Once the clearing records are activated, you can extract the clearing records in a flat file. The **Extract Automatic Payments (APAYACH)** batch allows you to extract the clearing records with the latest batch run number in a flat file. The flat file is then sent to the auto clearing house for review. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, you cannot activate and extract the automatic refund clearing records using the **Activate Automatic Payments (ACTVTAPY)** and **Extract Automatic Payments (APAYACH)** batches, respectively. The implementation team will have to write the custom logic to activate and extract automatic refund clearing records in a flat file.

Uploading Response from Auto Clearing House (ACH)

Once the auto clearing house reviews the automatic payment clearing records, the review comments can be shared in the EDI 824 file format. An EDI 824 file may contain the review comments for one or more automatic payment clearing records. You can upload these EDI 824 files and store the review comments in the staging area using the **Upload Response from Auto Clearing House (C1-APACK)** batch.

On uploading an EDI 824 file, the system checks whether the automatic payment clearing ID specified in each record exists in the system. If so, it creates an automatic payment clearing staging record for the automatic payment clearing

ID in the **CI_APAY_STAGE_UP** table. If the acknowledgement code in the record is set to **TE** or **TR**, the system considers that the auto clearing house has rejected the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Reject Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. payment cancelation reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table.

However, if the acknowledgement code is blank or if the acknowledgement code is set to a value other than **TE** or **TR**, the system considers that the auto clearing house has accepted the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Success Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In addition, the error code (i.e. NOC reason) is stored corresponding to the automatic payment clearing staging record in the **CI_APAY_STAGE_UP_REM** table. In this case, the record may contain more than one error code.

The status of the automatic payment clearing staging record is set to **Pending**. If the error code (i.e. payment cancelation reason or NOC reason) is invalid, the status of the automatic payment clearing staging record is set to **Error**. An exception is logged in the **CI_APAY_STGUP_EXC** table. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is set to **Error** and an exception is logged in the **CI_APAY_STGUP_EXC** table.

The system sets the automatic payment distribution and freeze date (i.e. **APAY_DIST_FRZ_DT**) for each automatic payment clearing record (for which automatic payment clearing staging record is added in the system) to the payment date (which is stored on the payment event). For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Note: An additional table named **CI_APAY_STGUP_CHAR** is available which the implementation team can use to store additional information about the automatic payment clearing staging record in the form of characteristics.

To ensure that the EDI 824 files are uploaded successfully, you need to set the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:

- **Line Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of line.
- **Field Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of data record.
- **Reject Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has rejected the automatic payment clearing record.
- **Success Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has accepted the automatic payment clearing record with or without Notice to Change (NOC).

Note: You must specify an upload reason which is already defined in the system.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 965.

Freezing or Canceling Automatic Payments

Once the review comments are received in the form of reason and error codes for an automatic payment clearing record, you need to freeze or cancel the automatic payment based on the reason code. You can freeze or cancel automatic payments through the **Freeze or Cancel Automatic Payments (APAYRA)** batch.

On executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, the system checks whether the reason code (i.e. upload reason) and error code (i.e. payment cancelation reason or NOC reason) specified in the automatic payment clearing staging record exist in the system. This batch considers only those automatic payment clearing staging records which are in the **Pending** status and for which payment freeze date is specified in the automatic payment clearing record. If the reason code and error code exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm cancels the automatic payment and payment event. If the type of reason code is **Success**, the attached algorithm freezes the automatic payment on the payment freeze date. However, if the type of reason code is **Success** and the error code is specified along with the reason code, the attached algorithm freezes the automatic payment on the payment freeze date, stores error codes (i.e.

NOC reasons) as payment tender characteristics and then creates a To Do entry to notify user about these NOC reasons. Finally, the status of the automatic payment clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, payment cancelation reason, or NOC reason) specified in the automatic payment clearing staging record does not exist in the system, the status of the automatic payment clearing staging record is changed to **Error**. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is changed to **Error**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Voiding Refund Requests and Canceling Refund Adjustments

Once the auto clearing house reviews the automatic refund clearing records and shares the review comments, the implementation team will have to store the review comments in the following staging tables:

- **CI_APAY_STAGE_UP** – Used to store the automatic payment or refund clearing staging record for an automatic payment or refund clearing record, respectively. The status of the automatic payment or refund clearing staging record must be set to **Pending**.
- **CI_APAY_STAGE_UP_REM** – Used to store the reason and error codes of each automatic payment or refund clearing staging record.
- **CI_APAY_STGUP_CHAR** – Used to store additional information about the automatic payment or refund clearing staging record in the form of characteristics.

The review comments must be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) for an automatic refund clearing record. On executing the **Cancel Automatic Refunds (AREFRA)** batch, it checks whether the reason and error codes specified in the automatic refund clearing staging record exist in the system. If the reason and error codes exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm changes the status of the refund request to **Voided** and the corresponding refund adjustments are canceled. If the type of reason code is **Success**, no changes are made to the refund request and refund adjustments. Finally, the status of the automatic refund clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, void status reason) specified in the automatic refund clearing staging record does not exist in the system, the status of the automatic refund clearing staging record is changed to **Error**.

Generating To Do Entries

If an exception occurs while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, you can notify the user about such exception. The **To Do Creation for Automatic Payment Exception Records (APAYUPTD)** batch allows you to create a To Do using the APAYUPTD To Do type when an exception is logged for an automatic payment clearing staging record in the **CI_APAY_STGUP_EXC** table. The system creates one To Do entry for all exceptions that have occurred for an automatic payment clearing staging record. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Note: At present, a To Do is not created when an exception is logged for an automatic refund clearing staging record in the **CI_APAY_STGUP_EXC** table while executing the **Cancel Automatic Refunds (AREFRA)** batch.

Creating Tender Controls

Once you freeze the automatic payments, you need to create tender and deposit controls. The **Create Tender Controls for Automatic Payments (BALAPY)** batch allows you to create tender and deposit controls for each automatic payment which is frozen, but not yet linked to any tender control. One tender control is created for the **APAYACH** batch control and batch run number combination. The payment tenders of these automatic payments are then linked to the tender control.

This batch also balances the open tender control records and changes the status of the tender and deposit controls, accordingly. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the freeze payments on notification process, you need to do the following:

- Define the automatic payment instructions for the account for which you want to enable the automatic payment option.

Note: You can either define non-rule based effective dated automatic payment instructions in the **Auto Pay** tab of the **Account** screen or define rule based effective dated automatic payment instructions through the **Auto Pay Rule** screen.

- Set the **Autopay Creation Option** field to **Freeze Payment on Notification** in the **Billing** tab of the **Installation Options** screen.
- Create an automatic payment creation algorithm using the **APAY-CREATE** algorithm type and attach it to the **Automatic Payment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create an automatic refund creation algorithm using the **C1-AREF-CRET** algorithm type and attach it to the **Automatic Adjustment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create a date calculation algorithm using the **APAY-DTCALC** algorithm type and attach it to the **Autopay Date Calculation Alg** spot of the auto pay route type which is specified on the account's automatic payment instruction.
- Define the required upload reasons in the system.
- Define the required payment cancelation reasons in the system.
- Define values for the **APAY_UPL_NOC_LOOKUP** lookup field.

Note: The **APAY_UPL_NOC_LOOKUP** lookup field is used to define NOC reasons. The NOC reason specified in the automatic payment clearing staging record must exist in this lookup field and its status must be **Active**. Otherwise, the status of the automatic payment clearing staging record is changed to **Error**.

- Define voided status reasons for the **C1-RefundReq** business object.
- Create an automatic payment success algorithm using the **C1-APAY-SUCC** algorithm type and attach it to the reason code where the reason type is set to **Success**.

Note: You must attach the automatic payment success algorithm to an upload reason which you want to use while freezing automatic payments.

- Create an automatic payment cancel algorithm using the **C1-APAY-CAN** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

Note: You must attach the automatic payment cancel algorithm to an upload reason which you want to use while canceling automatic payments.

- Create a void automatic refund algorithm using the **C1-AREF-VOID** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

Note: You must attach the void automatic refund algorithm to an upload reason which you want to use while voiding automatic refunds.

- Create a characteristic type where the characteristic entity is set to **Payment Tender**. And, then specify this characteristic type as the value for the **Tender Characteristic Type** parameter in an algorithm which is created using the **C1-APAY-SUCC** algorithm type.

- Assign the **C1-ACH** To Do type to a To Do role whose users must receive the To Do entries generated when automatic payments are frozen with a Notice to Change (NOC).
- Assign the **APAYUPTD** To Do type to a To Do role whose users must receive the To Do entries generated when exceptions have occurred while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch.
- Define values for the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:
 - Line Separator
 - Field Separator
 - Reject Upload Reason
 - Success Upload Reason

Automatic Payment or Refund Clearing Staging Record Status Transition

The following figure graphically indicates how an automatic payment or refund clearing staging record moves from one status to another during the freeze payments on notification process:

EDI 824 File Format

Before uploading the EDI 824 file, you need to ensure that the file contains the following tags and attributes:

Tag	Attribute	Description	Mandatory (Yes or No)
OTI	Reference Number	Used to specify the automatic payment clearing ID. It indicates the automatic payment clearing record for which the review comments are received from the auto clearing house.	Yes
OTI	Acknowledgement Code	Used to indicate whether the automatic payment clearing record is accepted or rejected by the auto clearing house. If you want to reject the automatic payment clearing record, you must specify TE or TR as the acknowledgement code. However, if you want to approve the automatic payment clearing record, you can either specify any value other than TE or TR or leave this attribute blank.	No
TED	Error Code	Used to indicate either of the following: <ul style="list-style-type: none"> The payment cancellation reason when the automatic payment clearing record is rejected by the auto clearing house. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: You must specify a payment cancellation reason which is already defined in the system.</div> <ul style="list-style-type: none"> The Notice to Change (NOC) reason when the automatic payment clearing record is accepted by the auto clearing house with a Notice to Change (NOC). <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">Note: You must specify a NOC reason which is already defined in the APAY_UPL_NOC_LOOKUP lookup field.</div>	Yes (Conditional)
		Note: This attribute is required when the automatic payment clearing record is rejected by the auto clearing house.	
TED	Error Description	Used to specify the reason why the automatic payment clearing record is either rejected or accepted with a Notice to Change (NOC).	No

Sample EDI 824 File Format

```

OTI*TR*TN*411302586842\
TED*WA01*WRONG ACCOUNT\
OTI*TF*TN*411302525641\
OTI*TO*TN*806152348038\
TED*BR01*Bill Reopened\
OTI*TO*TN*806152307159\
OTI*TE*TN*806152307229\
TED*WA01*WRONG ACCOUNT\

```

Here, TR, TF, TO, and TE are acknowledgement codes. TR and TE indicate that the automatic payment clearing records are rejected. And, TF and TO indicate that the automatic payment clearing records are accepted with or without a Notice to Change (NOC).

Here, 411302586842, 411302525641, 806152348038, 806152307159, and 806152307229 are automatic payment clearing records, and WA01 and BR01 are error codes. WA01 is a payment cancellation reason and BR01 is a NOC reason. The string “WRONG ACCOUNT” and “Bill Reopened” are error descriptions.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 965.

Automatic Payment and Refund Upload Reason

Once the auto clearing house reviews the automatic payment and refund clearing records, an appropriate upload reason must be received for each clearing record. The upload reason indicates the following:

- Whether the automatic payment must be frozen or cancelled in the system
- Whether the automatic refund must be canceled in the system (i.e. the refund request must be voided and refund adjustments must be canceled)

The **Automatic Payment and Refund Upload Reason** screen allows you to define, edit, and delete an upload reason. It contains the following zone:

- [Upload Reasons](#) on page 967

Upload Reasons

The **Upload Reasons** zone lists upload reasons that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Reason	Displays the upload reason.
Reason Type	Indicates the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel • Success
Eligible for Processing	Indicates whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch. The valid values are: <ul style="list-style-type: none"> • Y • N
Description	Displays the description of the upload reason.
Edit	On clicking the Edit () icon, the Automatic Payment and Refund Upload Reason screen appears where you can edit the details of the upload reason.
Delete	On clicking the Delete () icon, you can delete the upload reason.

You can define an upload reason by clicking the **Add** link in the upper right corner of this zone.

Defining an Upload Reason

Prerequisites

To define an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To define an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
The **Automatic Payment and Refund Upload Reason** screen appears.
3. Click the **Add** link in the upper right corner of the **Upload Reasons** zone.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason.	Yes
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. • Success — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the C1-ACH To Do type for all NOC reasons specified in the automatic payment clearing staging record. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to Success , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to Cancel , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Code Search window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the Algorithm field.	Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason.

- Enter the required details in the **Automatic Payment and Refund Upload Reason** screen.

Note: If you want to attach more than one algorithm to the upload reason, click the **Add**  icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete**  icon corresponding to the algorithm.

- Click **Save**.

The upload reason is defined.

Editing an Upload Reason

Prerequisites

To edit an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To edit an upload reason:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.

The **Automatic Payment and Refund Upload Reason** screen appears.

3. In the **Upload Reasons** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the upload reason whose details you want to edit.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Displays the upload reason.	Not applicable
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided. • Success — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the C1-ACH To Do type for all NOC reasons specified in the automatic payment clearing staging record. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the Freeze or Cancel Automatic Payments (APAYRA) or Cancel Automatic Refunds (AREFRA) batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to Success , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to Cancel , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Code Search window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the Algorithm field.	Yes (Conditional) Note: This field is required when you are attaching an algorithm to the upload reason.

4. Modify the required details in the **Automatic Payment and Refund Upload Reason** screen.

Note: If you want to attach more than one algorithm to the upload reason, click the **Add**  icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete**  icon corresponding to the algorithm.

5. Click **Save**.

The changes made to the upload reason are saved.

Deleting an Upload Reason

Procedure

To delete an upload reason:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.
The **Automatic Payment and Refund Upload Reason** screen appears.
3. In the **Upload Reasons** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the upload reason that you want to delete.
A message appears confirming whether you want to delete the upload reason.
4. Click **OK**.
The upload reason is deleted.

Automatic Payment and Refund Clearing Staging

The **Automatic Payment and Refund Clearing Staging** screen allows you to search for automatic payment or refund clearing records using various search criteria. In addition, you can:

- View the automatic payment or refund clearing staging records associated to a clearing record
- View the upload reason and payment cancelation reason or NOC reason specified in the automatic payment clearing staging record
- View the upload reason and void status reason specified in the automatic refund clearing staging record
- View the characteristics defined for the automatic payment or refund clearing staging record
- Edit an automatic payment or refund clearing staging record
- Delete an automatic payment or refund clearing staging record

This screen contains the following zones:

- [Search Clearing Record](#) on page 973
- [Associated Clearing Staging Records](#) on page 975
- [Clearing Staging Upload Reasons](#) on page 976
- [Clearing Staging Characteristics](#) on page 976

Search Clearing Record

The **Search Clearing Record** zone allows you to search for automatic payment and refund clearing records using various search criteria. It contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the automatic payment or refund clearing records. The valid values are: <ul style="list-style-type: none"> • Automatic Payment • Automatic Refund 	Yes
Clearing ID	Used to search a particular clearing record.	No
Account ID	Used to search clearing records which are created for a particular account. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	No
Person Name	Used to search clearing records which are created for accounts of a particular person.	No
Extract From Date	Used to search clearing records that are extracted on or after a particular date.	No
Extract To Date	Used to search clearing records that are extracted on or before a particular date.	No
Bill ID	Used to search clearing records which are created against a bill.	No
Alternate Bill ID	Used to search clearing records which are created against a bill with the specified alternate bill ID.	No
Batch Control	Used to search clearing records where the APAYACH batch control is stamped. The valid value is APAYACH .	No
Batch Run Number	Used to search clearing records which are activated in a particular batch run.	No

Note: You must specify at least one search criterion while searching for a clearing record.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Clearing ID	Displays the clearing ID.

Column Name	Column Description
Account Information	Indicates the account for which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Bill Information	Indicates the bill against which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Payment Amount	Displays the payment amount.
	Note: This column appears only when you select the Automatic Payment option from the Search By list.
Pay Tender ID	Displays the payment tender ID.
	<p>Note:</p> <p>It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective tender.</p> <p>This column appears only when you select the Automatic Payment option from the Search By list.</p>
Tender Status	Indicates the current status of the payment tender. The valid values are: <ul style="list-style-type: none"> • Valid • Canceled
	Note: This column appears only when you select the Automatic Payment option from the Search By list.
Extract Date	Displays the date when the clearing record is extracted in a flat file.
Payment Freeze Date	Displays the date when the automatic payment must be frozen in the system.
	Note: This column appears only when you select the Automatic Payment option from the Search By list.
External Source ID	Indicates the tender source through which the payment was remitted.
Entity Type	Indicates the type of entity which is created for automatic refund. The valid value is: <ul style="list-style-type: none"> • Refund Request
	Note: This column appears only when you select the Automatic Refund option from the Search By list.
Entity ID	Displays the entity ID.
	Note: This column appears only when you select the Automatic Refund option from the Search By list.

Column Name	Column Description
Account Number	Indicates the bank account through which the automatic payment is made.
Batch Control	Indicates the batch control which is stamped on the clearing record.
Batch Run Number	Indicates the batch run in which the clearing record was activated.
Alternate Bill ID	Indicates the bill against which the clearing record is created.

Associated Clearing Staging Records

The **Associated Clearing Staging Records** zone lists the automatic payment or refund clearing staging records which are added corresponding to the clearing record. You can edit and delete an automatic payment or refund clearing staging record through this zone. It contains the following columns:

Column Name	Column Description
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Status	Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> • Pending • Complete • Error
Edit	On clicking the Edit () icon, the Edit Clearing Staging Record screen appears where you can edit the details of the clearing staging record. <p>Note: You can edit a clearing staging record only when it is in the Pending or Error status.</p>
Delete	On clicking the Delete () icon, you can delete the clearing staging record. <p>Note: You can delete a clearing staging record only when it is in the Pending status.</p>

By default, the **Associated Clearing Staging Records** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears only when you click the **Broadcast** () icon corresponding to the clearing record in the **Search Clearing Record** zone.

Clearing Staging Upload Reasons

The **Clearing Staging Upload Reasons** zone lists the reason code (i.e. upload reason) and error code (i.e. payment cancellation reason, Notice to Change (NOC) reasons, or void status reason) specified in the automatic payment or refund clearing staging record. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence in which the upload reason should be considered while freezing or canceling the automatic payment or while canceling the automatic refund.
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Upload Reason	Indicates whether the auto clearing house has accepted or rejected the clearing record.
Cancel Reason	Indicates the reason why the auto clearing house has rejected the clearing record. If the clearing record is created for an automatic payment, the payment cancellation reason appears in this column. However, if the clearing record is created for an automatic refund, the void status reason appears in this column.
NOC Reason	Indicates the reason why the auto clearing house has accepted the clearing record with a Notice to Change (NOC).
NOC Reason Description	Displays the description of the NOC reason.

By default, the **Clearing Staging Upload Reasons** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears only when you click the **Broadcast**  icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

Clearing Staging Characteristics

The **Clearing Staging Characteristics** zone lists the characteristics defined for the automatic payment or refund clearing staging record. It contains the following columns:

Column Name	Column Description
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the characteristic value.

By default, the **Clearing Staging Characteristics** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears only when you click the **Broadcast**  icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

Searching for a Clearing Record

Procedure

To search for a clearing record:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Automatic Payment and Refund Clearing Staging**.
The **Automatic Payment and Refund Clearing Staging** screen appears.
3. Enter the search criteria in the **Search Clearing Record** zone depending on whether you want to search for automatic payment or refund clearing records.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of clearing records that meet the search criteria appears in the **Search Results** section.

Editing a Clearing Staging Record

Prerequisites

To edit a clearing staging record, you should have:

- Upload reasons defined in the application
- NOC reasons defined in the **APAY_UPL_NOC_LOOKUP** lookup field.
- Payment cancelation reasons defined in the application
- Reasons defined for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen

Note: You can edit a clearing staging record only when it is in the **Pending** or **Error** status. On editing a clearing staging record which is in the **Error** status, the status of the clearing staging record is changed to **Pending**. Also, the exceptions logged for the clearing staging record are deleted from the **CI_APAY_STGUP_EXC** table.

Procedure

To edit a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the clearing record whose associated clearing staging record you want to edit.

The **Associated Clearing Staging Records** zone appears.

3. In the **Associated Clearing Staging Records** zone, click the **Edit**  icon in the **Edit** column corresponding to the clearing staging record whose details you want to edit.

The **Edit Clearing Staging Record** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Clearing Staging ID	Displays the clearing staging ID.	Not applicable
Clearing ID	Indicates the clearing record against which the clearing staging record is added.	Not applicable
Status	Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> • Pending • Complete • Error 	Not applicable
Upload Date	Used to specify the date when the clearing staging record was uploaded or added in the system.	Yes

In addition, this screen contains the following two sections:

- **Upload Reasons** — Used to add, edit, or remove the reason code (i.e. upload reason) and error (sub reason) codes from the clearing staging record. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason. It indicates whether the auto clearing house has accepted or rejected the clearing record.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> • Cancel • Success 	Yes
Sub Reason Code	Used to specify either of the following: <ul style="list-style-type: none"> • Payment cancelation reason or void status reason (for automatic refund) when the reason type is set to Cancel • Notice to Change (NOC) reason when the reason type is set to Success 	No
Sub Reason Description	Used to specify the description of the NOC reason.	No

Note: The upload reason, payment cancelation reason, void status reason, and NOC reasons must be already defined in the system. If you specify an invalid reason and sub reason codes, the status of the clearing staging record is changed to **Error** when you execute the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch.

- **Characteristics** — Used to define characteristics for the clearing staging record.
4. Modify the required details in the **Edit Clearing Staging Record** screen.

Note: If you want to add more than one reason or sub reason code, click the **Add** (+) icon in the **Upload Reasons** section and then specify the required details. However, if you want to remove a reason or sub reason code, click the **Delete** (🗑️) icon corresponding to the reason.

5. Define characteristics for the clearing staging record, if required.
6. Click **Save**.

The changes made to the clearing staging record are saved.

Defining Characteristics for a Clearing Staging Record

Prerequisites

To define characteristics for a clearing staging record, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Payment Upload**)

Procedure

To define characteristics for a clearing staging record:

1. Ensure that the **Characteristics** section is expanded when you are editing a clearing staging record.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the clearing staging record.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Auto Payment Upload .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the clearing staging record.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the clearing staging record, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the clearing staging record, click the **Delete**  icon corresponding to the characteristic.

How to edit a clearing staging record	Editing a Clearing Staging Record on page 979

Deleting a Clearing Staging Record

Procedure

To delete a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.

2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the clearing record whose associated clearing staging record you want to delete.

The **Associated Clearing Staging Records** zone appears.

3. In the **Associated Clearing Staging Records** zone, click the **Delete**  icon in the **Delete** column corresponding to the clearing staging record that you want to delete.

A message appears confirming whether you want to delete the clearing staging record.

Note: You can delete a clearing staging record only when it is in the **Pending** status.

4. Click **OK**.

The clearing staging record is deleted.

Chapter 14

Construct

Topics:

- [Prerequisites](#)
- [Construct Status Transition](#)
- [Template](#)
- [Construct \(Used for Searching\)](#)
- [Construct \(Used for Viewing\)](#)
- [Billing and Settlement Hierarchy](#)

Oracle Revenue Management and Billing provides you with a flexible way to define the billing hierarchy using the construct based billing feature. In a construct, you can include:

- **Usage Accounts** - A set of usage accounts of different persons whose charges and/or adjustments must be billed through an invoice account. These persons need not belong to the same person hierarchy. The system allows you to select a set of usage accounts based on the criteria using the account selection template. The persons' and their child persons' usage accounts that meet the specified criteria are included in the construct.
- **Billable Charges** - A set of billable charges that you want to bill through an invoice account. The system will only consider billable charges of those usage accounts for which the construct is defined. The system allows you to select a set of billable charges based on the criteria using the billable charge selection template.
- **Adjustments** - A set of adjustments that you want to bill through an invoice account. The system will only consider adjustments of those usage accounts for which the construct is defined. The system allows you to select a set of adjustments based on the criteria using the adjustment selection template.

You can bill the charges and adjustments of usage accounts on the same invoice account. Or, you can bill the charges of usage accounts on one invoice account and the adjustments on another invoice account. Or, you can bill the charges or adjustments of the usage accounts on more than one invoice account. You can define different types of constructs. At present, the system supports only invoice and settlement construct. Here, settlement includes receivables and payables.

One usage account can belong to only one active construct and not to multiple active constructs at the same time. The system also allows you to exclude some usage accounts when you do not want to include all usage accounts that satisfy the criteria in the construct. While defining a construct, you can use an existing invoice account. The contracts for the invoice account are created only when you activate the construct. One contract is created for every target contract type set on usage accounts' contracts' contract type.

You can use a construct during the construct based billing process only when the construct is in the **Active** status. The following batches are designed to support the construct based billing process:

- **Construct Based - Pending Bill Generation (BILLOPEN)** – This batch is used to generate pending bills for accounts that meet the criteria.
- **Construct Based - Bill Segment Generation (BSGENREG)** – This batch is used to generate the bill segments on the pending bills.

- **Construct Based - Bill Completion (POSTPROC)** – This batch is used to generate post processing bill segments during the bill completion process. It changes the status of the bill to **Complete**.

During the bill generation process, all accounts that meet the criteria are considered for billing. These accounts may be usage or invoice accounts. All billable charges (with the **Adhoc** flag set to **No**) whose start date is earlier than or equal to the batch business date are considered during bill segment generation. If a billable charge satisfies the rule defined on any active construct, the bill segment is generated on the respective invoice account. And, if a billable charge does not satisfy the rule defined on any active construct, the bill segment is generated on the usage account. The post-processing bill segments, if any, are generated on the invoice or usage account depending on the type of price assignment.

Note: The construct based billing batches are currently not designed to consider billable charges whose end date is earlier than or equal to the batch business date.

For more information on how to setup the construct based billing process, refer to [Prerequisites](#) on page 985.

Prerequisites

To setup the construct based billing process, you need to do the following:

- Define the Target Contract Type characteristic for usage accounts' contracts' contract type.
- Create a default account creation algorithm using the C1-ACTCR-IC algorithm type.
- Create a default contract creation algorithm using the C1-CTMP-IC algorithm type.
- Create a usage account construct mapping algorithm using the C1-UACM-IC algorithm type.
- Associate the usage account construct mapping algorithm to a division whose usage accounts you want to include in any existing active construct.

Note: There might be situations when a usage account is created after the construct is activated. If you want to include such usage account in any existing active construct, you need to associate the usage account construct mapping algorithm to a division in which you are creating the usage account. If the usage account satisfies the criteria specified in any active construct, it is included in the construct once the usage account is created.

- Define the required templates, profiles and constructs in the application.
- Define values for the PAGE_NUMBER lookup field.
- Define approval workflow group, approval workflow chain, approval workflow criteria, and approval workflow group chain linkage for construct.
- Configure the approval workflow settings for construct.
- Define approval workflow reasons which are required while rejecting a construct.
- Assign the **C1-IC_AC** To Do type to a To Do role whose users must receive the To Do entries generated when the new invoice account is created while activating a construct.
- Transfer adjustments algorithm defined using the **C1-IC-AD-XFR** algorithm type.
- Define an algorithm of the BS-CRE-INVCN algorithm type and attach it on the **Create Algorithm** spot of the bill segment type.

Note: If you want to use the regular billing process, you need to attach an algorithm of the BS-CRE-PRICE algorithm type on the **Create Algorithm** spot of the bill segment type. However, if you want to use the construct based billing process, you need to attach an algorithm of the BS-CRE-INVCN algorithm type on **Create Algorithm** spot of the bill segment type.

Construct Status Transition

The following figure graphically indicates how a construct moves from one status to another during its lifecycle:

Template

Template is used to select a set of usage accounts, billable charges, or adjustments based on the criteria. In a template, you can define a SELECT statement to retrieve data from a table or view based on a condition. You can use the bind variables in the where clause (condition). The bind variables must be alphanumeric and prefixed with the colon (:). The values for these bind variables are specified while defining a construct.

You can validate the syntax of the SELECT statement. If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

You can define the following three types of templates:

- **Account Selection** - Used for selecting a set of usage accounts based on the criteria.
- **Adjustment Selection** - Used for selecting a set of adjustments based on the criteria.
- **Billable Charge Selection** - Used for selecting a set of billable charges based on the criteria.

You can only use templates which are active while defining or editing a construct. The **Template** screen allows you to define, edit, and delete a template. You can edit a template even if it is used in any construct. However, any changes made to a template will not be reflected in a construct where the template is already used unless you use the latest template in the construct. This screen consists of the following zones:

- [Search Template](#) on page 987

Search Template

The **Search Template** zone allows you to search for a template using various search criteria. This zone contains the following two sections:

- **Search Criteria** - Used to search by different search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the template name.	No
Description	Used to specify the description for the template.	No
Purpose	Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"> • Adjustment Selection - Used for selecting a set of adjustments based on the criteria. • Bill Segment Selection - Used for selecting a set of bill segments based on the criteria. • Billable Charge Selection - Used for selecting a set of billable charges based on the criteria. • Usage Account Selection - Used for selecting a set of usage accounts based on the criteria. • Usage and Invoice Account Selection - Used for selecting a set of usage and invoice accounts based on the criteria. 	No
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	No

Note: You must specify at least one search criterion while searching for a template.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Template	Displays the name of the template.
Description	Displays the description of the template.
Purpose	Indicates the purpose of the template. The valid values are: <ul style="list-style-type: none"> • Adjustment Selection • Billable Segment Selection • Billable Charge Selection • Usage Account Selection • Usage and Invoice Account Selection

Column Name	Column Description
Status	Indicates the status of the template. The valid values are: <ul style="list-style-type: none"> Active Inactive
View	On clicking the View (🔍) icon, the View Template screen appears where you can view the details of the template.
Edit	On clicking the Edit (✏️) icon, the Template screen appears where you can edit the details of the template.
	Note: If a template is used in any construct, a message appears confirming whether you want to edit the template.

You can create a new template by clicking the **Add** button in the upper right corner of this zone.

Searching for a Template

Procedure

To search for a template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.
The **Template** screen appears.
3. Enter the search criteria in the **Search Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of templates that meet the search criteria appears in the **Search Results** section.

Defining a Template

Procedure

To define a template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Template**.
A sub-menu appears.
3. Click the **Add** option from the **Template** sub-menu.

The **Template** screen appears. It consists of the following zone:

- **Search Template** — Used to specify basic details about the template. It consists of the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to specify the template name.	Yes
Description	Used to search for a template by it's description.	Yes
Purpose	Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"> • Adjustment Selection - Used for selecting a set of adjustments based on the criteria. • Bill Segment Selection - Used for selecting a set of bill segments based on the criteria. • Billable Charge Selection - Used for selecting a set of billable charges based on the criteria. • Usage Account Selection - Used for selecting a set of usage accounts based on the criteria. • Usage and Invoice Account Selection - Used for selecting a set of usage and invoice accounts based on the criteria. 	Yes
Status	Used to specify additional information about the template.	Yes

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bind Variable	Used to specify the bind variable (which is used in the where clause).	Yes (Conditional)
		Note: This field is required when you are defining a bind variable.

Field Name	Field Description	Mandatory (Yes or No)
Data Type	Used to indicate the type of data that you want to store in the bind variable. The valid values are: <ul style="list-style-type: none"> Date Numeric String 	Yes (Conditional) Note: This field is required when you are defining a bind variable.
Label	Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges.	Yes (Conditional) Note: This field is required when you are defining a bind variable.
Zone	Used to specify the zone for the template. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Zone/Code Description window appears.	Yes (Conditional) Note: This field is required when you are defining a bind variable.

4. Enter the required details in the **Main** tab.

5. If you want to define more than one bind variable, click the **Add**  icon in the **Bind Variables** section and then enter the required details.

Note: However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete**  icon corresponding to the bind variable.

6. If required, click **Validate** to validate the syntax of the SELECT statement.

Note: If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

7. Define characteristics for the template, if required.

8. Click **Validate and Save**.

The system validates the syntax of the SELECT statement and then accordingly saves the template.

How to define characteristics for a template	Defining Characteristics for a Template on page 990

Defining Characteristics for a Template

Prerequisites

To define characteristics for a template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Template)

Procedure

To define characteristics for a template:

1. Click the **Characteristics** tab in the **Template** screen when you are creating or editing a template.

The **Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the template.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the template.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the template.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the template.

2. Enter the required details.
3. If you want to define more than one characteristic for the template, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the template, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Validate and Save**.

The characteristics are defined for the template.

How to edit a template	Editing a Template on page 991

Editing a Template

Procedure

To edit a template:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **T** and then click **Template**.

The **Template** screen appears.

- In the **Search Results** section, click the **Edit** () icon in the **Edit** column corresponding to the template whose details you want to edit.

Note: If a template is used in any construct, a message appears confirming whether you want to edit the template. You must click **OK** if you want to edit the template. Any changes made to a template will not be reflected in any construct where the template is already used unless you use the latest template in the construct.

The **Template** screen appears. It consists of the following tabs:

- **Main** - Used to specify basic details about the template.
- **Characteristics** - Used to define characteristics for the template.

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to indicate the template name.	Not applicable
Description	Used to specify the description for the template.	Yes
Detailed Description	Used to specify additional information about the template.	No
Purpose	Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"> • Account Selection - Used for selecting a set of usage accounts based on the criteria. • Adjustment Selection - Used for selecting a set of adjustments based on the criteria. • Billable Charge Selection - Used for selecting a set of billable charges based on the criteria. • Usage Account Selection - Used for selecting a set of usage accounts based on the criteria. • Usage and Invoice Account Selection - Used for selecting a set of usage and invoice accounts based on the criteria. 	Yes
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)								
Select	<p>Used to specify the column name. It indicates the data that you want to retrieve using the SELECT statement.</p> <p>The default value appears in this field when you select the purpose of the template. 		Note: This field is required when you are defining a bind variable.

Field Name	Field Description	Mandatory (Yes or No)
Label	Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges.	Yes (Conditional)
		Note: This field is required when you are defining a bind variable.
Zone	Used to indicate a zone for the template.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Zone/Code Description window appears.	Note: This field is required when you are defining a bind variable.

- Modify the details in the **Main** tab, if required.
- If you want to define more than one bind variable, click the **Add** (+) icon in the **Bind Variables** section and then enter the required details.

Note: However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑️) icon corresponding to the bind variable.

- If required, click **Validate** to validate the syntax of the SELECT statement.

Note: If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

- Define, edit or remove characteristics from the template, if required.
- Click **Validate and Save**.

The system validates the syntax of the SELECT statement and then accordingly saves the changes *Defining Characteristics for a Template* on page 990 made to the template.

Deleting a Template

Procedure

To delete a template:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **T** and then click **Template**.
The **Template** screen appears.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the template that you want to delete.

A message appears confirming whether you want to delete the template.

Note: You can only delete a template which is not yet used in any construct.

4. Click **OK**.

The template is deleted.

Construct (Used for Searching)

The **Construct** screen allows you to search for a construct using various search criteria. Through this screen, you can define, edit, view, copy, inactivate a construct. It contains the following zones:

- [Search Construct](#) on page 995

Search Construct

The **Search Construct** zone allows you to search for a construct using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Construct ID	Used to specify the construct ID.	No
Description	Used to specify the description for the construct.	No

Field Name	Field Description	Mandatory (Yes or No)
Construct Type	Used to indicate the type of the construct. The valid values are: <ul style="list-style-type: none"> • Invoice Only • Invoice and Settlement • Settlement Only 	No
Status	Used to indicate the status of the construct. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Inactive • Pending Approval • Rejected 	No
Effective Start Date	Used to specify the date from when the construct is effective.	No
Effective End Date	Used to specify the date till when the construct is effective.	No
Usage Account Identifier Type	Used to indicate the usage account's identifier type based on which you want to search for a construct. Note: This field appears only when you select the Invoice Only or Invoice and Settlement option from the Construct Type list.	No
Usage or Invoice Account Identifier Type	Used to indicate the usage or invoice account's identifier type based on which you want to search for a construct. Note: This field appears only when you select the Settlement Only option from the Construct Type list.	No
Usage Account Identifier	Used to indicate the usage account which belongs to the construct. Note: This field appears only when you select the Invoice Only or Invoice and Settlement option from the Construct Type list.	No
Usage or Invoice Account Identifier	Used to indicate the usage or invoice account which belongs to the construct. Note: This field appears only when you select the Settlement Only option from the Construct Type list.	No

Field Name	Field Description	Mandatory (Yes or No)
Invoice Account Identifier Type	Used to indicate the invoice account's identifier type based on which you want to search for a construct.	No
	Note: This field appears only when you select the Invoice Only or Invoice and Settlement option from the Construct Type list.	
Settlement Account Identifier Type	Used to indicate the settlement account's identifier type based on which you want to search for a construct.	No
	Note: This field appears only when you select the Settlement Only option from the Purpose list.	
Invoice Account Identifier	Used to indicate the invoice account which is used in the construct.	No
	Note: This field appears only when you select the Invoice Only or Invoice and Settlement option from the Construct Type list.	
Settlement Account Identifier	Used to indicate the settlement account which is used in the construct.	No
	Note: This field appears only when you select the Settlement Only option from the Construct Type list.	

Note: You must specify at least one search criterion while searching for a construct.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Construct ID	Displays the construct ID.
Description	Displays the description of the construct.
Construct Type	Indicates the purpose of the construct. The valid values are: <ul style="list-style-type: none"> • Invoice Only • Invoice and Settlement • Settlement Only
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.

Column Name	Column Description
Status	Indicates the status of the construct. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Inactive • Pending Approval • Rejected
Copy	On clicking the Copy () icon, the Construct screen appears where you can create a construct using an existing construct.
View	On clicking the View () icon, the Construct screen appears where you can view the details of the construct.
Edit	On clicking the Edit () icon, the Construct screen appears where you can edit the details of the construct.
Inactivate	On clicking the Inactivate icon () in the Inactivate column, the Inactivate window appears confirming whether you want to inactivate the selected construct. <p>Note: You can only inactivate the construct which is in Active status. The Inactivate icon appears in the Inactivate column, only in front of the construct which is in Active status.</p>

You can create a new construct by clicking the **Add** button in the upper right corner of the **Construct** screen.

Searching for a Construct

Procedure

To search for a construct:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select the **Invoice & Settlement Management** and then click **Construct**.
A sub-menu appears.
3. Click the **Search** option from the **Construct** sub-menu.
The **Construct** screen appears.

- Enter the search criteria in the **Search Construct** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of constructs that meet the search criteria appears in the **Search Results** section.

Defining a Construct

Procedure

To define a construct:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Invoice & Settlement Management** and then click **Construct**.
A sub-menu appears.
- Click the **Add** option from the **Construct** sub-menu.

The **Construct** screen appears. It consists of the following sections:

- Main** — Used to specify basic details about the construct.
- Characteristics** — Used to define characteristics for the construct.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Construct Description	Used to specify the description for the construct.	Yes
Construct Type	Used to indicate the type of the construct. The valid values are: <ul style="list-style-type: none"> Invoice — Indicates that you want to use the construct for billing. Invoice and Settlement — Indicates that you want to use the construct for billing and settlement. Settlement — Indicates that you want to use the construct for settlement. 	Yes
	Note: Here, settlement includes receivables and payables	

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the construct. By default, the Draft option is selected from the list.	Not applicable
Effective Start Date	Used to specify the date from when the construct is effective.	Yes
	Note: The effective from date cannot be later than the effective end date.	
Effective End Date	Used to specify the date till when the construct is effective.	No
	Note: The effective to date cannot be earlier than the effective start date.	

Tip: Alternatively, you can access the **Construct** screen by clicking the **Add** button on the top-right of the **Construct** screen.

4. Enter the required details in the **Main** section.
5. Define characteristics for the construct, if required.
6. Do either of the following:

If you want to...	Then...
Save the construct in the draft version	<ol style="list-style-type: none"> 1. Click Save as Draft. <p>The construct is created and the status of the construct is set to Draft. The construct ID is generated automatically when the construct is created.</p>
Activate the construct	<ol style="list-style-type: none"> 1. Click Activate. <p>The construct is created and the status of the construct is set to Active. The construct ID is generated automatically when the construct is created.</p> <p>Note: The Activate button appears while defining a construct only when the approval workflow process is not configured for construct.</p>
Send the construct for approval	<ol style="list-style-type: none"> 1. Click Send for Approval. <p>The construct is created and the approval workflow request is raised for the construct. The status of the construct is set to Pending Approval. In addition, the construct ID is generated automatically when the construct is created.</p> <p>Note: The Send for Approval button appears while defining a construct only when the approval workflow process is configured for construct.</p>

Defining Characteristics for a Construct

Prerequisites

To define characteristics for a construct, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Construct)

Procedure

To define characteristics for a construct:

1. Ensure that the **Characteristics** section is expanded in the **Construct** screen when you are creating or editing a construct. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the construct.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the construct.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the construct.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Predefined Characteristic Search window appears.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the construct.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the construct, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the construct, click the **Delete** (🗑️) icon corresponding to the characteristic.

Related Topics

For more information on...	See...
How to define a construct	Defining a Construct on page 999
How to edit a construct	Editing a Construct on page 1002

Editing a Construct

You can only edit a construct in the **Draft**, **Active**, or **Rejected** status. If a bill is already generated through a construct and it is in the **Pending** status, you cannot edit the details of the construct. You can only edit the effective to date of a construct when all bills generated through the construct are in the **Completed** status. The effective to date must be later than the last completed bill's bill date. Otherwise, the system will not allow you to edit the effective to date of the construct.

Procedure

To edit a template:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Invoice & Settlement Management** and then click **Construct**.
A sub-menu appears.
- Click on **Search**.
The **Construct** screen appears.
- In the **Search Results** section, click the **Edit** (✏️) icon in the **Edit** column corresponding to the **Construct ID** whose details you want to edit.

Note: If a template is used in any construct, a message appears confirming whether you want to edit the template. You must click **OK** if you want to edit the template. Any changes made to a template will not be reflected in any construct where the template is already used unless you use the latest template in the construct.

The **Template** screen appears. It consists of the following tabs:

- Main** - Used to specify basic details about the template.
- Characteristics** - Used to define characteristics for the template.

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template	Used to indicate the template name.	Not applicable
Description	Used to specify the description for the template.	Yes

Field Name	Field Description	Mandatory (Yes or No)								
Detailed Description	Used to specify additional information about the template.	No								
Purpose	Used to indicate the purpose of the template. The valid values are: <ul style="list-style-type: none"> • Account Selection - Used for selecting a set of usage accounts based on the criteria. • Adjustment Selection - Used for selecting a set of adjustments based on the criteria. • Billable Charge Selection - Used for selecting a set of billable charges based on the criteria. • Usage Account Selection - Used for selecting a set of usage accounts based on the criteria. • Usage and Invoice Account Selection - Used for selecting a set of usage and invoice accounts based on the criteria. 	Yes								
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes								
Select	Used to specify the column name. It indicates the data that you want to retrieve using the SELECT statement. The default value appears in this field when you select the purpose of the template. However, the default value changes depending on the purpose of template. You can edit the column name whenever required. <table border="1" data-bbox="548 1192 1156 1459"> <thead> <tr> <th>If you have set the purpose of the template to....</th> <th>Then, the default value is...</th> </tr> </thead> <tbody> <tr> <td>Account Selection</td> <td>ACCT_ID</td> </tr> <tr> <td>Adjustment Selection</td> <td>ADJ_ID</td> </tr> <tr> <td>Billable Charge Selection</td> <td>BILLABLE_CHG_ID</td> </tr> </tbody> </table>	If you have set the purpose of the template to....	Then, the default value is...	Account Selection	ACCT_ID	Adjustment Selection	ADJ_ID	Billable Charge Selection	BILLABLE_CHG_ID	Yes
If you have set the purpose of the template to....	Then, the default value is...									
Account Selection	ACCT_ID									
Adjustment Selection	ADJ_ID									
Billable Charge Selection	BILLABLE_CHG_ID									
From	Used to specify the table or view name. It indicates the table or view from which you want to retrieve the data.	Yes								

Field Name	Field Description	Mandatory (Yes or No)
Where	<p>Used to specify the condition based on which you want to retrieve the data from the table or view. You can use the bind variables in the where clause using the following syntax:</p> <pre>{column_name}{operator} : {bind_variable}</pre> <p>The bind variables must be alphanumeric and prefixed with the colon (:). There should not be any space between the column name, operator, and the bind variable. For example, CURRENCY_CD=:CURRENCY. All bind variables used in the where clause must be defined in the Bind Variables section.</p>	No

In addition, this tab contains the **Bind Variables** section where you can define the bind variables which are used in the where clause. The **Bind Variables** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bind Variable	Used to specify the bind variable (which is used in the where clause).	Yes (Conditional)
		Note: This field is required when you are defining a bind variable.
Data Type	Used to indicate the type of data that you want to store in the bind variable. The valid values are: <ul style="list-style-type: none"> • Date • Numeric • String 	Yes (Conditional)
		Note: This field is required when you are defining a bind variable.
Label	Used to specify the business label for the bind variable. The business label appears when you define and edit the criteria for selecting a set of usage accounts, adjustments, or billable charges.	Yes (Conditional)
		Note: This field is required when you are defining a bind variable.
Zone	Used to indicate a zone for the template.	Yes (Conditional)
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Zone/Code Description window appears.	Note: This field is required when you are defining a bind variable.

5. Modify the details in the **Main** tab, if required.

Note: If you want to define more than one bind variable, click the **Add** (+) icon in the **Bind Variables** section and then enter the required details. However, if you want to remove a bind variable from the **Bind Variables** section, click the **Delete** (🗑️) icon corresponding to the bind variable.

6. If required, click **Validate** to validate the syntax of the SELECT statement.

Note: If the syntax of the SELECT statement is correct, a message appears indicating that the SQL statement was validated successfully. However, if the syntax of the SELECT statement is incorrect, an error message occurs. You need to then correct the SELECT statement accordingly. Otherwise, the system will not allow you to save the template.

7. Define, edit or remove characteristics from the template, if required.
8. Click **Validate and Save**.

The system validates the syntax of the SELECT statement and then accordingly saves the changes made to the template.

Copying a Construct

Instead of creating a construct from scratch, you can create a new construct using an existing construct. This is possible through copying a construct. On copying a construct, the usage accounts, billable charges, and adjustments' selection criteria and characteristics are copied to the new construct. You can then edit the details, if required.

Prerequisites

To copy a construct, you should have:

- Construct (whose copy you want to create) defined in the application

Procedure

To copy a construct:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Invoice & Settlement Management** and then click **Construct**.
A sub-menu appears.
3. Click on **Search**.
The **Construct** screen appears.
4. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the construct whose copy you want to create.

The **Construct** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Construct Description	Used to specify the description for the new construct.	Yes
Effective From	Used to specify the date from when the new construct is effective.	Yes
	Note: The effective from date cannot be later than the effective to date.	
Effective To	Used to specify the date till when the new construct is effective.	No
	Note: The effective to date cannot be earlier than the effective from date.	

5. Enter the required details in the **Main** section and the **Characteristics** section.

6. Click **Save and Next**.

The **Construct** screen appears.

7. Edit the details of the new construct, if required.

Viewing the Construct Details

Procedure

To view the details of a construct:

1. Search for the construct in the **Construct** screen.
2. In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the construct whose details you want to view.

The **Construct** screen appears. It contains the following sections:

- **Construct Information** — Displays basic details about the construct.
- **Include Usage/Invoice Accounts** — Indicates the persons and their usage accounts or the Invoice accounts for which the construct is defined.
- **Include Bill Segments** — Indicates the bill segments of the usage accounts
- **Include Billable Charges** — Indicates the billable charges of the usage accounts which are billed through a settlement account.
- **Exclude Usage/Invoice Accounts** — Indicates the usage accounts of the persons to which this construct is not applicable.
- **Include Adjustments** — Indicates the adjustments of the usage accounts which are billed through an invoice account.
- **Linked Accounts** — Indicates the linked accounts which are included in the construct.

- View the basic details about the construct in the **Construct Information** section.

Construct (Used for Viewing)

The **Construct** screen allows you to view the details of the construct as well as the log entries. Through this screen, you can define, edit, delete various details of a construct and add log entries. It consists of the following tabs:

- [Construct - Main](#) on page 1007
- [Construct - Log](#) on page 1012

Construct - Main

The **Main** tab displays the details of the construct. It contains the following zone:

- [Construct Information](#)
- [Include Usage/Invoice Accounts](#)
- [Include Billable Charges](#)
- [Include Adjustments](#)
- [Include Bill Segments](#) on page 1010
- [Linked Accounts](#)
- [Exclude Usage/Invoice Accounts](#)

Construct Information

The **Construct Information** zone displays the basic details of the construct. It contains the following sections:

- Main** - The **Main** section contains the following fields:

Field Name	Field Description
Construct ID	Displays the construct ID.
Description	Displays the description of the construct.
Construct Type	Displays the type of the construct.
Status	Displays the status of the construct.
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays date till when the construct is effective.

- Characteristics** - The **Characteristics** section contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the construct.
Characteristic Type	Displays the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the construct.
	Note: The Edit button appears only when the construct is in the Draft status.
Delete	Used to delete the construct.
	Note: The Delete button appears only when the construct is in the Draft status.
Submit	Used to submit the details of the construct.
	Note: The Submit button appears only when the construct is in the Draft status.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the construct is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the construct business object.
Status Date Time	Displays the date and time when the construct status is updated
Create Date Time	Displays the date and time when the construct is created.

Construct - Log

The **Log** tab contains the following zone:

- [Construct Log](#) on page 1012

Construct Log

The **Construct Log** zone lists the complete trail of actions performed on the construct. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the construct.
Details	Displays the details about the action performed on the construct..
User	Indicates the user who has performed the action on the construct..
Log Type	Indicates the type of the log.

Column Name	Column Description
Related Object	Indicates the object or entity which is created when the action is performed on the construct..
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the construct. is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the construct by clicking the **Add Log Entry** link in the upper right corner of the **Construct Log** zone.

Including Usage Accounts in a Construct

While defining a construct, you need to indicate the persons and their usage accounts for which you want to define the construct. The system allows you to select a set of usage accounts based on the criteria using the account selection template.

Note: One usage account can belong to only one active construct and not to multiple active constructs at the same time.

Prerequisites

To include usage accounts in a construct, you should have:

- Persons, usage accounts, and account selection templates defined in the application

Procedure

To include usage accounts in a construct:

1. Ensure that **Include Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria Description	Displays the description of the criteria.

Field Name	Field Description
Criteria	Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Edit	On clicking the Edit (✎) icon in the Edit column, the Payment Request Type screen appears where you can edit the details of the payment request type.
Delete	On clicking the Delete (🗑) icon in the Delete column, you can delete the payment request type.

- Click the **Add** link at the top—right side of the **Include Usage/Invoice Accounts** zone.
The **Selection Criteria** screen appears.
- Enter the required details and click **Save**.
- If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 3.
- The **Usage Accounts** are included in the construct.

Including Usage and Invoice Accounts in a Construct

While defining a construct, you need to indicate the persons and their usage and invoice accounts for which you want to define the construct. The system allows you to select a set of usage and invoice accounts based on the criteria using the usage and invoice account selection template.

Note: One usage and invoice account can belong to only one active construct and not to multiple active constructs at the same time.

Prerequisites

To include usage and invoice accounts in a construct, you should have:

- Persons, usage and invoice accounts, and account selection templates defined in the application

Procedure

To include usage and invoice accounts in a construct:

- Ensure that **Include Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.

Field Name	Field Description
Template	Displays the name of the template.
Criteria Description	Displays the description of the criteria.
Criteria	Indicates the bind variable for which you need to define the value.
	Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Edit	On clicking the Edit () icon in the Edit column, the Selection Criteria screen appears where you can edit the construct.
Delete	On clicking the Delete () icon in the Delete column, you can delete the construct.

- Click the **Add** link at the top—right side of the **Include Usage/Invoice Accounts** zone.
The **Selection Criteria** screen appears.
- Enter the required details and click **Save**.
- If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 3.

The **Usage and Invoice Accounts** are included in the construct.

Excluding Usage Accounts from a Construct

The system will determine the usage accounts based on the criteria defined in the **Exclude Usage Accounts** section. There might be situations when you do not want to include all usage accounts that satisfy the criteria in the construct. In such cases, you can list the usage accounts that should be excluded from the construct.

Procedure

To exclude usage accounts from a construct:

- Ensure that **Exclude Usage/Invoice Accounts** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Account ID	Displays the account ID.

Field Name	Field Description
Account Information	Displays the information of the account. In addition, this column has a Context Menu () which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Edit	On clicking the Edit () icon in the Edit column, the Selection Criteria screen appears where you can edit the construct.
Delete	On clicking the Delete () icon in the Delete column, you can delete the construct.

- Click the **Add** link at the top—right side of the **Exclude Usage/Invoice Accounts** zone.

The **Exclude Usage Accounts** screen appears.

- Search for the usage account that you want to exclude from the construct.

Note: The **Search** () icon appears corresponding to this field. On clicking the **Search** icon, the **Account Search** window appears.

- If you want to exclude more than one usage account, click the **Add** () icon and then repeat the step 3.

Note: However, if you do not want a usage account to be excluded from the construct, click the **Delete** () icon corresponding to the excluded usage account.

- Enter the required details and click **Save**.

The **Usage Accounts** are excluded from the construct.

Including Billable Charges in a Construct

While defining a construct, you need to indicate the billable charges that you want to bill through an invoice account. You can use an existing invoice account. The system allows you to select a set of billable charges based on the criteria using the billable charge selection template.

Prerequisites

To include billable charges in a construct, you should have:

- Billable charge selection templates defined in the application
- Invoice account defined in the application (in case you want to use an existing invoice account)

Procedure

To include billable charges in a construct:

1. Ensure that **Include Billable Charges** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Invoice Account Information	Displays the information of the account. In addition, this column has a Context Menu () which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Edit	On clicking the Edit () icon in the Edit column, the Selection Criteria screen appears where you can edit the construct.
Delete	On clicking the Delete () icon in the Delete column, you can delete the construct.

2. Click the **Add** link at the top—right side of the **Include Billable Charges** zone.
The **Selection Criteria** screen appears.
3. Search for the billable charge selection template that you want to use for selecting a set of billable charges.
4. Enter the required details and click **Save**.
5. If you want to include more than one usage accounts, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 4.

The **Usage And Invoice Accounts** are included in the construct.

Including Bill Segments in a Construct

While defining a construct, you need to indicate the bill segments that you want to bill through a settlement account. You can use an existing settlement account. The system allows you to select multiple bill segments based on the criteria using the bill segment selection template.

Prerequisites

To include bill segments in a construct, you should have:

- Bill segment selection templates defined in the application
- Settlement account defined in the application (in case you want to use an existing settlement account)

Procedure

To include bill segments in a construct:

1. Ensure that **Include Bill Segments** zone is expanded while defining, editing, viewing or copying a construct on the **Construct** screen. It contains the following fields:

Field Name	Field Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Settlement Account Information	Displays the information of the settlement account. In addition, this column has a context menu (☰) which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Edit	On clicking the Edit (✏️) icon in the Edit column, the Selection Criteria screen appears where you can edit the construct.
Delete	On clicking the Delete (🗑️) icon in the Delete column, you can delete the construct.

2. Click the **Add** link at the top—right side of the **Include Bill Segments** zone.

The **Selection Criteria** screen appears.

3. Search for the bill segment selection template that you want to use for selecting bill segments.
4. Enter the required details and click **Save**.
5. If you want to include more than one bill segments, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 4.

The bill segments are included from the construct.

Including Adjustments in a Construct

While defining a construct, you need to indicate the adjustments that you want to bill through an invoice or settlement account. You can use an existing invoice or settlement account. The system allows you to select a set of adjustments based on the criteria using the adjustment selection template.

Prerequisites

To include adjustments in a construct, you should have:

- Adjustment selection templates defined in the application
- Invoice or settlement account defined in the application (in case you want to use an existing invoice account)

Procedure

To include adjustments in a construct:

1. Ensure that **Include Adjustments** zone is expanded while defining, editing, viewing or copying a construct in the **Construct** screen. It contains the following fields:

Column Name	Column Description
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.
Priority	Displays the priority of an account.
Template	Displays the name of the template.
Criteria	Indicates the bind variable for which you need to define the value. Note: The bind variables change depending on the account selection template that you have selected. If a business label is defined for the bind variable, the business label appears in this field.
Invoice Account Information	Displays the information of the invoice account. In addition, this column has a context menu () which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Edit	On clicking the Edit () icon in the Edit column, the Selection Criteria screen appears where you can edit the construct.
Delete	On clicking the Delete () icon in the Delete column, you can delete the construct.

2. Click the **Add** link at the top-right side of the **Include Adjustments** zone.
The **Selection Criteria** screen appears.
3. Search for the adjustment selection template that you want to use for selecting a set of adjustments.
4. Enter the required details and click **Save**.
5. If you want to include more than one usage adjustments, click **Save and Add New** button in the **Selection Criteria** screen and repeat step 4.

The **Adjustments** are included in the construct.

Activating a Construct

Only active constructs which are effective are used during the construct based billing process. Therefore, you need to activate a construct.

Prerequisites

To activate a construct, you should have:

- Target contract type (characteristic type) defined on usage accounts' contracts' contract type
- Default account creation algorithm defined using the C1-ACTCR-IC algorithm type
- Default contract creation algorithm defined using the C1-CTMP-IC algorithm type
- Assign the **C1-IC_AC** To Do type to a To Do role whose users must receive the To Do entries generated when the new invoice account is created while activating a construct

Procedure

To activate a construct:

1. Search for the draft construct in the **Construct** screen.
2. In the **Search Results** section, click **View**  icon in the **View** column corresponding to the construct that you want to activate.

The **Construct** screen appears.

3. Click **Submit** button in the **Construct Information** zone.

A message appears confirming whether you want to activate a construct.

Note: If you click on **Edit**  icon or **Copy** icon  in the respective columns while searching for a construct, click on **Save and Next** button and then click **Submit** button in the **Construct Information** zone.

4. Click **OK**.

The construct is activated.

Billing and Settlement Hierarchy

The **Billing and Settlement Hierarchy** screen allows you to search for a person/account hierarchy using various search criteria. Through this screen, you can search and view person/account hierarchy. It contains the following zones:

- [Search Hierarchy](#) on page 1022
- [Linked Accounts](#) on page 1011
- [Criteria](#) on page 1024

Search Hierarchy

The **Search Hierarchy** zone allows you to search for a person or an account with its billing/settlement hierarchy using various search criteria. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account with person's billing or settlement hierarchy or account's billing or settlement hierarchy. The valid values are: <ul style="list-style-type: none"> • Person-Billing Hierarchy • Person-Settlement Hierarchy • Account-Billing Hierarchy • Account-Settlement Hierarchy 	Yes
Person ID	Used to search for accounts which belong to a particular person. <p>Note: This field appears only when you select the Person-Billing Hierarchy and Person-Settlement Hierarchy option from the Search By list.</p> <p>The Search () icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p>	Yes
As on Date	Used to search for billing information which is effective on the specified date.	No
Person Name	Used to search for accounts which belong to a particular person. <p>Note: This field appears only when you select the Person-Billing Hierarchy and Person-Settlement Hierarchy option from the Search By list.</p>	Yes
View Option	Used to indicate whether you want to view invoice or usage account billing details. The valid values are: <ul style="list-style-type: none"> • Invoice Account — Used when you want to view the usage accounts billed through an invoice account. • Usage Account — Used when you want to view the invoice accounts through which a usage account is billed. <p>Note: This field appears only when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to specify the invoice or usage account ID.	No
	Note: This field appears only when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list.	

Note: You must specify at least one search criterion while searching for a person or an account.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Invoice Account Information	Displays the information of the invoice account.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This field appears only when you select the Person-Billing Hierarchy and Account-Billing Hierarchy (if View Option is selected as Settlement Account) option from the Search By list.
Settlement Account Information	Displays the information of the settlement account.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. This field appears only when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list.
Construct Information	Displays additional information about the construct.
	Note: It has a link. On clicking the link, the Construct screen appears where you can view the details of the respective construct.
Effective Start Date	Displays the date from when the construct is effective.
Effective End Date	Displays the date till when the construct is effective.

On clicking the **Broadcast** icon () corresponding to the account, **Linked Accounts** zone and **Criteria** zone appears with the details of the respective account.

Viewing Person Billing Hierarchy Details**Procedure**

To view the details of a construct with person billing hierarchy:

1. Search for the hierarchy in the **Billing and Settlement Hierarchy** screen.
2. Select **Account-Billing Hierarchy** option from the **Search By** list and **Usage Account** option from the **View Option** list in the **Search Hierarchy** zone.
3. Enter **Person Name** or **Person ID** and click **Search** button.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. In the **Search Results** section, click the **Broadcast**  icon corresponding to the construct whose details you want to view. The **Linked Accounts** and **Criteria** zones appear.

The details of all the active constructs with invoice only or invoice and settlement purposes are displayed.

5. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

Viewing Person Settlement Hierarchy Details

Procedure

To view the details of a construct with person settlement hierarchy:

1. Search for the construct in the **Billing and Settlement Hierarchy** screen.
2. Select **Person-Settlement Hierarchy** option from the **Search By** list in the **Search Hierarchy** zone.
3. Enter **Person Name** or **Person ID** and click **Search** button.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. In the **Search Results** section, click the **Broadcast**  icon corresponding to the construct whose details you want to view. The **Linked Accounts** and **Criteria** zones appear.

The details of all the active constructs with settlement only types of construct are displayed.

5. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

Viewing Usage Accounts Billed through an Invoice Account

Procedure

To view the usage accounts billed through an invoice account:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Invoice & Settlement Management** and then click **Billing and Settlement Hierarchy**.

The **Billing and Settlement Hierarchy** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an account with person's billing or settlement hierarchy or account's billing or settlement hierarchy. The valid values are: <ul style="list-style-type: none"> • Person-Billing Hierarchy • Person-Settlement Hierarchy • Account-Billing Hierarchy • Account-Settlement Hierarchy 	Yes
Person ID	Used to search for accounts which belong to a particular person. Note: This field appears only when you select the Person-Billing Hierarchy and Person-Settlement Hierarchy option from the Search By list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.	Yes
As on Date	Used to search for billing information which is effective on the specified date.	No
Person Name	Used to search for accounts which belong to a particular person. Note: This field appears only when you select the Person-Billing Hierarchy and Person-Settlement Hierarchy option from the Search By list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
View Option	<p>Used to indicate whether you want to view invoice or usage account billing details. The valid values are:</p> <ul style="list-style-type: none"> • Invoice Account — Used when you want to view the usage accounts billed through an invoice account. • Usage Account — Used when you want to view the invoice accounts through which a usage account is billed. <p>Note: This field appears only when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list.</p>	No
Account ID	<p>Used to specify the invoice or usage account ID.</p> <p>Note: This field appears only when you select the Account-Billing Hierarchy and Account-Settlement Hierarchy option from the Search By list.</p>	No

4. Select the **Invoice Account** option from the **View Option** list.
5. Enter the date and invoice account ID in the respective fields.
6. Click **Search**.

A list of usage accounts which are billed through the invoice account appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Usage Account	<p>Indicates the usage account which is billed through the invoice account.</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Construct Description	<p>Indicates the construct in which the usage account is included.</p> <p>Note: It has a link. On clicking the link, the Construct screen appears where you can view the details of the respective construct.</p>
Selection Criteria	Indicates the criteria used to select a set of usage account's charges or adjustments.

Viewing Invoice Accounts through which a Usage Account is Billed

Procedure

To view the invoice accounts through which a usage account is billed:

1. Search for the hierarchy in the **Billing and Settlement Hierarchy** screen.

2. Select **Account-Billing Hierarchy** option from the **Search By** list and **Usage Account** option from the **View Option** list in the **Search Hierarchy** zone.
3. Enter the **Account ID** and click **Search** button.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of invoice accounts through which the usage account’s charges or adjustments are billed appears in the search results. The **Search Results** section contains the following fields:

Field Name	Field Description
Construct Description	Indicates the construct in which the usage account is included.
	Note: It has a link. On clicking the link, the Construct screen appears where you can view the details of the respective construct.

In addition, this section contains the following columns:

Column Name	Column Description
Invoice Account	Indicates the invoice account through which the usage account’s charges or adjustments are billed.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Priority	Indicates the order in which the bill segments must be generated for a set of billable charges or adjustments on the invoice account.
Selection Criteria	Indicates the criteria used to select a set of billable charges or adjustments.

Viewing Settlement Accounts through which a Usage or Invoice Account is Settled

Procedure

To view construct in which a settlement account is used:

1. Search for the hierarchy in the **Billing and Settlement Hierarchy** screen.
2. Select **Account-Settlement Hierarchy** option from the **Search By** list and **Settlement Account** option from the **View Option** list in the **Search Hierarchy** zone.
3. In the **Search Results** section, click the **Broadcast**  icon corresponding to the construct whose details you want to view. The **Linked Accounts** and **Criteria** zones appear.

The details of all the active constructs linked with the settlement accounts are displayed.

4. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

Viewing Settlement Hierarchy of a Invoice or Usage Account**Procedure**

To view the settlement hierarchy details of a invoice or usage account:

1. Search for the construct in the **Billing and Settlement Hierarchy** screen.
2. Select **Account Settlement Hierarchy** option from the **Search By** list and **Usage or Invoice Account** option from the **View Option** list in the **Search Hierarchy** zone.
3. In the **Search Results** section, click the **Broadcast**  icon corresponding to the construct whose details you want to view. The **Linked Accounts** and **Criteria** zones appear.

The details of all the active constructs linked with the invoice or usage accounts are displayed.

4. View the details of the construct in the **Linked Accounts** zone and **Criteria** zone.

Chapter 15

Trial Billing

Topics:

- [Trial Bill \(Used for Searching\)](#)
- [Trial Bill \(Used for Viewing\)](#)

Oracle Revenue Management and Billing facilitates you to generate trial bills before actual bill is generated for an account. This helps to review the trial bill and make the required corrections before the actual bill is generated. The Trial Billing feature is currently designed and developed for open item accounting and not for balance forward accounting.

The process of trial and actual billing is identical. The only difference is that you cannot freeze and complete the trial bills. Also, during trial billing, the account balance is not updated. It is updated only when the actual bill is generated. You can generate trial bill only in case of regular billing, and not in case of adhoc billing. The trial bills can be generated only through the batch process. To generate trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** – This batch is used to generate pending trial or actual bills for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch is used to generate bill segments for pending trial or actual bills.
3. **Bill Completion (C1-BLPPR)** – This batch is used to generate post-processing bill segments in the pending trial or actual bills during the bill completion process. The adjustments, if any, created on the accounts are swept onto the pending trial or actual bills. In addition, the bill routing information and bill messages are stamped on the pending trial or actual bills. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. However, in case of pending trial bill, the currency conversion for adjustments is done, but the transfer adjustments are not created. Finally, the status of the actual bill is set to **Complete**, whereas the status of the trial bill remains as **Pending**.

Note: The adjustments which are in the **Freezable** status are not swept onto the trial bills. Only adjustments which are in the **Frozen** status are swept onto the trial bills.

The **Trial Bill** check box is added in the **Main** tab of the **Account** screen. If you leave the **Process All or Selected Accounts** parameter blank while executing the above batches, all accounts (that meet the criteria) irrespective of whether the **Trial Bill** check box is selected or not are considered for generating the trial bills. However, if the **Process All or Selected Accounts** parameter is set to **Y**, then only those accounts that meet the criteria and where the **Trial Bill** check box is selected are considered for generating the trial bills.

You can create an actual bill using a trial bill. While creating actual bills using trial bills, you need to specify the trial billing batch run number whose trial bills

you want to convert to the actual bills. To create actual bills using trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** - This batch generates pending actual bill for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch copies regular bill segments which are generated for the trial bill and stamps them onto the pending actual bill. It also copies the corresponding financial transactions (FTs).
3. **Bill Completion (C1-BLPPR)** – This batch copies post-processing bill segments which are generated for the trial bill and stamps them onto the pending actual bill. The bill routing information and bill messages are copied from the trial bill to the pending actual bill. The adjustment, if any, created on the account are swept onto the pending actual bill. They are not copied from the respective trial bill. If the adjustment currency is different from the account’s invoice currency, the transfer adjustment is created on the pending actual bill. Finally, the status of the actual bill is set to **Complete**.

The actual bill ID, bill segment ID and FT ID are different from the trial bill ID, bill segment ID and FT ID, respectively. If an actual bill is created using a trial bill, the system will stamp the trial bill ID on the actual bill. This helps you to track the trial bill of an actual bill.

The system allows you to view a trial bill through a user interface. It also allows you to print the trial bill in the PDF format. You can print a trial bill only when Oracle Documaker is integrated with Oracle Revenue Management and Billing. For more information about the batches, see *Oracle Revenue Management and Billing Batch Guide*.

Trial Bill (Used for Searching)

The **Trial Bill** screen allows you to search for a trial bill using various search criteria. It contains the following zone:

- [Search Trial Bill](#) on page 1033

Through this screen, you can navigate to the following screen:

- [Trial Bill \(Used for Viewing\)](#) on page 1036

Search Trial Bill

The **Search Trial Bill** zone allows you to search for trial bills using various search criteria. It contains the following two sections:

- **Search Criteria** — The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter the criteria in the Account ID and Trial Bill Description fields (which are in different criteria groups), the system searches for trial bills using the account ID. The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a trial bill using the trial bill details. The valid value is: <ul style="list-style-type: none"> • Trial Bill Details 	Yes
	Note: By default, the Trial Bill Details option is selected.	
Person ID	Used to search trial bills which are generated for a particular person.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.	
Trial Bill ID	Used to search for a particular trial bill.	No
Account ID	Used to search trial bills which are generated for a particular account.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Division	Used to search trial bills which are generated for accounts belonging to a particular division.	No
From Trial Bill Date	Used to search trial bills which are generated from a particular date onwards.	No
Invoice Currency	Used to search trial bills which are generated in a particular invoice currency.	No
To Trial Bill Date	Used to search trial bills which are generated till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Batch Run Date	Used to search trial bills which are generated on a particular batch run date.	No
Trial Bill Description	Used to search trial bills which are generated in a particular batch run.	Yes (Conditional)
		Note: This field is required when you are searching for trial bills using the batch run date.

Note: You must specify at least one search criterion while searching for a trial bill.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Information	Displays additional information about the trial bill. Note: It has a link. On clicking the link, the Trial Bill screen appears where you can view the details of the respective trial bill.
Current Charges	Displays the trial bill amount.
Account Information	Indicates the account for which the trial bill is generated. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Person Name	Indicates the person for whom the trial bill is generated.
Division	Indicates the division to which the account belongs.
Batch Run Date	Displays the date when the batch is executed to generate the trial bill.
Batch Run Number	Indicates the batch run in which the trial bill is generated.

Searching for a Trial Bill

Prerequisites

To search for a trial bill, you should have:

- Divisions and currencies defined in the application

Procedure

To search for a trial bill:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Financial** and then click **Trial Bill**.

The **Trial Bill** screen appears.

- Enter the search criteria in the **Search Trial Bill** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of trial bills that meet the search criteria appears in the **Search Results** section.

Viewing the Trial Bill Details

Procedure

To view the details of a trial bill:

- Search for the trial bill in the **Trial Bill** screen.
- In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.
The **Trial Bill** screen appears.
- View the basic details of the trial bill in the **Trial Bill** zone.
- View the segments of the trial bill in the **Trial Bill Segments** zone.
- View the calc lines of a trial bill segment in the **Trial Bill Segment Calc Lines** zone.
- View the service quantity details of a trial bill segment in the **Trial Bill Segment SQ Details** zone.
- View the financial details of a trial bill segment in the **Trial Bill Segment Financial Details** zone.

Trial Bill (Used for Viewing)

The **Trial Bill** screen allows you to:

- View the details of a trial bill, such as the trial bill summary, trial bill messages, and trial bill characteristics
- View the segments of a trial bill
- View the calculation lines, service quantity details, and financial details of a trial bill segment

It contains the following zones:

- [Trial Bill](#) on page 1036
- [Trial Bill Segments](#) on page 1037
- [Trial Bill Segment Calc Lines](#) on page 1039
- [Trial Bill Segment SQ Details](#) on page 1040
- [Trial Bill Segment Financial Details](#) on page 1040

Trial Bill

The **Trial Bill** zone displays the details of the trial bill. It contains the following sections:

- **Main** — This section provides basic information about the trial bill. It contains the following fields:

Field Name	Field Description
Trial Bill ID	Displays the trial bill ID.
Trial Bill Information	Displays additional information about the trial bill.
Trial Bill Description	Displays the description of the batch run in which the trial bill is generated.
Account Information	Indicates the account for which the trial bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

- **Trial Bill Summary** — This section summarizes the financial impact of the bill. It contains the following fields:

Field Name	Field Description
New Charges	Displays the total amount of frozen bill segment financial transactions which are linked to the trial bill.
Adjustments	Displays the total amount of frozen and/or canceled adjustment financial transactions which are linked to the trial bill.
Corrections	Displays the total amount of canceled and/or rebilled bill segment financial transactions which are linked to the trial bill.
Total	Displays the sum of new charges, adjustments, and corrections.
No. of Bill Segments in Error	Indicates the number of bill segments in the trial bill which are in the Error status.

- **Trial Bill Messages** — This section lists the bill messages that are stamped on the trial bill. It contains the following columns:

Column Name	Column Description
Message Code	Displays the code that uniquely identifies the bill message.
Message on Bill	Displays the bill message.
Priority	Indicates the priority which determines the order in which the bill message must be printed on the trial bill.
Insert Code	Indicates whether the bill message must be sent separately along with the trial bill.

- **Characteristics** — This section lists characteristics defined for the trial bill. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

In addition, this zone contains a button named **Display Trial Bill** which allows you to print a trial bill in the PDF format.

Trial Bill Segments

The **Trial Bill Segments** zone lists the segments of the trial bill. You can filter the trial bill segments using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search trial bill segments which are generated for a particular usage account.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Contract Type	Used to search trial bill segments which are generated against a particular type of contract.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.	
Trial Bill Segment Type	Used to search for a particular type of trial bill segments. The valid values are: <ul style="list-style-type: none"> • Post Processing • Regular 	No
Price Item	Used to search trial bill segments which are generated for a particular price item.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.	
Trial Bill Segment Status	Used to search trial bill segments in a particular status. The valid values are: <ul style="list-style-type: none"> • Error • Freezable 	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Segment ID	Displays the trial bill segment ID.
Status	Indicates the status of the trial bill segment. The valid values are: <ul style="list-style-type: none"> • Error • Freezable
Start Date	Displays the start date of the trial bill segment.
End Date	Displays the end date of the trial bill segment.
Calculated Amount (Pricing Currency)	Displays the trial bill segment amount in the pricing currency.
Price Item	Indicates the price item for which the trial bill segment is generated.
Pricing Parameters	Indicates the price item parameters which are used along with the price item for determining the price item pricing.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Price Assignment ID	Indicates the price item pricing which is used during calculation.

Column Name	Column Description
Billable Charge ID	Indicates the billable charge for which the trial bill segment is generated.
	Note: It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the respective billable charge.
Construct ID	Indicates the construct through which the trial bill segment is generated.
	Note: It has a link. On clicking the link, the Construct screen appears where you can view the details of the respective construct.

On clicking the **Broadcast**  icon corresponding to the trial bill segment, the **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, and **Trial Bill Segment Financial Details** zones appear with the details of the respective trial bill segment.

Trial Bill Segment Calc Lines

The **Trial Bill Segment Calc Lines** zone lists the calculation lines which indicate how the system calculated the trial bill segment amount. It contains the following columns:

Column Name	Column Description
Sequence No.	Indicates the sequence in which the calculation line is created while calculating the trial bill segment amount.
Description on Bill	Displays the summarized information about the calculation line that will be printed on the trial bill.
Calculated Amount (Pricing Currency)	Displays the calculated charge amount associated with the calculation line in the pricing currency.
Calculated Amount (Invoice Currency)	Displays the calculated charge amount associated with the calculation line in the invoice currency.
Print	Indicates whether information about the calculation line will be printed on the person's trial bill. The valid values are: <ul style="list-style-type: none"> • Yes • No
Appears in Summary	Indicates whether the calculation line amount will appear in the summary of the trial bill. The valid values are: <ul style="list-style-type: none"> • Yes • No
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Price Component ID	Indicates the price component which is used during calculation.

Column Name	Column Description
Service Quantity Identifier	Indicates the service quantity identifier (SQI) of the service quantity which is priced on the calculation line.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Base Amount	Displays the total amount derived from the cross-referenced lines that the current line then used to calculate the charge amount.
Rate Component Sequence	Indicates the sequence of the rate component on the effective rate version which is used while calculating the line.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Distribution Code	Indicates the distribution code associated with the rate component.

By default, the **Trial Bill Segment Calc Lines** zone does not appear in the **Trial Bill** screen. It appears only when you click the **Broadcast**  icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

Chapter 16

Bill Tolerance

Topics:

- [Prerequisites](#)

Oracle Revenue Management and Billing allows you to define tolerance limit for the bill amount. If the difference between the previous and current bill amount exceeds either positive or negative tolerance limit, a To Do entry is generated when you initiate the bill completion process. In addition, a To Do entry is generated for the first bill of an account during the bill completion process. Until you review and close the To Do entry, you cannot complete the bill. After you close the To Do entry, you need to initiate the bill completion process once again to freeze and complete the bill. Note that the To Do entries are generated only for regular bills and not for adhoc bills.

The **Bill Tolerance** feature is supported when you freeze and complete the regular bills through the user interface and through the charge based billing batch named **Bill Completion (C1-BLPPR)**. It is not yet supported when you freeze and complete the bill through the **BILLING** batch. In addition, this feature is not yet designed to work when bills are generated through the construct based billing batches.

For more information on how to setup the bill tolerance feature, refer to [Prerequisites](#) on page 1046.

Prerequisites

To setup the bill tolerance feature, you need to do the following:

- Define an algorithm of the C1-BILL_TOLR algorithm type and attach it to the **Pre-Bill Completion Review** system event on the respective customer class. This algorithm type has the following parameters:
 - **Positive Tolerance Percentage** – Used to specify the positive tolerance limit in percentage.
 - **Negative Tolerance Percentage** – Used to specify the negative tolerance limit in percentage.
 - **Positive Tolerance Amount** - Used to specify the positive tolerance limit in amount.
 - **Negative Tolerance Amount** - Used to specify the negative tolerance limit in amount.
 - **Tolerance To Do Type** – Used to indicate that To Do entry of the specified To Do type must be created when the bill amount difference exceeds either positive or negative tolerance limit. This parameter is mandatory.
 - **First Bill To Do Type** – Used to indicate that To Do entry of the specified To Do type must be created when the first bill is generated for an account. This parameter is mandatory.
 - **Tolerance To Do Role** - Used to indicate that users with the specified To Do role can only view the “%1 Bill Tolerance Limit Exceeded” To Do entry. This parameter is mandatory.
 - **First Bill To Do Role** - Used to indicate that users with the specified To Do role can only view the “%1 To-do generated for First Bill” To Do entry. This parameter is mandatory.

For example, if you set the **Positive Tolerance Percentage** parameter to 10 and the **Negative Tolerance Percentage** parameter to 15 in the algorithm, then in the following scenarios:

Current Bill Amount (USD)	Previous Bill Amount (USD)	Tolerance Amount Calculation	To Do Entry Generated (Yes or No)	Reason
120	100	$100+(100*10)/100=110$	Yes	Current Bill Amount is above Positive Tolerance Limit
115	105	$105+(105*10)/100=115.5$	No	Current Bill Amount is within Positive Tolerance Limit
80	100	$100-(100*15)/100=85$	Yes	Current Bill Amount is below Negative Tolerance Limit
95	110	$110-(110*15)/100=93.5$	No	Current Bill Amount is within Negative Tolerance Limit

If the tolerance limit is specified in both percentage and amount, the system calculates the tolerance amount using percentage and amount, considers the minimum value, and then creates the To Do entry accordingly. For example, if you set the **Positive Tolerance Percentage** parameter to 10, the **Positive Tolerance Amount** parameter to 15, the **Negative Tolerance Percentage** parameter to 5, and the **Negative Tolerance Amount** parameter to 25 in the algorithm, then in the following scenarios:

Current Bill Amount (USD)	Previous Bill Amount (USD)	Tolerance Amount Calculation	To Do Entry Generated (Yes or No)	Reason
120	100	$100+(100*10)/100=110$ (Derived using positive tolerance percentage) $100+15=115$ (Derived using positive tolerance amount) Minimum Value is 110 in Positive Scenario	Yes	Current Bill Amount is above Positive Tolerance Limit
180	200	$200-(200*5)/100=190$ (Derived using negative tolerance percentage) $200-25=175$ (Derived using negative tolerance amount) Minimum Value is 190 in Negative Scenario	Yes	Current Bill Amount is below Negative Tolerance Limit

During the tolerance amount calculation, the system checks whether the **Multi-Currency Accounts** feature is enabled or disabled. If the **Multi-Currency Accounts** feature is enabled, the system converts the previous and current bill amount in the division's base currency when the invoice currency is different from the division's base currency. Once the currency conversion is done, the tolerance amount is calculated and To Do entry is generated accordingly.

- Set the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration to **True** if you want to enable the currency conversion feature during tolerance amount calculation
- Define the Tolerance and First Bill To Do types using the following information:
 - **Navigation Option** - billMaint
 - **Priority** – Priority 10 – Highest
 - **Message Category** - 11105
 - **Message Number** – 11009
 - **Sort Keys** — Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Bill ID	Yes	Ascending

- **Drill Keys** — Define the following drill keys for the To Do type:

Table Name	Field Name
CI_BILL	BILL_ID

How to set the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration	Setting the C1_PPARM_FLG Feature Configuration on page 2182

Chapter 17

GL Account Validation

Topics:

- [Static GL Account Validation](#)
- [Dynamic GL Account Validation](#)

Oracle Revenue Management and Billing allows you to validate the GL account statically and dynamically. The static GL account validation means you can validate the GL account while creating or editing a distribution code. And, the dynamic GL account validation means you can validate the GL account while assigning it to trial and actual financial transactions through the batch process.

For more information about static GL account validation and dynamic GL account validation, refer to [Static GL Account Validation](#) on page 1050 and [Dynamic GL Account Validation](#) on page 1050, respectively.

Static GL Account Validation

If you want to validate the GL account while creating or editing a distribution code, you need to select the **Validate GL Account** check box in the **Distribution Code** screen. If the GL account is valid, the following string appears below the check box while saving the distribution code:

“GL Account is validated on YYYY-MM-DD”

And, if the GL account is invalid, the following string appears below the check box while saving the distribution code:

“GL Account is invalid”

If you want to enable the static GL account validation feature on the **Distribution Code** screen, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to the **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen. Both these algorithm types have one parameter named **GL Account Length**. You need to set the value of this parameter while creating the algorithm using the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type. If you attach an algorithm of the **C1-GLVAL** algorithm type, the system checks whether the length of GL account is greater than or equal to the value defined in the **GL Account Length** parameter. If the length is greater than or equal to the specified length, the GL account is considered as valid. And, if the length is less than the specified length, the GL account is considered as invalid.

And, if you attach an algorithm of the **C1-GLVAL-COB** algorithm type, the system checks whether the length of GL account is equal to the value defined in the **GL Account Length** parameter. If the length is equal to the specified length, the GL account is considered as valid. And, if the length is less than or greater than the specified length, the GL account is considered as invalid.

Dynamic GL Account Validation

If you want to validate GL account while assigning it to trial and actual financial transactions, you need to set the **Validate GL Account** parameter to **Y** while executing the batch. If the GL account is valid, the date when the GL account is validated is added in the **GLA_VAL_DT** column of the **CI_TRL_FT_GL** or **CI_FT_GL** table, respectively, depending on whether the GL account is assigned to a trial or actual financial transaction.

If you want to enable the dynamic GL account validation feature in the **C1-GLASN** or **GLASSGN2** batch, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to either of the following:

- The **GL Account Validation** algorithm entity in the **Algorithms** tab of the **Division** screen
- The **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

If the GL account validation algorithm is defined at both these algorithm spots, the algorithm defined at the division level always takes precedence over the algorithm defined in the installation options during dynamic GL account validation.

Chapter 18

Upload Validated Adjustment Data

Topics:

- [Prerequisites](#)
- [CSV File Format](#)
- [Adjustment Upload Request \(Without Approval\) Status Transition](#)
- [Adjustment Upload Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-ADJUPLD](#)
- [Adjustment Upload Request](#)

Oracle Revenue Management and Billing until now provided you with an ability to upload adjustment data received from an external source system and create adjustments using the **C1-ADUP1** and **C1-ADUP2** batches. However, there was no user interface available through which you can upload an adjustment data file and create adjustments from the adjustment records. Now, the system provides a user interface which helps you to upload an adjustment data file.

You can upload an adjustment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. At present, the system supports only the CSV file format. For more information about the CSV file format, see [CSV File Format](#) on page 1053.

While uploading an adjustment data file, you need to specify the upload request type using which you want to upload the adjustment data file. It is the upload request type which helps the system to determine:

- Whether adjustments must be created in the real time (i.e. immediately) or in the deferred mode (i.e. in the background)
- Whether the size of the adjustment data file exceeds the maximum file size defined in the upload request type
- Whether the adjustment data file must be approved by the approver before creating adjustments

All records are validated before uploading an adjustment data file. During the validation process, the system and custom validations (if any) are executed. If there is any invalid record, the system does not allow you to upload the adjustment data file. The system indicates the reason why the adjustment record could not pass through the validation process. You need to first correct the adjustment record in the CSV file and then upload the adjustment data file.

An upload request of the specified upload request type is created when an adjustment data file is successfully uploaded in the system. You can track an adjustment data file through an upload request. During the adjustment upload process, an adjustment upload request goes through various statuses in its lifecycle. For more information about the adjustment upload request statuses, see [Adjustment Upload Request \(Without Approval\) Status Transition](#) on page 1054 and [Adjustment Upload Request \(With Approval\) Status Transition](#) on page 1055.

Note that the lifecycle of an adjustment upload request is driven by the business object using which the adjustment upload request is created. An adjustment upload request business object named **C1-ADJUPLD** is shipped with the product. The adjustment upload feature explained in this section is documented based on the lifecycle and logic defined in the **C1-ADJUPLD** business object.

If required, the implementation team can create a custom adjustment upload request business object.

Once the adjustment upload request is created, you can perform various tasks, such as:

- Track the status of an adjustment upload request
- View the details of an adjustment upload request
- View all records of an adjustment data file
- Cancel an adjustment data file
- Create adjustments for an adjustment data file
- Submit the adjustment data file for approval
- Approve or reject an adjustment data file based on the observations

Prerequisites

To setup the adjustment upload process, you need to do the following:

- Define the required upload request types in the system
- Create a defer algorithm using the **C1-UPLDEFEVL** algorithm type
- Create an algorithm using the **C1-MTCIALG** algorithm type if you want to create adjustments using the Contract match type
- Create an algorithm using the **C1-MTCTALG** algorithm type if you want to create adjustments using the Contract Type match type
- Define the required characteristic types where the characteristic entity is set to Upload Request Type
- Define cancellation and rejection reasons for the **C1-ADJUPLD** business object
- Assign the **C1-ADJUP** To Do type to a To Do role whose users must receive To Do entries generated while submitting an upload request (i.e. an adjustment data file) for approval
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

CSV File Format

Before uploading an adjustment data file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the match type is Contract Type and account ID is not specified.
Account Identifier	Used to specify the account identifier.	Yes (Conditional) Note: This data is required when the match type is Contract Type and account ID is not specified.
Account ID	Used to indicate the account for which the adjustment must be created.	Yes (Conditional) Note: This data is required when the match type is Contract Type and the account identifier type and account identifier are not specified.

Column Name	Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which the adjustment must be created.	Yes
Match Value	Used to indicate the entity (such as contract, contract type, and so on) against which the adjustment must be created.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	Yes
	Note: The adjustment type must be included in the adjustment type profile which is attached to the contract type.	
Adjustment Amount	Used to specify the adjustment amount.	Yes
	Note: The adjustment amount precision must match the precision (decimal positions) defined for the currency.	
Currency Code	Used to indicate the currency in which the adjustment must be created.	Yes
Comments	Used to specify additional information about the adjustment.	No
Bill ID	Used to indicate the bill on which the adjustment must be created.	No
Arrears Date	Used to specify the date from when the amount is outstanding on the bill.	No
Char Type 1, Char Type 2,, Char Type 5	Used to indicate the characteristic that must be defined for the adjustment.	Yes (Conditional)
		Note: This data is required if the characteristic value is specified.
Char Value 1, Char Value 2,, Char Value 5	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: This data is required if the characteristic type is specified.

Note: If an adjustment data file contains column names other than those mentioned in the above table, the system will not upload the adjustment data file.

Adjustment Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is off:

Adjustment Upload Request (With Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is on:

Algorithms Used in C1-ADJUPLD

The following table lists the algorithms which are attached to the **C1-ADJUPLD** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-FLREQ-INF	C1-FLREQ-INF	<p>This algorithm formats the upload request information that appears throughout the system for the BO. The algorithm formats the information as follows: Upload Request type description, Status description, ID. This algorithm generates the upload request information string which appears throughout the application. This algorithm concatenates the following fields:</p> <ul style="list-style-type: none"> • Upload Request Type Description • Upload Request Description • Upload Request ID
Validation	C1-ADVALREQ	C1-ADVALREQ	<p>This algorithm will be called from a business service and is responsible for validating the uploaded CSV file and identify if any records are invalid. The validations to be performed are mentioned below: 1. Mandatory column data checks 2. Check for valid values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. 3. This algorithm will also call the match type algorithm linked to the request type to derive and validate the value for contract ID. This algorithm validates the uploaded CSV file and identifies invalid records, if any. The validations performed are as follows:</p> <ul style="list-style-type: none"> • Validating mandatory column data • Validating values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. • Invoke the match type algorithm linked to the request type to derive and validate the value for contract ID.

The following table lists the algorithms which are used in the lifecycle of the **C1-ADJUPLD** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Cancelled	-	-	-	-
Create Adjustment	Enter	C1-ADJUPLDEF	C1-ADJUPLDEF	<p>This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates and creates adjustment. It evaluates, if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the Enter status algorithm when the request object is changed to Create or Approved status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Deferred	Monitor	C1-ADJ-MNTR	C1-ADJ-MNTR	This algorithm will be invoked from the Upload Request Monitor batch. This will be responsible for BO transition from 'Deferred' to 'Creating' status. This algorithm is triggered from the Upload Request Monitor batch. This algorithm transitions the business object status from Deferred to Creating .
Pending for Approval	Enter	C1-ADJUPAPVL	C1-ADJUPAPVL	This algorithm will be responsible of creating To Do for the approver to approve or reject the uploaded file data. To Do will be created using the To Do Type linked to the request type to the approver(s) who are associated with the To Do Role linked to the request type. This will be invoked by the Enter Status algorithm when the Request object enters 'SUBMITTED - Pending For Approver' status. This algorithm creates the To Do using the To Do Type for the approver to approve or reject the uploaded file data. This To Do Type is linked to the request type to the approver(s) associated with the To Do Role linked to the request type. This algorithm is triggered by the Enter status algorithm when the request object enters Submitted - Pending For Approver status.
Approved	Enter	C1-ADJUPLDEF	C1-ADJUPLDEF	This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the Enter status algorithm when the request object is changed to Create or Approved status.
Rejected	-	-	-	-
Completed	-	-	-	-
Creating Adjustment	Enter	C1-ADJCRTION	C1-ADJCRTION	This algorithm is responsible for creating Adjustment for the uploaded file. The adjustment ID will be updated back in the request table to link the request with the adjustments. This algorithm creates an adjustment for the uploaded file. In addition, the adjustment ID is stamped on the adjustment and on the corresponding financial transaction.

Adjustment Upload Request

The **Adjustment Upload Request** screen allows you to search for an adjustment upload request using various search criteria. Through this screen, you can:

- Upload an adjustment data file
- Cancel an adjustment data file
- View the details of an adjustment upload request
- View all adjustment records which are uploaded through an adjustment data file
- Create adjustments for an adjustment data file
- Submit an adjustment data file for approval
- Approve or reject an adjustment data file
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

This screen consists of the following zones:

- [Search Adjustment Upload Request](#) on page 1059

Search Adjustment Upload Request

The **Search Adjustment Upload Request** zone allows you to search for an adjustment upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. At present, there is only one query option named **Upload Request**. On selecting the **Upload Request** query option, the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to search adjustment upload requests which are created using a particular upload request type.	No
Status	Used to search adjustment upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Completed • Create Adjustment • Creating Adjustment • Deferred • Pending • Rejected • Pending For Approval 	No

Field Name	Field Description	Mandatory (Yes or No)
Upload From Date	Used to search adjustment upload requests which are created from a particular date onwards.	No
	Note: By default, the current date appears in this field.	
To	Used to search adjustment upload requests which are created till a particular date.	No
	Note: By default, the current date appears in this field.	
File Name	Used to search an adjustment upload request which is created while uploading an adjustment data file.	No

Note: You must specify at least one search criterion while searching for an adjustment upload request.

- **Search Results** — On clicking the **Refresh** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the adjustment data file is uploaded in the system.
Upload Request Information	Displays information about the adjustment upload request.
	Note: It has a link. On clicking the link, the Adjustment Upload Request screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the adjustment upload request.
Upload Request Type	Indicates the upload request type using which the adjustment data file is uploaded in the system.
File Name	Displays the name of the adjustment data file.

You can upload an adjustment data file by clicking the **Upload** link in the upper right corner of this zone.

Adjustment Upload Request

The **Adjustment Upload Request** zone displays the details of the adjustment upload request. This zone contains the following sections:

- **Header** — This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	<p>Displays information about the adjustment upload request. The information string contains the following comma-separated values:</p> <ul style="list-style-type: none"> • Upload Request Type Description • Status Description • Upload Request ID <p>Note: This information string is generated using the C1-FLREQ-INF algorithm which is attached to the Information system event in the adjustment upload request business object. If you want to display a different information string, you need to define a custom algorithm type and attach the algorithm in the adjustment upload request business object.</p>
Status	<p>Indicates the status of the adjustment upload request. The valid values are:</p> <ul style="list-style-type: none"> • Approved • Cancelled • Completed • Create Adjustment • Creating Adjustment • Deferred • Pending • Rejected • Pending for Approval
Status Reason	<p>Indicates the reason why the adjustment data file is cancelled or rejected.</p> <p>Note: This field appears only when the adjustment upload request is in the Cancelled or Rejected status.</p>
File Name	<p>Displays the name of the adjustment data file for which the adjustment upload request is created.</p>

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Cancel File	<p>Used to cancel an adjustment data file.</p> <p>Note: The Cancel File button appears only when the adjustment upload request is in the Pending status.</p>

Button Name	Button Description
Create Adjustment	Used to create adjustments for the records which are uploaded through the adjustment data file.
	<p>Note: The Create Adjustment button appears only when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending status. The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.
Submit for Approval	Used to submit the adjustment data file for approval.
	<p>Note: The Submit for Approval button appears only when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending status. The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.
Approve	Used to approve the adjustment data file.
	<p>Note: The Approve button appears only when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending for Approval status. A user with the approval To Do role is reviewing the adjustment data file.
Reject	Used to reject the adjustment data file.
	<p>Note: The Reject button appears only when:</p> <ul style="list-style-type: none"> The adjustment upload request is in the Pending for Approval status. A user with the approval To Do role is reviewing the adjustment data file.

Note: The **Record Actions** section does not contain buttons when the status of the adjustment upload request is **Cancelled, Completed, Deferred, or Rejected**.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the adjustment upload request is created.
	<p>Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.</p>
Status Date/Time	Displays the date and time when the adjustment upload request status is updated.
Create Date/Time	Displays the date and time when the adjustment upload request is created.

Adjustment Data Records

The **Adjustment Data Records** zone lists the adjustment records which are uploaded through the adjustment data file. This zone contains the following columns:

Column Name	Column Description
Adjustment Information	<p>Displays information about the adjustment that is created using the adjustment record.</p> <p>Note:</p> <p>The data appears in this column only when the status of the adjustment upload request is Completed.</p> <p>It has a link. On clicking the link, the Adjustment screen appears with the details of the respective adjustment.</p> <p>The information string appears only when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options — Framework screen.</p>
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Adjustment Match Value	Indicates the contract against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1, Char Type 2,, Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 1, Char Value 2,, Char Value 5	Displays the value of the characteristic type.

Searching for an Adjustment Upload Request

Prerequisites

To search for an adjustment upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an adjustment upload request:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Financial** and then click **Adjustment Upload Request**.

The **Adjustment Upload Request** screen appears.

4. Enter the search criteria in the **Search Adjustment Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of adjustment upload requests that meet the search criteria appears in the **Search Results** section.

Uploading an Adjustment Data File

Prerequisites

To upload an adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To upload an adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.

A list appears.

2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Financial** and then click **Adjustment Upload Request**.

The **Adjustment Upload Request** screen appears.

4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Upload Adjustment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file.	Yes
	Note: The list includes only those upload request types which are in the Active status.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
	Note: You can replace an existing file only when the adjustment upload request is in the Pending or Cancelled status.	
File Name	Used to specify the name and path of the adjustment data file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the adjustment data file is available in the system.	

5. Select the upload request type using which you want to upload the adjustment data file.
6. Click the **Browse** button corresponding to the **File Name** field.
7. Browse to the location where the adjustment data file that you want to upload is available.
8. Click **Open**.

The adjustment data file name and path appears in the **File Name** field.

9. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description
Errors	Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column.
	Note: This column appears only when you click the Save button.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

Column Name	Column Description
Account ID	Indicates the account for which the adjustment must be created.
Match Type	Indicates the match type using which the adjustment must be created.
Match Value	Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Currency Code	Indicates the currency in which the adjustment must be created.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1	Indicates the characteristic that must be defined for the adjustment.
Char Value 1	Displays the value of the characteristic type.
Char Type 2	Indicates the characteristic that must be defined for the adjustment.
Char Value 2	Displays the value of the characteristic type.
Char Type 3	Indicates the characteristic that must be defined for the adjustment.
Char Value 3	Displays the value of the characteristic type.
Char Type 4	Indicates the characteristic that must be defined for the adjustment.
Char Value 4	Displays the value of the characteristic type.
Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 5	Displays the value of the characteristic type.

Note: If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

10. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.
- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

Replacing an Adjustment Data File

Prerequisites

To replace an existing adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

Procedure

To replace an existing adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Financial** and then click **Adjustment Upload Request**.

The **Adjustment Upload Request** screen appears.

4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Adjustment Upload Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file.	Yes
	Note: The list includes only those upload request types which are in the Active status.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
	Note: You can replace an existing file only when the adjustment upload request is in the Pending or Cancelled status.	
File Name	Used to specify the name and path of the adjustment data file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the adjustment data file is available in the system.	

5. Select the upload request type using which you want to upload the adjustment data file.
6. Select the **Replace Existing File** check box to indicate that you want to replace an existing adjustment data file.
7. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

8. Browse to the location where the adjustment data file that you want to upload is available.
9. Click **Open**.

The adjustment data file name and path appears in the **File Name** field.

10. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description
Errors	Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column.
	Note: This column appears only when you click the Save button.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Match Type	Indicates the match type using which the adjustment must be created.
Match Value	Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Currency Code	Indicates the currency in which the adjustment must be created.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1	Indicates the characteristic that must be defined for the adjustment.
Char Value 1	Displays the value of the characteristic type.
Char Type 2	Indicates the characteristic that must be defined for the adjustment.
Char Value 2	Displays the value of the characteristic type.
Char Type 3	Indicates the characteristic that must be defined for the adjustment.
Char Value 3	Displays the value of the characteristic type.
Char Type 4	Indicates the characteristic that must be defined for the adjustment.
Char Value 4	Displays the value of the characteristic type.
Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 5	Displays the value of the characteristic type.

Note: If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

11. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.
- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

Canceling an Adjustment Data File

There might be situations when incorrect adjustment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel an adjustment data file only when the adjustment upload request is in the **Pending** status.

Prerequisites

To cancel an adjustment data file, you should have:

- Cancellation reasons defined in the application

Note: While cancelling an adjustment data file, you need to specify the reason why you want to cancel the adjustment data file. You can select the appropriate cancellation reason only when you have defined the reasons for the **Cancelled** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

Procedure

To cancel an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to cancel) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to cancel.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Cancel File** in the **Adjustment Upload Request** zone.

The **Cancellation Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancellation Reason	Used to indicate the reason why you want to cancel the adjustment data file.	Yes

Note: The **Cancel File** button appears only when the adjustment upload request is in the **Pending** status.

4. Select the cancellation reason from the list.
5. Click **Save**.

The adjustment data file is cancelled. In addition, the status of the adjustment upload request is changed to **Cancelled**.

Creating Adjustments for an Adjustment Data File

Procedure

To create adjustments for an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file for which you want to create adjustments) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file for which you want to create adjustments.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Create Adjustment** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit

(defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Note:

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Create Adjustment** button appears only when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.

Submitting an Adjustment Data File for Approval

Procedure

To submit an adjustment data file for approval:

1. Search for the adjustment upload request (which is created while uploading the file that you want to submit for approval) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to submit for approval.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Submit for Approval** in the **Adjustment Upload Request** zone.

The status of the adjustment upload request is changed to **Pending for Approval**. A To Do is created using the **C1-ADJUP** To Do type. Users having a To Do role to which the **C1-ADJUP** To Do type is associated can view

the To Do from the **To Do List** screen. On clicking the **Submitted Message** link corresponding to the To Do, the **Adjustment Upload Request** screen appears where you can review the records of the adjustment data file.

Note:

The **Submit for Approval** button appears only when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.

Approving an Adjustment Data File

Procedure

To approve an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
 4. If the adjustment data file is appropriate, then click **Approve** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

Note:

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Approve** button appears only when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

Rejecting an Adjustment Data File**Prerequisites**

To reject an adjustment data file, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an adjustment data file, you need to specify the reason why you want to reject the adjustment data file. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

The system does not allow the submitter to approve or reject the adjustment data file.

Procedure

To reject an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

- Review the records of the adjustment data file in the **Adjustment Data Records** zone.
- If the adjustment data file is not appropriate, then click **Reject** in the **Adjustment Upload Request** zone.

The **Rejection Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rejection Reason	Used to indicate the reason why you want to reject the adjustment data file.	Yes

Note:

The **Reject** button appears only when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

- Select the rejection reason from the list.
- Click **Save**.

The adjustment data file is rejected. In addition, the status of the adjustment upload request is changed to **Rejected**.

Viewing the Log of an Adjustment Upload Request

Procedure

To view the log of an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to view.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.

- **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
 - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the adjustment upload request.
Details	Displays the details about the action performed on the adjustment upload request.
User	Indicates the user who has performed the action on the adjustment upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the adjustment upload request.
Status Reason	Indicates the reason why the adjustment upload request was rejected or cancelled.

Note: You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Related Topics

Adding a Log Entry for an Adjustment Upload Request

Procedure

To add a log entry for an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to edit.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
 - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
 - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

- Click the **Log** tab.

The **Log** tab appears.

- Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the adjustment upload request.	Not applicable
Log Details	Used to specify additional comments on the adjustment upload request.	Yes

- Enter the comments in the **Log Details** field.

- Click **Save**.

The log entry is added in the **Upload Request Log** zone.

