example, when you define the following threshold tiered pricing for Price Item A and the user consumes 75,000 units of the same, the system will charge 75,000 units at \$1 per unit as the service quantity utilization falls within 45000+ tiering range:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

## Multi Parameter Based Pricing

Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. You can also define pricing for bundles based on multiple parameters. You can enable or disable the multi parameter based pricing feature by setting the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration. For more information, see [Setting the C1\\_PPARM\\_FLG Feature Configuration](#) on page 2043.

If the multi parameter based pricing feature is disabled, you can define pricing for a price item based on the variance parameter. If the multi parameter based pricing feature is enabled, you can define pricing for a price item based on multiple parameters. For example:

Price Item A	Country	Currency
Pricing 1	US	USD

Price Item A	Country	Currency
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Price Item A based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price item (i.e. Price item A).

Then, when you define Pricing 1 for Price item A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item A	US, USD		0	5000
20	1	Number of Transactions	Price Item A	US, USD		5000	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Price Item A	Germany, USD		0	1000
20	3	Number of Transactions	Price Item A	Germany, USD		1000	

Now, when the user performs 1500 transactions (in USD) of Price Item A in Germany, 12000 transactions (in USD) of Price Item A in US, the system creates two billable charges. In one billable charge (with Price Item A, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Price Item A, Germany and USD combination), the system uses \$3 as the rate for calculating charges.

Note that in this case the parameters based on which you have defined pricing and tiering ranges are same. You can use different parameters while defining pricing and tiering ranges, if required. You can also use another price item or bundle and its parameters while defining tiering ranges. For example:

The following table lists the tiering ranges of Pricing 1 defined for Price Item A where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item B	Germany, USD		0	100
20	1	Number of Transactions	Price Item B	Germany, USD		100	200
30	0.5	Number of Transactions	Price Item B	Germany, USD		200	

Now, when the user performs 1500 transactions (in USD) of Price Item A in US, 200 transactions (in USD) of Price Item B in Germany, the system creates one billable charge. The system adds the transactions with the following combinations and then determines the range of Price Item A within which the total units (i.e. 200) fall:

- Price Item B, Germany, USD

In this case, the total units fall in the 100 – 200 range of Price Item A, and therefore the system uses \$1 as the rate for calculating charges (i.e.  $1500 * 1 = 1500$ ).

Some parameters might be mandatory and some might be optional while defining price item pricing. You can define price item pricing based on these parameters at various levels, such as:

- Account Agreed
- Account Price List
- Account Inherited Price List
- Customer Agreed
- Customer Price List
- Customer Inherited Price List
- Parent Customer Agreed
- Parent Customer Price List
- Parent Customer Inherited Price List
- Default Price List
- Global Price List

As prices can be defined at multiple levels, the system first searches for exact match at all levels (using the search order). If the system finds the exact match at multiple levels, the price assignment at the higher precedence level is considered. Let us understand this with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters at the Account Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 2 is defined for Price Item A with the following parameters at the Parent Customer Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters at the Account Price List level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	—

Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system searches for price with exact match (Type — BT, Country — US, and Currency — USD). The exact match is available at two levels — Account Agreed and Parent Customer Agreed. The system considers the price at the Account Agreed level because this level has higher precedence.

Depending on the search order defined for the division (to which the account belongs), the level with higher precedence changes. Accordingly, the price assignment at the higher precedence level is considered for calculating the charges.

If the system does not find the exact match at any level, it searches for the best fit match at all levels. Let us understand how the best fit match is determined with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	-

Pricing 2 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	-

Pricing 4 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	GBP

The system has Pricing 1, Pricing 2, Pricing 3, and Pricing 4 defined for Price Item A. Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system does not find price with exact match (Type — BT, Country — US, and Currency — USD). Therefore, it searches for the best fit match.

While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Currency) and checks whether the price (with Type — BT and Country — US) is available. If the price is available, the system considers the price as the best fit match. Therefore, in this case, Pricing 1 is considered as the best fit match.

Suppose, if the price (with Type — BT and Country — US) is not available, then the system rules out the optional parameter with next lowest priority (i.e. Country) and checks whether the price (with Type — BT and Currency — USD) is available. If the price is available, the system considers the price as the best fit match. In this case, Pricing 2 would be considered as the best fit match. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered.

## Price Assignment Search Mechanism

The price assignment search algorithm searches effective price item pricing based on the following parameters:

- **Search Order** — Used to indicate the order in which the system must search effective price item pricing at various levels in the customer hierarchy. This is a mandatory parameter. The valid values are:

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_PRICELIST	<ol style="list-style-type: none"> <li>1. <b>Account Agreed</b> — Means price item pricing is agreed for the account in the hierarchy.</li> <li>2. <b>Account Price List</b> — Means price item pricing is defined within the price list which is assigned to the account.</li> <li>3. <b>Account Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account.</li> <li>4. <b>Customer Agreed</b> — Means price item pricing is agreed for the customer in the hierarchy.</li> <li>5. <b>Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the customer.</li> <li>6. <b>Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer.</li> <li>7. <b>Parent Customer Agreed</b> — Means price item pricing is agreed for the parent customer in the hierarchy.</li> <li>8. <b>Parent Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the parent customer.</li> <li>9. <b>Parent Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.</li> </ol>

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_FIRST	<ol style="list-style-type: none"> <li>1. <b>Account Agreed</b> — Means price item pricing is agreed for the account in the hierarchy.</li> <li>2. <b>Customer Agreed</b> — Means price item pricing is agreed for the customer in the hierarchy.</li> <li>3. <b>Parent Customer Agreed</b> — Means price item pricing is agreed for the parent customer in the hierarchy.</li> <li>4. <b>Account Price List</b> — Means price item pricing is defined within the price list which is assigned to the account.</li> <li>5. <b>Account Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account.</li> <li>6. <b>Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the customer.</li> <li>7. <b>Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer.</li> <li>8. <b>Parent Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the parent customer.</li> <li>9. <b>Parent Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.</li> </ol>

**Note:** In these price assignment search orders, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.

- **Default Price List ID** — Used to indicate the default price list. If the effective price item pricing is not available at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list.
- **Global Price List** — Used to indicate whether the system should consider the price item pricing defined in the global price list. If the effective price item pricing is not available in the default price list or if the default price list is not specified in the price assignment search algorithm, the system checks whether it should consider the price item pricing defined in the global price list. The valid values are:

- Y
- N

Finally, if the effective price item pricing is not available in either default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.

- **Prefer Price Item Over Bundle** — Used to indicate whether to prefer price item, regular bundle, or parent bundle pricing when the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) are assigned at the same level. The valid values are:

- Y
- N

If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

- **Person Relationship Type Sequence Algorithm** — Used to attach an algorithm which is defined using the C1-CUSRLALGT algorithm type. The attached algorithm is used while searching effective price item pricing at the parent customer level. It indicates whether the system should search person to person relationship type sequence defined:
  - For the division, price item, and price item parameters combination
  - For the division
  - In the C1\_PER\_REL feature configuration

### Related Topics

For more information on...	See...
Person to Person Relationship Type Sequence	<a href="#">Person Relationship Type Sequence</a> on page 117

## Person Relationship Type Sequence

When the price assignment search algorithm searches effective price item pricing at the parent customer level, the system determines the parent customer's person to person relationship type whose price item pricing should be considered. The person to person relationship type sequence indicates the order in which relationship type should be considered while searching for effective price item pricing at the parent customer level. For example, if a customer has two parents – Parent 1 with the relationship type set to “Subsidiary” and Parent 2 with the relationship type set to “Franchise Owner”, and the following person to person relationship type sequence is defined in the system:

When the price assignment search algorithm searches effective price item pricing at the parent customer level, the system determines the parent customer's person to person relationship type whose price item pricing should be considered. The person to person relationship type sequence indicates the order in which relationship type should be considered while searching for effective price item pricing at the parent customer level. For example, if a customer has two parents – Parent 1 with the relationship type set to “Subsidiary” and Parent 2 with the relationship type set to “Franchise Owner”, and the following person to person relationship type sequence is defined in the system:

Sequence Number	Relationship Type
10	Subsidiary
20	Franchise Owner

In the above example, the system will inherit effective price item pricing (if available) from Parent 1 or within its hierarchy. If the effective price item pricing is not available in the Parent 1 hierarchy, the system will inherit effective price item pricing (if available) from Parent 2 or within its hierarchy. If the effective price item pricing is not available in the Parent 2 hierarchy, an error message occurs indicating that the effective price item pricing is not available.

While searching effective pricing at the parent customer level based on the person to person relationship type sequence, the system will use the depth first search mechanism. Let us understand this with the help of an example.

Person To Person Relationship Type Sequence	
Sequence Number	Relationship Type
10	Subsidiary (S)
20	Branch (B)
30	Franchise Owner (F)

In the above example, if the effective pricing is not available at the account or customer level, the system will search effective pricing at the parent customer level in the following order:

- P1 (because the first relationship type in the sequence is Subsidiary)
- P2 (grandparent of P1 irrespective of the relationship type)
- P3 (because the second relationship type in the sequence is Branch)
- P4 (because the second relationship type in the sequence is Branch)
- P6 (grandparent of P4 irrespective of the relationship type)
- P5 (because the third relationship type in the sequence is Franchise Owner)

The system provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1\_PER\_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1\_PER\_REL feature configuration and accordingly search the effective price item pricing at the parent customer level.

To enable the system to search person to person relationship type sequence at different levels, you need to create an algorithm of the C1-CUSRLALGT algorithm type and attach it to the **Person Relationship Type Sequence Algorithm** parameter in the price assignment search algorithm. The C1-CUSRLALGT algorithm type has the following parameters:

- **Check on Division, Price Item and Price Item Parameters Combination** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division, price item, and price item parameters combination. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Division** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Feature Configuration** – Used to indicate whether you want the system to consider the person to person relationship type sequence defined in the **C1\_PER\_REL** feature configuration. This is a mandatory parameter. The valid values are:

- **A** – Used when you want to consider all person to person relationship types defined in the feature configuration (in the specified sequence).
- **F** – Used when you want to only consider the person to person relationship type defined with the lowest sequence in the feature configuration.
- **N** – Used when you do not want to consider the person to person relationship type sequence defined in the C1\_PER\_REL feature configuration.

By default, the value is set to **F**.

## Pricing Eligibility

Oracle Revenue Management and Billing enables you to define pricing eligibility criteria using the account, person, and product attributes while defining a price item pricing. For example, a bank offers a product named 12 Month Standard Certificate of Deposit (CD). The interest rate charged to a person for this product differs based on two parameters – Deposit Amount and Person Type (Preferred and Non-Preferred). The following table lists the interest rates offered for the 12 Month Standard Certificate of Deposit (CD) product:

Deposit Amount	Non-Preferred	Preferred
Less than \$5,000	0.13%	0.20%
Greater than \$5,000	0.15%	0.22%

Earlier, you were able to define different interest rates based on different parameters using the rate eligibility feature at the rate component level. Considering the above example, you had to define four rate components. The respective rate component would appear while defining price item pricing based on the following:

- The value defined for the **Deposit Amount** characteristic on the account

- The value defined for the **Customer Type** characteristic on the main customer

However, now, you can implement the above scenario using a single rate component instead of maintaining four different rate components. Now, while defining price item pricing, you need to define four different price components for a rate component. For each price component, you need to define the pricing eligibility criteria in the following manner:

Price Component	Rate	Pricing Criteria	Eligibility	If True	If False
P1	0.13%	Deposit Amount > 5000		Check Next Condition	Return False
P1	0.13%	Person Type = Non-Preferred		Return True	Return False
P2	0.15%	Deposit Amount < 5000		Check Next Condition	Return False
P2	0.15%	Person Type = Non-Preferred		Return True	Return False
P3	0.20%	Deposit Amount > 5000		Check Next Condition	Return False
P3	0.20%	Person Type = Preferred		Return True	Return False
P4	0.22%	Deposit Amount < 5000		Check Next Condition	Return False
P4	0.22%	Person Type = Preferred		Return True	Return False

You can define pricing eligibility criteria only when the appropriate parameters are created in the system. These parameters must be mapped to either of the following:

- Account attributes, characteristics, usage amounts, or usage counters
- Person attributes, characteristics, usage amounts, or usage counters
- Product attributes or characteristics
- Service Quantity Identifier
- Custom algorithm which returns the appropriate value

In the above example, you can define the pricing eligibility criteria only when the following parameters are defined in the system:

Parameter	Source Entity	Source Type	Source Type Code	Value Type
Deposit Amount	Account	Usage Amount	Deposit Amount	Adhoc
Customer Type	Person	Characteristic	Person Type	Predefined

You can define pricing eligibility criteria for rate components whose tiering type is set to **Flat**, **Threshold**, or **Step**. Each criterion in the pricing eligibility criteria is executed in the specified sequence. If the value of the pricing eligibility criteria is **True**, the rate of the respective price component is passed to the rate component for further calculations.

## Persisting Interest Rate for Rate Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate (i.e. Interest Rate)
- Fees

If the type of a price item is **Rate**, the system calculates and persist the rate for the price item. The rate is persisted only for the price item pricing which is either assigned or inherited by an account. If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**.

Repricing	<a href="#">Repricing</a> on page 121

## Persisting Fee for Fee Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate
- Fees

The input elements Pricing Frequency, Advance Pricing should be populated if **Price Item** is available for **Pricing Only**, **Price Item Type** is **Fees** and **Price Assignment Type** is **Post-Processing**.

If the type of a price item is **Fee**, the system calculates and persist the fee for the price item.

**Note:** The **Process Fees Request and Persist Fees for an Account (C1-ACFEE)** batch is used to calculate and persist the fees for the account. It must be executed when a user wants to store fees.

## Repricing

If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**. The **Repricing** process is triggered in the following scenarios when:

- You edit the attributes and characteristics of an account.
- You add or delete the usage amount and counter details of an account.
- You edit the attributes and characteristics of a person.
- You add or delete the usage amount and counter details of a person.
- You define or edit the price item pricing of an active price list which is assigned to an account or a person.
- You define, edit, override, or copy the price item pricing of an account or a person.
- You assign a price list to an account or a person, or edit the price list assignment details of an account or a person.

The system behaves in the following manner in the above scenarios:

Scenario	System Behaviour
On editing the attributes and characteristics of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the account attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> On editing the account attributes, the effective date is set to the date when you edit the account attributes. However, on editing the account's characteristic, the effective date is set to the date from when the characteristic is effective for the account.</p>
On adding or deleting the usage amount and counter details of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> The effective date is set to the date from when the usage amount or counter is effective for the account.</p>
On editing the attributes and characteristics of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the person attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>On editing the person attributes, the effective date is set to the date when you edit the person attributes. However, on editing the person's characteristic, the effective date is set to the date from when the characteristic is effective for the person.</p>

Scenario	System Behaviour
On adding or deleting the usage amount and counter details of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The effective date is set to the date from when the usage amount or counter is effective for the person.</p>
On assigning a price list to an account or editing the price list assignment details of an account	<p>The system creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date.</li> <li>• If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date.</li> </ul> <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day.</li> <li>• If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day.</li> </ul> <p>On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>

Scenario	System Behaviour
<p>On assigning a price list to a person or editing the price list assignment details of a person</p>	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date.</li> <li>• If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date.</li> </ul> <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day.</li> <li>• If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day.</li> </ul> <p><b>Note:</b> If the Price List Assignment Start Date and Price List Assignment End Date are earlier than the current date, repricing requests for the accounts are not created in the <b>CI_REPRC_REQ_DTL</b> table.</p> <p>On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>
<p>On defining, editing, overriding, or copying the price item pricing of an account</p>	<p>The system creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>

Scenario	System Behaviour
On defining, editing, overriding, or copying the price item pricing of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>
On defining or editing the price item pricing of an active price list which is assigned to an account or a person	<p>The system creates an entry for the price item pricing in the <b>CI_REPRC_ENTITY_DTL</b> table. On executing the <b>Identify Accounts for Repricing (C1-REPC1)</b> batch, the system identifies the following in the specified order:</p> <ol style="list-style-type: none"> <li>1. Price list on which the price item pricing is assigned</li> <li>2. Account or Person on which the price list is assigned</li> <li>3. All accounts which belong to the person and its child persons when the price list is assigned to a person</li> </ol> <p>Once the accounts are identified, the system checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, a repricing request is created for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> Only accounts where the person and child person are the main customers are considered for repricing.</p>

For more information about the **Identify Accounts for Repricing (C1-REPC1)** and **Process Repricing Request and Persist Pricing for an Account (C1-REPC2)** batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

To enable the repricing feature, you need to do the following:

- Define an algorithm using the **C1-REPRCACCT** algorithm type and attach it to the **Audit** algorithm spot of the **C1-AccountBO** business object
- Define an algorithm using the **C1-REPRCACBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-ACCBALCNT** business object

- Define an algorithm using the **C1-REPRCPERS** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PERSON\_BO** business object
- Define an algorithm using the **C1-REPRCPPEBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-PERBALCNT** business object
- Define an algorithm using the **C1\_PLASGNAUD** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PLASGNADD** and **C1\_PLASGNEDIT** business objects
- Define an algorithm using the **C1-PRCASGNAD** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PRICEASGN\_BO** business object
- Define an algorithm using the **C1-REPRCPPLPA** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PRICEASGN\_BO** business object
- Define the required parameters for the account and person attributes, characteristics, usage amount and usage counter

## Two-Dimensional Pricing

---

Oracle Revenue Management and Billing enables you to define two-dimensional pricing for a price item. In the two-dimensional pricing, you can offer rates based on utilization of two service quantity identifiers (SQIs). For example, the rate for a price item can vary for each customer depending on the number of ATM transactions and current monthly balance as shown below: Current Monthly Balance Number of ATM Transactions 0-25 25-50 50-75 75-100 0-10000 2 1.9 1.8 1.7 10000-50000 1.6 1.5 1.4 1.3 50000-100000 1.2 1.1 1.0 0.9 100000-500000 0.8 0.7 0.6 0.5 The system allows you to define two-dimensional pricing in a grid which has X-axis and Y-axis. Both, the X-axis and Y-axis should contain service quantity identifiers (SQIs). The two-dimensional pricing is composed of threshold and step tiered pricing. The X-axis is a threshold tier and Y-axis is a step tier. On creating two-dimensional pricing, one price component is created for each X-axis and Y-axis combination. The step tier is stored as the tiering range whereas the threshold tier is stored as the eligibility criteria in the price component. Note that the tiering ranges and eligibility criteria are automatically created in the price component. You cannot manually add a tiering range and eligibility criteria in the price component. You can define two-dimensional pricing only when the tiering type of the rate components in the rate schedule is set to STEP. A new field named Pricing Rule Type is added in the Price Item Pricing screen. If you select the Two-Dimensional option from the Pricing Rule Type list, you can define two-dimensional pricing for the price item. However, if you do not select the Two-Dimensional option from the Pricing Rule Type list, you can define traditional flat, step, or tiered pricing for the price item. Besides selecting the Two-Dimensional option from the Pricing Rule Type list, you also need to select the Pricing Eligibility option while defining the two-dimensional pricing for the price item.

## Types of Price Item Bundle

---

The system allows you to define the following types of price item bundle:

- [Regular Bundle](#) on page 126
- [Phantom Bundle](#) on page 130
- [Ratio Bundle](#) on page 128

### Regular Bundle

In case of a regular bundle, pricing is defined at the bundle level. The system determines the rate by identifying the tiering range within which the total service quantities used for all price items in the bundle fall. Note that the rate is determined from the tiering range of the price component whose pricing eligibility criteria is met. Let us understand this with the help of an example.

Bundle X, which is a regular bundle, contains the following three price items:

- Price Item A

- Price Item B
- Price Item C

The following tiered pricing is defined for Bundle X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 4000	2
4001 – 8000	1

**Note:** In the above example, the assumption is that there only one rate component, one price component within the rate component, and pricing eligibility criteria is not defined for the price component.

Now, when the user consumes 1500 units of Price Item A, 1000 units of Price Item B, and 2000 units of Price Item C, the system adds the quantities of services used for all price items in Bundle X (i.e. 1500+1000+2000=4500), and then determines the range within which the total units (i.e. 4500) fall. In this case, the total units fall in the 4001 – 8000 range, and therefore the system uses \$1 as the rate for calculating charges.

If the multi parameter based pricing feature is enabled, you can define pricing for regular bundles based on multiple parameters. For example:

Bundle X	Country	Currency
Pricing 1	US	USD
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Bundle X based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the regular bundle (i.e. Bundle X) and then add price items (i.e. Price Item A, Price Item B, and Price Item C) to the bundle. Note that you can add a price item to a regular bundle only when the regular bundle and price item have same parameters associated with them for the specified date range. Therefore, before adding Price Item A, Price Item B, and Price Item C to Bundle X, you should ensure that Country and Currency are also associated with these price items.

Then, when you define Pricing 1 for Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Bundle X	US, USD		0	500
20	1	Number of Transactions	Bundle X	US, USD		500	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Bundle X	Germany, USD		0	1000
20	3	Number of Transactions	Bundle X	Germany, USD		1000	

Now, when the user performs 500 transactions (in USD) of Bundle X in Germany, 1200 transactions (in USD) of Bundle X in US, the system creates two billable charges. In one billable charge (with Bundle X, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Bundle X, Germany and USD combination), the system uses \$4 as the rate for calculating charges.

## Ratio Bundle

In case of a ratio bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle.

A ratio expresses the magnitude of quantities relative to each other. It has two factors — Numerator and Denominator. For ratio bundle, the ratio of price item quantities is used to determine the rate for volume based pricing. To determine within which range of ratio limit does the price item utilization falls, the ratio of price item quantities is used. Once the range limits are determined, the rate specified for that range is applied to the quantity of the price item used. Let us understand this with the help of an example.

Bundle X, which is a ratio bundle, contains the following price items:

- **Price Item A** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	4
0.6 – 0.9	3
0.9+	2

- **Price Item B** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	5
0.6 – 0.9	4
0.9+	3

- **Price Item C** — It has been added to the bundle using the price item relationship type as Denominator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	3
0.6 – 0.9	2
0.9+	1

Now, when the user consumes 500 units of Price Item A, 2500 units of Price Item B, and 4000 units of Price Item C, the system calculates the ratio of price item quantities (i.e.  $(500+2500)/4000=0.75$ ). Once the ratio is calculated, the system determines the range of each price item within which the ratio (i.e. 0.75) falls. In this case, the ratio falls in the 0.6 – 0.9 range of Price Item A, B, and C. Therefore, the system uses \$3, \$4, and \$2, respectively, as the rate for calculating charges (i.e.  $(500*3)=1500$ ,  $(2500*4)=10000$ , and  $(4000*2)=8000$ ).

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a ratio bundle based on multiple parameters. For example:

Bundle X	Country	Currency
Price Item A	US	USD

<b>Bundle X</b>	<b>Country</b>	<b>Currency</b>
Price Item B	Germany	USD
Price Item C	England	USD

Price Item A, Price Item B, and Price Item C are added in Bundle X. Price Item A, Price Item B, and Price Item C utilization in Bundle X is determined based on two parameters — Country and Currency. Before you add price item to a ratio bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item A, Price Item B, and Price Item C) and then add these price items to the bundle (i.e. Bundle X).

While adding Price Item A to Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Price Item B to Bundle X with Country set to Germany and Currency set to USD, and Price Item C with Country set to England and Currency set to USD.

The following table lists the tiered pricing defined for Price Item A:

<b>Tier Sequence</b>	<b>Rate</b>	<b>Tiering Criteria</b>	<b>Price Item</b>	<b>Price Parameters</b>	<b>Item</b>	<b>From</b>	<b>To</b>
10	5	Number of Transactions	Bundle X			0	1.75
20	4	Number of Transactions	Bundle X			1.75	2.50
30	3	Number of Transactions	Bundle X			2.50	

The following table lists the tiered pricing defined for Price Item B:

<b>Tier Sequence</b>	<b>Rate</b>	<b>Tiering Criteria</b>	<b>Price Item</b>	<b>Price Parameters</b>	<b>Item</b>	<b>From</b>	<b>To</b>
10	5	Number of Transactions	Bundle X			0	3.5
20	4	Number of Transactions	Bundle X			3.5	

The following table lists the tiered pricing defined for Price Item C:

<b>Tier Sequence</b>	<b>Rate</b>	<b>Tiering Criteria</b>	<b>Price Item</b>	<b>Price Parameters</b>	<b>Item</b>	<b>From</b>	<b>To</b>
10	2	Number of Transactions	Bundle X			0	2.0
20	1	Number of Transactions	Bundle X			2.0	

Now, when the user performs 5000 transactions (in USD) of Price Item A in US, 6000 transactions (in USD) of Price Item B in Germany, and 5000 transactions (in USD) of Price Item C in England, the system creates three billable charges — one for each price item (i.e. Price Item A, Price Item B, and Price Item C). The system calculates the ratio of transactions with the following combinations and then determines the range of each price item within which the ratio (i.e. 2.2) falls:

- Price Item A, US, USD
- Price Item B, Germany, USD
- Price Item C, England, USD

In this case, the ratio falls in the 1.75 – 2.50 range of Price Item A, the 0 – 3.5 range of Price Item B, and in the 2.0 — Infinite range of Price Item C. Therefore, the system uses \$4, \$5, and \$1 as the rate for calculating charges (i.e.  $(5000*4)=20000$  ,  $(6000*5)=30000$  , and  $(5000*1)=5000$ ).

You can also add a price item more than once in a ratio bundle with different set of parameters. For example:

Bundle X	Relationship Type	Country	Currency
Price Item A	Numerator	US	USD
Price Item A	Numerator	England	USD
Price Item B	Numerator	Germany	USD
Price Item C	Denominator	England	USD
Price Item C	Denominator	US	USD

In this case, the system calculates the ratio of transactions with the following combinations and then determines the range of each price item (i.e. Price Item A, Price Item B, and Price Item C) within which the ratio falls:

- Price Item A, US, USD
- Price Item A, England, USD
- Price Item B, Germany, USD
- Price Item C, England, USD
- Price Item C, US, USD

## Phantom Bundle

In case of a phantom bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle. The system determines the price by identifying the tiering range of each price item within which the total quantities of services used for all price items in the bundle fall. Let us understand this with the help of an example.

Bundle A, which is a phantom bundle, contains the following two price items:

- **Price Item X** — The following tiered pricing is defined for Price Item X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 6000	2

- **Price Item Y** — The following tiered pricing is defined for Price Item Y:

Quantity Range	Rate (\$) per unit
1 – 5000	2
5001 – 10000	1

Now, when the user consumes 2500 units of Price Item X and 3500 units of Price Item Y, the system adds the quantities of services used for all price items in Bundle A (i.e.  $2500+3500=6000$ ), and then determines the range of each price item within which the total units (i.e. 6000) fall. In this case, the total units fall in the 3001 – 6000 range of Price Item X and the 5001 – 10000 range of Price Item Y, and therefore the system uses \$2 and \$1, respectively, as the rate for calculating charges (i.e.  $(2500*2)=5000$  and  $(3500*1)=3500$ ). This helps the customer to take advantage of the lowest rate.

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a phantom bundle based on multiple parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item Y	Germany	USD

Price Item X and Price Item Y are added in Bundle A. Price Item X and Price Item Y utilization in Bundle A is determined based on two parameters — Country and Currency. Before you add price item to a phantom bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item X and Price Item Y) and then add these price items to the bundle (i.e. Bundle A).

While adding Price Item X to Bundle A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Product Y to Bundle A with Country set to Germany and Currency set to USD.

The following table lists the tiered pricing defined for Price Item X:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	3	Number of Transactions	Bundle A			0	5000
20	2	Number of Transactions	Bundle A			5000	10000
30	1	Number of Transactions	Bundle A			10000	

The following table lists the tiered pricing defined for Price Item Y:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	5	Number of Transactions	Bundle A			0	5000
20	4	Number of Transactions	Bundle A			5000	

Now, when the user performs 5000 transactions (in USD) of Price Item Y in Germany, 6000 transactions (in USD) of Price Item X in US, the system creates two billable charges — one for Price Item X and another for Price Item Y. The system adds the transactions with the following combinations and then determines the range of each price item within which the total units (i.e. 11000) fall:

- Price Item X, US, USD
- Price Item Y, Germany, USD

In this case, the total units fall in the 10000 – Infinite range of Price Item X and the 5000 – Infinite range of Price Item Y, and therefore the system uses \$1 and \$4, respectively, as the rate for calculating charges (i.e.  $(5000*4)=20000$  and  $(6000*1)=6000$ ).

You can also add a price item more than once in a phantom bundle with different set of parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item X	Germany	USD
Price Item Y	Germany	USD
Price Item Y	US	USD

In this case, the system adds the transactions with the following combinations and then determines the range of each price item (i.e. Price Item X and Price Item Y) within which the total units fall:

- Price Item X, US, USD
- Price Item X, Germany, USD
- Price Item Y, Germany, USD

- Price Item Y, US, USD

## Parameter

The pricing for a price item may differ depending upon various transaction, person, account, or product attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. In addition, you can define the pricing, price list, and product eligibility criteria using one or more parameters.

Each parameter must be mapped to the following:

- **Source Entity** - Indicates the entity from where the parameter value is derived. A source entity can be account, person, product, transaction, service quantity identifier, or an algorithm.
- **Source Type** - Indicates the type of source from where the parameter value is derived. A source type can be field, characteristic, usage amount, or usage counter.
- **Source Type Code** - Indicates the source (such as, field, characteristic, usage amount, usage counter, SQI, or algorithm) from where the parameter value is derived.

The system allows you to define the following types of parameters:

- **Adhoc** - Used to store an adhoc value.
- **Predefined** - Used to store a predefined value. For example, you can create a parameter named **Country** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
AUT	Austria
AUS	Australia
CAN	Canada
CHN	China

In such case, while defining the pricing for a price item using the **Country** parameter, you can use any one of the above mentioned parameter values.

- **Reference** - Used to store a value which is already present in a table. For example, you can create a parameter named **Country** where the value type is set to **Reference** and the reference entity is set to **CI\_COUNTRY\_L** (i.e. where the description of all countries is stored). In such case, while defining the pricing for a price item using the **Country** parameter, you can specify a country which is present in the **CI\_COUNTRY\_L** table in the parameter value.

## Parameter (Used for Searching)

The **Parameter** screen allows you to define, edit, delete and copy a parameter. It contains the following zone:

- [Search Parameter](#) on page 132

### Search Parameter

The **Search Parameter** zone allows you to search for a parameter using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search a particular parameter.	No

Field Name	Field Description	Mandatory (Yes or No)
Value Type	Used to search parameters in which you can store a particular type of value. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>	No
Source Entity	Used to search parameters whose value is derived from a particular entity. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>	No
Source Type	Used to search parameters whose value is derived from a particular type of source. The valid values are: <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul>	No
Description	Used to search parameters with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Parameter	Displays the parameter name.
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>
Description	Displays the description of the parameter.

Column Name	Column Description
Source Entity	Indicates the entity from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> <li>Account</li> <li>Algorithm</li> <li>Person</li> <li>Product</li> <li>Service Quantity Identifier</li> <li>Transaction</li> </ul>
Source Type	Indicates the type of source from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> <li>Characteristic</li> <li>Field</li> <li>Usage Amount</li> <li>Usage Counter</li> </ul>
View	On clicking the <b>View</b> (  ) icon, the <b>Parameter</b> screen appears where you can view the details of the parameter.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Parameter</b> screen appears where you can edit the details of the parameter.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the parameter. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p><b>Note:</b></p> <p>You can delete a parameter only when the following conditions are met:</p> <ul style="list-style-type: none"> <li>It is not yet associated to any price item or price item bundle.</li> <li>It is not yet used while defining the pricing, price list, or product eligibility criteria.</li> </ul> </div>
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Parameter</b> screen appears where you can define a new parameter using an existing parameter.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Searching for a Parameter

### Procedure

To search for a parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.  
The **Parameter** screen appears.
3. Enter the search criteria in the **Search Parameter** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of parameters that meet the search criteria appears in the **Search Results** section.

## Defining a Parameter

### Prerequisites

To define a parameter, you should have:

- Validation algorithm defined using the **C1\_PPARM\_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

### Note:

A sample algorithm type named **C1\_PPARM\_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

### Procedure

To define a parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.

- From the **Admin** menu, select **P** and then click **Parameter**.

The **Parameter** screen appears.

- Click the **Add** button in the **Page Title** area of the **Parameter** screen.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the parameter name.	
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Account</li> <li>Algorithm</li> <li>Person</li> <li>Product</li> <li>Service Quantity Identifier</li> <li>Transaction</li> </ul>	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Characteristic</li> <li>Field</li> <li>Usage Amount</li> <li>Usage Counter</li> </ul>	Yes
	<b>Note:</b> This field appears only when the <b>Account</b> , <b>Person</b> , or <b>Product</b> option is selected from the <b>Source Entity</b> list.  The <b>Usage Amount</b> and <b>Usage Counter</b> options do not appear in the <b>Source Type</b> list when the <b>Product</b> option is selected from the <b>Source Entity</b> list.	
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>Adhoc</li> <li>Predefined</li> <li>Reference</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)

Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> <td>Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p><b>Note:</b> This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Validation Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Reference Entity</b> field. On clicking the <b>Search</b> icon, the <b>Reference Table Search</b> window appears.</p> <p>You can only specify a language table, where the <b>DESCR</b> column is available, in the <b>Reference Entity</b> field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.	Yes
	<b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	
Description	Used to specify the description for the parameter value.	Yes

**Note:**

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** () icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** () icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)																
Price Item	<p>Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p><b>Note:</b> The following table lists the source entity and source type combinations when the <b>Price Item</b> option is disabled in the <b>Parameter Usage</b> section:</p> <table border="1" data-bbox="581 590 1110 842"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Usage Amount</td> </tr> <tr> <td>Account</td> <td>Usage Counter</td> </tr> <tr> <td>Person</td> <td>Usage Amount</td> </tr> <tr> <td>Person</td> <td>Usage Counter</td> </tr> </tbody> </table> <p>The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:</p> <table border="1" data-bbox="581 1010 1110 1192"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Identifier</td> <td>Quantity</td> </tr> </tbody> </table>	Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter	Source Entity	Source Type	Algorithm	—	Service Identifier	Quantity	<p>Yes (Conditional)</p> <p><b>Note:</b> You must select this option when you want to associate the parameter with a price item.</p>

Source Entity	Source Type																	
Algorithm	—																	
Service Identifier	Quantity																	
Pricing Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> You must select this option when you want to define a pricing eligibility criteria using the parameter.</p>																
Price List Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the price list eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> You must select this option when you want to define a price list eligibility criteria using the parameter.</p>																

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	<b>Note:</b> This option does not appear when the <b>Algorithm</b> , <b>Service Quantity Identifier</b> , or <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> You must select this option when you want to define a product eligibility criteria using the parameter.

**Note:** You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen depending on whether you want to create an adhoc, predefined, or reference parameter.
- Click **Save**.

The parameter is defined.

**Note:** If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

### Editing a Parameter

#### Prerequisites

To edit a parameter, you should have:

- Validation algorithm defined using the **C1\_PPARM\_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

#### Note:

A sample algorithm type named **C1\_PPARM\_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

### Procedure

To edit a parameter:

- Search for the parameter in the **Parameter** screen.
- In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the parameter whose details you want to edit.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Displays the parameter name.	Not applicable
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Account</li> <li>Algorithm</li> <li>Person</li> <li>Product</li> <li>Service Quantity Identifier</li> <li>Transaction</li> </ul>	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Characteristic</li> <li>Field</li> <li>Usage Amount</li> <li>Usage Counter</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Account</b>, <b>Person</b>, or <b>Product</b> option from the <b>Source Entity</b> list. The <b>Usage Amount</b> and <b>Usage Counter</b> options do not appear in the <b>Source Type</b> list when the <b>Product</b> option is selected from the <b>Source Entity</b> list.</p>	Yes
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>Adhoc</li> <li>Predefined</li> <li>Reference</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)																																	
Source Type Code	Used to indicate the source, such as, field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.	Yes																																	
	<p><b>Note:</b></p> <p>This field does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p> <p>The following table indicates the values that are listed in the <b>Source Type Code</b> field depending on the source entity and source type combination:</p>

Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> <td>Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p><b>Note:</b> This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Validation Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Reference Entity</b> field. On clicking the <b>Search</b> icon, the <b>Reference Table Search</b> window appears.</p> <p>You can only specify a language table, where the <b>DESCR</b> column is available, in the <b>Reference Entity</b> field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.	Yes
	<b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	
Description	Used to specify the description for the parameter value.	Yes

**Note:**

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** () icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** () icon corresponding to the parameter value.

You cannot delete a predefined parameter value which is already used in the system.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)																
Price Item	<p>Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p><b>Note:</b> The following table lists the source entity and source type combinations when the <b>Price Item</b> option is disabled in the <b>Parameter Usage</b> section:</p> <table border="1" data-bbox="581 590 1110 842"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Usage Amount</td> </tr> <tr> <td>Account</td> <td>Usage Counter</td> </tr> <tr> <td>Person</td> <td>Usage Amount</td> </tr> <tr> <td>Person</td> <td>Usage Counter</td> </tr> </tbody> </table> <p>The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:</p> <table border="1" data-bbox="581 1010 1110 1192"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Identifier</td> <td>Quantity</td> </tr> </tbody> </table>	Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter	Source Entity	Source Type	Algorithm	—	Service Identifier	Quantity	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you want to associate the parameter with a price item.</p>
Source Entity	Source Type																	
Account	Usage Amount																	
Account	Usage Counter																	
Person	Usage Amount																	
Person	Usage Counter																	
Source Entity	Source Type																	
Algorithm	—																	
Service Identifier	Quantity																	
Pricing Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you want to define a pricing eligibility criteria using the parameter.</p>																
Price List Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the price list eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you want to define a price list eligibility criteria using the parameter.</p>																

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	<b>Note:</b> This option does not appear when the <b>Algorithm</b> , <b>Service Quantity Identifier</b> , or <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> This field is required when you want to define a product eligibility criteria using the parameter.

**Note:**

You must select at least one option in the **Parameter Usage** section.

If the parameter is already associated to a price item or used while defining the pricing, price list, or product eligibility criteria, you cannot deselect the respective option in the **Parameter Usage** section.

3. Modify the required details in the **Parameter** screen.
4. Click **Save**.

The changes made to the parameter are saved.

**Related Topics**

For more information on...	See...
How to search for a parameter	<a href="#">Searching for a Parameter</a> on page 135

**Deleting a Parameter****Procedure**

To delete a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the parameter that you want to delete.

A message appears confirming whether you want to delete the parameter.

**Note:**

You can delete a parameter only when the following conditions are met:

- It is not yet associated to any price item or price item bundle.
- It is not yet used while defining the pricing, price list, or product eligibility criteria.

3. Click **OK**.

The parameter is deleted.

## Copying a Parameter

Instead of creating a parameter from scratch, you can define a new parameter using an existing parameter. This is possible through copying a parameter. When you copy a parameter, the predefined values, validation algorithm, and reference entity (depending upon the value type) are copied along with other parameter details. You can then edit the details, if required.

**Note:** You cannot change the type of value that you can store in the new parameter (which is created using an existing parameter).

### Prerequisites

To copy a parameter, you should have:

- Parameter (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1\_PPARM\_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

### **Note:**

A sample algorithm type named **C1\_PPARM\_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

### Procedure

To copy a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the parameter whose copy you want to create.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the parameter name.	

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul> <div style="border: 1px solid black; background-color: #f0f0f0; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>This field appears only when you select the <b>Account</b>, <b>Person</b>, or <b>Product</b> option from the <b>Source Entity</b> list.</p> <p>The <b>Usage Amount</b> and <b>Usage Counter</b> options do not appear in the <b>Source Type</b> list when the <b>Product</b> option is selected from the <b>Source Entity</b> list.</p> </div>	Yes
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>	Not applicable

### Viewing the Parameter Details

#### Procedure

To view the details of a parameter:

- Search for the parameter in the **Parameter** screen.
- In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the parameter whose details you want to view.  
The **Parameter** screen appears.
- View the details of the parameter in the **Parameter** screen.

### Parameter (Used for Viewing)

The **Parameter** screen allows you to view the details of a parameter. It contains the following zone:

- [Parameter](#) on page 155

## Parameter

The **Parameter** zone displays the details of the parameter. It contains the following sections:

- **Main** – Displays basic information about the parameter. It contains the following fields:

Field Name	Field Description
Parameter	Displays the parameter name.
Description	Displays the description of the parameter.
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>
Validation Algorithm	Indicates the algorithm which is used to validate the adhoc parameter value. <p><b>Note:</b> This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list. It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.</p>
Referenced Table	Indicates the table whose primary key (i.e. column) is used to validate the parameter value. <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list. It has a link. On clicking the link, the <b>Table</b> screen appears where you can view the details of the respective table.</p>
Source Entity	Indicates the entity from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>

Field Name	Field Description
Source Type	<p>Indicates the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul> <p><b>Note:</b> This field appears only when the <b>Account</b>, <b>Person</b>, or <b>Product</b> option is selected from the <b>Source Entity</b> list.</p>
Source Type Code	<p>Indicates the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.</p> <p><b>Note:</b> This field does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>

- **Parameter Usage** – Indicates where the parameter can be used in the system. It contains the following options:

Option Name	Option Description						
Price Item	<p>Indicates whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p>The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Quantity Identifier</td> <td>—</td> </tr> </tbody> </table>	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—
Source Entity	Source Type						
Algorithm	—						
Service Quantity Identifier	—						
Pricing Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the pricing eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>						
Price List Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the price list eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>						
Product Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the product eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Algorithm</b>, <b>Service Quantity Identifier</b>, or <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>						

- **Parameter Values** - Lists the predefined values of the parameter. It contains the following columns in the grid:

Column Name	Column Description
Parameter Value	Displays the parameter value.
Description	Displays the description of the parameter value.

**Note:** The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

## Price Item

A bank may offer wide range of services to customers and accordingly charge them fees and/or interest for a service. You can define each charge as a price item in Oracle Revenue Management and Billing. Once a price item is defined, you can define pricing for the price item. The price item pricing can be a standard price defined in the price list or override price that is specific to a person or an account. The system allows you to define price item pricing at various levels in a person hierarchy (for example, at the account level, main customer level, or at the parent customer level). You can also define price item pricing in the account's price list, main customer's price list, parent customer's price list, and price list's parent price list.

You can associate one or more price items with each other, and thereby group them for various reasons, such as reporting, billing, and so on. You can also create a price item bundle and then add price items within the price item bundle. The main objective behind grouping price items or creating price item bundles is to offer discounts based on the volume across price items, facilitate minimum or maximum charge calculations across price items, or offer common price across price items. While associating a price item with the parent price item or adding a price item to the price item bundle, you need to specify how the two price items are related to each other.

The system allows you to define the following types of price item bundle:

- [Regular Bundle](#) on page 126
- [Phantom Bundle](#) on page 130
- [Ratio Bundle](#) on page 128

The system allows you to define price items and price item bundles which are available for only pricing or pricing and billing. If the price item is available for only pricing, you can indicate the type of the price item. The valid values are:

- Rate (i.e. Interest Rate)
- Fees

If the type of a price item is **Rate**, the system calculates and persist the rate for the price item. The rate is persisted only for the price item pricing which is either assigned or inherited by an account. You cannot define a price item bundle when it is available for only pricing and when the price item type is set to **Rate**. When you define a price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1\_PRICING)** feature configuration is automatically associated with the price item or price item bundle.

You can associate a price item or price item bundle to one or more divisions. You can assign a price item or price item bundle to an account, person, or price list only when the account, person, or price list belongs to the division to which the price item or price item bundle is associated. You can define a set of characteristics for a price item or price item bundle which are common across divisions or specific to a division. You can associate one or more parameters to a price item. These parameters can then be used for aggregating transactions and defining the price item pricing. Note that you can associate parameters only to regular price item bundles and not to ratio and phantom price item bundles.

## Price Item (Used for Searching)

The **Price Item** screen allows you to search for a price item or price item bundle using various search criteria. It allows you to create and edit a price item or price item bundle. In addition, it allows you to copy a price item bundle only when **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **False**. This screen consists of the following zones:

- [Search Price Item](#) on page 158

### Search Price Item

The **Search Price Item** zone allows you to search for a price item or price item bundle using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price item or price item bundle using the price item details. The valid value is: <ul style="list-style-type: none"> <li>• Price Item Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Price Item Details</b> option is selected.	
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search a price item or price item bundle with a particular description.	No
Division	Used to search price items or price item bundles which are associated with a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price Item Usage	Used to search price items or price item bundles which can be used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	No
	<b>Note:</b> By default, the <b>Pricing and Billing</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Bundle	Used to indicate whether you want to search a price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price Item Type	Used to search a particular type of price items or price item bundles. The valid values are: <ul style="list-style-type: none"> <li>• Fees</li> <li>• Rate</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list.	

**Note:** You must specify at least one search criterion while searching for a price item or price item bundle.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle.
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> However, if the price item bundle is available for only pricing and the <b>Price Item Type</b> is set to <b>Fees</b> , the valid value is: <ul style="list-style-type: none"> <li>• Regular</li> </ul>
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul>
Price Item Usage	Indicates whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Price Item</b> screen appears where you can create a new price item or price item bundle using an existing price item or price item bundle.

Column Name	Column Description
Price Item Assigned To	On clicking the <b>View</b> (🔍) icon in the <b>Price Item Assigned To</b> column, the <b>Price Item Assignments</b> screen appears where you can view the active price lists, persons, and accounts to which the price item or price item bundle is assigned.
Price Item Relationship	On clicking the <b>View</b> (🔍) icon in the <b>Price Item Relationship</b> column, the <b>Price Item Relationship</b> screen appears where you can view the list of the price items and price item bundles associated with the parent price item or added to the price item bundle.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### Searching for a Price Item or Price Item Bundle

#### Prerequisites

To search for a price item or price item bundle, you should have:

- Divisions defined in the application
- Price items or price item bundles associated with the division to which the user belongs

#### Procedure

To search for a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.  
A sub-menu appears.
3. Click the **Search** option from the **Price Item** sub-menu.  
The **Price Item** screen appears.
4. Enter the search criteria in the **Search Price Item** zone depending on whether you want to search for a price item or price item bundle.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

## 5. Click **Search**.

A list of price items or price item bundles that meet the search criteria appears in the **Search Results** section.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Defining a Price Item or Price Item Bundle

### Prerequisites

To define a price item or price item bundle, you should have:

- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1\_PRICING)** feature configuration

### Procedure

To define a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.  
A sub-menu appears.
3. Click the **Add** option from the **Price Item** sub-menu.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

#### **Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining the ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs and characteristics for the price item or price item bundle.
- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Pricing and Billing</b> option is selected.	
Price Item Type	Used to indicate the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Fees</b> option is selected. This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list. You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b> .	
Bundle	Used to indicate whether you want to define a price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, the <b>No</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> <li>Phantom</li> <li>Ratio</li> <li>Regular</li> </ul>	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field is enabled only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p> <p>All the above mentioned values are available in the list when you are defining a price item bundle which is available for pricing and billing. However, when you are defining a price item bundle which is available for only pricing and when the price item type is set to <b>Fees</b>, you can only define a regular price item bundle. Therefore, by default, the value is set to <b>Regular</b> when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p> <p>You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b>.</p>	<p><b>Note:</b> This field is required when you are creating a price item bundle.</p>
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
	<p><b>Note:</b> By default, the <b>No</b> option is selected.</p>	
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle.	Yes
	<p><b>Note:</b></p> <p>This field appears only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Contract Type</b> field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.</p>	

**Tip:** Alternatively, you can access the **Price Item** screen by clicking the **Add** button in the **Page Title** area of the **Price Item** screen.

4. Enter the required details in the **Main** section.

5. Associate parameters with the price item or price item bundle, if required.
6. Associate the price item or price item bundle to the required divisions.
7. Define the required division-specific SQIs for the price item or price item bundle.
8. Define division-specific characteristics for the price item or price item bundle, if required.
9. Define characteristics for the price item or price item bundle, if required.
10. Click **Save**.

The price item is defined.

**Note:** When you define a price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1\_PRICING)** feature configuration is automatically associated to the price item or price item bundle.

### **Associating a Parameter with a Price Item or Price Item Bundle**

#### **Prerequisites**

To associate a parameter with a price item or price item bundle, you should have:

- Parameters defined in the application (where the **Price Item** option is selected in the **Parameter Usage** section)

#### **Procedure**

To associate a parameter with a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears. It contains the following fields in a grid:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Effective Start Date	Used to specify the date from when the parameter is effective for the price item or price item bundle.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the parameter is effective for the price item or price item bundle.	No
Parameter	Used to indicate the parameter that you want to associate with the price item or price item bundle.	Yes
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Parameter</b> field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears.</p> <p>In the <b>Parameter Search</b> window, the system allows you to search only those parameters where the parameter usage is set to <b>Price Item</b>.</p>	
Business Label	Used to specify a business label for the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.	No
Display Order	Used to indicate the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Yes
Parameter Usage	Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• <b>Aggregation</b> – Indicates that you want to use the parameter for aggregating transactions.</li> <li>• <b>Pricing</b> – Indicates that you want to use the parameter for aggregating transactions and defining the price item pricing.</li> </ul>	Yes
Mandatory	Used to indicate whether the parameter is mandatory while defining the price item pricing.	No
Priority	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Yes (Conditional)
	<b>Note:</b> This field is disabled when the <b>Mandatory</b> option is selected.	<b>Note:</b> This field is required when the <b>Mandatory</b> option is not selected.

**Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining, editing, or copying ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

2. Enter the required details in the **Parameters** section.
3. If you want to associate more than one parameter with the price item or price item bundle, click the **Add**  icon and then repeat steps 2.

**Note:**

However, if you want to remove a parameter from the price item or price item bundle, click the **Delete** () icon corresponding to the parameter. You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which will be used for aggregation (in other words, where the **Parameter Usage** field is set to **Aggregation**) anytime, whenever required. However, you can add a parameter which will be used for pricing (in other words, where the **Parameter Usage** field is set to **Pricing**) only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

**4. Click Save.**

The parameters are associated with the price item or price item bundle.

**Note:** The priority for all parameters which are mandatory is set to 0.

How to define valid predefined parameter values for a price item or price item bundle	<a href="#">Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle</a> on page 166

**Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle****Prerequisites**

To define valid predefined parameter values for a price item or price item bundle, you should have:

- Values defined for the predefined parameter which is associated with the price item or price item bundle

**Procedure**

To define valid predefined parameter values for a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears.

2. Click the **Add** () icon in the **Parameter** column corresponding to the predefined parameter for which you want to define valid values for the price item or price item bundle.

The following field appears in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Parameter Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Parameter Value Search</b> window appears.</p> <p>On specifying the valid predefined parameter value for a price item or price item bundle, the description of the valid predefined parameter value appears corresponding to the <b>Parameter Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining valid predefined parameter values for the price item or price item bundle.</p>

- Select the predefined parameter value from the respective field.
- If you want to define more than one valid predefined parameter value for the price item or price item bundle, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a valid predefined parameter value from the price item or price item bundle, click the **Delete**  icon corresponding to the parameter value.

- Click **Save**.

The valid predefined parameter values are defined for the price item or price item bundle.

### **Related Topics**

How to associate a parameter with a price item or price item bundle	<a href="#">Associating a Parameter with a Price Item or Price Item Bundle</a> on page 164

### **Associating a Price Item or Price Item Bundle with a Division**

#### **Prerequisites**

To associate a price item or price item bundle with a division, you should have:

- Divisions defined in the application

#### **Procedure**

To associate a price item or price item bundle with a division:

- Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQIs	On clicking the <b>Add</b>  icon, you can define division-specific SQIs for the price item or price item bundle.	No

Field Name	Field Description	Mandatory (Yes or No)
Division Characteristics	On clicking the <b>Add</b> (  ) icon, you can define division-specific characteristics for the price item or price item bundle.	No
Division	Used to indicate the division to which you want to associate the price item or price item bundle.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	Yes

- Enter the required details in the **Divisions** section.
- If you want to associate the price item or price item bundle with more than one division, click the **Add** (  ) icon and then repeat step 2.

**Note:** However, if you want to remove the price item or price item bundle from a division, click the **Delete** (  ) icon corresponding to the division.

- Define division-specific SQIs for the price item or price item bundle, if required.
- Define division-specific characteristics for the price item or price item bundle, if required.
- Click **Save**.

The price item or price item bundle is associated to the division.

**Tip:** Alternatively, you can associate a price item or price item bundle to a division using the **Division** screen.

How to define division-specific SQIs for a price item or price item bundle	<a href="#">Defining Division-Specific SQIs for a Price Item or Price Item Bundle</a> on page 170

### Defining Division-Specific Characteristics for a Price Item or Price Item Bundle

#### Prerequisites

To define division-specific characteristics for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Division/Price Item Combination**)
- Price items or price item bundles associated to the division to which the user belongs

#### Procedure

To define division-specific characteristics for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** () icon in the **Division Characteristics** column corresponding to the division for which you want to define division-specific price item or price item bundle characteristics.

The following fields appear in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Division/Price Item Combination</b> .	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (  ) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item or price item bundle.

3. Enter the required details in the **Divisions** section.
4. If you want to define more than one division-specific characteristic for the price item or price item bundle, click the **Add** () icon and then repeat step 3.

**Note:** However, if you want to remove a division-specific characteristic from the price item or price item bundle, click the **Delete** () icon corresponding to the characteristic.

5. Click **Save**.

The division-specific characteristics are defined for the price item or price item bundle.

## Defining Division-Specific SQIs for a Price Item or Price Item Bundle

### Prerequisites

To define division-specific SQIs for a price item or price item bundle, you should have:

- SQIs defined in the application
- Price items or price item bundles associated with the division to which the user belongs

### Procedure

To define division-specific SQIs for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** () icon in the **SQIs** column corresponding to the division for which you want to define division-specific price item or price item bundle SQIs.

The following field appears in the grid:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI to which you want to associate the price item or price item bundle in the division.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to the <b>SQI</b> field. On clicking the <b>Search</b> icon, the <b>Service Quantity Identifier Search</b> window appears.</p> <p>On indicating the SQI, the description of the SQI appears corresponding to the <b>SQI</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a division-specific SQI for the price item or price item bundle.</p>

3. Enter the required details in the **Divisions** section.
4. If you want to define more than one division-specific SQI for the price item or price item bundle, click the **Add** () icon and then repeat step 3.

**Note:** However, if you want to remove a division-specific SQI from the price item or price item bundle, click the **Delete** () icon corresponding to the SQI.

5. Click **Save**.

The division-specific SQIs are defined for the price item or price item bundle.

**Defining a Characteristic for a Price Item or Price Item Bundle****Prerequisites**

To define a characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

**Procedure**

To define a characteristic for a price item or price item bundle:

1. Click the **Price Item Characteristics** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Price Item Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item or price item bundle.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item or price item bundle.

2. Enter the required details in the **Price Item Characteristics** section.

- If you want to define more than one characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item or price item bundle.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to define a price item or price item bundle	<a href="#">Defining a Price Item or Price Item Bundle</a> on page 161
How to edit a price item or price item bundle	<a href="#">Editing a Price Item or Price Item Bundle</a> on page 182
How to copy a price item or price item bundle	<a href="#">Copying a Price Item or Price Item Bundle</a> on page 172

### **Copying a Price Item or Price Item Bundle**

Instead of creating a price item or price item bundle from scratch, you can create a new price item or price item bundle using an existing price item or price item bundle. This is possible through copying a price item or price item bundle. On copying a price item or price item bundle, the details including the parameters, divisions, division-specific characteristics, division-specific SQIs, and characteristics are copied to the new price item or price item bundle. You can then edit the details, if required.

#### **Prerequisites**

To copy a price item or price item bundle, you should have:

- Price item or price item bundle (whose copy you want to create) defined in the application
- Price item or price item bundle (whose copy you want to create) associated with the division to which the user belongs
- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1\_PRICING)** feature configuration

#### **Procedure**

To copy a price item or price item bundle:

- Search for the price item or price item bundle in the **Price Item** screen.
- In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the price item or price item bundle using which you want to define a new price item or price item bundle.

The **Price Item** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the price item or price item bundle.
- Parameters** – Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

**Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** – Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs and characteristics for the price item or price item bundle.
- **Price Item Characteristics** – Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	Yes
Price Item Type	Used to indicate the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list.</p> <p>You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b>.</p> </div>	Yes
Bundle	Used to indicate whether you want to define a price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	Used to indicate the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>Phantom</li> <li>Ratio</li> <li>Regular</li> </ul>	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field is enabled only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p> <p>All the above mentioned values are available in the list when you are defining a price item bundle which is available for pricing and billing. However, when you are defining a price item bundle which is available for only pricing and when the price item type is set to <b>Fees</b>, you can only define a regular price item bundle. Therefore, by default, the value is set to <b>Regular</b> when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p> <p>You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b>.</p>	<p><b>Note:</b> This field is required when you are creating a price item bundle.</p>
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle.	Yes
	<p><b>Note:</b></p> <p>This field appears only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Contract Type</b> field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.</p>	

3. Enter the required details in the **Main** section.
4. Associate, edit, or disassociate parameters from the price item or price item bundle, if required.
5. Associate or disassociate the price item or price item bundle from the required divisions.
6. Define or remove the division-specific SQIs from the price item or price item bundle, if required.
7. Define or remove the division-specific characteristics for the price item or price item bundle, if required.

8. Define, edit, or remove characteristics from the price item or price item bundle, if required.
9. Click **Save**.

The new price item is defined.

**Note:**

When you define a new price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1\_PRICING)** feature configuration is automatically associated to the price item or price item bundle.

The system allows you to add a price item to the new price item bundle only when:

- Price item and price item bundle (whose copy you are creating) are associated to the same contract type.
- Price item is associated with the division to which the price item bundle (whose copy you are creating) is associated.
- Another price item bundle with the same price item, relationship type, and date range combination does not exist in the system.

**Viewing the Price Item or Price Item Bundle Details**

**Procedure**

To view the details of a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to view.

The **Price Item** screen appears. It contains the following zones:

- [Price Item](#) on page 177
- [Parameters](#) on page 178
- [Predefined Parameter Values for Price Item](#) on page 179

- [Divisions](#) on page 179
  - [Division-Specific Characteristics for Price Item](#) on page 180
  - [Division-Specific SQIs for Price Item](#) on page 180
  - [Price Item Relationship](#) on page 181
3. View the basic details and characteristics of the price item or price item bundle in the **Price Item** zone.
  4. View the parameters associated with the price item or price item bundle in the **Parameters** zone.
  5. View the valid predefined parameter values of the price item or price item bundle in the **Predefined Parameter Values for Price Item** zone.
  6. View the divisions to which the price item or price item bundle is associated in the **Divisions** zone.
  7. View the division-specific characteristics of the price item or price item bundle in the **Division-Specific Characteristics for Price Item** zone.
  8. View the division-specific SQIs of the price item or price item bundle in the **Division-Specific SQIs for Price Item** zone.
  9. View the price items or price item bundles related to the parent price item or price item bundle in the **Price Item Relationship** zone.

<b>Price Item</b> screen	<a href="#">Price Item (Used for Viewing)</a> on page 176

### Price Item (Used for Viewing)

The **Price Item** screen allows you to view the details of the price item or price item bundle. It also allows you to edit the details of the price item or price item bundle. It contains the following zones:

- **Price Item** – Displays the basic details of the price item or price item bundle.
- **Parameters** – Lists the parameters which are associated with the price item or price item bundle.
- **Predefined Parameter Values for Price Item** – Lists the predefined parameter values which are valid for the price item or price item bundle.

**Note:** By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a parameter in the **Parameters** zone.

- **Divisions** – Lists the divisions to which the price item or price item bundle is associated.
- **Division-Specific Characteristics for Price Item** – Lists the characteristics which are defined for the price item or price item bundle in the respective division.

**Note:** By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

- **Division-Specific SQIs for Price Item** – Lists the SQIs to which the price item or price item bundle is associated in the respective division.

**Note:** By default, the **Division-Specific SQIs for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

- **Price Item Relationship** – Lists the price items or price item bundles which are associated with the parent price item or added in the price item bundle.

## Price Item

The **Price Item** zone displays the details of the price item or price item bundle. It contains the following sections:

- **Main** – Displays basic information about the price item or price item bundle. It contains the following fields:

Field Name	Field Description
Price Item	Displays information about the price item or price item bundle.
Description	Displays the description of the price item or price item bundle.
Price Item Usage	Indicates whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul>
	<b>Note:</b> This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list.
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul>
	<b>Note:</b> This field appears only when you select the <b>Yes</b> option from the <b>Bundle</b> list.
Global Price List	Indicates whether the price item or price item bundle is assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Contract Type	Displays the contract type to which the price item or price item bundle is associated.

- **Price Item Characteristics** – Lists the characteristics defined for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item or price item bundle.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price item or price item bundle.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price item or price item bundle is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

### **Parameters**

The **Parameters** zone lists the parameters to which the price item or price item bundle is associated. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the parameter is effective for the price item or price item bundle.
Effective End Date	Displays the date till when the parameter is effective for the price item or price item bundle.
Parameter	Indicates the parameter to which the price item or price item bundle is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the respective parameter.
Business Label	Displays the business label of the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.
Display Order	Indicates the order in which the parameter and its value should be displayed in the price item parameter information string across the application.

Column Name	Column Description
Parameter Usage	Indicates whether the parameter is used for aggregation and/or for defining the pricing of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• <b>Aggregation</b> – Indicates that the parameter is used for aggregating transactions.</li> <li>• <b>Pricing</b> – Indicates that the parameter is used for aggregating transactions and defining the price item pricing.</li> </ul>
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing.
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.

On clicking the **Broadcast**  icon corresponding to a parameter, the **Predefined Parameter Values for Price Item** zone appears where you can view the valid predefined parameter values of the price item or price item bundle.

<b>Predefined Parameter Values</b> zone	<a href="#">Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle</a> on page 166

#### Predefined Parameter Values for Price Item

The **Predefined Parameter Values for Price Item** zone lists the predefined parameter values which are valid for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Parameter Value	Displays the predefined parameter value.
Description	Displays the description of the predefined parameter value.

By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a parameter in the **Parameters** zone.

#### Related Topics

For more information on...	See...
<b>Price Item</b> screen	<a href="#">Price Item (Used for Viewing)</a> on page 176

#### Divisions

The **Divisions** zone lists the divisions to which the price item or price item bundle is associated. It contains the following column:

Column Name	Column Description
Division	Indicates the division to which the price item or price item bundle is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Division</b> screen appears where you can view the details of the respective division.

On clicking the **Broadcast**  icon corresponding to a division, the **Division-Specific Characteristics for Price Item** and **Division-Specific SQIs for Price Item** zones appear.

You can filter the list using the **Division** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

### Related Topics

### **Division-Specific Characteristics for Price Item**

The **Division-Specific Characteristics for Price Item** zone lists the characteristics defined for a price item or price item bundle in a specific division. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the price item or price item bundle characteristic is effective for the division.
Characteristic Type	Indicates the characteristic type.  <b>Note:</b> It has a link. On clicking the link, the <b>Characteristic Type</b> screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

### Related Topics

### Price Item Relationship

The **Price Item Relationship** zone lists the price items or price item bundles which are associated with the parent price item or added to the price item bundle. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Relationship Type	Indicates how the price item or price item bundle is related with the parent price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul>
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul>
	<b>Note:</b> The data appears in this column only when the associated price item is a bundle.

You can filter the list using various search criteria (such as, **Price Item**, **Description**, **Effective Start Date**, and **Relationship Type**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

You can associate or disassociate a price item or price item bundle from a parent price item and add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

## Editing a Price Item or Price Item Bundle

### Prerequisites

To edit a price item or price item bundle, you should have:

- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1\_PRICING)** feature configuration

### Procedure

To edit a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to edit.  
The **Price Item** screen appears.
3. Click the **Edit** button in the **Price Item** zone.

The **Price Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item or price item bundle.
- **Parameters** – Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

#### Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while editing the ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** – Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs and characteristics for the price item or price item bundle.
- **Price Item Characteristics** – Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item or price item bundle.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	Yes
	<b>Note:</b> The system does not allow you to change the price item usage from <b>Pricing and Billing</b> to <b>Pricing</b> for a price item or price item bundle.	
Price Item Type	Used to indicate the type of price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul>	Yes
	<b>Note:</b> This field appears only when the <b>Price Item Usage</b> field is set to <b>Pricing</b> .	
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Not applicable
Bundle Type	Used to indicate the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul>	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.  All the above mentioned values are available in the list when you are editing a price item bundle which is available for pricing and billing. However, when you are editing a price item bundle which is available for only pricing and when the price item type is set to <b>Fees</b> , you can only define a regular price item bundle. Therefore, by default, the value is set to <b>Regular</b> when the <b>Pricing</b> option is selected from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.	<b>Note:</b> This field is required when you are editing a price item bundle.

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle. <p><b>Note:</b></p> <p>This field appears only when the <b>Price Item Usage</b> field is set to <b>Pricing and Billing</b>.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Contract Type</b> field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.</p>	Yes

4. Modify the required details in the **Main** section.
5. Associate or disassociate a parameter from the price item or price item bundle, if required.

**Note:**

You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which will be used for aggregation (in other words, where the **Parameter Usage** field is set to **Aggregation**) anytime, whenever required. However, you can add a parameter which will be used for pricing (in other words, where the **Parameter Usage** field is set to **Pricing**) only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

6. Associate or disassociate the price item or price item bundle from the divisions, if required.

**Note:** If the price item or price item bundle is associated to a division to which you do not have access, then the corresponding row in the **Divisions** section is grayed out.

7. Define, edit, or remove division-specific SQIs from the price item or price item bundle, if required.
8. Define, edit, or remove division-specific characteristics from the price item or price item bundle, if required.
9. Define, edit, or remove characteristics from the price item or price item bundle, if required.
10. Click **Save**.

The changes made to the price item or price item bundle are saved.

## Price Item Relationship

Oracle Revenue Management and Billing allows you to associate two or more price items with each other, and thereby group them for various reasons, such as reporting, billing, and so on. In other words, you can define a price item to price item relationship. The price item to which a set of price items are associated is called a parent price item. You can also create a price item bundle and then add price items to the price item bundle. The main objective behind grouping price items or creating price item bundles is to offer discounts based on the volume across price items, facilitate minimum or maximum charge calculations across price items, or offer common price across price items.

While associating a price item with a parent price item or adding a price item to a price item bundle, you need to specify how the price item is related to the parent price item or price item bundle. You can add a price item to a price item bundle using the following relationship types:

- **Bundle** – Used while adding price items in the regular and phantom price item bundles.
- **Denominator** – Used while adding price items in the ratio price item bundles.
- **Numerator** – Used while adding price items in the ratio price item bundles.

However, you can associate a price item or price item bundle with a parent price item using the following relationship types:

- Other
- Custom
- Price Item
- Service
- Service Group

### Note:

You cannot add same set of price items using the same relationship type while defining two or more bundles with the same bundle type. For example, you cannot add P1 and P2 using the relationship type as Bundle while defining regular bundles named BUN1 and BUN2. However, you can use same set of price items while defining two or more price item to price item relationships.

If the multi parameter based pricing feature is enabled, you can add same set of price item and price item parameter combination (using the same relationship type) in more than one bundle (having the same bundle type) provided the price item parameter values are different.

The **Price Item Relationship** screen allows you to view the price items that are already associated with the parent price item or added to the price item bundle. It also allows you to associate or disassociate a price item or price item bundle

from the parent price item, or add or remove a price item or price item bundle from the price item bundle. This screen consists of the following zone:

- [Assigned Price Items](#) on page 186

### Assigned Price Items

The **Assigned Price Items** zone lists the price items or price item bundles that are already associated with the parent price item or added to the price item bundle. You will not find any records in this zone if the parent price item does not have any price item or price item bundle associated with it or if the price item bundle does not have any price item or price item bundle added to it. It contains the following sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search a particular price item or price item bundle which is associated with the parent price item or added to the price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
Effective Start Date	Used to search price items or price item bundles which are associated with the parent price item or added to the price item bundle from a particular date.	No
Relationship Type	Used to search price items or price item bundles which are related to the parent price item or added to the price item bundle using a particular relationship type. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.

Column Name	Column Description
Relationship Type	<p>Indicates how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul> <p><b>Note:</b> The <b>Bundle</b> relationship type is used while adding price items in the regular and phantom price item bundles. The <b>Denominator</b> and <b>Numerator</b> relationship types are used while adding price items in the ratio price item bundles. And, all other relationship types, such as <b>Other</b>, <b>Custom</b>, <b>Price Item</b>, <b>Service</b>, and <b>Service Group</b> are used while associating price items to the parent price item.</p>
Price Item Parameters	Indicates the parameters based on which you want to determine pricing for the price item.

You can associate or disassociate a price item or price item bundle from a parent price item, or add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

## Viewing the Price Items or Price Item Bundles Associated with a Parent Price Item

### Procedure

To view the price items or price item bundles associated with a parent price item:

1. Search for the price item in the **Price Item** screen.
2. In the **Search Results** section, click the **Price Item Relationship** (☰) icon in the **Price Item Relationship** column corresponding to the price item whose relationship details you want to view.  
The **Price Item Relationship** screen appears.
3. View the price items or price item bundles that are associated with the parent price item in the **Assigned Price Items** zone.

