License Restrictions Warranty/Consequential Damages Disclaimer

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure, and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or de-compilation of this software, unless required by law for interoperability, is prohibited.

Warranty Disclaimer

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

Restricted Rights Notice

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS

Oracle programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data delivered to U.S. Government end users are “commercial computer software” or “commercial technical data” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data shall be subject to license terms and restrictions as mentioned in Oracle License Agreement, and to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). No other rights are granted to the U.S. Government.

Hazardous Applications Notice

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

Third Party Content, Products, and Services Disclaimer

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third party content, products, or services.

Viewing the Parameter Details.....	156
Parameter (Used for Viewing).....	156
Parameter.....	157
Price Item.....	159
Price Item (Used for Searching).....	160
Search Price Item.....	160
Searching for a Price Item or Price Item Bundle.....	162
Defining a Price Item or Price Item Bundle.....	163
Associating a Parameter with a Price Item or Price Item Bundle.....	166
Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle.....	168
Associating a Price Item or Price Item Bundle with a Division.....	169
Defining Division-Specific Characteristics for a Price Item or Price Item Bundle..	170
Defining Division-Specific SQIs for a Price Item or Price Item Bundle.....	172
Defining a Characteristic for a Price Item or Price Item Bundle.....	173
Copying a Price Item or Price Item Bundle.....	174
Viewing the Price Item or Price Item Bundle Details.....	177
Price Item (Used for Viewing).....	178
Price Item.....	179
Parameters.....	180
Predefined Parameter Values for Price Item.....	181
Divisions.....	181
Division-Specific Characteristics for Price Item.....	182
Division-Specific SQIs for Price Item.....	182
Price Item Relationship.....	183
Editing a Price Item or Price Item Bundle.....	184
Price Item Relationship.....	187
Assigned Price Items.....	188
Viewing the Price Items or Price Item Bundles Associated with a Parent Price Item.....	190
Viewing the Price Items or Price Item Bundles Added to a Price Item Bundle.....	190
Associating a Price Item or Price Item Bundle with a Parent Price Item.....	190
Adding a Price Item or Price Item Bundle to a Price Item Bundle.....	193
Setting the Parameters for a Price Item or Price Item Bundle.....	195
Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle.....	197
Disassociating a Price Item or Price Item Bundle from a Parent Price Item.....	198
Removing a Price Item or Price Item Bundle from a Price Item Bundle.....	199
Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item.....	199
Filtering the Price Items or Price Item Bundles Added to a Price Item Bundle.....	200
Price Item Assignments.....	201
Active Price Lists where Price Item is Assigned.....	201
Persons to whom Price Item is Assigned.....	201
Accounts where Price Item is Assigned.....	202
Viewing the Price Lists, Persons, or Accounts where a Price Item is Assigned.....	202
Price List.....	203
Price List (Used for Searching).....	204
Search Price List.....	204

Overriding a Price Item Pricing.....	396
Pricing Simulation.....	398
Search Pricing.....	398
Simulation - Effective Pricing Information.....	402
Searching Pricing Simulation for Account or Price List.....	407
Viewing Pricing Simulation.....	407
Exporting Effective Price Simulation.....	408
Eligible Price List.....	410
Search Eligible Price Lists.....	411
Rate Definition.....	412
Rate Schedule Components.....	413
Create/Edit Rate Definition.....	414
Defining Tiering Setup of a Rate Component.....	415
Editing Tiering Setup of a Rate Component.....	416
Deleting Tiering Setup of a Rate Component.....	417
Tiering Criterion.....	418
Tiering Criterion List.....	418
Edit Tiering Criterion.....	418
Create Tiering Criterion.....	419
Creating a Tiering Criterion.....	419
Editing a Tiering Criterion.....	420
Variance Parameter.....	421

Filtering the Variance Parameters.....	421
Defining a Variance Parameter.....	422
Editing a Variance Parameter.....	422
Deleting a Variance Parameter.....	423
Person to Person Relationship Type Sequence.....	423
Search Person Relationship Type Sequence for Price Item.....	424
Search Person Relationship Type Sequence for Division.....	425
Searching Relationship Type Sequence for a Division, Price Item, and Price Item Parameters.....	426
Defining Relationship Type Sequence for a Division, Price Item, and Price Item Parameters.....	427
Editing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	429
Deleting Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	430
Viewing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	431
Searching Relationship Type Sequence for a Division.....	431
Defining Relationship Type Sequence for a Division.....	432
Editing Relationship Type Sequence of a Division.....	433
Deleting Relationship Type Sequence of a Division.....	434
Viewing Relationship Type Sequence of a Division.....	435
Chapter IV: Division.....	437
Division Search.....	438
Searching for a Division.....	438
Division.....	439
Defining a Division.....	441
Associating Access Groups with a Division.....	444
Associating Price Items with a Division.....	445
Associating Price Lists with a Division.....	446
Associating Languages with a Division.....	447
Associating Invoice Currencies with a Division.....	448
Associating Person Identifier Types with a Division.....	449
Associating Algorithms with a Division.....	449
Defining Characteristics for a Division.....	453
Associating Bill Messages with a Division.....	454
Associating Party Char Types with a Division.....	455
Associating Bill Cycles with a Division.....	456
Associating Account Identifier Types with a Division.....	457
Defining Division-Specific Characteristics for a Price Item.....	458
Chapter V: Approval Workflow.....	461
Most Commonly Used Terms.....	463
Approval Workflow Process.....	463
Prerequisites.....	465
Approval Transaction.....	467
Search Approval Transaction.....	467
Approval Transaction Log.....	471
Searching for an Approval Transaction.....	472
Viewing the Log of an Approval Transaction.....	472
Comparison: New versus Existing.....	473
Approving an Approval Transaction.....	473
Rejecting an Approval Transaction.....	474

Canceling an Approval Transaction.....	475
Modifying an Approval Transaction.....	476
Withdrawing an Approval Transaction.....	477
Resolving an Approval Transaction.....	477
Approve Price Assignment.....	478
Search.....	478
List of Price Assignments.....	481
Approve Price Assignment - Comparison: New versus Existing.....	482
Approval Transaction Log.....	484
Approving a Price Assignment for an Account.....	485
Approving a Price Assignment for a Person.....	486
Approving a Price Assignment for a Price List.....	487
Rejecting a Price Assignment for an Account.....	488
Rejecting a Price Assignment for a Person.....	489
Rejecting a Price Assignment for a Price List.....	491
Canceling a Price Assignment for an Account.....	492
Canceling a Price Assignment for a Person.....	493
Canceling a Price Assignment for a Price List.....	495

Trial Bill Segments.....	1037
Trial Bill Segment Calc Lines.....	1039
Trial Bill Segment SQ Details.....	1040
Trial Bill Segment Financial Details.....	1040
Printing a Trial Bill in the PDF Format.....	1041
Viewing the Segments of a Trial Bill.....	1041
Filtering the Trial Bill Segments.....	1042
Viewing the Calc Lines of a Trial Bill Segment.....	1042
Viewing the SQ Details of a Trial Bill Segment.....	1043
Viewing the Financial Details of a Trial Bill Segment.....	1044

Chapter XVI: Bill Tolerance.....	1045
Prerequisites.....	1046
Chapter XVII: GL Account Validation.....	1049
Static GL Account Validation.....	1050
Dynamic GL Account Validation.....	1050
Chapter XVIII: Upload Validated Adjustment Data.....	1051
Prerequisites.....	1053
CSV File Format.....	1053
Adjustment Upload Request (Without Approval) Status Transition.....	1054
Adjustment Upload Request (With Approval) Status Transition.....	1055
Algorithms Used in C1-ADJUPLD.....	1056
Adjustment Upload Request.....	1059
Search Adjustment Upload Request.....	1059
Adjustment Upload Request.....	1060
Adjustment Data Records.....	1063
Searching for an Adjustment Upload Request.....	1064
Uploading an Adjustment Data File.....	1064
Replacing an Adjustment Data File.....	1067
Cancelling an Adjustment Data File.....	1069
Creating Adjustments for an Adjustment Data File.....	1070
Submitting an Adjustment Data File for Approval.....	1071
Approving an Adjustment Data File.....	1072
Rejecting an Adjustment Data File.....	1073
Viewing the Adjustment Upload Request Details.....	1074
Viewing All Records of an Adjustment Data File.....	1075
Viewing the Log of an Adjustment Upload Request.....	1075
Adding a Log Entry for an Adjustment Upload Request.....	1076
Chapter XIX: Foreign Exchange Gain Loss.....	1079
Foreign Exchange Gain Loss Calculation.....	1080
Prerequisites.....	1080
Foreign Exchange Gain Loss Scenarios.....	1081
Payment Scenarios.....	1081
Credit Adjustment Scenarios.....	1085
Write Off Adjustment Scenarios.....	1086
Write Up/Down Adjustment Scenarios.....	1088
Chapter XX: Payment Request.....	1091
Prerequisites.....	1093
Payment Request (Without Approval) Status Transition.....	1094
Payment Request (With Approval) Status Transition.....	1095
Algorithms Used in C1-PaymentRequest.....	1096
Algorithms Used in C1-PaymentTransferRequest.....	1100
Payment Request Type.....	1105
Payment Request Type List.....	1105
Payment Request Type.....	1106
Defining a Payment Request Type.....	1108
Defining Characteristics for a Payment Request Type.....	1111

Editing a Payment Request Type.....	1112
Copying a Payment Request Type.....	1115
Deleting a Payment Request Type.....	1118
Viewing the Payment Request Type Details.....	1119
Payment Request (Used for Searching).....	1119
Search Payment Request.....	1120
Searching for a Payment Request.....	1122
Viewing the Payment Request Details.....	1123
Payment Request (Used for Viewing).....	1124

Defining an Accrual Type.....	1641
Associating an Algorithm with an Accrual Type.....	1645
Excluding an Entity from an Accrual Type.....	1648
Associating a Division with an Accrual Type.....	1649

Accrual Type (Used for Viewing).....	1650
Accrual Type.....	1650
Editing an Accrual Type.....	1652
Deleting an Accrual Type.....	1659
Accrual (Used for Searching).....	1659
Search Accrual.....	1659
Searching for an Accrual.....	1661
Viewing the Accrual Details.....	1662
Defining an Accrual.....	1662
Defining a Characteristic for an Accrual.....	1664
Adding the Details for an Accrual.....	1665
Accrual (Used for Viewing).....	1666
Accrual - Main.....	1666
Accrual.....	1666
Accrual Details.....	1668
Accrual Calculation Lines.....	1668
Accrual - Log.....	1669
Accrual Log.....	1669
Viewing the Log of an Accrual.....	1670
Adding a Log Entry for an Accrual.....	1670
Approving an Accrual.....	1671
Rejecting an Accrual.....	1671
Resubmitting an Accrual.....	1672
Editing an Accrual.....	1673
Deleting an Accrual.....	1674

Chapter XXX: Payment Agreement Request..... 1677

Payment Agreement Request (Without Approval) Status Transition.....	1680
Payment Agreement Request (With Approval) Status Transition.....	1681
Prerequisites.....	1682
Algorithms Used in C1-PaymentAgreementRequest.....	1682
Payment Agreement Request Type.....	1683
Payment Agreement Request Type List.....	1683
Payment Agreement Request Type.....	1684
Defining a Payment Agreement Request Type.....	1687
Defining Characteristics for a Payment Agreement Request Type.....	1689
Editing a Payment Agreement Request Type.....	1690
Deleting a Payment Agreement Request Type.....	1693
Copying a Payment Agreement Request Type.....	1693
Viewing the Payment Agreement Request Type Details.....	1696
Payment Agreement Request (Used for Searching).....	1696
Search Payment Agreement Request.....	1697
Bill Details.....	1700
Searching for a Payment Agreement Request.....	1700
Viewing the Bills Added in the Payment Agreement Request.....	1701
Viewing the Payment Agreement Request Details.....	1701
Creating a Payment Agreement Request.....	1702
Defining Characteristics for a Payment Agreement Request.....	1703
Defining Payment Schedule for a Payment Agreement Request.....	1704
Payment Agreement Request (Used for Viewing).....	1705
Payment Agreement Request - Main.....	1706
Payment Agreement Request.....	1706
Bill Details.....	1708
Payment Schedule.....	1709
Payment Agreement Request - Bills.....	1709

Search Bills.....	1709
Payment Agreement Request - Log.....	1711
Payment Agreement Request Log.....	1711
Editing a Payment Agreement Request.....	1711
Deleting a Payment Agreement Request.....	1714
Submitting a Payment Agreement Request.....	1715
Removing an Overdue Bill from a Payment Agreement Request.....	1716
Approving a Payment Agreement Request.....	1716
Rejecting a Payment Agreement Request.....	1718
Resubmitting a Payment Agreement Request.....	1719
Filtering Overdue Bills of an Account.....	1720
Adding an Overdue Bill in a Payment Agreement Request.....	1721
Viewing the Log of a Payment Agreement Request.....	1722
Adding a Log Entry for a Payment Agreement Request.....	1723

Chapter XXXI: Dispute Request.....1725

Dispute Request (Without Approval) Status Transition.....	1731
Dispute Request (With Approval) Status Transition.....	1731
Prerequisites.....	1732
Algorithms Used in C1-DisputeRequest.....	1733
Dispute Request Type.....	1738
Dispute Request Type List.....	1741
Dispute Request Type.....	1742
Defining a Dispute Request Type.....	1744
Defining Characteristics for a Dispute Request Type.....	1747
Editing a Dispute Request Type.....	1748
Deleting a Dispute Request Type.....	1751
Copying a Dispute Request Type.....	1752
Viewing the Dispute Request Type Details.....	1754
Dispute Request (Used for Searching).....	1755
Search Dispute Request.....	1755
Searching for a Dispute Request.....	1758
Viewing the Dispute Request Details.....	1759
Creating a Dispute Request.....	1760
Defining Characteristics for a Dispute Request.....	1762
Dispute Request (Used for Viewing).....	1763
Dispute Request - Main.....	1764
Dispute Request.....	1764
Dispute Details.....	1766
Dispute Adjustments.....	1766
Previous Dispute Requests.....	1767
Dispute Request - Bills.....	1768
Search Bills.....	1768
Bill Line Items.....	1770
Dispute Request - Log.....	1770
Dispute Request Log.....	1770
Editing a Dispute Request.....	1771
Deleting a Dispute Request.....	1772
Submitting a Dispute Request.....	1773
Approving a Dispute Request.....	1774
Rejecting a Dispute Request.....	1775
Resubmitting a Dispute Request.....	1777
Editing the Dispute Details.....	1777
Deleting a Bill from the Dispute Request.....	1779
Viewing the Bill Line Items.....	1779

Adding a Bill to the Dispute Request.....	1780
Adding a Bill Line Item to the Dispute Request.....	1781
Viewing the Log of a Dispute Request.....	1783
Adding a Log Entry for a Dispute Request.....	1784

Chapter XXXII: Earnings Credit Rate 1787

Prerequisites.....	1791
Financial Transaction Distribution Object Status Transition.....	1791
Algorithms Used in C1-FTDIST.....	1792
Earnings Credit Rate Eligibility.....	1797
Earnings Credit Rate Eligibility.....	1798
Defining Earnings Credit Rate Eligibility for an Account.....	1799
Financial Transaction Distribution Type.....	1800
Financial Transaction Distribution Type List.....	1800
Financial Transaction Distribution Type.....	1802
Defining a Financial Transaction Distribution Type.....	1804
Defining Characteristics for a Financial Transaction Distribution Type.....	1807
Editing a Financial Transaction Distribution Type.....	1808
Deleting a Financial Transaction Distribution Type.....	1810
Copying a Financial Transaction Distribution Type.....	1811
Viewing the Financial Transaction Distribution Type Details.....	1814
Financial Transaction Distribution Rule.....	1814
Financial Transaction Distribution Rule List.....	1815
Financial Transaction Distribution Rule.....	1816
Financial Transaction Distribution Rule Version List.....	1817
Financial Transaction Distribution Rule Version.....	1818
Defining a Financial Transaction Distribution Rule.....	1820
Editing a Financial Transaction Distribution Rule.....	1821
Deleting a Financial Transaction Distribution Rule.....	1823
Copying a Financial Transaction Distribution Rule.....	1823
Viewing the Financial Transaction Distribution Rule Details.....	1825
Viewing the Financial Transaction Distribution Rule Version List.....	1825
Defining a Financial Transaction Distribution Rule Version.....	1826
Including Objects in a Financial Transaction Distribution Rule Version.....	1829
Excluding Objects in a Financial Transaction Distribution Rule Version.....	1830
Associating Algorithms with a Financial Transaction Distribution Rule Version.....	1831
Editing a Financial Transaction Distribution Rule Version.....	1831
Deleting a Financial Transaction Distribution Rule Version.....	1834
Copying a Financial Transaction Distribution Rule Version.....	1835
Viewing the Financial Transaction Distribution Rule Version Details.....	1838
Expiration Cycle Extendable Lookup.....	1839
Extendable Lookup Search.....	1839
Searching for an Expiration Cycle Extendable Lookup.....	1839
Extendable Lookup (Expiration Cycle).....	1840
Extendable Lookup Value List.....	1840
Extendable Lookup Value.....	1841
Defining an Expiration Cycle.....	1842
Editing an Expiration Cycle.....	1843
Deleting an Expiration Cycle.....	1844
Copying an Expiration Cycle.....	1845
Viewing the Expiration Cycle Details.....	1846
Distribution Hierarchy Extendable Lookup.....	1847
Extendable Lookup Search.....	1847
Searching for a Distribution Hierarchy Extendable Lookup.....	1848
Extendable Lookup (Distribution Hierarchy).....	1848

Extendable Lookup Value List.....	1849
Extendable Lookup Value.....	1849
Defining a Distribution Hierarchy.....	1851
Editing a Distribution Hierarchy.....	1852
Deleting a Distribution Hierarchy.....	1853
Copying a Distribution Hierarchy.....	1854
Viewing the Distribution Hierarchy Details.....	1856
Financial Transaction Distribution Object Extendable Lookup.....	1856
Extendable Lookup Search.....	1856
Extendable Lookup (Financial Transaction Distribution Object).....	1857
Extendable Lookup Value List.....	1857
Extendable Lookup Value.....	1858
Defining a Financial Transaction Distribution Object.....	1860
Editing a Financial Transaction Distribution Object.....	1861
Deleting a Financial Transaction Distribution Object.....	1862
Copying a Financial Transaction Distribution Object.....	1863
Viewing the Financial Transaction Distribution Object Details.....	1865
Financial Transaction Distribution (Used for Searching).....	1865
Financial Transaction Distribution Search.....	1865
Searching for a Financial Transaction Distribution Object.....	1867
Viewing the Financial Transaction Distribution Object Details.....	1868
Financial Transaction Distribution (Used for Viewing).....	1868
Financial Transaction Distribution - Main.....	1869
Financial Transaction Distribution.....	1869
Financial Transaction Distribution - Log.....	1871
Financial Transaction Distribution Log.....	1871
Viewing the Log of a Financial Transaction Distribution.....	1872
Adding a Log Entry for a Financial Transaction Distribution.....	1872

Chapter XXXIII: Deferred Revenue Recognition..... 1875

Prerequisites.....	1877
Deferred Revenue Recognition Status Transition.....	1877
Algorithms Used in Deferred Revenue Recognition.....	1879
Deferred Revenue Recognition Template (Used for Searching).....	1884
Search Deferred Revenue Recognition Template.....	1884
Searching for a Deferred Revenue Recognition Template.....	1885
Defining a Deferred Revenue Recognition Template.....	1886
Associating Algorithms with a Deferred Revenue Recognition Template.....	1888
Associating Deferred Revenue Recognition Template With A Division.....	1889
Defining Characteristics for a Deferred Revenue Recognition Template.....	1890
Viewing the Deferred Revenue Recognition Template Details.....	1891
Deferred Revenue Recognition Template (Used for Viewing).....	1892
Deferred Revenue Recognition Template.....	1892
Editing a Deferred Revenue Recognition Template.....	1894
Deleting a Deferred Revenue Recognition Template.....	1895
Deferred Revenue Recognition (Used for Searching).....	1895
Search Deferred Revenue Recognition.....	1896
Searching for a Deferred Revenue Recognition.....	1900
Viewing the Deferred Revenue Recognition Details.....	1900
Deferred Revenue Recognition (Used for Viewing).....	1901
Deferred Revenue Recognition - Main.....	1901
Deferred Revenue Recognition.....	1901
Associated Deferred Revenue Recognitions.....	1903
Recognition Schedule.....	1904
Revenue Recognition Items.....	1904

Deferred Revenue Recognition - Log.....	1904
Deferred Revenue Recognition Log.....	1904
Editing a Deferred Revenue Recognition.....	1905
Creating the Deferred Revenue Recognition Schedule.....	1906
Defining Characteristics for a Deferred Revenue Recognition.....	1906
Adding Related Deferred Revenue Recognitions.....	1907
Editing the Deferred Revenue Recognition Schedule Details.....	1908
Viewing the Log of a Deferred Revenue Recognition.....	1909
Adding a Log Entry for a Deferred Revenue Recognition.....	1910

Chapter XXXIV: Product Lifecycle Management..... 1913

Prerequisites.....	1915
Product Status Transition through User Interface.....	1915
Product Status Transition through a Batch Process.....	1916
Product Version Status Transition.....	1917
Product Enrollment Status Transition through User Interface.....	1918
Product Enrollment Status Transition through a Batch Process.....	1919
Product Service (Used for Searching).....	1921
Search Product Service.....	1921
Associated Price Items.....	1922
Searching for a Product Service.....	1922
Viewing the Product Service Price Items.....	1923
Defining a Product Service.....	1923
Associating a Product Service with a Price Item.....	1925
Defining a Characteristics for a Product Service.....	1926
Viewing the Product Service Details.....	1927
Product Service (Used for Viewing).....	1928
Product Service.....	1928
Price Items.....	1929
Editing a Product Service.....	1929
Deleting a Product Service.....	1930
Copying a Product Service.....	1931
Product (Used for Searching).....	1932
Search Product.....	1932
Product Version List.....	1934
Searching for a Product.....	1934
Viewing the Product Versions.....	1935
Viewing the Product Details.....	1935
Viewing the Product Version Details.....	1936
Defining a Product.....	1936
Associating a Product with a Division.....	1938
Defining a Product to Product Relationship.....	1938
Defining a Characteristics for a Product.....	1939
Defining a Product Version.....	1941
Adding a Product Service to a Product Version.....	1943
Adding a Standard Product to a Product Version.....	1944
Adding Add-on Services to a Product Version.....	1946
Associating a Price List with a Product Version.....	1947
Defining Eligibility Criteria for a Product Version.....	1948
Defining Characteristics for a Product Version.....	1950
Product Version (Used for Viewing).....	1951
Product Version - Main.....	1952
Product Version.....	1952
Products.....	1954
Product Services.....	1954

Add-on Product Services.....	1955
Services.....	1955
Price List.....	1956
Eligibility Criteria.....	1956
Product Version - Log.....	1958
Product Version Log.....	1958
Editing a Product Version.....	1958
Deleting a Product Version.....	1960
Copying a Product Version.....	1960
Finalizing a Product Version.....	1962
Viewing the Log of a Product Version.....	1963
Product (Used for Viewing).....	1964
Product - Main.....	1964
Product Details.....	1964
Product Version List.....	1966
Product - Log.....	1966
Product Log.....	1967
Editing a Product.....	1967
Copying a Product.....	1968
Activating a Product.....	1969
Retiring a Product.....	1969
Viewing the Log of a Product.....	1970
Product Enrollment (Used for Searching).....	1971
Search Enrollment.....	1971
Enrolled Products.....	1973
Enrolled Services.....	1974
Enrolled Standard Products.....	1974
Enrolled Add-on Services.....	1975
Searching for a Product Enrollment.....	1975
Viewing the Enrolled Products.....	1976
Viewing the Enrolled Services.....	1976
Viewing the Standard Products Included in an Enrolled Product.....	1977
Viewing the Add-on Services Enrolled with the Product	1977
Enrolling an Account for One or More Products and Services.....	1978
Viewing the Product Priority of an Account.....	1981
Defining Characteristics for a Product Enrollment.....	1982
Product Enrollment (Used for Viewing).....	1982
Product Enrollment - Main.....	1983
Product Enrollment.....	1983
Enrolled Products.....	1984
Enrolled Services.....	1985
Enrolled Standard Products.....	1985
Enrolled Add-on Product Services.....	1986
Product Priority.....	1986
Product Enrollment - Log.....	1987
Enrollment Log.....	1987
Viewing the Standard Products Included in an Enrolled Product.....	1987
Editing a Product Enrollment.....	1988
Copying a Product Enrollment.....	1989
Enrolling a Product Enrollment.....	1989
Unenrolling a Product Enrollment.....	1990
Viewing the Log of a Product Enrollment.....	1991