Chapter 19

Foreign Exchange Gain Loss

Topics:

- [Foreign Exchange Gain Loss Calculation](#)
- [Prerequisites](#)
- [Foreign Exchange Gain Loss Scenarios](#)

In a multi-currency environment, financial transactions such as payments and adjustments created for an account can result in loss or gain due to fluctuations in the exchange rate at different point in time. This loss or gain is booked under the Foreign Exchange Gain Loss in the General Ledger and does not impact the account balance of the person.

The Foreign Exchange Gain or Loss might occur when:

- Exchange Rate for Invoice Currency to Division' Base Currency is different on Bill Completion Date and Payment Freeze Date

Assumption: In this case, the Invoice Currency and Payment Currency are same.

- Exchange Rate for Adjustment Currency to Division's Base Currency is different on Bill Completion Date and Adjustment Freeze Date

Assumption: In this case, the Adjustment Currency and Invoice Currency are same, but they are different from the Division's Base Currency.

- Exchange Rate for Adjustment Currency to Division's Base Currency is different on Bill Completion Date and Payment Freeze Date

Assumption: In this case, the Adjustment Currency, Payment Currency, and Invoice Currency are same, but they are different from the Division's Base Currency.

Oracle Revenue Management and Billing facilitates you to calculate the foreign exchange gain or loss and book it against an FXLG distribution code. However, you can calculate the foreign exchange gain or loss only when you have enabled the FT GL Extension feature. For more information on how the system calculates the foreign exchange gain loss, see [Foreign Exchange Gain Loss Calculation](#) on page 1080. For more information on how to setup the Foreign Exchange Gain Loss feature, see [Prerequisites](#) on page 1080.

Note: The system can calculate the foreign exchange gain or loss appropriately only when the Division's Base Currency is same on Bill Completion Date and Adjustment/Payment Freeze Date. Otherwise, erroneous results might occur.

Foreign Exchange Gain Loss Calculation

During the Foreign Exchange Gain Loss calculation, the system considers the following types of financial transactions:

- Payments (i.e. Pay Segments)
- Credit adjustments which are created against a bill after the bill completion
- Write-off adjustments which are created against a bill
- Write Up adjustments which are automatically created when you match a payment against a bill using the Bill Weighted match type
- Write Down adjustments which are automatically created when you match a payment against a bill using the Bill Weighted match type

Note: The system does not consider financial transactions which are created due to payment and adjustment cancellation.

To understand how foreign exchange gain or loss is calculated, see [Foreign Exchange Gain Loss Scenarios](#) on page 1081.

You can calculate the foreign exchange gain loss only when you have enabled the FT GL Extension feature. Oracle Revenue Management and Billing provides you a batch named **Foreign Exchange Loss Gain (C1-FXLG)** which calculates the foreign exchange gain loss. This batch considers payment and adjustment FTs when:

- Division's Base Currency is different from the Payment or Adjustment Currency
- Payment or Adjustment Freeze Date is different from the Bill Completion Date
- Match Event ID exists in the financial transaction
- FXLG_CALC_STATUS column corresponding to the financial transaction in the CI_FT table is set to N or NULL

Once the foreign exchange gain or loss is calculated, two entries are added corresponding to each financial transaction in the CI_FT_GL and CI_FT_GL_EXT tables. One entry for foreign exchange gain loss is booked against the distribution code for FXLG and another entry for foreign exchange gain loss is booked against the distribution code which is used for contract balancing. The foreign exchange loss is recorded as positive entry and the foreign exchange gain is recorded as negative entry. In the CI_FT_GL table, the foreign exchange gain loss is recorded in the financial transaction currency. And, in the CI_FT_GL_EXT table, the foreign exchange gain loss is recorded in the division's base currency.

You must execute the **Foreign Exchange Loss Gain (C1-FXLG)** batch prior to the **Assign GL Account to Financial Transaction (C1-GLASN)** or **Insert Records in CI_FTTEMP (GLASSGN1)** batch. For more information about these batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

Prerequisites

To setup the Foreign Exchange Gain Loss feature, you need to do the following:

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to enable FT GL extension feature
- Set the following parameters of an algorithm which is created using the **FTFREZGLEXTN** algorithm type to **R** (i.e. arrears date):
 - Exchange Rate Date Type for Adjustments with Freeze At Will Option (Valid Values: A, R, F, C)
 - Exchange Rate Date Type for Adjustments with Freeze At Bill Completion Option (Valid Values: A, R, F, C, E)
 - Exchange Rate Date Type for Payments (Valid Values: A, R, F, C)

- Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C)
- Create an algorithm of the **C1_CURALGBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature
- Create an algorithm of the **C1_CURALGAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature
- Create an algorithm of the **C1_CURALGPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature
- Set the **Bill Segment Freeze Option** to **Freeze At Bill Completion** in the **Billing** tab of the **Installation Options** screen
- Define the required exchange rates for currency conversion
- Define the distribution code against which you want to book the foreign exchange gain loss
- Set the **Adjustment Freeze Option** to **Freeze At Bill Completion** for adjustment types whose adjustments are presented and impacts the next bill of an account

C1_CURALGPY algorithm type	C1_CURALGPY on page 629

Foreign Exchange Gain Loss Scenarios

To understand how foreign exchange gain loss is calculated, refer to the following different scenarios:

- [Payment Scenarios](#) on page 1081
- [Credit Adjustment Scenarios](#) on page 1085
- [Write Off Adjustment Scenarios](#) on page 1086
- [Write Up/Down Adjustment Scenarios](#) on page 1088

Payment Scenarios

The following scenarios indicate how foreign exchange gain or loss is calculated for payments which are matched against bills:

- Scenario 1 — Payment Freeze Date = Bill Completion Date; Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-01-2001)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	50
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-01-2001)
Base Currency	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-
Payment Amount	-	1000
Payment Amount in Base Currency on Bill Completion Date	-	1000*50 = 50000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	1000*50 = 50000
Foreign Exchange Gain or Loss	-	Not applicable

Observation: In the Scenario 1, the foreign exchange gain or loss is not applicable because Bill Completion Date and Payment Freeze Date are same.

- Scenario 2 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Same; Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-02-2001)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	50
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	1000*50 = 50000	-
Payment Amount	-	1000
Payment Amount in Base Currency on Bill Completion Date	-	1000*50 = 50000
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	1000*50 = 50000
Foreign Exchange Gain or Loss	-	50000-50000 = 0

Observation: In the Scenario 2, there is no foreign exchange gain or loss because the exchange rate is same on the Bill Completion Date and Payment Freeze Date.

- Scenario 3 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-02-2001)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	51

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-02-2001)
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	$1000 * 50 = 50000$	-
Payment Amount	-	1000
Payment Amount in Base Currency on Bill Completion Date	-	$1000 * 50 = 50000$
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	$1000 * 51 = 51000$
Foreign Exchange Gain or Loss	-	$50000 - 51000 = -1000$

Observation: In the Scenario 3, there is foreign exchange gain of 1000 INR on 01-02-2001 because of difference in exchange rate.

- Scenario 4 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Same; Partial Payments; Total Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	First Partial Payment Freeze Date (01-02-2001)	Second Partial Payment Freeze Date (01-03-2001)
Exchange Rate From	USD	USD	USD
Exchange Rate To	INR	INR	INR
Exchange Rate	50	50	50
Invoice/Payment Currency	USD	USD	USD
Invoice Amount	1000	-	-
Base Currency	INR	INR	INR
Booked Revenue in Base Currency	$1000 * 50 = 50000$	-	-
Payment Amount	-	500	500
Payment Amount in Base Currency on Bill Completion Date	-	$500 * 50 = 25000$	$500 * 50 = 25000$
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	$500 * 50 = 25000$	$500 * 50 = 25000$
Foreign Exchange Gain or Loss	-	$25000 - 25000 = 0$	$25000 - 25000 = 0$

Observation: In the Scenario 4, there is no foreign exchange gain or loss because the exchange rate is same on the Bill Completion Date and Payment Freeze Date.

- Scenario 5 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Payments; Total Payment Amount = Invoice Amount

	Bill Completion Date (01-01-2001)	First Payment Date (01-02-2001)	Partial Freeze Date (01-03-2001)
Exchange Rate From	USD	USD	USD
Exchange Rate To	INR	INR	INR
Exchange Rate	50	51	48
Invoice/Payment Currency	USD	USD	USD
Invoice Amount	1000	-	-
Base Currency	INR	INR	INR
Booked Revenue in Base Currency	$1000 * 50 = 50000$	-	-
Payment Amount	-	800	200
Payment Amount in Base Currency on Bill Completion Date	-	$800 * 50 = 40000$	$200 * 50 = 10000$
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	$800 * 51 = 40800$	$200 * 48 = 9600$
Foreign Exchange Gain or Loss	-	$40000 - 40800 = -800$	$10000 - 9600 = 400$

Observation: In the Scenario 5, there is foreign exchange gain of 800 INR on 01-02-2001 and foreign exchange loss of 400 INR on 01-03-2001.

- Scenario 6 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Amount > Invoice Amount (i.e. Overpayment)

	Bill Completion Date (01-01-2001)	Payment Freeze Date (01-02-2001)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	49
Invoice/Payment Currency	USD	USD
Invoice Amount	1000	-
Base Currency	INR	INR
Booked Revenue in Base Currency	$1000 * 50 = 50000$	-
Payment Amount	-	1200
Payment Amount in Base Currency on Bill Completion Date	-	$1000 * 50 = 50000$
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	$1000 * 49 = 49000$
Foreign Exchange Gain or Loss	-	$50000 - 49000 = 1000$

Observation: In the Scenario 6, there is foreign exchange loss of 1000 INR on 01-02-2001 because of difference in exchange rate. Note that the foreign exchange gain or loss is not calculated on the overpayment amount (i.e. 200 USD).

- Scenario 7 — Payment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Payments; Total Payment Amount > Invoice Amount (i.e. Overpayment)

	Bill Completion Date (01-01-2001)	First Partial Payment Freeze Date (01-02-2001)	Second Partial Payment Freeze Date (01-03-2001)
Exchange Rate From	USD	USD	USD
Exchange Rate To	INR	INR	INR
Exchange Rate	50	49	52
Invoice/Payment Currency	USD	USD	USD
Invoice Amount	1000	-	-
Base Currency	INR	INR	INR
Booked Revenue in Base Currency	$1000 * 50 = 50000$	-	-
Payment Amount	-	800	400
Payment Amount in Base Currency on Bill Completion Date	-	$800 * 50 = 40000$	$200 * 50 = 10000$
Realized Revenue (Payment Amount) in Base Currency on Payment Freeze Date	-	$800 * 49 = 39200$	$200 * 52 = 10400$
Foreign Exchange Gain or Loss	-	$40000 - 39200 = 800$	$10000 - 10400 = -400$

Observation: In the Scenario 7, there is foreign exchange loss of 800 INR on 01-02-2001 and foreign exchange gain of 400 INR on 01-03-2001. Note that the foreign exchange gain or loss is not calculated on the overpayment amount (i.e. 200 USD).

Note: If a payment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Credit Adjustment Scenarios

An adjustment which is posted against a bill after the bill completion is treated as payment towards the bill. The following scenarios indicate how foreign exchange gain or loss is calculated for credit adjustments which are created against a bill after the bill completion:

- Scenario 1 — Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different

	Bill Completion Date (04-30-2015)	Adjustment Freeze Date (05-10-2015)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	40
Invoice/Adjustment Currency	INR	INR
Invoice Amount	1000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	$1000 / 50 = 20$	-

	Bill Completion Date (04–30–2015)	Adjustment Freeze Date (05–10–2015)
Adjustment Amount	-	400
Adjustment Amount in Base Currency on Bill Completion Date	-	$400/50 = 8$
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	$400/40 = 10$
Foreign Exchange Gain or Loss	-	$8-10 = -2$

Observation: In the Scenario 1, there is foreign exchange gain of 2 USD on 05–10–2015 because of difference in exchange rate.

- Scenario 2 — Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different

	Bill Completion Date (04–11–2014)	Adjustment Freeze Date (04–30–2014)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	55	60
Invoice/Adjustment Currency	INR	INR
Invoice Amount	2000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	$2000/55 = 36.36$	-
Adjustment Amount	-	200
Adjustment Amount in Base Currency on Bill Completion Date	-	$200/55 = 3.63$
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	$200/60 = 3.33$
Foreign Exchange Gain or Loss	-	$3.63-3.33 = 0.30$

Observation: In the Scenario 2, there is foreign exchange loss of 0.30 USD on 04–30–2014 because of difference in exchange rate.

Note:

Multi-currency is not supported while creating credit adjustments against a bill after the bill completion. Therefore, the credit adjustment's currency must be same as the invoice currency.

If the amount of credit adjustment exceeds the bill amount, you need to match the excess amount against another bill while freezing the adjustment. Otherwise, the adjustment is not considered during foreign exchange gain loss calculation.

If a credit adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Write Off Adjustment Scenarios

The following scenarios indicate how foreign exchange gain or loss is calculated for write off adjustments which are created against a bill:

- Scenario 1 — Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Full Bill Amount is Written Off

	Bill Completion Date (04-30-2015)	Adjustment Freeze Date (05-10-2015)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	50	60
Invoice/Adjustment Currency	INR	INR
Invoice Amount	1000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	$1000/50 = 20$	-
Adjustment Amount	-	1000
Adjustment Amount in Base Currency on Bill Completion Date	-	$1000/50 = 20$
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	$1000/60 = 16.67$
Foreign Exchange Gain or Loss	-	$20 - 16.67 = 3.33$

Observation: In the Scenario 1, there is foreign exchange loss of 3.33 USD on 05-10-2015 because of difference in exchange rate.

- Scenario 2 — Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Partial Bill Amount is Written Off

	Bill Completion Date (01-30-2014)	Adjustment Freeze Date (03-03-2015)
Exchange Rate From	USD	USD
Exchange Rate To	INR	INR
Exchange Rate	60	55
Invoice/Adjustment Currency	INR	INR
Invoice Amount	1000	-
Base Currency	USD	USD
Booked Revenue in Base Currency	$1000/60 = 16.67$	-
Adjustment Amount	-	600
Adjustment Amount in Base Currency on Bill Completion Date	-	$600/60 = 10$
Realized Revenue (Adjustment Amount) in Base Currency on Adjustment Freeze Date	-	$600/55 = 10.91$
Foreign Exchange Gain or Loss	-	$10 - 10.91 = -0.91$

Observation: In the Scenario 2, there is foreign exchange gain of 0.91 USD on 03-03-2015 because of difference in exchange rate.

Note: If a write off adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Write Up/Down Adjustment Scenarios

If the lower or upper tolerance limit defined in the Bill Weighted Payment Distribution algorithm is met when a payment is matched against a bill using the Bill Weighted match type, the Write Up or Write Down adjustment is automatically created. The following scenarios indicate how foreign exchange gain or loss is calculated for write up or write down adjustments:

- Scenario 1 — Payment/Adjustment Freeze Date Not Equal to Bill Completion Date; Exchange Rate is Different; Payment Matched against a Bill with Two Bill Segments (BS1 — 50 INR; BS2 — 50 INR)

	Bill Completion Date (04–30–2015)	Payment Freeze Date (05–14–2015)	Write Up/Down Adjustment (Against BS1) Freeze Date (05–14–2015)	Write Up/Down Adjustment (Against BS2) Freeze Date (05–14–2015)
Exchange Rate From	USD	USD	USD	USD
Exchange Rate To	INR	INR	INR	INR
Exchange Rate	50	45	45	45
Invoice/Payment/Adjustment Currency	INR	INR	INR	INR
Invoice Amount	100	-	-	-
Base Currency	USD	USD	USD	USD
Booked Revenue in Base Currency	$100/50 = 2$	-	-	-
Payment/Adjustment Amount	-	95	2.5	2.5
Payment/Adjustment Amount in Base Currency on Bill Completion Date	-	$95/50 = 1.9$	$2.5/50 = 0.05$	$2.5/50 = 0.05$
Realized Revenue (Payment/Adjustment Amount) in Base Currency on Payment/Adjustment Freeze Date	-	$95/45 = 2.11$	$2.5/45 = 0.056$	$2.5/45 = 0.056$
Foreign Exchange Gain or Loss	-	$1.9 - 2.11 = -0.21$	$0.05 - 0.056 = -0.006$	$0.05 - 0.056 = -0.006$

Observation: In the Scenario 1, two Write Up adjustments are created — one against BS1 and another against BS2. While freezing the payment which is matched against the bill, there is foreign exchange gain of 0.21 USD

on 05-14-2015. However, while freezing the Write Up adjustments which are created against BS1 and BS2, there is foreign exchange gain of 0.006 and 0.006 USD, respectively, on 05-14-2015.

Note: If a write up or write down adjustment is cancelled, reverse financial transactions are created. These financial transactions are not considered during the foreign exchange gain loss calculation.

Chapter 20

Payment Request

Topics:

- [Prerequisites](#)
- [Payment Request \(Without Approval\) Status Transition](#)
- [Payment Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-PaymentRequest](#)
- [Algorithms Used in C1-PaymentTransferRequest](#)
- [Payment Request Type](#)

- [Payment Request \(Used for Viewing\)](#)
- [Payment Event Summary](#)

Oracle Revenue Management and Billing facilitates you to create and transfer payments through a payment request. While creating a payment creation or transfer request, you need to specify the payment request type using which you want to create the payment request. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing the payments

While creating a payment creation request, you need to specify the tender amount and match type details. However, while creating a payment transfer request, you need to specify the transfer amount and match type details. The **Payment Request** feature supports the following match types :

- By Bill Regular (Match Entity: Account)
- By Bill (Match Entity: Bill)
- By Bill Weighted (Match Entity: Account)
- By Bill Segments (Match Entity: Account)
- By Suspense Contract (Match Entity: Account)
- By Settlement ID (Match Entity: Account)

You can specify multiple match types along with the entity (such as account or bill) in the payment request. Depending on the match type and match entity selected, the entities (such as unpaid bills, bill segments, or contracts) of the account are considered against which you can match the tender or transfer (payment) amount. Once you update the payment amount against the required entities, you can distribute the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tender are created. The payments are created in the **Freezable** status. If any error occurs while creating a payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating a new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

The system allows you to view the pay segments of a payment and edit the pay segment amount, if required. You can edit the pay segment amount before submitting the payment request for approval or before freezing the payments. If the approval is not required for the payment request, you can directly freeze the payments created through the payment request. However, if the approval is required for the payment request, you need to submit the payment request for approval. Based on the observations, the approver might approve or reject the payment request. On approving a payment creation request or freezing the payments, the status of the payments is changed from **Freezable** to **Frozen**. However, on approving a payment transfer request or freezing the payments, the system does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

On rejecting a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, on rejecting a payment transfer request, the new payments which are created through the payment transfer request are deleted.

During the payment request process, a payment creation or transfer request goes through various statuses in its lifecycle. For more information about the payment request statuses, see [Payment Request \(Without Approval\) Status Transition](#) on page 1094 and [Payment Request \(With Approval\) Status Transition](#) on page 1095.

Note that the lifecycle of a payment creation and transfer requests is driven by the respective business object using which the payment creation and transfer requests are created. The **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects are shipped with the product. The payment request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects.

For more information on how to setup the payment request process, see [Prerequisites](#) on page 1093.

Prerequisites

To setup the payment request process, you need to do the following:

- Define the following match types:

Match Type	Description	Payment Distribution Override Algorithm	Manual Distribution Algorithm	Entity Type	Match Type Search Zone	Entity Flag
BILLR	By Bill Regular	C1-PDOV-PYBL	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILLW	By Bill Weighted	C1-PDOV-WTBS	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILL-WO	By Bill Weighted Outstanding Amount	C1-PDOV-WTOA		Account	C1_ACCT_SRCH	Bill
BILLSEG	By Bill Segment	C1-PDOV-PYBS	C1-MD-BSEG	Account	C1_ACCTSRCH	Bill Segment
BYSATY	By Suspense Contract	C1-PDOV-SATY	C1-MD-ONSA	Account	C1_ACCTSRCH	Contract
SETT-ID	By Settlement ID	C1-PDOV-PYSL	C1-MD-SID	Account	C1_ACCTSRCH	Settlement
BYBILL	By Bill	C1-PDOV-PYBL or C1-PDOV-WTBS	C1-MDBYBILL	Bill	CI_BILL	Bill
BILL-BS	By Bill - Pay By Bill Segment Oldest	C1-PDOV-BSDT		Account	C1_ACCT_SRCH	Bill

Note: The **C1-PDOV-BSDT** algorithm for the bill match type BILL-BS is used to distribute the amount among the bill segments of the bill in the order of bill segment start date.

Note: The **C1-PDOV-WTOA** algorithm for the bill match type BILL-WOA performs the bill weighted calculation based on the unpaid amount on the bill segment.

- Create a defer algorithm using the **C1-PAY-COUNT** algorithm type
- Define the required payment request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Request Type**
- Define the required characteristic types where the characteristic entity is set to **Payment Tender**
- Define rejected status reasons for the **C1-PaymentRequest** business object
- Define rejected status reasons for the **C1-PaymentTransferRequest** business object
- Define payment cancelation or transfer reasons through the **Payment Cancel Reason** screen

- Assign the **C1-PAYRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a payment request for approval
- Set the **Payment Portal Configuration (C1-PAYPORTAL)** feature configuration
- Set the **Payment Request-Sort Distribution data (C1-PYREQSRT)** feature configuration
- Set the batch control type of the **Payment Request Periodic Monitor (C1-PAYRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Payment Request (Without Approval) Status Transition

The following figure graphically indicates how a payment creation or transfer request moves from one status to another when the approval workflow is off:

Payment Request (With Approval) Status Transition

The following figure graphically indicates how a payment creation or transfer request moves from one status to another when approval workflow is on:

Algorithms Used in C1-PaymentRequest

The following table lists the algorithms which are attached to the **C1-PaymentRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PAYRQ-INF	C1-PAYRQ-INF	This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> • Payment Request Type Description • Payment Request Status Description • Payment Request ID
Post-Processing	C1-PAYREQPOS	C1-PAYREQPOS	This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the C1_PAY_DISTRIBUTION table when you remove a match type while editing a payment request.

System Event	Algorithm	Algorithm Type	Description
Validation	C1-PAYREQVAL	C1-PAYREQVAL	<p>This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the Generate Auto Pay option is selected. This algorithm is triggered when you click the Manual Distribution button.</p> <p>Note: You do not specify the tender and auto pay details while creating a payment transfer request.</p>

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-PAY-DFT	C1-PAY-DFT	This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.
Draft	Exit	C1-PAYDFTEXT	C1-PAYDFTEXT	This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the Distribute button.
Approval In Progress	Enter	C1-PAY-PFA	C1-PAY-PFA	This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.
Approval In Progress	Exit	C1-PAYPFAEXT	C1-PAYPFAEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Enter	C1-PAY-APP	C1-PAY-APP	This algorithm changes the status of the payment request to Freezing when the approver clicks the Approve button.
Distribute	Enter	C1-PAY-DIST	C1-PAY-DIST	This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to Distributed . However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to Deferred Distribution .
Deferred Distribution	Monitor	C1-PAY-MONT	C1-PAY-MONT	This algorithm is invoked from the Payment Request Periodic Monitor (C1-PAYRQ) batch. It changes the status of the payment request from Deferred Distribution to Distributed .
Distributed	Enter	C1-PAYCREATE	C1-PAYCREATE	This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the C1_PAY_DISTRIBUTION table where the payment amount is greater than or less than zero. The status of the payments is set to Freezable . If any error occurs while creating a payment, the status of the payment is set to Error . The payment event ID is updated corresponding to the payment request in the C1_PAY_REQ table. Finally, the status of the payment request is changed to Distributed .
Distributed	Exit	C1-FRZ-VALID	C1-FRZ-VALID	This algorithm is triggered when you click the Submit for Approval or Freeze button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.

Status	System Event	Algorithm	Algorithm Type	Description
Distributed	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Freezing	Enter	C1-PAY-V-FRZ	C1-PAY-V-FRZ	This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity.
Freezing	Enter	C1-PAY-FRZ	C1-PAY-FRZ	<p>This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:</p> <ul style="list-style-type: none"> Changes the status of the payments which are in the Freezable status to Frozen Changes the status of the payment event to Balanced when there are no payments in the Error status <p>However, if you are freezing the payments of a payment transfer request, this algorithm does the following:</p> <ul style="list-style-type: none"> Changes the status of the old payments which are in the Frozen status to Cancelled Deletes the old payments which are in the Error status Changes the status of the new payments which are in the Freezable status to Frozen Changes the status of the payment event to Balanced when there are no payments in the Error status
Processed	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Rejected	Enter	C1-PAY-RJT	C1-PAY-RJT	This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.
Discarded	Enter	C1-PAY-RJT	C1-PAY-RJT	This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.
Distribute And Freeze	Enter	C1-ISFREEZE	C1-ISFREEZE	This algorithm invokes the distribute algorithm and set Flag in the payment request clob.

Algorithms Used in C1-PaymentTransferRequest

The following table lists the algorithms which are attached to the **C1-PaymentTransferRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PAYRQ-INF	C1-PAYRQ-INF	This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> • Payment Request Type Description • Payment Request Status Description • Payment Request ID
Post-Processing	C1-PAYREQPOS	C1-PAYREQPOS	This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the C1_PAY_DISTRIBUTION table when you remove a match type while editing a payment request.

System Event	Algorithm	Algorithm Type	Description
Validation	C1-PAYREQVAL	C1-PAYREQVAL	<p>This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the Generate Auto Pay option is selected. This algorithm is triggered when you click the Manual Distribution button.</p> <p>Note: You do not specify the tender and auto pay details while creating a payment transfer request.</p>

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentTransferRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-PAY-DFT	C1-PAY-DFT	This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.
Draft	Exit	C1-PAYDFTEXT	C1-PAYDFTEXT	This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the Distribute button.
Approval In Progress	Enter	C1-PAY-PFA	C1-PAY-PFA	This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.
Approval In Progress	Exit	C1-PAYPFAEXT	C1-PAYPFAEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Approved	Enter	C1-PAY-APP	C1-PAY-APP	This algorithm changes the status of the payment request to Freezing when the approver clicks the Approve button.
Distribute	Enter	C1-PAY-DIST	C1-PAY-DIST	This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to Distributed . However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to Deferred Distribution .
Deferred Distribution	Monitor	C1-PAY-MONT	C1-PAY-MONT	This algorithm is invoked from the Payment Request Periodic Monitor (C1-PAYRQ) batch. It changes the status of the payment request from Deferred Distribution to Distributed .

Status	System Event	Algorithm	Algorithm Type	Description
Distributed	Enter	C1-PAYTRANS	C1-PAYTRANS	This algorithm is invoked when the status of the payment transfer request is changed to Distributed . A payment is created for each record in the C1_PAY_DISTRIBUTION table where the payment amount is greater than or less than zero. The status of the new payments is set to Freezable . If any error occurs while creating a payment, the status of the payment is set to Error . The payment event ID is updated corresponding to the payment request in the C1_PAY_REQ table. Finally, the status of the payment request is changed to Distributed .
Distributed	Exit	C1-FRZ-VALID	C1-FRZ-VALID	This algorithm is triggered when you click the Submit for Approval or Freeze button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.
Distributed	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Freezing	Enter	C1-PAY-V-FRZ	C1-PAY-V-FRZ	This algorithm validates the payment that already exists on the entity. It checks the unpaid amount of the entity.

Status	System Event	Algorithm	Algorithm Type	Description
Freezing	Enter	C1-PAY-FRZ	C1-PAY-FRZ	<p>This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status <p>However, if you are freezing the payments of a payment transfer request, this algorithm does the following:</p> <ul style="list-style-type: none"> • Changes the status of the old payments which are in the Frozen status to Cancelled • Deletes the old payments which are in the Error status • Changes the status of the new payments which are in the Freezable status to Frozen • Changes the status of the payment event to Balanced when there are no payments in the Error status
Processed	-	-	-	-
Rejected	Enter	C1-PAY-RJT	C1-PAY-RJT	<p>This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Discarded	Enter	C1-PAY-RJT	C1-PAY-RJT	This algorithm is triggered when the approver clicks the Reject button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.
Distribute And Freeze	Enter	C1-ISFREEZE	C1-ISFREEZE	This algorithm invokes the distribute algorithm and set Flag in payment request clob.
Cancel	-	-	-	-

Payment Request Type

Oracle Revenue Management and Billing allows you to define a payment request type using which you can create a payment request. A payment request of the specified payment request type is created when you manually distribute the tender or payment amount. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing payments

The **Payment Request Type** screen allows you to define, edit, copy, and delete a payment request type. This screen consists of the following zones:

- [Payment Request Type List](#) on page 1105
- [Payment Request Type](#) on page 1106

Payment Request Type List

The **Payment Request Type List** zone lists payment request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Request Type	Displays the payment request type.
Description	Displays the description of the payment request type.
Edit	On clicking the Edit  icon, the Payment Request Type screen appears where you can edit the details of the payment request type.
Duplicate	On clicking the Duplicate  icon, the Payment Request Type screen appears where you can define a payment request type using an existing payment request type.

Column Name	Column Description
Delete	On clicking the Delete (🗑️) icon, you can delete the payment request type.
	Note: You can delete a payment request type only when you have not created a payment request using the payment request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment request type, the **Payment Request Type** zone appears with the details of the respective payment request type.

Payment Request Type

The **Payment Request Type** zone displays the details of the payment request type. This zone contains the following sections:

- **Main** — This section provides basic information about the payment request type. It contains the following fields:

Field Name	Field Description
Payment Request Type	Displays the payment request type.
Payment Request Business Object	Indicates the business object that will be used to create the payment request. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the payment request type.
Detailed Description	Displays additional information about the payment request type.
Status	Indicates the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Transfer	Indicates whether the payment request type will be used to create payment transfer or payment creation request.

Field Name	Field Description
Defer Algorithm	<p>Indicates the algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p>
Approval Required	Indicates whether approval is required while freezing payments of the payment requests which are created using the payment request type.
Approval To Do Type	<p>Indicates that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p>Note:</p> <p>This field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve the payment request submitted for approval.</p> <p>Note:</p> <p>This field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>

- **Characteristics** — This section lists the characteristics defined for the payment request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment request type.

Button Name	Button Description
Delete	Used to delete the payment request type.
	Note: You can delete a payment request type only when you have not created a payment request using the payment request type.
Duplicate	Used to create a new payment request type using an existing payment request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Payment Request Type** zone does not appear in the **Payment Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to a payment request type in the **Payment Request Type List** zone.

Defining a Payment Request Type

Prerequisites

To define a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ To Do** type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To define a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type Business Object	Used to indicate the business object that you want to use to create the payment request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple payment request type business objects defined in the application. If there is only one payment request type business object defined in the application, the **Payment Request Type** screen appears.

4. Select the required payment request type business object from the respective field.
5. Click **OK**.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to specify the payment request type.	Yes
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked. You can configure the Payment Request Periodic Monitor (C1-PAYRQ) batch such that it is executed at regular intervals. When the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked, the system checks whether there are any payment requests in the Deferred Distribution status. If there is a payment request in the Deferred Distribution status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	<p>Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p>Note: This field appears only when the Approval Required check box is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.

6. Enter the required details.

Note: You can search for an algorithm and To Do type by clicking the **Search**  icon corresponding to the respective field.

7. Define characteristics for the payment request type, if required.
8. Click **Save**.

The payment request type is defined.

How to define characteristics for a payment request type	Defining Characteristics for a Payment Request Type on page 1111

Defining Characteristics for a Payment Request Type

Prerequisites

To define characteristics for a payment request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Request Type**)

Procedure

To define characteristics for a payment request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Request Type .	Note: This field is required when you are defining a characteristic for the payment request type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment request type.

- Enter the required details.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment request type, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment request type, click the **Delete**  icon corresponding to the characteristic.

Editing a Payment Request Type

Prerequisites

To edit a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To edit a payment request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Payment Request Type** sub-menu.
The **Payment Request Type** screen appears.

4. In the **Payment Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the payment request type whose details you want to edit.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Displays the payment request type.	Not applicable
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p>Note:</p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the Payment Request Periodic Monitor (C1-PAYRQ) batch is invoked. You can configure the Payment Request Periodic Monitor (C1-PAYRQ) batch such that it is executed at regular intervals. Copying a Payment Request Type

Instead of creating a payment request type from scratch, you can create a new payment request type using an existing payment request type. This is possible through copying a payment request type. On copying a payment request type, the details including the characteristics are copied to the new payment request type. You can then edit the details, if required.

Prerequisites

To copy a payment request type, you should have:

- Payment request type (whose copy you want to create) defined in the application
- Payment request business objects defined in the application
- Defier algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

Procedure

To copy a payment request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Payment Request Type** sub-menu.

The **Payment Request Type** screen appears.

- In the **Payment Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the payment request type whose copy you want to create.

The **Payment Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the payment request type.
- Characteristics** - Used to define characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to specify the payment request type.	Yes
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No

Deleting a Payment Request Type

Procedure

To delete a payment request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **P** and then click **Payment Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Payment Request Type** sub-menu.
The **Payment Request Type** screen appears.
- In the **Payment Request Type List** zone, click the **Delete**  icon in the **Delete** column corresponding to the payment request type that you want to delete.
A message appears confirming whether you want to delete the payment request type.

Note: You can delete a payment request type only when you have not created a payment request using the payment request type.

Tip: Alternatively, you can click the **Delete** button in the **Payment Request Type** zone to delete the payment request type.

5. Click **OK**.

The payment request type is deleted.

Payment Request (Used for Searching)

The **Payment Request** screen allows you to search for a payment creation or transfer request using various search criteria. It also allows you to create payment creation and transfer requests. Through this screen, you can navigate to the following screens:

- [Payment Request \(Used for Viewing\)](#) on page 1124

This screen consists of the following zones:

- [Search Payment Request](#) on page 1120

Search Payment Request

The **Search Payment Request** zone allows you to search for a payment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment request using request or payment details. The valid values are: <ul style="list-style-type: none"> • Request Details • Payment Details 	Yes
	Note: By default, the Request Details option is selected.	
On or Before Creation Date/Time	Used to search payment requests which are created till a particular date and time.	No
	Note: By default, the current date and time appears in this field. This field appears only when you select the Request Details option from the Search By list.	
Payment Request Status	Used to search payment requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Discarded • Distribute And Freeze • Distributed • Draft • Processed • Rejected 	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Payment Request Type	Used to search payment requests which are created using a particular payment request type.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
User ID	Used to search payment requests which are created by a particular user.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Payment Request ID	Used to search a particular payment request.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Payment Event ID	Used to search a payment request through which a payment event is created.	No
	Note: This field appears only when you select the Payment Details option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Payment Event Search window appears.	
Payor Account ID	Used to search payment requests which are created for a particular payor account.	No
	Note: This field appears only when you select the Payment Details option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Payor Name	Used to search payment requests which are created for a particular payor.	No
	Note: This field appears only when you select the Payment Details option from the Search By list.	
Payment Date	Used to search payment requests through which payments are created on a particular date.	No
	Note: This field appears only when you select the Payment Details option from the Search By list.	

Note: You must specify at least one search criterion while searching for a payment request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the payment request was created in the system.
Payment Request Information	Displays information about the payment request.
	Note: It has a link. On clicking the link, the Payment Request screen appears where you can view the details of the respective payment request.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected
Payment Event Information	Displays information about the payment event which is created through the payment request.
	Note: It has a link. On clicking the link, the Payment Event screen appears with the details of the respective payment event.
Created By	Indicates the user who has created the payment request.
Payor Account Information	Displays information about the payor's account for which the payment request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Searching for a Payment Request

Prerequisites

To search for a payment request, you should have:

- Payment request types defined in the application

Procedure

To search for a payment request:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Financial** and then click **Payment Request**.

A sub-menu appears.

- Click the **Search** option from the **Payment Request** sub-menu.

The **Payment Request** screen appears.

- Enter the search criteria in the **Search Payment Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of payment requests that meet the search criteria appears in the **Search Results** section.

Viewing the Payment Request Details

Procedure

To view the details of a payment request:

- Search for the payment request in the **Payment Request** screen.
- In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
 - **Log** – This tab lists the complete trail of actions performed on the payment request.
- View the details of the payment request in the **Payment Request** zone.
 - View the payment distribution records of the payment request in the **Payment Distribution** zone.

Payment Request (Used for Viewing)

Once you create a payment creation or transfer request, the **Payment Request** screen allows you to:

- Edit the details of a payment request
- Edit the payment amount against each entity
- Delete a payment request
- View the details of a payment request
- Distribute the tender or payment amount
- Edit the amount of a payment segment
- Freeze the payments created through a payment request
- Submit a payment request for approval before freezing payments
- Approve or reject a payment request
- View the log of a payment request
- Add a log entry for a payment request

This screen consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
- **Log** – This tab lists the complete trail of actions performed on the payment request.

Payment Request

The **Payment Request** zone displays the details of the payment request. This zone contains the following sections:

- **Main** — This section provides basic information about the payment request. It contains the following fields:

Field Name	Field Description
Payment Request Information	Displays information about the payment request.
Payment Request Type	Indicates the payment request type using which the payment request is created. Note: It has a link. On clicking the link, the Payment Request Type screen appears where you can view the details of the payment request type.
Payment Request Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Distribution • Distributed • Draft • Processed • Rejected

Field Name	Field Description
Status Reason	Indicates the reason why the payment request is rejected.
	<p>Note:</p> <p>This field appears only when the payment request is in the Rejected status.</p> <p>It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected reason.</p>
Payor Account Information	Displays information about the payor's account for which the payment request is created.
	<p>Note:</p> <p>This field appears only when you are viewing the details of a payment creation request.</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Payment Date	Displays the date when the payment event and payments are created.
Payment Event Information	Displays information about the payment event. If you are viewing the details of a payment creation request, this field displays information about the payment event which is created through the payment creation request. However, if you are viewing the details of a payment transfer request, this field displays information about the payment event whose payments you want to transfer.
	<p>Note:</p> <p>This field does not appear when the payment request is in the Rejected status.</p> <p>If you are viewing the details of a payment creation request, this field does not appear when the payment creation request is in the Draft status.</p> <p>It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event.</p>
Transfer Amount	Displays the total payment amount which you want to transfer.
	<p>Note: This field appears only when you are viewing the details of a payment transfer request.</p>
Transfer Reason	Indicates the reason why you want to transfer the payment amount.
	<p>Note: This field appears only when you are viewing the details of a payment transfer request.</p>

- **Tender Details** — This section provides details about the tender used in the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following fields:

Field Name	Field Description
Tender Type	Indicates the type of tender through which the payment was made.
Tender Amount	Displays the tender amount.

Field Name	Field Description
Currency	Indicates the currency in which the payment was made.
Check Number	Displays the check number if the payment is made through check. Note: This field appears only when the tender type is set to Check .
Auto Pay Route Type Code	Indicates when and how automatic payment request of the account is routed to a financial institution. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Auto Pay Source Code	Indicates the financial institution that receives the automatic payment request. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and frozen in the system. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Account Number	Indicates the bank account number through which the automatic payment was made. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Expires On	Displays the date when the tender type will expire. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.
Name	Displays the name of the person as maintained in the financial institution's system. Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.

Field Name	Field Description
Tender Control Information	Displays information about the tender control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>This field appears only when the payment request is in the Distributed, Approval In Progress, Processed , or Rejected status.</p> <p>It has a link. On clicking the link, the Tender Control screen appears where you can view the details of the respective tender control.</p>
Deposit Control Information	Displays information about the deposit control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note:</p> <p>This field appears only when the payment request is in the Distributed, Approval In Progress, Processed, or Rejected status.</p> <p>It has a link. On clicking the link, the Deposit Control screen appears where you can view the details of the respective deposit control.</p>
Pay Tender ID	Displays the payment tender ID.
	<p>Note: This field appears only when the payment request is in the Processed status.</p>
Tender Status	Indicates the current status of the tender. The valid values are: <ul style="list-style-type: none"> Valid Cancelled
	<p>Note: This field appears only when the payment request is in the Processed status.</p>
MICR ID	Displays the MICR code on the payment.
Ext. Reference ID	Displays the external reference number of the payment on the payment upload interface record.
Person ID	Indicates the person's account ID mentioned in the payment upload interface record.
Name	Indicates the person mentioned in the payment upload interface record.

- **Characteristics** — This section lists the characteristics defined for the payment tender. It appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Match Types** — This section lists the match type details of the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which you want to match the payment.
Match By	Indicates the bill or account (whose entities, such as unpaid bills, unpaid bill segments, settlement IDs, or contracts) must be considered while matching the payment.

- **Payor Account Details** — This section appears only when you are viewing the details of a payment transfer request. It contains the following columns:

Column Name	Column Description
Payor Account Information	Displays information about the payor's account whose payments you want to transfer.

- **Payment Details** — This section appears only when you are viewing the details of a payment transfer request. It contains the **Show Payments** link. On clicking the link, the **Payment** screen appears where you can view the details of the payment that you want to transfer. In case, you want to transfer multiple payments, the **Payment Search** window appears with the list of payments selected for transfer. You can click the individual payment to view the details in the **Payment** screen. The **Show Payments** link does not appear when you are viewing the details of a payment transfer request which is in the **Processed** status. Instead, the following column appears in this section:

Column Name	Column Description
Payment(s)	Displays information about the payment which is cancelled.

- **Record Actions** — This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the payment request.
	Note: The Edit button appears only when the payment request is in the Draft status.
Delete	Used to delete the payment request.
	Note: The Delete button appears only when the payment request is in the Draft status.
Distribute	Used to distribute the tender or payment amount.
	Note: The Distribute button appears only when the payment request is in the Draft status.
Submit for Approval	Used to submit the payment request for approval.
	Note: The Submit for Approval button appears only when: <ul style="list-style-type: none"> • The payment request is in the Distributed status. • The Approval Required check box is selected in the payment request type using which the payment request is created.

Column Name	Column Description
Freeze	Used to freeze the payments which are created through the payment request.
	<p>Note: The Freeze button appears only when:</p> <ul style="list-style-type: none"> The payment request is in the Distributed status. The Approval Required check box is not selected in the payment request type using which the payment request is created.
Approve	Used to approve the payment request.
	<p>Note: The Approve button appears only when:</p> <ul style="list-style-type: none"> The payment request is in the Approval In Progress status. A user with the approval To Do role is reviewing the payment request.
Reject	Used to reject the payment request.
	<p>Note: The Reject button appears only when:</p> <ul style="list-style-type: none"> The payment request is in the Approval In Progress status. A user with the approval To Do role is reviewing the payment request.
Back to Draft	Used to change the status of the payment request to Draft .
	<p>Note: The Back to Draft button appears only when the payment request is in the Distributed status.</p>
Discard	Used to discard the payment creation or transfer request.
	<p>Note: The Discard button appears only when the payment request is in the Distributed status.</p>
Distribute And Freeze	Used to distribute and freeze the payments at the same time.
	<p>Note: the Distribute And Freeze button appears only when the payment request is in the Draft status.</p>

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Status Date/Time	Displays the date and time when the payment request status is updated
Create Date/Time	Displays the date and time when the payment request is created.

Payment Distribution

The **Payment Distribution** zone lists the payment distribution records of the payment request. This zone contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the payment was matched.
Payee Account ID	Indicates the account for which the payment was made. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Match Value	Indicates the entity (such as bill ID, bill segment ID, contract ID, or settlement ID) against which the payment was matched.
Match Entity	Indicates the type of entity against which the payment was matched. The valid values are: <ul style="list-style-type: none"> • Bill • Bill Segment • Contract • Settlement
Amount	Displays the entity amount. In case of contract, the entity amount would be zero.
Write Off Adjustment Amount	Indicates the amount which is either write up or down when the payment against the bill is within the tolerance limit. Note: The data appears in this column only when the match type is Bill Weighted and the payment amount is within the underpayment or overpayment tolerance limit. This column does not appear when the payment request is in the Draft or Rejected status.
Paid Amount	Displays the amount which is already paid against the entity. Note: This column appears only when the payment request is in the Draft or Rejected status.
Unpaid Amount	Displays the amount which is eligible for payment against the entity. Note: This column appears only when the payment request is in the Draft or Rejected status.
Payment Amount	Displays the payment amount. If the Show Default check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the Show Default check box is selected against a match type while creating the payment request, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where Show Default check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can edit the payment amount, if required.
Payment Currency	Indicates the currency in which the payment was made.

Column Name	Column Description
Payment ID	Displays the payment ID.
	<p>Note:</p> <p>It has a link. On clicking the link, the Payment screen appears with the details of the respective payment.</p> <p>This column does not appear when the payment request is in the Draft or Rejected status.</p>
Payment Status	<p>Indicates the status of the payment. The valid values are:</p> <ul style="list-style-type: none"> • Canceled • Error • Freezable • Frozen • Incomplete
	<p>Note: This column does not appear when the payment request is in the Draft or Rejected status.</p>
Error Message	Indicates the reason why the payment is in the Error status.
	<p>Note: This column does not appear when the payment request is in the Draft or Rejected status.</p>
Detail	On clicking the Detail button, the Edit Payment Segment Amount screen appears where you can edit the payment segment amount.
	<p>Note:</p> <p>This column does not appear when the payment request is in the Draft or Rejected status.</p> <p>The Detail button appears in the Detail column only when:</p> <ul style="list-style-type: none"> • The payment request is in the Distributed or Approval In Progress status • The payment is in the Freezable status. <p>However, a user with the approval To Do role will not be able to edit the payment segment amount.</p>
Redistribute	On clicking the Redistribute button, you can redistribute the payment amount among the payment segments.
	<p>Note:</p> <p>This column appears only when the payment request is in the Distributed or Distribute and Freeze status.</p> <p>The Redistribute button appears in the Redistribute column only when:</p> <ul style="list-style-type: none"> • The payment request is in the Distributed or Approval In Progress status

You can edit the payment amount by clicking the **Update Payment Amount** button in the upper right corner of this zone.

Creating a Payment Creation Request

Prerequisites

To create a payment creation request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is not selected)

Procedure

To create a payment creation request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Request**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Request** sub-menu.

The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment request. Note: The list includes only those payment request types where the Transfer check box is not selected.	Yes

Tip: Alternatively, you can access the **Select Payment Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request** screen.

4. Select the required payment request type from the respective field.
5. Click **OK**.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment request.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment request. Note: On specify the account ID, additional information about the account appears corresponding to this field. The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Payment Date	Used to specify the date when the payment was made.	Yes
	Note: By default, the current date appears in this field.	

- **Tender Details** - Used to specify the tender details in the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment was made.	Yes
Tender Amount	Used to specify the tender amount.	Yes
Currency	Used to indicate the currency in which the payment was made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.	Not applicable
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and frozen in the system.	Not applicable
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Account Number	Used to indicate the bank account number through which the automatic payment was made.	Yes (Conditional) Note: This field is required only when you select a tender type where the Generate Auto Pay check box is selected.
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Expires On	Used to specify the date when the tender type will expire.	No
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Name	Used to specify the name of the person as maintained in the financial institution's system.	No
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
MICR ID	Used to specify the MICR code on the payment.	No
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to indicate the person's account ID mentioned in the payment upload interface record.	No
Name	Used to indicate the person mentioned in the payment upload interface record.	No
Tender Control ID	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Tender Control Search window appears.	

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender .	Note: This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment tender.

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	Note: By default, the Show Default check box is selected when you select the match type.	
Entity	<p>Indicates the match type entity. The valid values are:</p> <ul style="list-style-type: none"> • Account — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill — Enables you to select the unpaid bill against which you want to match the payment. <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p>	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity.	Yes

6. Enter the required details.

Note:

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search**  icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add**  icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete**  icon corresponding to the match type.

7. Define characteristics for the payment tender, if required.

8. Click **Manual Distribution**.

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account Note: Only contracts of the contract type where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense are listed in the Payment Distribution zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in Payment Distribution zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Note:

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

Defining Characteristics for a Payment Tender**Prerequisites**

To define characteristics for a payment tender, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Tender**)

Procedure

To define characteristics for a payment tender:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a payment request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender .	Note: This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment tender.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment tender, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment tender, click the **Delete** (🗑️) icon corresponding to the characteristic.

Editing the Payment Amount

Procedure

To edit the payment amount against each entity:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Update Payment Amount** button in the upper right corner of the **Payment Distribution** zone.

The **Edit Payment Amount** screen appears. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section allows you to filter the payment distribution records using various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to search the entities which are considered using a particular match type.	Yes
	Note: By default, the All option is selected.	
Entity ID	Used to search entities which belong to a particular account.	Yes
	Note: By default, the All option is selected.	
Match Value	Used to search for a particular entity (such as bill, bill segment, contract, or settlement ID).	No
Sort By	Used to sort entity information as per the match type defined in the C1-PYREQSRT feature configuration.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the entity is considered.
Payee Information	Displays information about the account for which the payment was made.
Entity Information	Displays information about the entity against which the payment was matched.
Amount	Displays the entity amount. In case of contract, the entity amount would be zero.
Paid Amount	Displays the amount which is already paid against the entity.
Unpaid Amount	Displays the amount which is eligible for payment against the entity.
Payment Amount	Used to specify the payment amount. Note: If the Allow Overpayment option type of the C1-PAYPORTAL feature configuration is set to true , you can specify the payment amount greater than the unpaid amount. In other words, you can make overpayment against an entity.
Payment Currency	Indicates the currency in which the payment was made.

In addition, the **Search Results** section contains the following fields:

Field Name	Field Description
Total Amount	Displays the tender or transfer amount.
Running Total	Displays the sum of payment amount specified against each entity.
Running Balance	Displays the difference between total amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero.

Note: Pagination is used to display limited number of records in the **Edit Payment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- Modify the payment amount against an entity, if required.

Note: The sum of payment amount should be equal to the tender or transfer (payment) amount.

- Click **Save**.

The changes made to the payment request are saved.

- Click **Close**.

The payment amount is updated in the **Payment Distribution** zone.

Editing a Payment Request

Procedure

To edit a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Edit** button in the **Payment Request** zone.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment request.	Not applicable
Payment Request Type	Indicates the payment request type using which the payment request is created.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment request. Note: On specify the account ID, additional information about the account appears corresponding to this field. The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search screen appears.	Yes
Payment Date	Used to specify the date when the payment was made.	Yes

- **Tender Details** - Used to specify the tender details in the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment was made.	Yes
Tender Amount	Used to specify the tender amount.	Yes
Currency	Used to indicate the currency in which the payment was made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	Note: This field is required only when you select a tender type where the Generate Auto Pay check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.	Not applicable
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	Note: This field is required only when you select a tender type where the Generate Auto Pay check box is selected.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and frozen in the system.	Not applicable
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Account Number	Used to indicate the bank account number through which the automatic payment was made.	Yes (Conditional)
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	Note: This field is required only when you select a tender type where the Generate Auto Pay check box is selected.
Expires On	Used to specify the date when the tender type will expire.	No
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
Name	Used to specify the name of the person as maintained in the financial institution's system.	No
	Note: This field appears only when you select a tender type where the Generate Auto Pay check box is selected.	
MICR ID	Used to specify the MICR code on the payment.	No

Field Name	Field Description	Mandatory (Yes or No)
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to indicate the person's account ID mentioned in the payment upload interface record.	No
Name	Used to indicate the person mentioned in the payment upload interface record.	No

Note: If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Tender .	Note: This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment tender.

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	Note: By default, the Show Default check box is selected when you select the match type.	

Field Name	Field Description	Mandatory (Yes or No)
Entity	Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> • Account — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill — Enables you to select the unpaid bill against which you want to match the payment. 	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity.	Yes

Note: The **Edit** button appears only when the payment request is in the **Draft** status.

4. Modify the details of the payment request, if required.

Note:

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search**  icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add**  icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete**  icon corresponding to the match type.

You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

5. Define, edit, or remove characteristics from the payment request, if required.
6. Click **Manual Distribution**.

The changes made to the payment request are saved. Depending on the information specified in the **Match Types** section, the entities are listed in the **Payment Distribution** zone. You can edit the payment amount against each entity, if required.

Deleting a Payment Request

Procedure

To delete a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request that you want to delete.

The **Payment Request** screen appears.

3. Click the **Delete** button in the **Payment Request** zone.

A message appears confirming whether you want to delete the payment request.

Note: The **Delete** button appears only when the payment request is in the **Draft** status.

4. Click **OK**.

The payment request is deleted.

Distributing the Tender or Payment Amount

Procedure

To distribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute.

The **Payment Request** screen appears.

3. Click the **Distribute** button in the **Payment Request** zone.

The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes the tender or payment amount in the deferred mode.

Note:

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Freezable** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed, the status of the payment request is changed to **Distributed**.

Note:

The **Distribute** button appears only when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Distributing and Freezing the Tender or Payment Amount

Procedure

To distribute and freeze the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute and freeze.

The **Payment Request** screen appears.

3. Click the **Distribute And Freeze** button in the **Payment Request** zone.

The **Defer** algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the **Defer** algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes and freezes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes and freezes the tender or payment amount in the deferred mode.

Note:

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing and freezing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Frozen** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Frozen** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Frozen** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed and frozen, the status of the payment request is changed to **Processed**.

Note:

The **Distribute And Freeze** button appears only when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Redistributing the Tender or Payment Amount**Procedure**

To redistribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to redistribute.

The **Payment Request** screen appears.

3. In the **Payment Distribution** zone, click the **Redistribute** button in the **Redistribute** column corresponding to the payment distribution whose tender or payment amount you want to redistribute.

The required payment gets redistributed among the account's contracts.

Note: The **Redistribute** button appears only when the payment status is in **Incomplete, Error, or Freezable** status.

Editing the Payment Segment Amount

Before you freeze the payments, the system allows you to edit the pay segment amount of the payments which are in the **Freezable** status. You can edit the amount only when there are multiple pay segments in a payment.

Procedure

To edit the payment segment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Detail** button in the **Payment Distribution** zone.

The **Edit Payment Segment Amount** screen appears. It contains the following fields:

Field Name	Field Description
Payment Event Information	Displays information about the payment event which is created through the payment request.
Payment Information	Displays information about the payment which is created through the payment event.
Payee Account Information	Displays information about the account for which the payment is made.
Match Value	Displays information about the entity against which the payment is matched.
Payment Amount	Displays the total payment amount.
Running Total	Displays the sum of payment amount specified against each pay segment.
Running Balance	Displays the difference between total payment amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero.

In addition, this section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sr No	Indicates the sequence number of the pay segment.	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Entity Information	Displays information about the entity (such as bill segment or contract) against which the pay segment is created.	Not applicable
Total Amount	Displays the entity amount. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total bill segment amount.	Not applicable
Unpaid Amount	Displays the amount which is eligible for payment. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total unpaid bill segment amount.	Not applicable
Payment Amount	Used to specify the payment amount that you want to distribute against the pay segment. Note: This field is non-editable when: <ul style="list-style-type: none"> • There is only one pay segment in a payment. • A user with the approval To Do role is reviewing the pay segment amount. 	Yes
Payment Currency	Indicates the currency in which the payment was made.	Not applicable
Pay Segment ID	Displays the pay segment ID.	Not applicable

Note:

The **Detail** button appears in the **Detail** column only when:

- The payment request is in the **Distributed** or **Approval In Progress** status
- The payment is in the **Freezable** status.

Pagination is used to display limited number of records in the **Edit Payment Segment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** () , **Previous** () , **Next** () , and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

4. Modify the payment amount against a pay segment, if required.

Note: The sum of payment segment amount should be equal to the payment amount.

5. Click **Redistribute**.

The payment amount is redistributed among the pay segments.

Note: The **Redistribute** button is disabled when the **Payment Amount** field is non-editable.

6. Click **Close**.

Freezing Payments Created Through a Payment Request

Procedure

To freeze the payments created through a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose payments you want to freeze.

The **Payment Request** screen appears.

3. If required, you can edit the amount of a payment segment before freezing the payments.
4. Click the **Freeze** button in the **Payment Request** zone.

The system behaves in the following manner:

If you are...	Then
Freezing the payments created through a payment creation request	The status of the payments which are in the Freezable status is changed to Frozen . In addition, the status of the payment request is changed to Processed .
Freezing the payments created through a payment transfer request	The status of the old payments which are in the Frozen status is changed to Cancelled . The old payments which are in the Error status are deleted. The status of the new payments which are in the Freezable status is changed to Frozen . The status of the payment event is changed to Balanced when there are no new payments in the Error status. In addition, the status of the payment request is changed to Processed .

Note:

The **Freeze** button appears only when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is not selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to freeze the payments created through the payment request.

Submitting a Payment Request for Approval

Procedure

To submit a payment request for approval:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request that you want to submit for approval.

The **Payment Request** screen appears.

3. If required, you can edit the amount of a payment segment before submitting the payment request for approval.
4. Click the **Submit for Approval** button in the **Payment Request** zone.

The status of the payment request is changed to **Approval In Progress**. A To Do is created using the **C1-PAYRQ** To Do type. Users having a To Do role to which the **C1-PAYRQ** To Do type is associated can view the To Do from the **To Do List** screen.

Note:

The **Submit for Approval** button appears only when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to submit the payment request for approval.

Approving a Payment Request

You can view the number of payment requests which are pending for approval in the **Payment Request** screen. The approver can review, and accordingly approve or reject the payment request based on the observations.

Note: The system will not allow you to approve or reject a payment request submitted by you.

Procedure

To approve a payment request:

1. Do either of the following:

If you want to	Then
Approve a payment request through the Payment Request screen	<ol style="list-style-type: none"> 1. Search for the payment request in the Payment Request screen. 2. In the Search Results section, click the link in the Payment Request Information column corresponding to the payment request which you want to review.
Approve a payment request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-PAYRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the payment request that you want to review.

The **Payment Request** screen appears.

2. Review the payment request details.
3. Click the **Approve** button in the **Payment Request** zone.

The system behaves in the following manner:

If you are...	Then
Approving a payment creation request	The status of the payments which are in the Freezable status is changed to Frozen . In addition, the status of the payment request is changed to Processed .
Approving a payment transfer request	The status of the old payments which are in the Frozen status is changed to Cancelled . The old payments which are in the Error status are deleted. The status of the new payments which are in the Freezable status is changed to Frozen . The status of the payment event is changed to Balanced when there are no new payments in the Error status. In addition, the status of the payment request is changed to Processed .

Note: The **Approve** button appears only when:

- The payment request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment request.

Rejecting a Payment Request

Prerequisites

To reject a payment request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a payment request, you need to specify the reason why you want to reject the payment request. If you are rejecting a payment creation request, you can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-PaymentRequest** business object in the **Status Reason** screen. However, if you are rejecting a payment transfer request, you can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-PaymentTransferRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment request submitted by you.

Procedure

To reject a payment request:

1. Do either of the following:

If you want to...	Then...
Reject a payment request through the Payment Request screen	<ol style="list-style-type: none"> 1. Search for the payment request in the Payment Request screen. 2. In the Search Results section, click the link in the Payment Request Information column corresponding to the payment request which you want to review.
Reject a payment request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List.

If you want to...	Then...
	<p>The To Do Type for User Search window appears.</p> <ol style="list-style-type: none"> Enter C1-PAYRQ in the To Do Type field. Click the Search button corresponding to the To Do Type field. <p>The To Do List screen appears.</p> <ol style="list-style-type: none"> Select the Open option from the Filter by list to view all unassigned To Dos. Click the link in the Message column corresponding to the To Do of the payment request that you want to review.

The **Payment Request** screen appears.

- Review the payment request details.
- If required, you can review the payment segment amount of each payment by clicking the **Detail** button in the **Detail** column corresponding to the payment in the **Payment Distribution** zone.
- Click the **Reject** button in the **Payment Request** zone.

The **Status Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment request.	Yes

Note: The **Reject** button appears only when:

- The payment request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

If the approver rejects a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver rejects a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Rejected**.

Related Topics

For more information on...	See...
How to search for a payment request	Searching for a Payment Request on page 1122
Payment Request screen	Payment Request (Used for Viewing) on page 1124
Payment Request zone	Payment Request on page 1124

Discarding a Payment Request

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request which you want to discard.
3. Click the **Discard** button in the **Payment Request** zone.

Note:

The **Discard** button appears only when the payment request is in **Distributed** status.

If the approver discards a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver discards a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Discarded**.

Discarding a payment request is similar to rejecting a payment request. However, you can only reject a payment request, when approval workflow is on while creating a payment request but discarding a payment request can be done in both the cases, when the approval workflow is on or off.

Viewing the Log of a Payment Request

Procedure

To view the log of a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose log you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
 - **Log** – This tab lists the complete trail of actions performed on the payment request.
3. Click the **Log** tab.

The **Payment Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment request.
Details	Displays the details about the action performed on the payment request.
User	Indicates the user who has performed the action on the payment request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment request.
Status Reason	Indicates the reason why the payment request was rejected.

Note: You can manually add a log entry for the payment request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

Adding a Log Entry for a Payment Request

Procedure

To add a log entry for a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose log you want to edit.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Payment Request** – Displays the details of the payment request.
 - **Payment Distribution** – Lists the payment distribution records of the payment request.
- **Log** – This tab lists the complete trail of actions performed on the payment request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

The **Add Payment Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment request.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Log Details	Used to specify additional comments on the payment request.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Payment Request Log** zone.

Payment Event Summary

The **Payment Event Summary** screen allows you to search for a payment event using various search criteria. Through this screen, you can:

- View the payments created through a payment event
- View payment segments of a payment
- Transfer one or more payments of a payment event to another payee account
- Cancel a payment event
- Delete a payment event
- Cancel a payment of a payment event
- Delete a payment of a payment event
- Refund a payment which is matched against the suspense or excess credit contract

This screen consists of following zones:

- [Search Payment Event](#) on page 1156
- [Payments](#) on page 1159
- [Payment Segments](#) on page 1161

Search Payment Event

The **Search Payment Event** zone allows you to search for a payment event using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search for a payment event using the payor, payment event, tender, or contract details. The valid values are:</p> <ul style="list-style-type: none"> • Payor Account/Payment Event • Tender Details • Suspense/Excess Credit Contract <p>Note: By default, the Payor Account/Payment Event option is selected.</p>	Yes
Payment Event ID	<p>Used to search a particular payment event.</p> <p>Note: This field appears only when you select the Payor Account/Payment Event option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Payment Event Search window appears.</p>	No
Payor Account ID	<p>Used to search payment events which are created for a particular payor account.</p> <p>Note: This field appears only when you select the Payor Account/Payment Event option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.</p>	No
Payor Name	<p>Used to search payment events which are created for a particular payor.</p> <p>Note: This field appears only when you select the Payor Account/Payment Event option from the Search By list.</p>	No
Payment Date	<p>Used to search payment events which are created on a particular date.</p> <p>Note: This field appears only when you select the Payor Account/Payment Event option from the Search By list.</p>	No
Tender Type	<p>Used to search payment events where a particular tender type is used.</p> <p>Note: This field appears only when you select the Tender Details option from the Search By list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Check Number	Used to search a payment event which includes payments made through a particular check.	No
	Note: This field appears only when you select the Tender Details option from the Search By list.	
MICR ID	Used to search payment events which include payments made with a particular MICR code.	No
	Note: This field appears only when you select the Tender Details option from the Search By list.	
Contract ID	Used to search payment events which include payments made against a particular suspense or excess credit contract.	No
	Note: This field appears only when you select the Suspense/ Excess Credit Contract option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Contract Search window appears.	

Note: You must specify at least one search criterion while searching for a payment event.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Payment Event Information	Displays additional information about the payment event.
	Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the respective payment event.
Transfer	On clicking the Transfer button, you can transfer all payments (which are in either Frozen and Error status) of the payment event to another payee account.
	Note: The Transfer button appears only when: <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen or Error status. • There is no payment transfer request which is currently in progress for the payment event.

Column Name	Column Description
Cancel	On clicking the Cancel button, you can cancel all payments (which are in the Frozen status) of the payment event.
	<p>Note: The Cancel button appears only when:</p> <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen status. • One or more payments of the payment event are not in the Freezable or Error status. • There is no payment transfer request which is currently in progress for the payment event.
Delete	On clicking the Delete button, you can delete the payment event.
	<p>Note: The Delete button appears only when the payments of a payment event are in the Freezable, Error or Incomplete status.</p>
Additional Information	Displays information about the status of the payment event.
Payment Date	Displays the date when the payment was made.
Payor Name	Indicates the person who has made the payment.
	<p>Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p>
Payor Account ID	Indicates the account which made the payment.
	<p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Tender Amount	Displays the tender amount.
Payment Event ID	Displays the payment event ID.

Payments

The **Payments** zone lists all payments created through the payment event. This zone contains the following columns:

Column Name	Column Description
Payment ID	Displays the payment ID.
	<p>Note: It has a link. On clicking the link, the Payment screen appears with the details of the respective payment.</p>

Column Name	Column Description
Payee Account Information	Displays information about the account for which the payment was made. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Payment Amount	Displays the amount paid through the tender.
Payment Currency	Indicates the currency in which the payment was made.
Payment Status	Indicates the status of the payment. The valid values are: <ul style="list-style-type: none"> • Incomplete • Error • Freezable • Frozen • Canceled
Match Type	Indicates the match type using which the payment was matched.
Match Value	Indicates the entity (such as bill, bill segment, or contract) against which the payment was matched.
Error Message	Indicates the reason why the payment is in the Error status.
Payor Account ID	Indicates the account which made the payment.
Refund Amount	Displays the amount which is already refunded to the payor account.

In addition, this zone contains the following buttons:

Button Name	Button Description
Transfer	Used to transfer the payment to another payee account.
	Note: You can transfer a payment only when it is in the Frozen or Error status.
Cancel	Used to cancel the payment.
	Note: You can cancel a payment only when it is in the Frozen status.
Delete	Used to delete the payment.
	Note: You can delete a payment only when it is in the Freezable or Error status.
Refund	Used to refund the payment amount to the payor account.
	Note: You can refund the payment amount to the payor account only when: <ul style="list-style-type: none"> • The payment is matched against the suspense or excess credit contract. • The payment is in the Frozen status.

Payment Segments

The **Payment Segments** zone lists payment segments of a payment. This zone contains the following columns:

Column Name	Column Description
Pay Segment ID	<p>Displays the payment segment ID.</p> <p>Note: It has a link. On clicking the link, the Pay Segments tab of the Payment screen appears where you view the details of the payment segment.</p>
Contract Information	<p>Displays information about the contract against which the payment segment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.</p>
Payment Amount	Displays the payment segment amount.
Match Event ID	<p>Indicates the match event which is created for the payment segment.</p> <p>Note: It has a link. On clicking the link, the Match Event screen appears where you can view the details of the respective match event.</p>

Searching for a Payment Event

Prerequisites

To search for a payment event, you should have:

- Tender types defined in the application

Procedure

To search for a payment event:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. Select the **Main Menu** option from the list.

- From the **Main Menu**, select **Financial** and then click **Payment Event Summary**.

The **Payment Event Summary** screen appears.

- Enter the search criteria in the **Search Payment Event** zone.

Note:

You can search for a payment event and payor account by clicking the **Search**  icon corresponding to the respective field.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of payment events that meet the search criteria appears in the **Search Results** section.

Creating a Payment Transfer Request

The system allows you to transfer payments through a payment request. You can transfer all payments or individual payment of a payment event. You can only transfer payments which are in the **Frozen** or **Error** status.

Prerequisites

To create a payment transfer request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is selected)
- Payment cancel reasons defined in the application (where the **Payment Transfer** check box is selected)

Procedure

To create a payment transfer request:

- Search for the payment event (whose payments you want to transfer) in the **Payment Event Summary** screen.
- Do either of the following:

If you want to...	Then...
Transfer all payments of a payment event	<ol style="list-style-type: none"> In the Search Results section, click the Transfer button in the Transfer column corresponding to the payment event whose payments you want to transfer.

If you want to...	Then...
	<p>Note: The Transfer button appears only when:</p> <ul style="list-style-type: none"> • One or more payments of the payment event are in the Frozen or Error status. • There is no payment transfer request which is currently in progress for the payment event.
Transfer one or more payments of a payment event	<ol style="list-style-type: none"> 1. In the Search Results section, click the Broadcast  icon corresponding to the payment event whose payments you want to view. The Payments zone appears. 2. Select the check box corresponding to the payments that you want to transfer. 3. Click the Transfer button in the Payments zone. <p>Note: You can transfer a payment only when it is in the Frozen or Error status.</p>

The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment request. Note: The list includes only those payment request types where the Transfer check box is selected.	Yes

3. Select the required payment request type from the respective field.
4. Click **OK**.
 - **Main** - Used to specify basic details about the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment request.	Not applicable
Payment Event Information	Displays information about the payment event whose payments you want to transfer.	Not applicable
Transfer Amount	Displays the total payment amount which you want to transfer.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Payment Date	Used to specify the date when the payment was transferred.	Yes
	Note: By default, the current date appears in this field.	
Transfer Reason	Used to indicate the reason why you want to transfer the payments.	Yes
	Note: The list includes only those payment cancel reasons where the Payment Transfer check box is selected.	

- **Payor Account Details** — This section contains the following columns:

Column Name	Column Description
Payor Account Information	Displays information about the payor's account whose payments you want to transfer.

- **Payment Details** — This section contains the following columns:

Column Name	Column Description
Payment(s)	Displays information about the payment that you want to transfer.

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	Note: By default, the Show Default check box is selected when you select the match type.	
Entity	Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> • Account — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment. • Bill — Enables you to select the unpaid bill against which you want to match the payment. 	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity.	Yes

5. Enter the required details.

Note:

You can search for an entity (such as account or bill) by clicking the **Search**  icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add**  icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete**  icon corresponding to the match type.

6. Click Manual Distribution.

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	Contracts of the account Note: Only contracts of the contract type where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense are listed in the Payment Distribution zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the Eligible for Billing flag is set to No and Special Role flag is set to Suspense) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in Payment Distribution zone.
By Settlement	Account	Unpaid bill segments where the settlement account is stamped

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

Note:

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

Canceling a Payment Event**Prerequisites**

To cancel a payment event, you should have:

- Payment cancel reasons defined in the application

Procedure

To cancel a payment event:

1. Search for the payment event in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Cancel** button in the **Cancel** column corresponding to the payment event that you want to cancel.

The **Cancel** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the payment event.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bank	Used to indicate the bank which should be charged for the cancellation.	Yes
Bank Account	Used to indicate the bank account which should be charged for the cancellation.	Yes

Note: The **Cancel** button appears only when:

- One or more payments of the payment event are in the **Frozen** status.
- One or more payments of the payment event are not in the **Freezable** or **Error** status.
- There is no payment transfer request which is currently in progress for the payment event.

3. Select the cancel reason, bank, and bank account from the respective fields.
4. Click **OK**.

The payment tender and all payments in the payment event are cancelled.

Deleting a Payment Event

You can delete a payment event only when the payment(s) of the payment event are in the **Freezable**, **Error**, or **Incomplete** status. On deleting a payment event, the payment event, payments, payment segments, and payment tender are deleted.

Procedure

To delete a payment event:

1. Search for the payment event in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Delete** button in the **Delete** column corresponding to the payment event that you want to delete.

A message appears confirming whether you want to delete the payment event.

Note: The **Delete** button appears only when the payments of a payment event are in the **Freezable**, **Error**, or **Incomplete** status.

3. Click **OK**.

The payment event is deleted.

Chapter 21

Account Receivable Central

Topics:

- [Single Offset](#)
- [Mass Offset](#)
- [Cross Currency Offset](#)
- [Hold](#)
- [Refund](#)
- [Write Off](#)
- [Dispute](#)
- [Account Receivable Central](#)

The Account Receivable Central is a portal which facilitates user to perform Single/Mass/Cross Currency offset operation for a bill's outstanding amount with another bill or multiple bills. You can also refund/write off amount to the account using refund requests and write off requests respectively.

Account Receivable Central also enables to put bill(s) on hold for the funding purpose. It allows you to have a complete overview of the bills. Based on the search criteria, the system returns a list of bills that meet the search criteria.

Account Receivable Central is used for:

- **Single Offset** - Enables single debit bill to be offset against multiple credit bills in the same currency and vice versa.
- **Mass Offset** - Enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.
- **Cross Currency Offset** - Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa.
- **Hold** - Enables bill(s) to be put on hold fully (the bill outstanding amount) or partially (the bill outstanding amount in partial) for a specific period for funding.
- **Refund** - Enables you to refund amount of credit bill or bill line item (credit bill segment or adjustment) to the account through a refund request.
- **Write Off** - Enables you to write off amount to the account through a write off request.
- **Dispute** - Enables you to dispute amount of credit/debit bill or bill item (credit/debit bill segment or adjustment) to the account through a dispute request.

The bill(s) for offsetting can belong to the same person or multiple persons depending upon the option **Allow Offsetting across Persons** set in the feature configuration **C1-OFFSETREQ** which allows offsetting in the system.

Single Offset

Single Offset enables you to search and add bill to an offset request from the **Account Receivable Central** screen. Single Offset enables single debit bill to be offset against multiple credit bills in the same currency and vice versa. The offset request is created and an offset request ID is generated for the request.

You can search and select credit/debit bills (with outstanding amount) for offsetting belonging to the same or different person. All the selected bills with their outstanding balance are displayed. The display of bills is controlled by **C1-OFFSETREQ** feature configuration. The feature configuration identifies whether offsetting is allowed for bills across persons. To offset bills belonging to different persons, set the **Allow Offsetting Across Persons** option type to **Y**. The bills are displayed having same currency with the default offset amount on the offset request after adding the bills. You can select one or multiple or all the bills displayed and add to the offset request. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request.

Upon adding a bill to the offset request, the default offset amount algorithm **C1-OFST-AMT** configured in the offset request type is invoked. The bills in the offset request are processed based on the logic of oldest bill first. The default offset amount is populated against the selected debit and credit bills. You can also edit the offset amount from the offset request, if required. The offset adjustments for offset requests are created and distributed based on the match type set in the offset distribution algorithm.

You can configure the offset request type to be submitted for offset distribution with or without approval. Upon submitting the offset request for approval, a To Do type is created and sent to the approver for offset request approval. The status of the offset request changes from **Submitted** to **Approval In Progress** in case of offset request with approval and in case of offset request without approval it changes to **Processed**. The approver can either approve or reject the offset request. Once the approver approves the offset request, selected bills are offset and adjustments are created for the bills. The status of the offset request changes from **Approval In Progress** to **Processed**. You can also view the details of the adjustment(s) created. However, if the approver rejects an offset request, a rejection reason should be provided.

A log maintained for offset requests logs complete trail of actions performed on offset request except the actions performed while editing the offset request. On submitting, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type and the **Unapply** button is enabled which cancels the adjustments. Upon cancelling the adjustments, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Note: The **Unapply** button appears only when the offset request is in the **Processed** status

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$1200	—\$800	\$400	Bill 1 amount \$1200 is offset against Bill 2.
Bill 2	—\$1000	\$500	—\$500	From Bill 2, \$500 is offset against from Bill 1.
Bill 3	—\$300	\$300	0	From Bill 3, \$300 is offset against from Bill 1.

Mass Offset

Mass offset functions is similar to single offset, the only difference is that mass offset enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.

Upon selection of a debit/credit bill from **Account Receivable Central**, you can add more credit/debit bill(s) from the search bills result in offset request. You can filter the bills using the **Bill Type** filter on the bill search zone to select debit/credit bills to be added to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

A log maintained for offset requests logs complete trail of actions performed on offset request. Once you submit the offset request, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type. When the offset request status changes to **Processed** adjustments are created and the **Unapply** button is enabled which cancels the adjustments. Upon unapplying the offset request, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$2000	—\$700	\$1300	The Offset amount \$400 is offset against Bill 2.
Bill 2	—\$400	\$400	0	Bill 2 is offset against \$400 from Bill Outstanding amount of Bill 1 i.e. \$2000.
Bill 3	—\$300	\$300	0	Bill 3 is offset against \$300 from Bill Outstanding amount of Bill 1 i.e. \$1600.

Cross Currency Offset

Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa. Cross-currency offset enables you to offset credit/debit bills with different currencies. You can add credit/debit bills to the debit/credit bill added from **Account Receivable Central**. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

The **C1-OFFSUBENT** algorithm validates whether the sum of debit offset amount is equal to sum of credit offset amount for all bills selected in the offset request. After validation, status of the offset request changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type.

Bill Information	Outstanding Amount	Outstanding Amount (in Offset currency)	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$300	\$300	—\$130.1	\$169.9	Outstanding amount \$300 is offset against \$130.1 (£100). (Exchange rate: 1£=1.3\$)
Bill 2	—£100	—\$130.1	\$130.1	0	Outstanding amount £100 (\$130.1) of Bill 2 is offset against \$300 from Bill 1.

Note: In case of multiple exchange rates with same date and different timestamps, the latest timestamp is considered.

Note: The adjustments are created in the currency of the bill.

Hold

Account Receivable Central enables bill(s) to be put on hold which belongs to a person's account or all accounts of a particular person. When a bill is put on hold, specific reason must be specified; no funding related activities can be performed for the specified period.

Funding related activities are put on hold from the start date of the hold request. The hold exists till the hold request release date; however you can also release individual bills.

You can only put bills on hold which has **Completed** status. When a person/account is on hold, all the subsequent bills under them are also on hold irrespective of bill status. You can select the bill amount in a bill to be put on hold i.e. you can put the particular bill on hold with partial or full bill amount.

Hold request type is used to define the hold request. In the hold request type, the **Hold Process** is set to **Funding**, which puts hold on only the funding activities of the selected bill belonging to a person or account.

Refund

Enables you to refund amount of credit bill to account through a refund request. For creating a refund request you need to specify the refund request type using which you want to create the refund request. The refund request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the refund request type, the adjustment type should be defined for creating refund adjustments.

Write Off

Enables you to write off the amount to the account through a write off request. For creating a write off request you need to specify the write off request type. The write off request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the write off request type, the adjustment type should be defined for creating write off adjustments.

Dispute

Enables you to dispute amount of credit/debit bill to an account through a dispute request. For creating a dispute request you need to specify the dispute request type using which you want to create the dispute request. The dispute request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the dispute request type, the adjustment type should be defined for creating dispute adjustments.

Account Receivable Central

The **Account Receivable Central** screen allows you to search for bills using various search criteria. This screen consists of the following zones:

- [Search Bill](#) on page 1174

Through the **Account Receivable Central** screen, you can navigate to the following screens:

- [Offset Request \(Used for Viewing\)](#) on page 1209
- [Hold Request \(Used for Viewing\)](#) on page 1443
- [Refund Request](#) on page 1349
- [Write Off Request](#) on page 1382
- [Dispute Request \(Used for Viewing\)](#) on page 1763

Search Bill

The **Search Bill** zone allows you to search for bills in the **Accounts Receivable Central** screen using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search bills using bill details, using account details or using person details whose account is linked to a particular bill. The valid values are: <ul style="list-style-type: none"> • Person Details • Account Details • Bill Details 	Yes
	Note: By default, the Person Details option is selected.	
Person ID	Used to select the person ID based on which you want to search for bills of a person.	No
	Note: This field appears only when you select the Person Details option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	Note: This field appears only when you select the Person Details option from the Search By list.	
Person Identifier Type	Used to select the identifier type based on which you want to search for bills of a person.	Yes (Conditional)
	Note: This field appears only when you select the Person Details option from the Search By list.	
Person Identifier	Used to specify the value of the person identifier type.	Yes (Conditional)
	Note: This field appears only when you select the Person Details option from the Search By list.	
Bills on Hold	Used to indicate whether the bill is on hold. The valid values are: <ul style="list-style-type: none"> • No • Yes 	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Balance	Used to search bills with a particular balance amount. The valid values are: <ul style="list-style-type: none"> • Equal to Zero • Greater Than Zero • Less Than Zero • Not Equal to Zero 	No
Pending Bills	Used to indicate whether the bill is pending.	No
Account ID	Used to search for bills of a particular account. Note: This field appears only when you select the Account Details option from the Search By list.	No
Account Identifier Type	Used to specify the account identifier type of the account whose bill you want to search. Note: This field appears only when you select the Account Details option from the Search By list.	No
Account Identifier	Used to select the account identifier based on which you want to search for bills of a particular account. Note: This field appears only when you select the Account Details option from the Search By list.	No
Bill ID	Used to search a particular bill. Note: This field appears only when you select the Bill Details option from the Search By list.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID. Note: This field appears only when you select the Bill Details option from the Search By list.	No
Invoice Currency	Used to search for bills which are billed in a particular currency. Note: This field appears only when you select the Bill Details option from the Search By list.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No
Bill Outstanding Amount From	Used to search bills with a particular minimum outstanding amount.	

Field Name	Field Description	Mandatory (Yes or No)
To	Used to search bills with a particular maximum outstanding amount.	

Note: You must specify at least one search criterion while searching for a bill when you select the **Person Details** or **Account Details** option from the **Search By** list.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Outstanding Amount	Displays the current bill balance amount.
Bill Date	Used to specify the date on which the bill was generated.
Hold Amount	Displays the amount from the bill that is on hold.
Account Information	Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. A tool tip appears when you hover over this column corresponding to the bill. It indicates the Current Balance, Excess Payment and Unapplied Payments and their values. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective bill.
Person Information	Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears with the details of the respective bill.

This zone contains following buttons:

Button Name	Button Description
Single Offset	Used to add the selected bill with same currency to an offset request.
Mass Offset	Used to add the selected bills with same currency to an offset request.
Cross Currency Offset	Used to add the selected bills with different currency to an offset request.
Hold	Used to add the selected bill to hold request to be put on hold.
Write Off	Used to add the selected bill to a write off request.
Refund	Used to add the selected bill to a refund request.
Dispute	Used to add the selected bill to a dispute request.

Bill Information

The **Bill Information** screen allows you to view detail information of a particular bill.

This screen consists of the following zones:

- [Hold Details](#) on page 1178
- [Offset Details](#) on page 1178
- [Garnishment Details](#) on page 1179
- [Bill Line Items](#) on page 1179

Offset Details

The **Offset Details** zone displays details of the offset request. This zone contains following columns:

Column Name	Column Description
Offset Request Information	Displays additional information about the offset request.
	Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the respective offset request.
Offset Amount	Displays the total offset amount.
Creation Mode	Displays the mode of creation for offset request . The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Hold Details

The **Hold Details** zone displays details of the hold request on a bill. This zone contains following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request.
	Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request.
Entity	Displays the type of entity.
Hold Entity	Displays additional information about the bill which is put on hold.
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Start Date	Displays the start date of the hold request.
End Date	Displays the end date of the hold request.

Garnishment Details

The **Garnishment Details** zone displays details garnishment details of the offset request. This zone contains following columns:

Column Name	Column Description
Garnishment Contract	Displays additional information about the contract created against the garnishment adjustments. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Garnishment Amount	Displays the total garnishment amount.

Bill Line Items

The **Bill Line Items** zone displays information about the selected bill's bill line item. This zone contains the following fields:

Field Name	Field Description
Bill Line Item	Displays the bill line item (bill segment/adjustment) of the selected bills.
Bill Line Item Information	Displays the information about the bill line item. Note: It has a link. On clicking the link, the Bill Segment screen or Adjustments screen appears with the details of the respective bill line item or adjustments.
Amount	Displays the amount of the bill line item.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Account Receivable Central**.
The **Account Receivable Central** screen appears.

3. Enter the search criteria in the **Search Bill** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Note: The wild card search for searching bill in the **Search Bill** zone is applicable only when you select the **Bill Details** option from the **Search By** list.

4. Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

Chapter 22

Offset Request

Topics:

- [Offset Request \(Without Approval\) Status Transition](#)
- [Offset Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-OffsetRequest](#)
- [Prerequisites](#)
- [Offset Request Type](#)
- [Offset Request \(Used for Searching\)](#)
- [Offset Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to offset credit and debit bill(s) from the account(s) belonging to different persons. While creating an offset request, you need to specify the offset request type using which you want to create the offset request. You can create an offset request from:

- **Account Receivables Central** screen
- **Offset Request** screen

You can offset the bills across from the account(s) belonging to same or different person. In an offset request you can offset debit bill(s) against credit bill(s) or vice-versa. You can also offset bills with same currency or different currencies.

The offset request type helps the system to determine:

- Whether adjustments must be created in the real time (i.e. immediately) or in the deferred mode (i.e. in the background).
- Whether the offset request must be approved before creating offset adjustments in the system.
- Default adjustment type using which offset adjustments must be created.
- The default offset amount whenever a new bill is added using **C1-OFST-AMT** algorithm.

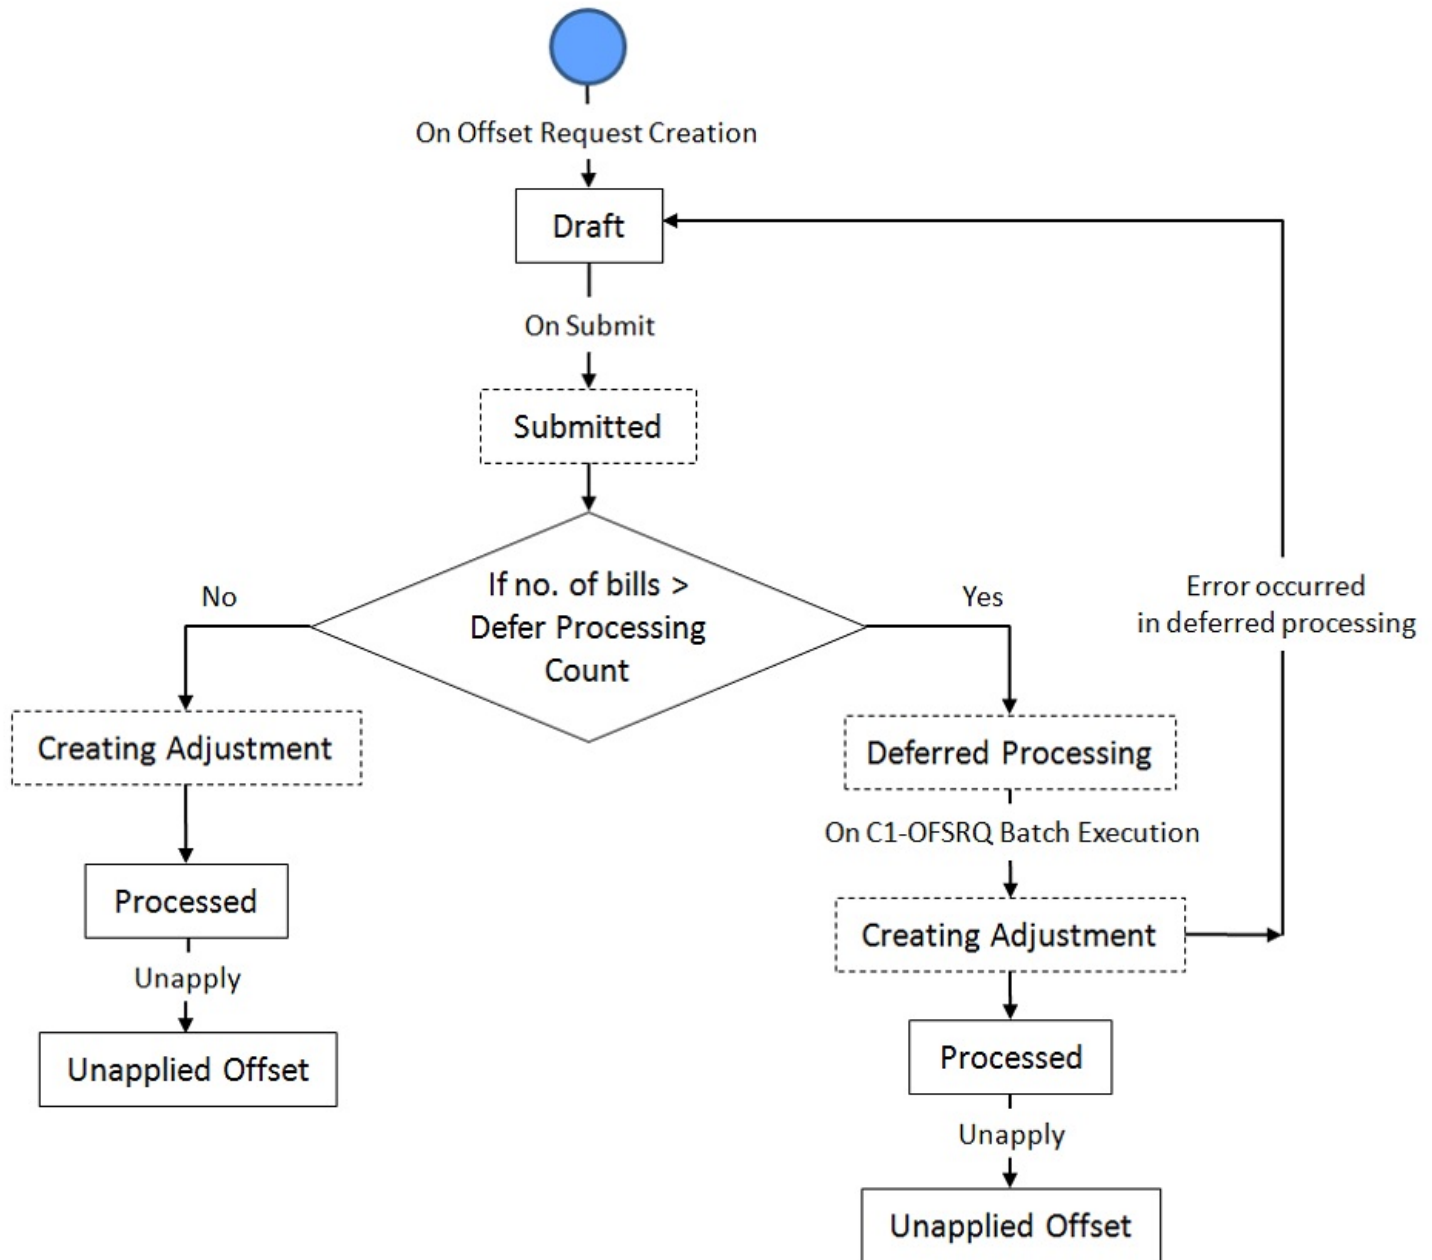

During the offset request process, an offset request goes through various statuses in its lifecycle. For more information about the offset request statuses, see [Offset Request \(Without Approval\) Status Transition](#) on page 1182 and [Offset Request \(With Approval\) Status Transition](#) on page 1183.

Note that the lifecycle of an offset request is driven by business object using which the offset request is created. An offset request business object named **C1-OffsetRequest** is shipped with the product. The offset request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-OffsetRequest** business object.

For more information on how to setup the offset request process, see [Prerequisites](#) on page 1189.

Offset Request (Without Approval) Status Transition

The following figure graphically indicates how an offset request moves from one status to another when approval workflow is off:

Offset Request (With Approval) Status Transition

The following figure graphically indicates how an offset request moves from one status to another when approval workflow is on:

Algorithms Used in C1-OffsetRequest

The following table lists the algorithms which are attached to the **C1-OffsetRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-OFFST-INF	C1-OFFST-INF	This algorithm generates the offset request information string which appears throughout the application. It concatenates the following fields: <ul style="list-style-type: none"> • Offset Request Type Description • Offset Request Status Description • Offset Request ID

The following table lists the algorithms which are used in the lifecycle of the **C1-OffsetRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	-	-	-
Submitted	Enter	C1-OFFSUBENT	C1-OFFSUBENT	This algorithm checks the following: <ul style="list-style-type: none"> • If the bill(s) under request has non-zero outstanding amount. • The bill status is Completed. • Offset amount overridden by the user is non-zero. • Sum of all offset amounts for debit bills is equal to sum of all offset amounts for credit bills. • At least one debit and one credit bill is selected in the offset request.
Approval In Progress	Enter	C1-OFFAPPENT	C1-OFFAPPENT	This algorithm creates To Do based on the Approval To Do Type configured in offset request type.
Approval In Progress	Enter	C1-OFFAPPEXT	C1-OFFAPPEXT	This algorithm checks whether an approver is associated with the approval To Do Role specified in the offset request type. It does not allow the submitter to approve or reject the offset request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Enter	C1-OFSAPRENT	C1-OFSAPRENT	This algorithm changes the status of the offset request to Deferred Processing or Creating Adjustment when the approver clicks the Approve button.
Rejected	-	-	-	-
Deferred Processing	Enter	F1-AT-RQJ	F1-AT-RQJ	This algorithm type transitions current state of the business object to the input Next Status or to the status related to the input Next Transition Condition. Only either of the soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Creating Adjustment	Enter	F1-AT-RQJ	F1-AT-RQJ	This algorithm type transitions current state of the business object to the input Next Status or to the status related to the input Next Transition Condition. Only either of the soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment	Enter	C1-OFST-DIST	C1-OFST-DIST	<p>This algorithm is executed on submit or on approve of an offset request. It creates the transfer adjustments between bill segments/contracts of bills selected in an offset request using following two parameters for this algorithm:</p> <p>Parameter 1 - Match Type Code: This should be the Match Type defined for payment override distribution in the system. If a bill selected for offsetting is already paid partially using some Match Type, then match events and amounts of offset adjustments follow the same pattern of distribution. However if no payment has been received against a bill, then the Match Type value which is defined as parameter which will be used for the offset distribution. It is assumed the payment and offset distribution of Match Type Code is maintained in the system.</p>

Status	System Event	Algorithm	Algorithm Type	Description
				<p>Parameter 2 - Match Type Entity Flag: Valid values for this parameter are 'BILL',' BSEG' and 'SA'. This parameter defines the open item at which the match events are to be created. In case of unpaid bills, new match events will be created based on the value of this parameter. Based on the flag defined for Match Events are created as follows:</p> <ol style="list-style-type: none"> 1. If the Match Type Flag is 'BILL', then all FTs on a bill have the same Match Event. 2. If the Match Type Flag is 'BSEG', then each line item (bill segment or adjustment) on the bill will have a unique match event. 3. If the Match Type Flag is 'SA', then line items belonging to the same contract within a bill will have the same match event. <p>Offset distribution is performed in steps given below:</p> <ol style="list-style-type: none"> 1. Internal Offsetting within each bill: <ul style="list-style-type: none"> • This is done only if a bill has both debit and credit line items. • Internal offsetting happens either at contract level or bill line item level, based on the value of parameter 'Match Type Entity Flag'. If the value is 'BILL' or 'SA', then internal offsetting will be done at contract level and if it is 'BSEG', then internal offsetting is done at bill line item level. • In a bill starting from the highest priority (PAY_PRIORITY_FLG in contract type) credit contract with highest contract type priority/ bill line item, the balance will be offset with the highest priority debit contract/ bill line item by creating

Status	System Event	Algorithm	Algorithm Type	Description
				<p>It determines an outstanding amount starting from the oldest bill, for each credit open item (i.e. bill and contract type / bill line item).</p> <p>It invokes Payment Distribution Algorithm Driver (which invokes Payment Distribution Override algorithm in the match type) to determine the distribution of this amount to the debit bill by passing debit Bill ID (starting from the oldest bill), Account ID of the Bill under offset and Match Type code.</p> <p>It creates transfer adjustments from credit bill to debit bill.</p> <p>If there exists balance on credit bill then it is distributed to the next debit bill.</p> <p>The above process is repeated for each credit bill until balance on each credit bill is exhausted.</p> <p>Note: In case of offset of a partially paid bill, the match type to be defined should be same as the match type used during payment distribution.</p> <p>Note: In case of a partially refunded or written off bill, the match type should have the same Pay Dist Override Algorithm at the bill segment / adjustments level.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment		C1-UPD-HOLD	C1-UPD-HOLD	<p>This algorithm updates the hold amount or hold entity end date in hold request from the offset request. There are two scenarios:</p> <ul style="list-style-type: none"> • If the outstanding amount on the bill after offsetting is not zero and less than the current hold amount, the hold amount will be updated to the outstanding amount. • If the outstanding amount on the bill after offsetting is zero and the bill is present is some hold request which is active then the end date for the bill will be updated as the system date. <p>This algorithm also inserts log entries in the offset request and hold request logs. When the hold details for a bill is updated, the bill ID will be stored as part of the offset request logs and the old hold amount/updated hold amount or the end date which is added to the hold entity will be stored as part of the hold request logs.</p>
Processed	-	-	-	-
Unapplied Offset	Enter	C1-UNAPOFST	C1-UNAPOFST	This algorithm cancels all offset adjustments in an offset request.

Prerequisites

To setup the offset request process, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to **Offset Request Type**
- Define the required characteristic types where the characteristic entity is set to **Offset Request**
- Define unapplied offset and rejected status reasons for the **C1-OffsetRequest** business object
- Assign the **C1-OFSRQ** To Do type to a To Do role whose users must receive To Do generated while submitting an offset request for approval
- Assign the **C1-OFSSB** To Do type to a To Do role whose users must receive To Do generated when an error occurs in case of deferred processing.
- Set the **C1-OFFSETREQ** feature configuration.
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- For the defined adjustment type, the **Print by Default** and **Impact Next Bill Balance** should be unchecked and the **A/P Request Type Code** leave this option blank.

- Define **Exchange Rate** for cross currency offset.
- Define the required offset request types in the system

Offset Request Type

Oracle Revenue Management and Billing allows you to define:

- **Offset Request Type** — It is used to create an offset request. You can define multiple offset request types in the system. An offset request type helps the system to determine:
 - Whether the offset request must be approved before creating offset adjustments in the system.
 - Default adjustment type using which offset adjustments must be created.
 - Whether adjustments must be created in real time (i.e. immediately) or in the deferred mode (i.e. in the background)
 - The default offset amount whenever a new bill is added using **C1-OFST-AMT** algorithm.

While defining an offset request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the offset request (which is created using the offset request type) is sent for approval before creating the offset adjustments. However, if the **Approval Required** check box is not selected, the offset adjustments are created in real time (i.e. immediately) or in the deferred mode (i.e. in the background) on submitting an offset request.

Note: The offset adjustments are created in deferred mode if the number of bills in the offset request are more than the **Defer Processing Count** configured in the offset request type.

Let us understand an offset scenario with the help of some examples.

Bill 1, Bill 2 and Bill 3 are added to an offset request. You can update the offset amount in the offset request. Note that the offset amount must be less than the bill outstanding amount.

Bill Information	Bill Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$1500	—\$500	\$1000	Offset amount \$500 can be split to be offset against Bill 2 and Bill 3.
Bill 2	\$200	—\$200	0	Bill 2 is offset against \$200 from Bill Outstanding amount of Bill 1 i.e. \$1500.
Bill 3	\$300	—\$300	0	Bill 3 is offset against \$300 from Bill Outstanding amount of Bill 1 i.e. \$1500.

The offset request type is defined with or without approval and mapped to an adjustment type creating adjustments. You can cancel the offset adjustment by clicking the **Unapply** button in the **Offset Request** zone.

The **Offset Request Type** screen allows you to define, edit, delete, and copy an offset request type. This screen consists of the following zones:

- [Offset Request Type List](#) on page 1191
- [Offset Request Type](#) on page 1191

Offset Request Type List

The **Offset Request Type List** zone lists offset request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Edit	On clicking the Edit () icon, the Offset Request Type screen appears where you can edit the details of the offset request type.
Duplicate	On clicking the Duplicate () icon, the Offset Request Type screen appears where you can define an offset request type using an existing offset request type.
Delete	On clicking the Delete () icon, you can delete the offset request type. Note: You can delete an offset request type only when you have not created an offset request using the offset request type.

On clicking the **Broadcast** () icon corresponding to the offset request type, the **Offset Request Type** zone appears with the details of the respective offset request type.

Offset Request Type

The **Offset Request Type** zone displays the details of the offset request type. This zone consists of the following sections:

- **Main** — This section provides basic information about The offset request type. It contains the following fields:

Field Name	Field Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Offset Request Business Object	Indicates the business object that will be used to create the offset request. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Field Name	Field Description
Detailed Description	Displays additional information about the offset request type.
Status	Indicates the status of the offset request type. The valid values are: <ul style="list-style-type: none"> Active Inactive
Adjustment Type	Indicates the adjustment type using which the offset adjustments must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Default Offset Amount Algorithm	Indicates the default offset amount algorithm which calculates the offset amount.
Defer Processing Count	Displays the number of bills to determine if the offset request will be processed in deferred mode.
	Note: If the number of bills is less than the Defer Processing Count , the offset request will be processed in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while processing the offset adjustments using the offset request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when you submit the offset request for approval.
	Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do Type.
Approval To Do Role	Indicates that users with the specified To Do Role can only approve the offset request submitted for approval.
	Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do Role.
Submitter To Do Type	Indicates the To Do type for the submitter when the offset request moves to Draft status due to error while deferred processing..
	Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.

Field Name	Field Description
Submitter To Do Role	Indicates the To Do role for the submitter when the offset request moves to Draft status due to error while deferred processing..
	<p>Note:</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>

- **Characteristics** — This section lists the characteristics defined for the offset request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the offset request type.
Delete	Used to delete the offset request type.
	<p>Note: You can delete a offset request type only when you have not created an offset request using the offset request type.</p>
Duplicate	Used to create a new offset request type using an existing offset request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the offset request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>

By default, the **Offset Request Type** zone does not appear in the **Offset Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the offset request type in the **Offset Request Type List** zone.

Defining an Offset Request Type

Prerequisites

To define an offset request type, you should have:

- Offset request business objects defined in the application
- **C1-OFSRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an offset request for approval.
- **C1-OFSRQ** To Do type assigned to a To Do role whose users must receive To Do generated while resubmitting an offset request or in case an error occurs in the deferred processing.

Procedure

To define an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Offset Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type Business Object	Used to indicate the business object that you want to use to create the offset request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Offset Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple offset request type business objects defined in the application. If there is only one offset request type business object defined in the application, the **Offset Request Type** screen appears.

4. Select the required offset request type business object from the respective field.
5. Click **OK**.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object that you want to use while creating the offset request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the offset request type.	No
Status	<p>Used to indicate the status of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a offset request type to Inactive if there are offset requests which are created using the offset request type and are currently in the Draft or Approval In Progress or Deferred Processing status.</p>	Yes
Adjustment Type	<p>Used to indicate the adjustment type using which the offset adjustment must be created.</p> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.</p>	Yes
Default Offset Amount Algorithm	<p>Used to attach an algorithm that will be triggered when you create adjustments. This algorithm calculates the default offset amount whenever a bill is added to an offset request.</p> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes
Defer Processing Count	<p>Displays the number of bills to determine if the offset request will be processed in deferred mode.</p> <p>Note: If the number of bills is less than the Defer Processing Count, the offset request will be processed in real time (i.e. immediately).</p>	No
Approval Required	Indicates whether approval is required while processing the offset adjustments using the offset request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to Indicate the To Do entry of the specified To Do type must be created when you submit the offset request for approval.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the offset request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
Submitter To Do Type	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	

6. Enter the required details depending on whether you want to define offset request type.

Note: You can search for an adjustment type by clicking the **Search**  icon corresponding to the respective field.

7. Define characteristics for the offset request type, if required.
8. Click **Save**.

The offset request type is defined.

How to define characteristics for a offset request type	Defining Characteristics for an Offset Request Type on page 1196

Defining Characteristics for an Offset Request Type

Prerequisites

To define characteristics for an offset request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request Type**)

Procedure

To define characteristics for an offset request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an offset request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Offset Request Type .	Note: This field is required when you are defining a characteristic for the offset request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the offset request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the offset request type, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the offset request type, click the **Delete**  icon corresponding to the characteristic.