### Related Topics

## Associating a Price Item or Price Item Bundle with a Parent Price Item

### Prerequisites

To associate a price item or price item bundle with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs
- Price item or price item bundle associated to at least one division to which the parent price item belongs.

### Procedure

To associate a price item or price item bundle with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **Price Item Relationship** (🔍) icon in the **Price Item Relationship** column corresponding to the parent price item to which you want to associate a price item or price item bundle.  
The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.  
The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to associate with the parent price item.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.	
Relationship Type	Used to indicate how the price item or price item bundle is related with the parent price item. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul>	Yes
	<b>Note:</b> You can use the <b>Other</b> , <b>Custom</b> , <b>Price Item</b> , <b>Service</b> , or <b>Service Group</b> relationship type while associating a price item or price item bundle to the parent price item.	
Effective Start Date	Used to specify the date from when you want to associate the price item or price item bundle with the parent price item.	Yes
	<b>Note:</b> The effective start date cannot be later than the effective end date.	
Effective End Date	Used to specify the date till when you want to associate the price item or price item bundle with the parent price item.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameters	<p>Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.</p> <p>You must not use the <b>Price Item Parameters</b> field while associating a price item or price item bundle with a parent price item. This is because it is designed to be used while adding a price item or price item bundle to the ratio and phantom price item bundles.</p>	Not applicable
Characteristics	<p>On clicking the <b>Add</b> () icon, you can define relationship-specific characteristics for the price item or price item bundle.</p>	Not applicable

- Enter the required details in the **Price Item Relationship** screen.

**Note:** You can associate the same set of price items or price item bundles using the same relationship type to more than one parent price item. For example, you can associate the **P1** and **P2** price items using the **Service** relationship type to the **PP1** and **PP2** price items.

- Define relationship-specific characteristics for the price item or price item bundle, if required.
- If you want to associate more than one price item or price item bundle with the parent price item, click the **Add** () icon and then repeat the steps from 4 to 5.

**Note:** However, if you want to disassociate a price item or price item bundle from a parent price item, click the **Delete** () icon corresponding to the price item or price item bundle.

- Click **Save**.

The price item or price item bundle is associated with the parent price item.

## Adding a Price Item or Price Item Bundle to a Price Item Bundle

### Prerequisites

To add a price item or price item bundle to a price item bundle, you should have:

- Price item bundle (to which you want to add a price item or price item bundle) associated with the division to which the user belongs
- Price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated to the same contract type
- Parameters associated with the price item or price item bundle (which you want to add) when you want to determine pricing for the price item based on the parameters in the ratio and phantom price item bundles
- Regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated with the same parameters

**Note:** Not only the parameters, but also their details such as parameter usage, mandatory flag, and priority should be identical. Also, the date from when the parameters are effective for the price item bundle (to which you want to add a price item or price item bundle) should be earlier than or equal to the date from when the parameters are effective for the price item or price item bundle (which you want to add).

- Price item or price item bundle (which you want to add) associated to at least one division to which the price item bundle (to which you want to add a price item or price item bundle) belongs

### Procedure

To add a price item or price item bundle to a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Relationship** column corresponding to the price item bundle to which you want to add a price item or price item bundle. The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to add to the price item bundle.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	<p>Used to indicate how the price item or price item bundle is related to the price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul> <p><b>Note:</b> You can use the <b>Bundle</b> relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the <b>Denominator</b> and <b>Numerator</b> relationship type while adding a price item or price item bundle in the ratio price item bundles.</p>	Yes
Effective Start Date	<p>Used to specify the date from when the price item or price item bundle is added to the price item bundle.</p> <p><b>Note:</b> The effective start date cannot be later than the effective end date.</p>	Yes
Effective End Date	<p>Used to specify the date till when the price item or price item bundle is added to the price item bundle.</p> <p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	No
Price Item Parameters	<p>Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Price Item Parameters</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.</p>	No
Characteristics	<p>On clicking the <b>Add</b>  icon, you can define relationship-specific characteristics for the price item or price item bundle.</p>	Not applicable

4. Enter the required details in the **Price Item Relationship** screen.

**Note:**

You can add a price item or price item bundle to a regular price item bundle only when the regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) are associated with the same parameters for the specified date range.

You cannot add the same set of price items using the same relationship type to two or more price item bundles with the same bundle type. For example, you cannot add **P1** and **P2** using the **Bundle** relationship type to the **BUN1** and **BUN2** regular price item bundles.

If the multi parameter based pricing feature is enabled, you can add the same set of price item and price item parameter combination (using the same relationship type) to more than one bundle (with the same bundle type) provided the price item parameter values are different.

You cannot add the same price item or price item bundle in numerator and denominator while defining a ratio price item bundle.

5. Define relationship-specific characteristics for the price item or price item bundle, if required.
6. If you want to add more than one price item or price item bundle to the price item bundle, click the **Add** () icon and then repeat the steps from 4 to 5.

**Note:** However, if you want to remove a price item or price item bundle from a price item bundle, click the **Delete** () icon corresponding to the price item or price item bundle.

7. Click **Save**.

The price item or price item bundle is added to the price item bundle.

How to define relationship-specific characteristics for a price item or price item bundle	<a href="#">Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle</a> on page 195

**Setting the Parameters for a Price Item or Price Item Bundle****Prerequisites**

To set the parameters for a price item or price item bundle, you should have:

- Parameters (where the **Parameter Usage** field is set to **Pricing**) associated with the price item or price item bundle

**Procedure**

To set the parameters for a price item or price item bundle:

1. Click the **Search** () icon corresponding to the **Price Item Parameters** field.

The **Price Item Parameters** screen appears. It contains the following fields:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle for which you want to set the parameters.
Description	Displays the description of the price item or price item bundle.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Indicates the parameter which is associated with the price item or price item bundle.	Not applicable
	<b>Note:</b> Here, the system displays the price item parameter where the <b>Parameter Usage</b> field is set to <b>Pricing</b> .	
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Not applicable
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Not applicable
	<b>Note:</b> The priority for all parameters which are mandatory is set to 0.	
Parameter Value	Used to specify the parameter value.	Yes (Conditional)
	<b>Note:</b> If the parameter value type is <b>Predefined</b> or <b>Reference</b> , the <b>Search</b>  icon appears corresponding to the <b>Parameter Value</b> field. On clicking the <b>Search</b> icon, you can search for a parameter value.  You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	
		<b>Note:</b> This field is required when you want to determine pricing for the price item or price item bundle based on the parameter.

2. Enter the required details in the **Price Item Parameters** screen.
3. Click **OK**.

A comma-separated list of values appear in the **Price Item Parameters** column corresponding to the price item or price item bundle. The order in which parameter values appear in the price item parameter information string is controlled by the display order (which is defined while associating a parameter with a price item).

**Note:** The value specified for a parameter whose value type is set to **Adhoc** is validated using the validation algorithm attached to the respective parameter.

## Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle

### Prerequisites

To define relationship-specific characteristics for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item Relationship**)

### Procedure

To define relationship-specific characteristics for a price item or price item bundle:

1. Click the **Add** (  ) icon in the **Characteristics** column corresponding to the price item or price item bundle for which you want to define relationship-specific characteristics.

A grid appears corresponding to the price item or price item bundle with the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the relationship-specific characteristic is effective for the price item or price item bundle.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Relationship</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (  ) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.

2. Enter the required details in the **Characteristics** grid.
3. If you want to define more than one relationship-specific characteristic for the price item or price item bundle, click the **Add** (  ) icon and then repeat step 2.

**Note:** However, if you want to remove a relationship-specific characteristic from the price item or price item bundle, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The relationship-specific characteristics are defined for the price item or price item bundle.

## **Disassociating a Price Item or Price Item Bundle from a Parent Price Item**

### **Prerequisites**

To disassociate a price item or price item bundle from a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

### **Procedure**

To disassociate a price item or price item bundle from a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price Item Relationship** column corresponding to the parent price item from which you want to disassociate a price item or price item bundle. The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone. The **Price Item Relationship** screen appears.
4. Filter the price items or price item bundles associated to the parent price item, if required.
5. In the **Search Results** section, click the **Delete** () icon corresponding to the price item or price item bundle that you want to disassociate from the parent price item.
6. Click **Save**.

The price item or price item bundle is disassociated from the parent price item.

## Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item

### Prerequisites

To filter the price items or price item bundles associated with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

### Procedure

To filter the price items or price item bundles associated with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Relationship** column corresponding to the parent price item whose details you want to view. The **Price Item Relationship** screen appears.
3. Enter the search criteria in the **Assigned Price Items** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

The search results are filtered based on the specified criteria.

### Filtering the Price Items or Price Item Bundles Added to a Price Item Bundle

#### Prerequisites

To filter the price items or price item bundles added to a price item bundle, you should have:

- Price item bundle associated with the division to which the user belongs

#### Procedure

To filter the price items or price item bundles added to a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Relationship** column corresponding to the price item bundle whose details you want to view.

The **Price Item Relationship** screen appears.

3. Enter the search criteria in the **Assigned Price Items** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

The search results are filtered based on the specified criteria.

## Price Item Assignments

The **Price Item Assignments** screen allows you to view the active price lists, persons, and accounts where the price item or price item bundle is assigned. It contains the following zones:

- [Active Price Lists where Price Item is Assigned](#) on page 199
- [Persons to whom Price Item is Assigned](#) on page 199
- [Accounts where Price Item is Assigned](#) on page 200

### Active Price Lists where Price Item is Assigned

The **Active Price Lists where Price Item is Assigned** zone lists the active price lists where the pricing is defined for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Availability Start Date	Displays the date from when the price list is available for assignment.
Availability End Date	Displays the date till when the price list is available for assignment.

### Persons to whom Price Item is Assigned

The **Persons to whom Price Item is Assigned** zone lists the persons where the pricing is defined for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Person ID	Indicates the person to whom the price item is assigned.
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Price Assignment Start Date	Displays the date from when the price item is assigned to the person.
Price Assignment End Date	Displays the date till when the price item is assigned to the person.
Division	Indicates the division to which the person belongs.

Column Name	Column Description
Price Assignment ID	Indicates the price item pricing which is assigned to the person.

## Price List

---

A price list allows you to define standard prices for a group of price items. In other words, a price list is a rate card for price items or services which are offered to the accounts or persons. You can create more than one price list. For example, you can create a price list for large, medium-sized, and small customers. You can also create a set of price lists for different regions. You can define two types of price lists — **Standard** and **Promotional**. You can also set eligibility criteria for the price list with effective start date, end date, and description. At present, there is no functionality associated with the price list type. The implementation team can use the price list type to define the custom logic as per the business requirements.

A price list and price item pricing within the price list are effective for a particular duration. You can define multiple pricing for the same price item and variance parameter or product parameters combination within a price list only when the price item pricing date range is different. You can assign the same price item in multiple price lists and define different pricing for the price item in each price list based on the business requirements.

The system enables you to specify the duration for which the price list is available for assignment to an account or a person. However, note that at present, the availability start and end dates are not used in the product while assigning a price list to an account or a person. If required, the implementation team can build the custom logic using the availability start and end dates in the product.

Once you create a price list, you have to assign price items to the price list and define pricing for each price item assigned to the price list. The price lists are then assigned to accounts or persons to indicate the prices that will be charged for various price items or services offered to them. You can assign multiple price lists to an account or a person for an overlapping date range. But, you need to specify the priority or order for the price list in which the pricing from the price list should be considered. You can also assign the same price list to multiple accounts or persons.

You can define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit price item pricing from the price list hierarchy.

The system allows you to create the following:

- **Default Price List** – You can create a price list and set it as a default price list for a particular division. To define a default price list for a division, you need to set the value for the **Default Price List ID** parameter in the price assignment search algorithm which is attached to the division. If the effective price item pricing is not available

at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list and accordingly uses the price item pricing. You can have the same price list as a the default price list for multiple divisions.

- **Global Price List** – You can create one global price list in the system. It is used only when the price item pricing is not available at any level in the customer hierarchy and in the default price list associated with the division. You can assign only those price items in the global price list whose the **Global Price List** option is set to **Yes**. The global price list is used while searching an effective price item pricing only when the **Global Price List** parameter in the price assignment search algorithm (attached to the division) is set to **Y**. Finally, if the effective price item pricing is not available in the default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.
- **Template Price List** – You can define a template price list and assign template price item pricing to a template price list. You cannot assign template price list to an account or a person. You can only create a copy of a template price item pricing which is assigned to a template price list. Once you create a copy of the template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

## Price List (Used for Searching)

The **Price List** screen allows you to search for a price list using various search criteria. It also allows you to create a price list. This screen consists of the following zones:

- [Search Price List](#) on page 202
- [Price List Price Items](#) on page 205

### Search Price List

The **Search Price List** zone allows you to search for a price list using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search a price list.	Yes
Price List ID	Used to search price lists with a particular ID	No
Price List Description	Used to search price lists with a particular description.	No
Effective Start Date	Used to search price lists which are effective from a particular date.	No
Effective End Date	Used to search price lists which are effective till a particular date.	No
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> <li>• Standard</li> <li>• Promotional</li> </ul>	No
	<b>Note:</b> By default, the <b>Standard</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to indicate whether you want to search global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Availability Start Date	Used to search price lists which are available for assignment from a particular date.  <b>Note:</b> This field appears only when the <b>Advanced Search</b> link is clicked.	No
Availability End Date	Used to search price lists which are available for assignment till a particular date.  <b>Note:</b> This field appears only when the <b>Advanced Search</b> link is clicked.	No
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> <li>• Template</li> </ul> <b>Note:</b> This field appears only when the <b>Advanced Search</b> link is clicked.	No
Division	Used to search price lists which are associated with a particular division.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No
Parent Price List ID	Used to search price lists which can inherit pricing from a particular parent price list.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears. This field appears only when the <b>Advanced Search</b> link is clicked.	No
Parent Price List Effective Date	Used to search price lists which can inherit pricing from a parent price list on a particular date.  <b>Note:</b> This field appears only when the <b>Advanced Search</b> link is clicked.	No

**Note:** You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	Displays the concatenated string consisting of price list information and price list ID which are separated by a colon (:). <b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Copy Price List</b> screen appears where you can create a new price list using an existing price list.
Price List Pricing	On clicking the <b>Price List Pricing</b> (  ) icon, the <b>Price List Price Item Pricing</b> screen appears where you can view price list price items and assign price items.
Price List Assigned To	On clicking the <b>Price List Assigned To</b> (  ) icon, the <b>Price List Assignments</b> screen appears where you can view the details of the price list assigned.
Eligible Accounts/ Persons	On clicking the <b>Eligible Accounts/Persons</b> (  ) icon, the <b>Persons and Accounts Eligible for Price List Assignment</b> screen appears where you can view the details of the price list and can also search for eligible accounts and persons to be assigned to the price list.

**Note:** However, when you search for a price list by specifying the date (which can be current, past or future date) in the **Parent Price List Effective Date** field, the system retrieves the price lists that meet the search criteria along with the details of the parent price list that is effective on that date.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

The **Price List Price Items** zone appears on clicking the broadcast **Broadcast** () icon corresponding to the price list.

### Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. This zone contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string consisting of pricing information and pricing ID which are separated by a colon (:) for the price list.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> window appears with the details of the respective pricing.</p>
Pricing Parameters	<p>Used to specify multiple parameters based on which you want to determine the pricing utilization.</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>
Pricing Status	<p>Displays the status of pricing for the price item. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	<p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>

By default, the **Price List Price Items** zone does not appear in the **Price List** screen. It appears only when you click the **Broadcast**  icon corresponding to the price list in the **Search Price List** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

## **Searching for a Price List**

### **Prerequisites**

To search for a price list, you should have:

- Divisions defined in the application
- Price list associated with the division to which the user belongs

### **Procedure**

To search for a price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.  
A sub-menu appears.
3. Click the **Search** option from the **Price List** sub-menu.  
The **Price List** screen appears.
4. Enter the search criteria in the **Search Price List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

## Viewing Price Items Assigned to a Price List

### Prerequisites

To view price items assigned to a price list, you should have:

- An algorithm defined using the **C1-PLPINFO** algorithm type and attached to **Pricelist Products Assignment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

### Procedure

To view price items assigned to a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the price list whose price items you want to view.

The **Price List Price Items** zone appears.

3. View the price items that are assigned to the price list in the **Price List Price Items** zone.

### Related Topics

## Creating a Price List

### Procedure

To create a price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.  
A sub-menu appears.
3. Click the **Add** option from the **Price List** sub-menu.

The **Price List** screen appears. It consists of the following sections:

- **Main** – Used to specify basic details about the price list.
- **Hierarchy** – Used to define parent price list for the price list for a particular duration.
- **Divisions** – Used to associate price list with one or more divisions.
- **Eligibility Criteria** – Used to define eligibility criteria for price list.
- **Characteristics** – Used to define characteristics for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	<b>Note:</b> By default, the current date appears in this field.	
Effective End Date	Used to specify the date till when the price list is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Standard</li> <li>• Promotional</li> </ul>	Yes
	<b>Note:</b> By default, the value is set to <b>Standard</b> .	
Global Price List	Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person.	No
	<b>Note:</b> At present, the availability start date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person.	No
	<b>Note:</b> The availability end date cannot be earlier than the availability start date.  At present, the availability end date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• <b>Active</b> – Used to indicate that the price list is used for billing.</li> <li>• <b>Proposed</b> – Used to indicate that the price list is used for quotations.</li> <li>• <b>Template</b> – Used to indicate that the price list is a template price list.</li> </ul>	Yes
	<b>Note:</b> By default, the value is set to <b>Active</b> .	

**Tip:** Alternatively, you can access the **Price List** screen by clicking the **Add** button in the **Page Title** area of the **Price List** screen.

4. Enter the required details in the **Main** section.

**Note:** By default the **Main** section is displayed.

5. Click the **Show All** link from the **Section** to view all the sections and define or associate the following:

- Define parent price list for the price list, if required.
- Associate price list with one or more divisions, if required.
- Define eligibility criteria for the price list, if required.
- Define characteristics for the price list, if required.

6. Click **Save**.

**Note:** The price list ID is generated automatically when the price list is created.

How to define eligibility criteria for the price list	<a href="#">Defining Eligibility Criteria for a Price List</a> on page 213

### Defining the Price List Hierarchy

Oracle Revenue Management and Billing allows you to define the price list hierarchy. It helps you to inherit the price item pricing from the parent price list if the price item pricing is not available in the price list (assigned to the account, person, or parent person). And, if the price item pricing is not available in the parent price list, the system will search for the price item pricing in the parent's parent price list (i.e. in the grandparent price list) and continue till it reaches the last level in the hierarchy.

In other words, when you define the price list hierarchy and assign the price list to an account or a person, the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned

price list. However, if the price item pricing is available on both the assigned and parent price lists, the system derives the price item pricing from the assigned price list.

You can define multiple parent price lists for a price list. But, only one parent price list is effective for a particular duration. Two or more price lists can have the same parent price list.

### **Procedure**

To define the price list hierarchy:

1. Click the **Hierarchy** or **Show All** link from the **Section** in the **Price List** window when you are creating or editing a price list.

The **Hierarchy** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List Effective From Date	Used to specify the date from when the price list can inherit pricing from the parent price list.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a parent price list for the price list.
Parent Price List Effective To Date	Used to specify the date till when the price list can inherit pricing from the parent price list.	No
	<b>Note:</b> The effective to date cannot be earlier than the effective from date and later than price list effective end date.	
Parent Price List ID	Used to specify the ID of the parent price list.	Yes (Conditional)
	<b>Note:</b> On specifying the ID for a parent price list, the description of the parent price list appears corresponding to the <b>Parent Price List ID</b> field.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.	<b>Note:</b> This field is required when you are defining a parent price list for the price list.

2. Enter the required details in the **Hierarchy** section.

**Note:** You can search for a price list by clicking the **Search**  icon corresponding to the **Parent Price List ID** field.

3. If you want to define more than one parent price list for the price list, click the **Add**  icon and then repeat step 2.

#### **Note:**

You can define multiple parent price lists for a price list. But, only one parent price list is effective for a particular duration. Also, while defining parent price list for a price list, you can only specify a price list which is effective during the specified duration.

If you want to remove a parent price list from the price list hierarchy, click the **Delete**  icon corresponding to the parent price list.

#### 4. Click **Save**.

The parent price lists are defined for the price list.

### Defining Characteristics for a Price List

#### Prerequisites

To define characteristics for a price list, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List**)

#### Procedure

To define characteristics for a price list:

1. Click the **Characteristics** or **Show All** link from the **Section** in the **Price List** window when you are creating or editing a price list.

The **Characteristics** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price list.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price List</b> . <b>Note:</b> This field is required when you are defining a characteristic for the price list.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field. <b>Note:</b> This field is required when you are defining a characteristic for the price list.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the price list, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price list, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price list.

### **Associating a Price List with a Division**

You can assign a price list only to those accounts or persons which belong to the division to which the price list is associated. Therefore, you need to associate the price list with appropriate divisions.

#### **Prerequisites**

To associate a price list with a division, you should have:

- Divisions defined in the application

#### **Procedure**

To associate a price list with a division:

1. Click the **Divisions** or **Show All** link from the **Section** in the **Price List** window when you are creating or editing a price list.

The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the price list.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

2. Select the required division from the list.
3. If you want to associate the price list with more than one division, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove the price list from a division, click the **Delete** () icon corresponding to the division.

4. Click **Save**.

The price list is associated with the divisions.

**Tip:** Alternatively, you can associate a price list with a division using the **Division** screen.

## Defining Eligibility Criteria for a Price List

### Prerequisites

To define eligibility criteria for a price list, you should have:

- The **Parameter Available For** section is updated with check box – Price List Eligibility Criteria selected while defining the parameter

### Procedure

To define eligibility criteria for a price list:

- Click the **Eligibility Criteria** or **Show All** link from the **Section** in the **Price List** window when you are creating or editing a price list.

The **Eligibility Criteria** section appears. It contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Criteria	On clicking the <b>Add</b> (  ) icon, you can associate eligibility-criteria of parameter for the price list.	Yes (Conditional)
Effective Start Date	Used to specify the date from when the criteria is effective for the price list.	Yes (Conditional)
Effective End Date	Used to specify the date till when the criteria is effective for the price list.	Yes (Conditional)
Description	Used to specify the description for the criteria type.	No

- Enter the required details in the **Eligibility Criteria**
- If you want to define more than one eligibility criteria for the price list, click the **Add** (  ) icon and then repeat step 2.

**Note:** However, if you want to remove the eligibility criteria, click the **Delete** (  ) icon corresponding to the criteria.

- Associate eligibility-criteria of parameter for the price list, if required.
- Click **Save**.

The eligibility criteria are defined for the price list.

## Copying a Price List

### Prerequisites

To copy a price list, you should have:

- Price list (whose copy you want to create) defined in the application
- Price list (whose copy you want to create) associated with the division to which the user belongs

### Procedure

To copy a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Copy**  icon in the **Copy** column corresponding to the price list using which you want to create a new price list.

The **Price List** window appears. It contains the following sections:

- **Main** – Used to specify basic details about the price list.
  - **Hierarchy** – Used to define parent price list for the price list for a particular duration.
  - **Divisions** – Used to associate price list with one or more divisions.
  - **Eligibility Criteria** – Used to define eligibility criteria for price list.
  - **Characteristics** – Used to define characteristics for the price list.
3. Enter the required details in the **Main** section.
  4. Add, edit, or remove the parent price list details in **Hierarchy** section, if required.
  5. Add, edit, or remove the details in the **Divisions** section, if required.
  6. Add, edit, or remove the price list eligibility criteria and parameter eligibility-criteria for price list in the **Eligibility Criteria** section, if required.
  7. Add, edit, or remove the details in the **Characteristics** section, if required.
  8. Click **Save**.

**Note:** The price list ID is generated automatically when the price list is created.

## Viewing the Price List Details

### Procedure

To view the details of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to view.

The **Price List** screen appears. It contains the following tab:

- **Main** – Displays information about the price list. It contains the following zones:
    - **Price List** – Displays the basic details of the price item or price item bundle.
    - **Eligibility Criteria** – Lists the eligibility criteria to which the price list is associated.
3. View the details of the price list in the **Price List** screen.
  4. View the eligibility criteria to which the price list is associated in the **Eligibility Criteria** zone.

## Price List (Used for Viewing)

The **Price List** screen allows you to view the details of a price list. It also allows you to edit a price list. It consists of the following tab:

- **Main** – Displays information about the price list. It contains the following zones:
  - **Price List** – Displays the details of the price list.
  - **Eligibility Criteria** – Displays the eligibility criteria for the price list.

### Price List

The **Price List** zone displays the details of the price list. This zone contains the following sections:

- **Main** – This section provides basic information about the price list. It contains the following fields:

Field Name	Field Description
Price List ID	Displays the price list ID.
Price List Description	Displays the description for the price list.
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Price List Type	Indicates the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Standard</li> <li>• Promotional</li> </ul>
Global Price List	Indicates whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End date	Displays the date till when the price list is available for assignment to an account or a person.
Validity Period (in Days)	Displays the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.

Field Name	Field Description
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• <b>Active</b> – Indicates that the price list is used for billing.</li> <li>• <b>Proposed</b> – Indicates that the price list is used for quotations.</li> <li>• <b>Template</b> – Indicates that the price list is a template price list.</li> </ul>

- **Hierarchy** – This section displays the parent price list for a particular duration. It contains the following columns:

Column Name	Column Description
Parent Price List ID	Displays the ID of the parent price list.
Parent Price List Effective From Date	Displays the date from when the price list can inherit pricing from the parent price list.
Parent Price List Effective To Date	Displays the date till when the price list can inherit pricing from the parent price list.

- **Divisions** – This section displays the price list with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the price list.  <b>Note:</b> It has a link. On clicking the link, the <b>Division</b> screen appears where you can view the details of the respective division.

- **Characteristics** – This section displays characteristics for the price list. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price list.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Record Actions** – This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price list.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the price list is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Eligibility Criteria

The **Eligibility Criteria** zone displays the eligibility criteria of the price list. It contains the following columns:

Field Name	Field Description
Effective Start Date	Displays the date from when the criteria is effective for the price list.
Effective End Date	Displays the date till when the criteria is effective for the price list.
Description	Displays the description for the criteria type.
Sequence Number	Indicates the order in which the price list eligibility criteria should be executed.
Parameter	Indicates the parameter (on the left hand side) is used in the pricing eligibility criteria.
Operator	Displays the relational operator to define the relation between the parameter name and value.
Parameter Value Type	Indicates whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value.
Parameter	Indicates the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).
Parameter Value	Indicates the parameter value against which you want to compare the parameter (on the left hand side).
Is True	Indicates what happens when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>
Is False	Indicates what happens when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>

Field Name	Field Description
Is Insufficient	<p>Indicates what happens when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>

### Editing a Price List

#### Procedure

To edit a price list:

1. Search for the price list in the **Price List** screen.
2. Click the **Edit** button in the **Record Actions** section.

The **Price List** window appears. It consists of the following sections:

- **Main** – Used to specify basic details about the price list.
- **Hierarchy** – Used to define parent price list for the price list for a particular duration.
- **Divisions** – Used to associate price list with one or more divisions.
- **Eligibility Criteria** – Used to define eligibility criteria for price list.
- **Characteristics** – Used to define characteristics for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	<p>Used to specify the date from when the price list is effective.</p> <p><b>Note:</b> The system will not allow you to change the effective start date when:</p> <ul style="list-style-type: none"> <li>• There is a price item assigned to the price list on that date.</li> <li>• The price list is assigned to an account or a person on that date.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the price list is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Standard</li> <li>• Promotional</li> </ul>	Yes
Global Price List	Used to indicate whether the price list is a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person.	No
	<b>Note:</b> At present, the availability start date is not used in the product while assigning a price list to an account or a person. It is available for future use.	
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person.	No
	<b>Note:</b> The availability end date cannot be earlier than the availability start date.  At present, the availability end date is not used in the product while assigning a price list to an account or a person. It is available for future use.	
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Active</b> – Used to indicate that the price list is used for billing. This value appears only when you are editing a proposed price list</li> <li>• <b>Proposed</b> – Used to indicate that the price list is used for quotations.</li> <li>• <b>Template</b> – Used to indicate that the price list is a template price list.</li> </ul>	Yes
	<b>Note:</b> You cannot change the status of an active and template price list.	

3. Modify the details in the **Main** section, if required.

**Note:** By default the **Main** section is displayed.

4. Click the **Show All** link from the **Section** to view all the sections and define or associate the following:
- Add, edit or remove parent price list from the price list hierarchy, if required.
  - Associate or remove the price list from the divisions, if required.

**Note:** You can only view those divisions to which you have access in the **Division** list. If the price list is associated to a division to which you do not have access, then the division is grayed out.

- Define, edit, or remove eligibility criteria from the price list, if required
  - Define, edit, or remove characteristics from the price list, if required.
5. Click **Save**.

The changes made to the price list are saved.

## **Price List Price Item Pricing**

Once a price list is created, you can either assign a price item to the price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to the price list. The **Price List Price Item Pricing** screen allows you to:

- View and filter the price items that are assigned to the price list
- Search and assign price items to the price list
- Copy a price item pricing and assign it to the price list

This screen consists of the following zones:

- [Price List Price Items](#) on page 221
- [Search Price Item](#) on page 222

### Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. This zone contains the following columns:

Column Name	Column Description
Pricing Information	Displays the details of price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Edit	On clicking the <b>Edit</b> (  ) icon, you can edit the price item from the price list.
Delete	On clicking the <b>Delete</b> (  ) icon, you can remove the price item from the price list.  <b>Note:</b> The <b>Delete</b> icon appears in this column only when the price list is not yet assigned to any account or person.  This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to edit a price item from the price list	<a href="#">Editing a Price Item Pricing</a>
How to remove a price item from the price list	<a href="#">Removing a Price Item from a Price List</a> on page 228

### **Search Price Item**

You can assign a price item or price item bundle to a price list and then define pricing for the price item or price item bundle, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Search By	Used to indicate whether you want to search price item, pricing assigned to price list and override pricing for an account, or person. The valid values are: <ul style="list-style-type: none"> <li>• Price Item</li> <li>• Price list Pricing</li> <li>• Account Override Pricing</li> <li>• Person Override Pricing</li> </ul>	Yes
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.  <b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	No
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Bundle	Used to indicate whether you want to search for price item bundles. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price List ID	Used to search pricing of price items or price item bundles which are assigned to a particular price list.  <b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.	No
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.  <b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	No
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.  <b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	No
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul> <b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	No
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search pricing of price items or price item bundles which are assigned to a particular account.	Yes
	<b>Note:</b> This field appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.	
Person ID	Used to search pricing of price items or price item bundles which are assigned to a particular person.	Yes
	<b>Note:</b> This field appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.	

<b>Note:</b> You must specify at least one search criterion while searching for a price item or price item bundle. You can search for an account, person by clicking the <b>Search</b>  icon corresponding to the respective field.
--

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the price list belongs. It may also include price items or price item bundles that are already assigned to the price list in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the <b>Assign</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing.
Price Item Information	Displays details of the price item or price item bundle.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle.
Copy	On clicking the <b>Copy</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.
Pricing Information	Displays details of the price item pricing.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> window appears with the details of the respective price item pricing.

Column Name	Column Description
Account Information	<p data-bbox="570 212 1468 302">Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 331 1468 632"><b>Note:</b> This column appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list. It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. The account information string appears only when an algorithm defined using the <b>C1-AC-INFO</b> algorithm type is attached to the <b>Account Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Person Information	<p data-bbox="570 688 1468 779">Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 808 1468 1108"><b>Note:</b> This column appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list. It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person. The person information string appears only when an algorithm defined using the <b>PERS-INFO</b> algorithm type is attached to the <b>Person Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Price List Information	<p data-bbox="570 1165 1468 1255">Indicates the price list to which the price item pricing is assigned. ## Editing a Price Item Pricing of a Price List

### Prerequisites

To edit a price item pricing of a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Price List Pricing** (  ) icon corresponding to the price list whose details you want to view.

The **Price List Price Item Pricing** screen appears.

3. Price assignments effective for the price list appears in the **Price List Price Items** zone.
4. Click the **Edit** (  ) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="607 642 1203 884" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="607 1108 1203 1192" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="607 1417 1203 1501" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="545 1577 1203 1692" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Active</b> – Indicates that the price assignment is used for billing.</li> <li>• <b>Inactive</b> – Indicates that the price assignment is no longer used for billing.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is to be used for quotations.</li> <li>• <b>Template</b> – Indicates that the price assignment is a template price list.</li> </ul> <p><b>Note:</b> If a price assignment is in <b>Active</b> status, you can change its status to <b>Inactive</b>. If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b>.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <p><b>Note:</b> Rate schedules control how the bills for the price item will be calculated. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.</p>	Yes
Pricing Rule Type	<p>Used to indicate the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are editing a two-dimensional pricing rule.</p>
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> By default, <b>Yes</b> is selected.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	

5. Modify the details in the **Main** section, if required.
6. Edit the TFM Information in a price item pricing, if required.
7. Edit the characteristics for a price item pricing, if required.
8. Edit the parameters for a price item pricing, if required.
9. Click **Save**.

The changes made to the price item pricing are saved.

### **Assigning a Price Item to a Price List**

#### **Prerequisites**

To assign a price item to a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

#### **Procedure**

To assign a price item to a price list:

1. Search for the price list in the **Price List** screen.

- In the **Search Results** section, click the **Price List Pricing** () icon corresponding to the price list whose details you want to view.

The **Price List Price Item Pricing** screen appears.

- Search for the price item that you want to assign to the price list in the **Search Price Item or Price Item Pricing** zone.

- In the **Search Results** section, click the **Assign** () icon in the **Assign** column corresponding to the price item that you want to assign to the price list.

The **Price Item Pricing** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the price item pricing.
- TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- Characteristics** – Used to define characteristics for the price item pricing.
- Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>By default, the current system date appears in this field.</p> <p>The effective start date cannot be later than the effective end date.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="602 642 1195 884" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="602 1108 1195 1192" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="602 1417 1195 1501" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> <li>• <b>Template</b> – Indicates that the price assignment is a template price list.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.  <b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.	Yes
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Two-Dimensional</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul> <b>Note:</b> By default, <b>Yes</b> is selected.	Yes
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.  <b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	Yes

- Enter the required details in the **Main** section.
- Define TFM Information in a price item pricing, if required.
- Define characteristics for a price item pricing, if required.
- Define parameters for a price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item.

**Note:** A bundle cannot be assigned if its child price items are already assigned to a price list and vice versa, in the same date range.

### **Defining Characteristics for a Price Item Pricing**

#### **Prerequisites**

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

#### **Procedure**

To define characteristics for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

<b>Column Name</b>	<b>Column Description</b>	<b>Mandatory (Yes or No)</b>
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Pricing</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the price item pricing, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item pricing.

## **Defining Parameters for a Price Item Pricing**

### **Prerequisites**

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

### **Procedure**

To define parameter details segment for a price item pricing that is assigned to an account:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> window appears. The parameter search results displays only those parameters where the <b>Price Item</b> check box is selected	
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> <li>• Parameter Description</li> <li>• Mandatory (Yes or No)</li> <li>• Priority</li> </ul>	Not applicable
Parameter Value	Used to specify the value of the parameter.	Yes

2. Enter the required details in the **Price Item and Parameter Information** section.
3. If you want to define more than one parameter information for the price item pricing, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

4. Click **Save**.

The parameters are defined for the price item pricing.

### **Defining TFM Information in a Price Item Pricing**

#### **Prerequisites**

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

#### **Procedure**

To define the TFM information in a price item pricing:

1. Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quaterly</li> <li>• Yearly</li> </ul>	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines Across Transaction</li> </ul>	Yes

- Enter the required details in the **TFM Information** section.

**Note:** **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- Click **Save**.

The transactions are defined for the price item pricing.

## Price List Assignment

Once a price list is defined, you can assign it to accounts or persons to indicate the prices that will be charged for the price items or services offered to the accounts or persons. You can assign multiple price lists to an account or a person along with the priority or order in which the pricing should be considered. You can also define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit the price item pricing from the price list hierarchy.

For example, suppose you have PL1 (with priority 10) and PL2 (with priority 20) assigned to an account or a person. While determining pricing for a price item, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing in PL2. The system will behave in this manner only when the price list inheritance for PL1 is set to **No** during the price list assignment.

If the price list inheritance while assigning PL1 and PL2 to an account or a person is set to **Yes**, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing from the price list hierarchy defined for PL1. However, if the system does not find the price item pricing from the price list hierarchy of PL1, it will then search for the price item pricing in PL2 (assigned to the account or person with priority 20). If the system still does not find the price item pricing in PL2, it will search for the price item pricing from the price list hierarchy defined for PL2.

The **Price List Assignment** screen allows you to search and assign a price list to the account or person. It also allows you to view the price lists that are already assigned to the account or person. This screen consists of the following zones:

- [Price List Assignments](#) on page 242
- [Price List Price Items](#) on page 244
- [Search Price List for Assignment](#)

### Price List Assignments

The **Price List Assignments** zone allows you to view and filter price lists that are currently assigned to the account or person. You can also search for the price lists assigned to the account or person which either inactive or expired. You will not find any records in this zone if the account does not have any price lists assigned to it. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for current, inactive, or historical price list assignments. The valid values are: <ul style="list-style-type: none"> <li>• Current Price List Assignments</li> <li>• Inactive Price List Assignments</li> <li>• Historical Price List Assignments</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Current Price List Assignments</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to search a particular price list assigned to an account or a person.	No
Price List Description	Used to search price lists which are assigned to the account or person having a particular description.	No
Effective Start Date	Used to search price lists which are assigned to the account or person from a particular date.	No
Effective End Date	Used to search price lists which are assigned to the account or person till a particular date.	No
Assignment Status	<p>Used to search price list assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Rejected</li> <li>• Proposed</li> <li>• Inactive</li> </ul> <p><b>Note:</b> The <b>Inactive</b> option is not available in the <b>Assignment Status</b> list when you have selected the <b>Current Price List Assignments</b> or <b>Historical Price List Assignments</b> option from the <b>Search By</b> list. This field is disabled, and by default, the <b>Inactive</b> option is selected when you select the <b>Inactive Price List Assignments</b> option from the <b>Search By</b> list.</p>	No
Price List Inheritance	<p>Used to search price list assignments where the account or person can inherit price item pricing from the price list hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for price list assignments.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	<p>Displays information about the price list which is assigned to the account or person.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears with the details of the respective price list.</p>
Effective Start Date	Displays the date from when the price list is assigned to the account or person.
Effective End Date	Displays the date till when the price list is assigned to the account or person.

Column Name	Column Description
Priority	Indicates the order in which the assigned price list must be considered while determining the price item pricing for the account or person.
Assignment Status	Indicates the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Rejected</li> <li>• Proposed</li> <li>• Inactive</li> </ul>
Price List Inheritance	Indicates whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the account or person can inherit the price item pricing from the price list hierarchy.
Edit	On clicking the <b>Edit</b>  icon, the <b>Price List Assignment</b> screen appears where you can edit the price list assignment.

On clicking the **Broadcast**  icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

### **Price List Price Items**

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. This zone contains the following columns:

Column Name	Column Description
Pricing Information	Displays information about the price item pricing.  <b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> screen appears where you can view the details of the price item pricing.

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

### Search Price List for Assignment

The **Search Price List for Assignment** zone allows you to search for a price list that you want to assign to the account or person. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search against all price lists or against those price lists which are already assigned to an account or a person. The valid values are: <ul style="list-style-type: none"> <li>• Price List</li> <li>• Assigned Price List</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Price List</b> option is selected.	
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search price lists with a particular description.	No
Effective Start Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are effective from a particular date onwards. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are assigned to an account or a person from a particular date onwards.	No
Effective End Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are effective till a particular date. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are assigned to an account or a person till a particular date.	No
Account ID	Used to search price lists assigned to a particular account.	No
	<b>Note:</b> This field appears only when you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list.	
Person ID	Used to search price lists assigned to a particular person.	No
	<b>Note:</b> This field appears only when you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list.	
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>	No
	<b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> <li>Standard</li> <li>Promotional</li> </ul>	No
	<b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.	
Only Eligible Price Lists	Used to search price lists which are eligible for the account or person.	No
	<b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.	
Eligibility Date	Used to search price lists which are eligible for the account or person from a particular date.	No
	<b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.  By default, the current date appears in this field when the <b>Only Eligible Price Lists</b> option is selected. You can change the value, if required.	

**Note:** You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the <b>Assign</b> (  ) icon, the <b>Price List Assignment</b> screen appears where you can assign the price list to the account or person.
Price List Information	Displays the information about the price list.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.
Account Information	Displays the information about the account.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

Column Name	Column Description
Person Information	Displays the information about the person.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Effective Start Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, the date from when the price list is effective appears in this column. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, the date from when the price list is assigned to the account or person appears in this column.
Effective End Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, the date till when the price list is effective appears in this column. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, the date till when the price list is assigned to the account or person appears in this column.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.

### **Assigning a Price List to an Account**

#### **Prerequisites**

To assign a price list to an account, you should have:

- Price list defined in the application
- Price list associated with the division to which the account belongs

#### **Procedure**

To assign a price list to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to edit.

A menu appears.

3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** – Lists the price lists that are already assigned to the account.
  - **Price List Price Items** – Lists the price items that are assigned to the price list.
  - **Search Price List for Assignment** – Enables you to search for a price list that you want to assign to the account.
4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to an account or a person.
  5. Enter the search criteria in the **Search Price List for Assignment** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

**Note:** The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

7. In the **Search Results** section, click the **Assign** () icon corresponding to the price list that you want to assign to the account.

The **Price List Assignment** screen appears. It consists of the following sections:

- **Main** – Used to specify basic information while assigning the price list to the account.
- **Characteristics** – Used to define characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account to which you want to assign the price list.	Not applicable
Price List Information	Displays the information about the price list.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)								
Effective Start Date	Used to specify the date from when you want to assign the price list to the account.	Yes								
	<b>Note:</b> The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date.									
Effective End Date	Used to specify the date till when you want to assign the price list to the account.	No								
	<p><b>Note:</b></p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier:</p> <ul style="list-style-type: none"> <li>• Price list assignment validity end date (which is price list assignment start date + validity period)</li> <li>• Price list effective end date</li> </ul> <p>Let us understand this with the help of the following example:</p> <table border="1"> <tbody> <tr> <td><b>Price List Effective Start Date</b></td> <td>01-Jan-2015</td> </tr> <tr> <td><b>Price List Effective End Date</b></td> <td>31-Jan-2015</td> </tr> <tr> <td><b>Validity Period</b></td> <td>15 Days</td> </tr> <tr> <td><b>Price List Assignment Start Date</b></td> <td>15-Jan-2015</td> </tr> <tr> <td><b>Price List Assignment Validity End Date</b></td> <td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td> </tr> </tbody> </table> <p>In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date.</p>		<b>Price List Effective Start Date</b>	01-Jan-2015	<b>Price List Effective End Date</b>	31-Jan-2015	<b>Validity Period</b>	15 Days	<b>Price List Assignment Start Date</b>	15-Jan-2015
<b>Price List Effective Start Date</b>	01-Jan-2015									
<b>Price List Effective End Date</b>	31-Jan-2015									
<b>Validity Period</b>	15 Days									
<b>Price List Assignment Start Date</b>	15-Jan-2015									
<b>Price List Assignment Validity End Date</b>	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)									
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the account.	Yes								
Price List Inheritance	<p>Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> – Used to indicate that the account can inherit the price item pricing from the price list hierarchy.</li> <li>• <b>No</b> – Used to indicate that the account cannot inherit the price item pricing from the price list hierarchy.</li> </ul>	Yes								

Field Name	Field Description	Mandatory (Yes or No)
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Active</b> – Used to indicate that you want to use the price item pricing on the price list for billing.</li> <li>• <b>Proposed</b> – Used to indicate that you want to use the price item pricing on the price list for quotations.</li> </ul>	Yes

8. Enter the required details in the **Main** section.
9. Define characteristics for the price list assignment, if required.
10. Click **Save**.

The price list is assigned to the account.

## **Assigning a Price List to a Person**

### **Prerequisites**

To assign a price list to a person, you should have:

- Price list defined in the application
- Price list associated with the division to which the person belongs

### **Procedure**

To assign a price list to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to edit.

A menu appears.

3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** – Lists the price lists that are already assigned to the person.
  - **Price List Price Items** – Lists the price items that are assigned to the price list.
  - **Search Price List for Assignment** – Enables you to search for a price list that you want to assign to the person.
4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to an account or a person.

5. Enter the search criteria in the **Search Price List for Assignment** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

**Note:** The search results include only those price lists that are associated with the division to which the person belongs. It may also include price lists that are already assigned to the person in case those price lists match the search criteria.

7. In the **Search Results** section, click the **Assign**  icon corresponding to the price list that you want to assign to the person.

The **Price List Assignment** screen appears. It consists of the following sections:

- **Main** – Used to specify basic information while assigning the price list to the person.
- **Characteristics** – Used to define characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Information	Indicates the person to whom you want to assign the price list.	Not applicable
Price List Information	Displays the information about the price list.	Not applicable
Effective Start Date	Used to specify the date from when you want to assign the price list to the person.	Yes
	<b>Note:</b> The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date.	

Field Name	Field Description	Mandatory (Yes or No)										
Effective End Date	<p>Used to specify the date till when you want to assign the price list to the person.</p> <p><b>Note:</b></p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier:</p> <ul style="list-style-type: none"> <li>• Price list assignment validity end date (which is price list assignment start date + validity period)</li> <li>• Price list effective end date</li> </ul> <p>Let us understand this with the help of the following example:</p> <table border="1" data-bbox="521 751 1141 1129"> <tbody> <tr> <td><b>Price List Effective Start Date</b></td> <td>01-Jan-2015</td> </tr> <tr> <td><b>Price List Effective End Date</b></td> <td>31-Jan-2015</td> </tr> <tr> <td><b>Validity Period</b></td> <td>15 Days</td> </tr> <tr> <td><b>Price List Assignment Start Date</b></td> <td>15-Jan-2015</td> </tr> <tr> <td><b>Price List Assignment Validity End Date</b></td> <td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td> </tr> </tbody> </table> <p>In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date.</p>	<b>Price List Effective Start Date</b>	01-Jan-2015	<b>Price List Effective End Date</b>	31-Jan-2015	<b>Validity Period</b>	15 Days	<b>Price List Assignment Start Date</b>	15-Jan-2015	<b>Price List Assignment Validity End Date</b>	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)	No
<b>Price List Effective Start Date</b>	01-Jan-2015											
<b>Price List Effective End Date</b>	31-Jan-2015											
<b>Validity Period</b>	15 Days											
<b>Price List Assignment Start Date</b>	15-Jan-2015											
<b>Price List Assignment Validity End Date</b>	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)											
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the person.	Yes										
Price List Inheritance	<p>Used to indicate whether the person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> – Used to indicate that the person can inherit the price item pricing from the price list hierarchy.</li> <li>• <b>No</b> – Used to indicate that the person cannot inherit the price item pricing from the price list hierarchy.</li> </ul>	Yes										

Field Name	Field Description	Mandatory (Yes or No)
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Active</b> – Used to indicate that you want to use the price item pricing on the price list for billing.</li> <li>• <b>Proposed</b> – Used to indicate that you want to use the price item pricing on the price list for quotations.</li> </ul>	Yes

8. Enter the required details in the **Main** section.
9. Define characteristics for the price list assignment, if required.
10. Click **Save**.

The price list is assigned to the person.

How to define characteristics for a price list assignment	<a href="#">Defining Characteristics for a Price List Assignment</a>

## **Defining Characteristics for a Price List Assignment**

### **Prerequisites**

To define characteristics for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

### **Procedure**

To define characteristics for a price list assignment:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing characteristics for a price list assignment.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price List Assignment</b> .
		<b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list assignment, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price list assignment, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list assignment.

## Viewing Accounts and Persons where Price List is Assigned

### Prerequisites

To view accounts and persons where price list is assigned, you should have:

- Accounts and persons created in the application
- Price list defined and assigned to the accounts and persons

### Procedure

To view accounts and persons where price list is assigned:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.  
The **Price List** screen appears.
3. You can search for a price list by entering the search criteria in the **Search Price List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of price lists that meet the search criteria appears in the search results.
5. In the **Search Results** section, click the **Assigned To** (🔍) icon in the **Assigned To** column corresponding to the price list whose details you want to view.  
The **Price List Assignments** screen appears.
6. You can view the accounts and persons list where price list is assigned in the **Price List Assignments** screen.

## Persons and Accounts Eligible for Price List Assignment

The **Persons and Accounts Eligible for Price List Assignment** screen allows you to view the details of a price list. It also allows you to search for multiple eligible accounts or persons and assign them to the price list. This screen consists of the following zones:

- [Eligible Accounts](#) on page 267
- [Eligible Persons](#) on page 267

## Eligible Accounts

The **Eligible Accounts** zone allows you to search the eligible accounts for price list assignments. Moreover, it also allows you to assign the multiple eligible accounts to a price list. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division whose accounts you want to search.	Yes
Effective Date	Used to indicate the date from when the accounts are eligible for price list assignment.	No
Account ID	Used to indicate the account ID.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays the information about the eligible accounts where price list can be assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Assigned	Displays whether the account is assigned to the price list or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

## Eligible Persons

The **Eligible Persons** zone allows you to search the eligible persons for price list assignments. Moreover, it also allows you to assign the multiple eligible persons to a price list. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division whose persons you want to search.	Yes
Effective Date	Used to indicate the date from when the persons are eligible for price list assignment.	No
Person ID	Used to indicate the person ID.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays the information about the eligible persons where price list can be assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Assigned	Displays whether the person is assigned to the price list or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

## **Assigning a Price List to One or More Eligible Accounts**

### **Prerequisites**

To assign a price list to one or more eligible accounts, you should have:

- Price list defined in the application
- Accounts created in the application
- Price list should be associated with the division to which accounts belong.

### **Procedure**

To assign a price list to one or more eligible accounts:

1. Search for the eligible accounts in the **Eligible Accounts** zone of **Persons and Accounts Eligible for Price List Assignment** screen.
2. In the **Search Results** section, select the one or more accounts that you want to assign to the price list.
3. Click the **Assign** button available in the upper left corner of this section

The **Price List Assignment** screen appears. This screen contains following two sections:

- **Main** — Used to specify basic details about the price list. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Information	Displays the additional information about the price list.	Not applicable
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
Effective End Date	Used to specify the date till when the price list is effective.	No

Field Name	Field Description	Mandatory (Yes or No)
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the account.	No
Price List Inheritance	Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>	No
Priority Indicator	Used to set the priority of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Highest</b> — Used when you want the price list assignment to have the highest priority. It checks whether there are any other price list assignments for the account, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with highest priority minus one.</li> <li>• <b>Lowest</b> — Used when you want the price list assignment to have the lowest priority. It checks whether there are any other price list assignments for the account, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with lowest priority plus one.</li> </ul>	No

- **Characteristics** — Used to define characteristics for the price list.

#### 4. Click **Save**.

Selected accounts are assigned to the price list.

## Assigning a Price List to One or More Eligible Persons

### Prerequisites

To assign a price list to one or more eligible persons, you should have:

- Price list defined in the application
- Persons created in the application
- Price list should be associated with the division to which persons belong.

### Procedure

To assign a price list to one or more eligible persons:

1. Search for the eligible Persons in the **Eligible Persons** zone of **Persons and Accounts Eligible for Price List Assignment** screen.
2. In the **Search Results** section, select the one or more persons that you want to assign to the price list.
3. Click the **Assign** button available in the upper left corner.

The **Price List Assignment** screen appears. This screen contains following two sections:

- **Main** — Used to specify basic details about the price list. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Information	Displays the additional information about the price list.	Not applicable
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
Effective End Date	Used to specify the date till when the price list is effective.	No
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the person.	No
Price List Inheritance	Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Priority Indicator	Used to set the priority of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li><b>Highest</b> — Used when you want the price list assignment to have the highest priority. It checks whether there are any other price list assignments for the person, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with highest priority minus one.</li> <li><b>Lowest</b> — Used when you want the price list assignment to have the lowest priority. It checks whether there are any other price list assignments for the person, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with lowest priority plus one.</li> </ul>	No

- **Characteristics** — Used to define characteristics for the price list.

#### 4. Click **Save**.

Selected persons are assigned to the price list.

### **Defining Characteristics for a Price List Assignment**

#### **Prerequisites**

To define characteristics for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

#### **Procedure**

To define characteristics for a price list assignment:

1. Click the **Characteristics** tab in the **Price List Assignment** screen when you are assigning a price list to multiple persons or accounts and also editing the price list assignment details of multiple persons or accounts.

The **Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price List Assignment</b> .	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.

- Enter the required details in the **Characteristics** tab.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the price list assignment, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price list assignment, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list assignment.

## Pricing (Account)

The **Pricing (Account)** screen allows you to:

- View effective price assignments of an account
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to an account

- Edit or override a price item pricing
- Copy a price item pricing and assign it to an account

This screen consists of the following zones:

- [Effective Price Assignments for Account](#) on page 273
- [Search Price Item](#) on page 278

## Effective Price Assignments for Account

The **Effective Price Assignments for Account** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the account either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the account belongs. If required, you can filter effective price assignments using various search criteria.

**Note:** If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Indicates the account whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	<b>Note:</b> By default, this field is set to the system date.	

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account Agreed</b> – Means price item pricing is agreed for the account.</li> <li>• <b>Account Price List</b> – Means price item pricing is defined in the price list which is assigned to the account.</li> <li>• <b>Account Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account.</li> <li>• <b>Customer Agreed</b> – Means price item pricing is agreed for the main customer in the customer hierarchy.</li> <li>• <b>Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the main customer.</li> <li>• <b>Default Price List</b> – Means price item pricing defined in the price list is available in the default price list.</li> <li>• <b>Global Price List</b> – Means price item pricing defined in the price list is available in the global price list.</li> <li>• <b>Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer.</li> <li>• <b>Parent Customer Agreed</b> – Means price item pricing is agreed for the parent customer in the customer hierarchy.</li> <li>• <b>Parent Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the parent customer.</li> <li>• <b>Parent Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer.</li> <li>• <b>Product Default Price List</b> – Means product defined in the price list is available in the default price list.</li> </ul>	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Proposed</li> </ul>	No
	<b>Note:</b> By default, the <b>Active</b> option is selected.	
Show Default and Global Pricing	Used to search price assignments inherited from the default or global price list. The valid values are: <ul style="list-style-type: none"> <li><b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>Product-specific default price list defined for the division</li> <li>Default price list defined for the division</li> <li>Global price list</li> </ul> </li> <li><b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>Product-specific default price list defined for the division</li> <li>Default price list defined for the division</li> <li>Global price list</li> </ul> </li> </ul>	No
	<b>Note:</b> By default, the <b>No</b> option is selected.	
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	Used to search the price list using the following values: <ul style="list-style-type: none"> <li>Best Fit</li> <li>Exact Match</li> </ul>	No
	<b>Note:</b> By default, the <b>Exact Match</b> option is selected.	

**Note:** The **Search**  icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- **Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search price assignments which are defined using a particular parameter.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	
Parameter Value	Used to search price assignments which are defined using a particular parameter value.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	

**Note:**

The **Search**  icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, you can search for a parameter.

You can only use those parameters where the source entity is set to **Transaction**.

The **Search**  icon appears corresponding to the **Parameter Value** field only when the value type of the parameter is **Predefined** or **Reference**. If the value type of the parameter is **Predefined** then on clicking the **Search** icon, you can search for a predefined parameter value. However, if the value type of the parameter is **Reference** then on clicking the **Search** icon, you can search for a reference parameter value.

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the account.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

Column Name	Column Description
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> <li>• Product Default Price List</li> </ul>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Price Item Pricing</b> screen appears where you can edit the details of the price item pricing.
	<b>Note:</b> The <b>Edit</b> icon appears only when the assignment level is <b>Account Agreed</b> .

Column Name	Column Description
Override	<p>On clicking the <b>Override</b>  icon, the <b>Price Item Pricing</b> screen appears where you can override the price item pricing.</p> <p><b>Note:</b></p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>Y</b>, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>N</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

**Note:** The number of records that can be displayed in the **Search Results** section is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2045.

### Search Price Item

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> <li>• Price Item</li> <li>• Price List Pricing</li> <li>• Account Override Pricing</li> <li>• Person Override Pricing</li> </ul>	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	
Bundle	Used to search whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	
Price List ID	Used to search the price list to which the price item pricing is assigned.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	
Account ID	Used to search pricing of price items which are assigned to a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search pricing of price items which are assigned to a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.	

**Note:**

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search**  icon appears corresponding to the **Price List ID**, **Price Item**, **Account ID**, and **Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the account belongs. It may also include price items or price item bundles that are already assigned to the account in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the <b>Assign</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing.
	<b>Note:</b> This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.
Price Item Information	Displays details of the price item or price item bundle.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle. This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.
Copy	On clicking the <b>Copy</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.
Pricing Information	Displays details of the price item pricing.
	<b>Note:</b> This column appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.

Column Name	Column Description
Account Information	<p data-bbox="570 207 1461 302">Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 327 1461 663"><b>Note:</b> This column appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list. It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. The account information string appears only when an algorithm defined using the <b>C1-AC-INFO</b> algorithm type is attached to the <b>Account Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Person Information	<p data-bbox="570 684 1461 779">Indicates the person to which the price item pricing is assigned. ## Viewing Effective Price Assignments of an Account

### Prerequisites

To view effective price assignments of an account, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

**Procedure**

To view effective price assignments of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. View the pricing for price items or price item bundles assigned to the account (either directly or through the customer hierarchy) in the **Effective Price Assignments for Account** zone.
5. Filter the effective price assignments of the account, if required.

How to filter effective price assignments of an account	<a href="#">Filtering Effective Price Assignments of an Account</a> on page 284

**Filtering Effective Price Assignments of an Account****Prerequisites**

To filter effective price assignments of an account, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

**Procedure**

To filter effective price assignments of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Account** zone.

**Note:**

You can search for a price item, parameter, or parameter value by clicking the **Search** () icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add** () icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the

**Delete** () icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

### 5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Account** zone.

## Exporting Effective Price Assignments of an Account

### Prerequisites

To export effective price assignments of an account in the CSV format, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

### Procedure

To export effective price assignments of an account in the CSV format:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

4. Filter the effective price assignments of the account, if required.
5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.

A message appears confirming whether you want to open or save the EffectivePricing.csv file.

6. Select the **Save As** option from the **Save** list.

The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	Indicates the variance parameter which is used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing — Invoice Based</li> <li>• Post Processing — Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>

Column Name	Column Description
Price List Description	Displays the description of the price list.
	<b>Note:</b> The description appears only when the assignment level is <b>Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, or Parent Customer Inherited Price List.</b>
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Setup of the Rate Component</li> </ul>
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>• AC</li> <li>• NC</li> </ul>
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.

Column Name	Column Description
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quarterly</li> <li>• Yearly</li> </ul>
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item is billed individually or at the price item bundle level.

## Copying a Price Item Pricing

### Prerequisites

To copy a price item pricing and assign it to an account, you should have:

- Account (to which you want to assign the price item pricing) defined in the application
- Account associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

### Procedure

To copy a price item pricing and assign it to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

- In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

- Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the account.
- Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

- In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

- Modify the required pricing details.

**Note:**

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

- Edit the characteristics of the price item pricing, if required.
- Click **Save**.

A new price item pricing is defined and assigned to the account.

## **Viewing a Price Item Pricing**

### **Procedure**

To view a price item pricing and assignment details:

- Search for the account in the **Customer 360° View** screen.
- In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

- Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

- Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
- In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
  - Pricing Information** – Displays the pricing information of the price item.
  - TFM Information** – Displays the transaction feed management information of the price item.
  - Characteristics** – Displays the details of price item pricing characteristics.
  - Price Item and Parameter Information** – Displays the price item parameter details.
  - Record Actions** – Displays the record actions of the price item pricing.
  - Record Information** – Displays the record information of the price item pricing.
- Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- Rate Components** – Displays the rate components of the price item.
- Price Components** – Displays the details of price components of the price item.
- Tiering Criteria** – Displays the tiering criteria of the price item pricing.

**Note:** This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

**Note:** This zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

- View the basic details of price item pricing in the **Price Item Pricing** zone.
- View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
- View the rate components of price item in the **Rate Components** zone.
- View the details of price components of price item in the **Price Components** zone.
- View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
- View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

## Editing a Price Item Pricing of an Account

### Prerequisites

To edit a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="607 642 1117 915" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. ## Overriding a Price Item Pricing of an Account

### Prerequisites

To override a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### Procedure

To override a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Override** () icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.

- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="592 611 1183 850" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="592 1077 1183 1157" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="592 1383 1183 1463" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="532 1577 1183 1688" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field will be in enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to indicate the status of the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul>	Yes
	<b>Note:</b> If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b> .	
Pricing Currency	Used to indicate the currency in which you want to override the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are overriding a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, <b>Yes</b> is selected.	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	

6. Modify the details in the **Main** section, if required.
7. Modify the TFM Information in a price item pricing, if required.
8. Modify the characteristics for a price item pricing, if required.
9. Modify the parameters for a price item pricing, if required.

**Note:** If you change the effective end date while overriding a price item pricing, you need to specify the parameters which are effective during the date range of start and end date.

**10. Click Save.**

The price item pricing is overridden.

**Assigning a Price Item to an Account****Prerequisites**

To assign a price item to an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

**Procedure**

To assign a price item to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Search for the price item that you want to assign to the account in the **Search Price Item or Price Item Pricing** zone.
5. In the **Search Results** section, click the **Assign** () icon in the **Assign** column corresponding to the price item that you want to assign to the account.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>By default, the current system date appears in this field.</p> <p>The effective start date cannot be later than the effective end date.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="607 611 1206 852" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="607 1077 1206 1157" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="607 1388 1206 1467" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<p><b>Note:</b></p> <p>Rate schedules control how the bills for the price item will be calculated.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.</p>	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>Two-Dimensional</li> </ul> <p><b>Note:</b> This field is required when you are defining a two-dimensional pricing rule.</p>	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are:	Yes
	<ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul> <p><b>Note:</b> By default, <b>Yes</b> is selected.</p>	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<p><b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b>.</p>	

- Enter the required details in the **Main** section.
- Define TFM Information in a price item pricing, if required.
- Define characteristics for a price item pricing, if required.
- Define parameters for a price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item.

**Note:** A bundle cannot be assigned if its child price items are already assigned to an account and vice versa, in the same date range.

## Defining Characteristics for a Price Item Pricing

### Prerequisites

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

### Procedure

To define characteristics for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Pricing</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the price item pricing, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price item pricing.

## Defining Parameters for a Price Item Pricing

### **Prerequisites**

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

### **Procedure**

To define parameter details segment for a price item pricing that is assigned to an account:

1. Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.  <b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> window appears. The parameter search results displays only those parameters where the <b>Price Item</b> check box is selected	Yes
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> <li>Parameter Description</li> <li>Mandatory (Yes or No)</li> <li>Priority</li> </ul>	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

## Defining TFM Information in a Price Item Pricing

### Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

### Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quaterly</li> <li>• Yearly</li> </ul>	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines Across Transaction</li> </ul>	Yes

2. Enter the required details in the **TFM Information** section.

**Note:** **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The transactions are defined for the price item pricing.

## **Pricing (Person)**

The **Pricing (Person)** screen allows you to:

- View effective price assignments of a person
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to a person

- Edit or override a price item pricing
- Copy a price item pricing and assign it to a person

You can also view effective price assignments of a global person (i.e. a person who is not associated to any division) in this screen. The pricing for all price items or price item bundles assigned to the global person either directly or through a price list appears in this screen. However, you will be able to view pricing for only those price items or price item bundles that are associated to the division to which you have access.

Since a global person is not associated to any division, the system cannot determine the price assignment search order for a global person. Hence, the default search order is defined for global persons through the **C1\_PRASNORDR** feature configuration. This feature configuration contains the **Price Assignment Algorithm** option type where you need to specify the algorithm which contains default search order for global persons. You can change this default search order, if required. The valid search order values are — **AGREED\_PRICELIST** and **AGREED\_FIRST**. You can also create a custom search order, if required.

This screen consists of the following zones:

- [Effective Price Assignments for Person](#) on page 307
- [Search Price Item](#) on page 312

## Effective Price Assignments for Person

The **Effective Price Assignments for Person** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the person either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the person belongs. If required, you can filter effective price assignments using various search criteria.

**Note:** If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Indicates the person whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	<b>Note:</b> By default, this field is set to the current date.	

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Customer Agreed</b> – Means price item pricing is agreed for the main customer in the customer hierarchy.</li> <li>• <b>Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the main customer.</li> <li>• <b>Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer.</li> <li>• <b>Default Price List</b> – Means price item pricing defined in the price list is available in the default price list.</li> <li>• <b>Global Price List</b> – Means price item pricing defined in the price list is available in the global price list.</li> <li>• <b>Parent Customer Agreed</b> – Means price item pricing is agreed for the parent customer in the customer hierarchy.</li> <li>• <b>Parent Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the parent customer.</li> <li>• <b>Parent Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer.</li> </ul>	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No
Pricing Status	<p>Used to search price assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul> <p><b>Note:</b> By default, the <b>Active</b> option is selected.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to indicate whether you want to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> <li>• <b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>• Default price list defined for the division</li> <li>• Global price list</li> </ul> </li> </ul>	No
	<b>Note:</b> By default, the <b>No</b> option is selected.	
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	<p>Used to search the price list using the following values:</p> <ul style="list-style-type: none"> <li>• Best Fit</li> <li>• Exact Match</li> </ul>	No
	<b>Note:</b> By default, the <b>Exact Match</b> option is selected.	

**Note:** The **Search**  icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- **Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to search price assignments which are defined using a particular parameter.</p>	No
	<p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to search price assignments which are defined using a particular parameter value.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	

**Note:**

The **Search**  icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, you can search for a parameter.

You can only use those parameters where the source entity is set to **Transaction**.

The **Search**  icon appears corresponding to the **Parameter Value** field only when the value type of the parameter is **Predefined** or **Reference**. If the value type of the parameter is **Predefined** then on clicking the **Search** icon, you can search for a predefined parameter value. However, if the value type of the parameter is **Reference** then on clicking the **Search** icon, you can search for a reference parameter value.

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the person.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	<p>On clicking the <b>Edit</b>  icon, the <b>Price Item Pricing</b> screen appears where you can edit the details of the price item pricing.</p> <p><b>Note:</b> The <b>Edit</b> icon appears only when the assignment level is <b>Customer Agreed</b>.</p>
Override	<p>On clicking the <b>Override</b>  icon, the <b>Price Item Pricing</b> screen appears where you can override the price item pricing.</p> <p><b>Note:</b></p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>Y</b>, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>N</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

**Note:** The number of records that can be displayed in the **Search Results** section is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2045.

**Search Price Item**

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> <li>• Price Item</li> <li>• Price List Pricing</li> <li>• Account Override Pricing</li> <li>• Person Override Pricing</li> </ul>	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	
Bundle	Used to search whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	
Price List ID	Used to search the price list to which the price item pricing is assigned.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.	
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.	
Account ID	Used to search pricing of price items which are assigned to a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.	
Person ID	Used to search pricing of price items which are assigned to a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.	

**Note:**

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search**  icon appears corresponding to the **Price List ID, Price Item, Account ID, and Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the person belongs. However, if the person does not belong to any division, the search will be performed

against all price items or price item bundles defined in the system. It may also include price items or price item bundles that are already assigned to the person in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	<p>On clicking the <b>Assign</b> () icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing.</p> <p><b>Note:</b> This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p>
Price Item Information	<p>Displays details of the price item or price item bundle.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle. This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p>
Copy	<p>On clicking the <b>Copy</b> () icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.</p>
Pricing Information	<p>Displays details of the price item pricing.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Account Information	<p>Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b> This column appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list. It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. The account information string appears only when an algorithm defined using the <b>C1-AC-INFO</b> algorithm type is attached to the <b>Account Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>

Column Name	Column Description
Person Information	<p>Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>The person information string appears only when an algorithm defined using the <b>PERS-INFO</b> algorithm type is attached to the <b>Person Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Price List Information	<p>Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.</p>
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>
Effective Start Date	<p>Displays the date from when the price item pricing is effective.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Effective End Date	<p>Displays the date till when the price item pricing is effective.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Pricing Currency	<p>Indicates the currency in which the price item pricing is defined.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>

Column Name	Column Description
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
	<p><b>Note:</b></p> <p>It has a link. On clicking the link <b>Rate Schedule</b> screen appears.</p> <p>This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul>
	<p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
	<p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>

How to assign a price item or price item bundle to a person	<a href="#">Assigning a Price Item or Price Item Bundle to a Person</a>

## Viewing Effective Price Assignments of a Person

### Prerequisites

To view effective price assignments of a person, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

### Procedure

To view effective price assignments of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. View the pricing for price items or price item bundles assigned to the person (either directly or through the customer hierarchy) in the **Effective Price Assignments for Person** zone.
5. Filter the effective price assignments of the person, if required.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to search for a person	<a href="#">Searching for a Person</a>
<b>Pricing (Person)</b> screen	<a href="#">Pricing (Person)</a> on page 306
<b>Effective Price Assignments for Person</b> zone	<a href="#">Effective Price Assignments for Person</a> on page 307
How to filter effective price assignments of a person	<a href="#">Filtering Effective Price Assignments of a Person</a> on page 318

## **Filtering Effective Price Assignments of a Person**

### **Prerequisites**

To filter effective price assignments of a person, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

### **Procedure**

To filter effective price assignments of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Person** zone.