Chapter XXXV: Subscription Billing..... 1993

Prerequisites.....	1995
--------------------	------

Subscription Type (Used for Searching).....	1995
Search Subscription Type.....	1995
Searching for a Subscription Type.....	1996
Viewing the Subscription Type Details.....	1997
Defining a Subscription Type.....	1997
Defining Characteristics for a Subscription Type.....	2000
Subscription Type (Used for Viewing).....	2001
Subscription Type.....	2001
Editing a Subscription Type.....	2004
Copying a Subscription Type.....	2006
Deleting a Subscription Type.....	2009
Account Subscription (Used for Searching).....	2009
Search Account Subscription.....	2009
Searching for an Account Subscription.....	2011
Viewing the Account Subscription Details.....	2012
Defining an Account Subscription.....	2012
Defining Characteristics for an Account Subscription.....	2015
Account Subscription (Used for Viewing).....	2016
Account Subscription - Main.....	2016
Account Subscription.....	2016
Subscription Services.....	2018
Subscription Service Charges.....	2019
Subscription Service Charge Entities.....	2019
Account Subscription Suspension History.....	2019
Account Subscription Termination Charges.....	2020
Account Subscription - Log.....	2020
Account Subscription Log.....	2020
Adding Services and Charges in the Account Subscription.....	2021
Editing an Account Subscription.....	2022
Deleting an Account Subscription.....	2023
Activating an Account Subscription.....	2024
Canceling an Account Subscription.....	2024
Editing the Subscription Service Details.....	2025
Deleting a Service from the Account Subscription.....	2026
Viewing the Charges of a Subscription Service.....	2026
Viewing Related Entities of a Subscription Service Charge.....	2027
Viewing Suspension History of the Account Subscription.....	2027
Viewing Termination Charges of the Account Subscription.....	2028
Suspending an Account Subscription.....	2028
Terminating an Account Subscription.....	2029
Resuming an Account Subscription.....	2030
Viewing the Log of an Account Subscription.....	2031

Chapter XXXVI: Mass Pricing Update.....2033

Prerequisites.....	2035
Mass Pricing Update Request (Without Approval) Status Transition.....	2035
Mass Pricing Update Request (With Approval) Status Transition.....	2036
Algorithms Used in C1-MassPricingReq.....	2037
C1-REQST-INF.....	2038
C1-MPRIVALDN.....	2038
C1-MPRISUBMT.....	2039
C1-MPRIAPTD.....	2039
F1-TODOCOMPL.....	2039
F1-AT-RQJ.....	2039

Mass Pricing Update Request - Log.....	2065
Mass Pricing Update Request Log.....	2065
Editing a Mass Pricing Update Request.....	2066
Deleting a Mass Pricing Update Request.....	2068
Submitting a Mass Pricing Update Request.....	2068
Approving a Mass Pricing Update Request.....	2069
Rejecting a Mass Pricing Update Request.....	2071
Generating a Batch Job for a Mass Pricing Update Request.....	2071
Viewing the Log of a Mass Pricing Update Request.....	2072
Adding a Log Entry for a Mass Pricing Update Request.....	2072
Mass Pricing Update Request.....	2073
Search Price Assignments.....	2074
Account Agreed Price Assignments.....	2076
Customer Agreed Price Assignments.....	2077
Price List Price Assignments.....	2078
Product Price List Price Assignments.....	2078
Searching for Price Assignments on a Pricing Entity.....	2079
Viewing the Price Assignments Defined at the Account Level.....	2080
Viewing the Price Assignments Defined at the Person Level.....	2080
Viewing the Price Assignments Defined on the Price Lists.....	2081
Viewing the Price Assignments Defined on the Price Lists Associated to the Products.....	2081

Chapter XXXVII: Price Item, Parameter, and SQI Upload..... 2083

Uploading a Price Item File in the XML Format.....	2085
Defining a File Request Type for Uploading Price Items in the XML Format.....	2085
Uploading a Price Item File.....	2086
Creating or Updating Price Items.....	2086
Uploading a Price Item File in the CSV Format.....	2086
Defining a File Request Type for Uploading Price Items in the CSV Format.....	2086
Uploading a Price Item File.....	2087
Creating or Updating Price Items.....	2087
XML File Format for Uploading Price Items.....	2088
Sample XML Format for Uploading Price Items.....	2098
CSV File Format for Uploading Price Items.....	2103
Sample CSV Format for Uploading Price Items.....	2111

Uploading a Parameter File in the XML Format.....	2122
Defining a File Request Type for Uploading Parameters in the XML Format.....	2123
Uploading a Parameter File.....	2123
Creating Parameters.....	2123
Uploading a Parameter File in the CSV Format.....	2123
Defining a File Request Type for Uploading Parameters in the CSV Format.....	2124
Uploading a Parameter File.....	2125
Creating Parameters.....	2125
XML File Format for Uploading Parameters.....	2125
Sample XML Format for Uploading Parameters.....	2130
CSV File Format for Uploading Parameters.....	2133
Sample CSV Format for Uploading Parameters.....	2138
Uploading an SQI File in the XML Format.....	2143
Defining a File Request Type for Uploading SQIs in the XML Format.....	2143
Uploading an SQI File.....	2144
Creating SQIs.....	2144
Uploading an SQI File in the CSV Format.....	2144
Defining a File Request Type for Uploading SQIs in the CSV Format.....	2144
Uploading an SQI File.....	2146
Creating SQIs.....	2146
XML File Format for Uploading Service Quantity Identifiers (SQIs).....	2146
Sample XML Format for Uploading Service Quantity Identifiers (SQIs).....	2147
CSV File Format for Uploading Service Quantity Identifiers (SQIs).....	2147
Sample CSV Format for Uploading SQIs.....	2148
Uploading Price Items, Parameters, and SQIs from the Same File.....	2149

Chapter XXXVIII: Product and Product Version Upload.....2151

Chapter XXXIX: Price List and Price List Assignment Upload.....2153

Appendix A: Most Commonly Used Tasks..... 2155

Changing the Layout.....	2156
Adding a Column to the Zone.....	2156
Rearranging Columns in the Zone.....	2156
Removing a Column from the Zone.....	2156

Appendix B: Administration.....2159

UI Maps.....	2160
Creating Display UI Map for an Approval Workflow Group.....	2160
Creating Input UI Map for an Approval Workflow Group.....	2161
Feature Configurations.....	2162
Setting the C1_ACCTINFO Feature Configuration.....	2162
Setting the C1_AXENTITY Feature Configuration.....	2163
Setting the C1_DIVFUNCT Feature Configuration.....	2165
Setting the C1_EXCHRATE Feature Configuration.....	2166
Setting the C1_EXP_OVRD Feature Configuration.....	2166
Setting the C1_FINTRANOP Feature Configuration.....	2167
Setting the C1_FM Feature Configuration.....	2168
Setting the C1_MASPRI Feature Configuration.....	2175
Setting the C1_MLTCURACC Feature Configuration.....	2176
Setting the C1-ODBFC Feature Configuration.....	2177
Setting the C1-PAYPORTAL Feature Configuration.....	2179

Setting the C1_PERACCT Feature Configuration.....	2180
Setting the C1_PER_REL Feature Configuration.....	2181
Setting the C1_PPARAM_FLG Feature Configuration.....	2182
Setting the C1_PRASNORDR Feature Configuration.....	2183
Setting the C1_PR_REC Feature Configuration.....	2183
Setting the C1-PYREQSRT Feature Configuration.....	2184
Setting the C1_RLENG Feature Configuration.....	2185
Setting the C1-TXNDMYID Feature Configuration.....	2186

Preface

About this Document

This document lists and describes various features in Oracle Revenue Management and Billing which can be used in both Financial Services and Health-Care domain.

Intended Audience

This document is intended for the following audience:

- End-users
- System Administrators
- Consulting Team
- Implementation Team
- Development Team

Organization of the Document

Each banking feature is described in a separate chapter in this document. All screens related to the feature and tasks related to the screen are explained in each chapter. This document contains the following chapters:

Chapter Number	Chapter Name	Chapter Description
Chapter 1	Customer 360° View	Explains how to view in-depth information about the person or account in the Customer 360° View screen. It also explains how to view the enrolled products, effective price assignments, and effective price list assignments of a person or account. In addition, it explains how to view the detailed information about the bill.
Chapter 2	Invoicing Group	Describes the invoicing group and explains how to create a master account. It also explains how to add or remove a member from a master account.
Chapter 3	Pricing Management	Explains the different concepts of the pricing model supported in the application. It explains how to define a parameter, price item, price list, tiering criterion, variance parameter, and person to person relationship type sequence. It also explains how to define pricing for a price item, how to assign a price item to a person, account, or price list, and how to assign a price list to a person or account.
Chapter 4	Division	Describes the different types of division. It also explains how to define a division.

Chapter Number	Chapter Name	Chapter Description
Chapter 5	Approval Workflow	Describes the approval workflow process and explains how to perform various tasks involved in the process. It explains how to implement the approval workflow process for an entity, such as account, person, and so on. It explains how to define an approval workflow group, approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, approval workflow reasons, and approval workflow settings.
Chapter 6	Multi-Currency Accounts	Lists and describes the business processes that are enhanced to implement the multi-currency accounts feature.
Chapter 7	Rules Engine	Describes how the rules engine function. It explains how to define, execute, and maintain business rules separately from the application code.
Chapter 8	Alternate Sequential Bill Numbers	Explains how to generate alternate sequential bill numbers which are either unique throughout the system or within the division.
Chapter 9	Currency Conversion	Lists and describes the business processes where the currency conversion feature can be enabled in the system. It explains how to enable the currency conversion feature for each business process. It also explains how to create different types of exchange rates in the system.
Chapter 10	Transaction Management Feed	Describes the transaction feed management process and its sub-processes. It explains how to execute each sub-process. It also explains how to view the details of various transactions uploaded in the system. In addition, it explains how to create a transaction source, transaction record type, transaction aggregation rule, aggregation schedule, and disaggregation request.
Chapter 11	On Demand Billing	Explains how to generate adhoc bills using the on demand billing process. It explains how to create a file type and file group, how to upload a usage data file, how to generate adhoc bills for a file group, and how to freeze the adhoc bills of a file group.
Chapter 12	Upload Validated Payment Data	Explains how to upload and validate the payment records before you move them to the staging area. It also explains how to create payment events and payments using the validated payment records.
Chapter 13	Freeze Payments on Notification	Explains how the system freezes or cancels the automatic payments, voids the refund requests and cancels the refund adjustments when the review comments are received from the auto clearing house.
Chapter 14	Construct	Describes the construct based billing and settlement feature. It explains how to create templates and different types of constructs, such as invoice construct, invoice and settlement construct, and settlement construct. It also explains how to view the billing and settlement hierarchy of a person or account.
Chapter 15	Trial Billing	Explains how to generate trial bills before the actual bill is generated for an account. It also explains how to view the trial bills in the system.

Chapter Number	Chapter Name	Chapter Description
Chapter 16	Bill Tolerance	Explains how to define the tolerance limit for the bill amount. It also describes how the system behaves when the difference between the previous and current bill amount exceeds the positive or negative tolerance limit.
Chapter 17	GL Account Validation	Explains how to enable the static or dynamic GL account validation feature.
Chapter 18	Upload Validated Adjustment Data	Explains how to validate and upload an adjustment data file and create adjustments through an adjustment upload request.
Chapter 19	Foreign Exchange Gain Loss	Explains how the system calculates the foreign exchange gain loss on the payment and adjustment financial transactions.
Chapter 20	Payment Request	Explains how to create or transfer payments through a payment request.
Chapter 21	Account Receivable Central	Explains how to use the Account Receivable Central screen to search for a bill which you need to offset against another bill. It explains how to perform single, mass, and cross currency offset against one or more bills. It also enables you to create a hold request, refund request, write off request, and dispute request through this screen.
Chapter 22	Offset Request	Explains how to offset the bill's outstanding amount against one or more bills through an offset request. It explains how to create the offset request types and offset requests in the system.
Chapter 23	Funding Request	Describes how to change the automatic payment amount through the funding process. It explains how to create the funding request types and funding requests in the system.
Chapter 24	Refund/Write Off Request	Describes how to refund a payment or credit bill or bill line item and write off a debit bill or bill line item through a refund or write off request, respectively. It explains how to create the refund or write off request types and refund or write off requests in the system.
Chapter 25	Hold Request	Describes how to hold some processes and/or bills at the account or person level for a time period through a hold request. It explains how to create the hold request types and hold requests in the system.
Chapter 26	Delinquency Central	Explains how to track the overdue processes of a delinquent account through the Delinquency Central screen. It also explains how to create a hold request, payment arrangement, and promise to pay for a delinquent account from this screen.

Chapter Number	Chapter Name	Chapter Description
Chapter 27	Upload Request	Explains how to do the following through an upload request: <ul style="list-style-type: none"> • Update bill cycle of accounts • Update contract riders in contracts • Create hold requests, refund requests, write off requests, or billable charges • Reinstate the policies • Create sort records for bill groups • Create derivation and pricing parameters for bill groups
Chapter 28	General Ledger (GL) Accounting Template	Describes how to override the distribution code used for creating FT GL entries using the GL Accounting Template feature. It explains how to create the GL accounting templates for each process and sub processes combination.
Chapter 29	Accrual	Describes how to calculate, create, and reverse accrual for accounts. It explains how to create the accrual cycles, accrual types, and accruals for the accounts in the system.
Chapter 30	Payment Agreement Request	Describes how to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. It explains how to create the payment agreement request types and payment agreement requests in the system.
Chapter 31	Dispute Request	Describes how to track and close a dispute against a particular bill, bill segment, and/or adjustment through a dispute request. It explains how to create the dispute request types and dispute requests in the system.
Chapter 32	Earning Credit Rate	Explains how to create the financial transaction distribution (ECR) object when the adjustment and/or bill segment financial transaction created against an ECR contract is frozen. It also explains how to distribute the credit or debit amount on the financial transaction distribution object to different accounts based on the distribution hierarchy.
Chapter 33	Deferred Revenue Recognition	Describes how to recognize the deferred revenue in the system. It explains how to create a deferred revenue recognition template for each distribution code and contract type combination. It also explains how to generate the schedule for a deferred revenue recognition. In addition, it explains how to edit the deferred revenue recognition schedule.
Chapter 34	Product Lifecycle Management	Describes the entire lifecycle of a product from inception to service and then to the retirement. It explains how to create various types of products, such as standard and packaged products. It explains how to create a product service, product, and product versions in the system. It also explains how to enroll an account for different types of products.
Chapter 35	Subscription Billing	Describes the service based billing wherein the customers pay a subscription price to have access to a product or service. It explains how to create the subscription types and subscriptions on the accounts.

Chapter Number	Chapter Name	Chapter Description
Chapter 36	Mass Pricing Update	Describes how to update multiple price assignments of a person, account, price list, or product at the same time. It explains how to increase or decrease the rate in a price assignment or forcibly end date a price assignment through a mass pricing update request. It also explains how to create the mass pricing update request types and mass pricing update requests in the system.
Chapter 37	Price Item, Parameter, and SQI Upload	Describes how to upload the price item, parameter, and SQI files through the File Upload Interface utility. It explains how information should be structured while uploading the price item, parameter, and SQI files in the XML or CSV format. It also explains how to define different file request types for adding or editing the price items, parameters, and SQIs in different formats.
Chapter 38	Product and Product Version Upload	Describes how to upload the product and product version files through the File Upload Interface utility. It explains how information should be structured while uploading the product and product version files in the XML or CSV format. It also explains how to define different file request types for adding or editing the products and product versions in different formats.
Chapter 39	Price List and Price Item Pricing Upload	Describes how to upload the price list and price assignment files through the File Upload Interface utility. It explains how information should be structured while uploading the price list and price assignment files in the XML or CSV format. It also explains how to define different file request types for adding or editing the price lists and price assignments in different formats.
Appendix A	Most Commonly Used Tasks	Lists and describes some of the common tasks that you may perform while using the application.
Appendix B	Administration	Describes how to create UI maps and set various feature configurations in the system.

Conventions

The following conventions are used across this document:

Convention	Meaning
boldface	Boldface indicates graphical user interface elements associated with an action, or terms defined in the text.
<i>italic</i>	Italic indicates a document or book title.
Monospace	Monospace indicates information that an end-user needs to enter in the application.

Chapter 1

Customer 360° View

Topics:

- [Customer 360° View](#)
- [Customer 360° Information](#)
- [Bill Information](#)

Oracle Revenue Management and Billing provides you with the ability to quickly view in-depth information about the person by aggregating data from the application and presenting the same on a screen named **Customer 360° View**. This data can then be easily used for analysis. You can use the person or account details to view the 360° information of the person, such as:

- Basic details, characteristics, linked accounts, hierarchy, and the customer contacts of a person
- Basic details, characteristics, account persons list, automatic payment options, billing history, payment history, dispute details, hold details, and overdue processes details of the person's account
- Basic details of the bill, adjustments which are swept onto the bill, activities (such as, payment, offset, refund, or write off) through which the bill is settled, high level summary and details of the bill segments included the bill, active hold requests due to which the bill is kept on hold, offset requests through which the bill is offset against another bill, and refund and write off requests through which the bill or its bill segment is either refunded or written off.

In other words, this feature allows you to drill down to see or act on all current and historical revenue management and billing details. This allows you to professionally and efficiently handle customer inquiries and complaints at the first point of contact, raising your customer service from previously unattainable levels and reducing the associated time and cost.

Customer 360° View

The **Customer 360° View** screen allows you to search for a person and account using various search criteria. You can then view 360° information of the person and the person's account, and vice-versa. By default, whenever you login to the application, the **Customer 360° View** screen appears. This screen consists of the following zone:

- [360° Search](#) on page 48

360° Search

The **360° Search** zone allows you to search a person and account using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a person or account. The valid values are: <ul style="list-style-type: none"> • Account • Person 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search persons or accounts which belong to a particular division.	Yes (Conditional)
	Note: This field appears only when you select the Person or Account option from the Search By list.	
Customer Class	Used to search accounts which belongs to a particular customer class.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Person Name	Used to search a particular person. If you specify the person name while searching for an account, the system searches all accounts where the person is the main customer.	No
	Note: If you are searching for an account, this field appears only when you click the Advanced Search link available in the right side of the 360° Search zone.	
Person ID	Used to search a particular person.	No
	Note: This field appears only when you select the Person option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person.	Yes (Conditional)
	Note: If you search for a person information using the Account option from the Search By then, this field appears only when you click the Advanced Search link available in the right side of the 360° Search zone.	Note: If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search a person with a particular identifier.	Yes (Conditional)
	Note: If you search for a person information using the Account option from the Search By then, this field appears only when you click the Advanced Search link available in the right side of the 360° Search zone.	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Person Type	Used to search persons of a particular type.	No
	Note: This field appears only when you select the Person option from the Search By list and click the Advanced Search link available in the right side of the 360° Search zone.	
Segment	Used to search a person with a particular segment.	No
	Note: This field appears only when you select the Person option from the Search By list and click the Advanced Search link available in the right side of the 360° Search zone.	
Prospect	Used to indicates whether the person is a prospective customer or not. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears only when you select the Person option from the Search By list and click the Advanced Search link available in the right side of the 360° Search zone.	

Field Name	Field Description	Mandatory (Yes or No)
Address	Used to search persons with a particular address or accounts' whose main customer has a particular address.	No
	Note: This field appears only when you select the Person or Account option from the Search By list and click the Advanced Search link available in the right side of the 360° Search zone.	
City	Used to search persons who belong to a particular city or accounts' whose main customer belong to a particular city.	No
	Note: This field appears only when you select the Person or Account option from the Search By list and click the Advanced Search link available in the right side of the 360° Search zone.	
Phone Number	Used to search a person with a particular phone number or accounts' whose main customer has a particular phone number.	No
	Note: This field appears only when you select the Person or Account option from the Search By list and click the Advanced Search link available in the right side of the 360° Search zone.	
Account ID	Used to search a particular account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to search an account with a particular identifier.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Account Category	Used to search accounts which belongs to a particular category. The valid values are: <ul style="list-style-type: none"> • Invoice Account • Settlement Account • Usage Account 	No
Product	Used to search a particular product. Note: This field appears only when you select the Account option from the Search By list The Search () icon appears corresponding to this field. On clicking the Search icon, the Product Search window appears.	No
Characteristic Type	Used to search persons, accounts or policies with a particular type of characteristic. Note: This field appears only when you click the Advanced Search link available in the right side of the 360° Search zone.	No
Characteristic Value	Used to search persons, accounts or policies with a particular characteristic. Note: This field appears only when you click the Advanced Search link available in the right side of the 360° Search zone. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: If you specify the characteristic type as a search criteria, you have to enter the characteristics value.

Note:

You must specify at least one search criterion while searching for a person or account. One more search criterion is required when you are searching for a person or account using the division and/or customer class.

If you have specified any other search criterion along with the person ID or account ID, the system ignores the additional search criterion and searches using the person ID or account ID respectively.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.</p> <p>This column appears only when you select the Person option from the Search By list.</p>
Person Name	Displays the name of the person.
	<p>Note: This column appears only when you select the Person option from the Search By list.</p>
Primary Person Identifier Type	Indicates the primary identifier type associated with the person.
	<p>Note: This column appears only when you select the Person option from the Search By list.</p>
Primary Person Identifier	Displays the primary person identifier.
	<p>Note: This column appears only when you select the Person option from the Search By list.</p>
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p> <p>This column appears only when you select the Account option from the Search By list.</p>
Division	Indicates the division to which the account belongs.
Customer Class	Indicates the customer class to which the account belongs.
	<p>Note: This column appears only when you select the Account option from the Search By list.</p>
Primary Account Identifier Type	Indicates the primary identifier type associated with the account.
	<p>Note: This column appears only when you select the Account option from the Search By list.</p>
Account Identifier	Displays the primary account identifier.
	<p>Note: This column appears only when you select the Account option from the Search By list.</p>

Column Name	Column Description
Main Customer	Displays the name of the customer to which the account belongs.
	Note: This column appears only when you select the Account option from the Search By list.

Note: You can view the 360° information of the person or account by clicking the **View** () icon corresponding to the record in the **Search Results** section.

Searching for a Person

Prerequisites

To search for a person, you should have:

- Divisions, customer classes, person types, and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)

Procedure

To search for a person:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Customer 360° View**.
The **Customer 360° View** screen appears.
3. Select the **Person** option from the **Search By** list to indicate that you want to search for a person.
4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for a person. One more search criterion is required when you are searching for a person using the division .

You must specify the division when you are searching for a person using city.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the person using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. In this screen, you can only use the ‘%’ wildcard character in the **Person Name** and **Address** fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

Searching for an Account**Prerequisites**

To search for an account, you should have:

- Divisions, customer classes, and account identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

Procedure

To search for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Customer 360° View**.
The **Customer 360° View** screen appears.
3. Select the **Account** option from the **Search By** list to indicate that you want to search for an account.
4. Enter the required search criteria in the **360° Search** zone.

Note:

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class.

If you have specified any other search criterion along with the account ID, the system ignores the additional search criterion and searches for the account using the account ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. In this screen, you can only use the '%' wildcard character in the **Person Name** and **Address** fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

Person Information

The **Person Information** zone displays information about the person. It contains the following sections:

- **Main** - Displays the basic details of the person. It contains the following fields:

Field Name	Field Description
Person Information	Displays information about the person. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the person.
Person Type	Indicates the type of the person.
Date of Birth	Displays the date when the person was born. Note: This field appears only when the respective data is available for the person.

- **Person Identifiers** - Lists various types of identification associated with the person. It contains the following columns:

Column Name	Column Description
Person Identifier Type	Indicates the person identifier type.
Person Identifier	Displays the value of the person identifier type.

- **Contact Information** - Displays the contact details of the person. It contains the following fields:

Field Name	Field Description
Country	Indicates the country where the person is located.
Address 1	Displays the first line of the person's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the person's address. It may contain details, such as street name.
Address 3	Displays the third line of the person's address. It may contain the landmark details.
Address 4	Displays the fourth line of the person's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the person resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
City	Displays the city where the person is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the person is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.
Email ID	Displays the e-mail ID of the person.

Note: The above mentioned fields appear in the **Contact Information** section only when the respective data is available for the person.

- **Deal Information** - Displays the deal details of the person received from the external system. It contains the following columns:

Column Name	Column Description
Deal ID	Displays the deal ID. This is an identifier generated in the Deal Management system (such as, Oracle Revenue Management and Billing Analytics (ORMBA)).
Relationship Manager	Indicates the professional who is working to improve the relationship with the person with respect to the deal.

Column Name	Column Description
Prospect	Indicates whether the person is a prospective customer or not. The valid values are Yes or No .
Segment	Displays the segment to which the person belongs.

- **Phone Details** - Lists the phone details of the person. It contains the following columns:

Column Name	Column Description
Phone Type	Indicates the type of the phone number.
Phone Number	Displays the phone number of the person.

Person Characteristics

The **Person Characteristics** zone lists the characteristics defined for the person. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the person.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column only when the type of characteristic value is set to Predefined Value or Foreign Key Value .