Editing an Offset Request Type

Prerequisites

To edit an offset request type, you should have:

- Offset request business objects defined in the application
- **C1-OFSRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an offset request for approval.
- **C1-OFSRQ** To Do type assigned to a To Do role whose users must receive To Do generated while resubmitting an offset request or in case an error occurs in the deferred processing.

Procedure

To edit an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the offset request type whose details you want to edit.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object that you want to use while creating the offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: You cannot change the status of a offset request type to Inactive if there are offset requests which are created using the offset request type and are currently in the Draft or Approval In Progress or Deferred Processing status.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Adjustment Type	Used to indicate the adjustment type using which the offset adjustment must be created.	Yes
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.</p>	
Default Offset Amount Algorithm	Used to attach an algorithm that will be triggered when you create adjustments. This algorithm calculates the default offset amount whenever a bill is added to an offset request.	Yes
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	
Defer Processing Count	Displays the number of bills to determine if the offset request will be processed in deferred mode.	No
	<p>Note: If the number of bills is less than the Defer Processing Count, the offset request will be processed in real time (i.e. immediately).</p>	
Approval Required	Indicates whether approval is required while processing the offset adjustments using the offset request type.	No
Approval To Do Type	Used to Indicate the To Do entry of the specified To Do type must be created when you submit the offset request for approval.	Yes (Conditional)
	<p>Note: This field is required when the Approval Required check box is selected.</p> <p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the offset request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
Submitter To Do Type	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	

Tip: Alternatively, you can click the **Edit** button in the **Offset Request Type** zone to edit the details of the offset request type.

- Modify the details, if required.

Note: You can search for an adjustment type by clicking the **Search**  icon corresponding to the respective field.

- Define, edit, or remove characteristics from the offset request type, if required.
- Click **Save**.

The changes made to the offset request type are saved.

Deleting an Offset Request Type

Procedure

To delete an offset request type:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
- Click the **Search** option from the **Offset Request Type** sub-menu.
The **Offset Request Type** screen appears.

4. In the **Offset Request Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the offset request type that you want to delete.

A message appears confirming whether you want to delete the offset request type.

Note: You can delete an offset request type only when you have not defined an offset request using the offset request type.

Tip: Alternatively, you can click the **Delete** button in the **Offset Request Type** zone to delete the offset request type.

5. Click **OK**.

The offset request type is deleted.

Copying Offset Request Type

Instead of creating an offset request type from scratch, you can create a new offset request type using an existing offset request type. This is possible through copying an offset request type. On copying an offset request type, the details including the characteristics are copied to the new offset request type. You can then edit the details, if required.

Prerequisites

To copy an offset request type, you should have:

- Offset request type (whose copy you want to create) defined in the application
- Offset request business objects defined in the application

Procedure

To copy an offset request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the offset request type whose copy you want to create.
The **Offset Request Type** screen appears. It contains the following sections:
 - **Main** - Used to specify basic details about the offset request type.
 - **Characteristics** - Used to define characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object that you want to use while creating the offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	<p>Used to indicate the status of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a offset request type to Inactive if there are offset requests which are created using the offset request type and are currently in the Draft or Approval In Progress or Deferred Processing status.</p>	Yes
Adjustment Type	<p>Used to indicate the adjustment type using which the offset adjustment must be created.</p> <p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.</p>	Yes
Default Offset Amount Algorithm	<p>Used to attach an algorithm that will be triggered when you create adjustments. This algorithm calculates the default offset amount whenever a bill is added to an offset request.</p> <p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Displays the number of bills to determine if the offset request will be processed in deferred mode.	No
	Note: If the number of bills is less than the Defer Processing Count , the offset request will be processed in real time (i.e. immediately).	
Approval Required	Indicates whether approval is required while processing the offset adjustments using the offset request type.	No
Approval To Do Type	Used to Indicate the To Do entry of the specified To Do type must be created when you submit the offset request for approval.	Yes (Conditional)
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the offset request submitted for approval.	Yes (Conditional)
		Note: This field is required when the Approval Required check box is selected.
Submitter To Do Type	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	

Tip: Alternatively, you can click the **Duplicate** button in the **Offset Request Type** zone to create a copy of the offset request type.

5. Enter the required details.

Note: You can search for an adjustment type by clicking the **Search**  icon corresponding to the respective field.

6. Define, edit, or remove characteristics from the offset request type, if required.
7. Click **Save**.

The new offset request type is defined.

Offset Request (Used for Searching)

The **Offset Request** screen allows you to search for an offset request using various search criteria. It also allows you to create an offset request. Through this screen, you can navigate to the following screens:

- [Offset Request \(Used for Viewing\)](#) on page 1209

This screen consists of the following zones:

- [Search Offset Request](#) on page 1204

Search Offset Request

The **Search Offset Request** zone allows you to search for offset requests using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an offset request using request details or bill details. The valid values are: <ul style="list-style-type: none"> • Request Details • Bill Details 	Yes
	Note: By default, the Request Details option is selected.	
Created From	Used to search offset requests which are created from a particular date onwards.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
To	Used to search offset requests which are created till a particular date.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Status	Used to search offset requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Draft • Deferred Processing • Processed • Rejected • Unapplied Offset 	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
User ID	Used to search offset requests which are created by a particular user.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Offset Request Type	Used to search offset requests which are created using a particular offset request type.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Offset Request ID	Used to search a particular offset request.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Person ID	Used to search for offset requests in which bills of a particular person are selected for offsetting.	No
	Note: This field appears only when you select the Request Details option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.	
Account ID	Used to search for offset requests in which bills of a particular account are selected for offsetting.	No
	Note: This field appears only when you select the Request Details option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.	
Bill ID	Used to search offset requests with a particular bill.	No
	Note: This field appears only when you select the Bill Details option from the Search By list. The Search  icon appears corresponding to this field. On clicking the Search icon, the Bill Search window appears.	
Alternate Bill ID	Used to search a particular offset request using the alternate bill ID.	
Bill Date From	Used to search offset requests with bills which are created from a particular date onwards.	No
	Note: This field appears only when you select the Bill Details option from the Search By list.	
To	Used to search offset requests with bills which are created till a particular date.	No
	Note: This field appears only when you select the Bill Details option from the Search By list.	

Note: You must specify at least one search criterion while searching for an offset request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the offset request is created.
Offset Request Information	Displays information about the offset request.
	Note: It has a link. On clicking the link, the Offset Request screen appears.
Offset Amount	Displays the total offset amount.
Status	Indicates the status of the offset request.
Created By	Indicates the user who has created the offset request.
Creation Mode	Displays the mode of offset request creation. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Searching for an Offset Request

Prerequisites

To search for an offset request, you should have:

- Offset request types defined in the application

Procedure

To search for an offset request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Offset Request**.
A sub-menu appears.
3. Click the **Search** option from the **Offset Request** sub-menu.
The **Offset Request** screen appears.
4. Enter the search criteria in the **Search Offset Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of offset requests that meet the search criteria appears in the **Search Results** section.

Viewing the Offset Request Details

Procedure

To view the details of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the offset request. It contains the following zones:
 - **Offset Request** – Displays the details of the offset request.
 - **Selected Bills** – Lists the debit or credit bill line items to be offset.
 - **Search Bill** – Used to debit and credit bills that you want to offset. The bills in the search results added to the offset request can be viewed in the **Selected Bills** zone.
 - **Log** – Lists the complete trail of actions performed on the offset request.
3. View the details of the offset request in the **Offset Request** zone.
 4. View the entities (such as credit or debit bills) which must be offset in the **Selected Bills** zone.

Offset Request (Used for Viewing)

Once you create an offset request, the **Offset Request** screen allows you to:

- Edit the details of an offset request
- Edit the offset amount of the bills in the offset request
- Delete an offset request
- View the details of an offset request
- Submit an offset request for approval
- Approve or reject an offset request
- View the log of an offset request
- Add a log entry for an offset request

This screen consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Offset Request** – Displays the details of the offset request.
 - **Selected Bills** – Lists the selected bills added to the offset request.
 - **Search Bill** – Searches bills using search criteria.
- **Log** – This tab lists the complete trail of actions performed on the offset request.

Offset Request - Main

The **Main** tab on the **Offset Request** contains the following zones:

- [Offset Request](#) on page 1209
- [Selected Bills](#) on page 1211
- [Search Bill](#) on page 1212

Offset Request

The **Offset Request** zone displays the details of the offset request. This zone contains the following sections:

- **Main** — This section provides basic information about the offset request. It contains the following fields:

Field Name	Field Description
Offset Request Information	Displays information about the offset request.
Offset Request Type	Indicates the offset request type using which the offset request is created.
	Note: It has a link. On clicking the link, the Offset Request Type screen appears where you can view the details of the offset request type.

Field Name	Field Description
Status	<p>Indicates the status of the offset request. The valid values are:</p> <ul style="list-style-type: none"> • Approval In Progress • Draft • Deferred Processing • Rejected • Processed • Unapplied Offset
Adjustment Type	<p>Indicates the adjustment type using which offset adjustments are created for the offset request. By default, adjustment type defined in the offset request type is displayed.</p> <p>Note: It has a link. On clicking the link, the Adjustment Type screen appears with the details of the respective offset request.</p>
Offset Amount	Displays the total debit offset amount.

- **Characteristics** — Lists the characteristics defined for the offset request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the offset request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the offset request.</p> <p>Note: The Edit button appears only when the offset request is in the Draft status.</p>
Delete	<p>Used to delete the offset request.</p> <p>Note: The Delete button appears only when the offset request is in the Draft status.</p>
Submit	<p>Used to submit the offset request for approval or create offset adjustments in case approval is not configured for the offset request.</p> <p>Note: The Submit button appears only when the offset request is in the Draft status.</p>

Button Name	Button Description
Approve	Used to approve the offset request.
	<p>Note: The Approve button appears only when:</p> <ul style="list-style-type: none"> The offset request is in the Approval In Progress status. A user with the approval To Do role is reviewing the offset request.
Reject	Used to reject the offset request.
	<p>Note: The Reject button appears only when:</p> <ul style="list-style-type: none"> The offset request is in the Approval In Progress status. A user with the approval To Do role is reviewing the offset request.
Unapply	Used to unapply the offset request to cancel the offset adjustments.
	<p>Note: The Unapply button appears only when the offset request is in the Processed status.</p>

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the offset request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Status Date/Time	Displays the date and time when the offset request status is updated
Create Date/Time	Displays the date and time when the offset request is created.

Selected Bills

The **Selected Bills** zone lists the debit and credit bill(s) that you have added to the offset request. This zone contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.</p>
Bill Date	Displays the date on which the bill was generated.
Outstanding Amount	Displays the outstanding amount of the bill.
	<p>Note: After the offset request is processed, this field displays the new bill balance instead of Remaining Bill Balance.</p>

Column Name	Column Description
Hold Amount	Displays the bill amount that has been put on hold.
	Note: After the offset request is processed, this field displays the new hold amount instead of Updated Hold Amount .
Offset Amount	Displays the amount that you want to offset.
	Note: By default, the amount which is eligible for offset appears in this field. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Remaining Bill Balance	Displays the difference between bill outstanding amount and offset amount.
	Note: This column appears only when the offset request status is in the Draft or Rejected status.
Updated Hold Amount	Displays the updated hold amount which is the hold amount before the offset request is processed.
	Note: This column appears only when the offset request status is in the Draft or Rejected status.
View Adjustments	Displays the details of adjustments created against the corresponding bill by clicking the View () icon for the respective bill.
	Note: This column appears only when the offset request is in the Processed status.
Account Information	Displays information about the account.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Bill ID	Displays the bill ID.

Search Bill

The **Search Bill** zone allows you to search for a bill applicable for offset. This zone contains the following fields:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an offset request using person, account, or bill details. The valid values are: <ul style="list-style-type: none"> • Person Details • Account Details • Bill Details 	Yes
	Note: By default, the Person Details option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for bills which belong to a particular person.	Yes
	Note: This field appears only when you select the Person Details option from the Search By list. The Allow Offsetting Across Persons option in the C1-OFFSETREQ feature configuration is set to Y .	
Account ID	Used to search for bills which belong to a particular account.	
	Note: This field appears only when you select the Account Details option from the Search By list.	
Bill ID	Used to search for a particular bill.	
	Note: This field appears only when you select the Bill Details option from the Search By list.	
Bills on Hold	Used to indicate whether the bills are on hold. The valid values are: <ul style="list-style-type: none"> • No • Yes 	
	Note: This field appears only when you select the Person Details option from the Search By list.	
Bill Balance	Used to indicate category for bill balance. The valid values are: <ul style="list-style-type: none"> • Equal to Zero • Greater Than Zero • Lesser Than Zero • Not Equal to Zero 	
Bill Date From	Used to search bills applicable for the offset request which are created from a particular date onwards.	Yes
	Note: By default, date before 30 days of the current date appears in this field.	
Bill Date To	Used to search bills applicable for the offset request which are created till a particular date.	Yes
	Note: By default, the current date appears in this field.	
Show Cross Currency Bills	Used to indicate whether the bills are cross currency bills.	Not applicable

Note: You must specify at least one search criterion while searching for an offset request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Display additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Bill Date	Displays the date when the bill was completed.
Due Date	Displays the due date of the bill.
Outstanding Amount	Displays the total outstanding amount of the bill.
Hold Amount	Displays the amount from the bill that has been put on hold.
Outstanding Amount (Offset Currency)	Displays the outstanding amount of the bill in the native currency of the offset request. Note: This column appears only if the Show Cross Currency Bills option is checked.
Account Information	Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.

View Adjustments

The **View Adjustments** screen appears when you click the **View**  icon under **View Adjustments** column in the **Selected Bills** zone on the **Offset Request** screen when the offset request is in **Processed** status. This zone contains the following columns:

Column Name	Column Description
Adjustment Information	Displays the additional information about the bill.
Adjustment Amount	Displays the adjustment amount.
From Bill	Displays the additional information about the bill from the which the offset request is created.
To Bill	Displays the additional information about the bill which is offset against a selected bill.

Note: The view icon for **View Adjustments** appears only when the offset request is in the **Processed** status.

Offset Request - Log

The **Log** tab on the **Offset Request** contains the following zones:

- [Offset Request Log](#) on page 1215

Offset Request Log

The **Offset Request Log** zone on the **Offset Request** screen lists the complete trail of actions performed on the offset request. It also logs the actions of To Do types, hold amount updated from offset request and error occurred in deferred processing of the offset request. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the offset request.
Details	Displays the details about the action performed on the offset request.
User	Indicates the user who has performed the action on the offset request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the offset request.
Status Reason	Indicates the reason why the offset request was rejected or unapplied offset.

Note: You can manually add a log entry for the offset request by clicking the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

Creating an Offset Request

Prerequisites

To create an offset request, you should have:

- Offset request types defined in the application.

Procedure

To create an offset request:

1. Do either of the following:

If you want to...	Then...
Define an offset request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. The Account Receivable Central screen appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Single Offset, Mass Offset, or Cross Currency Offset, whichever is applicable.
Define an offset request from the Offset Request screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Offset Request. A sub-menu appears. 3. Click the Add option from the Offset Request sub-menu.

The **Add Offset Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to indicate the request type using which you want to create the offset request.	Yes
Bill	<p>Used to indicate the bill against which you want to create the offset request.</p> <p>Note: When you add the bill from Account Receivable Central screen, this field is disabled.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Bill Search window appears.</p>	Yes

Tip: Alternatively, you can access the **Add Offset Request** screen by clicking the **Add** button in the **Page Title** area of the **Offset Request** screen.

2. Select the required offset request type and bill from the respective fields.

Note: You can search for an account by clicking the **Search**  icon corresponding to the respective field.

3. Click **Save**.

The offset request is defined and the status of the offset request is set to **Draft**. The **Offset Request** screen appears where you can view the details of the offset request. It contains the following tabs:

- **Main** – Displays information about the offset request. It contains the following zones:
 - **Offset Request** – Displays the details of the offset request.
 - **Selected Bills** – Lists the bills with debit and credit line items of the account which must be offset.

- **Search Bill** — Used to search bills with debit and credit line items that you want to offset. This tab appears only when the offset request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the offset request.
4. Add debit and credit line items that you want to offset.
 5. Edit the offset amount of each entity, if required.
 6. Define characteristics for the offset request, if required.

Defining Characteristics for an Offset Request

Prerequisites

To define characteristics for an offset request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request**)

Procedure

To define characteristics for an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

3. Click the **Edit** button in the **Offset Request** zone.

The **Offset Request** screen appears.

Note: The **Edit** button appears only when the offset request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the offset request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the offset request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the offset request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Offset Request .	Note: This field is required when you are defining a characteristic for the offset request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the offset request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the offset request, click the **Add**  icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the offset request, click the **Delete**  icon corresponding to the characteristic.

Filtering Credit and Debit Bills of an Offset Request

Procedure

To filter bills of an offset request:

1. Search for the bills in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the offset request. It contains the following zones:
 - **Offset Request** – Displays the details of the offset request.
 - **Selected Bills** – Lists the debit and credit bill(s) to be offset.
 - **Search Bill** – Used to search bills with debit or credit bill(s) that you want to offset. The debit or credit bill(s) in the search results added to the offset request can be viewed in the **Selected Bills** zone.
- **Log** – Lists the complete trail of actions performed on the offset request.

You can filter the bills using **Bill Balance** search criteria available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (✖) icon in the upper right corner of the **Selected Bills** zone.

3. Click **Search**.

The search results are filtered based on the specified criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Due Date	Displays the due date of the bill.
Outstanding Amount	Displays the outstanding amount of the bill.
	Note: After the offset request is processed, this field displays the new bill balance instead of Remaining Bill Balance .
Hold Amount	Displays the bill amount that has been put on hold.
	Note: After the offset request is processed, this field displays the new hold amount instead of Updated Hold Amount .
Offset Amount	Displays the amount that you want to offset.
	Note: By default, the amount which is eligible for offset appears in this field. You can edit the amount, if required. However, you cannot specify the amount greater than the remaining bill balance.
Remaining Bill Balance	Displays the difference between bill outstanding amount and the offset amount.
	Note: This column appears only when the offset request status is in the Draft or Rejected status.
Updated Hold Amount	Displays the updated hold amount.
	Note: This column appears only when the offset request status is in the Draft or Rejected status.

Adding a Credit or Debit Bill to the Offset Request

You can add the credit/debit bills to an offset request. While adding a credit/debit bill to an offset request, you can either:

- Add selected credit/debit bill to the offset request from the **Account Receivable Central** screen only before creating the offset request.
- Add selected credit/debit bill(s) to the offset request from the **Offset Request** screen.

Prerequisites

To add credit/debit bill(s) to the offset request, you should have:

- Completed bills for the account/person.

Procedure

To add credit/debit bill(s) to the offset request:

1. Do either of the following:

If you want to...	Then...
Add a credit/debit bill from the Offset Request screen	<ol style="list-style-type: none"> 1. Search for the bills in the Search Bill zone on the Offset Request screen. 2. Select a bill and click the Add button. <p>The selected bill(s) are added to the offset request. You can view the added bills in the Offset Request screen.</p>
Create single offset request	<ol style="list-style-type: none"> 1. Search for the bill in the Account Receivable Central screen. 2. From the search results, select a bill and click the Single Offset button. <p>The selected bill is added to an offset request. You can view the added bill in the Offset Request screen.</p>
Create mass offset request	<ol style="list-style-type: none"> 1. Search for the bills in the Account Receivable Central screen. 2. From the search results, select a bill and click the Mass Offset button. <p>The selected bill is added to an offset request and you can add more bills with same currency to the offset request from the Search Bill zone in the Offset Request screen. You can view the added bills in the Offset Request screen.</p>
Create cross currency offset request	<ol style="list-style-type: none"> 1. Search for the bills in the Account Receivable Central screen. 2. From the search results, select a bill and click the Cross Currency Offset button. <p>The selected bills is added to an offset request and you can add more bills with different currencies to the offset request from the Search Bill zone in the Offset Request screen. You can view the added bills in the Offset Request screen.</p>

Note: You can add only one bill from **Account Receivable Central** screen. You cannot remove the bill added from the **Account Receivable Central** screen.

- After selecting the required fields in the **Add Offset Request** screen, the selected bill appears in the **Offset Request** screen.

Editing an Offset Request

Prerequisites

To edit an offset request, you should have:

- Adjustment types defined in the application

Procedure

To edit an offset request:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

- Click the **Edit** button in the **Offset Request** zone.

The **Offset Request** screen appears. It contains the following sections:

- Main** — Used to edit the offset details, such as the amount which must be offset and the adjustment type using which the offset adjustment must be created. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Information	Displays information about the offset request.	Not applicable
Offset Request Type	Indicates the offset request type using which the offset request is created.	Not applicable
Adjustment Type	Used to indicate the adjustment type using which the offset adjustment must be created.	Yes
Comments	Used to specify additional information about the offset request.	No

- Characteristics** — Used to define characteristics for the offset request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the offset request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the offset request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Offset Request .	Note: This field is required when you are defining a characteristic for the offset request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the offset request.

- **Offset Details** — Used to edit the offset details, such as the amount which must be offset. It contains the following fields:

Column Name	Column Description
Total Debit Offset Amount	Displays the total debit amount of the all the bills added in the offset request.
Total Credit Offset Amount	Displays the total credit amount of the all the bills added in the offset request.
Total Offset Amount	Displays the total credit and debit amount of the all the bills added in the offset request.
Bill Information	Displays additional information about the bill.
Outstanding Amount	Displays the outstanding amount of the bill.
Due Date	Displays the due date of the bill.
Hold Amount	Displays the amount of the bill that has been put on hold.
Outstanding Amount (Offset Currency)	Displays the outstanding amount of the bill in the native currency of the offset request.
	Note: This column appears only in case of cross currency offset.
Offset Amount	Displays the amount that you want to offset.
	Note: By default, the amount which is eligible for offset appears in this field. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Remaining Bill Balance	Displays the difference between bill outstanding amount and the offset amount.
Updated Hold Amount	Displays the updated hold amount.

Note:

The **Edit** button appears only when the offset request is in the **Draft** status.

4. Modify the details of the offset request, if required.
5. Define, edit, or remove characteristics of the offset request, if required.
6. Click **Save**.

The changes made to the offset request are saved.

Submitting an Offset Request

Prerequisites

To submit an offset request, you should have:

- Debit and credit bill(s) added in the offset request.

Procedure

To submit an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to delete.

The **Offset Request** screen appears.

3. Click the **Submit** button in the **Offset Request** zone.

The system behaves in the following manner:

If...	Then
The Approval Required check box is selected in the offset request type using which the offset request is created	A To Do of the C1-OFSRQ To Do type is created and sent to the approver. The status of the offset request is changed to Approval In Progress .
The Approval Required check box is not selected in the offset request type using which the offset request is created.	The offset adjustments are created using the specified adjustment type and the status of the offset request is changed to Processed . Note: The offset adjustments are created in the Frozen status. If a match event is present for the bill line items, the existing match event is stamped on the offset adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the offset adjustments and on the corresponding financial transactions. If you are doing a partial offset for any entity, the corresponding match event status is set to Open . However, if the entire eligible amount is offset, the corresponding match event status is set to Balanced .

Note: The **Offset Amount** should be less than or equal to current **Outstanding Amount** of the bill.

Note: The **Submit** button appears only when the offset request is in the **Draft** status.

Approving an Offset Request

You can view the number of offset requests which are pending for approval in the **Offset Request** screen. The approver can review, and accordingly approve or reject the offset request based on the observations.

Note: The system will not allow you to approve or reject an offset request submitted by you.

Procedure

To approve an offset request:

1. Do either of the following:

If you want to...	Then...
Approve an offset request through the Offset Request screen	<ol style="list-style-type: none"> 1. Search for the offset request in the Offset Request screen. 2. In the Search Results section, click the link in the Offset Request Information column corresponding to the offset request which you want to review.
Approve an offset request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-OFSRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the offset request that you want to review.

The **Offset Request** screen appears.

2. Review the offset request details.
3. Click the **Approve** button in the **Offset Request** zone.

If the number of bills in the offset request does not exceed the defer processing count (defined in the Offset Request Type), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **View Adjustments** screen and the status of the offset request is changed to **Processed**. However, if the number of bills in the offset request exceeds the defer processing count, the system creates adjustments in the deferred mode and the status of the adjustment offset request is changed to **Deferred Processing**.

Note: Deferred mode means in the background when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is invoked. When the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is invoked, the system checks whether there are any offset requests in the **Deferred Processing** status. If there is an offset request in the **Deferred Processing** status, the system creates adjustments for the offset request. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **View Adjustments** screen and the status of the offset request is changed to **Processed**.

Note:

The **Approve** button appears only when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

Rejecting an Offset Request

Prerequisites

To reject an offset request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an offset request, you need to specify the reason why you want to reject the offset request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-OffsetRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject an offset request submitted by you.

Procedure

To reject an offset request:

1. Do either of the following:

If you want to...	Then...
Reject an offset request through the Offset Request screen	<ol style="list-style-type: none"> 1. Search for the offset request in the Offset Request screen. 2. In the Search Results section, click the link in the Offset Request Information column corresponding to the offset request which you want to review.

If you want to...	Then...
Reject an offset request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-OFSRQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the offset request that you want to review.

The **Offset Request** screen appears.

2. Review the offset request details.
3. Click the **Reject** button in the **Offset Request** zone.

The **Reject Offset Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the offset request.	Yes
Comments	Used to specify additional information while rejecting the offset request.	No

Note: The **Reject** button appears only when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the offset request is changed to **Rejected**.

Viewing the Log of an Offset Request

Procedure

To view the log of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose log you want to view.

The **Offset Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the offset request. It contains the following zones:
 - **Offset Request** – Displays the details of the offset request.
 - **Selected Bills** – Lists the debit and credit bill line items which must be offset.
 - **Search Bill** – Used to search debit and credit bill line items that you want to offset.
- **Log** – Lists the complete trail of actions performed on the offset request.

3. Click the **Log** tab.

The **Offset Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the offset request.
Details	Displays the details about the action performed on the offset request.
User	Indicates the user who has performed the action on the offset request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the offset request.
Status Reason	Indicates the reason why the offset request was rejected or cancelled.

Note: You can manually add a log entry for the offset request by clicking the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

Unapplying an Offset Request

There might be situations when an incorrect offset request is processed in the system. In such case, the system provides you with an ability to unapply the offset request. However, you can unapply an offset request only when the offset request is in the **Processed** status.

Prerequisites

To unapply an offset request, you should have:

- Unapply reasons defined in the application

Note: While unapplying an offset request, you need to specify the reason why you want to unapply the offset request. You can select the appropriate unapply reason only when you have defined the reasons for the **Unapplied Offset** status of the **C1-OffsetRequest** business object in the **Status Reason** screen.

Procedure

To unapply an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to unapply.

The **Offset Request** screen appears.

3. Click the **Unapply** button in the **Offset Request** zone.

The **Unapply Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to unapply the offset request.	Yes
Comments	Used to specify additional information while cancelling the offset request.	No

Note: The **Unapply** button appears only when the offset request is in the **Processed** status.

4. Select the unapply reason from the **Unapply Reason** list.
5. Click **Save**.

The status of the offset request is changed to **Unapplied Offset**.

- [Funding Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the automatic payment facility for an account. The system automatically calculates the automatic payment amount during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. However, there might be situations when you would like to do the following before stamping the automatic payment amount against the bill in the **CI_BILL_ACH** table:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

The system enables you to change the automatic payment amount through the funding process. The funding process supports all three automatic payment creation options (i.e. Create At Bill Completion, Create On Extract Date, and Freeze Payment on Notification).

While creating a funding request, you need to specify a funding request type using which you want to create the funding request. It is the funding request type which helps the system to determine:

- The business object using which the funding request should be created in the system.
- The currency in which the total debit and credit amount should be calculated.
- The account funding currency characteristic type which must be defined on the account. This characteristic indicates that the funding amount of the account's bills should be calculated in the specified currency.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill.

Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.

Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.

- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.
- The currency conversion algorithms which must be used while determining the approval hierarchy for the funding request.

Note: The **Funding Request (C1-FundingReq)** business object is shipped with the product.

Once you specify a funding request type, the funding request is created in the **Draft** status. You can then add one or more debit or credit bills in the funding request. Note that you can only add bills of those accounts for which the **Defer Auto Pay** option is selected on the customer class. Once the bills are added, you can submit a funding request. Before you submit a funding request, you can do the following:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

The system calculates the funding amount in the following manner:

Bill Type	Funding Amount for the Bill
Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)
Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in the funding request)

You can delete, cancel, or submit a funding request which is in the **Draft** status. On canceling a funding request, the status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. On submitting a funding request, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**.

Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic**

Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.

You can optionally configure the approval process for the funding request. If the **Approval Required** option is selected in the funding request type, the status of the funding request is changed to **Approval In Progress** on submitting the funding request. The system calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, the system uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount, the system automatically approves the funding request and changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the system creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy.

Once the approver at the first level in the approval hierarchy approves the funding request, the system checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

If an approver rejects a funding request, the status of the funding request is changed to **Rejected**. And, if an approver requests to resubmit a funding request for approval, the status of the funding request is changed to **Draft**. You can then edit the funding request and resubmit it for approval. The system allows the submitter to withdraw the funding request when it is in the **Approval In Progress** status. On withdrawing a funding request, the status of the funding request is changed to **Draft**.

If a funding request is created automatically through a custom batch, the system allows you to manually exclude some bills from the funding request when it is in the **Draft** status. You can exclude a bill from a funding request by changing its status to **Excluded**.

For more information on how to setup the funding request process, see [Prerequisites](#) on page 1234.

Prerequisites

To setup the funding request process, you need to do the following:

- Define the required funding request types in the system
- Define the required funding adjustment types where the **A/P Request Type Code** field is set to **REFUND**
- Define the required garnishment adjustment types where the **A/P Request Type Code** field is not set to **REFUND**
- Define the required characteristic types where the characteristic entity is set to **Funding Request Type**
- Define the required characteristic types where the characteristic entity is set to **Funding Request**
- Define the required approval profiles with the debit and credit approval hierarchy in the system
- Specify the **C1-FNDAP** To Do type in the approval profile which you want to use in the funding request's approval process
- Specify the **C1-FNDSB** as the submitter To Do type in the funding request types
- Define the status reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen
- Assign the **C1-FNDAP** To Do type to a To Do role whose users must receive a To Do while submitting a funding request for approval
- Assign the **C1-FNDSB** To Do type to a To Do role whose users must receive a To Do when an approver requests to resubmit the funding request for approval
- Select the **Defer Auto Pay** option on the customer class of the accounts for which you want to use the funding process
- Define the values for the **CAN_RSN_CD_FLG** lookup field
- Define the **Funding Currency** characteristic type where the characteristic entity is set to **Account**
- Define a currency conversion algorithm for payments using the **C1_CURALGPY** algorithm type
- Define a currency conversion algorithm for adjustments using the **C1_CURALGAD** algorithm type
- Attach the currency conversion algorithms to the **Currency Conversion For Adjustments** and **Currency Conversion For Payments** algorithm spots to the required divisions
- Set the batch control type of the **Funding Request Periodic Monitor (C1-FNDRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Funding Request (Without Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is not configured in the funding request type:

Funding Request (With Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is configured in the funding request type:

Algorithms Used in C1-FundingReq

C1-FUNDINFO

This algorithm generates the funding request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Funding Request Type Description
2. Funding Request Status Description
3. Funding Request ID

C1-FUNDSUBMT

This algorithm is invoked when you submit a funding request. If the approval process is not configured in the funding request type, it changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. If the approval process is configured in the funding request type, it calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount in the approval hierarchy, the funding request is automatically approved by the system and the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding

request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

C1-FUNDAPP

This algorithm is invoked when the status of the funding request is changed to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, a log entry is created for the funding request when the To Do is created.

Note: If a funding request needs approval from the subsequent level in the approval hierarchy, this algorithm creates a To Do and assigns it to the users with the To Do role defined at the subsequent level in the approval hierarchy.

C1-FUNDAPRVD

This algorithm is invoked when you approve a funding request. It checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

Note: If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-FNDRESUBM

This algorithm is invoked when the status of the funding request is changed to **Return to Submitter**. It changes the status of the funding request to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. In addition, it creates a To Do using the submitter To Do type which is specified in the funding request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the funding request type.

C1-FUNDVAL

This algorithm is invoked when the status of the funding request is changed to **Create Funding**. It checks whether the funding amount of a debit bill is equal to the bill outstanding amount minus hold and offset amount set on the bill (i.e. $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount}$). Similarly, it checks whether the funding amount of a credit bill is equal to the bill outstanding amount minus hold, offset, and garnishment amount set on the bill (i.e. $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount} - \text{Garnishment Amount}$). If so, it executes the next algorithm. However, if the funding amount is incorrect, the status of the record in the funding request is changed to **Error**.

C1-FUNDAPAY

If the funding amount of a bill is in debit, it stamps the funding amount as the automatic payment amount against the bill in the **CI_BILL_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

It considers the records in the funding request which are in the **Pending** status. Once the **CI_BILL_ACH** table is updated, the status of the record in the funding request is changed to **Processed**. If any error occurs while updating the **CI_BILL_ACH** table, the status of the record in the funding request is changed to **Error**.

C1-FUNDADJCR

If the funding amount of a bill is in credit, it creates the A/P adjustments using the funding adjustment type. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account.

It considers the records in the funding request which are in the **Pending** status. Once the adjustments are created, the status of the record in the funding request is changed to **Processed**. If any error occurs while creating the adjustments, the status of the record in the funding request is changed to **Error**.

Points to Note:

- The system uses the funding and garnishment adjustment types from the funding request.
- The main customer's address is used while creating the A/P adjustment for a credit bill.
- The garnishment adjustments are created against the garnishment contracts of the account. A garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.
- The system allows you to transfer funding amount to multiple garnishment contracts of the account. Accordingly, the number of non A/P adjustments will be created using the garnishment adjustment type.

It contains the following parameters:

- **Adjustment Type** - Used to indicate the adjustment type using which the adjustment should be created against the credit bill for internal offsetting.
- **Match Type Entity Flag** - Used to indicate the match type entity on which a new match event must be created when no payment exists for the credit bill. The valid values are:
 - **BILL** - Used when you want to create the same match event on all financial transactions of a bill.
 - **BSEG** - Used when you want to create a unique match event for each bill line item (such as, bill segment or adjustment).

- **SA** - Used when you want to create the same match event on the bill line items which are created against the same contract.

C1-FUNDCANCL

This algorithm is invoked when you cancel a funding request. It excludes all debit and credit bills from the funding request and changes the status of each record in the funding request to **Excluded**. In addition, the status of the funding request is changed to **Canceled**.

Funding Request Type

Oracle Revenue Management and Billing allows you to define a funding request type using which you can create a funding request. It is the funding request type which helps the system to determine the following:

- The business object using which the funding request should be created in the system.
- The currency in which the funding amount should be calculated.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.

Note: In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is moved to the garnishment contract of the account.

Note: In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

The **Funding Request Type** screen allows you to define, edit, delete, and copy a funding request type. It contains the following zones:

- [Funding Request Type List](#) on page 1240
- [Funding Request Type](#) on page 1241

Funding Request Type List

The **Funding Request Type List** zone lists the funding request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Edit	On clicking the Edit  icon, the Funding Request Type screen appears where you can edit the details of the funding request type.

Column Name	Column Description
Duplicate	On clicking the Duplicate () icon, the Funding Request Type screen appears where you can define a new funding request type using an existing funding request type.
Delete	On clicking the Delete () icon, you can delete the funding request type. Note: You can delete a funding request type only when you have not created a funding request using the funding request type.

On clicking the **Broadcast** () icon corresponding to a funding request type, the **Funding Request Type** zone appears with the details of the respective funding request type.

Funding Request Type

The **Funding Request Type** zone displays the details of the funding request type. It contains of the following sections:

- **Main** - Displays the basic information about the funding request type. It contains the following fields:

Field Name	Field Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Funding Request Business Object	Indicates the business object that will be used to create the funding request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the funding request type.
Status	Indicates the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Funding Amount Currency	Indicates the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone.
Account Funding Currency Characteristic Type	Indicates the characteristic type which should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.

Field Name	Field Description
Default Funding Adjustment Type	Indicates the adjustment type using which the funding adjustments must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Default Garnishment Adjustment Type	Indicates the garnishment adjustment type using which the garnishment adjustments must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears with the details of the respective adjustment type.
Threshold Range Algorithm	Indicates the threshold range for a bill based on the payments done for the bill.
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.
Defer Processing Count	Displays the number of bills to determine if the funding request will be processed in deferred mode.
	Note: If the number of bills is less than the Defer Processing Count , the funding request will be processed in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while creating the funding adjustments using the funding request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the funding request type.
	<p>Note:</p> <p>The Approval Profile field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the Approval Profile screen appears where you can view the details of the respective approval profile.</p>
Submitter To Do Type	Indicates the To Do type for the submitter when the funding request type is resubmitted by the approver.
	<p>Note:</p> <p>The Submitter To Do Type field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>

Field Name	Field Description
Submitter To Do Role	Indicates the To Do role for the submitter when the funding request type is resubmitted by the approver. Note: The Submitter To Do Role field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.
Currency Conversion Adjustment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.
Currency Conversion Payment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.

- **Characteristics** - The **Characteristics** section lists the characteristics defined for the funding request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request type.
Delete	Used to delete the funding request type. Note: You can delete a funding request type only when you have not created a funding request using the funding request type.
Duplicate	Used to create a new funding request type using an existing funding request type.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Funding Request Type** zone does not appear in the **Funding Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the funding request type in the **Funding Request Type List** zone.

Defining a Funding Request Type**Prerequisites**

To define a funding request type, you should have:

- Funding request type business objects defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To define a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Funding Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type Business Object	Used to indicate the business object using which you want to create the funding request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Funding Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple funding request type business objects defined in the application. If there is only one funding request type business object defined in the application, the **Funding Request Type** screen appears.

4. Select the required funding request type business object from the respective field.
5. Click **OK**.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a funding request type to Inactive when the corresponding funding request is in a status other than Processed or Rejected .	

Field Name	Field Description	Mandatory (Yes or No)
Funding Amount Currency	<p>Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone.</p> <p>Note:</p> <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account Funding Currency Characteristic Type	<p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Account Funding Currency Characteristic Type field. On clicking the Search icon, the Characteristic Type Search window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to Account.</p> <p>The converted amount appears in the Funding Currency Amount column of the Selected Bills zone in the Funding Request screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>	Yes
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Default Garnishment Adjustment Type	<p>Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p>	Yes
Threshold Range Algorithm	<p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p>Note:</p> <p>You must specify an algorithm which is created using the C1-FDRTTR algorithm type in the Threshold Range Algorithm field.</p> <p>The Search  icon appears corresponding to the Threshold Range Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	<p>Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.</p> <p>Note:</p> <p>You cannot specify a negative value in the Defer Processing Count field.</p> <p>Deferred mode means in the background when the Funding Request Periodic Monitor (C1-FNDRQ) batch is invoked. You can configure the Funding Request Periodic Monitor (C1-FNDRQ) batch such that it is executed at regular intervals. For more information about the Funding Request Periodic Monitor (C1-FNDRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p>	No
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	<p>Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.</p> <p>Note: This field appears only when the Approval Required option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p>Note:</p> <p>You must specify the C1-FNDSB To Do type in the Submitter To Do Type field.</p> <p>The Search  icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Adjustment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	<p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p>

Field Name	Field Description	Mandatory (Yes or No)
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p> <p>Note: This field appears only when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Payment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	

6. Enter the required details in the **Main** section.
7. Define characteristics for the funding request type, if required.
8. Click **Save**.

The funding request type is defined.

How to define a characteristic for a funding request type	Defining a Characteristic for a Funding Request Type on page 1251

Defining a Characteristic for a Funding Request Type

Prerequisites

To define a characteristic for a funding request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request Type**)

Procedure

To define a characteristic for a funding request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a funding request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Funding Request Type .	Note: This field is required when you are defining a characteristic for the funding request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: If you select a predefined characteristic type, the Search  icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the funding request type.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the funding request type, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the funding request type, click the **Delete**  icon corresponding to the characteristic.

How to copy a funding request type	Copying a Funding Request Type on page 1260

Editing a Funding Request Type

Prerequisites

To edit a funding request type, you should have:

- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)

- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To edit a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the funding request type whose details you want to edit.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Displays the funding request type.	Not applicable
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a funding request type to Inactive when the corresponding funding request is in a status other than Processed or Rejected .	
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone. Note: <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account Funding Currency Characteristic Type	<p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Account Funding Currency Characteristic Type field. On clicking the Search icon, the Characteristic Type Search window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to Account.</p> <p>The converted amount appears in the Funding Currency Amount column of the Selected Bills zone in the Funding Request screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>	Yes
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Default Garnishment Adjustment Type	<p>Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.</p> <p>Note:</p> <p>The Search  icon appears corresponding to the Default Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>In the Default Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND.</p>	Yes
Threshold Range Algorithm	<p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p>Note:</p> <p>You must specify an algorithm which is created using the C1-FDRTTR algorithm type in the Threshold Range Algorithm field.</p> <p>The Search  icon appears corresponding to the Threshold Range Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.	No
	<p>Note:</p> <p>You cannot specify a negative value in the Defer Processing Count field.</p> <p>Deferred mode means in the background when the Funding Request Periodic Monitor (C1-FNDRQ) batch is invoked. You can configure the Funding Request Periodic Monitor (C1-FNDRQ) batch such that it is executed at regular intervals. Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p>Note:</p> <p>You must specify the C1-FNDSB To Do type in the Submitter To Do Type field.</p> <p>The Search  icon appears corresponding to the Submitter To Do Type field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p>	<p>Note: This field is required when the Approval Required option is selected.</p>
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Adjustment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	<p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p>

Field Name	Field Description	Mandatory (Yes or No)
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The Search  icon appears corresponding to the Currency Conversion Payment Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	<p>Note: This field is required when the Currency Conversion Required option is selected in the approval profile.</p>

Tip: Alternatively, you can edit the details of a funding request type by clicking the **Edit** button in the **Funding Request Type** zone.

5. Modify the details in the **Main** section, if required.
6. Define, edit, or remove characteristics from the funding request type, if required.
7. Click **Save**.

The changes made to the funding request type are saved.

Deleting a Funding Request Type

Procedure

To delete a funding request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.
The **Funding Request Type** screen appears.

- In the **Funding Request Type List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the funding request type that you want to delete.

A message appears confirming whether you want to delete the funding request type.

Note: You can delete a funding request type only when you have not created a funding request using the funding request type.

Tip: Alternatively, you can delete a funding request type by clicking the **Delete** button in the **Funding Request Type** zone.

- Click **OK**.

The funding request type is deleted.

Copying a Funding Request Type

Instead of creating a funding request type from scratch, you can create a new funding request type using an existing funding request type. This is possible through copying a funding request type. On copying a funding request type, the details including the characteristics are copied to the new funding request type. You can then edit the details, if required.

Prerequisites

To copy a funding request type, you should have:

- Funding request type (whose copy you want to create) defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1_CURALGPY** and **C1_CURALGAD** algorithm type, respectively

Procedure

To copy a funding request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Funding Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Funding Request Type** sub-menu.

The **Funding Request Type** screen appears.

- In the **Funding Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the funding request type whose copy you want to create.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a funding request type to Inactive when the corresponding funding request is in a status other than Processed or Rejected .	

Field Name	Field Description	Mandatory (Yes or No)
Funding Amount Currency	<p>Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the Statistics section of the Funding Request zone.</p> <p>Note:</p> <p>The list includes only those currencies which are defined in the system.</p> <p>If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>	Yes

Searching for a Funding Request

Prerequisites

To search for a funding request, you should have:

- Funding request types defined in the application

Procedure

To search for a funding request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Funding Request**.
A sub-menu appears.
3. Click the **Search** option from the **Funding Request** sub-menu.
The **Funding Request** screen appears.
4. Enter the search criteria in the **Search Funding Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of funding requests that meet the search criteria appears in the **Search Results** section.

Creating a Funding Request

Prerequisites

To create a funding request, you should have:

- Funding request types defined in the application

Procedure

To create a funding request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Funding Request**.
A sub-menu appears.

- Click the **Add** option from the **Funding Request** sub-menu.

The **Add Funding Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to indicate the funding request type using which you want to create the funding request.	Yes

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Funding Request** screen.

- Select the required funding request type from the respective field.
- Click **OK**.

The funding request is created in the **Draft** status.

Funding Request (Used for Viewing)

The **Funding Request** screen allows you to:

- Edit the details of a funding request
- Delete or cancel a funding request
- View the details of a funding request
- Submit a funding request for processing
- Approve or reject a funding request
- Request the submitter to resubmit a funding request for approval
- Withdraw a funding request
- View the log of a funding request
- Add a log entry for a funding request

It consists of the following tabs:

- [Funding Request - Main](#) on page 1273
- [Funding Request - Bills](#) on page 1281
- [Funding Request - Log](#) on page 1285

Funding Request - Main

The **Main** tab displays information about the funding request. It contains the following zones:

- [Funding Request](#) on page 1274

- [Search Bill](#) on page 1277

Funding Request

The **Funding Request** zone displays the details of the funding request. It contains the following sections:

- **Main** - Displays basic information about the funding request. It contains the following fields:

Field Name	Field Description
Funding Request Information	Displays information about the funding request.
Funding Request Type	Indicates the funding request type using which the funding request is created. Note: It has a link. On clicking the link, the Funding Request Type screen appears where you can view the details of the respective funding request type.
Status	Indicates the status of the funding request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Deferred Processing • Draft • Processed • Rejected
Status Reason	Indicates the reason why the funding request is rejected. Note: This field appears only when the funding request is in the Rejected status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the respective status reason.
Funding Adjustment Type	Indicates the adjustment type using which the A/P adjustment is created against a credit bill. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Garnishment Adjustment Type	Indicates the adjustment type using which the garnishment adjustment is created when the amount from the credit bill is transferred to the garnishment contract of the account. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Comments	Displays additional information entered while rejecting the funding request. Note: This field appears only when the funding request is in the Rejected status.
Creation Mode	Indicates whether the funding request is created automatically or manually. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

- **Statistics** - Displays analytical information about the funding request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of debit or credit bills which are added in the funding request.
Total Records Processed	Displays the total number of debit or credit bills for which payments or adjustments are successfully created in the system.
Total Records Excluded	Displays the total number of debit or credit bills which are excluded from the automatic funding request.
Total Records In Error	Displays the total number of debit or credit bills for which payments or adjustments was not successfully created in the system.
Total Payment Incoming Events Created	Displays the total number of payment events created against the debit bills in the funding request.
Total Adjustments Created	Displays the total number of adjustments created against the credit bills in the funding request.
Total Credit Funding Amount	<p>Displays the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. The sum total is calculated in the funding amount currency which is specified in the funding request type.</p> <p>Note: If the credit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the Currency Conversion For Adjustments algorithm spot of the account's division.</p>
Total Debit Funding Amount	<p>Displays the sum of funding amount of all bills whose funding amount is in debit. The sum total is calculated in the funding amount currency which is specified in the funding request type.</p> <p>Note: If the debit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the Currency Conversion For Payments algorithm spot of the account's division.</p>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the funding request.</p> <p>Note: The Edit button appears only when the funding request is in the Draft status.</p>
Delete	<p>Used to delete the funding request.</p> <p>Note: The Delete button appears only when the funding request is in the Draft status.</p>

Button Name	Button Description
Submit	Used to submit the funding request.
	Note: The Submit button appears only when the funding request is in the Draft status.
Cancel	Used to cancel the funding request.
	Note: The Cancel button appears only when the funding request is in the Draft status.
Approve	Used to approve the funding request.
	Note: The Approve button appears only when: <ul style="list-style-type: none"> The funding request is in the Approval In Progress status. A user with the approval To Do role is reviewing the funding request.
Reject	Used to reject the funding request.
	Note: The Reject button appears only when: <ul style="list-style-type: none"> The funding request is in the Approval In Progress status. A user with the approval To Do role is reviewing the funding request.
Re Submit	Used to request for resubmitting the funding request.
	Note: The Re Submit button appears only when: <ul style="list-style-type: none"> The funding request is in the Approval In Progress status. A user with the approval To Do role is reviewing the funding request.
Withdraw	Used to withdraw the funding request.
	Note: The Withdraw button appears only when: <ul style="list-style-type: none"> The funding request is in the Approval In Progress status. A user with the submitter To Do role is viewing the funding request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the funding request status is updated
Create Date/Time	Displays the date and time when the funding request is created.

- **Characteristics** - Lists the characteristics defined for the funding request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the funding request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Funding Request - Log

The **Log** tab contains the following zone:

- [Funding Request Log](#) on page 1285

Funding Request Log

The **Funding Request Log** zone lists the complete trail of actions performed on the funding request. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the funding request.
Details	Displays the details of the action performed on the funding request.
User	Indicates the user who has performed the action on the funding request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the funding request.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Column Name	Column Description
Status Reason	Indicates the reason why the funding request was rejected by the approver.
	Note: The data appears in this column only when the funding request is in the Rejected status.

Note: You can manually add a log entry for the funding request by clicking the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

Adding a Debit or Credit Bill to a Funding Request

In a funding request, you can only add the debit or credit bills of the accounts for which the **Defer Auto Pay** option is selected on the respective customer class.

Procedure

To add a debit or credit bill to a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

Note:

The **Search Bill** zone appears only when the funding request is in the **Draft** status.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

6. Select the check box corresponding to a bill that you want to add to the funding request.
7. Click the **Add** button in the **Search Bill** zone.

A message appears indicating that the bill is added to the funding request.

Note: You can only add a debit or credit bill of an account for which the **Defer Auto Pay** option is selected on the respective customer class.

8. Click **OK**.

The bill is added to the funding request. The status of the bill record in the funding request is set to **Pending**.

Deleting a Debit or Credit Bill from a Funding Request

Procedure

To delete a debit or credit bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.
The **Funding Request** screen appears.
3. Click the **Bills** tab.
The **Bills** tab appears.
4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to delete from the funding request.
5. Click the **Delete** button in the **Selected Bills** zone.

A message appears confirming whether you want to delete the bill from the funding request.

Note: The **Delete** button appears only when the funding request is in the **Draft** status.

6. Click **OK**.

The debit or credit bill is deleted from the funding request.

Excluding a Bill from a Funding Request

If the funding request is manually created through the user interface, you add or delete bills from the funding request when it is in the **Draft** status. However, if the funding request is automatically created through a custom logic, the system allows you to exclude the required bills from the funding request when it is in the **Draft** status. In such case, the status of the record in the funding request is changed to **Excluded**. The excluded bills can then be included in some other funding request.

Prerequisites

To exclude a bill from a funding request, you should have:

- Values defined for the **CAN_RSN_CD_FLG** lookup field

Procedure

To exclude a bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to exclude from the funding request.
5. Click the **Edit** button in the **Selected Bills** zone.

The **Edit Funding Request Details** screen appears. It contains the following field:

Field Name	Field Description
Funding Request Information	Displays the information about the funding request.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Bill Information	Displays the information about the bill.	Not applicable						
Garnishment Amount	Displays the funding amount which is transferred to the garnishment contracts of the account.	Not applicable						
Funding Amount	<p>Displays the bill amount which can be used for the funding process. It is calculated in the following manner:</p> <table border="1"> <thead> <tr> <th>Bill Type</th> <th>Funding Amount for the Bill</th> </tr> </thead> <tbody> <tr> <td>Debit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)</td> </tr> <tr> <td>Credit Bill</td> <td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)</td> </tr> </tbody> </table>	Bill Type	Funding Amount for the Bill	Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)	Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)	Not applicable
Bill Type	Funding Amount for the Bill							
Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)							
Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)							

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the record in the funding request. The valid values are: <ul style="list-style-type: none"> Excluded Invalid Masked Pending Processed Valid 	Yes
Cancel Reason	Used to indicate the reason why you want to exclude the bill from the funding request.	Yes (Conditional)
	Note: The list includes only those values which are defined in the CAN_RSN_CD_FLG lookup field.	Note: This field is required when you want to exclude the bill from the funding request.

Note: The **Edit** button appears only when the creation mode of the funding request is set to **Automatic** and the funding request is in the **Draft** status.

6. Select the **Excluded** option from the **Status** field.
7. Select the required cancel reason from the respective field.
8. Click **Save**.

The bill is excluded from the funding request. The status of the bill record in the funding request is set to **Excluded**.

Editing a Funding Request

Prerequisites

To edit a funding request, you should have:

- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To edit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Edit** button in the **Funding Request** zone.

The **Edit Funding Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request.
- **Characteristics** - Used to define a characteristic for the funding request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Information	Displays information about the funding request.	Not applicable
Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill. Note: The Search  icon appears corresponding to the Funding Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. In the Funding Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is set to REFUND .	Yes (Conditional) Note: This field is required while creating an A/P adjustment against a credit bill.
Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account. Note: The Search  icon appears corresponding to the Garnishment Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears. In the Garnishment Adjustment Type field, you can only specify an adjustment type where the A/P Request Type Code field is not set to REFUND .	Yes (Conditional) Note: This field is required while creating garnishment adjustments for a credit bill.
Comments	Used to specify additional information about the funding request.	No

Note: The **Edit** button appears only when the funding request is in the **Draft** status.

4. Modify the details of the funding request, if required.
5. Define, edit, or remove characteristics from the funding request, if required.

6. Click **Save**.

The changes made to the funding request are saved.

How to define a characteristic for a funding request	Defining a Characteristic for a Funding Request on page 1291

Defining a Characteristic for a Funding Request

Prerequisites

To define a characteristic for a funding request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request**)

Procedure

To define a characteristic for a funding request:

1. Ensure that the **Characteristics** section is expanded when you are editing a funding request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the funding request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the funding request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Funding Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the funding request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search  icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the funding request.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the funding request, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the funding request, click the **Delete**  icon corresponding to the characteristic.

Canceling a Funding Request

Prerequisites

To cancel a funding request, you should have:

- Reasons defined for the **Canceled** status of the **C1-FundingRequest** business object in the **Status Reason** screen

Procedure

To cancel a funding request:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to cancel.

The **Funding Request** screen appears.

- Click the **Cancel** button in the **Funding Request** zone.

The **Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the funding request.	Yes
	Note: The list includes only those reasons which are defined for the Canceled status of the C1-FundingRequest business object in the Status Reason screen.	

Note: The **Cancel** button appears only when the funding request is in the **Draft** status.

- Select the cancellation reason from the **Status Reason** list.
- Click **Save**.

The status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. The excluded bills can then be included in some other funding request.

Submitting a Funding Request

Prerequisites

To submit a funding request, you should have:

- At least one debit or credit bill in the funding request
- Funding and garnishment adjustment types defined in the funding request
- Funding adjustment type defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment type defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

Procedure

To submit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to submit.

The **Funding Request** screen appears.

3. Click the **Submit** button in the **Funding Request** zone.

The system behaves in the following manner:

If...	Then...				
<p>The Approval Required option is selected in the funding request type using which the funding request is created</p>	<p>It calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. Depending on the sum total amount, the system behaves in the following manner:</p>				
	<table border="1"> <thead> <tr> <th data-bbox="889 466 1177 506">If...</th> <th data-bbox="1182 466 1466 506">Then...</th> </tr> </thead> <tbody> <tr> <td data-bbox="889 510 1177 898"> <p>The sum total is less than the minimum threshold amount in the approval hierarchy</p> </td> <td data-bbox="1182 510 1466 898"> <p>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> </td> </tr> </tbody> </table>	If...	Then...	<p>The sum total is less than the minimum threshold amount in the approval hierarchy</p>	<p>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p>
	If...	Then...			
<p>The sum total is less than the minimum threshold amount in the approval hierarchy</p>	<p>The system automatically approves the funding request and changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p>				
<p>The sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy</p>	<p>The system changes the status of the funding request to Approval In Progress. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.</p>				

If...	Then...
<p>The Approval Required option is not selected in the funding request type using which the funding request is created</p>	<p>The system changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> <p>Once the Funding Request Periodic Monitor (C1-FNDRQ) batch is executed, it checks whether there are any funding requests in the Deferred Processing status. If so, it changes the status of the funding request to Create Funding.</p> <p>Once the status of a funding request is changed to Create Funding, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the CI_BILL_ACH table. Then, on executing the Create Automatic Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.</p> <p>Note: The funding and garnishment adjustments are created in the Frozen status.</p>

Note: The **Submit** button appears only when the funding request is in the **Draft** status.

Approving a Funding Request

You can view the number of funding requests which are pending for approval in the **Funding Request** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the funding request based on the observations.

Note: The system will not allow you to approve, reject or resubmit a funding request submitted by you.

Procedure

To approve a funding request:

1. Do either of the following:

If you want to...	Then...
Approve a funding request through the Funding Request screen	<ol style="list-style-type: none"> 1. Search for the funding request in the Funding Request screen. 2. In the Search Results section, click the link in the Funding Request Information column corresponding to the funding request which you want to review.
Approve a funding request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-FNDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the funding request that you want to review.

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is accurate, then click the **Approve** button in the **Funding Request** zone.

The system behaves in the following manner:

If...	Then...
The sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy	The system changes the status of the funding request to Approval In Progress . It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the next level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.

If...	Then...
<p>The sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy</p>	<p>The system changes the status of the funding request to either Deferred Processing or Create Funding depending on whether the number of bills in the funding request exceeds the defer processing count.</p> <p>Once the Funding Request Periodic Monitor (C1-FNDRQ) batch is executed, it checks whether there are any funding requests in the Deferred Processing status. If so, it changes the status of the funding request to Create Funding.</p> <p>Once the status of a funding request is changed to Create Funding, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the CI_BILL_ACH table. Then, on executing the Create Automatic Payments and Refunds (APAYCRET) batch, the system creates automatic payment and payment event for such bill.</p> <p>Note: The funding and garnishment adjustments are created in the Frozen status.</p>

Note: The **Approve** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

Requesting to Resubmit a Funding Request

Procedure

To request for resubmitting a funding request:

1. Do either of the following:

If you want to...	Then...
Request for resubmitting a funding request through the Funding Request screen	<ol style="list-style-type: none"> 1. Search for the funding request in the Funding Request screen. 2. In the Search Results section, click the link in the Funding Request Information column corresponding to the funding request which you want to review.
Request for resubmitting a funding request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-FNDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the funding request that you want to review.

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incomplete and you want the submitter to make the required changes and resubmit the request, click the **Re Submit** button in the **Funding Request** zone.

The **Resubmit Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the funding request before resubmitting it for approval.	Yes

Note: The **Re Submit** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Enter the comments in the respective field and then click **Save**.

A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the funding request type. In addition, the status of the funding request is changed to **Draft**.

Withdrawing a Funding Request

Prerequisites

To withdraw a funding request, you should have:

- Submitter To Do role (which is specified in the funding request type) associated with the **C1-FNDAP** To Do type

Procedure

To withdraw a funding request:

1. Search for the funding request in the **Funding Request** screen.

2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to withdraw.

The **Funding Request** screen appears.

3. If you want to make some changes in the funding request which is already sent for approval, click the **Withdraw** button in the **Funding Request** zone.

The status of the funding request is changed to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. The To Do for approver is automatically closed when the submitter withdraws the funding request. Note that the To Do for approver is automatically closed only when the submitter To Do role is associated with the To Do type specified in the approval profile.

Note: The **Withdraw** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the submitter To Do role is viewing the funding request.

Transferring the Funding Amount of a Credit Bill to a Garnishment Contract

Prerequisites

To transfer the funding amount of a credit bill to a garnishment contract, you should have:

- At least one garnishment contract on the account

Note: The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

Procedure

To transfer the funding amount of a credit bill to a garnishment contract:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, click the link on the value **Y** in the **Garnishment Contract** column corresponding to a credit bill whose funding amount you want to transfer to a garnishment contract.

The **Edit Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Information	Indicates the credit bill whose funding amount you want to transfer to a garnishment contract of the account.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Garnishment Contract	Used to indicate the garnishment contract of the account.	Yes
Garnishment Amount	Used to specify the amount that you want to transfer to the garnishment contract.	Yes

- Enter the required details in the **Edit Garnishment Details** screen.
- If you want to transfer the funding amount of the credit bill to more than one garnishment contract of the account, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to remove a garnishment record from the funding request, click the **Delete** (🗑️) icon corresponding to the garnishment record.

- Click **Save**.

The changes made to the funding request are saved.

Viewing the Garnishment Details of a Credit Bill

Procedure

To view the garnishment details of a credit bill:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

- Click the **Bills** tab.

The **Bills** tab appears.

- In the **Selected Bills** zone, click the **Broadcast**  icon in the **Garnishment** column corresponding to the credit bill whose garnishment details you want to view.

The **View Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Info	Indicates the credit bill whose garnishment details you are viewing.

In addition, this screen contains the following columns:

Column Name	Column Description
Garnishment Contract	Indicates the garnishment contract of the account against which amount from the credit bill is transferred.
Garnishment Amount	Displays the amount which is transferred to the garnishment contract.

Note:

The **Garnishment** column does not appear when the funding request is in the **Draft** status.

The **View** () icon appears in the **Garnishment** column only when the funding request is in the **Processed** status.

Viewing the Payments Created Through a Funding Request

Procedure

To view the payments created through a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, click the **Broadcast**

 icon corresponding to a debit bill whose payment details you want to view.

The **Funding Payments Details** zone appears.

Note: The **Broadcast**  icon appears only when the funding request is in the **Processed** status.

5. View the payments created for the debit bill through the funding request in the **Funding Payments Details** zone.

Note: The data appears in the **Funding Payments Details** zone only when the **Create Automatic Payments and Refunds (APAYCRET)** batch is executed to create the automatic payment and payment event for the debit bill. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Viewing the Adjustments Created Through a Funding Request

Procedure

To view the adjustments created through a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, click the **Broadcast**

 icon corresponding to a credit bill whose adjustment details you want to view.

The **Funding Adjustments** zone appears.

Note: The **Broadcast**  icon appears only when the funding request is in the **Processed** status.

5. View the A/P adjustments and garnishment adjustments (if any) created for the credit bill through the funding request in the **Funding Adjustments** zone.

Viewing the Log of a Funding Request

Procedure

To view the log of a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to view.

The **Funding Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the funding request in the **Funding Request Log** zone.

Adding a Log Entry for a Funding Request**Procedure**

To add a log entry for a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to edit.

The **Funding Request** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the funding request.	Not applicable
Log Details	Used to specify additional comments on the funding request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Funding Request Log** zone.

Oracle Revenue Management and Billing allows you to refund and write off amount to the account. If the amount received from the payor account is matched against the suspense or excess credit contract, the system facilitates you to refund the amount to the payor. In addition, you can refund the amount of a credit bill line item, such as credit bill segment or adjustment, if required. To refund the amount to the account holder, you need to create refund adjustments through a refund request. While creating a refund request, you need to specify the refund request type using which you want to create the refund request. It is the refund request type which helps the system to determine:

- Whether the refund request must be approved before creating refund adjustments in the system
- Approval profile using which the refund request must be approved
- Whether multi-level or single-level approval is required while creating refund adjustments in the system
- Tolerance limit for refund (i.e. minimum refund amount)
- Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
- Default adjustment type using which refund adjustments must be created

The system allows you to create refund adjustments only using those adjustment types where A/P request type is defined. Once the refund adjustments are created, the A/P Extract process will extract the information and accordingly refund the amount to the payor. During the refund request process, a refund request goes through various statuses in its lifecycle. For more information about the refund request statuses, see [Refund Request \(Without Approval\) Status Transition](#) on page 1311 and [Refund Request \(With Approval\) Status Transition](#) on page 1311.

Note that the lifecycle of a refund request is driven by the business object using which the refund request is created. A refund request business object named **C1-RefundReq** is shipped with the product. The refund request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-RefundReq** business object.

Similarly, the system facilitates you to write off the amount to the account through a write off request. While creating a write off request, you need to specify the write off request type using which you want to create the write off request. It is the write off request type which helps the system to determine:

- Whether the write off request must be approved before creating write off adjustments in the system
- Approval profile using which the write off request must be approved

- Whether multi-level or single-level approval is required while creating write off adjustments in the system
- Default adjustment type using which write off adjustments must be created

The system allows you to create write off adjustments only using those adjustment types where A/P request type is not defined. During the write off request process, a write off request goes through various statuses in its lifecycle. For more information about the write off request statuses, see [Write Off Request \(Without Approval\) Status Transition](#) on page 1312 and [Write Off Request \(With Approval\) Status Transition](#) on page 1313.

Note that the lifecycle of a write off request is driven by the business object using which the write off request is created. A write off request business object named **C1-WORequest** is shipped with the product. The write off request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-WORequest** business object.

For more information on how to setup the refund and write off request processes, see [Prerequisites](#) on page 1323.

Refund Request (Without Approval) Status Transition

Algorithms Used in C1-RefundReq

The following table lists the algorithms which are attached to the **C1-RefundReq** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	<p>This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:</p> <ul style="list-style-type: none"> • Refund or Write Off Request Type Description • Refund or Write Off Request Status Description • Refund or Write Off Request ID
Post-Processing	C1-REFWOPOSP	C1-REFWOPOSP	<p>This algorithm recalculates and updates the total refund amount in the Refund Request zone when you change the refund amount against an entity while editing a refund request.</p>
Validation	C1-REFUNDVAL	C1-REFUNDVAL	<p>This algorithm validates the following for each entity that you have selected in the refund request:</p> <ul style="list-style-type: none"> • The mandatory data, such as refund amount and adjustment type, is specified. • The refund amount is not less than zero. • The refund amount is not greater than the entity amount. • The refund amount is not greater than the eligible refund amount. • The partial refund is not done at the payment event or bill level.

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-REF-DFT	C1-REF-DFT	<p>This algorithm fetches the account's main customer's name and address and displays in the Refund Request zone. In addition, when you refund the payments from the Payment Event Summary screen, this algorithm does the following:</p> <ul style="list-style-type: none"> • The total eligible refund amount is calculated and accordingly displayed in the Refund Request screen. • The default refund adjustment type specified in the refund request type is fetched and displayed against the selected payment event or payments. • On selecting a payment event for refund, if all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the Refund Details zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the Refund Details zone.
Submitted	Enter	C1-REFUNDSUB	C1-REFUNDSUB	<p>This algorithm checks the following:</p> <ul style="list-style-type: none"> • Whether the approval is required for the refund request. If the approval is required for a refund request, the status of the refund request is changed to Approval In Progress. However, if the approval is not required for a refund request, the status of the refund request is changed to Creating Adjustment. • At least one entity, such as payment event, payment, or credit bill line item (such as credit bill segment or adjustment) is selected in the refund request. • Whether the approval profile attached to the refund request type has the credit hierarchy and C1-REFRQ To Do type defined.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Enter	C1-REFUNDAPP	C1-REFUNDAPP	<p>This algorithm creates the following:</p> <ul style="list-style-type: none"> • A To Do using the To Do type specified in the approval profile which is attached to the refund request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. • A log entry is added when a To Do is created using the To Do type.
Approved	Enter	C1-REFAPPRVD	C1-REFAPPRVD	<p>This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the refund request is changed to Approval In Progress and the algorithm attached to the Approval In Progress status is invoked. If further approval is not required, the status of the refund request is changed to Creating Adjustment.</p>
Rejected	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment	Enter	C1-REFADJCRI	C1-REFADJCRI	<p>This algorithm does the following:</p> <ul style="list-style-type: none"> Creates the refund adjustments for the refund request. These refund adjustments are created in the Frozen status. The adjustment ID is displayed corresponding to the entity in the Refund Details zone. Stamps the bill ID of credit line item on the adjustment and the corresponding financial transaction. If a match event is present for the credit bill line item and for payments which are matched against the excess credit contract, the existing match event is stamped on the refund or write up adjustment and the corresponding financial transaction. However, when a match event is not present for payments which are matched against the suspense contract or if the match event does not exist, a new match event is created and stamped on the refund or write up adjustment and the corresponding financial transaction. If you are doing a partial refund for any entity, the corresponding match event status is set to Open. However, if you are refunding the entire eligible amount, the corresponding match event status is set to Balanced. The details of the refund adjustments are added in the A/P Check Request (CL_ADJ_APREQ) table. If a write up adjustment is created, the write up adjustment type specified in the refund request type is displayed corresponding to the entity in the Refund Details zone.
Processed	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Voided	Enter	C1-REFVOID	C1-REFVOID	<p>This algorithm is invoked on click of the Void button for a refund request which is in processed state.</p> <p>The algorithm cancels all the frozen adjustments created for the refund request.</p> <p>The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (F1_BUS_OBJ_STATUS_RSN_CHAR table). If the reason is not found, it will use the status reason selected by the user</p>

Algorithms Used in C1-WORequest

The following table lists the algorithms which are attached to the **C1-WORequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	<p>This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:</p> <ul style="list-style-type: none"> • Refund or Write Off Request Type Description • Refund or Write Off Request Status Description • Refund or Write Off Request ID
Post-Processing	C1-WOPOSP	C1-WOPOSP	<p>This algorithm recalculates and updates the total write off amount in the Write Off Request zone when you change the write off amount against an entity while editing a write off request.</p>

System Event	Algorithm	Algorithm Type	Description
Validation	C1-WOBOVAL	C1-WOBOVAL	<p>This algorithm validates the following for each entity that you have selected in the write off request:</p> <ul style="list-style-type: none"> • The mandatory data, such as write off amount and adjustment type, is specified. • The write off amount is not less than zero. • The write off amount is not greater than the entity amount. • The write off amount is not greater than the eligible write off amount. • The partial write off is not done at the bill level. • The A/P Request Type is not defined in the selected adjustment type.

The following table lists the algorithms which are used in the lifecycle of the **C1-WORequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Submitted	Enter	C1-WOSUBMIT	C1-WOSUBMIT	<p>This algorithm checks the following:</p> <ul style="list-style-type: none"> • Whether the approval is required for the write off request. If the approval is required for a write off request, the status of the write off request is changed to Approval In Progress. However, if the approval is not required for a write off request, the status of the write off request is changed to Creating Adjustment. • At least one debit bill line item (such as debit bill segment or adjustment) is selected in the write off request. • Whether the approval profile attached to the write off request type has the debit hierarchy and C1-WOREQ To Do type defined.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Enter	C1-WOAPPROVL	C1-WOAPPROVL	<p>This algorithm creates the following:</p> <ul style="list-style-type: none"> • A To Do using the To Do type specified in the approval profile which is attached to the write off request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. • A log entry is added when a To Do is created using the To Do type.
Approved	Enter	C1-WOAPPROVD	C1-WOAPPROVD	<p>This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the write off request is changed to Approval In Progress and the algorithm attached to the Approval In Progress status is invoked. If further approval is not required, the status of the write off request is changed to Creating Adjustment.</p>
Rejected	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment	Enter	C1-WOAJCRT	C1-WOAJCRT	<p>This algorithm does the following:</p> <ul style="list-style-type: none"> Creates the write off adjustments for the write off request. These write off adjustments are created in the Frozen status. The adjustment ID is displayed corresponding to the entity in the Write Off Details zone. Stamps the bill ID of debit line item on the adjustment and the corresponding financial transaction. If a match event is present for the debit bill line item, the existing match event is stamped on the write off adjustment and the corresponding financial transaction. However, if the match event does not exist, a new match event is created and stamped on the write off adjustment and the corresponding financial transaction. If you are doing a partial write off for any entity, the corresponding match event status is set to Open. However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced.
Processed	-	-	-	-
Cancelled	Enter	C1-WOCANCEL	C1-WOCANCEL	<p>This algorithm is invoked on click of the Cancel button for a write off request which is in the Processed state.</p> <p>This algorithm cancels all the frozen adjustments created for the write off request.</p> <p>The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (F1_BUS_OBJ_STATUS_RSN_CHAR table). If the reason is not found, it will use the status reason selected by the user.</p>

Prerequisites

To setup the refund request process, you need to do the following:

- Define the required adjustment types (for creating refund adjustments) where A/P request type is defined
- Define the required adjustment types (for creating write up adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define voided and rejected status reasons for the **C1-RefundReq** business object
- Assign the **C1-REFRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a refund request for approval
- Define the required approval profiles with the credit hierarchy and **C1-REFRQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- Define the required refund request types in the system

To setup the write off request process, you need to do the following:

- Define the required adjustment types (for creating write off adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define cancelled and rejected status reasons for the **C1-WOREquest** business object
- Assign the **C1-WOREQ** To Do type to a To Do role whose users must receive To Do generated while submitting a write off request for approval
- Define the required approval profiles with the debit hierarchy and **C1-WOREQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- Define the required write off request types in the system

Refund/Write Off Request Type

Oracle Revenue Management and Billing allows you to define:

- **Refund Request Type** — It is used to create a refund request. You can define multiple refund request types in the system. A refund request type helps the system to determine:
 - Whether the refund request must be approved before creating refund adjustments in the system
 - Approval profile using which the refund request must be approved
 - Whether multi-level or single-level approval is required while creating refund adjustments in the system
 - Tolerance limit for refund (i.e. minimum refund amount)
 - Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
 - Default adjustment type using which refund adjustments must be created

- **Write Off Request Type** — It is used to create a write off request. You can define multiple write off request types in the system. A write off request type helps the system to determine:
 - Whether the write off request must be approved before creating write off adjustments in the system
 - Approval profile using which the write off request must be approved
 - Whether multi-level or single-level approval is required while creating write off adjustments in the system
 - Default adjustment type using which write off adjustments must be created

While defining a refund or write off request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the refund or write off request (which is created using the refund or write off request type) is sent for approval before creating the refund or write off adjustments. However, if the **Approval Required** check box is not selected, the refund or write off adjustments are created immediately on submitting a refund or write off request. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. You can define a debit and credit hierarchy in the approval profile using the threshold amount. The debit approval hierarchy is used for approving write off request and credit approval hierarchy is used for approving refund request. Therefore, while defining an approval profile for refund, you need to define credit hierarchy and set the To Do Type to **C1-REFRQ**. However, while defining an approval profile for write off, you need to define debit hierarchy and set the To Do Type to **C1-WOREQ**.

You can define an approval hierarchy where users with different To Do role at each level can approve or reject the refund or write off request. For example, you can define an approval profile called A1 with two levels of approval. At the first level, a user with the *Manager* To Do role will approve or reject the refund or write off request, and at the second level, a user with the *Senior Manager* To Do role will approve or reject the refund or write off request. On submitting a refund or write off request where approval is required, a notification in the form of To Do is sent to all users with the To Do role defined at the first level in the hierarchy. Once the request is approved at the first level, a notification is sent to all users with the To Do role defined at the next level in the hierarchy. This process continues till the approval is received from all levels in the hierarchy. Once users at all levels approve the refund or write off request, the refund or write off adjustments are created. However, if an approver at any level in the hierarchy rejects the request, the refund or write off adjustments are not created.

The approval hierarchy is controlled by the threshold amount. For example, you define an approval profile called A1 with two levels of approval — First Level (Threshold Amount: 300, To Do Role: *Manager*) and Second Level (Threshold Amount: 500, To Do Role: *Senior Manager*). Now, if the total refund or write off amount is equal to 300 or less than 500, then the approval is required only from the first level in the hierarchy and not from the second level in the hierarchy. However, if the total refund or write off amount is equal to or greater than 500, then the approval is required from the first level and then from the second level in the hierarchy. But, if the total refund or write off amount is less than 300, then the approval is not required from any levels in the hierarchy. The system will automatically approve the refund or write off request and create the refund or write off adjustments.

The system supports both single-level and multi-level approval process while approving refund or write off request. If the **Hierarchical Approval** check box is selected while defining a refund or write off request type, the approval hierarchy defined in the approval profile is followed based on the threshold limit. However, if the **Hierarchical Approval** check box is not selected while defining a refund or write off request type, the approval is required only from the approval level where the total refund or write off amount falls within the threshold limit. Let us understand this with the help of some examples.

Example 1

Refund Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval								
R1	Refund Analyst	<p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$500	Senior Analyst	\$750	Manager	\$1500	Senior Manager	Yes
Threshold Amount	To Do Role										
\$500	Senior Analyst										
\$750	Manager										
\$1500	Senior Manager										
R2	Refund Analyst	<p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$500	Senior Analyst	\$750	Manager	\$1500	Senior Manager	No
Threshold Amount	To Do Role										
\$500	Senior Analyst										
\$750	Manager										
\$1500	Senior Manager										

The following table indicates how the system will behave in different refund scenarios:

Refund Request	Refund Request Type	Total Refund Amount (\$)	Comments
RR1	R1	200	This refund request is automatically approved by the system because the total refund amount is less than \$500.
RR2	R1	750	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role <p>This is because the total refund amount is either equal to \$750 or less than \$1500 and hierarchical approval is required.</p>
RR3	R1	2000	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role <p>This is because the total refund amount is greater than \$1500 and hierarchical approval is required.</p>
RR4	R2	200	This refund request is automatically approved by the system because the total refund amount is less than \$500.

Refund Request	Refund Request Type	Total Refund Amount (\$)	Comments
RR5	R2	750	The To Do is sent for approval to users with the Manager To Do role. This is because the total refund amount is either equal to \$750 or less than \$1500 and hierarchical approval is not required.
RR6	R2	2000	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total refund amount is greater than \$1500 and hierarchical approval is not required.

Example 2

Write Off Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval	
W1	Write Off Analyst	Debit Hierarchy	Yes	
		Threshold Amount		To Do Role
		\$100		Senior Analyst
		\$200		Manager
		\$300		Senior Manager
W2	Write Off Analyst	Debit Hierarchy	No	
		Threshold Amount		To Do Role
		\$100		Senior Analyst
		\$200		Manager
		\$300		Senior Manager

The following table indicates how the system will behave in different write off scenarios:

Write Off Request	Write Off Request Type	Total Write Off Amount (\$)	Comments
WO1	W1	90	This write off request is automatically approved by the system because the total write off amount is less than \$100.
WO2	W1	250	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role <p>This is because the total write off amount is either equal to \$200 or less than \$300 and hierarchical approval is required.</p>

Write Off Request	Write Off Request Type	Total Write Off Amount (\$)	Comments
WO3	W1	500	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role <p>This is because the total write off amount is greater than \$300 and hierarchical approval is required.</p>
WO4	W2	90	This write off request is automatically approved by the system because the total write off amount is less than \$100.
WO5	W2	250	The To Do is sent for approval to users with the Manager To Do role. This is because the total write off amount is either equal to \$200 or less than \$300 and hierarchical approval is not required.
WO6	W2	500	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total write off amount is greater than \$300 and hierarchical approval is not required.

The **Refund/Write Off Request Type** screen allows you to define, edit, delete, and copy a refund and write off request type. This screen consists of the following zones:

- [Refund/Write Off Request Type List](#) on page 1327
- [Refund/Write Off Request Type](#) on page 1328

Refund/Write Off Request Type List

The **Refund/Write Off Request Type List** zone lists refund and write off request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Refund/Write Off Request Type	Displays the refund or write off request type.
Description	Displays the description of the refund or write off request type.
Edit	On clicking the Edit () icon, the Refund/Write Off Request Type screen appears where you can edit the details of the refund and write off request type.
Duplicate	On clicking the Duplicate () icon, the Refund/Write Off Request Type screen appears where you can define a refund and write off request type using an existing refund and write off request type.
Delete	<p>On clicking the Delete () icon, you can delete the refund or write off request type.</p> <p>Note: You can delete a refund or write off request type only when you have not created a refund or write off request using the refund or write off request type.</p>

On clicking the **Broadcast**  icon corresponding to refund or write off request type, the **Refund/Write Off Request Type** zone appears with the details of the respective refund or write off request type.

Defining a Refund or Write Off Request Type

Prerequisites

To define a refund or write off request type, you should have:

- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To define a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Refund/Write Off Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type Business Object	Used to indicate the business object that you want to use to create the refund or write off request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple refund and write off request type business objects defined in the application. If there is only one refund and write off request type business object defined in the application, the **Refund/Write Off Request Type** screen appears.

4. Select the required refund and write off request type business object from the respective field.
5. Click **OK**.

The **Refund/Write Off Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the refund or write off request type.
- **Characteristics** - Used to define characteristics for the refund or write off request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes
Business Object	Indicates the refund and write off request type business object used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object that you want to use while creating the refund or write off request.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No
Status	<p>Used to indicate the status of the refund or write off request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a refund or write off request type to Inactive if there are refund or write off requests which are created using the refund or write off request type and are currently in the Draft or Approval In Progress status.</p>	Yes
Action	<p>Used to indicate whether the request type is created for refund or write off. The valid values are:</p> <ul style="list-style-type: none"> • Refund • Write Off 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Minimum Refund Amount	Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment.	Yes
	Note: This field appears only when the Action field is set to Refund .	
Write Up Adjustment Type	Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount.	Yes
	Note: This field appears only when the Action field is set to Refund . You can create write up adjustments only using those adjustment types where A/P request type is not defined.	
Approval Required	Used to indicate whether approval is required while creating the refund or write off adjustments using the refund or write off request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the refund or write off request type.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the refund or write off adjustments using the refund or write off request type.	No
	Note: This field appears only when the Approval Required check box is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Refund Adjustment Type	Used to indicate the adjustment type using which the refund adjustments must be created. This default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request.	Yes
	<p>Note:</p> <p>This field appears only when the Action field is set to Refund.</p> <p>The list includes only those adjustment types where A/P request type is defined.</p>	
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request.	Yes
	<p>Note:</p> <p>This field appears only when the Action field is set to Write Off.</p> <p>You can create write off adjustments only using those adjustment types where A/P request type is not defined.</p>	

6. Enter the required details depending on whether you want to define refund or write off request type.

Note: You can search for an adjustment type by clicking the **Search**  icon corresponding to the respective field.

7. Define characteristics for the refund or write off request type, if required.
8. Click **Save**.

The refund or write off request type is defined.

Defining Characteristics for a Refund or Write Off Request Type

Prerequisites

To define characteristics for a refund or write off request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request Type**)

Procedure

To define characteristics for a refund or write off request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a refund or write off request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request Type .	Note: This field is required when you are defining a characteristic for the refund or write off request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the refund or write off request type.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the refund or write off request type, click the **Add** () icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the refund or write off request type, click the **Delete** () icon corresponding to the characteristic.

Copying a Refund or Write Off Request Type

Instead of creating a refund or write off request type from scratch, you can create a new refund or write off request type using an existing refund or write off request type. This is possible through copying a refund or write off request type. On copying a refund or write off request type, the details including the characteristics are copied to the new refund or write off request type. You can then edit the details, if required.

Prerequisites

To copy a refund or write off request type, you should have:

- Refund or Write Off request type (whose copy you want to create) defined in the application
- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To copy a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.

The **Refund/Write Off Request Type** screen appears.

4. In the **Refund/Write Off Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the refund or write off request type whose copy you want to create.

The **Refund/Write Off Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the refund or write off request type.
- **Characteristics** - Used to define characteristics for the refund or write off request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes
Business Object	Indicates the refund and write off request type business object used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object that you want to use while creating the refund or write off request.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the refund or write off request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a refund or write off request type to Inactive if there are refund or write off requests which are created using the refund or write off request type and are currently in the Draft or Approval In Progress status.</p>	Yes
Action	<p>Used to indicate whether the request type is created for refund or write off. The valid values are:</p> <ul style="list-style-type: none"> • Refund • Write Off 	Yes

Searching for a Refund or Write Off Request

Prerequisites

To search for a refund or write off request, you should have:

- Refund or Write Off request types defined in the application

Procedure

To search for a refund or write off request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Refund/Write Off Request**.
A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request** sub-menu.
The **Refund/Write Off Request** screen appears.
4. Enter the search criteria in the **Search Refund/Write Off Request** zone depending on whether you want to search for a refund or write off request.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of refund or write off requests that meet the search criteria appears in the **Search Results** section.

Refund Request

Once you create a refund request, the **Refund Request** screen allows you to:

- Edit and delete a refund request
- View the details of a refund request
- Submit a refund request for approval
- Approve or reject a refund request
- View the log of a refund request
- Add a log entry for a refund request
- Void a refund request

This screen consists of the following tabs:

- **Main** – Displays information about the refund request. It contains the following zones:
 - **Refund Request** – Displays the details of the refund request.
 - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Bill Line Items** — Displays the details of the bill which must be refunded.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Refund Details** zone.

- **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. It contains the following zones:
 - **Search Bills** — Lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.
 - **Bill Line Items** — Lists the debit and credit bill segments and adjustments of the bill.

This tab appears only when the refund request is in the **Draft** status.

- **Payments** — Used to search payment events or individual payments that you want to refund. It contains the following zones:
 - **Search Payment Event** — Lists the payment events which are created for the account. You can filter the payment events using various search criteria.
 - **Payments** — Lists all payments created through the payment event.

This tab appears only when the refund request is in the **Draft** status.

- **Log** — Lists the complete trail of actions performed on the refund request.

Refund Request - Main

The **Main** tab displays information about the refund request. It contains the following zones:

- [Refund Request](#) on page 1350
- [Refund Details](#) on page 1352
- [Bill Line Items](#) on page 1353

Refund Request

The **Refund Request** zone displays the details of the refund request. This zone contains the following sections:

- **Main** — This section provides basic information about the refund request. It contains the following fields:

Field Name	Field Description
Refund Request Information	Displays information about the refund request.
Refund Request Type	Indicates the refund request type using which the refund request is created. Note: It has a link. On clicking the link, the Refund/Write Off Request Type screen appears where you can view the details of the refund request type.
Status	Indicates the status of the refund request. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Rejected • Processed • Voided

Field Name	Field Description
Status Reason	Indicates the reason why the refund request is rejected or voided.
	<p>Note:</p> <p>This field appears only when the refund request is in the Rejected or Voided status.</p> <p>It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected or voided reason.</p>
Account Information	Indicates the account for which the refund request is created.
	<p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Person Name	Indicates the person for whom the refund request is created.
Override Address	Indicates whether the account's mailing address is overridden.
Address 1	Displays the house number and apartment name.
Address 2	Displays the street name.
Address 3	Indicates the landmark, if available.
Address 4	Displays the village, town, or city name.
City	Displays the city name.
State	Displays the state name.
Country	Displays the country name.
Postal	Displays the postal or zip code.
Comments	Displays additional information about the refund request.
Total Refund Amount	Displays the total refund amount.

- **Characteristics** — Lists the characteristics defined for the refund request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the refund request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund request.
	<p>Note: The Edit button appears only when the refund request is in the Draft status.</p>

Button Name	Button Description
Delete	Used to delete the refund request.
	Note: The Delete button appears only when the refund request is in the Draft status.
Submit	Used to submit the refund request for approval.
	Note: The Submit button appears only when the refund request is in the Draft status.
Approve	Used to approve the refund request.
	Note: The Approve button appears only when: <ul style="list-style-type: none"> The refund request is in the Approval In Progress status. A user with the approval To Do role is reviewing the refund request.
Reject	Used to reject the refund request.
	Note: The Reject button appears only when: <ul style="list-style-type: none"> The refund request is in the Approval In Progress status. A user with the approval To Do role is reviewing the refund request.
Void	Used to void the refund request.
	Note: The Void button appears only when the refund request is in the Processed status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the refund request status is updated
Create Date/Time	Displays the date and time when the refund request is created.

Refund Details

The **Refund Details** zone lists the payment events, payments, and credit bill line items (such as bill segments and adjustments) that you have added to the refund request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a payment event, payment, bill, bill segment, or an adjustment.

Column Name	Column Description
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Refund Amount	Displays the amount that must be refunded. Note: By default, the amount which is eligible for refund appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created or against which the payment is matched. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created. Note: By default, the adjustment type specified in the refund request type appears in this column. You can change the adjustment type, if required, by editing the refund request.
Adjustment Information	Displays information about the refund adjustment. Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment. The data appears in this column only when the status of the refund request is Processed . The information string appears only when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options — Framework screen.

Note: On clicking the Broadcast  icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.
	Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment.

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Refund Details** zone.

Refund Request - Bills

The **Bills** tab allows you to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. It contains the following zones:

- [Search Bills](#) on page 1354
- [Bill Line Items](#) on page 1356

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using bill or bill and price item details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Bill and Price Item Details 	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search a particular bill.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No
Price Item	Used to search bills which are created for a particular price item.	No
	Note: This field appears only when you select Bill and Price Item Details option from the Search By list. You can search for a price item by clicking the search  icon corresponding to the field.	

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Amount	Displays the total bill amount.

If you want to refund a bill with credit balance and all credit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All credit bill segments and adjustments of the bill are added in the **Refund Details** zone on the **Main** tab. However, if you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

Creating a Refund Request

Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

Procedure

To create a refund request:

1. Do either of the following:

If you want to...	Then...
Define a refund request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Refund.

If you want to...	Then...
	<p>Note: Only one bill at a time is allowed to select for Refund Request from the Account Receivable Central screen.</p>
Define a refund request from the Refund Request screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Refund/Write Off Request. A sub-menu appears. 3. Click the Add option from the Refund/Write Off Request sub-menu.

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	<p>Displays the type of request (refund or write off) to be created.</p> <p>Note: This field is pre-populated if the refund request is created from the Account Receivable Central screen. This field is editable if the refund request is created from the Refund/Write Off Request screen.</p>	Not applicable
Refund/Write Off Request Type	<p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p>Note: The refund request types are listed when you set the Action field to Refund and the write off request types are listed when you set the Action field to Write Off.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account	Used to indicate the account for which you want to create the refund or write off request.	Yes
	<p>Note:</p> <p>This field is pre-populated if the refund request is created from the Account Receivable Central screen.</p> <p>This field is editable if the refund request is created from the Refund/Write Off Request screen.</p> <p>You can search for an account by clicking the Search  icon corresponding to the respective field.</p>	

Tip:

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.
3. Click **Save**.

The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the refund request. It contains the following tabs:

Note: The refund request can be created only for bill with outstanding amount lesser than zero.

- **Main** – Displays information about the refund request. It contains the following zones:
 - **Refund Request** – Displays the details of the refund request.
 - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
 - **Payments** — Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears only when the refund request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the refund request.
4. Add payment events, payments, or credit bill line items that you want to refund.
 5. Edit the refund amount of each entity, if required.
 6. Define characteristics for the refund request, if required.
 7. Override the address if you want to sent the refund to an address other than the account’s main customer address.

Defining Characteristics for a Refund Request

Prerequisites

To define characteristics for a refund request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define characteristics for a refund request:

- Search for the refund request in the **Refund/Write Off Request** screen.
- In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.

The **Refund Request** screen appears.

- Click the **Edit** button in the **Refund Request** zone.

The **Edit Refund Request** screen appears.

Note: The **Edit** button appears only when the refund request is in the **Draft** status.

- Ensure that the **Characteristics** section is expanded when you are editing the refund request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Note: This field is required when you are defining a characteristic for the refund request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the refund request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the refund request, click the **Add**  icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the refund request, click the **Delete**  icon corresponding to the characteristic.

Adding a Payment Event to the Refund Request

Prerequisites

To add a payment event to the refund request, you should have:

- Payments made by the account for which you need to create the refund request

Procedure

To add a payment event to the refund request:

1. Click the **Payments** tab in the **Refund Request** screen.

The **Payments** tab appears.

2. Filter the payment events, if required, in the **Search Payment Event** zone.

Note: You can only refund payments, which are matched against suspense or excess credit contracts, to the payor account. Therefore, you can only view payment events which includes payments matched against suspense or excess credit contracts. If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

3. Select the check box corresponding to the payment event, whose payments you want to refund, in the **Search Results** section.

Note: You can add more than one payment event to the refund request at the same time.

4. Click **Add**.

A message appears indicating that the selected payment events are added to the refund request.

5. Click **OK**.

Note that the entity is added in the **Refund Details** zone on the **Main** tab.

Note:

You can only refund payments which are in the **Frozen** status.

If all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details** zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

Adding a Credit Bill to the Refund Request

You can refund the credit bills to the account.

Prerequisites

To add a credit bill to the refund request, you should have:

- Completed bills for the account with one or more credit line items

Procedure

To add a credit bill to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add the credit bill to the refund request	<ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to refund. 2. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p>
A bill has credit balance and one or more debit line items and you want to add the credit bill to the refund request	<ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to refund. 2. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p>

4. Click **Add**.

A message appears indicating that the selected bills are added to the refund request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click **OK**.

Note that all the credit bill segments or adjustments of the bills are added in the **Refund Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.

The system will not allow you to add a debit line item to the **Refund Details** zone.

Adding a Credit Bill Line Item to the Refund Request

You can refund the credit bill line items, such as bill segments and adjustments, to the account. While adding a credit bill line item to the refund request, you can either:

- Directly add all credit line items of a bill to the refund request by adding the bill which has all bill segments and adjustments in credit
- Individually add a credit bill segment or adjustment of a bill (with one or more credit line items) to the refund request

Prerequisites

To add a credit bill line item to the refund request, you should have:

- Completed bills for the account with one or more credit line items

Procedure

To add a credit bill line item to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add a particular credit bill line item to the refund request	<ol style="list-style-type: none"> <li data-bbox="849 226 1399 380">1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. <li data-bbox="849 411 1399 506">2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund.
A bill has credit balance and one or more debit line items	<ol style="list-style-type: none"> <li data-bbox="849 558 1399 711">1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. <li data-bbox="849 743 1399 837">2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund.
A bill has debit balance and one or more credit line items	<ol style="list-style-type: none"> <li data-bbox="849 890 1399 1043">1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. <li data-bbox="849 1075 1399 1169">2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund.

4. Click Add.

A message appears indicating that the selected bill segments or adjustments are added to the refund request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click OK.

Note that the credit bill segments or adjustments are added in the **Refund Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.

The system will not allow you to add a debit line item to the **Refund Details** zone.

Editing a Refund Request

Prerequisites

To edit a refund request, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.

The **Refund Request** screen appears.

3. Click the **Edit** button in the **Refund Request** zone.

The **Edit Refund Request** screen appears. It contains the following section:

Field Name	Field Description	Mandatory (Yes or No)
Refund Request Information	Displays information about the refund request.	Not applicable
Account Information	Indicates the account for which the refund request is created.	Not applicable
Person Name	Used to indicate the person for whom the refund request is created.	No
Override Address	Used to indicate whether the account's mailing address must be overridden. Note: By default, the account's main customer's address appears in the following fields — Address 1, Address 2, Address 3, Address 4, City, Country, State, and Postal. You can override the address in these fields, if required.	No
Address 1	Used to specify the house number and apartment name.	No
Address 2	Used to specify the street name.	No
Address 3	Used to specify any landmark, if available.	No
Address 4	Used to specify the village, town, or city name.	No
City	Used to specify the city name.	No
Country	Used to specify the country name.	No

Field Name	Field Description	Mandatory (Yes or No)
State	Used to specify the state name.	No
Postal	Used to specify the postal or zip code.	No
Comments	Used to specify additional information about the refund request.	No

In addition, this screen contains the following two sections:

- **Characteristics** — Used to define characteristics for the refund request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the refund request.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the refund request.

4. Modify the details of the refund request, if required.
5. Define, edit, or remove characteristics from the refund request, if required.
6. Click **Save**.

The changes made to the refund request are saved.

Voiding a Refund Request

There might be situations when incorrect refund request is processed in the system. In such case, the system provides you with an ability to void or cancel the refund request. However, note that you can void a refund request only when the refund request is in the **Processed** status.

Prerequisites

To void a refund request, you should have:

- Void reasons defined in the application

Note: While voiding a refund request, you need to specify the reason why you want to void the refund request. You can select the appropriate void reason only when you have defined the reasons for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen.

Procedure

To void a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request that you want to void.

The **Refund Request** screen appears.

- Click the **Void** button in the **Refund Request** zone.

The **Void Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to void the refund request.	Yes
Comments	Used to specify additional information while voiding the refund request.	No

Note: The **Void** button appears only when the refund request is in the **Processed** status.

- Select the void reason from the **Status Reason** list.
- Click **Save**.

The status of the refund request is changed to **Voided**.

Note: The **C1-REFVOID** algorithm cancels all the frozen adjustments created for the refund request which is in the **Processed** state.

Write Off Request

Once you create a write off request, the **Write Off Request** screen allows you to:

- Edit and delete a write off request
- View the details of a write off request
- Submit a write off request for approval
- Approve or reject a write off request
- View the log of a write off request
- Add a log entry for a write off request
- Cancel a write off request

This screen consists of the following tabs:

- Main** – Displays information about the write off request. It contains the following zones:
 - Write Off Request** – Displays the details of the write off request.
 - Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - Bill Line Items** — Displays the details of the bill which must be written off.

Note:

This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

- **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:
 - **Search Bills** — Lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.
 - **Bill Line Items** — Lists the debit and credit bill segments and adjustments of the bill.

This tab appears only when the write off request is in the **Draft** status.

- **Log** – Lists the complete trail of actions performed on the write off request.

Write Off Request - Main

The **Main** tab displays information about the write off request. It contains the following zones:

- [Write Off Request](#) on page 1383
- [Write Off Details](#) on page 1385
- [Bill Line Items](#) on page 1386

Write Off Request

The **Write Off Request** zone displays the details of the write off request. This zone contains the following sections:

- **Main** — This section provides basic information about the write off request. It contains the following fields:

Field Name	Field Description
Write Off Request Information	Displays information about the write off request.
Write Off Request Type	Indicates the write off request type using which the write off request is created. Note: It has a link. On clicking the link, the Refund/Write Off Request Type screen appears where you can view the details of the write off request type.
Status	Indicates the status of the write off request. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Rejected • Processed • Cancelled

Field Name	Field Description
Status Reason	Indicates the reason why the write off request is rejected or cancelled. Note: This field appears only when the write off request is in the Rejected or Cancelled status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the rejected or cancelled reason.
Account Information	Indicates the account for which the write off request is created. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Comments	Displays additional information about the write off request.
Total Write Off Amount	Displays the total write off amount.

- **Characteristics** — Lists the characteristics defined for the write off request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the write off request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the write off request. Note: The Edit button appears only when the write off request is in the Draft status.
Delete	Used to delete the write off request. Note: The Delete button appears only when the write off request is in the Draft status.
Submit	Used to submit the write off request for approval. Note: The Submit button appears only when the write off request is in the Draft status.
Approve	Used to approve the write off request. Note: The Approve button appears only when: <ul style="list-style-type: none"> • The write off request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the write off request.

Button Name	Button Description
Reject	Used to reject the write off request.
	<p>Note: The Reject button appears only when:</p> <ul style="list-style-type: none"> The write off request is in the Approval In Progress status. A user with the approval To Do role is reviewing the write off request.
Cancel	Used to cancel the write off request.
	<p>Note: The Cancel button appears only when the write off request is in the Processed status.</p>

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the write off request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Status Date/Time	Displays the date and time when the write off request status is updated
Create Date/Time	Displays the date and time when the write off request is created.

Write Off Details

The **Write Off Details** zone lists the debit bill line items (such as bill segments and adjustments) that you have added to the write off request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Write Off Amount	Displays the amount that must be written off.
	<p>Note: By default, the amount which is eligible for write off appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.</p>
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.</p>

Column Name	Column Description
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created.
	Note: By default, the adjustment type specified in the write off request type appears in this column. You can change the adjustment type, if required, by editing the write off request.
Adjustment Information	Displays information about the write off adjustment.
	Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment. The data appears in this column only when the status of the write off request is Processed .
	The information string appears only when an algorithm of the C1-ADI-INFO algorithm type is attached to the Adjustment Information system event in the Algorithms tab of the Installation Options — Framework screen.

Note:

On clicking the **Broadcast**  icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.
	Note: If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.

Column Name	Column Description
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment.

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Write Off Details** zone.

Write Off Request - Bills

The **Bills** tab allows you to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:

- [Search Bill](#)
- [Bill Line Items](#) on page 1388

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a bill using the bill details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Bill and Price Item Details 	Yes
	Note: By default, the Bill Details option is selected.	
Bill ID	Used to search a particular bill.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No

Field Name	Field Description	Mandatory (Yes or No)
To	Used to search bills which are created till a particular date.	No
Price Item	Used to search bills which are created for a particular price item.	No
	Note: This field appears only when you select Bill and Price Item Details option from the Search By list. You can search for a price item by clicking the search  icon corresponding to the field.	

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Amount	Displays the total bill amount.

If you want to write off a bill with debit balance and all debit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All debit bill segments and adjustments of the bill are added in the **Write Off Details** zone on the **Main** tab. However, if you select a bill (with debit balance) which contains one or more credit line items or if you select a bill (with credit balance) which contains one or more debit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

Creating a Write Off Request

Prerequisites

To create a write off request, you should have:

- Write off request types defined in the application

Procedure

To create a write off request:

1. Do either of the following:

If you want to...	Then...
Define a write off request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Write Off. <p>Note: Only one bill at a time is allowed to select for Write Off Request from the Account Receivable Central screen.</p>
Define a write off request from the Write Off Request screen	<ol style="list-style-type: none"> 1. Click the Main link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Refund/Write Off Request.

If you want to...	Then...
	<p>A sub-menu appears.</p> <p>3. Click the Add option from the Refund/Write Off Request sub-menu.</p>

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	<p>Displays the type of request (refund or write off) to be created.</p> <p>Note: This field is pre-populated if the write off request is created from the Account Receivable Central screen. This field is editable if the write off request is created from the Refund/Write Off Request screen.</p>	Yes
Refund/Write Off Request Type	<p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p>Note: The refund request types are listed when you set the Action field to Refund and the write off request types are listed when you set the Action field to Write Off.</p>	Yes
Account	<p>Used to indicate the account for which you want to create the refund or write off request.</p> <p>Note: This field is pre-populated if the write off request is created from the Account Receivable Central screen. This field is editable if the write off request is created from the Refund/Write Off Request screen. You can search for an account by clicking the Search  icon corresponding to the respective field.</p>	Yes

Tip: Alternatively, you can access the **Select Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request** screen.

2. Select the required write off request type and account from the respective fields.
3. Click **Save**.

The write off request is defined and the status of the write off request is set to **Draft**. The **Write Off Request** screen appears with the details of the write off request. It contains the following tabs:

Note: The write off request can be created only for bill with outstanding amount greater than zero.

- **Main** – Displays information about the write off request. It contains the following zones:
 - **Write Off Request** – Displays the details of the write off request.
 - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears only when the write off request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the write off request.
4. Add debit bill line items that you want to write off.
 5. Edit the write off amount of each entity, if required.
 6. Define characteristics for the write off request, if required.

Defining Characteristics for a Write Off Request

Prerequisites

To define characteristics for a write off request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

Procedure

To define characteristics for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.

The **Write Off Request** screen appears.

3. Click the **Edit** button in the **Write Off Request** zone.

The **Edit Write Off Request** screen appears.

Note: The **Edit** button appears only when the write off request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the write off request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the write off request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the write off request, click the **Add** () icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the write off request, click the **Delete** () icon corresponding to the characteristic.

Adding a Debit Bill to the Write Off Request

Prerequisites

To add a debit bill to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.

The **Bills** tab appears.

- Filter the bills, if required, in the **Search Bills** zone.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

- Do either of the following:

If...	Then...
A bill has all debit line items and you want to add the debit bill to the write off request	<ol style="list-style-type: none"> In the Search Bills zone, select the bills that you want to write off. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p>
A bill has debit balance and one or more credit line items and you want to add the debit bill to the write off request	<ol style="list-style-type: none"> In the Search Bills zone, select the bills that you want to write off. Click the Add button available at the upper left corner of the Search Bills zone. <p>Note: Default adjustment type selected in the write off request type should be non A/P.</p>

- Click **Add**.

A message appears indicating that the selected bills are added to the write off request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

- Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

Note:
Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone.
The system will not allow you to add a credit line item to the **Write Off Details** zone.