**Note:**

You can search for a price item, parameter, or parameter value by clicking the **Search** () icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add** () icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the

**Delete** () icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

### 5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Person** zone.

## Exporting Effective Price Assignments of a Person

### Prerequisites

To export effective price assignments of a person in the CSV format, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

### Procedure

To export effective price assignments of a person in the CSV format:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Filter the effective price assignments of the person, if required.
5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.

A message appears confirming whether you want to open or save the EffectivePricing.csv file.

6. Select the **Save As** option from the **Save** list.

The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	Indicates the variance parameter which is used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>
Price List Description	Displays the description of the price list.  <b>Note:</b> The description appears only when the assignment level is <b>Customer Price List, Customer Inherited Price List, Parent Customer Price List, or Parent Customer Inherited Price List</b> .

Column Name	Column Description
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Setup of the Rate Component</li> </ul>
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>• AC</li> <li>• NC</li> </ul>
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>

Column Name	Column Description
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quarterly</li> <li>• Yearly</li> </ul>
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item or price item bundle's total usage is considered for determining the rate.

## **Copying a Price Item Pricing**

### **Prerequisites**

To copy a price item pricing and assign it to a person, you should have:

- Person (to which you want to assign the price item pricing) defined in the application
- Person associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

### **Procedure**

To copy a price item pricing and assign it to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

5. Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the person.
6. Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

7. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

8. Modify the required pricing details.

**Note:**

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

9. Edit the characteristics of the price item pricing, if required.

10. Click **Save**.

A new price item pricing is defined and assigned to the person.

## **Viewing a Price Item Pricing**

### **Procedure**

To view a price item pricing and assignment details:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- **Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
  - **Pricing Information** – Displays the pricing information of the price item.
  - **TFM Information** – Displays the transaction feed management information of the price item.
  - **Characteristics** – Displays the details of price item pricing characteristics.
  - **Price Item and Parameter Information** – Displays the price item parameter details.
  - **Record Actions** – Displays the record actions of the price item pricing.
  - **Record Information** – Displays the record information of the price item pricing.
- **Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- **Rate Components** – Displays the rate components of the price item.
- **Price Components** – Displays the details of price components of the price item.
- **Tiering Criteria** – Displays the tiering criteria of the price item pricing.

**Note:** This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- **Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

**Note:** This zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

6. View the basic details of price item pricing in the **Price Item Pricing** zone.
7. View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
8. View the rate components of price item in the **Rate Components** zone.
9. View the details of price components of price item in the **Price Components** zone.
10. View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
11. View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

## Editing a Price Item Pricing of a Person

### Prerequisites

To edit a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing of a person:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="607 642 1117 915" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="607 1171 1117 1255" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="607 1512 1117 1596" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="545 1705 1117 1818" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Active</b> – Indicates that the price assignment is used for billing.</li> <li>• <b>Inactive</b> – Indicates that the price assignment is no longer used for billing.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul> <p><b>Note:</b> If a price assignment is in <b>Active</b> status, you can change its status to <b>Inactive</b>. If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b>.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <p><b>Note:</b> Rate schedules control how the bills for the price item will be calculated. The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.</p>	Yes
Pricing Rule Type	<p>Used to indicate the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are editing a two-dimensional pricing rule.
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> By default, <b>Yes</b> is selected.</p>	Yes
Pricing Frequency	<p>Used to indicate pricing frequency for the price item.</p> <p><b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b>.</p>	Yes

6. Modify the details in the **Main** section, if required.
7. Edit the TFM Information in a price item pricing, if required.
8. Edit the characteristics for a price item pricing, if required.
9. Edit the parameters for a price item pricing, if required.
10. Click **Save**.

The changes made to the price item pricing are saved.

## Overriding a Price Item Pricing of a Person

### Prerequisites

To override a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### Procedure

To override a price item pricing of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.
5. In the **Search Results** section, click the **Override** () icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.

- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="607 642 1117 915" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="607 1171 1117 1255" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="607 1512 1117 1596" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="545 1705 1117 1818" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This field will be in enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to indicate the status of the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul>	Yes
	<b>Note:</b> If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b> .	
Pricing Currency	Used to indicate the currency in which you want to override the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are overriding a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, <b>Yes</b> is selected.	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	

6. Modify the details in the **Main** section, if required.
7. Modify the TFM Information in a price item pricing, if required.
8. Modify the characteristics for a price item pricing, if required.
9. Modify the parameters for a price item pricing, if required.

**Note:** If you change the effective end date while overriding a price item pricing, you need to specify the parameters which are effective during the date range of start and end date.

**10. Click Save.**

The price item pricing is overridden.

**Assigning a Price Item to a Person****Prerequisites**

To assign a price item to a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

**Procedure**

To assign a price item to a person:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Search for the price item that you want to assign to the person in the **Search Price Item or Price Item Pricing** zone.
5. In the **Search Results** section, click the **Assign** () icon in the **Assign** column corresponding to the price item that you want to assign to the person.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>By default, the current system date appears in this field.</p> <p>The effective start date cannot be later than the effective end date.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div data-bbox="607 611 1166 852" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div data-bbox="607 1077 1166 1157" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div data-bbox="607 1388 1166 1467" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<p><b>Note:</b></p> <p>Rate schedules control how the bills for the price item will be calculated.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.</p>	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are:	Yes
	<ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> By default, <b>Yes</b> is selected.</p>	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<p><b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b>.</p>	

- Enter the required details in the **Main** section.
- Define TFM Information in a price item pricing, if required.
- Define characteristics for a price item pricing, if required.
- Define parameters for a price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item.

**Note:** A bundle cannot be assigned if its child price items are already assigned to a person and vice versa, in the same date range.

## Defining Characteristics for a Price Item Pricing

### Prerequisites

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

### Procedure

To define characteristics for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Pricing</b> .	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the price item pricing, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price item pricing.

## Defining Parameters for a Price Item Pricing

### **Prerequisites**

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

### **Procedure**

To define parameter details segment for a price item pricing that is assigned to an account:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.  <b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> window appears. The parameter search results displays only those parameters where the <b>Price Item</b> check box is selected	Yes
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> <li>Parameter Description</li> <li>Mandatory (Yes or No)</li> <li>Priority</li> </ul>	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

## Defining TFM Information in a Price Item Pricing

### Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

### Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quaterly</li> <li>• Yearly</li> </ul>	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines Across Transaction</li> </ul>	Yes

2. Enter the required details in the **TFM Information** section.

**Note:** **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The transactions are defined for the price item pricing.

## **Price Item Pricing (Used for Viewing)**

Once the pricing is defined for a price item pricing which is assigned to a account, person, or price list, the **Price Item Pricing** screen allows you to:

- Edit the details of a price item pricing
- Delete a price item pricing

- Submit a price item pricing for processing
- View the details of price components of the rate component
- View the details of tiering criteria, pricing eligibility criteria of a price component
- Add price components of the rate components
- Add tiering components, pricing eligibility criteria of the price components
- Edit price components, tiering criteria, pricing eligibility criteria
- Delete price components, tiering criteria, pricing eligibility criteria

**Note:**

When the price assignment is in **Draft** status and when:

- Approval Workflow is off then status is changed from **Draft** to **Active**.
- Approval Workflow is on then status is changed from **Draft** to **Pending in Approval**.

## Price Item Pricing

The **Price Item Pricing** zone displays the details of the price item pricing. It contains the following sections:

- **Pricing Information** – Displays the pricing information of the price item. It contains the following fields:

Field Name	Field Description
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Rate Schedule	Indicates the rate schedule used while defining price item pricing. <b>Note:</b> It has a link. On clicking the link, the <b>Rate Schedule</b> screen appears where you can view the details of the rate schedule.
Print Zero	Indicates the zero pricing displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Pricing Currency	Indicates the currency in which the price item pricing is defined. <b>Note:</b> It has a link. On clicking the link, the <b>Currency</b> screen appears where you can view the details of the currency.
Pricing Status	Indicates the status of the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>

Field Name	Field Description
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
Pricing Eligibility	Displays the pricing eligibility criteria for price item pricing.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul>
Pricing Rule Type	Indicates the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>

- **TFM Information** – Displays the transactions mapped to the price item pricing. It contains the following fields:

Field Name	Field Description
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Aggregate Transactions	Indicates whether the transactions mapped to the price item is aggregated for billing or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quaterly</li> <li>• Yearly</li> </ul>
Transaction Rating Criteria	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> </ul>

**Note:**

**TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

**TFM Information** section does not appear when the **Price Item Available For** is **Only Pricing** and the **Price Item Type** is **Fees** then, only the **Pricing Frequency** field appears.

- **Characteristics** – Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Price Item and Parameter Information** – Displays the parameter details segment for the price item pricing. It contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing.
Parameter Value	Displays the parameter value.

- **Record Actions** – This section contains the following buttons:

Column Name	Column Description
Edit	Used to define, edit the price item pricing. It is also used to remove the characteristics, price item and parameter information of price item pricing.
	<b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.
Delete	Used to delete the price item pricing.
	<b>Note:</b> The <b>Delete</b> button appears only when the price item pricing is in the <b>Draft</b> status.
Submit	Used to submit the price item pricing for validation and processing.
	<b>Note:</b> The <b>Submit</b> button appears only when the price item pricing is in the <b>Draft</b> status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the price item pricing is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Rate and Price Component Summary

The **Rate and Price Component Summary** zone lists the following in a tree view:

- Information string of price component with tiers where the rate schedule is flat.
- Information string of price component with tiers where the rate schedule is step.
- Information string of price component with tiers where the rate schedule is threshold.

## Rate Components

The **Rate Components** zone lists rate components and its details for price item pricing that are assigned to an account, person, or price list. This zone contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence number of the rate component.
Rate Components	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component ID</li> <li>• Rate Component Sequence Number</li> <li>• Tiering Setup of the Rate Component</li> </ul>
Add Price Component	On clicking the <b>Add Price Component</b> button, the <b>Price Component</b> screen appears where you can add the price component for the rate component.
	<b>Note:</b> This button appears only when the <b>Pricing Status</b> of the price item pricing is in <b>Draft, Proposed</b> and <b>Template</b> status.

On clicking the broadcast **Broadcast** (📡) icon corresponding to the rate component, the **Price Components** zone appears with the details of the price components for the respective rate component.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

## Tiering Criteria

The **Tiering Criteria** zone lists the detail of tiering criterions that are used in the tiering range. This zone contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence number of the tiering criteria.
Tiering Criterion	Indicates the tiering criterion.
Price Item	Displays the price item.
Parameter Information	Displays information about the parameter associated with the price item.
Lower Limit	Displays the lower limit of the tiering range.
Upper Limit	Displays the upper limit of the tiering range.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Price Component</b> screen appears where you can edit the details of the tiering criteria.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the tiering criteria.
	<b>Note:</b> The <b>Delete</b> icon appears only when the price assignment is in <b>Draft</b> , <b>Proposed</b> or <b>Template</b> status.

By default, the **Tiering Criteria** zone does not appear in the **Price Item Pricing** screen. It appears only when you click the broadcast **Broadcast** (📡) icon corresponding to a price component in the **Price Components** zone.

### Note:

The **Tiering Criteria** zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**.

You can define tiering criteria for a price component by clicking the **Add** link in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

## Pricing Eligibility Criteria

The **Pricing Eligibility Criteria** zone lists the detail of parameters used while defining the pricing eligibility criteria. This zone contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence number of the tiering criteria.
Parameter	Indicates the parameter (on the left hand side) is used in the pricing eligibility criteria.
Operator	Displays the relational operator defined for the relation between the parameter name and value.
Parameter Value Type	Indicates whether the parameter (on the left hand side) is compared against another parameter (on the right hand side) or directly against a parameter value.
Parameter	Indicates the parameter (on the right hand side) against which you have compared the parameter (on the left hand side).
Parameter Value	Indicates the parameter value against which you have compared the parameter (on the left hand side).
Is True	Indicates what happens when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number is executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field is executed.</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
Is False	Indicates what happens when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number is executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field is executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>

Column Name	Column Description
Is Insufficient	Indicates what happens when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Indicates that the condition with consecutive sequence number is executed.</li> <li>• <b>Rule Is False</b> – Indicates that the action specified in the <b>Rule False Action</b> field is executed</li> <li>• <b>Rule Is True</b> – Indicates that the action specified in the <b>Rule True Action</b> field is executed.</li> </ul>
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Price Component</b> screen appears where you can edit the details of the pricing eligibility criteria.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the pricing eligibility criteria.
	<b>Note:</b> The <b>Delete</b> icon appears only when the price assignment is in <b>Draft, Proposed</b> or <b>Template</b> status.

By default, the **Pricing Eligibility Criteria** zone does not appear in the **Price Item Pricing** screen. It appears only when you click the broadcast **Broadcast** (📡) icon corresponding to a price component in the **Price Components** zone.

**Note:**

The **Pricing Eligibility Criteria** zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

You can define pricing eligibility criteria for a price component by clicking the **Add** link in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

## Two-Dimensional Pricing

The **Two-Dimensional Pricing** zone displays the details of the two-dimensional pricing. It contains the following field:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a comma(,) for an account, person or price list.

In addition, this section contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Displays the <b>Price Criteria</b> of the price component
Threshold Parameter	Displays the parameter of the price component eligibility
Tiering Range	Displays the tiering range of the pricing.

## Defining a Price Item Pricing

### Prerequisites

To define pricing for a price item, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### Procedure

To define pricing for a price item:

1. Do either of the following:

If you want to...	Then...
Define pricing for a price item that you want assign to a customer	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Person)</b> screen.</li> <li>2. Search for the price item that you want to assign to the customer.</li> <li>3. In the <b>Search Results</b> section, click the <b>Assign</b>  icon in the <b>Assign</b> column corresponding to the price item that you want to assign to the customer.</li> </ol>
Define pricing for a price item that you want assign to an account	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Account)</b> screen.</li> <li>2. Search for the price item that you want to assign to the account.</li> <li>3. In the <b>Search Results</b> section, click the <b>Assign</b>  icon in the <b>Assign</b> column corresponding to the price item that you want to assign to the account.</li> </ol>
Define pricing for a price item that you want assign to a price list	<ol style="list-style-type: none"> <li>1. Access the <b>Price list Price Item Pricing</b> screen.</li> </ol>

If you want to...	Then...
	<ol style="list-style-type: none"> <li>2. Search for the price item that you want to assign to the price list.</li> <li>3. In the <b>Search Results</b> section, click the link in the <b>Price Item</b> column corresponding to the price item that you want to assign to the price list.</li> </ol>

The **Price Item Pricing** screen appears.

2. Enter the transaction feed management information that you want to map to the price item pricing.
3. Enter the date from when the price item pricing is effective in the **Effective Start Date** field.
4. Select the currency, in which you want to define the pricing, from the **Pricing Currency** list.
5. Enter the rate schedule that you want to use while defining price item pricing.
  - Parameter details segment is displayed in the **Price Item and Parameter Information** section.

**Note:** You can specify multiple parameter codes associated with the price items, search for a price item parameters using the **Search**  icon corresponding to the **Parameter** field.

- A section appears at the bottom of the screen.

**Note:** You can search for a rate schedule by clicking the **Search**  icon corresponding to the field.

6. Select the type of price assignment from the respective field.
7. Select **All Customers** or **New Customers** from the **Apply To** list depending on whether you want to apply the price item pricing to all customers or only to the new customers.
8. Select **Pricing Frequency** and **Advance Pricing** (this field would be displayed only if additionally **Price Assignment Type** is **Post Processing**). These fields are applicable for price item value as **Pricing Only** and **Price Item Type** value as **Fees**.
9. The section at the bottom of the screen contains rate components of the rate schedule on the left hand side and the eligibility and tiering ranges per price component on the right hand side.
10. Rate is used to specify the price for the price item.
11. You can expand details to add tiering criteria and pricing eligibility criteria by clicking the **Add**  icon corresponding to the **Eligibility tier Details** field.
12. If price component is for **Flat Rate** then **Pricing Eligibility Criteria** details are displayed and if price component is for **Step Tiering** or **Threshold Tiering** then **Pricing Eligibility Criteria** and **Tiering Criteria** details are displayed.
13. In the **Pricing Eligibility Criteria** section, you can enter price component details to following mandatory fields:
  - a) You can specify relational **Operator** to define relation between **LHS Parameter Code** and **RHS Parameter Code**.
  - b) You can select the type of pricing eligibility for **RHS Parameter Value Type**.
  - c) Select the values from **Is True**, **Is False** and **Is Insufficient** that indicates what should happen when the condition is true, false or insufficient.
14. To add more than one **Pricing Eligibility Criteria**, click the **Add**  icon and to delete the pricing eligibility click the **Delete**  icon corresponding to the **Sequence Number**.
15. In the **Tiering Criteria** section, you can enter price component details to the following mandatory fields:

- a) Select the **Tiering Criterion** from the list.
- b) If you want to define tiering range based on some other price item or bundle's usage, enter the price item or bundle code in the **Price Item** field

**Note:** You can search for a price item by clicking the **Search** (🔍) icon corresponding to the **Price item** field.

- c) You can define the price item pricing based on multiple parameters, select the parameters using the **Search** (🔍) icon corresponding to the **Price Item Parameters** field.
  - d) To add more than one **Price Item Parameters**, click the **Add** (+) icon and to delete the price item parameters click the **Delete** (🗑️) icon corresponding to the **Parameter** field.
  - e) Enter the lower and upper limits of the tiering range in the **From** and **To** fields.
16. To add more than one **Price Component Details**, click the **Add** (+) icon and repeat the steps from 9 to 14. To delete the details of price component click the **Delete** (🗑️) icon corresponding to the **Price Component Sequence** field.

17. Define characteristics for the price assignment, if required.

18. Click **Save**.

The pricing is defined for the price item.

**Note:** A bundle cannot be assigned if its child price items are already assigned to a price list, customer, or an account, and vice versa, in the same date range.

The <b>Price Item Pricing</b> screen appears.</li> </ol> <p><b>Tip:</b> Alternatively, you can access the <b>Price Item Pricing</b> screen by:</p> <ol style="list-style-type: none"> <li>1. Search for a price item in the <b>Search Price Item or Price Item Pricing</b> zone.</li> <li>2. In the <b>Search Results</b> section, click the <b>Assign</b> () icon corresponding to the price item.</li> <li>3. Enter the required details in the <b>Price Item Pricing</b> screen and click <b>Save</b>.</li> <li>4. The <b>Price Item Pricing</b> screen appears.</li> </ol>

2. Click the **Add Price Component** button in the **Add Price Component** of **Rate Components** zone.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a colon (:) for an account, person or price list.

Field Name	Field Description
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Type of the Rate Component</li> </ul>

In addition, this screen contains the following sections:

- **Main** – Used to specify the basic details about the price component.
- **Tiering Criteria** – Used to specify the details of tiering criteria that are used in the tiering range.
- **Pricing Eligibility Criteria** – Used to specify the details of parameters used while defining the pricing eligibility criteria.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which price component should be considered.	Yes
Show Price Component	Used to indicate whether the price component should appear or not.	Yes
Description	Used to specify the description of the price component.	Yes
Rate Value	Used to indicate the rate defined for the price component.	Yes

**Tip:** Alternatively, you can access the **Price Component** screen by clicking the **Add** link to the right hand side corner of the **Price Components** zone.

3. Enter the required details in the **Main** section.
4. Define tiering criteria for a price component.
5. Define pricing eligibility criteria for a price component.
6. Click **Save**.

The price component is defined for a rate component.

## Defining a Tiering Criteria for a Price Component

### Prerequisites

To define a tiering criteria for a price component, you should have:

- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application.

### Procedure

To define a tiering criteria for a price component:

1. Click the **Add** link the right hand side corner of the **Tiering Criteria** zone.

#### **Note:**

The **Tiering Criteria** zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a colon (:) for an account, person or price list.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Type of the Rate Component</li> </ul>

In addition, this screen contains the following sections:

- **Main** – Used to specify the basic details about the price component.

This section contains the following fields:

Field Name	Field Description
Sequence	Indicates the sequence in which price component should be considered.
Show Price Component	Indicates that the price component will appear or not.
Description	Displays the description of the price component.
Rate Value	Indicates the rate defined for the price component.

- **Tiering Criteria** – Used to specify the details of tiering criterions that are used in the tiering range.

This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which tiering criteria should be considered.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Used to select the tiering criterion which is used in the tiering range.	Yes
Lower Limit	<p>Used to specify the lower limit of the pricing range.</p> <p><b>Note:</b> The system provides you with the facility to specify the lower limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.</p>	Yes
Upper Limit	<p>Used to specify the upper limit of the pricing range.</p> <p><b>Note:</b> The system provides you with the facility to specify the upper limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.  When you define single tier with the maximum value as blank (for example, 0 to BLANK), the system will automatically replace the blank space with 9999999999999999.99.</p>	Yes
Price Item	<p>Used to Indicate whether the price item or price item bundle's total usage is considered for determining the rate. By default, the price item code for which you are defining the pricing appears in this field. You can specify any other price item or bundle code, if required.</p> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameters	<p>Used to specify the parameters based on which price item or bundle's total usage should be considered for determining the rate. By default, the parameters based on which you are defining the pricing appear in this field. You can specify any other parameters (where the <b>Pricing</b> flag is set to <b>Yes</b>), if required. However, note that you can only select parameters associated with the price item or bundle which is used for defining the tiering criteria.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Edit</b> () appears corresponding to this field. On clicking the <b>Edit</b> icon, the <b>Parameters Search</b> screen appears.</p>	No

- Enter the required details in the **Tiering Criteria** section.
- If you want to define more than one tiering criteria for the price component, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a tiering criteria from the price component, click the **Delete** () icon corresponding to the tiering criterion.

- Click **Save**.

The tiering criteria is defined for the price component.

## Defining a Pricing Eligibility Criteria for a Price Component

### Prerequisites

To define a pricing eligibility criteria for a price component, you should have:

- Pricing eligibility defined in the application

### Procedure

To define a pricing eligibility criteria for a price component:

1. Click the **Add** link the right hand side corner of the **Pricing Eligibility Criteria** zone.

#### **Note:**

The **Pricing Eligibility Criteria** zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a colon (:) for an account, person or price list.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Type of the Rate Component</li> </ul>

In addition, this screen contains the following sections:

- **Main** – Used to specify the basic details about the price component.

This section contains the following fields:

Field Name	Field Description
Sequence	Indicates the sequence in which price component should be considered.
Show Price Component	Indicates that the price component will appear or not.
Description	Displays the description of the price component.
Rate Value	Indicates the rate defined for the price component.

- **Pricing Eligibility Criteria** – Used to specify the details of parameters used in the pricing eligibility criteria.

This section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the criteria should be executed in the rule.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the left hand side parameter which you want to use along with the price item for price determination.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.</p> <p>You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (ERROR)</b>.</p>	Yes
Operator	<p>Used to specify the relational operator to define the relation between the left hand side and right hand side parameters code. The valid values are:</p> <ul style="list-style-type: none"> <li>• &lt;</li> <li>• &lt;=</li> <li>• &lt;&gt;</li> <li>• =</li> <li>• &gt;</li> <li>• &gt;=</li> <li>• Algorithm</li> <li>• Between</li> <li>• In</li> <li>• Like</li> </ul>	Yes
Parameter Value Type	<p>Used to indicate the type of pricing eligibility. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Parameter</b> – Used to indicate the type of parameter.</li> <li>• <b>Value</b> – Used to indicate the type of value.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	<p>When the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field then it is used to specify the right hand side parameter which you want to use along with the price item for price determination. When the <b>Value</b> option is selected for the <b>Parameter Value Type</b> field then it is used to specify the parameter value.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> () icon appears corresponding to this field only when the <b>Parameter</b> option is selected for <b>Parameter Value Type</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.</p> <p>When the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field then you must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (ERROR)</b>.</p> <p>When the <b>Value</b> option is selected for the <b>Parameter Value Type</b> field then you can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon (;) in the parameter value.</p>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

- Enter the required details in the **Pricing Eligibility Criteria** section.
- If you want to define more than one pricing eligibility criteria for the price component, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a pricing eligibility criteria from the price component, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The pricing eligibility criteria is defined for the price component.

The <b>Price Item Pricing</b> screen appears.</p>

If you want to edit the tiering criteria of.....	Then...
	<p><b>Tip:</b> Alternatively, you can access the <b>Price Item Pricing</b> screen by:</p> <ol style="list-style-type: none"> <li>1. Search for a price item in the <b>Search Price Item or Price Item Pricing</b> zone.</li> <li>2. In the <b>Search Results</b> section, click the <b>Assign</b> () icon corresponding to the price item.</li> <li>3. Enter the required details in the <b>Price Item Pricing</b> screen and click <b>Save</b>.</li> <li>4. The <b>Price Item Pricing</b> screen appears.</li> </ol>

2. In the **Rate Components** zone, click the **Broadcast** () icon corresponding to the rate component, the **Price Components** zone appears with the details of the price components for the respective rate component.
3. In the **Price Components** zone, click the **Broadcast** () icon corresponding to the price component, the **Tiering Criteria** zone appears with the details of tiering criterions that are used in the tiering range.

**Note:**

The **Tiering Criteria** zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**.

4. Click the **Edit** () icon in the **Edit** column corresponding to the tiering criteria whose details you want to edit for the price component.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a colon (:) for an account, person or price list.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Type of the Rate Component</li> </ul>

In addition, this screen contains the following sections:

- **Main** – Used to specify the basic details about the price component.

This section contains the following fields:

Field Name	Field Description
Sequence	Indicates the sequence in which price component should be considered.
Show Price Component	Indicates that the price component will appear or not.
Description	Displays the description of the price component.
Rate Value	Indicates the rate defined for the price component.

- **Tiering Criteria** – Used to specify the details of tiering criteria that are used in the tiering range.

This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which tiering criteria is to be considered.	Yes
Tiering Criterion	Used to select the tiering criterion which is used in the tiering range.	Yes
Lower Limit	Used to specify the lower limit of the pricing range.	Yes
	<b>Note:</b> The system provides you with the facility to specify the lower limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.	
Upper Limit	Used to specify the upper limit of the pricing range.	Yes
	<b>Note:</b> The system provides you with the facility to specify the upper limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.  When you define single tier with the maximum value as blank (for example, 0 to BLANK), the system will automatically replace the blank space with 9999999999999999.99.	
Price Item	Used to Indicate whether the price item or price item bundle's total usage is considered for determining the rate. By default, the price item code for which you defined the pricing appears in this field. You can specify any other price item or bundle code, if required.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.	

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameters	<p>Used to specify the parameters based on which price item or bundle's total usage should be considered for determining the rate. By default, the parameters based on which you are defining the pricing appear in this field. You can specify any other parameters (where the <b>Pricing</b> flag is set to <b>Yes</b>), if required. However, note that you can only select parameters associated with the price item or bundle which is used for defining the tiering criteria.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Edit</b> () appears corresponding to this field. On clicking the <b>Edit</b> icon, the <b>Parameters Search</b> screen appears.</p>	No

5. Modify the tiering criteria for a price component.

6. Click **Save**.

The tiering criteria is edited for a price component.

## Editing a Price Item Pricing

### Prerequisites

To edit a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing:

1. Do either of the following:

If you want to...	Then...
Edit pricing of a price item that is assigned to a person	<ol style="list-style-type: none"> <li>1. Search for the person in the <b>Customer 360° View</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the <b>Show Context Menu</b> (☰) icon corresponding to the person whose <i>details</i> you want to view. A menu appears.</li> <li>3. Click the <b>Go To Effective Pricing</b> menu option. The <b>Pricing (Person)</b> screen appears.</li> <li>4. Price assignments effective for the person appears in the <b>Effective Price Assignments for Person</b> zone.</li> <li>5. You can edit the pricing item pricing through the following alternatives:               <ol style="list-style-type: none"> <li>a. First alternative,                   <ul style="list-style-type: none"> <li>• In the <b>Search Results</b> section of <b>Effective Price Assignments for Person</b> zone, click the <b>Edit</b> (✎) icon in the <b>Edit</b> column corresponding to the price item pricing whose details you want to edit. The <b>Price Item Pricing</b> screen appears to edit the pricing details of a price item.</li> </ul> </li> <li>b. Second alternative,</li> </ol> </li> </ol>

If you want to...	Then...
	<ul style="list-style-type: none"> <li>• In the <b>Search Results</b> section of <b>Effective Price Assignments for Person</b> zone, click the link in the <b>Pricing Information</b> column corresponding to the price item whose pricing details you want to view. The <b>Price Item Pricing</b> screen appears.</li> <li>• Click the <b>Edit</b> button in the <b>Record Actions</b> section. The <b>Price Item Pricing</b> screen appears to edit the pricing details of a price item.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.</p> </div> <p>c. Third alternative,</p> <ul style="list-style-type: none"> <li>• Search for a price item in the <b>Search Price Item or Price Item Pricing</b> zone. In the <b>Search Results</b> section, click the <b>Assign</b> () icon corresponding to the price item.</li> <li>• Enter the required details in the <b>Price Item Pricing</b> screen and click <b>Save</b>. The <b>Price Item Pricing</b> screen appears.</li> <li>• Click the <b>Edit</b> button in the <b>Record Actions</b> section. If you want to...	Then...
	<p>item whose pricing details you want to view.</p> <p>The <b>Price Item Pricing</b> screen appears.</p> <ul style="list-style-type: none"> <li>Click the <b>Edit</b> button in the <b>Record Actions</b> section.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of a price item.</p> <div data-bbox="1003 554 1399 667" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.</p> </div> <p>c. Third alternative,</p> <ul style="list-style-type: none"> <li>Search for a price item in the <b>Search Price Item or Price Item Pricing</b> zone.</li> </ul> <p>In the <b>Search Results</b> section, click the <b>Assign</b> () icon corresponding to the price item.</p> <ul style="list-style-type: none"> <li>Enter the required details in the <b>Price Item Pricing</b> screen and click <b>Save</b>.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears.</p> <ul style="list-style-type: none"> <li>Click the <b>Edit</b> button in the <b>Record Actions</b> section.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of a price item.</p> <div data-bbox="1003 1373 1399 1486" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.</p> </div>

The **Price Item Pricing** screen appears.

2. Modify the required pricing details.

**Note:**

If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.

You can search for parameter, rate schedule by clicking the **Search** () icon corresponding to the respective fields.

3. Edit the TFM Information in a price item pricing, if required.

4. Edit the characteristics for a price item pricing, if required.
5. Edit the parameters for a price item pricing, if required.
6. Edit the price assignment, if required.
7. Click **Save**.

**Note:**

If any value other than **Status** and **End Date** is updated then the price item pricing for the price item is end with **End Date** updated as (today's date -1) and a new price item pricing is generated for the price item with new price item pricing ID and start date as today's date.

The **Edit Price Components** button appears only when you are editing a price assignment which is in the **Active**, **Proposed**, or **Template** status and which is not past dated; If the approval workflow is on, then the **Edit Price Components** button appears when you are editing a proposed and template price assignment which is already approved.

When the price assignment is in **Draft** status and,

- When the approval workflow is on and is in **Draft** status then it is changed to **Pending in Approval**.

When the price assignment is in **Draft** status and,

- When the approval workflow is off and is in **Draft** status then it is changed to **Active**.

The changes made to the price item pricing are saved.

## Overriding a Price Item Pricing

### Prerequisites

To override a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### Procedure

To override a price item pricing:

1. Do either of the following:

If you want to...	Then...
Override price item pricing assigned to the customer either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Person)</b> screen.</li> <li>2. In the <b>Effective Price Assignment</b> zone, click the <b>Override</b>  icon in the <b>Override</b> column corresponding to the price item pricing that you want to override.</li> </ol>
Override price item pricing assigned to the account either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Account)</b> screen.</li> <li>2. In the <b>Effective Price Assignment</b> zone, click the <b>Override</b>  icon in the <b>Override</b> column corresponding to the price item pricing that you want to override.</li> </ol>

The **Price Item Pricing** screen appears.

2. Modify the required pricing details.

#### **Note:**

If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.

While overriding a price item pricing, you can not only edit the existing tiering combination details, but also add additional tiering combinations until the maximum tiering combinations limit is met.

3. Modify the price assignment characteristics, if required.
4. Click **Save**.

The price item pricing is overridden.

## Editing the Two-Dimensional Pricing

### Procedure

To edit a two-dimensional pricing:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Search for the price item pricing in the **Search Price Item or Price Item Pricing** screen.
5. Click the **Assign** icon () corresponding to the **Price Item Information**.

The **Price Item Pricing** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Displays the date from when the price item pricing is effective.	Yes
End Date	Displays the date till when the price item pricing is effective.	No
Rate Schedule	Indicates the rate schedule used while defining price item pricing. <b>Note:</b> It has a link. On clicking the link, the <b>Rate Schedule</b> screen appears where you can view the details of the rate schedule.	Yes
Print Zero	Indicates the zero pricing displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Pricing Currency	Indicates the currency in which the price item pricing is defined. <b>Note:</b> It has a link. On clicking the link, the <b>Currency</b> screen appears where you can view the details of the currency.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Indicates the status of the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>	Yes
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>	Yes
Pricing Eligibility	Displays the pricing eligibility criteria for price item pricing.	Yes
Pricing Rule Type	Indicates the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes

6. Click **Save**.

The **Price Item Pricing** screen appears.

7. Click the **Edit** link in the top-right of the **Two-Dimensional Pricing** zone.

The **Two-Dimensional Pricing** screen appears. It contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Used to search by the various criterion.
Threshold Parameter	Used to search by the threshold parameter.
Tiering Range	Displays the tiering range of the pricing.

8. Modify the details in the **Two-Dimensional Pricing** screen, if required.

9.

If you want to add more than one threshold parameter, click the **Add** () icon and then enter the threshold parameter name and its value.

However, if you want to remove a threshold parameter, click the **Delete** () icon corresponding to the parameter.

10.

If you want to add more than one tiering range, click the **Add** () icon and then enter the specific range.

However, if you want to remove a tiering range, click the **Delete** () icon corresponding to the range that you want to remove.

11. Click **Save**.

The changes made to the two-dimensional pricing are saved.

**Related Topics**

For more information on...	See...
How to search for a price list	<a href="#">Searching for a Price List</a> on page 206

## Pricing Simulation

---

The **Pricing Simulation** screen allows you to:

- View pricing simulation details for account or price list
- View effective pricing information
- Search simulation details of account or price list

This screen consists of the following zones:

- [Search Pricing](#) on page 405

Through the **Pricing Simulation** screen, you can navigate to the following screens:

- [Price Item \(Used for Viewing\)](#) on page 176
- [Simulation - Effective Pricing Information](#) on page 409

## Search Pricing

The **Search Pricing** zone allows you to search pricing for an account.

In case of bundles, the order in which the price item pricing is listed in this zone is based on the following condition:

- If the system finds pricing for price items that belong to a bundle before finding pricing for the bundle, then the system lists the pricing for price items that belong to the bundle, and not the pricing for the bundle. For example, let say, B0001 is a bundle, and contains C0001 and C0002 price items. If the system finds pricing for B0001, it validates whether the pricing for C0001 and C0002 has already been found. If yes, then the system lists the pricing for C0001 and C0002. If the system does not find pricing for C0001 and C0002 before finding pricing for B0001, it lists the pricing for B0001.

**Note:** If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following two options:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for pricing using price list or account or person details. The valid values are: <ul style="list-style-type: none"> <li>• Price List</li> <li>• Account /Person</li> </ul>	Yes
	<b>Note:</b> By default, <b>Price List</b> option is selected.	
Price List ID	Used to indicate Price List ID for which simulation must be created.	Yes
	<b>Note:</b> This field appears only when the <b>Price List ID</b> option is selected for the <b>Search By</b> field.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> screen appears.	
Account ID	Used to specify the account for which simulation must be created.	Yes
	<b>Note:</b> This field appears only when the <b>Account</b> option is selected for the <b>Search By</b> field.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> screen appears.	
Person ID	Used to specify the person for which simulation must be created. This field gets auto populated once the Account ID value is defined.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> screen appears.	
Simulation Date	Used to search price simulations which are effective from a particular date onwards.	Yes
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Search Type	Used to indicate whether you want to search the price list using the following values: <ul style="list-style-type: none"> <li>• Best Fit</li> <li>• Exact Match</li> </ul>	No
	<b>Note:</b> By default, <b>Exact Match</b> option is selected.	
Show Default and Global Pricing	Used to indicate whether the product is assigned to a default and global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price Item	Used to specify the price items for pricing simulation.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.	
Description	Used to search price assignments of a price item having a particular description.	No
View Type	Used to indicate whether you want to view summary or tiering details of price components. The valid values are: <ul style="list-style-type: none"> <li>• <b>Detail</b> — Used when you want to view the details of price component with pricing eligibility and tiering criteria.</li> <li>• <b>Summary</b> — Used when you want to view the summary of effective price component.</li> </ul>	No
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> . The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> screen appears.	

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	<p>Displays the value of the parameter or used to specify multiple parameter value.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field only when the value type for the <b>Parameter</b> is <b>Reference</b> or <b>Predefined</b>.</p> <p>If the value type of the <b>Parameter</b> is <b>Reference</b> then on clicking the <b>Search</b> icon, the <b>Reference Parameter Value Search</b> screen appears.</p> <p>If the value type of the <b>Parameter</b> is <b>Predefined</b> then on clicking the <b>Search</b> icon, the <b>Predefined Parameter Value Search</b> screen appears.</p>	No

To add more than one **Parameter**, click the **Add**  icon and to delete the parameters click the **Delete**  icon corresponding to the **Parameter** field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

**Note:** If default Price List ID is added to the Price List Value and if **Yes** is selected for **Show Default and Global Pricing**, also if Price List is added to the product for selected account then **Search Results** section will display price list assignments for the value and product will be displayed along with the default price list assignments.

Column Name	Column Description
Price Item	<p>Displays the price item code.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>View Price Item</b> screen appears with the details of the respective price item.</p>
Description	Displays the description of the price item.
Variance Parameters	<p>Indicates the variance parameter which is used for defining the price item pricing.</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>
Price Item Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values used for defining the price item pricing.</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>

Column Name	Column Description
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing — Invoice Based</li> <li>• Post Processing — Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list.
	<b>Note:</b> The description appears only when the pricing assignment type is Account Price List, or Account Inherited Price List.
Rate Description	Displays the description of the tiering setup of the rate component.
Simulate	On clicking the Simulate  icon, the <b>Simulation — Effective Pricing Information</b> screen appears where you can add the <b>Price Item SQIs</b> and <b>Pricing Eligibility Parameters</b> details that can be passed for pricing simulation.
	<b>Note:</b> This column appears only when the price item is <b>Rate</b> and <b>Fees</b> .
Effective Start Date	Displays the date from when the pricing is effective.
Effective End Date	Displays the date till when the pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.

**Note:**

The number of records that can be displayed in the **Search Results** section of the **Search Pricing** zone is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2045.

After providing the required information, when you click on **Simulate** button, the **Effective Pricing Information** zone appears where you can view the effective pricing simulation. This zone contains the following sections:

- **Rate Information** — This section contains the following fields:

Field Name	Field Description
Applicable Rate	Displays the rate applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

**Note:** This section appears only when **Price Item Type** is **Rate** .

- **Fee Information** — This section contains the following fields:

Field Name	Field Description
Applicable Fee	Displays the fee applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

**Note:** This section appears only when **Price Item Type** is **Fees** .

- **Price Item and Parameter Information** — This section contains the following fields:

Field Name	Field Description
Price Item	Displays the price item for which pricing is defined.
Description	Displays the description of the price item

The Parameter Information appears only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

This segment contains the following fields:

Field Name	Field Description
Parameter	Specifies multiple parameter codes associated with the price items based on which pricing is defined.
Parameter Information	Displays the parameter information with concatenated comma separated values.
Parameter Value	Displays the value of the parameter.

- **TFM Information** — This section contains the following fields:

Field Name	Field Description
Ignore Transaction	Displays whether the transactions mapped to the price item is considered for billing.
Aggregation Schedule	Displays the aggregation cycle.
Aggregation Transaction	Specifies whether the transactions mapped to the price item are aggregated for billing.
Rating Criteria	Specifies how and when you rate the transaction legs mapped to the price item.

**Note:** This section appears only when the **Price Item** is available for **Pricing and Billing**.

- **Pricing Information** — This section contains the following fields.

Field Name	Field Description
Effective Start Date	Displays the date from when the price item pricing is effective.
Pricing Currency	Specifies the currency in which you define the price item pricing.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Status	Displays the status of price assignment.
Variance Parameter	Specifies the variance based on which price item pricing is defined. <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Rate Schedule	Specifies the rate schedule used for defining price item pricing.
Price Assignment Type	Displays the type of price assignment.
Print Zero	Specifies whether zero pricing should be displayed in the bill.
Apply To	Displays whether the price item pricing is applied to all customers or only to the new customers.
Pricing Frequency	Displays the frequency for pricing where <b>Price Item Type</b> is fees.
Advance Pricing	Displays only if <b>Price Item</b> is defined as <b>Pricing Only</b> , <b>Price Item Type</b> is defined as <b>Fees</b> and <b>Price Assignment Type</b> is defined as <b>Post Processing</b> . The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

**Pricing Eligibility Criteria** and **Tiering Criteria** for each eligibility or tier range are displayed in following fields:

Field Name	Field Description
Rate Component Sequence	Displays the sequence number of the rate component.
Tiering Type	Displays the tiering type of the rate component.
Price Component Sequence	Specifies the sequence of price component whose rate is used for calculation.
Price Component Description	Displays the description of the rate component.
Rate	Specifies the price for the price item.
Contributing Factor	Displays the availability of contributing factor.
Eligibility/Tier Details	On clicking the <b>Add (+)</b> icon, expandable details of <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> are displayed.

When you click the **Add (+)** icon, if the price component is scheduled for Flat Rate then, only **Pricing Eligibility Criteria** segment appears. If the price component is scheduled for Step or Threshold then both the segments, **Tiering Criteria** and **Pricing Eligibility Criteria** appears.

**Tiering Criteria** segment contains the following fields:

Field Name	Field Description
Tiering Criteria	Displays the tiering criteria.
Price Item	Specifies whether the price item or bundle's total usage is considered for determining the rate.
Variance Parameter	Specifies the variance based on which price item or bundle's total usage is considered for determining the rate. <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Specifies the parameters based on which price item or bundle's total usage is considered for determining the rate. <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
From	Specifies the lower limit of the tiering range.
To	Specify the upper limit of the tiering range.

**Pricing Eligibility Criteria** segment contains the following fields:

Field Name	Field Description
Sequence Number	Specifies the order in which the criteria should be executed in the rule.

Field Name	Field Description
Parameter	Specifies the left hand side parameter which you want to use along with the price item for price determination.  <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Operator	Specifies the relational operator to define the relation between the left hand side and right hand side parameters.
Parameter Value Type	Displays the type of pricing eligibility.
Parameter	Specifies the right hand side parameter which you want to use along with the price item for price determination.  <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Parameter Value	Specifies the parameter value.
Is True	Displays what should happen when the condition is true (satisfied).
Is False	Displays what should happen when the condition is false (not satisfied).
Is Sufficient	Displays what should happen when the data is insufficient.

This section contains the following links:

Link Name	Link Description
Expand All	Used to define all the <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> segments.
Collapse All	Used to un-define the displayed <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> segments.
Expand Only Contributing Factors	Used to define only those <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> segments with contributing factors.

## Searching Pricing Simulation for Account or Price List

### Prerequisites

To search pricing simulation for an account or price list, you should have:

- Price Item, Account or Person details defined in the application

### **Procedure**

To search pricing simulation for an account or price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.  
The **Pricing Simulation** screen appears.
3. In the **Search Pricing** zone, select **Account** or **Price List** depending on what you want search pricing simulation.
4. Enter the additional search criteria, if required.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of pricing details that meet the search criteria appears in the **Search Results** section.

### **Related Topics**

<b>Pricing Simulation</b> screen	<a href="#">Pricing Simulation</a> on page 405
<b>Search Pricing</b> zone	<a href="#">Search Pricing</a> on page 405

## **Viewing Pricing Simulation**

### **Prerequisites**

To view pricing simulation details of an account, you should have:

- Price items assigned to the account

### **Procedure**

To view pricing simulation of an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.  
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

## Exporting Effective Price Simulation

### Procedure

To export effective price simulation for an account in the CSV format:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.  
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Export to Excel** link in the **Search Pricing** zone.  
The **File Download** dialog box appears.
5. Click **Save**.  
The **Save As** dialog box appears.
6. Browse to the location where you want to save the file.
7. Enter the file name in the respective field, and click **Save**.  
The search results are exported in CSV format.
8. Open the CSV file in Microsoft Excel.

It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.
Description	Displays the description of the price item.

Column Name	Column Description
Variance	Indicates the variance parameter which is used for defining the price item pricing.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Indicates the parameters which are used for defining the price item pricing.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing — Invoice Based</li> <li>• Post Processing — Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list.
	<b>Note:</b> The description appears only when the pricing assignment type is Account Price List, Customer Price List, or Parent Customer Price List.
Rate	Displays the price of the price item. It also indicates whether the price is a Flat, Threshold, or Step price. The price can be agreed pricing, price list pricing, or pricing inherited from the price list hierarchy. If the price is applicable only to new customers, an asterisk (*) symbol appears corresponding to the price.
Price Component Description	Displays the description of the price component whose rate is used for calculation.
	<b>Note:</b> The data appears in this column only when the rate corresponding to the price component in the price item pricing is used for calculation.
Effective Start Date	Displays the date from when the pricing assignment is effective.
Effective End Date	Displays the date till when the pricing assignment is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price assignment is applicable to all customers or only to the new customers.
Price Assignment ID	Displays the ID that is generated automatically when the price assignment is done.
Parent Level	Displays the numerical level of the parent in the hierarchy from whom the pricing is inherited.
Price List ID	Displays the price list ID from where the pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.

Column Name	Column Description
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.
Parent Pricelist Level	Indicates the parent level when pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item should be considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregate Transaction	Indicates whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregation Schedule	Indicates the aggregation cycle.
Tiering Criterion	Indicates the tiering criterion.
Tiering Price Item	Indicates whether the price item is billed individually or at the bundle level.

## Eligible Price List

---

The **Eligible Price List** screen allows you to:

- View eligible price list details for account or person
- View pricing simulation details of account or person

This screen consists of the following zones:

- [Search Eligible Price Lists](#) on page 418
- [Pricing Simulation](#) on page 405

### Search Eligible Price Lists

The **Search Eligible Price List** zone allows you to search eligible price list for account and person. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible Date	Used to specify the date on which the eligibility check need to be searched.	Yes
Person ID	Used to specify the person for which eligible price list to be searched.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the icon, the <b>Person Search</b> screen appears.	No
Account ID	Used to specify the account for which eligible price list to be searched.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the icon, the <b>Account Search</b> screen appears.	No
Status	Used to search eligible price list based on status.	Yes
Division	Used to search eligible price list based on division.	Yes
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing.  <b>Note:</b> This field appears only when the <b>MultiPrice Parameter</b> option type of the <b>MultiParameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to True.  The Search (🔍) icon appears corresponding to this field. On clicking the icon, the <b>Parameter Search</b> screen appears.	No
Parameter Value	Displays the value of the parameter or used to specify multiple parameter value.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field only when the value type for the <b>Parameter</b> is defined as <b>Reference</b> or <b>Predefined</b> . If the value type of the <b>Parameter</b> is <b>Reference</b> then on clicking the search icon, the <b>Reference Parameter Value Search</b> screen appears else if the value type of the <b>Parameter</b> is <b>Predefined</b> then on clicking the search icon, the <b>Predefined Parameter Value Search</b> screen appears.	No

**Note:** To add more than one **Parameter**, click the add (+) icon and to delete the parameters click the delete (🗑️) icon corresponding to this field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List ID	Displays the price list ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List Price Item Assignments</b> screen appears where you can view the details of the respective price list.
Price List Description	Displays the price list description.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List Price Item Assignments</b> screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>
Availability Start Date	Used to search price lists which are available for assignment from a particular date.
Availability End Date	Used to search price lists which are available for assignment till a particular date.
Effective Start Date	Used to search price lists which are effective from a particular date.
Effective End Date	Used to search price lists which are effective till a particular date.
Simulate	On clicking the <b>Simulate</b>  icon, the <b>Pricing Simulation Screen</b> appears with the price list ID, account and person fields prepopulated.

## Rate Definition

---

Rate schedules, rate versions, and rate components are used to define the formulas to calculate the total amount charged to a customer for a product. Some examples of formulas are: price times the number of transactions used and a flat monthly charge plus a percentage of the average daily balance.

The rate is a formula with variables whose values are supplied by a user by setting up a price list or override price. For example, a rate might add a flat monthly charge and a percentage of the average daily balance to arrive at the amount charged to the customer. This rate might be used to calculate the charge for multiple products, each product with its own flat amount and percentage. So, these two factors are defined as variables whose values must be entered by users when they setup price list or override price. In Oracle Revenue Management and Billing (ORMB), these variables are defined as rate components.

The system provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. The **Rate Definition** screen allows you to indicate whether the rate component supports standard

flat pricing or tiered pricing. It allows you to define, edit, and delete the tiering setup of a rate component. This screen consists of the following zones:

- [Rate Schedule Components](#) on page 421
- [Create/Edit Rate Definition](#) on page 422

## Rate Schedule Components

The **Rate Schedule Components** zone allows you to select the rate schedule whose rate components' tiering setup you want to define or edit. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to select the rate schedule.	Yes

- **Search Results** — On clicking the **Search** button, the rate components of the rate schedule appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Rate Schedule	Displays the rate schedule.
Rate Component Sequence	Displays the sequence number of the rate component.
Rate Component Description	Displays the description of the rate component.
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.
Tiering Type	Displays the tiering type.
Maximum Tiering Combinations	Displays the maximum number of tiering ranges supported by the rate component.  <b>Note:</b> Each tiering range supports more than one tiering criteria. For example, a rate component supports tiering based on two different criteria such as transaction volumes from a bundle and balances of the priced product. In such case, for a single rate, it is possible to enter separate tiering range information for each criterion and vary this information by product.
Rate Component Map Description	Displays the description of the tiering setup of the rate component.
Action	Indicates the action that can be performed on the rate component. The valid values are: <ul style="list-style-type: none"> <li>• <b>Add</b> — Allows you to define the tiering setup of the rate component</li> <li>• <b>Edit</b> — Allows you to edit the tiering setup of the rate component</li> </ul>
Rate Component Map ID	Displays the rate component map ID.  <b>Note:</b> This ID is generated automatically when you define the tiering setup of the rate component.

On clicking the **Broadcast**  icon corresponding to the rate component, the **Create/Edit Rate Definition** zone appears with the details of the respective rate component.

**Create/Edit Rate Definition**

The **Create/Edit Rate Definition** zone allows you to define and edit tiering setup of the rate component. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Displays the code of the rate schedule.	Not applicable
Rate Component Description	Displays the description of the rate component.	Not applicable
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.	Not applicable
Rate Component Sequence	Displays the sequence number of the rate component.	Not applicable
Tiering Type	Used to specify the tiering type. The valid values are: <ul style="list-style-type: none"> <li>• FLAT</li> <li>• STEP</li> <li>• THRESHOLD</li> </ul>	Yes
	<b>Note:</b> This field is non-editable when you edit the tiering setup of the rate component.	
Maximum Tiering Combinations	Used to specify the maximum number of tiering ranges supported by the rate component.	Yes
	<b>Note:</b> This field is non-editable when you: <ul style="list-style-type: none"> <li>• Select the tiering type as <b>FLAT</b> or <b>STEP</b></li> <li>• Edit the tiering setup of the rate component</li> </ul> By default, <b>0</b> appears in this field when you select the tiering type as <b>FLAT</b> , and <b>1</b> appears when you select the tiering type as <b>STEP</b> .	
Rate Component Map Description	Used to specify the description for the tiering setup of the rate component. For example, if you want the user to enter price per transaction for a tiering range, enter <b>Price Per Transaction</b> in the <b>Rate Component Map Description</b> field.	Yes

This zone contains the following buttons:

Button Name	Button Description (When the Action is Add)	Button Description (When the Action is Edit)
Save	Used to create the tiering setup.	Used to save the changes made in this zone.
Delete	<b>Note:</b> This button is disabled when you define the tiering setup of the rate component.	Used to delete the tiering setup of the rate component.
		<b>Note:</b> You can delete the tiering setup only when the rate component is not yet used for any product pricing.
Cancel	Used to clear the fields in this zone.	Used to reset the changes made in this zone.

## **Defining Tiering Setup of a Rate Component**

### **Prerequisites**

To define tiering setup of a rate component, you should have:

- Rate schedules defined in the application
- Rate components of the rate schedule defined in the application

### **Procedure**

To define tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.  
The **Rate Definition** screen appears.
3. Select the rate schedule in the **Rate Schedule Components** zone.
4. Click **Search**.  
The rate components of the rate schedule appear as the search results.
5. Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to define.  
The **Create/Edit Rate Definition** zone appears.
6. Select the tiering type from the list.
7. Enter the maximum number of tiering ranges supported by the rate component.

#### **Note:**

The **Maximum Tiering Combinations** field is non-editable when you select the tiering type as **FLAT** or **STEP**. By default, **0** appears in the **Maximum Tiering Combinations** field when you select the tiering type as **FLAT**, and **1** appears when you select the tiering type as **STEP**.

- Enter the description for the tiering setup of the rate component.

For example, if you want the user to enter price per transaction for a tiering range, enter `Price Per Transaction` in the **Rate Component Map Description** field.

- Click **Save**.

The rate component map ID is generated automatically when you define the tiering setup of the rate component.

## Editing Tiering Setup of a Rate Component

### Procedure

To edit tiering setup of a rate component:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.  
The **Rate Definition** screen appears.
- Select the rate schedule in the **Rate Schedule Components** zone.
- Click **Search**.  
The rate components of the rate schedule appear as the search results.
- Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to edit.  
The **Create/Edit Rate Definition** zone appears.
- Modify the details of the tiering setup.

**Note:** You can only modify the rate component map description.

- Click **Save**.

The changes made to the tiering setup are saved.

### Related Topics

For more information on...	See...
<b>Rate Definition</b> screen	<a href="#">Rate Definition</a> on page 420
<b>Rate Schedule Components</b> zone	<a href="#">Rate Schedule Components</a> on page 421

## Deleting Tiering Setup of a Rate Component

### Procedure

To delete tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.

The **Rate Definition** screen appears.

3. Select the rate schedule in the **Rate Schedule Components** zone.

4. Click **Search**.

The rate components of the rate schedule appear as the search results.

5. Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to delete.

The **Create/Edit Rate Definition** zone appears.

6. Click **Delete**.

The tiering setup of the rate component is deleted, and the action that can be performed on the rate component changes from **Edit** to **Add** in the **Rate Schedule Components** zone.

#### Note:

The **Delete** button is disabled when you define the tiering setup of the rate component.

You can delete the tiering setup only when the rate component is not yet used for any product pricing.

## Tiering Criterion

Oracle Revenue Management and Billing (ORMB) provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization.

Let us understand this with the help of an example. ABC company uses wire transfer services provided by a large bank. If ABC company initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If ABC company initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, you will have to define tiered pricing with the following tiering ranges:

- If the number of wire transfers is greater than 0 and less than or equal to 1000, then charge \$5 per transfer to ABC company.
- If the number of wire transfers is greater than 1000, then charge \$3 per transfer to ABC company.

In the above example, number of wire transfers is the tiering criterion, 0 – 1000 and 1000 – BLANK are tiering ranges, and \$5 and \$3 are rates per transfer.

The **Tiering Criteria** screen allows you to create and edit a tiering criterion. This screen consists of the following zones:

- [Tiering Criterion List](#) on page 426
- [Edit Tiering Criterion](#) on page 426
- [Create Tiering Criterion](#) on page 427

## Tiering Criterion List

The **Tiering Criterion List** zone displays tiering criterion that are already defined in the system. This zone contains the following columns:

Column Name	Column Description
Tiering Criterion	Displays the code of the tiering criterion.
Description	Displays the description of the tiering criterion.
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

On clicking the **Broadcast**  icon corresponding to the tiering criterion, the **Edit Tiering Criterion** zone appears with the details of the respective tiering criterion.

## Edit Tiering Criterion

The **Edit Tiering Criterion** zone allows you to edit the tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Displays the code of the tiering criterion.	Not applicable
Description	Used to modify the description of the tiering criterion.	Yes
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.	Not applicable

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Cancel	Used to clear the changes made in this zone.

By default, the **Edit Tiering Criterion** zone does not appear in the **Tiering Criteria** screen. It appears only when you click the **Broadcast**  icon corresponding to the tiering criterion in the **Tiering Criteria List** zone.

### Related Topics

For more information on...	See...
How to edit a tiering criterion	<a href="#">Editing a Tiering Criterion</a> on page 428

## Create Tiering Criterion

The **Create Tiering Criterion** zone allows you to create tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Used to specify the code that uniquely identifies the tiering criterion.	Yes
Description	Used to specify the description for the tiering criterion.	Yes
Service Quantity Identifier	Used to specify the Service Quantity Identifier (SQI) for the tiering criterion.  <b>Note:</b> During billing, the rating engine uses the SQI to determine which service quantities are applied to tiers.	Yes

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to create the tiering criterion.
Cancel	Used to clear the fields in this zone.

### Related Topics

For more information on...	See...
How to create a tiering criterion	<a href="#">Creating a Tiering Criterion</a> on page 427

## Creating a Tiering Criterion

### Prerequisites

To create a tiering criterion, you should have:

- Service Quantity Identifiers (SQIs) defined in the application

### Procedure

To create a tiering criterion:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Tiering Criterion**.  
The **Tiering Criterion** screen appears.
3. In the **Create Tiering Criterion** zone, enter the code that uniquely identifies the tiering criterion.
4. Enter the description for the tiering criterion.
5. Select the Service Quantity Identifier (SQI) that you want to associate with the tiering criterion.
6. Click **Save**.

The tiering criterion is created.

### Related Topics

<b>Edit Tiering Criterion</b> zone	<a href="#">Edit Tiering Criterion</a> on page 426

## Variance Parameter

Oracle Revenue Management and Billing allows you to define pricing for a product based on the variance parameter. This helps you to maintain variance based pricing for a product. For example, you can define different product pricing for each country or currency, if required. Before you define product pricing based on a variance parameter, you need to define the variance parameter. The **Variance Parameter** screen allows you to define, edit, and delete a variance parameter. It also allows you to filter the variance parameters using a search criteria.

### Filtering the Variance Parameters

#### **Procedure**

To filter the variance parameters:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following two sections:

- **Search Criteria**— The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	No

- **Search Results** — On clicking the **Search** button corresponding to the **Variance Parameter** field, the search results are filtered based on the specified criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Variance Parameter	Displays the variance parameter.
Description	Displays the description of the variance parameter.

3. Enter the search criteria in the **Variance Parameter** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Search** button corresponding to the **Variance Parameter** field.

The search results are filtered based on the specified criteria.

### **Related Topics**

For more information on...	See...
<b>Variance Parameter</b> screen	<a href="#">Variance Parameter</a> on page 428

## **Defining a Variance Parameter**

### **Procedure**

To define a variance parameter:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	Yes
Description	Used to specify the description for the variance parameter.	Yes

3. Enter the required details.

4. If you want to define more than one variance parameter, click the **Add** () icon and then repeat step 4.

**Note:** However, if you want to remove a variance parameter, click the **Delete** (🗑️) icon corresponding to the variance parameter that you want to delete.

- Click **Save**.

The variance parameter is defined.

### **Related Topics**

For more information on...	See...
<b>Variance Parameter</b> screen	<a href="#">Variance Parameter</a> on page 428

## **Editing a Variance Parameter**

### **Procedure**

To edit a variance parameter:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears.

- If required, you can filter the variance parameters in the **Variance Parameter** screen.

A list of variance parameters that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Variance Parameter	Displays the variance parameter.	Not applicable
Description	Used to specify the description for the variance parameter.	Yes

- Modify the required details.
- Click **Save**.

The changes made to the variance parameter are saved.

### **Related Topics**

For more information on...	See...
<b>Variance Parameter</b> screen	<a href="#">Variance Parameter</a> on page 428
How to filter the variance parameters	<a href="#">Filtering the Variance Parameters</a> on page 428

## **Deleting a Variance Parameter**

### **Procedure**

To delete a variance parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **V** and then click **Variance Parameter**.  
The **Variance Parameter** screen appears.
3. If required, you can filter the variance parameters in the **Variance Parameter** screen.  
A list of variance parameters that meet the search criteria appears in the **Search Results** section.
4. Click the **Delete** () icon corresponding to the variance parameter that you want to delete.
5. Click **Save**.  
The variance parameter is deleted.

**Note:** You can only delete a variance parameter which is not yet used.

How to filter the variance parameters	<a href="#">Filtering the Variance Parameters</a> on page 428

## Person to Person Relationship Type Sequence

Oracle Revenue Management and Billing provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1\_PER\_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1\_PER\_REL feature configuration and accordingly search effective price item pricing at the parent customer level.

The **Person to Person Relationship Type Sequence** screen allows you to define, edit, and delete person to person relationship type sequence of:

- a division
- a division, price item, and price item parameters combination

This screen consists of the following zones:

- [Search Person Relationship Type Sequence for Price Item](#) on page 432
- [Search Person Relationship Type Sequence for Division](#) on page 433

## Search Person Relationship Type Sequence for Price Item

The **Search Person Relationship Type Sequence for Price Item** zone allows you to search person to person relationship type sequence defined for a division, price item, and price item parameters combination. You can also define, edit, and delete person to person relationship type sequence of a division, price item, and price item parameters combination.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item code.	No
Price Item Description	Used to specify the description of the price item.	No
Division	Used to specify the division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

**Note:** You must specify at least one search criterion while searching person to person relationship type sequence defined for a division, price item, and price item parameters combination.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Price Item</b> screen appears with the details of the respective price item.
Description	Displays the description of the price item.
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.
View	On clicking the <b>View</b> (🔍) icon, the <b>Person Relationship Type Sequence for Division and Price Item</b> screen appears where you can view person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Person Relationship Type Sequence for Division and Price Item</b> screen appears where you can edit person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete person to person relationship type sequence defined for the division, price item, and price item parameters combination.

You can define person to person relationship type sequence for a division, price item, and price item parameters combination by clicking the **Add** link in the upper right corner of this zone.

**Search Person Relationship Type Sequence for Division**

The **Search Person Relationship Type Sequence for Division** zone allows you to search person to person relationship type sequence defined for a division. You can also define, edit, and delete person to person relationship type sequence of a division.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division for which person to person relationship type sequence is defined.
Description	Displays the description of the division.
View	On clicking the <b>View</b> (👁️) icon, the <b>Person Relationship Type Sequence for Division</b> screen appears where you can view person to person relationship type sequence of the division.
Edit	On clicking the <b>Edit</b> (✏️) icon, the <b>Person Relationship Type Sequence for Division</b> screen appears where you can edit person to person relationship type sequence of the division.
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the person to person relationship type sequence of the division.

You can define person to person relationship type sequence for a division by clicking the **Add** link in the upper right corner of this zone.

## Searching Relationship Type Sequence for a Division, Price Item, and Price Item Parameters

### Prerequisites

To search person to person relationship type sequence for a division, price item, and price item parameters combination, you should have:

- Divisions defined in the application

### Procedure

To search person to person relationship type sequence for a division, price item, and price item parameters combination:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.  
The **Person to Person Relationship Type Sequence** screen appears.
3. Enter the search criteria in the **Search Person Relationship Type Sequence for Price Item** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually whenever required.

4. Click **Search**.

A list of division, price item, and price item parameters combinations that meet the search criteria and for which person to person relationship type sequence is defined appears in the **Search Results** section.

## Defining Relationship Type Sequence for a Division, Price Item, and Price Item Parameters

### Prerequisites

To define person to person relationship type sequence for a division, price item, and price item parameters combination, you should have:

- Divisions defined in the application
- Price items associated with the division to which the user belongs
- Parameters associated with the price item
- Person relationship types defined in the application

### Procedure

To define person to person relationship type sequence for a division, price item, and price item parameters combination:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.

The **Person to Person Relationship Type Sequence** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Person Relationship Type Sequence for Price Item** zone.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define price item and price item parameters specific person to person relationship type sequence.	Yes
Price Item	Used to specify the price item code.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.	Yes
Price Item Parameters	Used to specify the price item parameters.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters Search</b> screen appears.	No

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

4. Enter the required details.

**Note:** You can search for a price item and price item parameters by clicking the **Search** () icon corresponding to the respective field.

5. If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** () icon and then enter the details in the **Person Relationship Type Sequence** section.

**Note:** However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** () icon corresponding to the relationship type.

6. Click **Save**.

The person to person relationship type sequence is defined for the division, price item, and price item parameters combination.

## Editing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters

### Prerequisites

To edit person to person relationship type sequence of a division, price item, and price item parameters combination, you should have:

- Person relationship types defined in the application

### Procedure

To edit person to person relationship type sequence of a division, price item, and price item parameters combination:

1. Search person to person relationship type sequence for the division, price item, and price item parameters combination in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **Edit** () icon in the **Edit** column corresponding to the division, price item, and price item parameters combination whose person to person relationship type sequence you want to edit.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.	Not applicable
Price Item	Displays the price item code.	Not applicable
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).	Not applicable

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

3. If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** () icon and then enter the details in the **Person Relationship Type Sequence** section.

**Note:** However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** () icon corresponding to the relationship type.

4. Click **Save**.

The changes made to the person to person relationship type sequence are saved.

## Division

---

### Topics:

- [Division Search](#)
- [Division](#)

The following two types of divisions are used while defining a contract type:

- **General Ledger (GL) Division** — GL divisions typically comprise of individual entities (for example, companies) in the general ledger. You must set up a GL division for each such entity. The GL division is used to define the accounting period for financial transactions linked to contracts. Contracts are associated with GL divisions through their contract type. The system uses accounting periods to prevent a user from creating financial transactions in the closed periods. It also uses accounting periods when it generates the flat file that contains the consolidated journal entry that is interfaced to the general ledger.
- **Division** — A division is associated with a jurisdiction. A jurisdiction is a geographic-oriented entity with unique business rules. For example, if you conduct business in California and Japan, each jurisdiction has different set of rules, and therefore you need to have a separate jurisdiction for each division. You must set up a division for each jurisdiction in which you conduct the business. For the Pricing Management functionality, setting up a division is mandatory, and the system must contain information about at least one division.

A division is associated with the following:

- **Person** — You may or may not associate person to a division. It is optional. But, when you are using division specific functionality, you have to associate person to a division while creating a local person.
- **Contract** — Contract is associated to a division through its contract type. The contract type controls multiple business rules which are defined for a given jurisdiction and contract type combination. In addition to controlling the business rules defined on the contract's contract type, the contract's division also controls the type of collection criteria used to determine if and how to collect overdue debt.
- **Account** — The division on account when combined with the account's customer class defines the jurisdiction that governs financial business rules (for example, the bill's due date, when and how late payment charges are calculated, etc.). It also allows you to assign To Do entries associated with the account to a given To Do role based on the account's division.

## Division Search

The **Division Search** window allows you to search for a division. This screen contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division code.	No
Description	Used to specify the description for the division.	No

- **Search Results** — On clicking the **Search** button corresponding to the respective field, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Displays the division code.
Description	Displays the description of the division.

How to search for a division	<a href="#">Searching for a Division</a> on page 446

## Searching for a Division

### Procedure

To search for a division:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.  
A sub-menu appears.
3. Click the **Search** option from the **Division** sub-menu.  
The **Division Search** window appears.
4. Enter the code or description of the division in the **Search Criteria** section.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click the **Search** button corresponding to the respective field.  
A list of divisions that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the division whose details you want to view or edit.  
The **Division** screen appears.