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Note: This zone lists the person characteristics in the descending order of the effective date.

Linked Accounts

The **Linked Accounts** zone displays all the accounts of a person. It contains the following field:

Field Name	Field Description
Search By	Used to indicate the type of search to be performed. The valid values are: <ul style="list-style-type: none"> • Linked Accounts

In addition to the above field, this section contains the following columns:

Column Name	Column Description
Sr. No.	Displays the sequential number of the data.
360° Degree Information	On clicking the 360 Degree Information () icon, the Accounts tab appears with the details of the respective account.

Column Name	Column Description
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Primary Account Identifier	Displays the primary account identifier type of the account.
Division	Displays the division to which the account belongs.

Person Legal Hierarchy

The **Person Legal Hierarchy** zone lists the following in a tree view:

- Information string of accounts where the person is the main customer
- Information string of the parent persons
- Information strings of the child persons

Displays information about the person, account, child person, and parent person in a tree view. Each node in the tree has a link. The following table indicates the information string that appears in various scenarios:

If...	Then...
The person is the main customer of an account	The account information string appears. It has a link. On clicking the link, the information of an account appears in the Account screen.
The person has a child	The child person information string appears. It has a link. On clicking the link, the information of the child person appears in the Person screen. Note: The child person information string does not appear only if the end date of the child person is earlier than the system date.
The person has a parent person	The person information string appears. It has a link. On clicking the link, the information of the person appears in the Person screen.

You will see the **Get More...** button in the bottom of the zone only when the person hierarchy list exceeds the 25 records.

Customer Contacts

The **Customer Contacts** zone displays information about how and when the person was contacted. It contains the following columns:

Column Name	Column Description
Customer Contact Information	Displays information about the customer contact. Note: It has a link. On clicking the link, the Customer Contact screen appears where you can view the details of the respective customer contact.

Column Name	Column Description
Contact Date	Displays the date when the person was contacted.
Contact Type	Indicates how the person was contacted.
Comments	Displays additional information about the customer contact.

You can filter the list using various search criteria (such as, **On or Before Contact Date**, **Contact Class**, **Contact Type**, and so on) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Enrolled Products

The **Enrolled Products** zone displays information about products which are enrolled by a person. It contains the following fields:

Column Name	Column Description
Product	Displays the name of the product.
	Note: It has a link. On clicking the link, the Product screen appears with the details of the respective product.
Product Type	Displays the type of the product.
Product Version	Displays the version of the enrolled product.
	Note: It has a link. On clicking the link, the Product Version screen appears where you can view the details of the respective product version.

Account Information

The **Account Information** zone displays the details of the account. It contains the following sections:

- **Main** – Displays the basic information about the account. It contains the following fields:

Field Name	Field Description
Account Information	Displays information about the account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the account.
Division	Displays the division to which the account belongs.

- **Accounting Information** – Displays various accounting related information. It contains the following columns:

Field Name	Field Description
Eligible for Accrual	Displays whether an account is eligible for accrual or not. The valid values are Yes or No .
Account on Dispute	Displays whether an account is on dispute or not. The valid values are Yes or No .
Overdue Process for Account	Displays whether an account is having overdue process or not. The valid values are Yes or No .
ECR Offset Eligibility	Displays the ECR offset eligibility.

Field Name	Field Description
ECR Expiration Cycle	Displays the ECR expiration cycle.
Accrual Cycle	Displays the description of an accrual cycle which is set for an account.
Account on Hold	Displays whether an account is in hold or not. The valid values are Yes or No .
ECR Eligibility	Displays whether an account is eligible for ECR offset or not. The valid values are Yes or No .
ECR Offset Distribution Type	Displays the ECR offset distribution type.
ECR Account Distribution Priority	Displays the ECR account distribution priority.

- **Contact Information** – Displays the contact details of the account’s main customer. It contains the following fields:

Field Name	Field Description
Address Source	Indicates which address should be used to route the account’s bills and/or quotes via the postal service.
Country	Indicates the country where the main customer is located.
Address 1	Displays the first line of the main customer’s address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the main customer’s address. It may contain details, such as street name.
Address 3	Displays the third line of the main customer’s address. It may contain the landmark details.
Address 4	Displays the fourth line of the main customer’s address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.
In City Limit	Indicates whether the main customer resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
City	Displays the city where the main customer is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the main customer is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.

Note: Only **Address Source** field appears in the **Contact Information** section when the address source of the main customer is set to **Account Override**.

- **Account Identifiers** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

- **Billing Information** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Bill Cycle	Displays the bill cycle of the account.
Last Bill	Displays the bill information string for the last bill of an account. It has a link. On clicking the link, the information of bill appears in the Bill screen. Note: This field appears only when last bill information exists for the account.
Previous Bill	Displays the bill information string for the bill prior to the last bill of an account. It has a link. On clicking the link, the information of bill appears in the Bill screen. Note: This field appears only when previous bill information exists for the account.
Auto Pay	Displays whether auto pay exists on an account or not. The valid values are Yes or No .
Next Bill Date	Displays the next date on which bill is scheduled to be generated for an account. Note: This field appears only when next payment date exists for the account.
Pending Bill	Displays the bill information string for the pending bill of an account. It has a link. On clicking the link, the information of bill appears in the Bill screen. Note: This field appears only when pending bill information exists for the account.

- **Financial Details** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Current Balance	Displays the current balance of the account.
Payoff Balance	Displays the payoff balance for the account.
Overdue Amount	Displays the overdue amount of the account.
Dispute Amount	Displays the dispute amount of the account.
Last Payment Information	Displays the information string for the last payment on the account. It has a link. On clicking the link, the information of payment event appears in the Payment Event screen. Note: This field appears only when last payment exists for the account.

Account Characteristics

The **Account Characteristics** zone lists the characteristics defined for the account. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	Note: The data appears in this column only when the type of characteristic value is set to Predefined Value or Foreign Key Value .

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Account Persons

The **Account Persons** zone lists all the linked person information of the account. It contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the person.
Relationship Type	Indicates how the person is related to the account.
Main Customer	Displays whether the person is main customer or not. The valid values are Yes or No .
Financially Responsible	Displays whether the person is financially responsible or not. The valid values are Yes or No .

Note: You can view the 360° information of the person by clicking the **360 Degree Information** () icon corresponding to the record.

Enrolled Products

The **Enrolled Products** zone displays information about products which are enrolled by a person. It contains the following columns:

Column Name	Column Description
Product	Displays information about the product details.
	Note: It has a link. On clicking the link, the screen appears with the details of the respective product.

Column Name	Column Description
Product Version	Displays the version of the enrolled product.
	Note: It has a link. On clicking the link, the screen appears with the details of the respective product version.
Start Date	Displays the start date of the product enrollment.
End Date	Displays the end date of the product enrollment.
Product Priority	Displays the product priority.
Product Type	Indicates the type of product.

Auto Pay Details

The **Auto Pay Details** zone lists the automatic payment options available for the account. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the automatic payment option is effective.
End Date	Displays the date till when the automatic payment option is effective.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit card or credit card.
Last Four Digits of Card	Displays the last four digits of the debit or credit card.
	Note: The data appears in this column only when the external type of the auto pay source code's tender type is set to Credit Card Withdrawal.
Percentage	Indicates the percentage of automatic payment that must be made through the automatic payment option.
Priority	Indicates the order in which the automatic payment option should be considered for the effective date range.

Timeline

The **Timeline** zone displays the following information in a graphical presentation:

- Number of regular bills created for the account in a particular month
- Number of adhoc bills created for the account in a particular month
- Number of payments created for the account in a particular month
- Number of dispute requests created for the account in a particular month
- Number of active hold requests created for the account in a particular month

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Month	Used to indicate the month till when you want to display the above stated information.	Yes
	Note: By default, the current month appears in this field.	

Field Name	Field Description	Mandatory (Yes or No)
Year	Used to indicate the year till when you want to display the above stated information.	Yes
	Note: By default, the current year appears in this field.	

Depending on the month and year specified in the above fields, the data for the respective month and previous 11 months is presented in the grid. For example, if the Month and Year is set to April 2017, then the data for the May 2016, Jun 2016, Jul 2016, Aug 2016, Sep 2016, Oct 2016, Nov 2016, Dec 2016, Jan 2017, Feb 2017, Mar 2017, and Apr 2017 appears in the grid. To view the data for a different period, you must accordingly change the month and year and then click **Search** (🔍) icon.

You can use the **Previous Year** (⏪), **Previous Month** (⏴), **Next Month** (⏵), and **Next Year** (⏩) icons to change the values specified in the above mentioned fields.

The following table indicates the data and the manner in which the data is presented in the grid:

Row Name	Row Description						
Regular Bills	<p>A small icon appears for each regular bill created for the account in the respective month. For example, if three regular bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month on which the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1"> <thead> <tr> <th>If the bill is...</th> <th>Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td>Fully Matched</td> <td>Green</td> </tr> <tr> <td>Unmatched</td> <td>Red</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding bill information appears at the bottom of the zone. It has a link. On clicking the link, the Bill screen appears where you can view the details of the bill.</p> <p>Note:</p> <p>If you want to display the day of the due date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to D. However, if you want to display the day of the bill date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to B.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-OI-EVT algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red
If the bill is...	Then the icon appears in...						
Fully Matched	Green						
Unmatched	Red						

Row Name	Row Description												
Adhoc Bills	<p>A small icon appears for each adhoc bill created for the account in the respective month. For example, if three adhoc bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month on which the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table border="1" data-bbox="467 485 1463 638"> <thead> <tr> <th data-bbox="467 485 964 533">If the bill is...</th> <th data-bbox="969 485 1463 533">Then the icon appears in...</th> </tr> </thead> <tbody> <tr> <td data-bbox="467 539 964 588">Fully Matched</td> <td data-bbox="969 539 1463 588">Green</td> </tr> <tr> <td data-bbox="467 594 964 638">Unmatched</td> <td data-bbox="969 594 1463 638">Red</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding bill information appears at the bottom of the zone. It has a link. On clicking the link, the Bill screen appears where you can view the details of the bill.</p> <p>Note:</p> <p>If you want to display the day of the due date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to D. However, if you want to display the day of the bill date on the icon, you must set the Date To Use (D-Due Date, B-Bill Date) parameter in the C1-TL-OI-EVT algorithm to B.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the C1-TL-OI-EVT algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red						
If the bill is...	Then the icon appears in...												
Fully Matched	Green												
Unmatched	Red												
Payments	<p>A small icon appears for each payment created for the account in the respective month. For example, if one payment is created for the account in the month of Aug 2016, three payments are created in the month of Dec 2016, and four payments are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month on which the payment was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the payment:</p> <table border="1" data-bbox="467 1297 1463 1602"> <thead> <tr> <th data-bbox="467 1297 964 1346">Status</th> <th data-bbox="969 1297 1463 1346">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="467 1352 964 1400">Frozen</td> <td data-bbox="969 1352 1463 1400">Green</td> </tr> <tr> <td data-bbox="467 1407 964 1455">Canceled</td> <td data-bbox="969 1407 1463 1455">Red</td> </tr> <tr> <td data-bbox="467 1461 964 1509">Freezable</td> <td data-bbox="969 1461 1463 1509">Blue</td> </tr> <tr> <td data-bbox="467 1516 964 1564">Error</td> <td data-bbox="969 1516 1463 1564">Red</td> </tr> <tr> <td data-bbox="467 1570 964 1602">Incomplete</td> <td data-bbox="969 1570 1463 1602">Yellow</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding payment information appears at the bottom of the zone. It has a link. On clicking the link, the Payment screen appears where you can view the details of the payment.</p> <p>Note: You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the C1-TL-PY-EVT algorithm.</p>	Status	Color	Frozen	Green	Canceled	Red	Freezable	Blue	Error	Red	Incomplete	Yellow
Status	Color												
Frozen	Green												
Canceled	Red												
Freezable	Blue												
Error	Red												
Incomplete	Yellow												

Row Name	Row Description												
Dispute Requests	<p>A small icon appears for each dispute request created for the account in the respective month. For example, if one dispute request is created for the account in the month of Aug 2016, three dispute requests are created in the month of Dec 2016, and four dispute request are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month on which the dispute request was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the dispute request:</p> <table border="1" data-bbox="467 453 1463 756"> <thead> <tr> <th data-bbox="475 459 964 504">Status</th> <th data-bbox="969 459 1455 504">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 510 964 554">Active</td> <td data-bbox="969 510 1455 554">Green</td> </tr> <tr> <td data-bbox="475 560 964 604">Approved</td> <td data-bbox="969 560 1455 604">Green</td> </tr> <tr> <td data-bbox="475 611 964 655">Rejected</td> <td data-bbox="969 611 1455 655">Red</td> </tr> <tr> <td data-bbox="475 661 964 705">Approval In Progress</td> <td data-bbox="969 661 1455 705">Orange</td> </tr> <tr> <td data-bbox="475 711 964 756">Draft</td> <td data-bbox="969 711 1455 756">Orange</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding dispute information appears at the bottom of the zone. It has a link. On clicking the link, the Dispute Request screen appears where you can view the details of the dispute.</p> <p>Note: You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the C1-TL-DP-EVT algorithm.</p>	Status	Color	Active	Green	Approved	Green	Rejected	Red	Approval In Progress	Orange	Draft	Orange
Status	Color												
Active	Green												
Approved	Green												
Rejected	Red												
Approval In Progress	Orange												
Draft	Orange												
Processes on Hold	<p>A small icon appears for each active hold request for the account in the respective month depending upon the number of processes on hold. For example, if there is one active hold request having two processes on hold for the account in the month of Aug 2016 and two active hold requests as H1 and H2, having one process on hold for H1 hold request and four processes on hold for H2 hold request for the month of Dec 2016, then two icon appears in the Aug 2016 column and five icons appear in the Dec 2016 column. A text indicating the day of the month on which an entity was kept on hold appears on the icon. The following table indicates the color in which the icon appears depending on the status of the hold request:</p> <table border="1" data-bbox="467 1272 1463 1373"> <thead> <tr> <th data-bbox="475 1278 964 1323">Status</th> <th data-bbox="969 1278 1455 1323">Color</th> </tr> </thead> <tbody> <tr> <td data-bbox="475 1329 964 1373">Active</td> <td data-bbox="969 1329 1455 1373">Green</td> </tr> </tbody> </table> <p>On clicking the icon, the corresponding hold information appears at the bottom of the zone. It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the dispute.</p> <p>Note: You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the C1-TL-HR-EVT algorithm.</p>	Status	Color	Active	Green								
Status	Color												
Active	Green												

Billing History

The **Billing History** zone lists all the bill information of the account. It contains the following columns:

Column Name	Column Description
Bill Information	Displays information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Bill Information screen appears where you can view the details of the bill.
Bill Amount	Displays the bill amount.
Unpaid Amount	Displays the unpaid amount of the bill.
Days Past Due	Displays the number of days past after the due date.
Billing Method	Displays the method used for generating bill.

You can filter the list using the **On or before Bill Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Note: You can view additional information about the bill by clicking the **View** () icon corresponding to the bill in the **Billing History** zone.

Related Topics

How to view the details of a bill	Viewing the Bill Information on page 85

Payment History

The **Payment History** zone lists all the payment information of the account. It contains the following columns:

Column Name	Column Description
Payment Event Information	Displays information about the payment event. Note: It has a link. On clicking the link, the Payment Event screen appears where you can view the details of the payment.
Payment Date	Displays the date when the payment was made.
Payment Amount	Displays the amount paid through the tender.
Payment Status	Displays the current status of payment. The valid values are: <ul style="list-style-type: none"> • Canceled • Error • Freezable • Frozen • Incomplete
Tender Source	Displays the tender source through which the payment was remitted.

Dispute Details

The **Dispute Details** zone lists the dispute requests for the account. It contains the following columns:

Column Name	Column Description
Dispute Request Information	Displays information about the dispute request.
	Note: It has a link. On clicking the link, the Dispute Request screen appears where you can view the details of the dispute request.
Dispute Amount	Displays the dispute amount.
Status	Indicates the status of the dispute request.

Hold Details

The **Hold Details** zone lists the active hold requests due to which the account is kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request.
	Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the hold request.
Status	Indicates the status of the hold request.
Entity	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> • Person • Account • Bill
Hold Reason	Displays the hold reason.
Hold Process	Indicates the process that is kept on hold for the entity.
Start Date	Displays the date from when the entity is kept on hold for the process.
End Date	Displays the date till when the entity is kept on hold for the process.

Overdue Process Details

The **Overdue Process Details** zone lists the overdue processes of the account. It contains the following columns:

Column Name	Column Description
Overdue Process Information	Displays information about the overdue process. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Overdue Process screen appears where you can view the details of the overdue process.
Overdue Amount	Displays the overdue amount for the account.
Number of Overdue Bills	Displays the total number of bills that are overdue.

Customer 360° Information - Product and Pricing

The **Pricing** tab displays details of price list and price list price items, effective price assignments for account, effective price assignments for person. It consists of the following zones:

- [Product](#) on page 75
- [Price List Assignments](#) on page 76
- [Price List Price Items](#) on page 76
- [Effective Price Assignments for Account](#) on page 78
- [Effective Price Assignments for Person](#) on page 81
- [Associated Price Items](#) on page 75

Product

The **Product** zone displays information about products which are enrolled by a person. It contains the following fields:

Field Name	Field Description
Product	Displays information about the product details. Note: It has a link. On clicking the link, the Product screen appears where you can view the details of the respective product.

Note: By default, the **Products** zone is displayed with the **Product Name** and **Product Version**. It also displays various **Product Service Price Items** that form a part of the product. To view the price items that are associated with the product, click the **Broadcast**  icon, corresponding to the product whose associated price items you want to view.

Associated Price Items

The **Associated Price Items** zone displays information about the price items associated with the product. It contains the following columns:

Field Name	Field Description
Sequence No.	Displays the sequence number.
Pricing Information	Displays information about the pricing information of the product. Note: It has a link. On clicking the link, the Price Item Pricing screen appears with the details of the respective product.
Price Item	Displays the price item.

Price List Assignments

The **Price List Assignments** zone allows you to view and filter price lists that are currently assigned to the account or person. You will not find any records in this zone if the account does not have any price lists assigned to it. This zone contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list which is assigned to the account or person.
	Note: It has a link. On clicking the link, the Price List screen appears with the details of the respective price list.
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed • Account Price List • Account Inherited Price List • Customer Agreed • Customer Price List • Default Price List • Global Price List • Customer Inherited Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List • Product Default Price List

On clicking the **Broadcast**  icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. This zone contains the following columns:

Column Name	Column Description
Pricing Information	Displays information about the price item pricing.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the price item pricing.

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Pricing Status	Indicates the status of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Draft • Active • Inactive • Proposed • Rejected • Template
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

By default, the **Price List Price Items** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears only when you click the **Broadcast** () icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using the **Price Item**, **Effective Start Date** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

How to view price items assigned to an account	Viewing Price Items Assigned to an Account on page 58

Effective Price Assignments for Account

The **Effective Price Assignments for Account** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the account either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the account belongs. If required, you can filter effective price assignments using various search criteria.

Note:

The **Effective Price Assignments for Account** zone appears when the **Customer 360° Information** is searched for account.

If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Indicates the account whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	Note: By default, this field is set to the system date.	
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Draft • Active • Pending For Approval • Proposed 	No
	Note: By default, the Active option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Product-specific default price list defined for the division • Default price list defined for the division • Global price list • No – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Product-specific default price list defined for the division • Default price list defined for the division • Global price list <p>Note: By default, the No option is selected.</p>	No
Price Item	<p>Used to search price assignments of a particular price item or price item bundle.</p> <p>Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.</p>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string consisting of pricing information and pricing ID for the account.</p> <p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears with the details of the respective price item pricing.</p>
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	<p>Used to specify multiple parameters based on which you want to determine the pricing utilization.</p> <p>Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>

Column Name	Column Description
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> • Account Agreed • Account Price List • Account Inherited Price List • Customer Agreed • Customer Price List • Default Price List • Global Price List • Customer Inherited Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List • Product Default Price List
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
View Rate	<p>On Clicking the View Rate () icon, the Effective Pricing Information screen appears where you can view the details persisted rate.</p> <p>Note: When the value of Price Item Type is defined as Rate, only then the icon would be available.</p>
Edit	<p>On clicking the Edit () icon, the Price Item Pricing screen appears where you can edit the details of the price item pricing.</p> <p>Note: The Edit icon appears only when the assignment level is Account Agreed.</p>

Column Name	Column Description
Override	<p>On clicking the Override  icon, the Price Item Pricing screen appears where you can override the price item pricing.</p> <p>Note:</p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to Y, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to N.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

Note: The number of records that can be displayed in the **Search Results** section is controlled via the **C1_PR_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1_PR_REC** feature configuration. For more information, refer to [Setting the C1_PR_REC Feature Configuration](#) on page 2183.

Effective Price Assignments for Person

The **Effective Price Assignments for Person** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the person either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the person belongs. If required, you can filter effective price assignments using various search criteria.

Note:

The **Effective Price Assignments for Person** zone appears when the **Customer 360° Information** is searched for person.

If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Indicates the person whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	Note: By default, this field is set to the current date.	
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Draft • Active • Pending For Approval • Proposed 	No
	Note: By default, the Active option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to indicate whether you want to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Default price list defined for the division • Global price list • No – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Default price list defined for the division • Global price list <p>Note: By default, the No option is selected.</p>	No
Price Item	<p>Used to search price assignments of a particular price item or price item bundle.</p> <p>Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.</p>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	<p>Displays the concatenated string consisting of pricing information and pricing ID for the person.</p> <p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears with the details of the respective price item pricing.</p>

Bill Information

The **Bill Information** screen allows you to view:

- Basic details about the bill
- Settlement activities, such as payment, offset, refund, or write off through which the bill is settled
- Active hold requests due to which the bill is kept on hold
- Offset requests through which the bill is offset against another bill
- Bill line items of the bill
- Garnishment adjustments of the bill
- Refund and write off requests through which the bill or its bill segment is either refunded or written off
- Dispute requests due to which bill is kept on hold

It consists of the following zones:

- [Bill Information](#) on page 87
- [Settlement Activities](#) on page 88
- [Hold Details](#) on page 88
- [Offset Details](#) on page 89
- [Bill Line Items](#) on page 89
- [Garnishment Details](#) on page 90
- [Refund and Write Off Details](#) on page 90
- [Dispute Details](#)

Bill Information

The **Bill Information** zone displays the details of the bill. It contains the following section:

- **Main** — Displays the basic information about the bill. It contains the following fields:

Field Name	Field Description
Bill Information	Displays information about the bill. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Bill screen appears where you can view the details of the bill.
Account Information	Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the account.

Settlement Activities

You may settle a bill by making a payment, offsetting a bill, refunding a bill, or by writing off a bill. The **Settlement Activities** zone lists the activities related to the bill settlement. It contains the following columns:

Column Name	Column Description
Activity Date	Displays the date when the settlement activity occurred.
Activity Type	Indicates the type of the activity. The valid values are: <ul style="list-style-type: none"> • Payment • Offset • Refund • Write Off
Amount	Indicates the amount settled through the activity.
Related Object Information	Displays additional information about the activity.
Related Object ID	Displays the payment, offset request, refund request, or write off request ID depending on the type of the activity.
	Note: It has a link. On clicking the link, the Payment, Offset Request, Refund Request, or Write Off Request screen appears where you can view the details of the respective activity.

Hold Details

The **Hold Details** zone lists the active hold requests due to which the bill is kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request.
	Note: It has a link. On clicking the link, the Hold Request screen appears where you can view the details of the hold request.

Column Name	Column Description
Status	Indicates the status of the hold request.
Entity	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"> • Person • Account • Bill
Entity Information	Indicates the entity for which the hold request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <p>Note: It has a link. On clicking the link, the Person, Account, or Bill screen appears where you can view the details of the respective entity.</p>
Start Date	Displays the date from when the entity is kept on hold.
End Date	Displays the date till when the entity is kept on hold.

Offset Details

The **Offset Details** zone lists the offset requests through which the bill is offset against another bill. It contains the following columns:

Column Name	Column Description
Offset Request Information	Displays information about the offset request. <p>Note: It has a link. On clicking the link, the Offset Request screen appears where you can view the details of the offset request.</p>
Offset Amount	Indicates the amount of the bill which is offset.
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> • Automatic • Manual

Bill Line Items

The **Bill Line Items** zone lists the information about the selected bill's bill line item. It contains the following columns:

Column Name	Column Description
Bill Line Item	Displays the bill line item of the selected bills. The valid value are: <ul style="list-style-type: none"> • Bill Segment • Adjustment
Bill Line Item Information	Displays information about the bill line item. <p>Note: It has a link. On clicking the link, the Bill Segment or Adjustment screen appears with the details of respective bill line item or adjustments</p>
Amount	Displays the amount of the bill line item.

Column Name	Column Description
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the respective contract.