Adding a Debit Bill Line Item to the Write Off Request

You can write off the debit bill line items, such as bill segments and adjustments, of the account. While adding a debit bill line item to the write off request, you can either:

- Directly add all debit line items of a bill to the write off request by adding the bill which has all bill segments and adjustments in debit
- Individually add a debit bill segment or adjustment of a bill (with one or more debit line items) to the write off request

Prerequisites

To add a debit bill line item to the write off request, you should have:

- Completed bills for the account with one or more debit line items

Procedure

To add a debit bill line item to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do any of the following:

If...	Then...
A bill has all debit line items and you want to add a particular debit bill line item to the write off request	<ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. 2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.
A bill has debit balance and one or more credit line items	<ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. 2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.
A bill has credit balance and one or more debit line items	<ol style="list-style-type: none"> 1. In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears.

If...	Then...
	2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.

4. Click **Add**.

A message appears indicating that the selected bill segments or adjustments are added to the write off request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

5. Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone.

The system will not allow you to add a credit line item to the **Write Off Details** zone.

Editing a Write Off Request

Prerequisites

To edit a write off request, you should have:

- Adjustment types without A/P request type defined in the application

Procedure

To edit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.

The **Write Off Request** screen appears.

3. Click the **Edit** button in the **Write Off Request** zone.

The **Edit Write Off Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Write Off Request Information	Displays information about the write off request.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account for which the write off request is created.	Not applicable
Comments	Used to specify additional information about the write off request.	No

In addition, this screen contains the following two sections:

- **Characteristics** — Used to define characteristics for the write off request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Refund Write Off Request .	Note: This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the write off request.

4. Modify the details of the write off request, if required.
5. Define, edit, or remove characteristics from the write off request, if required.
6. Click **Save**.

The changes made to the write off request are saved.

Editing the Write Off Details

Prerequisites

To edit the write off details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the write off details:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose bill line item details you want to edit.

The **Write Off Request** screen appears. You can edit the bill line items of the write off request by using either of the following ways:

If...	Then...
Select the bill whose details you want to edit in the Write Off Details zone and click the Edit button available in the upper left corner of this zone.	The Edit Request Details screen appears.
In the Write Off Details zone, click the Broadcast  icon corresponding to the bill whose line items details you want to edit.	<p>The Bill Line Items zone appears.</p> <p>Note: This zone appears only when the Entity Type is Bill.</p> <p>1. Select the bill line item whose details you want to edit in the Bill Line Items zone and click the Edit button available in the upper left corner of this zone.</p> <p>The Edit Request Details screen appears.</p>

Note: A bill line item from the write off request can be edited only when the write off request is in the **Draft** status.

The **Edit Request Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request ID	Displays the write off request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable
Adjustment Type	<p>Indicates the adjustment type of the write off request type.</p> <p>You can search for an adjustment type by clicking the Search  icon corresponding to the field.</p>	No

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are <ul style="list-style-type: none"> • Adjustments • Bill • Bill Segment • Payment Event • Payment
Entity ID	Displays the entity ID.
Entity Amount	Displays the entity amount.
Currency	Displays the currency in which the entity was created.
Request Amount	Displays the amount that must be write off.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>You can search for an account by clicking the Search  icon corresponding to the field.</p> </div>
Bill ID	Displays the bill ID.

In addition to the above columns, the screen has following button:

Button Name	Button Description
Override	Used to override an adjustment type of the write off request.

<p>Note:</p> <p>Pagination is used to display limited number of records in the Search Results section. By default, 10 records are displayed in the Search Results section. You can change the number of records displayed per page, if required.</p> <p>You can use the navigation buttons, such as First () , Previous () , Next () , and Last () to navigate between pages. You can also select the page to which you want to navigate from the Go To list.</p> <p>The values appear in the Page Limit list only when you define values for the PAGE_NUMBER lookup field.</p>

3. Modify the details of the bill line items.
4. Click **Save**.

The changes made to the write off bill line items are saved.

Approving a Write Off Request

You can view the number of write off requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the write off request based on the observations.

Note: The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To approve a write off request:

1. Do either of the following:

If you want to...	Then...
Approve a write off request through the Refund/Write Off Request screen	<ol style="list-style-type: none"> 1. Search for the write off request in the Refund/Write Off Request screen. 2. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the write off request which you want to review.
Approve a write off request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-WOREQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos.

If you want to...	Then...
	6. Click the link in the Message column corresponding to the To Do of the write off request that you want to review.

The **Write Off Request** screen appears.

2. Review the write off request details.
3. Click the **Approve** button in the **Write Off Request** zone.

The system behaves in the following manner:

If...	Then...
The Hierarchical Approval check box is selected in the write off request type using which the write off request is created and the total write off amount is greater than the threshold amount specified at the next level in the approval hierarchy	A To Do of the C1-WOREQ To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the write off request remains as Approval In Progress .
The Hierarchical Approval check box is selected in the write off request type using which the write off request is created and the total write off amount is less than the threshold amount specified at the next level in the approval hierarchy	<p>The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to Processed.</p> <p>Note: The write off adjustments are created in the Frozen status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to Open. However, if the entire eligible amount is written off, the corresponding match event status is set to Balanced.</p>
The Hierarchical Approval check box is not selected in the write off request type using which the write off request is created	<p>The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to Processed.</p> <p>Note: The write off adjustments are created in the Frozen status. Rejecting a Write Off Request

Prerequisites

To reject a write off request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a write off request, you need to specify the reason why you want to reject the write off request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-WORequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a write off request submitted by you.

Procedure

To reject a write off request:

1. Do either of the following:

If you want to...	Then...
Reject a write off request through the Refund/Write Off Request screen	<ol style="list-style-type: none"> 1. Search for the write off request in the Refund/Write Off Request screen. 2. In the Search Results section, click the link in the Refund/Write Off Request Information column corresponding to the write off request which you want to review.
Reject a write off request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 3. Enter C1-WOREQ in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the write off request that you want to review.

The **Write Off Request** screen appears.

2. Review the write off request details.
3. Click the **Reject** button in the **Write Off Request** zone.

The **Reject Write Off Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the write off request.	Yes
Comments	Used to specify additional information while rejecting the write off request.	No

Note: The **Reject** button appears only when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the write off request is changed to **Rejected**.

Viewing the Log of a Write Off Request

Procedure

To view the log of a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose log you want to view.

The **Write Off Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the write off request. It contains the following zones:
 - **Write Off Request** – Displays the details of the write off request.
 - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
 - **Bill Line Items** — Displays the details of the bill which must be written off.

Note:

This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

- **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears only when the write off request is in the **Draft** status.
 - **Log** – Lists the complete trail of actions performed on the write off request.
3. Click the **Log** tab
 4. View the log of the write off request in the **Write Off Request Log** zone.

Note: You can manually add a log entry for the write off request by clicking the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

Canceling a Write Off Request

There might be situations when incorrect write off request is processed in the system. In such case, the system provides you with an ability to cancel the write off request. However, note that you can cancel a write off request only when the write off request is in the **Processed** status.

Prerequisites

To cancel a write off request, you should have:

- Cancel reasons defined in the application

Note: While cancelling a write off request, you need to specify the reason why you want to cancel the write off request. You can select the appropriate cancel reason only when you have defined the reasons for the **Cancelled** status of the **C1-WORequest** business object in the **Status Reason** screen.

Procedure

To cancel a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to cancel.

The **Write Off Request** screen appears.

3. Click the **Cancel** button in the **Write Off Request** zone.

The **Cancel Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the write off request.	Yes
Comments	Used to specify additional information while cancelling the write off request.	No

Note: The **Cancel** button appears only when the write off request is in the **Processed** status.

4. Select the cancel reason from the **Status Reason** list.
5. Click **Save**.

The status of the write off request is changed to **Cancelled**.

Note: The **C1-WOCANCEL** algorithm cancels all the frozen adjustments created for the write off request which is in the **Processed** state.

Chapter 25

Hold Request

Topics:

- [Hold Request \(Without Approval\) Status Transition](#)
- [Hold Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-HoldRequest](#)
- [Prerequisites](#)
- [Hold Request Type](#)
- [Hold Request \(Used for Searching\)](#)
- [Hold Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to hold the amount for Person, Account or Bills. Hold is a way to prevent certain types of activities from taking place for a customer over a given period of time. The activities that need to be on Hold vary according to the reason for hold, such as due to a climate disaster the collection activity remains on Hold until disaster period is over.

Hold Request is a object which contains list of processes to be kept on hold for certain entities such as account, person, and bill for certain period of time. The hold period is defined as the duration between Hold Request Start Date and End Date. Each Hold Request contains an entity and processes on hold. There could exists multiple hold requests for an entity for different hold reasons and processes.

Following are the hold request entities:

- **Person:** If the person is on hold then all entities linked to that person where the person is financially responsible, such as accounts and its bills will be on hold.
- **Account:** If the account is on hold then all the bills of that account will be on hold.
- **Bill:** A bill will be on complete or partial hold.

In Hold Request, following mentioned processes can be on hold:

- **Auto Pay** — If the auto payment process is on hold then, then auto pay for the bills of the account added in hold request will be on hold till the request is released. However, you can do the manual payments. On activation of the hold request, **Defer Auto Pay Date** field (in Account screen) is populated with some future date. If billing process is on hold then auto payment process would also go on hold.
- **Bill Generation** — If the bill generation process is on hold then, then new bills will not be created for the account added in hold request till request is released. On activation of the hold request, **Bill After** date field (in Account screen) is populated with either hold request end date or some future date until that date billing is kept on hold. Whenever hold request is released for billing process then **Bill After** date field will be populated as system date.

Note: During the tenure of a hold request if customer does not require pending bills to be used for bill generation, bill in pending for accounts under hold are identified during activation of hold request which can be deleted by execution of the **C1-DELBI** batch . For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*

- **Overdue** — If the overdue process is on hold then bills associated with accounts in the hold request will be on hold for overdue process. It means existing overdue will be cancelled. New overdue process will get created once hold request is released. On activation of the hold request, **Postpone Credit Review** field (in Account screen) is populated with either hold request end date or some future date. When hold request is released, **Postpone Credit Review** field would be set as system date. If the overdue process is on hold then request for policy termination due to non payment will be on hold.
- **Funding** — A list of bills identified for a full bill amount or a partial bill amount will be kept on hold for a funding process.

Note:

For Funding process, Person, Bill, and Account entities can be put on hold. However, for processes like Auto pay, Bill Generation, and Overdue, only Account entity can be put on hold.

Processes and Entities start dates and end dates are expected to be within the limit of Hold Request Start Date and End Date.

You need to specify the hold request type while creating a hold request. Hold request type helps the system to determine:

- Whether to allow the partial hold for bill or not
- Whether hold request must be approved by the approver before keeping entities and processes on hold

It is possible for a given entity, such as a person or account, to be affected by hold request with differing periods or at differing levels. For example, if there is a hold request added for a person manually and another hold request is there due to some other reason for an account belongs to the person who is already on hold. The system assumes that both hold requests are in effect for the account and that the period of accounts starts from the start of the earlier hold request record (for the account) until the later of the two release dates.

During the hold request process, a hold request goes through various statuses in its lifecycle. For more information about the hold request statuses, see [Hold Request \(Without Approval\) Status Transition](#) on page 1413 and [Hold Request \(With Approval\) Status Transition](#) on page 1413

Note that the lifecycle of a hold request is driven by the business object using which the hold request is created. A hold request business object named **C1-HoldRequest** is shipped with the product. The hold request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-HoldRequest** business object. In addition, you can configure the search feature by setting **Fkref** feature configuration for each entity, such as person, account and bill.

For more information on how to setup the hold request processes, see [Prerequisites](#) on page 1420.

Hold Request (Without Approval) Status Transition

The following figure graphically indicates how a hold request moves from one status to another when approval workflow is off:

Hold Request (With Approval) Status Transition

The following figure graphically indicates how a hold request moves from one status to another when approval workflow is on:

Algorithms Used in C1-HoldRequest

The following table lists the algorithms which are attached to the **C1-HoldRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-HOLD-INF	C1-HOLD-INF	<p>This algorithm generates hold request information string which appears throughout the application. This algorithm concatenates the following fields:</p> <ul style="list-style-type: none"> • Hold Request Type • Status • Entity • Hold Request ID

System Event	Algorithm	Algorithm Type	Description
Validation	C1-HLDVALDN	C1-HLDVALDN	<p>This algorithm validates following during different statuses:</p> <p>For Draft status, it checks the following:</p> <ul style="list-style-type: none"> • At least one Process is present in the request. Entity selection is optional • No duplicate entity and process is allowed in a single request. • Same entity cannot be placed on hold with the same Hold Reason in multiple Hold Requests. • Request start date is earlier than or equal to process and entity start date. • Request End Date is later than or equal to process and entity end date. • At least one process start date is earlier than or equal to any entity start date. • At least one process end date is later than or equal to any entity end date. • For Bill and Person entity, Bill Generation, Overdue, and Auto Pay processes cannot be selected as the hold processes in a hold request. • For Bill entity, it checks if hold amount is less than or equal to bill outstanding amount • For Bill entity, to add a new bill to the request, the selected bill should be with a non-zero outstanding amount. • Each Entities start date should lie within at least one process start date and end date in a request. <p>For Active state following are some additional validations:</p> <ul style="list-style-type: none"> • Hold Process or Entities cannot be deleted. • Hold Request or Entity or Process Start Date cannot be modified. • Hold Reason cannot be modified • Hold Request or Process or Entity End Date can be updated as either equal or greater than system date. • Process can be added with start date as system date. • Entity cannot be added in hold request. • If entity or process end date is in past then it cannot be updated.

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-HLDARCTRN	C1-HLDARCTRN	This algorithm transitions the request to active status when the request is created from Account Receivable Central and Delinquency Control .
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for primary key of the current business object, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submit	Enter	C1-HOLDSUBMT	C1-HOLDSUBMT	This algorithm checks the following: <ul style="list-style-type: none"> Whether the approval is required for the hold request. If the approval is required for a hold request, the status of the hold request is changed to Approval In Progress. However, if the approval is not required for a hold request, the status of the hold request is changed to Active or Deferred Processing depending on the Defer Processing Count specified in the hold request type.

Status	System Event	Algorithm	Algorithm Type	Description
Active	Enter	C1-HOLDACTV	C1-HOLDACTV	<p>This algorithm is invoked on Active button and validates following:</p> <ul style="list-style-type: none"> • Entities Start Date is on or after Hold Request Start Date • Entities End Date is on or before Hold Request End Date • For an Entity Bill, Hold Amount is not more than bill outstanding amount or Bill outstanding amount is not equal to zero. • Updates and processes entities start date to system date. • It updates following mentioned date to minimum of Entity End Date or Process End Date: <ul style="list-style-type: none"> • Bill After Date - For Bill Generation Process. • Postpone Credit review Date Until- For Overdue Process. • Defer Auto Pay Date - For Auto pay process. • Parameter-Alert Type-Using this Alert Type alerts are shown in the dashboard. A alert will have hyperlink which will enable user to navigate to Alerts tab on account. • Start Dates and End Dates of Alert types are maintained based on the Hold Requests associated with the account. <p>Note: If entity end date is empty, process end date will be considered. If process end date and entity is empty, Hold Request End Date will be considered.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Deferred Processing	Monitor	F1-AT-RQJ	F1-AT-RQJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Only one of the soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Approval In Progress	Enter	C1-HOLDAPP	C1-HOLDAPP	This algorithm creates To Do based on 'Approval To Do Type configured in Hold Request Type.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Approved	Enter	C1-HOLDAPRVD	C1-HOLDAPRVD	This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval profile hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the hold request is changed to Approval In Progress . If further approval is not required, the status of the hold request is changed to Active or Deferred Processing depending on the Defer Processing Count specified in the hold request type.

Status	System Event	Algorithm	Algorithm Type	Description
Return to Submitter	Enter	C1-HLDRESUBM	C1-HLDRESUBM	This algorithm is triggered when the approver clicks the Re Submit button. A To Do is created and sent to the submitter. It transitions the status of the hold request from Approval In Progress to Draft . The submitter can make required changes to the request details and submit it again. The To Do Type and To Do Role for submitter is specified in hold request type.
Rejected	-	-	-	-
Released	Enter	C1-RELENTITY	C1-RELENTITY	This algorithm is invoked on Release button and updates following date to system date for all entities in the Hold Request: <ul style="list-style-type: none"> • Bill After Date - For Bill Generation Process • Postpone Credit review Date Until- For Overdue Process • Defer Auto Pay Date - For Auto pay process • Parameter-Alert Type-Using this Alert Type alerts are shown in the dashboard. A alert will have hyperlink which will enable user to navigate to Alerts tab on account • Start Dates and End Dates of Alert types are maintained based on the Hold Requests associated with the account.
Released	Enter	C1-RLSHOLD	C1-RLSHOLD	This algorithm is invoked on click of Release button in hold request and updates the following: <ul style="list-style-type: none"> • Hold Request End Date is updated to System Date • Processes End Date is updated to System Date • Entities End Date is updated to System Date • Hold request status is changed to Released after Hold Release Reason is accepted.

Prerequisites

To setup the hold request process, you need to do the following:

- Define the release status reasons for the **C1-HoldRequest** business object
- Define the required hold reasons in the system
- Define rejected status reasons for the **C1-HoldRequest** business object
- Assign the **C1-HLDAP** To Do type to a To Do role whose users must receive To Do generated while submitting a hold request for approval
- Assign the **C1-HOLSB** To Do type to a To Do role whose users must receive To Do generated while resubmitting a hold request
- Define the required hold request types in the system
- Define the required characteristic types where the characteristic entity is set to **Hold Request**
- Define the required characteristic types where the characteristic entity is set to **Hold Request Type**
- Set the batch control type of the **Hold Request Periodic Monitor (C1-HLDRQ)** and **Hold Request Monitor (C1-HLMON)** batches to Timed and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Note: For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*

Hold Request Type

Oracle Revenue Management and Billing allows you to define a hold request type using which you can create a hold request.

The **Hold Request Type** screen allows you to define, edit, copy, and delete a hold request type. This screen consists of the following zones:

- [Hold Request Type List](#) on page 1420
- [Hold Request Type](#) on page 1421

Hold Request Type List

The **Hold Request Type List** zone lists hold request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.

Column Name	Column Description
Edit	On clicking the Edit (✎) icon, the Hold Request Type screen appears where you can edit the details of the hold request type.
Duplicate	On clicking the Duplicate (📄📄) icon, the Hold Request Type screen appears where you can define a hold request type using an existing hold request type.
Delete	On clicking the Delete (🗑) icon, you can delete the hold request type.
	Note: You can delete a hold request type only when you have not created a hold request using the hold request type.

On clicking the **Broadcast** (📡) icon corresponding to the hold request type, the **Hold Request Type** zone appears with the details of the respective hold request type.

Hold Request Type

The **Hold Request Type** zone displays the details of the hold request type. This zone consists of the following sections:

- **Main** — This section provides basic information about the hold request type. It contains the following fields:

Field Name	Field Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.
Hold Request Business Object	Indicates the business object that will be used to create the hold request. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the hold request type.
Status	Indicates the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Allow Partial Hold for Bill	Indicates whether the partial hold amount is allowed for a bill.

Field Name	Field Description
Defer Processing Count	Displays the number of entities to determine if the hold request will be processed in deferred mode.
	Note: If the number of entities is less than the Defer Processing Count , the hold request will be processed in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while creating the hold request using hold request type.
Approval To Do Type	Indicates that To Do of the specified To Do type must be created when you submit the hold request for approval.
	Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve the hold request submitted for approval.
	Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.
Submitter To Do Type	Indicates the To Do type of the submitter.
	Note: It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the To Do role of the submitter.
	Note: It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.

- **Hold Processes** —This section displays the list of processes to be kept on hold for the hold request type.
- **Characteristics** — This section lists the characteristics defined for the hold request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request type.
Delete	Used to delete the hold request type.
	Note: You can delete a hold request type only when you have not created a hold request using the hold request type.
Duplicate	Used to create a new hold request type using an existing hold request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the hold request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Hold Request Type** zone does not appear in the **Hold Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the hold request type in the **Hold Request Type List** zone.

Defining a Hold Request Type

Prerequisites

To define a hold request type, you should have:

- Hold request business objects defined in the application

Procedure

To define a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Hold Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type Business Object	Used to indicate the business object that you want to use to create the hold request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple hold request type business objects defined in the application. If there is only one hold request type business object defined in the application, the **Hold Request Type** screen appears.

- Select the required hold request type business object from the respective field.
- Click **OK**.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request type.
- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the hold request type business object used while defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object that you want to use while creating the hold request.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No
Status	Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a hold request type to Inactive if there are hold requests which are created using the hold request type and are currently in the Draft or Approval In Progress status.	
Allow Partial Hold for Bill	Used to indicate whether the partial hold amount will be accepted for a bill.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate the number of entities to determine if the hold request will be processed in deferred mode.	No
	<p>Note:</p> <p>If the number of entities is less than the Defer Processing Count, the hold request will be processed in real time (i.e. immediately).</p> <p>Defer processing count should be a numerical value without decimal points.</p>	
Approval Required	Used to indicate whether approval is required while creating the hold request using hold request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required check box is selected.</p> <p>Note: This field is required when the Approval Required check box is selected</p>	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required check box is selected.</p> <p>Note: This field is required when the Approval Required check box is selected</p>	
Submitter To Do Type	Used to indicate the To Do type for the submitter.	No
Submitter To Do Role	Used to indicate the To Do role for the submitter.	No

Note:

Deferred mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. When the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked, the system checks whether there are any hold requests in the **Deferred** status. If there is an hold request in the **Deferred** status, then its status is changed to **Active**.

- Enter the required details.

Note: You can search for **To Do Type** by clicking the **Search**  icon corresponding to the respective field.

- Define processes to hold for the hold request type.

Note:

At least one hold process needs to be selected for defining a hold request type.

8. Define characteristics for the hold request type, if required.
9. Click **Save**.

The hold request type is defined.

How to define characteristics for a hold request type	Defining Characteristics for a Hold Request Type on page 1426

**Defining Characteristics for a Hold Request Type****Prerequisites**

To define characteristics for a hold request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request Type**)

Procedure

To define characteristics for a hold request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a hold request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Hold Request Type .	Note: This field is required when you are defining a characteristic for the hold request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the hold request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the hold request type, click the **Add** () icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the hold request type, click the **Delete** () icon corresponding to the characteristic.

Editing a Hold Request Type

Prerequisites

To edit a hold request type, you should have:

- Hold request business objects defined in the application

Procedure

To edit a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.
The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the hold request type whose details you want to edit.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request type.
- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Displays the hold request type.	Not applicable
Business Object	Indicates the hold request type business object used while defining the hold request type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object that you want to use while creating the hold request.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No
Status	Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a hold request type to Inactive if there are hold requests which are created using the hold request type and are currently in the Draft or Approval In Progress status.	
Allow Partial Hold for Bill	Used to indicate whether the partial hold amount will be accepted for a bill.	Yes
Defer Processing Count	Used to indicate the number of entities to determine if the hold request will be processed in deferred mode.	No
	Note: If the number of entities is less than the Defer Processing Count , the hold request will be processed in real time (i.e. immediately). Defer processing count should be a numerical value without decimal points.	
Approval Required	Used to indicate whether approval is required while creating the hold request using hold request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	
	Note: This field is required when the Approval Required check box is selected	

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected
Submitter To Do Type	Used to indicate the To Do type for the submitter.	No
Submitter To Do Role	Used to indicate the To Do role for the submitter.	No

Note:

Deferred mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. When the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked, the system checks whether there are any hold requests in the **Deferred** status. If there is an hold request in the **Deferred** status, then its status is changed to **Active**.

Tip: Alternatively, you can click the **Edit** button in the **Hold Request Type** zone to edit the details of the hold request type.

5. Modify the details, if required.
6. Define, edit, or remove characteristics from the hold request type, if required.
7. Click **Save**.

The changes made to the hold request type are saved.

Deleting a Hold Request Type**Procedure**

To delete a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Hold Request Type** sub-menu.

The **Hold Request Type** screen appears.

- In the **Hold Request Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the hold request type that you want to delete.

A message appears confirming whether you want to delete the hold request type.

Note: You can delete a hold request type only when you have not defined a hold request using the hold request type.

Tip: Alternatively, you can click the **Delete** button in the **Hold Request Type** zone to delete the hold request type.

- Click **OK**.

The hold request type is deleted.

Copying a Hold Request Type

Instead of creating a hold request type from scratch, you can create a new hold request type using an existing hold request type. This is possible through copying a hold request type. On copying a hold request type, the details including the characteristics are copied to the new hold request type. You can then edit the details, if required.

Prerequisites

To copy a hold request type, you should have:

- Hold request type (whose copy you want to create) defined in the application
- Hold request business objects defined in the application

Procedure

To copy a hold request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **H** and then click **Hold Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Hold Request Type** sub-menu.

The **Hold Request Type** screen appears.

- In the **Hold Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the hold request type whose copy you want to create.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request type.
- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the hold request type business object used while defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object that you want to use while creating the hold request.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No
Status	Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: You cannot change the status of a hold request type to Inactive if there are hold requests which are created using the hold request type and are currently in the Draft or Approval In Progress status.</p> </div>	Yes
Allow Partial Hold for Bill	Used to indicate whether the partial hold amount will be accepted for a bill.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	used to indicate the number of bills to determine if the hold request will be processed in deferred mode.	No
	<p>Note:</p> <p>Deferred mode means in the background when the Hold Request Periodic Monitor (C1-HLDRQ) batch is invoked. You can configure the Hold Request Periodic Monitor (C1-HLDRQ) batch such that it is executed at regular intervals. When the Hold Request Periodic Monitor (C1-HLDRQ) batch is invoked, the system checks whether there are any hold requests in the Deferred status. If there is an hold request in the Deferred status, then its status is changed to Active.</p> <p>If the number of bills is less than the Defer Processing Count, the hold request will be processed in real time (i.e. immediately).</p> <p>Defer processing count should be a numerical value without decimal points.</p>	
Approval Required	Used to indicate whether approval is required while creating the hold request using hold request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required check box is selected.</p>	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.	Yes (Conditional)
	<p>Note: This field appears only when the Approval Required check box is selected.</p>	
Submitter To Do Type	Used to indicate the To Do type for the submitter.	No
Submitter To Do Role	Used to indicate the To Do role for the submitter.	No

Tip: Alternatively, you can click the **Duplicate** button in the **Hold Request Type** zone to create a copy of the hold request type.

5. Enter the required details.
6. Define, edit or remove processes from the hold request type, if required.
7. Define, edit, or remove characteristics from the hold request type, if required.
8. Click **Save**.

The new hold request type is defined.

Viewing the Hold Request Type Details

Procedure

To view the details of a hold request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.
The **Hold Request Type** screen appears.

Searching for a Hold Request

Prerequisites

To search for a hold request, you should have:

- Hold request types defined in the application

Procedure

To search for a hold request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Hold Request**.
A sub-menu appears.
3. Click the **Search** option from the **Hold Request** sub-menu.
The **Hold Request** screen appears.
4. Enter the search criteria in the **Search Hold Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of hold requests that meet the search criteria appears in the **Search Results** section.

Only one bill at a time is allowed to select for Hold Request from Account Receivable Central</p>
Define a hold request from the Delinquency Central screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Credit & Collection and then click Delinquency Central. The Delinquency Central screen appears. 3. Search for the overdue process in the Delinquency Central screen. 4. In the Search Results section, select the required overdue process and then click Create Hold Request. <p>Note: Accounts are selected to be on hold from Delinquency Central screen Only one account at a time is allowed to select for Hold Request from Delinquency Central screen.</p>
Define a hold request from the Hold Request screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 2. From the Main menu, select Financial and then click Hold Request. A sub-menu appears. 3. Click the Add option from the Hold Request sub-menu.

The **Add Hold Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to indicate the request type using which you want to create the hold request.	Yes

Tip: Alternatively, you can access the **Add Hold Request** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request** screen.

2. Select the required hold request type from the respective fields.
3. Click **OK**.

The hold request is defined and the status of the hold request is set to **Draft**. The **Hold Request** screen appears where you can view the details of the hold request. It contains the following sections:

- **Main** – Used to specify basic details about the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Indicates the hold request type using which you want to create the hold request.	Not applicable
Start Date	Used to specify the date from when the hold request is effective.	Yes
	<p>Note:</p> <p>The hold request start date cannot be later than the hold request end date.</p> <p>By default, system date appears in this field.</p>	
End Date	Used to specify the date till when the hold request is effective.	Yes
	<p>Note: The hold request end date cannot be earlier than the hold request start date.</p>	
Hold Reason	Used to indicate the reason why you want to hold the entity.	Yes
	<p>Note: The hold reason must exist in the HOLD_REASON_FLG lookup field and its status must be Active.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Entity	<p>Used to indicate the type of the entity for which you want to create the hold request. The valid values are:</p> <ul style="list-style-type: none"> • Account • Bill • Person <p>Note: If bill is kept on hold using Account Receivable Central screen, then this field will display Bill as an entity and Hold Entities section will display information about this bill.</p>	Yes
Comments	Used to specify the additional information about hold request.	No

- **Hold Entities** — Used to specify details of the selected hold entity. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Entity ID	<p>Used to specify the hold entity ID.</p> <p>Note: You can search for an entity ID by clicking the search  icon corresponding to the field</p> <p>If the hold entity is account, you must specify the account ID in this field. If the hold entity is person, you must specify the person ID in this field. And, if the hold entity is bill, you must specify the bill ID in this field.</p>	Yes
Start Date	<p>Used to specify the date from when you want to hold the entity.</p> <p>Note: By default, system date appears in this field</p> <p>The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates.</p> <p>The hold entity start date cannot be later than the hold entity end date.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when you want to hold the entity.	No
	Note: The hold entity end date must be between hold request start and end dates and between the process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date.	
Hold Amount	Displays the amount which is kept on hold.	Not applicable
	Note: This column appears only when the hold entity is Bill .	

- **Hold Processes** — Used to indicate the processes to be on hold for the hold request. By default, processes are defined on the hold request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that needs to be kept on hold.	Yes
Start Date	Used to specify the date from when process is to be on hold for the hold request.	Yes
	Note: By default, system date appears in this field The hold process start date must be between the hold request start and end dates.	
End Date	Used to specify the date till when the process is to be on hold.	No

- **Characteristics** — Used to define the characteristics for the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the hold request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Hold Request .	Note: This field is required when you are defining a characteristic for the hold request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the hold request.

4. Enter the required details

Note:

Processes and Entities start dates and end dates are expected to be within the limit of Hold Request Start Date and End date.

You can search for a hold entity by clicking the **search**  icon corresponding to the respective field.

5. Add entities and processes for the hold request.
6. Define characteristics for the hold request, if required.
7. Click **Save**.

The hold request is created and the status of the hold request is set to **Draft**. The **Hold Request** screen appears with the details of hold request.

Note: It is recommended that user should set the **C1-HLMON** batch every time the hold request is generated. Otherwise, alert would be shown in the dashboard which may not give the proper representation of active hold requests.

Note: This zone appears only when hold request is for **Bill** and its status is **Draft**.

- **Search Person** — Searches the persons to be put on hold.

Note: This zone appears only when hold request is for **Person** and its status is **Draft**.

- **Log** — Lists complete trail of actions performed on the hold request. This tab contains the following zone:
 - **Hold Request Log** — Displays the actions performed on the hold request.

Hold Request - Main

The **Main** tab on the **Hold Request** contains the following zones:

- [Hold Request](#) on page 1444
- [Hold Entities](#) on page 1446
- [Search Account](#) on page 1448

Note: This zone appears only when hold request is for **Account** and its status is **Draft** .

- [Search Bill](#) on page 1451

Note: This zone appears only when hold request is for **Bill** and its status is **Draft** .

- [Search Person](#) on page 1452

Note: This zone appears only when hold request is for **Person** and its status is **Draft** .

Hold Request

The **Hold Request** zone displays the details of the hold request. This zone contains the following sections:

- **Main** — This section provides basic information about the hold request. It contains the following fields:

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Hold Request Type	Indicates the hold request type using which the hold request is created. Note: It has a link. On clicking the link, the Hold Request Type screen appears where you can view the details of the hold request type.
Status	Indicates the status of the hold request.
Status Reason	Indicates the reason why the hold request is released. Note: This field appears only when the hold request is in the Released status. It has a link. On clicking the link, the Status Reason screen appears where you can view the details of the released reason.
Start Date	Displays the date when the hold request is created.
End Date	Displays the date when the hold request is released.
Hold Reason	Displays the reason of hold request.
Entity	Displays the hold request entity.
Comments	Displays the additional information for a hold request.

- **Hold Processes** — Lists the processes that are on hold in the hold request. It contains the following columns:

Column Name	Column Description
Hold Process	Lists the processes that are on hold.
Start Date	Displays the date from when the process is to be on hold for hold request.
End Date	Displays the date till when the process is to be on hold for hold request.

- **Characteristics** — Lists the characteristics defined for the hold request. It contains the following fields:

Field Name	Field Description
Effective Date	Displays the date from when hold request is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request. Note: The Edit button appears only when the hold request is in the Draft or Active status.

Button Name	Button Description
Delete	Used to delete the hold request.
	Note: The Delete button appears only when the hold request is in the Draft status.
Submit	Used to activate the hold request.
	Note: The Submit button appears only when the hold request is in the Draft status.
Re Submit	Used to re-submit the hold request.
	Note: the Re Submit button appears only when the hold request is in the Approval In Progress status.
Approve	Used to approve the hold request.
	Note: the Approve button appears only when the hold request is in the Approval In Progress status.
Reject	Used to reject the hold request.
	Note: the Reject button appears only when the hold request is in the Approval In Progress status.
Release	Used to release the hold request.
	Note: The Release button appears only when the hold request is in the Active status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the hold request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the hold request status is updated.
Create Date/Time	Displays the date and time when the hold request is created.

Hold Entities

The **Hold Entities** zone on the **Hold Request** screen lists the entities that are on hold request. This zone contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears with details of the respective person.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with details of the respective account.
Bill Information	Displays information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears with details of the respective bill.
Start Date	Displays the date from when the entity is on hold.
End Date	Displays the date till when the entity is on hold.
	Note: When hold request for entity is released, then its end date gets updated to the release date only when its end date lies between the hold request start date and end date .
Hold Amount	Displays the amount on hold.
	Note: This column appears only when the entity bill is on hold.
Bill After Date	Displays the date after which bills can be generated.
	Note: This column appears only when the entity account is on hold.
Postpone Credit Review Until	Displays the date till when overdue process is to be on hold.
	Note: This column appears only when the entity account is on hold.
Defer Auto Pay Date	Displays the date from when auto pay process is to be put on deferred mode.
	Note: This column appears only when the entity account is on hold.

Note:

You can directly edit the start and end date of the hold entities by selecting the corresponding column and then click the **Edit** button available on the upper left corner of the **Hold Entities** zone.

You can directly delete the hold entities by selecting the corresponding column and then click the **Delete** button available on the upper left corner of the **Hold Entities** zone.

Postal	Used to indicate the postal or zip code.	No

Note:

You must specify at least one search criterion while searching for persons.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays the person information.
Person Identifier Type	Displays the identifier type of the person linked to the account.
Person Identifier	Displays the ID of the person linked to the account.
Country	Displays the country name.
State	Displays the state name.
County	Displays the county name.
Postal	Displays the postal or zip code.
Entity ID	Displays the entity ID.

Editing a Hold Request

Procedure

To edit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.

The **Hold Request** screen appears.

3. Click the **Edit** button in the **Hold Request** zone.

Note: The **Edit** button appears only when the hold request is in the **Draft** or **Active** status.

The **Hold Request** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Hold Request Type	Displays the hold request type using which the hold request is created.	Not applicable
Start Date	Used to specify the date till when you want to hold the entity. Note: The hold entity end date must be between hold request start and end dates and between the process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date.	Yes
End Date	Used to specify the date till when the hold request is effective. Note: The hold request end date cannot be earlier than the hold request start date.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Hold Reason	Used to indicate the reason why you want to hold the entity.	Yes
	Note: The hold reason must exist in the HOLD_REASON_FLG lookup field and its status must be Active .	Note: This field cannot be edited if hold request is in Active status.
Entity	Displays the hold entity.	Not applicable
Comments	Used to specify the additional information about hold request.	No

- **Hold Processes** — Used to specify the processes on hold in the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that needs to be kept on hold.	Yes
Start Date	Used to specify the date from when process is to be on hold for the hold request.	Yes
	Note: This field is not editable when hold request is in Active status. The hold process start date must be between the hold request start and end dates.	
End Date	Used to specify the date till when the hold process is to be on hold.	No

- **Characteristics** — Used to define characteristics for the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the hold request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Hold Request .	Note: This field is required when you are defining a characteristic for the hold request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the hold request.

- Modify the details of the hold request, if required.

Note:

If you want to specify more than one hold processes, click the **Add** (+) icon corresponding to the process and then specify the details.

However, if you want to remove a hold process from the hold request, click the **Delete** (🗑️) icon corresponding to the process.

- Define, edit, or remove characteristics from the hold request, if required.
- Click **Save**.

The changes made to the hold request are saved.

Submitting a Hold Request**Prerequisites**

To submit a hold request, you should have:

- Hold Request Types, Hold Processes and Hold Entities defined in the request.

Procedure

To submit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request that you want to submit.

The **Hold Request** screen appears.

3. Click the **Submit** button in the **Hold Request** zone.

The system behaves in the following manner:

If...	Then
The Approval Required check box is selected in the hold request type using which the hold request is created.	A To Do of the C1-HLDAP To Do type is created and sent to the approver and the status of the hold request is changed to Approval In Progress .
The Approval Required check box is not selected in the hold request type using which the hold request is created.	The hold request is created using the specified hold request types and the status of the hold request is changed to Active or Deferred Processing as specified in the hold request type.

Note:

The **Submit** button appears only when the hold request is in the **Draft** status.

Once the request is activated, the **Release** button appears in the **Record Actions** section.

If hold request start date is in past and its status is draft then, on activation of the hold request, the start date is changed to the system date.

For Active hold request, **C1-DELBI** batch will delete all pending bill segments and bills under account for bill generation process.

For more information about the **Delete Pending Bill segments and Bills (C1-DELBI) batch**, refer to Oracle Revenue Management and Billing Batch Guide.

Rejecting a Hold Request**Prerequisites**

To reject a hold request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a hold request, you need to specify the reason why you want to reject the hold request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-HoldRequest** business object in the **Status Reason** screen.

The system will not allow you to approve, reject or resubmit a hold request submitted by you.

Procedure

To reject a hold request:

1. Do either of the following:

If you want to	Then
Reject a hold request through the Hold Request screen	<ol style="list-style-type: none"> 1. Search for the hold request in the Hold Request screen. 2. In the Search Results section, click the link in the Hold Request Information column corresponding to the hold request which you want to review.
Reject a hold request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-HLDAP in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field.

If you want to	Then
	<p>The To Do List screen appears.</p> <ol style="list-style-type: none"> 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the hold request that you want to review.

The **Hold Request** screen appears.

2. Review the hold request details.
3. Click the **Reject** button in the **Hold Request** zone.

The **Reject Hold Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the hold request.	Yes
Comments	Used to specify additional information while rejecting the hold request.	No

Note: The **Reject** button appears only when:

- The hold request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the hold request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the hold request is changed to **Rejected**.

Resubmitting a Hold Request

Prerequisites

To resubmit a hold request, you should have:

- Entities added in the hold request which is submitted for approval.

While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the hold request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

Procedure

To resubmit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request that you want to resubmit.

The **Hold Request** screen appears.

3. Click the **Re Submit** button in the **Hold Request** zone.

The **Resubmit Hold Request** screen appears.

Note: The **Re Submit** button appears only when the hold request is in the **Approval In Progress** status.

A To Do of the **C1-HOLSB** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the hold request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

Viewing the Log of a Hold Request**Procedure**

To view the log of a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose log you want to view.

The **Hold Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the hold request. It contains the following zones:
 - **Hold Request** – Displays the details of the hold request.
 - **Hold Entities** – Lists the hold entities records of the hold request.
 - **Search Account** – Searches the accounts to be put on hold.

Note: This zone appears only when hold request is for **Account** and its status is **Draft**.

- **Search Bill** – Searches the bills to be put on hold.

Note: This zone appears only when hold request is for **Bill** and its status is **Draft**.

- **Search Person** – Searches the persons to be put on hold.

Note: This zone appears only when hold request is for **Person** and its status is **Draft**.

- **Log** – Lists the complete trail of actions performed on the hold request. This tab contains the following zone:
 - **Hold Request Log** – Displays the trail of actions performed on the particular hold request.

3. Click the **Log** tab.

The **Hold Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the hold request.
Details	Displays the details about the action performed on the hold request.
User	Indicates the user who has performed the action on the hold request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the hold request.
Status Reason	Indicates the reason why the hold request was rejected or voided.

Note: You can manually add a log entry for the hold request by clicking the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

Note: This zone appears only when hold request is for **Account** and its status is **Draft**.

- **Search Bill** – Searches the bills to be put on hold.

Note: This zone appears only when hold request is for **Bill** and its status is **Draft**.

- **Search Person** – Searches the persons to be put on hold.

Note: This zone appears only when hold request is for **Person** and its status is **Draft**.

- **Log** – Lists the complete trail of actions performed on the hold request. This tab contains the following zone:
 - **Hold Request Log** – Displays the trail of actions performed on the particular hold request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

The **Add Hold Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Log Details	Used to specify additional comments on the hold request.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Hold Request Log** zone.

Chapter 26

Delinquency Central

Topics:

- [Prerequisites](#)
- [Delinquency Central \(Used for Viewing\)](#)
- [Overdue Process Information for Account: {Account ID}](#)

Oracle Revenue Management and Billing provides a complete overview of the overdue bills belonging to the delinquent accounts of a particular person using the **Delinquency Central**. User can review the overdue bills and perform following actions from the delinquency central:

- Initiate customer contact
- Initiate hold on overdue process
- Create payment arrangement for an account
- Create promise to pay for person's account

The Delinquency Central assists you in identifying all the overdue processes, overdue bills & delinquent accounts using an overdue monitoring process.

For more information on how to setup the delinquency central, see [Prerequisites](#) on page 1474.

Prerequisites

To setup delinquency central, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to overdue event.
- Define the overdue event type and overdue process template in the system.
- Promise To Pay type defined in the application.
- Customer contact type defined in the application.
- Hold request type defined in the application.

Delinquency Central (Used for Viewing)

The **Delinquency Central** screen allows you to:

- Search for an overdue process
- View the details of an overdue process
- View the details of an overdue event
- Create customer contact
- Create a hold request for an overdue process
- Create a payment arrangement for an account
- Create a promise to pay for a person's account
- Create a payment agreement request for an account

This screen consists of the following zones:

- [Search Overdue Process](#)
- [Overdue Events](#)

Search Overdue Process

The **Search Overdue Process** zone allows you to search for overdue processes using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for overdue processes using person, account, bill or overdue process. The valid values are: <ul style="list-style-type: none"> • Person • Account • Bill • Overdue Process 	No
	Note: By default, the Person option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for overdue processes which belong to a particular person.	No
	Note: This field appears only when you select the Person option from the Search By list.	
Person Identifier Type	Used to search for overdue processes with a particular person identifier type.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	
Person Identifier	Used to search for overdue processes with a specific value of the person identifier type.	Yes
	Note: This field appears only when you select the Person option from the Search By list.	
Account ID	Used to search for overdue processes created for a particular account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier Type	Used to search for overdue processes with a particular account identifier type.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier	Used to search for overdue processes with a particular account identifier.	Yes
	Note: This field appears only when you select the Account option from the Search By list.	
Bill ID	Used to search for overdue processes with a particular bill.	No
	Note: This field appears only when you select the Bill option from the Search By list.	
Alternate Bill ID	Used to search for overdue processes using an alternate bill ID.	No
	Note: This field appears only when you select the Bill option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and its value.	No
	Note: This field appears only when you select the Bill option from the Search By list.	
Overdue Process Template	Used to search for overdue processes with a particular overdue process template.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
Start Date	Used to search for overdue processes with a particular start date.	Yes
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
End Date	Used to search overdue process with a particular end date.	Yes
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
Status	Used to search for overdue processes with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
On Hold	Used to search for overdue processes that are on hold.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
Overdue Amount From	Used to search for overdue processes with a particular lower limit of the overdue amount.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	
To	Used to search for overdue processes with a particular higher limit of the overdue amount.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and value.	No
	Note: This field appears only when you select the Overdue Process option from the Search By list.	

- In addition to above search parameters, the screen consists of following fields in the **Person Details** or **Account Details** section:

Column Name	Column Description
Main Customer	Displays the name of the main customer to whom the account belongs.
	Note: This field appears only when you select the Account option from the Search By list.
Person Name	Displays the name of the person to whom the account belongs.
	Note: This field appears only when you select the Person option from the Search By list.
Person Identifier Type	Displays the person identifier type.
	Note: This field appears only when you select the Person or Account option from the Search By list.
Person Identifier	Displays the value of the person identifier type.
	Note: This field appears only when you select the Person or Account option from the Search By list.
Account Identifier Type	Displays the account identifier type.
	Note: This field appears only when you select the Account option from the Search By list.
Account Identifier	Displays the value of the account identifier type.
	Note: This field appears only when you select the Account option from the Search By list.
Overdue	Displays whether the person account(s)/bill(s) are overdue. The valid values are: <ul style="list-style-type: none"> • Yes • No
	Note: This field appears only when you select the Person or Account option from the Search By list.
Number of Active Overdue processes	Displays the number of overdue processes linked to the person's account that are in active status.
	Note: This field appears only when you select the Person or Account option from the Search By list.

Column Name	Column Description
Number of Hold(s) on Account(s)	Displays the number of hold requests on the particular account.
Number of Overdue Bills	Displays the total number of bills that are overdue. Note: This field appears only when you select the Person or Account option from the Search By list.
Total Overdue Amount	Displays the total overdue amount for an account.
Last Payment Date	Displays date of the last payment made by the person. Note: This field appears only when you select the Person or Account option from the Search By list.
Last Payment Amount	Displays the amount last paid by the person. Note: This field appears only when you select the Person or Account option from the Search By list.
Number Of Payment Arrangements	Displays the number of payment arrangements for the person's account. Note: This field appears only when you select the Person or Account option from the Search By list.
Total Number of Overdue Process on Hold	Displays the total number of overdue process that are on hold. Note: This field appears only when you select the Person or Account option from the Search By list.
Number of Promise To Pay	Displays the number of promise to pay belonging to the person. Note: This field appears only when you select the Person or Account option from the Search By list.
Number of Broken Promise To Pay	Displays the total number of promise to pay that are broken. Note: This field appears only when you select the Person or Account option from the Search By list.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Overdue Process	Display additional information about the overdue process. Note: It has a link. On clicking the link, the Overdue Process screen appears where you can view the details of the overdue process.
Overdue Process Template	Displays the template that was used to create overdue process's events.

Column Name	Column Description
Account Information	Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the account.
Person Information	Display additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears with the details of the person.
Overdue Amount	Displays the overdue amount under that overdue process.
On Hold	Displays whether the overdue process is on hold.
Overdue Process Details	On clicking the View  icon, the Overdue Process Details screen appears where you can view details of the overdue process.

On clicking the **Broadcast**  icon corresponding to the overdue process, the **Overdue Events** zone appears with the details of the respective overdue process.

Searching for an Overdue Process

Prerequisites

To search for an overdue process, you should have:

- Overdue process defined in the application.

Procedure

To search for an overdue process:

1. Click the **Menu** link in the **Application** toolbar
2. From the **Main** menu, select **Credits & Collection** and then click **Delinquency Central**.

The **Delinquency Central** screen appears.

3. Enter the search criteria in the **Search Overdue Process** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of overdue processes that meet the search criteria appear in the **Search Results** section.

Overdue Process Information for Account: {Account ID}

The **Overdue Process Information for Account: {Account ID}** screen allows you to view detail information of the account which is linked to the overdue process.

This screen consists of the following zones:

- [Person Information](#) on page 1481
- [Overdue Bills](#) on page 1483
- << insert Payment Agreement page here ... >>
- [Hold Details](#) on page 1483
- [Payment Arrangement](#) on page 1483
- [Promise To Pay](#) on page 1482
- [Account Information](#) on page 1482
- [Customer Contact Details](#) on page 1482

Person Information

The **Person Information** zone displays details of the person whose account is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Person Name	Displays the name of the person whose account is linked to the overdue process.
Phone Number	Displays the phone number of the person.
Address	Displays the address of the person.

Account Information

The **Account Information** zone displays the details of the account that is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Last Payment Date	Displays the date of the last payment made from the account that is linked with the overdue process.
Last Payment Amount	Displays the amount last paid from the account.

Customer Contact Details

The **Customer Contact Details** zone displays the contact details of the customer whose account is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Contact Date/Time	Displays the date and time when the customer was contacted.
Customer Contact Information	Displays additional information about the customer contact. Note: It has a link. On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer contact.
Preferred Contact Method	Displays the preferred method of contacting the customer.
Comments	Displays the comments that are placed against each customer.

Promise To Pay

The **Promise To Pay** zone displays promise to pay created for an account which is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Promise To Pay Information	Displays additional information of promise to pay. Note: It has a link. On clicking the link, the Promise To Pay screen appears where you can view the details of promise to pay.
Scheduled Amount	Displays the amount to be paid on the Scheduled Date .
Scheduled Date	Displays the date when the payment is expected as per promise to pay.

Column Name	Column Description
Status	Displays the status of promise to pay.
Created By	Displays the user ID who has created the promise to pay.

Hold Details

The **Hold Details** zone displays the details of the person whose account is linked to the overdue process. This zone contains the following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request. Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the hold request.
Status	Displays the status of the hold request.
Entity	Displays the hold request entity.
Entity Information	Displays the information about the entity on hold. Note: It has a link. On clicking the link, the Account, Bill or Person screen appears, where you can view details of the respective account, bill or person.
Start Date	Displays the date when the hold request is created.
End Date	Displays the end date of the hold request.

Overdue Bills

The **Overdue Bills** zone displays details of the overdue bills. This zone contains following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Due Date	Displays the due date of the bill.
Overdue Amount	Displays the amount that is overdue in the bill.
Days Past Due	Displays the number of days past after the bill date.

Payment Arrangement

The **Payment Arrangement** zone displays the details of the payment arrangement that is created for an account linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Contract Information	Displays the payment arrangement contract information . In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Payoff Balance	Displays the total amount that is paid against the payment arrangement contract.
Arrange Amount	Displays the amount that is paid in installments as per the payment arrangement contract.
Number of Installments	Displays the number of installments used to calculate the Arrange Amount .

Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following fields:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the name of the person for whom the bill is generated.	No
Person ID	Used to specify the person ID.	No
Bills of Persons in Hierarchy	Used to indicate whether you want to search for a bills generated against a person's hierarchy.	No
Bill Cycle	Used to indicate bills where a particular bill cycle is defined.	No
Bill Currency	Used to indicate the bill currency.	No
Billing Method	Used to indicate the billing method. The valid values are: <ul style="list-style-type: none"> • Ad-Hoc Billing • Regular Billing 	No
Bill ID	Used to specify the bill ID.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Account ID	Used to indicate the account against which the bill is generated.	No
On or After Bill Date	Used to specify the date when the bill was completed.	No
Account Identifier Type	Used to search for bills where the account against which it is generated, a particular account identifier type is defined.	No
Account Identifier	Used to search for a bill generated against an account with a particular account identifier.	No

Note: You must specify at least one search criterion while searching for the bill.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Name	Displays the name of the person against whom the bill is generated.
Bill ID	Displays the bill ID.
Bill Status	Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete
Bill Date	Displays the date when the bill was completed.
Due Date	Displays the due date of the bill.
Current Charges	Displays the bill amount.
Bill Information	Displays additional information about the bill.

Searching for a Bill

Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Credits & Collections** and then click **Delinquency Central**.
The **Delinquency Central** screen appears.
3. Select the **Bill** option from the **Search By** list.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of bills that meet the search criteria appear in the **Search Results** section.

Chapter 27

Upload Request

Topics:

- [Upload Request \(Without Approval\) Status Transition](#)
- [Upload Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-BillCycleUpdateUplReq](#)
- [Algorithms Used in C1-ContractRiderUpdateUplReq](#)
- [Algorithms Used in C1-HoldUploadRequest](#)
- [Algorithms Used in C1-RefundUploadRequest](#)
- [Algorithms Used in C1-WriteOffUploadRequest](#)
- [Algorithms Used in C1-BillableChargeUploadRequest](#)
- [Algorithms Used in C1-ReinstatementUploadRequest](#)
- [Algorithms Used in C1-BillGrpSortUploadRequest](#)
- [Algorithms Used in C1-BillLevelUploadRequest](#)
- [CSV File Format for Account Bill Cycle Upload Request](#)
- [CSV File Format for Contract Rider Upload Request](#)
- [CSV File Format for Billable Charge Upload](#)
- [CSV File Format for Hold Upload Request](#)
- [CSV File Format for Refund Request Upload](#)

Oracle Revenue Management and Billing provides a generic upload feature which enables you to upload various types of data. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

While uploading data for the above supported entities, you need to specify the upload request type using which you want to upload the file. It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can upload a data file in the CSV format. You cannot upload data for more than one entity type through the same CSV file. For example, you cannot upload data for billable charges and hold requests using a single CSV file. An upload request of the specified upload request type is created when the file is successfully uploaded in the system. You can track a file through an upload request.

Once an upload request is created, the status of the upload request is set to **Draft**. The status of each record uploaded through an upload request is set to **Pending**. However, if the mandatory data is not available or data required for deriving

- [CSV File Format for Write Off Request Upload](#)
- [CSV File Format for Reinstatement Upload Request](#)
- [CSV File Format for Bill Group Sorting Upload Request](#)
- [CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request](#)
- [Upload Request Type](#)
- [Upload Request \(Used for Searching\)](#)
- [Upload Request \(Used for Viewing\)](#)

mandatory data is incorrect in the record, the status of record is set to **Invalid**. You can then edit, delete, or validate the upload request. During the validation process, the system and custom validations (if any) are executed. The status of each record is changed to **Valid** or **Invalid** depending on whether the record was validated successfully or not.

Once the upload request is validated, you can either cancel or submit the upload request for further processing. On submitting an upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked).

You can optionally configure the system to use the approval workflow process for an upload request. If the **Approval Required** flag is set to **Yes** in an upload request type, then on submitting the respective upload request, the approval workflow process creates a To Do for the approver to review the upload request. Once the approver approves the upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. However, if the approver rejects the upload request, the status of the upload request is set to **Rejected**.

During the upload process, an upload request goes through various statuses in its lifecycle. Note that the lifecycle of an upload request is driven by the business object using which the upload request is created. In this release, we have shipped the following upload request business objects:

- Update Bill Cycle Upload Request (C1-BillCycleUpdateUplReq)
- Billable Charge Upload Request (C1-BillableChargeUploadRequest)
- Update Contract Rider Upload Request (C1-ContractRiderUpdateUplReq)
- Hold Request Upload Request (C1-HoldUploadRequest)
- Refund Request Upload Request (C1-RefundUploadRequest)
- Write Off Request Upload Request (C1-WriteOffUploadRequest)
- Reinstatement Upload Request (C1-ReinstatementUploadRequest)
- Bill Group Sorting Upload Request (C1-BillGrpSortUploadRequest)
- Bill Group Derivation and Pricing Parameters Upload Request(C1-BillLevelUploadRequest)

During the upload request process, an upload request creation goes through various statuses in its lifecycle. For more information about the upload request statuses, see [Upload Request \(Without Approval\) Status Transition](#) on page 1492 and [Upload Request \(With Approval\) Status Transition](#) on page 1493.

Note: The lifecycle of an upload request creation is driven by the respective business object using which the request is created. The upload request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the upload request process, see [Prerequisites](#) on page 1494.

Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is off:

Upload Request (With Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is on:

Prerequisites

To setup the upload request process, you need to do the following:

- Define the required upload request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the values for the following parameters in the **C1-REN-VALID** algorithm:
 - Policy Status after Processing Reinstatement Upload Request
 - Policy Reinstatement Status for Reason Verification
- Define the value for the **Online Record Process Limit** parameter in the **C1-DEFERUPLD** algorithm.
- Define the value for the **Policy Status after Processing Reinstatement Upload Request** parameter in the **C1-REN-PROC** algorithm.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive the To Do for approving a bill cycle update upload request.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive the To Do for approving a contract rider update upload request.
- Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive the To Do for approving a hold upload request.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive the To Do for approving a refund upload request.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive the To Do for approving a write off upload request.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive the To Do for approving a billable charge upload request.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive the To Do for approving a reinstatement upload request.
- Create a To Do type named **C1-BGSRT** using the following information:
 - **Navigation Option** - c1upldrqTabMenu
 - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive the To Do for approving a bill group sorting upload request.
- Create a To Do type named **C1-BGDVP** using the following information:
 - **Navigation Option** - c1upldrqTabMenu

- **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive the To Do for approving a bill group derivation and pricing parameters upload request.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Algorithms Used in C1-BillCycleUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-BillCycleUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BCU-DERIV	C1-BCU-DERIV	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-BCU-VALID	C1-BCU-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the account ID and bill cycle specified in the record are valid. If the account ID and bill cycle are valid and if the bill cycle is associated with the division to which the account belongs, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill cycle is invalid, or if the bill cycle is not associated with the division to which the account belongs, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more records with the same account ID. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid.</p>
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	This algorithm is invoked when the status of the upload request is changed to Submitted or Approved . It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing . However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing . It contains the following parameter: <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	This algorithm is invoked when the status of the upload request is changed to Submitted or Approved . It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing . However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing . It contains the following parameter: <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Approved	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters: <ul style="list-style-type: none"> • Next Status • Next Transition Condition At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

Status	System Event	Algorithm	Algorithm Type	Description
Deferred Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Processing	Enter	C1-BCU-PROC	C1-BCU-PROC	<p>This algorithm fetches a list of records which are in the Valid status. For each valid record, the system reads the account ID and bill cycle, and updates the bill cycle information of the account using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to Processed. However, if the record could not be processed successfully due to any reason, the status of the record is changed to Error. Finally, the status of the upload request is changed to Processed.</p>
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Algorithms Used in C1-ContractRiderUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-ContractRiderUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CR-DERIV	C1-CR-DERIV	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-CR-VALID	C1-CR-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the account ID, contract ID, contract type, and bill factor specified in the record are valid. If the account ID, contract ID, contract type, and bill factor are valid, if the specified contract belongs to the account, and if the Contract Rider Applicability flag on the bill factor is set to Y, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill factor is invalid, or if the specified contract does not belong to the account, or if the Contract Rider Applicability flag on the bill factor is set to N, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p> <p>It also checks whether there are two or more records with the same account ID and contract type combination. If so, it validates and changes the status of one record to Valid and the status of the remaining records is changed to Invalid.</p>
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	<p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. Algorithms Used in C1-HoldUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-HLD-DERIV	C1-HLD-DERIV	<p>This algorithm reads the data in the BO_DATA_AREA column of the C1_UPL_REQUEST table and accordingly inserts the records in the C1_UPLOAD_REQ_DTLS table. In addition, the status of each record in the C1_UPLOAD_REQ_DTLS table is set to Pending.</p> <p>If the hold entity is ACCT and the entity ID is not specified in the record, it derives the account ID using the account identifier type and account identifier combination. Similarly, if the hold entity is PERS and the entity ID is not specified in the record, it derives the person ID using the person identifier type and person identifier combination. Once the account ID or person ID is derived, the corresponding record is updated in the C1_UPLOAD_REQ_DTLS table. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-HLD-VALID	C1-HLD-VALID	<p>This algorithm is invoked when the user clicks the Validate button. It validates the records which are in the Pending status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Valid.</p> <p>If the hold entity is ACCT and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is PERS and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the C1_UPLOAD_REQ_DTLS table to Valid. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the C1_UPLOAD_REQ_DTLS table is changed to Invalid.</p>
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress. However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). Algorithms Used in C1-RefundUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-RF-VALID	C1-RF-VALID	This algorithm validates the data uploaded in an upload request for creating refund requests before the request is submitted for processing.
Draft	Enter	C1-RF-DERIV	C1-RF-DERIV	This algorithm reads the BO_DATA_AREA in the request's primary table, derives additional data that is required for creating refund requests and inserts the records in C1_UPLOAD_REQ_DTLS table.
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	This algorithm is invoked when the user clicks the Submit button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to Approval In Progress . However, if the approval is not required for an upload request, the status of the upload request remains in the Submitted status.

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	<p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the Exclude To Do Entries From Auto Completion characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to Submitted or Approved. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to Processing. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to Deferred Processing.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> • Online Record Process Limit <ul style="list-style-type: none"> – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-BLSRTUPLD

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLSRTDERV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLSRTVALD

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group sort record.
- The end date is not earlier than the start date and the start date is not later than the end date.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group sort record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_BILL_LVL** table.

- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-BLSRTPROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the bill group (person) ID and sort ID, it creates one bill group sort record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

Algorithms Used in C1-BillLevelUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillLevelUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BLVUPLDTL	C1-BLVUPLDTL	Refer to C1-BLVUPLDTL on page 1534.
Draft	Enter	C1-BLVLDERIV	C1-BLVLDERIV	Refer to C1-BLVLDERIV on page 1534.
Validated	Enter	C1-BLVLVALID	C1-BLVLVALID	Refer to C1-BLVLVALID on page 1534.
Canceled	—	—	—	—

Processing	Enter	C1-BLVLVLPRO	C1-BLVLVLPRO	Refer to C1-BLVLVLPRO on page 1535.
Processed	—	—	—	—

C1-BLVUPLDTL

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPL_REQUEST** table and accordingly inserts the records in the **C1_UPLOAD_REQ_DTLS** table. In addition, the status of each record in the **C1_UPLOAD_REQ_DTLS** table is set to **Pending**.

C1-BLVLDERIV

This algorithm reads the data in the **BO_DATA_AREA** column of the **C1_UPLOAD_REQ_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1_UPLOAD_REQ_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

C1-BLVLVALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group derivation and pricing parameters record.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group derivation and pricing parameters record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- The number of characters specified in each field does not exceed the maximum field length.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_BILL_LVL** table.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1_UPLOAD_REQ_DTLS** table.
- The source system exists in the extendable lookup which is specified in the **Source System Extendable Lookup** parameter.
- The bill group sort record with the bill group ID and sort ID combination already exists in the system.
- The effective date specified in the record is within the date range of the effective bill group sort record.

If the above mentioned validations are successful, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1_UPLOAD_REQ_DTLS** table is changed to **Invalid**.

It contains the following parameter:

- **Source System Extendable Lookup** – Used to specify the source system extendable lookup business object. The bill group derivation and pricing parameters records should contain the source system which is already defined in this extendable lookup.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

C1-BLVLVLP

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date, it creates one bill group derivation and pricing parameters record using the entity business object defined in the upload request type. If the record

is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

CSV File Format for Account Bill Cycle Upload Request

Before uploading the account bill cycle file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the account ID is not specified.
Account Identifier	Used to specify the identifier of the account whose bill cycle you want to update.	Yes (Conditional)
		Note: This data is required when the account ID is not specified.
Account ID	Used to indicate the account whose bill cycle you want to update.	No
	Note: If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination.	
Bill Cycle	Used to specify the bill cycle.	Yes
	Note: You must specify a valid bill cycle which is associated with the division to which the account belongs.	

CSV File Format for Contract Rider Upload Request

Before uploading a contract rider file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the account ID and contract ID are not specified.
Account Identifier	Used to specify the identifier of the account whose contract you want to update.	Yes (Conditional)
		Note: This data is required when the account ID and contract ID are not specified.

Column Name	Description	Mandatory (Yes or No)
Account ID	Used to indicate the account whose contract you want to update.	Yes (Conditional)
		Note: This data is required when the account identifier type, account identifier, and contract ID are not specified.
Contract Type	Used to indicate the type of the contract whose details you want to update.	Yes (Conditional)
	Note: You must specify a contract type which already exists in the system.	Note: This data is required when the contract ID is not specified.
Contract ID	Used to indicate the contract whose contract rider information you want to update.	No
	Note: If you do not specify the contract ID, the system derives the active contract using the account ID and contract type combination.	
Start Date	Used to specify the date from when the bill factor is effective for the contract.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the date till when the bill factor is effective for the contract.	No
	Note: The end date cannot be earlier than the start date.	
Bill Factor	Used to specify the bill factor.	Yes
	Note: You must specify a valid bill factor where the Contract Rider Applicability flag is set to Y .	

CSV File Format for Billable Charge Upload

Before uploading a billable charge file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		Note: This data is required when the Account ID is not specified.

Column Name	Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional) Note: This data is required when the Account Identifier Type and Account Identifier is not specified.
Contract ID	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional) Note: This data is required when you want to create the billable charge against a specific contract on the account. If this data is not specified then billable charge is created against a contract with highest priority.
Start Date	Used to specify the start date of billable charge.	Yes
End Date	Used to specify the end date of billable charge.	Yes
Charge Type	Used to specify the charge type for which you want to create a billable charge.	No
Description On Bill	Used to specify description for a billable charge.	Yes
Recurring Flag	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set policy invoice frequency. The valid values are: <ul style="list-style-type: none"> • BP • FR 	Yes (Conditional) Note: This data is required if Frequency or Bill Period is specified.
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required if Recurring Flag is FR.
Bill Period	Used to specify the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required if Recurring Flag is BP.
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No

Column Name	Description	Mandatory (Yes or No)
Description on Bill1, Description on Bill2,, Description on Bill5	Used to specify description for the billable charge lines.	Yes (Conditional)
		Note: This data is required when the charge amount is specified.
Currency1, Currency2,, Currency5	Used to specify the currency in which the amount is charged. Note: If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional)
		Note: This data is required when the charge amount is specified.
Amount1, Amount2,, Amount5	Used to specify the charge amount.	Yes (Conditional)
		Note: This data is required when the description on bill or currency is specified.
Show On Bill1, Show on Bill2,, Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> • true • false 	No
Summary1, Summary2,, Summary5	Used to indicate whether the charge should be included in the summary line or not. The valid value are: <ul style="list-style-type: none"> • true • false 	No
Memo Only1, Memo Only2,, Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> • true • false 	No

Column Name	Description	Mandatory (Yes or No)
GL Distribution Code1, GL Distribution Code2,, GL distribution Code5	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional) Note: This data is required when false is specified in the Memo Only column corresponding to the bill line description.
Price Item	Used to specify the price item code.	Yes (Conditional) Note: This data is required when Variance Parameter or, Price Item Parameter and Price Item Parameter Value is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional) Note: This data is required when Price Item is specified and Price Item Parameter and Price Item Parameter Value are not specified.
Price Item Parameter1, Price Item Parameter2,, Price Item Parameter15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) Note: This data is required when Price Item is specified and Variance Parameter is not specified.
Price Item Parameter Value1, Price Item Parameter Value2,, Price Item Parameter Value15	Used to specify the parameter value. Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Yes (Conditional) Note: This data is required when Price Item is specified and Variance Parameter is not specified.
SQI1, SQI2,, SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional) Note: This data is required when the service quantity is specified.
SQI Value1, SQI Value2,, SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional) Note: This data is required when the SQI is specified.

Column Name	Description	Mandatory (Yes or No)
Effective Date1, Effective Date2,, Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Value1, Char Value2,, Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when Effective Date or Char Type is specified.

CSV File Format for Hold Upload Request

Before uploading a hold request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type. Note: You must specify a valid hold request type which is in the Active status.	Yes
Start Date	Used to specify the date from when the hold request is effective. Note: The hold request start date cannot be later than the hold request end date.	Yes
End Date	Used to specify the date till when the hold request is effective. Note: The hold request end date cannot be earlier than the hold request start date.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity. Note: The hold reason must exist in the HOLD_REASON_FLG lookup field and its status must be Active .	Yes

Column Name	Description	Mandatory (Yes or No)
Hold Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> • ACCT • BILL • PERS 	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the hold entity is ACCT and the entity ID is not specified.
Account Identifier	Used to specify the identifier of the account for which you want to create the hold request.	Yes (Conditional) Note: This data is required when the hold entity is ACCT and the entity ID is not specified.
Person Identifier Type	Used to specify the person identifier type.	Yes (Conditional) Note: This data is required when the hold entity is PERS and the entity ID is not specified.
Person Identifier	Used to specify the identifier of the person for which you want to create the hold request.	Yes (Conditional) Note: This data is required when the hold entity is PERS and the entity ID is not specified.
Hold Entity ID	Used to specify the entity ID. Note: If the hold entity is ACCT , you must specify the account ID in this field. If the hold entity is PERS , you must specify the person ID in this field. And, if the hold entity is BILL , you must specify the bill ID in this field. If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination. Similarly, if you do not specify the person ID, the system derives the person ID using the person identifier type and person identifier combination.	Yes (Conditional) Note: This data is required when the hold entity is BILL .
Comments	Used to specify additional information about the hold request.	No

Column Name	Description	Mandatory (Yes or No)
Hold Entity Start Date	Used to specify the date from when you want to hold the entity.	Yes
	<p>Note:</p> <p>The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates.</p> <p>The hold entity start date cannot be later than the hold entity end date.</p>	
Hold Entity End Date	Used to specify the date till when you want to hold the entity.	No
	<p>Note:</p> <p>The hold entity end date must be between hold request start and end dates and between the process's start and end dates.</p> <p>The hold entity end date cannot be earlier than the hold entity start date.</p>	
Hold Funding	Used to indicate whether you want to hold the funding process for the entity. The valid values are:	No
	<ul style="list-style-type: none"> • Y • N <p>Note: You can hold the funding process only when the hold entity is PERS or BILL.</p>	
Hold Funding Start Date	Used to specify the date from when you want to hold the funding process.	Yes (Conditional)
	<p>Note:</p> <p>The hold funding start date must be between the hold request start and end dates.</p> <p>The hold funding start date cannot be later than the hold funding end date.</p>	
Hold Funding End Date	Used to specify the date till when you want to hold the funding process.	No
	<p>Note:</p> <p>The hold funding end date must be between the hold request start and end dates.</p> <p>The hold funding end date cannot be earlier than the hold funding start date.</p>	

Column Name	Description	Mandatory (Yes or No)
Hold Overdue	Used to indicate whether you want to hold the overdue process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Hold Overdue Start Date	Used to specify the date from when you want to hold the overdue process. Note: The hold overdue start date must be between the hold request start and end dates. The hold overdue start date cannot be later than the hold overdue end date.	Yes (Conditional) Note: This data is required when the overdue process must be kept on hold.
Hold Overdue End Date	Used to specify the date till when you want to hold the overdue process. Note: The hold overdue end date must be between the hold request start and end dates. The hold overdue end date cannot be earlier than the hold overdue start date.	No
Hold Bill Generation	Used to indicate whether you want to hold the bill generation process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Hold Bill Generation Start Date	Used to specify the date from when you want to hold the bill generation process. Note: The hold bill generation start date must be between the hold request start and end dates. The hold bill generation start date cannot be later than the hold bill generation end date.	Yes (Conditional) Note: This data is required when the bill generation process must be kept on hold.
Hold Bill Generation End Date	Used to specify the date till when you want to hold the bill generation process. Note: The hold bill generation end date must be between the hold request start and end dates. The hold bill generation end date cannot be earlier than the hold bill generation start date.	No

Column Name	Description	Mandatory (Yes or No)
Hold Auto Pay	Used to indicate whether you want to hold the automatic payment process for the entity. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
Hold Autopay Start Date	Used to specify the date from when you want to hold the automatic payment process. <p>Note: The hold autopay start date must be between the hold request start and end dates. The hold autopay start date cannot be later than the hold autopay end date.</p>	Yes (Conditional) Note: This data is required when the automatic payment process must be kept on hold.
Hold Autopay End Date	Used to specify the date till when you want to hold the automatic payment process. <p>Note: The hold autopay end date must be between the hold request start and end dates. The hold autopay end date cannot be earlier than the hold autopay start date.</p>	No
Effective Date1, Effective Date2,, Effective Date5	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional) Note: This data is required when the characteristic type or characteristic value is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the hold request. <p>Note: You must specify a characteristic type where the characteristic entity is set to Hold Request.</p>	Yes (Conditional) Note: This data is required when the effective date or characteristic value is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required when the effective date or characteristic type is specified.

CSV File Format for Refund Request Upload

Before uploading a refund request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Refund Request Type	Used to specify the refund request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the refund request.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the refund request.	Yes (Conditional) Note: This data is required when the Account Identifier Type and Account Identifier are not specified.
Entity Type	Used to specify the entity type.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the refund adjustments are created.	No
Refund Amount	Used to specify the amount that you want to refund.	Yes
Comments	Used to specify the comments which are added on the refund request.	No
Effective Date1, Effective Date2,, Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the refund request.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when Effective Date or Char Type is specified.

CSV File Format for Write Off Request Upload

Before uploading a write off request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Write Off Request Type	Used to specify the write off request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the write off request.	Yes (Conditional) Note: This data is required when the Account ID is not specified.
Account ID	Used to specify the account for which you want to create the write off request.	Yes (Conditional) Note: This data is required when the Account Identifier Type and Account Identifier are not specified.
Entity Type	Used to specify the entity type.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the write off adjustments are created.	No
Write Off Amount	Used to specify the amount that you want to write off.	Yes
Comments	Used to specify the comments which are added on the write off request.	No
Effective Date1, Effective Date2,, Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) Note: This data is required when Char Type or Char Val is specified.
Char Type1, Char Type2,, Char Type5	Used to indicate the characteristic that must be defined for the write off request.	Yes (Conditional) Note: This data is required when Effective Date or Char Val is specified.
Char Val1, Char Val2,, Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when Effective Date or Char Type is specified.

CSV File Format for Reinstatement Upload Request

Before uploading a policy reinstatement file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Policy ID	Used to indicate the policy which you want to reinstate.	No
	Note: If you do not specify the policy ID, the system derives the policy ID using the source system and policy number combination.	
Source System	Used to indicate the external system from where the policy is originated.	Yes (Conditional)
		Note: This data is required when the policy ID is not specified.
Policy Number	Used to indicate the policy number.	Yes (Conditional)
		Note: This data is required when the policy ID is not specified.
Reinstatement Reason	Used to indicate the reason why you want to reinstate the policy.	Yes
	Note: You must specify a reason which is defined for the status specified in the Policy Reinstatement Status for Reason Verification parameter of the C1-REN-VALID algorithm.	

CSV File Format for Bill Group Sorting Upload Request

Before uploading a bill group sorting file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group sorting upload request. In addition, note that you must specify a child person whose person type is set to Bill Group and who is related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLLNG feature configuration.	Note: This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.
2	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional)
			Note: This data is required when the bill group (i.e. person) ID is not specified.

Sr. No.	Value	Description	Mandatory (Yes or No)
3	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional) Note: This data is required when the bill group (i.e. person) ID is not specified.
4	Sort ID	Used to specify the sort ID.	Yes
5	Description	Used to specify the description for the sort ID.	Yes
6	Start Date	Used to specify the date from when the sort ID is effective for the bill group. Note: The start date cannot be later than the end date.	Yes
7	End Date	Used to specify the date till when the sort ID is effective for the bill group. Note: The end date cannot be earlier than the start date.	No

CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request

Before uploading a bill group derivation and pricing parameters file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Source System	Used to indicate the source system from where the claim and enrollment transactions are received. Note: You must specify a source system which already exists in the extendable lookup which is specified in the Source System Extendable Lookup parameter of the C1-BLVLVALID algorithm.	Yes
2	Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group. Note: You must not specify the ampersand (&) character in the parameter 1.	Yes

Sr. No.	Value	Description	Mandatory (Yes or No)
3	Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 2.	
4	Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 3.	
5	Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group.	No
		Note: You must not specify the ampersand (&) character in the parameter 4.	
6	Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Yes
		Note: The effective date must be within the date range of the sort ID defined for the bill group.	
7	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)
		Note: You must specify an effective child person of the parent customer for whom you are creating the bill group derivation and pricing parameters upload request. In addition, note that you must specify a child person whose person type is set to Bill Group and who is related to the parent customer using a relationship type which is specified in the Person Relationship Type option type of the C1-ASOBLNG feature configuration.	
8	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional)
		Note: This data is required when the bill group (i.e. person) ID is not specified.	
9	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)
		Note: This data is required when the bill group (i.e. person) ID is not specified.	

Sr. No.	Value	Description	Mandatory (Yes or No)
10	Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes

Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

The **Adjustment Upload Request Type (C1-AdjRequestType)** business object is used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. If you are going to upload adjustment data files using an upload request type, you need to specify the match types (using which the adjustments must be created) in the upload request type. At present, the following two match types are shipped with the product:

- Contract
- Contract Type

You can also define custom match types, if required. You must use the **ADJ_MATCH_TYPE** lookup field to add a new match type. You need to attach an algorithm to each match type to determine the contract against which the adjustment must be created. At present, the following algorithm types and sample algorithms are shipped with the product:

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to Contract (CONT) .
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to Contract Type (CNTY) . If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement

- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- [Upload Request Type List](#) on page 1552
- [Upload Request Type](#) on page 1553

Parent topic: [Upload Request](#) on page 1489

Upload Request Type List

The **Upload Request Type List** zone lists upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the Edit () icon, the Upload Request Type screen appears where you can edit the details of the upload request type.
Duplicate	On clicking the Duplicate () icon, the Upload Request Type screen appears where you can define an upload request type using an existing upload request type.
Delete	On clicking the Delete () icon, you can delete the upload request type. Note: You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Mapping	On clicking the Mapping () icon, the mapping screen appears where you can map the columns of CSV file with the upload request type.

On clicking the **Broadcast** () icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	Indicates the business object that will be used to create the upload request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	Indicates the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
File Size (KB)	Displays the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. Note: This field appears only when you create upload request type using Adjustment Upload Request Type business object.

Field Name	Field Description
Defer Algorithm	<p>Indicates the algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>This field appears only when you create upload request type using Adjustment Upload Request Type business object.</p> <p>It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p>
Approval Required	Indicates whether approval is required for a file which is uploaded using the upload request type.
Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note:</p> <p>This field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve or reject the upload request submitted for approval.</p> <p>Note:</p> <p>This field appears only when the Approval Required check box is selected.</p> <p>On selecting the To Do Type, the To Do Roles configured on the To Do Type is populated.</p> <p>It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.</p>

Field Name	Field Description
FK Reference	Indicates the foreign key reference which specifies the created upload request type.
	<p>Note:</p> <p>This field appears only when you create upload request type using Upload Request Type business object.</p> <p>It has a link. On clicking the link, the Foreign Key Reference screen appears with the details of the respective foreign key.</p>

In addition, this section has the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type
	Note: The Match Type column is displayed for Adjustment Upload Request Business Object .
Algorithm	Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.
	Note: It has a link. On clicking the link, the Algorithm screen appears with the details of the respective algorithm. The Algorithm column is displayed for Adjustment Upload Request Business Object .

- **Characteristics** – This section lists the characteristics defined for the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request type.
Delete	Used to delete the upload request type.
	Note: You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to an upload request type in the **Upload Request Type List** zone.

Defining an Upload Request Type

Prerequisites

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval
- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval

- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval
- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

Procedure

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object that you want to use to create the upload request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	Note: This field appears when Adjustment Upload Request Type business object is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when Adjustment Upload Request Type business object is selected.</p> <p>In Upload Request Type, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from Validated to Deferred Processing else the status is changed to Processed.</p> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)																						
Entity Business Object	<p>Used to indicate for creating Business Object of the entity using the upload request type.</p> <p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when Upload Request Type business object is selected.</p>	No																						
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No																						
Approval To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The following table lists the To Do type using which the To Do must be generated for the different upload requests:</p> <table border="1"> <thead> <tr> <th>Upload Request</th> <th>To Do Type</th> </tr> </thead> <tbody> <tr> <td>Adjustment</td> <td>C1-ADJUP</td> </tr> <tr> <td>Bill Cycle Update</td> <td>C1-BCUUR</td> </tr> <tr> <td>Billable Charge</td> <td>C1-BCUR</td> </tr> <tr> <td>Contract Rider Update</td> <td>C1-CRUUR</td> </tr> <tr> <td>Hold Request</td> <td>C1-HLDUR</td> </tr> <tr> <td>Refund Request</td> <td>C1-REFUR</td> </tr> <tr> <td>Write Off Request</td> <td>C1-WOUR</td> </tr> <tr> <td>Policy Reinstatement</td> <td>C1-RPUR</td> </tr> <tr> <td>Bill Group Sorting</td> <td>C1-BGSRT</td> </tr> <tr> <td>Bill Group Derivation and Pricing Parameters</td> <td>C1-BGDVP</td> </tr> </tbody> </table>	Upload Request	To Do Type	Adjustment	C1-ADJUP	Bill Cycle Update	C1-BCUUR	Billable Charge	C1-BCUR	Contract Rider Update	C1-CRUUR	Hold Request	C1-HLDUR	Refund Request	C1-REFUR	Write Off Request	C1-WOUR	Policy Reinstatement	C1-RPUR	Bill Group Sorting	C1-BGSRT	Bill Group Derivation and Pricing Parameters	C1-BGDVP	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p>
Upload Request	To Do Type																							
Adjustment	C1-ADJUP																							
Bill Cycle Update	C1-BCUUR																							
Billable Charge	C1-BCUR																							
Contract Rider Update	C1-CRUUR																							
Hold Request	C1-HLDUR																							
Refund Request	C1-REFUR																							
Write Off Request	C1-WOUR

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when Upload Request Type business object is selected.	No

In addition, this section contains the following fields in the grid:

Note: This field appears when **Adjustment Upload Request Type** business object is selected.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional) Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	Yes (Conditional) Note: This field is required when you select the match type from the respective field.

6. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search**  icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add**  icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete**  icon corresponding to the match type.

7. Define characteristics for the upload request type, if required.

8. Click **Save**.

The upload request type is defined.

How to define characteristics for an upload request type	Defining Characteristics for an Upload Request Type on page 1562

Defining Characteristics for an Upload Request Type**Prerequisites**

To define characteristics for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

Procedure

To define characteristics for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request Type.	Note: This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request type, click the **Delete** () icon corresponding to the characteristic.

Editing an Upload Request Type

Prerequisites

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> <p>Note: This field appears when the business object is Adjustment Upload Request Type.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note: Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p>	Yes
Entity Business Object	<p>Used to indicate for creating Business Object of the entity using the upload request type.</p> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p>	No
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required when the Approval Required check box is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears. This field appears when the business object is Upload Request Type .	No

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional) Note: This field is required when you select the Adjustment Upload Request option from the Upload Request Business Object list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional) Note: This field is required when you select the match type from the respective field.

Tip: Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

4. Modify the required details.

Note:

You can search for an algorithm by clicking the **Search**  icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add**  icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete**  icon corresponding to the match type.

5. Define, edit, or remove characteristics from the upload request type, if required.

6. Click **Save**.

The changes made to the upload request type are saved.

Deleting an Upload Request Type

Procedure

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

Note: You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.

Tip: Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

4. Click **OK**.

The upload request type is deleted.

Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type (whose copy you want to create).	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the upload request type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive 	Yes
File Size (KB)	<p>Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.</p> <p>Note: This field appears when the business object is Adjustment Upload Request Type.</p>	Yes
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p>Note:</p> <p>Deferred mode means in the background when the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked. You can configure the Upload Request Periodic Monitor (C1-UPLRQ) batch such that it is executed at regular intervals. When the Upload Request Periodic Monitor (C1-UPLRQ) batch is invoked, the system checks whether there are any upload requests in the Deferred status. If there is an upload request in the Deferred status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is Adjustment Upload Request Type.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate to create the copy of Business Object of the entity using the upload request type.	No
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears when the business object is Upload Request Type.</p>	
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	<p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
	<p>Note: This field is required when the Approval Required check box is selected.</p>	
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Foreign Key Search window appears.</p> <p>This field appears when the business object is Upload Request Type.</p>	

In addition, this section contains the following fields in the grid:

Note: The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> Contract Contract Type 	Yes (Conditional) Note: This field is required when you select the Adjustment Upload Request Business Object list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional) Note: This field is required when you select the match type from the respective field.

Tip: Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

- Enter the required details.

Note:

You can search for an algorithm by clicking the **Search**  icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add**  icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete**  icon corresponding to the match type.

- Define, edit, or remove characteristics from the upload request type, if required.
- Click **Save**.

The new upload request type is defined.

Mapping an Upload Request Type

Prerequisites

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

Note: Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

Procedure

To map an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Mapping**  icon in the **Mapping** column corresponding to the upload request type whose columns you want to map with the CSV file.

The **Upload Request Type Mapping** screen appears. It contains the following field:

Note: The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type.	Not applicable

The **Upload Request Type Mapping** screen also contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the rows correspond to the columns in CSV file.	Yes (Conditional) Note: This column is required when you search the Data Records zone in the Upload Request screen.
Use for Searching	Used to indicate whether the defined CSV Column Header is searchable or not. Note: Upto 10 rows can be selected as searchable rows.	Yes (Conditional) Note: This column is required to be selected to be shown in the Data Records zone in the Upload Request screen
Sequence Number	Used to specify the sequence of the searchable fields. Note: Searchable rows should have sequence less than or equal to 10.	Yes (Conditional) Note: This column is required to be selected to be shown sequentially in the Data Records zone in the Upload Request screen

4. Enter the required details.

Note: If you want to add more than one column names mapped to the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete** (🗑️) icon corresponding to the column header.

5. Click **Save**.

The columns are mapped to the CSV files for upload request type.

Viewing the Upload Request Type Details

Procedure

To view the details of an upload request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.
The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Broadcast** (📡) icon corresponding to the upload request type whose details you want to view.
The **Upload Request Type** zone appears.
5. View the details of the upload request type in the **Upload Request Type** zone.

Upload Request (Used for Searching)

The **Upload Request** screen allows you to upload, validate and process the transaction data. Through this screen, you can navigate to the following screen:

- [Upload Request \(Used for Viewing\)](#) on page 1580

This screen consists of the following zone:

- [Search Upload Request](#) on page 1574

Search Upload Request

The **Search Upload Request** zone allows you to search for a upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an upload request using Request Details .	Yes
Upload Date From	Used to search upload requests which are created from a particular date.	No
To	Used to search upload requests which are created till a particular date.	No
Status	Used to search upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Canceled • Deferred Processing • Draft • Processed • Rejected • Validated 	No
Upload Request Type	Used to search upload requests which are created using a particular upload request type.	No
User ID	Used to search upload requests which are created by a particular user.	No
Upload Request ID	Used to search a particular upload request.	No
File Name	Used to search a particular file name.	No

Note: You must specify at least one search criterion while searching for an upload request.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the upload request was created in the system.
Payment Request Information	Displays information about the upload request.
	Note: It has a link. On clicking the link, the Upload Request screen appears where you can view the details of the respective upload request.

Column Name	Column Description
Status	Indicates the status of the upload request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Canceled • Deferred Processing • Draft • Processed • Rejected • Validated
Upload Request Type	Displays the upload request type using which the upload request is created.
Entity Business Object	Displays the business object code of the entity.
File Name	Displays the uploaded file name.
Total Records	Displays the total number of records in the uploaded csv file.
Created By	Indicates the user who has created the upload request.

Searching for an Upload Request

Prerequisites

To search for an upload request, you should have:

- Upload request types defined in the application

Procedure

To search for an upload request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
A sub-menu appears.
3. Click the **Search** option from the **Upload Request** sub-menu.
The **Upload Request** screen appears.
4. Enter the search criteria in the **Search Upload Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of upload requests that meet the search criteria appears in the **Search Results** section.

Viewing the Upload Request Details

Procedure

To view the details of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Upload Request** – Displays the details of the upload request.
 - **Data Records** – Lists the details of data records uploaded in the csv file.
 - **Log** – This tab lists the complete trail of actions performed on the upload request.
3. View the details of the upload request in the **Upload Request** zone.
 4. View the data records in the csv file of the upload request in the **Data Records** zone.

Creating an Upload Request

Prerequisites

To create an upload request, you should have:

- Upload request types defined in the application

Procedure

To create an upload request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.
A sub-menu appears.
3. Click the **Add** option from the **Upload Request** sub-menu.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	<p>Used to indicate the upload request type using which you want to create the upload request.</p> <p>Note: The following upload request types are shipped with the product:</p> <ul style="list-style-type: none"> • ADJ_UPL_REQ_TYPE_APVL • ADJ_UPL_REQ_TYPE_WO_APVL • BC_UPL_REQ_TYPE • BILL_CYCLE_UPD_UPL_REQ_TYPE • BILL_LVL_UPL_REQ_TYPE • BILL_SRT_UPL_REQ_TYPE • HOLD_UPL_REQ_TYPE • REFUND_UPL_REQ_TYPE • REIN_UPL_REQ_TYPE • SA_RIDER_UPD_UPL_REQ_TYPE • WO_UPL_REQ_TYPE 	Yes

Tip: Alternatively, you can access the **Select Upload Request Type** screen by clicking the **Upload** button in the **Page Title** area of the **Upload Request** screen.

Note: The **Select Upload Request Type** screen appears only when there are multiple upload request types defined in the application. If there is only one upload request type defined in the application, the **{XXX} Upload Request** screen appears.

4. Select the required upload request type from the respective field.
5. Click **OK**.

The **{XXX} Upload Request** screen appears. Here, {XXX} changes depending on the upload request type that you have selected. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the upload request will be created.	Not applicable
Parent Customer	<p>Used to indicate the person for whom you want to create the bill group sorting or bill group derivation and pricing parameters upload request.</p> <p>Note: This field appears only when you are creating an upload request using an upload request type where the upload request business object is set to C1-BillGrpSortUploadRequest or C1-BillLevelUploadRequest.</p> <p>The system allows you to create a bill group sorting or bill group derivation and pricing parameters upload request for a person whose person type is set to Parent Customer.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.</p>	Yes
File Name	<p>Used to specify the name and path of the file that you want to upload.</p> <p>Note: You can also click the Browse button corresponding to this field to browse to the location where the file is available in the system.</p>	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

6. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
7. Browse to the location where the file that you want to upload is available in the system.
8. Click **Open**.
The file name along with the path appears in the **File Name** field.
9. Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
10. Define characteristics for the upload request, if required.

11. Click Save.

A message appears indicating the number of records which are successfully uploaded. Then, an upload request is created in the **Draft** status. If the required identifier (such as account ID, person ID, policy ID, or bill group ID) is available in the record, the status of the record is set to **Pending**. However, if the required identifier could not be derived from the system, the status of the record is set to **Invalid**.

Upload Request screen	Upload Request (Used for Searching) on page 1573
How to define characteristics for an upload request	Defining Characteristics for an Upload Request on page 1579

Defining Characteristics for an Upload Request**Prerequisites**

To define characteristics for an upload request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request**)

Procedure

To define characteristics for an upload request:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an upload request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the upload request.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request, click the **Add** () icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the upload request, click the **Delete** () icon corresponding to the characteristic.

How to create an upload request	Creating an Upload Request on page 1576
How to edit an upload request	Editing an Upload Request on page 1585

Upload Request (Used for Viewing)

Once you create an upload request, the **Upload Request** screen allows you to:

- Edit the details of an upload request
- Delete an upload request
- View the details of an upload request
- Validate an upload request
- Cancel an upload request
- Submit an upload request
- Approve or reject an upload request
- View the data uploaded to a request
- View the log of an upload request
- Add a log entry for an upload request

This screen consists of the following tabs:

- **Main** – This tab contains the following two zones:
 - **Upload Request** – Displays the details of the upload request.
 - **Data Records** – Lists the data records of the upload request.
- **Log** – This tab lists the complete trail of actions performed on the upload request.

Upload Request - Main

The **Main** tab contains the following zones:

- [Upload Request](#) on page 1580
- [Data Records](#) on page 1583

Upload Request

The **Upload Request** zone displays the details of the upload request. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the upload request.
Upload Request Type	Indicates the upload request type using which the upload request is created. Note: It has a link. On clicking the link, the Upload Request Type screen appears where you can view the details of the upload request type.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Approved • Cancelled • Deferred Processing • Draft • Processed • Rejected • Submitted • Validated
File Name	Displays name of the uploaded file.

- **Statistics** – This section lists the statistics of records in the upload request. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in CSV file.
Valid Records	Displays the count of valid data records.
Error Records	Displays the count of data records in error status.
Pending Records	Displays the count of data records pending after successful derivation.
Invalid Records	Displays the count of data records after unsuccessful derivation.
Processed Records	Displays the count of data records after processing.

- **Characteristics** – This section lists the characteristics defined for the upload request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the upload request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the upload request.
	Note: The Edit button appears when the upload request is in the Draft or Validated status.
Delete	Used to delete the upload request.
	Note: The Delete button appears only when the upload request is in the Draft status.
Validate	Used to validate the upload request.
	Note: The Validate button appears only when the upload request is in the Draft status.
Cancel	Used to cancel the upload request.
	Note: The Cancel button appears only when the upload request is in the Validated status.
Submit	Used to submit the upload request for approval.
	Note: The Submit button appears only when: <ul style="list-style-type: none"> • The upload request is in the Validated status. • The Approval Required check box is selected in the upload request type using which the upload request is created.
Approve	Used to approve the upload request.
	Note: The Approve button appears only when: <ul style="list-style-type: none"> • The upload request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the upload request.
Reject	Used to reject the upload request.
	Note: The Reject button appears only when: <ul style="list-style-type: none"> • The upload request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the upload request.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Field Name	Field Description
Status Date/Time	Displays the date and time when the upload request status is updated
Create Date/Time	Displays the date and time when the upload request is created.

Data Records

The **Data Records** zone lists the data records of the upload request. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search Criteria 1, Search Criteria 2,,Search Criteria 10	Used to search for data from the CSV file with respect to the field.	No
Note: We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.		
Record Status	Used to indicate whether you want to search data records for an upload request. The valid values are: <ul style="list-style-type: none"> • Error • Invalid • Pending • Processed • Valid 	No

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
View	On clicking the View  icon, the Data Record Details window appears where you can view the details of the data records.
Search Result 1, Search Result 2,, Search Result 10	Displays data from the CSV file.
Note: We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	

Column Name	Column Description
Record Status	Indicates the status of the data record. The valid values are: <ul style="list-style-type: none"> • Error • Invalid • Pending • Processed • Valid
Message(s)	Displays message for the data record respective to it's status.
Entity ID	Displays entity ID of the upload request. Note: The entity ID is displayed only for data records with Processed status.
Entity Information	Displays entity information for the FK Reference selected in Upload Request Type screen. Note: The entity information is displayed only for data records with Processed status.

Note: By default the **Search Results** section displays data records for all the statuses though data is not added or selected to any of the fields and are searched through the **Search Criteria** section.

The **Log** tab contains the following zone:

- [Upload Request Log](#) on page 1584

Upload Request Log

The **Upload Request Log** zone on the **Upload Request** screen lists the complete trail of actions performed on the upload request. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Displays the status reason of action performed on the upload request.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. Enter **Log Details** and click **Save**. The upload request log is added.

Editing an Upload Request

Procedure

To edit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to edit.

The **Upload Request** screen appears.

3. Click the **Edit** button in the **Upload Request** zone.

Note: The **Edit** button appears only when the upload request is in the **Draft** or **Validated** status.

The entity **Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type using which the upload request is created.	Not applicable
File Name	Displays name of the uploaded CSV file.	Not applicable
Comments	Used to indicate the comments for upload request.	No

- **Characteristics** – Used to define characteristics for the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Upload Request .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the Upload request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the Upload request.

4. Modify the details of the upload request, if required.
5. Define, edit, or remove characteristics from the upload request, if required.
6. Click **Save**.

The changes made to the upload request are saved.

Deleting an Upload Request

Procedure

To delete an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to delete.

The **Upload Request** screen appears.

3. Click the **Delete** button in the **Upload Request** zone.

A message appears confirming whether you want to delete the upload request.

Note: The **Delete** button appears only when the upload request is in the **Draft** status.

4. Click **OK**.

The upload request is deleted.

Validating an Upload Request

Prerequisites

To validate an upload request, you should have:

- Upload Request Types defined in the request.

Procedure

To validate an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to validate.

The **Upload Request** screen appears.

3. Click the **Validate** button in the **Upload Request** zone.

Note: The **Validate** button appears only when the upload request is in the **Draft** status.

For more information about the **Upload Request Periodic Monitor (C1-UPLRQ)** batch, refer to Oracle Revenue Management and Billing Batch Guide.

The status of the upload request is changed to **Validated**.

Cancelling an Upload Request

Prerequisites

To cancel an upload request, you should have:

- Cancellation reasons defined in the application

Note: While cancelling an upload request, you need to specify the reason why you want to cancel the upload request. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

Procedure

To cancel an upload request:

1. Search for the upload request in the **Upload Request** screen.

- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to cancel.

The **Upload Request** screen appears.

- Click the **Cancel** button in the **Upload Request** zone.

The **Cancel Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the upload request.	Yes
Comments	Used to specify additional information while cancelling the upload request.	No

Note: The **Cancel** button appears only when the upload request is in the **Validated** status.

- Select the cancellation reason from the **Cancel Reason** list.
- Click **Save**.

The status of the upload request is changed to **Canceled**.

Submitting an Upload Request

Procedure

To submit an upload request:

- Search for the upload request in the **Upload Request** screen.
- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to submit.

The **Upload Request** screen appears.

- Click the **Submit** button in the **Upload Request** zone.

Approving an Upload Request

You can view the number of upload requests which are pending for approval in the **Upload Request** screen. The approver can review, and accordingly approve or reject the upload request based on the observations.

Note: The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To approve an upload request:

1. Do either of the following:

If you want to...	Then...
Approve a upload request through the Upload Request screen	<ol style="list-style-type: none"> 1. Search for the upload request in the Upload Request screen. 2. In the Search Results section, click the link in the Upload Request Information column corresponding to the upload request which you want to review.
Approve a upload request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter the required To Do type in the respective field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

2. Review the upload request details.
3. Click the **Approve** button in the **Upload Request** zone.

The system behaves in the following manner:

If...	Then...																				
<p>The number of valid records in the upload request does not exceed the online record process limit defined in the C1-DEFERUPLD algorithm</p>	<p>The following table lists the behavior for the different upload requests:</p> <table border="1" data-bbox="889 348 1463 1455"> <thead> <tr> <th data-bbox="894 354 1133 394">Upload Request</th> <th data-bbox="1138 354 1458 394">Behavior</th> </tr> </thead> <tbody> <tr> <td data-bbox="894 401 1133 478">Bill Cycle Update</td> <td data-bbox="1138 401 1458 478">The bill cycle information is updated for the accounts.</td> </tr> <tr> <td data-bbox="894 485 1133 562">Billable Charge</td> <td data-bbox="1138 485 1458 562">The billable charges are created.</td> </tr> <tr> <td data-bbox="894 569 1133 674">Contract Rider Update</td> <td data-bbox="1138 569 1458 674">The contract rider information is updated for the contracts.</td> </tr> <tr> <td data-bbox="894 680 1133 758">Hold Request</td> <td data-bbox="1138 680 1458 758">The hold requests are created.</td> </tr> <tr> <td data-bbox="894 764 1133 842">Refund Request</td> <td data-bbox="1138 764 1458 842">The refund requests are created.</td> </tr> <tr> <td data-bbox="894 848 1133 926">Write Off Request</td> <td data-bbox="1138 848 1458 926">The write off requests are created.</td> </tr> <tr> <td data-bbox="894 932 1133 1220">Policy Reinstatement</td> <td data-bbox="1138 932 1458 1220">The policies are reinstated and the status of the policies is changed to the one defined in the Policy Status after Processing Reinstatement Upload Request parameter of the C1-REN-VALID algorithm.</td> </tr> <tr> <td data-bbox="894 1226 1133 1304">Bill Group Sorting</td> <td data-bbox="1138 1226 1458 1304">The sort ID is defined for the respective bill group.</td> </tr> <tr> <td data-bbox="894 1310 1133 1451">Bill Group Derivation and Pricing Parameters</td> <td data-bbox="1138 1310 1458 1451">The derivation and pricing parameters are defined for the respective bill group and sort ID combination.</td> </tr> </tbody> </table> <p>In addition, the status of the upload request is changed to Processed.</p>	Upload Request	Behavior	Bill Cycle Update	The bill cycle information is updated for the accounts. Rejecting an Upload Request

Prerequisites

To reject an upload request, you should have:

- Rejection reasons defined in the application

Note:

While rejecting an upload request, you need to specify the reason why you want to reject the upload request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

The system will not allow you to approve or reject an upload request submitted by you.

Procedure

To reject an upload request:

1. Do either of the following:

If you want to	Then
Reject an upload request through the Upload Request screen	<ol style="list-style-type: none"> 1. Search for the upload request in the Upload Request screen. 2. In the Search Results section, click the link in the Upload Request Information column corresponding to the upload request which you want to review.
Reject an upload request from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter the required To Do type in the respective field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos.

If you want to	Then
	6. Click the link in the Message column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

- Review the upload request details.
- Click the **Reject** button in the **Upload Request** zone.

The **Reject Upload Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the upload request.	Yes
Comments	Used to specify additional information while rejecting the upload request.	No

Note: The **Reject** button appears only when:

- The upload request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the upload request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the upload request is changed to **Rejected**.

Viewing the Data Record Details

Procedure

To view the details of a data record:

- Search for the data record in the **Data Records** zone in the **Upload Request** screen.
- In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the data record whose details you want to view.

The **Data Record Details** window appears. It contains the following fields:

Field Name	Field Description
Sr. No.	Displays the sequential number of data.

Field Name	Field Description
CSV Column Header	Displays name of the column in uploaded CSV file.
CSV Column Value	Displays value in the column in uploaded CSV file.

- View the details of the data record in the **Data Record Details** window.

Viewing the Log of an Upload Request

Procedure

To view the log of an upload request:

- Search for the upload request in the **Upload Request** screen.
- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- Main** – Displays information about the upload request. It contains the following zones:
 - Upload Request** – Displays the details of the upload request.
 - Data Records** – Lists the data records of the upload request.
 - Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
 - Upload Request Log** – Displays the trail of actions performed on the particular upload request.
- Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Indicates the reason why the upload request was rejected.

Note: You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

Adding a Log Entry for an Upload Request

Procedure

To add a log entry for an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to edit.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the upload request. It contains the following zones:
 - **Upload Request** – Displays the details of the upload request.
 - **Data Records** – Lists the data records of the upload request.
- **Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
 - **Upload Request Log** – Displays the trail of actions performed on the particular upload request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Information	Displays information about the upload request.	Not applicable
Log Details	Used to specify additional comments on the upload request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Upload Request Log** zone.

Chapter 28

General Ledger (GL) Accounting Template

Topics:

- [GL Accounting Template \(Without Approval\) Status Transition](#)
- [GL Accounting Template \(With Approval\) Status Transition](#)
- [Algorithms Used in C1- GLAT](#)
- [Prerequisites](#)
- [GL Accounting Template \(Used for Searching\)](#)
- [GL Accounting Template \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now created FT GL entries while generating the financial transactions for adjustments, payments, and bill segments. The FT GL entries were created using the distribution codes from the adjustment type, rate component, billable charge pass through line, or contract type depending on the type of financial transaction. Now, the system enables you to override the distribution code used for creating FT GL entries using the GL Accounting Template feature.

The system allows you to define a GL Accounting template for each process and sub processes combination for a date range. Based on the parameters defined in the **FT Generation** algorithms, the system either uses the standard process or GL Accounting Template for FT GL creation. The GL Accounting template for the specified process and sub processes combination which is effective on the accounting date is used for FT GL creation.