## Division

The **Division** screen allows you to define and edit a division. This screen consists of the following tabs:

Tab Name	Tab Description	Mandatory (Yes or No)
Main	Used to define basic details for a division.	Yes
Access Groups	Used to define the users who have right to associate objects (such as persons, accounts, price items, price lists, etc.) with this division. The users can only view those divisions to which they have access in the <b>Division</b> list used across the application.	No
Price Items	Used to define which price items are available to persons or accounts in this division.  <b>Note:</b> Once the price item is created, you need to associate it with a division.	No
Price Lists	Used to define which price lists are available to persons or accounts in this division.  <b>Note:</b> Once the price list is created, you need to associate it with a division.  You can associate a price list with a division only when all price items in the price list are already associated with the division.	No
Languages	Used to limit the languages that you can select for a person's bills and correspondence in this division.	No
Invoice Currencies	Used to limit the invoice currencies that you can select for accounts in this division.  <b>Note:</b> Invoice currency is a currency in which the accounts in this division can be billed.	No
Person Identifier Types	Used to limit the person identifier types that you can select for persons in this division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Algorithms	<p>Used to associate algorithms with the division. Once a division is created, you must associate the <b>Price Assignment Search</b> algorithm to it. For the Banking functionality, this is required to ensure that the price item pricing is displayed in the correct order as defined by the algorithm. Each division can have unique hierarchy order or more than one division can have the same hierarchy order. The hierarchy order is also used in billing when the price determination is controlled by the sort order definition of the algorithm.</p> <p>You can define algorithms in the <b>Algorithm</b> screen. The search order is governed by the second parameter of the algorithm, and the valid values for the same are:</p> <ul style="list-style-type: none"> <li>• <b>AGREED_PRICELIST</b> – If you use this search order, the price item pricing is searched in the following order: Account Agreed, Account Price List, Account Inherited Price List, Customer Agreed, Customer Price List, Customer Inherited Price List, Parent Customer Agreed, Parent Customer Price List, and Parent Customer Inherited Price List.</li> </ul> <div data-bbox="602 961 1114 1104" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div> <ul style="list-style-type: none"> <li>• <b>AGREED_FIRST</b> - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Customer Agreed, Parent Customer Agreed, Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, and Parent Customer Inherited Price List.</li> </ul> <div data-bbox="602 1394 1114 1537" style="border: 1px solid black; padding: 5px;"> <p><b>Note:</b> In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div>	No
Characteristics	Used to define characteristics for the division.	No
Bill Messages	Used to specify the bill messages that are valid for accounts in this division.	No
Party Char Types	Used to limit the characteristic types that you can select for persons and accounts in this division.	No
Bill Cycles	Used to limit the bill cycles that you can select for accounts in this division.	No
Account Identifier Types	Used to limit the account identifier types that you can select for accounts in this division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Price Item Characteristics	Used to define division-specific characteristics for price items associated with this division.	No

## **Defining a Division**

### **Prerequisites**

To define a division, you should have:

- Work calendars, bill formats, bill route types, time zones, currencies, business objects, To Do types, and To Do roles defined in the application

### **Procedure**

To define a division:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.  
A sub-menu appears.
3. Click the **Add** option from the **Division** sub-menu.

The **Division** screen appears. It contains the following tabs:

- Main
- Access Groups
- Price Items
- Price Lists
- Languages
- Invoice Currencies
- Person Identifier Types
- Algorithms
- Characteristics
- Bill Messages
- Party Char Types
- Bill Cycles
- Account Identifier Types
- Price Item Characteristics

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the code that uniquely identifies the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> screen appears.	Yes
Description	Used to specify the description for the division.	Yes
Work Calendar	Used to indicate the days on which this division operates. This calendar is used to ensure that the system calculated dates (for example, bill due date, credit and collection event dates, etc.) fall on a working day.	Yes
Status	Used to indicate the status of the division. You can use either of the following values: <ul style="list-style-type: none"> <li>• <b>Active</b> Indicates that the division can be used in the system</li> <li>• <b>Pending</b> Indicates that the division is still being defined</li> <li>• <b>Retired</b> Indicates that the division is no longer available for use</li> </ul>	Yes
Bill Format	Used to specify the default bill format for accounts in this division.	No
Bill Route Type	Used to specify the default bill route type for accounts in this division.	No

Field Name	Field Description	Mandatory (Yes or No)
Base Currency Code	Used when accounts in this division can be billed in a currency that is different from the currency required by the GL. The system generates GL entries in the currency defined for an account. If you specify the value in this field, the system will convert the GL amounts maintained in the accounts currency into this currency. The financial transactions in both the currencies will be maintained in the system.	No
Time Zone	Used to indicate the time zone in which this division operates.	No
Eligible for Accrual	Used to indicate whether the accounts belonging to the division are eligible for accrual.	No
Accrual Cycle	Used to indicate the accrual cycle for the division.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Accrual Cycle Search</b> screen appears.	<b>Note:</b> The field is required when the division is eligible for accrual.
Comments	Used to specify additional details about the division.	No
Business Object	Used to specify a business object that may govern additional rules related to this division.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> screen appears.	
To Do Type	Used when you want the To Do entries (associated with accounts in this division) of a given To Do type must be assigned to the users with a given To Do role.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> screen appears.	
To Do Role	Used when you want the To Do entries (associated with accounts in this division) of a given To Do type must be assigned to the users with a given To Do role.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Role for To Do Type</b> screen appears.	

4. Enter the required details.

**Note:** You can search for a To Do type and To Do role by clicking the **Search**  icon corresponding to the respective field.

- If you want to add more than one To Do type and To Do role combination for a division, click the **Add** (+) icon and then enter the To Do type and To Do role.

**Note:** However, if you want to remove a To Do type and To Do role combination from the division, click the **Delete** (🗑️) icon corresponding to the combination.

- Associate access groups, price items, price lists, languages, invoice currencies, person identifier types, algorithms, bill messages, party characteristic types, bill cycles, and account identifier types with the division, if required.
- Define characteristics for the division, if required.
- Define division-specific characteristics for the price items, if required.
- Click the **Save** button in the **Page Title** area.

The division is defined.

## **Associating Access Groups with a Division**

### **Prerequisites**

To associate access groups with a division, you should have:

- Access groups defined in the application

### **Procedure**

To associate access groups with a division:

1. Search for the division to which you want to associate access groups.
2. Click the **Access Groups** tab in the **Division** screen..

The **Access Groups** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Access Group	Used to specify the access group code.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Access Group Search</b> window appears.	
Description	Displays the description of the access group.	Not applicable
	<b>Note:</b> The description appears automatically when you specify the access group.	

3. Enter the access group code.

**Note:** You can search for an access group by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one access group with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove an access group from the division, click the **Delete**  icon corresponding to the access group.

5. Click the **Save** button in the **Page Title** area.

The access groups are associated with the division.

## **Associating Price Items with a Division**

### **Prerequisites**

To associate products with a division, you should have:

- Products created in the application

### **Procedure**

To associate products with a division:

1. Search for the division to which you want to associate products.
2. Click the **Products** tab in the **Division** screen.

The **Products** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to specify the product code.	No
Description	Displays the description of the product.	Not applicable
	<b>Note:</b> The description appears automatically when you specify the product code.	

3. Enter the product code.

**Note:** You can search for a product by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one product with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a product from the division, click the **Delete**  icon corresponding to the product.

5. Click the **Save** button in the **Page Title** area.

The products are associated with the division.

## Associating Price Lists with a Division

### Prerequisites

To associate price lists with a division, you should have:

- Price lists created in the application

### Procedure

To associate price lists with a division:

1. Search for the division to which you want to associate price lists.
2. Click the **Price Lists** tab in the **Division** screen.

The **Price Lists** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to specify the price list ID.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Description	Displays the description of the price list.	Not applicable
	<b>Note:</b> The description appears automatically when you specify the price list ID.	

- Enter the price list ID.

**Note:** You can search for a price list by clicking the **Search**  icon corresponding to the field.

- If you want to associate more than one price list with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a price list from the division, click the **Delete**  icon corresponding to the price list.

- Click the **Save** button in the **Page Title** area.

The price lists are associated with the division.

## Associating Languages with a Division

### Prerequisites

To associate languages with a division, you should have:

- Languages defined in the application

### Procedure

To associate languages with a division:

- Search for the division to which you want to associate languages.
- Click the **Languages** tab in the **Division** screen.

The **Languages** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Language	Used to specify the language.	No

- Select the language from the list.
- If you want to associate more than one language with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a language from the division, click the **Delete**  icon corresponding to the language.

- Click the **Save** button in the **Page Title** area.

The languages are associated with the division.

## Associating Invoice Currencies with a Division

### Prerequisites

To associate invoice currencies with a division, you should have:

- Currencies defined in the application

### Procedure

To associate invoice currencies with a division:

- Search for the division in the **Division** screen.
- Click the **Invoice Currencies** tab.

The **Invoice Currencies** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to specify the currency.	No
Rounding Type	Used to indicate the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> <li>Down</li> <li>Nearest</li> <li>Up</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are associating a currency with the division.

- Select the currency and its rounding type from the respective list.
- If you want to associate more than one invoice currency with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove an invoice currency from the division, click the **Delete** (🗑️) icon corresponding to the invoice currency.

- Click the **Save** button in the **Page Title** area.

The invoice currencies are associated with the division.

## Associating Person Identifier Types with a Division

### Prerequisites

To associate person identifier types with a division, you should have:

- Person identifier types defined in the application

### Procedure

To associate person identifier types with a division:

1. Search for the division to which you want to associate person identifier types.
2. Click the **Person Identifier Types** tab in the **Division** screen.

The **Person Identifier Types** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to specify the person identifier type.	No

3. Select the person identifier type from the list.
4. If you want to associate more than one person identifier type with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a person identifier type from the division, click the **Delete** (🗑️) icon corresponding to the person identifier type.

5. Click the **Save** button in the **Page Title** area.

The person identifier types are associated with the division.

## Associating Algorithms with a Division

### Prerequisites

To associate algorithms with a division, you should have:

- Algorithms defined in the application

### Procedure

To associate algorithms with a division:

1. Search for the division to which you want to associate algorithms.
2. Click the **Algorithms** tab in the **Division** screen.

The **Algorithms** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division Algorithm Entity	<p>Used to indicate the entity to which you want to attach the algorithm. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Currency Conversion For Adjustments</b> — Used to attach a date or date and time based currency conversion algorithm which must be triggered during adjustment creation and FT GL creation for adjustments.</li> <li>• <b>Currency Conversion For Bill Segments</b> — Used to attach a date or date and time based currency conversion algorithm which must be triggered during bill segment generation and FT GL creation for bill segments.</li> <li>• <b>Currency Conversion For Payments</b> — Used to attach a date or date and time based currency conversion algorithm which must be triggered during payment and tender creation and during FT GL creation for payments.</li> <li>• <b>TFM - Currency Conversion</b> — Used to attach a date or date and time based currency conversion algorithm which must be triggered during the transaction aggregation process.</li> <li>• <b>Price Assignment Search</b> — Used to attach an algorithm which indicates the order in which the price item pricing must be determined while billing. It also indicates the order in which the price item pricing must be displayed on the <b>Pricing (Account)</b> and <b>Pricing (Person)</b> screens.</li> <li>• <b>Sequential Bill Number Generation</b> — Used to attach an algorithm which indicates how to sequence alternate bill numbers which are unique within the division.</li> <li>• <b>Usage Account Contract Mapping</b> — Used to attach an algorithm which must be triggered when you create a usage account. It checks whether the usage account satisfies any account selection template criteria defined for any active construct. If yes, it includes the usage account in the active construct provided no bills are generated for the construct.</li> <li>• <b>GL Account Validation</b> – Used to attach an algorithm which is triggered during dynamic GL account validation.</li> <li>• <b>TFM - Cancellation Pre-Processing</b> – Used to attach an algorithm which is triggered when you execute the C1-TXCNC batch. This algorithm is used to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process.</li> <li>• <b>TFM - Disaggregation Pre-Processing</b> - Used to attach an algorithm which is triggered when you execute the C1-PDTXN batch. This algorithm is used to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process.</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are associating an algorithm with the division.</p>

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>TFM - Rollback Pre-Processing</b> - Used to attach an algorithm which is triggered when you execute the C1-TXNRB batch. This algorithm is used to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process.</li> <li>• <b>TFM - Verify Pricing Post-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNVP batch. This algorithm is used to undertake some post-processing activities on a summary record in the CI_TXN_DTL_PRITM_SUMMARY table.</li> <li>• <b>TFM - Billable Charge Post-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNSQ and C1-TXNCU batches. This algorithm is used to undertake some post-processing activities on a billable charge.</li> <li>• <b>TFM - Price Item Derivation Post-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNIP batch. This algorithm is used to undertake some post-processing activities on the transaction legs.</li> <li>• <b>TFM - Rate Post-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNEX and C1-TXNSQ batches. This algorithm is used to undertake some preprocessing activities while determining rate for transaction legs.</li> <li>• <b>TFM - Rate Pre-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNEX and C1-TXNSQ batches. This algorithm is used to undertake some post-processing activities after determining rate for transaction legs.</li> </ul>	
Sequence Number	Used to specify the order in which the algorithms with the same entity should be executed.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with the division.
Algorithm	Used to specify the algorithm code.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	Yes (Conditional)  <b>Note:</b> This field is required when you are associating an algorithm with the division.
Description	Displays the description of the algorithm.  <b>Note:</b> The description appears automatically when you specify the algorithm code.	Not applicable

3. Enter the required details.

**Note:** You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the field.

4. If you want to associate more than one algorithm with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove an algorithm from the division, click the **Delete** (🗑️) icon corresponding to the algorithm.

5. Click the **Save** button in the **Page Title** area.

The algorithms are associated with the division.

## Defining Characteristics for a Division

### Prerequisites

To define characteristics for a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

### Procedure

To define characteristics for a division:

1. Search for the division for which you want to define characteristics.
2. Click the **Characteristics** tab in the **Division** screen.

The **Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the division.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the division.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Division.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the division.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the division.

- Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the division, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.

The characteristics are defined for the division.

## Associating Bill Messages with a Division

### Prerequisites

To associate bill messages with a division, you should have:

- Bill messages defined in the application

### Procedure

To associate bill messages with a division:

- Search for the division to which you want to associate bill messages.
- Click the **Bill Messages** tab in the **Division** screen.

The **Bill Messages** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when you want the bill message to appear on the bill.	Yes (Conditional)
		<b>Note:</b> This field is required when you are associating a bill message with the division.

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when you want the bill message to appear on the bill.	No
Bill Message	Used to specify the bill message that is valid for accounts in this division.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Bill Message Search</b> window appears.	<b>Note:</b> This field is required when you are associating a bill message with the division.
Description	Displays the description of the bill message.	Not applicable
	<b>Note:</b> The description appears automatically when you specify the message code.	

3. Enter the required details.

**Note:** You can search for a bill message by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one bill message with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a bill message from the division, click the **Delete**  icon corresponding to the message code.

5. Click the **Save** button in the **Page Title** area.

The bill messages are associated with the division.

## **Associating Party Char Types with a Division**

### **Prerequisites**

To associate party char types with a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

### **Procedure**

To associate party char types with a division:

1. Search for the division to which you want to associate party char types.
2. Click the **Party Char Types** tab in the **Division** screen.

The **Party Char Types** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	Used to indicate whether the characteristic type is valid for a person or an account in this division.	Yes (Conditional)
		<b>Note:</b> This field is required when you are associating a party char type with the division.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Division.
		<b>Note:</b> This field is required when you are associating a party char type with the division.

- Enter the required details.
- If you want to associate more than one party char type with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a party char type from the division, click the **Delete** (🗑️) icon corresponding to the characteristic type.

- Click the **Save** button in the **Page Title** area.

The party char types are associated with the division.

## **Associating Bill Cycles with a Division**

### **Prerequisites**

To associate bill cycles with a division, you should have:

- Bill cycles defined in the application

### **Procedure**

To associate bill cycles with a division:

- Search for the division to which you want to associate bill cycles.
- Click the **Bill Cycles** tab in the **Division** screen.

The **Bill Cycles** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Cycle	Used to specify the bill cycle.	No

- Select the bill cycle from the list.

- If you want to associate more than one bill cycle with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a bill cycle from the division, click the **Delete** (🗑️) icon corresponding to the bill cycle.

- Click the **Save** button in the **Page Title** area.

The bill cycles are associated with the division.

## Defining Division-Specific Characteristics for a Price Item

### Prerequisites

To define division-specific characteristics for a price item, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division/Price Item Combination)
- Price item associated with the division to which the user belongs

### Procedure

To define division-specific characteristics for a price item:

1. Search for the division for which you want to define price item characteristics.
2. Click the **Price Item Characteristics** tab in the **Division** screen.

The **Price Item Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price item	Displays the price item code.	Not applicable
Effective Date	Used to specify the date from when the price item characteristic is effective for the division.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item.

3. If the division has multiple price items associated with it, scroll to define characteristics for the required price item.

**Note:** You can use the **Previous** (←) and **Next** (→) buttons to scroll through the price items while defining their characteristics.

4. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. If you want to define more than one division-specific characteristic for the price item, click the **Add** () icon and then repeat step 4.

**Note:** However, if you want to remove a division-specific characteristic from the price item, click the **Delete** () icon corresponding to the characteristic.

6. Click the **Save** button in the **Page Title** area.

The division-specific characteristics are defined for the price item.

Oracle Revenue Management and Billing may optionally be configured to use the approval workflow process whenever any addition, modification, or deletion is done manually by a user. The approval workflow process routes any changes made to the business objects (such as person, account, contract, division, and so on) to a group of people for approval. The approval workflow process allows you to manage and track all tasks involved in the approval process.

Approval workflow allows you to define the rules for requiring an approval step before the data changes are committed to the database. Once you establish the approval workflow rules, the application manages the business process flow for having data changes approved before they are reflected in the database.

The system provides you with a flexible set of options used to determine when approvals are required, and how the approval process is to be managed including:

- Turning approval on or off for individual business objects within the application
- Grouping business objects so that approval is required for the group rather than the individual business objects within the group
- Who should approve
- How many levels of approvals are required
- Different approval workflow chains based on different criteria

Once you have turned approval workflow on for an object, or a group of objects, the system will use the approval workflow configuration to manage the entire approval process including:

- Determining whether approval is required based on data changes submitted by a user
- Routing approval workflow requests to one or more qualified approvers
- Managing rejected data changes and sending these back to the submitter for resolution
- Committing the changes once all required approvals are received

- *Approval Workflow Reason  
(Used for Viewing)*

## Most Commonly Used Terms

---

Before you understand the approval workflow process, you must familiarize yourself with the following terms:

Term	Description
Submitter	A person who adds, modifies or deletes a business object, such as person, account, contract, and division is called a submitter.
Approver	A person who approves any changes made to a business object is called an approver.
Approval Workflow Group	A group of one or more business objects for which approval is required, under some or all conditions, when data changes are made.
Approval Workflow Chain	The approval workflow chain indicates how many levels of approvals are required to approve the changes made by the submitter.

## Approval Workflow Process

---

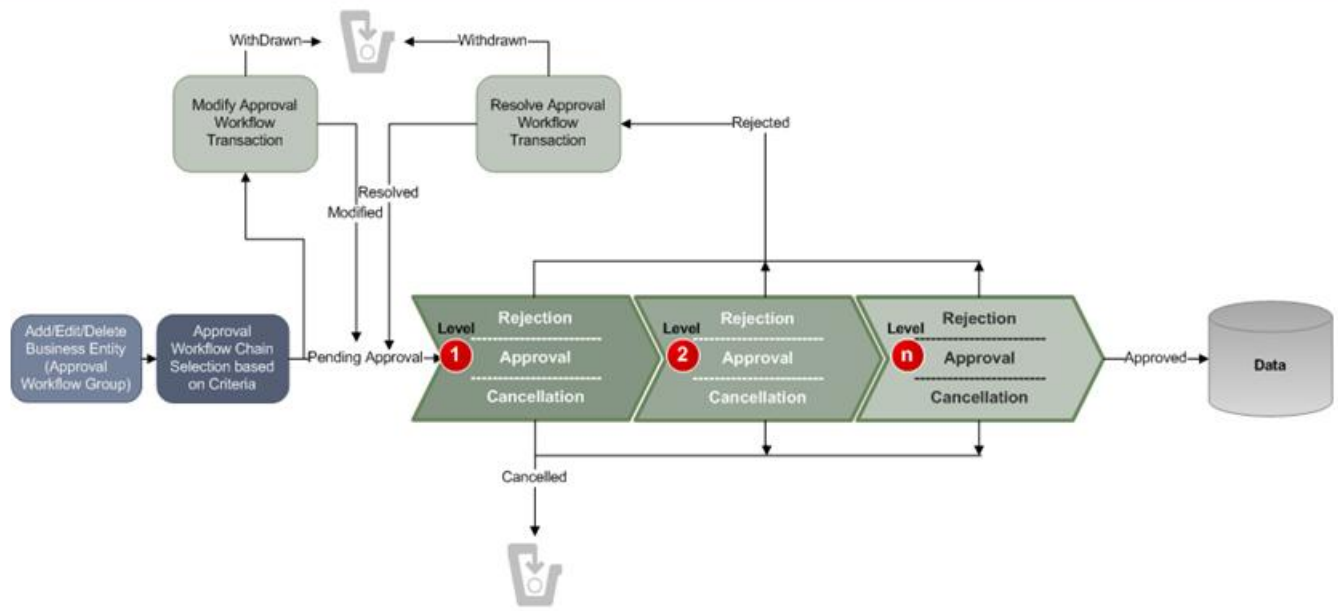

When a submitter adds, edits or deletes a business object (for example, an account) that belongs to an approval workflow group, the system checks whether approval workflow is activated for the approval workflow group. If the approval workflow is activated for the group, the system creates an approval workflow request. Every approval workflow request is uniquely identified in the system through the Approval Transaction ID.

The system identifies the approval workflow chain that must be used for approval depending on the pre-configured conditions or criteria. Based on the number of levels defined in the approval workflow chain, the request is sent to the approver at each level in the chain or hierarchy for approval. When the approver at the first level approves the request, a notification is sent to the approver at the second level for approval. This process continues till the approval is received from all levels in the hierarchy. Once the approvers at all levels approve the request, the changes are committed to the database.

However, if an approver at any level in the hierarchy rejects the request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver's comments and resubmits the changes for approval. In this case, the approval process starts once again from the beginning and not from the level at which the request was rejected.

The submitter also has the facility to modify the request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval. The submitter also has the facility to cancel the request.

The following figure indicates the flow of the approval workflow process:

To implement the approval workflow process, you need to define the following:

- [Approval Workflow Group \(Used for Searching\)](#) on page 526
- [Approval Workflow Chain \(Used for Searching\)](#) on page 543
- [Approval Workflow Criterion Type \(Used for Searching\)](#) on page 550
- [Approval Workflow Group Chain Linkage \(Used for Searching\)](#) on page 556
- [Approval Workflow Reason \(Used for Searching\)](#) on page 573
- [Approval Workflow Setting \(Used for Searching\)](#) on page 566

For price list, price item and price assignment, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1PRODUCT** – Contains the C1\_PRICEITEM\_BO business object
- **C1PRICELST** – Contains the C1\_F\_ADDPLBO business object
- **C1PRICEASG** – Contains the C1\_PRICECOMP and C1\_PRICEASGN\_BO business objects

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains. To setup the approval workflow process for price assignment, you need to do the following:

For Price Item	<ol style="list-style-type: none"> <li>1. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICEITEM</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_PRICEITEM_BO</b> as the business object on this algorithm.</li> <li>2. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICEITEM</b> MO.</li> <li>3. Link the <b>C1PRODUCT</b> group to the appropriate approval workflow chain.</li> <li>4. Activate the approval workflow for the <b>C1PRODUCT</b> group by setting the <b>Active</b> flag corresponding to the group in the <b>Approval Workflow Settings</b> screen to <b>Y</b>.</li> </ol>
----------------	---

For Price List	<ol style="list-style-type: none"> <li>1. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICELIST</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_F_ADDPLBO</b> as the business object on this algorithm.</li> <li>2. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICELIST</b> MO.</li> <li>3. Link the <b>C1PRICELST</b> group to the appropriate approval workflow chain.</li> <li>4. Activate the approval workflow for the <b>C1PRICELST</b> group by setting the <b>Active</b> flag corresponding to the group in the <b>Approval Workflow Settings</b> screen to <b>Y</b>.</li> </ol>
For Price Assignments	<ol style="list-style-type: none"> <li>1. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICECOMP</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_PRICECOMP</b> as the business object on this algorithm.</li> <li>2. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICECOMP</b> MO.</li> <li>3. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICEASGN</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_PRICEASGN_BO</b> as the business object on this algorithm.</li> <li>4. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICEASGN</b> MO.</li> <li>5. Link the <b>C1PRICEASG</b> group to the appropriate approval workflow chain.</li> <li>6. Activate the approval workflow for the <b>C1PRICEASG</b> group by setting the <b>Active</b> flag corresponding to the group in the <b>Approval Workflow Settings</b> screen to <b>Y</b>.</li> </ol>

Similarly, for invoicing group, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1IGADD**
- **C1IGUPD**

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains, and activate the approval workflow for these groups by setting the following in the **Approval Workflow Settings** screen:

- Set **Active** flag to **Yes**
- Set **Prevalidation** flag to **Yes**

**Note:** You must set the **Active** flag to **No** for both the groups in case you do not want to activate the approval workflow for invoicing group. If you set the **Active** flag to **Yes** for either of the groups, approval workflow is triggered when you add and/or edit an invoicing group.

## Prerequisites

You need to setup the following prerequisites to implement the approval workflow process:

- **Setup Feature Configuration for Approval Workflow** — If you create new Maintenance Objects (MOs) and want the access control for these MOs in the approval workflow transactions to be based on the access group and division, then you have to create a custom algorithm and attach it to the **Approval Transaction Entity Access Algorithms** option type of the **C1\_AXENTITY** feature configuration. Note that you will then have two access algorithms; one default algorithm (that is, **C1-APPTXN**) and another custom algorithm. For more information

about the **C1\_AXENTITY** feature configuration, see [Setting the C1\\_AXENTITY Feature Configuration](#) on page 2025.

- **Create and Attach Determine BO Algorithm** — To use approval workflow for a business object, check the corresponding maintenance object to see if a **Determine BO** algorithm is already attached to it. If not, create a **Determine BO** algorithm using the **F1-MOBO** algorithm type, and specify the appropriate business object name on the newly created algorithm. Attach this algorithm on the **Determine BO** algorithm spot of the maintenance object.
- **Attach Audit Algorithm to Business Objects** — To use the approval workflow process for a business object, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object. Unless you attach the audit algorithm to a business object, the approval workflow process will not be triggered for the respective business object. This step is only required when you are using the base panels. If you have created custom UI maps to enter or modify data for a specific business object, this step is not needed.
- **Attach Validation Algorithms to Business Objects** — The following algorithms are shipped with ORMB:

Business Object	Basic Validation Algorithm	Pending Transaction Validation Algorithm
C1-AppBOChain	C1-GRPCHNALG	C1-APPGRPCHL
C1-AppGrp	C1-GRPALG	C1-APPGROUPV
C1-ApprovalChainEligible	C1-ADMALG	C1-APGBYPORT
C1-ApprovalTransactionChain	C1-APCHALGO	C1-APCHNPEND

The basic validation algorithms are attached to the respective business objects, and then shipped with ORMB. However, the pending transaction validation algorithms are not attached to the respective business objects. If you want to restrict the users from either editing or deleting the approval workflow group, approval workflow settings, approval workflow chain, or approval workflow group chain linkage when the respective approval workflow requests are in the **Pending**, **Work-in-Progress**, or **Rejected** state, then you must attach the pending transaction validation algorithm on the **Validation** algorithm spot of the respective business object.

- **Set Colors for Highlighting during Comparison** — While approving, rejecting, or cancelling approval workflow requests where the submitter action is Update (UPD), you will be able to compare the existing and new data. By default, any modifications are highlighted in the Yellow (9933FF) color and new additions are highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Changing the Highlighting Colors](#).
- **Create To Do Types** — You need to create the To Do types that you want to use in the approval workflow process. Once the To Do type is created, you need to link it to the required To Do roles so that users belonging to the To Do role can view and work on the To Do type.
- **Create To Do Roles** — You need to create the To Do roles that you want to use in the approval workflow process. Once the To Do role is created, you need to add the users whom you want to assign this role.

**Note:** User who is withdrawing the approval workflow request must be assigned to the To Do role to which the approver at the first level in the hierarchy is assigned. Otherwise, the user will not be able to withdraw the approval workflow request.

- **Create Input UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group. For more information on how to create an Input UI map manually, see [Creating Input UI Map for an Approval Workflow Group](#) on page 2023.
- **Create Display UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group. For more information on

how to create a Display UI map manually, see [Creating Display UI Map for an Approval Workflow Group](#) on page 2022.

## Approval Transaction

If an approver at any level in the hierarchy rejects a request, a notification is sent to the submitters having the To Do role to resolve. The submitter then makes the required corrections based on the approver's comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Approval Transaction** screen allows you to resolve or withdraw a request. It consists of the following zones:

- [Search Approval Transaction](#)
- [Approval Transaction Log](#)

## Search Approval Transaction

The **Search Approval Transaction** zone allows you to search for an approval transaction using various search criteria. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an approval transaction using the task or approval transaction details. The valid values are: <ul style="list-style-type: none"> <li>• Task Details</li> <li>• Approval Transaction Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Task Details</b> option is selected.	
Status	Used to search approval transactions with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• Inprocess</li> <li>• Pending</li> <li>• Deleted</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Approval Transaction Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Task	Used to search approval transactions with a particular task. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Modify</li> <li>• Resolve</li> </ul>	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Task Details</b> option from the <b>Search By</b> list.	<b>Note:</b> This field is required when you want to search approval transactions using the task details.
Approval Workflow Group	Used to search approval transactions created for the business objects that belong to a particular approval workflow group.	No
Division	Used to search approval transactions which belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Reference ID	Used to search approval transactions created for the business object with a particular reference ID.	No
Approval Transaction ID	Used to search for a particular approval transaction.	No
Created From	Used to search approval transactions which are created from a particular date onwards.	No
Created Until	Used to search approval transactions which are created till a particular date.	No
Action	Used to search approval transactions which are created while adding, updating, or deleting a business object.	No
Submitter ID	Used to search approval transactions which are created by a particular submitter.	No
	<b>Note:</b> This field appears either when you select the <b>Task Details</b> from the <b>Search By</b> list and <b>Approve</b> option from the <b>Task</b> list or when you select the <b>Approval Transaction Details</b> from the <b>Search By</b> list and <b>Processing, Pending, or Deleted</b> option from the <b>Approval Transaction Status</b> list.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Submitter Id for Status</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Approver ID	Used to search approval transactions which are rejected by a particular approver.  <b>Note:</b> The <b>Approver ID</b> is displayed when the approval transaction is searched by <b>Task Details</b> and <b>Task is Resolve</b> . It is also displayed when the approval transaction is searched by <b>Approval Transaction Details</b> and Status is <b>Approved, Canceled, or Rejected</b> .  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Approver ID Search</b> window appears.	No

**Note:** You must specify at least one search criterion while searching for an approval transaction. One more search criterion is required when you are searching for an approval transaction using the **Task** field.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.  <b>Note:</b> It has a link. The link appears when you select <b>Task Details</b> option from the <b>Search By</b> list. If the <b>Approve</b> option is selected from the <b>Task</b> list then on clicking the link, <b>Comparison: New versus Existing</b> window appears with the compared details of the new and existing approval transactions. If the <b>Modify</b> option is selected from the <b>Task</b> list then on clicking the link, <b>Modify/Resolve Price List Assignment</b> window appears to modify or resolve the details of price list assignment. If the <b>Resolve</b> option is selected from the <b>Task</b> list then on clicking the link, <b>Modify/Resolve Price List Assignment</b> window appears to modify or resolve the details of price list assignment.
Approval Workflow Group	Displays the code of the approval workflow group.
Submitter Name	Displays the name of submitter who submits the approval transaction details list.  <b>Note:</b> This column appears either when you select the <b>Approve</b> or <b>Modify</b> option from the <b>Task</b> list or when you select the <b>Processing, Pending, or Deleted</b> option from the <b>Approval Transaction Status</b> list.
Approver Name	Displays the name of an approver who approves an approval transaction details list.  <b>Note:</b> This column appears either when you select the <b>Resolve</b> option from the <b>Task</b> list or when you select the <b>Approved, Canceled, or Rejected</b> option from the <b>Approval Transaction Status</b> list.

Column Name	Column Description
Submitted On	Displays the date and time on which approval transaction is submitted for approval.
	<b>Note:</b> This column appears either when you select the <b>Approve</b> or <b>Modify</b> option from the <b>Task</b> list or when you select the <b>Approved</b> , <b>Pending</b> , or <b>Deleted</b> option from the <b>Approval Transaction Details</b> list.
Action	Indicates the various types of action. The valid values are: <ul style="list-style-type: none"> <li>• Add</li> <li>• Delete (DEL)</li> <li>• Update (UPD)</li> </ul>
Division	Displays the division to which the approval transaction belongs.
Status	Displays the status of approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• Processing</li> <li>• Pending</li> <li>• Deleted</li> </ul>
	<b>Note:</b> This column appears either when you select <b>Approval Transaction Details</b> option from the <b>Search By</b> list of the search criteria.
To Do Type	Displays the type of <b>To Do</b> (notification) received for the approval transaction.
Approval Transaction Information	Displays additional information about the approval transaction.
Rejected On	Displays the date and time on which the transaction is rejected.
	<b>Note:</b> This column appears either when you select the <b>Resolve</b> option from the <b>Task</b> list or when you select the <b>Rejected</b> , option from the <b>Approval Transaction Details</b> list.
Reject Reason	Displays the reason for which the approval transaction is rejected by the approver.
	<b>Note:</b> This column appears either when you select the <b>Resolve</b> option from the <b>Task</b> list or when you select the <b>Rejected</b> option from the <b>Approval Transaction Details</b> list.
Canceled On	Displays the date and time on which the approval transaction is canceled by the user.
	<b>Note:</b> This column appears when you select the <b>Cancelled</b> option from the <b>Approval Transaction Details</b> list.

Column Name	Column Description
Cancel Reason	Displays the reason for which the approval transaction is canceled by the user.
	<b>Note:</b> This column appears either when you select the <b>Canceled</b> option from the <b>Approval Transaction Details</b> list.
Withdraw	Displays a link to withdraw an approval transaction.
	<b>Note:</b> This column appears either when you select the <b>Modify</b> or <b>Resolve</b> option from the <b>Task</b> list. It has a link and on clicking the link, a message appears to confirm the withdrawal of the respective approval transaction.

On clicking the **Broadcast**  icon corresponding to the approval transaction the **Approval Transaction Log** zone appears with the approval transaction log details.

### Related Topics

For more information on...	See...
<b>Approval Transaction Log</b> zone	<a href="#">Approval Transaction Log</a> on page 479

How to view the log of an approval transaction	<a href="#">Viewing the Log of an Approval Transaction</a> on page 480

## Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Displays the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• InProcess</li> <li>• Pending</li> <li>• Deleted</li> </ul>
View	It has a link. On clicking the <b>View</b> link, the <b>Comparison: New versus Existing</b> window appears where you can view the existing and new compared transactions”.
Status Reason	Displays the status reason of the approval transaction.
Comments	Displays additional information about the approval transaction.

By default, the **Banking Approval Transaction Log** zone does not appear. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction in the **Approval Transaction** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

**Related Topics**

For more information on...	See...
How to view the log of an approval transaction	<a href="#">Viewing the Log of an Approval Transaction</a> on page 480

**Searching for an Approval Transaction****Procedure**

To search for an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.  
The **Approval Transaction** screen appears.
3. Click the **Search** option from the **Approval Transaction** sub-menu.  
The **Approval Transaction** screen appears.
4. Enter the search criteria in the **Search Approval Transaction** zone depending on whether you want to search for a task or approval transaction details.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of task or approval transactions that meet the search criteria appears in the **Search Results** section.

<b>Approval Transaction</b> screen	<a href="#">Approval Transaction</a> on page 475
<b>Search Approval Transaction</b> zone	<a href="#">Search Approval Transaction</a> on page 475

**Viewing the Log of an Approval Transaction****Procedure**

To view the log of an approval transaction:

1. Search for the task or approval transaction details in the **Approval Transaction** screen.
2. In the Search Results section, click the **Broadcast**  icon corresponding to the approval transaction whose log details you want to view.  
The **Approval Transaction Log** zone appears.
3. View the log details of the approval transactions in the **Approval Transaction Log** zone.

**Related Topics**

For more information on...	See...
Search Approval Transaction zone	<a href="#">Search Approval Transaction</a> on page 475
Approval Transaction Log zone	<a href="#">Approval Transaction Log</a> on page 479

## Comparison: New versus Existing

You have to define the reason codes which are used when the approval workflow request is either rejected or cancelled. The reason code helps to indicate the reason why a particular request was rejected or cancelled.

The **Comparison: New versus Existing** screen allows you to view the changes in the new approval transaction compared to the existing one. It contains the following sections:

- New
- Existing

Through this screen you can do the following:

- Approve an approval transaction
- Reject an Approval Transaction
- Cancel an approval transaction
- Modify an approval transaction
- Withdraw an Approval Transaction
- Resolve an approval transaction

## Approving an Approval Transaction

You can view the number of approval transactions which are pending for approval in the **Approval Transaction** screen. The approver can review, and accordingly approve, return to the submitter, revert to the original, or cancel the approval transaction based on the observations.

**Note:** The system will not allow you to approve, return to the submitter, revert to the original or cancel an approval transaction submitted by you.

### **Procedure**

To approve an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.

The **Comparison: New versus Existing** screen appears.

3. Review the compared existing and new approval transactions.
4. Click **Approve**.

A message appears with confirmation on transaction approved successfully.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

## 5. Click **OK**.

The approval transaction is removed from the search results.

### Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2025.

## 6. Review the changes and click **Approve** to accept the changes.

The changes in the approval transaction are approved.

How to search for an approval transaction	<a href="#">Searching for an Approval Transaction</a> on page 480

## Rejecting an Approval Transaction

### Prerequisites

To return an approval transaction to its submitter, you should have:

- Rejection reasons defined in the application

### Note:

While returning an approval transaction, you need to specify the reason why you want to return the approval transaction. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

### Procedure

To reject an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.  
The **Comparison: New versus Existing** screen appears.
3. Review the compared existing and new approval transactions.
4. Click Return to Submitter.” With stepresult, “The Rejection/Cancelation Reason window appears. It contains the following fie

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.
6. Click **OK**.

The approval transaction is removed from the search results.

### Related Topics

How to approve an approval transaction	<a href="#">Approving an Approval Transaction</a> on page 481
How to search for an approval transaction	<a href="#">Searching for an Approval Transaction</a> on page 480

## Canceling an Approval Transaction

### Prerequisites

To revert an approval transaction to its initial status, you should have:

- Cancellation reasons defined in the application

### **Note:**

While reverting an approval transaction, you need to specify the reason why you want to revert the approval transaction. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

### Procedure

To cancel an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.  
The **Comparison: New versus Existing** screen appears.
3. Review the compared existing and new approval transactions.
4. Click **Revert to Original**.

The **Rejection/Cancellation Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.

A **Comparison: New versus Existing** screen appears where you can view the changes in the new transaction as compared to the existing ones.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2025.

**6. Click OK.**

The approval transaction is removed from the search results.

**Modifying an Approval Transaction****Prerequisites**

To modify an approval transaction, you should have:

- Characteristic Types defined in the application.

**Procedure**

To Modify an approval transaction:

1. Search for approval transactions with task details and status as Modify in the **Approval Transaction** screen.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is **Update (UPD)**, you will be able to compare the existing and new data, and accordingly take an action.

3. Modify the required details.
4. Click **Save**.

The modifications made to the approval transaction are saved.

## Withdrawing an Approval Transaction

### Procedure

To withdraw an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. In the **Search Results** section, click the link in the **Withdraw** column corresponding to the approval transaction which you want to withdraw.  
A message appears confirming whether you want to withdraw the approval transaction.
3. Click **OK**.  
A message appears confirming whether you want to delete the approval transaction.
4. Click **OK**.  
The approval transaction is deleted.

## Resolving an Approval Transaction

### Prerequisites

To resolve an approval transaction, you should have:

- Characteristic Types defined in the application.

### Procedure

To resolve an approval transaction:

1. Search for approval transactions with task details and status as **Resolve** in the **Approval Transaction** screen.  
A list appears.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to resolve.  
A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is Update (UPD), you will be able to compare the existing and new data, and accordingly take an action.
3. Make the required changes.
4. Click **Save**.  
The changes resolve for the approval transaction are saved.

## Approve Price Assignment

The **Approve Price Assignment** screen allows you to search for the price assignment requests that are pending in your workflow for approval. You can review the changes, and accordingly approve, reject or cancel the request based on your observations. It contains the following zones:

- [Search](#) on page 486
- [List of Price Assignments](#) on page 489
- [Approve Price Assignment - Comparison: New versus Existing](#) on page 490
- [Approval Transaction Log](#) on page 479

## Search

The **Search** zone allows you to search for the price assignment requests that are pending in your workflow for approval. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Price List</li> <li>• Submitter ID</li> <li>• Approval Transaction ID</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person</b> option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to specify the value for the person identifier type.	Yes (Conditional)
	<b>Note:</b> If you enter the person identifier as a search criteria, you have to select the person identifier type.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search price assignments which are created for a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Price List Description	Used to search price lists with a particular description.	No
	<b>Note:</b> This field appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	<b>Note:</b> This field appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction ID	<p>This field appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.</p> <p><b>Note:</b></p> <p>The approval transaction ID is generated automatically when the price assignment request is created.</p> <p>This field appears only when you select the <b>Transaction ID</b> option from the <b>Search By</b> list.</p>	No

**Note:** You must specify at least one search criterion while searching for a price assignment.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. It contains the following columns:

Column Name	Column Description
Account ID	<p>Displays the account ID.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Account Identifier Type	<p>Indicates the account identifier type of the account for the price assignments.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Account Identifier	<p>Displays the value of the account identifier type.</p> <p><b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.</p>
Price List ID	<p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p>
Price List Description	<p>Displays the description for the price list.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p>
Person Identifier	<p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Person Name	<p>Displays the name of the person.</p> <p><b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Submitter ID	Displays the ID of the submitter.
	<b>Note:</b> This column appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.
Approval Transaction ID	Displays the approval transaction ID.
	<b>Note:</b> This column appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.

On clicking the **Broadcast**  icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

## List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction id.
	<b>Note:</b> The approval transaction id is generated automatically when the price assignment request is created.
Submitter Name	Displays the name of the submitter.
Action	Indicates the type of action, such as <b>Add</b> , <b>Update (UPD)</b> , or <b>Delete (DEL)</b> performed by the submitter during price assignment.
Submitted On	Indicates the submitter who has created the price assignment request.

Column Name	Column Description
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item or price item code.
Description	Displays the description of the price item or price item code.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Approval Transaction Information	Displays the additional information of an approval transaction.

**Note:**

By default, the **List of Price Assignments** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

**Approve Price Assignment - Comparison: New versus Existing**

The **Comparison: New versus Existing** zone lists the existing and the new price assignments defined in the system. You can approve, cancel, reject a price assignment through this zone. It contains the following fields:

Field Name	Field Description
Approval Transaction ID	Displays the approval transaction id.
Submitter ID	Displays the submitter id who has created the price assignment request.

Field Name	Field Description
Approval Transaction Information	Displays information about the approval transaction
Action	Indicates the action that can be performed on the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Add – Allows you to define the tiering setup of the price assignment</li> <li>• DEL – Allows you to delete the tiering setup of the price assignment.</li> <li>• UPD – Allows you to upload the tiering setup of the price assignment.</li> </ul>

In addition to the above fields, this zone also contains the following two sections:

- **New** – It consists of the new approved price assignments.
- **Existing** – It consists of the existing or old price assignments.

In addition, this zone also contains the following buttons:

Button Name	Button Description
Approve	Used to approve the price assignment.
Return to Submitter	Used to reject the price assignment.
Revert to Original	Used to cancel the price assignment.

**Note:**

By default, the **Comparison: New versus Existing** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

The changes made are highlighted in both the sections for the respective fields. The fields change according to the price assignments.

You can click on **Approve** button, **Return to Submitter** button, or **Revert to Original** button to **Approve**, **Reject** or **Cancel** the price assignments, respectively.

## Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Indicates the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• Inprocess</li> <li>• Pending</li> <li>• Initial</li> <li>• Deleted</li> </ul>
Status Reason	Indicates the reason why the approval transaction was rejected or cancelled.
Comments	Displays the additional details entered by the approver on rejecting or cancelling the approval transaction.

### Note:

By default, the **Approval Transaction Log** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

### Related Topics

For more information on...	See...
<b>List Of Price Assignments</b> zone	<a href="#">List of Price Assignments</a> on page 519

## Approving a Price Assignment for an Account

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. The approver can review, and accordingly approve, reject or cancel the price assignment based on the observations.

**Note:** The system will not allow you to approve, reject or cancel a price assignment submitted by you.

### Procedure

To approve a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.  
The **Approve Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review for approval.  
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast**  icon corresponding to the price assignment whose details you want to review and approve.  
The **Comparison: New Versus Existing** zone appears.

### Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2025.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.  
A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.
8. Click **Approve**.  
A message appears with confirmation on transaction approved successfully.

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve and then click **Approve**.

9. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

## Approving a Price Assignment for a Person

**Procedure**

To approve a price assignment for a person:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.  
The **Approve Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria by selecting **Person** in the **Search By** field.

**Note:**

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Search Results** appear only when **Person Identifier Type** and **Person Identifier** fields are entered.

4. Click **Search**.  
A list of persons that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the person whose price assignments you want to review for approval.  
The **List of Price Assignments** zone appears.
6. Click the **Broadcast**  icon corresponding to the **Transaction Id** in the **List of Price Assignments** zone, whose details you want to view and approve.  
The **Comparison: New Versus Existing** zone appears.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2025.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

- Review the pricing details, tiering ranges, and price assignment characteristics, and if they are accurate, then click **Approve**.

A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.

- Click **OK**.

A To Do (notification) is sent to the approver at the next level in the hierarchy. You will no longer be able to view this request in your workflow for approval. In case you are the last approver in the hierarchy, the changes are committed to the database.

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve, and then click **Approve**.

**Rejecting a Price Assignment for a Person**

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. You can review, and accordingly approve, reject or cancel the price assignment based on the observations.

**Note:** The system will not allow you to approve, reject or cancel a price assignment submitted by you.

**Procedure**

To reject a price assignment for a person:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.  
The **Approve Price Assignment** screen appears.
- Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast**  icon corresponding to the person whose price assignments you want to review.  
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast**  icon corresponding to the price assignment whose details you want to review.  
The **Comparison: New Versus Existing** zone appears.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2025.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.

The **Rejection/Cancellation Reason** screen appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reason Code	Used to specify the reason why the approval workflow request is rejected.	Yes
Rejection/Cancellation Comment	Used to specify additional information while rejecting/cancelling the approval workflow request.	Yes

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

8. Click **Return to Submitter**.

The **Rejection/Cancellation Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to add additional comments.	No

9. Enter the required details.

10. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

**Note:** Alternatively, you can cancel the price assignment by selecting the check box corresponding to the price assignment which you want to cancel and then click the **Revert to Original** button in the **List of Price Assignments** zone.

## Rejecting a Price Assignment for a Price List

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. You can review, and accordingly approve, reject or cancel the price assignment based on the observations.

**Note:** The system will not allow you to approve, reject or cancel a price assignment submitted by you.

### Procedure

To reject a price assignment for a price list:

1. Click the **Menu** link in the **Actions/Navigation** area.

A list appears.

2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.

The **Approve Price Assignment** screen appears.

3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast**  icon corresponding to the price list whose price assignments you want to review.

The **List of Price Assignments** zone appears.

6. In the **List of Price Assignments** zone, click the

**Broadcast**  icon corresponding to the price assignment whose details you want to review.

The **Comparison: New Versus Existing** zone appears.

#### Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2025.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.

The **Rejection/Cancellation Reason** screen appears.

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

8. Click **Return to Submitter**.

The **Rejection/Cancelation Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to add additional comments.	No

9. Enter the required details.

The **Approve** and **Revert to Original** buttons are disabled.

10. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

**Tip:** Alternatively, you can reject the price assignment by selecting the check box corresponding to the price assignment which you want to reject and then click the **Return to Submitter** button in the **List of Price Assignments** zone.

## Resolve Price Assignment

If an approver at any level in the hierarchy rejects a price assignment request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver's comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Resolve Price Assignment** screen allows you to resolve or withdraw a price assignment request. It consists of the following zones:

- [Search](#) on page 504
- [List of Price Assignments](#) on page 508

### Search

The **Search** zone allows you to search for the price assignment requests rejected by approvers and pending for you to resolve. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search price assignments using various details. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Price List</li> <li>• Submitter ID</li> <li>• Approver Transaction ID</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person</b> option is selected.	
Division	Used to search price assignments which belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Person Identifier Type	Used to specify the identifier type based on which you want to search for price assignment requests of a person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Account ID	Used to search for price assignment requests created for an account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to specify the account identifier type of the account whose price assignment requests you want to search.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
		<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to search for price assignment requests created for a price list.	No
	<b>Note:</b> This field appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	<b>Note:</b> This field appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	<b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.  This field appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a price assignments.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Displays the ID linked to the person.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a person.
Person Name	Displays the name of the person.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a person.
Division	Displays the division to which the account, person, or price list belongs.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of an account.  It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

Column Name	Column Description
Account Identifier Type	Displays the account identifier type.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of an account.
Account Identifier	Displays the value of the account identifier type.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of an account.
Price List ID	Displays the price list ID.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a price list.
Price List Description	Displays the description of the price list.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a price list.
Owner ID	Displays the ID of the person for whose account the approval workflow request is created.
Approval Transaction ID	Displays the approval transaction ID.
	<b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.
Person Identifier Type	Displays the person identifier type.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a person.

On clicking the **Broadcast**  icon corresponding to the account, person, or price list, the **List of Price Assignments** zone appears.

## List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	<b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as <b>Add</b> , <b>Update (UPD)</b> , or <b>Delete (DEL)</b> performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item code.
Description	Displays the description of the product.
Pricing Currency	Indicates the currency in which the product pricing is defined.
Start Date	Displays the date from when the product pricing is effective.
End Date	Displays the date till when the product pricing is effective.
Approver Name	Indicates the approver who has rejected the price assignment request.
Rejected On	Displays the date and time when the price assignment request was rejected by an approver.
Reject Reason	Indicates the reason why the price assignment request was rejected.
Rejection Comments	Displays the additional details entered by an approver on rejecting the price assignment request.
Approval Transaction Information	Displays information about the approval transaction.
	<b>Note:</b> This information string is generated using the <b>C1-APPTXNINF</b> algorithm.
Resolve	On clicking the <b>Resolve</b> link, you can modify the details of the price assignment request, and resubmit it for approval. On resubmitting, the approval workflow process starts once again from the first level in the hierarchy.
Withdraw	On clicking the <b>Withdraw</b> link, you can withdraw the price assignment request. Once you withdraw the request, no further action will be taken on the request.
View	On clicking the <b>Log</b> link, you can view the log of the price assignment request from the <b>Resolve Price Assignment</b> screen before resolving or withdrawing a request.

By default, the **List of Price Assignments** zone does not appear in the **Resolve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

## Withdrawing a Price Assignment for an Account

### Procedure

To withdraw a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- Do the following:

If you want to...	Then...
Withdraw a price assignment request when it is in the Pending Approval status	From the <b>Main</b> menu, select <b>Approval Workflow Management</b> and then click <b>Modify Price Assignment</b> . The <b>Modify Price Assignment</b> screen appears.
Withdraw a price assignment request when it has been rejected by an approver at any level in the hierarchy	From the <b>Main</b> menu, select <b>Approval Workflow Management</b> and then click <b>Resolve Price Assignment</b> . The <b>Resolve Price Assignment</b> screen appears.

- In the **Search** zone, enter the search criteria, such as the division to which the account belongs, account ID, or account identifier.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

- Click the **Broadcast**  icon corresponding to the account whose price assignment requests you want to withdraw.

The **List of Price Assignments** zone appears.

**Note:** The system provides you with a facility to view the log of a price assignment request from the **Modify Price Assignment** and **Resolve Price Assignment** screens before withdrawing a request.

- Click the **Withdraw** link in the **Withdraw** column corresponding to the price assignment request that you want to withdraw.

A message box appears confirming whether you want to delete the price assignment request.

- Click **OK**.

You will no longer be able to view this request in your workflow.

## Modify Price Assignment

---

The submitter has the facility to modify or withdraw a price assignment request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval.

The **Modify Price Assignment** screen allows you to modify or withdraw a price assignment request. It contains the following zones:

- [Search](#) on page 515
- [List of Price Assignments](#) on page 508

### Search

The **Search** zone allows you to search for the price assignment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Price List</li> <li>• Submitter ID</li> <li>• Approval Transaction ID</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person</b> option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.	
Person Identifier Type	Used to select the identifier type based on which you want to search price assignments through which the person's record is created or updated in the system.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
	<b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.	
Account ID	Used to search price assignments which are created for a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Price List Description	Used to search price lists with a particular description.	No
	<b>Note:</b> This field appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	<b>Note:</b> This field appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	<b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created. This field appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a price assignment.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Indicates the person for whom the price assignment is created.
	<b>Note:</b> This column appears only when you select the <b>Person</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.
Person Name	Displays the name of the person.
	<b>Note:</b> This column appears only when you select the <b>Person</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.
Person Identifier Type	Displays the person identifier type.
	<b>Note:</b> This column appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Account</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p>
Account Identifier Type	Indicates the account identifier type of the account for the price assignments.
	<p><b>Note:</b> This column appears only when you select the <b>Account</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.</p>
Account Identifier	Displays the value of the account identifier type.
	<p><b>Note:</b> This column appears only when you select the <b>Account</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.</p>
Price List ID	Displays the price list ID.
	<p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p>
Price List Description	Displays the description for the price list.
	<p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p>
	<p><b>Note:</b> This column appears only when you are searching for price assignment requests of a price list.</p>
Submitter ID	Displays the ID of the submitter.
	<p><b>Note:</b> This column appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.</p>

On clicking the **Broadcast**  icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

## List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	<b>Note:</b> The approval transaction id is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as <b>Add</b> , <b>Update (UPD)</b> , or <b>Delete (DEL)</b> , performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item or price item code.
Description	Displays the description of the price item or price item code.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Approval Transaction Information	Displays information about the approval transaction.
	<b>Note:</b> This information string is generated using the <b>C1-APPTXNINF</b> algorithm.
Modify	It has a link. On clicking the <b>Modify</b> link, the <b>Modify/Resolve Price Assignment</b> screen appears where you can modify the price assignment.
Withdraw	It has a link. On clicking the <b>Withdraw</b> link, you can withdraw and remove the approval transaction from the list of price assignments.
View	It has a link. On clicking the <b>Log</b> link, you can view the approval transaction log details.

By default, the **List of Price Assignments** zone does not appear in the **Modify Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

## Modifying a Price Assignment for an Account

You can view the number of price assignments which are pending for modification in the **Modify Price Assignment** screen. The modifier can review, and accordingly modify, withdraw or view log of the price assignment based on the observations.

### Procedure

To modify a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Modify Price Assignment**.  
The **Modify Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review.  
The **List of Price Assignments** zone appears.
6. Click the **Modify** link in the **Modify** column corresponding to the price assignment that you want to modify.  
The **Modify/Resolve Price Assignment** screen appears.

**Note:** Only those users who have access to the application services for each business object within the approval workflow group will be able to modify the details of the price assignment request.

7. Make the required changes.
8. Modify the required details.

The changes made to the price assignment are saved.

The **Approval Workflow Group** screen allows you to search for approval workflow group using various search criteria. Through this screen, you can navigate to the following screen:

- [Approval Workflow Group \(Used for Viewing\)](#) on page 535

This screen consists of the following zone:

- [Search Approval Workflow Group](#) on page 526

For more information on...	See...
How to search an approval workflow group	<a href="#">Searching for an Approval Workflow Group</a> on page 527
How to view the details of approval workflow group	<a href="#">Viewing the Approval Workflow Group Details</a> on page 528

## Search Approval Workflow Group

The **Search Approval Workflow Group** zone allows you to search for an approval workflow group using various search criteria. It contains the following sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to search a particular approval workflow group.	No
Description	Used to search approval workflow groups with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Group	Displays the approval workflow group.
Description	Displays the description of the approval workflow group.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Group</b> screen appears where you can view the details of the respective approval workflow group.

**Note:** You must specify at least one search criterion while searching for an Approval Workflow Group.

### Related Topics

## Searching for an Approval Workflow Group

### Procedure

To search for an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Group** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow groups that meet the search criteria appear in the **Search Results** section.

## Viewing the Approval Workflow Group Details

### Procedure

To view the details of an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to view.

The **Approval Workflow Group** screen appears. It consists of the **Main** tab with the following zone:

- [Approval Workflow Group](#) on page 536

3. View the details of the approval workflow group in the **Approval Workflow Group** zone.

### Related Topics

## Defining an Approval Workflow Group

### Prerequisites

To define an approval workflow group, you should have:

- Input and Display UI maps created in the application in case you want to use custom UI maps.
- Dependency, Approval, and Approval Post Processing algorithms defined in the application in case you want to use any of them.

**Note:** Before you define an approval workflow group for the User BO, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object belonging to the USER-SC MO, and not the USER MO.

### Procedure

To define an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.
3. Click the **Add** button in the **Page Title** area of **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group.
- **Business Objects and Group BO Relation** - Used to add business objects and define group BO Relation for the approval workflow group.

The **Main** section contains the following:

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction Type	Used to indicate the transaction type to which the approval workflow group belongs.	Yes
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Description	Used to specify the approval workflow group with a particular description.	Yes
Display UI Map	Used to specify the UI map that you want to use for viewing data of the business objects within the approval workflow group.  <b>Note:</b> You can search for a UI map, code, and an algorithm by clicking the <b>Search</b> icon (  ) corresponding to the Display UI Map field.  <b>Note:</b> If you clear the <b>Display UI Map</b> field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the <b>Regenerate UI Maps</b> icon corresponding to the group in the <b>Approval Workflow Settings</b> screen.	No
Input UI Map	Used to specify the UI map that you want to use for modifying data of the business objects within the approval workflow group.  <b>Note:</b> You can search for a UI map, code, and an algorithm by clicking the <b>Search</b> icon (  ) corresponding to the Input UI Map field.  <b>Note:</b> If you clear the <b>Input UI Map</b> field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the <b>Regenerate UI Maps</b> icon corresponding to the group in the <b>Approval Workflow Settings</b> screen.	No
Dependency Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow group.  <b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (  ) corresponding to the Dependency Algorithm field.  <b>Note:</b> This algorithm can be used to check all prerequisites before creating the approval workflow group.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Algorithm	<p>Used to specify the algorithm that will be triggered after the approval workflow group is approved by the approver at the last level in the hierarchy. The following approval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> <li>• <b>C1-APPPROD</b> - This approval algorithm is used for the C1PRODUCT group, which is shipped with ORMB.</li> <li>• <b>C1-APPPL</b> - This approval algorithm is used for the C1PRICELST group, which is shipped with ORMB.</li> <li>• <b>C1-APPASG</b> - This approval algorithm is used for the C1PRICEASG group, which is shipped with ORMB.</li> <li>• <b>C1-APPALG</b> - This is a standard approval algorithm that you can use for approval workflow groups where custom logic is not required.</li> </ul> <p>You can also create your own approval algorithms for custom UIs.</p> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Approval Algorithm field.</p>	No
Approval Post Processing Algorithm	<p>Used to specify the algorithm that will be triggered after the changes (which are approved by all approvers' in the hierarchy) are committed to the database.</p> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Approval Post Processing Algorithm field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Transaction Creation Algorithm	<p>Used to specify the algorithm that will create approval workflow group. The following transaction creation algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> <li>• <b>C1-APPASGCR</b> - Used to create approval workflow group for price assignment.</li> <li>• <b>C1-AXPROD</b> - Used to create approval workflow group for price item.</li> <li>• <b>C1-AXUSR</b> - Used to create approval workflow group for user.</li> <li>• <b>C1-IGCREATE</b> - Used to create approval workflow group for invoicing group.</li> <li>• <b>C1-AXCREATE</b> - This is a standard transaction creation algorithm that you can use to create approval workflow group for most of the base objects.</li> </ul> <p>You can also create your own transaction creation algorithms for custom UIs.</p> <p>In case of the base UIs, this algorithm is only used while modifying or resolving a group. The initial approval transaction creation for base UIs takes place through the Audit algorithm attached on the business object.</p> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Transaction Creation Algorithm field.</p>	Yes
Data Retrieval Algorithm	<p>Used to specify the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). The following data retrieval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> <li>• <b>C1-APPIGDR</b> - Used to retrieve data for invoicing group.</li> <li>• <b>C1-AXPRICEOV</b> - Used to retrieve data for price assignment.</li> <li>• <b>C1_APPDATA</b> - This is a standard data retrieval algorithm that you can use to retrieve data for most of the base objects.</li> </ul> <p>You can also create your own data retrieval algorithms for custom UIs.</p> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Data Retrieval Algorithm field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Information Algorithm	Used to specify the algorithm information.	No
	<b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (🔍) corresponding to the Approval Post Processing Algorithm field.	
Compare Map	Used to specify the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Display UI Map</b> field.	No
	<b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (🔍) corresponding to the Approval Post Processing Algorithm field.	
Input Script	Used to specify the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Input UI Map</b> field.	No
	<b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (🔍) corresponding to the Approval Post Processing Algorithm field.	

4. Enter the required details.
5. Add business objects and group BO relation with the approval workflow group, if required.
6. Click **Save**.

The approval workflow group is defined.

### **Related Topics**

<b>Approval Workflow Group</b> screen	<a href="#">Approval Workflow Group (Used for Viewing)</a> on page 535
<b>Approval Workflow Group</b> zone	<a href="#">Approval Workflow Group</a> on page 536
How to add business objects and group BO relation	<a href="#">Adding a Business Object</a>

## **Adding a Business Object**

### **Prerequisites**

To add a business object in the approval workflow group, you should have:

- Business object and approval workflow group created in the application.

### **Procedure**

To add a business object in the approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, Select **A**, and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

- Click the **Add** button in the page-title area of the **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains following sections:

- Main** - Used to specify basic details of the approval workflow group.
- Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects and link them with the approval workflow group.

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the Business Object Code that you want to include in the Approval Workflow Group.	Yes
Reference ID 1	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 2	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 3	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 4	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference Foreign Key 1	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 3	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
List	Used to indicate whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Used to specify the XPATH key of the field or list of fields in the parent business object.	No
To Key	Used to specify the XPATH key of the field or list of fields in the current business object.	No

**Note:** You can search for a business object and parent business object, by clicking the **Search** () icon placed corresponding to the **Business Object** field.

- If you want to define more than one business and parent business object for the approval workflow group, click the **Add** () icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**

The business object is added in the approval workflow group.

**Note:** When you add business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps** () icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

## Defining a Group BO Relation

### Prerequisites

To define a relationship between business object in the approval workflow group, you should have:

- Business objects added in the approval workflow group.

### Procedure

To define a relationship between business objects in the approval workflow group:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.

3. Search for an approval workflow group in the **Approval Workflow Group** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.
5. The **Approval Workflow Group** screen appears. It contains following sections:
  - **Main** - Used to specify basic details of the approval workflow group.
  - **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects, and link them with the approval workflow group.
6. Define and edit the approval workflow group details from the **Main** section, if required.
7. If you only want to define a business object, enter the required details in the **Business Objects and Group BO Relation** section.
8. If you want to define a group BO relation with the business object, enter the required details in the following fields.
  - a) **Parent Business Object**
  - b) **From Key**
  - c) **To Key**

**Note:** If you want to define more than one business or parent object, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a business or parent object, click the **Delete** (🗑️) icon corresponding to the business or parent object field.

9. Click **Save**.

The business object is defined, and its relationship with the parent object is also defined in the approval workflow group.

## **Approval Workflow Group (Used for Viewing)**

Once you define an approval workflow group, the **Approval Workflow Group** screen allows you to:

- Edit the details of an approval workflow group
- Edit the details of business objects and group business object relation
- Delete an approval workflow group
- Delete a business object and a group business object relation
- View the details of an approval workflow group

This screen consists of the following zone:

- [Approval Workflow Group](#) on page 536

## Approval Workflow Group

The **Approval Workflow Group** zone displays the details of the approval workflow group. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the name of the approval workflow group.
Description	Displays the description of the approval workflow group.
Display UI Map	Indicates the UI map that will be used for viewing data of the business objects within the approval workflow group.  <b>Note:</b> It has a link. On clicking the link, the <b>UI Map</b> screen appears where you can view the details of the respective UI Map.
Input UI Map	Indicates the UI map that will be used for modifying data of the business objects within the approval workflow group.  <b>Note:</b> It has a link. On clicking the link, the <b>UI Map</b> screen appears where you can view the details of the respective UI Map.
Dependency Algorithm	Indicates the algorithm that will be triggered before creating the approval workflow request.  <b>Note:</b> This algorithm can be used to check all prerequisites before creating the approval workflow request.
Approval Algorithm	Indicates the algorithm that will be triggered after the approval workflow request is approved by the approver at the last level in the hierarchy.
Approval Post Processing Algorithm	Indicates the algorithm that will be triggered after the changes (which are approved by all approvers in the hierarchy) are committed to the database.
Transaction Creation Algorithm	Indicates the algorithm that will create approval workflow requests.  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.
Data Retrieval Algorithm	Indicates the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD).  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.
Information Algorithm	Indicates the Approval Transaction information from the Approval Transactions that are created for a particular entity, based on the inputs of the XPath paths provided in the Reference IDs.
Compare Map	Indicates the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Display UI Map</b> field.
Input Script	Indicates the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Input UI Map</b> field.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit the approval workflow group. It is also used to delete the business objects and group BO relation.
Delete	Used to delete an approval workflow group.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow group is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

- **Business Objects And Group BO Relation** - The Business Objects And Group BO Relation contains the following fields:

Field Name	Field Description
Business Object	Indicates the Business Object that you want to include in the Approval Workflow Group.
Reference ID 1	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 2	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 3	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 4	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference Foreign Key 1	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 2	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 3	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 4	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 5	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 6	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.

Field Name	Field Description
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.
Parent Business Object	Indicates the parent business object. This should be one of the business objects within the group.
From Key	Indicates the XPATH key of the field or list of fields in the parent business object.
To Key	Indicates the XPATH key of the field or list of fields in the current business object.

## Editing an Approval Workflow Group

### Procedure

To edit an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Group** screen appears.

3. Click the **Edit** button in the **Approval workflow Group** zone.

The **Approval Workflow Group** screen appears.

4. Modify the details of the approval workflow group, if required.
5. Define, edit, or remove business objects and group BO relation from the approval workflow group, if required.
6. Click **Save**.

The changes made to the approval workflow group are saved.

## Editing a Business Object

### Procedure

To edit a business object in the approval workflow group:

1. From the **Admin** menu, select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.
2. Search for an approval workflow group in the **Search Approval Workflow Group** zone.
3. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.
4. The **Approval Workflow Group** zone appears. Click the **Edit** button from **Record Action** sections.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business objects and link them with the approval workflow group

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Displays the Business Object Code that is included in the Approval Workflow Group.	Yes
Reference ID 1	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 2	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 3	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 4	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference Foreign Key 1	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference Foreign Key 3	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Display the XPATH key of the field or list of fields in the parent business object.	No
To Key	Display the XPATH key of the field or list of fields in the current business object.	No

**Note:** You can search for a business object or parent business object by clicking the **Search**  icon placed corresponding to the **Business Object** and **Parent Business Object** field.

- If you want to define more than one business object or parent object for the approval workflow group, click the **Add**  icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**.

The changes made to the business object in approval workflow group are saved.

**Note:** When you change business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps**  icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

## Editing a Group BO Relation

### Procedure

To edit the business object's relationship details in the approval workflow group:

1. If required, filter the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.

The **Approval Workflow Group** screen appears. It contains following two sections:

- **Main** - Displays the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Displays the fields that allow to define or edit business objects, and link them with the approval workflow group.

3. If required, define and edit the approval workflow group details from the **Main** section.
4. The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the business object that you want to add in the approval workflow group.	Yes
Reference ID 1	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 2	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference ID 3	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 4	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference Foreign Key 1	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 2	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 3	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 4	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 5	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 6	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Displays the parent business object. This should be one of the business objects within the group.	No
From Key	Displays the XPATH key of the field or list of fields in the parent business object.	No
To Key	Displays the XPATH key of the field or list of fields in the current business object.	No

**Note:** You can search for a parent business object by clicking the **Search** () icon placed corresponding to the field. You can also define a new parent business object by clicking the **Add** () icon placed corresponding to the field.

5. Modify the required details in **Business Objects and Group BO Relation** section.
6. Click **Save**.

The changes made to business object's relationship are saved in the approval workflow group.

**Deleting a Group BO Relation****Procedure**

To delete the business object's relationship details in the approval workflow group:

1. If required, filter the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.
3. The **Approval Workflow Group** screen appears.
4. Click the **Edit** button in the **Record Actions** zone.  
The **Approval Workflow Group** screen appears.
5. In the **Business Objects and Group BO Relation** section, click the **Delete** () icon appearing next to the Business Object that you want to delete.
6. Click **Save**

The business object's relationship details are deleted from the approval workflow group.