You can filter the list using the **Bill Segment Date From** and **To** fields available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Garnishment Details

The **Garnishment Details** zone lists the garnishment adjustments that are created against the bill. It contains the following columns:

Column Name	Column Description
Garnishment Contract ID	Displays the garnishment contract ID. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Contract screen appears where you can view the details of the contract.
Garnishment Amount	Displays the garnishment amount.

Refund and Write Off Details

The **Refund and Write Off Details** zone lists the refund and write off requests through which the bill or its bill segment is either refunded or written off. It contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request.
	Note: It has a link. On clicking the link, the Refund Request or Write Off Request screen appears depending on whether the request is for refund or write off.
Refund/Write Off Amount	Displays the total refund or write off amount.
Status	Indicates the status of the refund or write off request.
Action	Indicates whether the request is created for refund or write off. The valid values are: <ul style="list-style-type: none"> Refund Write Off
Account Information	Displays additional information about the account for which the refund or write off request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the account.

Column Name	Column Description
Created By	Indicates the user who has created the refund or write off request.

You can filter the list using the **Action** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Dispute Details

The **Dispute Details** zone lists the dispute requests for the account. It contains the following columns:

Column Name	Column Description
Dispute Request Information	Displays information about the dispute request.
	Note: It has a link. On clicking the link, the Dispute Request screen appears where you can view the details of the dispute request.
Dispute Amount	Displays the dispute amount.
Status	Indicates the status of the dispute request.

Chapter 2

Invoicing Group

Topics:

- [Manage Invoicing Groups](#)
- [Invoicing Group Maintenance — Add/Edit](#)
- [Invoicing Group Information](#)

Invoicing group allows you to combine the charges for multiple accounts onto one bill for each billing period. It consists of the following:

- **Master Account** - The group level account that controls the billing.
- **Member Accounts** - The accounts whose bills are aggregated at the group level.

The following figure is a graphical representation of an invoicing group:

You can create an invoicing group by adding member accounts to the master account. An account can be the master account in the invoicing group only when its **Invoice Group Account** characteristic type is set to **Y**. On the other hand, an account can be added as a member to the master account only when its **Invoice Group Account** characteristic type is set to **N**.

Note: You can define the Invoice Group Account characteristic for the account only when the **Invoice Group Account** option type in the **C1_ACCTINFO** feature configuration is set. If the **Invoice Group Account** option type in the **C1_ACCTINFO** feature configuration is not set, you will not be able to indicate whether the account is a master or member account. For more information, refer to [Setting the C1_ACCTINFO Feature Configuration](#) on page 2162.

There is no restriction on the number of accounts that can be added to the master account. The accounts in the invoicing group can belong to different persons and may have different currencies, but they should be from the same banking division and person hierarchy. If the member accounts have a different invoice currency from the master account, the member account's charges will be converted to the master account's currency during billing.

Balances are maintained at the master account level. Bills are added to the master account's balance, and payments are subtracted from that balance. However, the charges can be traced back to the originating member accounts. The master account cannot have charges of its own; all charges come from the member accounts. However, when an account does not belong to any master account, it is billed individually with its charges appearing on the bill.

The contracts linked at the member level are duplicated at the master level when member accounts are added to the master account. However, note that only contracts which are eligible for billing are duplicated at the master level. Once a contract is duplicated at the master level, you need to activate the contract at the master level. Otherwise, the charges will be billed to the member account instead of the master account.

Manage Invoicing Groups

The **Manage Invoicing Groups** screen allows you to search for the master and member accounts using various search criteria. Through this screen, you can navigate to the **Invoicing Group Maintenance – Add/Edit** and **Invoicing Group Information** screens.

This screen contains the following two sections:

- Search Criteria
- Search Results

Searching for a Master Account

Prerequisites

To search for a master account, you should have:

- Divisions, billing cycles, and customer classes defined in the application
- Master accounts created in the application

Procedure

To search for a master account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, click **Manage Invoicing Groups**.

The **Manage Invoicing Groups** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoicing Group Assignment Type	Used to indicate whether you want to search for a master or member account.	Yes
Account ID	Used to specify the account ID.	No
Division	Used to specify the division whose accounts you want to search.	No
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the person whose accounts you want to search.	Yes (Conditional) Note: If you specify the billing cycle or person class as a search criteria, you have to specify the person name.
Billing Cycle	Used to specify the billing cycle during which the account is billed.	No
Person Class	Used to specify the customer class of the account.	No

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter Account ID and Person Name (which are in different criteria groups), the system searches using Account ID, which appears before Person Name.

Note: You must specify at least one search criterion while searching for a master account.

3. Select **Master** from the **Invoicing Group Assignment Type** list.
4. Specify the search criteria in any of the criteria groups.
5. Click **Search**.

The master accounts that meet the search criteria and to which you have access based on the account's access group appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Account ID	Displays the master account ID. Note: It has a link. On clicking the link, the Invoicing Group Maintenance – Add/Edit screen appears where you can view the details of the respective master account.
Account Identifier Type	Displays the account identifier type of the master account.
Account Identifier	Displays the value of the account identifier type.
Account Currency	Displays the invoice currency of the master account.
Division	Displays the division to which the master account belongs.
Person Name	Displays the name of the main customer.
Customer Class	Displays the customer class of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.

Searching for a Member Account

Prerequisites

To search for a member account, you should have:

- Divisions, billing cycles, and customer classes defined in the application
- Accounts added as a member to the master accounts

Procedure

To search for a member account:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, click **Manage Invoicing Groups**.

The **Manage Invoicing Groups** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Invoicing Group Assignment Type	Used to indicate whether you want to search for a master or member account.	Yes
Account ID	Used to specify the account ID.	No
Division	Used to specify the division whose accounts you want to search.	No
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Person Name	Used to specify the person whose accounts you want to search.	Yes (Conditional) Note: If you specify the billing cycle or customer class as a search criteria, you have to specify the person name.
Billing Cycle	Used to specify the billing cycle during which the account is billed.	No
Customer Class	Used to specify the customer class of the account.	No

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter Account ID and Person Name (which are in different criteria groups), the system searches using Account ID, which appears before Person Name.

Note: You must specify at least one search criterion while searching for a member account.

3. Select **Member** from the **Invoicing Group Assignment Type** list.
4. Specify the search criteria in any of the criteria groups.
5. Click **Search**.

The member accounts that meet the search criteria and to which you have access based on the account's access group appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Account ID	Displays the member account ID. Note: It has a link. On clicking the link, the Invoicing Group Information screen appears where you can view the details of the respective member account.
Account Identifier Type	Displays the account identifier type of the member account.
Account Identifier	Displays the value of the account identifier type.
Account Currency	Displays the invoice currency of the member account. Note: If the member account has a different invoice currency from the master account, the member account's charges will be converted to the master account's currency during billing.
Division	Displays the division to which the member account belongs.
Person Name	Displays the main person of the member account.
Customer Class	Displays the customer class of the member account.
Master Account Identifier Type	Displays the primary account identifier type of the master account.
Master Account Identifier	Displays the value of the primary account identifier type.
Master Person Name	Displays the main person of the master account.
Billing Cycle	Displays the billing cycle during which the member account is billed.

Invoicing Group Maintenance — Add/Edit

The **Invoicing Group Maintenance – Add/Edit** screen allows you to view the details of the master account. It also allows you to add, edit, and remove member accounts from the master account. This screen consists of the following zones:

- [Account Information](#) on page 99
- [Member Accounts](#) on page 100
- [Edit Member Account Assignment](#) on page 100
- [Search Accounts to Add](#) on page 101
- [Add Member](#) on page 102

Account Information

The **Account Information** zone displays the details of the master account. This zone contains the following fields:

Field Name	Field Description
Invoicing Group Assignment Type	Indicates that the selected account is a master account.
Person Name	Displays the name of the main customer.
Primary Account Identifier	Displays the primary account identifier type of the master account along with its value.
Customer Class	Displays the customer class of the master account.
Account Currency	Displays the invoice currency of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.
Division	Displays the division to which the master account belongs.

Note: All fields in the **Account Information** zone are read-only.

Member Accounts

The **Member Accounts** zone lists the member accounts of the master account. This zone contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the member account.
Account Identifier	Displays the value of the primary account identifier type.
Account Currency	Displays the invoice currency of the member account. Note: During billing, the charges for the member account are calculated in this currency and then converted to the master account's currency.
Effective Start Date	Displays the date from when the charges for the member account appears on the bill of the master account.
Effective End Date	Displays the date till when the charges for the member account appears on the bill of the master account.
Person Name	Displays the name of the main customer.
Customer Class	Displays the customer class of the member account.
Billing Cycle	Displays the billing cycle during which the member account is billed. Note: If the account is removed from the master account, it will be billed during this billing cycle.

On clicking the **Broadcast**  icon corresponding to the member account, the **Edit Member Account Assignment** zone appears with the details of the respective member account.

Edit Member Account Assignment

The **Edit Member Account Assignment** zone allows you to edit the assignment details of the member account. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to modify the date from when you want the charges for the member account to appear on the bill of the master account.	Yes
	Note: You can modify the date only when it is a future date.	
Invoicing Group Assignment Type	Indicates that the account is a member account.	Not applicable
Effective End Date	Used to modify the date till when you want the charges for the member account to appear on the bill of the master account.	No
	Note: You can modify the date only when it is not a past date.	
Primary Account Identifier	Displays the primary account identifier type of the member account along with its value.	Not applicable

Note: If a bill is already generated for the master account, you cannot modify the effective start and end dates.

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Remove Member	Used to remove the member from the master account.

By default, the **Edit Member Account Assignment** zone does not appear in the **Invoicing Group Maintenance – Add/Edit** screen. It appears only when you click the **Broadcast**  icon corresponding to the member account in the **Member Accounts** zone.

How to add a member to the master account	Adding a Member to the Master Account on page 103

Adding a Member to the Master Account

Prerequisites

To add a member to the master account, you should have:

- Accounts within the same banking division and person hierarchy where the value of the **Invoice Group Account** characteristic type is set to **N**
- Accounts with active contracts

Note: You cannot add an account as a member to a master account if that account is already a member of another master during that overlapping period.

Procedure

To add a member to the master account:

1. Access the **Invoicing Group Maintenance – Add/Edit** screen.
2. In the **Search Accounts to Add** zone, click the **Broadcast**  icon corresponding to the account that you want to add to the master account.
The **Add Member** zone appears.
3. Enter the date from when you want the charges for the member account to appear on the bill of the master account in the **Effective Start Date** field.

Note: The effective start date should be earlier than or equal to the member account's contract end date.

4. Click **Save**.

The account is added to the master account. The contracts at the member level are duplicated at the master level.

Note: Once a contract is duplicated at the master level, you need to activate the contract at the master level. Otherwise, the charges will be billed to the member account instead of the master account.

Invoicing Group Information

The **Invoicing Group Information** screen allows you to view the details of the member account. It also allows you to edit and remove the member account from the master account. This screen consists of the following zones:

- [Invoicing Group Information](#) on page 106
- [Selected Member Account](#) on page 106
- [Edit Member Account Assignment](#) on page 107

Invoicing Group Information

The **Invoicing Group Information** zone displays the master account details of the member account. This zone contains the following fields:

Field Name	Field Description
Invoicing Group Assignment Type	Indicates that this zone displays information about the member's master account.
Person Name	Displays the name of the main customer.
Primary Account Identifier	Displays the primary account identifier type of the master account along with its value.
Customer Class	Displays the customer class of the master account.
Account Currency	Displays the invoice currency of the master account.
Billing Cycle	Displays the billing cycle during which the master account is billed.
Division	Displays the division to which the master account belongs.

Note: All fields in the **Invoicing Group Information** zone are read-only.

Selected Member Account

The **Selected Member Account** zone displays the details of the member account. This zone contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the member account.
Account Identifier	Displays the value of the primary account identifier type.

Column Name	Column Description
Account Currency	Displays the invoice currency of the member account.
	Note: During billing, the charges for the member account are calculated in this currency and then converted to the master account's currency.
Effective Start Date	Displays the date from when the charges for the member account appears on the bill of the master account.
Effective End Date	Displays the date till when the charges for the member account appears on the bill of the master account.
Person Name	Displays the name of the main customer.
Customer Class	Displays the customer class of the member account.
Billing Cycle	Displays the billing cycle during which the member account is billed.
	Note: If the member account is removed from the master account, it will be billed during this billing cycle.

On clicking the **Broadcast**  icon corresponding to the member account, the **Edit Member Account Assignment** zone appears with the details of the respective member account.

Edit Member Account Assignment

The **Edit Member Account Assignment** zone allows you to edit the assignment details of the member account. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to modify the date from when you want the charges for the member account to appear on the bill of the master account.	Yes
	Note: You can modify the date only when it is a future date. The effective start date should be earlier than or equal to the member account's contract end date.	
Invoicing Group Assignment Type	Indicates that the account is a member account.	Not applicable
Effective End Date	Used to modify the date till when you want the charges for the member account to appear on the bill of the master account.	No
	Note: You can modify the date only when it is not a past date. The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Primary Account Identifier	Displays the primary account identifier type of the member account along with its value.	Not applicable

Note: If a bill is already generated for the master account, you cannot modify the effective start and end dates.

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Remove Member	Used to remove the member from the master account.

By default, the **Edit Member Account Assignment** zone does not appear in the **Invoicing Group Information** screen. It appears only when you click the **Broadcast**  icon corresponding to the member account in the **Selected Member Account** zone.

Oracle Revenue Management and Billing allows you to define prices for price item and services offered to the customers. These prices are either standard prices defined in the price lists or override prices that are specific to a customer or an account. The system allows you to define prices at various levels in a customer hierarchy (for example, at the account level, main customer level, or at the parent customer level). You can also define prices in the account's price list, main customer's price list, parent customer's price list, price list's parent price list. As prices can be defined at multiple places, the order in which the system searches for effective price item pricing will affect the price charged to the customer. The search order is configurable, and can vary with each division. You need to define the search order in the price assignment search algorithm (which is also known as crawling algorithm) and then attach the algorithm to the division. You can change the search order at any time.

You need to define the price assignment search algorithm using the C1_PRASN algorithm type. The price assignment search algorithm is used while:

- Listing effective price item pricing for an account or a customer
- Fetching effective price item pricing while creating recurring and non-recurring bill segments
- Fetching effective post processing pricing while creating post processing bill segments
- Fetching effective price item pricing in the **Price Item Pricing Verification (C1-TXNVP)** batch

For more information about the price assignment search algorithm, see [Price Assignment Search Mechanism](#) on page 117.

Since a global customer is not associated to any division, the system cannot determine the price assignment search order for a global customer. Hence, the default search order is defined for global customers through the **C1_PRASNORDR** feature configuration. You can change this default search order, if required.

The prices that are specific to a customer or an account are referred to as customer agreed or account agreed prices, respectively. You can override these agreed prices. Customer agreed or account agreed prices are effective for a particular duration and do not expire until you manually specify the end date. However, if you set the **Expire Override Switch** option type of the **C1_EXP_OVRD** feature configuration to **Y**, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the **Expire Override Switch** option type of the **C1_EXP_OVRD** feature configuration to **N**.

The system allows you to define the following types of pricing:

- Flat Pricing
- Tiered Pricing

For more information about the types of pricing, see [Types of Pricing](#) on page 113.

The price for a price item or service may differ depending upon various transaction, customer or account attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. This multi parameter based pricing feature enables the price analyst to define price item and its parameters which influence pricing. You can then define pricing for the price item based on these parameters. Bundles are offered to customers to provide discounted rates. You can also define pricing for bundles based on multiple parameters. To enable the multi parameter based pricing feature, you must set the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration to **True**. For more information about the multi parameter based pricing feature, see [Multi Parameter Based Pricing](#) on page 113.

Types of Pricing

The system allows you to define the following types of pricing:

- **Flat Pricing** — Used when you want to charge a fixed price per unit to the customer.
- **Tiered Pricing** — Used when standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization. For example, CG Limited uses wire transfer services provided by a large bank. If CG Limited initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If CG Limited initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, the following tiered pricing is defined:

Quantity Range	Rate (\$) per transfer
0 – 1000	5
1000+	3

You can define two types of tiered pricing:

- **Step Tiered Pricing** — The rate of the first tiering range is used to calculate the charge for the maximum quantity in the range, and for incremental service quantity utilization, the rate of the progressive tiering range is used. This happens till the utilized quantity is exhausted. For example, when you define the following step tiered pricing for Price Item A and the user consumes 60,000 units of the same, the system will charge the first 45,000 units at \$2 per unit and the remaining 15,000 units at \$1 per unit:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

- **Threshold Tiered Pricing** — The rate of the tiering range within which the service quantity utilization falls is used to calculate the charge for the entire volume. For example, when you define the following threshold tiered pricing for Price Item A and the user consumes 75,000 units of the same, the system will charge 75,000 units at \$1 per unit as the service quantity utilization falls within 45000+ tiering range:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

Multi Parameter Based Pricing

Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. You can also define pricing for bundles based on multiple parameters. You can enable or disable the multi parameter based pricing feature by setting the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration. For more information, see [Setting the C1_PPARM_FLG Feature Configuration](#) on page 2182.

If the multi parameter based pricing feature is disabled, you can define pricing for a price item based on the variance parameter. If the multi parameter based pricing feature is enabled, you can define pricing for a price item based on multiple parameters. For example:

Price Item A	Country	Currency
Pricing 1	US	USD

Price Item A	Country	Currency
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Price Item A based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price item (i.e. Price item A).

Then, when you define Pricing 1 for Price item A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item A	US, USD		0	5000
20	1	Number of Transactions	Price Item A	US, USD		5000	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Price Item A	Germany, USD		0	1000
20	3	Number of Transactions	Price Item A	Germany, USD		1000	

Now, when the user performs 1500 transactions (in USD) of Price Item A in Germany, 12000 transactions (in USD) of Price Item A in US, the system creates two billable charges. In one billable charge (with Price Item A, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Price Item A, Germany and USD combination), the system uses \$3 as the rate for calculating charges.

Note that in this case the parameters based on which you have defined pricing and tiering ranges are same. You can use different parameters while defining pricing and tiering ranges, if required. You can also use another price item or bundle and its parameters while defining tiering ranges. For example:

The following table lists the tiering ranges of Pricing 1 defined for Price Item A where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item B	Germany, USD		0	100
20	1	Number of Transactions	Price Item B	Germany, USD		100	200
30	0.5	Number of Transactions	Price Item B	Germany, USD		200	

Now, when the user performs 1500 transactions (in USD) of Price Item A in US, 200 transactions (in USD) of Price Item B in Germany, the system creates one billable charge. The system adds the transactions with the following combinations and then determines the range of Price Item A within which the total units (i.e. 200) fall:

- Price Item B, Germany, USD

In this case, the total units fall in the 100 – 200 range of Price Item A, and therefore the system uses \$1 as the rate for calculating charges (i.e. $1500 * 1 = 1500$).

Some parameters might be mandatory and some might be optional while defining price item pricing. You can define price item pricing based on these parameters at various levels, such as:

- Account Agreed
- Account Price List
- Account Inherited Price List
- Customer Agreed
- Customer Price List
- Customer Inherited Price List
- Parent Customer Agreed
- Parent Customer Price List
- Parent Customer Inherited Price List
- Default Price List
- Global Price List

As prices can be defined at multiple levels, the system first searches for exact match at all levels (using the search order). If the system finds the exact match at multiple levels, the price assignment at the higher precedence level is considered. Let us understand this with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters at the Account Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 2 is defined for Price Item A with the following parameters at the Parent Customer Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters at the Account Price List level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	—

Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system searches for price with exact match (Type — BT, Country — US, and Currency — USD). The exact match is available at two levels — Account Agreed and Parent Customer Agreed. The system considers the price at the Account Agreed level because this level has higher precedence.

Depending on the search order defined for the division (to which the account belongs), the level with higher precedence changes. Accordingly, the price assignment at the higher precedence level is considered for calculating the charges.

If the system does not find the exact match at any level, it searches for the best fit match at all levels. Let us understand how the best fit match is determined with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	-

Pricing 2 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	-

Pricing 4 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	GBP

The system has Pricing 1, Pricing 2, Pricing 3, and Pricing 4 defined for Price Item A. Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system does not find price with exact match (Type — BT, Country — US, and Currency — USD). Therefore, it searches for the best fit match.

While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Currency) and checks whether the price (with Type — BT and Country — US) is available. If the price is available, the system considers the price as the best fit match. Therefore, in this case, Pricing 1 is considered as the best fit match.

Suppose, if the price (with Type — BT and Country — US) is not available, then the system rules out the optional parameter with next lowest priority (i.e. Country) and checks whether the price (with Type — BT and Currency — USD) is available. If the price is available, the system considers the price as the best fit match. In this case, Pricing 2 would be considered as the best fit match. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered.

Price Assignment Search Mechanism

The price assignment search algorithm searches effective price item pricing based on the following parameters:

- **Search Order** — Used to indicate the order in which the system must search effective price item pricing at various levels in the customer hierarchy. This is a mandatory parameter. The valid values are:

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_PRICELIST	<ol style="list-style-type: none"> 1. Account Agreed — Means price item pricing is agreed for the account in the hierarchy. 2. Account Price List — Means price item pricing is defined within the price list which is assigned to the account. 3. Account Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account. 4. Customer Agreed — Means price item pricing is agreed for the customer in the hierarchy. 5. Customer Price List — Means price item pricing is defined within the price list which is assigned to the customer. 6. Customer Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer. 7. Parent Customer Agreed — Means price item pricing is agreed for the parent customer in the hierarchy. 8. Parent Customer Price List — Means price item pricing is defined within the price list which is assigned to the parent customer. 9. Parent Customer Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_FIRST	<ol style="list-style-type: none"> 1. Account Agreed — Means price item pricing is agreed for the account in the hierarchy. 2. Customer Agreed — Means price item pricing is agreed for the customer in the hierarchy. 3. Parent Customer Agreed — Means price item pricing is agreed for the parent customer in the hierarchy. 4. Account Price List — Means price item pricing is defined within the price list which is assigned to the account. 5. Account Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account. 6. Customer Price List — Means price item pricing is defined within the price list which is assigned to the customer. 7. Customer Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer. 8. Parent Customer Price List — Means price item pricing is defined within the price list which is assigned to the parent customer. 9. Parent Customer Inherited Price List — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.

Note: In these price assignment search orders, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.

- **Default Price List ID** — Used to indicate the default price list. If the effective price item pricing is not available at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list.
- **Global Price List** — Used to indicate whether the system should consider the price item pricing defined in the global price list. If the effective price item pricing is not available in the default price list or if the default price list is not specified in the price assignment search algorithm, the system checks whether it should consider the price item pricing defined in the global price list. The valid values are:

- Y
- N

Finally, if the effective price item pricing is not available in either default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.

- **Prefer Price Item Over Bundle** — Used to indicate whether to prefer price item, regular bundle, or parent bundle pricing when the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) are assigned at the same level. The valid values are:

- Y
- N

If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

- **Person Relationship Type Sequence Algorithm** — Used to attach an algorithm which is defined using the C1-CUSRLALGT algorithm type. The attached algorithm is used while searching effective price item pricing at the parent customer level. It indicates whether the system should search person to person relationship type sequence defined:
 - For the division, price item, and price item parameters combination
 - For the division
 - In the C1_PER_REL feature configuration

For more information on...	See...
Person to Person Relationship Type Sequence	Person Relationship Type Sequence on page 119

Person Relationship Type Sequence

When the price assignment search algorithm searches effective price item pricing at the parent customer level, the system determines the parent customer's person to person relationship type whose price item pricing should be considered. The person to person relationship type sequence indicates the order in which relationship type should be considered while searching for effective price item pricing at the parent customer level. For example, if a customer has two parents – Parent 1 with the relationship type set to “Subsidiary” and Parent 2 with the relationship type set to “Franchise Owner”, and the following person to person relationship type sequence is defined in the system:

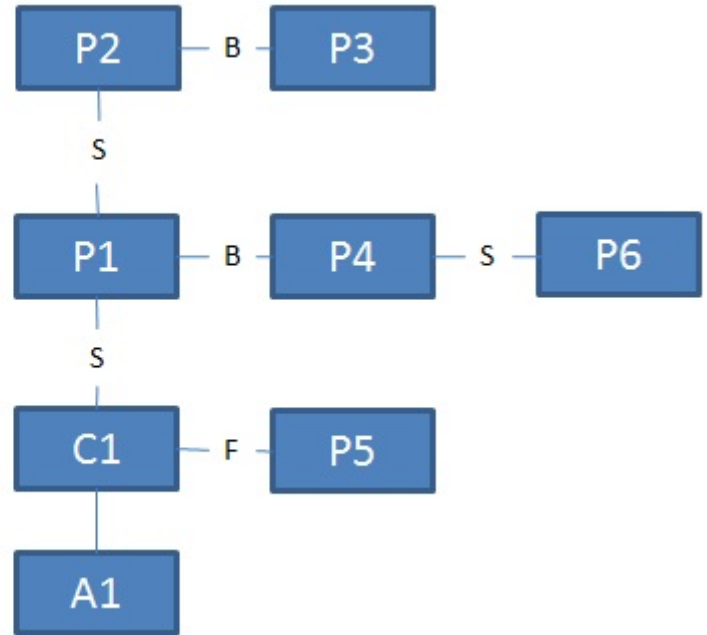

When the price assignment search algorithm searches effective price item pricing at the parent customer level, the system determines the parent customer's person to person relationship type whose price item pricing should be considered. The person to person relationship type sequence indicates the order in which relationship type should be considered while searching for effective price item pricing at the parent customer level. For example, if a customer has two parents – Parent 1 with the relationship type set to “Subsidiary” and Parent 2 with the relationship type set to “Franchise Owner”, and the following person to person relationship type sequence is defined in the system:

Sequence Number	Relationship Type
10	Subsidiary
20	Franchise Owner

In the above example, the system will inherit effective price item pricing (if available) from Parent 1 or within its hierarchy. If the effective price item pricing is not available in the Parent 1 hierarchy, the system will inherit effective price item pricing (if available) from Parent 2 or within its hierarchy. If the effective price item pricing is not available in the Parent 2 hierarchy, an error message occurs indicating that the effective price item pricing is not available.