There should be at least one debit and credit lines in the GL Accounting template. You can define maximum 10 lines in the GL Accounting template. Each line should contain the following information:

- Whether the line should be used to create a debit FT GL entry or credit FT GL entry
- Conditional algorithm (created using the **C1-GLATLC** algorithm type) to indicate whether the line should be used to create the FT GL entry or not
- Distribution code to indicate the GL Account against which the FT GL entry should be created
- User defined amount, such as Amount 01, Amount 02, or Amount 03

The line with the Amount 01 user defined amount is used to create balancing FT GL entry against the contract type. The line with the Amount 02, Amount 03, ..., and Amount 10 user defined amount is used to create FT GL entries for bill segment calculation lines, non-calculated adjustments, adjustment calculation lines, or payments. In case of bill segments and calculated adjustments, the lines with the Amount 02, Amount 03, ..., Amount 10 user defined amount are mapped to calculation line amounts based on the rate component sequence.

You can optionally configure the system to use the approval workflow process while activating or deactivating the GL Accounting templates. If you want to enable the approval workflow process, you need to define algorithms using the following algorithm types:

- C1-GLATAPPEN
- C1-GLATSUB

If the **Approval Required (Y or N)** parameter in an algorithm created using the **C1-GLATSUB** algorithm type is set to **Y**, then on submitting or deactivating the GL Accounting template, the approval workflow process creates a To Do

for the approver to review the GL Accounting template. Once the approver approves a GL Accounting template, the status of the GL Accounting template is set to **Active** or **Inactive**.

We are supporting the following process and sub processes combinations while creating the GL Accounting template:

Process	BS	AD	PS
Sub Process 1	Contract Type	Adjustment Type	Bank Account
Sub Process 2	Division	Contract Type	Contract Type
Sub Process 3	Rate Schedule	Division	Division
Sub Process 4	-	-	-
Sub Process 5	-	-	-

For example, you can define the following the GL Accounting templates using the above supported process and sub processes combinations:

GL Accounting Template	Process	Sub Process 1	Sub Process 2	Sub Process 3
GLAT1	BS	CT1	D1	RS1
GLAT2	BS	CT2	D1	RS1
GLAT3	BS	CT3	D2	RS2
GLAT4	PS	BA1	CT1	D1
GLAT5	PS	BA2	CT2	D2
GLAT6	AD	AT1	CT1	D1
GLAT7	AD	AT1	CT2	D2

While creating the GL Accounting template for BS and AD processes, you need to ensure that the line with the Amount 1 user defined amount is a debit line. However, while creating the GL Accounting template for PS process, you need to ensure that the line with the Amount 1 user defined amount is a credit line.

Based on the customer requirements, you can define GL Accounting template for various custom process and sub processes combinations.

The **Create Additional FT GL Entries** parameter is added in the **Assign GL Account to Financial Transaction (C1-GLASN)** and **Assign GL Account to Financial Transaction (GLASSGN2)** batches. If you set this parameter to **Y**, the **C1-GLCE** algorithm is invoked. Based on the parameters defined in the algorithm, the system checks whether there is a GL Accounting template which is effective on the accounting date for the specified process and sub processes combination. If the effective GL Accounting template is available, the system creates additional FT GL entries for the financial transactions. If the financial transaction's currency is different from the division's base currency, the algorithm will create FT GL extension for the respective financial transaction.

Two new parameters are added in the **ADJT-NM**, **ADJT-AC**, **ADJT-TA**, **ADJT-TC**, **ADJT-AD**, **ADJT-GL**, **PSEG-NM**, **PSEG-AC**, **PSEG-CA**, **BSBF-BA**, **BSBF-LO** algorithm types:

- **Use GL Accounting Template (Y or N)** - Indicates whether the FT GL entries should be created using the lines in the GL Accounting template. The valid values are **Y** and **N**.
- **Show the GL Accounting Template Error When Header Record Not Found (Y or N)** - Indicates whether you want to show error message when the effective GL Accounting template is not available for the process and sub processes combination. If you set the value of this parameter to **N**, the algorithm uses the standard process for FT GL creation when the effective GL Accounting template is not available.

The following table explains how the algorithms created using the following algorithm types create FT GL entries:

Algorithm Type	Use GL Accounting Template (Y or N)	Calculated Adjustment Distribution Code Source (AT - Adjustment Type, CL - Calc Lines)	Algorithm Behaviour
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	CL	Creates FT GL for the adjustment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	CL	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	AT	Creates FT GL for the adjustment using the distribution code on the respective adjustment type and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	AT	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **PSEG-NM**, **PSEG-AC**, and **PSEG-CA** algorithm types, the system creates FT GL for the payment segment using the distribution code on the respective payment segment type and the balancing FT GL using the distribution code on contract type. However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y**, the system creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates FT GL for the bill segment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
Created from a pass through billable charge	Creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> • FT GL for the bill segment calculation line using the distribution code on the respective rate component • FT GL for the pass through line using the distribution code on the respective pass through line • Balancing FT GL using the distribution code on contract type
A post processing bill segment	Creates FT GL for the post processing FT using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.

However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
Created from a pass through billable charge	Does not use the GL Accounting template. It creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.

If the bill segment is...	Then, the system...
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> • FT GL for bill segment calculation line using the lines in the GL Accounting template. • FT GL for the pass through line using the distribution code on the respective pass through line. • Balancing FT GL using the line in the GL Accounting template.
A post processing bill segment	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

GL Accounting Template (Without Approval) Status Transition

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is off:

GL Accounting Template (With Approval) Status Transition

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is on:

Algorithms Used in C1- GLAT

The following table lists the algorithms which are attached to the **C1-GLAT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-GLAT-INF	C1-GLAT-INF	This algorithm generates the GLAT information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> GLAT Description GLAT Status Description GLAT ID

The following table lists the algorithms which are used in the lifecycle of the **C1-GLAT** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> If soft parameter value is set to Y then approval workflow will be triggered.
Approval in Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Approval in Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the C1-GLATAAPEN Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Approval in Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Active	-	-	-	-
Deactivation Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> If soft parameter value is set to Y then approval workflow will be triggered.
Deactivation Approval In Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Deactivation Approval In Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the C1-GLATAAPEN Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Deactivation Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Rejected	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Inactive	-	-	-	-

Prerequisites

To setup the GL Accounting Template, you need to do the following:

- Define rejected status reasons for the **C1-GLAT** business object
- Define deactivated status reasons for the **C1-GLAT** business object
- Assign the **C1-GLAT** To Do type to a To Do role whose users must receive To Do generated while submitting a template for approval
- Define the required algorithms, for approval and To Do type role and configurations

GL Accounting Template (Used for Searching)

The **GL Accounting Template** screen allows you to search for a template using various search criteria. It also allows you to create template. Through this screen, you can navigate to the following screen:

- [GL Accounting Template \(Used for Viewing\)](#) on page 1613

This screen consists of the following zones:

- [Search GL Accounting Template](#) on page 1608
- [GL Accounting Template Lines](#) on page 1609

Search GL Accounting Template

The **Search GL Accounting Template** zone allows you to search for GL accounting templates using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template ID	Used to search a particular template.	No
Description	Used to specify the description of a template.	No
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Deactivation Approval In Progress • Active • Inactive • Rejected 	No
Process	Used to search a particular process.	No
Sub Process 1	Used to search a particular Sub Process 1.	No
Sub Process 2	Used to search a particular Sub Process 2.	No
Sub Process 3	Used to search a particular Sub Process 3.	No
Sub Process 4	Used to search a particular Sub Process 4.	No
Sub Process 5	Used to search a particular Sub Process 5.	No
Effective Start Date	Used to search templates which are effective from a particular date.	No
Effective End Date	Used to search templates which are effective till a particular date.	No

Note: You must specify at least one search criterion while searching for a template.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Process	Displays the process.
GL Accounting Template Request Information	Displays information about the template. <p>Note: It has a link. On clicking the link, the GL Accounting Template screen appears where you can view the details of the respective template.</p>
Description	Displays the description of process.

Column Name	Column Description
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.
Status	Displays the status of template.

GL Accounting Template Lines

The **GL Accounting Template Lines** zone displays the details of the template lines. This zone contains the following columns:

Column Name	Column Description
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

Note: By default, the **GL Accounting Template Lines** zone does not appear in the **GL Accounting Template** screen. It appears only when you click the **Broadcast**  icon corresponding to the template in the **Search Results** section.

Searching for a GL Accounting Template

Procedure

To search for a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
The **GL Accounting Template** screen appears.
3. Enter the search criteria in the **Search GL Accounting Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of templates that meet the search criteria appears in the **Search Results** section.

Creating a GL Accounting Template

Prerequisites

To create a GL Accounting template, you should have:

- Conditional Algorithms and Distribution codes defined in the application.

Procedure

To create a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.
The **GL Accounting Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **GL Accounting Template** screen.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments.
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** —Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

4. Enter the required details

Note:

You can search for a conditional algorithm and distribution code by clicking the **search**  icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

System will not allow to add a template having same set of process, sub processes and effective date. If there is a template already created and its status is Inactive, then only template can be created with same set of process, sub processes and effective date.

Each conditional line must have unique User Defined Amount Field value.

5. Add template lines for a template defined.

6. Click **Save**.

The GL Accounting template is created and the status of the template is set to **Draft**. The **GL Accounting Template** screen appears with the details of template.

Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.

- **GL Accounting Template Lines** — Lists the GL Accounting template lines. It contains the following columns:

Column Name	Column Description
Sequence No	Displays the sequence number.
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the template.
	Note: The Edit button appears only when the template is in the Draft or Rejected status.
Delete	Used to delete the template.
	Note: The Delete button appears only when the template is in the Draft or Rejected status.

Button Name	Button Description
Submit	Used to activate the template.
	Note: The Submit button appears only when the template is in the Draft or Rejected status.
Approve	Used to approve the template.
	Note: the Approve button appears only when the template is in the Approval In Progress or Deactivation Approval In Progress status.
Reject	Used to reject the template.
	Note: the Reject button appears only when the template is in the Approval In Progress or Deactivation Approval In Progress status.
Deactivate	Used to deactivate the active template.
	Note: The Deactivate button appears only when the template is in the Active status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

GL Accounting Template - Log

The **Log** tab on the **GL Accounting Template** screen contains the following zone:

[GL Accounting Template Log](#) on page 1615

GL Accounting Template Log

The **GL Accounting Template Log** zone on the **GL Accounting Template** screen lists the complete trail of actions performed on the GL Accounting template. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Displays the status reason of action performed on the template.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. Enter **Log Details** and click **Save**. The GL Accounting Template log is added.

Editing a GL Accounting Template

Procedure

To edit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to edit.

The **GL Accounting Template** screen for editing appears.

3. Click the **Edit** button in the **GL Accounting Template** zone.

Note: The **Edit** button appears only when the template is in the **Draft** or **Rejected** status.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) Note: This field is required if Process is Bill Segment or Payment Segment or Adjustments.

Field Name	Field Description	Mandatory (Yes or No)
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** — Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

Note:

If you want to specify more than one template lines, click the **Add** (+) icon corresponding to the sequence No and then specify the details.

However, if you want to remove a template line from the template, click the **Delete** (🗑️) icon corresponding to the sequence No.

You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

4. Modify the details of the template, if required.
5. Click **Save**.

The changes made to the GL Accounting template are saved.

Deleting a GL Accounting Template

Procedure

To delete a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to delete.

The **GL Accounting Template** screen appears.

3. Click the **Delete** button in the **GL Accounting Template** zone.

A message appears confirming whether you want to delete the template.

Note: The **Delete** button appears only when the template is in the **Draft** or **Rejected** status.

4. Click **OK**.

The GL Accounting template is deleted.

Note:

You can delete a template only when its status is **Draft**.

Submitting a GL Accounting Template

Prerequisites

To submit a GL Accounting Template, you should have:

- Process and GL Accounting template lines defined in the template.

Procedure

To submit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to submit.

The **GL Accounting Template** screen appears.

3. Click the **Submit** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If...	Then...
Approval Required Flag is set to Yes in the C1-GLATSUB algorithm.	A To Do of the C1-GLAT To Do type is created and sent to the approver and the status of the template is changed to Approval In Progress .
Approval Required Flag is set to No in the C1-GLATSUB algorithm.	The template is created using the specified process and the status of the template is changed to Active .

Note:

The **Submit** button appears only when the template is in the **Draft** or **Rejected** status.

Approving a GL Accounting Template

You can view the number of GL Accounting templates which are pending for approval in the **GL Accounting Template** screen. The approver can review, and accordingly approve or reject the template based on the observations.

Note: The system will not allow you to approve or reject a template submitted by you.

Procedure

To approve a template:

1. Do either of the following:

If you want to...	Then...
Approve a GL Accounting Template through the GL Accounting template screen	<ol style="list-style-type: none"> 1. Search for the template in the GL Accounting template screen. 2. In the Search Results section, click the link in the GL Accounting Template Information column corresponding to the template which you want to review.
Approve a GL Accounting Template from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List.

If you want to...	Then...
	<p>The To Do Type for User Search window appears.</p> <ol style="list-style-type: none"> 3. Enter C1-GLAT in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. <p>The To Do List screen appears.</p> <ol style="list-style-type: none"> 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the GL Accounting template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Approve** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If you are...	Then...
Approving a GL Accounting template	The status of the template is changed to Active as specified in the GL Accounting template.

Note: The **Approve** button appears only when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.

Rejecting a GL Accounting Template

Prerequisites

To reject a GL Accounting template, you should have:

- Rejection reasons defined in the application

Note:

While rejecting a GL Accounting template, you need to specify the reason why you want to reject the template. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-GLAT** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a template submitted by you.

Procedure

To reject a GL Accounting template

1. Do either of the following:

If you want to	Then
Reject a GL Accounting template through the GL Accounting Template screen	<ol style="list-style-type: none"> 1. Search for the template in the GL Accounting Template screen. 2. In the Search Results section, click the link in the GL Accounting Template Information column corresponding to the template which you want to review.
Reject a GL Accounting template from the To Do List screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 3. Enter C1-GLAT in the To Do Type field. 4. Click the Search button corresponding to the To Do Type field. The To Do List screen appears. 5. Select the Open option from the Filter by list to view all unassigned To Dos. 6. Click the link in the Message column corresponding to the To Do of the template that you want to review.

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Reject** button in the **GL Accounting Template** zone.

The **Reject GLAT Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the template	Yes

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify additional information while rejecting the template.	No

Note: The **Reject** button appears only when:

- The template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
- A user with the approval To Do role is reviewing the template.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the template is changed to **Rejected**.

Deactivating a GL Accounting Template

Prerequisites

To deactivate a GL Accounting template, you should have:

- Deactivation reasons defined in the application.

Note:

While deactivating a GL Accounting template, you need to specify the reason why you want to deactivate the template. You can select the appropriate deactivation reason only when you have defined the reasons for the deactivation status of the **C1-GLAT** business object in the **Status Reason** screen.

Procedure

To deactivate a GL Accounting template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to deactivate.

The **GL Accounting Template** screen appears.

3. Click the **Deactivate** button in the **GL Accounting Template** zone.

Note: The **Deactivate** button appears only when the template is in the **Active** status.

The **Deactivate GLAT Request** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason for deactivating a template	Yes
Comments	Used to specify the additional comments on the deactivation of template.	No

4. Click **OK**.

The GL Accounting template status is changed to **Deactivation Approval In Progress**.

Viewing the Log of a GL Accounting Template

Procedure

To view the log of a GL Accounting template:

1. Search for the template in the **GL Accounting template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose log you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
 - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
 - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. Click the **Log** tab.

The **GL Accounting Template Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Indicates the reason why the template was rejected or voided.

Note: You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

Related Topics

- [Accrual \(Used for Searching\)](#)
- [Accrual \(Used for Viewing\)](#)

Oracle Revenue Management and Billing enables you to calculate and create accrual for accounts. An accrual allows an entity to record expenses and revenues for which it expects to expend cash or receive cash, respectively, in a future reporting period.

The accrual is an adjustment which is created for the following:

- Revenues that have been earned but are not yet recorded in the books of accounts.
- Expenses that have been incurred but are not yet recorded in the book of accounts.

The system also enables you to reverse the accrual for accounts. You need to define whether the accounts belonging to a division are eligible for accrual or not. If a division is eligible for accrual, by default, all accounts belonging to the division are eligible for accrual. However, you can exclude an account from accrual, if required. To enable the accruals feature, you need to define the following:

- **Accrual Cycle** – You must specify the following information in the accrual cycle:
 - Dates when accrual should be calculated and created for the accounts where the accrual cycle is defined.
 - Accrual reversal period for each accrual date.

If a division is eligible for accrual, you need to specify the accrual cycle for the division. By default, all accounts belonging to a division will inherit the accrual cycle of the division. However, you can override the accrual cycle of an account

- **Accrual Type** – You must specify the following information in the accrual type:
 - Type of the accrual object that you want to create for posting the accrual amount. At present, the product enables you to create adjustments to record accruals for accounts in the system.
 - Whether you want to calculate the accrual based on the historical or actual data. If you want to calculate the accrual based on the historical data, you need to specify the number of historical bills that you want to consider for accrual calculation. The system will only consider the completed historical bills during accrual calculation. Besides specifying the historical bill count, you also need to specify the type of day (i.e. Business Day or Calendar Day) which is used to calculate the accrual amount. However, if you want to calculate the accrual based on the actual data, you need to specify whether trial bill or unbilled pass through billable charges

created through the Transaction Feed Management process should be considered to calculate the accrual amount.

- Whether you want to calculate accrual at the bill or bill segment level.
- Cancel reason that you want to use while reversing the accrual
- Algorithms that you want to use during the accrual calculation, creation, and reversal
- Whether any objects, such as adjustments created using a particular adjustment type, bill segments created for a particular price item, or adjustments' or bill segments' financial transactions where a particular distribution code is used, must be excluded during the accrual calculation.
- Divisions to which you want to associate the accrual type.

The accrual process includes the following sub-processes:

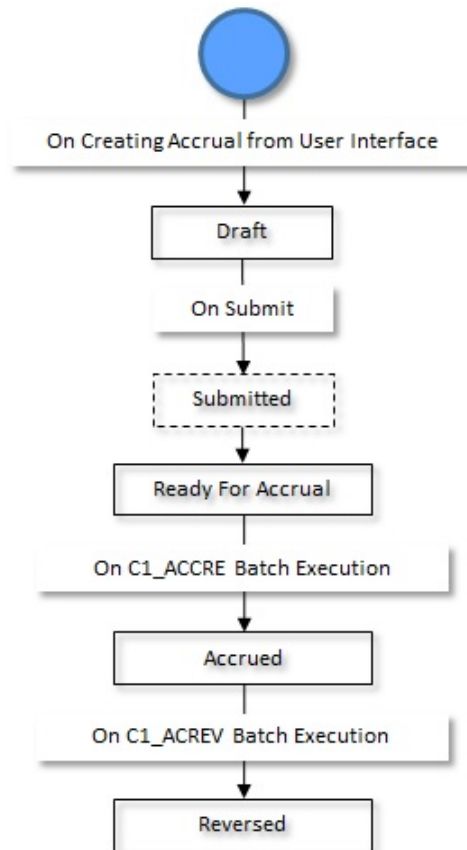

- **Accrual Calculation** – In this process, accounts that are eligible for accrual will have its accrual amount calculated on the basis of the accrual type configuration.
- **Accrual Creation** – In this process, on the basis of the calculated accrual amount and information configured on the accrual type, the accrual adjustment will be created.
- **Accrual Reversal** – In this process, reversal of accrual adjustments will be done to prevent double posting of revenue, once billing is done. On the basis of the accrual reversal schedule, an account with accrual adjustments will be selected for accrual reversal processing. For every frozen adjustment, a cancellation is done in order to reverse journal entries.

During the accrual process, an accrual goes through various statuses in its lifecycle. You can execute accrual process either using user interface (UI), or batch. For more information about the accrual statuses, see, [Accrual Created through UI \(Without Approval\) Status Transition](#) on page 1627, [Accrual Created through UI \(With Approval\) Status Transition](#) on page 1627, [Accrual Created through Batch \(Without Approval\) Status Transition](#) on page 1628 and [Accrual Created through Batch \(With Approval\) Status Transition](#) on page 1629

Note that the lifecycle of an accrual is driven by the business object using which the accrual is created. An accrual business object named **C1_ACCRUALS** is shipped with the product. The accrual feature explained in this document is articulated based on the lifecycle and logic defined in the **C1_ACCRUALS** business object.

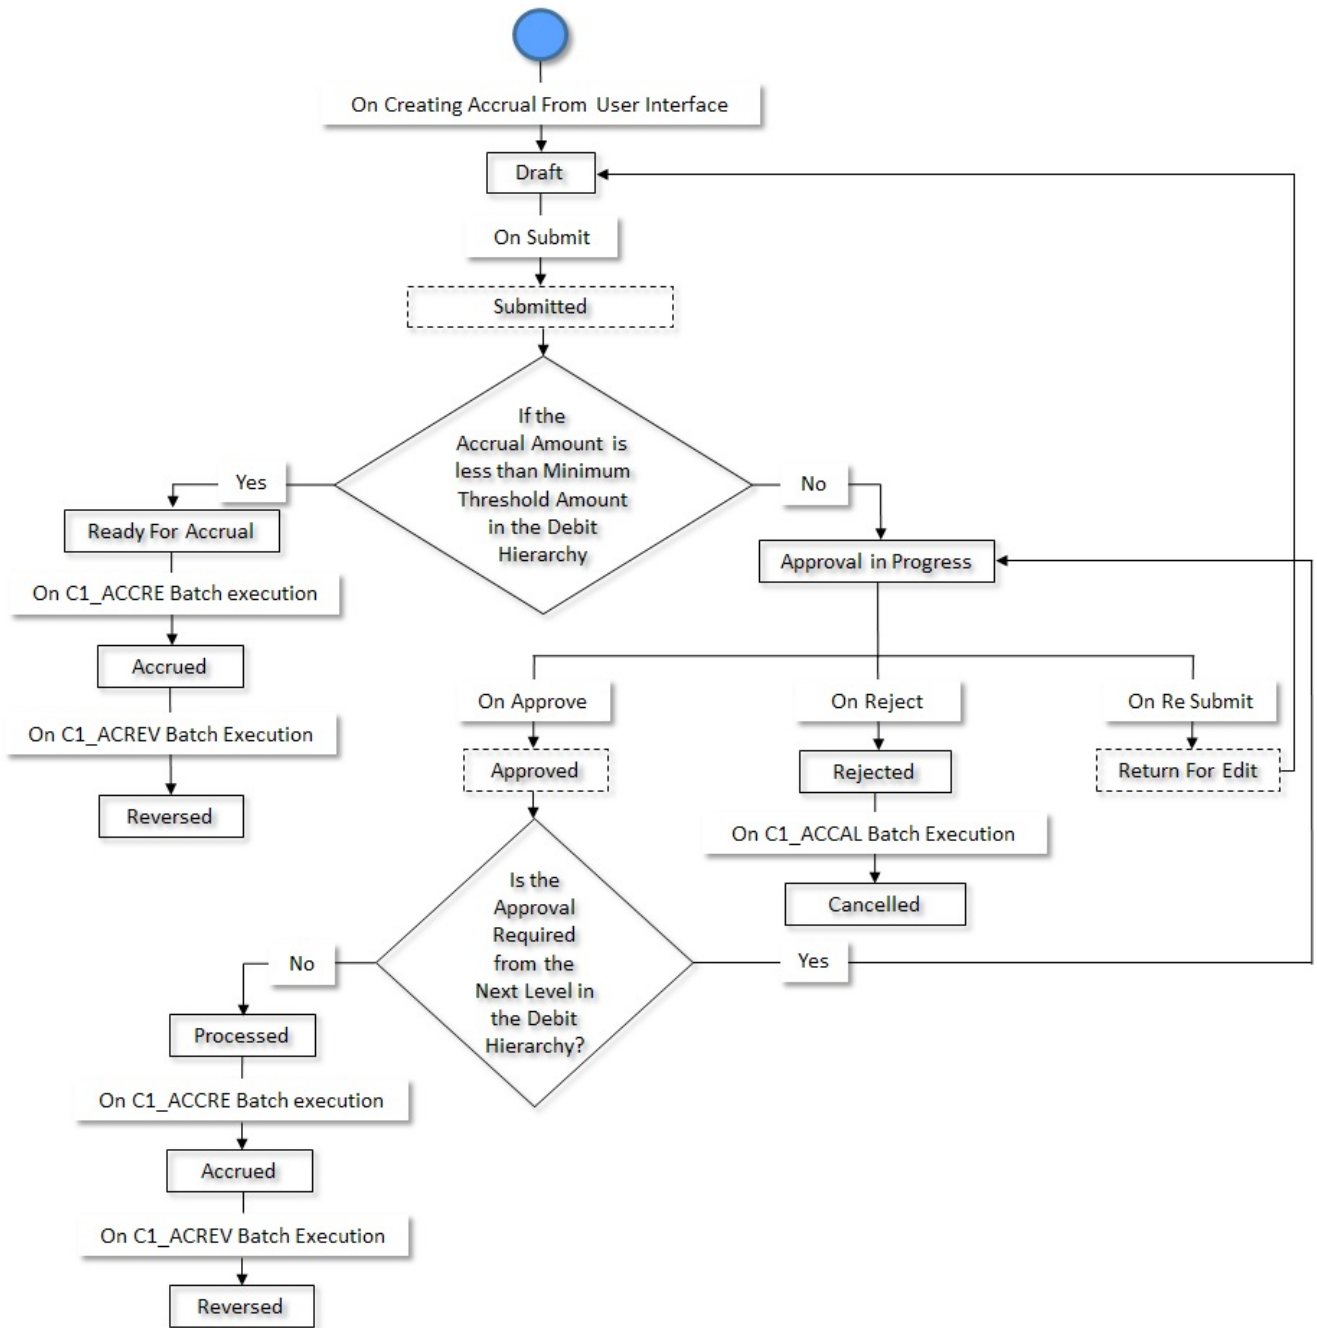

Accrual Created through UI (Without Approval) Status Transition

The following figure graphically indicates how an accrual created from the user interface moves from one status to another when approval workflow is off:

Accrual Created through UI (With Approval) Status Transition

The following figure graphically indicates how an accrual created from the user interface moves from one status to another when the approval workflow is on:

Accrual Created through Batch (Without Approval) Status Transition

The following figure graphically indicates how an accrual created through the batch moves from one status to another when the approval workflow is off:

Note: For more information about the batches, refer *Oracle Revenue Management and Billing Batch Guide*.

Accrual Created through Batch (With Approval) Status Transition

The following figure graphically indicates how an accrual created through the batch moves from one status to another when the approval workflow is on:

Note: For more information about the batches, refer *Oracle Revenue Management and Billing Batch Guide*.

Accrual Processes

An accrual allows an entity to record expenses and revenues for which it expects to expend cash or receive cash, respectively, in a future reporting period. Following are the accrual processes to implement accrual in the application:

- [Account's Eligibility Check for Accrual](#) on page 1631
- [Accrual Calculation](#) on page 1631
- [Accrual Creation](#) on page 1632
- [Accrual Reversal](#) on page 1633

Account's Eligibility Check for Accrual

The accrual eligibility process checks a number of account attributes to ensure that the accounts are eligible for accrual. The following table lists the internal process that identifies an account's eligibility for accrual. There will be a switch/indicator in the division and account levels that captures the information as given below:

Division Accrual (Yes/No)	Account Accrual (Yes/No)	Eligibility for Accrual (Yes/No)	Description
Yes	No	No	Account has the highest priority over division.
Yes	Blank	Yes	Division has the highest priority in the absence of account information.
Yes	Yes	Yes	Account has the highest priority over division.
No	Yes	No	If the division is set to no, ignore the account level switch.
No	No	No	If the division is set to no, ignore the account level switch.
No	Blank	No	If the division is set to no, ignore the account level switch.

Following accounts are considered for accrual eligibility:

1. The Invoicing Group's (IG) Master Account is the only account which is eligible for accrual.
2. The Invoice Construct Usage Account is not eligible for accrual.
3. You can only process the accrual eligible accounts for calculation purposes.

Accrual Calculation

The accrual calculation process calculates the accrual amount of only those accounts that are eligible for accrual. Depending upon the accrual type of those eligible accounts, an algorithm is created to calculate the accrual amount that is based on the following parameters:

- [Calculate Accrual at the Bill Level Based on Historical Data](#) on page 1631
- [Calculate Accrual at the Bill Segment Level Based on Historical Data](#) on page 1632
- [Calculate Accrual at the Bill Level Based on Actual Data](#) on page 1632
- [Calculate Accrual at the Bill Segment Level Based on Actual Data](#) on page 1632

Note: By default, all the adjustments (for bill level and bill segment level) are included in the accrual calculation. However, some adjustments from the calculation lines are excluded, through the look up references provided in the application.

Calculate Accrual at the Bill Level Based on Historical Data

The accounts eligible for accrual have their accrual amount calculated at the bill level based on the historical data. The number of historical bills to be considered for accrual calculation is based on the value configured in the accrual type of the eligible account.

For example, if there are two historical bills, the system considers the last two completed bills for accrual calculation. The accrual amount is the average of the bill segments and frozen adjustments on the last two bills. If the option from the Type of Day field is set as Business Day, the system does not consider the weekends and holidays during the accrual calculation. However, if the option from the Type of Day field is set as Calendar Day, the system considers the weekends and holidays during the accrual calculation.

Calculate Accrual at the Bill Segment Level Based on Historical Data

The accounts eligible for accrual have their accrual amount calculated at the bill segment level based on the historical data. The number of historical bills to be considered for accrual calculation is based on the value configured in the accrual type of the eligible account.

For example, if there are two historical bills, then the system considers the last two completed bills for accrual calculation. The accrual amount is the average of bill segments on the last two bills. If the option from the Type of Day field is set as Business Day, the system does not consider the weekends and holidays during the accrual calculation. However, if the option from the Type of Day is set as Calendar Day, the system considers the weekends and holidays during the accrual calculation.

Calculate Accrual at the Bill Level Based on Actual Data

The accounts eligible for accrual have their accrual amount calculated at the bill level based on the actual data. The actual data can be sourced from a trial bill or rated Transaction Feed Management transaction. The accrual source to be considered is based on the value configured in the accrual type of the account.

Following scenarios indicate how the accrual amount is calculated:

- If the accrual source is transaction feed and accrual amount is calculated at bill level; the accrual amount is the sum of unbilled pass through billable charges created for the account either manually or automatically through the Transaction Feed Management process and frozen adjustments of the account.
- If the accrual source is transaction feed and accrual amount is calculated at bill segment level; the accrual amount is the sum of unbilled pass through billable charges created for the account automatically through the Transaction Feed Management process.

Calculate Accrual at the Bill Segment Level Based on Actual Data

The accounts eligible for accrual have their accrual amount calculated at the bill segment level based on the actual data. The actual data can be sourced from a trial bill or rated Transaction Feed Management transaction. The accrual source to be considered is based on the value configured in the accrual type of the account.

Following scenarios indicate how the accrual amount is calculated:

- If the accrual source is trial bill and accrual amount is calculated at bill level; the accrual amount is the sum of bill segments and frozen adjustments on the latest trial bill.
- If the accrual source is trial bill and accrual amount is calculated at bill segment level; the accrual amount is the sum of bill segments on the latest trial bill.

Accrual Creation

The accrual creation takes place based on the calculated accrual amount and accrual type information which is used to create an accrual adjustment. You can create the adjustments for accruals through the **C1_ACCRE** batch process. The accruals which are either in the **Ready for Accrual** or **Processed** status are considered in this batch process. Based on the adjustment type defined in the accrual type, the system accordingly creates the accrual adjustment for the account. The status of the accrual is changed to **Accrued**.

Note:

For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

The system also enables you to manually create the accrual for an account. You can optionally configure the approval workflow process for accruals. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. The debit approval hierarchy is used for approving the accrual. You can define an approval hierarchy where users with different To Do role at each level can approve or reject the accrual. This process continues till the approval is received from all levels in the hierarchy. Once users at all levels approve the accrual, the status of the accrual is changed to **Processed**. However, if an approver at any level in the hierarchy rejects the accrual, the status of the accrual is changed to **Rejected**.

Accrual Reversal

The reversal of accrual adjustments is done to prevent double posting of revenue, once the billing is done. On the basis of the accrual reversal schedule, an account with accrual adjustments is selected for the accrual reversal processing. For every frozen adjustment, a cancellation is done in order to reverse journal entries.

You can reverse the accrual through the **C1_ACREV** batch process. On reversing the accrual, the accrual adjustments are cancelled and the status of the accrual is changed to **Reversed**.

Note: For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Accrual Cycle (Used for Searching)

The **Accrual Cycle** screen allows you to search for an accrual cycle using various search criteria. It contains the following zone:

- [Search Accrual Cycle](#) on page 1633

Search Accrual Cycle

The **Search Accrual Cycle** zone allows you to search an accrual cycle using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Cycle	Used to search a particular accrual cycle.	No
Description	Used to search an accrual cycle with a particular description.	No

Note: You should specify at least one search criterion while searching for an accrual cycle.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Accrual Cycle	Displays the name of accrual cycle.
Accrual Cycle Information	Displays information about the accrual cycle.
	Note: It has a link. On clicking the link, the Accrual Cycle screen appears where you can view the details of the respective accrual cycle.

Searching for an Accrual Cycle

Procedure

To search for an accrual cycle:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Accrual Cycle**.
The **Accrual Cycle** screen appears.
3. Enter the search criteria in the **Search Accrual Cycle** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of accrual cycles that meet the search criteria appear in the **Search Results** section.

Viewing the Accrual Cycle Details

Procedure

To view the details of an accrual cycle:

1. Search for an accrual cycle in the **Accrual Cycle** screen.
2. In the **Search Results** section, click the link in the **Accrual Cycle Information** column corresponding to the accrual cycle whose details you want to view.

The **Accrual Cycle** screen appears. It consists of the following tab:

- **Main** – Displays information about the accrual cycle. It contains the following zone:
 - **Accrual Cycle** – Displays the details of the accrual cycle.

3. View the details of the accrual cycle in the **Accrual Cycle** zone.

Defining an Accrual Cycle

Prerequisites

To define an accrual cycle, you should have:

- Accrual business object defined in the application.

Procedure

To define an accrual cycle:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Accrual Cycle**.

The **Accrual Cycle** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Accrual Cycle** screen.

The **Accrual Cycle** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the accrual cycle. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Cycle	Used to specify the name for an accrual cycle.	Yes
Description	Used to specify the description for an accrual cycle.	Yes

- **Schedule Periods** – Used to specify the schedule period for an accrual cycle.

4. Enter the required details in the **Main** section.
5. Define the schedule periods for an accrual cycle.
6. Click **Save**.

The accrual cycle is defined.

Adding a Schedule Period in an Accrual Cycle

Procedure

To add a schedule period in an accrual cycle, you should have:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Accrual Cycle**.

The **Accrual Cycle** screen appears.

- Ensure that the **Schedule Periods** section is expanded when you are adding a schedule period in an accrual cycle.

The **Schedule Periods** section contains the following fields:

Column Name	Column Description	Mandatory (Yes or No)
Accrual Date	Used to indicate the date from when the accrual creation process for an applicable account is initiated.	Yes
Reversal Start Date	Used to indicate the date from when the accrual reversal process starts. Note: The Reversal Start Date must be later than the Accrual Date .	Yes
Reversal End Date	Used to indicate the date till when the accrual reversal process ends. Note: The Reversal End Date cannot be earlier than the reversal start date	Yes

- Enter the required details in the **Schedule Periods** section.
- If you want to define more than one schedule period for an accrual type, click the **Add** (+) icon and then repeat step 4.

Note: However, if you want to remove a schedule period from an accrual type, click the **Delete** (🗑️) icon corresponding to the **Accrual Date** field.

- Click **Save**.

The schedule periods are defined for an accrual cycle.

Accrual Cycle (Used for Viewing)

Once you create an accrual cycle, the **Accrual Cycle** screen allows you to:

- View the details of an accrual cycle
- Edit an accrual cycle
- Delete an accrual cycle

This screen contains the following zone:

- [Accrual Cycle](#) on page 1636

Accrual Cycle

The **Accrual Cycle** zone displays the details of an accrual cycle. This zone contains the following sections:

- **Main** – Displays basic information about an accrual cycle. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Accrual Cycle	Displays the name of the accrual cycle.	No
Description	Used to search an accrual cycle with a particular description.	No

- **Schedule Periods** – This section contains the following columns:

Column Name	Column Description
Accrual Date	Displays the date on which the accrual creation process for an applicable account is initiated.
Reversal Start Date	Displays the date from when the accrual reversal process starts.
Reversal End Date	Displays the date till when the accrual reversal process ends.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of an accrual cycle.
Delete	Used to delete an accrual cycle.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which an accrual cycle is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing an Accrual Cycle

Procedure

To edit an accrual cycle:

1. Search for the accrual cycle in the **Accrual Cycle** screen.
2. In the **Search Results** section, click the link in the **Accrual Cycle Information** column corresponding to the accrual cycle whose details you want to edit.

The **Accrual Cycle** screen appears.

3. Click the **Edit** button in the **Accrual Cycle** zone.

The **Accrual Cycle** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the accrual cycle. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Cycle	Used to specify the name for accrual cycle.	Yes
Description	Used to specify the description about an accrual cycle.	Yes

- **Schedule Periods** – Used to specify the schedule period for an accrual cycle. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Accrual Date	Used to indicate the date from when the accrual creation process for an applicable account is initiated.	Yes
Reversal Start Date	Used to indicate the date from when the accrual reversal process starts.	Yes
	Note: The Reversal Start Date must be later than the Accrual Date .	
Reversal End Date	Used to indicate the date till when the accrual reversal process ends.	Yes
	Note: The Reversal End Date must be later than the Reversal Start Date .	

Note: If you want to associate more than one schedule period to the accrual type, click the **Add** (+) icon and then specify the details. However, if you want to remove a schedule period from the accrual type, click the **Delete** (🗑️) icon corresponding to the **Accrual Date** field.

4. Modify the description of the accrual cycle in the **Main** section.
5. Add, edit, or remove the schedule period information in the accrual cycle.
6. Click **Save**.

The changes made to the accrual cycle are saved.

Defining an Accrual Type

Prerequisites

To define an accrual type, you should have:

- Accrual Type business object defined in the application.
- Accrual business object defined in the application.
- Adjustment Types defined in the application (where the **Print by Default** and **Influence Next Bill Balance** checkbox is not selected).

Procedure

To define an accrual type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Accrual Type**.
The **Accrual Type** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Accrual Type** screen.

The **Accrual Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the accrual type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type	Used to specify the name for an accrual type.	Yes
Description	Used to specify the description for an accrual type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Accrual Object	Used to indicate the type of the accrual object that you want to create for posting the accrual amount.	Yes
	<p>Note:</p> <p>At present, you can only create adjustments to record the accruals for the accounts in the application.</p>	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	<p>Note:</p> <p>This field appears only when you select the Adjustment option from the Accrual Object field.</p> <p>The Search  icon appears corresponding to the Adjustment Type field. On clicking the Search icon, the Adjustment Type Search window appears.</p> <p>On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.</p>	
Accrual Criteria	Used to indicate the accrual criteria that you want to use for accrual calculation. The valid values are: <ul style="list-style-type: none"> Actual Historical 	Yes
Accrual Source	Used to indicate the source of data that you want to use for calculating the accruals that are based on the actual data. The valid values are: <ul style="list-style-type: none"> Transaction Feed Trial Bill 	Yes (Conditional)
	<p>Note: This field appears only when you select the Actual option from the Accrual Criteria field.</p>	
Historical Bill Count	Used to specify the number of historical bills that you want to consider for accrual calculation.	Yes (Conditional)
	<p>Note: This field appears only when you select the Historical option from the Accrual Criteria field.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Accrual Request Business Object	Used to indicate the business object that you want to use while creating the accrual request.	No
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>On specifying the business object, the description of the business object appears corresponding to the Accrual Request Business Object field.</p>	
Approval Required	Used to indicate whether approval is required for creating the accrual requests using the accrual type.	No
Approval Profile	Used to indicate the approval profile which must be used to define the approval hierarchy for the accrual type.	Yes (Conditional)
	<p>Note: This field appears only when Approval Required checkbox is selected.</p>	
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the accrual adjustments using the accrual type.	Yes (Conditional)
	<p>Note: This field appears only when Approval Required checkbox is selected.</p>	
Submitter To Do Type	Used to indicate the To Do type for the submitter when the accrual type is resubmitted by the approver.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when Approval Required checkbox is selected.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>On specifying the submitter To Do type, the description of the submitter To Do type appears corresponding to the Submitter To Do Type field.</p>	
Submitter To Do Role	Used to indicate the To Do role for the submitter when the accrual type is resubmitted by the approver.	Yes (Conditional)
	<p>Note: This field appears only when Approval Required checkbox is selected.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Type of Day	Used to indicate the type of day that you want to use to calculate the accrual amount. <ul style="list-style-type: none"> • Business Day • Calendar Day 	Yes
Posting Method	Used to indicate the posting method that you want to use for calculating the accrual amount. The valid values are: <ul style="list-style-type: none"> • Bill Level • Bill Segment Level 	Yes
Cancel Reason	Used to specify the cancel reason that you want to use while reversing the accrual.	Yes (Conditional)
		Note: This field is required when Adjustment option is selected from the Accrual Object field.
Contract Type	Used to indicate the contract type that you want to use for accrual calculation. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears. </div>	Yes

- **Algorithms** – Used to specify the algorithms that you want to use for an accrual type.
 - **Objects to Exclude** – Used to specify the objects that you want to exclude from an accrual type.
 - **Divisions** – Used to specify the division to which you want to associate with an accrual type.
 - **Characteristics** – Used to specify the characteristics for an accrual type.
4. Enter the required details in the **Main** section.
 5. Associate the required algorithms with an accrual type.
 6. Add the required entities that must be excluded in an accrual type.
 7. Associate the required division with an accrual type.
 8. Define characteristics in an accrual type, if required.
 9. Click **Save**.

The accrual type is defined

Associating an Algorithm with an Accrual Type

Prerequisites

To associate algorithms with an accrual type, you should have:

- Algorithms defined in the application.

Procedure

To associate algorithms with an accrual type:

- Search for the accrual type in the **Accrual Type** screen.
- In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the accrual type whose details you want to edit.

The **Accrual Type** screen appears.

- Click the **Edit** button in the **Accrual Type** zone.

The **Accrual Type** screen appears.

- Ensure that the **Algorithms** section is expanded when you are editing the accrual type.

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to execute the algorithm. The valid values are: <ul style="list-style-type: none"> Accrual Calculation Accrual Creation Accrual Eligibility Accrual Post Calculation Accrual Post Processing Accrual Pre Processing Accrual Reversal Accrual Reversal Post Processing Accrual Reversal Pre Processing Accrual Calculation 	Yes <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> Note: This field is required when you are associating an algorithm with the accrual type. </div>
Sequence	Used to specify the order in which the algorithms with the same system event must be executed.	Yes (Conditional) <div style="border: 1px solid black; padding: 2px; margin-top: 5px;"> Note: This field is required when you are associating an algorithm with the accrual type. </div>

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Used to specify the algorithm that you want to execute on the system event.	Yes (Conditional)
	<p>Note:</p> <p>Once you select the system event, the Search  icon appears corresponding to the Algorithm field. On clicking the Search  icon, the Algorithm Search window appears.</p> <p>On specifying the algorithm, the description of the algorithm appears corresponding to the Algorithm field.</p>	<p>Note: This field is required when you are associating an algorithm with the accrual type.</p>

Enter the following details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Calculation	-	Yes	Information will be available soon...
	<p>Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.</p>

	<p>Note: An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accrual Eligibility	-	No	-
	<p>Note: An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accrual Post Calculation	-	No	-
	<p>Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		
Accrual Post Processing	-	No	-
	<p>Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.</p>		

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Pre Processing	-	No	-
	Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal	-	No	-
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal Post Processing	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal Pre Processing	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Calculation	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		

Note: You must associate algorithms, such as **Accrual Calculation**, **Accrual Creation**, and **Accrual Reversal** to the system events in the accrual type.

5. Enter the required details in the **Algorithms** section.
6. If you want to associate more than one algorithm to the accrual type, click the **Add (+)** icon and then repeat step 5.

Note: However, if you want to disassociate an algorithm from the accrual type, click the **Delete (🗑)** icon corresponding to the algorithm.

7. Click **Save**.

The algorithm is associated with an accrual type.

Excluding an Entity from an Accrual Type

Procedure

To exclude an entity from an accrual type:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the accrual type whose details you want to edit.

The **Accrual Type** screen appears.

3. Click the **Edit** button in the **Accrual Type** zone.

The **Accrual Type** screen appears.

4. Ensure that the **Objects To Exclude** section is expanded when you are editing the accrual type.

Field Name	Field Description	Mandatory (Yes or No)
Entity Type	Used to indicate the entity type.	No
Sequence	Used to specify the order in which the entities must be excluded from the accrual type.	No
Entity	Used to indicate a valid value for the selected entity type.	Yes (Conditional)
		Note: This field is required if you select an option from the Entity Type field.

5. Enter the required details in the **Objects To Exclude** section.

Note: If you select a predefined entity type, the **Search**  icon appears corresponding to the **Entity** field. On clicking the **Search** icon, you can search for a predefined entity value.

6. If you want to exclude more than one entity in the accrual type, click the **Add**  icon and then repeat step 5.

Note: However, if you want to remove an excluded entity from the accrual type, click the **Delete**  icon corresponding to the entity.

7. Click **Save**.

The entity is defined which must be excluded in an accrual type.

Associating a Division with an Accrual Type

Prerequisites

To associate an accrual type with a division, you should have:

- Divisions defined in the application.

Procedure

To associate an accrual type with a division:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the accrual type whose details you want to edit.

The **Accrual Type** screen appears.

3. Click the **Edit** button in the **Accrual Type** zone.

The **Accrual Type** screen appears.

4. Ensure that the **Divisions** section is expanded when you are editing the accrual type.

The **Divisions** section contains the following fields:

Fields Name	Fields Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the division is effective for the accrual type.	No
Division	Used to indicate division to which you want to associate the accrual type.	Yes (Conditional)
		Note: This field is required when you have specified the Effective Date field.

5. Enter the required details in the **Divisions** section.
6. If you want to associate more than one division to the accrual type, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to disassociate a division from the accrual type, click the **Delete** (🗑️) icon corresponding to the division.

7. Click **Save**.

The division is associated with an accrual type.

Accrual Type (Used for Viewing)

The **Accrual Type** screen allows you to:

- View the details of an accrual type.
- Edit an accrual type.
- Delete an accrual type.

This screen contains the following zone:

- [Accrual Type](#) on page 1650

Accrual Type

The **Accrual Type** zone displays the details of an accrual type. This zone consists of the following sections:

- **Main** – This section provides basic information about the accrual type. It contains the following columns:

Column Name	Column Description
Accrual Type	Displays the name of an accrual type.
Description	Displays the description of an accrual type.
Accrual Object	Indicates the accrual object.
Adjustment Type	Indicates the adjustment type using which the adjustment is created.
Accrual Criteria	Indicates the accrual criteria used for calculation.
Accrual Source	Indicates the source of data that you want to use while calculating the accruals that are based on actual data. Note: This field appears only when Actual option is selected from the Accrual Criteria field while creating an accrual type.
Historical Bill Count	Displays the number of historical bills which are considered for accrual calculation. Note: This field appears only when Historical option is selected from the Accrual Criteria field while creating an accrual type.
Type of Day	Displays the type of day that is used to calculate the accrual amount.
Posting Method	Displays the posting method that is used to calculate the accrual amount.
Cancel Reason	Displays the reason of cancelation that is used while reversing the accrual.
Contract Type	Displays the contract type.

- **Algorithms** – Displays the algorithms that are associated with the accrual type. This section contains the following columns:

Column Name	Column Description
System Event	Indicates the system event on which the algorithm is executed.
Sequence	Displays the order in which the algorithms for each system is executed.
Algorithm	Indicates the algorithm which is associated with the accrual type.
	Note: It has a link. On clicking the link, Algorithm screen appears with the details of the respective algorithm.

- **Objects to Exclude** – Displays the objects which are excluded from the accrual type. This section contains the following columns:

Column Name	Column Description
Entity Type	Indicates the entity type.
Sequence	Displays the order in which the entities are excluded from the accrual type.
Entity	Displays the value for the entity type.

- **Divisions** – Displays the divisions which are associated with the accrual type. This section contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the division is effective for the accrual type.
Division	Displays the division associated to the accrual type.

- **Characteristics** – Displays the characteristics for the accrual type. This section contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the accrual type.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of an accrual type.
Delete	Used to delete an accrual type.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which an accrual type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing an Accrual Type

Prerequisites

To edit an accrual type, you should have:

- Adjustment Types defined in the application (where the **Print by Default** and **Influence Next Bill Balance** checkbox is not selected).

Procedure

To edit an accrual type:

- Search for the accrual type in the **Accrual Type** screen.
- In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the accrual type whose details you want to edit.

The **Accrual Type** screen appears.

- Click the **Edit** button in the **Record Actions** section.

The **Accrual Type** screen appears. It contains the following section:

- Main** – Used to specify basic details about the accrual type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Type	Used to specify the name for an accrual type.	Yes
Description	Used to specify the description for an accrual type.	Yes
Accrual Object	Used to indicate the type of the accrual object that you want to create for posting the accrual amount. Note: At present, you can only create adjustments to record the accruals for the accounts in the application.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created. Note: This field appears only when you select the Adjustment option from the Accrual Object field. The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears. On specifying the adjustment type, the description of the adjustment type appears corresponding to the Adjustment Type field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Accrual Criteria	Used to indicate the accrual criteria that you want to use for the accrual calculation. The valid values are: <ul style="list-style-type: none"> Actual Historical 	Yes
Accrual Source	Used to indicate the source of data that you want to use for calculating the accruals that are based on the actual data. The valid values are: <ul style="list-style-type: none"> Transaction Feed Trial Bill 	Yes (Conditional)
	Note: This field appears only when you select the Actual option from the Accrual Criteria field.	Note: This field is required if you select the Actual option from the Accrual Criteria field.
Historical Bill Count	Used to specify the number of historical bills that you want to consider for accrual calculation.	Yes (Conditional)
	Note: This field appears only when you select the Historical option from the Accrual Criteria field.	Note: This field is required if you select the Historical option from the Accrual Criteria field.
Accrual Request Business Object	Used to indicate the business object that you want to use while creating the accrual request. <p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>On specifying the business object, the description of the business object appears corresponding to the Accrual Request Business Object field.</p>	No
Approval Required	Used to indicate whether approval is required while creating accrual requests which are created using the accrual type.	Yes
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the accrual type.	Yes
	Note: This field appears only when Approval Required checkbox is selected.	Note: This field is required when the Approval Required checkbox is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the accrual adjustments using the accrual type.	Yes (Conditional)
	Note: This field appears only when Approval Required check box is selected.	Note: This field is required when the Approval Required checkbox is selected.

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate the To Do type for the submitter when the accrual type is resubmitted by the approver.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when Approval Required checkbox is selected.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	<p>Note: This field is required when the Approval Required checkbox is selected.</p>
Submitter To Do Role	Used to indicate the To Do role for the submitter when the accrual type is resubmitted by the approver.	Yes (Conditional)
	<p>Note: This field appears only when Approval Required checkbox is selected.</p>	<p>Note: This field is required when the Approval Required checkbox is selected.</p>
Type of Day	Used to indicate the type of day that you want to use to calculate the accrual amount. <ul style="list-style-type: none"> • Business Day • Calendar Day 	Yes
Posting Method	Used to indicate the posting method that you want to use for calculating the accrual amount. The valid values are: <ul style="list-style-type: none"> • Bill Level • Bill Segment Level 	Yes
Cancel Reason	Used to specify the cancel reason that you want to use while reversing the accrual.	Yes (Conditional)
		<p>Note: This field is required when Adjustment option is selected from the Accrual Object field.</p>
Contract Type	Used to indicate the contract type that you want to use for accrual calculation.	Yes
	<p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.</p>	

- **Algorithms** – Used to specify the algorithms that you want to use for accrual type. This section contains the following fields:

Fields Name	Fields Description	Mandatory (Yes or No)
System Event	Used to indicate the system event when you want to execute the algorithm. The valid values are: <ul style="list-style-type: none"> • Accrual Calculation • Accrual Creation • Accrual Eligibility • Accrual Post Calculation • Accrual Post Processing • Accrual Pre Processing • Accrual Reversal • Accrual Reversal Post Processing • Accrual Reversal Pre Processing • Accrual Calculation 	Yes
Sequence	Used to specify the order in which the algorithms with the same system event must be executed.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the accrual type.
Algorithm	Used to specify the algorithm that you want to execute on the system event. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the accrual type.

Enter the following details in the **Algorithms** section:

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Calculation	- Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.	Yes	Information will be available soon...
Accrual Creation	- Note: An accumulation billable charge post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.	No	-

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Eligibility	-	No	-
	Note: An accumulation billable charge pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Post Calculation	-	No	-
	Note: An accumulation post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Post Processing	-	No	-
	Note: A accumulation pre processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Pre Processing	-	No	-
	Note: A pricing rule post processing algorithm type is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal	-	No	-
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal Post Processing	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		
Accrual Reversal Pre Processing	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		

System Event	Algorithm	Mandatory (Yes or No)	For more information, see...
Accrual Calculation	-		
	Note: An algorithm type for validating a discount arrangement transaction is not shipped with the product. You can create a custom algorithm type, if required.		

Note:

If you want to associate more than one algorithm with the accrual type, click the **Add** (+) icon and then specify the details. However, if you want to remove an algorithm from the accrual type, click the **Delete** (🗑️) icon corresponding to the algorithm.

- **Objects to Exclude** – Used to specify the objects that you want to exclude from accrual type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Entity Type	Used to indicate the entity type.	No
Sequence	Used to specify the order in which the entities must be excluded from the accrual type.	No
Entity	Used to indicate the valid value for the entity type that you have selected.	Yes (Conditional)
		Note: This field is required if you select the value for Entity Type field.

Note:

If you want to associate more than one entity with the accrual type, click the **Add** (+) icon and then specify the details. However, if you want to remove an entity from the accrual type, click the **Delete** (🗑️) icon corresponding to the entity type.

- **Divisions** – Used to specify division to which you want to associate the accrual type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to indicate the date from when the division is effective for the accrual type.	No
Division	Used to indicate division to which you want to associate the accrual type.	Yes (Conditional)
		Note: This field is required when you have specified the Effective Date field.

Note:

If you want to associate more than one division with the accrual type, click the **Add** (+) icon and then specify the details. However, if you want to remove a division from the accrual type, click the **Delete** (🗑️) icon corresponding to the division.

- **Characteristics** – Used to specify the characteristics for the accrual type. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for an accrual type.
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Accrual Type .	Note: This field is required when you are defining a characteristic for an accrual type.
Characteristic Value	Used to specify the value of characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>Once you select the characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search (🔍) icon, the Predefined Characteristic window appears.</p> <p>On specifying the characteristic, the description of the characteristic appears corresponding to the Characteristic Value field.</p>	Note: This field is required when you are defining a characteristic for an accrual type.

Note:

If you want to associate more than one characteristic with the accrual type, click the **Add** (+) icon and then specify the details. However, if you want to remove a characteristic from the accrual type, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Modify the required details in the **Main** section.
5. Associate the required algorithms with the accrual type.
6. Add, edit, or remove the required objects in the accrual type.
7. Add, edit, or remove the required divisions in the accrual type.
8. Add, edit, or remove the characteristics in the accrual type.

9. Click **Save**.

The changes made to an accrual type are saved.

Deleting an Accrual Type

Procedure

To delete an accrual type:

1. Search for the accrual type in the **Accrual Type** screen.
2. In the **Search Results** section, click the link in the **Accrual Type Information** column corresponding to the *accrual type* that you want to delete.

The **Accrual Type** screen appears.

3. Click the **Delete** button in the **Accrual Type** zone.

A message appears confirming whether you want to delete an accrual type.

4. Click **OK**.

An accrual type is deleted.

Accrual (Used for Searching)

The **Accrual** screen allows you to search for an accrual detail using various search criteria. This screen consists of the following zone:

- [Search Accrual](#) on page 1659

Search Accrual

The **Search Accrual** zone allows you to search an accrual detail using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an accrual using the search parameter. The valid value is: <ul style="list-style-type: none"> • Accrual Details 	Not applicable
Account ID	Used to indicate whether you want to search for accruals belonging to a particular account. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. </div>	No
Division	Used to indicate whether you want to search for accruals belonging to a particular division.	No
Accrual Type	Used to search for accruals which are created using a particular accrual type.	No
Posting Method	Used to indicate whether you want to search for accruals which use a particular posting method for calculating the accrual amount. The valid values are: <ul style="list-style-type: none"> • Bill Level • Bill Segment Level 	No
Accrual Cycle	Used to search for accruals which are created using a particular accrual cycle.	No
Creation Date From	Used to indicate whether you want to search for accruals which are created from a particular date onwards.	No
Accrual Creation Mode	Used to indicate whether you want to search for accruals which are created using a particular creation mode. The valid values are: <ul style="list-style-type: none"> • Batch • Manual 	No
Creation Date To	Used to search accruals which are created till a particular date.	No
Status	Used to search for accruals with a particular status. The valid values are: <ul style="list-style-type: none"> • Ready For Accrual • Accrued • Reversed • Approval In Progress • Cancelled • Draft • Ignore • Processed • Rejected 	No

Note: You must specify at least one search criterion while searching for an accrual.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Accrual Information	Displays information about the accrual.
	Note: It has a link. On clicking the link, the Accrual screen appears with the details of the respective accrual.
Division	Indicates the division to which the accrual account belongs.
Accrual Type	Indicates the type of the accrual.
Posting Method	Indicates the posting method used for accrual.
Accrual Creation Mode	Indicates the creation mode used for an accrual.
Status	Displays the status of the accrual.
Create Date/Time	Displays the date and time when the accrual is created.

Searching for an Accrual

Procedure

To search for an accrual :

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Accrual**.
A sub-menu appears.
3. Click the **Search** option from the **Accrual** sub-menu.
The **Accrual** screen appears.
4. Enter the search criteria in the **Search Accrual** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of accruals that meet the search criteria appears in the **Search Results** section.

Viewing the Accrual Details**Procedure**

To view the details of an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to view.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1666
- [Accrual - Log](#) on page 1669

3. Ensure that the **Main** tab is selected.
4. View the details of the accrual in the **Accrual** zone.

Related Topics

How to search for an accrual	Searching for an Accrual on page 1661
Accrual screen	Accrual (Used for Viewing) on page 1666
Accrual zone	Accrual on page 1666

Defining an Accrual**Prerequisites**

To define an accrual, you should have:

- Batch **C1_ACCRE** defined in the application, if an accrual creation takes place through a batch.
- Algorithm **C1_ACCR_CRE** defined for accrual creation in the application.
- Algorithm **C1_ACCR_CAL** defined for accrual calculation in the application.
- Algorithm **C1_ACCR_REV** defined for accrual reversal in the application.
- Account ID defined in the application.
- Characteristic type defined in the application (where the characteristic entity is set to **Accrual**).
- Price Item defined in the application.

Procedure

To add an accrual:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Financial** and then click **Accrual**.

A sub-menu appears.

- Click the **Add** option from the **Accrual** sub menu.

The **Accrual** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the accrual.
- **Characteristics** – Used to specify the characteristics for an accrual.
- **Accrual Details** – Used to specify the accrual details for an accrual.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search a particular account. Note: The Search  icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears. On specifying the account information, the description of the account appears corresponding to the Account ID field.	Yes
Contract	Used to specify the accrual contract of the account. Note: It is a read-only field and cannot be edited.	Not applicable
Accrual Cycle	Used to specify the accrual cycle for the account. Note: It is a read-only field and cannot be edited.	Not applicable
Posting Method	Used to specify the posting method used for an accrual. Note: It is a read-only field and cannot be edited.	Not applicable
Accrual Type	Used to specify the type of an accrual. Note: It is a read-only field and cannot be edited.	Not applicable
Accrual Creation Mode	Used to specify the creation method of an accrual. Note: It is a read-only field and cannot be edited.	Not applicable
Currency	Used to specify the currency used for calculating the accrual. Note: It is a read-only field and cannot be edited.	Not applicable
Comments	Used to specify the comments for an accrual.	No

Tip: Alternatively, you can access the **Accrual** screen by clicking the **Add** button in the **Page Title** area of the **Accrual** screen.

Note:

You must specify the reversal end date which must be later than the reversal start date.

You must specify the accrual date which lies earlier than the reversal start date.

4. Define characteristics for an accrual, if required.
5. Define the accrual details for an accrual.
6. Click **Save**.
7. An accrual is defined.

Related Topics

For more information on...	See...
Defining the characteristics for an accrual	Defining a Characteristic for an Accrual on page 1664
Adding the details for an accrual	Adding the Details for an Accrual on page 1665

Defining a Characteristic for an Accrual**Prerequisites**

To define a characteristic for an accrual, you should have:

- Characteristic type defined in the application (where the characteristic entity is set to **Accrual**).

Procedure

To define a characteristic for an accrual:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an accrual.

The **Characteristics** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Accrual Detail Sequence	Used to specify the sequence in which the accrual processing must be executed.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Effective Date	Used to specify the date from when the characteristic is effective for an accrual.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for an accrual.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Accrual .	Note: This field is required when you are defining a characteristic for an accrual.

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search () icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for an accrual.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for an accrual., click the **Add** () icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an accrual, click the **Delete** () icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for an accrual..

Adding the Details for an Accrual

Procedure

To define the details for an accrual:

- Ensure that **Accrual Details** section is expanded when you are defining or editing an accrual.

The **Accrual Details** section contains the following fields in the grid:

Column Name	Column Description	Mandatory (Yes or No)
Accrual Detail Sequence	Used to specify the detailed sequence in which the accrual processing must be executed.	Not applicable
Price Item	Used to indicate the price item for an accrual.	Yes (Conditional)
	<p>Note: The Search () icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.</p>	<p>Note: This field is required when the price item information is not defined for the accrual contract.</p>
Amount	Used to specify the accrual amount.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Override Reason	Used to specify the override reason for the accrual.	No

- Enter the required details in the **Accrual Details** section.
- Click **Save**.

The accrual details are defined for an accrual.

Accrual (Used for Viewing)

Once you create an accrual, the **Accrual** screen allows you to:

- View the details of an accrual
- Edit an accrual
- Submit an accrual
- Delete an accrual
- Approve, Reject, and Re-Submit an accrual
- View the accrual calculation lines

This screen contains the following tabs:

- [Accrual - Main](#) on page 1666
- [Accrual Log](#) on page 1669

Accrual - Main

The **Main** tab displays information about the reconciliation. It contains the following zones:

- [Accrual](#) on page 1666
- [Accrual Details](#) on page 1668
- [Accrual Calculation Lines](#) on page 1668

Accrual

The **Accrual** zone displays the details of an accrual. It contains the following sections:

- Main** – Displays basic information about the accrual. It contains the following columns:

Column Name	Column Description
Accrual Information	Displays information about the accrual.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account

Column Name	Column Description
Contract Information	Displays information about the contract. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Division	Displays the division which is associated with the accrual.
Status	Displays the status of the accrual.
Accrual Cycle	Displays the cycle of the accrual.
Accrual Date	Displays the accrual date.
Reversal Start Date	Displays the date from when the reversal is effective for the accrual.
Reversal End Date	Displays the date till when the reversal is effective for the accrual.
Accrual Type	Displays the type of the accrual.
Accrual Creation Mode	Displays the creation mode of the accrual.
Posting Method	Displays the posting method that is used for calculating the accrual.
Accrual Amount	Displays the accrual amount.

- **Characteristics** – Lists the characteristics defined for the reconciliation. It contains the following columns:

Column Name	Column Description
Accrual Detail Sequence	Displays the sequence of the accrual.
Effective Date	Displays the date from when the characteristic is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of an accrual.
Delete	Used to delete an accrual.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which an accrual is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the accrual is created.

Accrual Calculation Lines

The **Accrual Calculation** zone displays the accrual calculation lines generated after the accrual creation batch is executed. It contains the following columns:

Column Name	Column Description
Entity Information	Displays entity information. Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the respective entity.
Entity Type	Displays the entity type.
Inclusion Amount	Displays the inclusion amount.
Bill Cycle Days	Displays the bill cycle days.

Column Name	Column Description
Historical Calculation Days	Displays the historical calculation days.
Bill Information	Displays the bill information. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the respective bill.
Recurring Charge Calculation Days	Displays the recurring charge calculation days. Note: This column appears only when the accrual status is Draft .
Recurring Charge Total Days	Displays the recurring charge calculation days. Note: This column appears only when the accrual status is Draft .

Accrual - Log

The **Log** tab lists the complete trail of actions performed on the accrual. It consists of the following zone:

- [Accrual Log](#) on page 1669

Accrual Log

The **Accrual Log** zone lists the complete trail of actions performed on the accrual. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the accrual.
Details	Displays the details about the action performed on the accrual.
User	Indicates the user who has performed the action on the accrual.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the accrual.

Note:

You can manually add a log entry for the accrual by clicking the **Add Log Entry** link in the upper right corner of the **Accrual Log** zone.

Viewing the Log of an Accrual

Procedure

To view the log of an accrual:

1. Search for an accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose log you want to view.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1666
- [Accrual - Log](#) on page 1669

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the accrual in the **Accrual** zone.

Adding a Log Entry for an Accrual

Procedure

To add a log entry for an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose log you want to edit.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1666
- [Accrual - Log](#) on page 1669

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Accrual Log** zone.

The **Add Accrual Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Accrual Information	Displays the information about the accrual.	Not applicable
Log Details	Used to specify additional comments for the accrual.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Accrual Log** zone.

Approving an Accrual

Prerequisites

To approve an accrual, you should have:

- Accrual status as **Approval in Progress**.

Procedure

To approve an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to view.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1666
 - [Accrual - Log](#) on page 1669
3. Ensure that the **Main** tab is selected.
 4. Click the **Approve** button in the **Accrual** zone.

The status of the accrual is changed to **Processed**.

Note: The **Approve** button appears only when the accrual is in the **Approval in Progress** status.

Rejecting an Accrual

Prerequisites

To reject an accrual, you should have:

- Accrual status as **Approval in Progress**.

Procedure

To reject an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to view.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1666
 - [Accrual - Log](#) on page 1669
3. Ensure that the **Main** tab is selected.
 4. Click the **Reject** button in the **Accrual** zone.

The status of the accrual is changed to **Rejected**.

Note: The **Reject** button appears only when the accrual is in the **Approval in Progress** status.

Resubmitting an Accrual**Prerequisites**

To resubmit an accrual, you should have:

- Accrual status as **Approval in Progress**.

Procedure

To resubmit an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to view.

The **Accrual** screen appears. It consists of the following tabs:

- [Accrual - Main](#) on page 1666
 - [Accrual - Log](#) on page 1669
3. Ensure that the **Main** tab is selected.
 4. Click the **Resubmit** button in the **Accrual** zone.

The status of the accrual is changed to **Accrued**.

Note: The **Resubmit** button appears only when the accrual is in the **Approval in Progress** status.

Editing an Accrual

Prerequisites

To define an accrual, you should have:

- Algorithm **C1_ACCR_CAL** defined for accrual calculation in the application.
- Algorithm **C1_ACCR_REV** defined for accrual reversal in the application.

Procedure

To edit an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual whose details you want to edit.

The **Accrual** screen appears.

3. Click the **Edit** button in the **Accrual** zone

The **Accrual** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the accrual. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search a particular account.	Yes
	Note: It is a read-only field and cannot be edited.	
Contract	Used to specify the accrual contract of the account.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Accrual Cycle	Used to specify the accrual cycle for the account.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Posting Method	Used to specify the posting method used for an accrual.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Accrual Type	Used to specify the type of an accrual.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Accrual Creation Mode	Used to specify the creation method of an accrual.	Not applicable
	Note: It is a read-only field and cannot be edited.	

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to specify the currency used for calculating the accrual.	Not applicable
	Note: It is a read-only field and cannot be edited.	
Comments	Used to specify the comments for an accrual.	No

Note:

You must specify the reversal end date which must be later than the reversal start date.

You must specify the accrual date which lies earlier than the reversal start date.

4. Add, edit, or remove the characteristics for an accrual, if required.
5. Add, edit, or remove the details for an accrual.
6. Click **Save**.

The changes made to the accrual are saved.

Deleting an Accrual**Procedure**

To delete an accrual:

1. Search for the accrual in the **Accrual** screen.
2. In the **Search Results** section, click the link in the **Accrual Information** column corresponding to the accrual that you want to delete.

The **Accrual** screen appears.

3. Click the **Delete** button in the **Accrual** zone.

A message appears confirming whether you want to delete the accrual.

Note: The **Delete** button appears only when the accrual status is **Draft**.

4. Click **OK**.

The accrual is deleted.

Chapter 30

Payment Agreement Request

Topics:

- [Payment Agreement Request \(Without Approval\) Status Transition](#)
- [Payment Agreement Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-PaymentAgreementRequest](#)
- [Payment Agreement Request Type](#)
- [Payment Agreement Request \(Used for Searching\)](#)
- [Payment Agreement Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the ability to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. Let us understand this with the help of an example. The following bills of the account A1 are unpaid:

- B1 (Bill Amount – 100\$, Unpaid Amount - 75\$)
- B2 (Bill Amount – 250\$, Unpaid Amount – 125\$)
- B3 (Bill Amount – 150\$, Unpaid Amount – 150\$)

Through a payment agreement request, you can schedule payments for these three bills in various installments. For example, you can schedule the following payments for the account A1:

Schedule Date	Schedule Amount
01-Jan-2017	100
15-Jan-2017	100
01-Feb-2017	100
15-Feb-2017	50

While creating a payment agreement request, you need to specify the payment agreement request type using which you want to create the payment agreement request. It is the payment agreement request type which helps the system to determine:

- The business object using which the payment agreement request should be created
- Whether the approval is required for the payment agreement request

You can only add completed bills of the account which are unpaid in a payment agreement request. Once a payment agreement request is created for an account, the status of the payment agreement request is set to **Draft**. You can then edit or delete the payment agreement request, if required. Once you add the unpaid bills of the account, you can submit the payment agreement request. On submitting a payment agreement request, the status of the payment agreement request is set to **Active**.

You can optionally configure the system to use the approval workflow process for a payment agreement request. If the **Approval Required** flag is set to **Yes** in a payment agreement request type, then on submitting the respective payment agreement request, the approval workflow process creates a To Do for the approver to review the payment agreement request. Once the approver approves the payment agreement request, the status of the payment agreement request is set to **Active**. The approver can approve, reject, or resubmit the payment

agreement request. When the payment agreement request is resubmitted to the submitter, the status of the payment agreement request is set to **Draft**.

Even if the approval workflow is configured for a payment agreement request type, you can skip the approval workflow for a payment agreement request. The system enables you to skip the approval workflow for a payment agreement request until you exceed the maximum limit defined in the **C1-PASUBMIT** algorithm. You can define the following parameters in the **C1-PA-SUBMIT** algorithm:

- Number of days to consider in past to check whether any payment agreement request with a particular status exist in the specified duration (for example, 365)
- Maximum number of payment agreement requests which can be activated without approval (for example, 1)
- Status in which payment agreement request should exist in the specified duration (for example, Broken Promise)

In the above example, on clicking the **Submit** button, the system will check how many payment agreement requests for the account in the last 365 days exist in the **Broken Promise** status. If the system finds one or more than one payment agreement requests in the **Broken Promise** status in the last 365 days, the approval workflow process creates a To Do for the approver to review the payment agreement request. However, if the system does not find any payment agreement request in the **Broken Promise** status in the last 365 days, the payment agreement request is not sent for approval and the status of the payment agreement request is directly changed to **Active**.

When the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If there is a payment agreement request in the **Active** status, the system checks whether the total unpaid amount of the bills is equal to zero and whether each bill is fully matched. If so, the status of the payment agreement request is changed to **Kept Promise**. However, if the total unpaid amount of the bills is not equal to zero, the system checks whether the current date is later than the schedule date and does not fall within the grace period. If so, the system checks whether total unpaid amount is greater than the total future schedule amount. If so, the status of the payment agreement request is changed to **Broken Promise**. However, if the current date is earlier than the schedule date or falls within the grace period, or the total unpaid amount is less than the total future schedule amount, the status of payment agreement request remains in **Active**. The system enables you to edit a payment agreement request which is in the **Active** status.

While defining a payment agreement request, you need to specify the payment method through which the payment will be done and whether the payment will be done through the payor or third party payor account. If the **Auto Pay** flag is set to **Yes** for a payment method, you need to also specify the automatic payment option using which the automatic payment should be created on the schedule date. One more batch named **Generate Auto Pay for Payment Agreement (C1-APPAB)** is introduced in this release. When the **Generate Auto Pay for Payment Agreement (C1-APPAB)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If so, whether the account for which the payment agreement request is created is eligible for automatic payment and the defer auto pay date (if any) defined for the account is earlier than the batch business date. If so, the system checks whether the extract date of the unpaid bill (with the earliest due date) is earlier than the schedule date.

If so, the system creates the automatic payment for the unpaid bill on the schedule date. However, if the account is not eligible for automatic payment, or the defer auto pay date is equal to or later than batch business date, or the extract date is equal to or later than the schedule date, the automatic payment is not generated for the account.

During the payment agreement request process, a payment agreement request creation goes through various statuses in its lifecycle. For more information about the payment agreement request statuses, see [Payment Agreement Request \(Without Approval\) Status Transition](#) on page 1680 and [Payment Agreement Request \(With Approval\) Status Transition](#) on page 1681. If the payment agreement request type is without approval then payment agreement status will automatically move from draft to active. The approval configuration algorithm **C1-PA-APPEXT** decides whether the request will be sent for approval or not. If the payment agreement request type is with approval then payment agreement will be sent for approval depending on:

- The number of days checked for approval workflow
- Payment agreement statuses (active, broken, kept) to be considered
- The maximum number of payment agreements allowed

Note: The lifecycle of a payment agreement request creation is driven by the respective business object using which the request is created. The payment agreement request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the payment agreement request process, see [Prerequisites](#) on page 1682.

Payment Agreement Request (Without Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is off:

Payment Agreement Request (With Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is on:

Prerequisites

To setup the payment agreement request process, you need to do the following:

- Define the required payment agreement request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request**
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request Type**
- Define the required pay methods for **Payment Agreement Request**
- Define the required third party payors for **Payment Agreement Request**
- Create an algorithm using the **C1-PA-INFO** algorithm type if you want to create Payment Agreement Requests using the payment agreement request information.
- Define the kept promise status reason for the **C1-PaymentAgreementRequest** business object
- Define the broken promise status reason for the **C1-PaymentAgreementRequest** business object
- Defined rejected status reason for the **C1-PaymentAgreementRequest** business object
- Assign the **C1-PAREQ** To Do type to a To Do role whose users must receive To Do generated while submitting or resubmitting a payment agreement request for approval
- The **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch process to monitor the payment agreement request and move the request to next stage

Algorithms Used in C1-PaymentAgreementRequest

The following table lists the algorithms which are attached to the **C1-PaymentAgreementRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PA-INFO	C1-PA-INFO	Refer to C1-PA-INFO
Pre-Processing	C1-PA-PRE	C1-PA-PRE	C1-PA-PRE
Validation	C1-PA-VAL	C1-PA-VAL	C1-PA-PRE

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentAgreementRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submit	Enter	C1-PA-SUBMIT	C1-PA-SUBMIT	C1-PA-SUBMIT
Approval In Progress	Enter	C1-PA-APPENT	C1-PA-APPENT	C1-PA-APPENT
Approval In Progress	Exit	C1-PA-APPEXT	C1-PA-APPEXT	C1-PA-APPEXT
Return to Submitter	Enter	C1-PA-RESUB	C1-PA-RESUB	C1-PA-RESUB
Active	Monitor	C1-PA-MONTR	C1-PA-MONTR	C1-MONTR
Active	Enter	C1-PA-ACTENT	C1-PA-ACTENT	C1-ACTENT

Payment Agreement Request Type

Oracle Revenue Management and Billing allows you to define, edit, copy and delete a payment agreement request type using which you can pay current unpaid debt bills in multiple installments whose payment amount is greater than zero. A payment agreement provide flexibility in payment of installment amount and schedule of payment.

The **C1-PaymentAgreementRequest** business object is created for payment agreement maintenance.

The **Payment Agreement Request Type** screen consists of the following zones:

- [Payment Agreement Request Type List](#) on page 1683
- [Payment Agreement Request Type](#) on page 1684

Payment Agreement Request Type List

The **Payment Agreement Request Type List** zone lists payment agreement request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Edit	On clicking the Edit (✎) icon, the Payment Agreement Request Type screen appears where you can edit the details of the payment agreement request type.
Duplicate	On clicking the Duplicate (📄📄) icon, the Payment Agreement Request Type screen appears where you can define a payment agreement request type using an existing payment agreement request type.
Delete	On clicking the Delete (🗑) icon, you can delete the payment agreement request type. Note: You can delete a payment agreement request type only when you have not created a payment agreement request using the payment agreement request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment agreement request type, the **Payment Agreement Request Type** zone appears with the details of the respective payment agreement request type.

Payment Agreement Request Type

The **Payment Agreement Request Type** zone displays the details of the payment agreement request type. This zone contains the following sections:

- **Main** – This section provides basic information about the payment agreement request type. It contains the following fields:

Field Name	Field Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Payment Agreement Request Business Object	Indicates the business object that will be used to create the payment agreement request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the payment agreement request type.
Status	Indicates the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Status Change Notification Type	Indicates the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Alert • To Do • Both
Approval Required	Indicates whether approval is required while creating payment agreement request using the payment agreement request type.

Field Name	Field Description
Approval To Do Type	<p data-bbox="505 212 1084 302">Indicates that the To Do entry of the specified To Do type must be created when you submit the payment agreement request for approval.</p> <div data-bbox="496 323 1091 705" style="border: 1px solid black; padding: 5px;"> <p data-bbox="505 333 570 359">Note:</p> <p data-bbox="505 380 1084 443">This field appears only when the Approval Required check box is selected.</p> <p data-bbox="505 464 1084 554">It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p> <p data-bbox="505 575 1084 674">The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> </div>
Approval To Do Role	<p data-bbox="505 730 1084 821">Indicates that users with the specified To Do role can only approve or reject the payment agreement request submitted for approval.</p> <div data-bbox="496 842 1091 1068" style="border: 1px solid black; padding: 5px;"> <p data-bbox="505 852 570 877">Note:</p> <p data-bbox="505 898 1084 961">This field appears only when the Approval Required check box is selected.</p> <p data-bbox="505 982 1084 1045">It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.</p> </div>
Submitter To Do Type	<p data-bbox="505 1098 1084 1188">Indicates the To Do type for the submitter when the payment agreement request type is resubmitted by the approver.</p> <div data-bbox="496 1209 1091 1591" style="border: 1px solid black; padding: 5px;"> <p data-bbox="505 1220 570 1245">Note:</p> <p data-bbox="505 1266 1084 1329">This field appears only when the Approval Required check box is selected.</p> <p data-bbox="505 1350 1084 1440">It has a link. On clicking the link, the To Do Type screen appears with the details of the respective To Do type.</p> <p data-bbox="505 1461 1084 1560">The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> </div>

Field Name	Field Description
Submitter To Do Role	Indicates the To Do role of the submitter when the payment agreement request type is resubmitted by the approver. Note: This field appears only when the Approval Required check box is selected. It has a link. On clicking the link, the To Do Role screen appears with the details of the respective To Do role.

- **Characteristics** – This section lists the characteristics defined for the payment agreement request type. It contains the following columns:

Column Name	Column Description	Mandatory (Yes Or No)
Characteristic Type	Indicates the characteristic type.	No
Characteristic Value	Displays the value of the characteristic type.	No

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment agreement request type.
Delete	Used to delete the payment agreement request type. Note: You can delete a payment agreement request type only when you have not created a payment agreement request using the payment agreement request type.
Duplicate	Used to create a new payment agreement request type using an existing payment agreement request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment agreement request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Payment Agreement Request Type** zone does not appear in the **Payment Agreement Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to a payment agreement request type in the **Payment Agreement Request Type List** zone.

Defining a Payment Agreement Request Type

Prerequisites

To define a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

Procedure

To define a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type Business Object	Used to indicate the business object that you want to use to create the payment agreement request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple payment agreement request type business objects defined in the application. If there is only one payment agreement request type business object defined in the application, the **Payment Agreement Request Type** screen appears.

4. Select the required payment agreement request type business object from the respective field.
5. Click **OK**.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes

Defining Characteristics for a Payment Agreement Request Type

Prerequisites

To define characteristics for a payment agreement request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Payment Agreement Request Type)

Procedure

To define characteristics for a payment agreement request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment agreement request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request Type.	Note: This field is required when you are defining a characteristic for the payment agreement request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the payment agreement request type.

- Enter the required details.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment agreement request type, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the payment agreement request type, click the **Delete**  icon corresponding to the characteristic.

Copying a Payment Agreement Request Type

Instead of creating a payment agreement request type from scratch, you can create a new payment agreement request type using an existing payment agreement request type. This is possible through copying a payment agreement request type. On copying a payment agreement request type, the details including the characteristics are copied to the new payment agreement request type. You can then edit the details, if required.

Prerequisites

To copy a payment agreement request type, you should have:

- Payment agreement request type (whose copy you want to create) defined in the application
- Payment agreement request business objects defined in the application

- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval

Procedure

To copy a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.
The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the payment agreement request type whose copy you want to create.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type (whose copy you want to create).	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> Alert To Do Both 	No
Approval Required	Used to indicate whether approval is required while creating payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval. <p>Note: This field appears only when the Approval Required check box is selected.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	Yes (Conditional) <p>Note: This field is required when the Approval Required check box is selected.</p>
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval. <p>Note: This field appears only when the Approval Required check box is selected.</p>	Yes (Conditional) <p>Note: This field is required when the Approval Required check box is selected.</p>
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver. <p>Note: This field appears only when the Approval Required check box is selected.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p>	Yes (Conditional) <p>Note: This field is required when the Approval Required check box is selected.</p>
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver. <p>Note: This field appears only when the Approval Required check box is selected.</p>	Yes (Conditional) <p>Note: This field is required when the Approval Required check box is selected.</p>

Tip: Alternatively, you can click the **Duplicate** button in the **Payment Agreement Request Type** zone to create a copy of the payment agreement request type.

5. Enter the required details.

6. Define, edit, or remove characteristics from the payment agreement request type, if required.
7. Click **Save**.

The new payment agreement request type is defined.

Searching for a Payment Agreement Request

Prerequisites

To search for a payment agreement request, you should have:

- Payment agreement request types defined in the application

Procedure

To search for a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Credit & Collection** and then click **Payment Agreement Request**.
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request** sub-menu.
The **Payment Agreement Request** screen appears.
4. Enter the search criteria in the **Search Payment Agreement Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of payment agreement requests that meet the search criteria appears in the **Search Results** section.

 - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

Note: This tab will be displayed only when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

The **Add Payment Agreement Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Information	Displays information about the payment agreement request.	Not applicable
Log Details	Used to specify additional comments on the payment agreement request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Payment Agreement Request Log** zone.

Oracle Revenue Management and Billing allows you to create a dispute request for an account. Through a dispute request, the dispute against a particular bill, bill segment, and/or adjustment is tracked and closed. While creating a dispute request, you need to specify the dispute request type using which you want to create the dispute request. It is the dispute request type which helps the system to determine:

- The business object using which the dispute request should be created
- Whether the dispute request must be approved before creating adjustments to settle a dispute against a bill, bill segment, or adjustment
- Approval profile using which the dispute request must be approved
- Whether multi-level or single-level approval is required for a dispute request
- Whether debit or credit hierarchy must be used for approval when the dispute request amount is zero
- Default adjustment type using which adjustments must be created

You can add completed bills, its bill segments, and adjustments in the dispute request. In other words, at present, the system enables you to resolve the dispute against a bill, bill segment, and adjustment. If the dispute is against a bill, the system, by default, sets the dispute amount and does not allow you to change the dispute amount. The dispute amount is set to the original bill amount because the original bill amount and dispute amount must be equal. However, if the original bill amount is positive, then the dispute amount is set to negative, and vice versa. If the dispute is against a bill segment or adjustment, you can change the dispute amount, if required.

Once a dispute request is created, the status of the dispute request is set to Draft. You can then edit or delete the dispute request, if required. Once you add the bills, bill segments, or adjustments in a dispute request, you can submit the dispute request. On submitting a dispute request, the system behaves in the following manner:

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Bill	Fully Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the bill. 2. Swaps the adjustment onto the next bill.
Bill	Unpaid	Yes	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Stops the automatic payment created for the current bill. 2. A characteristic is defined on the current bill indicating the date till when the bill should not be considered by the Overdue Monitor (C1-ADMOV) batch. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: The above step (2) occurs only when the approval is required for the dispute request.</p> </div> <ol style="list-style-type: none"> 3. Reopens the current bill of the account. 4. Creates the adjustment using the specified adjustment type for the bill and swaps the adjustment onto the current bill. 5. Completes and freeze the current bill.
Bill	Unpaid	No	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the bill. 2. Swaps the adjustment onto the current or next bill depending on the value defined for the Adjustment on Next Bill parameter in an algorithm created using the C1- ENTERADJ algorithm type.

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Bill	Partially Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates two adjustments using the specified adjustment type for the bill. 2. Swaps one adjustment onto the current bill and another adjustment onto the next bill. <p>Example: A dispute is raised against a bill (Bill Amount – 100, Dispute Amount – 100, and Unpaid Amount - 50), then one adjustment (with the adjustment amount 50) is swap on the current bill and another adjustment (with the adjustment amount 50) is swap on the next bill.</p>
Bill Segment	Fully Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the bill segment. 2. Swaps the adjustment onto the next bill.
Bill Segment	Unpaid	Yes	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Stops the automatic payment created for the current bill. 2. A characteristic is defined on the current bill indicating the date till when the bill should not be considered by the Overdue Monitor (C1-ADMOV) batch. <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p>Note: The above step (2) occurs only when the approval is required for the dispute request.</p> </div> <ol style="list-style-type: none"> 3. Reopens the current bill of the account. 4. Creates the adjustment using the specified adjustment type for the bill segment and swaps the adjustment onto the current bill. 5. Completes and freeze the current bill.

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Bill Segment	Unpaid	No	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the bill segment. 2. Swaps the adjustment onto the current or next bill depending on the value defined for the Adjustment on Next Bill parameter in an algorithm created using the C1- ENTERADJ algorithm type.
Bill Segment	Partially Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates two adjustments using the specified adjustment type for the bill segment. 2. Swaps one adjustment onto the current bill and another adjustment onto the next bill. <p>Example: A dispute is raised against a bill segment (Bill Segment Amount – 100, Dispute Amount – 100, and Unpaid Bill Segment Amount - 50), then one adjustment (with the adjustment amount 50) is swap on the current bill and another adjustment (with the adjustment amount 50) is swap on the next bill.</p>
Adjustment	Fully Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the adjustment (against which you have raised a dispute). 2. Swaps the adjustment onto the next bill.

Dispute Against	Type of Bill	Stop Auto Pay (Yes or No)	Behavior
Adjustment	Unpaid	Yes	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Stops the automatic payment created for the current bill. 2. A characteristic is defined on the current bill indicating the date till when the bill should not be considered by the Overdue Monitor (C1-ADMOV) batch. <div data-bbox="927 661 1472 743" style="border: 1px solid black; padding: 5px;"> <p>Note: The above step (2) occurs only when the approval is required for the dispute request.</p> </div> <ol style="list-style-type: none"> 3. Reopens the current bill of the account. 4. Creates the adjustment using the specified adjustment type for the adjustment (against which you have raised a dispute) and swaps the adjustment onto the current bill. 5. Completes and freeze the current bill.
Adjustment	Unpaid	No	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates the adjustment using the specified adjustment type for the adjustment (against which you have raised a dispute). 2. Swaps the adjustment onto the current or next bill depending on the value defined for the Adjustment on Next Bill parameter in an algorithm created using the C1- ENTERADJ algorithm type.
Adjustment	Partially Paid	Not applicable	<p>The system does the following:</p> <ol style="list-style-type: none"> 1. Creates two adjustments using the specified adjustment type for the adjustment (against which you have raised a dispute). 2. Swaps one adjustment onto the current bill and another adjustment onto the next bill. <p>Example: A dispute is raised against an adjustment (Adjustment Amount – 100, Dispute Amount – 100, and Unpaid Adjustment Amount - 50), then one adjustment (with the adjustment amount 50) is swap on the current bill and another adjustment (with the adjustment amount 50) is swap on the next bill.</p>

Finally, the status of the dispute request is changed to **Processed**. You can optionally configure the system to use the approval workflow process for a dispute request. If the **Approval Required** flag is set to **Yes** in a dispute request type, then on submitting the respective dispute request, the approval workflow process creates a To Do for the approver to review the dispute request. Once the approver approves the dispute request, the system behaves as mentioned in the above table. The approver can approve, reject, or resubmit the dispute request. When the dispute request is resubmitted to the submitter, the submitter can edit, cancel, or submit the dispute request.

The approval process is configured through the approval profile. The approval profile allows you to define the debit and credit hierarchy. If the dispute request amount is negative, the credit hierarchy in the approval profile is used for approval. However, if the dispute request amount is positive, the debit hierarchy in the approval profile is used for approval. You can either opt to use single-level or multi-level approval for the dispute requests.

During the dispute request process, a dispute request creation goes through various statuses in its lifecycle. For more information about the dispute request statuses, see [Dispute Request \(Without Approval\) Status Transition](#) on page 1731 and [Dispute Request \(With Approval\) Status Transition](#) on page 1731.

Note: The lifecycle of a dispute request creation is driven by the respective business object using which the request is created. The dispute request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the dispute request process, see [Prerequisites](#) on page 1732.

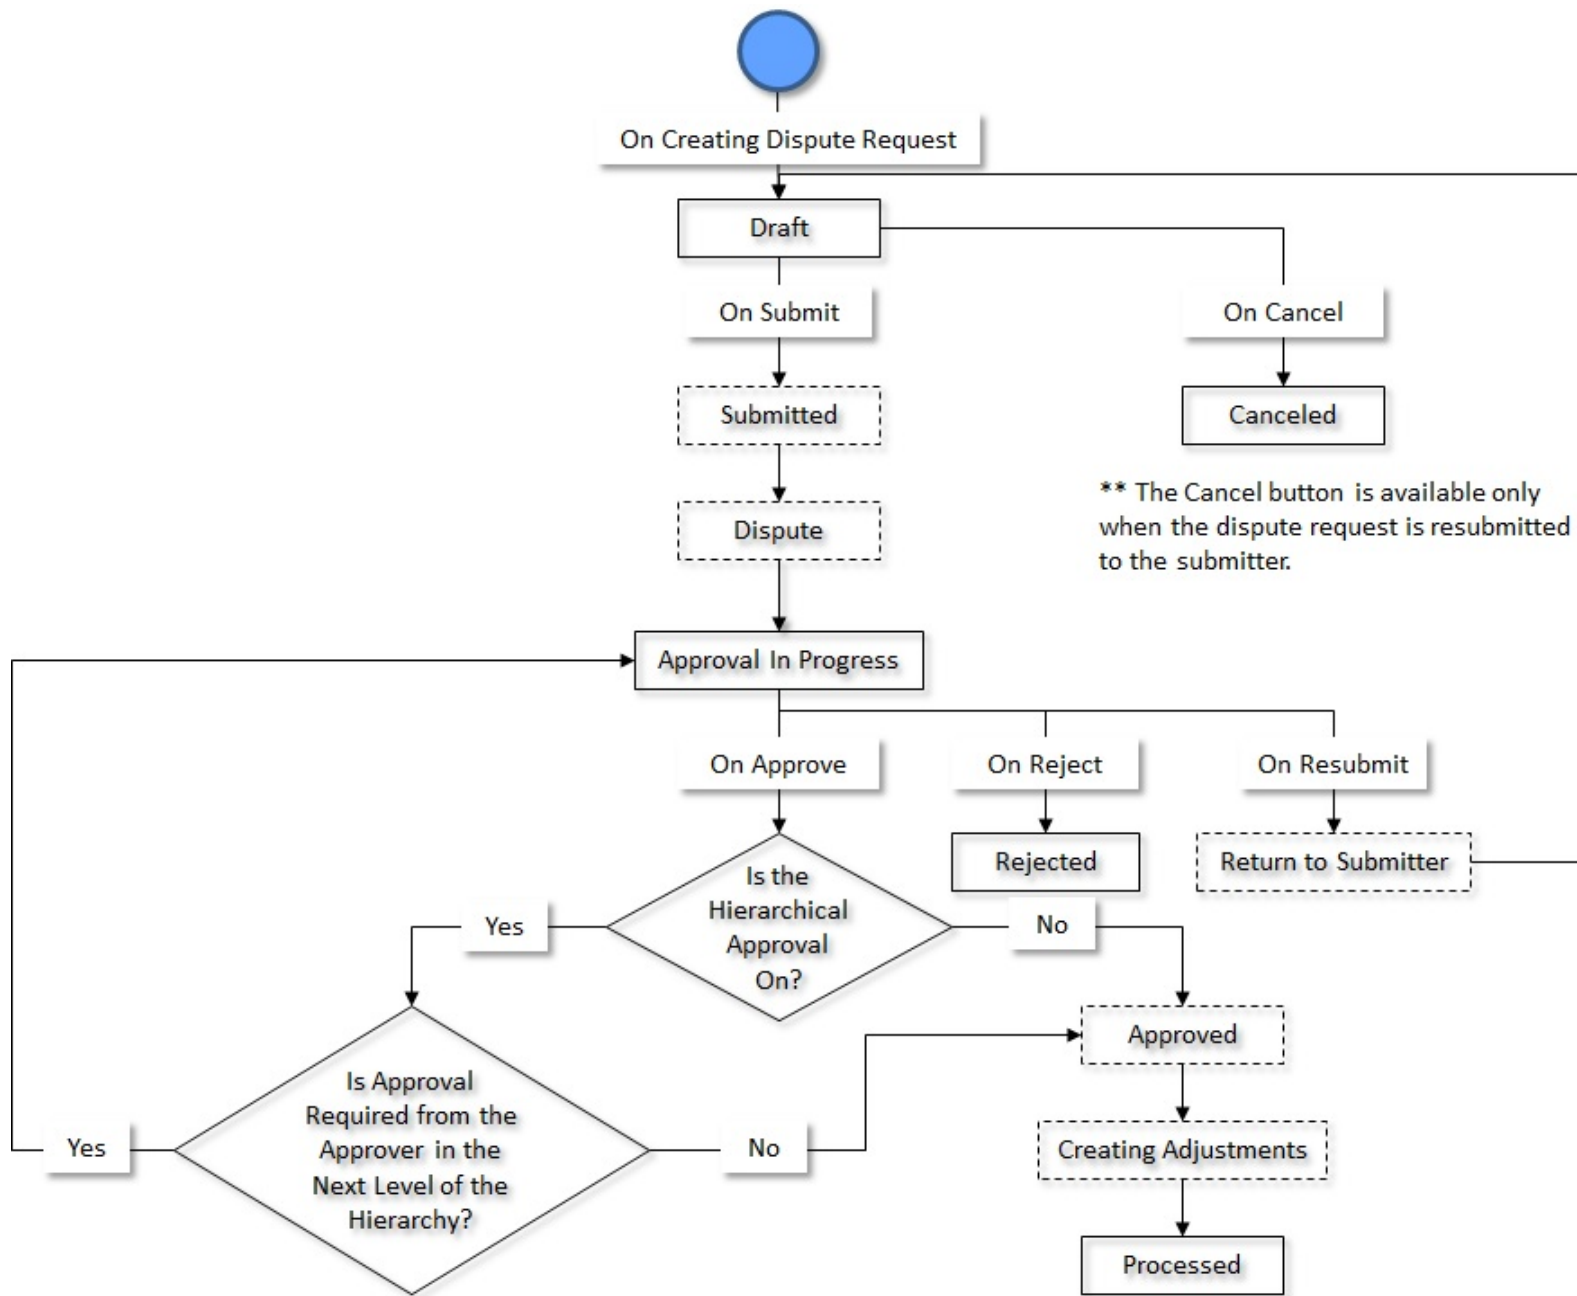

Dispute Request (Without Approval) Status Transition

The following figure graphically indicates how a dispute request moves from one status to another when approval workflow is off:

Dispute Request (With Approval) Status Transition

The following figure graphically indicates how a dispute request moves from one status to another when approval workflow is on:

Prerequisites

To setup the dispute request process, you need to do the following:

- Define the required refund request types in the system
- Define the required adjustment types (for creating dispute adjustments) where A/P request type is defined
- Define the required characteristic types where the characteristic entity is set to **Dispute Request Type**
- Define the required characteristic types where the characteristic entity is set to **Dispute Request**
- Define rejected status reasons for the **C1-DisputeRequest** business object

- Assign the **C1-DSPSB** To Do type to a To Do role whose users must receive To Do generated while submitting a dispute request for approval
- Define the required approval profiles with the credit/debit hierarchy and **C1_DISAP** To Do type
- Create an algorithm using the **C1-DSPTRQINF** algorithm type if you want to create Dispute Requests using the dispute request information.
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

Algorithms Used in C1-DisputeRequest

The following table lists the algorithms which are attached to the **C1-DisputeRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-DSPTRQINF	C1-DSPTRQINF	This algorithm generates the dispute request information string which appears throughout the application. It concatenates the following fields: <ul style="list-style-type: none"> • Dispute Request Type Description • Dispute Request Status Description • Dispute Request ID
Validation	C1-DSPTVADN	C1-DSPTVADN	This algorithm validates following: <p>Draft status validations:</p> <ul style="list-style-type: none"> • At-least one entity should be selected to submit a dispute. Dispute Request with at-least one Bill or Bill Line Item should be added for submission • Dispute amount cannot be zero or null • If a bill is already present in dispute request and request is not in final status then user should not be allowed to add same bill in another dispute request • Disputed Amount should be equal to bill outstanding amount if bill Line item contain multiple contracts

The following table lists the algorithms which are used in the lifecycle of the **C1-DisputeRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DISPUTSUB	C1-DISPUTSUB	<p>This algorithm checks the following:</p> <ul style="list-style-type: none"> Whether the approval is required for the dispute request. If the approval is required for a dispute request, the status of the dispute request is changed to Approval In Progress. However, if the approval is not required for a dispute request, the status of the dispute request is changed to Creating Adjustment. At least one entity, such as payment event, payment, or credit bill line item (such as credit bill segment or adjustment) is selected in the dispute request. Whether the approval profile attached to the Dispute Request Type has the credit hierarchy and To Do Type defined.
Submitted	Enter	C1-DPTSTAUPY	C1-DPTSTAUPY	<p>This algorithm is used to stop auto pay on bill.</p> <p>Parameter – Characteristic Type</p> <p>Characteristic Type is used to add the characteristic which is stamped on the bill to postpone overdue process</p>
Dispute	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.</p>
Dispute	Enter	C1-DPTSTAUPY	C1-DPTSTAUPY	<p>This algorithm is used to stop auto pay on bill.</p> <p>Parameter – Characteristic Type</p> <p>Characteristic Type is used to add the characteristic which is stamped on the bill to postpone overdue process</p>

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustments	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition . Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Creating Adjustments	Enter	C1-ENTERADJS	C1-ENTERADJ	<p>This algorithm is executed on submit or on approve of a dispute request. It creates the adjustments which will be swapped on the current or next bill.</p> <p>Adjustment are created with below logic</p> <p>Unpaid Bill logic</p> <ul style="list-style-type: none"> • If stop auto pay switch is No and auto pay exist then create adjustment on next bill • If stop auto pay switch is Yes then perform below step <ul style="list-style-type: none"> • If bill cannot be reopen or adjustment need to be created on next bill then create adjustment on next bill • If approval is configured then create to do for manual creation of auto pay (Auto Pay is stopped while submitting the request) • Else <ul style="list-style-type: none"> • create adjustment on current bill <ul style="list-style-type: none"> • if approval is configured then <ul style="list-style-type: none"> • Bill reopen and complete (Auto Pay is stopped while submitting the request) • Delete overdue char from bill

Status	System Event	Algorithm	Algorithm Type	Description
				<ul style="list-style-type: none"> • Else <ul style="list-style-type: none"> • Stop auto pay • Reopen and complete <p>Paid Bill logic</p> <ul style="list-style-type: none"> • Adjustment will be created on next bill <p>Partial Bill Logic</p> <ul style="list-style-type: none"> • Adjustment will be created to balance current bill and another adjustment will be created for remaining amount and it will be stamped on next bill. • If dispute adjustment will increase the debit or credit balance then adjustment will be stamped on next bill. <p>There are four parameters for this algorithm.</p> <p>Parameter 1 – Adjustment on Next Bill (Required)</p> <ul style="list-style-type: none"> • Adjustments should be swapped on the current or next bill. It is used only for unpaid bill. <p>Parameter 2 – Match Type Entity Flag (Required)</p> <ul style="list-style-type: none"> • Valid values for this parameter are BILL, BSEG and SA. This parameter defines the open item at which the match events are to be created. For bills which are not paid yet, new match events will be created based on the value of this parameter. • Based on the flag defined Match Events are created as follows, <ul style="list-style-type: none"> • If the Match Type Flag is BILL, then all FTs on a bill have the same Match Event. • If the Match Type Flag is BSEG, then each line item (bill segment or adjustment) on the bill will have a unique match event. • If the Match Type Flag is SA, then line items belonging to the same contract within a bill will have the same match event. <p>Parameter 3 – To Do Type</p> <ul style="list-style-type: none"> • To Do will be sent to the user if bill can't be reopen and auto pay has been stopped.

Status	System Event	Algorithm	Algorithm Type	Description
				<p>Parameter 4 – Characteristic Type</p> <ul style="list-style-type: none"> Characteristic Type is used to remove the characteristic which is stamped on the bill to postpone overdue process
Approval In Progress	Enter	C1-DSPTAPP	C1-DSPTAPP	<p>This algorithm creates the following:</p> <ul style="list-style-type: none"> A To Do using the To Do type specified in the approval profile which is attached to the dispute request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not. A log entry is added when a To Do is created using the To Do type.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	<p>This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.</p>
Approved	Enter	C1-DSPAPPRVD	C1-DSPAPPRVD	<p>This algorithm is triggered when the approver clicks the Approve button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the dispute request is changed to Approval In Progress and the algorithm attached to the Approval In Progress status is invoked. If further approval is not required, the status of the dispute request is changed to Creating Adjustment.</p>
Return to Submitter	Enter	C1-DSPPTRESUB	C1-DSPPTRESUB	<p>This algorithm is invoked on Re-Submit button. It moves the status of Dispute Request into Draft. A To Do will be generated for the user as submitter whose To Do Type and To Do Role are fetched from Dispute Request Type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Rejected	Enter	C1- DSPTREJT	C1- DSPTREJT	This algorithm is executed when on reject. Parameter 1 – To Do Type <ul style="list-style-type: none"> To Do will be sent to the user if bill can't be reopen and auto pay has been stopped. Parameter 2 – Characteristic Type <ul style="list-style-type: none"> Characteristic Type is used to remove the characteristic which is stamped on the bill to postpone overdue process
Canceled	Enter	C1- DSPTREJT	C1- DSPTREJT	This algorithm is executed when on reject. Parameter 1 – To Do Type <ul style="list-style-type: none"> To Do will be sent to the user if bill can't be reopen and auto pay has been stopped. Parameter 2 – Characteristic Type <ul style="list-style-type: none"> Characteristic Type is used to remove the characteristic which is stamped on the bill to postpone overdue process

Dispute Request Type

Oracle Revenue Management and Billing allows you to define:

- **Dispute Request Type** – It is used to create a dispute request. You can define multiple dispute request types in the system. A dispute request type helps the system to determine:
 - Whether the dispute request must be approved before creating dispute adjustments in the system
 - Approval profile using which the dispute request must be approved
 - Whether multi-level or single-level approval is required while creating dispute adjustments in the system
 - Adjustment type using which the dispute adjustment must be created when the total dispute amount is less than the minimum dispute amount
 - Default adjustment type using which dispute adjustments must be created

While defining a dispute request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the dispute request (which is created using the dispute request type) is sent for approval before creating the dispute adjustments. However, if the **Approval Required** check box is not selected, the dispute adjustments are created immediately on submitting a dispute request. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. You can define a debit and credit hierarchy in the approval profile using the threshold amount. The debit approval hierarchy and credit approval hierarchy is used for approving dispute request. Therefore, while defining an approval profile for dispute, you need to define credit and debit hierarchy and set the To Do Type to **C1-DISAP**.