**Approval Workflow Chain (Used for Searching)**

The **Approval Workflow Chain** screen allows you to search for approval workflow chain using various search criteria. Through this screen, you can navigate to the following screen:

- [Approval Workflow Chain \(Used for Viewing\)](#) on page 547

This screen consists of the following zone:

- [Search Approval Workflow Chain](#) on page 543

**Search Approval Workflow Chain**

The **Search Approval Workflow Chain** zone allows you to search for an approval workflow chain using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to search a particular approval workflow chain.	No
Description	Used to search approval workflow chains with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Chain	Displays the approval workflow chain.
Description	Displays the description of the approval workflow chain.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears where you can view the details of the respective approval workflow chain.

**Note:** You must specify at least one search criterion while searching for an approval workflow chain.

## Searching for an Approval Workflow Chain

### Procedure

To search the approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

3. Enter the search criteria in the **Search Approval Workflow Chain** zone.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow chains that meet the search criteria appears in the **Search Results** section.

## Defining an Approval Workflow Chain

### Prerequisites

To define an approval workflow chain, you should have:

- The To Do role and To Do type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

### Procedure

To define an approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.  
The **Approval Workflow Chain** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Chain** screen.  
The **Approval Workflow Chain** screen appears. It contains the following sections:
  - **Main** - Used to specify basic details of the approval workflow chain.
  - **Approval Levels** - Used to specify a level in the approval workflow chain.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to specify the approval workflow chain	Yes
Description	Used to specify the description for the approval workflow chain	Yes

Field Name	Field Description	Mandatory (Yes or No)
To Do Role To Resolve	Used to specify the To Do Role to indicate the users who will receive a notification when the approval transactions are rejected by an approver at any level in the hierarchy.	Yes

- Enter the required details.
- Define approval levels for the approval workflow chain, if required.
- Click **Save**.

The approval workflow chain is defined.

### Related Topics

## Defining Approval Levels for an Approval Workflow Chain

### Prerequisites

To define approval levels in the approval workflow chain, you should have:

- The To Do Role and To Do Type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

### Procedure

To define an approval levels for an approval workflow chain:

- Ensure that the **Approval Levels** section is expanded when you are defining or editing an approval workflow chain.

The **Approval Levels** section contains the following fields

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Used to specify the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.  <b>Note:</b> You can search for an action algorithm by clicking the <b>Search</b>  icon corresponding to the <b>Action Algorithm</b> field.	Yes
Approver To Do Role	Used to specify the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.  <b>Note:</b> You can search for an approver to do role by clicking the <b>Search</b>  icon corresponding to the <b>Approver To Do Role</b> field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approver To Do Type	Used to specify the type of notification that you want to generate when the approver approves or rejects the request.	Yes
	<b>Note:</b> You can search for an approver to do type by clicking the <b>Search</b>  icon corresponding to the <b>Approver To Do Type</b> field.	

- Enter the required details in the **Approval Levels** section.
- If you want to define more than one approval level for the approval workflow chain, click the **Add**  icon and then repeat step 2. However, if you want to remove a approval level from the approval workflow chain, click the **Delete**  icon corresponding to the approval level.

### Related Topics

## Approval Workflow Chain (Used for Viewing)

Once you define an approval workflow chain, the **Approval Workflow Chain** screen allows you to:

- View the details of an approval workflow chain
- Edit an approval workflow chain
- Delete an approval workflow chain

This screen contains the following zone:

- [Approval Workflow Chain](#) on page 547

### Approval Workflow Chain

The **Approval Workflow Chain** zone displays the details of the approval workflow chain. It contains the following sections:

- Main** - Displays basic information about the approval workflow chain. It contains the following fields:

Field Name	Field Description
Approval Workflow Chain	Displays the approval workflow chain and levels.
Description	Displays the description of the approval workflow chain and levels.
To Do Role To Resolve	Displays the description of To Do Role role type.

- Approval Levels** - Displays the levels defined in the approval workflow chain.

Field Name	Field Description
Action Algorithm	Indicates the additional action that the system will perform apart from generating a notification when the approver approves or rejects the request.

Field Name	Field Description
Level	Indicates the level in the hierarchy.
Approver To Do Role	Indicates that the users with the specified To Do role will either approve or reject the request at this level in the hierarchy.
Approval To Do Type	Indicates the type of notification that will be generated when the approver approves or rejects the request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit and delete the approval workflow chain and approval levels.
Delete	Used to delete the approval workflow chain.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing an Approval Workflow Chain

### Procedure

To edit an approval workflow chain:

1. Search for an approval workflow chain in the **Search Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to edit.

The **Approval Workflow Chain** screen appears.

3. Click the **Edit** button in the **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

- **Main** - Used to specify the basic details of the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Displays the approval workflow chain.	Yes
Description	Displays the description for the approval workflow chain.	Yes
To Do Role To Resolve	Displays the To Do role to indicate the users who will be sent a notification when the approval workflow request is rejected by an approver at any level in the hierarchy.	Yes

- **Approval Levels** - Used to specify a level in the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Displays the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.	Yes
Approver To Do Role	Displays the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.	Yes
Approval To Do Type	Displays the type of notification that you want to generate when the approver approves or rejects the request.	Yes

4. Modify the required details in the **Main** section.
5. Edit, or remove approval levels from the approval workflow chain, if required.
6. Click **Save**.

The changes made to the approval workflow chain screen are saved.

## Defining an Approval Workflow Criterion Type

### Prerequisites

To define an approval workflow criterion type, you should have:

- Algorithm, Business object, and Field object defined in the application.

### Procedure

To define an approval workflow criterion type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Approval Workflow Criterion Type**.

The **Approval Workflow Criterion Type** screen appears.

- Click the **Add** button in the **Page Title** area of the **Approval Workflow Criterion Type** screen.

The **Approval Workflow Criterion Type** screen appears. It contains the following section:

- Main** - Used to specify basic details about the approval workflow criterion type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Criterion Type	Used to specify the approval workflow criterion type.	Yes
Description	Used to specify the description for the approval workflow criterion type.	Yes
Derived From	Used to indicate the option which triggers the approval workflow. The valid values are: <ul style="list-style-type: none"> <li>Algorithm</li> <li>Business Object</li> </ul>	Yes
Algorithm	Used to indicate the algorithm for which you want to define the approval workflow criterion type.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.  This field appears only when you select the Algorithm option form the Derived From list.	Yes
Business Object	Used to indicate the business object for which you want to define the approval workflow criterion type.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.  This field appears only when you select the Business Object option form the Derived From list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Field	Used to indicate the field that you want to use to define the criteria for associating approval workflow requests with the approval workflow chains.	Yes
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon corresponding to this field. On clicking the Search icon, the Field Search window appears.</p> <p>This field appears only when you select the Business Object option from the Derived From list.</p>	

4. Enter the required details.
5. Click **Save**.

The approval workflow criterion type is created.

## Viewing the Approval Workflow Group Chain Linkage Details

### Procedure

To view the details of an approval workflow chain linkage:

1. Search for the approval workflow group chain linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to view.

The **Approval Workflow Group Chain Linkage** screen appears. It contains the following zone:

- [Approval Workflow Group Chain Linkage](#) on page 563
3. View the details of the approval workflow group chain linkage in the **Approval Workflow Group Chain Linkage** zone.

## Defining an Approval Workflow Group Chain Linkage

### Prerequisites

To define an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group and Approval Workflow Chain defined in the application.

### Procedure

To define an approval workflow group chain linkage:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Approval Workflow Group Chain Linkage**.

The **Approval Workflow Group Chain Linkage** screen appears.

- Click the **Add** button in the **Page Title** area of the **Approval Workflow Group Chain Linkage** screen.

The **Approval Workflow Group Chain Linkage** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group chain linkage.
- **Group Chain Linkage Criteria** - Used to define group chain linkage criteria for the approval workflow type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to indicate the approval workflow group.	Yes
	<b>Note:</b> You can search for an approval workflow group type by clicking the Search (🔍) icon corresponding to the field.	
Approval Workflow Chain	Used to indicate the approval workflow chain.	Yes
	<b>Note:</b> You can search for an approval workflow chain by clicking the Search (🔍) icon corresponding to the field.	
Field Approval Rule	Used to indicate whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

- Enter the required details.
- Define group chain linkage criteria for the approval workflow, if required.
- Define field approval rule criteria for the approval workflow, if required.
- Click **Save**.

The approval workflow group chain linkage is created.

## Defining Group Chain Linkage Criteria for an Approval Workflow

### Prerequisites

To define group chain linkage criteria for an approval workflow, you should have:

- Approval Workflow Criterion Type defined in the application.

### Procedure

To define group chain linkage criteria for an approval workflow:

1. Ensure that the **Group Chain Linkage Criteria** section is expanded when you are defining or editing an approval workflow.

The **Group Chain Linkage Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Displays the Group Chain Linkage ID.	Yes
	<b>Note:</b> The data appears in this field only when you are editing the details of an approval workflow criterion type.	
Criterion Type	Used to indicate the criteria type needed for defining the criterion.	Yes
	<b>Note:</b> The Search  icon appears corresponding to this field. On clicking the Search icon, the Approval Workflow Chain Search window appears.	
Operator	Used to indicate the relational operator used to define the relation between the criterion type and criterion value.	Yes
Criterion Value	Used to specify the criterion value.	Yes

2. Enter the required details.
3. If you want to define more than one group chain linkage criteria for the approval workflow, click the **Add**  icon, and then repeat step 2.

**Note:** However, if you want to remove a group chain linkage criteria from the approval workflow, click the **Delete**  icon corresponding to the group chain linkage criteria.

## Defining a Field Approval Rule

### Prerequisites

To define a field approval rule for an approval workflow group chain linkage, you should have:

- Business Object, Field, and Approval Workflow Chain to be defined in the application.

**Procedure**

To define a field approval rule for an approval workflow group chain linkage:

1. Ensure that the

**Field Approval Rule Criteria** section is expanded when you select the Yes option from the Field Approval Rule field of the M

The **Field Approval Rule Criteria** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence.	Used to indicate the order in which the rule criteria should be executed while adding or updating the field value.	Yes
Applicable For	Used to indicate whether the rule criteria should be considered while adding and/or updating the field value. The valid values are: <ul style="list-style-type: none"> <li>• Add</li> <li>• Update</li> <li>• Add and Update</li> </ul>	Yes
Business Object	Used to indicate the business object in which the field is included.	Yes
	<b>Note:</b> The Search  icon appears corresponding to the <b>Business Object</b> field. On clicking the search icon, the <b>Search Group Based Business Object</b> search window appears.	
Field	Used to indicate the field for which you want to define the approval rule criteria.	Yes
	<b>Note:</b> The Search  icon appears corresponding to the <b>Field</b> search field. On clicking the search icon, the <b>Field Search</b> search window appears.	
Approval Workflow Chain	Used to indicate the approval workflow chain that you want to use for the field value approval.	Yes
	<b>Note:</b> The Search  icon appears corresponding to the <b>Approval Workflow Chain</b> field. On clicking the search icon, the <b>Approval Workflow Chain Search</b> search window appears.	
Value Range	Used to indicate whether you want to define value based threshold limit for each approval level.	No
	<b>Note:</b> This field is enabled only when the data type of the field is <b>Numeric</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Hierarchical	Used to indicate whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.	No

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Used to specify the threshold value using which you want to control the approval hierarchy.
Approval Level	Used to indicate the approval level at which approval is required when the field value is within the threshold value.  <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to the <b>Approval Level</b> field. On clicking the search icon, the <b>Approval Level Search</b> search window appears.  <b>Note:</b> The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

- Enter the required details in the **Field Approval Rule Criteria** section.
- If you want to define more than one field approval rule criteria for the approval workflow chain linkage, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a field approval rule criteria from the approval workflow chain linkage, click the **Delete** (🗑️) icon corresponding to the sequence field.
- Click **Save**.

The approval workflow field rule is defined.

## Approval Workflow Group Chain Linkage (Used for Viewing)

Once you define an approval workflow group chain linkage, the **Approval Workflow Group Chain Linkage** screen allows you to:

- Edit an approval workflow group chain linkage
- Delete an approval workflow group chain linkage

This screen contains the following zone:

- [Approval Workflow Group Chain Linkage](#) on page 563

For more information on...	See...
How to view the details of an approval workflow group chain linkage	<a href="#">Viewing the Approval Workflow Group Chain Linkage Details</a> on page 558

## Approval Workflow Group Chain Linkage

The **Approval Workflow Group Chain Linkage** zone displays the details of the approval workflow group chain linkage. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group chain linkage. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group for which a link is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Group</b> screen appears with the details of the respective approval workflow group.
Approval Workflow Chain	Displays the approval workflow chain for which a link is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears with the details of the respective approval workflow group.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow group chain linkage. Also used to define, edit, delete Group Chain Linkage Criteria and Field Approval Rule Criteria.
Delete	Used to delete the approval workflow group chain linkage.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain linkage is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

- **Group Chain Linkage Criteria** - Lists the group chain linkage criteria..This section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.

Column Name	Column Description
Criterion Type	Displays the criterion type needed for defining the criterion.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Criterion Type</b> screen appears where you can view the details of the respective criterion type.
Operator	Indicates the relational operator used to define the relation between the criterion type and criterion value. The valid values are: <ul style="list-style-type: none"> <li>EQUALS</li> <li>IN</li> </ul>
Criterion Value	Displays the criterion value.

- **Field Approval Rule Criteria** - Lists the field approval rule criteria for approval workflow group chain linkage. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the rule criteria should be executed while adding or updating the field value.
Applicable For	Displays the rule criteria which should be considered while adding and/or updating the field value.
Business Object	Displays the business object in which the field is included.
Field	Displays the field for which you want to define the approval rule criteria.
	<b>Note:</b> The <b>Context Menu</b> (  ) icon appears corresponding to the <b>Field</b> search field. On clicking the context menu icon, the <b>Go to Field</b> menu appears. On clicking the <b>Go to Field</b> menu item, the <b>Field</b> screen appears with the details of the respective field.
	<b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears with the details of the respective field.
Approval Workflow Chain	Indicates the approval workflow chain that you want to use for the field value approval.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears with the details of the respective approval workflow chain.
Value Range	Indicates whether you want to define value based threshold limit for each approval level.
	<b>Note:</b> This field is enabled only when the data type of the field is <b>Numeric</b> .

Column Name	Column Description
Hierarchical Approval	Indicates whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.
	<b>Note:</b> This field is enabled only when the <b>Value Range</b> check box is selected.

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Displays the threshold value using which you want to control the approval hierarchy.
Approval Level	Displays the approval level at which approval is required when the field value is within the threshold value.
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Approval Level</b> field. On clicking the search icon, the <b>Approval Level Search</b> search window appears.
	<b>Note:</b> The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

## Editing an Approval Workflow Group Chain Linkage

### Prerequisites

To edit an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group, and Approval Workflow Chain defined in the application.

### Procedure

To edit an approval workflow group chain linkage:

1. Search for the Approval Workflow Group Chain Linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to edit.  
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Edit** button in the **Approval Workflow Group Chain Linkage** zone.  
The **Approval Workflow Group Chain Linkage** screen appears.
4. Define or edit approval workflow group chain linkage, if required.
5. Define, edit or remove approval workflow criterion from the approval workflow group chain linkage, if required.
6. Define, edit or remove field approval rule criteria from the approval workflow group chain linkage, if required.
7. Click **Save**.

The changes made to the approval workflow group chain linkage screen are saved.

## **Searching for an Approval Workflow Group**

### **Prerequisites**

To search for an approval workflow group, you should have:

- Approval Workflow Group defined in the application.
- Active flag should be set to **Yes**

### **Procedure**

To search for an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Setting**.  
The **Approval Workflow Setting** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Group** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

A list of approval workflow groups that meet the search criteria appears in the **Search Results** section.

## Defining Approval Workflow Group Settings

### Prerequisites

To define an approval workflow group setting, you should have:

- Approval Workflow Group defined in the application.
- Active flag set to **Yes**

### Procedure

To define an approval workflow group setting:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Setting**.  
The **Approval Workflow Settings** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Settings** screen.

The **Approval Workflow Settings** screen appears. It contains the following section:

- **Main** - Used to specify the details for the approval workflow settings.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Approval Chain Selection Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow request.	Yes
	<b>Note:</b> This algorithm identifies the approval workflow chain that must be used for the approval workflow group.	
	<b>Note:</b> You can search for an approval chain selection algorithm by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Approval Chain Selection Algorithm</b> field.	
Prevalidation	Used to indicate whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> You can search for a prevalidation by clicking the <b>Search</b> (🔍) icon corresponding to the <b>Prevalidation</b> field.	
Approval Reason Required	Used to indicate whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Active	Used to indicate whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• <b>Yes</b> - Used when you want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>No</b> - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>Conditional</b> - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Conditional Algorithm	Used to specify the algorithm that will be used to determine the business objects for which the approval workflow must be activated.	Yes
	<b>Note:</b> This field appears only when the <b>Conditional</b> option is selected from the <b>Active</b> list.	

4. Enter the required details.

5. Click **Save**.

The approval workflow group setting is defined.

## Approval Workflow Group Settings

The **Approval Workflow Group Settings** zone displays the details of the approval workflow group settings. It contains the following sections:

- **Main** - Displays the basic information about the approval workflow group settings. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group.

Field Name	Field Description
Approval Chain Selection Algorithm	Displays the algorithm that will be triggered after creating the approval workflow request.
	<b>Note:</b> This algorithm identifies the approval workflow chain that must be used for the approval workflow group.
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective approval chain selection algorithm.
Prevalidation	Indicates whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Approval Reason Required	Indicates whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Active	Indicates whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• <b>Yes</b> - Used when you want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>No</b> - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>Conditional</b> - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.</li> </ul>
Conditional Algorithm	Displays the algorithm that will be used to determine the business objects for which the approval workflow must be activated.
	<b>Note:</b> This field appears only when the <b>Conditional</b> option is selected from the <b>Active</b> list.
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective conditional algorithm.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the settings of the approval workflow group.
Delete	Used to delete the approval workflow group setting.
Regenerate UI Maps	Used to regenerate the approval workflow group setting UI Maps.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing Approval Workflow Group Settings

### Prerequisites

To edit approval workflow group settings, you should have:

- Approval Chain Selection Algorithm defined in the application.
- Prevalidation, Approval Reason Required, and Active flag defined in the application.
- Conditional Algorithm defined in the application

### Procedure

To edit approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Settings** screen appears.

3. Click the **Edit** button in the **Approval Workflow Group Settings** zone.

The **Approval Workflow Group Settings** screen appears.

4. Edit the settings for the approval workflow group, if required.
5. Click **Save**.

The changes made to the approval workflow group settings are saved.

### Related Topics

## Deleting Approval Workflow Group Settings

### Procedure

To delete approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group that you want to delete.

The **Approval Workflow Settings** screen appears.

3. Click the **Delete** button in the **Approval Workflow Group Settings** zone.

A message appears confirming whether you want to delete the approval workflow group settings.

4. Click **OK**.

The approval workflow setting is deleted.

### Related Topics

## Regenerating Input and Display UI Maps

### Procedure

To regenerate UI Maps for an approval workflow group setting:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group for which you want to regenerate UI maps.

The **Approval Workflow Settings** screen appears.

3. Click the **Regenerate UI Maps** button in the **Approval Workflow Group Settings** zone.

A message appears confirming whether you want to replace the existing Input and Display UI Maps.

4. Click **OK**.

The Input and Display UI Maps are generated.

## Approval Workflow Reason (Used for Searching)

The **Approval Workflow Reason** screen allows you to search for an approval workflow reason using various search criteria. It also allows you to define an approval workflow reason. It contains the following zone:

- [Approval Workflow Reason List](#) on page 573

### Approval Workflow Reason List

The **Approval Workflow Reason List** zone lists the approval workflow reasons that are already defined in the system. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	No
Description	Used to search approval workflow reasons with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Reason	Displays the approval workflow reason.
Description	Displays the description of the approval workflow reason.
Reason Category	Indicates the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>

Approval Workflow Reason List zone	<a href="#">Approval Workflow Reason List</a> on page 573

**Viewing the Approval Workflow Reason Details****Procedure**

To view the details of an approval workflow reason:

1. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow reason whose details you want to view.

The **Approval Workflow Reason** screen appears. It contains the following zone:

- [Approval Workflow Reason](#) on page 576

3. View the details of the approval workflow reason in the **Approval Workflow Reason** zone.

**Related Topics**

For more information on...	See...
How to filter the approval workflow reasons	<a href="#">Filtering the Approval Workflow Reasons</a> on page 574
Approval Workflow Reason screen	<a href="#">Approval Workflow Reason (Used for Viewing)</a> on page 576

**Defining an Approval Workflow Reason****Prerequisites**

To define an approval workflow reason, you should have:

- Values defined for the **APPTXN\_REASON\_TYPE** lookup field

**Procedure**

To define an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Reason** screen.

The **Approval Workflow Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to specify the approval workflow reason.	Yes
Description	Used to specify the description for the approval workflow reason.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Reason Category	Used to indicate the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>	Yes

4. Enter the required details in the **Approval Workflow Reason** screen.
5. Click **Save**.

The approval workflow reason is defined.

### **Related Topics**

For more information on...	See...
<b>Approval Workflow Reason</b> screen	<a href="#">Approval Workflow Reason (Used for Searching)</a> on page 573

## **Approval Workflow Reason (Used for Viewing)**

Once you define an approval workflow reason, the **Approval Workflow Reason** screen allows you to:

- View the details of an approval workflow reason
- Edit and delete an approval workflow reason

This screen contains the following zone:

- [Approval Workflow Reason](#) on page 576

### **Approval Workflow Reason**

The **Approval Workflow Reason** zone displays the details of the approval workflow reason. It contains the following sections:

- **Main** - Displays basic information about the approval workflow reason. It contains the following fields:

Field Name	Field Description
Approval Workflow Reason	Displays the approval workflow reason.
Description	Displays the description of the approval workflow reason.
Reason Category	Indicates the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow reason.
Delete	Used to delete the approval workflow reason.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## **Editing an Approval Workflow Reason**

### **Prerequisites**

To edit an approval workflow reason, you should have:

- Values defined for the **APPTXN\_REASON\_TYPE** lookup field

### **Procedure**

To edit an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow reason whose details you want to edit.  
The **Approval Workflow Reason** screen appears.
5. Click the **Edit** button in the **Approval Workflow Reason** zone.

The **Approval Workflow Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Displays the approval workflow reason.	Not applicable
Description	Used to specify the description for the approval workflow reason.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Reason Category	Used to indicate the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>	Yes

6. Modify the required details in the **Approval Workflow Reason** screen.

7. Click **Save**.

The changes made to the approval workflow reason are saved.

### Related Topics

## Deleting an Approval Workflow Reason

### Procedure

To delete an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.

The **Approval Workflow Reason** screen appears.

3. If required, filter the approval workflow reasons in the **Approval Workflow Reason** screen.

4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow reason that you want to delete.

The **Approval Workflow Reason** screen appears.

5. Click the **Delete** button in the **Approval Workflow Reason** zone.

A message appears confirming whether you want to delete the approval workflow reason.

6. Click **OK**.

The approval workflow reason is deleted.

# Chapter

# 6

---

## Multi-Currency Accounts

---

### Topics:

- [Creating Adjustments](#)
- [Generating Bills](#)
- [Applying Payments](#)
- [Monitoring Overdue Debt](#)
- [Generating History](#)

Oracle Revenue Management and Billing allows you to change the currency in which an account is invoiced. While the charges on a bill must be in a single currency, accounts can now be billed in different currencies over time. For example, when a person opens an account, he/she might be billed in US Dollars. However, with the Multi-Currency Accounts feature enabled, the same account can be billed in Euros in the near future. You can use the Multi-Currency Accounts functionality only when:

- You set the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration.
- The account's person class is enabled for open item accounting. In other words, the **Open Item Accounting** check box of the account's customer class is selected.
- The account does not have any active or pending loans, payment plans, payment arrangements, or recurring charge contracts.

The following are some limitations while using the Multi-Currency Accounts functionality:

- Overdue charges in multiple currencies may not be referred to a collection agency. Such cases would be handled via a manual referral.
- Because the account's customer class must be enabled for open-item accounting, you can only use Overdue Processing to collect overdue bills. The Collections and Severance processes are not supported for open-item accounting.
- Write offs involving multiple currencies must be performed manually.
- Budgets, deposits, pay plans, and payment arrangements are not supported.

**Note:** If there is an outstanding debt for an account in more than one currency, the system displays "\*\*\*" instead of the total account balance across the application.

To use the Multi-Currency Accounts functionality, you need to:

- Set the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration
- Define required currencies along with currency symbols
- Define invoice currencies for divisions. This is because while changing the invoice currency of an account, you can only view those invoice currencies that are associated to the account's division.
- Define the required exchange rates for currency conversion

- Create tender control and deposit control for every invoice currency defined in the system
- Define an adjustment type that you want to use during currency conversion, and link it to the relevant adjustment profile
- Define an adjustment type that you want to use during Write off process, and link it to the relevant adjustment profile
- Define a contract type that you want to use during over payments to transfer the credit balance to other contracts
- Set the collection method of the account's customer class to **Overdue**
- Setup auto-pay to debit the bill amount, and not the account's balance
- Setup the account's customer class to keep credits on a separate contract

The following business processes are enhanced for implementing the Multi-Currency Accounts functionality:

- [Creating Adjustments](#) on page 581
- [Generating Bills](#) on page 581
- [Applying Payments](#) on page 581
- [Monitoring Overdue Debt](#) on page 581
- [Generating History](#) on page 581

For more information on...	See...
How to set the <b>Multi-Currency Accounts (C1_MLTCURACC)</b> feature configuration	<a href="#">Setting the C1_MLTCURACC Feature Configuration</a> on page 2037

## Creating Adjustments

---

If you are using the Multi-Currency Accounts functionality, you can create adjustments in the currency which is different from the account's invoice currency.

## Generating Bills

---

A bill is generated in the account's invoice currency. If you change the invoice currency of an account, any new bills will be generated in the new currency. For example, if you have changed the invoice currency of an account from US Dollars to Euros on 1<sup>st</sup> Feb 2010, all bills generated thereafter will be generated in Euros.

When a bill is completed and adjustments are swept onto the bill, adjustments that are created in the currency which is different from the account's invoice currency will be converted to the account's invoice currency. The system will create a transfer adjustment for each adjustment that is converted to provide complete audit information. The adjustment type specified in the **Transfer Adjustment Type for Currency Conversion** option type of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration will be used for the conversion. The original adjustment and to-side of the transfer adjustment will be placed on the same match event.

Also, during bill completion, the Contract Type – Bill Completion algorithm type, **CREDIT-XFER**, which is usually specified on the credit contract, will automatically convert credit amounts in one currency to the invoice currency before distributing those credits.

## Applying Payments

---

If you are using the Multi-Currency Accounts feature, you can apply payments in the currency which is different from the account's invoice currency. However, note that the currency used for payment cannot be different from the one used for billing.

When applying a payment, you can only select **Bill ID** as the match type. Also, all tenders for the same payment event must be in the same currency.

## Monitoring Overdue Debt

---

Currency code is now optional while defining collection class overdue rules. When a batch job is processed, the Overdue Debt Monitor will search for overdue rules that match the account's collection class, division, and currency. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the Overdue Debt Monitor will search for overdue rules that match the account's collection class and division. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the account will be skipped.

## Generating History

---

If the account has financial transactions in multiple currencies, zero appears throughout the **Current Balance** and **Payoff Balance** columns in the following screens:

- Account Financial History
- Contract Financial History
- View Account Financial Transaction History

---

# Chapter 7

---

## Rules Engine

---

### Topics:

- [Rule Type \(Used for Searching\)](#)
- [Rule Type \(Used for Viewing\)](#)
- [Rule](#)
- [View Rule](#)
- [Rule Check](#)

A rules engine executes one or more business rules in a runtime production environment. It allows you to define, execute, and maintain these business rules separately from the application code. You can then use these business rules in any program to facilitate operational decisions at runtime. For example, you might use business rules in the Collection module to decide the collection strategy or in the Banking module to derive charges codes or price items for the transaction.

A rules engine allows you to classify these rules using the rule type. It also allows you to define the relationship between two or more rules and set the priority for each rule. When a calling program invokes these rules using the rule type, all effective rules with the specified rule type are executed, starting with the rule having highest priority. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Each rule contains one or more criteria. Depending on whether the criteria is satisfied, the system either executes the next criteria or indicates whether the rule is true or false. The rules engine allows you to define what should happen when the rule is true or false. In both the cases, you can enforce the system to either:

- Execute any dependent rule
- Execute a rule with the same rule type having lower priority
- Return the output parameters and their values to the calling program

You can define a criteria for a rule only using the input parameters that are defined for the rule type. Also, when the rule is true, you can only return the output parameters that are defined for the rule type to the calling programs. Therefore, in case you want to use any field in the rule, you have to associate it with the rule type as an input or output parameter.

A rules engine also allows you to execute preprocessing and postprocessing algorithms. A preprocessing algorithm is triggered before executing any criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. A postprocessing algorithm is triggered after executing all criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.

Oracle Revenue Management and Billing provides you with the Rule Check utility. It allows you to validate whether rules defined with a specific rule type get executed as expected. On validating, it indicates the sequence in which the rules were executed, the total execution time, and displays the output parameters of the rule that was successfully executed.

Normally, in the Transaction Feed Management feature, the transaction legs are created using the output parameters of the rule where the criteria returns **Rule**

**Is True** and the rule true action is set to **Success**. Oracle Revenue Management and Billing also enables you to accumulate the output parameters of all rules where the criteria returns **Rule Is True** irrespective of whether the rule true action is set to **Next Dependent**, **Next Rule by Priority**, or **Success**. This accumulation process continues until a rule is executed where the criteria returns **Rule Is True** and the rule true action is set to **Success**. Once the output parameters are accumulated, the transactions legs are created using these accumulated output parameters. You can enable the rule output accumulation feature for the Transaction Feed Management module by setting the **Rule Output Accumulation** option type in the **C1\_FM** feature configuration to **true**.

There might be situations when duplicate transaction legs are created through the rule output accumulation process. The system enables you to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. If the **Remove Duplicates from Accumulated Rule Output** option type in **C1\_FM** feature configuration is set to **true**, the system does not create duplicate transaction legs during the transaction aggregation cycle.

**Note:** The transaction legs with the same account ID, price item, variance parameter or price item parameters, and processing date are considered as duplicate transaction legs.

## Rule Type (Used for Searching)

A rule type can be used for defining rule based auto pay instructions or business rules for mapping transactions with the price items. If you want to use the rule type for defining rule based auto pay instructions, you must set the **Rule Type Usage** field to **Auto Pay**. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave the **Rule Type Usage** field blank.

It is the rule type which helps the system to determine:

- Fields that can be used while defining criteria for business rules or rule based auto pay instructions
- Entities whose characteristics can be used while defining criteria for rule based auto pay instructions
- Algorithms which must be used for deriving information from the financial transaction
- Maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type

The **Rule Type** screen allows you to search for a rule type using various search criteria. It also allows you to define, edit, delete, and copy a rule type. It contains the following zone:

- [Search Rule Type](#) on page 585

## Search Rule Type

The **Search Rule Type** zone allows you to search for a rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to search a particular rule type.	No
Description	Used to search rule types with a particular description.	No
Rule Type Usage	Used to indicate whether you want to search rule types which are used for defining rule based auto pay instructions or which are used for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> <li>• Auto Pay</li> </ul> <p><b>Note:</b> If you want to search rule types which are used for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Rule Type	Displays the rule type.
Description	Displays the description of the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.

Column Name	Column Description
View	On clicking the <b>View</b> (  ) icon, the <b>Rule Type</b> screen appears where you can view the details of the rule type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Rule Type</b> screen appears where you can edit the details of the rule type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the rule type.
	<b>Note:</b> You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Rule Type</b> screen appears where you can create a new rule type using an existing rule type.

How to copy a rule type	<a href="#">Copying a Rule Type</a> on page 595

## Searching for a Rule Type

### Prerequisites

To search for a rule type, you should have:

- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

### Procedure

To search for a rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Rule Type** sub-menu.  
The **Rule Type** screen appears.
4. Enter the search criteria in the **Search Rule Type** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rule types that meet the search criteria appears in the **Search Results** section.

### Related Topics

<b>Rule Type</b> screen	<a href="#">Rule Type (Used for Searching)</a> on page 585
<b>Search Rule Type</b> zone	<a href="#">Search Rule Type</a> on page 585

## Defining a Rule Type

### Prerequisites

To define a rule type, you should have:

- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

### Procedure

To define a rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Rule Type** sub-menu.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> <li>Auto Pay</li> </ul> <p><b>Note:</b> If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to <b>Auto Pay</b>. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. <p><b>Note:</b></p> <p>This field appears only when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.</p> <p>The maximum rule count cannot be less than or equal to zero.</p>	No

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Rule Type** screen.

- Enter the required details in the **Main** section.
- Define input and output parameters for the rule type.
- Associate one or more characteristic entities with the rule type, if required.

**Note:** You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The rule type is defined.

## Defining Input and Output Parameters for a Rule Type

### Prerequisites

To define the input and output parameters for a rule type, you should have:

- Fields defined in the application
- Field search zone defined in the application

### Procedure

To define the input and output parameters for a rule type:

1. Ensure that the **Input and Output Parameters** section is expanded when you are defining, editing, or copying a rule type.

The **Input and Output Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number for the input or output parameter.	Yes
Field	Used to indicate the field that you want to use as the input or output parameter.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Field Search</b> window appears.	Yes
Rule Input/Output	Used to indicate whether you want to use the field as input and/or output parameter while defining a business rule. The valid values are: <ul style="list-style-type: none"> <li>• Input</li> <li>• Input and Output</li> <li>• Output</li> </ul> <b>Note:</b> By default, the <b>Input</b> option is selected.  This field appears only when you do not select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Search Zone	Used to indicate the search zone that you want to use for searching the field value while defining criteria for rule based auto pay instructions.	No
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Zone Search</b> window appears.</p> <p>This field appears only when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.</p>	

- Enter the required details in the **Input and Output Parameters** section.

<p><b>Note:</b></p> <p>At present, the following fields are only supported while defining a rule type where the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b>:</p> <ul style="list-style-type: none"> <li>• Policy Number</li> <li>• Plan Number</li> <li>• Price Item</li> </ul> <p>If you want to use any other field while defining criteria for rule based auto pay instructions, the implementation team will have to develop the custom logic to implement the requirement.</p>
--

- If you want to define more than one input or output parameter for the rule type, click the **Add**  icon and then repeat step 2.

<p><b>Note:</b> However, if you want to remove an input or output parameter from the rule type, click the <b>Delete</b>  icon corresponding to the parameter.</p>
--

## Associating an Algorithm with a Rule Type

### Prerequisites

To associate an algorithm with a rule type, you should have:

- Rule criteria derivation algorithm defined using the **C1-APRCRIDER** algorithm type

### Procedure

To associate an algorithm with a rule type:

- Ensure that the **Rule Criteria Derivation Algorithms** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Derivation Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm should be executed.	Yes
Algorithm	<p>Used to attach an algorithm which you want to use for deriving the following from the financial transaction:</p> <ul style="list-style-type: none"> <li>• Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters</li> <li>• Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities</li> </ul> <p><b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Derivation Algorithms** section.
3. If you want to associate more than one algorithm with the rule type, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove an algorithm from the rule type, click the **Delete** (🗑️) icon corresponding to the algorithm.

### Related Topics

## Associating a Characteristic Entity with a Rule Type

### Prerequisites

To associate a characteristic entity with a rule type, you should have:

- Values defined for the **RULE\_CRITERIA\_ENTITY\_FLG** lookup field

### Procedure

To associate a characteristic entity with a rule type:

1. Ensure that the **Rule Criteria Characteristic Entities** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Characteristic Entities** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	<p>Used to indicate the entity whose characteristics you want to use while defining criteria for rule based auto pay instructions. The valid values are:</p> <ul style="list-style-type: none"> <li>• Adjustment</li> <li>• Billable Charge</li> <li>• Policy</li> <li>• Policy Plan</li> <li>• Price Item</li> </ul>	Yes
	<p><b>Note:</b> At present, the characteristics of the above listed entities are only supported while defining criteria for rule based auto pay instructions. If you want to use characteristics of any other entity, the implementation team will have to develop the custom logic to implement the requirement.</p>	

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- Enter the required details in the **Rule Criteria Characteristic Entities** section.
- If you want to associate more than one characteristic entity with the rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic entity from the rule type, click the **Delete (🗑)** icon corresponding to the characteristic entity.

## Editing a Rule Type

### Procedure

To edit a rule type:

- Search for the rule type in the **Rule Type** screen.
- In the **Search Results** section, click the **Edit (🔍)** icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.	Not applicable
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	<p>Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b>.</p> <p>The maximum rule count cannot be less than or equal to zero.</p> <p>You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.</p>	No

**Tip:** Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove input or output parameters from the rule type, if required.

**Note:** You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

5. Associate or remove one or more characteristic entities from the rule type, if required.

**Note:**

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

**Deleting a Rule Type****Procedure**

To delete a rule type:

- Search for the rule type in the **Rule Type** screen.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule type that you want to delete.

A message appears confirming whether you want to delete the rule type.

**Note:** You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.

- Click **OK**.

The rule type is deleted.

## Copying a Rule Type

Instead of creating a rule type from scratch, you can create a new rule type using an existing rule type. This is possible through copying a rule type. On copying a rule type, the details including the input and output parameters, rule criteria characteristic entities, and rule criteria derivation algorithms are copied to the new rule type. You can then edit the details, if required.

### Prerequisites

To copy a rule type, you should have:

- Rule type (whose copy you want to create) defined in the application
- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

### Procedure

To copy a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the rule type whose copy you want to create.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> <li>Auto Pay</li> </ul> <p><b>Note:</b> If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to <b>Auto Pay</b>. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. <p><b>Note:</b></p> <p>This field appears only when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.</p> <p>The maximum rule count cannot be less than or equal to zero.</p>	No

- Enter the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.
- Associate or remove one or more characteristic entities from the rule type, if required.

**Note:** You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The new rule type is defined.

## Viewing the Rule Type Details

### Procedure

To view the details of a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the rule type whose details you want to view.

The **Rule Type** screen appears.

3. View the details of the rule type in the **Rule Type** zone.

<b>Rule Type</b> screen	<a href="#">Rule Type (Used for Viewing)</a> on page 597
<b>Rule Type</b> zone	<a href="#">Rule Type</a>

## Rule Type (Used for Viewing)

The **Rule Type** screen allows you to view the details of the rule type. It contains the following zone:

- [Rule Type](#) on page 597

### Rule Type

The **Rule Type** zone displays the details of the rule type. It contains the following sections:

- **Main** - Displays basic information about the rule type. It contains the following fields:

Field Name	Field Description
Rule Type	Displays the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.  <b>Note:</b> This field appears only when the rule type usage is specified while defining the rule type.
Description	Displays the description of the rule type.
Maximum Rule Count	Indicates the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.  <b>Note:</b> This field appears only when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b> .

- **Input and Output Parameters** - Lists the input and output parameters defined for the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number of the input or output parameter.
Field	Indicates the field which is used as the input or output parameter.
Type	Indicates whether the field is used as input and/or output parameter while defining a business rule.
Search Zone	Indicates the search zone that is used for searching the field value while defining criteria for rule based auto pay instructions.  <b>Note:</b> It has a link. On clicking the link, the <b>Zone</b> screen appears where you can view the details of the zone.

- **Rule Criteria Characteristic Entities** - This section contains the following column:

Column Name	Column Description
Characteristic Entity	Indicates the entity whose characteristics can be used while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"> <li>• Adjustment</li> <li>• Billable Charge</li> <li>• Policy</li> <li>• Policy Plan</li> <li>• Price Item</li> </ul>

- **Rule Criteria Derivation Algorithms** - Lists the algorithms attached to the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithm should be executed.
Algorithm	Indicates the algorithm attached to the rule type which derives the following from the financial transaction: <ul style="list-style-type: none"> <li>• Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters</li> <li>• Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities</li> </ul>

**Note:** The **Rule Criteria Characteristic Entities** and **Rule Criteria Derivation Algorithms** sections appear only when the **Rule Type Usage** field is set to **Auto Pay**.

You can edit the details of the rule type by clicking the **Edit** link in the upper-right corner of this zone.

## Rule

---

The **Rule** screen allows you to define, edit, delete, and copy a rule. This screen consists of the following zones:

- [Search](#) on page 599

## Search

The **Search** zone allows you to search for a rule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	No
Rule Type	Used to specify the type of rule.	No
Description	Used to specify the description for the rule.	No
Rule Priority	Used to specify the priority of the rule.	No
Effective Start Date	Used to specify the date from when the rule is effective.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Priority	Displays the priority of the rule.
Code	Displays the rule code.
Description	Displays the description of the rule.
Type	Displays the type of rule.
Start Date	Displays the date from when the rule is effective.
End Date	Displays the date till when the rule is effective.
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
View	On clicking the <b>View</b> (  ) icon, the <b>View Rule</b> screen appears where you can view the details of the rule.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Edit Rule</b> screen appears where you can edit the details of the rule.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the rule.
	<b>Note:</b> You can delete a rule only if it is not used.

Column Name	Column Description
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Copy Rule</b> screen appears where you can create a rule using an existing rule.

You can create a new rule by clicking the **Add** link in the upper right corner of this zone.

## **Searching for a Rule**

### **Procedure**

To search for a rule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.  
A sub-menu appears.
3. Click the **Search** option from the **Rule** sub-menu.  
The **Rule** screen appears.
4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rules that meet the search criteria appears in the **Search Results** section.

## **Defining a Rule**

### **Prerequisites**

To define a rule, you should have:

- Rule types defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

### **Procedure**

To define a rule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.  
A sub-menu appears.
3. Click the **Add** option from the **Rule** sub-menu.

The **Add Rule** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule. <b>Note:</b> You cannot define two rules with the same rule type and priority in the same duration.	Yes
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective. <b>Note:</b> The effective end date cannot be earlier than the effective start date.	No
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	<p><b>Note:</b></p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	
Rule True Action	<p>Used to indicate what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b>. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is true.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule True Action</b> list.</p>
Rule False Action	<p>Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b>. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is false.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.	Yes (Conditional)  <b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter.  <b>Note:</b> For more information about the output parameters that you can specify while defining a rule, see <a href="#">Transaction Validation and Initial Price Item Determination</a> on page 679.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.	Yes
Parameter Value	Used to specify the value for the parameter.  <b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;). in the parameter value.	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes
Parameter Name	Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name.  <b>Note:</b> If a business label is defined for a user defined field (that you have selected), the business label appears in the <b>Parameter Name</b> field.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	<p>Used to specify the parameter value.</p> <p><b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is Insufficient	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Add Rule** screen by clicking the **Add** link in the upper right corner of the **Search** zone in the **Rule** screen.

- Enter the required details.

**Note:**

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

- Click **Save**.

The rule is defined.

**Related Topics**

**Editing a Rule****Prerequisites**

To edit a rule, you should have:

- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them.

**Procedure**

To edit a rule:

- Search for the rule in the **Rule** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule whose details you want to edit.

The **Edit Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule. <b>Note:</b> You cannot define two rules with the same rule type and priority in the same duration.	Yes
Effective Start Date	Used to specify the date from when the rule is effective.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the rule is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is true.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.	Yes (Conditional)
		<b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule True Action</b> list.

Field Name	Field Description	Mandatory (Yes or No)
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is false.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.	Yes (Conditional)  <b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter.  <b>Note:</b> For more information about the output parameters that you can specify while defining a rule, see <i>Transaction Validation and Initial Price Item Determination</i> on page 679.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.	Yes
Parameter Value	Used to specify the value for the parameter.  <b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	<p>Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name.</p> <p><b>Note:</b></p> <p>If a business label is defined for a user defined field (that you have selected), the business label appears in the <b>Parameter Name</b> field.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p>	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value	<p>Used to specify the parameter value.</p> <p><b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Edit Rule** screen by clicking the **Edit** link in the **View Rule** screen.

3. Modify the required details.

**Note:** You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

4. Add or remove output parameters or criteria from the rule, if required.

**Note:** If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The changes made to the rule are saved.

### Related Topics

For more information on...	See...
<b>Rule</b> screen	<a href="#">Rule</a> on page 599
<b>Search</b> zone	<a href="#">Search</a> on page 599

## Deleting a Rule

### **Procedure**

To delete a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule that you want to delete.

A message appears confirming whether you want to delete the rule.

**Note:** You can delete a rule only if it is not used.

3. Click **OK**.

The rule is deleted.

**Related Topics**

For more information on...	See...
<b>Rule</b> screen	<a href="#">Rule</a> on page 599
<b>Search</b> zone	<a href="#">Search</a> on page 599

**Copying a Rule**

Instead of creating a rule from scratch, you can also create a new rule using an existing rule. You can do this by copying a rule. When you copy a rule, the output parameters and criteria defined for the original rule are copied to the new rule. You can then add or remove parameters or criteria from the new rule.

**Prerequisites**

To copy a rule, you should have:

- Rule (whose copy you want to create) defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

**Procedure**

To copy a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Copy** () icon corresponding to the rule whose copy you want to create.

The **Copy Rule** screen appears.

3. Enter the new rule code and the description for the new rule.
4. Modify the required details.
5. Add or remove output parameters or criteria from the new rule.

**Note:**

You can specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;), in the parameter value.

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** () icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** () icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** () icon corresponding to it.

For more information about the output parameters that you can specify while defining a rule, see [Transaction Validation and Initial Price Item Determination](#) on page 679.

6. Click **Save**.

The new rule is defined.

## View Rule

The **View Rule** screen allows you to view the details of a rule. This screen consists of the following zones:

- [Rule Information](#) on page 611

### Rule Information

The **Rule Information** zone displays information about the rule. This zone contains the following fields:

Field Name	Field Description
Rule Code	Displays the rule code.
Rule Type	Indicates the type of rule.
Description	Displays the description of the rule.
Rule Priority	Indicates the priority of the rule.  <b>Note:</b> You can use the <b>Move Up</b> (↑) and <b>Move Down</b> (↓) icons corresponding to this field to view the details of a rule (having the same rule type) with a higher or lower priority. Note that this functionality is available only when you access the <b>View Rule</b> screen through the <b>Rule</b> screen.
Effective Start Date	Displays the date from when the rule is effective.
Effective End Date	Displays the date till when the rule is effective.
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered after executing the criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
Rule True Action	Indicates what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> .
Dependent Rule	Indicates the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.
Rule False Action	Indicates what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> .
Dependent Rule	Indicates the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Lists the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the name of the parameter. In addition, this column has a context menu which helps in navigating to the <b>Field</b> screen.
Parameter Value	Displays the value of the parameter.

- **Criteria** — Lists the criteria defined in the rule. This section contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the order in which the criteria should be executed in the rule.
Parameter Type	Indicates whether the input parameter is a field or an algorithm.
Parameter Name	Displays the field or algorithm name which is used as an input parameter.
Operator	Indicates the relational operator used to define the relation between the parameter name and value.
Parameter Value	Displays the parameter value.
Is True	Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>
Is False	Indicates what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>
Is Insufficient	Indicates what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>

The **Edit** link appears in the upper-right corner of the **Rule Information** zone. On clicking the **Edit** link, the **Edit Rule** screen appears where you can edit the details of the rule.

#### **Related Topics**

For more information on...	See...
How to view the details of a rule	<a href="#">Viewing the Rule Details</a> on page 613

## Viewing the Rule Details

### Procedure

To view the details of a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule whose details you want to view.

The **View Rule** screen appears.

3. View the details of the rule in the **Rule Information** zone.

## Rule Check

The **Rule Check** screen allows you to validate whether rules of a particular rule type are executed as expected. On validating, it indicates the sequence in which all effective rules were executed, the total execution time, and the output parameters of the rule that was successfully executed. This screen consists of the following sections:

- Rule Type Input Parameters
- Rule Output Parameters
- Rule Execution

### Rule Type Input Parameters

The **Rule Type Input Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No
	<b>Note:</b> If you do not specify the effective date, the system executes all rules which are effective on the system date.	
Parameter Name	Indicates the input parameter.	Not applicable
	<b>Note:</b> The input parameters listed change depending on the rule type that you have selected.	
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

**Rule Output Parameters**

The **Rule Output Parameters** section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> <li>• <b>Success</b> — Indicates that one of the rule was successfully executed and returned the output parameters.</li> <li>• <b>Fail</b> — Indicates that none of the rules with the specified rule type were successfully executed.</li> <li>• <b>Error</b> — Indicates that an error occurred while executing a rule.</li> </ul>
Execution Time	Displays the total time taken to execute all effective rules with the specified rule type.
Error	Displays the error message indicating the error that occurred while executing a rule.
	<b>Note:</b> This field appears only when the status is <b>Error</b> .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

**Rule Execution**

The **Rule Execution** section indicates the sequence in which all effective rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Indicates the rule that was executed.
Rule Type	Indicates the type of rule.
Rule Priority	Indicates the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

**Rule Check**

The **Rule Check** zone allows you to validate whether rules of a particular rule type are executed as expected. It indicates the sequence in which all effective rules were executed along with the total execution time. This zone consists of the following sections:

- **Rule Type Input Parameters** — This sections contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter Name	Indicates the input parameter.	Not applicable
	<b>Note:</b> The input parameters listed change depending on the rule type that you have selected.	
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

- **Rule Output Parameters** — This section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> <li>• <b>Success</b> — Indicates that one of the rule was successfully executed and returned the output parameters.</li> <li>• <b>Fail</b> — Indicates that none of the rules with the specified rule type were successfully executed.</li> <li>• <b>Error</b> — Indicates that an error occurred while executing a rule.</li> </ul>
Execution Time	Displays the total time taken to execute a set of rules.
Error	Displays the error message indicating the error that occurred while executing a rule.
	<b>Note:</b> This field appears only when the status is <b>Error</b> .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

- **Rule Execution** — Indicates the sequence in which the rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Displays the rule code.
Rule Type	Displays the type of rule.
Rule Priority	Displays the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

## Alternate Sequential Bill Numbers

---

### Topics:

- [Sequential Bill Number Generation Algorithms](#)
- [Enabling the Alternate Sequential Bill Numbers Feature](#)

Each bill is uniquely identified by its bill ID. Bill ID is a random, system-generated number. In some locales, bills have an additional identifier known as alternate sequential bill number. Alternate sequential bill numbers are system-generated, sequential numbers. For example, the first bill generated by the system is assigned a sequential bill number of 1, the next bill is assigned a value of 2, and so on.

If you want to generate alternate sequential bill numbers, you must select the **Use Sequential Bill Numbers** check box in the **Billing** tab of the **Installation Options** screen. However, you can only generate alternate sequential bill numbers for bills that are complete and for which the alternate sequential bill numbers are not yet generated.

You can configure the application to generate alternate sequential bill numbers which are either unique throughout the system or within the division. The **Assign Sequential Bill Numbers (ASSGNSBN)** batch allows you to generate alternate sequential bill numbers for completed bills. You need to configure this batch such that it is executed at regular intervals. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

## Sequential Bill Number Generation Algorithms

The following table lists the sequential bill number generation algorithm types shipped with the product:

If you want to generate...	Then create algorithm using the following algorithm type....
Alternate sequential bill numbers unique throughout the system	<a href="#">C1_ALTBLLSYS</a> on page 618
Alternate sequential bill numbers unique within the division	<a href="#">C1_ALTBLDV</a> on page 621
Alternate sequential bill numbers unique throughout the system and in the required format using a set of parameters	<a href="#">C1_ALTBSYS1</a> on page 618 <b>Note:</b> The alternate sequential bill number will be unique throughout the system only when you configure the algorithm parameters appropriately.
Alternate sequential bill numbers unique within the division and in the required format using a set of parameters	<a href="#">C1_ALTBLDIV1</a> on page 621 <b>Note:</b> The alternate sequential bill number will be unique within the division only when you configure the algorithm parameters appropriately.

### C1\_ALTBLLSYS

The **C1\_ALTBLLSYS** algorithm type is used to generate alternate bill ID for a completed bill. The alternate bill ID is sequenced using the sequence number, and is unique throughout the system. This algorithm type does not have any parameters.

### C1\_ALTBSYS1

The **C1\_ALTBSYS1** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
'X'	Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.

Parameter	Description
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Account_Identifier_Type&gt;</b> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.</li> </ul>
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> <li>• “yyyy” or “yy” for year</li> <li>• “MM” or “M” for month</li> <li>• “dd” or “d” for day</li> </ul> <p><b>Note:</b> The date format should either start or end with the year.</p>
SEQ_NBR	The sequence number generated by the database. It should not be more than 12 characters.
FIXED_SUFFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.

You can specify the above mentioned parameters against any of the following parameters available in the **C1\_ALTBLSYS1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7

- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS\_DIVISION
- Field2 — ‘|’
- Field3 — SEQ\_NBR
- Field4 — ‘-’
- Field5 — FIXED\_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS\_DIVISION|SEQ\_NBR-01 format. For example, DIV1|12345678-01. If you want to generate unique alternate bill ID, we recommend you to use the **SEQ\_NBR** parameter while creating an algorithm using the **C1\_ALTBLSYS1** algorithm type.

Note that if you do not specify the value for any parameters while creating an algorithm using the **C1\_ALTBLSYS1** algorithm type, the system will generate the alternate bill ID using the sequence number.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1\_ALTBLSYS1** is already shipped with the product. You can create custom algorithms using the **C1\_ALTBLSYS1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

## C1\_ALTBLDV

The **C1\_ALTBLDV** algorithm type is used to generate alternate bill ID for a completed bill which is unique within the division. For example, two bills (such as B1 and B2) belonging to the same division (such as D1) cannot have the same alternate bill ID. However, two bills (such as B1 and B2) belonging to different divisions, (such as D1 and D2) can have the same alternate bill ID.

This algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Initial Bill Sequence Number	Used to specify the initial alternate bill ID that you want to use while sequencing.  <b>Note:</b> If you do not specify any value for this parameter, by default, the system will generate the initial alternate bill ID for sequencing.	No

## C1\_ALTBLDIV1

The **C1\_ALTBLDIV1** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
‘X’	Here, X stands for a separator. For example, ‘;’. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.

Parameter	Description
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Account_Identifier_Type&gt;</b> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.</li> </ul>
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> <li>• “yyyy” or “yy” for year</li> <li>• “MM” or “M” for month</li> <li>• “dd” or “d” for day</li> </ul> <p><b>Note:</b> The date format should either start or end with the year.</p>
FIXED_SUFFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	<p>or</p> <p>Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.</p>

You can specify the above mentioned parameters against any of the following parameters available in the **C1\_ALTBLDIV1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9

- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS\_DIVISION
- Field2 — ‘|’
- Field3 — BILL\_DT=MMddy
- Field4 — ‘-’
- Field5 — FIXED\_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS\_DIVISION|MMddy-01 format. For example, DIV1|110501-01. Note that if you do not specify the value for any of these algorithm type parameters, the system will not generate the alternate bill ID for a completed bill.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1\_ALTBLDIV1** is already shipped with the product. You can create custom algorithms using the **C1\_ALTBLDIV1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

## Enabling the Alternate Sequential Bill Numbers Feature

---

### Prerequisites

To enable the alternate sequential bill numbers feature, you should have:

- An algorithm created using the **C1\_ALTBLLSYS**, **C1\_ALTBLSYS1**, **C1\_ALTBLDV**, or **C1\_ALTBLDIV1** algorithm type depending on which you want to use for alternate sequential bill number generation

### Procedure

To enable the alternate sequential bill numbers feature:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **I** and then click **Installation Options**.

The **Installation Options** screen appears.

3. Click the **Billing** tab.

The **Billing** tab appears.

4. Select the **Use Sequential Bill Numbers** check box to indicate that you want to generate alternate sequential bill numbers for completed bills.

The **Sequential Invoice** field is enabled.

5. Select the **System-wide** or **Division-specific** option from the **Sequential Invoice** list depending on whether you want alternate sequential bill numbers to be unique throughout the system or within the division.

6. Do either of the following:

If you want to generate...	Then
Alternate sequential bill numbers unique throughout the system	<ol style="list-style-type: none"> <li>1. Attach an algorithm created using the <b>C1_ALTBLLSYS</b> algorithm type to the <b>Sequence Generation Algorithm</b> field to indicate how the alternate bill numbers which are unique throughout the system should be sequenced.</li> </ol>

If you want to generate...	Then

## Currency Conversion

---

### Topics:

- [Prerequisites](#)
- [Bill Segment Generation](#)
- [Adjustment Creation](#)
- [Payment and Tender Creation](#)
- [Transaction Aggregation](#)
- [FT GL Creation](#)
- [Currency Conversion Algorithms](#)
- [Exchange Rate \(Used for Searching\)](#)
- [Exchange Rate \(Used for Viewing\)](#)

Oracle Revenue Management and Billing supports currency conversion using an exchange rate. The currency conversion feature is used only when the multi-currency accounts feature is enabled. In other words, you can use the currency conversion feature only when the **Allow Multi-Currency Accounts** option type of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration is set to **Y**.

The currency conversion can take place during the following business processes which are configured in the system:

- Bill Segment Generation
- Adjustment Creation
- Payment and Tender Creation
- FT GL Creation
- Transaction Aggregation

To enable the currency conversion feature, you need to attach the currency conversion algorithm at the division level. The system facilitates you to define different conversion currency algorithm for each business process. The currency conversion feature functions only when the appropriate exchange rate is available in the system. Otherwise, erroneous results might occur.

The system allows you to define date or date and time based global and division-specific exchange rates. The date based exchange rate mean that the exchange rate is applicable throughout the day. However, the date and time based exchange rate mean that the exchange rate is applicable from that date and time onwards.

**Note:** At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during

currency conversion. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

While converting the amount from the source currency to the target currency (i.e. FROM CCY to TO CCY), the system uses the precision (i.e. decimal positions) of the target currency (i.e. TO CCY). For example, if you set the decimal positions for USD and INR to 1 and 2, respectively, the system uses 1 decimal position during currency conversion from INR to USD.

The system provides you with a facility to define whether you want to enable or disable the currency conversion feature for a rate component. If the currency conversion feature is enabled for a rate component, the currency conversion will take place while generating bill segments for the rate (i.e. rate component) based billable charges.

## Prerequisites

---

To setup the currency conversion feature, you need to do the following:

- Define the required divisions and currencies in the system
- Define the values for the **CONV\_TYPE\_FLG** and **EXCH\_RATE\_SRC\_FLG** lookup fields
- Define the Determine Business Object algorithm using the **F1-MOBO** algorithm type and attach it to the **C1\_EXCHRATE** maintenance object

**Note:** The **C1-ExchangeRate** and **C1\_EXCHRATE\_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1\_EXCHRATE\_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Define the required exchange rates for currency conversion
- Set the following option types of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration:
  - Allow Multi-Currency Accounts
  - Transfer Adjustment Type
- Set the **Allow Currency Conversion** field for each rate component to either **Yes** or **No** depending on whether you want to enable the currency conversion feature for the rate (i.e. rate component) based billable charges
- Create an algorithm of the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division when you want to enable currency conversion during:
  - Bill Segment Generation
  - FT GL Creation for Bill Segments

**Note:** The **C1\_CURALGBS** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTBS** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division when you want to enable currency conversion during:
  - Adjustment Creation
  - FT GL Creation for Adjustments

**Note:** The **C1\_CURALGAD** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTAD** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1\_CURALGPY** or **C1\_EXCRTPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division when you want to enable currency conversion during:
  - Payment and Tender Creation
  - FT GL Creation for Payments

**Note:** The **C1\_CURALGPY** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTPY** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1\_CURALGTFM** or **C1\_EXCRTTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division when you want to enable currency conversion during transaction aggregation

**Note:** The **C1\_CURALGTFM** algorithm type uses date based exchange rate during currency conversion. However, the **C1\_EXCRTTFM** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to create FT GL extension

## Bill Segment Generation

The system allows you to generate bill segments using the following:

- **Pass through billable charges** — If the pass through billable charges have a bill line currency which is different from the account's invoice currency, the bill line amount is converted into the account's invoice currency during the bill segment generation.
- **Rate based billable charges** — If the rate based billable charges have a pricing currency which is different from the account's invoice currency, the amount is converted into the account's invoice currency during the bill segment generation.

In addition, during the post processing bill segment generation, if the pricing currency is different from the account's invoice currency, then the amount is converted into the account's invoice currency. The currency conversion is done only when you have an algorithm of the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. In addition, the currency conversion is done for rate based billable charges only when the **Allow Currency Conversion** field in the respective rate component is set to **Yes**. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the bill segment will change to **Error**.

<b>C1_CURALGBS</b> algorithm type	<a href="#">CI_CURALGBS</a> on page 634
<b>C1_EXCRTBS</b> algorithm type	<a href="#">CI_EXCRTBS</a> on page 641

## Adjustment Creation

There might be situations when the adjustment currency is different from the account's invoice currency. The system enables you to determine whether currency conversion must be done during adjustment creation or during bill completion. If you clear the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during adjustment creation. However, if you select the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during bill completion and not during adjustment creation. A transfer adjustment is created in the account's invoice currency and the reverse adjustment is created against the original adjustment in the adjustment currency when you complete the next bill of the account. The system creates the transfer and reverse adjustments using the adjustment type specified in the **Transfer Adjustment Type** option type of the **Multi-Currency Accounts (C1\_MLTCURACC)** feature configuration.

The currency conversion is done only when you have an algorithm of the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the transfer adjustment will not be created.

<b>C1_CURALGAD</b> algorithm type	<a href="#">CI_CURALGAD</a> on page 635
<b>C1_EXCRTAD</b> algorithm type	<a href="#">CI_EXCRTAD</a> on page 642

## Payment and Tender Creation

If the payment currency is different from the account's invoice currency, the amount is converted into the account's invoice currency during payment and tender creation. The currency conversion is done only when you have an algorithm of the **C1\_CURALGPY** or **C1\_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the payment and tenders will not be created.

### Note:

The currency conversion feature is available only when the payment currency (i.e. tender currency) is different from the payor account's invoice currency and not when the payor account's invoice currency is different from the payee account's invoice currency.

The currency conversion feature for payments is currently not supported from the **Payment Portal** screen and while uploading payment data from an external source.

<b>C1_CURALGPY</b> algorithm type	<a href="#">CI_CURALGPY</a> on page 637
<b>C1_EXCRTPY</b> algorithm type	<a href="#">CI_EXCRTPY</a> on page 644

## Transaction Aggregation

---

If the transaction or user defined (UDF) currency is different from the pricing currency, the amount is converted into the pricing currency when you are aggregating transactions based on the transaction or UDF amount. The currency conversion is done only when you have an algorithm of the **C1\_CURALGTFM** or **C1\_EXCRTTFM** algorithm type attached on the **TFM - Currency Conversion** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the transaction will change to **Error**.

## FT GL Creation

---

During FT GL creation, the system creates an FT GL extension when the account's invoice currency is different from the division's base currency. The FT GL extension is created for the following financial transaction (FT) types:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

The FT GL extension is created for bill segments only when you have an algorithm of the **C1\_CURALGBS** or **C1\_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments only when you have an algorithm of the **C1\_CURALGPY** or **C1\_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments only when you have an algorithm of the **C1\_CURALGAD** or **C1\_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen and the FT GL extension will not be created. In addition, if the required exchange rate is not available during currency conversion, the FT GL extension will not be created.

Date and time based exchange rate during currency conversion while aggregating transactions	<a href="#">CI_EXCRTTFM</a> on page 646

## C1\_CURALGBS

The **C1\_CURALGBS** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1\_CURALGBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	

Parameter	Description	Mandatory (Yes or No)
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

How to setup the currency conversion feature	<a href="#">Prerequisites</a> on page 629

## C1\_CURALGAD

The **C1\_CURALGAD** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate

3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1\_CURALGAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> <p>If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.</p>	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## **C1\_CURALGPY**

The **C1\_CURALGPY** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency

8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1\_CURALGPY** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No

Parameter	Description	Mandatory (Yes or No)
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## C1\_CURALGTFM

The **C1\_CURALGTFM** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)

7. Global exchange rate through base currency

8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_CURALGTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1\_CURALGTFM** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

## C1\_EXCRTBS

The **C1\_EXCRTBS** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1\_EXCRTBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	<b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	

Parameter	Description	Mandatory (Yes or No)
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. <p><b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field.</p>	No

## C1\_EXCRTAD

The **C1\_EXCRTAD** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or

direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1\_EXCRTAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field.	No

## C1\_EXCRTPY

The **C1\_EXCRTPY** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate

3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1\_EXCRTPY** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field.	No

## C1\_EXCRTTFM

The **C1\_EXCRTTFM** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate

2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1\_EXCRTTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1\_EXCRTTFM** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.  <b>Note:</b> The parameter value must be already defined as a value in the <b>CONV_TYPE_FLG</b> lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> <li>• Direct Rate First</li> <li>• Division First</li> </ul> If you do not specify the value for this parameter, by default, the system uses the <b>Division First</b> search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p>If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.</p>	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p>If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.</p>	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm. <p><b>Note:</b> A sample algorithm type named <b>C1_EXCRTOVRD</b> is shipped with the product. It is used to fetch the exchange rate which is available corresponding to the transaction in the <b>C1_TXN_DETAIL</b> table. The exchange rate is then used by the algorithm which is created using the <b>C1_EXCRTTFM</b> algorithm type to convert the transaction amount from the transaction currency to the pricing currency. You must specify the column from where the exchange rate must be picked during currency conversion in the <b>Transaction Detail Field for Exchange Rate</b> parameter.</p>	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. <p><b>Note:</b> The parameter value must be already defined as a value in the <b>EXCH_RATE_SRC_FLG</b> lookup field.</p>	No

## FTFREZGLEXTN

The **FTFREZGLEXTN** algorithm type is used to create FT GL extension for the following financial transaction (FT) types when the account's invoice currency is different from the division's base currency:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

You need to attach an algorithm of the **FTFREZGLEXTN** algorithm type on the **FT Freeze** system event of the customer class. The FT GL extension is created for bill segments only when you have an algorithm of the **C1\_CURALGBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments only when you have an algorithm of the **C1\_CURALGPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments only when you have an algorithm of the **C1\_CURALGAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division.

The **FTFREZGLEXTN** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Adjustments with Freeze At Will	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the <b>Freeze At Will</b> option. The valid values are: <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> – Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Adjustments with Freeze At Bill Completion	<p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the <b>Freeze At Bill Completion</b> option. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> – Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes
Exchange Rate Date Type for Payments (Valid Values: A, R, F, C)	<p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for payments. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> – Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> </ul>	Yes

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C, E)	<p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for bill segments. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>A (Accounting Date)</b> – Used to search for an exchange rate which is effective on the accounting date.</li> <li>• <b>R (Arrears Date)</b> - Used to search for an exchange rate which is effective on the arrears date.</li> <li>• <b>F (FT Freeze Date)</b> - Used to search for an exchange rate which is effective on the FT freeze date.</li> <li>• <b>C (FT Create Date)</b> - Used to search for an exchange rate which is effective on the FT creation date.</li> <li>• <b>E (Bill Segment End Date)</b> - Used to search for an exchange rate which is effective on the bill segment end date.</li> </ul> <p><b>Note:</b> If you set the <b>Exchange Rate Date Type for Bill Segments</b> parameter to <b>R</b>, ensure that you set the <b>Bill Segment Freeze Option</b> to <b>Freeze At Bill Completion</b> in the <b>Billing</b> tab of the <b>Installation Options</b> screen. Otherwise, erroneous results might occur.</p>	Yes

## C1\_EXCRTOVRD

The **C1\_EXCRTOVRD** algorithm type is used to fetch the exchange rate which is available corresponding to the transaction in the **CI\_TXN\_DETAIL** table. The exchange rate is then used by the algorithm which is created using the **C1\_EXCRTTFM** algorithm type to convert the transaction amount from the transaction currency to the pricing currency. If you want to fetch exchange rate from the **CI\_TXN\_DETAIL** table, you need to create an algorithm using the **C1\_EXCRTOVRD** algorithm type and attach it to the **Exchange Rate Override Algorithm** parameter in the algorithm which is created using the **C1\_EXCRTTFM** algorithm type.

The **C1\_EXCRTOVRD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Transaction Detail Field for Exchange Rate	Used to indicate the column of the <b>CI_TXN_DETAIL</b> table from where the exchange rate must be picked during currency conversion.	Yes

### Related Topics

C1_EXCRTTFM algorithm type	<a href="#">CI_EXCRTTFM</a> on page 646

## Exchange Rate (Used for Searching)

You can define date or date and time based global and division-specific exchange rates. The date based exchange rate means that the exchange rate is applicable throughout the day. However, the date and time based exchange rate means that the exchange rate is applicable from that date and time onwards. The global exchange rate can be used for all divisions, whereas the division-specific exchange range can only be used for the division for which the exchange rate is defined.