While searching effective pricing at the parent customer level based on the person to person relationship type sequence, the system will use the depth first search mechanism. Let us understand this with the help of an example.

Person To Person Relationship Type Sequence	
Sequence Number	Relationship Type
10	Subsidiary (S)
20	Branch (B)
30	Franchise Owner (F)

In the above example, if the effective pricing is not available at the account or customer level, the system will search effective pricing at the parent customer level in the following order:

- P1 (because the first relationship type in the sequence is Subsidiary)
- P2 (grandparent of P1 irrespective of the relationship type)
- P3 (because the second relationship type in the sequence is Branch)
- P4 (because the second relationship type in the sequence is Branch)
- P6 (grandparent of P4 irrespective of the relationship type)
- P5 (because the third relationship type in the sequence is Franchise Owner)

The system provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1_PER_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1_PER_REL feature configuration and accordingly search the effective price item pricing at the parent customer level.

To enable the system to search person to person relationship type sequence at different levels, you need to create an algorithm of the C1-CUSRLALGT algorithm type and attach it to the **Person Relationship Type Sequence Algorithm** parameter in the price assignment search algorithm. The C1-CUSRLALGT algorithm type has the following parameters:

- **Check on Division, Price Item and Price Item Parameters Combination** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division, price item, and price item parameters combination. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Division** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Feature Configuration** – Used to indicate whether you want the system to consider the person to person relationship type sequence defined in the **C1_PER_REL** feature configuration. This is a mandatory parameter. The valid values are:

- **A** – Used when you want to consider all person to person relationship types defined in the feature configuration (in the specified sequence).
- **F** – Used when you want to only consider the person to person relationship type defined with the lowest sequence in the feature configuration.
- **N** – Used when you do not want to consider the person to person relationship type sequence defined in the C1_PER_REL feature configuration.

By default, the value is set to **F**.

Pricing Eligibility

Oracle Revenue Management and Billing enables you to define pricing eligibility criteria using the account, person, and product attributes while defining a price item pricing. For example, a bank offers a product named 12 Month Standard Certificate of Deposit (CD). The interest rate charged to a person for this product differs based on two parameters – Deposit Amount and Person Type (Preferred and Non-Preferred). The following table lists the interest rates offered for the 12 Month Standard Certificate of Deposit (CD) product:

Deposit Amount	Non-Preferred	Preferred
Less than \$5,000	0.13%	0.20%
Greater than \$5,000	0.15%	0.22%

Earlier, you were able to define different interest rates based on different parameters using the rate eligibility feature at the rate component level. Considering the above example, you had to define four rate components. The respective rate component would appear while defining price item pricing based on the following:

- The value defined for the **Deposit Amount** characteristic on the account

- The value defined for the **Customer Type** characteristic on the main customer

However, now, you can implement the above scenario using a single rate component instead of maintaining four different rate components. Now, while defining price item pricing, you need to define four different price components for a rate component. For each price component, you need to define the pricing eligibility criteria in the following manner:

Price Component	Rate	Pricing Criteria	Eligibility	If True	If False
P1	0.13%	Deposit Amount > 5000		Check Next Condition	Return False
P1	0.13%	Person Type = Non-Preferred		Return True	Return False
P2	0.15%	Deposit Amount < 5000		Check Next Condition	Return False
P2	0.15%	Person Type = Non-Preferred		Return True	Return False
P3	0.20%	Deposit Amount > 5000		Check Next Condition	Return False
P3	0.20%	Person Type = Preferred		Return True	Return False
P4	0.22%	Deposit Amount < 5000		Check Next Condition	Return False
P4	0.22%	Person Type = Preferred		Return True	Return False

You can define pricing eligibility criteria only when the appropriate parameters are created in the system. These parameters must be mapped to either of the following:

- Account attributes, characteristics, usage amounts, or usage counters
- Person attributes, characteristics, usage amounts, or usage counters
- Product attributes or characteristics
- Service Quantity Identifier
- Custom algorithm which returns the appropriate value

In the above example, you can define the pricing eligibility criteria only when the following parameters are defined in the system:

Parameter	Source Entity	Source Type	Source Type Code	Value Type
Deposit Amount	Account	Usage Amount	Deposit Amount	Adhoc
Customer Type	Person	Characteristic	Person Type	Predefined

You can define pricing eligibility criteria for rate components whose tiering type is set to **Flat**, **Threshold**, or **Step**. Each criterion in the pricing eligibility criteria is executed in the specified sequence. If the value of the pricing eligibility criteria is **True**, the rate of the respective price component is passed to the rate component for further calculations.

Persisting Interest Rate for Rate Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate (i.e. Interest Rate)
- Fees

If the type of a price item is **Rate**, the system calculates and persist the rate for the price item. The rate is persisted only for the price item pricing which is either assigned or inherited by an account. If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**.

Related Topics

For more information on...	See...
Repricing	Repricing on page 123

Persisting Fee for Fee Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate
- Fees

The input elements Pricing Frequency, Advance Pricing should be populated if **Price Item** is available for **Pricing Only**, **Price Item Type** is **Fees** and **Price Assignment Type** is **Post-Processing**.

If the type of a price item is **Fee**, the system calculates and persist the fee for the price item.

Note: The **Process Fees Request and Persist Fees for an Account (C1-ACFEE)** batch is used to calculate and persist the fees for the account. It must be executed when a user wants to store fees.

Related Topics

For more information on...	See...
Repricing	Repricing on page 123

Repricing

If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**. The **Repricing** process is triggered in the following scenarios when:

- You edit the attributes and characteristics of an account.
- You add or delete the usage amount and counter details of an account.
- You edit the attributes and characteristics of a person.
- You add or delete the usage amount and counter details of a person.
- You define or edit the price item pricing of an active price list which is assigned to an account or a person.
- You define, edit, override, or copy the price item pricing of an account or a person.
- You assign a price list to an account or a person, or edit the price list assignment details of an account or a person.

The system behaves in the following manner in the above scenarios:

Scenario	System Behaviour
On editing the attributes and characteristics of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the account attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the CI_REPRC_REQ_DTL table. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: On editing the account attributes, the effective date is set to the date when you edit the account attributes. However, on editing the account's characteristic, the effective date is set to the date from when the characteristic is effective for the account.</p>
On adding or deleting the usage amount and counter details of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the CI_REPRC_REQ_DTL table. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: The effective date is set to the date from when the usage amount or counter is effective for the account.</p>
On editing the attributes and characteristics of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the person attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the CI_REPRC_REQ_DTL table. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>On editing the person attributes, the effective date is set to the date when you edit the person attributes. However, on editing the person's characteristic, the effective date is set to the date from when the characteristic is effective for the person.</p>

Scenario	System Behaviour
<p>On adding or deleting the usage amount and counter details of a person</p>	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the CI_REPRC_REQ_DTL table. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The effective date is set to the date from when the usage amount or counter is effective for the person.</p>
<p>On assigning a price list to an account or editing the price list assignment details of an account</p>	<p>The system creates a repricing request for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> • If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date. • If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date. <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> • If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day. • If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day. <p>On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>

Scenario	System Behaviour
<p>On assigning a price list to a person or editing the price list assignment details of a person</p>	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> • If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date. • If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date. <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> • If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day. • If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day. <p>Note: If the Price List Assignment Start Date and Price List Assignment End Date are earlier than the current date, repricing requests for the accounts are not created in the CI_REPRC_REQ_DTL table.</p> <p>On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>
<p>On defining, editing, overriding, or copying the price item pricing of an account</p>	<p>The system creates a repricing request for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>

Scenario	System Behaviour
On defining, editing, overriding, or copying the price item pricing of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note:</p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>
On defining or editing the price item pricing of an active price list which is assigned to an account or a person	<p>The system creates an entry for the price item pricing in the CI_REPRC_ENTITY_DTL table. On executing the Identify Accounts for Repricing (C1-REPC1) batch, the system identifies the following in the specified order:</p> <ol style="list-style-type: none"> 1. Price list on which the price item pricing is assigned 2. Account or Person on which the price list is assigned 3. All accounts which belong to the person and its child persons when the price list is assigned to a person <p>Once the accounts are identified, the system checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, a repricing request is created for the account, price item, and effective date combination in the CI_REPRC_REQ_DTL table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the Process Repricing Request and Persist Pricing for an Account (C1-REPC2) batch, you can recalculate and persist the rate for the account in the CI_PRCE_CALC table.</p> <p>Note: Only accounts where the person and child person are the main customers are considered for repricing.</p>

For more information about the **Identify Accounts for Repricing (C1-REPC1)** and **Process Repricing Request and Persist Pricing for an Account (C1-REPC2)** batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

To enable the repricing feature, you need to do the following:

- Define an algorithm using the **C1-REPRCACCT** algorithm type and attach it to the **Audit** algorithm spot of the **C1-AccountBO** business object
- Define an algorithm using the **C1-REPRCACBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-ACCBALCNT** business object

- Define an algorithm using the **C1-REPRCPERS** algorithm type and attach it to the **Audit** algorithm spot of the **C1_PERSON_BO** business object
- Define an algorithm using the **C1-REPRCPPEBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-PERBALCNT** business object
- Define an algorithm using the **C1_PLASGNAUD** algorithm type and attach it to the **Audit** algorithm spot of the **C1_PLASGNADD** and **C1_PLASGNEDIT** business objects
- Define an algorithm using the **C1-PRCASGNAD** algorithm type and attach it to the **Audit** algorithm spot of the **C1_PRICEASGN_BO** business object
- Define an algorithm using the **C1-REPRCPPLPA** algorithm type and attach it to the **Audit** algorithm spot of the **C1_PRICEASGN_BO** business object
- Define the required parameters for the account and person attributes, characteristics, usage amount and usage counter

Two-Dimensional Pricing

Oracle Revenue Management and Billing enables you to define two-dimensional pricing for a price item. In the two-dimensional pricing, you can offer rates based on utilization of two service quantity identifiers (SQIs). For example, the rate for a price item can vary for each customer depending on the number of ATM transactions and current monthly balance as shown below: Current Monthly Balance Number of ATM Transactions 0-25 25-50 50-75 75-100 0-10000 2 1.9 1.8 1.7 10000-50000 1.6 1.5 1.4 1.3 50000-100000 1.2 1.1 1.0 0.9 100000-500000 0.8 0.7 0.6 0.5 The system allows you to define two-dimensional pricing in a grid which has X-axis and Y-axis. Both, the X-axis and Y-axis should contain service quantity identifiers (SQIs). The two-dimensional pricing is composed of threshold and step tiered pricing. The X-axis is a threshold tier and Y-axis is a step tier. On creating two-dimensional pricing, one price component is created for each X-axis and Y-axis combination. The step tier is stored as the tiering range whereas the threshold tier is stored as the eligibility criteria in the price component. Note that the tiering ranges and eligibility criteria are automatically created in the price component. You cannot manually add a tiering range and eligibility criteria in the price component. You can define two-dimensional pricing only when the tiering type of the rate components in the rate schedule is set to STEP. A new field named Pricing Rule Type is added in the Price Item Pricing screen. If you select the Two-Dimensional option from the Pricing Rule Type list, you can define two-dimensional pricing for the price item. However, if you do not select the Two-Dimensional option from the Pricing Rule Type list, you can define traditional flat, step, or tiered pricing for the price item. Besides selecting the Two-Dimensional option from the Pricing Rule Type list, you also need to select the Pricing Eligibility option while defining the two-dimensional pricing for the price item.

Types of Price Item Bundle

The system allows you to define the following types of price item bundle:

- [Regular Bundle](#) on page 128
- [Phantom Bundle](#) on page 132
- [Ratio Bundle](#) on page 130

Regular Bundle

In case of a regular bundle, pricing is defined at the bundle level. The system determines the rate by identifying the tiering range within which the total service quantities used for all price items in the bundle fall. Note that the rate is determined from the tiering range of the price component whose pricing eligibility criteria is met. Let us understand this with the help of an example.

Bundle X, which is a regular bundle, contains the following three price items:

- Price Item A

- Price Item B
- Price Item C

The following tiered pricing is defined for Bundle X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 4000	2
4001 – 8000	1

Note: In the above example, the assumption is that there only one rate component, one price component within the rate component, and pricing eligibility criteria is not defined for the price component.

Now, when the user consumes 1500 units of Price Item A, 1000 units of Price Item B, and 2000 units of Price Item C, the system adds the quantities of services used for all price items in Bundle X (i.e. 1500+1000+2000=4500), and then determines the range within which the total units (i.e. 4500) fall. In this case, the total units fall in the 4001 – 8000 range, and therefore the system uses \$1 as the rate for calculating charges.

If the multi parameter based pricing feature is enabled, you can define pricing for regular bundles based on multiple parameters. For example:

Bundle X	Country	Currency
Pricing 1	US	USD
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Bundle X based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the regular bundle (i.e. Bundle X) and then add price items (i.e. Price Item A, Price Item B, and Price Item C) to the bundle. Note that you can add a price item to a regular bundle only when the regular bundle and price item have same parameters associated with them for the specified date range. Therefore, before adding Price Item A, Price Item B, and Price Item C to Bundle X, you should ensure that Country and Currency are also associated with these price items.

Then, when you define Pricing 1 for Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Bundle X	US, USD		0	500
20	1	Number of Transactions	Bundle X	US, USD		500	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Bundle X	Germany, USD		0	1000
20	3	Number of Transactions	Bundle X	Germany, USD		1000	

Now, when the user performs 500 transactions (in USD) of Bundle X in Germany, 1200 transactions (in USD) of Bundle X in US, the system creates two billable charges. In one billable charge (with Bundle X, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Bundle X, Germany and USD combination), the system uses \$4 as the rate for calculating charges.

Ratio Bundle

In case of a ratio bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle.

A ratio expresses the magnitude of quantities relative to each other. It has two factors — Numerator and Denominator. For ratio bundle, the ratio of price item quantities is used to determine the rate for volume based pricing. To determine within which range of ratio limit does the price item utilization falls, the ratio of price item quantities is used. Once the range limits are determined, the rate specified for that range is applied to the quantity of the price item used. Let us understand this with the help of an example.

Bundle X, which is a ratio bundle, contains the following price items:

- **Price Item A** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	4
0.6 – 0.9	3
0.9+	2

- **Price Item B** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	5
0.6 – 0.9	4
0.9+	3

- **Price Item C** — It has been added to the bundle using the price item relationship type as Denominator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	3
0.6 – 0.9	2
0.9+	1

Now, when the user consumes 500 units of Price Item A, 2500 units of Price Item B, and 4000 units of Price Item C, the system calculates the ratio of price item quantities (i.e. $(500+2500)/4000=0.75$). Once the ratio is calculated, the system determines the range of each price item within which the ratio (i.e. 0.75) falls. In this case, the ratio falls in the 0.6 – 0.9 range of Price Item A, B, and C. Therefore, the system uses \$3, \$4, and \$2, respectively, as the rate for calculating charges (i.e. $(500*3)=1500$, $(2500*4)=10000$, and $(4000*2)=8000$).

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a ratio bundle based on multiple parameters. For example:

Bundle X	Country	Currency
Price Item A	US	USD

Bundle X	Country	Currency
Price Item B	Germany	USD
Price Item C	England	USD

Price Item A, Price Item B, and Price Item C are added in Bundle X. Price Item A, Price Item B, and Price Item C utilization in Bundle X is determined based on two parameters — Country and Currency. Before you add price item to a ratio bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item A, Price Item B, and Price Item C) and then add these price items to the bundle (i.e. Bundle X).

While adding Price Item A to Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Price Item B to Bundle X with Country set to Germany and Currency set to USD, and Price Item C with Country set to England and Currency set to USD.

The following table lists the tiered pricing defined for Price Item A:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	5	Number of Transactions	Bundle X			0	1.75
20	4	Number of Transactions	Bundle X			1.75	2.50
30	3	Number of Transactions	Bundle X			2.50	

The following table lists the tiered pricing defined for Price Item B:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	5	Number of Transactions	Bundle X			0	3.5
20	4	Number of Transactions	Bundle X			3.5	

The following table lists the tiered pricing defined for Price Item C:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Bundle X			0	2.0
20	1	Number of Transactions	Bundle X			2.0	

Now, when the user performs 5000 transactions (in USD) of Price Item A in US, 6000 transactions (in USD) of Price Item B in Germany, and 5000 transactions (in USD) of Price Item C in England, the system creates three billable charges — one for each price item (i.e. Price Item A, Price Item B, and Price Item C). The system calculates the ratio of transactions with the following combinations and then determines the range of each price item within which the ratio (i.e. 2.2) falls:

- Price Item A, US, USD
- Price Item B, Germany, USD
- Price Item C, England, USD

In this case, the ratio falls in the 1.75 – 2.50 range of Price Item A, the 0 – 3.5 range of Price Item B, and in the 2.0 — Infinite range of Price Item C. Therefore, the system uses \$4, \$5, and \$1 as the rate for calculating charges (i.e. $(5000*4)=20000$, $(6000*5)=30000$, and $(5000*1)=5000$).

You can also add a price item more than once in a ratio bundle with different set of parameters. For example:

Bundle X	Relationship Type	Country	Currency
Price Item A	Numerator	US	USD
Price Item A	Numerator	England	USD
Price Item B	Numerator	Germany	USD
Price Item C	Denominator	England	USD
Price Item C	Denominator	US	USD

In this case, the system calculates the ratio of transactions with the following combinations and then determines the range of each price item (i.e. Price Item A, Price Item B, and Price Item C) within which the ratio falls:

- Price Item A, US, USD
- Price Item A, England, USD
- Price Item B, Germany, USD
- Price Item C, England, USD
- Price Item C, US, USD

Phantom Bundle

In case of a phantom bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle. The system determines the price by identifying the tiering range of each price item within which the total quantities of services used for all price items in the bundle fall. Let us understand this with the help of an example.

Bundle A, which is a phantom bundle, contains the following two price items:

- **Price Item X** — The following tiered pricing is defined for Price Item X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 6000	2

- **Price Item Y** — The following tiered pricing is defined for Price Item Y:

Quantity Range	Rate (\$) per unit
1 – 5000	2
5001 – 10000	1

Now, when the user consumes 2500 units of Price Item X and 3500 units of Price Item Y, the system adds the quantities of services used for all price items in Bundle A (i.e. $2500+3500=6000$), and then determines the range of each price item within which the total units (i.e. 6000) fall. In this case, the total units fall in the 3001 – 6000 range of Price Item X and the 5001 – 10000 range of Price Item Y, and therefore the system uses \$2 and \$1, respectively, as the rate for calculating charges (i.e. $(2500*2)=5000$ and $(3500*1)=3500$). This helps the customer to take advantage of the lowest rate.

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a phantom bundle based on multiple parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item Y	Germany	USD

Price Item X and Price Item Y are added in Bundle A. Price Item X and Price Item Y utilization in Bundle A is determined based on two parameters — Country and Currency. Before you add price item to a phantom bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item X and Price Item Y) and then add these price items to the bundle (i.e. Bundle A).

While adding Price Item X to Bundle A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Product Y to Bundle A with Country set to Germany and Currency set to USD.

The following table lists the tiered pricing defined for Price Item X:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	3	Number of Transactions	Bundle A			0	5000
20	2	Number of Transactions	Bundle A			5000	10000
30	1	Number of Transactions	Bundle A			10000	

The following table lists the tiered pricing defined for Price Item Y:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	5	Number of Transactions	Bundle A			0	5000
20	4	Number of Transactions	Bundle A			5000	

Now, when the user performs 5000 transactions (in USD) of Price Item Y in Germany, 6000 transactions (in USD) of Price Item X in US, the system creates two billable charges — one for Price Item X and another for Price Item Y. The system adds the transactions with the following combinations and then determines the range of each price item within which the total units (i.e. 11000) fall:

- Price Item X, US, USD
- Price Item Y, Germany, USD

In this case, the total units fall in the 10000 – Infinite range of Price Item X and the 5000 – Infinite range of Price Item Y, and therefore the system uses \$1 and \$4, respectively, as the rate for calculating charges (i.e. $(5000 * 4) = 20000$ and $(6000 * 1) = 6000$).

You can also add a price item more than once in a phantom bundle with different set of parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item X	Germany	USD
Price Item Y	Germany	USD
Price Item Y	US	USD

In this case, the system adds the transactions with the following combinations and then determines the range of each price item (i.e. Price Item X and Price Item Y) within which the total units fall:

- Price Item X, US, USD
- Price Item X, Germany, USD
- Price Item Y, Germany, USD

- Price Item Y, US, USD

Parameter

The pricing for a price item may differ depending upon various transaction, person, account, or product attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. In addition, you can define the pricing, price list, and product eligibility criteria using one or more parameters.

Each parameter must be mapped to the following:

- **Source Entity** - Indicates the entity from where the parameter value is derived. A source entity can be account, person, product, transaction, service quantity identifier, or an algorithm.
- **Source Type** - Indicates the type of source from where the parameter value is derived. A source type can be field, characteristic, usage amount, or usage counter.
- **Source Type Code** - Indicates the source (such as, field, characteristic, usage amount, usage counter, SQL, or algorithm) from where the parameter value is derived.

The system allows you to define the following types of parameters:

- **Adhoc** - Used to store an adhoc value.
- **Predefined** - Used to store a predefined value. For example, you can create a parameter named **Country** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
AUT	Austria
AUS	Australia
CAN	Canada
CHN	China

In such case, while defining the pricing for a price item using the **Country** parameter, you can use any one of the above mentioned parameter values.

- **Reference** - Used to store a value which is already present in a table. For example, you can create a parameter named **Country** where the value type is set to **Reference** and the reference entity is set to **CI_COUNTRY_L** (i.e. where the description of all countries is stored). In such case, while defining the pricing for a price item using the **Country** parameter, you can specify a country which is present in the **CI_COUNTRY_L** table in the parameter value.

Parameter (Used for Searching)

The **Parameter** screen allows you to define, edit, delete and copy a parameter. It contains the following zone:

- [Search Parameter](#) on page 134

Search Parameter

The **Search Parameter** zone allows you to search for a parameter using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search a particular parameter.	No

Field Name	Field Description	Mandatory (Yes or No)
Value Type	Used to search parameters in which you can store a particular type of value. The valid values are: <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	No
Source Entity	Used to search parameters whose value is derived from a particular entity. The valid values are: <ul style="list-style-type: none"> • Account • Algorithm • Person • Product • Service Quantity Identifier • Transaction 	No
Source Type	Used to search parameters whose value is derived from a particular type of source. The valid values are: <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter 	No
Description	Used to search parameters with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Parameter	Displays the parameter name.
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> • Adhoc • Predefined • Reference
Description	Displays the description of the parameter.

Column Name	Column Description
Source Entity	Indicates the entity from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> Account Algorithm Person Product Service Quantity Identifier Transaction
Source Type	Indicates the type of source from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> Characteristic Field Usage Amount Usage Counter
View	On clicking the View () icon, the Parameter screen appears where you can view the details of the parameter.
Edit	On clicking the Edit () icon, the Parameter screen appears where you can edit the details of the parameter.
Delete	On clicking the Delete () icon, you can delete the parameter. <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>You can delete a parameter only when the following conditions are met:</p> <ul style="list-style-type: none"> It is not yet associated to any price item or price item bundle. It is not yet used while defining the pricing, price list, or product eligibility criteria. </div>
Copy	On clicking the Copy () icon, the Parameter screen appears where you can define a new parameter using an existing parameter.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Parameter

Procedure

To search for a parameter:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.
The **Parameter** screen appears.
3. Enter the search criteria in the **Search Parameter** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of parameters that meet the search criteria appears in the **Search Results** section.

Defining a Parameter

Prerequisites

To define a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To define a parameter:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.

- From the **Admin** menu, select **P** and then click **Parameter**.