You can define an approval hierarchy where users with different To Do role at each level can approve or reject the dispute request. For example, you can define an approval profile called A1 with two levels of approval. At the first level, a user with the *Manager* To Do role will approve or reject the dispute request, and at the second level, a user with the *Senior Manager* To Do role will approve or reject the dispute request. On submitting a dispute request where approval is required, a notification in the form of To Do is sent to all users with the To Do role defined at the first level in the hierarchy. Once the request is approved at the first level, a notification is sent to all users with the To Do role defined at the next level in the hierarchy. This process continues till the approval is received from all levels in

the hierarchy. Once users at all levels approve the dispute request, the dispute adjustments are created. However, if an approver at any level in the hierarchy rejects the request, the dispute adjustments are not created.

The approval hierarchy is controlled by the threshold amount. For example, you define an approval profile called A1 with two levels of approval – First Level (Threshold Amount: 300, To Do Role: Manager) and Second Level (Threshold Amount: 500, To Do Role: Senior Manager). Now, if the total dispute amount is equal to 300 or less than 500, then the approval is required only from the first level in the hierarchy and not from the second level in the hierarchy. However, if the total dispute amount is equal to or greater than 500, then the approval is required from the first level and then from the second level in the hierarchy. But, if the total dispute amount is less than 300, then the approval is not required from any levels in the hierarchy. The system will automatically approve the dispute request and create the dispute adjustments.

The system supports both single-level and multi-level approval process while approving dispute request. If the **Hierarchical Approval** check box is selected while defining a dispute request type, the approval hierarchy defined in the approval profile is followed based on the threshold limit. However, if the **Hierarchical Approval** check box is not selected while defining a dispute request type, the approval is required only from the approval level where the total dispute amount falls within the threshold limit. Let us understand this with the help of some examples.

Dispute Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval								
D1	Dispute Analyst	<p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$500	Senior Analyst	\$750	Manager	\$1500	Senior Manager	Yes
Threshold Amount	To Do Role										
\$500	Senior Analyst										
\$750	Manager										
\$1500	Senior Manager										
D2	Dispute Analyst	<p>Credit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$500</td> <td>Senior Analyst</td> </tr> <tr> <td>\$750</td> <td>Manager</td> </tr> <tr> <td>\$1500</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$500	Senior Analyst	\$750	Manager	\$1500	Senior Manager	No
Threshold Amount	To Do Role										
\$500	Senior Analyst										
\$750	Manager										
\$1500	Senior Manager										
D3	Dispute Analyst	<p>Debit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$100</td> <td>Senior Analyst</td> </tr> <tr> <td>\$200</td> <td>Manager</td> </tr> <tr> <td>\$300</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$100	Senior Analyst	\$200	Manager	\$300	Senior Manager	Yes
Threshold Amount	To Do Role										
\$100	Senior Analyst										
\$200	Manager										
\$300	Senior Manager										
D4	Dispute Analyst	<p>Debit Hierarchy</p> <table border="1"> <thead> <tr> <th>Threshold Amount</th> <th>To Do Role</th> </tr> </thead> <tbody> <tr> <td>\$100</td> <td>Senior Analyst</td> </tr> <tr> <td>\$200</td> <td>Manager</td> </tr> <tr> <td>\$300</td> <td>Senior Manager</td> </tr> </tbody> </table>	Threshold Amount	To Do Role	\$100	Senior Analyst	\$200	Manager	\$300	Senior Manager	No
Threshold Amount	To Do Role										
\$100	Senior Analyst										
\$200	Manager										
\$300	Senior Manager										

The following table indicates how the system will behave in different dispute scenarios:

Dispute Request	Dispute Request Type	Total Refund Amount (\$)	Comments
DR1	D1	200	This dispute request is automatically approved by the system because the total dispute amount is less than \$500.
DR2	D1	750	The To Do is sent for approval to the following users in the specified order: <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role This is because the total dispute amount is either equal to \$750 or less than \$1500 and hierarchical approval is required.
DR3	D1	2000	The To Do is sent for approval to the following users in the specified order: <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role This is because the total dispute amount is greater than \$1500 and hierarchical approval is required.
DR4	D2	200	This dispute request is automatically approved by the system because the total dispute amount is less than \$500.
DR5	D2	750	The To Do is sent for approval to users with the Manager To Do role. This is because the total dispute amount is either equal to \$750 or less than \$1500 and hierarchical approval is not required.
DR6	D2	2000	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total dispute amount is greater than \$1500 and hierarchical approval is not required.
DR7	D3	90	This dispute request is automatically approved by the system because the total dispute amount is less than \$100.
DR8	D3	250	The To Do is sent for approval to the following users in the specified order: <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role This is because the total dispute amount is either equal to \$200 or less than \$300 and hierarchical approval is required.

Dispute Request	Dispute Request Type	Total Refund Amount (\$)	Comments
DR9	D3	500	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> 1. Users with the Senior Analyst To Do role 2. Users with the Manager To Do role 3. Users with the Senior Manager To Do role <p>This is because the total dispute amount is greater than \$300 and hierarchical approval is required.</p>
DR10	D4	90	This dispute request is automatically approved by the system because the total dispute amount is less than \$100.
DR11	D4	250	The To Do is sent for approval to users with the Manager To Do role. This is because the total dispute amount is either equal to \$200 or less than \$300 and hierarchical approval is not required.
DR12	D4	500	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total dispute amount is greater than \$300 and hierarchical approval is not required.

The **Dispute Request Type** screen allows you to define, edit, delete, and copy a dispute request type. This screen consists of the following zones:

- [Dispute Request Type List](#) on page 1741
- [Dispute Request Type](#) on page 1742

Dispute Request Type List

The **Dispute Request Type List** zone lists dispute request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Dispute Request Type	Displays the dispute request type.
Description	Displays the description of the dispute request type.
Edit	On clicking the Edit () icon, the Dispute Request Type screen appears where you can edit the details of the dispute request type.
Duplicate	On clicking the Duplicate () icon, the Dispute Request Type screen appears where you can define a dispute request type using an existing dispute request type.
Delete	<p>On clicking the Delete () icon, you can delete the dispute request type.</p> <p>Note: You can delete a dispute request type only when you have not created a dispute request using the dispute request type.</p>

On clicking the **Broadcast**  icon corresponding to dispute request type, the **Dispute Request Type** zone appears with the details of the respective dispute request type.

Dispute Request Type

The **Dispute Request Type** zone displays the details of the dispute request type. This zone consists of the following sections:

- **Main** – This section provides basic information about the dispute request type. It contains the following fields:

Field Name	Field Description
Dispute Request Type	Displays the dispute request type.
Description	Displays the description of the dispute request type.
Dispute Request Business Object	Indicates the business object that will be used to create the dispute request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the dispute request type.
Status	Indicates the status of the dispute request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Default Adjustment Type	Indicates the adjustment type using which the dispute adjustment must be created. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Approval Required	Indicates whether approval is required while creating the dispute adjustments using the dispute request type.

Field Name	Field Description
Approval Profile	<p>Indicates the approval profile which must be used to define approval hierarchy for the dispute request type.</p> <p>Note: This field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the Approval Profile screen appears where you can view the details of the respective approval profile.</p>
Hierarchical Approval	<p>Indicates whether multi-level or single approval is required while creating the dispute adjustments using the dispute request type.</p> <p>Note: This field appears only when the Approval Required check box is selected.</p>
Zero Threshold Amount Hierarchy	Indicates that based on the approval profile hierarchy, To Do Type from the hierarchy (credit/debit) will be picked up.
Submitter To Do Type	<p>Indicates the To Do type for the submitter when the dispute request type is resubmitted by the approver.</p> <p>Note: This field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Type screen appears where you can view the details of the respective To Do type.</p>
Submitter To Do Role	<p>Indicates the To Do role for the submitter when the dispute request type is resubmitted by the approver.</p> <p>Note: This field appears only when the Approval Required check box is selected.</p> <p>It has a link. On clicking the link, the To Do Role screen appears where you can view the details of the respective To Do role.</p>

- **Characteristics** – This section lists the characteristics defined for the dispute request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the dispute request type.

Button Name	Button Description
Delete	Used to delete the dispute request type.
	Note: You can delete a dispute request type only when you have not created a dispute request using the dispute request type.
Duplicate	Used to create a new dispute request type using an existing dispute request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the dispute request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Dispute Request Type** zone does not appear in the **Dispute Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the dispute request type in the **Dispute Request Type List** zone.

Defining a Dispute Request Type

Prerequisites

To define a dispute request type, you should have:

- Dispute request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To define a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Dispute Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Dispute Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type Business Object	Used to indicate the business object that you want to use to create the dispute request type.	Yes

Tip: Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Dispute Request Type** screen.

Note: The **Select Business Object** screen appears only when there are multiple dispute request type business objects defined in the application. If there is only one dispute request type business object defined in the application, the **Dispute Request Type** screen appears.

4. Select the required dispute request type business object from the respective field.
5. Click **OK**.

The **Dispute Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the dispute request type.
- **Characteristics** – Used to define characteristics for the dispute request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Used to specify the dispute request type.	Yes
Business Object	Indicates the dispute request type business object used while defining the dispute request type.	Not applicable
Description	Used to specify the description for the dispute request type.	Yes
Dispute Request Business Object	Used to indicate the business object that you want to use while creating the dispute request.	Yes
Detailed Description	Used to specify additional information about the dispute request type.	No
Status	Used to indicate the status of the dispute request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a dispute request type to Inactive if there are dispute requests which are created using the dispute request type and are currently in the Draft or Approval In Progress status.	

Field Name	Field Description	Mandatory (Yes or No)
Default Adjustment Type	Used to indicate the adjustment type using which the dispute adjustment must be created.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	
Approval Required	Used to indicate whether approval is required while creating the dispute adjustments using the dispute request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the dispute request type.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the dispute adjustments using the dispute request type.	No
	Note: This field appears only when the Approval Required check box is selected.	
Zero Threshold Amount Hierarchy	Used to indicate that based on the approval profile hierarchy, To Do Type from the hierarchy will be selected. The valid values are: <ul style="list-style-type: none"> • Credit • Debit 	No
Submitter To Do Type	Used to indicate the To Do type for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected. The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Role	Used to indicate the To Do role for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.

Note:

When the threshold amount is equal to zero for the request then based on the value in **Zero Threshold Amount Hierarchy**, the to do type will be picked from the **Approval Profile** hierarchy to send notification.

Only when the **Approval Required** checkbox is selected, you will be able to select **Hierarchical Approval** and **Approval Profile** to be used. If hierarchical approval is not selected, the request has to be approved by a single approver (highest level approver determined by the dispute amount and approval profile).

6. Enter the required details depending on whether you want to define dispute request type.
7. Define characteristics for the dispute request type, if required.
8. Click **Save**.

The dispute request type is defined.

Defining Characteristics for a Dispute Request Type

Prerequisites

To define characteristics for a dispute request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Dispute Request Type**)

Procedure

To define characteristics for a dispute request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a dispute request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Dispute Request Type .	Note: This field is required when you are defining a characteristic for the dispute request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the dispute request type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the dispute request type, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the dispute request type, click the **Delete**  icon corresponding to the characteristic.

Editing a Dispute Request Type

Prerequisites

To edit a dispute request type, you should have:

- Dispute request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To edit a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **D** and then click **Dispute Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Dispute Request Type** sub-menu.

The **Dispute Request Type** screen appears.

- In the **Dispute Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the dispute request type whose details you want to edit.

The **Dispute Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the dispute request type.
- **Characteristics** – Used to define characteristics for the dispute request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Displays the dispute request type.	Not applicable
Business Object	Indicates the dispute request type business object used while defining the dispute request type.	Not applicable
Description	Used to specify the description for the dispute request type.	Yes
Dispute Request Business Object	Used to indicate the business object that you want to use while creating the dispute request.	Yes
Detailed Description	Used to specify additional information about the dispute request type.	No
Status	Used to indicate the status of the dispute request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
	Note: You cannot change the status of a dispute request type to Inactive if there are dispute requests which are created using the dispute request type and are currently in the Draft or Approval In Progress status.	
Default Adjustment Type	Used to indicate the adjustment type using which the dispute adjustment is created.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Required	Used to indicate whether approval is required while creating the dispute adjustments using the dispute request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the dispute request type.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the dispute adjustments using the dispute request type.	No
	Note: This field appears only when the Approval Required check box is selected.	
Zero Threshold Amount Hierarchy	Used to indicate that based on the approval profile hierarchy, To Do Type from the hierarchy is selected. The valid values are: <ul style="list-style-type: none"> • Credit • Debit 	No
Submitter To Do Type	Used to indicate the To Do type for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected. The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	Note: This field is required when the Approval Required check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	Note: This field is required when the Approval Required check box is selected.

Tip: Alternatively, you can click the **Edit** button in the **Dispute Request Type** zone to edit the details of the dispute request type.

5. Modify the details, if required.
6. Define, edit, or remove characteristics from the dispute request type, if required.
7. Click **Save**.

The changes made to the dispute request type are saved.

Copying a Dispute Request Type

Instead of creating a dispute request type from scratch, you can create a new dispute request type using an existing dispute request type. This is possible through copying a dispute request type. On copying a dispute request type, the details including the characteristics are copied to the new dispute request type. You can then edit the details, if required.

Prerequisites

To copy a dispute request type, you should have:

- Dispute request type (whose copy you want to create) defined in the application
- Dispute request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

Procedure

To copy a dispute request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Dispute Request Type**.
A sub-menu appears.
3. Click the **Search** option from the **Dispute Request Type** sub-menu.
The **Dispute Request Type** screen appears.
4. In the **Dispute Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the dispute request type whose copy you want to create.

The **Dispute Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the dispute request type.
- **Characteristics** – Used to define characteristics for the dispute request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Used to specify the dispute request type.	Yes
Business Object	Indicates the dispute request type business object used while defining the dispute request type.	Not applicable
Description	Used to specify the description for the dispute request type.	Yes
Dispute Request Business Object	Used to indicate the business object that you want to use while creating the dispute request.	Yes
Detailed Description	Used to specify additional information about the dispute request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the dispute request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
	Note: You cannot change the status of a dispute request type to Inactive if there are dispute requests which are created using the dispute request type and are currently in the Draft or Approval In Progress status.	
Default Adjustment Type	Used to indicate the adjustment type using which the dispute adjustment must be created.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	
Approval Required	Used to indicate whether approval is required while creating the dispute adjustments using the dispute request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the dispute request type.	Yes (Conditional)
	Note: This field appears only when the Approval Required check box is selected.	
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the dispute adjustments using the dispute request type.	No
	Note: This field appears only when the Approval Required check box is selected.	
Zero Threshold Amount Hierarchy	Used to indicate that based on the approval profile hierarchy, To Do Type from the hierarchy will be selected. The valid values are: <ul style="list-style-type: none"> Credit Debit 	No

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate the To Do type for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
	Note: This field appears only when the Approval Required check box is selected. The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.	
Submitter To Do Role	Used to indicate the To Do role for the submitter when the dispute request is resubmitted by the approver.	Yes (Conditional) Note: This field is required when the Approval Required check box is selected.
	Note: This field appears only when the Approval Required check box is selected.	

Tip: Alternatively, you can click the **Duplicate** button in the **Dispute Request Type** zone to create a copy of the dispute request type.

- Enter the required details.
- Define, edit, or remove characteristics from the dispute request type, if required.
- Click **Save**.

The new dispute request type is defined.

Dispute Request (Used for Searching)

The **Dispute Request** screen allows you to search for a dispute request using various search criteria. It also allows you to create a dispute request. Through this screen, you can navigate to the following screen:

- [Dispute Request \(Used for Viewing\)](#) on page 1763

This screen consists of the following zone:

- [Search Dispute Request](#) on page 1755

Search Dispute Request

The **Search Dispute Request** zone allows you to search for dispute requests using various search criteria. This zone contains the following two sections:

- Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a dispute request using request, person, account or bill details. The valid values are: <ul style="list-style-type: none"> Request Details – Used when you want to search for dispute requests. Person, Account, or Bill Details – Used when you want to search for person, account, or bill requests. <p>Note: By default, the Request Details option is selected.</p>	Yes
Dispute Request Type	Used to search dispute requests which are created using a particular dispute request type. <p>Note: This field appears only when you select the Request Details option from the Search By list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search dispute requests with a particular status. The valid values are: <ul style="list-style-type: none"> • Approval In Progress • Cancelled • Draft • Processed • Rejected 	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
User ID	Used to search dispute requests which are created by a particular user.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Created From	Used to search dispute requests which are created from a particular date onwards.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
To	Used to search dispute requests which are created till a particular date.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Dispute Request ID	Used to search a particular dispute request.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	
Account ID	Used to search dispute requests which are created for a particular account.	No
	Note: The Search  icon appears corresponding to the field. On clicking the Search icon, the Account Search window appears.	
Dispute Reason	Used to search dispute requests which are created using a particular dispute reason for the bill.	No
	Note: This field appears only when you select the Request Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search dispute requests which are created for a particular person.	No
	<p>Note:</p> <p>This field appears only when you select the Person, Account, or Bill Details option from the Search By list.</p> <p>The Search  icon appears corresponding to the field. On clicking the Search icon, the Person Search window appears.</p>	
Bill ID	Used to search dispute requests which includes bill segments or adjustments of a particular bill.	No
	<p>Note:</p> <p>This field appears only when you select the Person, Account, or Bill Details option from the Search By list.</p> <p>The Search  icon appears corresponding to the field. On clicking the Search icon, the Bill Search window appears.</p>	
Alternate Bill ID	Used to search dispute requests which are created for a particular bill using the alternate bill ID.	No
	<p>Note: This field appears only when you select the Person, Account, or Bill Details option from the Search By list.</p>	
Bill Date From	Used to search dispute requests which includes bill segments or adjustments of bills which are created from a particular date onwards.	No
	<p>Note: This field appears only when you select the Person, Account, or Bill Details option from the Search By list.</p>	
To	Used to search dispute requests which includes bill segments or adjustments of bills which are created till a particular date.	No
	<p>Note: This field appears only when you select the Person, Account, or Bill Details option from the Search By list.</p>	

Note: You must specify at least one search criterion while searching for a dispute request.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date Time	Displays the date and time when the dispute request is created.
Dispute Request Information	Displays information about the dispute request. Note: It has a link. On clicking the link, the Dispute Request screen appears depending on whether the request is for dispute.
Status	Indicates the status of the dispute request.
Account Information	Displays additional information about the account for which the dispute request is created. Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Created By	Indicates the user who has created the dispute request.

Searching for a Dispute Request

Prerequisites

To search for a dispute request, you should have:

- Dispute request types defined in the application

Procedure

To search for a dispute request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Dispute Request**.
A sub-menu appears.
3. Click the **Search** option from the **Dispute Request** sub-menu.
The **Dispute Request** screen appears.
4. Enter the search criteria in the **Search Dispute Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of dispute requests that meet the search criteria appears in the **Search Results** section.

Viewing the Dispute Request Details**Procedure**

To view the details of a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request whose details you want to view.

The **Dispute Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the dispute request. It contains the following zones:
 - **Dispute Request** – Displays the details of the dispute request.
 - **Dispute Details** – Lists the entities, such as auto payment events, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be disputed.
 - **Dispute Adjustments** – Displays the adjustment details of dispute request.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Dispute Details** zone and only when the status is **Processed**.

- **Previous Dispute Requests** – Displays the details of the bill which must be disputed.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Dispute Details** zone.

- **Bills** – Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to dispute.
 - **Log** – Lists the complete trail of actions performed on the dispute request.
3. View the details of the dispute request in the **Dispute Request** zone.
 4. View the entities such as auto payment events, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be disputed in the **Dispute Details** zone.
 5. View the adjustment details of dispute request in the **Dispute Adjustments** zone.
 6. View the details of the bill which must be disputed in the **Previous Dispute Requests** zone.

Creating a Dispute Request

Prerequisites

To create a dispute request, you should have:

- Dispute request types defined in the application

Procedure

To create a dispute request:

1. Do either of the following:

If you want to	Then
Define a dispute request from the Account Receivable Central screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Account Receivable Central. The Account Receivable Central screen appears. 3. Search for the bill in the Account Receivable Central screen. 4. In the Search Results section, select the required bill and then click Dispute. <p>Note: Only one bill at a time is allowed to select for Dispute Request from the Account Receivable Central screen.</p>
Define a dispute request from the Dispute Request screen	<ol style="list-style-type: none"> 1. Click the Menu link in the Application toolbar. A list appears. 2. From the Main menu, select Financial and then click Dispute Request. A sub-menu appears. 3. Click the Add option from the Dispute Request sub-menu.

The **Select Dispute Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Used to indicate the request type using which you want to create the dispute request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search dispute requests which are created for a particular account.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Dispute Reason	Used to indicate the dispute requests which are created using a particular dispute reason for the bill.	Yes

Tip: Alternatively, you can access the **Select Dispute Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Dispute Request** screen.

2. Select the required dispute request type from the respective field.
3. Click **Save**.

The dispute request is defined and the status of the dispute request is set to **Draft**. The **Dispute Request** screen appears where you can view the details of the dispute request. It contains the following tabs:

Note: The dispute request can be created only for bill with zero outstanding amount.

- **Main** – Displays information about the dispute request. It contains the following zones:
 - **Dispute Request** – Displays the details of the dispute request.
 - **Dispute Details** – Lists the entities, such as auto payment events, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be disputed.
 - **Dispute Adjustments** – Displays the adjustment details of dispute request.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Dispute Details** zone and only when the status is **Processed**.

- **Previous Dispute Requests** – Displays the details of the bill which must be disputed.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Dispute Details** zone.

- **Bills** – Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to dispute.
 - **Log** – Lists the complete trail of actions performed on the dispute request.
4. Add auto payment events, or credit bill line items that you want to dispute.
 5. Edit the dispute amount of each entity, if required.
 6. Define characteristics for the dispute request, if required.

Defining Characteristics for a Dispute Request

Prerequisites

To define characteristics for a dispute request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Dispute Request**)

Procedure

To define characteristics for a dispute request:

- Search for the dispute request in the **Dispute Request** screen.
- In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request whose details you want to edit.

The **Dispute Request** screen appears.

- Click the **Edit** button in the **Dispute Request** zone.

The **Dispute Request** screen appears.

Note: The **Edit** button appears only when the dispute request is in the **Draft** status.

- Ensure that the **Characteristics** section is expanded when you are editing the dispute request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the dispute request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the dispute request.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Dispute Request .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the dispute request.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the dispute request.

5. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the dispute request, click the **Add**  icon and then repeat step 5.

Note: However, if you want to remove a characteristic from the dispute request, click the **Delete**  icon corresponding to the characteristic.

Dispute Request (Used for Viewing)

Once you create a dispute request, the **Dispute Request** screen allows you to:

- Edit and delete a dispute request
- View the details of a dispute request
- Submit a dispute request for approval
- Approve or reject a dispute request
- View the log of a dispute request
- Add a log entry for a dispute request

This screen consists of the following tabs:

- **Main** – Displays information about the dispute request. It contains the following zones:
 - **Dispute Request** – Displays the details of the dispute request.
 - **Dispute Details** – Lists the entities, such as auto payment events, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be disputed.
 - **Dispute Adjustments** – Displays the adjustment details of dispute request.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Dispute Details** zone and only when the status is **Processed**.

- **Previous Dispute Requests** – Displays the details of the bill which must be disputed.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Dispute Details** zone.

- **Bills** – Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to dispute. It contains the following zones:
 - **Search Bills** – Lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.
 - **Bill Line Items** – Lists the debit and credit bill segments and adjustments of the bill.

This tab appears only when the dispute request is in the **Draft** status.

- **Log** – Lists the complete trail of actions performed on the dispute request.

Dispute Request - Main

The **Main** tab displays information about the dispute request. It contains the following zones:

- [Dispute Request](#) on page 1764
- [Dispute Details](#) on page 1766
- [Dispute Adjustments](#) on page 1766
- [Previous Dispute Requests](#) on page 1767

Dispute Request

The **Dispute Request** zone displays the details of the dispute request. This zone contains the following sections:

- **Main** – This section provides basic information about the dispute request. It contains the following fields:

Field Name	Field Description
Dispute Request Information	Displays information about the dispute request.
Dispute Request Type	Indicates the dispute request type using which the dispute request is created. Note: It has a link. On clicking the link, the Dispute Request Type screen appears where you can view the details of the dispute request type.
Status	Indicates the status of the refund request. The valid values are: <ul style="list-style-type: none"> • Draft • Approval In Progress • Cancelled • Rejected • Processed
Dispute Reason	Indicates the reason why the dispute request is rejected.
Account Information	Indicates the account for which the dispute request is created. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Comments	Displays additional information about the dispute request.

- **Characteristics** – Lists the characteristics defined for the dispute request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the dispute request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the dispute request.
	Note: The Edit button appears only when the dispute request is in the Draft status.
Delete	Used to delete the dispute request.
	Note: The Delete button appears only when the dispute request is in the Draft status.
Submit	Used to submit the dispute request for approval.
	Note: The Submit button appears only when the dispute request is in the Draft status.
Cancel	Used to cancel the dispute request resubmitted for approval.
	Note: The Cancel button appears only when the dispute request is in the Draft status.
Approve	Used to approve the dispute request.
	Note: The Approve button appears only when: <ul style="list-style-type: none"> • The dispute request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the dispute request.
Reject	Used to reject the dispute request.
	Note: The Reject button appears only when: <ul style="list-style-type: none"> • The dispute request is in the Approval In Progress status. • A user with the approval To Do role is reviewing the dispute request.
Re Submit	Used to resubmit the dispute request to the submitter.
	Note: The Re-Submit button appears only when the dispute request is in the Approval In Progress status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the dispute request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the dispute request status is updated
Create Date/Time	Displays the date and time when the dispute request is created.

Dispute Details

The **Dispute Details** zone lists the credit/debit bill line items (such as bill segments and adjustments) that you have added to the dispute request. This zone contains the following columns:

Column Name	Column Description
Entity Type	Indicates whether the entity is a bill, bill segment, or an adjustment.
Entity ID	Displays the entity ID.
Currency	Indicates the currency in which the entity was created.
Dispute Amount	Displays the entity amount.
Adjustment Type	Indicates the adjustment type using which the dispute adjustment must be created. Note: By default, the adjustment type specified in the dispute request type appears in this column. You can change the adjustment type, if required, by editing the dispute request. It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment.
Stop Auto Pay	Displays whether to stop auto payment or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
Entity Information	Displays information about the entity. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the respective entity screen appears with the details of the respective entity.

Note:

On clicking the Broadcast  icon corresponding to the entity type as **Bill**, the **Dispute Adjustments** and **Previous Dispute Requests** zones appears with the details of the respective bill.

The **Dispute Details** zone appears only when the status is **Processed**.

Dispute Amount currency will be same as bill or invoice currency. It cannot be zero or null. It will be less than or equal to the original, outstanding bill amount, or bill line item amount if the bill line item contains multiple contract.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

Dispute Adjustments

The **Dispute Adjustments** zone lists the adjustment details of dispute request. This zone contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the adjustments in dispute request.
	Note: It has a link. On clicking the link, the respective Adjustment screen appears with the details of adjustment for respective entity.
Adjustment Amount	Displays the adjustment amount.

Note:

On clicking the Broadcast  icon corresponding to the entity type as **Bill**, the **Dispute Adjustments** zone appears with the details of the respective bill.

The **Dispute Adjustments** zone appears only when the status is **Processed**.

Dispute Adjustment Amount cannot be zero or null, it should be delta amount.

Dispute Request - Bills

The **Bills** tab allows you to search bills with credit/debit line items, such as credit/debit bill segments and adjustments, that you want to dispute. It contains the following zones:

- [Search Bills](#) on page 1768
- [Bill Line Items](#) on page 1770

Search Bills

The **Search Bills** zone lists completed bills of the account which are either with credit/debit balance or have one or more credit/debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a bill using the bill details. The valid values are: <ul style="list-style-type: none"> • Bill Details • Bill and Price Item Details Note: By default, the Bill Details option is selected.	Yes
Bill ID	Used to search a particular bill. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Bill Search window appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search bills which are created for a particular price item.	No
	<p>Note:</p> <p>This field appears only when you select Bill and Price Item Details option from the Search By list.</p> <p>You can search for a price item by clicking the Search  icon corresponding to the field. On clicking the Search icon, the Price Item Search window appears.</p>	
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.</p>
Bill Amount	Displays the total bill amount.

If you want to dispute a bill with credit/debit balance and all credit/debit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All credit/debit bill segments and adjustments of the bill are added in the **Dispute Details** zone on the **Main** tab. However, if you select a bill (with credit/debit balance) which contains one or more credit/debit line items or if you select a bill (with credit/debit balance) which contains one or more credit/debit line items, the system will not allow you to add the credit/debit line items by directly adding the bill. In such case, you need to individually select the credit/debit bill segments and adjustments of the bill and then add them to the dispute request.

Note:

If a dispute request is currently in progress for a credit/debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

Multiple bill of same account can be added to the dispute request. Multiple bill line items of any bill can also be added to the dispute request.

Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill segment or an adjustment.
Entity Information	Displays additional information about the bill segment or adjustment. If the entity is a bill segment, the context menu appears in the column which helps in navigating to other screens in the application.
	Note: It has a link. If the entity is a bill segment then on clicking the link, the Bill Segment screen appears with the details of the respective bill segment. However, if the entity is an adjustment then on clicking the link, the Adjustment screen appears where you can view the details of the respective adjustment.
Entity Amount	Displays the bill segment or adjustment amount.
Currency	Displays the currency in which the amount is billed.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.

You can select one or more credit/debit bill segments or adjustments and click the **Add** button in this zone to add selected credit/debit bill segments or adjustments to the dispute request.

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Search Bills** zone.

Editing a Dispute Request

Prerequisites

To edit a dispute request, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request whose details you want to edit.

The **Dispute Request** screen appears.

3. Click the **Edit** button in the **Dispute Request** zone.

The **Dispute Request** screen appears. It contains the following section:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request Type	Displays information about the dispute request.	Not applicable
Dispute Reason	Used to indicate the dispute requests which are created using a particular dispute reason for the bill.	Yes
Account Information	Indicates the account for which the dispute request is created.	Not applicable
Comments	Used to specify additional information about the dispute request.	No

In addition, this screen contains the following two sections:

- **Characteristics** – Used to define characteristics for the dispute request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the dispute request.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the dispute request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Dispute Request .	Note: This field is required when you are defining a characteristic for the dispute request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the dispute request.

- Modify the details of the dispute request, if required.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- Define, edit, or remove characteristics from the dispute request, if required.
- Click **Save**.

The changes made to the dispute request are saved.

Editing the Dispute Details

Prerequisites

To edit the dispute details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the dispute details:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request whose bill line item details you want to edit.

The **Dispute Request** screen appears.

3. Select the bill whose details you want to edit in the **Dispute Details** zone and click the **Edit** button available in the upper left corner of this zone.

The **Edit Dispute Details** screen appears.

Note: A bill line item from the dispute request can be edited only when the dispute request is in the **Draft** status.

The **Edit Dispute Details** screen contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Dispute Request ID	Displays the dispute request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are <ul style="list-style-type: none"> • Adjustments • Bill • Bill Segment
Entity ID	Displays the entity ID.
Entity Information	Displays the entity information.
Dispute Amount	Indicates the amount that must be disputed.
Currency	Displays the currency in which the entity was created.
Adjustment Type	Displays the adjustment type using which the dispute adjustment must be created.
Stop Auto Pay	Displays whether auto pay needs to be stopped for the entity of the dispute request.

4. Modify the details of the bill line items.
 5. Click **Save**.
- The changes made to the dispute bill line items are saved.

Deleting a Bill from the Dispute Request

Procedure

To delete a bill from the dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request whose bill you want to delete.

The **Dispute Request** screen appears.

3. In the **Dispute Details** zone, select the bills and click the **Delete** button available in the upper left corner of this zone.

A message appears confirming whether you want to delete the bill from the dispute request.

Note: You can delete bill from the dispute request only when the request is in the **Draft** status.

4. Click **OK**.

The selected bill gets deleted from the dispute request.

Viewing the Bill Line Items

Procedure

To view the bill line items of a dispute request:

1. Search for the dispute request in the **Dispute Request** screen.
2. In the **Search Results** section, click the link in the **Dispute Request Information** column corresponding to the dispute request whose log you want to view.

The **Dispute Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the dispute request. It contains the following zones:
 - **Dispute Request** – Displays the details of the dispute request.
 - **Dispute Details** – Lists the entities, such as auto payment events, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be disputed.
 - **Dispute Adjustments** – Displays the adjustment details of dispute request.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Dispute Details** zone and only when the status is **Processed**.

- **Previous Dispute Requests** – Displays the details of the bill which must be disputed.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Dispute Details** zone.

- **Bills** – Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to dispute. It contains the following zones:
 - **Search Bills** – Lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.

Note: Filter the bills, if required, in the **Search Bills** zone.

- **Bill Line Items** – Lists the debit and credit bill segments and adjustments of the bill.

Note: This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Search Bills** zone.

This tab appears only when the dispute request is in the **Draft** status.

- **Log** – Lists the complete trail of actions performed on the dispute request.

3. View the details of the bill line items in the **Bill Line Items** zone.

Adding a Bill to the Dispute Request

You can dispute the credit/debit bills to the account.

Prerequisites

To add a credit/debit bill to the dispute request, you should have:

- Completed bills for the account with one or more credit/debit line items

Procedure

To add a credit/debit bill to the dispute request:

1. Click the **Bills** tab in the **Dispute Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

Note: If a dispute request is currently in progress for a credit/debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit/debit line items and you want to add the credit/debit bill to the dispute request	<ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to dispute. 2. Click the Add button available at the upper left corner of the Search Bills zone.
A bill has credit balance and one or more debit line items and you want to add the credit bill to the dispute request	<ol style="list-style-type: none"> 1. In the Search Bills zone, select the bills that you want to dispute. 2. Click the Add button available at the upper left corner of the Search Bills zone.

4. Click **Add**.

A message appears indicating that the selected bills are added to the dispute request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the dispute request.

5. Click **OK**.

Note that all the credit/debit bill segments or adjustments of the bills are added in the **Dispute Details** zone on the **Main** tab.

Note: Irrespective of whether you select a credit/debit bill, or credit/debit bill segments or adjustments, the credit/debit bill segments or adjustments are added in the **Dispute Details** zone. The credit/debit bill is not added to the **Dispute Details** zone.

Adding a Bill Line Item to the Dispute Request

You can dispute the credit/debit bill line items, such as bill segments and adjustments, to the account. While adding a credit/debit bill line item to the dispute request, you can either:

- Directly add all credit/debit line items of a bill to the dispute request by adding the bill which has all bill segments and adjustments in credit
- Individually add a credit bill segment or adjustment of a bill (with one or more credit/debit line items) to the dispute request

Prerequisites

To add a credit/debit bill line item to the dispute request, you should have:

- Completed bills for the account with one or more credit/debit line items

Procedure

To add a credit/debit bill line item to the dispute request:

1. Click the **Bills** tab in the **Dispute Request** screen.

The **Bills** tab appears.

- Filter the bills, if required, in the **Search Bills** zone.

Note: If a dispute request is currently in progress for a credit/debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

- Do either of the following:

If...	Then...
A bill has all credit line items and you want to add a particular credit bill line item to the dispute request	<ol style="list-style-type: none"> In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. Select the check box corresponding to the credit bill segment or adjustment that you want to dispute.
A bill has credit balance and one or more debit line items	<ol style="list-style-type: none"> In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. Select the check box corresponding to the credit bill segment or adjustment that you want to dispute.
A bill has debit balance and one or more credit line items	<ol style="list-style-type: none"> In the Search Bills zone, click the Broadcast  icon corresponding to the bill whose line items you want to view. The Bill Line Items zone appears. Select the check box corresponding to the credit bill segment or adjustment that you want to dispute.

- Click **Add**.

A message appears indicating that the selected bill segments or adjustments are added to the dispute request.

Note: If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the dispute request.

- Click **OK**.

Note that the credit bill segments or adjustments are added in the **Dispute Details** zone on the **Main** tab.

Note:

Irrespective of whether you select a credit/debit bill, or credit/debit bill segments or adjustments, the credit/debit bill segments or adjustments are added in the **Dispute Details** zone. The credit bill is not added to the **Dispute Details** zone.

The system will not allow you to add a debit line item to the **Dispute Details** zone.

Oracle Revenue Management and Billing enables you to generate the earnings credit rate (ECR) when the account is eligible for earnings credit rate and is associated with a contract of a contract type where the **Financial Transaction Distribution Object** characteristic is defined. In other words, the system enables you to create the financial transaction distribution (ECR) object when the adjustment and/or bill segment financial transaction created against an ECR contract is frozen. The status of the financial transaction distribution object is set to **Pending**.

To enable the Earnings Credit Rate (ECR) feature, you need to setup the following:

- **Financial Transaction Distribution Type** – A financial transaction distribution type is an object which controls the distribution of a credit and debit bill segment or adjustment financial transaction. It is associated to a contract type through a financial transaction distribution object. It helps the system to determine:
 - Whether it is defined for adjustment or bill segment financial transactions whose credit or debit amount should be distributed.
 - The type of adjustment (such as transfer adjustment) should be created when the credit or debit amount on the financial transaction distribution object is distributed.
 - The financial transaction distribution rule using which the credit or debit amount on the financial transaction distribution object should be distributed.
 - Whether the credit or debit amount on the financial transaction distribution object should be used to offset an adjustment or bill segment of the same account (where ECR is earned), another account of the customer (for whom ECR is earned), or the account identified as per the distribution hierarchy.
 - Whether the credit or debit amount on the financial transaction distribution object should be written off when it is equal to or less than the write off threshold amount.
 - The type of adjustment that should be created when the credit or debit amount on the financial transaction distribution object is written off.
 - The type of adjustment that should be created when the credit or debit amount on the financial transaction distribution object is expired.

- The type of adjustment that should be created when the excess credit amount on the financial transaction distribution object is refunded at the end of the year.
- The business object using which the financial transaction distribution object should be created.
- **Financial Transaction Distribution Rule** – A financial transaction distribution rule is associated with one or more financial transaction distribution types. It helps the system to determine:
 - The method using which the credit or debit amount on the financial transaction distribution object should be distributed. If the distribution method is set to **Fee Based**, the system will distribute the credit or debit amount on the financial transaction distribution object to offset fees starting from the highest to lowest amount. If the distribution method is set to **Priority Based**, the system will distribute the credit or debit amount on the financial transaction distribution object to the accounts in the order of their account distribution priority. If the distribution method is set to **Weighted Average**, the system will distribute the credit or debit amount on the financial transaction distribution object to the accounts in the weighted average ratio.
 - The distribution hierarchy using which the accounts, to which the credit or debit amount on the financial transaction distribution object should be distributed, should be derived.
 - The priority in which the objects, such as adjustments of a particular adjustment type or bill segments created for a particular price item, should be offset using the credit or debit amount on the financial transaction distribution object.
 - The objects, such as adjustments of a particular adjustment type or bill segments created for a particular price item, should be excluded from offsetting.
 - Algorithms that should be used to select the accounts, interpret the order of distribution, and then distribute the credit or debit amount.
- **Expiration Cycle** – An expiration cycle is an extendable lookup reference object which indicates the frequency at which the financial transaction distribution object created for the account should be expired (i.e. after two months or 45 days from the date of creation). You can associate an expiration cycle with one or more accounts.
- **Distribution Hierarchy** – A distribution hierarchy is an extendable lookup reference object which indicates the list of hierarchies that should be considered while deriving accounts for offsetting the credit or debit amount on the financial transaction distribution object. The valid hierarchy lists are:
 - **IGA Member Accounts Same Division** – If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against other member accounts of an invoicing group in which the source account is also a member account.
 - **Person Relationship (Child) Same Division** – If this option is selected, the system will first offset the credit or debit amount on the

financial transaction distribution object against the source account, other accounts of the source customer, and then against the child persons' accounts who are related to the parent person (i.e. source customer) using a particular relationship type and belongs to the same division.

- **Person Relationship (Child) Other Division** – If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against the child persons' accounts who are related to the parent person (i.e. source customer) using a particular relationship type and belongs to a different division.
- **Person Relationship (Parent) Same Division** – If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against the parent persons' accounts who are related to the child person (i.e. source customer) using a particular relationship type and belongs to the same division.
- **Person Relationship (Parent) Other Division** – If this option is selected, the system will first offset the credit or debit amount on the financial transaction distribution object against the source account, other accounts of the source customer, and then against the parent persons' accounts who are related to the child person (i.e. source customer) using a particular relationship type and belongs to a different division.

You can associate a distribution hierarchy with one or more financial transaction distribution rules.

- **Financial Transaction Distribution Object** – A financial transaction distribution type is associated to a contract type through a financial transaction distribution object. You can include multiple financial transaction distribution types in a financial transaction distribution object. You can associate a financial transaction distribution object to one or more contract types.
- **Earnings Credit Rate Eligibility** – You can define earnings credit rate eligibility for each account in the system. It helps the system to determine:
 - Whether the account is eligible for generating earnings credit rate (i.e. financial transaction distribution object).
 - Whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.
 - The priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.
 - The expiration cycle for the account.

The following two batches are introduced in this release:

- **Financial Transaction Distribution Monitor (C1-FTDPR)** – It is used to monitor or check whether there are any financial transaction distribution objects in the Pending status. If there is a financial transaction

distribution object in the Pending status, the system validates the financial transaction distribution object and changes the status of the financial transaction distribution object to Validated. From the Validated status, the status of the financial transaction distribution object is changed to either of the following:

- **Refund** (when there is excess credit amount on the financial transaction distribution object at the end of the year and the source account belongs to a particular customer class where refund is allowed).
- **Write Off** (when the credit or debit amount on the financial transaction distribution object is equal to or less than the write off threshold amount)
- **Expire** (when the credit or debit amount on the financial transaction distribution object is expired)

Accordingly, the refund, write off, and expire adjustments are created. However, if none of the above conditions are met, the status of the financial transaction distribution object remains as **Validated**.

- **FT Distribution Single Threaded Transition Batch (C1-FTDTS)** – It is used to monitor or check whether there are any financial transaction distribution objects in the Validated status. If there is a financial transaction distribution object in the Validated status, the system changes the status of the financial transaction distribution object to **Apply Rule** and executes the algorithm attached to the **Apply Rule** system event on the financial transaction distribution rule version which is effective on the batch business date. Once the credit or debit distribution array of accounts is created, the status of the financial transaction distribution object is changed to **Distributed** and then the algorithm attached to the Distribute system event on the financial transaction distribution rule version which is effective on the batch business date is executed. On the credit or debit amount distribution, two adjustments are created – one against the source contract and another against the bill segment or adjustment's contract to which the amount is distributed. Once the credit or debit amount on the financial transaction distribution object is fully distributed, the status of the financial transaction distribution object is changed to **Complete**. However, if the credit or debit amount on the financial transaction distribution object is not yet fully distributed, the status of the financial transaction distribution object is changed to **Validated**.

Prerequisites

To setup the earnings credit rate process, you need to do the following:

- Add the earnings credit rate to the eligible accounts.
- Define the required financial transaction distribution types in the system.
- Define the required financial transaction distribution rules in the system.
- Define the following extendable lookup reference objects in the system:
 - Expiration Cycle
 - Distribution Hierarchy
 - Financial transaction distribution object

Financial Transaction Distribution Object Status Transition

The following figure graphically indicates how a financial transaction distribution object is created in the system:

Note: For more information about the batches, refer *Oracle Revenue Management and Billing Batch Guide*.

Algorithms Used in C1-FTDIST

The following table lists the algorithms which are attached to the **C1-FTDIST** business object:

System Event	Algorithm	Algorithm Type	Description																																
Information	C1-FTDISTINF	C1-FTDISTINF	<p>This algorithm formats the FT Distribution that appears throughout the system. It concatenates the fields and separator specified as algorithm parameters. Possible fields are:</p> <table border="1"> <thead> <tr> <th>Field</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>ACCT_ID</td> <td>Account ID</td> </tr> <tr> <td>ADJ_ID</td> <td>Adjustment ID</td> </tr> <tr> <td>BO_STATUS_CD</td> <td>Status</td> </tr> <tr> <td>BO_STATUS_REASON_CD</td> <td>Status Reason</td> </tr> <tr> <td>BSEG_ID</td> <td>Bill Segment ID</td> </tr> <tr> <td>BUS_OBJ_CD</td> <td>Business Object</td> </tr> <tr> <td>CRE_DTTM</td> <td>Creation Date/Time</td> </tr> <tr> <td>EXPIRATION_DT</td> <td>Expiration Date</td> </tr> <tr> <td>FT_DISTRIBUTION_ID</td> <td>FT Distribution</td> </tr> <tr> <td>FT_DIST_TYPE_CD</td> <td>FT Distribution Type</td> </tr> <tr> <td>FT_ID</td> <td>FT ID</td> </tr> <tr> <td>ILM_DT</td> <td>ILM Date</td> </tr> <tr> <td>SA_ID</td> <td>SA ID</td> </tr> <tr> <td>STATUS_UPD_DTTM</td> <td>Status Update Date/Time</td> </tr> <tr> <td>TOT_AMT</td> <td>Payoff Amount</td> </tr> </tbody> </table>	Field	Description	ACCT_ID	Account ID	ADJ_ID	Adjustment ID	BO_STATUS_CD	Status	BO_STATUS_REASON_CD	Status Reason	BSEG_ID	Bill Segment ID	BUS_OBJ_CD	Business Object	CRE_DTTM	Creation Date/Time	EXPIRATION_DT	Expiration Date	FT_DISTRIBUTION_ID	FT Distribution	FT_DIST_TYPE_CD	FT Distribution Type	FT_ID	FT ID	ILM_DT	ILM Date	SA_ID	SA ID	STATUS_UPD_DTTM	Status Update Date/Time	TOT_AMT	Payoff Amount

Validation	C1-VALFTDIST	C1-VALFTDIST	<p>This algorithm validates the Business Object - Financial Transaction Distribution, which includes:</p> <ul style="list-style-type: none"> Adjustment ID or Bill Segment ID must be supplied. 																																

The following table lists the algorithms which are used in the lifecycle of the **C1-FTDIST** business object:

Status	System Event	Algorithm	Algorithm Type	Description
In Progress	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Validate	Monitor	C1-FTDVALIDT	C1-FTDVALIDT	<p>This algorithm transitions the FT Distribution record from validate to any of the following statuses based on certain conditions:</p> <ul style="list-style-type: none"> • It transitions to Expire status (based on Parameter Expire Status Transition Condition) when the credit is not fully distributed and process date is before or on the same day as the Expiration Date defined in the record. • It transitions to Write Off status (based on Parameter Write Off Status Transition Condition) when the Total Amount is less than or equal to the Write Off Threshold defined in the FT Distribution Type linked to the record. It also uses Parameter Handle Negative or Positive for Write Off. If the Parameter is Negative and the Payoff Amount of the record is negative or the Parameter is Positive and the Payoff Amount of the record is positive, then proceed with Write Off. • It transitions to Refund status (based on Parameter Refund Status Transition Condition) when the Parameter Refund at End of Year is Y and the record's source account's customer class is equal to Parameter Applicable Customer Class for Refund. If none of the conditions are met, the record remains at Validate status. <p>If none of the conditions are met, the record remains at Validate status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Apply Rule	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either of the one soft parameters may be specified. If both the soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Apply Rule	Enter	C1-FTDAPRL	C1-FTDAPRL	This algorithm will call the pre-processing and apply rule algorithms that are configured in the effective rule version of the FT Distribution Rule of the Financial Transaction Distribution record's FT Distribution Type.
Distributed	Enter	C1-FTDDIST	C1-FTDDIST	This algorithm will trigger the distribute algorithms configured in the effective rule version of the FT Distribution Rule linked to the FT Distribution Type of the Financial Transaction Distribution record. After invoking the algorithms, the FT Distribution amount is compared to the sum of the distribution amounts with frozen transfer adjustments in the list. If the amounts are equal, the FT Distribution record is transitioned to Complete (based on the Parameter Complete Status Transition Condition). Otherwise, it is transitioned back to Validate (based on the Validate Status Transition Condition).
Expire	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Expire	Enter	C1-FTDEXP	C1-FTDEXP	This algorithm expires credit amount by creating an expiration adjustment defined in the FT Distribution Type. The Expiration Adjustment created will have a characteristic of type Parameter Financial Transaction Distribution Characteristic Type and value equal to the FT Distribution ID. The FT Distribution record will have a characteristic of type Write off Adjustment with value equal to the Expiration Adjustment ID.
Refund	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either of the one soft parameters may be specified. If both the soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Refund	Enter	C1-FTDREFUND	C1-FTDREFUND	This algorithm refunds the credit amount by creating a refund adjustment defined in the FT Distribution Type. The Refund Adjustment will be linked to the Refund Contract (with type equal to Parameter Refund Contract Type) attached to the source Account of the FT Distribution. The Refund Adjustment will be linked to the FT Distribution via a characteristic with type Parameter Financial Transaction Distribution Characteristic Type. Also, the FT Distribution record will have a characteristic of type Refund Adjustment with value equal to the Refund Adjustment ID.

Status	System Event	Algorithm	Algorithm Type	Description
Write Off	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Write Off	Enter	C1-FTDWRTOFF	C1-FTDWRTOFF	This algorithm writes off the credit amount by creating a write off adjustment defined in the FT Distribution Type. The Write off Adjustment created will have a characteristic of type Parameter Financial Transaction Distribution Characteristic Type and value equal to the FT Distribution ID. The FT Distribution record will have a characteristic of type Write Off Adjustment with value equal to the Write Off Adjustment ID.
Cancel	Enter	C1-FTDCANCEL	C1-FTDCANCEL	This algorithm will cancel all the transfer adjustments listed in the Financial Transaction Distribution record's Distribution List. The cancel reason code will be copied or taken from the original Distribution Object's cancel reason. If it is not provided, it will use the parameter Default Cancel Reason.
Complete	Enter	C1-FTDCOMP	C1-FTDCOMP	This algorithm will trigger the post-processing algorithms configured in the effective rule version of the FT Distribution Rule linked to the FT Distribution Type of the Financial Transaction Distribution record.

Earnings Credit Rate Eligibility

This screen allows you to add earnings credit rate eligibility for each account in the system and helps you to determine the following:

- Whether the account is eligible for generating earnings credit rate (i.e. financial transaction distribution object).
- Whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.

- The priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.
- The expiration cycle for the account.

This screen contains the following zone:

- [Earnings Credit Rate Eligibility](#) on page 1798

Earnings Credit Rate Eligibility

The **Earnings Credit Rate Eligibility** zone allows you to add earnings credit rate eligibility for each account in the system.

This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Earnings Credit Rate ID	Displays the earnings credit rate ID.	Not applicable
Account ID	Used to search for a particular account.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	
Earnings Credit Rate Eligible	Used to define whether an earned credit rate can be calculated and created for the account or not.	No
Offset Eligibility	Used to define whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.	No
Offset Distribution Type	Used to search the financial transaction distribution type which would be used to offset the credit or debit amount from another account. If this field is left blank, then the financial transaction distribution type for the earning credit rate source account will be used.	No
	Note: This field is enabled only when the Offset Eligibility check box is selected. This field is enabled only when the Offset Eligibility check box is selected. The Search  icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Offset Distribution Type FK Search window appears.	
Account Distribution Priority	Used to indicate the priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.	No
Expiration Cycle	Used to indicate the expiration cycle for the account.	Yes

Defining Earnings Credit Rate Eligibility for an Account

Prerequisites

To define an earnings credit rate eligibility for an account, you should have:

- Accounts defined in the application.
- Expiration cycle defined in the application.
- Financial transaction distribution type defined in the application.

Procedure

To define earnings credit rate eligibility for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Earnings Credit Rate Eligibility**.

The **Earnings Credit Rate Eligibility** screen appears. It contains the following section:

- **Main** – Used to add the basic details about the earnings credit rate eligibility for an account. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Earnings Credit Rate ID	Displays the earnings credit rate ID.	Not applicable
Account ID	Used to search for a particular account. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	Yes
Earnings Credit Rate Eligible	Used to define whether an earned credit rate can be calculated and created for the account or not.	No
Offset Eligibility	Used to define whether the credit or debit amount on the financial transaction distribution object can be offset against the source account, other accounts of the source customer, or against the accounts identified in the distribution hierarchy.	No

Field Name	Field Description	Mandatory (Yes or No)
Offset Distribution Type	Used to search the financial transaction distribution type which would be used to offset the credit or debit amount from another account. If this field is left blank, then the financial transaction distribution type for the earning credit rate source account will be used.	No
	<p>Note:</p> <p>This field is enabled only when the Offset Eligibility check box is selected. This field is enabled only when the Offset Eligibility check box is selected.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Offset Distribution Type FK Search window appears.</p>	
Account Distribution Priority	Used to indicate the priority in which the account should be considered while distributing the credit or debit amount on the financial transaction distribution object.	No
Expiration Cycle	Used to indicate the expiration cycle for the account.	Yes

3. Enter the required details.

4. Click **Save**.

The earnings credit rate eligibility is defined for the account.

Financial Transaction Distribution Type

The **Financial Transaction Distribution Type** screen allows you to define, edit, copy, and delete a financial transaction distribution object type.

This screen contains the following zones:

- [Financial Transaction Distribution Type List](#) on page 1800
- [Financial Transaction Distribution Type](#) on page 1802

Financial Transaction Distribution Type List

The **Financial Transaction Distribution Type List** zone allows you to view the list of financial transaction distribution types that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
FT Distribution Type	Displays the financial transaction distribution type.
Description	Displays the description of the financial transaction distribution type.
	Note: It has a link. On clicking the link, the Financial Transaction Distribution Type zone appears with the details of the respective financial transaction distribution type.
Related Transaction BO	Displays the corresponding transaction business object. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.
FT Adjustment Type	Displays the adjustment type used in the financial transaction adjustment.
Distribution Object Type	Displays the financial transaction object type used in distributing the credit.
Edit	On clicking the Edit (✎) icon, the FT Distribution Type screen appears where you can edit the details of the financial transaction distribution type.
Duplicate	On clicking the Duplicate (📄📄) icon, the FT Distribution Type screen appears where you can define a financial transaction distribution type using an existing financial transaction distribution type.
Delete	On clicking the Delete (🗑️) icon, you can delete the financial transaction distribution type.

On clicking the **Broadcast** (📡) icon corresponding to the financial transaction distribution type, the **Financial Transaction Distribution Type** zone appears with the details of the respective financial transaction distribution type.

You can filter the list using the **Financial Transaction Distribution Type**, **Description**, or **Financial Transaction Object Type** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (⌵) icon in the upper right corner of this zone.

Financial Transaction Distribution Type

The **Financial Transaction Distribution Type** zone displays the details of the financial transaction distribution types that are already defined in the system. This zone contains the following sections:

- **Main** – This section provides basic information about the financial transaction distribution type. It contains the following fields:

Field Name	Field Description
FT Distribution Type	Displays the financial transaction distribution type.
Description	Displays the description of the financial transaction distribution type.
FT Object Type	Indicates the business object that will be used to create the financial transaction distribution type. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
FT Adjustment Type	Displays the adjustment type used in the financial transaction adjustment.
Distribution Object Type	Displays the financial transaction object type used in distributing the credit.
Distribution Adjustment Type	Displays the adjustment type which is used for distribution if the Transfer Adjustment option is selected from the Distribution Object Type list. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
FT Distribution Rule	Displays the financial transaction distribution rule to be used for distributing the credit or debit in an account. Note: It has a link. On clicking the link, the Financial Transaction Distribution Rule screen appears where you can view the details of the respective financial transaction distribution rule.
Write Off Threshold Amount	Displays the minimum credit amount for write off. Any amount specified in this field is assumed to be negative. For example, a value of “2” is treated as “-2”. Such that if the credit is only “-2”, then this will written off instead of distributing it to offset.
Write Off Adjustment Type	Displays the adjustment type used for write off. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.

Field Name	Field Description
Expiration Adjustment Type	Displays the adjustment type used for expiration.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Refund Adjustment Type	Displays the adjustment type used for refund.
	Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.
Offset Indicator	Displays whether the financial transaction distribution type is applicable when an account in a hierarchy is using an excess credit from the account credit source to offset its own debt or not.
Related Transaction BO	Displays the object using which financial transaction object is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Characteristics** – This section lists the characteristics defined for the financial transaction distribution type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the financial transaction distribution type.
Delete	Used to delete the financial transaction distribution type.
Duplicate	Used to create a new financial transaction distribution type using an existing financial transaction distribution type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the financial transaction distribution type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Financial Transaction Distribution Type** zone does not appear in the **Financial Transaction Distribution Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the financial transaction distribution type in the **Financial Transaction Distribution Type List** zone.

Defining a Financial Transaction Distribution Type

Prerequisites

To define a financial transaction distribution type, you should have:

- Financial transaction distribution objects defined in the application.
- Adjustment types defined in the application.
- Financial transaction distribution rule defined in the application.
- Required characteristics defined in the application.

Procedure

To define a financial transaction distribution type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Type**.
A sub-menu appears.
3. Click the **Add** option from the **Financial Transaction Distribution Type** sub-menu.

The **Financial Transaction Distribution Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the financial transaction distribution type.
- **Characteristics** – Used to define characteristics for the financial transaction distribution type.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to specify the financial transaction distribution type.	Yes
Description	Used to specify the description of the financial transaction distribution type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
FT Object Type	Used to indicate the business object that will be used to create the financial transaction distribution type. The valid values are: <ul style="list-style-type: none"> • Adjustment • Bill Segment 	Yes
FT Adjustment Type	Used to indicate the adjustment type used in the financial transaction adjustment.	Yes (Conditional)
	Note: By default, this field is disabled. This field gets enabled when you select Adjustment option from the FT Object Type list.	Note: This field is required when you are selecting the Adjustment option for the FT Object Type list.
Distribution Object Type	Used to indicate the financial transaction object type used in distribution.	Yes
Distribution Adjustment Type	Used to indicate the adjustment type which is used for distribution if the Transfer Adjustment option is selected from the Distribution Object Type list.	No
FT Distribution Rule	Used to indicate the financial transaction distribution rule to be used for distributing the credit or debit in an account.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Offset Distribution Type FK Search window appears.	
Offset Indicator	Used to indicate whether the financial transaction distribution type is applicable when an account in a hierarchy is using an excess credit from the account credit source to offset its own debt or not.	No
Write Off Threshold Amount	Used to specify the minimum credit amount for write off.	Yes (Conditional)
		Note: This field is required when you do not check the Offset Indicator check box.

Field Name	Field Description	Mandatory (Yes or No)
Write Off Adjustment Type	Used to indicate the adjustment type used for write off.	Yes (Conditional)
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Note: This field is required when you do not check the Offset Indicator check box.
Expiration Adjustment Type	Used to indicate the adjustment type used for expiration.	Yes (Conditional)
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Note: This field is required when you do not check the Offset Indicator check box.
Refund Adjustment Type	Used to indicate the adjustment type used for refund.	Yes (Conditional)
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	Note: This field is required when you do not check the Offset Indicator check box.
Related Transaction BO	Used to indicate the object using which financial transaction object is created.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Business Object Search window appears.	

Characteristics – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the financial transaction distribution type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the financial transaction distribution type.

Tip: Alternatively, you can access the **Financial Transaction Distribution Type** screen by clicking the **Add** button in the **Page Title** area of the **Financial Transaction Distribution Type** screen.

4. Enter the required details.
5. Define characteristics for the financial transaction distribution type, if required.
6. Click **Save**.

The financial transaction distribution type is defined.

Defining Characteristics for a Financial Transaction Distribution Type

Procedure

To define characteristics for a financial transaction distribution type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a financial transaction distribution type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the financial transaction distribution type.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the financial transaction distribution type.

2. Enter the required details.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the financial transaction distribution type, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the financial transaction distribution type, click the **Delete** () icon corresponding to the characteristic.

Copying a Financial Transaction Distribution Type

Instead of creating a financial transaction distribution type from scratch, you can create a new financial transaction distribution type using an existing financial transaction distribution type. This is possible through copying a financial transaction distribution type. On copying a financial transaction distribution type, the details including the characteristics are copied to the new financial transaction distribution type. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution type, you should have:

- Financial transaction distribution type (whose copy you want to create) defined in the application
- Financial transaction distribution type business objects defined in the application

Procedure

To copy a financial transaction distribution type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Type**.
A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Type** sub-menu.
The **Financial Transaction Distribution Type** screen appears.
4. In the **Financial Transaction Distribution Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the financial transaction distribution type whose copy you want to create.

The **Financial Transaction Distribution Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the financial transaction distribution type.
- **Characteristics** — Used to define characteristics for the financial transaction distribution type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to specify the financial transaction distribution type.	Yes
Description	Used to specify the description of the financial transaction distribution type.	Yes
FT Object Type	Used to indicate the business object that will be used to create the financial transaction distribution type. The valid values are: <ul style="list-style-type: none"> • Adjustment • Bill Segment 	Yes
FT Adjustment Type	Used to indicate the adjustment type used in the financial transaction adjustment.	Yes (Conditional)
	Note: By default, this field is disabled. This field gets enabled when you select Adjustment option from the FT Object Type list.	Note: This field is required when you are selecting the Adjustment option for the FT Object Type list.
Distribution Object Type	Used to indicate the financial transaction object type used in distribution.	Yes
Distribution Adjustment Type	Used to indicate the adjustment type which is used for distribution if the Transfer Adjustment option is selected from the Distribution Object Type list.	No

Financial Transaction Distribution Rule

Once you create a financial transaction distribution rule, the **Financial Transaction Distribution Rule** screen allows you to:

- Edit the details of a financial transaction distribution rule
- Copy a financial transaction distribution rule
- Delete a financial transaction distribution rule
- View the details of a financial transaction distribution rule
- Add the financial transaction distribution rule version

- Edit the details of a financial transaction distribution rule version
- Copy a financial transaction distribution rule version
- Include or exclude objects from a financial transaction distribution rule version
- Associate or dissociate algorithms from a financial transaction distribution rule version
- Delete a financial transaction distribution rule version
- View the details of a financial transaction distribution rule version

This screen consists of following zones:

- [Financial Transaction Distribution Rule List](#) on page 1815
- [Financial Transaction Distribution Rule](#) on page 1816
- [Financial Transaction Distribution Rule Version List](#) on page 1817
- [Financial Transaction Distribution Rule Version](#) on page 1818

Financial Transaction Distribution Rule List

The **Financial Transaction Distribution Rule List** zone allows you to view the list of financial transaction distribution rules that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
FT Distribution Rule	Displays the financial transaction distribution rule.
Description	Displays the description of the financial transaction distribution rule.
Distribution Method	Indicates the principle for distributing credit for accounts other than the credit or debit source account. The valid values are: <ul style="list-style-type: none"> • Fee Based • Priority Based • Weighted Average
Distribution Hierarchy	Indicates the hierarchy of accounts in which the distribution needs to be made.
Edit	On clicking the Edit () icon, the Financial Transaction Distribution Rule screen appears where you can edit the details of the financial transaction distribution rule.
Duplicate	On clicking the Duplicate () icon, the Financial Transaction Distribution Rule screen appears where you can define a financial transaction distribution rule using an existing financial transaction distribution rule.
Delete	On clicking the Delete () icon, you can delete the financial transaction distribution rule.

On clicking the **Broadcast** () icon corresponding to the financial transaction distribution rule, the **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zones appear with the details of the respective financial transaction distribution rule and financial transaction distribution rule version.

You can filter the list using the **FT Distribution Rule**, **Description**, **Effective Date**, and **Distribution Method** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Financial Transaction Distribution Rule

The **Financial Transaction Distribution Rule** zone allows you to view the details of financial transaction distribution rule. This zone contains the following sections:

- **Main** – This section displays the details of the financial transaction distribution rule. It contains the following columns:

Column Name	Column Description
FT Distribution Rule	Displays the financial transaction distribution rule.
Description	Displays the description of the financial transaction distribution rule.
Detailed Description	Displays the additional information about the financial transaction distribution rule.
Distribution Method	Indicates the principle for distributing credit for the accounts other than the credit or debit source account. The valid values are: <ul style="list-style-type: none"> • Fee Based • Priority Based • Weighted Average
Distribution Hierarchy	Indicates the hierarchy of accounts in which the distribution needs to be made.
Edit	On clicking the Edit () icon, the Financial Transaction Distribution Rule screen appears where you can edit the details of the financial transaction distribution rule.

Column Name	Column Description
Duplicate	On clicking the Duplicate () icon, the Financial Transaction Distribution Rule screen appears where you can define a financial transaction distribution rule using an existing financial transaction distribution rule.
Delete	On clicking the Delete () icon, you can delete the financial transaction distribution rule.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the financial transaction distribution rule
Delete	Used to delete the financial transaction distribution rule.
Duplicate	Used to create a new financial transaction distribution rule using an existing financial transaction distribution rule.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the financial transaction distribution rule is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Financial Transaction Distribution Rule** zone does not appear in the **Financial Transaction Distribution Rule** screen. It appears only when you click the **Broadcast** () icon corresponding to the financial transaction distribution rule of the **Financial Transaction Distribution Rule List** zone.

Financial Transaction Distribution Rule Version List

The **Financial Transaction Distribution Rule Version List** zone allows you to view the list of financial transaction distribution rule version that are already defined in the system and are used as the basis for credit distribution.

This zone contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.
Description	Displays the description of the associated financial transaction distribution rule.
Edit	On clicking the Edit () icon, the Financial Transaction Distribution Rule Version screen appears where you can edit the details of the financial transaction distribution rule version.
Duplicate	On clicking the Duplicate () icon, the Financial Transaction Distribution Rule Version screen appears where you can define a financial transaction distribution rule version using an existing financial transaction distribution rule version.
Delete	On clicking the Delete () icon, you can delete the financial transaction distribution version.

By default, the **Financial Transaction Distribution Rule Version** zone does not appear in the **Financial Transaction Distribution Rule** screen. It appears only when you click the **Broadcast** () icon corresponding to the financial transaction distribution rule of the **Financial Transaction Distribution Rule List** zone.

You can filter the list using the **Description** or **Effective Date** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Financial Transaction Distribution Rule Version

The **Financial Transaction Distribution Rule Version** zone allows you to view the details of the financial transaction distribution rule version. This zone contains the following sections:

- **Main** – This section displays the details of the financial transaction distribution rule version. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.
Version Description	Displays the description of the financial transaction distribution rule version.
Detailed Description	Displays the additional information about the financial transaction distribution rule version.

- **Included Objects** – This section displays the list of object that are included for credit distribution. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence in which the objects should be included in the financial transaction distribution rule version.
Priority	Displays the sequence of objects for the credit or debit distribution within an account.
Object Type	Displays the type of object.
Value	Displays the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.
Bill Status	Displays the status of the bill.

- **Excluded Objects** – This section displays the list of object that are excluded from credit distribution. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence in which the objects should be excluded from the financial transaction distribution rule version.
Object Type	Displays the type of object.
Value	Displays the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search  icon appears corresponding to this field. On clicking the Search icon, the Financial Transaction Business Object Search window appears.

- **Algorithms** – This section displays the list of algorithms that are included. It contains the following columns:

Column Name	Column Description
System Event	Indicates the system event on which the algorithm must be executed.
Sequence	Displays the order in which the algorithms for each system event must be executed.
Algorithm	Displays the algorithm code. Note: It has a link. On clicking the link, Algorithm screen appears with the details of the respective algorithm.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the financial transaction distribution rule version.
Delete	Used to delete the financial transaction distribution rule version.
Duplicate	Used to create a new financial transaction distribution rule version using an existing financial transaction distribution rule version.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the financial transaction distribution rule version is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.

By default, the **Financial Transaction Distribution Rule Version** zone does not appear in the **Financial Transaction Distribution Rule** screen. It appears only when you click the **Broadcast**  icon corresponding to the financial transaction distribution rule version of the **Financial Transaction Distribution Rule Version List** zone.

Defining a Financial Transaction Distribution Rule

Prerequisites

To define a financial transaction distribution rule, you should have:

- Distribution method and hierarchy defined in the application.

Procedure

To define a financial transaction distribution rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
A sub-menu appears.
3. Click the **Add** option from the **Financial Transaction Distribution Rule** sub-menu.

The **Financial Transaction Distribution Rule** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the financial transaction distribution rule.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Used to specify the financial transaction distribution rule.	Yes
Description	Used to specify the description of the financial transaction distribution rule.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule.	No
Distribution Method	Used to indicate the principle for distributing credit for accounts other than the credit or debit source account. The valid values are: <ul style="list-style-type: none"> • Fee Based • Priority Based • Weighted Average 	Yes
Distribution Hierarchy	Used to indicate the hierarchy of accounts in which the distribution needs to be made.	No

Tip: Alternatively, you can access the **Financial Transaction Distribution Rule** screen by clicking the **Add** button in the **Page Title** area of the **Financial Transaction Distribution Rule** screen.

4. Enter the required details.
5. Click **Save**.

The financial transaction distribution rule is defined.

Editing a Financial Transaction Distribution Rule

Procedure

To edit a financial transaction distribution rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Edit**  icon in the **Edit** column corresponding to the financial transaction distribution rule whose details you want to edit.

The **Financial Transaction Distribution Rule** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the financial transaction distribution rule.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Used to specify the financial transaction distribution rule.	Yes
Description	Used to specify the description of the financial transaction distribution rule.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule.	No
Distribution Method	Used to indicate the principle for distributing credit for accounts other than the credit or debit source account. The valid values are: <ul style="list-style-type: none"> • Fee Based • Priority Based • Weighted Average 	Yes
Distribution Hierarchy	Used to indicate the hierarchy of accounts in which the distribution needs to be made.	No

Tip: Alternatively, you can click the **Edit** button in the **Financial Transaction Distribution Rule** zone to edit the details of the financial transaction distribution rule.

5. Modify the details of the financial transaction distribution rule.
6. Click **Save**.
The changes made to the financial transaction distribution rule are saved.

Copying a Financial Transaction Distribution Rule

Instead of creating a financial transaction distribution rule from scratch, you can create a new financial transaction distribution rule using an existing financial transaction distribution rule. This is possible through copying a financial transaction distribution rule. On copying a financial transaction distribution rule, the details are copied to the new financial transaction distribution rule. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution rule, you should have:

- Financial transaction distribution rule (whose copy you want to create) defined in the application
- Financial transaction distribution rule business objects defined in the application

Procedure

To copy a financial transaction distribution rule:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.

A sub-menu appears.

3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.

The **Financial Transaction Distribution Rule** screen appears.

4. In the **Financial Transaction Distribution Rule List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the financial transaction distribution rule whose copy you want to create.

The **Financial Transaction Distribution Rule** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the financial transaction distribution rule.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Used to specify the financial transaction distribution rule.	Yes
Description	Used to specify the description of the financial transaction distribution rule.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule.	No
Distribution Method	Used to indicate the principle for distributing credit for accounts other than the credit or debit source account. The valid values are: <ul style="list-style-type: none"> • Fee Based • Priority Based • Weighted Average 	Yes
Distribution Hierarchy	Used to indicate the hierarchy of accounts in which the distribution needs to be made.	No

Tip: Alternatively, you can click the **Duplicate** button in the **Financial Transaction Distribution Rule** zone to create a copy of the financial transaction distribution rule.

5. Enter the required details.
6. Click **Save**.

The new financial transaction distribution rule is defined.

Defining a Financial Transaction Distribution Rule Version

Prerequisites

To define a financial transaction distribution rule version, you should have:

- Financial transaction distribution rule defined in the application.
- Object types and algorithms defined in the application.

Procedure

To define a financial transaction distribution rule version:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.

A sub-menu appears.

- Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.

The **Financial Transaction Distribution Rule** screen appears.

- In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast**  icon corresponding to the financial transaction distribution rule whose details you want to edit.

The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.

- Click the **Add** link in the upper right corner of the **Financial Transaction Distribution Rule Version List** zone.

The **Financial Transaction Distribution Rule Version** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the financial transaction distribution rule version.
- Included Objects** – Used to include the objects in financial transaction distribution rule version.
- Excluded Objects** – Used to exclude the objects in financial transaction distribution rule version.
- Algorithms** – Used to define the algorithms that are added for financial transaction distribution rule version.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Displays the financial transaction distribution rule.	Not applicable
Effective Date	Used to specify the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.	Yes
Business Object	Displays the business object using which financial transaction distribution rule version is created.	Not applicable
Version Description	Used to specify the description of the financial transaction distribution rule version.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule version.	No

The **Included Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be included in the financial transaction distribution rule version.	No
Priority	Used to specify the sequence of objects for the credit or debit distribution within an account.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	No
Bill Status	Used to indicate the status of the bill.	No

Note: If you include object, then all the fields are mandatory.

The **Excluded Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be excluded from the financial transaction distribution rule version.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	No

Note: If you exclude object, then all the fields are mandatory.

The **Algorithms** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicates the system event on which the algorithm must be executed.	No
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	No
Algorithm	Used to specify the algorithm code. Note: It has a link. On clicking the link, Algorithm screen appears with the details of the respective algorithm. The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	No

Note: While defining a financial transaction distribution rule version, you can either include or exclude objects from it.

6. Enter the required details.
7. Include or exclude the object types, if required.
8. Add the algorithms, if required.
9. Click **Save**.

The financial transaction distribution rule version is defined.

Editing a Financial Transaction Distribution Rule Version

Procedure

To edit a financial transaction distribution rule version:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.

A sub-menu appears.

3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.

The **Financial Transaction Distribution Rule** screen appears.

4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast**  icon corresponding to the financial transaction distribution rule whose details you want to edit.

The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.

5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Edit**  icon in the **Edit** column corresponding to the financial transaction distribution rule version whose details you want to edit.

The **Financial Transaction Distribution Rule Version** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the financial transaction distribution rule version.
- **Included Objects** – Used to include the objects in financial transaction distribution rule version.
- **Excluded Objects** – Used to exclude the objects in financial transaction distribution rule version.
- **Algorithms** – Used to define the algorithms in the financial transaction distribution rule version.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Displays the financial transaction distribution rule.	Not applicable
Effective Date	Used to specify the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.	Yes
Business Object	Displays the business object using which financial transaction distribution rule version is created.	Not applicable
Version Description	Used to specify the description of the financial transaction distribution rule version.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule version.	No

The **Included Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be included in the financial transaction distribution rule version.	No
Priority	Used to specify the sequence of objects for the credit or debit distribution within an account.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type.	No
	Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type.	
Bill Status	Used to indicate the status of the bill.	No

Note: If you include object, then all the fields are mandatory.

The **Excluded Objects** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be excluded from the financial transaction distribution rule version.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type.	No
	Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type.	

Note: If you exclude object, then all the fields are mandatory.

The **Algorithms** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicates the system event on which the algorithm must be executed.	No
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	No

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Used to specify the algorithm code.	No
	Note: It has a link. On clicking the link, Algorithm screen appears with the details of the respective algorithm.	

Note: While defining a financial transaction distribution rule version, you can either include or exclude objects from it.

6. Modify the details of the financial transaction distribution rule version.
7. Modify the included or excluded objects from the financial transaction distribution rule version, if required.
8. Edit the algorithms, if required
9. Click **Save**.

The changes made to the financial transaction distribution rule version are saved.

Deleting a Financial Transaction Distribution Rule Version

Procedure

To delete a financial transaction distribution rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast**  icon corresponding to the financial transaction distribution rule whose details you want to edit.
The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Delete**  icon in the **Delete** column corresponding to the financial transaction distribution rule version that you want to delete.
A message appears confirming whether you want to delete the financial transaction distribution rule version.
6. Click **OK**.

The financial transaction distribution rule version is deleted.

Copying a Financial Transaction Distribution Rule Version

Instead of creating a financial transaction distribution rule version from scratch, you can create a new financial transaction distribution rule version using an existing financial transaction distribution rule version. This is possible through copying a financial transaction distribution rule version. On copying a financial transaction distribution rule version, the details are copied to the new financial transaction distribution rule. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution rule, you should have:

- Financial transaction distribution rule version (whose copy you want to create) defined in the application
- Financial transaction distribution rule version business objects defined in the application

Procedure

To copy a financial transaction distribution rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
The **Financial Transaction Distribution Rule** screen appears.
4. In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast**  icon corresponding to the financial transaction distribution rule whose details you want to edit.
The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.
5. In the **Financial Transaction Distribution Rule Version List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the financial transaction distribution rule version whose copy you want to create.

The **Financial Transaction Distribution Rule Version** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the financial transaction distribution rule version.
- **Included Objects** – Used to include the objects in financial transaction distribution rule version.
- **Excluded Objects** – Used to exclude the objects in financial transaction distribution rule version.
- **Algorithms** – Used to define the algorithms in the financial transaction distribution rule version.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
FT Distribution Rule	Displays the financial transaction distribution rule.	Not applicable
Effective Date	Used to specify the date from when the financial transaction distribution rule version is effective for the respective financial transaction distribution rule.	Yes
Business Object	Displays the business object using which financial transaction distribution rule version is created.	Not applicable
Version Description	Used to specify the description of the financial transaction distribution rule version.	Yes
Detailed Description	Used to specify the additional information about the financial transaction distribution rule version.	No

Note: If you include object, then all the fields are mandatory.

Included Objects – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be included in the financial transaction distribution rule version.	No
Priority	Used to specify the sequence of objects for the credit or debit distribution within an account.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	No
Bill Status	Used to indicate the status of the bill.	No

Excluded Objects – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence in which the objects should be excluded from the financial transaction distribution rule version.	No
Object Type	Used to indicate the type of object.	No
Value	Used to specify the value of the object type. Note: It has a link. On clicking the link, respective object type screen appears with the details of the respective object type. The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	No

Note: If you exclude object, then all the fields are mandatory.

Algorithms – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Used to indicates the system event on which the algorithm must be executed.	No
Sequence	Used to specify the order in which the algorithms for each system event must be executed.	No
Algorithm	Used to specify the algorithm code. Note: It has a link. On clicking the link, Algorithm screen appears with the details of the respective algorithm. The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	No

Note: While defining a financial transaction distribution rule version, you can either include or exclude objects from it.

6. Enter the required details.
7. Define, edit, or remove objects from the financial transaction distribution rule version , if required.
8. Associate or dissociate the algorithms from the financial transaction distribution rule version, if required

9. Click **Save**.

The new financial transaction distribution rule version is defined.

Viewing the Financial Transaction Distribution Rule Version Details

Procedure

To view the details of a financial transaction distribution rule version:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Financial Transaction Distribution Rule**.
A sub-menu appears.
- Click the **Search** option from the **Financial Transaction Distribution Rule** sub-menu.
The **Financial Transaction Distribution Rule** screen appears.
- In the **Financial Transaction Distribution Rule List** zone, click the **Broadcast**  icon corresponding to the financial transaction distribution rule whose details you want to view.
The **Financial Transaction Distribution Rule** and **Financial Transaction Distribution Rule Version List** zone appears.
- In the **Financial Transaction Distribution Rule Version List** zone, click the **Broadcast**  icon corresponding to the financial transaction distribution rule version whose details you want to view.
The **Financial Transaction Distribution Rule Version** zone appears.
- View the details of the financial transaction distribution rule version in the **Financial Transaction Distribution Rule Version** zone.

Expiration Cycle Extendable Lookup

The **Expiration Cycle Extendable Lookup** screen allows you to search for an expiration cycle. An expiration cycle is an extendable lookup reference object which indicates the frequency at which the financial transaction distribution object created for the account should be expired (i.e. after two months or 45 days from the date of creation). You can associate an expiration cycle with one or more accounts. This screen contains the following zone:

- [Extendable Lookup Search](#) on page 1839

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search the details of expiration cycle business object. This zone contains the following two sections:

- **Search Criteria** - This section contains the following fields:

Field Name	Field Description
Business Object	Used to search the expiration cycle business object.
Description	Used to search the expiration cycle business object with a particular description.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the business objects.
Description	Displays description of the business object.
	Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective business object.

Note: You must specify at least one search criterion while searching for the expiration cycle business object.

Searching for an Expiration Cycle Extendable Lookup

Prerequisites

To search for an expiration cycle extended lookup, you should have:

- Expiration cycle extended lookup defined in the application.

Procedure

To search for an expiration cycle extended lookup:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.
The **Extendable Lookup Query** screen appears.
3. Search for **C1-EXPCYCLE** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business object.
The **Extended Lookup** screen appears.
5. View the list of expiration cycle extended lookup values in the **Extendable Lookup Value List** zone.

Note:

You must specify at least one search criterion while searching for an expiration cycle extended lookup.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Extendable Lookup (Expiration Cycle)

Once you create an expiration cycle, the **Extendable Lookup** (Expiration Cycle) screen allows you to:

- Edit the details of an expiration cycle
- Copy an expiration cycle
- Delete an expiration cycle
- View the details of an expiration cycle

This screen contains the following zones:

- [Extendable Lookup Value List](#) on page 1840
- [Extendable Lookup Value](#) on page 1841

Extendable Lookup Value List

The **Extendable Lookup Value List** zone allows you to view the list of expiration cycle extended lookup values that are already defined in the system.

This zone contains the following columns:

Column Name	Column Description
Value	Displays the expiration cycle extended lookup value.
Description	Displays the description of the expiration cycle extended lookup value.

Column Name	Column Description
Detailed Description	Displays the additional information about the expiration cycle extended lookup value.
Owner	Displays the owner of the expiration cycle extended lookup value.
Edit	On clicking the Edit () icon, the Expiration Cycle screen appears where you can edit the details of the expiration cycle extended lookup value.
Duplicate	On clicking the Duplicate () icon, the Expiration Cycle screen appears where you can define a expiration cycle extended lookup value using an existing expiration cycle extended lookup value.
Delete	On clicking the Delete () icon, you can delete the expiration cycle extended lookup value.

On clicking the **Broadcast** () icon corresponding to the expiration cycle extended lookup value, the **Extendable Lookup Value** zone appear with the details of the respective expiration cycle extended lookup value.

You can filter the list using the **Value** or **Description** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Extendable Lookup Value

The **Extendable Lookup Value** zone allows you to view the details of the expiration cycle extended lookup value. This zone contains the following section:

- **Main** - This section allows you to view the details of the expiration cycle extended lookup value. It contains the following fields:

Field Name	Field Description
Expiration Cycle	Displays the expiration cycle extended lookup value.
Description	Displays the description of the expiration cycle extended lookup value.
Override Description	Displays the overridden description of the expiration cycle extended lookup value.
Detailed Description	Displays the additional information about the expiration cycle extended lookup value.
Status	Displays the status of expiration cycle extended lookup value.

Field Name	Field Description
Duration Unit	Displays the duration unit of the expiration cycle extended lookup value.
Duration Value	Displays the period till when the expiration cycle extended lookup value is active.
Consider Holiday	Displays whether to consider holidays or not while calculating the duration value.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the expiration cycle extended lookup value.
Delete	Used to delete the expiration cycle extended lookup value.
Duplicate	Used to create a new expiration cycle extended lookup value using an existing expiration cycle extended lookup value.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the expiration cycle extended lookup value is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.
Owner	Indicates the person or entity that created the expiration cycle business object.

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the extendable lookup value of the **Extendable Lookup Value List** zone.

Defining an Expiration Cycle

Procedure

To define an expiration cycle:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
The **Extended Lookup Query** screen appears.

- Search for **C1-EXPCYCLE** business object.
- In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business object.

The **Extended Lookup** screen appears.

- Click the **Add** button in the **Page Title** area of the **Extended Lookup** screen.

The **Expiration Cycle** screen appears. It contains the following section:

- Main** – Used to specify basic details about the expiration cycle.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Expiration Cycle	Used to specify the value of expiration cycle.	Yes
Description	Used to specify the description of the expiration cycle.	Yes
Override Description	Used to specify the override description of the expiration cycle.	No
Detailed Description	Used to specify the additional information about the expiration cycle.	No
Status	Used to indicate the status of the expiration cycle.	No
Duration Unit	Used to indicate the duration unit of the expiration cycle.	Yes
Duration Value	Used to indicate the period till when the expiration cycle is active.	Yes
Consider Holiday	Used to indicate whether to consider the holiday while calculating the duration value.	No

- Enter the required details.
- Click **Save**.

The expiration cycle is defined.

Editing an Expiration Cycle

Procedure

To edit an expiration cycle:

- Search for the **C1-EXPCYCLE** business object in the **Extended Lookup Query** screen.
- In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business object.

The **Extended Lookup** screen appears.

3. In the **Extended Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the extended lookup value whose details you want to edit.

The **Expiration Cycle** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the expiration cycle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Expiration Cycle	Used to specify the value of expiration cycle.	Yes
Description	Used to specify the description of the expiration cycle.	Yes
Override Description	Used to specify the override description of the expiration cycle.	No
Detailed Description	Used to specify the additional information about the expiration cycle.	No
Status	Used to indicate the status of the expiration cycle.	No
Duration Unit	Used to indicate the duration unit of the expiration cycle.	Yes
Duration Value	Used to indicate the period till when the expiration cycle is active.	Yes
Consider Holiday	Used to indicate whether to consider the holiday while calculating the duration value.	No

Tip: Alternatively, you can click the **Edit** button in the **Extended Lookup Value** zone to edit the details of the expiration cycle.

4. Modify the details, if required.
5. Click **Save**.

The changes made to the expiration cycle are saved.

Copying an Expiration Cycle

Instead of creating an expiration cycle from scratch, you can create a new expiration cycle using an existing expiration cycle. This is possible through copying an expiration cycle. On copying an expiration cycle, the details are copied to the new expiration cycle. You can then edit the details, if required.

Prerequisites

To copy an expiration cycle, you should have:

- Expiration cycle (whose copy you want to create) defined in the application
- Expiration cycle business objects defined in the application

Procedure

To copy an expiration cycle:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
The **Extended Lookup Query** screen appears.
3. Search for **C1-EXPCYCLE** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-EXPCYCLE** business object.

The **Extended Lookup** screen appears.

5. In the **Extended Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the expiration cycle whose copy you want to create.

The **Expiration Cycle** screen appears. It contains the following section:

- **Main** – Used to specify basic details about the expiration cycle.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Expiration Cycle	Used to specify the value of expiration cycle.	Yes
Description	Used to specify the description of the expiration cycle.	Yes
Override Description	Used to specify the override description of the expiration cycle.	No
Detailed Description	Used to specify the additional information about the expiration cycle.	No
Status	Used to indicate the status of the expiration cycle.	No
Duration Unit	Used to indicate the duration unit of the expiration cycle.	Yes
Duration Value	Used to indicate the period till when the expiration cycle is active.	Yes
Consider Holiday	Used to indicate whether to consider the holiday while calculating the duration value.	No

Tip: Alternatively, you can click the **Duplicate** button in the **Extended Lookup Value** zone to create a copy of the expiration cycle.

6. Enter the required details.
7. Click **Save**.

The new expiration cycle is defined.

Distribution Hierarchy Extendable Lookup

The **Distribution Hierarchy Extendable Lookup** screen allows you to search for a distribution hierarchy. A distribution hierarchy is an extendable lookup reference object which indicates the list of hierarchies that should be considered while deriving accounts for offsetting the credit or debit amount on the financial transaction distribution object. This screen contains the following zone:

- [Extendable Lookup Search](#) on page 1847

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search the details of distribution hierarchy business object. This zone contains the following two sections:

- **Search Criteria** – This section contains the following fields:

Field Name	Field Description
Business Object	Used to search the distribution hierarchy business object.
Description	Used to search the distribution hierarchy business object with a particular description.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the business object.
Description	Displays information about the business object.
	Note: It has a link. On clicking the link, the Extendable Lookup screen appears where you can view the details of the respective business object.

Note: You must specify at least one search criterion while searching for the distribution hierarchy business object.

Extendable Lookup Value

The **Extendable Lookup Value** zone allows you to view the details of the distribution hierarchy extended lookup value. This zone consists of the following section:

- **Main** – This section lists the distribution hierarchy extended lookup values. It contains the following fields:

Field Name	Field Description
Hierarchy Code	Displays the unique hierarchy code.

Field Name	Field Description
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.
Description	Displays the description of the distribution hierarchy extended lookup value.
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.
Status	Displays the status of the distribution hierarchy extended lookup value.

- **Hierarchy List** – This section lists the hierarchy of the distribution. It contains the following columns:

Column Name	Column Description
Sequence	Displays the order of priority according to which the distribution will be made in hierarchy.
Value	Displays the value of hierarchy.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the distribution hierarchy extended lookup value.
Delete	Used to delete the distribution hierarchy extended lookup value.
Duplicate	Used to create a new distribution hierarchy extended lookup value using an existing distribution hierarchy extended lookup value.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the distribution hierarchy extended lookup value is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears with the details of the respective business object.
Owner	Indicates the person or entity that created the distribution hierarchy business object.

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the extendable lookup value of the **Extendable Lookup Value List** zone.

Defining a Distribution Hierarchy

Procedure

To define a distribution hierarchy:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **E** and then click **Extended Lookup**.
The **Extended Lookup Query** screen appears.
3. Search for **C1-HIERARCHY** business object.
4. In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business object.

The **Extended Lookup** screen appears.

5. Click the **Add** button in the **Page Title** area of the **Extended Lookup** screen.

The **Hierarchy** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the distribution hierarchy.
- **Hierarchy List** – Used to specify the hierarchy of the distribution.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Code	Displays the unique hierarchy code.	Yes
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.	No
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.	No
Description	Displays the description of the distribution hierarchy extended lookup value.	Yes
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.	No
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.	No
Status	Displays the status of the distribution hierarchy extended lookup value.	No

Hierarchy List – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order of priority according to which the distribution will be made in hierarchy.	Yes
Value	Used to specify the value of hierarchy.	Yes

Note:

You must specify at least one hierarchy list while defining a distribution hierarchy.

If you want to specify more than one hierarchy within the hierarchy list, click the **Add** (+) icon in the **Hierarchy List** section and then specify the details. However, if you want to remove a hierarchy from the hierarchy list, click the **Delete** (🗑️) icon corresponding to the hierarchy.

- Enter the required details.
- Click **Save**.

The distribution hierarchy is defined.

Editing a Distribution Hierarchy**Procedure**

To edit a distribution hierarchy:

- Search for the **C1-HIERARCHY** business object in the **Extended Lookup Query** screen.
- In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business object.
The **Extended Lookup** screen appears.
- In the **Extended Lookup Value List** zone, click the **Edit** (🖋️) icon in the **Edit** column corresponding to the extended lookup value whose details you want to edit.

The **Hierarchy** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the distribution hierarchy.
- Hierarchy List** – Used to specify the hierarchy of the distribution.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Code	Displays the unique hierarchy code.	Yes
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.	No
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.	No

Field Name	Field Description	Mandatory (Yes or No)
Description	Displays the description of the distribution hierarchy extended lookup value.	Yes
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.	No
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.	No
Status	Displays the status of the distribution hierarchy extended lookup value.	No

Hierarchy List – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order of priority according to which the distribution will be made in hierarchy.	Yes
Value	Used to specify the value of hierarchy.	Yes

Note:

You must specify at least one hierarchy list while defining a distribution hierarchy.

If you want to specify more than one hierarchy within the hierarchy list, click the **Add** (+) icon in the **Hierarchy List** section and then specify the details. However, if you want to remove a hierarchy from the hierarchy list, click the **Delete** (🗑️) icon corresponding to the hierarchy.

Tip: Alternatively, you can click the **Edit** button in the **Extended Lookup Value** zone to edit the details of the distribution hierarchy.

4. Modify the details, if required.
5. Add to the hierarchy list, if required.
6. Click **Save**.

The changes made to the distribution hierarchy are saved.

Copying a Distribution Hierarchy

Instead of creating a distribution hierarchy from scratch, you can create a new distribution hierarchy using an existing distribution hierarchy. This is possible through copying a distribution hierarchy. On copying a distribution hierarchy, the details are copied to the new distribution hierarchy. You can then edit the details, if required.

Prerequisites

To copy a distribution hierarchy, you should have:

- Distribution hierarchy (whose copy you want to create) defined in the application
- Distribution hierarchy business object defined in the application

Procedure

To copy a distribution hierarchy:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **E** and then click **Extended Lookup**.

The **Extended Lookup Query** screen appears.

- Search for **C1-HIERARCHY** business object.

- In the **Search Results** section, click the **Description** link corresponding to the **C1-HIERARCHY** business object.

The **Extended Lookup** screen appears.

- In the **Extended Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the distribution hierarchy whose copy you want to create.

The **Hierarchy** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the distribution hierarchy.
- Hierarchy List** – Used to specify the hierarchy list of distribution.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hierarchy Code	Displays the unique hierarchy code.	Yes
Parent Person Relationship Type	Displays the person relationship type used for going in parent hierarchy.	No
Child Person Relationship Type	Displays the person relationship type used for going in child hierarchy.	No
Description	Displays the description of the distribution hierarchy extended lookup value.	Yes
Override Description	Displays the overridden description of the distribution hierarchy extended lookup value.	No
Detailed Description	Displays the additional information about the distribution hierarchy extended lookup value.	No
Status	Displays the status of the distribution hierarchy extended lookup value.	No

Hierarchy List – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order of priority according to which the distribution will be made in hierarchy.	Yes
Value	Used to specify the value of hierarchy.	Yes

Note:

You must specify at least one hierarchy list while defining a distribution hierarchy.

If you want to specify more than one hierarchy within the hierarchy list, click the **Add** (+) icon in the **Hierarchy List** section and then specify the details. However, if you want to remove a hierarchy from the hierarchy list, click the **Delete** (🗑️) icon corresponding to the hierarchy.

Tip: Alternatively, you can click the **Duplicate** button in the **Extended Lookup Value** zone to create a copy of the distribution hierarchy.

6. Enter the required details.
7. Add to the hierarchy list, if required.
8. Click **Save**.

The new distribution hierarchy is defined.

Extendable Lookup Value

The **Extendable Lookup Value** zone allows you to view the details of the financial transaction distribution object extended lookup value. This zone consists of the following sections:

- **Main** - This section lists the financial transaction distribution object extended lookup values. It contains the following fields:

Field Name	Field Description
Financial Transaction Distribution Object Code	Displays the financial transaction distribution object code.
Description	Displays the description of the financial transaction distribution object extended lookup value.
Override Description	Displays the overridden description of the financial transaction distribution object extended lookup value.
Detailed Description	Displays the additional information about the financial transaction distribution object extended lookup value.

Field Name	Field Description
Status	Displays the status of the financial transaction distribution object extended lookup value.

- **Financial Transaction Distribution Type List** - This section lists the financial transaction distribution types associated to a financial transaction distribution object. It contains the following column:

Column Name	Column Description
Financial Transaction Distribution Type	Lists the financial transaction distribution types to be associated to a financial transaction distribution object. Note: It has a link. On clicking the link, the Financial Transaction Distribution Type screen appears where you can view the details of the respective business object.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the financial transaction distribution object extended lookup value.
Delete	Used to delete the financial transaction distribution object extended lookup value.
Duplicate	Used to create a new financial transaction distribution object extended lookup value using an existing financial transaction distribution object extended lookup value.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the financial transaction distribution object extended lookup value is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Owner	Indicates the person or entity that created the financial transaction distribution object.

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the extendable lookup value of the **Extendable Lookup Value List** zone.

Defining a Financial Transaction Distribution Object

Procedure

To define a financial transaction distribution object:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **E** and then click **Extended Lookup**.

The **Extended Lookup Query** screen appears.

3. Search for **C1-FTDISTOBJECT** business object.

4. In the **Search Results** section, click the **Description** link corresponding to the **C1-FTDISTOBJECT** business object.

The **Extended Lookup** screen appears.

5. Click the **Add** button in the **Page Title** area of the **Extended Lookup** screen.

The **Financial Transaction Distribution Object** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the distribution hierarchy.
- **Financial Transaction Distribution Type List** – Used to specify the financial transaction distribution types associated to a financial transaction distribution object.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Object Code	Used to specify the financial transaction distribution object code.	Yes
Description	Used to specify the description of the financial transaction distribution object extended lookup value.	Yes
Override Description	Used to specify the override description of the financial transaction distribution object extended lookup value.	No
Detailed Description	Used to specify the additional information about the financial transaction distribution object extended lookup value.	No
Status	Used to indicate the status of the financial transaction distribution object extended lookup value.	No

Financial Transaction Distribution Type List – This section contains the following column:

Column Name	Column Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to indicate the financial transaction distribution type to be associated to a financial transaction distribution object.	Yes

Note:

You must specify at least one financial transaction distribution type while defining a financial transaction distribution object.

If you want to specify more than one financial transaction distribution type within the financial transaction distribution type list, click the **Add** (+) icon in the **Financial Transaction Distribution Type List** section and then specify the details. However, if you want to remove a financial transaction distribution type from the financial transaction distribution type list, click the **Delete** (🗑️) icon corresponding to the financial transaction distribution type.

6. Enter the required details.
7. Click **Save**.

The financial transaction distribution object is defined.

Copying a Financial Transaction Distribution Object

Instead of creating a financial transaction distribution object from scratch, you can create a new financial transaction distribution object using an existing financial transaction distribution object: This is possible through copying a financial transaction distribution object. On copying a distribution hierarchy, the details are copied to the new financial transaction distribution object. You can then edit the details, if required.

Prerequisites

To copy a financial transaction distribution object, you should have:

- Financial transaction distribution object(whose copy you want to create) defined in the application
- Financial transaction distribution object business object defined in the application

Procedure

To copy a financial transaction distribution object:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **E** and then click **Extended Lookup**.

The **Extended Lookup Query** screen appears.

- Search for **C1-FTDISTOBJECT** business object.

- In the **Search Results** section, click the **Description** link corresponding to the **C1-FTDISTOBJECT** business object.

The **Extended Lookup** screen appears.

- In the **Extended Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the financial transaction distribution object whose copy you want to create.

The **Financial Transaction Distribution Object** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the financial transaction distribution object.

- **Financial Transaction Distribution Type List** – Used to specify the financial transaction distribution types associated to a financial transaction distribution object.

Main – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution Object Code	Used to specify the financial transaction distribution object code.	Yes
Description	Used to specify the description of the financial transaction distribution object extended lookup value.	Yes
Override Description	Used to specify the override description of the financial transaction distribution object extended lookup value.	No
Detailed Description	Used to specify the additional information about the financial transaction distribution object extended lookup value.	No
Status	Used to indicate the status of the financial transaction distribution object extended lookup value.	No

Financial Transaction Distribution Type List – This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Financial Transaction Distribution Type	Used to indicate the financial transaction distribution type to be associated to a financial transaction distribution object.	Yes

Note:

You must specify at least one financial transaction distribution type while defining a financial transaction distribution object.

If you want to specify more than one financial transaction distribution type within the financial transaction distribution type list, click the **Add** (+) icon in the **Financial Transaction Distribution Type List** section and then specify the details. However, if you want to remove a financial transaction distribution type from the financial transaction distribution type list, click the **Delete** (🗑️) icon corresponding to the financial transaction distribution type.

Tip: Alternatively, you can click the **Duplicate** button in the **Extended Lookup Value** zone to create a copy of the financial transaction distribution object.

6. Enter the required details.
7. Add financial transaction distribution type, if required.
8. Click **Save**.

The new financial transaction distribution object is defined.

Searching for a Financial Transaction Distribution Object

Prerequisites

To search for a financial transaction distribution, you should have:

- Financial transaction distribution types defined in the application.

Procedure

To search for a financial transaction distribution:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Financial Transaction Distribution**.
The **Financial Transaction Distribution** screen appears.
3. Enter the search criteria in the **Financial Transaction Distribution Search** zone depending on whether you want to search for a financial transaction distribution.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required. In case of **Financial Transaction Distribution ID**, wild card search is not supported.

In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Contract	<p>Indicates the contract on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective account.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Contract Search window appears.</p>
Status	Indicates the status of the financial transaction distribution object.
Financial Transaction ID	Displays the financial transaction ID.

Field Name	Field Description
Bill segment	Indicates the bill segment information on which the financial transaction distribution object is distributed. a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill Segment screen appears where you can view the details of the respective bill segment.
Amount	Displays the distributed amount.
Expiration Date	Displays the expiration date of the financial transaction distribution object.

- **Distribution List** – This section displays the distribution list of the financial transaction distribution object. It contains the following columns:

Column Name	Column Description
Account	Indicates the account on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Contract	Indicates the contract on which the financial transaction distribution object is distributed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective account.
Transfer Adjustment	Indicates the transfer adjustments made on the financial transaction distribution object.
Distribution Amount	Displays the distributed amount.

- **Characteristics** – This section lists the characteristics defined for the financial transaction distribution type. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the financial transaction distribution object.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the financial transaction distribution object is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the financial transaction distribution object status is updated.
Create Date/Time	Displays the date and time when the financial transaction distribution object is created.

Financial Transaction Distribution - Log

The **Log** tab contains the following zone:

- [Financial Transaction Distribution Log](#) on page 1871

Financial Transaction Distribution Log

The **Financial Transaction Distribution Log** zone on the **Financial Transaction Distribution** screen lists the complete trail of actions performed on the financial transaction distribution object. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the financial transaction distribution object.
Details	Displays the details about the action performed on the financial transaction distribution object.
User	Indicates the user who has performed the action on the financial transaction distribution object.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the financial transaction distribution object.
Status Reason	Displays the status reason of action performed on the financial transaction distribution object.

Note: You can manually add a log entry for the financial transaction distribution object by clicking the **Add Log Entry** link in the upper right corner of the **Financial Transaction Distribution** zone.

The **Add Log Entry** window appears. Enter **Log Details** and click **Save**. The financial transaction distribution object log is added.

Related Topics

For more information on...	See...
How to view the log of a financial transaction distribution	Viewing the Log of a Financial Transaction Distribution on page 1872

Viewing the Log of a Financial Transaction Distribution**Procedure**

To view the log of a financial transaction distribution:

1. Search for the financial transaction distribution object in the **Financial Transaction Distribution** screen.
2. In the **Search Results** section, click the link in the **Information** column corresponding to the financial transaction distribution object whose log you want to view.

The **Financial Transaction Distribution** screen appears. It consists of the following tabs:

- **Main** – Displays information about the financial transaction distribution. It contains the following zone:
 - **Financial Transaction Distribution** – Displays information about the financial transaction distribution object.
- **Log** – Lists the complete trail of actions performed on the financial transaction distribution object. This tab contains the following zone:
 - **Financial Transaction Distribution Log** – Displays the trail of actions performed on the particular financial transaction distribution object.