**Note:** At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

The **Exchange Rate** screen allows you to search for date or date and time based global and division-specific exchange rate using various search criteria. It also allows you to define, edit, and delete an exchange rate. This screen consists of the following zones:

- [Search Exchange Rate](#) on page 652

## Search Exchange Rate

The **Search Exchange Rate** zone allows you to search for an exchange rate using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search date or date and time based exchange rates. The valid values are: <ul style="list-style-type: none"> <li>• Date/Time and Exchange Rate Source</li> <li>• Date</li> </ul> <p><b>Note:</b> By default, the <b>Date/Time and Exchange Rate Source</b> option is selected.</p>	Yes
From Currency	Used to search exchange rates with a particular source currency.	No
To Currency	Used to search exchange rates with a particular target currency.	No

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search exchange rates which are defined for a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Conversion Type	Used to search exchange rates which are defined using a particular conversion type.	No
Effective Start Date/ Time	Used to search exchange rates which are effective from a particular date and time onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.	
Effective End Date/ Time	Used to search exchange rates which are effective till a particular date and time.	No
	<b>Note:</b> This field appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.	
Effective Start Date	Used to search exchange rates which are effective from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Date</b> option from the <b>Search By</b> list.	
Effective End Date	Used to search exchange rates which are effective till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Date</b> option from the <b>Search By</b> list.	
Exchange Rate Source	Used to search exchange rates which are received from a particular source.	No
	<b>Note:</b> This field appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for an exchange rate.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Exchange Rate ID	Displays the exchange rate ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Exchange Rate</b> screen appears with the details of the respective exchange rate.

Column Name	Column Description
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Division	Indicates the division for which the exchange rate is defined.  <b>Note:</b> The data does not appear in this column when the exchange rate is a global exchange rate.
Exchange Rate Source	Indicates the source from where the exchange rate is received.  <b>Note:</b> This column appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.
Conversion Type	Indicates the conversion type of the exchange rate.
Effective Start Date/Time	Displays the date and time from when the exchange rate is effective.  <b>Note:</b> This column appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list.
Effective End Date/Time	Displays the date and time till when the exchange rate is effective.  <b>Note:</b> This column appears only when you select the <b>Date/Time and Exchange Rate Source</b> option from the <b>Search By</b> list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.
Effective Start Date	Displays the date from when the exchange rate is effective.  <b>Note:</b> This column appears only when you select the <b>Date</b> option from the <b>Search By</b> list.
Effective End Date	Displays the date till when the exchange rate is effective.  <b>Note:</b> This column appears only when you select the <b>Date</b> option from the <b>Search By</b> list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.
Inverse Rate	Displays the reverse exchange rate.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Add/Edit Exchange Rate</b> screen appears where you can edit the details of the exchange rate.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the exchange rate.

**Note:**

If you specify the effective start date and time while searching for an exchange rate, the system searches exchange rates which are effective from the specified date and time onwards. Let us understand this with the help of an example. The following table lists the exchange rates which are defined in the system where the From Currency is USD, To Currency is INR, and Division is D1:

Exchange Rate	Effective Start Date and Time	Effective End Date and Time
RT1	01-01-2014 12:00:00 PM	-
RT2	02-01-2014 12:00:00 PM	-
RT3	03-01-2014 12:00:00 PM	-

Now, when you search for exchange rates using the following search criteria, the system accordingly displays the search results:

Search Criteria	Search Results
Effective Start Date and Time: 01-01-2014 12:00:00 PM	All three exchange rates — RT1, RT2, and RT3 — will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 31-01-2014 22:00:00 PM	RT1 will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 02-01-2014 22:00:00 PM	RT1 and RT2 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM	RT2 and RT3 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM; Effective End Date and Time: 02-28-2014 22:00:00 PM	RT2 will appear in the search results.
Effective Start Date and Time: 03-01-2014 12:00:00 PM	RT3 will appear in the search results.

**Searching for an Exchange Rate****Prerequisites**

To search for an exchange rate, you should have:

- Currencies and divisions defined in the application

- Conversion types defined in the **CONV\_TYPE\_FLG** lookup field
- Exchange rate sources defined in the **EXCH\_RATE\_SRC\_FLG** lookup field

### **Procedure**

To search for an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.  
A sub-menu appears.
3. Click the **Search** option from the **Exchange Rate** sub-menu.  
The **Exchange Rate** screen appears.
4. Select the required option from the **Search By** list depending on whether you want to search date or date and time based exchange rates.
5. Enter the search criteria in the **Search Exchange Rate** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all the input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of exchange rates that meet the search criteria appears in the **Search Results** section.

## **Defining an Exchange Rate**

### **Prerequisites**

To define an exchange rate, you should have:

- Determine Business Object algorithm defined using the **F1-MOBO** algorithm type and attached to the **C1\_EXCHRATE** maintenance object

**Note:** The **C1-ExchangeRate** and **C1\_EXCHRATE\_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1\_EXCHRATE\_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Currencies and divisions defined in the application
- Conversion types defined in the **CONV\_TYPE\_FLG** lookup field
- Exchange rate sources defined in the **EXCH\_RATE\_SRC\_FLG** lookup field

**Procedure**

To define an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.  
A sub-menu appears.
3. Click the **Add** option from the **Exchange Rate** sub-menu.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the business object using which you are defining an exchange rate.	Not applicable
From Currency	Used to indicate the currency that you want to translate. In other words, it is used to indicate the source currency.	Yes
To Currency	Used to indicate the currency in which you want to translate the source currency. In other words, it is used to indicate the target currency.	Yes
Conversion Type	Used to indicate the conversion type for the exchange rate.	Yes
Division	Used to indicate the division for which you want to define the exchange rate.	Yes (Conditional)
	<p><b>Note:</b></p> <p>You can only view those divisions to which you have access in the <b>Division</b> list.</p> <p>You must leave this field blank while defining a global exchange rate.</p>	<b>Note:</b> This field is required when you are defining a division-specific exchange rate.
Exchange Rate Source	Used to indicate the source from where the exchange rate is received.	No
	<p><b>Note:</b> This field appears only when you are defining a date and time based exchange rate.</p>	
Effective Start Date/Time	Used to specify the date and time from when the exchange rate is effective.	Yes
	<p><b>Note:</b></p> <p>This field appears only when you are defining a date and time based exchange rate.</p> <p>By default, the time is set to 12:00 AM. You can change the time, if required.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date/ Time	Used to specify the date and time till when the exchange rate is effective.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The effective end date and time cannot be earlier than the effective start date and time.</p> <p>You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date and time.</p> <p>This field appears only when you are defining a date and time based exchange rate.</p> <p>By default, the time is set to 12:00 AM. You can change the time, if required.</p>	<p><b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b>, this field is required when you are defining a division-specific exchange rate.</p>
Effective Start Date	Used to specify the date from when the exchange rate is effective.	Yes
	<p><b>Note:</b> This field appears only when you are defining a date based exchange rate.</p>	
Effective End Date	Used to specify the date till when the exchange rate is effective.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date.</p> <p>This field appears only when you are defining a date based exchange rate.</p>	<p><b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b>, this field is required when you are defining a division-specific exchange rate.</p>
Exchange Rate	Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency.	Yes
	<p><b>Note:</b> The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).</p>	
Spread	Used to specify the spread for the exchange rate.	No

**Tip:** Alternatively, you can access the **Add/Edit Exchange Rate** screen by clicking the **Add Exchange Rate** button in the **Page Title** area of the **Exchange Rate** screen.

4. Enter the required details in the **Add/Edit Exchange Rate** screen.
5. Define characteristics for the exchange rate, if required.

**Note:** You can define characteristics only when you are defining a date and time based exchange rate.

6. Click **Save**.

The exchange rate is defined in the system.

**Note:** If an exchange rate is already defined with a source and conversion type combination on a given date and time, the system will not allow you to define another exchange rate with the same specifications.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
<b>Exchange Rate</b> screen	<a href="#">Exchange Rate (Used for Searching)</a> on page 652
<b>Search Exchange Rate</b> zone	<a href="#">Search Exchange Rate</a> on page 652
How to define characteristics for an exchange rate	<a href="#">Defining Characteristics for an Exchange Rate</a> on page 659
How to set the <b>C1_EXCHRATE</b> feature configuration	<a href="#">Setting the C1_EXCHRATE Feature Configuration</a> on page 2028

## **Defining Characteristics for an Exchange Rate**

### **Prerequisites**

To define characteristics for an exchange rate, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Exchange Rate**)

### **Procedure**

To define characteristics for an exchange rate:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an exchange rate.

The **Characteristics** section contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Effective Date	Used to specify the date from when the characteristic is effective for the exchange rate.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the exchange rate.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Exchange Rate</b> .
		<b>Note:</b> This field is required when you are defining a characteristic for the exchange rate.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the exchange rate.

**Note:** The **Characteristics** section appears only when you are defining or editing a date and time based exchange rate.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the exchange rate, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the exchange rate, click the **Delete**  icon corresponding to the characteristic.

### Related Topics

## Editing an Exchange Rate

### Procedure

To edit an exchange rate:

- Search for the exchange rate in the **Exchange Rate** screen.
- In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the exchange rate whose details you want to edit.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Exchange Rate ID	Displays the exchange rate ID.	Not applicable
Business Object	Indicates the business object used while defining an exchange rate.	Not applicable
From Currency	Indicates the currency which is translated. In other words, it is the source currency.	Not applicable
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Conversion Type	Indicates the conversion type of the exchange rate.	Not applicable
Division	Indicates the division for which the exchange rate is defined.  <b>Note:</b> The data does not appear corresponding to this field when the exchange rate is a global exchange rate.	Not applicable
Exchange Rate Source	Indicates the source from where the exchange rate is received.  <b>Note:</b> This field appears only when you are editing a date and time based exchange rate.	Not applicable
Effective Start Date/Time	Displays the date and time from when the exchange rate is effective.  <b>Note:</b> This field appears only when you are editing a date and time based exchange rate.	Not applicable
Effective End Date/Time	Used to specify the date and time till when the exchange rate is effective.  <b>Note:</b> The effective end date and time cannot be earlier than the effective start date and time. This field appears only when you are editing a date and time based exchange rate. This field is non-editable when you are editing a date and time based global exchange rate. This is because a global exchange rate does not have an end date and time.	Yes (Conditional)  <b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b> , this field is required when you are defining a division-specific exchange rate.
Effective Start Date	Displays the date from when the exchange rate is effective.  <b>Note:</b> This field appears only when you are editing a date based exchange rate.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the exchange rate is effective.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>This field appears only when you are editing a date based exchange rate.</p> <p>This field is non-editable when you are editing a date based global exchange rate. This is because a global exchange rate does not have an end date.</p>	<p><b>Note:</b> If the <b>End Date Required for Division Override</b> option type of the <b>C1_EXCHRATE</b> feature configuration is set to <b>Y</b>, this field is required when you are defining a division-specific exchange rate.</p>
Exchange Rate	Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency.	Yes
	<p><b>Note:</b> The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).</p>	
Spread	Used to specify the spread for the exchange rate.	No

**Tip:** Alternatively, you can click the **Edit** button in the **Exchange Rate** zone to edit the details of the exchange rate.

3. Modify the required details in the **Add/Edit Exchange Rate** screen.
4. Define, edit, or remove characteristics from the exchange rate, if required.

**Note:** The **Characteristics** section appears only when you are editing a date and time based exchange rate.

5. Click **Save**.

The changes made to the exchange rate are saved.

## **Deleting an Exchange Rate**

### **Procedure**

To delete an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.

- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the exchange rate that you want to delete.

A message appears confirming whether you want to delete the exchange rate.

**Tip:** Alternatively, you can click the **Delete** button in the **Exchange Rate** zone to delete the exchange rate.

- Click **OK**.

The exchange rate is deleted.

How to search for an exchange rate	<a href="#">Searching for an Exchange Rate</a> on page 655

## Exchange Rate (Used for Viewing)

---

Once you define an exchange rate, the **Exchange Rate** screen allows you to:

- Edit the details of the exchange rate
- Delete the exchange rate
- View the details of the exchange rate
- View the log of the exchange rate

This screen consists of the following zones:

- [Exchange Rate](#) on page 663
- [Exchange Rate Log](#) on page 665

### Exchange Rate

The **Exchange Rate** zone displays the details of the exchange rate. This zone contains the following sections:

- Main** — This section provides basic information about the exchange rate. It contains the following fields:

Field Name	Field Description
Exchange Rate ID	Displays the exchange rate ID.
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Conversion Type	Indicates the conversion type of the exchange rate.

Field Name	Field Description
Division	<p>Indicates the division for which the exchange rate is defined.</p> <p><b>Note:</b></p> <p>The data does not appear corresponding to this field when the exchange rate is a global exchange rate.</p> <p>It has a link. On clicking the link, the <b>Division</b> screen appears with the details of the respective division.</p>
Exchange Rate Source	<p>Indicates the source from where the exchange rate is received.</p> <p><b>Note:</b> This field appears only when you are viewing the details of a date and time based exchange rate.</p>
Effective Start Date/Time	<p>Displays the date and time from when the exchange rate is effective.</p> <p><b>Note:</b> This field appears only when you are viewing the details of a date and time based exchange rate.</p>
Effective End Date/Time	<p>Displays the date and time till when the exchange rate is effective.</p> <p><b>Note:</b></p> <p>This field appears only when you are viewing the details of a date and time based exchange rate.</p> <p>The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.</p>
Effective Start Date	<p>Displays the date from when the exchange rate is effective.</p> <p><b>Note:</b> This field appears only when you are viewing the details of a date based exchange rate.</p>
Effective End Date	<p>Displays the date till when the exchange rate is effective.</p> <p><b>Note:</b></p> <p>This field appears only when you are viewing the details of a date based exchange rate.</p> <p>The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.</p>
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.

- **Characteristics** — This section lists the characteristics defined for the exchange rate. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the exchange rate.
Characteristic Type	Indicates the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

**Note:** The **Characteristics** section appears only when you are viewing the details of a date and time based exchange rate.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the exchange rate.
Delete	Used to delete the exchange rate.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the exchange rate is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the exchange rate is created.

### Related Topics

How to edit an exchange rate	<a href="#">Editing an Exchange Rate</a> on page 660
How to delete an exchange rate	<a href="#">Deleting an Exchange Rate</a> on page 662

## Exchange Rate Log

The **Exchange Rate Log** zone lists the complete trail of actions performed on the exchange rate. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the exchange rate.
Details	Displays the details about the action performed on the exchange rate.
User	Indicates the user who has performed the action on the exchange rate.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity which is generated when the action is performed on the exchange rate.  <b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Column Name	Column Description
Status Reason	Indicates the reason why the status was changed.
	<b>Note:</b> At present, no data appears in this column. The implementation team can create a custom exchange rate business object with the status lifecycle.

## Viewing the Exchange Rate Details

### Procedure

To view the details of an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.
2. In the **Search Results** section, click the link in the **Exchange Rate ID** column corresponding to the exchange rate whose details you want to view.

The **Exchange Rate** screen appears. It contains the following zones:

- **Exchange Rate** — Displays the details of the exchange rate.
  - **Exchange Rate Log** — Lists the complete trail of actions performed on the exchange rate.
3. View the details of the exchange rate in the **Exchange Rate** zone.
  4. View the log of the exchange rate in the **Exchange Rate Log** zone.

- [Transaction Aggregation Rule](#)
- [Schedule](#)
- [Disaggregation Request \(Used for Searching\)](#)

Oracle Revenue Management and Billing provides you with a facility to upload banking and Administrative Services Only (ASO) transactions received from various product processors or applications for billing. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

For more information on how to upload the data using the **File Upload Interface** feature, refer to the respective feature documentation. Once the transaction data is uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Product
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price item can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. During the transaction feed management process, each transaction goes through various statuses until it is billed to the person. For more information about the transaction statuses, see [Transaction Status Transition](#) on page 717.

The transaction feed management process includes the following sub-processes:

- [Transaction Aggregation](#) on page 676
- [Transaction Disaggregation](#) on page 702
- [Transaction Cancellation](#) on page 710
- [Transaction Rollback](#) on page 714

## Prerequisites

---

To setup the transaction feed management process, you need to do the following:

- Define the required transaction sources in the system
- Define the required transaction record types for each transaction source
- Associate the required SQIs with a price item —division combination
- Define the required transaction aggregation rule for each SQI
- Define the aggregation schedules in the system
- Define the required rules in the system to determine initial price item for transactions
- Attach a validation algorithm to each account identifier type (to ensure that the account identifier type and account identifier combination is unique in or across divisions)
- Attach the **Price Assignment Search** algorithm to each division
- Define the **TFM - Processing Date** characteristic for each division
- Create an algorithm of the **C1\_CURALGTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature
- Define the required exchange rates for currency conversion
- Define values for the PAGE\_NUMBER lookup field
- Create an algorithm of the **C1\_RTCL\_POPC** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the required division

Besides this, you need to setup the following feature configurations:

- *Rule Engine (C1\_RLENG)*
- *Dummy Header (C1-TXNDMYID)*
- *Multi Parameter Based Pricing (C1\_PPARAM\_FLG)*
- *Feed Management (C1\_FM)*

## Transaction Rating Before Billing

---

The system provides the flexibility to rate the transaction legs either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price items can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. This will help to reduce the performance issues which are caused when large volume of transactions are rated at the time of billing.

The system offers the following ways in which a transaction leg can be priced, rated and billed:

1. **Rate the Transaction Leg During Billing** – In this approach, you can use either of the following ways:
  - a. Determine effective pricing for a transaction leg, create a billable charge for the transaction leg, and then determine the rate during billing.
  - b. Determine effective pricing for a transaction leg, create a billable charge for aggregated transaction legs, and then determine the rate during billing.
2. **Rate the Transaction Leg Prior to Billing** – In this approach, you can use either of the following ways:
  - a. Determine effective pricing and rate for a transaction leg, and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation

parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.

- b. Determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.
- c. Determine effective pricing and rate for a transaction leg and create a pass through billable charge for the transaction leg which is billed during billing.

**3. Ignore the Transaction Leg for Billing** – In this approach, you can use either of the following ways:

- a. Determine effective pricing for a transaction leg, but the billable charge is not created for the transaction leg.
- b. Determine effective pricing and rate for a transaction leg, but the billable charge is not created for the transaction leg.

**Note:**

Once the rate is determined for transaction legs, a set of rate component characteristics and their values are grouped. For example, if a price assignment has the following rate components, the system creates two groups — Group A and Group B:

- RC1, Char1=Y, Char2=Y
- RC2, Char1=N, Char2=Y
- RC3, Char1=Y, Char2=Y

Group A contains Char1=Y, Char2=Y and Group B contains Char1=N, Char2=Y. These groups are used for accumulating pre-calculated charges. A unique aggregation parameter group ID is generated for each group. If a group with a set of rate component characteristics and their values already exists in the system, a new group is not created. Instead, the existing group is used for accumulating pre-calculated charges. The aggregation parameter group ID is created only when you attach an algorithm of the **C1\_RTCL\_POPC** algorithm type on the **TFM - Rate Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

While defining a price item pricing, you need to specify the rating criteria which indicates how and when you want to rate the transaction legs. The valid values are:

- Do Not Rate Transactions (DNRT)
- Aggregate transactions and then rate aggregated SQs (AGTR)
- Rate individual transactions and aggregate calc lines across transactions (RITA)
- Rate Transactions (RITX)

Along with the **Rating Criteria** field, the **Ignore Transaction** and **Aggregate Transaction** fields help the system to determine how and when the corresponding transaction leg must be rated. The following table indicates how to configure the system in order to use the above mentioned ways:

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3a	Yes	Not applicable	Do Not Rate Transactions (DNRT)	Not applicable because ignored transactions are not considered for billing.

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3b	Yes	Not applicable	Rate Transactions (RITX)	Update Status (C1-TXNEX)
1b	No	Yes	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2b	No	Yes	Aggregate transactions and then rate aggregated SQs (AGTR)	Service Quantity Calculation (C1-TXNSQ)
2a	No	Yes	Rate individual transactions and aggregate calc lines across transactions (RITA)	Update Status (C1-TXNEX)
1a	No	No	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2c	No	No	Rate Transactions (RITX)	Service Quantity Calculation (C1-TXNSQ)

Let us understand the following transaction rating ways with the help of an example:

- 2a
- 2b
- 2c

The following table lists the account, price item, and price item parameters combination to which transaction T1 and T2 are mapped:

Transaction	Transaction Volume	Transaction Date	Account	Price Item	Price Item Parameter Group ID	Price Assignment ID	Aggregation Schedule
T1	300	01/01/2015	A1	P1	PG1	PA1	Monthly
T1	300	01/01/2015	A2	P1	PG1	PA2	Monthly
T2	200	15/01/2015	A1	P1	PG1	PA1	Monthly
T2	200	15/01/2015	A3	P1	PG1	PA3	Monthly

The following table lists the rate components available on the PA1, PA2, and PA3 price assignments:

Transaction	Price Assignment ID	Rate Component	Currency Code	Distribution Code	Description on Bill	Aggregation Parameter Group ID (Rate Component's Characteristics)
T1	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T1	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T1	PA2	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T1	PA2	RC4-0.2*Transaction Volume	USD	BK-AR4	ABC	Char2=Y
T2	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T2	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T2	PA3	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T2	PA3	RC4-0.2*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y

Now, if you use **RITA (2a)** approach, the system will rate a transaction leg and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1- A1P1PG1- PA1, T2- A1P1PG1- PA1	RC1	$300*0.1 = 30$ , $200*0.1 = 20$	$30+20 = 50$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1– A1P1PG1– PA1, T2– A1P1PG1– PA1	RC2	$300 * 0.2 = 60$ , $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2– A3P1PG1– PA3	RC3, RC4	$200 * 0.3 = 60$ , $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Now, if you use **RITX (2c)** approach, the system will rate a transaction leg and calculate charges for each transaction leg in a separate pass through billable charge, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC1	$300 * 0.1 = 30$	30	The pass through charge is calculated for the transaction leg.
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC2	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC1	$200 * 0.1 = 20$	20	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC2	$200 * 0.2 = 40$	40	The pass through charge is calculated for the transaction leg.
BC4	01/01/2015	31/01/2015	T2-A3P1PG1-PA3	RC3, RC4	$200 * 0.3 = 60$ , $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1, BC2, and BC3 will have two pass through lines, whereas the BC4 will have one pass through line.

Now, if you use **AGTR (2b)** approach, the system will determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics), as shown in the following table:

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC1	500*0.1 = 50	50	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC2	500*0.2 = 100	100	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC3	300*0.3 = 90	90	The pass through charge is calculated for the transaction leg.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC4	300*0.2 = 60	60	The pass through charge is calculated for the transaction leg.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A3P1PG1- PA3- Monthly	200	BC3	01/01/2015	31/01/2015	RC3, RC4	200*0.3 = 60, 200*0.2 = 40	60+40 = 100	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

## Transaction Aggregation

---

The transaction aggregation process includes the following sub-processes:

- [Header Validation](#) on page 677
- [Transaction Validation and Initial Price Item Determination](#) on page 679
- [Price Item Pricing Verification](#) on page 689
- [Aggregation](#) on page 693
- [Clean Up](#) on page 697

The following figure graphically explains the transaction aggregation process:

## Header Validation

Once the file is uploaded in the system, you can execute the **Header Validation (C1-TXNHV)** batch to validate the file or header level information. It checks whether:

- Transaction Header ID and Transaction Source is available in the header.
- At least one transaction record is available in the file.
- The number of transaction records in the file matches the total transaction records in the header.
- The sum of transaction amount matches the total transaction amount in the header.
- The sum of transaction volume matches the total transaction volume in the header.
- File with the same header date and transaction header ID is not available in the system.
- External reference number is specified in each transaction record of the file.

If the file or header information is validated successfully, the status of the file or feed is changed to **Validated (VALI)** and the status of all transactions in the feed remains as **Uploaded (UPLD)**. However, if the header validation fails, the status of the feed and all transactions in the feed is changed to **Invalid (INVL)**.

The **Header Validation (C1-TXNHV)** batch is a multi-threaded batch. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to validate a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to validate the transaction feeds which are received from a particular transaction source.	No
Checksum Validation Required	Used to indicate whether the following should be validated: <ul style="list-style-type: none"> <li>The number of transaction records in the file matches the total transaction records in the header.</li> <li>The sum of transaction amount matches the total transaction amount in the header.</li> <li>The sum of transaction volume matches the total transaction volume in the header.</li> </ul> The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
Duplicate Check Required	Used to indicate whether the following should be validated: <ul style="list-style-type: none"> <li>File with the same header date and external header ID is not available in the system.</li> </ul> The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> The duplicate check is done only against the transaction feeds which are in the <b>Validated (VALI)</b> status and not against the transaction feeds which are in the <b>Uploaded (UPLD)</b> status.</p>	No
Allow Positive Transaction Volume in Header	Used to indicate whether you want to allow positive value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> By default, the parameter value is set to <b>Y</b>.</p>	Yes
Allow Negative Transaction Volume in Header	Used to indicate whether you want to allow negative value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> By default, the parameter value is set to <b>N</b>.</p>	Yes

Parameter Name	Description	Mandatory (Yes or No)
Allow Zero Transaction Volume in Header	Used to indicate whether you want to allow zero value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	Yes
	<b>Note:</b> By default, the parameter value is set to N.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## Transaction Validation and Initial Price Item Determination

This process includes the following three sub-processes:

- **Transaction Validation** - In this sub-process, the transaction records are validated. The transaction level validations are done to check the integrity of the data. During the transaction validation, the system checks whether:
  - Transaction source is defined in the system.
  - Transaction record type is defined for the transaction source in the system.
  - Division and currencies are defined in the system.
  - The account with the specified account identifier, account identifier type and division exists in the system.

**Note:** This validation is done only when the **Transaction Detail Account Validation** option type of the **Feed Management (C1\_FM)** feature configuration is set to **Y**. If you set the **Transaction Detail Account Validation** option type of the **Feed Management (C1\_FM)** feature configuration to **N**, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.

- User ID (if available in the transaction information) is defined in the system.
- The value other than 'Y' or 'N' is not specified in the **Manual Switch** column.
- The value other than '+' or '-' is not specified in the **Credit/Debit Indicator** column.
- Transaction Amount is specified when Transaction Currency is specified, and vice versa.
- Additional Amount 1 is specified when Amount 1 Currency Code is specified, and vice versa.
- Additional Amount 2 is specified when Amount 2 Currency Code is specified, and vice versa.
- Additional Amount 3 is specified when Amount 3 Currency Code is specified, and vice versa.
- Additional Amount 4 is specified when Amount 4 Currency Code is specified, and vice versa.
- Additional Amount 5 is specified when Amount 5 Currency Code is specified, and vice versa.
- Additional Amount 6 is specified when Amount 6 Currency Code is specified, and vice versa.
- Additional Amount 7 is specified when Amount 7 Currency Code is specified, and vice versa.
- Additional Amount 8 is specified when Amount 8 Currency Code is specified, and vice versa.
- Additional Amount 9 is specified when Amount 9 Currency Code is specified, and vice versa.
- Additional Amount 10 is specified when Amount 10 Currency Code is specified, and vice versa.

If the transaction information is invalid or incorrect (for example, division is invalid), the status of the transaction is changed to **Error (EROR)**. But, if the transaction information is not available, the status of the transaction is changed to **Invalid (INVL)**.

- **Initial Price Item Determination** - Once the transaction records are validated, the account which will bear the charges for the transaction and the price item and variance parameter or price item parameters to which the transaction will be mapped are determined using certain business rules. These business rules are invoked through a rule type. Depending on the transaction record type, a rule type is invoked for each transaction. The effective rules with the specified rule type are executed, starting with the rule having highest priority, until a rule is satisfied. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

**Note:** The system determines rules which are effective based on the **Processing Date for Transaction Feed Management** characteristic defined for the division to which the transaction belongs. The system uses the **Processing Date for Transaction Feed Management** characteristic which is effective on the transaction date. If the **Processing Date for Transaction Feed Management** characteristic type is set to BATCH\_DT, the system executes rules which are effective on the batch business date. However, if the **Processing Date for Transaction Feed Management** characteristic type is set to TXN\_DT, the system executes rules which are effective on the transaction date. Note that the transaction date must be earlier than or equal to the batch business date. And, if the **Processing Date for Transaction Feed Management** characteristic is not defined for the division to which a transaction belongs, the system, by default, executes rules which are effective on the transaction date.

Each rule contains one or more conditions or criteria. For example, Rule A states that if the transaction record type is R001 and the division is New York, then set the following output parameters:

- ACCT\_NO1\_Val - Account 1
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X

Here, Transaction Record Type = R001 and Division = New York are two conditions. If these two conditions in the rule are satisfied, then set three output parameters - ACCT\_NO1\_Val, DIVISION1\_VAL and PRODUCT1\_1\_Val. Now, when this rule is executed and the transaction satisfies this criteria, the transaction is mapped to Price Item X and Account 1 which belongs to D1 bears the charges for the transaction. In case, the rule has four output parameters (ACCT\_NO1\_Val set to Account 1, DIVISION1\_VAL set to D1, PRODUCT1\_1\_Val set to Price Item X, and PRODUCT1\_2\_Val set to Price Item Y), the transaction will be mapped to both the price items (i.e. Price Item X and Price Item Y) and Account 1 which belongs to D1 bears the charges for the transaction. A transaction can be mapped to one or more price items or to one or more price item and TOU (variance parameter) combinations. If the multi parameter based pricing feature is enabled, you can map a transaction to one or more price item and price item parameters combinations. Let us understand this with the help of an example.

Rule B states that if the transaction is performed in US and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT\_NO1\_Val - Account A
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X
- PCD1\_1\_1\_VAL - Country
- PVL1\_1\_1\_VAL - US
- PCD1\_1\_2\_VAL - Currency
- PVL1\_1\_2\_VAL - USD
- PRODUCT1\_2\_Val - Price Item Y
- PCD1\_2\_1\_VAL - Country
- PVL1\_2\_1\_VAL - US

- PCD1\_2\_2\_VAL - Currency
- PVL1\_2\_2\_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, Account A which belongs to D1 bears the charges for the transaction which is mapped to the following price item and price item parameters combinations:

- Price Item X, Country - US, Currency - USD
- Price Item Y, Country - US, Currency - USD

More than one account can bear the charges for a transaction and each account can belong to a different division. You can map a transaction to one or more price items, to one or more price item and TOU (variance parameter) combinations, or to one or more price item and price item parameters combinations. The system allows you to map price items for each account. For example, Rule C states that if the transaction is performed in UK and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT\_NO1\_Val - Account A
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X
- PCD1\_1\_1\_VAL - Country
- PVL1\_1\_1\_VAL - UK
- PCD1\_1\_2\_VAL - Currency
- PVL1\_1\_2\_VAL - USD
- PRODUCT1\_2\_Val - Price Item Y
- PCD1\_2\_1\_VAL - Country
- PVL1\_2\_1\_VAL - UK
- PCD1\_2\_2\_VAL - Currency
- PVL1\_2\_2\_VAL - USD
- ACCT\_NO2\_Val - Account B
- DIVISION2\_VAL - D2
- PRODUCT2\_1\_Val - Price Item A
- PCD2\_1\_1\_VAL - Country
- PVL2\_1\_1\_VAL - US
- PCD2\_1\_2\_VAL - Currency
- PVL2\_1\_2\_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, the transaction is mapped to the following price item and price item parameters combinations:

<b>Charges Borne By</b>	<b>Division to which the account belongs...</b>	<b>Price Item</b>	<b>Country</b>	<b>Currency</b>
Account A	D1	Price Item X	UK	USD
Account A	D1	Price Item Y	UK	USD
Account B	D2	Price Item A	US	USD

You can limit the maximum accounts that can bear the charges for a transaction, maximum price item that can be mapped to a transaction, and maximum parameters that can be used with each price item to determine price item pricing. For more information, see [Defining a Transaction Record Type](#) on page 815. You can also define rules to ignore transactions based on the transaction attributes. If the rule returns the **IGNORE\_SW** equal to **Y**, the status of the transaction is changed to **Ignored (IGNR)** and no further processing takes place on the transaction.

You can use the following output parameters while defining rules in the system:

Output Parameter	Naming Convention	Example	Description
Account Identifier	ACCT_NOX_Val	ACCT_NO1_Val, ACCT_NO2_Val, ACCT_NO3_Val, ....	Used to indicate the account which must bear the charges for the transaction.
Account Identifier Column Name	ACCT_NOX_Col	ACCT_NO1_Col, ACCT_NO2_Col, ACCT_NO3_Col, ...	Used to indicate the column from where the account identifier corresponding to the transaction (in the transaction details) must be picked.
Account Identifier Type	ACCT_NO_TYPEX_Val	ACCT_NO_TYPE1_Val, ACCT_NO_TYPE2_Val, ACCT_NO_TYPE3_Val, ...	Used to indicate the type of account identifier.
Account Identifier Type Column Name	ACCT_NO_TYPEX_Col	ACCT_NO_TYPE1_Col, ACCT_NO_TYPE2_Col, ACCT_NO_TYPE3_Col, ...	Used to indicate the column from where the account identifier type corresponding to the transaction (in the transaction details) must be picked.
Account Division	DIVISIONX_VAL	DIVISION1_VAL	Used to indicate the division to which the account belongs.
Account Division Column Name	DIVISIONX_COL	DIVISION1_COL	Used to indicate the column from where the division corresponding to the transaction (in the transaction details) must be picked.
Price Item Name	PRODUCTX_Y_Val	PRODUCT1_1_Val, PRODUCT2_1_Val, PRODUCT2_2_Val, ....	Used to indicate the price item to which the transaction must be mapped.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		
Price Item Column Name	PRODUCTX_Y_Col	PRODUCT1_1_Col,, PRODUCT2_1_Col, PRODUCT2_2_Col, ...	Used to indicate the column from where the price item corresponding to the transaction (in the transaction details) must be picked.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		

Output Parameter	Naming Convention	Example	Description
TOU	TOUX_Y_Val	TOU1_1_Val, TOU2_1_Val, TOU2_2_Val, ...	Used to indicate the variance parameter which you want to use along with the price item for price determination.  <b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
	<b>Note:</b> Here, X represents the account and Y represents the price item.		
TOU Column Name	TOUX_Y_Col	TOU1_1_Col, TOU2_1_Col, TOU2_2_Col, ...	Used to indicate the column from where the variance parameter corresponding to the transaction (in the transaction details) must be picked.  <b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
	<b>Note:</b> Here, X represents the account and Y represents the price item.		
Parameter Code	PCDX_Y_Z_VAL	PCD1_1_1_VAL, PCD1_2_1_VAL, PCD2_1_1_VAL, ...	Used to indicate the parameter which you want to use along with the price item for price determination.  <b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .
	<b>Note:</b> At present, the system does not support the Parameter Code Column output parameter.		
	<b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.		

Output Parameter	Naming Convention	Example	Description
Parameter Value	PVLX_Y_Z_VAL	PVL1_1_1_VAL, PVL1_2_1_VAL, PVL2_1_1_VAL, ...	Used to specify the value for the parameter.
	<p><b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.</p>		<p><b>Note:</b></p> <p>This output parameter appears only when the <b>Multi Price Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The parameter value must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b>.</p>
Parameter Value Column Name	PVLX_Y_Z_COL	PVL1_1_1_COL, PVL1_2_1_COL, PVL2_1_1_COL, ...	Used to indicate the column from where the parameter value corresponding to the transaction (in the transaction details) must be picked.
	<p><b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.</p>		<p><b>Note:</b></p> <p>This output parameter appears only when the <b>Multi Price Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The column from where the parameter value is picked must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b>.</p>

Output Parameter	Naming Convention	Example	Description
Processing Date Type	PRCS_DTX_Y_TYP	PRCS_DT1_1_TYP, PRCS_DT1_2_TYP, PRCS_DT2_1_TYP, ...	<p>Used to indicate the date type using which you want to determine the effective price item parameters, pricing, and exchange rate. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>TXN_DT</b> - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the transaction date.</li> <li>• <b>Batch_DT</b> - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the batch business date.</li> </ul>
	<p><b>Note:</b> Here, X represents the account and Y represents the price item.</p>		

Output Parameter	Naming Convention	Example	Description
Processing Date	PRCS_DTX_Y_VAL	PRCS_DT1_1_VAL, PRCS_DT1_2_VAL, PRCS_DT2_1_VAL, ....	Used to specify a custom date on which you want to determine the effective price item parameters, pricing, and exchange rate.
	<p><b>Note:</b> Here, X represents the account and Y represents the price item.</p>		<p><b>Note:</b></p> <p>The custom date must be a date other than the transaction or batch business date.</p> <p>Based on the <b>Processing Date for Transaction Feed Management</b> characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_VAL output parameter. In other words, the PRCS_DTX_Y_VAL output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.</p>
Ignore Transaction	IGNORE_SW		<p>Used to ignore transactions based on the transaction attributes. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>

Once the transaction satisfies any rule (invoked through the rule type), one transaction leg is created for each account, division, price item, and variance parameter or price item parameters combination. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1, T2, and T3 are mapped:

Transaction	Charges Borne By	Division to which the account belongs...	Price Item	Variance Parameter	Price Item Parameters
T1	A1	D1	P1	-	Country - US, Currency - USD
T1	A1	D1	P2	-	Country - Germany, Currency - USD
T1	A2	D2	P3	USD	-
T2	A1	D1	P1	-	Country - US, Currency - USD
T2	A2	D2	P2	USD	-
T3	A1	D1	P3	-	Country - Germany, Currency - USD

In such case, the system will create three legs for T1, two legs for T2, and one leg for T3. Each transaction leg will have its own status. The status of the transaction legs and transaction is changed to **Initial Price Item Determined (INPD)**. However, if a transaction does not satisfy any rule, the status of the transaction is changed to **Error (EROR)**.

**Note:**

During this sub-process, the system validates the following:

- Whether the price item parameters specified in the output parameters are effective for the price item on the processing date.
- Whether the mandatory price item parameter which is effective on the processing date is specified in the output parameter.
- Whether the parameter value is specified for all mandatory price item parameters which are effective on the processing date.

If any of the above validation fails, the status of the transaction is changed to **Error (EROR)** and no transaction legs are created.

- **Parameter Group Creation** - Once the transaction legs are created, the price item parameters of each transaction leg are grouped. For example, when a transaction is mapped to the following price item and price item parameters combinations, the system creates three groups - Group A, Group B, and Group C:
  - Account A, Price Item X, Country - US, Currency - USD
  - Account A, Price Item Y, Country - Germany, Currency - USD
  - Account B, Price Item X, Country - England, Currency - USD

Group A contains Country - US, Currency - USD; Group B contains Country - Germany, Currency - USD; and Group C contains Country - England, Currency - USD.

A set of price item parameters are grouped only when the multi parameter based pricing feature is enabled. A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

You can execute this process through a multi-threaded batch named **Validate Transaction and Derive Price Item (C1-TXNIP)**. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Batch Business Date	Used to identify the transactions for which you want to perform validation and determine price item. The system considers the transactions whose transaction date is earlier than or equal to the batch business date.	No
	<p><b>Note:</b></p> <p>If you do not specify any date, the batch business date is set to the current date.</p> <p>The batch business date used while executing the <b>C1-TXNIP</b> batch is stamped in the database. It is then used while executing all other consequent batches in the transaction aggregation cycle.</p>	
Transaction Header ID	Used when you want to validate and derive price item for the transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to validate and derive price item for the transactions which are received from a particular transaction source.	No
Division	Used when you want to validate and derive price item for the transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	No
	<b>Note:</b> By default, the parameter value is set to N.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

A log is generated if the **Logging Rules for Transaction Feed** option type in the **Rule Engine (C1\_RLENG)** feature configuration is set to **True**. This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.

**Note:**

You can aggregate transaction legs in a billable charge using aggregation parameters other than account ID, price item code, variance or price item parameters, aggregation start date, and aggregation end date. The additional aggregation parameters can be stamped in the form of aggregation parameter group ID while performing post-processing activities for each transaction leg. This aggregation parameter group ID will be used in subsequent batches during the transaction aggregation cycle. If you want to perform some post-processing activities on the transaction legs, you need to attach a post-processing algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs. This algorithm is triggered only for transactions which are in the **Initial Price Item Determined (INPD)** status. It is triggered before the price item parameter group is created.

A sample post-processing algorithm type named **C1\_PRDR\_POPC** is shipped with the price item. It does not have any business logic. If you want to undertake some post-processing activities for a transaction leg, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Price Item Derivation Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_PRDR\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch is executed, the processing date is stamped against each transaction leg in the database. If a custom processing date is specified for a particular account and price item combination, the custom processing date is stamped against the respective transaction leg. Otherwise, the processing date defined for the division to which a transaction belongs is stamped against the legs of the respective transaction. The processing date which is stamped against a transaction leg in the database is used while executing all subsequent batches in the transaction aggregation cycle.

How to define a rule	<a href="#">Defining a Rule</a> on page 600

**Price Item Pricing Verification**

In this process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or TOU combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the <b>Prefer Price Item Over Bundle</b> parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>If the price item belongs to a regular bundle and the effective pricing is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the regular bundle, the system checks whether the effective pricing is available for the parent bundle (if assigned) at the account level. If the effective pricing is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to <b>Error (EROR)</b>. If the effective pricing is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to <b>Error (EROR)</b>.</p>
Enabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or price item parameters (parameter group) combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the <b>Prefer Price Item Over Bundle</b> parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>The system searches for a price with exact match at all levels defined in the search order. If the exact match is available at two or more levels, the price assignment at the higher precedence level is considered for calculating the charges. But, if the system does not find the exact match at any level, it searches for the best fit match at all levels. For more information about best fit match, see <a href="#">Multi Parameter Based Pricing</a> on page 111. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered for calculating the charges.</p> <p>If the price item belongs to a regular bundle and the exact or best fit price is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the regular bundle, the system checks whether the exact or best fit price is available for the parent bundle (if assigned) at the account level. If the exact or best fit price is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to <b>Error (EROR)</b>. If the exact or best fit price is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to <b>Error (EROR)</b>.</p>

**Note:**

The processing date which is stamped against a transaction leg is used to determine effective pricing for the transaction leg.

The order in which the system searches effective pricing for the price item, regular bundle, or parent (regular) bundle at the same level depends on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

In addition, the status of the transaction and transaction leg is changed to **Error (EROR)** when:

- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.

Once the effective pricing is determined for the initial or final price item, the values of the following pricing attributes are retrieved:

- Ignore Transaction
- Aggregate Transaction
- Aggregation Schedule
- Rating Criteria
- Price Assignment ID
- Account ID (in case of account agreed and price list pricing)
- Person ID (in case of customer agreed and price list pricing)
- Price List ID (in case of price list pricing)
- Contract ID
- Regular Bundle Code
- Pricing Currency

You can execute this process through a multi-threaded batch named **Price Item Pricing Verification (C1-TXNVP)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to find the price item pricing for transactions which are received in a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to find the price item pricing for transactions which are received from a particular transaction source.	No
Division	Used when you want to find the price item pricing for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note that the **Price Item Pricing Verification (C1-TXNVP)** batch does not change the status of the transaction and its legs. You need to execute the **Update Status (C1-TXNEX)** batch to update the status of the transaction and its legs. Besides updating the status, the **Update Status (C1-TXNEX)** batch determines the rate for transaction legs whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 668.

You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	No
	<b>Note:</b> By default, the parameter value is set to N.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

You must specify same parameters in the **Product Pricing Verification (C1-TXNVP)** and **Update Status (C1-TXNEX)** batches. Otherwise, erroneous results might occur.

If you want to do some preprocessing activities before invoking the rates engine, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1\_RTCL\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities before invoking the rates engine, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_RTCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

If a transaction leg is ignored and not considered for billing, the status of the transaction leg is changed to **Ignored (IGNR)**, whereas the status of the transaction remains as **Initial Price Item Determined (INPD)**. However, if all legs of a transaction are ignored and not considered for billing, the status of the transaction and transaction legs is changed to **Ignored (IGNR)**.

You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **true**, the system will store the product pricing information in the following tables:

- CI\_PRC\_AGRD
- CI\_PRC\_PL
- CI\_PRC\_INH\_PL

But, if you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **false**, the system will not store the product pricing information in the above mentioned tables. If there are any pricing changes, you will have to update these tables before executing the **Price Item Pricing Verification (C1-TXNVP)** batch. You can update the product pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch. Ideally, you must execute the **Refresh Pricing (C1-TXNRP)** batch after you execute the **Flush All Caches (F1-FLUSH)** batch in the transaction aggregation cycle. You can specify the following parameters while executing the **Refresh Pricing (C1-TXNRP)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to update the price item pricing information of accounts belonging to a particular division.	No
Chunk Size	Used to specify the number of persons whose regular and post-processing price item pricing information you want to update in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 718
How to set the <b>C1_FM</b> feature configuration	<a href="#">Setting the C1_FM Feature Configuration</a> on page 2030

**Aggregation**

Once the price item pricing verification is complete, you can aggregate the transaction legs, create a billable charge, and update the **SQL** values in the billable charge. In the aggregation process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks the value defined in the <b>Aggregate Transaction</b> field. If the <b>Aggregate Transaction</b> field is set to <b>No</b>, the system creates one billable charge (with the <b>Billable</b> status) for each transaction leg. However, if the <b>Aggregate Transaction</b> field is set to <b>Yes</b>, the system creates one billable charge (with the <b>Billable</b> status) for all transactions legs having the same price item and TOU combination and whose transaction date falls between the aggregation schedule.</p> <p><b>Note:</b></p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to <b>Error (EROR)</b>.</p> <p>If the aggregated billable charge already exists for the account, price item and TOU combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>
Enabled	<p>The system checks the value defined in the <b>Aggregate Transaction</b> field. If the <b>Aggregate Transaction</b> field is set to <b>No</b>, the system creates one billable charge (with the <b>Billable</b> status) for each transaction leg. However, if the <b>Aggregate Transaction</b> field is set to <b>Yes</b>, the system creates one billable charge (with the <b>Billable</b> status) for all transaction legs having the same price item and price item parameters (parameter group) combination and whose transaction date falls between the aggregation schedule.</p> <p><b>Note:</b></p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to <b>Error (EROR)</b>.</p> <p>If the aggregated billable charge already exists for the account, price item and price item parameters combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>

The transaction aggregation is done based on the aggregation schedule defined in the price item pricing. You can use the following standard schedules or you can create your own custom schedules for aggregation:

- Daily
- Weekly
- Monthly
- Quarterly
- Yearly

Once the billable charge is created, the system aggregates the SQIs defined for the price item — division combination using the aggregation function and then updates the billable charge with the respective SQI values. If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

Once the SQI values are updated in the billable charge, the rate is determined for the transaction leg whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 668.

**Note:** If you want to do some preprocessing activities while determining rate, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1\_RTCL\_PRPC** is shipped with the price item. It does not have any business logic. If you want to undertake some preprocessing activities while determining rate for transaction legs, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_RTCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the billable charge is created and updated successfully, the status of the transaction leg is changed to **Completed (COMP)**. However, if the SQIs are not defined for the price item — division combination, the transaction aggregation rule is not defined for the SQI, or if the exchange rate is not available during currency conversion, the status of the transaction leg is changed to **Error (EROR)**. If all legs of a transaction are in the **Completed (COMP)** status, the status of the transaction is changed to **Completed (COMP)**. But, if any of the transaction leg is in the **Error (EROR)** status, the status of the transaction is changed to **Error (EROR)**.

You can execute this process through a multi-threaded batch named **Service Quantity Calculation (C1-TXNSQ)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to create the billable charges for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to create the billable charges for transactions which are received from a particular transaction source.	No
Division	Used when you want to create the billable charges for transactions belonging to a particular division.	No

Parameter Name	Description	Mandatory (Yes or No)
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

The **Service Quantity Calculation (C1-TXNSQ)** batch does not change the status of the transaction and its legs. You need to execute the **Mark Completion (C1-TXNCM)** batch to update the status of the transaction and its legs. Besides updating the status, the **Mark Completion (C1-TXNCM)** batch does the following with other legs when billable charge is not created for one or more transaction legs:

Rate for other transaction leg is determined using the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>Yes</b> and <b>Rating Criteria</b> is set to <b>Rate Transactions (RITX)</b>	The corresponding calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>No</b> , and <b>Rating Criteria</b> is set to <b>Rate Transactions (RITX)</b>	The corresponding billable charge and calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The corresponding calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The corresponding billable charge and calculation lines are not deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>No</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The corresponding non-aggregated billable charge is deleted.

You can specify either of the following parameters while executing the **Mark Completion (C1-TXNCM)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

You must specify same parameters in the **Service Quantity Calculation (C1-TXNSQ)** and **Mark Completion (C1-TXNCM)** batches. Otherwise, erroneous results might occur.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1\_BCHG\_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_BCHG\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 718

**Clean Up**

There might be situations when a transaction is mapped to one or more price items and due to some reasons a billable charge could not be created for one of the price item. And, therefore the status of the transaction is changed to **Error (EROR)**. In such case, you need to either recalculate SQIs in the aggregated billable charge or delete the aggregated billable charge depending on whether the aggregated billable charge includes transaction legs in the **Completed (COMP)** status. You can perform this clean up process through a multi-threaded batch named **Clean Up (C1-TXNCU)**.

When the transaction legs in the **Error (EROR)** and **Completed (COMP)** statuses are aggregated together in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The SQIs are recalculated in the billable charge.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The SQIs are recalculated in the billable charge and the rate is determined for aggregated service quantities. Once the rate is determined, pass through charges are calculated and accumulated accordingly.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The pass through charges are recalculated and accumulated accordingly.

However, when the transaction legs in the **Error (EROR)** status are only aggregated in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The aggregated billable charge is deleted.

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The aggregated billable charge and the corresponding calculation lines are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The aggregated billable charge is deleted.

**Note:**

If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

The SQIs in an aggregated billable charge are recalculated only when the **SQ Recalculation Required** option type in the **C1\_FM** feature configuration is set to **Y**. If you set the **SQ Recalculation Required** option type in the **C1\_FM** feature configuration to **N**, the SQIs are not recalculated in an aggregated billable charge. We recommend you to recalculate SQIs in an aggregated billable charge when more than one account bears the charges for a transaction.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1\_BCHG\_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_BCHG\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Besides the transaction aggregation process, the **Clean Up (C1-TXNCU)** batch is also used during the following sub-processes:

- **Cancellation** — During the cancellation process, it deletes non-aggregated billable charges and recalculates SQIs in aggregated billable charges.
- **Disaggregation** — During the disaggregation process, it deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation.

You can specify either of the following parameters while executing the **Clean Up (C1-TXNCU)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to update or delete billable charges created for transactions which are received in a particular transaction feed.	Yes (Conditional)
	<b>Note:</b> This parameter should not be used during the disaggregation process.	<b>Note:</b> This parameter is required when you set the request type to <b>CNCL</b> .

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to update or delete billable charges created for transactions which are received from a particular transaction source.	No
	<b>Note:</b> This parameter should not be used during the cancellation and disaggregation processes.	
Division	Used when you want to update or delete billable charges created for transactions belonging to a particular division.	No
	<b>Note:</b> This parameter should not be used during the cancellation process.	
Account ID	Used when you want to update or delete billable charges created for transactions of a particular account.	No
	<b>Note:</b> This parameter should be used only during the disaggregation process.	
Bill Cycle	Used when you want to update or delete billable charges created for transactions of accounts having a particular bill cycle.	No
	<b>Note:</b> This parameter should be used only during the disaggregation process.	
Disaggregate Transactions From Date	Used when you want to update or delete billable charges created for transactions which were performed from a particular date onwards.	Yes (Conditional)
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format. This parameter should be used only during the disaggregation process.	
Request Type	Used to indicate the process during which you want to execute the batch. The valid values are: <ul style="list-style-type: none"> <li>• CNCL</li> <li>• EROR</li> <li>• DISAGG</li> </ul>	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## Transaction Aggregation Batch Processing

---

During the transaction aggregation process, you need to execute the following batches in the specified order:

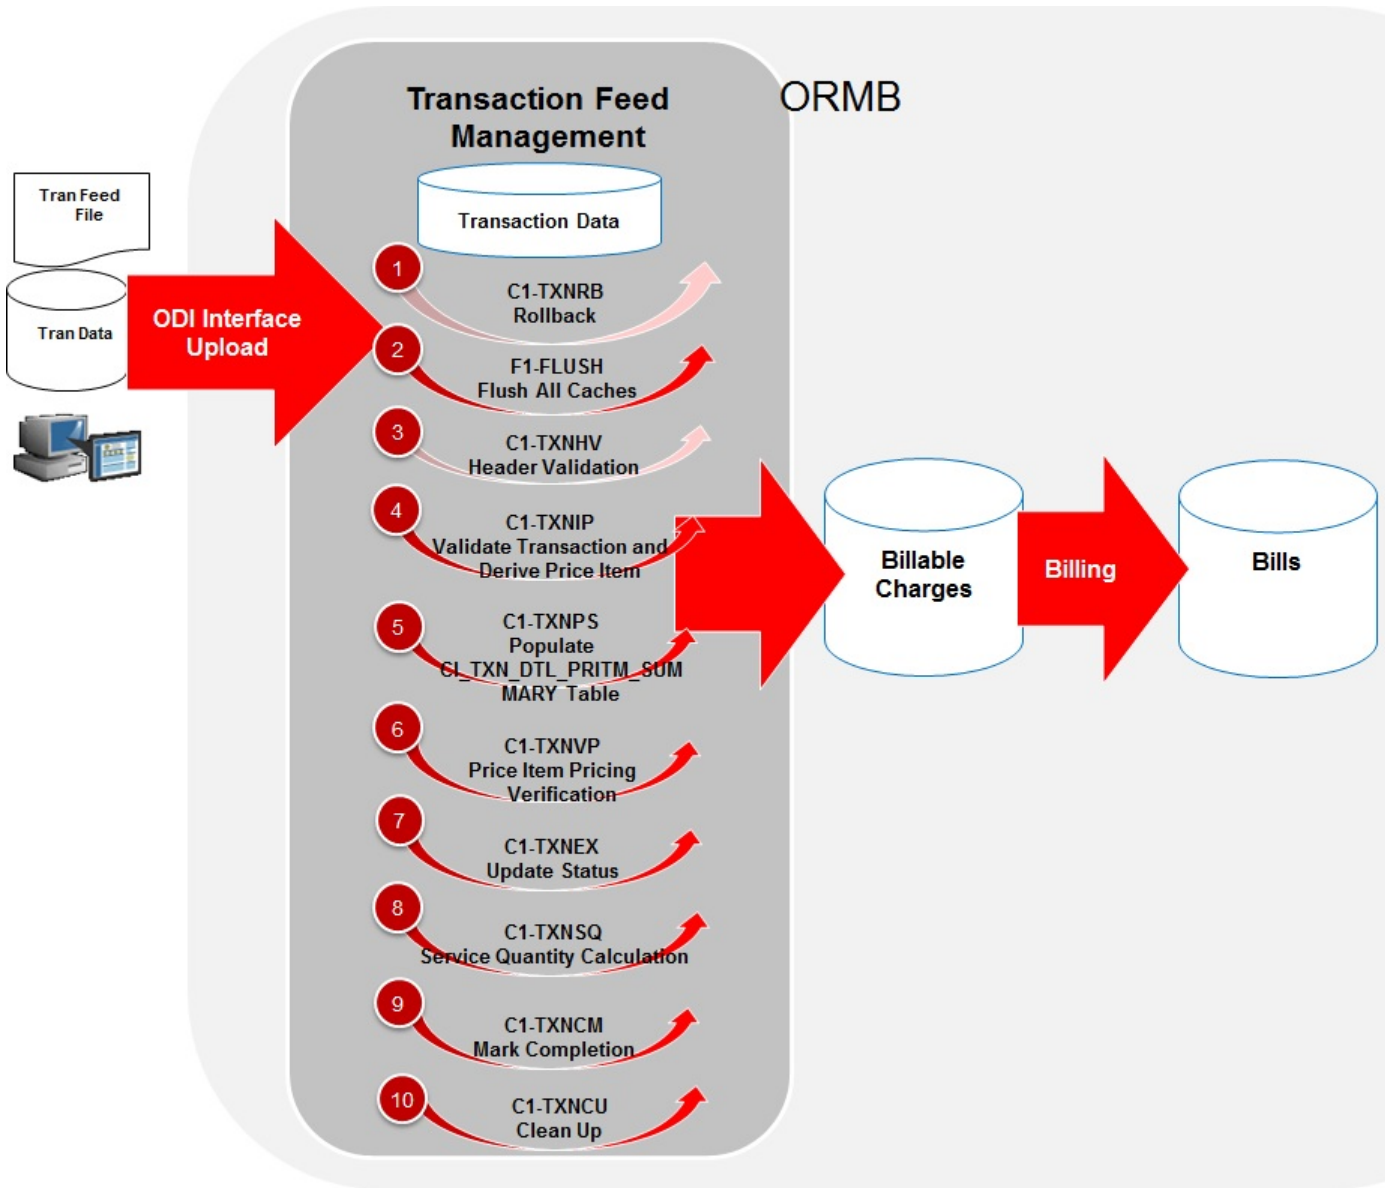

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Price Item Pricing Verification (C1-TXNVP)
6. Update Status (C1-TXNEX)
7. Service Quantity Calculation (C1-TXNSQ)
8. Mark Completion (C1-TXNCM)
9. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch locks the **CI\_TXN\_DTL\_PRITM\_SUMMARY** table before inserting records to ensure that only unique records are inserted in this table. The locking mechanism results in performance issue when there is no or very little aggregation of transactions. Therefore, we recommend you to use an alternative transaction aggregation process when the aggregation ratio is low. You can enable the alternative transaction aggregation process by setting the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1\_FM** feature configuration to **true**. In this alternative transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)
6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The following figure graphically explains the sequence in which you need to execute the batches during the transaction aggregation process:

**Note:**

You need to remember the following points during the transaction aggregation process:

- Before you start the transaction aggregation process, you need to execute the **Flush All Caches (F1-FLUSH)** batch to clean the cache. This batch has one parameter named **Thread Pool** which allows you to clean cache of a particular thread pool. In case you want to reprocess the error transactions from the earlier cycle, you need to execute the **Rollback (C1-TXNRB)** batch.
- You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **true**, the system will store the price item pricing information in the following tables:
  - CI\_PRC\_AGRD
  - CI\_PRC\_PL
  - CI\_PRC\_INH\_PL

But, if you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **false**, the system will not store the price item pricing information in the above mentioned tables. If there are any pricing changes, you can update the price item pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch.

- The **Header Validation (C1-TXNHV)** batch is optional. You can directly execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch once the transactions are uploaded in the system.
- The system allows you to execute each batch consecutively. You can execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and same parameters, or with the different division and different parameters. But, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and different parameters. For example, once you execute this batch with division as D1 and transaction source as S1, you cannot execute this batch again with division as D1 and transaction source as S2 until the former transaction aggregation cycle is complete.
- Once the **Price Item Pricing Verification (C1-TXNVP)** batch is executed, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. Similarly, once the **Service Quantity Calculation (C1-TXNSQ)** batch is executed, you cannot execute the **Price Item Pricing Verification (C1-TXNVP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. This rule is applicable to all subsequent batches in the transaction aggregation cycle.
- During the transaction aggregation process, you must specify the same division and same parameters across each batch. Otherwise, erroneous results might occur.
- If you have already executed the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch without any division, then you cannot execute this batch once again with a division unless and until the transaction aggregation cycle is complete.

## Transaction Disaggregation

---

As the aggregation cycle is different from the billing cycle, there might be situations when due to pricing changes, the billable charges are no longer valid. In such cases, you need to disaggregate the transactions. In the following scenarios, the system automatically creates a disaggregation request in the CI\_TXN\_DISAGG\_REQ table:

If...	Then
A price item is assigned to an account	A disaggregation request is created for the account.

If...	Then
<p>The following values in the price item pricing assigned to an account is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Aggregation Schedule</li> <li>• Ignore Transaction</li> <li>• Aggregate Transaction</li> <li>• Rating Criteria</li> <li>• Price Item Parameter</li> </ul>	<p>A disaggregation request is created for the account.</p>
<p>A price item is assigned to a person</p>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>The following values in the price item pricing assigned to a person is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Aggregation Schedule</li> <li>• Ignore Transaction</li> <li>• Aggregate Transaction</li> <li>• Rating Criteria</li> <li>• Price Item Parameter</li> </ul>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>A price list is assigned to an account.</p>	<p>A disaggregation request is created for the account.</p>
<p>The following values in the price list assigned to an account is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Priority</li> <li>• Price List Inheritance</li> </ul>	<p>A disaggregation request is created for the account.</p>
<p>A price list is assigned to a person.</p>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>The following values in the price list assigned to a person is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Priority</li> <li>• Price List Inheritance</li> </ul>	<p>A disaggregation request is created for each account of the person and its child person.</p>

However, there are various other scenarios for which you have to disaggregate the transactions. But, at the moment, the system does not automatically create a disaggregation request for these scenarios in the CL\_TXN\_DISAGG\_REQ table. You will have to create an appropriate disaggregation request in this table. The system allows you to create a

disaggregation request manually through the **Disaggregation Request** screen or through a batch named **Disaggregation Request Creation (C1-DISTG)**.

In the following scenarios, you have to create an appropriate disaggregation request for the account or person, respectively:

- Effective price item pricing assigned to an account is overridden.
- Variance parameter in the price item pricing assigned to an account is changed.
- A price list assignment has expired or a price list is no longer available to an account.
- Effective price item pricing assigned to a person is overridden.
- Variance parameter in the price item pricing assigned to a person is changed.
- A price list assignment has expired or a price list is no longer available to a person.
- A price item is added to a price list.
- The following details in the price item pricing assigned to a price list is changed:
  - Variance Parameter
  - Effective Start Date
  - Effective End Date
  - Aggregation Schedule
  - Ignore Transaction
  - Rating Criteria
  - Aggregate Transaction
- A new bundle is created.
- A price item is added to a bundle.
- A price item is removed from a bundle.
- A bundle is eliminated (that is, all its price item are removed).
- A price item is added.
- A price list hierarchy is changed.
- SQIs associated with a price item - division combination are changed.
- Transaction aggregation rule defined for an SQI is changed or deleted.
- Business rules used for initial price item mapping are changed.

At present, the system disaggregates transactions at the account level and not at the price item level. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1 is mapped:

Transaction	Account	Price Item
T1	A1	P1
T1	A1	P2
T1	A2	P1
T1	A2	P2

Now, if the pricing of P1 assigned to A1 changes, the system creates a disaggregation request for A1 and identifies all transaction legs which are mapped to A1 for disaggregation. In this example, the system will consider the first two transaction legs - T1-A1-P1 and T1-A1-P2 - for disaggregation even if the pricing of P2 assigned to A1 has not changed.

The **Disaggregation Request Creation (C1-DISTG)** batch creates a disaggregation request for an account. When you create a disaggregation request for an account, the transactions mapped to the account are disaggregated. This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to create disaggregation request for accounts belonging to a particular division.	No
Person ID	Used when you want to create disaggregation request for accounts belonging to a particular person.	No
Bill Cycle	Used when you want to create disaggregation request for accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to create disaggregation request for accounts for which transactions were performed from a particular date onwards.	Yes
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Before you proceed with the disaggregation process, you need to ensure that there are no pending bills for the accounts whose transactions need to be disaggregated. If there are pending bills for these accounts, you need to first execute the **Pending Bill Segments Deletion (C1-BSEGD)** batch and then execute the **Pending Bill Deletion (C1-PNBD)** batch. While executing these batches in the specified order, ensure that you specify the same parameters in both these batches. For more information about these batches, see *Oracle Revenue Management and Billing Batch Execution Guide*.

**Note:** The **Pending Bill Deletion (C1-PNBD)** batch deletes those pending bills which are generated through the billing batches (i.e. **BILLING** or **C1-PNDBL**). It does not delete pending bills which are generated through the user interface. Also, it deletes regular pending bills and not adhoc pending bills.

Once a disaggregation request is either manually or automatically created for an account, you need to execute the following batches in the specified order to disaggregate transactions:

- **Identify Transactions for Disaggregation (C1-IDENT)** - This batch fetches disaggregation requests which are created for accounts from the CI\_TXN\_DISAGG\_REQ table. It identifies the transactions and the corresponding aggregated and non-aggregated billable charges for disaggregation. If the bill segment of a billable charge is in the **Pending Cancel** or **Frozen** status, the system will not identify the billable charge for deletion. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to identify the transactions of accounts belonging to a particular division for disaggregation.	No
Account ID	Used when you want to identify the transactions of a particular account for disaggregation.	No
Bill Cycle	Used when you want to identify the transactions of accounts having a particular bill cycle for disaggregation.	No

Parameter Name	Description	Mandatory (Yes or No)
Disaggregate Transactions From Date	Used when you want to identify the transactions which were performed from a particular date onwards for disaggregation.	No
	<p><b>Note:</b></p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The aggregated billable charge, which is affected, should not contain a transaction leg whose transaction date is earlier than the date specified in this parameter. Otherwise, erroneous results will occur. Therefore, ensure that you specify the appropriate value for the <b>Disaggregate Transactions From Date</b> parameter.</p>	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Post-Processing Algorithm	Used to attach a post-processing algorithm. This algorithm is triggered once the transactions and corresponding billable charges are identified for disaggregation.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to exclude the aggregated and non-aggregated billable charges which are in the <b>Canceled</b> status during the disaggregation process. The valid values are:	No
	<ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> If you do not specify any value, by default, the parameter value is set to N.</p>	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

- **Process Non-Aggregated Transactions (C1-PDTXN)** - This batch processes the identified transactions, deletes the required transaction legs, and changes the status of the transaction to **Uploaded (UPLD)**. If a non-aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The corresponding transaction leg and calculation lines (if any) are deleted.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if a non-aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, the corresponding calculation lines (if any), and transaction leg are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If a non-aggregated billable charge is in the **Cancel** status, then the corresponding transaction leg and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. If the rate is determined for a transaction leg which is in the **Ignored (IGNR)** status, the calculation lines are deleted along with the transaction leg during disaggregation.

If aggregated billable charge exists for a transaction leg, then the corresponding transaction legs and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to disaggregate the transactions of accounts belonging to a particular division.	No
Account ID	Used when you want to disaggregate the transactions of a particular account.	No
Bill Cycle	Used when you want to disaggregate the transactions of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to disaggregate the transactions which were performed from a particular date onwards. <b>Note:</b> You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process, you need to attach a preprocessing algorithm on the **TFM - Disaggregation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Process Non-Aggregated Transactions (C1-PDTEXN)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_DSAG\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the disaggregation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Disaggregation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_DSAG\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

- **Clean Up (C1-TXNCU)** - This batch deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation. If an aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if an aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, and the corresponding calculation lines (if any) are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If an aggregated billable charge is in the **Cancel** status, then the corresponding calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

While executing the **Clean Up (C1-TXNCU)** batch during disaggregation, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 697.

- **Update Disaggregation Request Status (C1-DRSUA)** - This batch changes the status of the disaggregation request in the **CI\_TXN\_DISAGG\_REQ** table to **COMPLETE**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Account ID	Used when you want to update the disaggregation requests' status of a particular account.	No
Division	Used when you want to update the disaggregation requests' status of accounts belonging to a particular division.	No
Bill Cycle	Used when you want to update the disaggregation requests' status of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to update the disaggregation requests' status of accounts whose transactions were performed from a particular date onwards and the bill segments created for these transactions are in the <b>Pending Cancel</b> or <b>Frozen</b> status.  <b>Note:</b> You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Update Status Algorithm	Used to attach a custom algorithm which indicates when the status of the disaggregation request in the <b>CI_TXN_DISAGG_REQ</b> table must be changed to <b>COMPLETE</b> .  <b>Note:</b> If an algorithm is specified in this parameter, the system uses the custom logic and not the in-built logic for updating the status of the disaggregation requests.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to change the status of the disaggregation request to <b>COMPLETE</b> when the canceled billable charges are excluded during the disaggregation process. The valid values are:  <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <b>Note:</b> If you do not specify any value, by default, the parameter value is set to N.  You must specify the same value for this parameter while executing the <b>Identify Transactions for Disaggregation (C1-IDENT)</b> and <b>Update Disaggregation Request Status (C1-DRSUA)</b> batches during the disaggregation process. Otherwise, erroneous results will occur.	No

Parameter Name	Description	Mandatory (Yes or No)
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## Transaction Disaggregation Batch Processing

---

During the transaction disaggregation process, you need to execute the following batches in the specified order:

1. Disaggregation Request Creation (C1-DISTG)
2. Pending Bill Segments Deletion (C1-BSEGD)
3. Pending Bill Deletion (C1-PNBD)
4. Identify Transactions for Disaggregation (C1-IDENT)
5. Process Non-Aggregated Transactions (C1-PDTXN)
6. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
7. Update Disaggregation Request Status (C1-DRSUA)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction disaggregation process:

## Transaction Cancellation

There might be situations when incorrect transaction data file is uploaded in the system. In such cases, the system provides you with an ability to cancel the whole transaction feed. You can cancel a transaction feed either before the transaction aggregation process starts (that is, before executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch) or after the transaction aggregation process ends (that is, after executing the **Clean Up (C1-TXNCU)** batch). In other words, you cannot cancel a transaction feed during the transaction aggregation process. Once the transaction feed is cancelled, the status of the feed and all transactions in the feed is changed to **Cancelled (CNCL)**.