The **Parameter** screen appears.

- Click the **Add** button in the **Page Title** area of the **Parameter** screen.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name.	Yes
	Note: You cannot specify any special character except underscore (_) in the parameter name.	
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> Account Algorithm Person Product Service Quantity Identifier Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> Characteristic Field Usage Amount Usage Counter 	Yes
	Note: This field appears only when the Account , Person , or Product option is selected from the Source Entity list. The Usage Amount and Usage Counter options do not appear in the Source Type list when the Product option is selected from the Source Entity list.	
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> Adhoc Predefined Reference 	Yes

Field Name	Field Description	Mandatory (Yes or No)																																	
Source Type Code	Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.	Yes																																	
	<p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p>

Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> <td>Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note: This field appears only when the Adhoc option is selected from the Value Type list.</p> <p>The Search  icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note: This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search  icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p>Note: This field appears only when the Reference option is selected from the Value Type list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.	Yes
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	
Description	Used to specify the description for the parameter value.	Yes

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** () icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** () icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)																
Price Item	<p>Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p>Note:</p> <p>The following table lists the source entity and source type combinations when the Price Item option is disabled in the Parameter Usage section:</p> <table border="1" data-bbox="581 590 1110 842"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Usage Amount</td> </tr> <tr> <td>Account</td> <td>Usage Counter</td> </tr> <tr> <td>Person</td> <td>Usage Amount</td> </tr> <tr> <td>Person</td> <td>Usage Counter</td> </tr> </tbody> </table> <p>The following table lists the source entity and source type combinations when the Price Item option does not appear in the Parameter Usage section:</p> <table border="1" data-bbox="581 1010 1110 1192"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Identifier</td> <td>Quantity</td> </tr> </tbody> </table>	Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter	Source Entity	Source Type	Algorithm	—	Service Identifier	Quantity	<p>Yes (Conditional)</p> <p>Note: You must select this option when you want to associate the parameter with a price item.</p>

Source Entity	Source Type																	
Algorithm	—																	
Service Identifier	Quantity																	
Pricing Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.</p> <p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>	<p>Yes (Conditional)</p> <p>Note: You must select this option when you want to define a pricing eligibility criteria using the parameter.</p>																
Price List Eligibility Criteria	<p>Used to indicate whether the parameter can be used while defining the price list eligibility criteria.</p> <p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>	<p>Yes (Conditional)</p> <p>Note: You must select this option when you want to define a price list eligibility criteria using the parameter.</p>																

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm , Service Quantity Identifier , or Transaction option is selected from the Source Entity list.	Note: You must select this option when you want to define a product eligibility criteria using the parameter.

Note: You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen depending on whether you want to create an adhoc, predefined, or reference parameter.
- Click **Save**.

The parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Editing a Parameter

Prerequisites

To edit a parameter, you should have:

- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To edit a parameter:

- Search for the parameter in the **Parameter** screen.
- In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the parameter whose details you want to edit.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Displays the parameter name.	Not applicable
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> Account Algorithm Person Product Service Quantity Identifier Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> Characteristic Field Usage Amount Usage Counter <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>This field appears only when you select the Account, Person, or Product option from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Product option is selected from the Source Entity list.</p> </div>	Yes
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> Adhoc Predefined Reference 	Not applicable

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm , Service Quantity Identifier , or Transaction option is selected from the Source Entity list.	Note: This field is required when you want to define a product eligibility criteria using the parameter.

Note:

You must select at least one option in the **Parameter Usage** section.

If the parameter is already associated to a price item or used while defining the pricing, price list, or product eligibility criteria, you cannot deselect the respective option in the **Parameter Usage** section.

3. Modify the required details in the **Parameter** screen.
4. Click **Save**.

The changes made to the parameter are saved.

How to search for a parameter	Searching for a Parameter on page 137

Deleting a Parameter**Procedure**

To delete a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the parameter that you want to delete.

A message appears confirming whether you want to delete the parameter.

Note:

You can delete a parameter only when the following conditions are met:

- It is not yet associated to any price item or price item bundle.
- It is not yet used while defining the pricing, price list, or product eligibility criteria.

3. Click **OK**.

The parameter is deleted.

Copying a Parameter

Instead of creating a parameter from scratch, you can define a new parameter using an existing parameter. This is possible through copying a parameter. When you copy a parameter, the predefined values, validation algorithm, and reference entity (depending upon the value type) are copied along with other parameter details. You can then edit the details, if required.

Note: You cannot change the type of value that you can store in the new parameter (which is created using an existing parameter).

Prerequisites

To copy a parameter, you should have:

- Parameter (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1_PPARM_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

Note:

A sample algorithm type named **C1_PPARM_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To copy a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the parameter whose copy you want to create.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name.	Yes
	Note: You cannot specify any special character except underscore (_) in the parameter name.	

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> • Account • Algorithm • Person • Product • Service Quantity Identifier • Transaction 	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <div style="border: 1px solid black; background-color: #f0f0f0; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>This field appears only when you select the Account, Person, or Product option from the Source Entity list.</p> <p>The Usage Amount and Usage Counter options do not appear in the Source Type list when the Product option is selected from the Source Entity list.</p> </div>	Yes
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> • Adhoc • Predefined • Reference 	Not applicable

Field Name	Field Description	Mandatory (Yes or No)																																	
Source Type Code	Used to indicate the source, such as, field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.	Yes																																	
	<p>Note:</p> <p>This field does not appear when the Transaction option is selected from the Source Entity list.</p> <p>The following table indicates the values that are listed in the Source Type Code field depending on the source entity and source type combination:</p>																																		
	<table border="1"> <thead> <tr> <th data-bbox="540 615 686 688">Source Entity</th> <th data-bbox="686 615 849 688">Source Type</th> <th data-bbox="849 615 1109 688">Source Type Code</th> </tr> </thead> <tbody> <tr> <td data-bbox="540 688 686 867">Account</td> <td data-bbox="686 688 849 867">Characteristic</td> <td data-bbox="849 688 1109 867">Lists all characteristics where the characteristic entity is set to Account.</td> </tr> <tr> <td data-bbox="540 867 686 951">Account</td> <td data-bbox="686 867 849 951">Field</td> <td data-bbox="849 867 1109 951">Lists all fields of the CI_ACCT table.</td> </tr> <tr> <td data-bbox="540 951 686 1098">Account</td> <td data-bbox="686 951 849 1098">Usage Amount</td> <td data-bbox="849 951 1109 1098">Lists all values defined for the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="540 1098 686 1245">Account</td> <td data-bbox="686 1098 849 1245">Usage Counter</td> <td data-bbox="849 1098 1109 1245">Lists all values defined for the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="540 1245 686 1413">Person</td> <td data-bbox="686 1245 849 1413">Characteristic</td> <td data-bbox="849 1245 1109 1413">Lists all characteristics where the characteristic entity is set to Person.</td> </tr> <tr> <td data-bbox="540 1413 686 1497">Person</td> <td data-bbox="686 1413 849 1497">Field</td> <td data-bbox="849 1413 1109 1497">Lists all fields of the CI_PER table.</td> </tr> <tr> <td data-bbox="540 1497 686 1644">Person</td> <td data-bbox="686 1497 849 1644">Usage Amount</td> <td data-bbox="849 1497 1109 1644">Lists all values defined for the BAL_FLG lookup field.</td> </tr> <tr> <td data-bbox="540 1644 686 1791">Person</td> <td data-bbox="686 1644 849 1791">Usage Counter</td> <td data-bbox="849 1644 1109 1791">Lists all values defined for the CNT_FLG lookup field.</td> </tr> <tr> <td data-bbox="540 1791 686 1969">Product</td> <td data-bbox="686 1791 849 1969">Characteristic</td> <td data-bbox="849 1791 1109 1969">Lists all characteristics where the characteristic entity is set to Product.</td> </tr> <tr> <td data-bbox="540 1969 686 2085">Product</td> <td data-bbox="686 1969 849 2085">Field</td> <td data-bbox="849 1969 1109 2085">Lists all fields of the C1_PRODUCT table.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Account	Characteristic	Lists all characteristics where the characteristic entity is set to Account . Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> <th>Source Type Code</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> <td>Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.</td> </tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the C1-PPARM-ENT algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p>Note: This field appears only when the Adhoc option is selected from the Value Type list.</p> <p>The Search  icon appears corresponding to the Validation Algorithm field. On clicking the Search icon, the Algorithm Search window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p>Note: This field appears only when the Reference option is selected from the Value Type list.</p> <p>The Search  icon appears corresponding to the Reference Entity field. On clicking the Search icon, the Reference Table Search window appears.</p> <p>You can only specify a language table, where the DESCR column is available, in the Reference Entity field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p>Note: This field appears only when the Reference option is selected from the Value Type list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.	Yes
	Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	
Description	Used to specify the description for the parameter value.	Yes

Note:

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** () icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** () icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)																
Price Item	Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)																
	<p>Note:</p> <p>The following table lists the source entity and source type combinations when the Price Item option is disabled in the Parameter Usage section:</p> <table border="1" data-bbox="581 590 1107 842"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Account</td> <td>Usage Amount</td> </tr> <tr> <td>Account</td> <td>Usage Counter</td> </tr> <tr> <td>Person</td> <td>Usage Amount</td> </tr> <tr> <td>Person</td> <td>Usage Counter</td> </tr> </tbody> </table> <p>The following table lists the source entity and source type combinations when the Price Item option does not appear in the Parameter Usage section:</p> <table border="1" data-bbox="581 1010 1107 1192"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Identifier</td> <td>Quantity</td> </tr> </tbody> </table>	Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter	Source Entity	Source Type	Algorithm	—	Service Identifier	Quantity	<p>Note: This field is required when you want to associate the parameter with a price item.</p>
	Source Entity	Source Type																
Account	Usage Amount																	
Account	Usage Counter																	
Person	Usage Amount																	
Person	Usage Counter																	
Source Entity	Source Type																	
Algorithm	—																	
Service Identifier	Quantity																	
Pricing Eligibility Criteria	Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.	Yes (Conditional)																
Price List Eligibility Criteria	Used to indicate whether the parameter can be used while defining the price list eligibility criteria.	Yes (Conditional)																
	<p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>	<p>Note: This field is required when you want to define a price list eligibility criteria using the parameter.</p>																

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	Note: This option does not appear when the Algorithm , Service Quantity Identifier , or Transaction option is selected from the Source Entity list.	Note: This field is required when you want to define a product eligibility criteria using the parameter.

Note: You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen depending on whether you want to create an adhoc, predefined, or reference parameter.
- Click **Save**.

The parameter is defined.

Note: If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Viewing the Parameter Details

Procedure

To view the details of a parameter:

- Search for the parameter in the **Parameter** screen.
- In the **Search Results** section, click the **View** (🔍) icon in the **View** column corresponding to the parameter whose details you want to view.
The **Parameter** screen appears.
- View the details of the parameter in the **Parameter** screen.

Parameter (Used for Viewing)

The **Parameter** screen allows you to view the details of a parameter. It contains the following zone:

- [Parameter](#) on page 157

Parameter

The **Parameter** zone displays the details of the parameter. It contains the following sections:

- **Main** – Displays basic information about the parameter. It contains the following fields:

Field Name	Field Description
Parameter	Displays the parameter name.
Description	Displays the description of the parameter.
Value Type	<p>Indicates the type of value that you can store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> • Adhoc • Predefined • Reference
Validation Algorithm	<p>Indicates the algorithm which is used to validate the adhoc parameter value.</p> <p>Note: This field appears only when the Adhoc option is selected from the Value Type list. It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.</p>
Referenced Table	<p>Indicates the table whose primary key (i.e. column) is used to validate the parameter value.</p> <p>Note: This field appears only when the Reference option is selected from the Value Type list. It has a link. On clicking the link, the Table screen appears where you can view the details of the respective table.</p>
Source Entity	<p>Indicates the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Account • Algorithm • Person • Product • Service Quantity Identifier • Transaction

Field Name	Field Description
Source Type	<p>Indicates the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> • Characteristic • Field • Usage Amount • Usage Counter <p>Note: This field appears only when the Account, Person, or Product option is selected from the Source Entity list.</p>
Source Type Code	<p>Indicates the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.</p> <p>Note: This field does not appear when the Transaction option is selected from the Source Entity list.</p>

- **Parameter Usage** – Indicates where the parameter can be used in the system. It contains the following options:

Option Name	Option Description						
Price Item	<p>Indicates whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p>The following table lists the source entity and source type combinations when the Price Item option does not appear in the Parameter Usage section:</p> <table border="1"> <thead> <tr> <th>Source Entity</th> <th>Source Type</th> </tr> </thead> <tbody> <tr> <td>Algorithm</td> <td>—</td> </tr> <tr> <td>Service Quantity Identifier</td> <td>—</td> </tr> </tbody> </table>	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—
Source Entity	Source Type						
Algorithm	—						
Service Quantity Identifier	—						
Pricing Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the pricing eligibility criteria.</p> <p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>						
Price List Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the price list eligibility criteria.</p> <p>Note: This option does not appear when the Transaction option is selected from the Source Entity list.</p>						
Product Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the product eligibility criteria.</p> <p>Note: This option does not appear when the Algorithm, Service Quantity Identifier, or Transaction option is selected from the Source Entity list.</p>						

- **Parameter Values** - Lists the predefined values of the parameter. It contains the following columns in the grid:

Column Name	Column Description
Parameter Value	Displays the parameter value.
Description	Displays the description of the parameter value.

Note: The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

Price Item

A bank may offer wide range of services to customers and accordingly charge them fees and/or interest for a service. You can define each charge as a price item in Oracle Revenue Management and Billing. Once a price item is defined, you can define pricing for the price item. The price item pricing can be a standard price defined in the price list or override price that is specific to a person or an account. The system allows you to define price item pricing at various levels in a person hierarchy (for example, at the account level, main customer level, or at the parent customer level). You can also define price item pricing in the account's price list, main customer's price list, parent customer's price list, and price list's parent price list.

You can associate one or more price items with each other, and thereby group them for various reasons, such as reporting, billing, and so on. You can also create a price item bundle and then add price items within the price item bundle. The main objective behind grouping price items or creating price item bundles is to offer discounts based on the volume across price items, facilitate minimum or maximum charge calculations across price items, or offer common price across price items. While associating a price item with the parent price item or adding a price item to the price item bundle, you need to specify how the two price items are related to each other.

The system allows you to define the following types of price item bundle:

- [Regular Bundle](#) on page 128
- [Phantom Bundle](#) on page 132
- [Ratio Bundle](#) on page 130

The system allows you to define price items and price item bundles which are available for only pricing or pricing and billing. If the price item is available for only pricing, you can indicate the type of the price item. The valid values are:

- Rate (i.e. Interest Rate)
- Fees

If the type of a price item is **Rate**, the system calculates and persist the rate for the price item. The rate is persisted only for the price item pricing which is either assigned or inherited by an account. You cannot define a price item bundle when it is available for only pricing and when the price item type is set to **Rate**. When you define a price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1_PRICING)** feature configuration is automatically associated with the price item or price item bundle.

You can associate a price item or price item bundle to one or more divisions. You can assign a price item or price item bundle to an account, person, or price list only when the account, person, or price list belongs to the division to which the price item or price item bundle is associated. You can define a set of characteristics for a price item or price item bundle which are common across divisions or specific to a division. You can associate one or more parameters to a price item. These parameters can then be used for aggregating transactions and defining the price item pricing. Note that you can associate parameters only to regular price item bundles and not to ratio and phantom price item bundles.

Price Item (Used for Searching)

The **Price Item** screen allows you to search for a price item or price item bundle using various search criteria. It allows you to create and edit a price item or price item bundle. In addition, it allows you to copy a price item bundle only when **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **False**. This screen consists of the following zones:

- [Search Price Item](#) on page 160

Search Price Item

The **Search Price Item** zone allows you to search for a price item or price item bundle using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price item or price item bundle using the price item details. The valid value is: <ul style="list-style-type: none"> • Price Item Details 	Yes
	Note: By default, the Price Item Details option is selected.	
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search a price item or price item bundle with a particular description.	No
Division	Used to search price items or price item bundles which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Price Item Usage	Used to search price items or price item bundles which can be used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing 	No
	Note: By default, the Pricing and Billing option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Bundle	Used to indicate whether you want to search a price item bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Price Item Type	Used to search a particular type of price items or price item bundles. The valid values are: <ul style="list-style-type: none"> • Fees • Rate 	No
	Note: This field appears only when you select the Pricing option from the Price Item Usage list.	

Note: You must specify at least one search criterion while searching for a price item or price item bundle.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular However, if the price item bundle is available for only pricing and the Price Item Type is set to Fees , the valid value is: <ul style="list-style-type: none"> • Regular
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees
Price Item Usage	Indicates whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing
Copy	On clicking the Copy () icon, the Price Item screen appears where you can create a new price item or price item bundle using an existing price item or price item bundle.

Column Name	Column Description
Price Item Assigned To	On clicking the View (🔍) icon in the Price Item Assigned To column, the Price Item Assignments screen appears where you can view the active price lists, persons, and accounts to which the price item or price item bundle is assigned.
Price Item Relationship	On clicking the View (🔍) icon in the Price Item Relationship column, the Price Item Relationship screen appears where you can view the list of the price items and price item bundles associated with the parent price item or added to the price item bundle.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Searching for a Price Item or Price Item Bundle

Prerequisites

To search for a price item or price item bundle, you should have:

- Divisions defined in the application
- Price items or price item bundles associated with the division to which the user belongs

Procedure

To search for a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Search** option from the **Price Item** sub-menu.
The **Price Item** screen appears.
4. Enter the search criteria in the **Search Price Item** zone depending on whether you want to search for a price item or price item bundle.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price items or price item bundles that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Defining a Price Item or Price Item Bundle

Prerequisites

To define a price item or price item bundle, you should have:

- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1_PRICING)** feature configuration

Procedure

To define a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.
A sub-menu appears.
3. Click the **Add** option from the **Price Item** sub-menu.

The **Price Item** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item or price item bundle.
- **Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining the ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** - Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs and characteristics for the price item or price item bundle.
- **Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing 	Yes
	Note: By default, the Pricing and Billing option is selected.	
Price Item Type	Used to indicate the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees 	Yes
	Note: By default, the Fees option is selected. This field appears only when you select the Pricing option from the Price Item Usage list. You cannot define a price item bundle when it is available for only pricing and when the price item type is set to Rate .	
Bundle	Used to indicate whether you want to define a price item bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: By default, the No option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> Phantom Ratio Regular 	Yes (Conditional)
	<p>Note:</p> <p>This field is enabled only when you select the Pricing and Billing option from the Price Item Usage list and the Yes option from the Bundle list.</p> <p>All the above mentioned values are available in the list when you are defining a price item bundle which is available for pricing and billing. However, when you are defining a price item bundle which is available for only pricing and when the price item type is set to Fees, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular when you select the Pricing option from the Price Item Usage list and the Yes option from the Bundle list.</p> <p>You cannot define a price item bundle when it is available for only pricing and when the price item type is set to Rate.</p>	<p>Note: This field is required when you are creating a price item bundle.</p>
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
	<p>Note: By default, the No option is selected.</p>	
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle.	Yes
	<p>Note:</p> <p>This field appears only when you select the Pricing and Billing option from the Price Item Usage list.</p> <p>The Search  icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	

Tip: Alternatively, you can access the **Price Item** screen by clicking the **Add** button in the **Page Title** area of the **Price Item** screen.

4. Enter the required details in the **Main** section.

5. Associate parameters with the price item or price item bundle, if required.
6. Associate the price item or price item bundle to the required divisions.
7. Define the required division-specific SQIs for the price item or price item bundle.
8. Define division-specific characteristics for the price item or price item bundle, if required.
9. Define characteristics for the price item or price item bundle, if required.
10. Click **Save**.

The price item is defined.

Note: When you define a price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1_PRICING)** feature configuration is automatically associated to the price item or price item bundle.

Associating a Parameter with a Price Item or Price Item Bundle

Prerequisites

To associate a parameter with a price item or price item bundle, you should have:

- Parameters defined in the application (where the **Price Item** option is selected in the **Parameter Usage** section)

Procedure

To associate a parameter with a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the parameter is effective for the price item or price item bundle.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the parameter is effective for the price item or price item bundle.	No
Parameter	Used to indicate the parameter that you want to associate with the price item or price item bundle.	Yes
	<p>Note:</p> <p>The Search  icon appears corresponding to the Parameter field. On clicking the Search icon, the Parameter Search window appears.</p> <p>In the Parameter Search window, the system allows you to search only those parameters where the parameter usage is set to Price Item.</p>	
Business Label	Used to specify a business label for the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.	No
Display Order	Used to indicate the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Yes
Parameter Usage	Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Aggregation – Indicates that you want to use the parameter for aggregating transactions. • Pricing – Indicates that you want to use the parameter for aggregating transactions and defining the price item pricing. 	Yes
Mandatory	Used to indicate whether the parameter is mandatory while defining the price item pricing.	No
Priority	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Yes (Conditional)
	<p>Note: This field is disabled when the Mandatory option is selected.</p>	<p>Note: This field is required when the Mandatory option is not selected.</p>

Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining, editing, or copying ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

2. Enter the required details in the **Parameters** section.
3. If you want to associate more than one parameter with the price item or price item bundle, click the **Add**  icon and then repeat steps 2.

Note:

However, if you want to remove a parameter from the price item or price item bundle, click the **Delete** () icon corresponding to the parameter. You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which will be used for aggregation (in other words, where the **Parameter Usage** field is set to **Aggregation**) anytime, whenever required. However, you can add a parameter which will be used for pricing (in other words, where the **Parameter Usage** field is set to **Pricing**) only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

4. Click Save.

The parameters are associated with the price item or price item bundle.

Note: The priority for all parameters which are mandatory is set to 0.

Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle**Prerequisites**

To define valid predefined parameter values for a price item or price item bundle, you should have:

- Values defined for the predefined parameter which is associated with the price item or price item bundle

Procedure

To define valid predefined parameter values for a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears.

2. Click the **Add** () icon in the **Parameter** column corresponding to the predefined parameter for which you want to define valid values for the price item or price item bundle.

The following field appears in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional)
	<p>Note:</p> <p>The Search  icon appears corresponding to the Parameter Value field. On clicking the Search icon, the Predefined Parameter Value Search window appears.</p> <p>On specifying the valid predefined parameter value for a price item or price item bundle, the description of the valid predefined parameter value appears corresponding to the Parameter Value field.</p>	<p>Note: This field is required when you are defining valid predefined parameter values for the price item or price item bundle.</p>

- Select the predefined parameter value from the respective field.
- If you want to define more than one valid predefined parameter value for the price item or price item bundle, click the **Add**  icon and then repeat step 3.

Note: However, if you want to remove a valid predefined parameter value from the price item or price item bundle, click the **Delete**  icon corresponding to the parameter value.

- Click **Save**.

The valid predefined parameter values are defined for the price item or price item bundle.

Associating a Price Item or Price Item Bundle with a Division

Prerequisites

To associate a price item or price item bundle with a division, you should have:

- Divisions defined in the application

Procedure

To associate a price item or price item bundle with a division:

- Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQIs	On clicking the Add  icon, you can define division-specific SQIs for the price item or price item bundle.	No

Field Name	Field Description	Mandatory (Yes or No)
Division Characteristics	On clicking the Add () icon, you can define division-specific characteristics for the price item or price item bundle.	No
Division	Used to indicate the division to which you want to associate the price item or price item bundle. Note: You can only view those divisions to which you have access in the Division list.	Yes

- Enter the required details in the **Divisions** section.
- If you want to associate the price item or price item bundle with more than one division, click the **Add** () icon and then repeat step 2.

Note: However, if you want to remove the price item or price item bundle from a division, click the **Delete** () icon corresponding to the division.

- Define division-specific SQIs for the price item or price item bundle, if required.
- Define division-specific characteristics for the price item or price item bundle, if required.
- Click **Save**.

The price item or price item bundle is associated to the division.

Tip: Alternatively, you can associate a price item or price item bundle to a division using the **Division** screen.

Defining Division-Specific Characteristics for a Price Item or Price Item Bundle

Prerequisites

To define division-specific characteristics for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Division/Price Item Combination**)
- Price items or price item bundles associated to the division to which the user belongs

Procedure

To define division-specific characteristics for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** () icon in the **Division Characteristics** column corresponding to the division for which you want to define division-specific price item or price item bundle characteristics.

The following fields appear in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division.	Yes (Conditional)
		Note: This field is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination .	Yes (Conditional)
		Note: This field is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search () icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a division-specific characteristic for the price item or price item bundle.

3. Enter the required details in the **Divisions** section.
4. If you want to define more than one division-specific characteristic for the price item or price item bundle, click the **Add** () icon and then repeat step 3.

Note: However, if you want to remove a division-specific characteristic from the price item or price item bundle, click the **Delete** () icon corresponding to the characteristic.

5. Click **Save**.

The division-specific characteristics are defined for the price item or price item bundle.