3. Click the **Log** tab.

4. View the log of a financial transaction distribution in the **Financial Transaction Distribution Log** zone.

Adding a Log Entry for a Financial Transaction Distribution**Procedure**

To add a log entry for a financial transaction distribution:

1. Search for the financial transaction distribution object in the **Financial Transaction Distribution** screen.
2. In the **Search Results** section, click the link in the **Information** column corresponding to the financial transaction distribution whose log you want to edit.

The **Financial Transaction Distribution** screen appears. It consists of the following tabs:

- **Main** – Displays information about the financial transaction distribution. It contains the following zone:
 - **Financial Transaction Distribution** – Displays information about the financial transaction distribution object.

- **Log** – Lists the complete trail of actions performed on the financial transaction distribution object. This tab contains the following zone:
 - **Financial Transaction Distribution Log** – Displays the trail of actions performed on the particular financial transaction distribution object.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Financial Transaction Distribution Log** zone.

The **Add Log Entry** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Financial Transaction Distribution	Displays information about the financial transaction distribution object.	Not applicable
Log Details	Used to specify additional comments on the financial transaction distribution object.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Financial Transaction Distribution Log** zone.

Deferred Revenue Recognition

Topics:

- [Prerequisites](#)
- [Deferred Revenue Recognition Status Transition](#)
- [Algorithms Used in Deferred Revenue Recognition](#)
- [Deferred Revenue Recognition Template \(Used for Searching\)](#)
- [Deferred Revenue Recognition Template \(Used for Viewing\)](#)
- [Deferred Revenue Recognition \(Used for Searching\)](#)
- [Deferred Revenue Recognition \(Used for Viewing\)](#)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is \$1200. When this new business is booked, the revenue of \$1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, \$200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information

about the deferred revenue recognition statuses, see [Deferred Revenue Recognition Status Transition](#) on page 1877.

Note: The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see [Prerequisites](#) on page 1877.

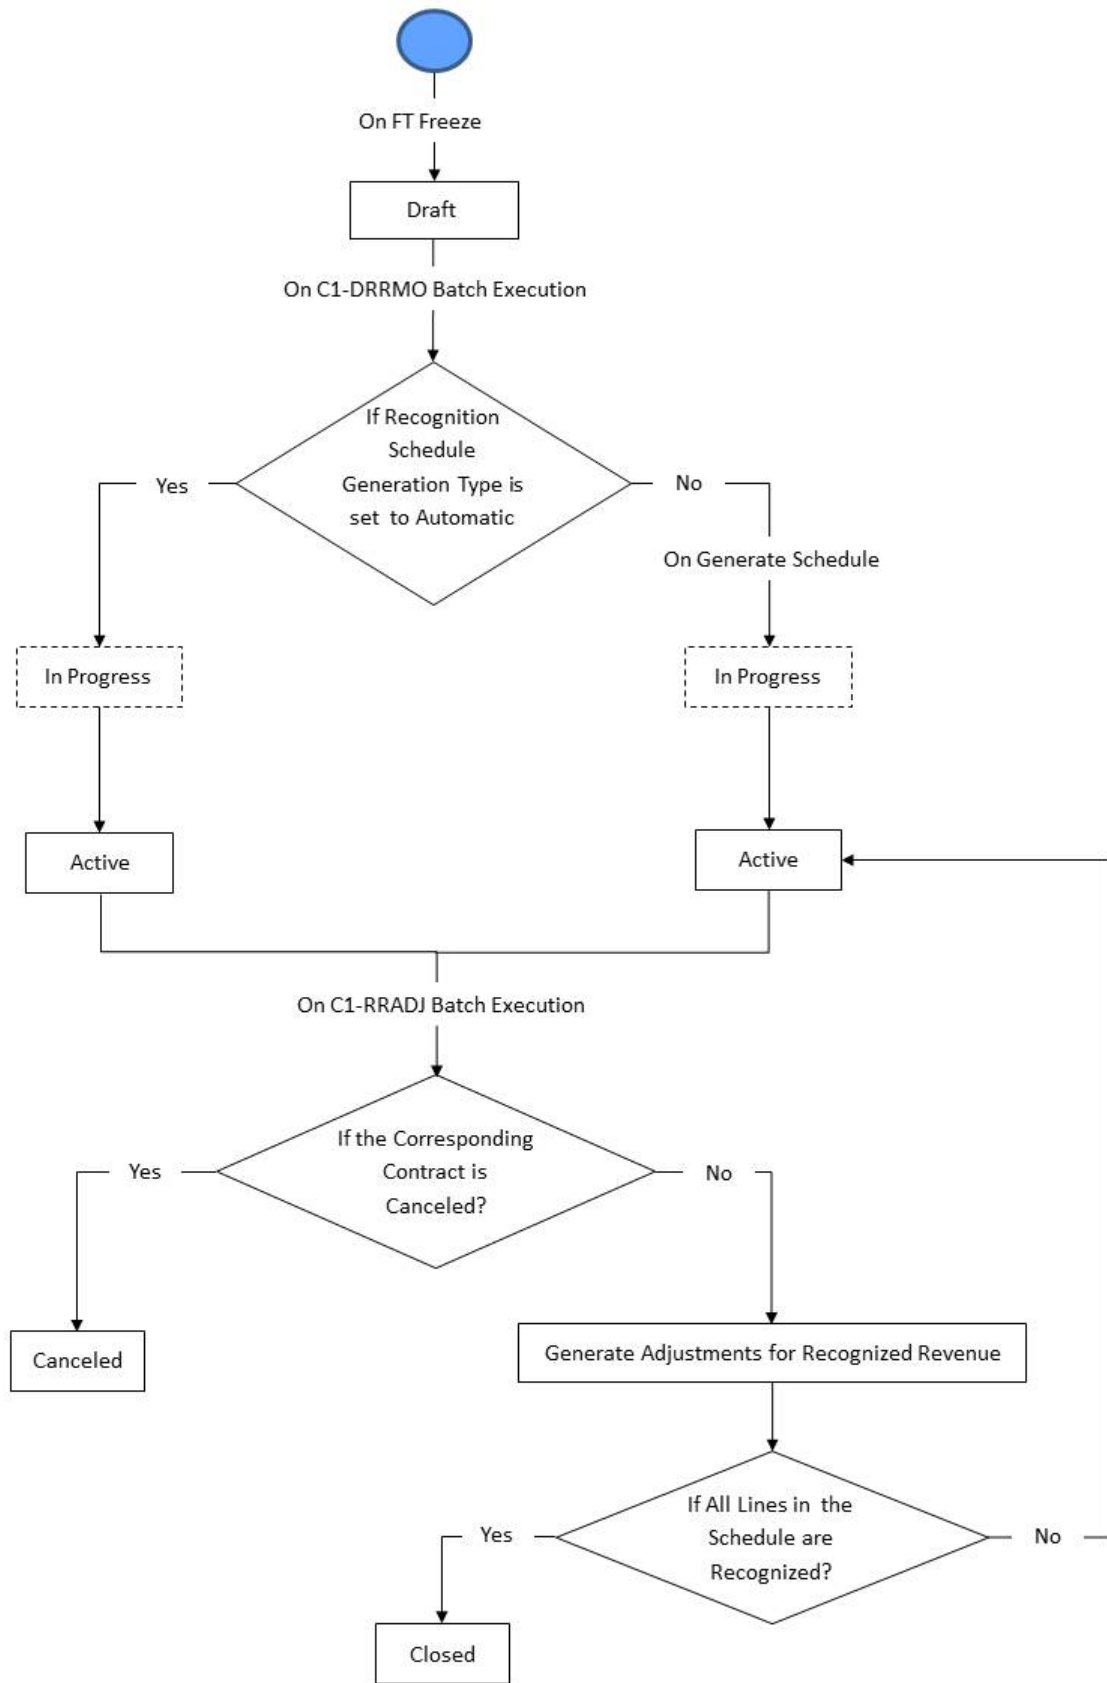

Prerequisites

To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
 - Use Calendar or Business Days (C or B)
 - Override Default Recognition Date (Y or N)
 - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
 - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

Deferred Revenue Recognition Status Transition

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	<p>This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter:</p> <ul style="list-style-type: none"> • Use Contract Expiration Date (Y or N) – Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECITM	C1-REVRECITM	<p>This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon (which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters:</p> <ul style="list-style-type: none"> • Use Calendar or Business Days (C or B) - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory. • Override Default Recognition Date (Y or N) – Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory. • Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun) – Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day. • Override Default Monthly Recognition Date (1-31) - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, ..., 31. This parameter is required when you want to override the default monthly recognition date.

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECADJ	C1-REVRECADJ	This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.
		C1-REVITMREC	C1-REVITMREC	<p>If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter:</p> <ul style="list-style-type: none"> • Create Adjustments (Y or N) – Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.
		C1-DRRTM-INF	C1-DRRTM-INF	<p>This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> 1. Deferred Revenue Recognition Template 2. Description

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	<p>This algorithm validates the deferred revenue recognition template. It checks the following:</p> <ul style="list-style-type: none"> • Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule. • Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events. • Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination. • Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field. • Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.>> Whether the low proration limit is between 0 to 31 and is less than the high proration limit. <p>In addition, it does not allow you to:</p> <ul style="list-style-type: none"> • Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition. • Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status. • Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status. <p>You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRSC-INF	C1-DRRSC-INF	<p>This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> 1. Deferred Revenue Recognition Template 2. Deferred Revenue Recognition Status 3. Distribution Code 4. Deferred Revenue Recognition ID
		C1-REVMON	C1-REVMON	<p>This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.</p>
		C1-REVRECINP	C1-REVRECINP	<p>This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> • Next Status • Next Transition Condition <p>At a time, you can specify value for either the Next Status or Next Transition Condition parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.</p>

Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition Template \(Used for Viewing\)](#) on page 1892

This screen consists of the following zone:

- [Search Deferred Revenue Recognition Template](#) on page 1884

Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> • Daily • Monthly • Weekly 	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are: <ul style="list-style-type: none"> Active Inactive 	No

Note: You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition. Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the respective deferred revenue recognition template.
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

How to view the details of a deferred revenue recognition template	Viewing the Deferred Revenue Recognition Template Details on page 1891
How to search for a deferred revenue recognition template	Searching for a Deferred Revenue Recognition Template on page 1885

Searching for a Deferred Revenue Recognition Template

Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.
The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

Defining a Deferred Revenue Recognition Template

Prerequisites

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

Procedure

To define a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the deferred revenue recognition template.
- **Parameters** – Used to specify the various parameters for the deferred revenue recognition template.
- **Algorithms** – Used to associate algorithms with the deferred revenue recognition template.
- **Divisions** – Used to associate a deferred revenue recognition template with a division.
- **Characteristics** – Used to define characteristics for the deferred revenue recognition template.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

The **Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Distribution Code Search window appears.	
Contract Type	Used to indicate a particular type of contract.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> Automatic Manual 	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> Daily Monthly Weekly 	Yes
Allow Proration	Used to allow proration.	Yes
	Note: The Allow Proration field appears only when you select Recognition Schedule as Monthly .	

Field Name	Field Description	Mandatory (Yes or No)
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.	Yes (Conditional)
	Note: This field appears only when you check the tick-box for Allow Proration .	Note: This field is required only when the recognition schedule is selected as monthly and when the Allow Proration check box is selected.
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.	Yes (Conditional)
	Note: This field appears only when you check the tick-box for Allow Proration .	Note: This field is required only when the recognition schedule is selected as monthly and when the Allow Proration check box is selected.

- Enter the required details.
- Associate algorithms with the deferred revenue recognition template, if required.
- View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
- Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
- Click **Save**.

The deferred revenue recognition template is created.

Deferred Revenue Recognition Template screen	Deferred Revenue Recognition Template (Used for Searching) on page 1884
How to associate algorithms with the deferred revenue recognition template	Associating Algorithms with a Deferred Revenue Recognition Template on page 1888

Associating Algorithms with a Deferred Revenue Recognition Template

Procedure

To associate algorithms with a deferred revenue recognition template:

- Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number.	Yes
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears. On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the Algorithm field.	

- Enter the required details in the **Algorithms** section.
- If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add**  icon, and then repeat 2.

Note: However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete**  icon corresponding to the algorithm.

How to edit a deferred revenue recognition template	Editing a Deferred Revenue Recognition Template on page 1894

Associating Deferred Revenue Recognition Template With A Division

Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

Procedure

To associate deferred revenue recognition template with a division:

- Ensure that the **Divisions** section is expanded when you are creating or editing a deferred revenue recognition template.

The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template.	No
	Note: You can only view those divisions to which you have access in the Division list.	

- Select the required division from the list.
- If you want to associate the deferred revenue recognition template with more than one division, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑️) icon corresponding to the division.

- Click **Save**.

The deferred revenue recognition template is associated with the divisions.

Defining Characteristics for a Deferred Revenue Recognition Template

Prerequisites

To define characteristics for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

Procedure

To define characteristics for a deferred revenue recognition template:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the Characteristic Valued field.	Note: This field is required when you are defining a characteristic for the deferred revenue recognition template.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete** (🗑️) icon corresponding to the characteristic.

Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- [Deferred Revenue Recognition Template](#) on page 1892

Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> • Active • Inactive

- **Parameters** – Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code. Note: It has a link. On clicking the link, the Distribution Code screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the Deferred Revenue Recognition Template which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created. Note: It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective adjustment type.

Field Name	Field Description
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> Manual Automatic
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: <ul style="list-style-type: none"> Daily Monthly Weekly
Allow Proration	Used to allow proration. Note: The Allow Proration field appears only when you select Recognition Schedule as Monthly .
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated. Note: This field appears only when you check the tick-box for Allow Proration .
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated. Note: This field appears only when you check the tick-box for Allow Proration .

- **Divisions** – Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** – Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Displays an algorithm that needs to be attached to the selected system event.	No
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.	

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template. Note: The Edit button appears only when the deferred revenue recognition template is in the Active status.
Delete	Used to delete the deferred revenue recognition template.

-
- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing a Deferred Revenue Recognition Template

Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to edit.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.

The **Deferred Revenue Recognition Template** screen appears.

Note: The **Edit** button appears only when the deferred revenue recognition template is in the **Active** status.

4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics from the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition template are saved.

Deleting a Deferred Revenue Recognition Template

Procedure

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template that you want to delete.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.

A message appears confirming whether you want to delete the deferred revenue recognition template.

4. Click **OK**.

The deferred revenue recognition template is deleted.

Deferred Revenue Recognition (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition \(Used for Viewing\)](#) on page 1901

This screen consists of the following zone:

- [Search Deferred Revenue Recognition](#) on page 1896

Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are: <ul style="list-style-type: none"> • Account Details • Person Details • Deferred Revenue Recognition Details • Financial Transaction Details • Policy Details 	Yes
	Note: By default, the Account Details option is selected.	
Person ID	Used to search deferred revenue recognition which are assigned to a particular person.	No
	Note: This field appears only when you select the Person Details option from the Search By list.	
Account ID	Used to search the account ID.	No
	Note: This field appears only when you select the Account Details option from the Search By list.	
Person Identifier Type	Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.	Yes (Conditional)
		Note: If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
		Note: If you specify the person identifier type as a search criteria, you have to specify the person identifier.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type of the account whose details you want to search.	Yes (Conditional)
	Note: This field appears only when you select the Account Details option from the Search By list.	Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier.	Yes (Conditional)
	Note: This field appears only when you select the Account Details option from the Search By list.	Note: If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Contract ID	Used to specify the contract ID linked to the account.	No
	Note: This field appears only when you select the Account Details option from the Search By list.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	Note: This field appears only when you select the Person Details option from the Search By list.	
Status	Used to search deferred revenue recognition with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled • Draft 	No
	Note: This field appears only when you select the Person Details , Account Details , or Deferred Revenue Recognition Details option from the Search By list.	
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition.	No
	Note: This field appears only when you select the Person Details , Account Details , or Deferred Revenue Recognition Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid.	No
	Note: This field appears only when you select the Person Details or Account Details option from the Search By list.	
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition	No
	Note: This field appears only when you select the Deferred Revenue Recognition Details option from the Search By list.	
Description	Used to specify the description of the deferred revenue recognition.	No
	Note: This field appears only when you select the Deferred Revenue Recognition Details option from the Search By list.	
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> • Daily • Monthly • Weekly 	No
	Note: This field appears only when you select the Deferred Revenue Recognition Details option from the Search By list.	
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction.	
	Note: This field appears only when you select the Financial Transaction Details option from the Search By list.	
Policy Type	Used to indicate the type of policy.	Yes
	Note: This field appears only when you select the Policy Details option from the Search By list.	
Policy Number	Used to indicate the policy number.	No
	Note: This field appears only when you select the Policy Details option from the Search By list.	
Plan Number	Used to indicate the plan number of the policy.	No
	Note: This field appears only when you select the Policy Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the name of the external system from where the policy originated.	No
	Note: This field appears only when you select the Policy Details option from the Search By list.	
Start Date	Used to indicate the date from when the policy is effective.	No
	Note: This field appears only when you select the Policy Details option from the Search By list.	
End Date	Used to indicate the date till when the policy is effective.	No
	Note: This field appears only when you select the Policy Details option from the Search By list.	

Note: You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction screen appears where you can view the details of the respective financial transaction.

Searching for a Deferred Revenue Recognition

Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.
- Person identifier types defined in the application
- Account identifier types defined in the application
- Recognition Schedules defined in the application
- Source Systems defined in the application

Procedure

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Deferred Revenue Recognition**.
A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.
The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

Viewing the Deferred Revenue Recognition Details

Procedure

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 1901

- [Deferred Revenue Recognition - Log](#) on page 1904
3. Ensure that the **Main** tab is selected.
 4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

How to search for a deferred revenue recognition	Searching for a Deferred Revenue Recognition on page 1900

Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 1901
- [Deferred Revenue Recognition - Log](#) on page 1904

Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- [Deferred Revenue Recognition](#) on page 1901
- [Associated Deferred Revenue Recognitions](#) on page 1903
- [Recognition Schedule](#) on page 1904
- [Revenue Recognition Items](#) on page 1904

Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.

Field Name	Field Description
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction Information screen appears where you can view the details of the financial transaction.
Total Revenue Deferred	Displays the total revenue deferred.
Total Revenue Recognized	Displays the total revenue recognized.
Status	Indicates the status of the deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled • Draft

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.
	Note: The Edit button appears only when the deferred revenue recognition is in the Active status.

Button Name	Button Description
Generate Schedule	Used to generate the deferred revenue recognition schedule.
	Note: The Generate Schedule button appears only when the deferred revenue recognition is in the Draft status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	Note: It has a link. On clicking the link, the Financial Transaction screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.

Column Name	Column Description
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	Note: It has a link. On clicking the link, the Deferred Revenue Recognition Template screen appears where you can view the details of the deferred revenue recognition template.
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> • Active • Closed • Canceled

Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

Note: This zone appears when the deferred revenue recognition is in the **Active** status.

Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. “
	Note: It has a link. On clicking the link, the Adjustment screen appears where you can view the details of the deferred revenue recognition.

Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- [Deferred Revenue Recognition Log](#) on page 1904

Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.
	Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Note: You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

Creating the Deferred Revenue Recognition Schedule**Prerequisites**

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

Procedure

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate.

The **Deferred Revenue Recognition** screen appears.

3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

Note: The **Generate Schedule** button appears only when the deferred revenue recognition is in the **Draft** status.

The status of the deferred revenue recognition is changed to **Active**.

Defining Characteristics for a Deferred Revenue Recognition**Prerequisites**

To define characteristics for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

Procedure

To define characteristics for a deferred revenue recognition:

1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Deferred Revenue Recognition .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Value	Used to specify the value for the characteristic type. Note: On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the deferred revenue recognition.

2. Enter the required details in the **Characteristics** section.

Note: If you select a characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

3. If you want to define more than one characteristic for the deferred revenue recognition, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete**  icon corresponding to the characteristic.

Related Topics

For more information on...	See...
How to edit a deferred revenue recognition	Editing a Deferred Revenue Recognition on page 1905

Adding Related Deferred Revenue Recognitions

Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

Procedure

To add related deferred revenue recognitions:

1. Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred revenue recognition.

The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Deferred Revenue Recognition Search window appears.	
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Financial Transactions Search window appears.	

- Enter the required details in the **Related Deferred Revenue Recognitions** section.
- If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete** (🗑) icon corresponding to the related deferred revenue recognition.

Related Topics

Editing the Deferred Revenue Recognition Schedule Details

Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

Procedure

To edit the details of the deferred revenue recognition schedule:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

The **Deferred Revenue Recognition** screen appears.

- Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.

The **Edit Recognition Schedule** screen appears.

Note: A recognition schedule from the deferred revenue recognition can be edited only when the deferred revenue recognition is in the **Active** status.

The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

- Modify the details of the recognition schedule.
- If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add (+)** icon and then repeat step 4.

Note: However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete (🗑)** icon corresponding to the recognition schedule.

- Click **Save**.

The changes made to the recognition schedule are saved.

Viewing the Log of a Deferred Revenue Recognition

Procedure

To view the log of a deferred revenue recognition:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 1901
- [Deferred Revenue Recognition - Log](#) on page 1904

- Click the **Log** tab.

The **Log** tab appears.

- View the complete trail of actions performed on the deferred revenue recognition in the **Deferred Revenue Recognition Log** zone.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the dispute request.
Details	Displays the details about the deferred revenue recognition log
User	Indicates the user who has performed deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the deferred revenue recognition
Status Reason	Displays the status reason of action performed on the deferred revenue recognition

Chapter 34

Product Lifecycle Management

Topics:

- *Prerequisites*
- *Product Status Transition through User Interface*
- *Product Status Transition through a Batch Process*
- *Product Version Status Transition*
- *Product Enrollment Status Transition through User Interface*
- *Product Enrollment Status Transition through a Batch Process*
- *Product Service (Used for Searching)*
- *Product Service (Used for Viewing)*
- *Product (Used for Searching)*
- *Product Version (Used for Viewing)*
- *Product (Used for Viewing)*
- *Product Enrollment (Used for Searching)*
- *Product Enrollment (Used for Viewing)*

Oracle Revenue Management and Billing facilitates a process of managing the entire lifecycle of a product from inception to service and then to retirement. The system allows you to create the following types of products:

- **Standard** - This type of product is a standalone product.
- **Packaged** - This type of a product is a bundle or group of products.
- **Informational** - This type of a product is used in the product hierarchy, but does not have its own pricing.

On creating a product, the status of the product is set to **Draft**. You can associate a product to one or more divisions. You can create a product to product relationship in the system. You can add product versions in the product. A product version is the entity which holds the following information:

- Product services which are offered with the product
- Price list from where the pricing for offered product services should be obtained.
- Eligibility criteria which must be satisfied when the account enrolls for the product.

The above information is captured when you create a product version for a standard product. However, when you create a product version for a packaged product, it holds the following information:

- Standard products which are offered in the packaged product.

Note: Some of these products might be compulsorily offered with the packaged product while some of the products might be optional.

- Standard products' services which are offered in the packaged product.

Note: Some of these product services might be compulsorily offered with the standard product while some of the product services might be optional.

- Add-on product services which are offered in the packaged product.
- Price list from where the pricing for offered product services and add-on product services should be obtained.
- Eligibility criteria which must be satisfied when the account enrolls for the packaged product.

A product version is effective from a particular date and its effective date must fall within the product date range. On creating a product version, the status of the product version is set to **In Progress**. You can activate a product only when at least one of its product versions is in the **Finalized** status.

A product service can be associated to one or more price items. A product service can be offered with a product only when it is associated with at least one price item in the system.

Once the product is activated, you can enroll the account for the product. On enrolling for a product, the system retrieves the product details from the product version which is effective on the system date. While enrolling for a standard product, you cannot remove mandatory product services from the product. However, you can enroll for optional product services which are offered with the product.

Similarly, while enrolling for a packaged product, you cannot remove mandatory products and product services from the packaged product. However, you can enroll for optional products and product services which are offered with the packaged product. While enrolling an account for a product, you can set the product enrollment priority for the account.

Once you create the product enrollment, the status of the enrollment is set to **Pending**. On submitting the product enrollment, the validation process is initiated. If all conditions are met, the status of the product enrollment is changed to **Enrolled**. You can unenroll for the product, whenever required.

You can retire a product, whenever required. The product, product version, and product enrollment goes through various statuses in their lifecycle.

The following batches are newly introduced for the Product Lifecycle Management feature:

- Product BO Monitor (C1-PRTRN)
- Product Enrollment Monitor (C1-ENTRN)

For more information on how to setup the product lifecycle management feature, see [Prerequisites](#) on page 1915.

Prerequisites

To setup the product lifecycle management feature, you need to do the following:

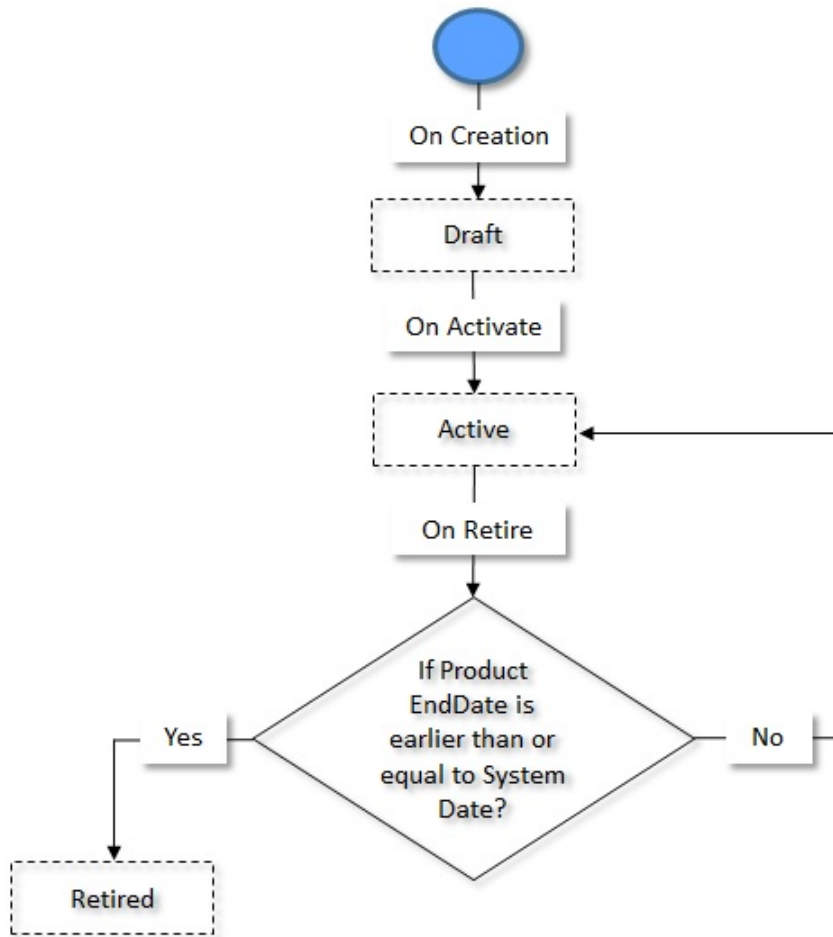

- Define the required customer and account in the system.
- Create a approval workflow group with a group name **PRODUCTPLM** for the product and product version.
- Define the feature configuration as **C1-PRODCH**.
- Define the sequence of execution of **C1-PROD-TDCC**, **C1-TRAN-RETR**, and **C1-PROD-ACTV** algorithms, in the **ACTIVE** status of the **C1_PRODUCT_BO** business object.
- Define the following parameters for the predefined **C1-PROD-TDCC** algorithm-type.
 - To Do Type1
 - Number of Days
 - Customer Contact
- Define the parameters for the predefined **C1-PRTRN** batch control.

Note: If the batch date is not defined while creating the batch control, system date is assigned as the batch date.

- Define at least one packaged or standard product for product enrollment purposes.
- Associate at least one price list with a product, when you are defining single or multiple product versions.

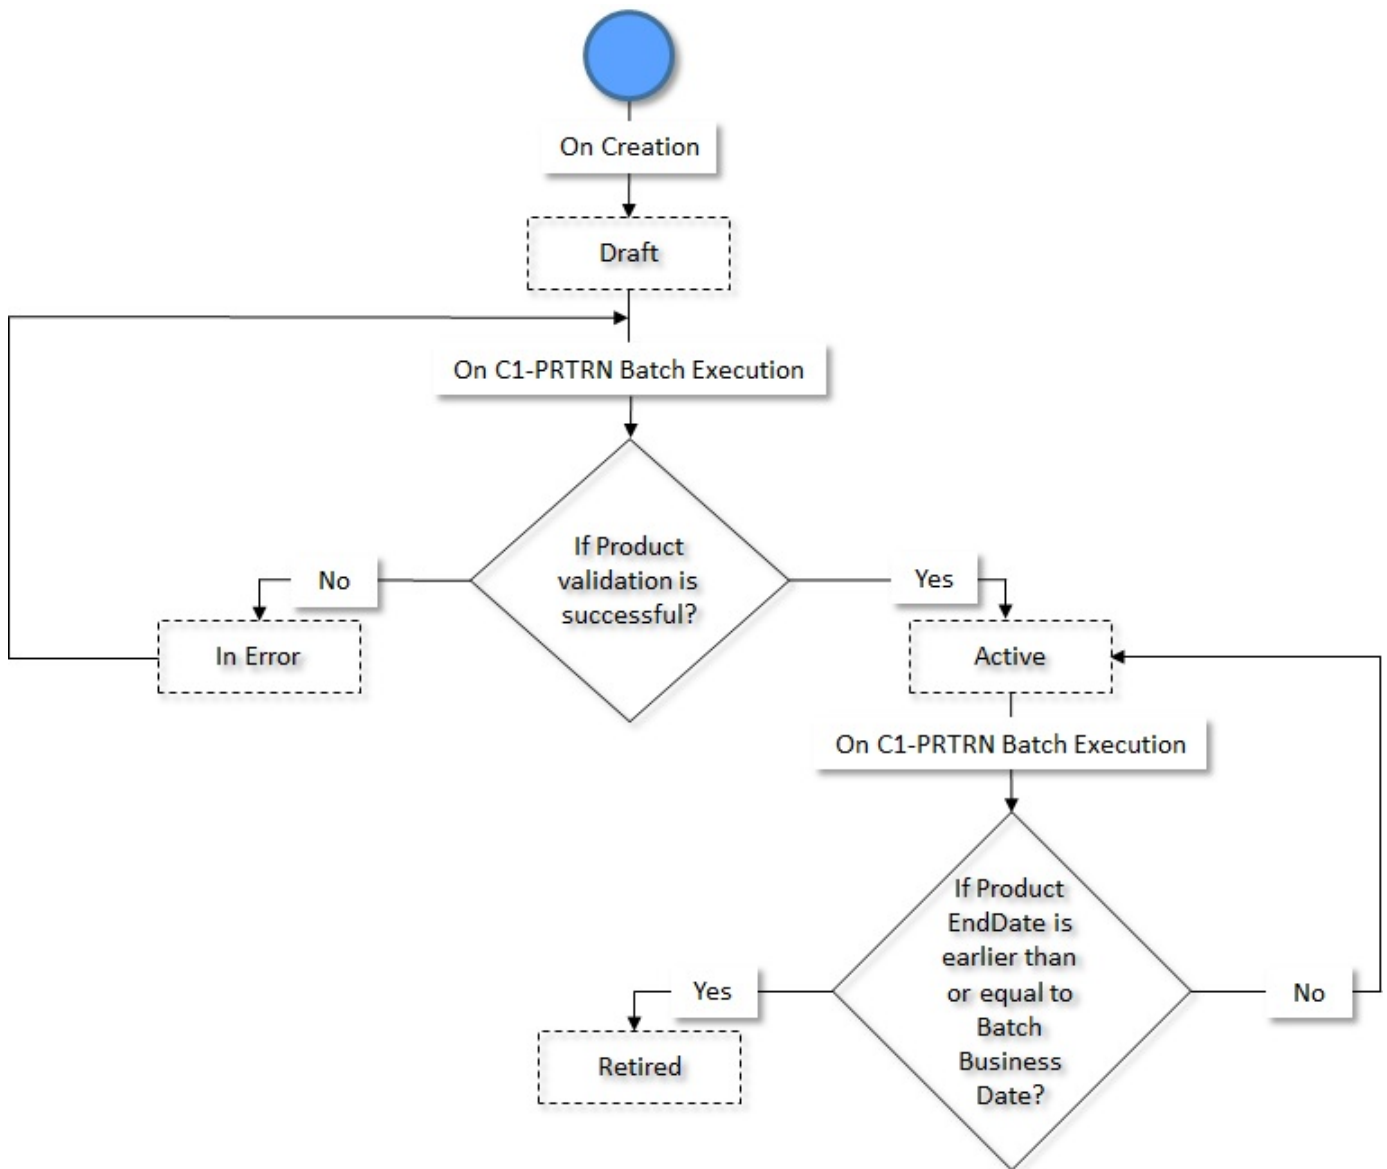

Product Status Transition through User Interface

The following figure graphically indicates how a product moves from one status to another through the user interface:

Product Service (Used for Searching)

The **Product Service** screen allows you to search for a product service using various search criteria. Through this screen, you can navigate to the following screen:

- [Product Service \(Used for Viewing\)](#) on page 1928

This screen consists of the following zone:

- [Search Product Service](#) on page 1921

For more information on...	See...
How to search for a product service	Searching for a Product Service on page 1922
How to view the details of a product service	Viewing the Product Service Details on page 1927

Search Product Service

The **Product Service Search** zone allows you to search for a product service using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Service	Used to search for a product service based on the unique user-defined product service.	No
Description	Used to specify the description of a product service.	No
Start Date	Used to search for product service which starts from a particular date onwards.	No
End Date	Used to search for product service which is created till a particular date.	No
Price Item Information	Used to search for product service for which a price item information is created or updated in the system.	No

Note: You must specify at least one search criterion while searching for a product service.

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Product Service	Displays the service code of a product service.
Description	Displays the description of product service.
	Note: It has a link. On clicking the link, the Product Service screen appears where you can view the details of the respective product service.
Start Date	Displays the date from when the product service is effective.
End Date	Displays the date till when the product service is effective.

On clicking the **Broadcast**  icon corresponding to a service code, the **Price Items** zone appears with the details of the respective product service.

Searching for a Product Service

Prerequisite

To search for a product service, you should have:

- Product Service defined in the application.
- Price Item defined in the application.

Procedure

To search for a product service:

1. From the **Main** menu, select **Pricing Management** and then click **Product Service**.
A sub-menu appears.
2. Click the **Search** option from the **Product Service** sub-menu.
The **Product Service** screen appears.
3. Enter the search criteria in the [Search Product Service](#) on page 1921 zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of product services that meet the search criteria appear in the **Search Results** section.

Viewing the Product Service Price Items

Procedure

To view the price items of the product:

1. Search for a product service in the **Product Service** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to a service code whose details you want to view.

The **Price Items** zone appears. It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code that is set for each product service. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the product service will begin.
End Date	Displays the date till when the product service will be available.

Defining a Product Service

Prerequisites

To define a product service, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Product Service**)
- Price Item business object defined in the application.

Procedure

To define a product service:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product Service**.
The sub-menu appears.
3. Click the **Add** option from the **Product Service** sub-menu.

The **Product Service** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the product service.
- **Characteristics** - Used to define characteristics for a product service.
- **Price Items** - Used to define price item for a product service.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Service	Used to specify the product service.	Yes
	Note: While defining a product service, ensure that at least one price item is associated with the product service.	
Description	Used to specify the description of a product service.	Yes
Start Date	Used to specify the date from when the product service is effective.	Yes
	Note: The product service end date cannot be earlier than the product service start date.	
End Date	Used to specify the date till when the product service is effective.	Yes
	Note: The product service end date cannot be earlier than the product service start date.	

Note:

If the product service is used in one or more product versions, the product service's end date cannot be earlier than the product version's effective date.

4. Enter the required details in the **Main** section.

Note:

The Start Date field is mandatory.

5. Define the characteristics for a product service, if required.
6. Define the price item for a product service.
7. Click **Save**.

The product service is defined.

Related Topics

Defining the characteristics for a product service	Defining a Characteristics for a Product Service on page 1926
Associating the product service with a Price Item	Associating a Product Service with a Price Item on page 1925

Associating a Product Service with a Price Item

Prerequisites

To associate a product service with a price item, you should have:

- Price Item business object defined in the application.

Procedure

To associate a product service with a price item:

1. Ensure that the **Price Items** section is expanded when you are defining, editing, or copying a product service.

The Price Item section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item which is associated with this product service. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.	No
Start Date	Used to specify the date from when the product service is effective.	No
End Date	Used to specify the date till when the product service is effective. Note: The price item end date cannot be earlier than the price item start date.	No

2. Enter the required details in the **Price Items** section.

Note: The product service is used in one or more product versions, and therefore the product service's start date cannot be later than the product version's effective date.

3. If you want to associate one or more price items with the product service, click the **Add**  icon and then repeat step 2. However, if you want to remove the price items from the product service, click the **Delete**  icon corresponding to the price item.
4. Click **Save**.

Note:

You cannot associate the same price item multiple times with the product service.

You can remove a price item from the product service even though the product version is in the Finalized status. A To Do Type named **C1-SVCU1** gets created whenever any modifications are made to the product service.

You can associate a price item with a product service only when the price item's date range is within the product service's date range.

If there are changes with respect to the price items associated with the product service, then you must create a new version for that product.

The product service is associated with the price item.

Defining a Characteristics for a Product Service**Prerequisites**

To define characteristics for a product service, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Product Service**)

Procedure

To define characteristics for a product service:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a product service.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the product service.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the product service.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	Note: The list includes only those characteristic types where the characteristic entity is set to Product Service	Note: This field is required when you are defining a characteristic for the product service.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the product service.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the product service, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a characteristic from the product service, click the **Delete** (🗑️) icon corresponding to the characteristic.
- Select an appropriate characteristic type from the **Characteristic Type** list.

Product Service

The **Product Service** zone displays the details of the product service. It contains the following sections:

- **Main** - Displays the basic information about the product service. It contains the following fields:

Field Name	Field Description
Product Service	Displays the product service that is assigned to a product service.
Description	Displays the description of the product service.
Start Date	Displays the date when the product service starts.
End Date	Displays the date when the product service ends.

- **Characteristics** - Lists the characteristics defined for the product service. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the product service.
Characteristic Type	Indicates the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the product service.
Delete	Used to delete the product service.
Duplicate	Used to create a new product service using an existing product service information.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the product service is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Price Items

The **Product Service Price Item** zone lists various price items that are associated with a service. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays the price item information that is associated with a service. Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Start Date	Displays the date from when the product service will begin.
End Date	Displays the date till when the product service will be available.

Editing a Product Service

Procedure

To edit a product service:

1. Search for the product service in the **Product Service**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the product service whose details you want to edit.
The **Product Service** screen appears.
3. Click the **Edit** button in the **Product Service** zone.
The **Product Service** screen appears.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Modify the details of the product service in the main section, if required.
5. Modify the characteristics for a product service, if required.
6. Associate the price items with a product service, if required.
7. Click **Save**.

The changes made to the product service are saved.

Deleting a Product Service

Procedure

To delete a product service:

1. Search for the product service in the **Product Service**.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the link in the **Description** column corresponding to the product service whose details you want to delete.
The **Product Service** screen appears.
3. Click the **Delete** button in the **Product Service** zone.
A message appears confirming whether you want to delete the product service.

Note: If the product service is associated with the product version, then the product service cannot be deleted.

4. Click **OK**.

The product service is deleted.

Copying a Product Service

Instead of creating a product service from scratch, you can create a new product service using an existing product service. This is possible through copying a product service. On copying a product service, the details including the algorithms and characteristics are copied to the new product service. You can then edit the details, if required.

Prerequisites

To define a product service, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Product Service**)
- Price Item business object defined in the application.

Procedure

To define a product service:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product Service**.
The sub-menu appears.
3. Click the **Search** option from the **Product Service** sub-menu.

The **Product Service** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the product service.
- **Characteristics** - Used to define characteristics for a product service.
- **Price Items** - Used to define price item for a product service.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Service	Used to specify the product service.	Yes
Description	Used to specify the description of a product service.	Yes
Start Date	Used to specify the date from when the product service is effective.	Yes
End Date	Used to specify the date till when the product service is effective.	Yes

Tip: Alternatively, you can click the **Duplicate** button in the **Record Actions** section, in the **Product Service** zone to create a copy of the product service.

4. Enter the required details in the **Main** section.
5. Define the characteristics for a product service, if required.

6. Define the price item for a product service, if required.
7. Click **Save**.

The new product service is defined.

Associating a Product with a Division

Prerequisites

To associate product with a division, you should have:

- Division defined in the application.

Procedure

To associate product with a division:

1. Ensure that the **Divisions** section is expanded when you are defining, editing, or copying a product.

The Division section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division of the product.	Yes

2. Enter the required details in the **Divisions** section.

Note:

At least one division must be associated with the product.

3. If you want to associate one or more divisions with the product, click the **Add** (+) icon and then repeat step 2.

Note:

However, if you want to remove the divisions from the product, click the **Delete** (🗑️) icon corresponding to the product.

4. Click **Save**.

Note:

Ensure that the division associated with the product is associated to the price list.

You cannot remove the division from the product because the price list associated to the product version which is effective on (mention date) is associated to the division.

The divisions are associated with the product.

Product Version - Log

The **Product Version - Log** tab contains the following zone:

- [Product Version Log](#) on page 1958

Product Version Log

The **Product Version - Log** zone lists the complete trail of actions performed on the product version. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the product version.
Details	Displays the details about the action performed on the product version.
User	Displays the user who has performed the action on the product version.
Log Type	Displays the type of log.
Related Object	Displays the object or entity that is generated when the action is performed on the product version.
Status Reason	Displays the status reason of action performed on the product version.

Editing a Product Version

Procedure

To edit a product version:

1. Search for the product in the **Search Product** zone.
2. In the **Search Results** section, click the **Broadcast**  icon, corresponding to the product column.

The **Product Version List** zone appears.

- Click the link in the **Description** column, corresponding to the status column.

The **Product Version** screen appears.

- Click the **Edit** button in the **Product Version** zone.

The **Product Version** screen appears.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Modify the details of the product version in the main section, if required.

Note:

The effective date of a product version cannot be later than the product end date.

- Define, edit, or remove the products and/or services for a product version, if required.

Note:

You must select the Inclusion check box when the product service is defined as mandatory in the effective product version.

- Modify the price list for a product version, if required.
- Define, edit, or remove the eligibility for a product version, if required.
- Define, edit, or remove the characteristics for a product version, if required.
- Click **Save**.

Note:

You cannot edit the details of the product version except the characteristics when the product version is in the Finalized status.

The changes made to the product version are saved.

Deleting a Product Version

Procedure

To delete a product version:

1. Search for the product in the **Search Product** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the **Broadcast**  icon, corresponding to the product column.

The **Product Version List** zone appears.

3. Click the link in the **Description** column, corresponding to the status column.

The **Product Version** screen appears.

4. Click the **Delete** button in the **Product Version** zone.

A message appears confirming whether you want to delete the product version.

5. Click **OK**.

Note:

You cannot delete the product version which is in the Finalized status.

The product version is deleted.

Copying a Product Version

Instead of creating a product version from scratch, you can create a new product version using an existing product version. This is possible through copying a product version. On copying a product version, the details including the algorithms and characteristics are copied to the new product version. You can then edit the details, if required.

Prerequisites

To copy a product version, you should have:

- Product and Product Type defined in the application.
- Product Status and Service Code defined in the application.
- Product Category, Division, and Product To Do Role defined in the application.
- Eligibility Type, Characteristic Type, Price List, and Terms and Conditions defined in the application.
- Parameter, Operator, Parameter Value Type, Is True, Is False, and Is Sufficient defined in the application.

Procedure

To copy a product version:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Menu** list, select **Pricing Management**, and then click **Product**.
The sub-menu appears.
3. Click the **Search** option from the **Product** sub-menu.
The **Product** screen appears.
4. In the **Search Results** section, click the **Broadcast**  icon corresponding to the product column whose version you want to copy.
The **Product Version List** zone appears.
5. Click the link in the **Description** column, to view the details of the product version.
The **Product Version** screen appears.
6. Click the **Duplicate** button in the **Record Actions** section.

The **Product Version** screen appears. It contains the following sections:

- **Main** - Used to specify basic details of the product version.
- **Products and Services** - Used to define the products and services for a product version.
- **Price List**
- Used to define the Price List for the product version.
- **Eligibility**
- Used to define the Eligibility for the product version.
- **Characteristics**
- Used to define the Characteristics for the product version.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product Type	Displays the product type.	Not applicable
Product	Displays the product code.	Not applicable
Effective Date	Used to specify the effective date from when the product version will be effective.	Yes
Status	Used to specify the status of the version.	Yes
	Note: It is a read-only field, and cannot be edited.	
Description	Used to specify the description for the version.	No

Field Name	Field Description	Mandatory (Yes or No)
Terms and Conditions	Used to specify the terms and conditions for the version.	Yes
	Note: Click the Search  icon appearing corresponding to the Terms and Conditions field. On clicking the Search icon, you can search for a predefined terms and conditions.	

7. Enter the required details in the **Products and Services** and/or **Product Services** section.

Note: If the product type is **Packaged** then **Products and Services** section appears. If the product type is **Standard** then **Product Services** section appears. If the product type is **Information Only** neither of these sections are displayed.

8. Enter the required details in the **Price List** section.
9. Enter the required details in the **Eligibility** section.
10. Enter the required details in the **Characteristics** section.
11. Click **Save**.

The new product service is defined.

Finalizing a Product Version

Prerequisites

To finalize a product version, you should have:

- Product Version status as In Progress

Procedure

To finalize a product version:

1. Search for the product in the **Product Search** screen.

2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the product whose details you want to view.
The **Product Version List** screen appears.
3. In the **Product Version List** zone, click the link in the **Description** column, for that product version, whose product version log you want to view.
The **Product Version** screen appears.
4. Click the **Finalize** button in the **Product Version** zone.
The status of the product version is changed to **Finalized**.

Note:

You cannot finalize the product version when its effective date is earlier than the product start date.

Note:

The **Finalize** button appears only when the product version is in the **In Progress** status.

Product - Main

The **Product - Main** tab displays information about the product, division, product to product relationship, characteristics, and product version. It contains the following zones:

- [Product Details](#) on page 1964
- [Product Version List](#) on page 1934

Product Details

The **Product Details** zone displays the details of the product. It contains the following sections:

- **Main** - Displays the basic information about the product. It contains the following fields:

Field Name	Field Description
Product	Displays information about the product.
	Note: It has a link. On clicking the link, the Product screen appears where you can view the details of the product.
Description	Displays the description of the product version.
Status	Displays the status of the product version.
Product Type	Displays the type of product for which the product version is created.
Product Category	Displays the category to which the product is associated.
Start Date	Displays the date from when the product is effective.
End Date	Displays the date from till when the product is effective.
Compliance Number	Displays the number supplied by the legal department
Product Manager To Do Role	Displays all the To Dos that are raised against this product, and are assigned to this particular To Do Role.

- **Record Actions** - This section contains the following fields:

Button Name	Button Description
Edit	Used to edit the details of the product.
	Note: The Edit button appears only when the product status is Active and Draft .
Duplicate	Used to create a new product using an existing product.
	Note: The Duplicate button appears only when the product status is Active and Draft .
Retire	Used to indicate that the product is no longer available for use.
	Note: The Retire button appears only when the product status is Active .
Active	Used to activate the product.
	Note: The Active button appears only when the product status is Draft .

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the product version is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Divisions** - Displays the division defined for the product. It contains the following columns:

Column Name	Column Description
Division	Displays the division to which the product belongs.
	Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the division.

- **Product to Product Relationship** - Lists the characteristics defined for the product version. It contains the following columns:

Column Name	Column Description
Product	Displays the product with whom the relationship has to be made.
Relationship Type	Displays the type of relationship.
Effective Start Date	Displays the date from when the product to product relationship will be effective.
Effective End Date	Displays the date till when the product to product relationship will be effective.

- **Characteristics** - Lists the characteristics defined for the product version. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics for the product will be effective.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the characteristic value.

Product Version List

The **Product Version List** zone lists the information related to the product version.

Column Name	Column Description
Effective Date	Displays the date from when the product version is effective.
Description	Displays the description of the product version.
	Note: It has a link. On clicking the link, the Product Version screen appears where you can view the details of the respective product version.
Status	Displays the status of the product version.

Related Topics

Product - Log

The **Product - Log** tab contains the following zone:

- [Product Log](#) on page 1967

Product Log

The **Product Log** zone lists the complete trail of actions performed on the product. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the product.
Details	Displays the details about the action performed on the product.
User	Displays the user who has performed the action on the product.
Log Type	Displays the type of log.
Related Object	Displays the object or entity that is generated when the action is performed on the product.
Status Reason	Displays the status reason of action performed on the product.

Editing a Product

Procedure

To edit a product:

1. Search for the product in the **Search Product** zone.
2. In the **Search Results** section, click the link in the **Description** column,, corresponding to the product column whose details you want to edit.

The **Product** screen appears.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

3. Click the **Edit** button in the **Record Actions** zone.

The **Product** screen appears.

4. Modify the details of the product in the main section, if required.

Note:

The product start date cannot be later than its product version's effective date.

The product end date cannot be earlier than its product version's effective date.

You cannot update the product type field because a product version is already defined for the product.

You cannot add or edit a product version when the product is in the Retired status.

5. Define, edit, or remove the divisions for a product, if required.

Note:

You cannot remove the division from the product because an account from this division is already enrolled to the product.

You cannot remove the division from the packaged product because the child product is associated to the division.

6. Define, edit, or remove the product to product relationship for a product, if required.

- Define, edit, or remove the characteristics for a product, if required.

Note:

You cannot change the value of the characteristic when the product is in the Active status. To change the value of the characteristic, the characteristic type should not be of **C1-STOPE** type.

- Click **Save**.

The changes made to the product are saved.

Copying a Product

Instead of creating a product from scratch, you can create a new product using an existing product. This is possible through copying a product. On copying a product, the details including the algorithms and characteristics are copied to the new product. You can then edit the details, if required.

Prerequisites

To copy a product, you should have:

- Product, Product Type, Product Category, and Product Manager's To Do Role defined in the application.
- Division defined in the application.
- Relationship Type and Characteristic Type defined in the application.

Procedure

To copy a product:

- Search for a product in the **Product** screen.
- In the **Search Results** section, click the link in the **Description** column, corresponding to the product column, whose details you want to copy.
The **Product** screen appears.
- Click the **Duplicate** button in the **Record Actions** section.
The **Product** screen appears.
- Enter the required product details in the **Main** section, if required.
- Define, edit, or remove the divisions for a product, if required.
- Define, edit, or remove the product to product relationship for a product, if required.
- Define, edit, or remove the characteristics for a product, if required.
- Click **Save**.

The new product is defined.

Activating a Product

Prerequisites

To activate a product, you should have:

- Product must have the status as Draft.
- Product Version Status should be Finalized.

Procedure

To activate a product:

1. Search for a product in the **Product** screen.
2. In the **Search Results** section, click the link in the **Description** column, corresponding to the product column that needs to be activated.

The **Product** screen appears.

3. Click the **Active** button in the **Record Actions** section.

Note:

You can activate a product only when there is at least one product version in the Finalized status.

The product is activated, as the status is changed from **Draft** to **Active**.

Retiring a Product

Prerequisites

To retire a product, you should have:

- Product Status must be Active.
- Product End Date less than equal to current date.

Procedure

To retire a product:

1. Search for a product in the **Product** screen.

- In the **Search Results** section, click the link in the **Description** column, corresponding to the product column that needs to be activated.

The **Product** screen appears.

- Click the **Retire** button in the **Record Actions** section.

The **Retire Product** screen appears.

- Mention the **End Date** of the product.

Note:

The enrollments for the product, which you are retiring, are still effective.

- Click **Save**.

The product is retired, as the status is changed from **Active** to **Retired**.

Note:

On retiring the product, the end date of the effective product enrollments is set to the system date.

Search Enrollment

The **Search Enrollment** zone allows you to search for the enrolled products using various search criteria. It contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an enrolled product using the option of Product Enrollment. The valid values are: <ul style="list-style-type: none"> • Product Enrollment 	Yes
	Note: By default, the Product Enrollment option is selected.	
Enrollment ID	Used to search an enrollment, based on the enrollment ID.	No
Account ID	Used to search an enrollment, based on the account ID.	No
Person ID	Used to search an enrollment, based on the person ID.	No
Product	Used to search an enrollment, based on the product ID.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search an enrollment with a particular status. The valid values are: <ul style="list-style-type: none"> • Canceled • Enrolled • Error • Pending • Unenrolled • Validated 	No
Start Date	Used to search enrollments which are initiated from a specific date.	No
Enrollment Channel	Used to search enrollments based on a enrollment source. The valid values are: <ul style="list-style-type: none"> • Oracle Revenue Management and Billing 	No
End Date	Used to search enrollments which are initiated till a specific date.	No

Note: You must specify at least one search criterion while searching for an enrollment.

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Enrollment ID	Displays the enrollment ID of the enrolled product.
	Note: It has a link. On clicking the link, the Product Enrollment screen appears where you can view the details of the respective enrolled product.
Account Information	Displays the account ID of the enrolled product.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Start Date	Displays the date from when the enrolled product is effective.
End Date	Displays the date till when the enrolled product is effective.

On clicking the **Broadcast**  icon corresponding to an enrollment ID, the **Enrolled Products** zone appears with the details of the products that are enrolled.

- **Enrolled Products** - The **Enrolled Products** section contains the following columns:

Column Name	Column Description
Product Type	Displays the type of product which is enrolled.
Product	Displays the name of the enrolled product.

Column Name	Column Description
Version Description	Displays the description of the enrolled product version.
	Note: It has a link. On clicking the link, the Product Version screen appears where you can view the details of the respective enrolled product.
Start Date	Displays the date from when the enrolled product is effective.
End Date	Displays the date till when the enrolled product is effective.

- **Enrolled Services** - The **Enrolled Services** section contains the following columns:

Column Name	Column Description
Service Code	Displays the type of service which is enrolled.
Description	Displays the description of the enrolled service.
	Note: It has a link. On clicking the link, the Product Service screen appears where you can view the details of the respective enrolled service.
Start Date	Displays the date from when the enrolled service is effective.
End Date	Displays the date till when the enrolled service is effective.

Searching for a Product Enrollment

Prerequisite

To search for a product enrollment, you should have:

- Enrollment Details defined in the application.
- Account ID and Person ID defined in the application.
- Product and Status defined in the application.
- Enrollment defined in the application.

Procedure

To search for a product enrollment:

1. From the **Main** menu, select **Pricing Management** and then click **Product Enrollment**.
A sub-menu appears.
2. Click the **Search** option from the **Product Enrollment** sub-menu.

The **Product Enrollment** screen appears.

3. Enter the search criteria in the [Search Enrollment](#) on page 1971 zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of enrolled products that meet the search criteria appear in the **Search Results** section.

Note: If you have specified any other search criterion other than the product enrollment ID, the system generates a message saying that the product enrollment ID is invalid.

Viewing the Enrolled Services

Procedure

To view the enrolled services:

1. Search for an enrolled product in the **Product** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the enrollment ID whose enrolled products you want to view.
The **Enrolled Products** zone appears.
3. In the **Enrolled Products** zone, click the **Broadcast**  icon corresponding to the product type whose services you want to view.

The **Enrolled Services** zone appears.

Note: In case the product type is **Standard** and the **Broadcast**  icon is clicked from the **Enrolled Products** zone, the **Enrolled Services** zone appears.

Note: In case the product type is **Packaged** and **Broadcast**  icon is clicked from the **Enrolled Products** zone, and if there are services enrolled within the packaged product, the **Enrolled Services** zone appears.

4. View the list of enrolled products in the **Enrolled Services** screen.

Enrolling an Account for One or More Products and Services

Prerequisites

To enroll an account for one or more products and services, you should have:

- Account Information defined in the application.
- Enrollment Channel defined in the application.
- Product defined in the application.
- Characteristic Type defined in the application.

Procedure

To enroll an account for one or more products and services:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Menu** list, select **Pricing Management**, and then click **Product Enrollment**.
The sub-menu appears.
- Click the **Add** option from the **Product Enrollment** sub-menu.

The **Product Enrollment** screen appears. It contains the following sections:

- Main** - Used to specify basic details of the account for product enrollment. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Enrollment ID	Used to specify the enrollment ID once the product is defined for an enrollment.	Yes
	Note: Enrollment ID is displayed only when the product is added for enrollment.	
Account ID	Used to specify the account ID.	Yes
	Note: You can search for an account by clicking the Search  icon corresponding to the Account Information field.	

Field Name	Field Description	Mandatory (Yes or No)
Status	Displays the status of the product.	No
	Note: The product enrollment will always have the status as Pending .	
Start Date	Used to specify the date from when the product enrollment is effective.	Yes
End Date	Used to specify the date till when the product enrollment is effective.	Yes
Enrollment Channel	Used to specify the source for product enrollment.	Yes
Comments	Used to specify the comments for product enrollment.	No

- **Product and Services** - Used to define products and services for a product. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to specify the product for enrollment.	No
	Note: You can search for a product by clicking the Search  icon corresponding to the Product field.	
Start Date	Used to specify the date from when the product is effective.	No
End Date	Used to specify the date till when the product is effective.	No
Inclusion	Used to indicate whether the product is used for enrollment.	No
Standard Product	Displays the standard product which is included within the main product.	No
Start Date	Used to specify the date from when the standard product is effective.	No
End Date	Used to specify the date till when the standard product is effective.	No
Inclusion	Used to indicate whether the standard product is used for enrollment.	No
Services	Displays the service that is a part of the standard product.	No
Start Date	Used to specify the date from when the service is effective.	No
End Date	Used to specify the date till when the service is effective.	No
Inclusion	Used to indicate whether the service is used for enrollment.	No
	Note: The inclusion check-box is already checked, if the service has been marked as Mandatory in the Product Version zone.	
Add on Services	Displays the add-on service which is a part of the packaged product.	No

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the add-on service is effective.	No
End Date	Used to specify the date till when the add-on service is effective.	No
Inclusion	Used to indicate whether the add-on service is used for enrollment.	No

- **Product Priority** - Used to define the product priority for product enrollment.

Field Name	Field Description	Mandatory (Yes or No)
Enrollment ID	Displays the enrollment ID.	No
Packaged Products	Displays the packaged product which is added for enrollment.	No
Standard Products	Displays the standard product which is added for enrollment.	No
Product Enrolled Start Date	Displays the date from when the product's enrolled date is effective.	No
Product Enrolled End Date	Displays the date till when the product's enrolled date is effective.	No
Priority	Displays the priority of the product in terms of enrollment.	No

- **Characteristics** - Used to define the characteristics for a product enrollment.

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic will be effective.	No
Characteristics Type	Used to indicate the characteristic type for a characteristic.	No
Characteristics Value	Used to indicate the characteristic value.	No

4. Enter the required details in the **Main** section.

Note:

The Start Date field is mandatory.

5. Enter the required details in the **Product and Services** section.

Note:

At least one product service must be added in the product version.

6. Enter the required details in the **Product Priority** section.

Note:

Ensure that priority for the product is specified.

7. Enter the required details in the **Characteristics** section.
8. Click **Save**.

Note:

You cannot enroll for a product where none of its product versions are effective within the enrollment date range.

You cannot enroll for a product where the product start date is later than the enrollment start date.

The enrollment start and end dates should be within the start and end dates of the product.

At least one product must be selected while enrolling products for an account.

At least one price item associated with the product service must be effective during enrollment.

The account is added for enrollment.

Defining Characteristics for a Product Enrollment

Procedure

To define characteristics for a product enrollment:

1. Search for an enrollment in the **Search Enrollment** zone.
2. Click the **Add** button in the **Page Title** area of **Product Enrollment** zone.

The **Product Enrollment** screen appears.

3. Click the **Characteristic** link from the **Section** group, located in the left-most area of the screen.

The **Characteristics** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic will be effective for enrollment.	No
Characteristics Type	Used to indicate the characteristic type for a characteristic.	No
Characteristics Value	Used to indicate the characteristic value.	No

4. Enter the required details in the **Characteristics** section.
5. If you want to add more than one characteristic to the product enrollment, click the **Add** (+) icon. However, if you want to remove a characteristic from the enrollment, click the **Delete** (🗑️) icon corresponding to the effective date field.
6. Click **Save**.

The characteristics are defined for the product enrollment.

Product Enrollment

The **Product Enrollment** zone displays the details of the enrollment. It contains the following sections:

- **Main** - Displays the basic information about the enrollment. It contains the following fields:

Field Name	Field Description
Enrollment ID	Displays the enrollment ID.
Account Information	Displays information about the account. In addition, this column has a context menu () which helps in navigating to other screens in the application.
Status	Displays the status of the enrollment.
Start Date	Displays the date from when product enrollment is effective.
End Date	Displays the date till when product enrollment is effective.
Enrollment Channel	Indicates the channel which is used for product enrollment.
Comments	Displays the comments that are added for product enrollment.

- **Record Actions** - This section contains the following fields:

Button Name	Button Description
Edit	Used to edit the details of the product enrollment.
	Note: The Edit button appears only when the product enrollment status is Enrolled , Cancelled , and Pending status.

Button Name	Button Description
Duplicate	Used to create a new product enrollment using an existing enrollment.
	Note: The Duplicate button appears only when the product enrollment status is Enrolled, Cancelled, Pending, and Unenrolled .
Delete	Used to delete a product enrollment.
	Note: The Delete button appears only when the product enrollment status is Cancelled .
Unenroll	Used to unenroll already conducted product enrollment.
	Note: The Unenroll button appears only when the product enrollment status is Enrolled .
Submit	Used to submit the product for an enrollment.
	Note: The Submit button appears only when the product enrollment status is Pending .

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the product enrollment is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Characteristics** - Lists the characteristics defined for the product version. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristics are effective for product enrollment.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the characteristic value.

Enrolled Products

The **Enrolled Products** zone displays the products that have been enrolled. It contains the following columns:

Columns Name	Column Description
Product Type	Displays the type of the product.
Product	Displays the name of the product.
Version Description	Displays the description of the enrolled product version.
	Note: It has a link. On clicking the link, the Product Version screen appears where you can view the details of the respective product version.
Start Date	Displays the date from when the enrollment is effective.

Columns Name	Column Description
End Date	Displays the date till when the enrollment is effective.

Note: By default, the **Enrolled Services** zone does not appear. It appears only when the product type is **Standard** and you click the **Broadcast**  icon corresponding to the product type column.

Editing a Product Enrollment

Procedure

To edit a product enrollment:

1. Search for the product in the **Search Enrollment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. Click the link in the **Enrollment ID** column, corresponding to the broadcast icon. The **Product Enrollment** screen appears.
3. Click the **Edit** button in the **Product Enrollment** zone. The **Product Enrollment** screen appears.
4. Modify the details of the product version in the main section, if required.
5. Define, edit, or remove the products and/or services for a product enrollment, if required.
6. Modify the product priority for a product enrollment, if required.

Note:

The priority for the enrolled product must be greater than zero (0).

7. Define, edit, or remove the characteristics for a product enrollment, if required.
8. Click **Save**.

Note:

You cannot edit the details of the product enrollment when it is in the enrolled status.

The changes made to the product enrollment are saved.

You cannot enroll for more than one product with the same product type and priority combination.

Copying a Product Enrollment

Instead of creating a product enrollment from scratch, you can create a new product enrollment using an existing enrollment. This is possible through copying a product enrollment. On copying a product enrollment, the details including the algorithms and characteristics are copied to the new product. You can then edit the details, if required.

Prerequisites

To copy a product enrollment, you should have:

- Account ID, Account Start and End Date, and Enrollment Channel defined in the application.
- Product and Characteristic Type defined in the application.

Procedure

To copy a product enrollment:

1. Search for a product in the **Product Enrollment** screen.
2. In the **Search Results** section, click the link in the **Description** column, corresponding to the product column, whose details you want to copy.

The **Product Enrollment** screen appears.

3. Click the **Duplicate** button in the **Record Actions** section.

The **Product Enrollment** screen appears.

4. Enter the required product details in the **Main** section, if required.
5. Define, edit, or remove the products and services, if required.
6. Define, edit, or remove the product priority, if required.
7. Define, edit, or remove the characteristics, if required.
8. Click **Save**.

The new product enrollment is defined.

Enrolling a Product Enrollment

Prerequisites

To enroll a product for an enrollment, you should have:

- Status of the product defined as Pending or Validated.
- Account Information defined in the application.
- Enrollment Channel defined in the application.
- Product defined in the application.
- Characteristic Type defined in the application.

Procedure

To enroll a product for an enrollment:

1. Search for the product in the **Search Enrollment** zone.
2. Click the link in the **Enrollment ID** column, corresponding to the broadcast icon.
The **Product Enrollment** screen appears.
3. Click the **Submit** button in the **Product Enrollment** zone.
The product status gets changed to **Enroll**.

Note: Once the submit button is clicked the ORMB application validates the account information, enrollment channel, product, and characteristic type field to ensure that they contain appropriate data. If any information is missing then an error message is displayed.

Unenrolling a Product Enrollment

Prerequisites

To unenroll a product for an enrollment, you should have:

- Status of the product defined as enrolled.
- Account Information defined in the application.
- Enrollment Channel defined in the application.
- Product defined in the application.
- Characteristic Type defined in the application.

Procedure

To unenroll a product for an enrollment:

1. Search for the product in the **Search Enrollment** zone.
2. Click the link in the **Enrollment ID** column, corresponding to the broadcast icon.
The **Product Enrollment** screen appears.
3. Click the **Unenroll** button in the **Product Enrollment** zone.

The Unenroll Product Enrollment Pre Transition window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Enrollment ID	Displays the enrollment ID of the enrolled product.	Not applicable
Status	Displays the status of the enrolled product.	Not applicable
Start Date	Displays the start date of the enrolled product.	Not applicable
End Date	Displays the end date of the enrolled product.	No

Note: If the user manually performs the unenrollment process, the application will simply change the product enrollment status from **Enroll** to **Unenroll**. If in-case the **End Date** is not mentioned during the enrollment, the application keeps the **End Date** in an **Open** state. If the user does not performs the unenrollment process, then a batch named **C1-EXTRN** gets executed. This batch performs a check to ensure that the product end date and the business date make a match. If they both match, then all of the enrollments with relation to the product are unenrolled.

4. Click **Save**.

The product enrollment status is changed to **Unenroll**.

Viewing the Log of a Product Enrollment

Procedure

To view the log of a Product Enrollment:

1. Search for the product enrollment in the **Product Enrollment** screen.
2. In the **Search Results** section, click the **Enrollment ID** link corresponding to the broadcast icon, whose product enrollment log you want to view.

The **Product Enrollment** screen appears. It consists of the following tabs:

- [Product Enrollment - Main](#) on page 1983
- [Product Enrollment - Log](#) on page 1987

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the product enrollment in the **Product Enrollment Log** zone.

Chapter 35

Subscription Billing

Topics:

- [Prerequisites](#)
- [Subscription Type \(Used for Searching\)](#)
- [Subscription Type \(Used for Viewing\)](#)
- [Account Subscription \(Used for Searching\)](#)
- [Account Subscription \(Used for Viewing\)](#)

Oracle Revenue Management and Billing (ORMB) facilitates the service based billing wherein the customers pay a subscription price to have access to a product or service. For example, the customer may subscribe for newspaper service, cable service, internet service, video service (like Netflix, Amazon Prime Video), cloud service, and so on. The consumers may have to pay one or more charges with respect to the subscribed service. These charges can be one-time or recurring charges in nature.

In **ORMB**, you can carry out service based billing for an account by creating subscription on the account. While creating an account subscription, you need to specify the subscription type using which you want to create the account subscription. It is the subscription type which helps the system to determine:

- The business object using which the account subscription must be created in the system.
- The division and contract type for which the subscription type is created.
- The default duration for which the account subscription or service charge must be renewed when the automatic renewal option is selected.
- Whether the service charges should be prorated when the account subscription is suspended for a particular duration, or when one or more services or the entire account subscription is terminated.
- Whether already billed charges should be adjusted on the next bill in case of suspension and termination.
- The adjustment type using which the adjustments must be created when the account subscription is edited, suspended, or resumed.
- The adjustment type using which the adjustments must be created when one or more services or the entire account subscription is terminated.
- The services which the consumer can subscribe when the account subscription is created using the subscription type.
- The charges which can be charged when the consumer subscribes for a particular service.
- The distribution code for each charge which indicates the GL account to which the corresponding financial transaction must be posted.
- Whether the monthly recurring revenue is exempted for the service.
- The algorithm which must be executed when the account subscription is terminated, suspended, or resumed.

While creating an account subscription, the system allows you to use only those subscription types for the account which are defined for the division to which the account belongs and which are associated with the contract type whose

contract exists on the account. You can specify whether the account subscription must be automatically renewed for the default duration (which is specified in the subscription type). In case of subscription renewal, you can specify whether there is any cost escalation at the time of renewal. You can add services and its charges in the account subscription depending on the subscription type. The system allows you to indicate whether the charge is a one-time charge or a recurring charge. You can specify the frequency at which the recurring charges should be created for the subscribed services. In case of service charge renewal, you can specify whether there is any cost escalation at the time of renewal.

Once an account subscription is created, the status of the account subscription is set to **Draft**. You can then edit, delete, submit, or cancel the account subscription, if required. You can optionally configure approval workflow for the account subscription. On submitting an account subscription when the approval workflow is off, the status of the account subscription is changed to Active. However, on submitting an account subscription when the approval workflow is on, an approval transaction is created for the account subscription. Only when the approver approves the approval transaction, the status of the account subscription is changed to Active. Note that the status of the account subscription is changed to Active only when the subscription start date is past dated. However, if the subscription start date is a future date, the status of the account subscription is changed to **Validated** irrespective of whether the approval workflow is on or off.

A new batch named **Account Subscription Periodic Monitor (C1-ASUBM)** batch is introduced in this release. It monitors or checks whether there are any account subscriptions in the **Validated** status. If there is an account subscription in the **Validated** status and its subscription start date is earlier than or equal to batch business date, the status of the account subscription is changed to **Active**. You can then edit the details, if required. However, while editing, you can only change end dates and add the services and charges in the account subscription. You cannot remove a service or charge from the account subscription once it is in the Active status. For more information on batch, see **Oracle Revenue Management and Billing Batch Guide**.

The system allows you to suspend the account subscription for a particular duration. While suspending the account subscription, you need to specify the suspension reason and suspension condition indicating whether fees should be charged or not for the suspended period. Based on the suspension condition and proration options defined, the system will accordingly update or cancel billable charges.

The system also allows you to terminate a particular service or all services at the same time. While terminating a service, you can specify the termination charges, if any. If the termination charges are specified, the adjustments will be created and posted accordingly on the next bill.

Prerequisites

To setup the subscription billing feature, you need to do the following:

- Define the required subscription billing types in the system.
- Define the required characteristic types where the characteristic entity is set to **Subscription Type**.
- Define the required characteristic types where the characteristic entity is set to **Account Subscription**.
- Define values for the option types in the feature configuration.
- Define values for the lookup field.
- Define predefined values for the characteristic type.
- Adjustment Type will be validated based on the adjustment type profile attached on the Contract Type.
- At least one subscription charge is mandatory, for each subscription service.
- An account with a division same as the division of the selected subscription type.
- An account with a unique contract ID on the contract type.
- At least one subscription service is mandatory, for each subscription type.

Subscription Type (Used for Searching)

The **Subscription Type** screen allows you to search for the subscription type details using various search criteria. It contains the following zone:

- [Search Subscription Type](#) on page 1995

Through this screen, you can navigate to the following screen:

- [Subscription Type \(Used for Viewing\)](#) on page 2001

Search Subscription Type

The **Search Subscription Type** zone allows you to search for a subscription type using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to search by a subscription type.	Yes
Description	Used to search a subscription type with a particular description.	No
Division	Used to search a subscription type which is associated with a particular division.	No

Field Name	Field Description	Mandatory (Yes or No)
Contract Type	Used to specify the contract type to which the contract to which the subscription type belongs.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears.	
Status	Used to search the subscription type with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	No

Note: You must specify at least one search criterion while searching for a subscription type.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Subscription Type Information	Displays the basic information about the subscription type. Note: It has a link. On clicking the link, the Subscription Type screen appears where you can view the details of the respective subscription type.
Status	Indicates the status of the subscription type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Division	Displays the division to which the subscription type belongs.
Contract Type	Displays the contract type that you want to associate with the subscription type.

Searching for a Subscription Type

Prerequisites

To search for a subscription type, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To search for a subscription type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **S** and then click **Subscription Type**.
The **Subscription Type** screen appears.
3. Enter the search criteria in the **Search Subscription Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of subscription types that meet the search criteria appears in the **Search Results** section.

Note: You must specify at least one search criterion while searching for a subscription type.

Defining a Subscription Type

Prerequisites

To define a subscription type, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To define a subscription type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **S** and then click **Subscription Type**.

The **Subscription Type** screen appears.

3. Enter the search criteria in the **Search Subscription Type** zone.

4. Click **Add** button in the page title area of the **Subscription Type** screen.

The **Subscription Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the subscription services.
- **Subscription Services** – Used to specify the details of the subscription services.
- **Algorithms** – Used to specify the algorithms used in the subscription type.
- **Characteristics** – Used to define characteristics for the subscription type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to specify the subscription type.	Yes
Description	Used to specify the description for the subscription type.	Yes
Account Subscription Business Object	Used to indicate the business object using which you want to create a person when the corresponding account subscription is processed.	Yes
Detailed Description	Used to specify additional information about the subscription type.	No
Division	Used to indicate the division to which you want to associate the subscription type.	Yes
Contract Type	Used to indicate the Contract Type to which you want to associate the subscription type. <div style="border: 1px solid black; padding: 5px; background-color: #f2f2f2;"> Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Contract Type Search window appears. </div>	Yes
Renewal Duration Type	Used to indicate the renewal cycle. The valid values are: <ul style="list-style-type: none"> • Day • Month • Week • Year 	Yes
Renewal Duration	Used to specify the duration of the renewal of the subscription.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the subscription type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes
Prorate Charges	Indicates whether monthly subscription fee is prorated or not in the event the cancelation occurs in the middle of the month.	No
Adjust Billed Charges	Indicates the billed charges adjusted.	No
	Note: This field appears only when you check the Prorate Charges check box.	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: This field appears only when you check the Prorate Charges and Adjust Billed Charges check box.	
Termination Adjustment Type	Used to indicate the adjustment type used for termination of the subscription service.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search window appears.	

The **Subscription Services** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes
Monthly Recurring Revenue (MRR) Exempted	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Distribution Code	Used to indicate distribution code linked to the service that will be used on the billable charge.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Distribution Code Search window appears.	

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	

5. Enter the required details in the **Main** section.
6. Add algorithms for the subscription type, if required.
7. Define characteristics for the subscription type, if required.
8. Click **Save**.

The subscription type is defined.

How to define characteristics for a subscription type	Defining Characteristics for a Subscription Type on page 2000

Defining Characteristics for a Subscription Type

Prerequisites

To define characteristics for a subscription type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Subscription Type**)

Procedure

To define characteristics for a subscription type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a subscription type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for a subscription type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for a subscription type.
Characteristic Value	Used to specify the value of characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for a subscription type.

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the subscription type, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the subscription type, click the **Delete**  icon corresponding to the characteristic.

Subscription Type (Used for Viewing)

The **Subscription Type** screen allows you to define, edit, copy, and delete subscription type. It contains the following zone:

- [Subscription Type](#) on page 2001

Subscription Type

The **Subscription Type** zone displays the details of the subscription type. It contains the following sections:

- Main** – Displays basic information about the subscription type. It contains the following fields:

Field Name	Field Description
Subscription Type	Displays the subscription type.
Description	Displays the description for the subscription type.
Account Subscription Business Object	<p>Indicates the business object using which you want to create a person when the corresponding account subscription is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Detailed Description	Displays additional information about the subscription type.
Division	<p>Indicates the division to which you want to associate the subscription type.</p> <p>Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.</p>
Contract Type	Indicates the Contract Type to which you want to associate the subscription type.
Renewal Duration Type	<p>Indicates the renewal cycle. The valid values are:</p> <ul style="list-style-type: none"> • Day • Month • Week • Year
Renewal Duration	Displays the duration of the renewal of the subscription.
Status	<p>Indicates the status of the subscription type. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive <p>Note: You cannot change the status of a Subscription Type to Inactive if there are account subscriptions that are created using the Subscription Type and are currently in the Draft or Approval In Progress status.</p>
Prorate Charges	Indicates whether monthly subscription fee is prorated or not in the event the cancelation occurs in the middle of the month.
Adjust Billed Charges	<p>Indicates the billed charges adjusted.</p> <p>Note: This field appears only when you check the Prorate Charges check box.</p>
Adjustment Type	<p>Indicates the adjustment type using which the adjustment must be created.</p> <p>Note:</p> <p>This field appears only when you check the Prorate Charges and Adjust Billed Charges check box.</p> <p>It has a link. On clicking the link, the Adjustment Type screen appears where you can view the details of the respective business object.</p>

Field Name	Field Description
Termination Adjustment Type	Indicates the adjustment type used for termination of the subscription service.

- The **Subscription Services** section contains the following columns:

Column Name	Column Description
Subscription Service	Displays the type of the subscription service.
Monthly Recurring Revenue (MRR) Exempted	Indicates whether the service type is exempted from MRR calculation.
Subscription Charge	Indicates the charges related to the subscription service.
Distribution Code	Indicates the distribution code linked to the service that will be used on the billable charge.

- Characteristics** – Lists the characteristics defined for the subscription type. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the subscription is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the subscription type.
Delete	Used to delete the subscription type.
	Note: You can delete an subscription type only when you have not created an subscription type using the subscription type.
Duplicate	Used to create a new subscription type using an existing subscription type.

- Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the subscription type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- The **Algorithms** section contains the following columns:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Displays the system event.	Yes
Sequence	Displays the sequence number.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Algorithm	Displays an algorithm associated to the system event that you have selected.	Yes
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective subscription type.

Editing a Subscription Type

Procedure

To edit a subscription type:

1. Search for the subscription type in the **Subscription Type** screen.
2. In the **Search Results** section, click the link in the **Subscription Type Information** column corresponding to the subscription type whose details you want to edit.

The **Subscription Type** screen appears.

3. Click the **Edit** button in the **Subscription Type** zone.

The **Subscription Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the subscription services.
- **Subscription Services** – Used to specify the details of the subscription services.
- **Algorithms** – Used to specify the algorithms used in the subscription type.
- **Characteristics** – Used to define characteristics for the subscription type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to specify the subscription type.	Yes
Description	Used to specify the description for the subscription type.	Yes
Account Subscription Business Object	Used to indicate the business object using which you want to create a person when the corresponding account subscription is processed.	Yes
Detailed Description	Used to specify additional information about the subscription type.	No

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the subscription type.	Yes
Contract Type	Used to indicate the Contract Type to which you want to associate the subscription type.	Yes
Renewal Duration Type	Used to indicate the renewal cycle. The valid values are: <ul style="list-style-type: none"> • Day • Month • Week • Year 	Yes
Renewal Duration	Used to specify the duration of the renewal of the subscription.	Yes
Status	Used to indicate the status of the subscription type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Prorate Charges	Indicates whether monthly subscription fee is prorated or not in the event the cancelation occurs in the middle of the month.	No
Adjust Billed Charges	Indicates the billed charges adjusted.	No
	Note: This field appears only when you check the Prorate Charges check box.	
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: This field appears only when you check the Prorate Charges and Adjust Billed Charges check box.	
Termination Adjustment Type	Used to indicate the adjustment type used for termination of the subscription service.	No

The **Subscription Services** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes
Monthly Recurring Revenue (MRR) Exempted	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Distribution Code	Used to indicate distribution code linked to the service that will be used on the billable charge.	No

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event.	Yes
Sequence	Used to specify the sequence number.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	

4. Add algorithms for the subscription type, if required.
5. Define, edit, or remove characteristics from the subscription type, if required.
6. Click **Save**.

The changes made to the subscription type are saved.

Copying a Subscription Type

Prerequisites

To copy a subscription type, you should have:

- Subscription type (whose copy you want to create) defined in the application
- Account Subscription business objects defined in the application

Procedure

To copy a subscription type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **S** and then click **Subscription Type**.
The **Subscription Type** screen appears.
3. Enter the search criteria in the **Search Subscription Type** zone.
4. In the **Search Results** section, click the link in the **Subscription Type Information** column whose details you want to view.
5. Click the **Duplicate** button in the **Subscription Type** zone.

The **Subscription Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the subscription services.
- **Subscription Services** – Used to specify the details of the subscription services.
- **Algorithms** – Used to specify the algorithms used in the subscription type.
- **Characteristics** – Used to define characteristics for the subscription type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to specify the subscription type.	Yes
Description	Used to specify the description for the subscription type.	Yes
Account Subscription Business Object	Used to indicate the business object using which you want to create a person when the corresponding account subscription is processed.	Yes
Detailed Description	Used to specify additional information about the subscription type.	No
Division	Used to indicate the division to which you want to associate the subscription type.	Yes
Contract Type	Used to indicate the Contract Type to which you want to associate the subscription type.	Yes
Renewal Duration Type	Used to indicate the renewal cycle. The valid values are: <ul style="list-style-type: none"> • Day • Month • Week • Year 	Yes
Renewal Duration	Used to specify the duration of the renewal of the subscription.	Yes
Status	Used to indicate the status of the subscription type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes
Prorate Charges	Used to indicate whether monthly subscription fee is prorated or not in the event the cancelation occurs in the middle of the month.	No
Adjust Billed Charges	Used to indicate the billed charges adjusted. <p>Note: This field appears only when you check the Prorate Charges check box.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	No
	Note: This field appears only when you check the Prorate Charges and Adjust Billed Charges check box.	
Termination Adjustment Type	Used to indicate the adjustment type used for termination of the subscription service.	No

The **Subscription Services** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes
Monthly Recurring Revenue Exempted (MRR)	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Distribution Code	Used to indicate distribution code linked to the service that will be used on the billable charge.	No

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event.	Yes
Sequence	Used to specify the sequence number.	Yes
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	

6. Enter the required details in the **Main** section.
7. Add algorithms for the subscription type, if required.
8. Define characteristics for the subscription type, if required.
9. Click **Save**.

The new subscription type is defined.

Account Information	Displays the basic information about the account.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective upload request.

Searching for an Account Subscription

Prerequisites

To search for an account subscription, you should have:

- Subscription type defined in the application
- Subscription Services defined in the application

Procedure

To search for an account subscription:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Account Subscription**.
A sub-menu appears.
3. Click the **Search** option from the **Account Subscription** sub-menu.
The **Account Subscription** screen appears.
4. Enter the search criteria in the **Search Account Subscription** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of account subscriptions that meet the search criteria appears in the **Search Results** section.

Note: You must specify at least one search criterion while searching for an account subscription.

Defining an Account Subscription

Prerequisites

To define an account subscription, you should have:

- Subscription type business objects defined in the application
- Subscription Services defined in the application

Procedure

To define an account subscription:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Tools** and then click **Account Subscription**.
A sub-menu appears.
3. Click the **Add** option from the **Account Subscription** sub-menu.

The **Account Subscription** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type	Used to search a particular subscription type. Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search a particular subscription type.	Yes
	Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears.	

Tip: Alternatively, you can access the **Account Subscription** screen by clicking the **Add** button in the page title area of the **Account Subscription** screen.

4. Click **OK**.

The **Account Subscription** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the subscription services.
- **Subscription Services and Charges** – Used to specify the details of the subscription services.
- **Characteristics** – Used to define characteristics for the subscription type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Type Information	Displays the basic information about the subscription type.	Not applicable
Account Information	Displays the basic information about the account linked to the subscription type.	Not applicable
Subscription Start Date	Used to specify the date from when the subscription is effective.	Yes
	Note: The subscription start date cannot be later than the subscription end date.	
Subscription End Date	Used to specify the date till when the subscription is effective.	Yes
	Note: The subscription end date cannot be earlier than the subscription start date.	
Automatic Renewal	Used to indicate whether you want to renew the subscription automatically.	No
Cost Escalation (in Percentage)	Note: This field appears only when Automatic Renewal check box is selected.	No
Comments	Used to specify additional information about the account subscription.	No

The **Subscription Services and Charges** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to specify the type of the subscription service.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Service Start Date	Used to indicate whether the service type is exempted from MRR calculation.	No
Subscription Charge	Used to indicate charges related to the subscription service.	Yes
Service End Date	Used to indicate distribution code linked to the service that will be used on the billable charge.	No
Subscription Charge	Used to specify the type of the subscription charges.	Yes
Charge Amount	Used to specify the charges related to the subscription charge.	Yes
Charge Start Date	Used to specify the date from when the charges are effective.	Yes
Charge End Date	Used to specify the date till when the charges are effective.	Yes
One-Time Charge	Used to indicate whether you want to pay the subscription charges one-time.	No
Recurring Charge Frequency	Used to specify whether you want to pay the subscription charges on regular recurring basis. Note: This field gets enabled only when you select the check box corresponding to the One-Time Charge field.	No
Automatic Renewal	Used to indicate whether you want to renew the subscription services and charges automatically.	No
Cost Escalation (in Percentage)	Used to indicate the percentage in which the subscription charge amount must increase when the automatic renewal of the subscription is triggered. Note: This field appears only when Automatic Renewal check box is selected.	No
Description on Bill	Used to specify the description on the bill.	No

5. Enter the required details in the **Main** section.
6. Enter the required details in the **Subscription Services and Charges** section.
7. Define characteristics for an account subscription, if required.
8. Click **Save**.

The account subscription is defined.

Defining Characteristics for an Account Subscription

Prerequisites

To define characteristics for an account subscription, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Account Subscription**)

Procedure

To define characteristics for an account subscription:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an account subscription.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective.	Yes (Conditional) Note: This field is required when you are defining a characteristic for an account subscription.
Characteristic Type	Used to specify the characteristic type.	Yes (Conditional) Note: This field is required when you are defining a characteristic for an account subscription.
Characteristic Value	Used to specify the value of characteristic type. Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for an account subscription.

2. Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for an account subscription, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from an account subscription, click the **Delete**  icon corresponding to the characteristic.

Viewing Termination Charges of the Account Subscription

Procedure

To view the termination charges of the account subscription:

1. Search for the account subscription in the **Account Subscription** screen.
2. In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding to the account subscription whose log you want to view.

The **Account Subscription** screen appears.

3. Click the **Broadcast**  icon corresponding to the subscription service whose charges you want to view.

The **Subscription Service Charges** zone appears.

4. Ensure that the **Account Subscription Termination Charges** zone is expanded.
5. View the details as required in the **Account Subscription Termination Charges** zone.

Suspending an Account Subscription

Procedure

To suspend an account subscription:

1. Search for an account subscription in the **Account Subscription** screen.
2. In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding to an account subscription whose details you want to edit.

The **Account Subscription** screen appears.

- Click the **Suspend** button in the **Account Subscription** zone.

The **Account Subscription Suspension** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Suspension Start Date	Used to specify the start date of the account subscription suspension.	Yes
Suspension End Date	Used to specify the end date of the account subscription suspension.	Yes
Suspension Condition	Used to specify the condition of the account subscription suspension.	Yes
Suspension Reason	Used to specify the reason of the account subscription suspension.	Yes

- Click **Save**.

An account subscription is suspended.

Note: You can suspend only those account subscriptions whose status is in **Active** status.

Terminating an Account Subscription

Procedure

To terminate an account subscription:

- Search for an account subscription in the **Account Subscription** screen.
- In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding to an account subscription whose details you want to edit.

The **Account Subscription** screen appears.

- Click the **Terminate** button in the **Account Subscription** zone.

The **Account Subscription Service Termination** window appears. It contains the following sections:

- Main**
 - Used to specify basic details about the subscription services.
- Termination Charges** – Used to specify the charges related to the termination of the account subscription services.

The **Main** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Subscription Service	Used to indicate the type of subscription service.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Termination Date	Used to specify date of the termination subscription service.	Yes
Termination Reason	Used to specify reason of the termination subscription service.	Yes

The **Termination Charges** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Termination Charge Type	Used to indicate the type of account subscription termination charges.	Yes
Charge Amount	Used to indicate the charges for the termination of the account subscription.	Yes
Termination Adjustment Type	Used to specify termination adjustment type.	Yes
	<p>Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Adjustment Type Search screen appears.</p>	

4. Click **Save**.

An account subscription is terminated.

Note: You can terminate only those account subscriptions whose status is in **Active** or **Suspended** status.

Resuming an Account Subscription

Procedure

To resume an account subscription:

1. Search for an account subscription in the **Account Subscription** screen.
2. In the **Search Results** section, click the link in the **Account Subscription Information** column corresponding to an account subscription whose details you want to edit.

The **Account Subscription** screen appears.

3. Click the **Resume** button in the **Account Subscription** zone.

The **Confirm Resume** window appears.

4. Click **OK**.

An account subscription is resumed.

Note: You can resume only those account subscriptions whose status is in **Suspended** status.

Chapter 36

Mass Pricing Update

Topics:

- [Prerequisites](#)
- [Mass Pricing Update Request \(Without Approval\) Status Transition](#)
- [Mass Pricing Update Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-MassPricingReq](#)
- [Request Type](#)
- [Mass Pricing Update Request \(Used for Searching\)](#)
- [Mass Pricing Update Request \(Used for Viewing\)](#)
- [Mass Pricing Update Request](#)

Oracle Revenue Management and Billing provides the ability for mass price item pricing update. In other words, the system enables you to update multiple active price item pricing assigned to a person, account, price list, or product at the same time. You can search for the price assignments which you want to update using the following fields:

- Price Item
- Price Item Parameters
- Account ID
- Person ID
- Division
- Update Date
- Pricing Entity Type

On specifying the search criteria, the system fetches the number of entities on which the price item pricing is defined and the number of price assignments on a particular type of pricing entity. Once you select one or more price item pricing, you can create the mass pricing update request by clicking the **Mass Pricing Update** button. While creating a mass pricing update request, you need to specify the mass pricing update request type using which you want to create the mass pricing update request. It is the mass pricing update request type which helps the system to determine:

- The business object using which the mass pricing update request should be created in the system.
- Whether the approval is required for the mass pricing update request.
- Whether the mass pricing update must be performed in the deferred mode when the number of price assignments in the mass pricing update request exceeds the defer processing count.

Once the mass pricing update request type is selected, you need to specify the mass pricing update criteria, mass pricing update type, and rate value. Once a mass pricing update request is created in the **Draft** status, you can submit the mass pricing update request. On submitting a mass pricing update request, the status of the mass pricing update request is changed to either **Deferred Processing** or **Updating Price Assignments** depending on whether the number of price assignments in the mass pricing update request exceeds the defer processing count. If the status is changed to **Deferred Processing**, you need to click the **Submit Batch** button. On clicking the **Submit Batch** button, the system automatically creates a batch job using the **C1-GENRQ** batch control. While creating the batch job, it uses the values defined for the **Thread Count** and **Thread Pool Name** option types in the **C1-MASPRI** feature configuration.

Once the batch job is executed, the status of the mass pricing update request is changed to **Updating Price Assignments**. If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment is created. However, if a price assignment is not yet referred in the system, the existing price assignment is updated. Once the price assignment is newly created or updated, the status of the record in the mass pricing update request is changed to **Processed**. However, if a price assignment is referred for a future date, the status of the record in the mass pricing update request is changed to **Error**. In addition, if any error occurs while updating an existing price assignment or creating a new price assignment, the status of the record in the mass pricing update request is changed to **Error**. Finally, the status of the mass pricing update request is changed to **Processed**.

You can optionally configure the approval workflow for the mass pricing update request. If the **Approval Required** field is set to **Yes** in the mass pricing update request type, the status of the mass pricing update request is changed to **Approval In Progress** when you submit the mass pricing update request. Once the approver approves the mass pricing update request, the status of the mass pricing update request is changed to either **Deferred Processing** or **Updating Price Assignments** depending on whether the number of price assignments in the mass pricing update request exceeds the defer processing count. However, if the approver rejects a mass pricing update request, the status of the mass pricing update request is changed to **Rejected**.

For more information on how to setup the mass pricing update process, see [Prerequisites](#) on page 2035.

Prerequisites

To setup the mass pricing update feature, you need to do the following:

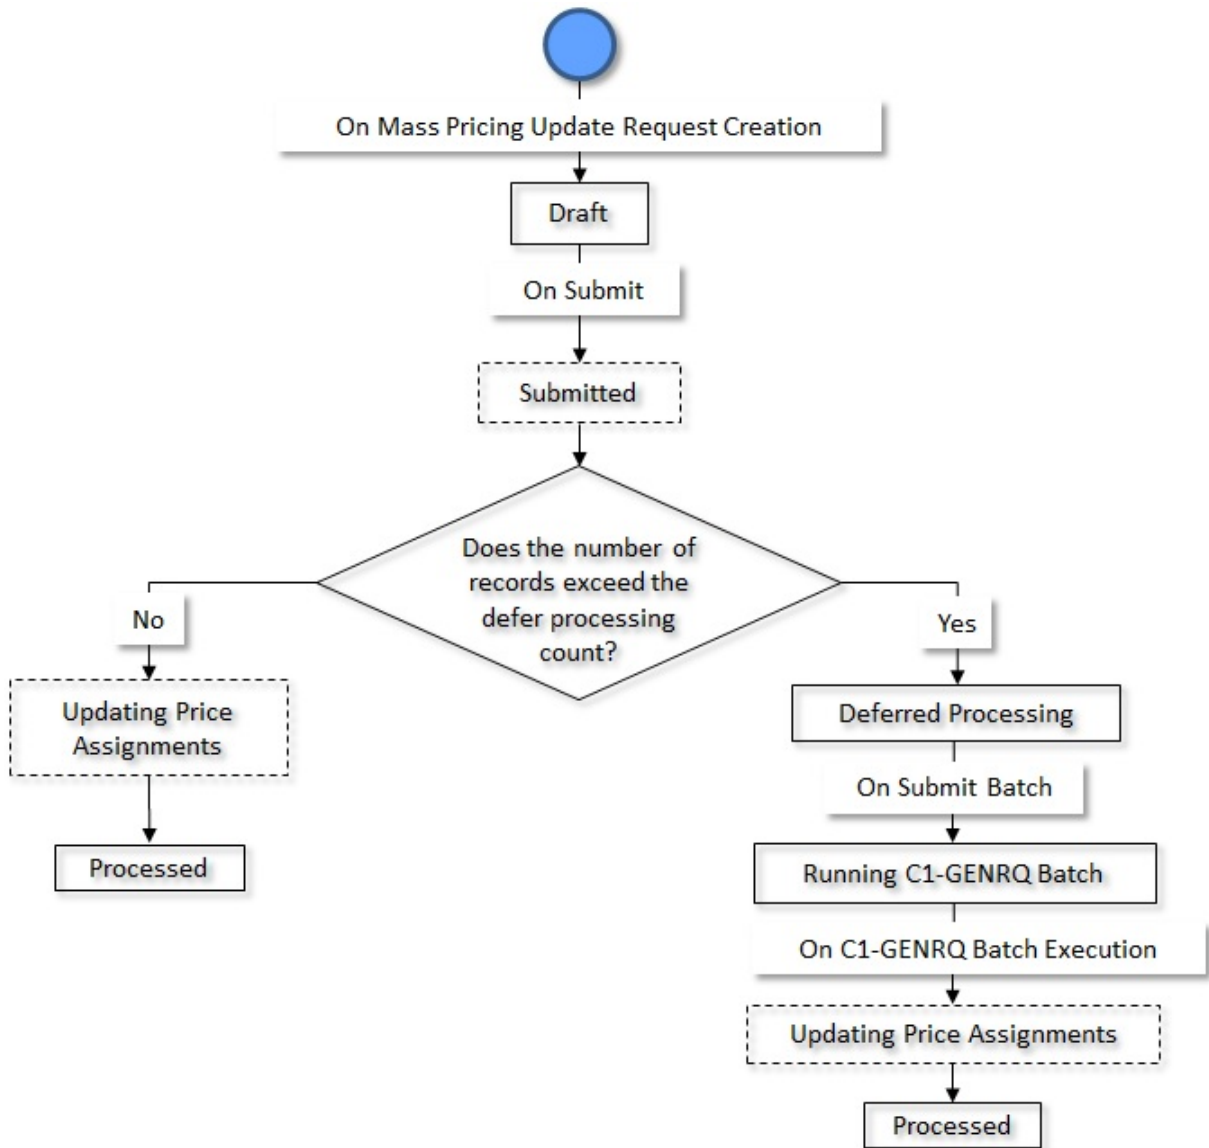

- Define the required mass pricing update request types in the system.
- Set the **Mass Pricing Update (C1-MASPRI)** feature configuration
- Attach a currency conversion algorithm to the **Currency Conversion For Bill Segments** algorithm spot of the required divisions
- Define one To Do type for submitter and another To Do type for approver when the approval is required for a mass pricing update request
- Assign a To Do role to the required To Do types in the application

Processed	-	-	-	-
Rejected	Enter	C1-MPRIRJTD	C1-MPRIRJTD	Refer to C1-MPRIRJTD on page 2040

C1-REQST-INF

This algorithm generates the request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Request Type Description
2. Request Status
3. Request ID

C1-MPRIVALDN

This algorithm is invoked when you create a mass pricing update request. It checks the following:

- Whether the mass pricing update criteria is specified.
- Whether the mass pricing update type is specified when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
- Whether the rate value is specified when the mass pricing update criteria is set to **Increase Price** or **Decrease Price**.
- Whether the currency is specified when the mass pricing update criteria is set to **Increase Price** or **Decrease Price** and the mass pricing update type is set to **Absolute**.
- If any of the above conditions are not met, the system does not allow you to create the mass pricing update request.

C1-MPRISUBMT

This algorithm is invoked when you submit a mass pricing update request. If the approval workflow is configured on the respective mass pricing update request type, it changes the status of the mass pricing update request to **Approval in Progress**. However, if the approval workflow is not configured on the respective mass pricing update request type, it changes the status of the mass pricing update request to either **Deferred Processing** or **Updating Price Assignments** depending on whether the number of price assignments in the mass pricing update request exceeds the defer processing count.

C1-MPRIAPTD

This algorithm is invoked when the status of the mass pricing update request is changed to **Approval in Progress**. It creates a To Do using the approval To Do type which is specified in the respective mass pricing update request type. Once a To Do is created, it is assigned to all users with an approval To Do role which is specified in the respective mass pricing update request type.

F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

C1-MPRIDEFER

This algorithm is invoked when the status of the mass pricing update request is changed to **Running C1-GENRQ Batch**. It creates a batch job using the **C1-GENRQ** batch control. While creating the batch job, it uses the values defined in the **Thread Count** and **Thread Pool Name** option types of the **Mass Pricing Update (C1-MASPRI)** feature configuration. It also creates a log for the mass pricing update request which indicates the batch job ID.

C1-MPRIAPRD

This algorithm is invoked when you approve a mass pricing update request. If the number of price assignments in the mass pricing update request exceeds the defer processing count, the status of the mass pricing update request is changed to **Deferred Processing**. However, if the number of price assignments in the mass pricing update request does not exceed the defer processing count, the status of the mass pricing update request is changed to **Updating Price Assignments**.

C1-MPRIUPDPA

This algorithm is invoked when the status of the mass pricing update request is changed to **Updating Price Assignments**. If a price assignment is referred in past, this algorithm ends the existing price assignment and creates a new price assignment. However, if a price assignment is not yet referred in the system, this algorithm updates the existing price assignment. Once the price assignment is newly created or updated, the status of the record in the mass pricing update request is changed to **Processed**. However, if a price assignment is referred for a future date, the status of the record in

the mass pricing update request is changed to **Error**. In addition, if any error occurs while updating an existing price assignment or creating a new price assignment, the status of the record in the mass pricing update request is changed to **Error**. Note that if a price assignment is included multiple times in a mass pricing update request, the system will update the price assignment only once.

C1-MPRIRJTD

This algorithm is invoked when the status of the mass pricing update request is changed to **Rejected**. It creates a To Do using the submitter To Do type which is specified in the respective mass pricing update request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the respective mass pricing update request type.

Request Type

Oracle Revenue Management and Billing allows you to define a mass pricing update request type using which you can create mass pricing update requests. It is the mass pricing request type which helps the system to determine:

- The business object using which the mass pricing update request should be created in the system.
- Whether the approval is required for the mass pricing update request.
- Whether the mass pricing update must be performed in the deferred mode when the number of price assignments in the mass pricing update request exceeds the defer processing count.

The **Request Type** screen allows you to define, edit, copy, and delete a mass pricing update request type. It contains the following zones:

- [Request Type List](#) on page 2040
- [Request Type](#) on page 2041

Request Type List

The **Request Type List** zone lists the mass pricing update request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Request Type	Displays the mass pricing update request type.
Description	Displays the description of the mass pricing update request type.
Edit	On clicking the Edit () icon, the Mass Pricing Request Type screen appears where you can edit the details of the mass pricing update request type.
Duplicate	On clicking the Duplicate () icon, the Mass Pricing Request Type screen appears where you can define a new mass pricing update request type using an existing mass pricing update request type.
Delete	On clicking the Delete () icon, you can delete the mass pricing update request type.
	Note: You can delete the mass pricing update request type only when you have not created a mass pricing update request using the mass pricing update request type.

On clicking the **Broadcast** () icon corresponding to a mass pricing update request type, the **Request Type** zone appears with the details of the respective mass pricing update request type.

You can define a new mass pricing update request type by clicking the **Addlink** in the upper right corner of the **Request Type List** zone.

Request Type

The **Request Type** zone displays the details of the mass pricing update request type. It contains the following sections:

- **Main** - Displays the basic information about the mass pricing update request type. It contains the following fields:

Field Name	Field Description
Request Type	Displays the mass pricing update request type.
Request Business Object	Indicates the business object using which you want to create a mass pricing update request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Description	Displays the description for the mass pricing update request type.
Detailed Description	Displays the additional information about the mass pricing update request type.
Status	Indicates the status of the mass pricing update request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive
Defer Processing Count	Indicates whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count. Note: Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i> . If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).
Approval Required	Indicates whether approval is required before updating the price item pricing through a mass pricing update request.

Field Name	Field Description
Approval Type	Indicates the type of approval. The valid value is: <ul style="list-style-type: none"> Request Level Approval
Approval To Do Type	Indicates that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval. <p>Note: This field appears only when the Approval Required option is selected. It has a link. On clicking the link, the To Do Type screen appears where you can view the details of respective To Do type.</p>
Approval To Do Role	Indicates that the users with the specified To Do role will receive the mass pricing update request when it is submitted for approval. <p>Note: This field appears only when the Approval Required option is selected. It has a link. On clicking the link, the To Do Role screen appears where you can view the details of respective To Do role.</p>
Submitter To Do Type	Indicates that To Do entry of the specified To Do type must be created when an approver rejects a mass pricing update request. <p>Note: This field appears only when the Approval Required option is selected. It has a link. On clicking the link, the To Do Type screen appears where you can view the details of respective To Do type.</p>
Submitter To Do Role	Indicates that the users with the specified To Do role will receive the mass pricing update request when it is rejected by an approver. <p>Note: This field appears only when the Approval Required option is selected. It has a link. On clicking the link, the To Do Role screen appears where you can view the details of respective To Do role.</p>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the mass pricing update request type.
Delete	Used to delete the mass pricing update request type. <p>Note: You can delete a mass pricing update request type only when you have not created a mass pricing update request using the mass pricing update request type.</p>
Duplicate	Used to create a new mass pricing update request type using an existing mass pricing update request type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the mass pricing update request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

By default, the **Request Type** zone does not appear in the **Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to a mass pricing update request type in the **Request Type List** zone.