The following table explains how the system behaves:

When you cancel a transaction feed for which...	Then
<p>A bill (with the <b>Pending</b> status) is already generated in the system</p>	<p>The corresponding billable charges, bill segments, and bill are deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b>.</p> <p><b>Note:</b></p> <p>If a pending bill has a bill segment in the <b>Frozen</b> or <b>Pending Cancel</b> status, the system does not allow you to cancel the transaction feed.</p> <p>If a pending bill has a bill segment in the <b>Cancel</b> status, the system behaves in the following manner:</p> <ul style="list-style-type: none"> <li>• Deletes all other bill segments which are not in the <b>Cancel</b> status.</li> <li>• The billable charge corresponding to the bill segment which is not in the <b>Cancel</b> status is deleted if the billable charge is in the <b>Billable</b> status and if the billable charge only includes transactions from the feed that you want to cancel.</li> <li>• The billable charge corresponding to the bill segment which is not in the <b>Cancel</b> status is not deleted or recalculated if the billable charge is in the <b>Cancelled</b> status.</li> <li>• The billable charge corresponding to the bill segment which is in the <b>Cancel</b> status is cancelled if the billable charge only includes transactions from the feed that you want to cancel.</li> <li>• The SQIs in the billable charge are recalculated if the billable charge includes transactions from multiple feeds.</li> </ul> <p>If a bill is created for transactions which are uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> <li>• The bill and their corresponding bill segments are deleted.</li> <li>• The SQIs are recalculated in the corresponding billable charges.</li> <li>• The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted.</li> <li>• The status of the transactions uploaded through Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of the transactions uploaded through Feed B remains the same (i.e. <b>Completed (COMP)</b> ).</li> </ul>
<p>A bill (with the <b>Complete</b> status) already exists in the system</p>	<p>The system does not allow you to cancel the transaction feed.</p>

When you cancel a transaction feed for which...	Then
A bill (with the <b>Complete</b> status) has all bill segments in the <b>Cancelled</b> status	The corresponding billable charges are cancelled. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .
A billable charge (with the <b>Billable</b> status) exists in the system	<p>The billable charge is deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b>.</p> <p><b>Note:</b></p> <p>In case a billable charge is created for transactions uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> <li>• The SQIs are recalculated in the billable charge.</li> <li>• The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted.</li> <li>• The status of the transactions uploaded through Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of the transactions uploaded through Feed B remains the same (i.e. <b>Completed (COMP)</b> ).</li> </ul>
A billable charge (with the <b>Cancelled</b> status) exists in the system	The billable charge is not deleted. However, the corresponding transaction legs and their calculation lines (if any) are deleted and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .

To cancel a transaction feed, you need to execute the following batches in the specified order:

1. **Pending Bill Deletion (C1-DELBL)** — This batch deletes the bills (with the **Pending** status) and their corresponding bill segments. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to delete bills which include charges for transactions which are received in a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

2. **Clean Up (C1-TXNCU)** — This batch deletes non-aggregated and aggregated billable charges. An aggregated billable charge is deleted only when it includes legs of transactions from the feed that you want to cancel. If an aggregated billable charge includes legs of transactions from multiple feeds, the SQIs and calculation lines (if any) are recalculated in the aggregated billable charge. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**, is cancelled or deleted during the cancellation process. Note that while executing this batch, the **Request Type** parameter must be set to **CNCL**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 697.

3. **Cancellation (C1-TXCNC)** — This batch deletes the transaction legs. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)** or **Rate Transactions (RITX)**, is cancelled or deleted during the cancellation process. Finally, this batch changes the status of the feed and all transactions in the feed to **Cancelled (CNCL)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to cancel a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process, you need to attach a preprocessing algorithm on the **TFM - Cancellation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Cancellation (C1-TXCNC)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_CNCL\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the cancellation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Cancellation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_CNCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 718

## Transaction Cancellation Batch Processing

During the transaction cancellation process, you need to execute the following batches in the specified order:

1. Pending Bill Deletion (C1-DELBL)
2. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **CNCL**
3. Cancellation (C1-TXCNC)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction cancellation process:

## Transaction Rollback

---

In the transaction aggregation process, an error occurs when:

- Transaction validation fails.
- Transaction does not satisfy any rule invoked through the rule type.
- Effective pricing is not available for one or more price items to which a transaction is mapped.
- SQIs are not defined for the price item — division combination.
- Transaction aggregation rule is not defined for the SQL.
- Exchange rate is not available during currency conversion.
- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.
- Price Item parameters specified in the output parameters are not effective for the price item on the processing date.
- Mandatory price item parameter which is effective on the processing date is not specified in the output parameter.
- Parameter value is not specified for all mandatory price item parameters which are effective on the processing date.

In such cases, the status of the transaction is changed to **Error**. You can configure the required setup and then execute the following batches once again in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)

**Note:** You must execute the **Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)** batch only when the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1\_FM** feature configuration is set to **true**.

6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU)

But, before you execute these batches, you need to rollback the transaction status to **Uploaded (UPLD)**. The system allows you to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. When you rollback a transaction, the corresponding transaction legs are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. On rolling back a transaction leg whose effective pricing has the **Ignore Transaction** field set to **Yes** and the **Rating Criteria** field set to **Rate Transactions (RITX)**, the corresponding calculation lines are also deleted along with the transaction leg. If you rollback a partially disaggregated transaction which is in the **Error (EROR)** status, the transaction legs which are in the **Error (EROR)** status are only deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

You need to execute the **Rollback (C1-TXNRB)** batch to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Status	Used to indicate whether you want to rollback transactions which are in the <b>Ignored</b> or <b>Error</b> status. The valid values are: <ul style="list-style-type: none"> <li>• IGNR</li> <li>• EROR</li> </ul>	Yes
Transaction Header ID	Used when you want to rollback transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to rollback transactions which are received from a particular transaction source.	No
Division	Used when you want to rollback transactions belonging to a particular division.	No
Rollback From Date	Used when you want to rollback transactions which were performed from a particular date onwards. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> You must specify the date in the YYYY-MM-DD format. The rollback from date cannot be later than the rollback to date.</p> </div>	No
Rollback To Date	Used when you want to rollback transactions which were performed till a particular date. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> You must specify the date in the YYYY-MM-DD format. The rollback to date cannot be earlier than the rollback from date.</p> </div>	No

Parameter Name	Description	Mandatory (Yes or No)
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process, you need to attach a preprocessing algorithm on the **Transaction Feed Management Rollback Preprocessing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Rollback (C1-TXNRB)** batch. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_ROBK\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the rollback process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rollback Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_ROBK\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

## Feed Status Transition

---

The following figure graphically indicates how a feed moves from one status to another during the transaction feed management process:

## Transaction Status Transition

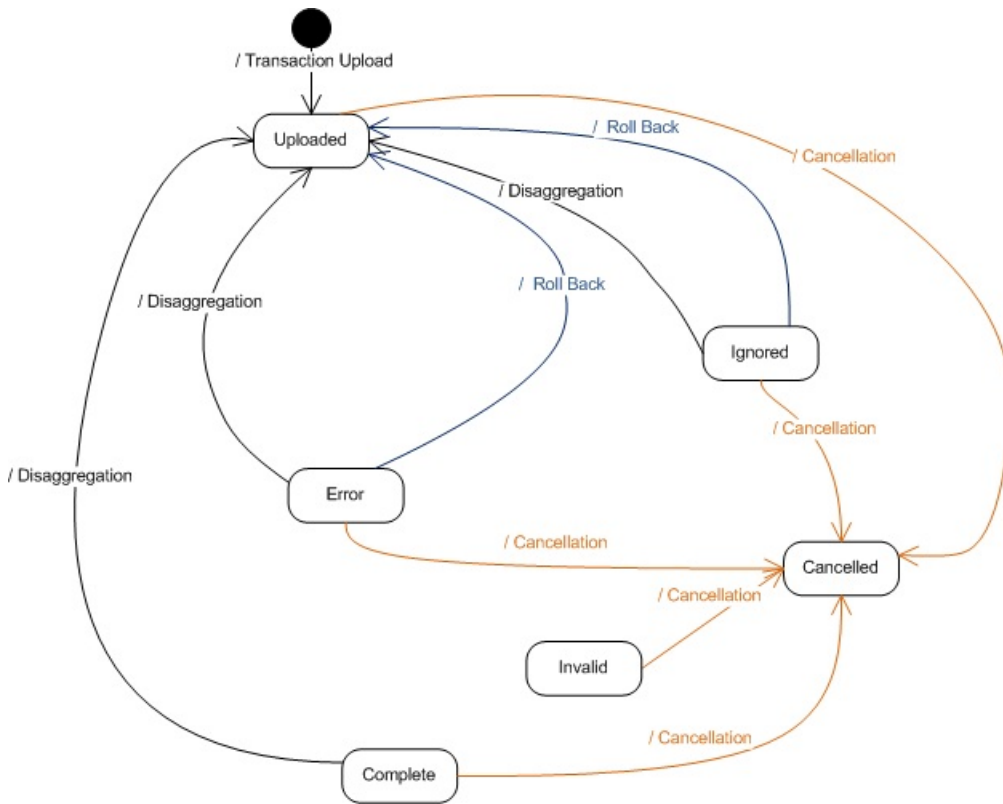

### Aggregation

The following figure graphically indicates how a transaction moves from one status to another during the aggregation process:

### Disaggregation, Rollback, and Cancellation

The following figure graphically indicates how a transaction moves from one status to another during the disaggregation, rollback, and cancellation processes:

## Transaction Leg Status Transition

This section explains how a transaction leg moves from one status to another during the following sub-processes:

- Transaction Aggregation

**Note:** This is the aggregation process for transactions that are recently uploaded or reaggregated after being fully disaggregated.

- Transaction Rollback
- Transaction Cancellation
- Transaction Disaggregation
- Transaction Reaggregation

**Note:** This is the aggregation process for transactions that are reaggregated after being partially disaggregated.

### Transaction Aggregation

The following table indicates how a transaction leg moves from one status to another during the aggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNIP	Transaction validation fails due to incomplete transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	INVALID	Not applicable as the transaction legs are not yet created
2	C1-TXNIP	Transaction validation fails due to invalid or incorrect transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
3	C1-TXNIP	Transaction validation is successful but no product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
4	C1-TXNIP	Transaction validation is successful and product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
5	C1-TXNIP	Transaction validation is successful and the transaction is ignored by the rule based on the transaction attributes	UPLOADED	Not applicable as the transaction legs are not yet created	IGNORED	Not applicable as the transaction legs are not yet created
6	C1-TXNVP and C1-TXNEX	Effective pricing is not found for any of the transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
7	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing for one or more transaction legs but not for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED (when <b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing) INITIAL PRODUCT DETERMINED (when <b>Ignore Transaction</b> flag is set to <b>N</b> in the effective pricing)
8	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED	IGNORED

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
9	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to N in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
10	C1-TXNSQ and C1-TXNCM	SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	COMPLETED	COMPLETED

### Transaction Rollback

The following table indicates how a transaction leg moves from one status to another during the rollback process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNRB	Transactions with the Error (EROR) status are rolled back	ERROR	ERROR	UPLOADED	Not applicable as the transaction legs are not yet created
2	C1-TXNRB	Transactions with the Ignored (IGNR) status are rolled back	IGNORED	IGNORED	UPLOADED	Not applicable as the transaction legs are not yet created

### Transaction Cancellation

The following table indicates how a transaction leg moves from one status to another during the cancellation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXCNC	Transactions in any status are cancelled	UPLOADED, INITIAL PRODUCT DETERMINED, ERROR, COMPLETED, INVALID, or IGNORED	INITIAL PRODUCT DETERMINED, ERROR, IGNORED, or COMPLETED	CANCELLED	CANCELLED

**Transaction Disaggregation**

The following table indicates how a transaction leg moves from one status to another during the disaggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-DISTG	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED  <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status
2	C1-DISTG	Transactions in the INVALID or CANCELLED status cannot be disaggregated. In addition, the newly uploaded transactions and fully disaggregated transactions which are in the UPLOADED status cannot be disaggregated.	CANCELLED, INVALID, or UPLOADED	Not applicable as the transactions will not have any legs in these statuses	No change in the status	Not applicable as the transactions will not have any legs in these statuses
3	C1-IDENT	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED  <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
4	C1-IDENT	Transaction has already been disaggregated and is in the UPLOADED status. The transaction legs which were not affected are moved in the staging table and the transaction legs which were affected are deleted. Now, if the effective pricing is changed for the account to which the transaction leg in the staging table is mapped, then that transaction leg must be disaggregated. Thus, disaggregation is done even though the transaction is in the UPLOADED status.	UPLOADED	UPLOADED	No change in the status	No change in the status
5	C1-PDTXN	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	UPLOADED	Transaction legs which are affected during disaggregation are deleted and the other legs which are not affected are moved to the staging table.

### **Transaction Reaggregation**

The following table indicates how a transaction leg moves from one status to another during the reaggregation process:

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
1	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. <b>IGNORE_SW</b> is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED
2	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. <b>IGNORE_SW</b> is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
3	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. All the transaction legs were in the COMPLETED status. One of the transaction legs in the COMPLETED status was disaggregated. During reaggregation, no product was derived for this transaction leg.	COMPLETED	COMPLETED	ERROR	Derived Leg: No new transaction leg was created Existing Legs: COMPLETED
4	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, no product was derived for the transaction.	ERROR	No Transaction Legs Exist	ERROR	Derived Leg: No new transaction leg was created Existing Legs: None
5	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, a product was derived for the transaction.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Leg: INITIAL PRODUCT DETERMINED Existing Legs: None

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
6	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated. During reaggregation, the effective pricing was not found for the transaction leg.	COMPLETED	COMPLETED, IGNORED	ERROR	Derived Leg: ERROR Existing Legs: COMPLETED and IGNORED
7	C1-TXNVP and C1-TXNEX	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, the effective pricing is found for the transaction legs.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Legs: INITIAL PRODUCT DETERMINED Existing Legs: None
8	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. <b>Ignore Transaction</b> flag is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
9	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. <b>Ignore Transaction</b> flag is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED
10	C1-TXNSQ and C1-TXNCM	While reaggregating transaction legs, SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion.	COMPLETED, ERROR, IGNORED <b>Note:</b> There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	ERROR	Derived Legs: ERROR Existing Legs: No change in the status
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs which were earlier disaggregated and now reaggregated.	COMPLETED, ERROR, IGNORED <b>Note:</b> There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	COMPLETED	Derived Leg: COMPLETED Existing Legs: No change in the status

## Transaction Data File

You can upload a transaction data file in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Before uploading a transaction data file, you need to ensure that it contains the following:

- **File Header** - Every file must have one header record. It should contain the following details:

Header Data	Description	Mandatory (Yes or No)
Transaction Source	Used to specify the source from where the transactions are received.	Yes
Header Date (YYYYMMDD)	Used to specify the header date.	Yes
Transaction Header ID	Used to specify the external transaction header ID.	Yes
File Name	Used to specify the file name.	Yes
Number of Transactions	Used to specify the total number of transaction records in the file.	Yes
Total Transaction Volume	Used to specify the total transaction volume.	Yes
Total Transaction Amount	Used to specify the total transaction amount.	Yes

- **Transaction Record** - Every file must have one or more transaction records. It should contain the following details:

Record Data	Description	Mandatory (Yes or No)
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Source	Used to specify the source from where the transaction is received.	Yes
Transaction Date (YYYYMMDD)	Used to specify the date when the transaction was performed.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	Yes
Customer Reference Number	Used to indicate the customer who has performed the transaction.	No
Division	Used to specify the division to which the transaction belongs.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Transaction Amount	Used to specify the transaction amount.	Yes

Record Data	Description	Mandatory (Yes or No)
Transaction Currency	Used to specify the currency in which the transaction was performed.	Yes
	<b>Note:</b> If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction. The valid values are: <ul style="list-style-type: none"> <li>• Plus (+)</li> <li>• Minus (-)</li> </ul>	Yes
Account Identifier Type	Used to indicate the account identifier type.	Yes
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes
UDF_NUM_1, UDF_NUM_2, UDF_NUM_3, ..., UDF_NUM_20	Used to specify additional information about the transaction.	No
UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10	Used to specify additional transaction amount.	Yes (Conditional)
		<b>Note:</b> The UDF_AMT_N is required when the corresponding UDF_CCY_N is specified.
UDF_CCY_1, UDF_CCY_2, UDF_CCY_3, ....., UDF_CCY_10	Used to specify additional transaction currency. <b>Note:</b> If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	Yes (Conditional)
		<b>Note:</b> The UDF_CCY_N is required when the corresponding UDF_AMT_N is specified.
UDF_DTTM_1, UDF_DTTM_2, ....., UDF_DTTM_5	Used to specify additional information about the transaction.	No
UDF_CHAR_1, UDF_CHAR_2, UDF_CHAR_3, ..., UDF_CHAR_50	Used to specify additional information about the transaction.	No
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	

## Error List

The following table lists the errors that may occur while executing various batches in the transaction feed management process. It also indicates how you can resolve these errors.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	102	{Checksum Validation Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value other than 'Y', 'y', 'N' or 'n' is specified for the <b>Checksum Validation Required</b> parameter.</li> </ul>
C1-TXNHV	102	{Duplicate Check Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value other than 'Y', 'y', 'N' or 'n' is specified for the <b>Duplicate Check Required</b> parameter.</li> </ul>
C1-TXNHV	1314	The Transaction Source is mandatory.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The data is not available in the <b>Transaction Source</b> column.</li> </ul>
C1-TXNHV	1332	Sum of transaction records in the header does not match the total number of records in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1333	Sum of transaction volume in the header does not match the total transaction volume in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1334	Sum of transaction amount in the header does not match the total transaction amount in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1338	The Transaction Header ID already exists in the system. Please enter unique header ID.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The same file is uploaded multiple times in the system.</li> </ul>
C1-TXNHV	1341	Exception occurred during the transaction header validation.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The data is not available in the required format.</li> </ul>
C1-TXNHV	1421	Transaction records does not exist in the file. Please check.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	1422	Sum of transaction records in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The value available in the <b>Number of Transactions</b> column is less than or equal to zero.</li> </ul>
C1-TXNHV	1423	Sum of transaction volume in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The value available in the <b>Total Transaction Volume</b> column is less than or equal to zero.</li> </ul>
C1-TXNHV	1663	Transaction Header External Id is missing.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The data is not available in the <b>Transaction Header ID</b> column.</li> </ul>
C1-TXNHV	1664	Header Transaction Amount should be greater than 0.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The value available in the <b>Total Transaction Amount</b> column is less than or equal to zero.</li> </ul>
C1-TXNIP	102	{Chunk Size} field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Chunk Size</b> parameter is less than or equal to one.</li> </ul>
C1-TXNIP	102	{ Maximum Batch Size } field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Maximum Batch Count</b> parameter is greater than the value specified for the <b>Chunk Size</b> parameter.</li> </ul>
C1-TXNIP	106	Value { Given Transaction Header Id } too long for field { transactionHeaderId }. Maximum length: 14. Found: { Length of given Transaction Header Id}	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Transaction Header ID</b> parameter exceeds the maximum length of 14 characters.</li> </ul>
C1-TXNIP	106	Value { Given Transaction Source Code } too long for field { transactionSource }. Maximum length: 30. Found: { Length of given Transaction Source Code}	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Transaction Source</b> parameter exceeds the maximum length of 30 characters.</li> </ul>
C1-TXNIP	106	Value { Given Transaction Division } too long for field { division }. Maximum length: 5 Found: { Length of given Transaction Division}	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Division</b> parameter exceeds the maximum length of 5 characters.</li> </ul>

## Feed Management Dashboard

The **Feed Management Dashboard** screen allows you to view the details of a transaction feed. It allows you to drill down and view:

- Transaction volume details of a feed at the division level
- Transactions in a feed which belong to a division
- Legs of a transaction
- SQIs which are associated with the price item-division combination to which a transaction is mapped
- Calculation lines generated for a transaction leg
- Characteristics defined for each calculation line

This screen consists of the following zones:

- [Search - Feed Level](#) on page 765
- [Division Level Information](#) on page 767
- [Transaction Level Information](#) on page 768
- [Transaction Leg Information](#) on page 769
- [Transaction Leg Service Quantity](#) on page 770
- [Transaction Leg Calculation Lines](#) on page 770
- [Transaction Leg Calc Line Characteristics](#) on page 772

### Search - Feed Level

The **Search - Feed Level** zone allows you to search for a transaction feed using various search criteria. You can view the details of a transaction feed which is already uploaded in the system. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Feed Header Date From	Used to search for transaction feeds having header date later than or equal to the specified date.	No
Feed Header Date To	Used to search for transaction feeds having header date earlier than or equal to the specified date.	No
Transaction Source	Used to search for transaction feeds received from a particular transaction source.	No
File Name	Used to search for a transaction feed based on the file name.	No
Feed Load Date From	Used to search for transaction feeds which are uploaded on or later than the specified date.	No
Feed Load Date To	Used to search for transaction feeds which are uploaded on or earlier than the specified date.	No
Transaction Header ID	Used to search for a transaction feed based on the header ID.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the file from where the transaction feed is uploaded.
Transaction Source	Displays the transaction source from where the transaction feed is received.
Transaction Header ID	Displays the transaction header ID.
	<b>Note:</b> The transaction header ID is generated automatically when the file is uploaded.
Transaction Header External ID	Displays the ID mentioned in the file header.
Feed Header Date	Displays the date mentioned in the file header.
Feed Load Date	Displays the date when the transaction feed was uploaded in the system.
Feed Status	Displays the status of the transaction feed. The valid values are: <ul style="list-style-type: none"> <li>• <b>Uploaded</b> - Indicates that the transaction feed is uploaded.</li> <li>• <b>Validated</b> - Indicates that the file header is validated.</li> <li>• <b>Cancelled</b> - Indicates that the transaction feed is cancelled.</li> <li>• <b>Invalid</b> - Indicates that the file header validation failed.</li> </ul>
Error Message	Indicates the reason why the file header validation failed.
Total Volume	Displays the total transaction volume of the feed.
Uploaded Volume	Displays the total transaction volume which is uploaded in the system.
INPD Volume	Displays the total transaction volume which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume for which billable charges are created and completed in the system.

Column Name	Column Description
Error Volume	Displays the total transaction volume which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume which is cancelled in the system.
Ignored Volume	Displays the total transaction volume which is ignored in the system.
Invalid Volume	Displays the total transaction volume which is invalid.

## Division Level Information

The **Division Level Information** zone allows you to drill down and view the transaction volume details of a feed at the division level. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used when you want to view the transaction volume details of a particular division received through the feed.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division.
Total Volume	Displays the total transaction volume of the division.
Uploaded Volume	Displays the total transaction volume (of the division) which is uploaded in the system.
INPD Volume	Displays the total transaction volume (of the division) which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume (of the division) for which billable charges are created and completed in the system.
Error Volume	Displays the total transaction volume (of the division) which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume (of the division) which is cancelled in the system.
Ignored Volume	Displays the total transaction volume (of the division) which is ignored in the system.
Invalid Volume	Displays the total transaction volume (of the division) which is invalid.

By default, the **Division Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction feed in the **Search — Feed Level** zone.

## Transaction Level Information

The **Transaction Level Information** zone lists transactions in a feed which belong to a division. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Transaction Status	Used to search transactions with a particular status.	No
External Reference Number	Used to search a transaction with a particular external reference number.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
External Reference Number	Displays the external reference number of the transaction.
Division	Indicates the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction was performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.

Column Name	Column Description
Customer Reference Number	Indicates the customer who performed the transaction.
Transaction Status	Indicates the status of the transaction.
Error Message	Indicates the reason why the validation, price item determination, or billable charge creation process failed.
Rule	Indicates the rule which was met while determining initial price item for the transaction.  <b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction.  <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

## Transaction Leg Information

The **Transaction Leg Information** zone lists the legs of a transaction. It contains the following columns:

Column Name	Column Description
Transaction ID	Indicates the transaction to which the transaction leg belongs.
Sequence	Displays the sequence number of transaction leg.
Account Identifier Type	Indicates the type of account identifier to which the transaction is mapped.
Account Identifier	Indicates the account which will bear the charges for the transaction.
Price Item	Indicates the price item to which the transaction is mapped.
Variance	Indicates the variance parameter which is used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

Column Name	Column Description
Billable Charge ID	Indicates the billable charge which is created for the transaction leg.
	<p><b>Note:</b></p> <p>The data appears in this column only when the billable charge is created for the transaction leg.</p> <p>It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the billable charge.</p>
Transaction Calculation ID	Displays the transaction calculation ID.
	<b>Note:</b> The data appears in this column only when the transaction leg is rated before billing.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction in the **Transaction Level Information** zone.

#### Related Topics

## Transaction Leg Service Quantity

The **Transaction Leg Service Quantity** zone lists the SQIs which are associated with the price item-division combination to which a transaction is mapped. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Daily Service Quantity	Displays the SQI value which is calculated using the transaction aggregation rule defined for the price item - division combination.

By default, the **Transaction Leg Service Quantity** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

#### Related Topics

## Transaction Leg Calculation Lines

During the pass through charge calculation, a calculation line is created for each rate component. The **Transaction Leg Calculation Lines** zone lists the calculation lines created for a transaction leg. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate	Displays the rate which is used for calculation.
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off. This amount appears in the invoice currency.
Precise Calculated Amount	Displays the calculated charge amount. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Description on Bill	Displays the summarized information about the calculation line that will be printed on the bill.
Distribution Code	Indicates the distribution code associated with the rate component.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

### **Related Topics**

## Transaction Leg Calc Line Characteristics

The **Transaction Leg Calc Line Characteristics** zone lists the characteristics defined for each calculation line. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Transaction Leg Calc Line Characteristics** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

## Searching for a Transaction Feed

### Procedure

To search for a transaction feed:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Feed Management Dashboard**.  
The **Feed Management Dashboard** screen appears.
3. Enter the search criteria in the **Search — Feed Level** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction feeds that meet the search criteria appears in the **Search Results** section.

## View Billed Transactions

The **View Billed Transactions** screen allows you to view the transactions which are billed to the person. This screen consists of the following zones:

- [Search Bill](#) on page 776
- [Bill Segments](#) on page 778
- [Transaction Details](#) on page 779
- [SQ Details](#) on page 780

You can also access this screen from the **Bill** screen by selecting the **Go To View Billed Transactions** option from the **Bill ID** context menu. The only difference is that the **Search Bill** zone does not appear when you access this screen from the **Bill** screen.

### Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search bills of a particular person.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to search a particular bill.	No
	<b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Division	Used to search bills of accounts that belong to a particular division.	Yes (Conditional)
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Primary Account Identifier Type	Used to select the identifier type based on which you want to search bills of a particular account.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used when you want search bills of a particular account.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Primary Person Identifier Type	Used to select the identifier type based on which you want to search bills of a particular person.	Yes (Conditional)
		<b>Note:</b> If you enter the person identifier as a search criteria, you have to select the person identifier type.
Primary Person Identifier	Used when you want search bills of a particular person.	Yes (Conditional)
		<b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Bill Completion From Date	Used to search bills which are completed on or later than the specified date.	No
Bill Completion To Date	Used to search bills which are completed on or earlier than the specified date.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Status	Used to search bills with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Complete</li> <li>• Pending</li> </ul>	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID. <b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Bill Status	Displays the status of the bill.
Completion Date	Displays the date when the bill was completed.
Total Bill Amount	Displays the total amount billed to the person.
Invoice Currency	Displays the currency in which the amount is billed to the person.
Account Identifier Type	Displays the primary account identifier type.
Account Identifier	Indicates the account for which the bill is created.
Person Identifier Type	Displays the primary person identifier type.
Person Identifier	Indicates the person for whom the bill is created.
Division	Displays the division to which the account belongs.
Alternate Bill ID	Displays the alternate bill ID.

## Bill Segments

The **Bill Segments** zone lists the bill segments of a bill. This zone contains the following columns:

Column Name	Column Description
Bill Segment ID	Displays the bill segment ID. <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen appears with the details of the respective bill segment.
Status	Indicates the status of the bill segment.

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Amount	Displays the amount of the bill segment.
Currency	Indicates the currency in which the bill segment is generated.
Price Item	Indicates the price item for which the bill segment is generated.
Variance Parameter	Indicates the variance parameter which is used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Billable Charge ID	Indicates the billable charge for which the bill segment is generated.  <b>Note:</b> It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the respective billable charge.
Account Information	Indicates the member account (in the invoicing group) for which the bill segment is generated.
Invoice Construct ID	Indicates the construct through which the bill segment is generated.

By default, the **Bill Segments** zone does not appear in the **View Billed Transactions** screen. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Search** zone.

### Related Topics

## Transaction Details

The **Transaction Details** zone lists the transactions for which the billable charge (corresponding to the bill segment) is created. This zone contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.  <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Date	Displays the date when the transaction was performed.
Transaction Volume	Displays the transaction volume.

Column Name	Column Description
Transaction Amount	Displays the transaction amount.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Initial Price Item	Indicates the price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

By default, the **Transaction Details** zone does not appear in the **View Billed Transactions** screen. It appears only when you click the **Broadcast**  icon corresponding to the bill segment in the **Bill Segments** zone.

## **SQ Details**

The **SQ Details** zone lists the SQIs calculated on the billable charge (corresponding to the bill segment). This zone contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.

By default, the **SQ Details** zone does not appear in the **View Billed Transactions** screen. It appears only when you click the **Broadcast**  icon corresponding to the bill segment in the **Bill Segments** zone.

#### **Related Topics**

## **Searching for a Bill**

### **Procedure**

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Transaction Feed Management** and then click **View Billed Transactions**.

The **View Billed Transactions** screen appears.

- Enter the search criteria in the **Search Bill** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

## Transaction Details

---

The **Transaction Details** screen allows you to search for transactions using various search criteria. It also allows you to add and copy a transaction. This screen consists of the following zones:

- [Search](#) on page 782

### **Search**

The **Search** zone allows you to search for transactions using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. You can select either of the following query options:
  - **Uploaded** — Used to indicate that you want to search for a transaction which is recently uploaded in the system.
  - **Initial Price Item Determined** — Used to indicate that you want to search for a transaction for which a price item is determined in the system.
  - **Ignored** — Used to indicate that you want to search for a transaction which is ignored in the system.
  - **Error** — Used to indicate that you want to search for a transaction which could not pass through the validation, price item determination, or billable charge creation process.
  - **Cancelled** — Used to indicate that you want to search for a transaction which is cancelled in the system.
  - **Completed** — Used to indicate that you want to search for a transaction for which billable charge is completed in the system.
  - **Invalid** — Used to indicate that you want to search for a transaction which is invalid.
- **Search Results** — The **Search Results** section displays the records based on the specified search criteria. The columns in the search results change depending on the query option selected.

You can also add a transaction manually by clicking the **Add** link in the upper right corner of this zone.

## **Searching for an UPLD Transaction**

### **Procedure**

To search for an uploaded transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.  
The **Transaction Details** screen appears.

3. Select the **Uploaded** option from the **Search By** list to indicate that you want to search for a transaction which is recently uploaded in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Manual Entry	Indicates whether the transaction is manually added in the system. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Transaction Information	Displays additional information about the transaction. <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

6. View the legs of the transaction in the **Transaction Legs** zone, if required.

**Note:** You can only view the legs of an uploaded transaction which is partially disaggregated.

## Searching for an INPD Transaction

### Procedure

To search for a transaction for which a price item is determined:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.

The **Transaction Details** screen appears.

3. Select the **Initial Price Item Determined** option from the **Search By** list to indicate that you want to search for a transaction for which a price item is determined in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Price Item	Used to search transactions which are mapped to a particular price item.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all the input fields except the date fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

##### 5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

##### 6. View the legs of the transaction in the **Transaction Legs** zone, if required.

## Searching for an EROR Transaction

### Procedure

To search for a transaction with an error:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.  
The **Transaction Details** screen appears.
3. Select the **Error** option from the **Search By** list to indicate that you want to search for a transaction which could not pass through the validation, price item determination, or billable charge creation process.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division. <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Indicates the person who performed the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Date	Displays the date when the transaction was performed.

Column Name	Column Description
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Error Message	<p>Indicates the reason why the validation and price item determination process failed.</p> <p><b>Note:</b> If the error occurred while executing the <b>Validate Transaction and Derive Price Item (C1-TXNIP)</b> batch, a generic message appears indicating that the transaction is in the <b>Error (EROR)</b> status due to one or more reasons. You can view all error messages logged for the transaction in the <b>Transaction Error Messages</b> zone. However, if the error occurred while executing the <b>Price Item Pricing Verification (C1-TXNVP)</b> or <b>Service Quantity Calculation (C1-TXNSQ)</b> batch, a generic message appears indicating that one or more transaction legs are in the <b>Error (EROR)</b> status. You can view the error message corresponding to the transaction leg in the <b>Transaction Legs</b> zone.</p>
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Rule	<p>Indicates the rule which was met while determining initial price item for the transaction.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.</p> <p>This column is blank when the error has occurred while determining initial price item for the transaction.</p>
Transaction Information	<p>Displays additional information about the transaction.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.</p>

6. View the legs of the transaction in the **Transaction Legs** zone, if required.
7. View the error messages logged for the transaction in the **Transaction Error Messages** zone, if required.

## Searching for an INVL Transaction

### Procedure

To search for an invalid transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.  
The **Transaction Details** screen appears.
3. Select the **Invalid** option from the **Search By** list to indicate that you want to search for a transaction which is invalid.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division. <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No

Field Name	Field Description	Mandatory (Yes or No)
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Transaction Information	Displays additional information about the transaction. <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

Column Name	Column Description
Error Message	Indicates the reason why the transaction is invalid.
	<b>Note:</b> A generic message appears indicating that the error occurred due to one or more reasons. You can view all error messages logged for the transaction in the <b>Transaction Error Messages</b> zone.

- View the error messages logged for the transaction in the **Transaction Error Messages** zone, if required.

## Viewing the Transaction Legs

### Procedure

To view the legs of a transaction:

- Search for the transaction in the **Transaction Details** screen.
- In the **Search Results** section, click the **Broadcast**  icon corresponding to the transaction whose legs you want to view.

The **Transaction Legs** zone appears. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
Transaction Leg Status	Indicates the status of the transaction leg. The valid values are: <ul style="list-style-type: none"> <li>Uploaded (UPLD)</li> <li>Initial Price Item Derived (INPD)</li> <li>Ignored (IGNR)</li> <li>Error (EROR)</li> <li>Completed (COMP)</li> </ul>
Account Information	Indicates the account which will bear the charges for the transaction. The string includes the account identifier type, account identifier, and division (to which the derived account belongs).
Initial Price Item Code	Indicates the initial price item to which the transaction is mapped.

Column Name	Column Description
Variance Parameter	Indicates the variance parameter which is used along with the final price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the final price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Final Price Item Code	Indicates the final price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction.  <b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Price Assignment ID	Indicates the effective pricing which is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or variance parameter or price item parameters (parameter group) combination on the processing date.
Aggregate Transaction	Indicates whether the transaction leg is aggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Billable Charge ID	Indicates the billable charge in which the transaction leg is included for billing.
Division	Indicates the division to which the derived account belongs. The derived account means the account which will bear the charges for the transaction.
Sequence Number	Displays the sequence number of the transaction leg.
Error Message	Indicates the reason why the price item pricing verification or billable charge creation process failed.

**Note:**

The **Broadcast**  icon appears corresponding to an UPLD, INPD, IGNR, EROR and COMP transaction. This is because you can only view legs of an UPLD, INPD, IGNR, EROR and COMP transaction.

You can only view the legs of an uploaded transaction which is partially disaggregated.

### 3. View the details of the transaction legs in the **Transaction Legs** zone.

## Viewing Error Messages

### Procedure

To view the error messages logged for a transaction:

1. Search for the transaction which is in the **Invalid (INVL)** or **Error (EROR)** status in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the transaction whose error messages you want to view.

The **Transaction Error Messages** zone appears. It contains the following columns:

Column Name	Column Description
Error Message	Indicates the reason why the transaction is in the <b>Invalid (INVL)</b> or <b>Error (EROR)</b> status.

**Note:** The **Transaction Error Messages** zone appears when the transactions are in the **Invalid (INVL)** status and when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

3. View the error messages in the **Transaction Error Messages** zone.

## Viewing the Transaction Details

### Procedure

To view the details of a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose details you want to view.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description
Transaction ID	Displays the transaction ID. <b>Note:</b> The transaction ID is generated automatically when the transaction is uploaded or manually created in the system.
Transaction Source	Displays the transaction source from where the transaction was received.
Division	Displays the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Manual Entry	Indicates whether the transaction was manually entered in the system.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Indicates the person who performed the transaction.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Currency	Indicates the currency in which the transaction was performed.
Transaction Volume	Displays the transaction volume.
Account ID	Indicates the account for which the transaction was performed.
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Displays additional information about the transaction. <b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Displays additional information about the transaction. <b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.

Field Name	Field Description
Additional Date 1, Additional Date 2, ....., Additional Date 5	Displays additional information about the transaction.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ....., Additional Numeric Data 20	Displays additional information about the transaction.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	
Additional Data 1, Additional Data 2, Additional Data 3, ....., Additional Data 50	Displays additional information about the transaction.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.

## Adding a Transaction

### Prerequisites

To add a transaction manually, you should have:

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

### Procedure

To add a transaction manually:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.  
The **Transaction Details** screen appears.
3. Click the **Add** link in the upper right corner of the **Search** zone.  
The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction was received.	Yes
Division	Used to specify the division to which the transaction belongs.	Yes
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction was performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Customer Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction was performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional)
	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	<b>Note:</b> This field is required when you are specifying the currency in the corresponding field.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

Field Name	Field Description	Mandatory (Yes or No)
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional)
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	<b>Note:</b> This field is required when you are specifying the amount in the corresponding field.
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ....., Additional Numeric Data 20	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	

4. Enter the required details.
5. Click **Save**.

The transaction is added in the system. If the following option types are set in the **Dummy Header (C1-TXNDMYID)** feature configuration, the header details including the header ID are generated automatically for the manually added transaction:

- Dummy File Name
- Dummy Header ID
- Dummy Transaction Source
- Dummy Header Date

**Note:** The header ID remains same for all transactions which are manually created on a particular date. You can cancel manually added transactions using the Transaction Header ID.

## Copying a Transaction

Instead of adding a transaction from scratch, you can create a copy of similar transaction and then edit it accordingly.

### Prerequisites

To copy a transaction, you should have:

- Transaction (whose copy you want to create) available in the application
- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

### Procedure

To copy a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose copy you want to create.

The **Transaction Details** screen appears. Note that the fields are in the read-only mode.

3. Click **Copy**.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction was received.	Yes
Division	Used to specify the division to which the transaction belongs.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	Yes
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction was performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Price Item Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes (Conditional) <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction was performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional) <b>Note:</b> This field is required when you are specifying the currency in the corresponding field.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional) <b>Note:</b> This field is required when you are specifying the amount in the corresponding field.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

Field Name	Field Description	Mandatory (Yes or No)
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ....., Additional Numeric Data 20	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

4. Enter the required details.
5. Click **Save**.

The new transaction is added in the system.

## **Transaction Source**

The **Transaction Source** screen allows you to define, edit, delete, and copy a transaction source. This screen consists of the following zones:

- [Search Transaction Source](#) on page 809

## Search Transaction Source

The **Search Transaction Source** zone allows you to search for a transaction source. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search a particular transaction source.	No
Description	Used to search transaction sources with a particular description.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Source	Displays the transaction source.
Description	Displays the description of the transaction source.
Account Identifier Type	Indicates the type of account identifier that will be received from the transaction source.
Edit	On clicking the <b>Edit</b>  icon, the <b>Transaction Source</b> screen appears where you can edit the details of the transaction source.
Delete	On clicking the <b>Delete</b>  icon, you can delete the transaction source.
	<b>Note:</b> You can only delete a transaction source which is not yet used.
Copy	On clicking the <b>Copy</b>  icon, the <b>Transaction Source</b> screen appears where you can create a transaction source using an existing transaction source.

You can create a new transaction source by clicking the **Add** link in the upper right corner of this zone.

## Searching for a Transaction Source

### Procedure

To search for a transaction source:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **T** and then click **Transaction Source**.

The **Transaction Source** screen appears.

- Enter the search criteria in the **Search Transaction Source** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of transaction sources that meet the search criteria appears in the **Search Results** section.

## **Defining a Transaction Source**

### **Prerequisites**

To define a transaction source, you should have:

- Account identifier types defined in the application

### **Procedure**

To define a transaction source:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **T** and then click **Transaction Source**.

The **Transaction Source** screen appears.

- Click the **Add** link in the upper right corner of the **Search Transaction Source** zone.

The **Transaction Source** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Transaction Source	Used to specify the transaction source.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the transaction source.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- Enter the required details.
- Click **Save**.

The transaction source is defined.

## Editing a Transaction Source

### Prerequisites

To edit a transaction source, you should have:

- Account identifier types defined in the application

### Procedure

To edit a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the transaction source whose details you want to edit.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Displays the transaction source.	Not applicable
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

3. Modify the required details.
4. Click **Save**.

The changes made to the transaction source are saved.

### Related Topics

## Deleting a Transaction Source

### Procedure

To delete a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.

- In the **Search Results** section, click the **Delete** () icon in the **Delete** column corresponding to the transaction source that you want to delete.

A message appears confirming whether you want to delete the transaction source.

**Note:** You can only delete a transaction source which is not yet used.

- Click **OK**.

The transaction source is deleted.

### Related Topics

For more information on...	See...
How to search for a transaction source	<a href="#">Searching for a Transaction Source</a> on page 809

## Copying a Transaction Source

Instead of creating a transaction source from scratch, you can create a new transaction source using an existing transaction source. This is possible through copying a transaction source. Once you create a copy of a transaction source, the record types defined for the original transaction source are also copied to the new transaction source.

### Prerequisites

To copy a transaction source, you should have:

- Transaction source (whose copy you want to create) defined in the application
- Account identifier types defined in the application

### Procedure

To copy a transaction source:

- Search for the transaction source in the **Transaction Source** screen.
- In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the transaction source whose copy you want to create.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the transaction source.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- Enter the required details.

- Click **Save**.

The new transaction source is defined.

### Related Topics

<b>For more information on...</b>	<b>See...</b>
How to search for a transaction source	<a href="#">Searching for a Transaction Source</a> on page 809

## Transaction Record Type

The **Transaction Record Type** screen allows you to define, edit, delete, and copy a transaction record type. While defining a transaction record type, you need to define a rule type. This rule type is invoked for transactions with the transaction source and record type combination. While defining a rule type, you can select the transaction detail fields that you want to use as input or output parameters in a rule.

Besides using the transaction detail fields, the system allows you to use fields which are not part of the standard transaction details. These fields are referred to as temporary fields and are defined similar to other fields, but are not associated with any ORMB tables. You need to associate temporary fields with the rule type while defining a transaction record type. Once associated, you can use the temporary field as input or output parameter while defining a rule using the rule type.

**Note:** At present, you can only associate a temporary field with a rule type, but cannot use the temporary field in a rule which is created using the rule type. The latter part of the functionality will be available in a future release of Oracle Revenue Management and Billing.

The **Transaction Record Type** screen consists of the following zones:

- [Search Transaction Record Type](#) on page 813

## Search Transaction Record Type

The **Search Transaction Record Type** zone allows you to search for a transaction record type. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search transaction record types defined for a particular transaction source.	No
Transaction Record Type	Used to search a particular transaction record type.	No
Description	Used to search transaction record types with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Record Type	Displays the transaction record type.
Description	Displays the description of the transaction record type.
Transaction Source	Indicates the transaction source for which the transaction record type is defined.

Column Name	Column Description
Rule Type	Indicates the rule type that is invoked for the transaction record type.  <b>Note:</b> It has a link. On clicking the link, the <b>View Rule Type</b> screen appears where you can view the details of the respective rule type.
Pricing Rule Type	Indicates the pricing rule type.  <b>Note:</b> It has a link. On clicking the link, the <b>Pricing Rule Type</b> screen appears where you can view the list of pricing rule types.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Transaction Record Type</b> screen appears where you can edit the details of the transaction record type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the transaction record type.  <b>Note:</b> You can delete a transaction record type when: <ul style="list-style-type: none"> <li>• It is not yet used.</li> <li>• Rules are not yet defined using the rule type which is invoked by the transaction source and record type combination.</li> </ul>
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Transaction Record Type</b> screen appears where you can create a new transaction record type using an existing transaction record type.

You can create a new transaction record type by clicking the **Add** link in the upper right corner of this zone.

## Defining a Transaction Record Type

### Prerequisites

To define a transaction record type, you should have:

- Transaction sources defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

### Procedure

To define a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.  
The **Transaction Record Type** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Transaction Record Type** zone.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Transaction Source</b> window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Transaction Record Type	Used to specify the transaction record type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Rule Validation Algorithm	<p>Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.</p> <p><b>Note:</b> This algorithm checks whether:</p> <ul style="list-style-type: none"> <li>• The values specified against the output parameters exist in the system</li> <li>• The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination</li> </ul> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Info String Algorithm	Used to specify the algorithm that will generate the information string which appears in the <b>Transaction Information</b> column throughout the application.	No
	<p><b>Note:</b> This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• 00</li> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> <li>• 11</li> <li>• 12</li> <li>• 13</li> <li>• 14</li> <li>• 15</li> </ul>	Yes
	<p><b>Note:</b> At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** - Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p><b>Note:</b> The business label appears when you add, copy, or view a transaction in the <b>Transaction Details</b> screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

**Note:** At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT\_NBR), Account Identifier Type (ACCT\_NBR\_TYPE\_CD), Division (CIS\_DIVISION), Currency Code (CURRENCY\_CD), Customer Reference Number (CUST\_REF\_NBR), Do not Aggregate Switch (DO\_NOT\_AGG\_SW), External Reference Number (EXT\_TXN\_NBR), Credit/Debit Indicator (HOW\_TO\_USE\_TXN\_FLG), Manual Entry (MANUAL\_SW), Transaction Amount (TXN\_AMT), Transaction Date (TXN\_DTTM), Transaction Record Type (TXN\_REC\_TYPE\_CD), Transaction Source (TXN\_SOURCE\_CD), Transaction Upload Date (TXN\_UPLOAD\_DTTM), Transaction Volume (TXN\_VOL), Additional Amount 1 (UDF\_AMT\_1), Additional Amount 2 (UDF\_AMT\_2), Additional Amount 3 (UDF\_AMT\_3), Additional Amount 4 (UDF\_AMT\_4), Additional Amount 5 (UDF\_AMT\_5), Additional Amount 6 (UDF\_AMT\_6), Additional Amount 7 (UDF\_AMT\_7), Additional Amount 8 (UDF\_AMT\_8), Additional Amount 9 (UDF\_AMT\_9), Additional Amount 10 (UDF\_AMT\_10), Additional Data 1 (UDF\_CHAR\_1), Additional Data 2 (UDF\_CHAR\_2), Additional Data 3 (UDF\_CHAR\_3), Additional Data 4 (UDF\_CHAR\_4), Additional Data 5 (UDF\_CHAR\_5), Additional Data 6 (UDF\_CHAR\_6), Additional Data 7 (UDF\_CHAR\_7), Additional Data 8 (UDF\_CHAR\_8), Additional Data 9 (UDF\_CHAR\_9), Additional Data 10 (UDF\_CHAR\_10), Additional Data 11 (UDF\_CHAR\_11), Additional Data 12 (UDF\_CHAR\_12), Additional Data 13 (UDF\_CHAR\_13), Additional Data 14 (UDF\_CHAR\_14), Additional Data 15 (UDF\_CHAR\_15), Additional Data 16 (UDF\_CHAR\_16), Additional Data 17 (UDF\_CHAR\_17), Additional Data 18 (UDF\_CHAR\_18), Additional Data 19 (UDF\_CHAR\_19), Additional Data 20 (UDF\_CHAR\_20), Additional Data 21 (UDF\_CHAR\_21), Additional Data 22 (UDF\_CHAR\_22), Additional Data 23 (UDF\_CHAR\_23), Additional Data 24 (UDF\_CHAR\_24), Additional Data 25 (UDF\_CHAR\_25), Additional Data 26 (UDF\_CHAR\_26), Additional Data 27 (UDF\_CHAR\_27), Additional Data 28 (UDF\_CHAR\_28), Additional Data 29 (UDF\_CHAR\_29), Additional Data 30 (UDF\_CHAR\_30), Additional Data 31 (UDF\_CHAR\_31), Additional Data 32 (UDF\_CHAR\_32), Additional Data 33 (UDF\_CHAR\_33), Additional Data 34 (UDF\_CHAR\_34), Additional Data 35 (UDF\_CHAR\_35), Additional Data 36 (UDF\_CHAR\_36), Additional Data 37 (UDF\_CHAR\_37), Additional Data 38 (UDF\_CHAR\_38), Additional Data 39 (UDF\_CHAR\_39), Additional Data 40 (UDF\_CHAR\_40), Additional Data 41 (UDF\_CHAR\_41), Additional Data 42 (UDF\_CHAR\_42), Additional Data 43 (UDF\_CHAR\_43), Additional Data 44 (UDF\_CHAR\_44), Additional Data 45 (UDF\_CHAR\_45), Additional Data 46 (UDF\_CHAR\_46), Additional Data 47 (UDF\_CHAR\_47), Additional Data 48 (UDF\_CHAR\_48), Additional Data 49 (UDF\_CHAR\_49), Additional Data 50 (UDF\_CHAR\_50), Amount 1 Currency Code (UDF\_CURRENCY\_CD\_1), Amount 2 Currency Code (UDF\_CURRENCY\_CD\_2), Amount 3 Currency Code (UDF\_CURRENCY\_CD\_3), Amount 4 Currency Code (UDF\_CURRENCY\_CD\_4), Amount 5 Currency Code (UDF\_CURRENCY\_CD\_5), Amount 6 Currency Code (UDF\_CURRENCY\_CD\_6), Amount 7 Currency Code (UDF\_CURRENCY\_CD\_7), Amount 8 Currency Code (UDF\_CURRENCY\_CD\_8), Amount 9 Currency Code (UDF\_CURRENCY\_CD\_9), Amount 10 Currency Code (UDF\_CURRENCY\_CD\_10), Additional Date 1 (UDF\_DTTM\_1), Additional Date 2 (UDF\_DTTM\_2), Additional Date 3 (UDF\_DTTM\_3), Additional Date 4 (UDF\_DTTM\_4), Additional Date 5 (UDF\_DTTM\_5), Additional Numeric Data 1 (UDF\_NBR\_1), Additional Numeric Data 2 (UDF\_NBR\_2), Additional Numeric Data 3 (UDF\_NBR\_3), Additional Numeric Data 4 (UDF\_NBR\_4), Additional Numeric Data 5 (UDF\_NBR\_5), Additional Numeric Data 6 (UDF\_NBR\_6), Additional Numeric Data 7 (UDF\_NBR\_7), Additional Numeric Data 8 (UDF\_NBR\_8), Additional Numeric Data 9 (UDF\_NBR\_9), Additional Numeric Data 10 (UDF\_NBR\_10), Additional Numeric Data 11 (UDF\_NBR\_11), Additional Numeric Data 12 (UDF\_NBR\_12), Additional Numeric Data 13 (UDF\_NBR\_13), Additional Numeric Data 14 (UDF\_NBR\_14), Additional Numeric Data 15 (UDF\_NBR\_15), Additional Numeric Data 16 (UDF\_NBR\_16), Additional Numeric Data 17 (UDF\_NBR\_17), Additional Numeric Data 18 (UDF\_NBR\_18), Additional Numeric Data 19 (UDF\_NBR\_19), Additional Numeric Data 20 (UDF\_NBR\_20).

- **Temporary Fields** - Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Transaction Record Type Tempo Field Search</b> window appears.</p>	

4. Enter the required details.

**Note:** You can search for a transaction source and algorithm by clicking the **Search**  icon corresponding to the respective field.

5. Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
6. If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

**Note:**

You can search for a field by clicking the **Search**  icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add**  icon and then repeat step 7. However, if you want to remove a temporary field from the transaction record type, click the **Delete**  icon corresponding to the temporary field.

7. Click **Save**.

The transaction record type is defined.

## **Editing a Transaction Record Type**

### **Prerequisites**

To edit a transaction record type, you should have:

- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

### **Procedure**

To edit a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the transaction record type whose details you want to edit.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Transaction Source</b> window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.	No
	<b>Note:</b> This algorithm checks whether: <ul style="list-style-type: none"> <li>• The values specified against the output parameters exist in the system</li> <li>• The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination</li> </ul> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Info String Algorithm	<p>Used to specify the algorithm that will generate the information string which appears in the <b>Transaction Information</b> column throughout the application.</p> <p><b>Note:</b> This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• 00</li> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> <li>• 11</li> <li>• 12</li> <li>• 13</li> <li>• 14</li> <li>• 15</li> </ul>	Yes
	<p><b>Note:</b> At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** - Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p><b>Note:</b> The business label appears when you add, copy, or view a transaction in the <b>Transaction Details</b> screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

**Note:** At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT\_NBR), Account Identifier Type (ACCT\_NBR\_TYPE\_CD), Division (CIS\_DIVISION), Currency Code (CURRENCY\_CD), Customer Reference Number (CUST\_REF\_NBR), Do not Aggregate Switch (DO\_NOT\_AGG\_SW), External Reference Number (EXT\_TXN\_NBR), Credit/Debit Indicator (HOW\_TO\_USE\_TXN\_FLG), Manual Entry (MANUAL\_SW), Transaction Amount (TXN\_AMT), Transaction Date (TXN\_DTTM), Transaction Record Type (TXN\_REC\_TYPE\_CD), Transaction Source (TXN\_SOURCE\_CD), Transaction Upload Date (TXN\_UPLOAD\_DTTM), Transaction Volume (TXN\_VOL), Additional Amount 1 (UDF\_AMT\_1), Additional Amount 2 (UDF\_AMT\_2), Additional Amount 3 (UDF\_AMT\_3), Additional Amount 4 (UDF\_AMT\_4), Additional Amount 5 (UDF\_AMT\_5), Additional Amount 6 (UDF\_AMT\_6), Additional Amount 7 (UDF\_AMT\_7), Additional Amount 8 (UDF\_AMT\_8), Additional Amount 9 (UDF\_AMT\_9), Additional Amount 10 (UDF\_AMT\_10), Additional Data 1 (UDF\_CHAR\_1), Additional Data 2 (UDF\_CHAR\_2), Additional Data 3 (UDF\_CHAR\_3), Additional Data 4 (UDF\_CHAR\_4), Additional Data 5 (UDF\_CHAR\_5), Additional Data 6 (UDF\_CHAR\_6), Additional Data 7 (UDF\_CHAR\_7), Additional Data 8 (UDF\_CHAR\_8), Additional Data 9 (UDF\_CHAR\_9), Additional Data 10 (UDF\_CHAR\_10), Additional Data 11 (UDF\_CHAR\_11), Additional Data 12 (UDF\_CHAR\_12), Additional Data 13 (UDF\_CHAR\_13), Additional Data 14 (UDF\_CHAR\_14), Additional Data 15 (UDF\_CHAR\_15), Additional Data 16 (UDF\_CHAR\_16), Additional Data 17 (UDF\_CHAR\_17), Additional Data 18 (UDF\_CHAR\_18), Additional Data 19 (UDF\_CHAR\_19), Additional Data 20 (UDF\_CHAR\_20), Additional Data 21 (UDF\_CHAR\_21), Additional Data 22 (UDF\_CHAR\_22), Additional Data 23 (UDF\_CHAR\_23), Additional Data 24 (UDF\_CHAR\_24), Additional Data 25 (UDF\_CHAR\_25), Additional Data 26 (UDF\_CHAR\_26), Additional Data 27 (UDF\_CHAR\_27), Additional Data 28 (UDF\_CHAR\_28), Additional Data 29 (UDF\_CHAR\_29), Additional Data 30 (UDF\_CHAR\_30), Additional Data 31 (UDF\_CHAR\_31), Additional Data 32 (UDF\_CHAR\_32), Additional Data 33 (UDF\_CHAR\_33), Additional Data 34 (UDF\_CHAR\_34), Additional Data 35 (UDF\_CHAR\_35), Additional Data 36 (UDF\_CHAR\_36), Additional Data 37 (UDF\_CHAR\_37), Additional Data 38 (UDF\_CHAR\_38), Additional Data 39 (UDF\_CHAR\_39), Additional Data 40 (UDF\_CHAR\_40), Additional Data 41 (UDF\_CHAR\_41), Additional Data 42 (UDF\_CHAR\_42), Additional Data 43 (UDF\_CHAR\_43), Additional Data 44 (UDF\_CHAR\_44), Additional Data 45 (UDF\_CHAR\_45), Additional Data 46 (UDF\_CHAR\_46), Additional Data 47 (UDF\_CHAR\_47), Additional Data 48 (UDF\_CHAR\_48), Additional Data 49 (UDF\_CHAR\_49), Additional Data 50 (UDF\_CHAR\_50), Amount 1 Currency Code (UDF\_CURRENCY\_CD\_1), Amount 2 Currency Code (UDF\_CURRENCY\_CD\_2), Amount 3 Currency Code (UDF\_CURRENCY\_CD\_3), Amount 4 Currency Code (UDF\_CURRENCY\_CD\_4), Amount 5 Currency Code (UDF\_CURRENCY\_CD\_5), Amount 6 Currency Code (UDF\_CURRENCY\_CD\_6), Amount 7 Currency Code (UDF\_CURRENCY\_CD\_7), Amount 8 Currency Code (UDF\_CURRENCY\_CD\_8), Amount 9 Currency Code (UDF\_CURRENCY\_CD\_9), Amount 10 Currency Code (UDF\_CURRENCY\_CD\_10), Additional Date 1 (UDF\_DTTM\_1), Additional Date 2 (UDF\_DTTM\_2), Additional Date 3 (UDF\_DTTM\_3), Additional Date 4 (UDF\_DTTM\_4), Additional Date 5 (UDF\_DTTM\_5), Additional Numeric Data 1 (UDF\_NBR\_1), Additional Numeric Data 2 (UDF\_NBR\_2), Additional Numeric Data 3 (UDF\_NBR\_3), Additional Numeric Data 4 (UDF\_NBR\_4), Additional Numeric Data 5 (UDF\_NBR\_5), Additional Numeric Data 6 (UDF\_NBR\_6), Additional Numeric Data 7 (UDF\_NBR\_7), Additional Numeric Data 8 (UDF\_NBR\_8), Additional Numeric Data 9 (UDF\_NBR\_9), Additional Numeric Data 10 (UDF\_NBR\_10), Additional Numeric Data 11 (UDF\_NBR\_11), Additional Numeric Data 12 (UDF\_NBR\_12), Additional Numeric Data 13 (UDF\_NBR\_13), Additional Numeric Data 14 (UDF\_NBR\_14), Additional Numeric Data 15 (UDF\_NBR\_15), Additional Numeric Data 16 (UDF\_NBR\_16), Additional Numeric Data 17 (UDF\_NBR\_17), Additional Numeric Data 18 (UDF\_NBR\_18), Additional Numeric Data 19 (UDF\_NBR\_19), Additional Numeric Data 20 (UDF\_NBR\_20).

- **Temporary Fields** - Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Transaction Record Type Tempo Field Search</b> window appears.</p>	

### 3. Modify the required details.

**Note:**

You can search for an algorithm and field by clicking the **Search** () icon corresponding to the respective field.

You can edit and remove an input or output parameter from a rule type only when it is not yet used in a rule (which is created using the rule type).

If you want to add more than one temporary field to the transaction record type, click the **Add** () icon and then specify the details in the **Temporary Fields** section. However, if you want to remove a temporary field from the transaction record type, click the **Delete** () icon corresponding to the temporary field.

### 4. Click **Save**.

The changes made to the transaction record type are saved.

### **Related Topics**

For more information on...	See...
How to search for a transaction record type	<a href="#">Searching for a Transaction Record Type</a> on page 814

## Deleting a Transaction Record Type

### **Procedure**

To delete a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Delete** () icon in the **Delete** column corresponding to the transaction record type that you want to delete.

A message appears confirming whether you want to delete the transaction record type.

**Note:** You can only delete a transaction record type which is not yet used.

### 3. Click **OK**.

The transaction record type is deleted.

### **Related Topics**

How to search for a transaction record type	<a href="#">Searching for a Transaction Record Type</a> on page 814

## Copying a Transaction Record Type

Instead of creating a transaction record type from scratch, you can create a new transaction record type using an existing transaction record type. This is possible through copying a transaction record type. Once you create a copy of a transaction record type, the input or output parameters and temporary fields are also copied to the new transaction record type. You can then edit the details, if required.

### Prerequisites

To copy a transaction record type, you should have:

- Transaction record type (whose copy you want to create) defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

### Procedure

To copy a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Copy** ( icon in the **Copy** column corresponding to the transaction record type whose copy you want to create.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	<b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Transaction Source</b> window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Rule Type	Used to specify the pricing rule type.	Yes
Rule Validation Algorithm	<p>Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.</p> <p><b>Note:</b> This algorithm checks whether:</p> <ul style="list-style-type: none"> <li>• The values specified against the output parameters exist in the system</li> <li>• The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination</li> </ul> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Info String Algorithm	<p>Used to specify the algorithm that will generate the information string which appears in the <b>Transaction Information</b> column throughout the application.</p> <p><b>Note:</b> This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• 00</li> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> <li>• 11</li> <li>• 12</li> <li>• 13</li> <li>• 14</li> <li>• 15</li> </ul>	Yes
	<p><b>Note:</b> At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** - Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p><b>Note:</b> The business label appears when you add, copy, or view a transaction in the <b>Transaction Details</b> screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

**Note:** At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT\_NBR), Account Identifier Type (ACCT\_NBR\_TYPE\_CD), Division (CIS\_DIVISION), Currency Code (CURRENCY\_CD), Customer Reference Number (CUST\_REF\_NBR), Do not Aggregate Switch (DO\_NOT\_AGG\_SW), External Reference Number (EXT\_TXN\_NBR), Credit/Debit Indicator (HOW\_TO\_USE\_TXN\_FLG), Manual Entry (MANUAL\_SW), Transaction Amount (TXN\_AMT), Transaction Date (TXN\_DTTM), Transaction Record Type (TXN\_REC\_TYPE\_CD), Transaction Source (TXN\_SOURCE\_CD), Transaction Upload Date (TXN\_UPLOAD\_DTTM), Transaction Volume (TXN\_VOL), Additional Amount 1 (UDF\_AMT\_1), Additional Amount 2 (UDF\_AMT\_2), Additional Amount 3 (UDF\_AMT\_3), Additional Amount 4 (UDF\_AMT\_4), Additional Amount 5 (UDF\_AMT\_5), Additional Amount 6 (UDF\_AMT\_6), Additional Amount 7 (UDF\_AMT\_7), Additional Amount 8 (UDF\_AMT\_8), Additional Amount 9 (UDF\_AMT\_9), Additional Amount 10 (UDF\_AMT\_10), Additional Data 1 (UDF\_CHAR\_1), Additional Data 2 (UDF\_CHAR\_2), Additional Data 3 (UDF\_CHAR\_3), Additional Data 4 (UDF\_CHAR\_4), Additional Data 5 (UDF\_CHAR\_5), Additional Data 6 (UDF\_CHAR\_6), Additional Data 7 (UDF\_CHAR\_7), Additional Data 8 (UDF\_CHAR\_8), Additional Data 9 (UDF\_CHAR\_9), Additional Data 10 (UDF\_CHAR\_10), Additional Data 11 (UDF\_CHAR\_11), Additional Data 12 (UDF\_CHAR\_12), Additional Data 13 (UDF\_CHAR\_13), Additional Data 14 (UDF\_CHAR\_14), Additional Data 15 (UDF\_CHAR\_15), Additional Data 16 (UDF\_CHAR\_16), Additional Data 17 (UDF\_CHAR\_17), Additional Data 18 (UDF\_CHAR\_18), Additional Data 19 (UDF\_CHAR\_19), Additional Data 20 (UDF\_CHAR\_20), Additional Data 21 (UDF\_CHAR\_21), Additional Data 22 (UDF\_CHAR\_22), Additional Data 23 (UDF\_CHAR\_23), Additional Data 24 (UDF\_CHAR\_24), Additional Data 25 (UDF\_CHAR\_25), Additional Data 26 (UDF\_CHAR\_26), Additional Data 27 (UDF\_CHAR\_27), Additional Data 28 (UDF\_CHAR\_28), Additional Data 29 (UDF\_CHAR\_29), Additional Data 30 (UDF\_CHAR\_30), Additional Data 31 (UDF\_CHAR\_31), Additional Data 32 (UDF\_CHAR\_32), Additional Data 33 (UDF\_CHAR\_33), Additional Data 34 (UDF\_CHAR\_34), Additional Data 35 (UDF\_CHAR\_35), Additional Data 36 (UDF\_CHAR\_36), Additional Data 37 (UDF\_CHAR\_37), Additional Data 38 (UDF\_CHAR\_38), Additional Data 39 (UDF\_CHAR\_39), Additional Data 40 (UDF\_CHAR\_40), Additional Data 41 (UDF\_CHAR\_41), Additional Data 42 (UDF\_CHAR\_42), Additional Data 43 (UDF\_CHAR\_43), Additional Data 44 (UDF\_CHAR\_44), Additional Data 45 (UDF\_CHAR\_45), Additional Data 46 (UDF\_CHAR\_46), Additional Data 47 (UDF\_CHAR\_47), Additional Data 48 (UDF\_CHAR\_48), Additional Data 49 (UDF\_CHAR\_49), Additional Data 50 (UDF\_CHAR\_50), Amount 1 Currency Code (UDF\_CURRENCY\_CD\_1), Amount 2 Currency Code (UDF\_CURRENCY\_CD\_2), Amount 3 Currency Code (UDF\_CURRENCY\_CD\_3), Amount 4 Currency Code (UDF\_CURRENCY\_CD\_4), Amount 5 Currency Code (UDF\_CURRENCY\_CD\_5), Amount 6 Currency Code (UDF\_CURRENCY\_CD\_6), Amount 7 Currency Code (UDF\_CURRENCY\_CD\_7), Amount 8 Currency Code (UDF\_CURRENCY\_CD\_8), Amount 9 Currency Code (UDF\_CURRENCY\_CD\_9), Amount 10 Currency Code (UDF\_CURRENCY\_CD\_10), Additional Date 1 (UDF\_DTTM\_1), Additional Date 2 (UDF\_DTTM\_2), Additional Date 3 (UDF\_DTTM\_3), Additional Date 4 (UDF\_DTTM\_4), Additional Date 5 (UDF\_DTTM\_5), Additional Numeric Data 1 (UDF\_NBR\_1), Additional Numeric Data 2 (UDF\_NBR\_2), Additional Numeric Data 3 (UDF\_NBR\_3), Additional Numeric Data 4 (UDF\_NBR\_4), Additional Numeric Data 5 (UDF\_NBR\_5), Additional Numeric Data 6 (UDF\_NBR\_6), Additional Numeric Data 7 (UDF\_NBR\_7), Additional Numeric Data 8 (UDF\_NBR\_8), Additional Numeric Data 9 (UDF\_NBR\_9), Additional Numeric Data 10 (UDF\_NBR\_10), Additional Numeric Data 11 (UDF\_NBR\_11), Additional Numeric Data 12 (UDF\_NBR\_12), Additional Numeric Data 13 (UDF\_NBR\_13), Additional Numeric Data 14 (UDF\_NBR\_14), Additional Numeric Data 15 (UDF\_NBR\_15), Additional Numeric Data 16 (UDF\_NBR\_16), Additional Numeric Data 17 (UDF\_NBR\_17), Additional Numeric Data 18 (UDF\_NBR\_18), Additional Numeric Data 19 (UDF\_NBR\_19), Additional Numeric Data 20 (UDF\_NBR\_20).

- **Temporary Fields** - Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Transaction Record Type Tempo Field Search</b> window appears.</p>	

- Enter the required details.

**Note:** You can search for an algorithm by clicking the **Search**  icon corresponding to the respective field.

- Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
- If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

**Note:**

You can search for a field by clicking the **Search**  icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add**  icon and then repeat step 5. However, if you want to remove a temporary field from the transaction record type, click the

**Delete**  icon corresponding to the temporary field.

- Click **Save**.

The new transaction record type is defined.

## Transaction Aggregation Rule

The **Transaction Aggregation Rule** screen allows you to define transaction aggregation rule for an SQL. You can also edit and delete the transaction aggregation rule of an SQL. This screen contains the following zones:

- [Transaction Aggregation Rules](#) on page 832

### Transaction Aggregation Rules

The **Transaction Aggregation Rules** zone lists transaction aggregation rules that are already defined in the system. You can define, edit, and delete a transaction aggregation rule through this zone.

This zone contains the following columns:

Column Name	Column Description
SQL Description	Displays the description of the service quantity identifier (SQI).
Aggregation Function	Indicates the formula used in the transaction aggregation rule defined for the SQI.
Function	Indicates the function used for aggregation.
Transaction Parameter	Indicates the transaction parameter used for aggregation.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Transaction Aggregation Rule</b> screen appears where you can edit the aggregation rule.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the transaction aggregation rule.