Defining Division-Specific SQIs for a Price Item or Price Item Bundle

Prerequisites

To define division-specific SQIs for a price item or price item bundle, you should have:

- SQIs defined in the application
- Price items or price item bundles associated with the division to which the user belongs

Procedure

To define division-specific SQIs for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** () icon in the **SQIs** column corresponding to the division for which you want to define division-specific price item or price item bundle SQIs.

The following field appears in the grid:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI to which you want to associate the price item or price item bundle in the division.	Yes (Conditional)
	<p>Note:</p> <p>The Search () icon appears corresponding to the SQI field. On clicking the Search icon, the Service Quantity Identifier Search window appears.</p> <p>On indicating the SQI, the description of the SQI appears corresponding to the SQI field.</p>	<p>Note: This field is required when you are defining a division-specific SQI for the price item or price item bundle.</p>

3. Enter the required details in the **Divisions** section.
4. If you want to define more than one division-specific SQI for the price item or price item bundle, click the **Add** () icon and then repeat step 3.

Note: However, if you want to remove a division-specific SQI from the price item or price item bundle, click the **Delete** () icon corresponding to the SQI.

5. Click **Save**.

The division-specific SQIs are defined for the price item or price item bundle.

Defining a Characteristic for a Price Item or Price Item Bundle**Prerequisites**

To define a characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define a characteristic for a price item or price item bundle:

1. Click the **Price Item Characteristics** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Price Item Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item or price item bundle.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price Item .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search  icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price item or price item bundle.

2. Enter the required details in the **Price Item Characteristics** section.

- If you want to define more than one characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item or price item bundle.

Related Topics

For more information on...	See...
How to define a price item or price item bundle	Defining a Price Item or Price Item Bundle on page 163
How to edit a price item or price item bundle	Editing a Price Item or Price Item Bundle on page 184
How to copy a price item or price item bundle	Copying a Price Item or Price Item Bundle on page 174

Copying a Price Item or Price Item Bundle

Instead of creating a price item or price item bundle from scratch, you can create a new price item or price item bundle using an existing price item or price item bundle. This is possible through copying a price item or price item bundle. On copying a price item or price item bundle, the details including the parameters, divisions, division-specific characteristics, division-specific SQIs, and characteristics are copied to the new price item or price item bundle. You can then edit the details, if required.

Prerequisites

To copy a price item or price item bundle, you should have:

- Price item or price item bundle (whose copy you want to create) defined in the application
- Price item or price item bundle (whose copy you want to create) associated with the division to which the user belongs
- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1_PRICING)** feature configuration

Procedure

To copy a price item or price item bundle:

- Search for the price item or price item bundle in the **Price Item** screen.
- In the **Search Results** section, click the **Copy** (📄) icon in the **Copy** column corresponding to the price item or price item bundle using which you want to define a new price item or price item bundle.

The **Price Item** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the price item or price item bundle.
- Parameters** – Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** – Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs and characteristics for the price item or price item bundle.
- **Price Item Characteristics** – Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing 	Yes
Price Item Type	Used to indicate the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p>Note:</p> <p>This field appears only when you select the Pricing option from the Price Item Usage list.</p> <p>You cannot define a price item bundle when it is available for only pricing and when the price item type is set to Rate.</p> </div>	Yes
Bundle	Used to indicate whether you want to define a price item bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	Used to indicate the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> Phantom Ratio Regular 	Yes (Conditional)
	<p>Note:</p> <p>This field is enabled only when you select the Pricing and Billing option from the Price Item Usage list and the Yes option from the Bundle list.</p> <p>All the above mentioned values are available in the list when you are defining a price item bundle which is available for pricing and billing. However, when you are defining a price item bundle which is available for only pricing and when the price item type is set to Fees, you can only define a regular price item bundle. Therefore, by default, the value is set to Regular when you select the Pricing option from the Price Item Usage list and the Yes option from the Bundle list.</p> <p>You cannot define a price item bundle when it is available for only pricing and when the price item type is set to Rate.</p>	<p>Note: This field is required when you are creating a price item bundle.</p>
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle.	Yes
	<p>Note:</p> <p>This field appears only when you select the Pricing and Billing option from the Price Item Usage list.</p> <p>The Search  icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	

3. Enter the required details in the **Main** section.
4. Associate, edit, or disassociate parameters from the price item or price item bundle, if required.
5. Associate or disassociate the price item or price item bundle from the required divisions.
6. Define or remove the division-specific SQIs from the price item or price item bundle, if required.
7. Define or remove the division-specific characteristics for the price item or price item bundle, if required.

8. Define, edit, or remove characteristics from the price item or price item bundle, if required.
9. Click **Save**.

The new price item is defined.

Note:

When you define a new price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1_PRICING)** feature configuration is automatically associated to the price item or price item bundle.

The system allows you to add a price item to the new price item bundle only when:

- Price item and price item bundle (whose copy you are creating) are associated to the same contract type.
- Price item is associated with the division to which the price item bundle (whose copy you are creating) is associated.
- Another price item bundle with the same price item, relationship type, and date range combination does not exist in the system.

Viewing the Price Item or Price Item Bundle Details

Procedure

To view the details of a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to view.

The **Price Item** screen appears. It contains the following zones:

- [Price Item](#) on page 179
- [Parameters](#) on page 180
- [Predefined Parameter Values for Price Item](#) on page 181

- [Divisions](#) on page 181
 - [Division-Specific Characteristics for Price Item](#) on page 182
 - [Division-Specific SQIs for Price Item](#) on page 182
 - [Price Item Relationship](#) on page 183
3. View the basic details and characteristics of the price item or price item bundle in the **Price Item** zone.
 4. View the parameters associated with the price item or price item bundle in the **Parameters** zone.
 5. View the valid predefined parameter values of the price item or price item bundle in the **Predefined Parameter Values for Price Item** zone.
 6. View the divisions to which the price item or price item bundle is associated in the **Divisions** zone.
 7. View the division-specific characteristics of the price item or price item bundle in the **Division-Specific Characteristics for Price Item** zone.
 8. View the division-specific SQIs of the price item or price item bundle in the **Division-Specific SQIs for Price Item** zone.
 9. View the price items or price item bundles related to the parent price item or price item bundle in the **Price Item Relationship** zone.

Related Topics

How to search for a price item or price item bundle	Searching for a Price Item or Price Item Bundle on page 162
Price Item screen	Price Item (Used for Viewing) on page 178

Price Item (Used for Viewing)

The **Price Item** screen allows you to view the details of the price item or price item bundle. It also allows you to edit the details of the price item or price item bundle. It contains the following zones:

- **Price Item** – Displays the basic details of the price item or price item bundle.
- **Parameters** – Lists the parameters which are associated with the price item or price item bundle.
- **Predefined Parameter Values for Price Item** – Lists the predefined parameter values which are valid for the price item or price item bundle.

Note: By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a parameter in the **Parameters** zone.

- **Divisions** – Lists the divisions to which the price item or price item bundle is associated.
- **Division-Specific Characteristics for Price Item** – Lists the characteristics which are defined for the price item or price item bundle in the respective division.

Note: By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

- **Division-Specific SQIs for Price Item** – Lists the SQIs to which the price item or price item bundle is associated in the respective division.

Note: By default, the **Division-Specific SQIs for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

- **Price Item Relationship** – Lists the price items or price item bundles which are associated with the parent price item or added in the price item bundle.

Price Item

The **Price Item** zone displays the details of the price item or price item bundle. It contains the following sections:

- **Main** – Displays basic information about the price item or price item bundle. It contains the following fields:

Field Name	Field Description
Price Item	Displays information about the price item or price item bundle.
Description	Displays the description of the price item or price item bundle.
Price Item Usage	Indicates whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees
	Note: This field appears only when you select the Pricing option from the Price Item Usage list.
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular
	Note: This field appears only when you select the Yes option from the Bundle list.
Global Price List	Indicates whether the price item or price item bundle is assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No
Contract Type	Displays the contract type to which the price item or price item bundle is associated.

- **Price Item Characteristics** – Lists the characteristics defined for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item or price item bundle.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price item or price item bundle.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price item or price item bundle is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Parameters

The **Parameters** zone lists the parameters to which the price item or price item bundle is associated. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the parameter is effective for the price item or price item bundle.
Effective End Date	Displays the date till when the parameter is effective for the price item or price item bundle.
Parameter	Indicates the parameter to which the price item or price item bundle is associated. Note: It has a link. On clicking the link, the Parameter screen appears where you can view the details of the respective parameter.
Business Label	Displays the business label of the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.
Display Order	Indicates the order in which the parameter and its value should be displayed in the price item parameter information string across the application.

Column Name	Column Description
Parameter Usage	Indicates whether the parameter is used for aggregation and/or for defining the pricing of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Aggregation – Indicates that the parameter is used for aggregating transactions. • Pricing – Indicates that the parameter is used for aggregating transactions and defining the price item pricing.
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing.
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.

On clicking the **Broadcast**  icon corresponding to a parameter, the **Predefined Parameter Values for Price Item** zone appears where you can view the valid predefined parameter values of the price item or price item bundle.

Predefined Parameter Values for Price Item

The **Predefined Parameter Values for Price Item** zone lists the predefined parameter values which are valid for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Parameter Value	Displays the predefined parameter value.
Description	Displays the description of the predefined parameter value.

By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a parameter in the **Parameters** zone.

Divisions

The **Divisions** zone lists the divisions to which the price item or price item bundle is associated. It contains the following column:

Column Name	Column Description
Division	Indicates the division to which the price item or price item bundle is associated. Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.

On clicking the **Broadcast**  icon corresponding to a division, the **Division-Specific Characteristics for Price Item** and **Division-Specific SQIs for Price Item** zones appear.

You can filter the list using the **Division** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

Division-Specific Characteristics for Price Item

The **Division-Specific Characteristics for Price Item** zone lists the characteristics defined for a price item or price item bundle in a specific division. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the price item or price item bundle characteristic is effective for the division.
Characteristic Type	Indicates the characteristic type. Note: It has a link. On clicking the link, the Characteristic Type screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

Price Item Relationship

The **Price Item Relationship** zone lists the price items or price item bundles which are associated with the parent price item or added to the price item bundle. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Relationship Type	Indicates how the price item or price item bundle is related with the parent price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Bundle • Custom • Denominator • Numerator • Other • Price Item • Service • Service Group
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular
	Note: The data appears in this column only when the associated price item is a bundle.

You can filter the list using various search criteria (such as, **Price Item**, **Description**, **Effective Start Date**, and **Relationship Type**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

You can associate or disassociate a price item or price item bundle from a parent price item and add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

Editing a Price Item or Price Item Bundle

Prerequisites

To edit a price item or price item bundle, you should have:

- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1_PRICING)** feature configuration

Procedure

To edit a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to edit.
The **Price Item** screen appears.
3. Click the **Edit** button in the **Price Item** zone.

The **Price Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item or price item bundle.
- **Parameters** – Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while editing the ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** – Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs and characteristics for the price item or price item bundle.
- **Price Item Characteristics** – Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item or price item bundle.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> • Pricing • Pricing and Billing 	Yes
	Note: The system does not allow you to change the price item usage from Pricing and Billing to Pricing for a price item or price item bundle.	
Price Item Type	Used to indicate the type of price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees 	Yes
	Note: This field appears only when the Price Item Usage field is set to Pricing .	
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Not applicable
Bundle Type	Used to indicate the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular 	Yes (Conditional)
	Note: This field is required when you are editing a price item bundle.	
	Note: This field is enabled only when you select the Pricing and Billing option from the Price Item Usage list and the Yes option from the Bundle list. All the above mentioned values are available in the list when you are editing a price item bundle which is available for pricing and billing. However, when you are editing a price item bundle which is available for only pricing and when the price item type is set to Fees , you can only define a regular price item bundle. Therefore, by default, the value is set to Regular when the Pricing option is selected from the Price Item Usage list and the Yes option from the Bundle list.	

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle. <p>Note:</p> <p>This field appears only when the Price Item Usage field is set to Pricing and Billing.</p> <p>The Search  icon appears corresponding to the Contract Type field. On clicking the Search icon, the Contract Type Search window appears.</p>	Yes

4. Modify the required details in the **Main** section.
5. Associate or disassociate a parameter from the price item or price item bundle, if required.

Note:

You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which will be used for aggregation (in other words, where the **Parameter Usage** field is set to **Aggregation**) anytime, whenever required. However, you can add a parameter which will be used for pricing (in other words, where the **Parameter Usage** field is set to **Pricing**) only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

6. Associate or disassociate the price item or price item bundle from the divisions, if required.

Note: If the price item or price item bundle is associated to a division to which you do not have access, then the corresponding row in the **Divisions** section is grayed out.

7. Define, edit, or remove division-specific SQIs from the price item or price item bundle, if required.
8. Define, edit, or remove division-specific characteristics from the price item or price item bundle, if required.
9. Define, edit, or remove characteristics from the price item or price item bundle, if required.
10. Click **Save**.

The changes made to the price item or price item bundle are saved.

Price Item Relationship

Oracle Revenue Management and Billing allows you to associate two or more price items with each other, and thereby group them for various reasons, such as reporting, billing, and so on. In other words, you can define a price item to price item relationship. The price item to which a set of price items are associated is called a parent price item. You can also create a price item bundle and then add price items to the price item bundle. The main objective behind grouping price items or creating price item bundles is to offer discounts based on the volume across price items, facilitate minimum or maximum charge calculations across price items, or offer common price across price items.

While associating a price item with a parent price item or adding a price item to a price item bundle, you need to specify how the price item is related to the parent price item or price item bundle. You can add a price item to a price item bundle using the following relationship types:

- **Bundle** – Used while adding price items in the regular and phantom price item bundles.
- **Denominator** – Used while adding price items in the ratio price item bundles.
- **Numerator** – Used while adding price items in the ratio price item bundles.

However, you can associate a price item or price item bundle with a parent price item using the following relationship types:

- Other
- Custom
- Price Item
- Service
- Service Group

Note:

You cannot add same set of price items using the same relationship type while defining two or more bundles with the same bundle type. For example, you cannot add P1 and P2 using the relationship type as Bundle while defining regular bundles named BUN1 and BUN2. However, you can use same set of price items while defining two or more price item to price item relationships.

If the multi parameter based pricing feature is enabled, you can add same set of price item and price item parameter combination (using the same relationship type) in more than one bundle (having the same bundle type) provided the price item parameter values are different.

The **Price Item Relationship** screen allows you to view the price items that are already associated with the parent price item or added to the price item bundle. It also allows you to associate or disassociate a price item or price item bundle

from the parent price item, or add or remove a price item or price item bundle from the price item bundle. This screen consists of the following zone:

- [Assigned Price Items](#) on page 188

Assigned Price Items

The **Assigned Price Items** zone lists the price items or price item bundles that are already associated with the parent price item or added to the price item bundle. You will not find any records in this zone if the parent price item does not have any price item or price item bundle associated with it or if the price item bundle does not have any price item or price item bundle added to it. It contains the following sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search a particular price item or price item bundle which is associated with the parent price item or added to the price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
Effective Start Date	Used to search price items or price item bundles which are associated with the parent price item or added to the price item bundle from a particular date.	No
Relationship Type	Used to search price items or price item bundles which are related to the parent price item or added to the price item bundle using a particular relationship type. The valid values are: <ul style="list-style-type: none"> • Bundle • Custom • Denominator • Numerator • Other • Price Item • Service • Service Group 	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.

Column Name	Column Description
Relationship Type	<p>Indicates how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> • Bundle • Custom • Denominator • Numerator • Other • Price Item • Service • Service Group <p>Note: The Bundle relationship type is used while adding price items in the regular and phantom price item bundles. The Denominator and Numerator relationship types are used while adding price items in the ratio price item bundles. And, all other relationship types, such as Other, Custom, Price Item, Service, and Service Group are used while associating price items to the parent price item.</p>
Price Item Parameters	Indicates the parameters based on which you want to determine pricing for the price item.

You can associate or disassociate a price item or price item bundle from a parent price item, or add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

Associating a Price Item or Price Item Bundle with a Parent Price Item

Prerequisites

To associate a price item or price item bundle with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs
- Price item or price item bundle associated to at least one division to which the parent price item belongs.

Procedure

To associate a price item or price item bundle with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **Price Item Relationship** (🔍) icon in the **Price Item Relationship** column corresponding to the parent price item to which you want to associate a price item or price item bundle.
The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.
The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to associate with the parent price item.	Yes
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search window appears.	
Relationship Type	Used to indicate how the price item or price item bundle is related with the parent price item. The valid values are: <ul style="list-style-type: none"> • Bundle • Custom • Denominator • Numerator • Other • Price Item • Service • Service Group 	Yes
	Note: You can use the Other , Custom , Price Item , Service , or Service Group relationship type while associating a price item or price item bundle to the parent price item.	
Effective Start Date	Used to specify the date from when you want to associate the price item or price item bundle with the parent price item.	Yes
	Note: The effective start date cannot be later than the effective end date.	
Effective End Date	Used to specify the date till when you want to associate the price item or price item bundle with the parent price item.	No
	Note: The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameters	<p>Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.</p> <p>Note:</p> <p>This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The Search () icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameters screen appears.</p> <p>You must not use the Price Item Parameters field while associating a price item or price item bundle with a parent price item. This is because it is designed to be used while adding a price item or price item bundle to the ratio and phantom price item bundles.</p>	Not applicable
Characteristics	<p>On clicking the Add () icon, you can define relationship-specific characteristics for the price item or price item bundle.</p>	Not applicable

- Enter the required details in the **Price Item Relationship** screen.

Note: You can associate the same set of price items or price item bundles using the same relationship type to more than one parent price item. For example, you can associate the **P1** and **P2** price items using the **Service** relationship type to the **PP1** and **PP2** price items.

- Define relationship-specific characteristics for the price item or price item bundle, if required.
- If you want to associate more than one price item or price item bundle with the parent price item, click the **Add** () icon and then repeat the steps from 4 to 5.

Note: However, if you want to disassociate a price item or price item bundle from a parent price item, click the **Delete** () icon corresponding to the price item or price item bundle.

- Click **Save**.

The price item or price item bundle is associated with the parent price item.

Adding a Price Item or Price Item Bundle to a Price Item Bundle

Prerequisites

To add a price item or price item bundle to a price item bundle, you should have:

- Price item bundle (to which you want to add a price item or price item bundle) associated with the division to which the user belongs
- Price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated to the same contract type
- Parameters associated with the price item or price item bundle (which you want to add) when you want to determine pricing for the price item based on the parameters in the ratio and phantom price item bundles
- Regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated with the same parameters

Note: Not only the parameters, but also their details such as parameter usage, mandatory flag, and priority should be identical. Also, the date from when the parameters are effective for the price item bundle (to which you want to add a price item or price item bundle) should be earlier than or equal to the date from when the parameters are effective for the price item or price item bundle (which you want to add).

- Price item or price item bundle (which you want to add) associated to at least one division to which the price item bundle (to which you want to add a price item or price item bundle) belongs

Procedure

To add a price item or price item bundle to a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Relationship** column corresponding to the price item bundle to which you want to add a price item or price item bundle. The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to add to the price item bundle.	Yes
	Note: The Search (🔍) icon appears corresponding to the Price Item field. On clicking the Search icon, the Price Item Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Used to indicate how the price item or price item bundle is related to the price item bundle. The valid values are: <ul style="list-style-type: none"> • Bundle • Custom • Denominator • Numerator • Other • Price Item • Service • Service Group 	Yes
	Note: You can use the Bundle relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the Denominator and Numerator relationship type while adding a price item or price item bundle in the ratio price item bundles.	
Effective Start Date	Used to specify the date from when the price item or price item bundle is added to the price item bundle.	Yes
	Note: The effective start date cannot be later than the effective end date.	
Effective End Date	Used to specify the date till when the price item or price item bundle is added to the price item bundle.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Price Item Parameters	Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.	No
	Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . The Search (🔍) icon appears corresponding to the Price Item Parameters field. On clicking the Search icon, the Price Item Parameters screen appears.	
Characteristics	On clicking the Add (📄+) icon, you can define relationship-specific characteristics for the price item or price item bundle.	Not applicable

4. Enter the required details in the **Price Item Relationship** screen.

Note:

You can add a price item or price item bundle to a regular price item bundle only when the regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) are associated with the same parameters for the specified date range.

You cannot add the same set of price items using the same relationship type to two or more price item bundles with the same bundle type. For example, you cannot add **P1** and **P2** using the **Bundle** relationship type to the **BUN1** and **BUN2** regular price item bundles.

If the multi parameter based pricing feature is enabled, you can add the same set of price item and price item parameter combination (using the same relationship type) to more than one bundle (with the same bundle type) provided the price item parameter values are different.

You cannot add the same price item or price item bundle in numerator and denominator while defining a ratio price item bundle.

5. Define relationship-specific characteristics for the price item or price item bundle, if required.
6. If you want to add more than one price item or price item bundle to the price item bundle, click the **Add** () icon and then repeat the steps from 4 to 5.

Note: However, if you want to remove a price item or price item bundle from a price item bundle, click the **Delete** () icon corresponding to the price item or price item bundle.

7. Click **Save**.

The price item or price item bundle is added to the price item bundle.

Setting the Parameters for a Price Item or Price Item Bundle**Prerequisites**

To set the parameters for a price item or price item bundle, you should have:

- Parameters (where the **Parameter Usage** field is set to **Pricing**) associated with the price item or price item bundle

Procedure

To set the parameters for a price item or price item bundle:

1. Click the **Search** () icon corresponding to the **Price Item Parameters** field.

The **Price Item Parameters** screen appears. It contains the following fields:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle for which you want to set the parameters.
Description	Displays the description of the price item or price item bundle.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Indicates the parameter which is associated with the price item or price item bundle.	Not applicable
	Note: Here, the system displays the price item parameter where the Parameter Usage field is set to Pricing .	
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Not applicable
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Not applicable
	Note: The priority for all parameters which are mandatory is set to 0.	
Parameter Value	Used to specify the parameter value.	Yes (Conditional)
	Note: If the parameter value type is Predefined or Reference , the Search  icon appears corresponding to the Parameter Value field. On clicking the Search icon, you can search for a parameter value. You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	
		Note: This field is required when you want to determine pricing for the price item or price item bundle based on the parameter.

2. Enter the required details in the **Price Item Parameters** screen.
3. Click **OK**.

A comma-separated list of values appear in the **Price Item Parameters** column corresponding to the price item or price item bundle. The order in which parameter values appear in the price item parameter information string is controlled by the display order (which is defined while associating a parameter with a price item).

Note: The value specified for a parameter whose value type is set to **Adhoc** is validated using the validation algorithm attached to the respective parameter.

Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle

Prerequisites

To define relationship-specific characteristics for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item Relationship**)

Procedure

To define relationship-specific characteristics for a price item or price item bundle:

1. Click the **Add** () icon in the **Characteristics** column corresponding to the price item or price item bundle for which you want to define relationship-specific characteristics.

A grid appears corresponding to the price item or price item bundle with the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the relationship-specific characteristic is effective for the price item or price item bundle.	Yes (Conditional) Note: This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price Item Relationship .	Yes (Conditional) Note: This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search () icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.

2. Enter the required details in the **Characteristics** grid.
3. If you want to define more than one relationship-specific characteristic for the price item or price item bundle, click the **Add** () icon and then repeat step 2.

Note: However, if you want to remove a relationship-specific characteristic from the price item or price item bundle, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The relationship-specific characteristics are defined for the price item or price item bundle.

Disassociating a Price Item or Price Item Bundle from a Parent Price Item

Prerequisites

To disassociate a price item or price item bundle from a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

Procedure

To disassociate a price item or price item bundle from a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price Item Relationship** column corresponding to the parent price item from which you want to disassociate a price item or price item bundle. The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone. The **Price Item Relationship** screen appears.
4. Filter the price items or price item bundles associated to the parent price item, if required.
5. In the **Search Results** section, click the **Delete** () icon corresponding to the price item or price item bundle that you want to disassociate from the parent price item.
6. Click **Save**.

The price item or price item bundle is disassociated from the parent price item.

Removing a Price Item or Price Item Bundle from a Price Item Bundle

Prerequisites

To remove a price item or price item bundle from a price item bundle, you should have:

- Price item bundle associated with the division to which the user belongs

Procedure

To remove a price item or price item bundle from a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Relationship** column corresponding to the price item bundle from which you want to remove a price item or price item bundle. The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone. The **Price Item Relationship** screen appears.
4. Filter the price items or price item bundles added to the price item bundle, if required.
5. In the **Search Results** section, click the **Delete** (🗑️) icon corresponding to the price item or price item bundle that you want to remove from the price item bundle.
6. Click **Save**.
The price item or price item bundle is removed from the price item bundle.

Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item

Prerequisites

To filter the price items or price item bundles associated with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

Procedure

To filter the price items or price item bundles associated with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Relationship** column corresponding to the parent price item whose details you want to view. The **Price Item Relationship** screen appears.
3. Enter the search criteria in the **Assigned Price Items** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The search results are filtered based on the specified criteria.