You can define a new mass pricing update request type by clicking the **Add** link in the upper right corner of this zone.

Defining a Mass Pricing Update Request Type

Prerequisites

To define a mass pricing update request type, you should have:

- Mass pricing update request type business objects defined in the application.
- Mass pricing update request business objects defined in the application.
- One To Do type defined for submitter and another To Do type defined for approver when the approval is required for a mass pricing update request
- A To Do role assigned to the required To Do types in the application

Procedure

To define a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Request Type Business Object	Used to indicate the business object using which you want to create the mass pricing update request type.	Yes
	Note: You can create a mass pricing update request type using the Mass Pricing Request Type (C1-MassPricingReqType) business object.	

Note: Alternatively, you can access this screen by clicking the **Add** link in the upper right corner of the **Request Type List** zone.

4. Select the **Mass Pricing Request Type** business object from the respective field.
5. Click **OK**.

The **Mass Pricing Update Request Type** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the mass pricing update request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to specify the mass pricing update request type.	Yes
Business Object	Indicates the business object using which you are defining the mass pricing update request type.	Not applicable
Request Business Object	Used to indicate the business object using which you want to create a mass pricing update request. The valid value is: <ul style="list-style-type: none"> • Mass Pricing Request 	Yes
Description	Used to specify the description for the mass pricing update request type.	Yes
Detailed Description	Used to specify the additional information about the mass pricing update request type.	No
Status	Used to indicate the status of the mass pricing update request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count.	No
	<p>Note:</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).</p>	
Approval Required	Used to indicate whether approval is required before updating the price item pricing through a mass pricing update request.	No
Approval Type	Used to indicate the type of approval. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> • Request Level Approval <p>Note: This field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required only when the Approval Required option is selected.</p>
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The Approval To Do Type field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required only when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that the users with the specified To Do role must receive the mass pricing update request for approval.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified approval To Do type.</p>	<p>Note: This field is required only when the Approval Required option is selected.</p>
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the mass pricing update request.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The Submitter To Do Type field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required only when the Approval Required option is selected.</p>
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the mass pricing update request.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p>	<p>Note: This field is required only when the Approval Required option is selected.</p>

6. Enter the required details in the **Main** section.

7. Click **Save**.

The mass pricing update request type is defined.

Editing a Mass Pricing Update Request Type

Prerequisites

To edit a mass pricing update request type, you should have:

- Mass pricing update request business objects defined in the application.

Procedure

To edit a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **R** and then click **Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Request Type** sub-menu.

The **Request Type** screen appears.

4. In the **Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the mass pricing update request type whose details you want to edit.

The **Mass Pricing Update Request Type** screen appears. It contains the following section:

- **Main** - Used to specify basic details about the mass pricing update request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to specify the mass pricing update request type.	Yes
Business Object	Indicates the business object using which you are defining the mass pricing update request type.	Not applicable
Request Business Object	Used to indicate the business object using which you want to create a mass pricing update request. The valid value is: <ul style="list-style-type: none"> • Mass Pricing Request 	Yes
Description	Used to specify the description for the mass pricing update request type.	Yes
Detailed Description	Used to specify the additional information about the mass pricing update request type.	No
Status	Used to indicate the status of the mass pricing update request type. The valid values are: <ul style="list-style-type: none"> • Active • Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	<p>Used to indicate whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count.</p> <p>Note:</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).</p>	No
Approval Required	Indicates whether approval is required before updating the price item pricing through a mass pricing update request.	No
Approval Type	<p>Indicates the type of approval. The valid value is:</p> <ul style="list-style-type: none"> Request Level Approval <p>Note: This field appears only when the Approval Required option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required only when the Approval Required option is selected.</p>
Approval To Do Type	<p>Indicates that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval.</p> <p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The Approval To Do Type field appears only when the Approval Required option is selected.</p>	<p>Yes (Conditional)</p> <p>Note: This field is required only when the Approval Required option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Indicates that the users with the specified To Do role must receive the mass pricing update request for approval.	Yes (Conditional) Note: This field is required only when the Approval Required option is selected.
	Note: This field appears only when the Approval Required option is selected. The list includes only those To Do roles which are associated to the specified approval To Do type.	
Submitter To Do Type	Indicates that To Do entry of the specified To Do type must be created when the approver rejects the mass pricing update request.	Yes (Conditional) Note: This field is required only when the Approval Required option is selected.
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears. The Submitter To Do Type field appears only when the Approval Required option is selected.	
Submitter To Do Role	Indicates that the users with the specified To Do role must receive a To Do when the approver rejects the mass pricing update request.	Yes (Conditional) Note: This field is required only when the Approval Required option is selected.
	Note: This field appears only when the Approval Required option is selected. The list includes only those To Do roles which are associated to the specified submitter To Do type.	

Tip: Alternatively, you can edit the details of a mass pricing update request type by clicking the **Edit** button in the **Request Type** zone.

5. Modify the required details in the **Main** section.
6. Click **Save**.

The changes made to the mass pricing update request type are saved.

Deleting a Mass Pricing Update Request Type

Procedure

To delete a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **R** and then click **Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Request Type** sub-menu.

The **Request Type** screen appears.

4. In the **Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the mass pricing update request type that you want to delete.

A message appears confirming whether you want to delete the mass pricing update request type.

Note: You can delete a mass pricing update request type only when you have not created a mass pricing update request using the mass pricing update request type.

Tip: Alternatively, you can delete a mass pricing update request type by clicking the **Delete** button in the **Request Type** zone.

5. Click **OK**.

The mass pricing update request type is deleted.

Copying a Mass Pricing Update Request Type

Instead of creating a mass pricing update request type from scratch, you can create a new mass pricing update request type using an existing mass pricing update request type. This is possible through copying a mass pricing update request type. On copying a mass pricing update request type, the details including the characteristics are copied to the new mass pricing update request type. You can then edit the details, if required.

Prerequisites

To copy a mass pricing update request type, you should have:

- Mass pricing update request type (whose copy you want to create) defined in the application.
- Mass pricing update request business objects defined in the application.

Procedure

To copy a mass pricing update request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **R** and then click **Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Request Type** sub-menu.

The **Request Type** screen appears.

- In the **Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the request type whose copy you want to create.

The **Mass Pricing Update Request Type** screen appears. It contains the following section:

- Main** - Used to specify basic details about the mass pricing update request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to specify the mass pricing update request type.	Yes
Business Object	Indicates the business object using which you are defining the mass pricing update request type.	Not applicable
Request Business Object	Used to indicate the business object using which you want to create a mass pricing update request. The valid value is: <ul style="list-style-type: none"> Mass Pricing Request 	Yes
Description	Used to specify the description for the mass pricing update request type.	Yes
Detailed Description	Used to specify the additional information about the mass pricing update request type.	No
Status	Used to indicate the status of the mass pricing update request type. The valid values are: <ul style="list-style-type: none"> Active Inactive 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate whether the price item pricing should be updated in the deferred mode (i.e. in the background) when the number of price assignments in a mass pricing update request exceeds the defer processing count.	No
	<p>Note:</p> <p>Deferred mode means in the background when the Generic Request Periodic Monitor (C1-GENRQ) batch is invoked. You can configure the Generic Request Periodic Monitor (C1-GENRQ) batch such that it is executed at regular intervals. For more information about the Generic Request Periodic Monitor (C1-GENRQ) batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of price assignments in a mass pricing update request does not exceed the defer processing count, the system will process the mass pricing update request in real time (i.e. immediately).</p>	
Approval Required	Used to indicate whether approval is required before updating the price item pricing through a mass pricing update request.	No
Approval Type	Used to indicate the type of approval. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> Request Level Approval <p>Note: This field appears only when the Approval Required option is selected.</p>	
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the mass pricing update request for approval.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The Approval To Do Type field appears only when the Approval Required option is selected.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that the users with the specified To Do role must receive the mass pricing update request for approval.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified approval To Do type.</p>	<p>Note: This field is required only when the Approval Required option is selected.</p>
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the mass pricing update request.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search window appears.</p> <p>The Submitter To Do Type field appears only when the Approval Required option is selected.</p>	<p>Note: This field is required only when the Approval Required option is selected.</p>
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the mass pricing update request.	Yes (Conditional)
	<p>Note:</p> <p>This field appears only when the Approval Required option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p>	<p>Note: This field is required only when the Approval Required option is selected.</p>

Tip: Alternatively, you can copy a mass pricing update request type by clicking the **Duplicate** button in the **Request Type** zone.

5. Enter the required details in the **Main** section.
6. Click **Save**.

The new mass pricing update request type is defined.

Searching for a Mass Pricing Update Request

Prerequisites

To search for a mass pricing update request, you should have:

- Mass pricing update request types defined in the application

Procedure

To search for a mass pricing update request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
A sub-menu appears.
3. Click the **Search** option from the **Mass Pricing Update Request** sub-menu.
The **Mass Pricing Update Request** screen appears.
4. Enter the search criteria in the **Search Mass Pricing Update Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of mass pricing update requests that meet the search criteria appears in the **Search Results** section.

Creating a Mass Pricing Update Request

Prerequisites

To define a mass pricing update request, you should have:

- Mass pricing update request types defined in the application
- A currency conversion algorithm attached to the **Currency Conversion For Bill Segments** algorithm spot of the respective division

Procedure

To define a mass pricing update request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.

A sub-menu appears.

3. Click the **Add** option from the **Mass Pricing Update Request** sub-menu.

The **Mass Pricing Update Request** screen appears.

4. Search for the required price assignments which you want to update in the **Search Price Assignments** zone.
5. Do either of the following:

If you want to...	Then...
Update all price assignments of a particular pricing entity type	<ol style="list-style-type: none"> 1. Select the check box corresponding to the respective pricing entity type. 2. Click Mass Pricing Update.
Update all price assignments of one or more pricing entity type	<ol style="list-style-type: none"> 1. Select the check box corresponding to the respective pricing entity types. 2. Click Mass Pricing Update.
Update all price assignments of all pricing entity types	<ol style="list-style-type: none"> 1. Select the check box corresponding to all pricing entity types. 2. Click Mass Pricing Update.
Update the price item pricing assigned to a particular person	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Customer Agreed pricing entity type. The Customer Agreed Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Customer Agreed Price Assignments zone. 3. Click Mass Pricing Update.
Update the price item pricing assigned to a particular account	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Account Agreed pricing entity type. The Account Agreed Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Account Agreed Price Assignments zone. 3. Click Mass Pricing Update.
Update the price item pricing assigned to a particular price list	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Price List pricing entity type. The Price list Price Assignments zone appears.

If you want to...	Then...
	<ol style="list-style-type: none"> 2. Select the check box corresponding to the required price item pricing that you want to update in the Price list Price Assignments zone. 3. Click Mass Pricing Update.
Update the price item pricing assigned to a particular price list associated to a particular product	<ol style="list-style-type: none"> 1. Select the check box corresponding to the Product pricing entity type. The Product Price list Price Assignments zone appears. 2. Select the check box corresponding to the required price item pricing that you want to update in the Product Price list Price Assignments zone. 3. Click Mass Pricing Update.

The **Select Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Mass Pricing Update Request Type	Used to indicate the mass pricing update request type using which you want to create a mass pricing update request.	Yes

6. Select the required mass pricing update request type from the respective field.
7. Click **OK**.

The **Mass Pricing Update Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the mass pricing update request.	Not applicable
Mass Pricing Update Criteria	Used to indicate whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: <ul style="list-style-type: none"> • Decrease Price • End Date Price • Increase Price 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Mass Pricing Update Type	Used to indicate whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: <ul style="list-style-type: none"> Absolute Percentage 	Yes (Conditional)
	Note: This field appears only when the mass pricing update criteria is set to Increase Price or Decrease Price .	Note: This field is required when the mass pricing update criteria is set to Increase Price or Decrease Price .
Rate Value	Used to specify the rate by which you want to increase or decrease the price.	Yes (Conditional)
	Note: This field appears only when the mass pricing update criteria is set to Increase Price or Decrease Price . You cannot specify a negative value or zero in the Rate Value field.	Note: This field is required when the mass pricing update criteria is set to Increase Price or Decrease Price .
Currency	Used to indicate the currency in which the rate is specified.	Yes (Conditional)
	Note: This field appears only when the mass pricing update type is set to Absolute . If the pricing currency is different from the currency which is specified in the mass pricing update request, the system does the currency conversion using the algorithm which is attached to the Currency Conversion For Bill Segments algorithm spot of the respective division.	Note: This field is required when the mass pricing update type is set to Absolute .

Field Name	Field Description	Mandatory (Yes or No)
Update Date	<p>Displays the date when you want to update the price assignments. The system fetches the price assignments which are effective on the update date. If you want to forcibly end a price item pricing through the mass pricing update request, the end date in the price item pricing is set to the update date. However, if you want to increase or decrease the rate in a price item pricing through the mass pricing update request, the system behaves in the following manner:</p> <ul style="list-style-type: none"> • If a price assignment is referred in past, the existing price assignment is end dated and a new price assignment is created. • If a price assignment is not yet referred in the system, the existing price assignment is updated. <p>Note: You cannot update a price assignment through a mass pricing update request when the start or end date of the price assignment is equal to the update date.</p>	Not applicable

8. Enter the required details in the **Mass Pricing Update Request** screen.

9. Click **Save**.

The mass pricing update request is defined in the **Draft** status. And, the status of all price assignment records in the mass pricing update request is set to **Pending**.

Mass Pricing Update Request (Used for Viewing)

The **Mass Pricing Update Request** screen allows you to:

- View the details of a mass pricing update request
- Edit the details of a mass pricing update request
- Delete a mass pricing update request
- Submit a mass pricing update request for processing
- Approve or reject a mass pricing update request
- Submit a batch job for a mass pricing update request
- View the log of a mass pricing update request
- Add a log entry for a mass pricing update request

It consists of the following tabs:

- [Mass Pricing Update Request - Main](#) on page 2062
- [Mass Pricing Update Request - Log](#) on page 2065

Mass Pricing Update Request - Main

The **Main** tab displays information about the mass pricing update request. It contains the following zones:

- [Mass Pricing Update Request](#) on page 2062
- [Price Assignments](#) on page 2064

Mass Pricing Update Request

The **Mass Pricing Update Request** zone displays the details of the mass pricing update request. It contains the following sections:

- **Main** - Displays basic information about the mass pricing update request. It contains the following fields:

Field Name	Field Description
Request Information	Displays information about the mass pricing update request.
Mass Pricing Update Request Type	Indicates the mass pricing update request type using which the mass pricing update request is created. Note: It has a link. On clicking the link, the Request Type screen appears where you can view the details of the respective mass pricing update request type.
Status	Indicates the status of the mass pricing update request. The valid values are: <ul style="list-style-type: none"> • Approval in Progress • Deferred Processing • Draft • Processed • Rejected • Running C1-GENRQ Batch
Mass Pricing Update Criteria	Indicates whether you want to increase or decrease the rate in the price item pricing or whether you want to forcibly end the price item pricing on the update date. The valid values are: <ul style="list-style-type: none"> • Decrease Price • End Date Price • Increase Price
Mass Pricing Update Type	Indicates whether you want to increase or decrease the rate by an absolute value or in percentage. The valid values are: <ul style="list-style-type: none"> • Absolute • Percentage Note: This field appears only when the mass pricing update criteria is set to Increase Price or Decrease Price .

Field Name	Field Description
Rate Value	Displays the rate by which you want to increase or decrease the price.
	Note: This field appears only when the mass pricing update criteria is set to Increase Price or Decrease Price .
Currency	Indicates the currency in which the rate is specified.
	Note: This field appears only when the mass pricing update type is set to Absolute .
Update Date	Displays the date when you want to update the price assignments.

- **Statistics** - Displays summarized information about the records which are included in the mass pricing update request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of price assignments which are included in the mass pricing update request.
Processed Records	Displays the total number of price assignments which are successfully updated through the mass pricing update request.
Error Records	Displays the total number of price assignments which could not be updated through the mass pricing update request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the mass pricing update request.
	Note: The Edit button appears only when the mass pricing update request is in the Draft status.
Delete	Used to delete the mass pricing update request.
	Note: The Delete button appears only when the mass pricing update request is in the Draft status.
Submit	Used to submit the mass pricing update request for updating the price assignments.
	Note: The Submit button appears only when the mass pricing update request is in the Draft status.
Submit Batch	Used to generate a batch job using the Generic Request Periodic Monitor (C1-GENRQ) batch control.
	Note: The Submit Batch button appears only when the mass pricing update request is in the Deferred Processing status.

Button Name	Button Description
Approve	Used to approve the mass pricing update request.
	<p>Note: The Approve button appears only when:</p> <ul style="list-style-type: none"> The mass pricing update request is in the Approval in Progress status. A user with the approval To Do role is reviewing the mass pricing update request.
Reject	Used to reject the mass pricing update request.
	<p>Note: The Reject button appears only when:</p> <ul style="list-style-type: none"> The mass pricing update request is in the Approval in Progress status. A user with the approval To Do role is reviewing the mass pricing update request.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the mass pricing update request is created. In addition, a context menu appears corresponding to the Business Object field which helps in navigating to other screens in the application.
	<p>Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.</p>
Status Date Time	Displays the date and time when the mass pricing update request status is updated.
Creation Date Time	Displays the date and time when the mass pricing update request is created.

Price Assignments

The **Price Assignments** zone lists the price assignments which you want to update through the mass pricing update request. It contains the following columns:

Column Name	Column Description
Pricing Information	Displays information about the price item pricing.
	<p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the respective price item pricing.</p>
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	<p>Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).</p>
Entity ID	Indicates the entity to which the price item pricing is assigned.

Column Name	Column Description
Pricing Entity Type	Indicates the type of entity on which the price assignment is done. The valid values are: <ul style="list-style-type: none"> Account Agreed Customer Agreed Price List Product
Mass Pricing Update Status	Indicates the status of the price assignment record which is included in the mass pricing update request. The valid values are: <ul style="list-style-type: none"> Pending Processed Error

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Mass Pricing Update Request - Log

The **Log** tab contains the following zone:

- [Mass Pricing Update Request Log](#) on page 2065

Mass Pricing Update Request Log

The **Mass Pricing Update Request Log** zone lists the complete trail of actions performed on the mass pricing update request. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the mass pricing update request.
Details	Displays the details of the action performed on the mass pricing update request.
User	Indicates the user who has performed the action on the mass pricing update request.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity which is created when the action is performed on the mass pricing update request. <p>Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.</p>
Status Reason	Indicates the reason why the status of the mass pricing update request is changed. <p>Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.</p>

Note: You can manually add a log entry for the mass pricing update request by clicking the **Add Log Entry** link in the upper right corner of the **Mass Pricing Update Request Log** zone.

Deleting a Mass Pricing Update Request

Procedure

To delete a mass pricing update request:

1. Search for the mass pricing update request in the **Mass Pricing Update Request** screen.
2. In the **Search Results** section, click the link in the **Request Information** column corresponding to the mass pricing update request that you want to delete.

The **Mass Pricing Update Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Delete** button in the **Mass Pricing Update Request** zone.

A message appears confirming whether you want to delete the mass pricing update request.

Note: The **Delete** button in the **Mass Pricing Update Request** zone appears only when the mass pricing update request is in the **Draft** status.

Note: The **Delete** button appears only when the mass pricing update request is in the **Draft** status.

5. Click **OK**.

The mass pricing update request is deleted.

Generating a Batch Job for a Mass Pricing Update Request

Procedure

To generate a batch job for a mass pricing update request:

1. Search for the mass pricing update request in the **Mass Pricing Update Request** screen.
2. In the **Search Results** section, click the link in the **Request Information** column corresponding to the mass pricing update request for which you want to submit a batch job.
The **Mass Pricing Update Request** screen appears.
3. Ensure that the **Main** tab is selected.
4. Click the **Submit Batch** button in the **Mass Pricing Update Request** zone.

A batch job is created using the **C1-GENRQ** batch control. While creating the batch job, it uses the values defined in the **Thread Count** and **Thread Pool Name** option types of the **Mass Pricing Update (C1-MASPRI)** feature configuration. In addition, a log is created for the mass pricing update request which indicates the batch job ID. Finally, the status of the mass pricing update request is changed to **Running C1-GENRQ Batch**.

Note: The **Submit Batch** button appears only when the mass pricing update request is in the **Deferred Processing** status.

Adding a Log Entry for a Mass Pricing Update Request

Procedure

To add a log entry for a mass pricing update request:

1. Search for the mass pricing update request in the **Mass Pricing Update Request** screen.
2. In the **Search Results** section, click the link in the **Request Information** column corresponding to the mass pricing update request whose log you want to edit.

The **Mass Pricing Update Request** screen appears.

- Click the **Log** tab.

The **Log** tab appears.

- Click the **Add Log Entry** link in the upper right corner of this zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the mass pricing update request.	Not applicable
Log Details	Used to specify additional comments on the mass pricing update request.	Yes

- Enter the comments in the **Log Details** field.
- Click **Save**.

The log entry is added in the **Mass Pricing Update Request Log** zone.

Mass Pricing Update Request

The **Mass Pricing Update Request** screen allows you to search for price assignments using various search criteria. The search results (i.e. price assignments) are grouped based on the pricing entity type, such as **Account Agreed**, **Customer Agreed**, **Price List**, and **Product**. You can then create a mass pricing update request for the following:

- All price assignments of a particular pricing entity type
- All price assignments of one or more pricing entity type
- All price assignments of all pricing entity types
- A price item pricing assigned to a particular person, account, or price list
- A price item pricing assigned to a price list which is associated to a product
- One or more price assignments of a person, account, or price list
- One or more price assignments of a price list which is associated to a product

It contains the following zones:

- [Search Price Assignments](#) on page 2074
- [Account Agreed Price Assignments](#) on page 2076
- [Customer Agreed Price Assignments](#) on page 2077
- [Price List Price Assignments](#) on page 2078
- [Product Price List Price Assignments](#) on page 2078

Search Price Assignments

The **Search Price Assignments** zone allows you to search for active price assignments on different pricing entity type. It contains the following sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search pricing which is defined for a particular price item.	Yes
	Note: The Search  icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.	
Account ID	Used to search pricing which is assigned to a particular account.	No
	Note: The Search  icon appears corresponding to the Account ID field. On clicking the Search icon, the Account Search window appears.	
Person ID	Used to search pricing which is assigned to a particular person.	No
	Note: The Search  icon appears corresponding to the Person ID field. On clicking the Search icon, the Person Search window appears.	
Division	Used to search pricing which belongs to a particular division.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	
Update Date	Used to search pricing which is effective on a particular date.	Yes
	Note: By default, this field is set to the current date. The update date cannot be earlier than the system date.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing Entity Type	Used to search pricing which is defined on a particular type of entity. The valid values are: <ul style="list-style-type: none"> Account Agreed Customer Agreed Price List Product 	No
	Note: This field appears only when you click the Advanced Search link available in the right side of the Search Price Assignments zone.	

In addition, it contains the **Price Item Parameters** section which has the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search pricing which is defined using a particular parameter.	No
	Note: The Search  icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.	
Parameter Value	Used to search pricing which is defined using a particular parameter value.	Yes (Conditional)
	Note: If the value type of the parameter is Adhoc or Predefined , the Search  icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Parameter Value Search window appears.	

Note: If you want to add more than one parameter while searching for price assignments, click the **Add**  icon and then specify the parameter and parameter value. However, if you want to remove a parameter and parameter value combination from the search criteria, click the **Delete**  icon corresponding to the parameter and parameter value combination.

- **Search Result** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Result** section contains the following columns:

Column Name	Column Description
Pricing Entity Type	Indicates the type of entity on which the price item pricing is defined. The valid values are: <ul style="list-style-type: none"> Account Agreed Customer Agreed Price List Product
Pricing Entity Count	Indicates the number of entities on which the price item pricing is defined.
Price Assignment Count	Indicates the number of price assignments on a particular type of pricing entity.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

On clicking the **Broadcast**  icon corresponding to a pricing entity type, the **Account Agreed Price Assignments**, **Customer Agreed Price Assignments**, **Price List Price Assignments**, or **Product Price List Price Assignments** zone appears depending on the pricing entity type.

A check box appears corresponding to each pricing entity type. On selecting the check box, you can create a mass pricing update request for all price assignments which are done on the respective pricing entity type. You can also create a mass pricing update request for all price assignments which are done on one or more pricing entity types at the same time. In addition, you can select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are done on all pricing entity types.

Account Agreed Price Assignments

The **Account Agreed Price Assignments** zone lists the active pricing of a price item which is assigned to an account. It contains the following columns:

Column Name	Column Description
Account Information	Indicates the account to which the price item pricing is assigned. In addition, the Account Information column has a context menu which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Account Identifier Type	Indicates the primary identifier type of the account.
Account Identifier	Indicates the account to which the price item pricing is assigned.
Pricing Information	Displays information about the price item pricing. <p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of respective price item pricing.</p>

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined at the account level.

Customer Agreed Price Assignments

The **Customer Agreed Price Assignments** zone lists the active pricing of a price item which is assigned to a person. It contains the following columns:

Column Name	Column Description
Person Information	Indicates the person to whom the price item pricing is assigned. In addition, the Person Information column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Person Identifier Type	Indicates the primary identifier type of a person.
Person Identifier	Indicates the person to whom the price item pricing is assigned.
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined at the person level.

Price List Price Assignments

The **Price List Price Assignments** zone lists the active pricing of a price item which is assigned to a price list. It contains the following columns:

Column Name	Column Description
Price List Information	Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined in the price lists.

Product Price List Price Assignments

The **Product Price List Price Assignments** zone lists the active pricing of a price item which is added in the price lists associated with the products. It contains the following columns:

Column Name	Column Description
Product	Displays information about the product.

Column Name	Column Description
Product Version	Displays information about the effective product version.
Price List Information	Indicates the price list associated with the product to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of respective price list.
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of respective price item pricing.
Pricing Parameters	Displays a comma-separated list of parameter values using which the price item pricing is defined.
	Note: The order in which parameter values appear in the Pricing Parameters field is controlled by the display order (which is defined while associating a parameter with a price item).

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, it contains the following button:

Button Name	Button Description
Mass Pricing Update	Used to create a mass pricing update request.

A check box appears corresponding to each price assignment. On selecting the check box, you can create a mass pricing update request for the price assignment. You can select multiple price assignments at the same time. You can also select the check box corresponding to the column header. This indicates that you want to create a mass pricing update request for all price assignments which are defined in the price lists associated with the products.

Searching for Price Assignments on a Pricing Entity

Prerequisites

To search for price assignments on a pricing entity, you should have:

- Price items, accounts, persons, and divisions defined in the application
- Price item associated with the required division
- Access to the required division

Procedure

To search for price assignments on a pricing entity:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Mass Pricing Update Request**.
A sub-menu appears.
3. Click the **Add** option from the **Mass Pricing Update Request** sub-menu.

The **Mass Pricing Update Request** screen appears.

4. Enter the search criteria in the **Search Price Assignments** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

The number of price assignments on the following types of pricing entity are listed in the **Search Results** section:

- Account Agreed
- Customer Agreed
- Price List
- Product

Chapter 37

Price Item, Parameter, and SQI Upload

Topics:

- [Uploading a Price Item File in the XML Format](#)
- [Uploading a Price Item File in the CSV Format](#)
- [XML File Format for Uploading Price Items](#)
- [Sample XML Format for Uploading Price Items](#)
- [CSV File Format for Uploading Price Items](#)
- [Sample CSV Format for Uploading Price Items](#)
- [Uploading a Parameter File in the XML Format](#)
- [Uploading a Parameter File in the CSV Format](#)
- [XML File Format for Uploading Parameters](#)
- [Sample XML Format for Uploading Parameters](#)
- [CSV File Format for Uploading Parameters](#)
- [Sample CSV Format for Uploading Parameters](#)
- [Uploading an SQI File in the XML Format](#)
- [Uploading an SQI File in the CSV Format](#)
- [XML File Format for Uploading Service Quantity Identifiers \(SQIs\)](#)

There might be situations when the customer wants to move the price item, parameter, and service quantity identifier information from the legacy system to Oracle Revenue Management and Billing (ORMB). In such situations, you can use the **Price Item, Parameter, and SQI Upload** feature in ORMB to create new price items or edit the existing price items using the **File Upload Interface** utility. You can also use the **Price Item, Parameter, and SQI Upload** feature to create new parameters and SQIs using the **File Upload Interface** utility. However, at present, you cannot edit the existing parameters and SQIs using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing parameters and SQIs from the respective user interface.

Note: If you want to edit an existing price item in the system, you must provide all details of the price item and not just the details which you want to update. This is because the **File Upload Interface** utility supports the **Replace** operation and not the **Edit** operation while editing the price item.

You can upload the price item, parameter, and SQI files in the XML or CSV format using the **File Upload Interface** utility. You can specify the following in the XML and CSV files along with the basic details of the price item:

- Parameters and divisions which you want to associate with the price item
- Characteristics for the price item
- Division-specific characteristics for the price item
- Division-specific SQIs for the price item
- Details of the price item relationship

Note: While uploading the price item file, you need to ensure that the parameters and service quantity identifiers mentioned in the price item file are already present in the system.

You can upload the price items, parameters, and SQIs from the same file or from individual files based on the business requirements. For more information, refer to [Uploading Price Items, Parameters, and SQIs from the Same File](#) on page 2149.

At present, the system does not allow you to configure the approval process for the **Price Item, Parameter, and SQI Upload** feature. Therefore, you must ensure that the files are pre-approved before uploading them in the system.

Uploading a Price Item File in the XML Format

To upload a price item file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading price items in the XML format
2. Upload the price item file
3. Create or update the price items in the system

Related Topics

Defining a File Request Type for Uploading Price Items in the XML Format

Procedure

To define a file request type for uploading price items in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Object** option from the **Service Type** list.
9. Enter the **C1_PRICEITEM_BO** business object or custom price item business object in the **Service Name** field.
10. Attach an algorithm created using the **C1-PRCITM-PR** algorithm type to the **Pre-Processing Algorithm** field corresponding to the price item business object.

Note: For more information about the **C1-PRCITM-PR** algorithm, refer to [C1-PRCITM-PR](#).

11. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new price items or edit the existing price items using the file request type.
12. Click **Save**.

The file request type is defined for uploading price items in the XML format.

Uploading a Price Item File

You can upload a price item file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating or Updating Price Items

You can create or edit the price items in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading a Price Item File in the CSV Format

To upload a price item file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading price items in the CSV format
2. Upload the price item file
3. Create or update the price items in the system

Defining a File Request Type for Uploading Price Items in the CSV Format

Procedure

To define a file request type for uploading price items in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.
The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Enter `csv` in the **File Extension** field.
8. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
9. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
10. In the **Services** section, enter the required sequence number.

11. Select the **Business Object** option from the **Service Type** list.
12. Enter the **C1_PRICEITEM_BO** business object or custom price item business object in the **Service Name** field.
13. Attach an algorithm created using the **C1-PRCITM-PR** algorithm type to the **Pre-Processing Algorithm** field corresponding to the price item business object.

Note: For more information about the **C1-PRCITM-PR** algorithm, refer to [C1-PRCITM-PR](#).

14. Select the **Add** or **Replace** option from the **Operation** list depending on whether you want to create new price items or edit the existing price items using the file request type.
15. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
16. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
17. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	PRICEITEMCODE	C1_PRICEITEM_BO/priceItemCode
2	DESCRIPTION	C1_PRICEITEM_BO/description

18. Click **Save**.

The file request type is defined for uploading price items in the CSV format.

Uploading a Price Item File

You can upload a price item file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating or Updating Price Items

You can create or edit the price items in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the price item files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Price Items

Before uploading a price item file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1_PRICEITEM_BO	Used to specify the details of the price item or price item bundle whose record you want to create or update in the system.	Yes
priceItemCode	Used to specify the price item or price item bundle.	Yes
description	Used to specify the description for the price item or price item bundle.	Yes
priceItemAvailFor	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • PRIC - Enables you to use the price item or price item bundle for only pricing. • PRBL - Enables you to use the price item or price item bundle for pricing and billing. 	Yes
priceItemType	Used to indicate the type of the price item or price item bundle. If the price item or price item bundle is used for only pricing, the valid values are: <ul style="list-style-type: none"> • FEES • RATE However, if the price item or price item bundle is used for the pricing and billing, the valid value is: <ul style="list-style-type: none"> • FEES 	Yes
piStatusFlag	Used to indicate the status of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • ACTV - Enables you to set the price item or price item bundle to Active. • INAC - Enables you to set the price item or price item bundle to Inactive. 	Yes
bundleSw	Used to indicate whether you want to define a price item bundle. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
bundleTypeFlg	<p>Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are:</p> <ul style="list-style-type: none"> • PHAN - Enables you to create a phantom price item bundle. • REGU - Enables you to create a regular price item bundle. • RTIO - Enables you to create a ratio price item bundle. <p>However, if the price item bundle is available for only pricing and the price item type is set to FEES, the valid value is:</p> <ul style="list-style-type: none"> • REGU - Enables you to create a regular price item bundle. <p>Note: You cannot define a price item bundle when it is available for only pricing and when the price item type is set to RATE.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are creating a price item bundle.</p>
asgnGlobalPIsw	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes
saType	Used to indicate the contract type that you want to associate with the price item or price item bundle.	<p>Yes (Conditional)</p> <p>Note: This data is required when the price item or price item bundle is used for pricing and billing.</p>
priceItemParm	Used to specify the details of the parameter which you want to associate with the price item or price item bundle.	No

Tag Name	Tag Description	Mandatory (Yes or No)						
startDate	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="570 268 1154 835"> <thead> <tr> <th data-bbox="570 268 889 352">If this tag is used within...</th> <th data-bbox="889 268 1154 352">Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="570 352 889 531">priceItemParm</td> <td data-bbox="889 352 1154 531">Used to specify the date from when the parameter is effective for the price item or price item bundle.</td> </tr> <tr> <td data-bbox="570 531 889 835">priceItemRel</td> <td data-bbox="889 531 1154 835">Used to specify the date from when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the version tag is...	priceItemParm	Used to specify the date from when the parameter is effective for the price item or price item bundle.	priceItemRel	Used to specify the date from when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to do either of the following:</p> <ul style="list-style-type: none"> • Associate a parameter with the price item or price item bundle • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle
If this tag is used within...	Then the purpose of the version tag is...							
priceItemParm	Used to specify the date from when the parameter is effective for the price item or price item bundle.							
priceItemRel	Used to specify the date from when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.							
endDate	<p>You can use this tag within the following tags:</p> <table border="1" data-bbox="570 926 1154 1493"> <thead> <tr> <th data-bbox="570 926 889 1010">If this tag is used within...</th> <th data-bbox="889 926 1154 1010">Then the purpose of the version tag is...</th> </tr> </thead> <tbody> <tr> <td data-bbox="570 1010 889 1188">priceItemParm</td> <td data-bbox="889 1010 1154 1188">Used to specify the date till when the parameter is effective for the price item or price item bundle.</td> </tr> <tr> <td data-bbox="570 1188 889 1493">priceItemRel</td> <td data-bbox="889 1188 1154 1493">Used to specify the date till when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.</td> </tr> </tbody> </table>	If this tag is used within...	Then the purpose of the version tag is...	priceItemParm	Used to specify the date till when the parameter is effective for the price item or price item bundle.	priceItemRel	Used to specify the date till when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.	<p>No</p>
If this tag is used within...	Then the purpose of the version tag is...							
priceItemParm	Used to specify the date till when the parameter is effective for the price item or price item bundle.							
priceItemRel	Used to specify the date till when the price item or price item bundle is associated with the parent price item or added to the price item or price item bundle.							
priceParmCode	<p>Used to indicate the parameter that you want to associate with the price item or price item bundle.</p> <p>Note:</p> <p>You must specify a parameter which is already defined in the system.</p> <p>The system allows you to specify only those parameters where the parameter usage is set to Price Item.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p>						

Tag Name	Tag Description	Mandatory (Yes or No)
overridePriceParmLabel	Used to specify a business label for the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.	No
displayOrder	Used to indicate the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Yes (Conditional) Note: This data is required when you want to associate a parameter with the price item or price item bundle.
parmUsageFlg	Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • AGG - Indicates that you want to use the parameter for aggregating transactions. • PRI - Indicates that you want to use the parameter for aggregating transactions and defining the price item pricing. 	Yes (Conditional) Note: This data is required when you want to associate a parameter with the price item or price item bundle.
isRequired	Used to indicate whether the parameter is mandatory while defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
priorityNum	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Yes (Conditional) Note: This data is required when you want to associate an optional parameter with the price item or price item bundle.
priceItemParmVal	Used to specify a list of predefined parameter values which are valid for the price item or price item bundle. Note: The data should be added in this tag only when the value type of the parameter is set to Predefined .	No
priceParmVal	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional) Note: This data is required when you want to define valid predefined parameter values for the price item or price item bundle.
divPriceitem	Used to specify a list of divisions which you want to associate with the price item or price item bundle.	Yes

Tag Name	Tag Description	Mandatory (Yes or No)
division	Used to indicate the division to which you want to associate the price item or price item bundle.	Yes
priceItemSqi	Used to specify a list of division-specific SQIs for the price item or price item bundle.	No
serviceQuantityIdentifier	Used to indicate the SQI to which you want to associate the price item or price item bundle in the division.	Yes (Conditional) Note: This data is required when you want to define a division-specific SQI for the price item or price item bundle.
sqlFragment	At present, the data from this tag is not stored in the system. If you want to use this tag, you need to implement a custom logic to meet the requirements.	Not applicable

However, you must use the BNDL relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the DENB and NUMB relationship type while adding a price item or price item bundle in the ratio price item bundles.</p>	<p data-bbox="1170 816 1370 844">Yes (Conditional)</p> <p data-bbox="1170 875 1464 968">Note: This data is required when you want to do either of the following:</p> <ul data-bbox="1203 989 1464 1220" style="list-style-type: none"> <li data-bbox="1203 989 1464 1108">• Associate a price item or price item bundle with the parent price item <li data-bbox="1203 1129 1464 1220">• Add a price item or price item bundle to the price item bundle

Tag Name	Tag Description	Mandatory (Yes or No)
priceItemParmGroup	Used to specify the parameter and its value based on which you want to determine pricing for the price item or price item bundle.	No
priceParmCode	Used to specify the parameter using which you want to determine the pricing for the price item or price item bundle.	Yes (Conditional) Note: This data is required when you want to determine the pricing for the price item or price item bundle using a parameter.
	Note: You must specify a parameter which is associated with the price item or price item bundle and whose parameter usage is set to Pricing . You cannot specify any special character except underscore (_) in the parameter name.	
priceParmVal	Used to specify the parameter value using which you want to determine the pricing for the price item or price item bundle.	Yes (Conditional) Note: This data is required when you want to determine the pricing for the price item or price item bundle using a parameter.
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	
priceItemRelCharacteristic	Used to specify a list of relationship-specific characteristics for the price item or price item bundle.	No

Note: When you want to edit the existing price items using the **File Upload Interface** utility, you need to provide all details of the price item and not just the details which you want to update. This is because the system supports replace operation and not the edit operation while editing the price items.

Sample XML Format for Uploading Price Items

Using the below example, you can create the following price items:

Price Item	Related Price Item	Relationship Type
Overdraft Returned	-	-
Additional Negative Balance Fees	-	-
Overdraft Assistance	Overdraft Returned	Service
	Additional Negative Balance Fees	Service Group

Note: The system will create the above price items only when the required contract types, parameters, predefined parameter values, divisions, SQIs, characteristic types, predefined characteristic values are defined in the application.

CSV File Format for Uploading Price Items

Before uploading a price item file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes

Data	Description	Mandatory (Yes or No)
Price Item Usage	<p>Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are:</p> <ul style="list-style-type: none"> • PRIC - Enables you to use the price item or price item bundle for only pricing. • PRBL - Enables you to use the price item or price item bundle for pricing and billing. 	Yes
Price Item Type	<p>Used to indicate the type of the price item or price item bundle. If the price item or price item bundle is used for only pricing, the valid values are:</p> <ul style="list-style-type: none"> • FEES • RATE <p>However, if the price item or price item bundle is used for the pricing and billing, the valid value is:</p> <ul style="list-style-type: none"> • FEES 	Yes
Status	<p>Used to indicate the status of the price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • ACTV - Enables you to set the price item or price item bundle to Active. • INAC - Enables you to set the price item or price item bundle to Inactive. 	Yes
Bundle	<p>Used to indicate whether you want to define a price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes

Data	Description	Mandatory (Yes or No)
Bundle Type	<p>Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are:</p> <ul style="list-style-type: none"> • PHAN - Enables you to create a phantom price item bundle. • REGU - Enables you to create a regular price item bundle. • RTIO - Enables you to create a ratio price item bundle. <p>However, if the price item bundle is available for only pricing and the price item type is set to FEES, the valid value is:</p> <ul style="list-style-type: none"> • REGU - Enables you to create a regular price item bundle. <p>Note: You cannot define a price item bundle when it is available for only pricing and when the price item type is set to RATE.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are creating a price item bundle.</p>
Global Price List	<p>Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle.	<p>Yes (Conditional)</p> <p>Note: This data is required when the price item or price item bundle is used for pricing and billing.</p>
Price Item Parameter Information		
Effective Start Date	Used to specify the date from when the parameter is effective for the price item or price item bundle.	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p>
Effective End Date	Used to specify the date till when the parameter is effective for the price item or price item bundle.	No

Data	Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the parameter that you want to associate with the price item or price item bundle.</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>You must specify a parameter which is already defined in the system.</p> <p>The system allows you to specify only those parameters where the parameter usage is set to Price Item.</p> </div>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p> </div>
Business Label	<p>Used to specify a business label for the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.</p>	No
Display Order	<p>Used to indicate the order in which the parameter and its value should be displayed in the price item parameter information string across the application.</p>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p> </div>
Parameter Usage	<p>Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • AGG - Indicates that you want to use the parameter for aggregating transactions. • PRI - Indicates that you want to use the parameter for aggregating transactions and defining the price item pricing. 	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to associate a parameter with the price item or price item bundle.</p> </div>
Mandatory	<p>Used to indicate whether the parameter is mandatory while defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	No
Priority	<p>Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.</p>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to associate an optional parameter with the price item or price item bundle.</p> </div>
Predefined Parameter Values for Price Item		

Data	Description	Mandatory (Yes or No)
Predefined Parameter Value for Price Item	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional) Note: This data is required when you want to define valid predefined parameter values for the price item or price item bundle.
Division Information		
Division	Used to indicate the division to which you want to associate the price item or price item bundle.	Yes
Division-Specific SQIs for Price Item		
SQI	Used to indicate the SQI to which you want to associate the price item or price item bundle in the division.	Yes (Conditional) Note: This data is required when you want to define a division-specific SQI for the price item or price item bundle.
Division-Specific Characteristics for Price Item		
Characteristic Type	Used to specify the characteristic type. Note: You must specify a characteristic type which is already defined in the system. You must specify a characteristic type where the characteristic entity is set to Division/Price Item Combination .	Yes (Conditional) Note: This data is required when you are defining a division-specific characteristic for the price item or price item bundle.
Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division.	Yes (Conditional) Note: This data is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required when you are defining a division-specific characteristic for the price item or price item bundle.
Price Item Characteristics		

Data	Description	Mandatory (Yes or No)
Characteristic Type	<p>Used to specify the characteristic type.</p> <div data-bbox="483 275 1049 499" style="border: 1px solid black; padding: 5px;"> <p>Note:</p> <p>You must specify a characteristic type which is already defined in the system.</p> <p>You must specify a characteristic type where the characteristic entity is set to Price Item.</p> </div>	<p>Yes (Conditional)</p> <div data-bbox="1092 275 1438 422" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you are defining a characteristic for the price item or price item bundle.</p> </div>
Effective Date	<p>Used to specify the date from when the characteristic is effective for the price item or price item bundle.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 583 1438 730" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you are defining a characteristic for the price item or price item bundle.</p> </div>
Characteristic Value	<p>Used to specify the value for the characteristic type.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 810 1438 957" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you are defining a characteristic for the price item or price item bundle.</p> </div>
Price Item Relationship		
Price Item	<p>Used to indicate the price item or price item bundle that you want to associate with the parent price item or add to the price item bundle.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 1094 1438 1451" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to do either of the following:</p> <ul style="list-style-type: none"> • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle </div>
Effective Start Date	<p>Used to specify the date from when you want to associate the price item or price item bundle with the parent price item or add the price item or price item bundle to the price item bundle.</p>	<p>Yes (Conditional)</p> <div data-bbox="1092 1530 1438 1887" style="border: 1px solid black; padding: 5px;"> <p>Note: This data is required when you want to do either of the following:</p> <ul style="list-style-type: none"> • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle </div>

Data	Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when you want to associate the price item or price item bundle with the parent price item or add the price item or price item bundle to the price item bundle.	No
Relationship Type	<p>Used to indicate how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • BNDL - Enables you to set the relationship type to Bundle. • CG - Enables you to set the relationship type to Custom. • DENB - Enables you to set the relationship type to Denominator. • NUMB - Enables you to set the relationship type to Numerator. • OTHR - Enables you to set the relationship type to Other. • PROD - Enables you to set the relationship type to Price Item. • SVC - Enables you to set the relationship type to Service. • SVCG - Enables you to set the relationship type to Service Group. <p>Note: You must use the OTHR, CG, PROD, SVC, or SVCG relationship type while associating a price item or price item bundle to the parent price item. However, you must use the BNDL relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the DENB and NUMB relationship type while adding a price item or price item bundle in the ratio price item bundles.</p>	<p>Yes (Conditional)</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note: This data is required when you want to do either of the following:</p> <ul style="list-style-type: none"> • Associate a price item or price item bundle with the parent price item • Add a price item or price item bundle to the price item bundle </div>

Data	Description	Mandatory (Yes or No)
Price Item Parameter=Parameter Value	<p>Used to specify the parameter and its value using which you want to determine the pricing for the child price item or price item bundle.</p> <p>Note: You must specify a parameter which is associated with the price item or price item bundle and whose parameter usage is set to Pricing.</p> <p>You cannot specify any special character except underscore (_) in the parameter name.</p> <p>You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>You cannot specify more than 50 parameter and parameter value combinations while uploading the price item file in the CSV format.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you want to determine the pricing for the child price item or price item bundle using a parameter.</p>
Relationship-Specific Characteristics for Price Item		
Characteristic Type	<p>Used to specify the characteristic type.</p> <p>Note: You must specify a characteristic type which is already defined in the system.</p> <p>You must specify a characteristic type where the characteristic entity is set to Price Item Relationship.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are defining a relationship-specific characteristic for the price item or price item bundle.</p>
Effective Date	<p>Used to specify the date from when the relationship-specific characteristic is effective for the price item or price item bundle.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are defining a relationship-specific characteristic for the price item or price item bundle.</p>
Characteristic Value	<p>Used to specify the value for the characteristic type.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when you are defining a relationship-specific characteristic for the price item or price item bundle.</p>

Sample CSV Format for Uploading Price Items

Using the below example, you can create the following price items:

Price Item	Related Price Item	Relationship Type
Overdraft Returned	-	-
Additional Negative Balance Fees	-	-
Overdraft Assistance	Overdraft Returned	Service
	Additional Negative Balance Fees	Service Group

Note: The system will create the above price items only when the required contract types, parameters, predefined parameter values, divisions, SQIs, characteristic types, predefined characteristic values are defined in the application.

In addition, the file request type which is used for uploading the price item file in the CSV format must contain the following field transformation details:

Sequence	Field Name	Map Field XPath

Uploading a Parameter File in the XML Format

To upload a parameter file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading parameters in the XML format
2. Upload the parameter file
3. Create the parameters in the system

Related Topics

For more information on...	See...
How to create the parameters in the system	Creating Parameters on page 2123

Defining a File Request Type for Uploading Parameters in the XML Format

Procedure

To define a file request type for uploading parameters in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Object** option from the **Service Type** list.
9. Enter the **C1_PRICE_PARM** business object or custom parameter business object in the **Service Name** field.
10. Attach an algorithm created using the **C1-PRICEUPL** algorithm type to the **Pre-Processing Algorithm** field corresponding to the parameter business object.

Note: For more information about the **C1-PRICEUPL** algorithm, refer to [C1-PRICEUPL](#).

11. Select the **Add** option from the **Operation** list.

Note: At present, you cannot edit the existing parameters using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing parameters from the user interface.

12. Click **Save**.

The file request type is defined for uploading parameters in the XML format.

Uploading a Parameter File

You can upload a parameter file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating Parameters

You can create the parameters in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading a Parameter File in the CSV Format

To upload a parameter file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading parameters in the CSV format
2. Upload the parameter file
3. Create the parameters in the system

How to create the parameters in the system	Creating Parameters on page 2125

Defining a File Request Type for Uploading Parameters in the CSV Format

Procedure

To define a file request type for uploading parameters in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.
3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Select the **Data Transformation Required** option.
The **File Format** field is enabled.
6. Select the **Comma Separated Values** option from the **File Format** list.
7. Enter `csv` in the **File Extension** field.
8. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
9. Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
10. In the **Services** section, enter the required sequence number.
11. Select the **Business Object** option from the **Service Type** list.
12. Enter the **C1_PRICE_PARM** business object or custom parameter business object in the **Service Name** field.
13. Attach an algorithm created using the **C1-PRICEUPL** algorithm type to the **Pre-Processing Algorithm** field corresponding to the parameter business object.

Note: For more information about the **C1-PRICEUPL** algorithm, refer to [C1-PRICEUPL](#).

14. Select the **Add** option from the **Operation** list.

Note: At present, you cannot edit the existing parameters using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing parameters from the user interface.

15. If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
16. Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.

17. In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	PRICEPARMCODE	C1_PRICE_PARM/priceParmCode
2	DESCRIPTION	C1_PRICE_PARM/description

18. Click **Save**.

The file request type is defined for uploading parameters in the CSV format.

Uploading a Parameter File

You can upload a parameter file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating Parameters

You can create the parameters in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the parameter files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Parameters

Before uploading a parameter file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1_PRICE_PARM	Used to specify the details of the parameter whose record you want to create or update in the system.	Yes
pricingEligibilitySw	Used to indicate whether the parameter can be used while defining the pricing eligibility criteria. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: You must ensure that this tag contains N when the sourceEntityFlg tag contains TRN .	

Tag Name	Tag Description	Mandatory (Yes or No)														
priceItemSw	<p>Used to indicate whether the parameter can be associated with a price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: You must ensure that this tag contains N when a parameter is defined using the following source entity and source type combinations:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>ACCT</td> <td>BAL</td> </tr> <tr> <td>ACCT</td> <td>CNT</td> </tr> <tr> <td>PERS</td> <td>BAL</td> </tr> <tr> <td>PERS</td> <td>CNT</td> </tr> <tr> <td>ALGO</td> <td>—</td> </tr> <tr> <td>SQI</td> <td>—</td> </tr> </tbody> </table>	Source Entity	Source Type	ACCT	BAL	ACCT	CNT	PERS	BAL	PERS	CNT	ALGO	—	SQI	—	No
Source Entity	Source Type															
ACCT	BAL															
ACCT	CNT															
PERS	BAL															
PERS	CNT															
ALGO	—															
SQI	—															
priceListEligibilitySw	<p>Used to indicate whether the parameter can be used while defining the price list eligibility criteria. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: You must ensure that this tag contains N when the sourceEntityFlg tag contains TRN.</p>	No														
productEligibilitySw	<p>Used to indicate whether the parameter can be used while defining the product eligibility criteria. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: You must ensure that this tag contains N when the sourceEntityFlg tag contains ALGO, SQI, or TRN.</p>	No														
priceParmCode	<p>Used to specify the parameter name.</p> <p>Note: You cannot specify any special character except underscore (_) in the parameter name.</p>	Yes														
description	Used to specify the description for the parameter.	Yes														

Tag Name	Tag Description	Mandatory (Yes or No)
priceParmTypeFlag	<p>Used to indicate the type of value that you want to store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • ADV - Enables you to store an adhoc value in the parameter. • DFV - Enables you to store a predefined value in the parameter. • FKV - Enables you to store a reference value in the parameter. 	Yes
sourceEntityFlg	<p>Used to indicate the entity from where the parameter value should be derived. The valid values are:</p> <ul style="list-style-type: none"> • ACCT - Enables you to derive the parameter value from the account. • ALGO - Enables you to derive the parameter value from an algorithm. • PERS - Enables you to derive the parameter value from the person. • PRD - Enables you to derive the parameter value from the product. • SQI - Enables you to derive the parameter value from a service quantity identifier. • TRN - Enables you to derive the parameter value from a transaction. 	Yes

Tag Name	Tag Description	Mandatory (Yes or No)																																				
sourceTypeCode	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.</p> <p>Note:</p> <p>You must ensure that this tag contains no value when the sourceEntityFlg tag contains TRN.</p> <p>You must ensure that this tag contains the following information depending on the source entity and source type combination:</p> <table border="1" data-bbox="570 575 1154 1976"> <thead> <tr> <th data-bbox="570 575 719 653">Source Entity</th> <th data-bbox="719 575 885 653">Source Type</th> <th data-bbox="885 575 1154 653">Source Type Code</th> </tr> </thead> <tbody> <tr> <td data-bbox="570 653 719 800">ACCT</td> <td data-bbox="719 653 885 800">CHAR</td> <td data-bbox="885 653 1154 800">A characteristic type where the characteristic entity is set to Account.</td> </tr> <tr> <td data-bbox="570 800 719 884">ACCT</td> <td data-bbox="719 800 885 884">FLD</td> <td data-bbox="885 800 1154 884">A field from the CI_ACCT table.</td> </tr> <tr> <td data-bbox="570 884 719 999">ACCT</td> <td data-bbox="719 884 885 999">BAL</td> <td data-bbox="885 884 1154 999">A value from the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="570 999 719 1115">ACCT</td> <td data-bbox="719 999 885 1115">CNT</td> <td data-bbox="885 999 1154 1115">A value from the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="570 1115 719 1262">PERS</td> <td data-bbox="719 1115 885 1262">CHAR</td> <td data-bbox="885 1115 1154 1262">A characteristic type where the characteristic entity is set to Person.</td> </tr> <tr> <td data-bbox="570 1262 719 1346">PERS</td> <td data-bbox="719 1262 885 1346">FLD</td> <td data-bbox="885 1262 1154 1346">A field from the CI_PER table.</td> </tr> <tr> <td data-bbox="570 1346 719 1461">PERS</td> <td data-bbox="719 1346 885 1461">BAL</td> <td data-bbox="885 1346 1154 1461">A value from the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="570 1461 719 1577">PERS</td> <td data-bbox="719 1461 885 1577">CNT</td> <td data-bbox="885 1461 1154 1577">A value from the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="570 1577 719 1724">PRD</td> <td data-bbox="719 1577 885 1724">CHAR</td> <td data-bbox="885 1577 1154 1724">A characteristic type where the characteristic entity is set to Product.</td> </tr> <tr> <td data-bbox="570 1724 719 1839">PRD</td> <td data-bbox="719 1724 885 1839">FLD</td> <td data-bbox="885 1724 1154 1839">A field from the C1_PRODUCT table.</td> </tr> <tr> <td data-bbox="570 1839 719 1976">SQI</td> <td data-bbox="719 1839 885 1976">—</td> <td data-bbox="885 1839 1154 1976">A service quantity identifier which is already defined in the system.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	ACCT	CHAR	A characteristic type where the characteristic entity is set to Account .	ACCT	FLD	A field from the CI_ACCT table.	ACCT	BAL	A value from the BAL_FLG lookup field.	ACCT	CNT	A value from the CNT_FLG lookup field.	PERS	CHAR	A characteristic type where the characteristic entity is set to Person .	PERS	FLD	A field from the CI_PER table.	PERS	BAL	A value from the BAL_FLG lookup field.	PERS	CNT	A value from the CNT_FLG lookup field.	PRD	CHAR	A characteristic type where the characteristic entity is set to Product .	PRD	FLD	A field from the C1_PRODUCT table.	SQI	—	A service quantity identifier which is already defined in the system.	Yes
Source Entity	Source Type	Source Type Code																																				
ACCT	CHAR	A characteristic type where the characteristic entity is set to Account .																																				
ACCT	FLD	A field from the CI_ACCT table.																																				
ACCT	BAL	A value from the BAL_FLG lookup field.																																				
ACCT	CNT	A value from the CNT_FLG lookup field.																																				
PERS	CHAR	A characteristic type where the characteristic entity is set to Person .																																				
PERS	FLD	A field from the CI_PER table.																																				
PERS	BAL	A value from the BAL_FLG lookup field.																																				
PERS	CNT	A value from the CNT_FLG lookup field.																																				
PRD	CHAR	A characteristic type where the characteristic entity is set to Product .																																				
PRD	FLD	A field from the C1_PRODUCT table.																																				
SQI	—	A service quantity identifier which is already defined in the system.																																				

Tag Name	Tag Description	Mandatory (Yes or No)
sourceTypeFlg	<p>Used to indicate the type of source from where the parameter value should be derived. The valid values are:</p> <ul style="list-style-type: none"> • CHAR - Enables you to derive the parameter value from a characteristic. • FLD - Enables you to derive the parameter value from a field. • BAL - Enables you to derive the parameter value from a usage amount. • CNT - Enables you to derive the parameter value from a usage counter. <p>Note: You must ensure that this tag contains no value when the sourceEntityFlg tag contains ALGO, SQI, or TRN. You must ensure that this tag does not contain BAL or CNT when the sourceEntityFlg tag contains PRD.</p>	Yes
validationAlgoCd	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note: You must ensure that this tag contains value only when the priceParmTypeFlag tag contains ADV.</p>	No
referredTable	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required only when the priceParmTypeFlag tag contains FKV.</p>
referredField	<p>Used to indicate the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required only when the priceParmTypeFlag tag contains FKV.</p>
priceParmValue	<p>Used to specify a list of predefined values for the parameter.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required only when the priceParmTypeFlag tag contains DFV.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
priceParmVal	Used to specify the parameter value.	Yes (Conditional)
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	Note: This data is required only when the priceParmTypeFlag tag contains DFV .
descr	Used to specify the description for the parameter value.	Yes (Conditional)
		Note: This data is required only when the priceParmTypeFlag tag contains DFV .

Sample XML Format for Uploading Parameters

Using the below example, you can create the following parameters:

- Country
- Currency

Note: The system will create the above parameters only when the required fields, characteristic types, usage amount, usage counter, validation algorithm, referenced tables, and referenced fields are defined in the application.

CSV File Format for Uploading Parameters

Before uploading a parameter file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name. <div style="border: 1px solid black; padding: 5px;"> Note: You cannot specify any special character except underscore (_) in the parameter name. </div>	Yes
Description	Used to specify the description for the parameter.	Yes
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> • ADV - Enables you to store an adhoc value in the parameter. • DFV - Enables you to store a predefined value in the parameter. • FKV - Enables you to store a reference value in the parameter. 	Yes
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> • ACCT - Enables you to derive the parameter value from the account. • ALGO - Enables you to derive the parameter value from an algorithm. • PERS - Enables you to derive the parameter value from the person. • PRD - Enables you to derive the parameter value from the product. • SQI - Enables you to derive the parameter value from a service quantity identifier. • TRN - Enables you to derive the parameter value from a transaction. 	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> • CHAR - Enables you to derive the parameter value from a characteristic. • FLD - Enables you to derive the parameter value from a field. • BAL - Enables you to derive the parameter value from a usage amount. • CNT - Enables you to derive the parameter value from a usage counter. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> Note: You must not specify the source type when the source entity is set to ALGO, SQI, or TRN. You must not specify the source type as BAL or CNT when the source entity is set to PRD. </div>	Yes

Data	Description	Mandatory (Yes or No)																																				
Source Type Code	<p>Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.</p> <p>Note:</p> <p>You must not specify the source type code when the source entity is set to TRN.</p> <p>You must specify the source type code depending on the following source entity and source type combination:</p> <table border="1" data-bbox="435 590 1154 1738"> <thead> <tr> <th data-bbox="443 596 618 674">Source Entity</th> <th data-bbox="618 596 821 674">Source Type</th> <th data-bbox="821 596 1146 674">Source Type Code</th> </tr> </thead> <tbody> <tr> <td data-bbox="443 674 618 789">ACCT</td> <td data-bbox="618 674 821 789">CHAR</td> <td data-bbox="821 674 1146 789">A characteristic type where the characteristic entity is set to Account.</td> </tr> <tr> <td data-bbox="443 789 618 867">ACCT</td> <td data-bbox="618 789 821 867">FLD</td> <td data-bbox="821 789 1146 867">A field from the CI_ACCT table.</td> </tr> <tr> <td data-bbox="443 867 618 945">ACCT</td> <td data-bbox="618 867 821 945">BAL</td> <td data-bbox="821 867 1146 945">A value from the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="443 945 618 1022">ACCT</td> <td data-bbox="618 945 821 1022">CNT</td> <td data-bbox="821 945 1146 1022">A value from the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="443 1022 618 1138">PERS</td> <td data-bbox="618 1022 821 1138">CHAR</td> <td data-bbox="821 1022 1146 1138">A characteristic type where the characteristic entity is set to Person.</td> </tr> <tr> <td data-bbox="443 1138 618 1215">PERS</td> <td data-bbox="618 1138 821 1215">FLD</td> <td data-bbox="821 1138 1146 1215">A field from the CI_PER table.</td> </tr> <tr> <td data-bbox="443 1215 618 1293">PERS</td> <td data-bbox="618 1215 821 1293">BAL</td> <td data-bbox="821 1215 1146 1293">A value from the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="443 1293 618 1371">PERS</td> <td data-bbox="618 1293 821 1371">CNT</td> <td data-bbox="821 1293 1146 1371">A value from the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="443 1371 618 1486">PRD</td> <td data-bbox="618 1371 821 1486">CHAR</td> <td data-bbox="821 1371 1146 1486">A characteristic type where the characteristic entity is set to Product.</td> </tr> <tr> <td data-bbox="443 1486 618 1564">PRD</td> <td data-bbox="618 1486 821 1564">FLD</td> <td data-bbox="821 1486 1146 1564">A field from the C1_PRODUCT table.</td> </tr> <tr> <td data-bbox="443 1564 618 1732">SQI</td> <td data-bbox="618 1564 821 1732">—</td> <td data-bbox="821 1564 1146 1732">A service quantity identifier which is already defined in the system.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	ACCT	CHAR	A characteristic type where the characteristic entity is set to Account .	ACCT	FLD	A field from the CI_ACCT table.	ACCT	BAL	A value from the BAL_FLG lookup field.	ACCT	CNT	A value from the CNT_FLG lookup field.	PERS	CHAR	A characteristic type where the characteristic entity is set to Person .	PERS	FLD	A field from the CI_PER table.	PERS	BAL	A value from the BAL_FLG lookup field.	PERS	CNT	A value from the CNT_FLG lookup field.	PRD	CHAR	A characteristic type where the characteristic entity is set to Product .	PRD	FLD	A field from the C1_PRODUCT table.	SQI	—	A service quantity identifier which is already defined in the system.	Yes
Source Entity	Source Type	Source Type Code																																				
ACCT	CHAR	A characteristic type where the characteristic entity is set to Account .																																				
ACCT	FLD	A field from the CI_ACCT table.																																				
ACCT	BAL	A value from the BAL_FLG lookup field.																																				
ACCT	CNT	A value from the CNT_FLG lookup field.																																				
PERS	CHAR	A characteristic type where the characteristic entity is set to Person .																																				
PERS	FLD	A field from the CI_PER table.																																				
PERS	BAL	A value from the BAL_FLG lookup field.																																				
PERS	CNT	A value from the CNT_FLG lookup field.																																				
PRD	CHAR	A characteristic type where the characteristic entity is set to Product .																																				
PRD	FLD	A field from the C1_PRODUCT table.																																				
SQI	—	A service quantity identifier which is already defined in the system.																																				

Data	Description	Mandatory (Yes or No)
Validation Algorithm	Used to indicate the algorithm using which you want to validate the adhoc parameter value. <div data-bbox="431 338 1159 422" style="border: 1px solid black; padding: 2px;"> Note: You must specify a validation algorithm only when the value type is set to Adhoc. </div>	No
Reference Entity	Used to indicate the table whose primary key (column) you want to set as the reference entity.	Yes (Conditional) <div data-bbox="1203 499 1438 646" style="border: 1px solid black; padding: 2px;"> Note: This data is required only when the value type is set to Reference. </div>
Field Name	Used to indicate the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.	Yes (Conditional) <div data-bbox="1203 722 1438 869" style="border: 1px solid black; padding: 2px;"> Note: This data is required only when the value type is set to Reference. </div>
Predefined Parameter Values		
Parameter Value	Used to specify the parameter value. <div data-bbox="431 1010 1159 1125" style="border: 1px solid black; padding: 2px;"> Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value. </div>	Yes (Conditional) <div data-bbox="1203 1010 1438 1157" style="border: 1px solid black; padding: 2px;"> Note: This data is required only when the value type is set to Predefined. </div>
Description	Used to specify the description for the parameter value.	Yes (Conditional) <div data-bbox="1203 1234 1438 1381" style="border: 1px solid black; padding: 2px;"> Note: This data is required only when the value type is set to Predefined. </div>
Parameter Usage Information		

Data	Description	Mandatory (Yes or No)														
Price Item	<p>Used to indicate whether the parameter can be associated with a price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: You must specify the value as N when a parameter is defined using the following source entity and source type combinations:</p> <table border="1" data-bbox="435 575 1157 957"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>ACCT</td> <td>BAL</td> </tr> <tr> <td>ACCT</td> <td>CNT</td> </tr> <tr> <td>PERS</td> <td>BAL</td> </tr> <tr> <td>PERS</td> <td>CNT</td> </tr> <tr> <td>ALGO</td> <td>—</td> </tr> <tr> <td>SQI</td> <td>—</td> </tr> </tbody> </table>	Source Entity	Source Type	ACCT	BAL	ACCT	CNT	PERS	BAL	PERS	CNT	ALGO	—	SQI	—	No
Source Entity	Source Type															
ACCT	BAL															
ACCT	CNT															
PERS	BAL															
PERS	CNT															
ALGO	—															
SQI	—															
Pricing Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the pricing eligibility criteria. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	No														
Price List Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the price list eligibility criteria. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: You must specify the value as N when the source entity is set to TRN.</p>	No														
Product Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the product eligibility criteria. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: You must specify the value as N when the source entity is set to ALGO, SQI, or TRN.</p>	No

Sample CSV Format for Uploading Parameters

Using the below example, you can create the following parameters:

- Country
- Currency

Note: The system will create the above parameters only when the required fields, characteristic types, usage amount, usage counter, validation algorithm, referenced tables, and referenced fields are defined in the application.

Sequence	Field Name	Map Field XPath
1	Parameter	C1_PRICE_PARM_BO/priceParmCode
2	Description	C1_PRICE_PARM_BO/description
3	Value Type	C1_PRICE_PARM_BO/priceParmTypeFlag
4	Source Entity	C1_PRICE_PARM_BO/sourceEntityFlg
5	Source Type	C1_PRICE_PARM_BO/sourceTypeFlg
6	Source Type Code	C1_PRICE_PARM_BO/sourceTypeCode
7	Validation Algorithm	C1_PRICE_PARM_BO/validationAlgoCd
8	Reference Entity	C1_PRICE_PARM_BO/referredTable
9	Field Name	C1_PRICE_PARM_BO/referredField

Uploading an SQI File in the XML Format

To upload an SQI file in the XML format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading SQIs in the XML format
2. Upload the SQI file
3. Create the SQIs in the system

Related Topics

For more information on...	See...
How to define a file request type for uploading SQIs in the XML format	Defining a File Request Type for Uploading SQIs in the XML Format on page 2143
How to upload an SQI file	Uploading an SQI File on page 2144
How to create the SQIs in the system	Creating SQIs on page 2144

Defining a File Request Type for Uploading SQIs in the XML Format

Procedure

To define a file request type for uploading SQIs in the XML format:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Request Type**.
A sub-menu appears.

3. Click the **Add** option from the **File Request Type** sub-menu.
The **File Request Type** screen appears.
4. Enter the file request type and description in the respective fields.
5. Ensure that the **Extensible Markup Language** option is selected from the **File Format** list.
6. Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
7. In the **Services** section, enter the required sequence number.
8. Select the **Business Service** option from the **Service Type** list.
9. Enter the **C1-SQIUPLOAD** business service or custom SQI business service in the **Service Name** field.
10. Select the **Add** option from the **Operation** list.

Note: At present, you cannot edit the existing SQIs using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing SQIs from the user interface.

11. Click **Save**.

The file request type is defined for uploading SQIs in the XML format.

Uploading an SQI File

You can upload an SQI file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating SQIs

You can create the SQIs in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the XML format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Uploading an SQI File in the CSV Format

To upload an SQI file in the CSV format using the **File Upload Interface** utility, you need to do the following:

1. Define a file request type for uploading SQIs in the CSV format
2. Upload the SQI file
3. Create the SQIs in the system

Related Topics

How to define a file request type for uploading SQIs in the CSV format	Defining a File Request Type for Uploading SQIs in the CSV Format on page 2144
How to upload an SQI file	Uploading an SQI File on page 2146
How to create the SQIs in the system	Creating SQIs on page 2146

Defining a File Request Type for Uploading SQIs in the CSV Format

Procedure

To define a file request type for uploading SQIs in the CSV format:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **File Request Type**.

A sub-menu appears.

- Click the **Add** option from the **File Request Type** sub-menu.

The **File Request Type** screen appears.

- Enter the file request type and description in the respective fields.
- Select the **Data Transformation Required** option.
The **File Format** field is enabled.
- Select the **Comma Separated Values** option from the **File Format** list.
- Enter `csv` in the **File Extension** field.
- Attach an algorithm created using the **C1-FRHVA** algorithm type to the **File Validation Algorithm** field.
- Attach an algorithm created using the **C1-FRTA** algorithm type to the **Data Transformation Algorithm** field.
- In the **Services** section, enter the required sequence number.
- Select the **Business Service** option from the **Service Type** list.
- Enter the **C1-SQIUPLOAD** business service or custom SQI business service in the **Service Name** field.
- Select the **Add** option from the **Operation** list.

Note: At present, you cannot edit the existing SQIs using the **Price Item, Parameter, and SQI Upload** feature. You can only edit the existing SQIs from the user interface.

- If you have included a header in the CSV file, add the appropriate details in the **Header Transformation** section.
- Similarly, if you have included a footer in the CSV file, add the appropriate details in the **Footer Transformation** section.
- In the **Field Transformation** section, specify the following details:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the data field in the CSV record which you want to upload in the system.	Yes
Field Name	Used to indicate the field for which the data is uploaded in the system.	Yes
Map Field XPath	Used to specify the XPath of the field where you want to store the data field from the CSV record.	Yes

For example,

Sequence	Field Name	Map Field XPath
1	DECIMALPOSITIONS	C1-SQIUPLOAD/decimalPositions
2	DESCRIPTION	C1-SQIUPLOAD/description

- Click **Save**.

The file request type is defined for uploading SQIs in the CSV format.

Uploading an SQI File

You can upload an SQI file using the **File Transformation and Upload (C1-FTRAN)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Creating SQIs

You can create the SQIs in the system using the **File Request Processing (C1-FREQP)** batch. While executing this batch, you must specify a file request type which is defined for uploading the SQI files in the CSV format. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

XML File Format for Uploading Service Quantity Identifiers (SQIs)

Before uploading an SQI file through the **File Upload Interface** utility, you need to ensure that the XML file contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)
C1-SQIUPLOAD	Used to specify the details of the SQI whose record you want to create or update in the system.	Yes
serviceQuantityIdentifier	Used to specify the service quantity identifier (SQI).	Yes (Conditional) Note: This data is required when you want to define an SQI.
description	Used to specify the description for the SQI.	Yes (Conditional) Note: This data is required when you want to define an SQI.
decimalPositions	Used to specify the appropriate number of decimal positions for the SQI. Note: If you do not specify the value in this tag, by default, it is set to zero (0). You can specify maximum precision of 18 decimal positions for an SQI.	No

Sample XML Format for Uploading Service Quantity Identifiers (SQIs)	Sample XML Format for Uploading Service Quantity Identifiers (SQIs) on page 2147

Sample XML Format for Uploading Service Quantity Identifiers (SQIs)

Using the below example, you can create the following SQIs:

- ACCTBAL
- AVGDBAL
- OVDLMT

```
<root>
<request>
<payload>
<C1-SQIUPLOAD>
  <serviceQuantityIdentifier>ACCTBAL</serviceQuantityIdentifier>
  <description>Account Balance</description>
  <decimalPositions>18</decimalPositions>
</C1-SQIUPLOAD>
<C1-SQIUPLOAD>
  <serviceQuantityIdentifier>AVGDBAL</serviceQuantityIdentifier>
  <description>Average Daily Balance</description>
  <decimalPositions>18</decimalPositions>
</C1-SQIUPLOAD>
<C1-SQIUPLOAD>
  <serviceQuantityIdentifier>OVDLMT</serviceQuantityIdentifier>
  <description>Overdraft Limit</description>
  <decimalPositions>18</decimalPositions>
</C1-SQIUPLOAD>
</payload>
</request>
</root>
```

CSV File Format for Uploading Service Quantity Identifiers (SQIs)

Before uploading an SQI file through the **File Upload Interface** utility, you need to ensure that the CSV file contains the following data:

Data	Description	Mandatory (Yes or No)
Service Quantity Identifier	Used to specify the service quantity identifier (SQI).	Yes (Conditional) Note: This data is required when you want to define an SQI.
Description	Used to specify the description for the SQI.	Yes (Conditional) Note: This data is required when you want to define an SQI.

Data	Description	Mandatory (Yes or No)
Decimal Positions	Used to specify the appropriate number of decimal positions for the SQI.	No
	<p>Note:</p> <p>If you do not specify the value in this tag, by default, it is set to zero (0).</p> <p>You can specify maximum precision of 18 decimal positions for an SQI.</p>

Sample CSV Format for Uploading SQIs

Using the below example, you can create the following SQIs:

- ACCTBAL
- AVGDBAL
- OVDLMT

Note: The system will create the above SQIs only when the required value types, source entities, source types, source type codes, algorithms, and reference entity values are defined in the application.

Sequence	Field Name	Map Field XPath
1	SQI	C1-SQIUPLOAD/serviceQuantityIdentifier
2	Description	C1-SQIUPLOAD/description
3	Decimal Positions	C1-SQIUPLOAD/decimalPositions
4	SQI	C1-SQIUPLOAD/serviceQuantityIdentifier
5	Description	C1-SQIUPLOAD/description
6	Decimal Positions	C1-SQIUPLOAD/decimalPositions
7	SQI	C1-SQIUPLOAD/serviceQuantityIdentifier
8	Description	C1-SQIUPLOAD/description
9	Decimal Positions	C1-SQIUPLOAD/decimalPositions

Sample CSV

```
ACCTBAL,Account Balance,18,AVGDBAL,Average Daily Balance,18,OVDLMT,Overdraft Limit,18
```

Uploading Price Items, Parameters, and SQIs from the Same File

If the price item, parameter, and SQI information is given in the same file, you need to use a file request type where the following business objects and business service are added in the **Services** section:

- C1_PRICE_PARM
- C1-SQIUPLOAD
- C1_PRICEITEM_BO

Note that the **C1_PRICE_PARM** business object and the **C1-SQIUPLOAD** business service should have higher sequence compared to the **C1_PRICEITEM_BO** business object in such file request type. Otherwise, erroneous results might occur.

Chapter 38

Product and Product Version Upload

Oracle Revenue Management and Billing enables you to create new products and edit the existing products using the **File Upload Interface** utility. You can upload the product file in the XML or CSV format using the **File Upload Interface** utility. You can specify the following in the XML and CSV files along with the basic details of the product:

- Divisions which you want to associate with the product
- Characteristics for the product
- Details of the product to product relationship

The system also enables you to create new product versions and edit the existing product versions using the **File Upload Interface** utility. You can upload product versions along with the product or separately based on the requirements. You can specify the following in the XML and CSV files along with the basic details of the product version:

- Characteristics for the product version
- Eligibility criteria for the product version
- Services and price list which you want to add in the product version
- Standard products and their services which you want to add in the product version (in case of packaged product)

Chapter 39

Price List and Price List Assignment Upload

Oracle Revenue Management and Billing enables you to create new price lists and edit the existing price lists using the **File Upload Interface** utility. You can upload the price list file in the XML or CSV format using the **File Upload Interface** utility.

You can specify the following in the XML and CSV files along with the basic details of the price list:

- Divisions which you want to associate with the price list
- Characteristics for the price list
- Eligibility criteria for the price list
- Hierarchy details for the price list

Note: For more information about the CSV file format, refer to *Oracle Revenue Management and Billing Banking User Guide* or *Oracle Revenue Management and Billing Insurance User Guide*.

The system also enables you to create new price list assignment for an account, person, or price list and edit the existing price list assignment assigned to an account, person, or price list using the **File Upload Interface** utility. You can upload price list assignment along with the price list or separately based on the requirements.

You can specify the following in the XML and CSV files along with the basic details of price item pricing:

- Person, account, or price list to which you want to assign the price item pricing
- Characteristics for the price item pricing
- Price item parameters based on which you want to define the price item pricing
- Basic details for the price components
- Tiering criteria for the price component (if the **Tiering Type** of the corresponding rate component is set to **STEP** or **Threshold**)
- Eligibility criteria for the price component (if the **Tiering Type** of the corresponding rate component is set to **STEP** or **Threshold**)

Appendix

A

Most Commonly Used Tasks

Topics:

- [Changing the Layout](#)

This section lists some of the common tasks that are performed while using various functionality in the application.

Changing the Layout

You can change the layout of the zone by:

- [Removing a Column from the Zone](#) on page 2156
- [Adding a Column to the Zone](#) on page 2156
- [Rearranging Columns in the Zone](#) on page 2156

Adding a Column to the Zone

Once you have removed the columns from the zone, you can add them back to the zone. To add a column to the zone:

1. Click the **Column Configuration**  icon in the upper right corner of the zone.

A panel appears at the bottom of the zone with a list of column names.

Note: The column names with the white background in the panel are currently not displayed in the zone.

2. Drag and drop the column name from the panel to the location where you want to add the column in the zone.
The white background of the column name in the panel changes to the grey background indicating that the column is currently displayed in the zone.
3. If you want to add another column name from the panel to the zone, repeat the second step. Click the **Refresh** button, data will be displayed to the columns added in the zone.

Related Topics

For more information on...	See...
How to change the layout of the zone	Changing the Layout on page 2156

Rearranging Columns in the Zone

You can change the order in which the columns are displayed in the zone. To change the position of a column in the zone:

1. Click the column name whose position you want to change in the zone.
2. Drag and drop the column name between the columns where you want to place the selected column.

The position of the column changes in the zone.

Related Topics

For more information on...	See...
How to change the layout of the zone	Changing the Layout on page 2156

Removing a Column from the Zone

To remove a column from the zone:

Click the **Delete**  icon corresponding to the column name that you want to remove from the zone.

The column is removed from the zone and is currently displayed with white background in the panel.

Note: Alternatively you can remove the column from the zone by clicking the Delete (🗑️) icon corresponding to the column name in the panel.

How to change the layout of the zone	Changing the Layout on page 2156

Appendix

B

Administration

Topics:

- [UI Maps](#)
- [Feature Configurations](#)

This section lists some of the administrative tasks.

UI Maps

This section explains how to create the UI maps for viewing and modifying data of the business objects within the approval workflow group.

Creating Display UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group.

Procedure

To create a Display UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Display UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Display naming convention while automatically generating a Display UI map. Therefore, do not use this naming convention while creating a Display UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create a Display UI map for account, you must use the following schema:

```
<schema>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

8. Click the **Save** link in the **Actions/Navigation** area.
The **Display Only** and **Input Map** buttons are enabled on the dashboard.
9. Click the **Display Only** button.
The HTML code is generated in the **HTML Editor** zone.
10. Click the **Save** link in the **Actions/Navigation** area.
The changes are saved.

Creating Input UI Map for an Approval Workflow Group

The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group.

Procedure

To create an Input UI map manually:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **U** and then click **UI Map**.
A sub-menu appears.
3. Click the **Search** option from the **UI Map** sub-menu.
The **UI Map** screen appears.
4. In the **Main** tab, enter the name and description of the Input UI map.

Note: The system uses the CM_<Approval Workflow Group Code>_AppTxn_Input naming convention while automatically generating an Input UI map. Therefore, do not use this naming convention while creating an Input UI map manually.

5. Select **Complete HTML Document** from the **UI Map Type** list.
6. Click the **Schema** tab.
The **Schema** tab appears.
7. Add the following schema in the **Scheme Editor** zone:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <<Business Object Name> type="group">
    <includeBO name="<Business Object Name>" />
  </<Business Object Name>>
</schema>
```

In the above schema, you must replace <Business Object Name> with the name of the business object. For example, if you want to create an Input UI map for account, you must use the following schema:

```
<schema>
  <approvalTransactionId/>
  <action/>
  <account type="group">
    <includeBO name="Account" />
  </account>
</schema>
```

The <approvalTransactionId/> tag is used in the schema to retrieve the approval transaction ID of the respective business object. The <action/> tag is used in the schema to retrieve the action performed by the submitter.

- Click the **Save** link in the **Actions/Navigation** area.

The **Display Only** and **Input Map** buttons are enabled on the dashboard.

- Click the **Input Map** button.

The HTML code is generated in the **HTML Editor** zone.

- Add the following tag in the head tag:

```
<script language="javascript" type="text/javascript" src="code/
approvalWorkflow.js"></script>
```

- Add the text highlighted in bold within the tag as shown below:

```
<td>
<input onClick="performAction('<Approval Workflow Group Code>');"
oraMdLabel="SAVE_BTN_LBL" class="oraButton" type="button">
<input onClick="oraSubmitMap('CANCEL', false);" oraMdLabel="CANCEL_LBL"
class="oraButton" type="button">
</td>
```

In the above HTML code, you must replace <Approval Workflow Group Code> with the code of the approval workflow group for which you are creating a UI map.

- Click the **Save** link in the **Actions/Navigation** area.

The changes are saved.

Feature Configurations

This section explains how to set various feature configurations which are required for implementing various features in the Banking module.

Setting the C1_ACCTINFO Feature Configuration

Prerequisites

To set the **C1_ACCTINFO** feature configuration, you should have:

- Account Type characteristic type defined in the application (where the characteristic entity is set to Account)
- Invoice Group Account characteristic type defined in the application (where the characteristic entity is set to Account)

Procedure

To set the **C1_ACCTINFO** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_ACCTINFO** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Account Type	Used to specify the characteristic type. This characteristic type is used to define the type of account in the Account screen.	Yes
	Note: By default, the C1_F_ATY characteristic type is specified. If you want to use account types other than the ones defined in the C1_F_ATY characteristic type, you need to create a new predefined characteristic type and add the required account types as its characteristic values. Then, specify the newly created characteristic type as the value for this option type.	
Invoice Group Account	Used to specify the characteristic type. This characteristic type is used to indicate whether the account is a master or member account in the Account screen.	Yes
	Note: By default, the C1_F_IGA characteristic type is specified. If you want to use any other characteristic type other than C1_F_IGA , you need to create a new predefined characteristic type and add two characteristic values — Y and N. Then, specify the newly created characteristic type as the value for this option type.	

- Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Related Topics

For more information on...	See...
Invoicing Group	Invoicing Group on page 93

Setting the C1_AXENTITY Feature Configuration

Procedure

To set the **C1_AXENTITY** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1_AXENTITY** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Approval Transaction Compare New or Missing Entry Color	Used to indicate the color in which the new additions must be highlighted. This helps in comparing the existing and new data while approving, rejecting, or cancelling approval workflow requests. You must specify hexadecimal value in this option type.	Yes
Approval Transaction Compare Value Changed Color	Used to indicate the color in which the existing data modifications must be highlighted. This helps in comparing the existing and new data while approving, rejecting, or cancelling approval workflow requests. You must specify hexadecimal value in this option type.	Yes
Approval Transaction Entity Access Algorithms	Used to specify the algorithm which controls access to the existing and new maintenance objects based on the access group and division. By default, the C1-APPTXN algorithm is specified. If you create new maintenance objects and want the access control for these new maintenance objects to be based on the access group and division, you have to create a custom algorithm and then attach it to this option type. In such case, you would define this option type twice — one with the default algorithm (that is, C1-APPTXN) and another with the custom algorithm.	Yes
Approval Transaction Fields to be Disabled in Input UI Maps	Used to indicate the fields that you want to disable whenever the input UI maps are regenerated.	Yes
Approval Transaction Resolve To Do Type	Used to indicate the type of To Do that must be created when an approver at any level in the hierarchy rejects a request.	Yes
Display UI XSL	Used to indicate the XSL file that you want to use while regenerating the Display UI maps.	Yes
Input UI XSL	Used to indicate the XSL file that you want to use while regenerating the Input UI maps.	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_DIVFUNCT Feature Configuration

Procedure

To set the **C1_DIVFUNCT** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
- Enter **C1_DIVFUNCT** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Enforce division-specific validations	Used to indicate whether the division-specific validations must be triggered on the Person , Account and Contract screens. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_EXCHRATE Feature Configuration

Procedure

To set the **C1_EXCHRATE** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
- Enter **C1_EXCHRATE** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
End Date Required for Division Override	Used to indicate whether the end date is mandatory for a division-specific exchange rate. The valid values are: <ul style="list-style-type: none"> Y N By default, the value of this option type is set to N .	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Related Topics

How to edit an exchange rate	Editing an Exchange Rate on page 652

Setting the C1_EXP_OVRD Feature Configuration

Procedure

To set the **C1_EXP_OVRD** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_EXP_OVRD** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Expire Override Switch	Used to indicate whether you want to automatically expire an agreed pricing when the agreed pricing of a person or an account without end date is overridden. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_FINTRANOP Feature Configuration

Procedure

To set the **C1_FINTRANOP** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A list appears.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_FINTRANOP** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Bill Segment Regeneration on Freeze	<p>Used to indicate whether you want to regenerate the bill segments before freezing them. The valid value is:</p> <ul style="list-style-type: none"> • Y <p>If you do not want to regenerate the bill segments before freezing them, you must leave this option type blank.</p> <p>Note: If the Freeze and Complete check box is selected for the bill cycle and the Bill Segment Regeneration on Freeze option type is set to Y, then the bill segments are regenerated and the status of the bill segments is set to Frozen. However, if the Freeze and Complete check box is not selected for the bill cycle, then the bill segments are always regenerated irrespective of whether the Bill Segment Regeneration on Freeze option type is set to Y or not.</p>	No
Billable Charges Date	<p>Used to indicate whether you want to consider the billable charges whose start or end date is earlier than or equal to the cut-off date. The valid values are:</p> <ul style="list-style-type: none"> • S — Used when you want to consider the billable charges whose start date is earlier than or equal to the cut-off date. • E — Used when you want to consider the billable charges whose end date is earlier than or equal to the cut-off date. <p>If you do not set the value of this option type, by default, the system considers the billable charges whose start date is earlier than or equal to the cut-off date.</p>	No

6. Enter the values for the required option types in the **Feature Configuration** screen.

7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_FM Feature Configuration

Procedure

To set the **C1_FM** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_FM** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
First Batch in Transaction Aggregation Cycle	Used to specify the first mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	Note: At present, the system does not support any value other than C1-TXNIP for this option type.	
Last Batch in Transaction Aggregation Cycle	Used to specify the last mandatory batch that you want to be executed in the transaction aggregation cycle.	Yes
	Note: At present, the system does not support any value other than C1-TXNCU for this option type.	
Disaggregation - Price Assignment	Used to indicate whether the disaggregation request should be automatically created for a person or account when a price item is assigned to the person or account or the existing price item pricing assigned to the person or account is modified. The valid values are: <ul style="list-style-type: none"> • true • false 	No
	Note: You can use this feature only when an algorithm which is created using the TXNDISAGGPRA algorithm type is attached to the Post-Processing system event of the C1_PRASGN_BO business object.	

Option Type	Description	Mandatory (Yes or No)
Allow Duplicate Summary ID	<p>Used to indicate whether the transaction legs can have duplicate summary ID while creating an aggregated billable charge using the Service Quantity Calculation (C1-TXNSQ) batch. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	No
	<p>Note:</p> <p>If you set this option type to false, the system does not create the aggregated billable charge when one or more transaction legs have the same summary ID.</p> <p>If you do not specify the value for this option type, by default, the value is set to false.</p>	

Option Type	Description	Mandatory (Yes or No)
Parallel Query Degree	<p>Used to specify the degree of parallelism that you want to use while creating chunks (i.e. work units) in various Transaction Feed Management (TFM) batches. The valid values are:</p> <ul style="list-style-type: none"> • 1 • 2 • 3 • 4 • 5 • 6 • 7 <p>Note:</p> <p>With the parallel query feature, multiple threads on the database can work together simultaneously to process a single SQL statement which is used to create chunks. This helps to improve the batch performance.</p> <p>The system calculates the number of threads on the database that can be used to execute the SQL statement by setting 2 to the power of the specified parallel query degree. For example, if you set the parallel query degree to 4, the system uses 16 (i.e. 2⁴) threads on the database to create work units.</p> <p>You must set the parallel query degree depending on the infrastructure available on the site. If you do not specify the value for this option type, by default, the parallel query degree is set to 2.</p>	No
Price Item Determination Batch Description	Used to specify the description for the batch which is used for validating the transaction and deriving the price item in the transaction aggregation cycle. For example, Validate Transaction and Derive Price Item . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes

Option Type	Description	Mandatory (Yes or No)
Remove Duplicates from Accumulated Rule Output	<p>Used to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p>	No
Rule Output Accumulation	<p>Used to indicate whether the system should accumulate the output parameters of all rules where the criteria returns Rule Is True irrespective of whether the rule true action is set to Next Dependent, Next Rule by Priority, or Success and then create transaction legs using the accumulated output parameters. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you do not specify the value for this option type, by default, the value is set to false.</p>	No
Show Default Values in Price Item Pricing	<p>Used to indicate whether the default values must appear in the Ignore Transaction, Aggregate Transaction, and Aggregation Schedule fields while defining the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Y • N 	Yes
Use Materialized Views	<p>Used to indicate whether the price item pricing information must be cached in the CI_PRC_AGRD, CI_PRC_PL, and CI_PRC_INH_PL tables. The valid values are:</p> <ul style="list-style-type: none"> • true • false 	Yes
Maximum Price Item Parameters Cache Size	<p>Used to indicate the maximum number of price items whose parameter information can be cached in the memory.</p>	Yes
Maximum Price Item Parameter Groups Cache Size	<p>Used to indicate the maximum number of price item parameter groups whose information can be cached in the memory.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
SQ Recalculation Required	<p>Used to indicate whether the SQIs in an aggregated billable charge must be recalculated while executing the C1-TXNCU batch. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify the value for this option type or if you set the value to N, the system will not recalculate the SQIs in an aggregated billable charge.</p>	No
Transaction Detail Account Validation	<p>Used to indicate whether the account must be validated during the transaction validation process. The valid values are:</p> <ul style="list-style-type: none"> • Y • N <p>Note:</p> <p>If you set this option type to N, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.</p> <p>If you do not specify the value for this option type, the system will validate the account during the transaction validation process.</p>	No
Populate Summary Table Batch Description	<p>Used to specify the description for the batch which is used for adding a summary record in the CI_TXN_DTL_PRITM_SUMMARY table. For example, Populate CI_TXN_DTL_PRITM_SUMMARY Table. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	<p>Yes (Conditional)</p> <p>Note: This data is required when the Use C1-TXNPS During Transaction Aggregation option type is set to true.</p>
Find Price Item Pricing Batch Description	<p>Used to specify the description for the batch which is used for finding the price item pricing for transactions in the transaction aggregation cycle. For example, Price Item Pricing Verification. This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.</p>	Yes

Option Type	Description	Mandatory (Yes or No)
Update Transaction Status Batch Description	Used to specify the description for the batch which is used for updating the status of the transactions (for which the error has occurred) in the transaction aggregation cycle. For example, Update Status . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Service Quantity Calculation Batch Description	Used to specify the description for the batch which is used for creating the billable charges for transactions in the transaction aggregation cycle. For example, Service Quantity Calculation . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Transaction Completion Batch Description	Used to specify the description for the batch which is used for updating the status of the transactions in the transaction aggregation cycle. For example, Mark Completion . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes
Cleanup Unwanted Data Batch Description	Used to specify the description for the batch which is used for updating or deleting billable charges created for transactions in the transaction aggregation cycle. For example, Clean Up . This description appears in the error message when the transaction aggregation batches are not executed in the specified sequence.	Yes

Option Type	Description	Mandatory (Yes or No)
Use C1-TXNPS During Transaction Aggregation	<p>Used to indicate whether you want to use an alternative transaction aggregation process when the aggregation ratio is low. The valid values are:</p> <ul style="list-style-type: none"> • true • false <p>Note: If you set this option type to true, you need to execute the following batches in the specified order in the transaction aggregation cycle:</p> <ol style="list-style-type: none"> 1. Flush All Caches (F1-FLUSH) 2. Refresh Pricing (C1-TXNRP) 3. Header Validation (C1-TXNHV) 4. Validate Transaction and Derive Price Item (C1-TXNIP) 5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS) 6. Price Item Pricing Verification (C1-TXNVP) 7. Update Status (C1-TXNEX) 8. Service Quantity Calculation (C1-TXNSQ) 9. Mark Completion (C1-TXNCM) 10. Clean Up (C1-TXNCU) with the Request Type parameter set to EROR 	No

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_MASPRI Feature Configuration

Procedure

To set the **C1_MASPRI** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_MASPRI** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Thread Count	Used to specify the number of threads you want to spawn in parallel. It is used while creating a batch job for a mass pricing update request using the C1-GENRQ batch control.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch. It is used while creating a batch job for a mass pricing update request using the C1-GENRQ batch control.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_MLTCURACC Feature Configuration

Prerequisites

To set the **C1_MLTCURACC** feature configuration, you should have:

- Adjustment types defined in the application

Procedure

To set the **C1_MLTCURACC** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_MLTCURACC** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)												
Allow Multi-Currency Accounts	<p>Used to indicate whether you want to enable or disable the Multi-Currency Accounts feature. To enable the feature, set the Allow Multi-Currency Accounts option type to Y. By default, the value is set to N.</p> <p>Note:</p> <p>If the Allow Multi-Currency Accounts option type is set to N, the Invoice Currency field is disabled in the Account screen. By default, the base currency of the account's division appears in the Invoice Currency field. If the base currency is not defined for the account's division, the currency code specified in the Installation Options - Framework screen appears in the Invoice Currency field.</p> <p>If the Allow Multi-Currency Accounts option type is set to Y, the following fields are enabled in the application:</p> <table border="1"> <thead> <tr> <th>Screen Name</th> <th>Field Name</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Invoice Currency</td> </tr> <tr> <td>Billable Charge</td> <td>Currency (for Bill Line)</td> </tr> <tr> <td>Adjustment</td> <td>Currency</td> </tr> <tr> <td>Payment Event Add</td> <td>Payment Currency</td> </tr> <tr> <td>Rate Component</td> <td>Allow Currency Conversion</td> </tr> </tbody> </table>	Screen Name	Field Name	Account	Invoice Currency	Billable Charge	Currency (for Bill Line)	Adjustment	Currency	Payment Event Add	Payment Currency	Rate Component	Allow Currency Conversion	Yes
Screen Name	Field Name													
Account	Invoice Currency													
Billable Charge	Currency (for Bill Line)													
Adjustment	Currency													
Payment Event Add	Payment Currency													
Rate Component	Allow Currency Conversion													
Transfer Adjustment Type	Used to specify the adjustment type using which you want to create the transfer adjustment.	Yes												
Reason Code for Cancelling Original Adjustment	Used to specify the reason code that you want to use while cancelling the original adjustment.	Yes												

6. Enter the values for the required option types in the **Feature Configuration** screen.

7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-ODBFC Feature Configuration

Procedure

To set the **C1-ODBFC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1-ODBFC** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Average Record Size	Used to specify the average size of a usage record in bytes. By default, the value is set to 500. You can change the value, if required.	Yes
Billable Charge Chunk Size	Used to specify the number of billable charges you want to create in each work unit. By default, the value is set to 500. You can change the value, if required.	Yes
File Size Limit	Used to specify the size of a usage data file in bytes. By default, the value is set to 100000. You can change the value, if required.	Yes
Online Bill Creation Limit	Used to determine whether adhoc bills must be generated for a usage data file online or through the background process. If the total number of billable charges created for a usage data file exceeds the online bill creation limit, adhoc bills are generated for the usage data file through a batch process. By default, the value is set to 500. You can change the value, if required.	Yes
Staging XML Size	Used to specify the number of usage records you want to parse and map in each XML file. By default, the value is set to 500. You can change the value, if required.	Yes
Thread Count	Used to specify the number of threads you want to spawn in parallel.	No
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No
Transaction Limit	Used to determine whether billable charges for a usage data file must be created online or through the background process. If the total number of valid or approved records in a usage data file exceeds the transaction limit, billable charges are created for the valid or approved records through a batch process.	No

Option Type	Description	Mandatory (Yes or No)
Validation Chunk Size	Used to specify the number of usage records you want to validate or revalidate in each work unit. By default, the value is set to 500. You can change the value, if required.	Yes

- Enter the value for the option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PAYPORTAL Feature Configuration

Procedure

To set the **C1-PAYPORTAL** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
- Enter **C1-PAYPORTAL** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Allow Overpayment	Used to indicate whether you want to allow overpayment against an entity while editing the payment amount. The valid values are: <ul style="list-style-type: none"> true false 	Yes

Option Type	Description	Mandatory (Yes or No)
FK Reference for Bill	Used to indicate the foreign key reference which generates the information string for a bill in the Edit Payment Amount screen.	Yes
	Note: The C1-BLACT foreign key reference for bill is shipped with the product. You can also create a custom foreign key reference, if required.	
FK Reference for Bill Segment	Used to indicate the foreign key reference which generates the information string for a bill segment in the Edit Payment Amount screen.	Yes
	Note: The C1-BSEG foreign key reference for bill segment is shipped with the product. You can also create a custom foreign key reference, if required.	
FK Reference for Contract	Used to indicate the foreign key reference which generates the information string for a contract in the Edit Payment Amount screen.	Yes
	Note: The C1_F_SA foreign key reference for contract is shipped with the product. You can also create a custom foreign key reference, if required.	
FK Reference for Settlement	Used to indicate the foreign key reference which generates the information string for a settlement ID in the Edit Payment Amount screen.	No
	Note: At present, no foreign key reference for settlement ID is shipped with the product. Only the settlement ID appears in the information string. You can create a foreign key reference for settlement ID and specify it in this field.	

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PERACCT Feature Configuration

Procedure

To set the **C1_PERACCT** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_PERACCT** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Create Person Account Together	Used to indicate whether you want to create a person and account for that person simultaneously. The valid values are: <ul style="list-style-type: none"> Y N 	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PER_REL Feature Configuration

You can define person to person relationship type sequence in the **C1_PER_REL** feature configuration. This sequence is used while searching for effective price item pricing at the parent customer level.

Procedure

To set the **C1_PER_REL** feature configuration:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_PER_REL** in the **Feature Name** field.

- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Person to Person Relationship Type	Used to indicate the person to person relationship type.	Yes
	Note: If you want to define more than one relationship type in the feature configuration, you need to specify the sequence in which the relationship type should be considered while searching effective price item pricing at the parent customer level.	

6. Enter the values for the required option types in the **Feature Configuration** screen.

7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PPARM_FLG Feature Configuration

Procedure

To set the **C1_PPARM_FLG** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
- Enter **C1_PPARM_FLG** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Multi Price Parameter	Used to indicate whether you want to use the multi parameter based pricing feature. The valid values are: <ul style="list-style-type: none"> True — Indicates that you want to enable the multi parameter based pricing feature. False — Indicates that you want to disable the multi parameter based pricing feature. 	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.

- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PRASNORDR Feature Configuration

Procedure

To set the **C1_PRASNORDR** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
- Enter **C1_PRASNORDR** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Price Assignment Algorithm	Used to specify the algorithm which contains the default search order for global customers. The valid search order values are: <ul style="list-style-type: none"> AGREED_PRICELIST AGREED_FIRST You can change this default search order, whenever required. You can also create a custom search order, if required.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_PR_REC Feature Configuration

Procedure

To set the **C1_PR_REC** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
3. Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
4. Enter **C1_PR_REC** in the **Feature Name** field.
5. Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Effective Pricing RecordSet Limit	Used to specify the number of records that can be displayed in the Search Results section of the Effective Price Assignment zone. The value must be an integer and not in decimals. The maximum number of records that can be displayed are 5000. Note: If you enter the value as 0 or if you do not specify the value for the Effective Pricing RecordSet Limit option type, no records will be displayed in the Search Results section.	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-PYREQSRT Feature Configuration**Procedure**

To set the **C1-PYREQSRT** feature configuration:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1-PYREQSRT** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Bill	Used to sort columns by the selected option type. The table fields in CI_BILL table are used to set the values for the option type Bill . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"> Ascending Descending 	No
Bill Segment	Used to sort columns by the selected option type. The table fields in CI_BSEG table are used to set the values for the option type Bill Segment . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"> Ascending Descending 	No
Contract	Used to sort columns by the selected option type. The table fields in CI_SA table are used to set the values for the option type Contract . It also enables sorting by order. Its valid values are: <ul style="list-style-type: none"> Ascending Descending 	No

Note: Above options types are configured for the **Sort By** field for sorting columns on the **Edit Payment Amount** screen.

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1_RLENG Feature Configuration

Procedure

To set the **C1_RLENG** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.

A sub-menu appears.

- Click the **Search** option from the **Feature Configuration** sub-menu.

The **Feature Configuration Search** window appears.

- Enter **C1_RLENG** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Logging Rules for Transaction Feed	Used to indicate whether a log should be generated when you execute the Transaction Validation and Initial Product Determination (C1-TXNIP) batch. The valid values are: <ul style="list-style-type: none"> • True • False 	Yes
	Note: This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.	
Maximum Number of Rules in Cache	Used to indicate the maximum number of rules whose entry should be created in the log file.	Yes

- Enter the values for the required option types in the **Feature Configuration** screen.
- Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.

Setting the C1-TXNDMYID Feature Configuration

For manually added transactions, the system can generate header details including the header ID automatically if you set the option types in the **C1-TXNDMYID** feature configuration.

Procedure

To set the **C1-TXNDMYID** feature configuration:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **F** and then click **Feature Configuration**.
A sub-menu appears.
- Click the **Search** option from the **Feature Configuration** sub-menu.
The **Feature Configuration Search** window appears.
- Enter **C1-TXNDMYID** in the **Feature Name** field.
- Click the **Search** button corresponding to the **Feature Name** field.

The **Feature Configuration** screen appears. It contains the following option types:

Option Type	Description	Mandatory (Yes or No)
Dummy File Name	Used to specify the dummy file name.	Yes
Dummy Header ID	Used to specify the dummy header ID.	Yes
Dummy Transaction Source	Used to specify the dummy transaction source.	Yes
Dummy Header Date	Used to specify the dummy header date.	Yes

6. Enter the values for the required option types in the **Feature Configuration** screen.
7. Click the **Save** button in the **Page Title** area.

The changes made to the feature configuration are saved.