You can define transaction aggregation rule for an SQI by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

### **Related Topics**

How to define transaction aggregation rule for an SQI	<a href="#">Defining Transaction Aggregation Rule for an SQI</a> on page 833
How to edit transaction aggregation rule of an SQI	<a href="#">Editing Transaction Aggregation Rule of an SQI</a> on page 834
How to delete transaction aggregation rule of an SQI	<a href="#">Deleting Transaction Aggregation Rule of an SQI</a> on page 835

## **Defining Transaction Aggregation Rule for an SQI**

### **Prerequisites**

To define transaction aggregation rule for an SQI, you should have:

- SQI defined in the application

### **Procedure**

To define transaction aggregation rule for an SQI:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.  
The **Transaction Aggregation Rule** screen appears.
3. Click the **Add** link in the upper right corner of the **Transaction Aggregation Rules** zone.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQL	Used to indicate an SQI using which you are defining the transaction aggregation rule.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Function	Used to indicate the function using which you want to create a transaction aggregation rule. The valid values are: <ul style="list-style-type: none"> <li>• SUM()</li> <li>• MIN()</li> <li>• MAX()</li> <li>• COUNT()</li> </ul>	Yes
Transaction Parameter	Used to indicate the transaction parameter using which you want to create a transaction aggregation rule. The valid values are: <ul style="list-style-type: none"> <li>• TXN_AMT</li> <li>• TXN_VOL</li> <li>• UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10</li> <li>• UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20</li> </ul>	Yes

4. Enter the required details.

5. Click **Save**.

The transaction aggregation rule is defined for the SQL.

### **Related Topics**

## **Editing Transaction Aggregation Rule of an SQI**

### **Procedure**

To edit the transaction aggregation rule of an SQI:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.

The **Transaction Aggregation Rule** screen appears.

3. Click the **Edit** (✎) icon in the **Edit** column corresponding to the SQI whose transaction aggregation rule you want to edit.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Indicates the SQI using which you are defining the transaction aggregation rule.	Not applicable
Function	Used to indicate the function using which you want to create a transaction aggregation rule. The valid values are: <ul style="list-style-type: none"> <li>SUM()</li> <li>MIN()</li> <li>MAX()</li> <li>COUNT()</li> </ul>	Yes
Transaction Parameter	Used to indicate the transaction parameter using which you want to create a transaction aggregation rule. The valid values are: <ul style="list-style-type: none"> <li>TXN_AMT</li> <li>TXN_VOL</li> <li>UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10</li> <li>UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20</li> </ul>	Yes

4. Modify the details of the transaction aggregation rule, if required.
5. Click **Save**.

The changes made to the transaction aggregation rule are saved.

## Deleting Transaction Aggregation Rule of an SQI

### Procedure

To delete the transaction aggregation rule of an SQI:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.  
The **Transaction Aggregation Rule** screen appears.
3. Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the SQI whose transaction aggregation rule you want to delete.  
A message appears confirming whether you want to delete the transaction aggregation rule.

4. Click **OK**.

The transaction aggregation rule is deleted.

## Schedule

---

The **Schedule** screen allows you to define, edit, and delete a schedule. This screen consists of the following zones:

- [Search Schedule](#) on page 836

### Search Schedule

The **Search Schedule** zone allows you to search for a schedule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Used to search a particular schedule.	No
Description	Used to search schedules with a particular .description	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Schedule	Displays the schedule.
Description	Displays the description of the schedule.
View	On clicking the <b>View</b> (🔍) icon, the <b>View Schedule</b> screen appears where you can view the details of the schedule.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Edit Schedule</b> screen appears where you can edit the details of the schedule.
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the schedule.
	<b>Note:</b> You can only delete a schedule which is not yet used.

You can create a new schedule by clicking the **Add** link in the upper right corner of this zone.

## Searching for a Schedule

### Procedure

To search for a schedule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.  
The **Schedule** screen appears.
3. Enter the search criteria in the **Search Schedule** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
The search results appear.

## Viewing the Schedule Details

### Procedure

To view the details of a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the schedule whose details you want to view.  
The **View Schedule** screen appears.
3. View the details of the schedule in the **View Schedule** screen.

## Defining a Schedule

### Procedure

To define a schedule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.  
The **Schedule** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Schedule** zone.

The **Add Schedule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Used to specify the schedule code.	Yes
Description	Used to specify the description for the schedule.	Yes

In addition, this screen contains the following two sections:

- **Schedule Periods** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the start date of the schedule period.	Yes
	<b>Note:</b> The start date cannot be later than the end date.	
End Date	Used to specify the end date of the schedule period.	Yes
	<b>Note:</b> The end date cannot be earlier than the start date.	

**Note:** At least one schedule period must be defined in the schedule. Also, ensure that the schedule periods do not have overlapping days.

- **Schedule Types** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Type	Used to indicate the functionality where you want to use the schedule. You can use a schedule for more than one functionality.	Yes

4. Enter the required details.
5. If you want to define more than one period in the schedule, click the **Add** (+) icon and then specify the details.

**Note:** However, if you want to remove a period from the schedule, click the **Delete** (🗑️) icon corresponding to the period.

6. Click **Save**.

The schedule is defined.

## Editing a Schedule

### Procedure

To edit a schedule:

1. Search for the schedule in the **Schedule** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the schedule whose details you want to edit.

The **Edit Schedule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Displays the schedule code.	Not applicable
Description	Used to specify the description for the schedule.	Yes

In addition, this screen contains the following two sections:

- **Schedule Periods** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the start date of the schedule period.	Yes
	<b>Note:</b> The start date cannot be later than the end date.	
End Date	Used to specify the end date of the schedule period.	Yes
	<b>Note:</b> The end date cannot be earlier than the start date.	

**Note:** At least one schedule period must be defined in the schedule. Also, ensure that the schedule periods do not have overlapping days.

- **Schedule Types** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Type	Used to indicate the functionality where you want to use the schedule. You can use a schedule for more than one functionality.	Yes

3. Modify the required details.

4. If you want to define more than one period in the schedule, click the **Add** () icon and then specify the details.

**Note:** However, if you want to remove a period from the schedule, click the **Delete** () icon corresponding to the period.

5. Click **Save**.

The changes made to the schedule are saved.

### Related Topics

## Disaggregation Request (Used for Searching)

The **Disaggregation Request** screen allows you to search for disaggregation requests using various search criteria. It also allows you to create and delete a disaggregation request. This screen consists of the following zone:

- [Search Disaggregation Request](#) on page 841

## Search Disaggregation Request

The **Search Disaggregation Request** zone allows you to search for disaggregation requests using various search criteria. This zone contains the following two sections:

- **Search Criteria** - The fields in the **Search Criteria** section change depending on the query option selected. You can select either of the following query options:
  - **Person** - Used to indicate that you want to search for a disaggregation request created for a person.
  - **Account** - Used to indicate that you want to search for a disaggregation request created for an account.
  - **Accumulation Group** - Used to indicate that you want to search for a disaggregation request created for an accumulation group.

Field Name	Field Description	Mandatory (Yes or No)
PersonName	Used to search disaggregation requests which are created for a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Request Date From	Used to search disaggregation requests which are created from a particular date onwards.	Yes
Request Date To	Used to search disaggregation requests which are created till a particular date.	Yes
Processing Date From	Used to search disaggregation requests which are processed from a particular date onwards.	No
Processing Date To	Used to search disaggregation requests which are processed till a particular date.	No
Request Source	Used to search disaggregation requests which are created automatically, manually, or through the batch process. The valid values are: <ul style="list-style-type: none"> <li>• AUTOMATIC</li> <li>• BATCH</li> <li>• MANUAL</li> </ul>	No
Request Status	Used to search disaggregation requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• COMPLETE</li> <li>• PENDING</li> </ul>	No
Person ID	Used to search disaggregation requests which are created for a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search disaggregation requests which are created for persons or accounts that belong to a particular division.	Yes (Conditional)
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	<b>Note:</b> This field is required when you are searching for disaggregation requests created for an account.
Person Identifier Type	Used to select the person identifier type based on which you want to search disaggregation requests created for a person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	<b>Note:</b> If you enter person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used when you want to search disaggregation requests created for a person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search disaggregation requests which are created for a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to select the account identifier type based on which you want to search disaggregation requests created for an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you enter account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used when you want to search disaggregation requests created for an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify account identifier type as a search criteria, you have to enter the account identifier.
Accumulation Type	Used when you want to search disaggregation requests based on the type of accumulation.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Accumulation Group</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify accumulation type as a search criteria, you have to enter the parent accumulation group Id.

Field Name	Field Description	Mandatory (Yes or No)
Parent Accumulation Group ID	Used when you want to search disaggregation request based on the parent accumulation group Id.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Accumulation Group</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify accumulation type as a search criteria, you have to enter the parent accumulation group Id.

**Note:** You must specify at least one search criterion while searching for a funding request.

- **Search Results** — The **Search Results** section displays the records based on the specified search criteria. The columns in the search results change depending on the query option selected.

Column Name	Column Description
Request ID	Displays the disaggregation request ID.
Request Date	Displays the date when the disaggregation request was created.
Status	Indicates the status of the disaggregation request. The valid values are: <ul style="list-style-type: none"> <li>• COMPLETE</li> <li>• PENDING</li> </ul>
Person ID	Indicates the person for whom the disaggregation request is created.
Person Information	Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. <p><b>Note:</b> This column appears only when you select the <b>Person</b> or <b>Accumulation Group</b> option from the <b>Search By</b> list. It has a link. On clicking the link, the <b>Person</b> screen appears with the details of the respective person.</p>
Account ID	Indicates the account for which the disaggregation request is created.
Account Information	Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. <p><b>Note:</b> This column appears only when you select the <b>Account</b> or <b>Accumulation Group</b> option from the <b>Search By</b> list. It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.</p>
Processing Date	Displays the date when the disaggregation request was processed. <p><b>Note:</b> This column appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.</p>

Column Name	Column Description
Delete	On clicking the <b>Delete</b> button, you can delete the disaggregation request.
	<b>Note:</b> You can only delete a disaggregation request which is in the <b>Pending</b> status.
Accumulation Information	Displays the accumulation information.
	<b>Note:</b> This column appears only when you select the <b>Accumulation Group</b> option from the <b>Search By</b> list.

You can create a disaggregation request manually by clicking the **Add** link in the upper right corner of this zone.

## Searching for a Disaggregation Request

### **Procedure**

To search for a disaggregation request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Disaggregation Request**.  
The **Disaggregation Request** screen appears.
3. Select the **Person**, **Account** or **Accumulation Group** option from the **Search By** list depending on whether you want to search for a disaggregation request created for a person or an account.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
PersonName	Used to search disaggregation requests which are created for a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Request Date From	Used to search disaggregation requests which are created from a particular date onwards.	Yes
Request Date To	Used to search disaggregation requests which are created till a particular date.	Yes
Processing Date From	Used to search disaggregation requests which are processed from a particular date onwards.	No
Processing Date To	Used to search disaggregation requests which are processed till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Request Source	Used to search disaggregation requests which are created automatically, manually, or through the batch process. The valid values are: <ul style="list-style-type: none"> <li>• AUTOMATIC</li> <li>• BATCH</li> <li>• MANUAL</li> </ul>	No
Request Status	Used to search disaggregation requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• COMPLETE</li> <li>• PENDING</li> </ul>	No
Person ID	Used to search disaggregation requests which are created for a particular person.  <b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	No
Division	Used to search disaggregation requests which are created for persons or accounts that belong to a particular division.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	Yes (Conditional)  <b>Note:</b> This field is required when you are searching for disaggregation requests created for an account.
Person Identifier Type	Used to select the person identifier type based on which you want to search disaggregation requests created for a person.  <b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you enter person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used when you want to search disaggregation requests created for a person.  <b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search disaggregation requests which are created for a particular account.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	No
Account Identifier Type	Used to select the account identifier type based on which you want to search disaggregation requests created for an account.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you enter account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used when you want to search disaggregation requests created for an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify account identifier type as a search criteria, you have to enter the account identifier.
Accumulation Type	Used when you want to search disaggregation requests based on the type of accumulation.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Accumulation Group</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify accumulation type as a search criteria, you have to enter the parent accumulation group Id.
Parent Accumulation Group ID	Used when you want to search disaggregation request based on the parent accumulation group Id.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Accumulation Group</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify accumulation type as a search criteria, you have to enter the parent accumulation group Id.

4. Enter the search criteria in the **Search Disaggregation Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of disaggregation requests that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Request ID	Displays the disaggregation request ID.
Request Date	Displays the date when the disaggregation request was created.
Status	Indicates the status of the disaggregation request. The valid values are: <ul style="list-style-type: none"> <li>COMPLETE</li> <li>PENDING</li> </ul>
Person ID	Indicates the person for whom the disaggregation request is created.

Column Name	Column Description
Person Information	<p>Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Person</b> or <b>Accumulation Group</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears with the details of the respective person.</p>
Account ID	Indicates the account for which the disaggregation request is created.
Account Information	<p>Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>This column appears only when you select the <b>Account</b> or <b>Accumulation Group</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.</p>
Processing Date	<p>Displays the date when the disaggregation request was processed.</p> <p><b>Note:</b> This column appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.</p>
Delete	<p>On clicking the <b>Delete</b> button, you can delete the disaggregation request.</p> <p><b>Note:</b> You can only delete a disaggregation request which is in the <b>Pending</b> status.</p>
Accumulation Information	<p>Displays the accumulation information.</p> <p><b>Note:</b> This column appears only when you select the <b>Accumulation Group</b> option from the <b>Search By</b> list.</p>

## Creating a Disaggregation Request

### Prerequisites

To create a disaggregation request manually, you should have:

- Divisions, person identifier types, account identifier types, bill cycles, and invoice currencies defined in the application
- Price list assigned to the person or account (in case you want to search a person or an account based on an assigned price list)

### **Procedure**

To create a disaggregation request manually:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Disaggregation Request**.  
The **Disaggregation Request** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Disaggregation Request** zone.

The **Add Disaggregation Request** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Request Type	Used to indicate whether you want to create disaggregation request for a person or an account. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> </ul>	Yes
Division	Used to specify the division to which the person or account belongs.	Yes (Conditional)
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	<b>Note:</b> This field is required when you are creating a disaggregation request for an account.
Account ID	Used to indicate the account for which you want to create a disaggregation request.	No
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	
Person ID	Used to indicate the person for whom you want to create a disaggregation request.	No
	<b>Note:</b> This field is enabled only when you select the <b>Person</b> option from the <b>Request Type</b> list.	
Account Identifier Type	Used to specify the account identifier type based on which you want to search for an account.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	<b>Note:</b> If you enter account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to indicate the account for which you want to create a disaggregation request.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	<b>Note:</b> If you specify account identifier type as a search criteria, you have to enter the account identifier.
Person Identifier Type	Used to specify the person identifier type based on which you want to search for a person.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Person</b> option from the <b>Request Type</b> list.	<b>Note:</b> If you enter person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to indicate the person for whom you want to create a disaggregation request.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Person</b> option from the <b>Request Type</b> list.	<b>Note:</b> If you specify person identifier type as a search criteria, you have to enter the person identifier.
Bill Cycle	Used when you want to search accounts having a particular bill cycle.	No
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	
Person Name	Used to specify the name of the person.	No
Invoice Currency	Used when you want to search accounts having a particular invoice currency.	No
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	
With Assigned Price List	Used when you want to search for a person or an account to which a particular price list is assigned.	Yes (Conditional)
		<b>Note:</b> This field is required when you want to search for a person or an account based on an assigned price list.
Price List Assigned From	Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range.	Yes (Conditional)
		<b>Note:</b> This field is required when you want to search for a person or an account based on an assigned price list.

Field Name	Field Description	Mandatory (Yes or No)
Price List Assigned To	Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range.	Yes (Conditional)
		<b>Note:</b> This field is required when you want to search for a person or an account based on an assigned price list.

- Select the **Person** or **Account** option from the **Request Type** list depending on whether you want to search for a person or an account.
- Enter the search criteria in the **Search** section.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE\_NUMBER** lookup field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of persons or accounts that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the account.
	<b>Note:</b> The data appears in this column only when you search for an account.
Account Identifier	Displays the value of the primary account identifier type.
	<b>Note:</b> The data appears in this column only when you search for an account.
Division	Displays the division to which the person or account belongs.
Person Identifier Type	Displays the primary person identifier type of the person.
	<b>Note:</b> The data appears in this column only when you search for a person.
Person Identifier	Displays the value of the primary person identifier type.
	<b>Note:</b> The data appears in this column only when you search for a person.
Person Name	Displays the name of the person.

Column Name	Column Description
With Assigned Price List	Displays the price list assigned to the person or account.
	<b>Note:</b> The data appears in this column only when you search for a person or an account based on an assigned price list.
Price List Assigned From	Displays the date from when the price list is assigned to the person or account.
	<b>Note:</b> The data appears in this column only when you search for a person or an account based on an assigned price list.
Price List Assigned To	Displays the date till when the price list is assigned to the person or account.
	<b>Note:</b> The data appears in this column only when you search for a person or an account based on an assigned price list.
Account Info	Displays additional information about the account.
	<b>Note:</b> The data appears in this column only when you search for an account.
Bill Cycle	Indicates the bill cycle defined for the account.
	<b>Note:</b> The data appears in this column only when you search for an account.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE\_NUMBER** lookup field.

## 7. Do either of the following:

If you want to...	Then...
Create disaggregation request for one or more persons or accounts	<ol style="list-style-type: none"> <li>In the <b>Search Results</b> section, select the check box corresponding to the person or account for which you want to create a disaggregation request.</li> <li>Click <b>Disaggregate</b>.  If you have selected an account, the disaggregation request is created for the account. However, if you have selected a person, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person.</li> </ol>
Create disaggregation request for all persons or accounts that meet the search criteria	<ol style="list-style-type: none"> <li>Click <b>Disaggregate All</b>.  A message appears confirming whether you want to create disaggregation requests for all persons or accounts that meet the search criteria.</li> </ol>

If you want to...	Then...
	<p><b>2. Click OK.</b></p> <p>If the accounts are listed in the <b>Search Results</b> section, the disaggregation request is created for each account (listed on the respective page). However, if the persons are listed in the <b>Search Results</b> section, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person.</p>

## Deleting a Disaggregation Request

### Procedure

To delete a disaggregation request:

1. Search for the disaggregation request in the **Disaggregation Request** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the disaggregation request that you want to delete.

A message appears confirming whether you want to delete the disaggregation request.

#### **Note:**

You can only delete a disaggregation request which is in the **Pending** status.

If the disaggregation process is already started for a disaggregation request, we recommend you not to delete the disaggregation request from the system. Otherwise, erroneous results might occur.

3. Click **OK**.

The disaggregation request is deleted.

## On Demand Billing

---

### Topics:

- [Prerequisites](#)
- [CSV File Format for Banking Usage Data](#)
- [CSV File Format for Insurance Usage Data](#)
- [Usage Record Status Transition](#)
- [File Type](#)
- [On Demand Billing](#)
- [Usage Data Processing](#)

Oracle no longer supports the Off Cycle Billing feature introduced in Oracle Revenue Management and Billing Version 2.2.4.2. Instead, the On Demand Billing feature has been introduced to facilitate adhoc billing. Earlier, you were only able to carry out billing based on the bill cycle (defined for the account). In other words, you were able to generate a bill for a bill cycle using the billable charges whose start and end dates fall within the bill cycle. However, there might be situations where you have received certain billing information after the bill is generated for the bill cycle. In such scenarios, you would like to generate a separate bill for the newly created billable charges. The system now allows you to generate an adhoc bill. However, note that you cannot generate adhoc bills through the **Bill** screen.

A bill is generated using the billable charges. Now, in order to differentiate between the normal and adhoc billable charges, you need to set the **Adhoc Bill** flag for the billable charges. If the value of the **Adhoc Bill** flag is set to **Y**, the system will consider the billable charge during adhoc billing. And, if the value of the **Adhoc Bill** flag is set to **N**, the system will consider the billable charge during regular billing based on the bill cycle.

A new batch named **Adhoc Billing (C1-FABL)** is created which generates adhoc bills. Both, automatically generated and manually created billable charges (with the **Adhoc Bill** flag set to **Y**) are considered during adhoc billing.

With Oracle Revenue Management and Billing V2.4.0.0.0, the On Demand Billing feature has been enhanced to facilitate billing for multiple usage data files in one go. Till now you were only able to create billable charges and bill for only one usage data file at a time using the using the **On Demand Billing** screen. However, there might be situations where you want to upload multiple usage data files and generate billable charges for the usage records (of a single or multiple accounts) that you may want to group together based on certain criteria. For example, you may want to generate billable charges for all debit transactions of one or more accounts. In such scenarios, you can now upload multiple usage data files using a file group and create billable charges for the records uploaded through the **Usage Data Processing** screen. You can create file groups based on various criteria to upload multiple usage data files. For example, you may want to create a file group for uploading usage data files of accounts that need to be billed for the services to be charged for using the credit card facility. You can create a file group using the **On Demand Billing** screen. You can then upload one or more usage data files using the file group through the **Usage Data Processing** screen. Oracle Revenue Management and Billing provides you with a facility to upload usage data received from various product processors or banking applications for billing. You can upload a usage data file in the CSV format. The **Usage Data Processing** screen allows you to upload usage data files for both banking and insurance modules. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format,

see CSV File Format for Banking and CSV File Format for Insurance. When you upload a usage data file, mapping algorithm parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The status of each usage record is changed to Valid or Invalid depending on whether the usage record was validated successfully or not. Once a usage record is successfully validated, you can submit the valid records and create billable charges for them. Once the usage data files are uploaded and billable charges are generated through the **Usage Data Processing** screen, you can then create and freeze the bills using the **On Demand Billing** screen.

You can optionally configure the system to use the approval workflow process for a usage data file. On submitting a valid record, the approval workflow process routes the usage record to the approver for approval. The approver receives a notification to approve the valid records. The approver can either approve or reject one or more valid records. Once the approver approves a valid record, a billable charge is created for the usage record. However, if the approver rejects a valid record, a notification is sent to the submitter to resolve the usage record. The submitter can then correct the existing data or add missing data (based on the review comments), and can again submit the valid record for approval. Once the valid record is approved, a billable charge is created for the usage record.

The system generates the bills based on the Bill After Date. The Bill After Date indicates the date after which adhoc or normal bills must be generated. In case of adhoc billing, the Bill After Date is specified for a file group using which you can upload one or more usage data files.

While uploading usage data files for adhoc billing, you may or may not specify the Bill After Date for a file group. The system behaves in the following manner when:

- **Bill After Date — Specified:** Adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.
- **Bill After Date — Not Specified:** During the upload process, the Bill After Date is set to the current date. And, adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.

In case of regular billing, you may or may not specify the Bill After Date while uploading a usage data file. The system behaves in the following manner when:

- **Bill After Date — Specified:** Normal bill is generated for the account in the bill cycle in which the bill after date falls.
- **Bill After Date — Not Specified:** Normal bill is generated for the account based on the bill cycle defined for the account.

Once the adhoc or normal bills are generated for a usage data file, you can freeze and complete the bills. Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a usage data file from the **On Demand Billing** screen.

During the on demand billing process, each usage record of a file goes through various statuses until it is billed to the person. For more information about the usage record statuses, see [Usage Record Status Transition](#) on page 862.

## Prerequisites

---

To setup the on demand billing process, you need to do the following:

- Ensure approver's user group has access to the **F1-DFLTS** application service
- Create a To Do Type for submitter named **C1-ODBSU** using the following information:
  - **Navigation Option** — C1\_SUBMIT
  - **Priority** — Priority 10 – Highest
  - **Message Category** — 17000
  - **Message Number** — 1470
  - **Sort Keys** — Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Usage Data ID	Yes	Descending

- **Drill Keys** — Define the following drill keys for the To Do type:

Table Name	Field Name
CI_BCHG_STG	BCHG_HSTG_ID
CI_BCHG_STG	FILE_NAME
CI_BCHG_STG	BCHG_STG_STAT_FLG

- Create a To Do Type for approver named **C1-ODBAP** using the following information:
  - **Navigation Option** — CI\_NDAP
  - **Priority** — Priority 10 – Highest
  - **Message Category** — 17000
  - **Message Number** — 1470
  - **Sort Keys** — Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Usage Data ID	Yes	Descending

- **Drill Keys** — Define the following drill keys for the To Do type:

Table Name	Field Name
CI_BCHG_STG	BCHG_HSTG_ID
CI_BCHG_STG	FILE_NAME

- Create a To Do role named **C1-ODBSU** for submitter and **C1-ODBAP** for approver
- Assign the **C1-ODBSU** To Do type to the **C1-ODBSU** To Do role
- Assign the **C1-ODBAP** To Do type to the **C1-ODBAP** To Do role
- Create a To Do role named **C1-ODFU** and assign users to this To Do role. The users who have the **C1-ODFU** To Do role will receive the To Do entries generated while executing the **Upload and Validate Usage Data File (C1-ODFU)** batch.

- Assign the **C1-ODFU** To Do type to the **C1-ODFU** To Do role
- Create a To Do role named **C1-ODBCH** and assign users to this To Do role. The users who have the **C1-ODBCH** To Do role will receive the To Do entries generated while executing the **Billable Charge Creation (C1-ODBCH)** batch.
- Assign the **C1-ODBCH** To Do type to the **C1-ODBCH** To Do role
- Create a To Do role named **C1-FABL** and assign users to this To Do role. The users who have the **C1-FABL** To Do role will receive the To Do entries generated while executing the **Adhoc Billing (C1-FABL)** batch.
- Assign the **C1-FABL** To Do type to the **C1-FABL** To Do role
- Create a To Do role named **C1-FCADH** and assign users to this To Do role. The users who have the **C1-FCADH** To Do role will receive the To Do entries generated while executing the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch.
- Assign the **C1-FCADH** To Do type to the **C1-FCADH** To Do role
- Set e-mail address for the users who are going to use the **On Demand Billing** screen (otherwise To Do entry will not be generated on executing the above batches)
- Create a mapping algorithm using the **C1-CSVPMALGO** algorithm type
- Create a validation algorithm using the **C1-VLDALGO** algorithm type
- Create an extract algorithm using the **C1-EXTALGO** algorithm type
- Create a To Do algorithm using the **C1\_ODBDALGO** algorithm type and set the following parameters in the algorithm:
  - **To Do Role for Submitter** — Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver.
  - **To Do Type for Submitter** — Used to indicate that a To Do entry of the specified To Do type must be created when the approver rejects the records.
  - **To Do Role for Approver** — Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter.
  - **To Do Type for Approver** — Used to indicate that a To Do entry of the specified To Do type must be created when the submitter submits the valid records for approval.
- Define the required file types in the system
- Define values for the following lookup fields:
  - ODB\_CAN\_RSN\_FLG
  - ODB\_REJ\_RSN\_FLG
  - PAGE\_NUMBER
- If you want to create billable charges with future date for a contract, then ensure that the **Use Calendar Billing** option is set to **Allow Advanced Billing** in the respective contract type.
- Create an algorithm using the **C1-ODDFILEIN** algorithm type and attach it to the **Upload File Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen.

Besides this, you need to setup the following feature configurations:

- On Demand Billing (C1-ODBFC)
- Multi Parameter Based Pricing (C1\_PPARAM\_FLG)

### **Related Topics**

## CSV File Format for Banking Usage Data

Before uploading a usage data file for banking, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
DATA IDENTIFIER	Used to specify the serial number of the usage record.	No
ACCOUNT ID TYPE	Used to specify the account identifier type.	Yes
ACCOUNT IDENTIFIER	Used to indicate the account to which the usage record belongs.	Yes
START DATE	Used to specify the date from when the price item was used.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
END DATE	Used to specify the date till when the price item was used.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
DIVISION	Used to specify the division to which the usage record belongs.	Yes
DESCRIPTION	Used to specify the description for the usage record. It is shown on the billable charge.	Yes
BILL DESCRIPTION1, LINE BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Used to specify the description for the line item (charge).	Yes (Conditional)
		<b>Note:</b> This data is required when the charge amount is specified.
AMOUNT1, AMOUNT2, AMOUNT10 .....	Used to specify the charge amount.	Yes (Conditional)
		<b>Note:</b> This data is required when the bill line description or currency is specified.

Column Name	Description	Mandatory (Yes or No)
CURRENCY1, CURRENCY2, CURRENCY10	Used to specify the currency in which the amount is charged.  <b>Note:</b> If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional)  <b>Note:</b> This data is required when the charge amount is specified.
MEMO ONLY1, MEMO ONLY2, MEMO ONLY10	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>false</b> if the column does not contain any value.	No
SUMMARY1, SUMMARY2, SUMMARY10	Used to indicate whether the charge should be included in the summary line or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	No
SHOW ON BILL1, SHOW ON BILL2, SHOW ON BILL10	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	No
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, GL DISTRIBUTION CODE 10	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional)  <b>Note:</b> This data is required when <b>false</b> is specified in the <b>Memo Only</b> column corresponding to the bill line description.
PRICE ITEM	Used to specify the price item code.	Yes
VARIANCE	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	No

Column Name	Description	Mandatory (Yes or No)
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing.	Yes (Conditional)
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	<b>Note:</b> This data is required when the parameter value is specified.
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Used to specify the parameter value.	Yes (Conditional)
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	<b>Note:</b> This data is required when the parameter type is specified.
SQI1, SQI2, ....., SQI10	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional)
		<b>Note:</b> This data is required when the service quantity is specified.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Used to specify the number of units of the service quantity.	Yes (Conditional)
		<b>Note:</b> This data is required when the SQI is specified.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional)
		<b>Note:</b> This data is required when the characteristic value is specified.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Used to specify the value of the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required when the characteristic type is specified.

**Note:**

The column names in the CSV file must be in the Upper case. Otherwise, erroneous results might occur when you upload the usage data file.

While uploading a file using a file type where business labels are defined for usage data fields, the CSV file should contain the business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

## CSV File Format for Insurance Usage Data

Before uploading a usage data file for insurance, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
DATA IDENTIFIER	Used to specify the serial number of the usage record.	No

Column Name	Description	Mandatory (Yes or No)
START DATE	Used to specify the date from when the price item was used.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
END DATE	Used to specify the date till when the price item was used.	No
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
CONTRACT ID	Used to specify the contract ID.	Yes
CHARGE TYPE	Used to indicate the charge type.	No
DESCRIPTION	Used to specify the description for the usage record. It is shown on the billable charge.	Yes
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Used to specify the description for the line item (charge).	Yes (Conditional)
		<b>Note:</b> This data is required when the charge amount is specified.
AMOUNT1, AMOUNT2, ....., AMOUNT10	Used to specify the charge amount.	Yes (Conditional)
		<b>Note:</b> This data is required when the bill line description or currency is specified.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Used to specify the currency in which the amount is charged.	Yes (Conditional)
		<b>Note:</b> This data is required when the charge amount is specified.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	No

Column Name	Description	Mandatory (Yes or No)
SUMMARY1, SUMMARY2, ....., SUMMARY10	Used to indicate whether the charge should be included in the summary line or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	No
	<b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul>	No
	<b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional)
		<b>Note:</b> This data is required when <b>false</b> is specified in the <b>Memo Only</b> column corresponding to the bill line description.
PRICE ITEM	Used to specify the price item code.	Yes
VARIANCE	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	No
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing.	Yes (Conditional)
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	<b>Note:</b> This data is required when the parameter value is specified.
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Used to specify the parameter value.	Yes (Conditional)
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	<b>Note:</b> This data is required when the parameter type is specified.
SQI1, SQI2, ....., SQI10	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional)
		<b>Note:</b> This data is required when the service quantity is specified.

Column Name	Description	Mandatory (Yes or No)
SQIVALUE1, SQIVALUE2, SQIVALUE10	Used to specify the number of units of the service quantity.	Yes (Conditional) <b>Note:</b> This data is required when the SQL is specified.
CHARTYPE1, CHARTYPE2, CHARTYPE10	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) <b>Note:</b> This data is required when the characteristic value is specified.
CHARVAL1, CHARVAL2, CHARVAL10	Used to specify the value of the characteristic type.	Yes (Conditional) <b>Note:</b> This data is required when the characteristic type is specified.
RECURRING FLAG	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency.	No
BILL PERIOD	Used to indicate the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional) <b>Note:</b> This data is required when the recurring flag is equal to Bill Period.
FREQUENCY	Used to indicate the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) <b>Note:</b> This data is required when the recurring flag is equal to Frequency.

**Note:**

The column names in the CSV file must be in the Upper case. Otherwise, erroneous results might occur when you upload the usage data file.

While uploading a file using a file type where business labels are defined for usage data fields, the CSV file should contain the business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

## Usage Record Status Transition

---

The following figure graphically indicates how a usage record moves from one status to another during the on demand billing process:

## File Type

Oracle Revenue Management and Billing allows you to define file types using which you can upload a usage or payment data file. It is the file type which helps the system to understand how to process the file. The feed type specified in the file type indicates the type of data that you can upload using the file type. You can upload the following types of data using a file type:

- Banking Usage Data
- Insurance Usage Data
- Payment Upload Data

The following table lists the algorithms that you need to specify while defining file types for uploading usage or payment data:

Feed Type	Algorithm	Mandatory (Yes or No)	Algorithm Type Shipped with the Product...	Algorithm Type Purpose
Payment Upload Data	Mapping algorithm	Yes	C1-CSVUPLPAY	Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database.
Payment Upload Data	Validation algorithm	Yes	C1-PUPLVALID	Validates a payment data file.

Feed Type	Algorithm	Mandatory (Yes or No)	Algorithm Type Shipped with the Product...	Algorithm Type Purpose
Banking Usage Data	Mapping algorithm	Yes	C1-CSVPMALGO	Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named <b>Interface</b> .
Banking Usage Data	Validation algorithm	No	C1-VLDALGO	Validates a usage data file.
Banking Usage Data	To Do algorithm	No	C1_ODBTDALGO	Initiates the approval process for usage records before creating the billable charges.
Banking Usage Data	Extract algorithm	No	C1-EXTALGO	Extracts the usage records along with the error messages (if any) in the CSV format.
Insurance Usage Data	Mapping algorithm	Yes	C1-CSVPMALGO	Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named <b>Interface</b> .
Insurance Usage Data	Validation algorithm	No	None	-
			<b>Note:</b> You need to design custom algorithm type to validate insurance usage data.	
Insurance Usage Data	To Do algorithm	No	C1_ODBTDALGO	Initiates the approval process for usage records before creating the billable charges.
Insurance Usage Data	Extract algorithm	No	C1-EXTALGO	Extracts the usage records along with the error messages (if any) in the CSV format.

The **File Type** screen allows you to define, edit, and delete a file type. This screen consists of the following zones:

- [File Types](#) on page 864

## File Types

The **File Types** zone lists the file types that are already defined in the system. You can define, edit and delete a file type through this zone.

This zone contains the following columns:

Column Name	Column Description
File Type	Displays the file type.
Description	Displays the description of the file type.

Column Name	Column Description
Feed Type	Indicates the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> <li>Banking Usage Data</li> <li>Insurance Usage Data</li> <li>Payment Upload Data</li> </ul>
Mapping Algorithm	Indicates the mapping algorithm which is triggered when you upload a file.
Validation Algorithm	Indicates the validation algorithm which is triggered once the file is uploaded in the system.
To Do Algorithm	Indicates whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required.
Extract Algorithm	Indicates the extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>File Type</b> screen appears where you can edit the details of the file type.
	<b>Note:</b> You can edit the details of a file type only when no files are uploaded using the file type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the file type.
	<b>Note:</b> You can only delete a file type which is not yet used for uploading a file.

You can define a file type by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2018.

## Defining a File Type

### Prerequisites

To define a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1\_ODBDALGO** algorithm type

### Procedure

To define a file type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **File Type**.

The **File Type** screen appears.

- Click the **Add** link in the upper right corner of the **File Types** zone.

The **File Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to specify the file type.	Yes
Description	Used to specify the description for the file type.	Yes
Feed Type	Used to indicate the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> <li>Banking Usage Data</li> <li>Insurance Usage Data</li> <li>Payment Upload Data</li> </ul>	Yes
Disable Move to Staging	Used to indicate whether you want to disable the <b>Move to Staging</b> functionality in the <b>Payment Upload</b> screen.  <b>Note:</b> This field appears only when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
Mapping Algorithm	<p>Used to attach a mapping algorithm which is triggered when you upload a file.</p> <p><b>Note:</b></p> <p>The <b>C1-CSVUPLPAY</b> algorithm type is designed for uploading payment data and the <b>C1-CSVPMALGO</b> algorithm type is designed for uploading usage data. The <b>C1-CSVUPLPAY</b> algorithm type does the following:</p> <ol style="list-style-type: none"> <li>1. Validates whether the file is in the CSV format</li> <li>2. Validates whether at least one payment record is available in the CSV file</li> <li>3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database</li> <li>4. Uploads the payments records in the pre-staging area</li> </ol> <p>However, the <b>C1-CSVPMALGO</b> algorithm type does the following:</p> <ol style="list-style-type: none"> <li>1. Validates whether the file is in the CSV format</li> <li>2. Validates whether the CSV file contains data in the required format</li> <li>3. Validates whether the following data is available for each usage record: <ul style="list-style-type: none"> <li>• Account Identifier Type</li> <li>• Account Identifier</li> <li>• Division</li> <li>• Price Item</li> <li>• Description</li> </ul> </li> <li>4. Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named <b>Interface</b></li> </ol> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
To Do Algorithm	<p>Used to indicate whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required.</p> <p><b>Note:</b></p> <p>The <b>C1_ODBTDALGO</b> algorithm type contains the following parameters:</p> <ul style="list-style-type: none"> <li>• <b>To Do Role For Submitter</b> — Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver.</li> <li>• <b>To Do Type For Submitter</b> — Used to indicate that a To Do using the specified To Do type must be created when the approver rejects the records.</li> <li>• <b>To Do Role For Approver</b> — Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter.</li> <li>• <b>To Do Type For Approver</b> — Used to indicate that a To Do using the specified To Do type must be created when the submitter submits the valid records for approval.</li> </ul> <p>This field is disabled when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Validation Algorithm	Used to attach a validation algorithm which is triggered once the file is uploaded in the system.	Yes (Conditional)  <b>Note:</b> This field is required when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.
	<p><b>Note:</b></p> <p>The <b>C1-PUPLVALID</b> algorithm type is designed for validating a payment data file. It has some pre-defined validations based on which the status of the payment record is set to <b>Valid</b>, <b>Invalid</b>, or <b>Error</b>. For more information about the pre-defined validations, see <a href="#">Upload Payment Records in the Pre-Staging Area</a> on page 942.</p> <p>However, the <b>C1-VLDALGO</b> algorithm type is designed for validating a banking usage data file. It checks whether account identifier specified for each usage record contains any special characters. You can define any custom validations in this algorithm, if required. You cannot use an algorithm created using the <b>C1-VLDALGO</b> algorithm type to validate an insurance usage data file. If you want to validate an insurance usage data file, you need to create a custom algorithm type.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	
Extract Algorithm	Used to attach an extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format.	No
	<p><b>Note:</b> This field is disabled when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	

In addition, it contains the following two sections:

- **Map Divisions** — Used to indicate the divisions for which you want to use the file type.

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

**Note:** This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list.

- **Custom Labels** — Used to specify business labels for the usage data fields. The usage data fields will change depending on whether you have selected the **Banking Usage Data** or **Insurance Usage Data** option from the **Feed Type** list.

**Note:**

This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list. If you have defined the business label for a usage data field, the CSV file should contain business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

4. Enter the required details.

**Note:**

You can search for an algorithm by clicking the **Search** () icon corresponding to the respective field.

If you want to associate more than one division with the file type, click the **Add** () icon and then specify the details in the **Map Divisions** section. However, if you want to remove a division from the file type, click the **Delete** () icon corresponding to the division.

5. Click **Save**.

The file type is defined.

**Editing a File Type****Prerequisites**

To edit a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1\_ODBTDALGO** algorithm type

**Note:** You can edit the details of a file type only when no files are uploaded using the file type.

**Procedure**

To edit a file type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.  
The **File Type** screen appears.
3. Click the **Edit** () icon in the **Edit** column corresponding to the file type whose details you want to edit.

The **File Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to specify the file type.	Yes
Description	Used to specify the description for the file type.	Yes
Feed Type	Used to indicate the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> <li>• Banking Usage Data</li> <li>• Insurance Usage Data</li> <li>• Payment Upload Data</li> </ul>	Yes
Disable Move to Staging	Used to indicate whether you want to disable the <b>Move to Staging</b> functionality in the <b>Payment Upload</b> screen.  <b>Note:</b> This field appears only when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
Mapping Algorithm	<p>Used to attach a mapping algorithm which is triggered when you upload a file.</p> <p><b>Note:</b></p> <p>The <b>C1-CSVUPLPAY</b> algorithm type is designed for uploading payment data and the <b>C1-CSVPMALGO</b> algorithm type is designed for uploading usage data. The <b>C1-CSVUPLPAY</b> algorithm type does the following:</p> <ol style="list-style-type: none"> <li>1. Validates whether the file is in the CSV format</li> <li>2. Validates whether at least one payment record is available in the CSV file</li> <li>3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database</li> <li>4. Uploads the payments records in the pre-staging area</li> </ol> <p>However, the <b>C1-CSVPMALGO</b> algorithm type does the following:</p> <ol style="list-style-type: none"> <li>1. Validates whether the file is in the CSV format</li> <li>2. Validates whether the CSV file contains data in the required format</li> <li>3. Validates whether the following data is available for each usage record: <ul style="list-style-type: none"> <li>• Account Identifier Type</li> <li>• Account Identifier</li> <li>• Division</li> <li>• Price Item</li> <li>• Description</li> </ul> </li> <li>4. Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named <b>Interface</b></li> </ol> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
To Do Algorithm	<p>Used to indicate whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required.</p> <p><b>Note:</b></p> <p>The <b>C1_ODBTDALGO</b> algorithm type contains the following parameters:</p> <ul style="list-style-type: none"> <li>• <b>To Do Role For Submitter</b> — Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver.</li> <li>• <b>To Do Type For Submitter</b> — Used to indicate that a To Do using the specified To Do type must be created when the approver rejects the records.</li> <li>• <b>To Do Role For Approver</b> — Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter.</li> <li>• <b>To Do Type For Approver</b> — Used to indicate that a To Do using the specified To Do type must be created when the submitter submits the valid records for approval.</li> </ul> <p>This field is disabled when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Validation Algorithm	Used to attach a validation algorithm which is triggered once the file is uploaded in the system.	Yes (Conditional)  <b>Note:</b> This field is required when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.
	<p><b>Note:</b></p> <p>The <b>C1-PUPLVALID</b> algorithm type is designed for validating a payment data file. It has some pre-defined validations based on which the status of the payment record is set to <b>Valid</b>, <b>Invalid</b>, or <b>Error</b>. For more information about the pre-defined validations, see <a href="#">Upload Payment Records in the Pre-Staging Area</a> on page 942.</p> <p>However, the <b>C1-VLDALGO</b> algorithm type is designed for validating a banking usage data file. It checks whether account identifier specified for each usage record contains any special characters. You can define any custom validations in this algorithm, if required. You cannot use an algorithm created using the <b>C1-VLDALGO</b> algorithm type to validate an insurance usage data file. If you want to validate an insurance usage data file, you need to create a custom algorithm type.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	
Extract Algorithm	Used to attach an extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format.	No
	<p><b>Note:</b> This field is disabled when you select the <b>Payment Upload Data</b> option from the <b>Feed Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	

In addition, it contains the following two sections:

- **Map Divisions** — Used to indicate the divisions for which you want to use the file type.

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

**Note:** This section does not appear when the feed type is set to **Payment Upload Data**.

- **Custom Labels** — Used to specify business labels for the usage data fields. The usage data fields will change depending on whether you have selected the **Banking Usage Data** or **Insurance Usage Data** option from the **Feed Type** list.

**Note:**

This section does not appear when the feed type is set to **Payment Upload Data**.

If you have defined the business label for a usage data field, the CSV file should contain business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

## 4. Modify the required details.

**Note:**

You can search for an algorithm by clicking the **Search**  icon corresponding to the respective field.

If you want to associate more than one division with the file type, click the **Add**  icon and then specify the details in the **Map Divisions** section. However, if you want to remove a division from the file type, click the

**Delete**  icon corresponding to the division.

5. Click **Save**.

The changes made to the file type are saved.

## On Demand Billing

---

The **On Demand Billing** screen allows you to search for a file group based on various search criteria. Through this screen, you can:

- Define a file group
- Edit a file group
- Delete a file group
- Close a file group
- Generate adhoc bills for a file group
- Freeze and complete adhoc bills of a file group
- View all bills generated for a file group
- View usage data files of a file group
- Cancel a usage data file

This screen consists of the following zones:

- [Search](#) on page 876

### Search

The **Search** zone allows you to search for file groups for which bills are processed and/or generated in the system. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Group	Used to specify the file group.	No
Description	Used to specify the description for the file group.	No
User ID	Used to specify the name of the user who has uploaded the usage data files in the file group.	No
Bill After Date	Used to specify the date after which the bills must be generated for the file group.	No
Status	Used to indicate the status of the file group. The valid values are: <ul style="list-style-type: none"> <li>• Closed</li> <li>• Open</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for a file group.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Group	Displays the name of the file group.
	<b>Note:</b> It has a link. On clicking the link, the <b>File Group</b> screen appears where you can view the details of the file group.
Bill After Date	Displays the date after which the bills must be generated for the file group.
Default Usage Start Date	Displays the date from when the price item was used.
Default Usage End Date	Displays the date till when the price item was used.
Status	Displays the status of the file group. The valid values are: <ul style="list-style-type: none"> <li>• Open</li> <li>• Close</li> </ul>
Close	On clicking the <b>Close</b> (✖) icon, you can close a file group.
	<b>Note:</b> You can only close a file group in which all the records of the usage data files are either in the processed or cancelled status.
Generate Bill	On clicking the <b>Generate Bill</b> (📄) icon, you can generate bills for a file group.
Complete Bill	On clicking the <b>Complete Bill</b> (✅) icon, you can freeze and complete the bills of a file group.
Total	Displays the total number of records that are uploaded through the file group.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Submitted	Displays the number of valid records which are submitted for approval.
Processed	Displays the number of valid records for which billable charges are already created.
Rejected	Displays the number of records which are rejected by the approver.
Cancelled	Displays the number of records which are cancelled in the system.
Unbilled	Displays the number of records for which billable charges are created, but are not yet billed to the person.
Billed	Displays the number of records for which billable charges are created and billed to the person.
Bills	Displays the number of bills generated for the file group.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Bill Data</b> screen appears where you can view all bills generated for the usage data file.
Last Batch Status	Indicates the batch that was last executed on the file group and its current status.
	<b>Note:</b> It has a link. On clicking the link, the <b>Batch Run Tree</b> screen appears where you can view the execution details of the batch.

**Group Files**

The **Group Files** zone allows you to view the usage data files uploaded using a file group. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name of the usage data file.	No
File Type	Used to specify the type of usage data file.	No
File Upload From Date	Used to specify the start date of the period during which the usage data file that you want to search was uploaded in the system.	No
File Upload To Date	Used to specify the end date of the period during which the usage data file that you want to search was uploaded in the system.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Information	Displays the name of the usage data file of the file group and its related details.
Total	Displays the total number of records that are uploaded through the usage data file.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Submitted	Displays the number of valid records which are submitted for approval.
Rejected	Displays the number of records which are rejected by the approver.

Column Name	Column Description
Processed	Displays the number of valid records for which billable charges are already created.
Cancelled	Displays the number of records of a usage data file which are cancelled.
UnBilled	Displays the number of records for which billable charges are created, but are not yet billed to the person.
Billed	Displays the number of records for which billable charges are created and billed to the person.
Cancel	On clicking the <b>Cancel</b> (  ) icon, you can cancel a file.

By default, the **Group Files** zone does not appear in the **On Demand Billing** screen. It appears only when you click the **Broadcast**  icon corresponding to the file group in the **Search Results** section.

**Note:** By default, the **Group Files** zone displays a list of usage data files that are uploaded using the file group in the **Search Results** section. However, you can filter the list of usage data files by specifying a search criteria in the **Search Criteria** section.

## Searching for a File Group

### Procedure

To search for a file group:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of file groups that meet the search criteria appears in the **Search Results** section.

## Defining a File Group

### **Prerequisites**

To define a file group, you should have:

- Access to the divisions for which you want to define the file group

### **Procedure**

To define a file group:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.
3. Click the **Add** link in the upper right corner of the **Search** zone.

The **File Group** screen appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
File Group	Used to specify the file group.	Yes
Description	Used to specify the description for the file group.	Yes
Bill After Date	Used to specify the date after which the bill must be generated for the file group.	Yes
Default Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required.	Yes
	<b>Note:</b> The default usage start date cannot be later than the default usage end date.	
Default Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required.	Yes
	<b>Note:</b> The default usage end date cannot be earlier than the default usage start date.	

In addition, the **File Group** screen contains the following section:

**Map Divisions**— The **Map Divisions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define the file group.	No
		<b>Note:</b> If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file.

- Enter the required details.
- If you want to define the file group for more than one division, click the **Add** (+) icon and then repeat step 5.

**Note:** However, if you want to remove a division from the file group, click the **Delete** (🗑️) icon corresponding to the division.

- Click **Save**.

The file group is defined.

## Editing a File Group

### Procedure

To edit a file group:

**Note:** You can edit the details of a file group only when no usage data files of this group have been uploaded in the system or all the records in the usage data files of a file group are cancelled.

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- Select **Financial** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.
- Search for the file group in the **On Demand Billing** screen.
- In the **Search Results** section, click the link in the **File Group** column corresponding to the file group whose details you want to edit.

The **File Group** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Group	Displays the file group.	Not applicable
Description	Used to specify the description for the file group.	Yes
Bill After Date	Used to specify the date after which the bill must be generated for the file group	Yes
Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file.  <b>Note:</b> The default usage start date cannot be later than the default usage end date.	Yes
Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file.  <b>Note:</b> The default usage end date cannot be earlier than the default usage start date.	Yes

In addition, the **Add/Edit File Group** screen contains the following section:

- **Map Divisions**— The **Map Divisions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define the file group.	No  <b>Note:</b> If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file.

5. Modify the required details.

**Note:** If you want to define the file group for more than one division, click the **Add** () icon and then specify the details. However, if you want to remove a division from the file group, click the **Delete** () icon corresponding to it.

6. Click **Save**.

The changes made to the file group are saved.

<b>Search</b> zone	<a href="#">Search</a> on page 876

## Deleting a File Group

### Procedure

To delete a file group:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. Select **Financial** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the link in the **File Group** column corresponding to the file group that you want to delete.  
The **File Group** screen appears.
5. Click **Delete**.  
The file group is deleted.

**Note:** The delete button appears only if the file group is not yet used. In other words, you cannot delete a file group that you have used for uploading usage data files.

## Closing a File Group

### Procedure

To close a file group:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **On Demand Billing**.  
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the **Close** (✖) icon in the **Close** column corresponding to the file group that you want to close.

The status of the file group is changed to **Closed**.

**Note:** You can only close a file group in which all the records of the usage data files are either in the processed, cancelled, or rejected status. However, you may close a file group in which all the records are not in the cancelled and/or processed status, but in that case a to do entry is sent to the approver for approval of the pending records.

## Generating Adhoc Bills for a File Group

The **On Demand Billing** screen allows you to generate adhoc bills for a file group. However, you can generate bills only after you close the file group for which you want to generate adhoc bills.

### Procedure

To generate adhoc bills for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Generate Bill**  icon corresponding to the file group for which you want to generate the adhoc bills.

The **Generate Bill** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cutoff Date	Used to specify the cutoff date for the bill.	Yes
Accounting Date	Used to specify the accounting date of the bill.	Yes

3. Enter the required details.
4. Click **OK**.

The adhoc bills are generated for the usage data files of a file group. An adhoc bill is generated for a usage data file and account combination when the bill after date is equal to or earlier than the current date. The status of the usage records is changed to **Billed**. If the total number of billable charges created for a usage data file exceeds the online bill creation limit, a batch job is created using the **Adhoc Billing (C1-FABL)** batch. A message appears indicating the batch job ID. This batch job creates adhoc bills for the usage data file.

**Note:**

You can change the online bill creation limit, whenever required, using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Adhoc Billing (C1-FABL)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If an adhoc bill with the **Pending** status already exists for a usage data file and account combination, then the existing bill is deleted and regenerated. However, you can generate the bill again for a file group only after manually deleting the bill from the **Bill** screen.

On successful completion of the **Adhoc Billing (C1-FABL)** batch, a To Do entry is created using the **C1-FABL To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-FABL To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of billable charges which were processed
- Number of billable charges for which the bill after date is a future date
- Number of adhoc bills generated for the usage data file
- Number of billable charges which could not be processed successfully

Once the batch is executed successfully, the status of the usage records in a usage data file of a file group is changed to **Billed**.

**Related Topics**

For more information on...	See...
How to search for a file group	<a href="#">Searching for a File Group</a> on page 879

**Freezing All Bills of a File Group**

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for the usage data files of a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

**Procedure**

To freeze and complete all adhoc bills generated for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Freeze and Complete** (📌) icon corresponding to the file group whose adhoc bills you want to freeze and complete.

The **Complete Bill** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Date	Used to specify the date on which the bill was completed.	Yes
Accounting Date	Used to specify the accounting date of the bill.	Yes

3. Enter the required details.

- Click **OK** in the message box.

A batch job is created using the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch. A message appears indicating the batch job ID. This batch job freezes and completes all adhoc bills of the usage data file which are in the **Pending** status. The system does not freeze and complete pending adhoc bills which have bill segments in the **Error** status. For more information on the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

**Note:**

On successful completion of the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, a To Do entry is created using the **C1-FCADH To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-FCADH To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of bills which were picked up for completion
- Number of bills which were completed
- Number of bills which could not be completed successfully

Once the batch is executed successfully, the status of the bills is changed to **Complete**.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to search for a file group	<a href="#">Searching for a File Group</a> on page 879
How to freeze and complete one or more bills	<a href="#">Freezing Selected Bills of a File Group</a> on page 886

## **Freezing Selected Bills of a File Group**

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

### **Procedure**

To freeze and complete selected adhoc bills of a file group:

- Search for the file group in the **On Demand Billing** screen.
- In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose adhoc bills you want to freeze and complete.

The **View Bill Data** screen appears.

- Select the check box corresponding to the pending adhoc bill that you want to freeze and complete.

**Note:** The check box does not appear corresponding to the completed adhoc bills and pending adhoc bills which have bill segments in the **Error** status.

- Click **Freeze/Complete**.

The **Complete Bill** window appears. It contains the following fields:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Bill Date	Used to specify the date on which the bill was completed.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Accounting Date	Used to specify the accounting date of the bill.	Yes

- Enter the required details.
- Click **OK** in the message box.

The status of the bills is changed to **Complete**.

**Note:**

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a file group are in the **Complete** status
- Multiple bills are generated for a usage data file of a file group and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen only when there is at least one pending bill for a file group where none of the bill segments are in the **Error** status.

### Related Topics

## Viewing All Bills Generated for a File Group

### Procedure

To view all bills generated for a file group:

- Search for the file group in the **On Demand Billing** screen.
- In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose bills you want to view.

The **View Bill Data** screen appears. It contains the following fields:

Field Name	Field Description
File Group	Displays the name of the file group.
Description	Displays the description of the file group.
Bill Generation Date	Used to specify the date when the bills were generated for the file group.
Billing Method	Indicates the type of billing used for the file group. The valid values are: <ul style="list-style-type: none"> <li>Adhoc Billing</li> </ul>
Bill Status	Used to indicate the status of the bill. The valid values are: <ul style="list-style-type: none"> <li>Pending</li> <li>Complete</li> </ul>

In addition, this screen contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Alternate Bill ID	Displays the alternate bill ID.
Bill Status	Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Complete</li> </ul>
Bill Date	Displays the date when the bill was completed.
Accounting Date	Displays the accounting date for which the financial transaction of the bill is created.
Invoice Amount	Displays the total amount billed to the person.
Invoice Currency	Displays the currency in which the amount is billed to the person.
Invoice Account ID	Indicates the account for which the bill is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Display Bill	On clicking this link, you can view the details of the respective bill.
	<b>Note:</b> This link appears only for the bills that are in the <b>Complete</b> status. The facility to view the generated bills in PDF format is available only if Oracle Documaker is integrated with Oracle Revenue Management and Billing.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. Click **Search**.
4. View the bills generated for the usage data file in the **View Bill Data** screen.
5. If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

6. If required, you can click the **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) buttons to navigate between pages.
7. If required, you can freeze and complete adhoc bills which are generated for the usage data file.

**Note:**

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a usage data file are in the **Complete** status
- Multiple bills are generated for a usage data file and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen only when there is at least one pending bill for a usage data file where none of the bill segments are in the **Error** status.

**Usage Data Processing**

The **Usage Data Processing** screen allows you to search for a usage data file based on various search criteria. Through this screen, you can:

- Upload a usage data file
- Cancel a usage data file

- View all records uploaded through a usage data file
- View the valid, invalid, and cancelled records of a usage data file
- View the valid records of a usage data file which are submitted for approval
- View the valid records of a usage data file for which billable charges are already created
- View the rejected, billed and unbilled records of a usage data file
- Submit the valid records of a usage data file and create billable charges for them
- Approve or reject one or more valid records of a usage data file
- Revalidate the valid and invalid records of a usage data file
- Edit the valid, invalid and rejected records of a usage data file
- Export the usage data of a usage data file into a CSV file

This screen consists of the following zones:

- [Search](#) on page 890

## Search

The **Search** zone allows you to search for usage data files that are uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name of the usage data file.	No
File Type	Used to indicate the type of usage data file.	No
File Upload From Date	Used when you want to search for usage data files that were uploaded from a particular date onwards.	No
To	Used when you want to search for usage data files that were uploaded till a particular date.	No
User ID	Used to specify the name of the user who has uploaded the usage data file.	No
Billing Method	Used to specify the type of billing used for the usage data file. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc Billing</li> <li>• Regular Billing</li> </ul>	No
File Group	Used to specify the file group of the usage data file.	No

**Note:** You must specify at least one search criterion while searching for a usage data file.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Information	Displays the name of the usage data file and its related details.

Column Name	Column Description
Revalidate	On clicking the <b>Revalidate</b> (  ) icon, you can execute the validation process once again on the valid, invalid, and rejected records.
	<b>Note:</b> The <b>Revalidate</b> icon appears only when the usage records are in the <b>Valid</b> , <b>Invalid</b> , and/or <b>Rejected</b> status. In other words, you cannot revalidate a usage data file for which billable charges are created or when the bills are generated for a usage data file.
Cancel	On clicking the <b>Cancel</b> (  ) icon, you can cancel all valid, invalid, and rejected records of the usage data file.
	<b>Note:</b> The <b>Cancel</b> icon appears only when the usage records are in the <b>Valid</b> , <b>Invalid</b> , and/or <b>Rejected</b> status. In other words, you cannot cancel a usage data file for which billable charges are created or when the bills are generated for a usage data file.
Submit	On clicking the <b>Submit</b> (  ) icon, you can submit the valid records and create billable charges for them. If the valid usage records need to be approved before creating the billable charges, a To Do entry is created for the approver to approve the valid records.
	<b>Note:</b> The <b>Submit</b> icon appears only when all the records of a usage data file are in the <b>Valid</b> status. In other words, if a usage data file contains records in the <b>Invalid</b> status, you cannot create billable charges for a usage data file.
Approve	On clicking the <b>Approve</b> (  ) icon, the approver can approve all valid records of the usage data file.
	<b>Note:</b> The <b>Approve</b> icon appears only when the usage data file (with all usage records in the <b>Valid</b> status) is uploaded using a file type to which the To Do algorithm (for enabling approval workflow) is attached.
Total	Displays the total number of records that are uploaded through the usage data file.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all records uploaded through the usage data file.
Valid	Displays the number of records which are successfully validated in the system.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view and edit all valid records of the usage data file.
Invalid	Displays the number of records which could not pass through the validation process in the system.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view and edit all invalid records of the usage data file.

Column Name	Column Description
Submitted	Displays the number of valid records which are submitted for approval.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all submitted records of the usage data file.
Rejected	Displays the number of records which are rejected by the approver.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view and edit all rejected records of the usage data file.
Processed	Displays the number of valid records for which billable charges are already created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all processed records of the usage data file.
Billed	Displays the number of records for which billable charges are created and billed to the person.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all billed records of the usage data file.
Unbilled	Displays the number of records for which billable charges are created, but are not yet billed to the person.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all unbilled records of the usage data file.
Cancelled	Displays the number of records which are cancelled in the system.
	<b>Note:</b> It has a link. On clicking the link, the <b>Usage Data</b> screen appears where you can view all cancelled records of the usage data file.
Batch Run Status	Indicates the batch that was last executed on the usage data file and its current status.
	<b>Note:</b> It has a link. On clicking the link, the <b>Batch Run Tree</b> screen appears where you can view the execution details of the batch.

You can upload a usage data file by clicking the **Upload** link in the upper right corner of this zone.

## Searching for a Usage Data File

### Procedure

To search for a usage data file:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Usage Data Processing**.  
The **Usage Data Processing** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of usage data files that meet the search criteria appears in the **Search Results** section.

<b>Search</b> zone	<a href="#">Search</a> on page 890

## Uploading a Usage Data File

### Prerequisites

To upload a usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format
- File group using which you want to upload the usage data files is in **Open** status

### Procedure

To upload a usage data file:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Usage Data Processing**.  
The **Usage Data Processing** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Method	Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc Billing</li> <li>• Regular Billing</li> </ul>	Yes
File Group	Used to specify the file group to which you want to add the usage data file.  <b>Note:</b> This field appears only when you select the <b>Adhoc Billing</b> option from the <b>File Group</b> list. You can only view those file groups that are in the open status and to which you have access in the <b>File Group</b> list.	Yes (Conditional)  <b>Note:</b> If you select the billing method as <b>Adhoc Billing</b> , you have to specify the file group to which you want to add the usage data file.
Bill After Date	Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field.  <b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date.	Yes (Conditional)  <b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the bill after date.

Field Name	Field Description	Mandatory (Yes or No)
Default Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required.	Yes (Conditional)  <b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the default usage start date.
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date.	
Default Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required.	Yes (Conditional)  <b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the default usage end date.
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date.	
File Type	Used to specify the type of usage data file.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
File Name	Used to specify the name and path of the usage data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the usage data file is available in the system.	

4. Enter the required details.
5. Click the **Browse** button corresponding to the **File Name** field.  
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the usage data file that you want to upload is available.
7. Click **Open**.  
The usage data file name and path appears in the **File Name** field.
8. Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

**Note:**

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files — each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

9. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

**Replacing an Existing File****Prerequisites**

To replace an existing usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format

- File group using which you want to upload the usage data files is in **Open** status

### Procedure

To replace an existing usage data file:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- Select **Financial** and then click **Usage Data Processing**.  
The **Usage Data Processing** screen appears.
- Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Method	Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"> <li>Adhoc Billing</li> <li>Regular Billing</li> </ul>	Yes
File Group	Used to specify the file group to which you want to add the usage data file.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Adhoc Billing</b> option from the <b>File Group</b> list. You can only view those file groups that are in the open status and to which you have access in the <b>File Group</b> list.	<b>Note:</b> If you select the billing method as <b>Adhoc Billing</b> , you have to specify the file group to which you want to add the usage data file.
Bill After Date	Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field.	Yes (Conditional)
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date.	<b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the bill after date.
Default Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required.	Yes (Conditional)
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date.	<b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the default usage start date.

Field Name	Field Description	Mandatory (Yes or No)
Default Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required.	Yes (Conditional)  <b>Note:</b> If you select the billing method as <b>Regular Billing</b> , you have to specify the default usage end date.
	<b>Note:</b> If you have selected the billing method as <b>Adhoc Billing</b> , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as <b>Regular Billing</b> then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date.	
File Type	Used to specify the type of usage data file.	Yes
Replace Existing File	Used to indicate that you want to replace any existing file in the system.	Yes
File Name	Used to specify the name and path of the usage data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the usage data file is available in the system.	

- Select the **Replace Existing File** check box.

**Note:** You can replace an existing file only when the usage records of a usage data file are in any of the statuses:

- **Valid** and/or **Invalid**
- **Rejected**
- **Cancelled**

In other words, you cannot replace a file when the billable charges are already created for the usage records of a usage data file, or are pending for approval with the approver.

- Click the **Browse** button corresponding to the **File Name** field.  
The **Choose File to Upload** dialog box appears.
- Browse to the location where the usage data file that you want to replace is available.
- Click **Open**.  
The usage data file name and path appears in the **File Name** field.
- Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

**Note:**

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files — each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

9. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

**Viewing All Records of a Usage Data File****Procedure**

To view all records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Total** column corresponding to the usage data file whose records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the usage records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Used to specify the status of the usage record. The valid values are: <ul style="list-style-type: none"> <li>• Valid</li> <li>• Invalid</li> <li>• Submitted for Approval</li> <li>• Processed</li> <li>• Rejected</li> <li>• Cancelled</li> </ul>	No
Division	Used to specify the division to which the usage record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the usage records.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose usage records you want to view.	Yes (Conditional) <b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record. <b>Note:</b> This column appears only for the valid records for which billable charges have been created.
ACCOUNT ID TYPE	Indicates the account identifier type.

Column Name	Column Description
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.  <b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.  <b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.  <b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.  <b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.  <b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.  <b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.

Column Name	Column Description
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** ( <<< ), **Previous** ( < ), **Next** ( > ), and **Last** ( >>> ) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

**Note:** You can download details of all the records of a usage data file in a CSV file format using the **Export TO Excel** link provided in the **Search** section.

- View the records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** ( <<< ), **Previous** ( < ), **Next** ( > ), and **Last** ( >>> ) buttons to navigate between pages.
- If required, you can filter the usage records in the **Usage Data** screen.
- If required, you can click the **Export TO Excel** link to download details of all the records of a usage data file in a CSV file format.

**Viewing Valid Records of a Usage Data File****Procedure**

To view valid records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Valid** column corresponding to the usage data file whose valid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the valid records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Status	Indicates that all valid records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the valid record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the valid records.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose valid records you want to view.	Yes (Conditional) <b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all valid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID. <b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type. <b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. <b>Note:</b> If the start date is not available, the default usage start date appears in this column.

Column Name	Column Description
END DATE	Displays the date till when the price item was used.  <b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.  <b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.  <b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.

Column Name	Column Description
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** () , **Previous** () , **Next** () , and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the valid records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** () , **Previous** () , **Next** () , and **Last** () buttons to navigate between pages.
6. If required, you can filter the valid records in the **Usage Data** screen.

## Viewing Invalid Records of a Usage Data File

### Procedure

To view invalid records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Invalid** column corresponding to the usage data file whose invalid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the invalid records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Status	Indicates that all invalid records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the invalid record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the invalid records.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose invalid records you want to view.	Yes (Conditional) <b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all invalid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	<b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	<b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.
	<b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	<b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.
	<b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.

Column Name	Column Description
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the invalid records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) buttons to navigate between pages.
- If required, you can filter the invalid records in the **Usage Data** screen.

**Viewing Submitted Records of a Usage Data File****Procedure**

To view submitted records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Submitted** column corresponding to the usage data file whose submitted records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the submitted records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all records submitted for approval are displayed in the <b>Usage Data</b> screen.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division to which the submitted record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the submitted records.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose submitted records you want to view.	Yes (Conditional) <b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all submitted records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID. <b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type. <b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. <b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used. <b>Note:</b> If the end date is not available, the default usage end date appears in this column.

Column Name	Column Description
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.  <b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.  <b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2, ....., SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.

Column Name	Column Description
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ..., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. ## Viewing Processed Records of a Usage Data File

### Procedure

To view processed records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Processed** column corresponding to the usage data file whose processed records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the processed records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all processed records are displayed in the <b>Usage Data</b> screen.	Not applicable
Division	Used to specify the division to which the processed record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the processed records.	Yes (Conditional) <b>Note:</b> If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose processed records you want to view.	Yes (Conditional) <b>Note:</b> If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all processed records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.

Column Name	Column Description
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.  <b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.  <b>Note:</b> This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.  <b>Note:</b> If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.  <b>Note:</b> If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
PARAM TYPE1, PARAM TYPE2, ....., PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.  <b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
PARAM VALUE1, PARAM VALUE2, ....., PARAM VALUE15	Displays the value of the price item parameter.  <b>Note:</b> These columns appear only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
SQI1, SQI2, ....., SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQVALUE1, SQVALUE2, ....., SQVALUE10	Displays the number of units of the service quantity.

Column Name	Column Description
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2, ....., BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2, ....., AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2, ....., CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2, ....., MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2, ....., SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2, ....., SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ....., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2, ....., CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2, ....., CHARVAL10	Displays the value of the characteristic type.

**Note:**

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the processed records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

**Note:** By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE\_NUMBER** lookup field. For example, if the **PAGE\_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** ( << ), **Previous** ( < ), **Next** ( > ), and **Last** ( >> ) buttons to navigate between pages.
- If required, you can filter the processed records in the **Usage Data** screen.