Price List

A price list allows you to define standard prices for a group of price items. In other words, a price list is a rate card for price items or services which are offered to the accounts or persons. You can create more than one price list. For example, you can create a price list for large, medium-sized, and small customers. You can also create a set of price lists for different regions. You can define two types of price lists — **Standard** and **Promotional**. You can also set eligibility criteria for the price list with effective start date, end date, and description. At present, there is no functionality associated with the price list type. The implementation team can use the price list type to define the custom logic as per the business requirements.

A price list and price item pricing within the price list are effective for a particular duration. You can define multiple pricing for the same price item and variance parameter or product parameters combination within a price list only when the price item pricing date range is different. You can assign the same price item in multiple price lists and define different pricing for the price item in each price list based on the business requirements.

The system enables you to specify the duration for which the price list is available for assignment to an account or a person. However, note that at present, the availability start and end dates are not used in the product while assigning a price list to an account or a person. If required, the implementation team can build the custom logic using the availability start and end dates in the product.

Once you create a price list, you have to assign price items to the price list and define pricing for each price item assigned to the price list. The price lists are then assigned to accounts or persons to indicate the prices that will be charged for various price items or services offered to them. You can assign multiple price lists to an account or a person for an overlapping date range. But, you need to specify the priority or order for the price list in which the pricing from the price list should be considered. You can also assign the same price list to multiple accounts or persons.

You can define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit price item pricing from the price list hierarchy.

The system allows you to create the following:

- **Default Price List** – You can create a price list and set it as a default price list for a particular division. To define a default price list for a division, you need to set the value for the **Default Price List ID** parameter in the price assignment search algorithm which is attached to the division. If the effective price item pricing is not available

at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list and accordingly uses the price item pricing. You can have the same price list as a the default price list for multiple divisions.

- **Global Price List** – You can create one global price list in the system. It is used only when the price item pricing is not available at any level in the customer hierarchy and in the default price list associated with the division. You can assign only those price items in the global price list whose the **Global Price List** option is set to **Yes**. The global price list is used while searching an effective price item pricing only when the **Global Price List** parameter in the price assignment search algorithm (attached to the division) is set to **Y**. Finally, if the effective price item pricing is not available in the default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.
- **Template Price List** – You can define a template price list and assign template price item pricing to a template price list. You cannot assign template price list to an account or a person. You can only create a copy of a template price item pricing which is assigned to a template price list. Once you create a copy of the template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

Price List (Used for Searching)

The **Price List** screen allows you to search for a price list using various search criteria. It also allows you to define a price list. This screen consists of the following zones:

- [Search Price List](#) on page 204
- [Price List Price Items](#) on page 207

Search Price List

The **Search Price List** zone allows you to search for a price list using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price list using the price list details. The valid value is: <ul style="list-style-type: none"> • Price List Details 	Yes
	Note: By default, the Price List Details option is selected.	
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search a price list with a particular description.	No
Effective Start Date	Used to search price lists which are effective from a particular date.	No
Effective End Date	Used to search price lists which are effective till a particular date.	No
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> • Promotional • Standard 	No
	Note: By default, the Standard option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to indicate whether you want to search a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Availability Start Date	Used to search price lists which are available for assignment to an account or a person from a particular date. Note: By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.	No
Availability End Date	Used to search price lists which are available for assignment to an account or a person till a particular date. Note: By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.	No
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Proposed • Template Note: By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.	No
Division	Used to search price lists which are associated with a particular division. Note: You can only view those divisions to which you have access in the Division list.	No
Parent Price List	Used to search price lists which inherit pricing from a particular parent price list. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears. By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.	No

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List Effective Date	Used to search price lists that inherit pricing from a parent price list which is effective from a particular date.	No
	Note: By default this field does not appear. This field appears only when you click the Advanced Search link in the upper right corner of the Search Price List zone.	

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list.
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active • Proposed • Template
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.
Copy	On clicking the Copy () icon, the Price List screen appears where you can create a new price list using an existing price list.
Price List Pricing	On clicking the View () icon in the Price List Pricing column, the Price List Price Item Pricing screen appears where you can view and edit a list of price items pricing information assigned to the price list.
Price List Assigned To	On clicking the View () icon in the Price List Assigned To column, the Price List Assignments screen appears where you can view the details of the persons and accounts to which the price list is assigned.
Eligible Accounts/ Persons	On clicking the View () icon in the Eligible Accounts/Persons column, the Entities Eligible for Price List Assignment screen appears where you can search for a list of eligible accounts and persons to which you want to assign the price list in a particular division.

Note:

However, when you search for a price list by specifying the date (which can be current, past or future date) in the **Parent Price List Effective Date** field, the system retrieves the price lists that meet the search criteria along with the details of the parent price list that is effective on that date.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

- On clicking the **Broadcast**  icon corresponding to the **Price List Information** field, the **Price List Price Items** zone appears where you can view a list of price items to which the price list is assigned.

Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of the price item pricing information and pricing ID which are separated by a comma (,) for the price list. Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the pricing information of the respective price item.
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True .

Column Name	Column Description
Pricing Status	Indicates the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Inactive • Proposed • Rejected • Template
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based • Regular
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Copy	On clicking the Copy () icon, the Price Item Pricing screen appears where you can define a new price item pricing using the existing price item pricing.

By default, the **Price List Price Items** zone does not appear in the **Price List** screen. It appears only when you click the **Broadcast** () icon corresponding to the price list in the **Search Price List** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

Searching for a Price List

Prerequisites

To search for a price list, you should have:

- Divisions defined in the application

- Price list associated with the division to which the user belongs

Procedure

To search for a price list:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.
A sub-menu appears.
3. Click the **Search** option from the **Price List** sub-menu.
The **Price List** screen appears.
4. Enter the search criteria in the **Search Price List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Viewing Price Items Assigned to a Price List

Prerequisites

To view price items assigned to a price list, you should have:

- An algorithm defined using the **C1-PLPINFO** algorithm type and attached to **Pricelist Products Assignment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

Procedure

To view price items assigned to a price list:

1. Search for the price list in the **Price List** screen.
2. Do either of the following:

If you want to...	Then...
View the price items assigned to the price list in the price list screen	<ol style="list-style-type: none"> 1. In the Search Results section, click the Broadcast  icon corresponding to the price list whose price items details you want to view. 2. The Price List Price Items zone appears.

If you want to...	Then...
View the price items assigned to the price list in the price list price item pricing screen	<ol style="list-style-type: none"> In the Search Results section, click the link in the Price List Information column corresponding to the price list whose price items details you want to view. The Price List screen appears. <ol style="list-style-type: none"> In the Search Results section, click the View (🔍) icon in the Price List Pricing column corresponding to the price list whose price items details you want to view. The Price List Price Item Pricing screen appears.

- View the price items that are assigned to the price list in the **Price List Price Items** zone.

Defining a Price List

Procedure

To define a price list:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Price List**.
A sub-menu appears.
- Click the **Add** option from the **Price List** sub-menu.

The **Price List** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the price list.
- Hierarchy** - Used to associate the price list with one or more parent price lists for a specified duration.
- Divisions** - Used to associate the price list with one or more divisions.
- Eligibility Criteria** - Used to define one or more eligibility criteria for the price list.
- Characteristics** - Used to define a list of characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	Note: By default, the current date appears in this field.	
Effective End Date	Used to specify the date till when the price list is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> Promotional Standard 	Yes
	Note: By default, the Standard option is selected.	
Global Price List	Used to indicate whether the price list is a global price list or not. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person.	No
	Note: At present, the availability start date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person.	No
	Note: The availability end date cannot be earlier than the availability start date. At present, the availability end date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active - Used to indicate that the price list is used for billing. • Proposed - Used to indicate that the price list is used for quotations. • Template - Used to indicate that the price list is a template price list. 	Yes
	Note: By default, the Active option is selected.	

Tip: Alternatively, you can access the **Price List** screen by clicking the **Add** button in the **Page Title** area of the **Price List** screen.

4. Enter the required details in the **Main** section.

Note: By default the **Main** section is displayed.

5. Associate the price list with one or more parent price list, if required.
6. Associate the price list with one or more divisions, if required.
7. Define eligibility criteria for the price list, if required.
8. Define characteristics for the price list, if required.
9. Click **Save**.

The price list is defined.

Note: The price list ID is generated automatically when the price list is defined.

Defining the Price List Hierarchy

Oracle Revenue Management and Billing allows you to define the price list hierarchy. It helps you to inherit the price item pricing from the parent price list if the price item pricing is not available in the price list (assigned to the account, person, or parent person). And, if the price item pricing is not available in the parent price list, the system will search for the price item pricing in the parent's parent price list (i.e. in the grandparent price list) and continue till it reaches the last level in the hierarchy.

In other words, when you define the price list hierarchy and assign the price list to an account or a person, the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned

price list. However, if the price item pricing is available on both the assigned and parent price lists, the system derives the price item pricing from the assigned price list.

You can define multiple parent price lists for a price list. But, only one parent price list is effective for a particular duration. Two or more price lists can have the same parent price list.

Procedure

To define the price list hierarchy:

1. Click the **Hierarchy** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price list.

The **Hierarchy** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List Effective From Date	Used to specify the date from when the price list inherits pricing from the parent price list.	Yes (Conditional)
	Note: The parent price list effective from date cannot be later than the parent price list effective to date and earlier than price list effective end date.	Note: This field is required when you are associating the price list with a parent price list.
Parent Price List Effective To Date	Used to specify the date till when the price list inherits pricing from the parent price list.	No
	Note: The parent price list effective to date cannot be earlier than the parent price list effective from date and later than price list effective end date.	
Parent Price List	Used to specify the parent price list ID to which you want to associate the price list.	Yes (Conditional)
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears. On specifying the parent price list, the description of the parent price list appears corresponding to the Parent Price List field.	Note: This field is required when you are associating the price list with a parent price list.

2. Enter the required details in the **Hierarchy** section.
3. If you want to associate the price list with more than one parent price list, click the **Add**  icon corresponding to the parent price list and then repeat step 2.

Note:

However, If you want to remove a parent price list from the price list hierarchy, click the **Delete**  icon corresponding to the parent price list.

You can associate a price list with multiple parent price lists. But, only one parent price list is effective for a particular duration. Also, while associating a price list with a parent price list, you can only specify a price list which is effective during the specified duration.

4. Click **Save**.

The price list hierarchy is defined.

Defining a Characteristic for a Price List

Prerequisites

To define a characteristic for a price list, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List**)

Procedure

To define a characteristic for a price list:

1. Click the **Characteristics** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price list.

The **Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price List .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search  icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list.

2. Enter the required details in the **Characteristics** section.

3. If you want to define more than one characteristic for the price list, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for the price list.

Associating a Price List with a Division

You can assign a price list only to those accounts or persons which belong to the division to which the price list is associated. Therefore, you need to associate the price list with appropriate divisions.

Prerequisites

To associate a price list with a division, you should have:

- Divisions defined in the application

Procedure

To associate a price list with a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price list.

The **Divisions** section appears. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the price list.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	

2. Select the required division from the list.
3. If you want to associate the price list with more than one division, click the **Add** (+) icon corresponding to the division and then repeat step 2.

Note: However, if you want to remove the price list from a division, click the **Delete** (🗑️) icon corresponding to the division.

4. Click **Save**.

The price list is associated with the division.

Tip: Alternatively, you can associate a price list with a division using the **Division** screen.

Defining Eligibility Criteria for a Price List**Prerequisites**

To define eligibility criteria for a price list, you should have:

- The **Price List Eligibility Criteria** check box selected in the **Parameter Usage** section while defining the parameter

Procedure

To define eligibility criteria for a price list:

- Click the **Eligibility** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price list.

The **Eligibility** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Criteria	On clicking the Add () icon, you can associate eligibility criteria of parameters for the price list.	Yes (Conditional) Note: This field is required when you are defining a parameter eligibility criteria for the price list.
Effective Start Date	Used to specify the date from when the eligibility criteria is effective for the price list.	Yes (Conditional) Note: This field is required when you are defining an eligibility criteria for the price list.
Effective End Date	Used to specify the date till when the eligibility criteria is effective for the price list.	No
Description	Used to specify the description for the eligibility criteria.	Yes
Sequence Number	Used to indicate the order in which the parameter eligibility criteria for the price list should be executed. Note: This field appears only when you click the Add () icon in the Criteria column corresponding to the eligibility criteria	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the parameter (on the left hand side) which is used in the pricing eligibility criteria.</p> <p>Note:</p> <p>The Search () icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> <p>On specifying the value for a parameter, the description of the parameter appears corresponding to the Parameter field.</p> <p>The parameter search results displays only those parameters where the Price List Eligibility Criteria check box is selected.</p> <p>This field appears only when you click the Add () icon in the Criteria column corresponding to the eligibility criteria</p>	Yes
Operator	<p>Used to specify the relational operator to define the relation between the parameter name and value.</p> <p>Note: This field appears only when you click the Add () icon in the Criteria column corresponding to the eligibility criteria</p>	Yes
Parameter Value Type	<p>Used to indicate whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are:</p> <ul style="list-style-type: none"> • Parameter • Value <p>Note: This field appears only when you click the Add () icon in the Criteria column corresponding to the eligibility criteria</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).</p> <p>Note:</p> <p>On selecting Parameter from the Parameter Value Type column, a Search () icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> <p>On specifying the value for a parameter, the description of the parameter appears corresponding to the Parameter field.</p> <p>The parameter search results displays only those parameters where the Price List Eligibility Criteria check box is selected.</p> <p>This field appears only when you click the Add () icon in the Criteria column corresponding to the eligibility criteria</p>	Yes
Parameter Value	Used to indicate the parameter value against which you want to compare the parameter (on the left hand side).	
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number should be executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field should be executed • Rule Is True – Used to indicate that the action specified in the Rule True Action field should be executed. <p>Note: This field appears only when you click the Add () icon in the Criteria column corresponding to the eligibility criteria</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number should be executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field should be executed • Rule Is True – Used to indicate that the action specified in the Rule True Action field should be executed. <p>Note: This field appears only when you click the Add () icon in the Criteria column corresponding to the eligibility criteria</p>	Yes
Is Insufficient	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number should be executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field should be executed • Rule Is True – Used to indicate that the action specified in the Rule True Action field should be executed. <p>Note: This field appears only when you click the Add () icon in the Criteria column corresponding to the eligibility criteria</p>	Yes

- Enter the required details in the **Eligibility** section.
- If you want to define more than one eligibility criteria for the price list, click the **Add** () icon corresponding to the criteria and then repeat step 2.

Note: However, if you want to remove the eligibility criteria, click the **Delete** () icon corresponding to the criteria.

- If you want to define more than one parameter eligibility criteria for the price list, click the **Add** () icon corresponding to the parameter.

Note: However, if you want to remove the parameter eligibility criteria from the price list, click the **Delete** () icon corresponding to the parameter.

- Click **Save**.

The eligibility criteria is defined for the price list.

How to define a price list	Defining a Price List on page 210
How to edit a price list	Editing a Price List on page 227
How to copy a price list	Copying a Price List on page 220

Copying a Price List

Instead of creating a price list from scratch, you can create a new price list using an existing price list. This is possible through copying a price list. On copying a price list, the details including the pricing parameters, divisions, characteristics, eligibility criteria, and the assigned price items are copied to the new price list. You can then edit the details, if required.

Prerequisites

To copy a price list, you should have:

- Price list (whose copy you want to create) defined in the application
- Price list (whose copy you want to create) associated with the division to which the user belongs

Procedure

To copy a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price list using which you want to define a new price list.

The **Price List** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to associate the price list with one or more parent price lists for a specified duration.
- **Divisions** - Used to associate the price list with one or more divisions.
- **Eligibility Criteria** - Used to define one or more eligibility criteria for the price list.
- **Characteristics** - Used to define a list of characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	Note: The effective start date cannot be later than the effective end date.	
Effective End Date	Used to specify the date till when the price list is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> Promotional Standard 	Yes
	Note: By default, the Standard option is selected.	
Global Price List	Used to Indicate whether the price list is a global price list or not. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
Availability Start Date	Used to specify the date from when the price list is available for assignment to an account or a person.	Yes
	Note: At present, the availability start date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Availability End date	Used to specify the date till when the price list is available for assignment to an account or a person.	No
	Note: The availability end date cannot be earlier than the availability start date. At present, the availability end date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	Yes
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> Active - Used to indicate that the price list is used for billing. Proposed - Used to indicate that the price list is used for quotations. Template - Used to indicate that the price list is a template price list. 	Yes
Copy Pricing	Used to indicate whether you want to copy the pricing information to the price list. The valid values are: <ul style="list-style-type: none"> All None 	Yes

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the parent price list details, if required.
5. Associate or disassociate the price list from the required divisions.
6. Define, edit, or remove eligibility criteria for the price list, if required.
7. Define, edit, or remove characteristics from the price list, if required.
8. Click **Save**.

The new price list is defined.

Note: The price list ID is generated automatically when the price list is defined.

Viewing the Price List Details

Procedure

To view the details of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to view.

The **Price List** screen appears. It contains the following zones:

- [Price List](#) on page 223
 - [Eligibility Criteria](#) on page 224
 - [Price List Price Items](#) on page 207
3. View the basic details, hierarchy, divisions, and characteristics of the price list in the **Price List** zone.
 4. View the eligibility criteria to which the price list is associated in the **Eligibility Criteria** zone.
 5. View the price items that are assigned to the price list in the **Price List Price Items** zone.

Price List (Used for Viewing)

The **Price List** screen allows you to view the details of a price list. It also allows you to edit a price list. It contains the following zones:

- **Price List** - Displays the basic details of the price list.
- **Eligibility Criteria** - Displays the eligibility criteria for the price list.
- **Price List Price Items** - Displays the price items that are assigned to the price list.

Price List

The **Price List** zone displays the details of the price list. It contains the following sections:

- **Main** - Displays basic information about the price list. It contains the following fields:

Field Name	Field Description
Price List ID	Displays the price list ID.
Price List Description	Displays the description for the price list.
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Price List Type	Indicates the type of the price list. The valid values are: <ul style="list-style-type: none"> • Promotional • Standard
Global Price List	Indicates whether the price list is a global price list or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End date	Displays the date till when the price list is available for assignment to an account or a person.
Validity Period (in Days)	Displays the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active – Indicates that the price list is used for billing. • Proposed – Indicates that the price list is used for quotations. • Template – Indicates that the price list is a template price list.

- **Hierarchy** - Lists the parent price list from where the price list inherits the price item pricing for a specified duration. It contains the following columns:

Column Name	Column Description
Parent Price List	Displays the ID of the parent price list.
Parent Price List Effective From Date	Displays the date from when the price list can inherit pricing from the parent price list.

Column Name	Column Description
Parent Price List Effective To Date	Displays the date till when the price list can inherit pricing from the parent price list.

- **Divisions** - Lists the divisions to which the price list is associated. It contains the following column:

Column Name	Column Description
Division	Displays the division to which the price list is associated. Note: It has a link. On clicking the link, the Division screen appears where you can view the details of the respective division.

- **Characteristics** - Lists the characteristics that are associated with the price list. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price list.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Record Actions** - This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price list.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price list is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Eligibility Criteria

The **Eligibility Criteria** zone lists the criteria to which the price list is associated. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the eligibility criteria is effective for the price list.
Effective End Date	Displays the date till when the eligibility criteria is effective for the price list.
Description	Displays the description for the eligibility criteria.
Sequence	Indicates the order in which the price list eligibility criteria should be executed.

Column Name	Column Description
Parameter	Indicates the parameter (on the left hand side) used in the pricing eligibility criteria.
Operator	Displays the relational operator to define the relation between the parameter name and value.
Parameter Value Type	Indicates whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value.
Parameter	Indicates the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).
Parameter Value	Indicates the parameter value against which you want to compare the parameter (on the left hand side).
Is True	Indicates what happens when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition - Indicates that the condition with consecutive sequence number should be executed. • Rule Is False - Indicates that the action specified in the Rule False Action field should be executed • Rule Is True - Indicates that the action specified in the Rule True Action field should be executed.
Is False	Indicates what happens when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition - Indicates that the condition with consecutive sequence number should be executed. • Rule Is False - Indicates that the action specified in the Rule False Action field should be executed • Rule Is True - Indicates that the action specified in the Rule True Action field should be executed.
Is Insufficient	Indicates what happens when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check Next Condition - Indicates that the condition with consecutive sequence number should be executed. • Rule Is False - Indicates that the action specified in the Rule False Action field should be executed • Rule Is True - Indicates that the action specified in the Rule True Action field should be executed.

Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of the price item pricing information and pricing ID which are separated by a comma (,) for the price list.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the pricing information of the respective price item.
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Pricing Status	Indicates the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Inactive • Proposed • Rejected • Template
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based • Regular
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Copy	On clicking the Copy () icon, the Price Item Pricing screen appears where you can define a new price item pricing using the existing price item pricing.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

Editing a Price List

Procedure

To edit a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to edit.

The **Price List** screen appears.

3. Click the **Edit** button in the **Price List** zone.

The **Price List** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to associate the price list with one or more parent price lists for a specified duration.
- **Divisions** - Used to associate the price list with one or more divisions.
- **Eligibility Criteria** - Used to define one or more eligibility criteria for the price list.
- **Characteristics** - Used to define a list of characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	Note: The system will not allow you to change the effective start date when: <ul style="list-style-type: none"> • There is a price item assigned to the price list on that date. • The price list is assigned to an account or a person on that date. 	
Effective End Date	Used to specify the date till when the price list is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> Promotional Standard 	Yes
Global Price List	Used to indicate whether the price list is a global price list or not. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person. Note: At present, the availability start date is not used in the product while assigning a price list to an account or a person. It is available for future use.	No
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person. Note: The availability end date cannot be earlier than the availability start date. At present, the availability end date is not used in the product while assigning a price list to an account or a person. It is available for future use.	No
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> Active – Used to indicate that the price list is used for billing. This value appears only when you are editing a proposed price list Proposed – Used to indicate that the price list is used for quotations. Template – Used to indicate that the price list is a template price list. Note: You cannot change the status of an Active and a Template price list.	Yes

4. Modify the details in the **Main** section, if required.

Note: By default the **Main** section is displayed.

5. Add, edit or remove parent price list from the price list hierarchy, if required.

- Associate or disassociate the price list from the divisions, if required.

Note: You can only view those divisions to which you have access in the **Division** list. If the price list is associated to a division to which you do not have access, then the **Divisions** section is grayed out.

- Define, edit, or remove eligibility criteria from the price list, if required
- Define, edit, or remove characteristics from the price list, if required.
- Click **Save**.

The changes made to the price list is saved.

Price List Price Item Pricing

Once a price list is created, you can either assign a price item to the price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to the price list. The **Price List Price Item Pricing** screen allows you to:

- View and filter the price items that are assigned to the price list
- Search and assign price items to the price list
- Copy a price item pricing and assign it to the price list

This screen consists of the following zones:

- [Price List Price Items](#) on page 229
- [Search Price Item or Price Item Pricing](#) on page 231

Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of the price item pricing information and pricing ID which are separated by a comma (,) for the price list.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the pricing information of the respective price item.

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Pricing Status	Indicates the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Inactive • Proposed • Rejected • Template
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Edit	On clicking the Edit () icon, you can edit the price item pricing from the price list.
Delete	On clicking the Delete () icon, you can remove the price item pricing from the price list.
	Note: The Delete icon appears in this column only when the price list is not yet assigned to any account or person. This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

Search Price Item or Price Item Pricing

You can assign a price item or price item bundle to a price list and then define pricing for the price item or price item bundle, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item or Price Item Pricing** zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search price item, pricing assigned to price list, override pricing for an account or a person, pricing assigned to a standard product version or a packaged product version. The valid values are: <ul style="list-style-type: none"> • Price Item • Price list Pricing • Account Override Pricing • Person Override Pricing • Standard Product Version • Packaged Product Version • Packaged Product Version - Add on Service 	Yes
	Note: By default, the Price Item option is selected.	
Price Item	Used to search a particular price item or price item bundle. <p>Note: The Search  icon appears corresponding to this field when you select the Price list Pricing, Account Override Pricing, or Person Override Pricing option from the Search by list. On clicking the Search icon, the Price Item Search window appears.</p>	No
Description	Used to search price items or price item bundles with a particular description. <p>Note: This field appears only when you select the Price Item option from the Search By list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> No Yes 	No
	Note: This field appears only when you select the Price Item option from the Search By list.	
Bundle	Used to indicate whether you want to search for price item bundles. The valid values are: <ul style="list-style-type: none"> No Yes 	No
	Note: This field appears only when you select the Price Item option from the Search By list.	
Price List ID	Used to search pricing of price items or price item bundles which are assigned to a particular price list.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears. This field appears only when you select the Price List Pricing option from the Search By list.	
Effective Start Date	Used to search pricing of price items or price item bundles assigned to price lists which are effective from a particular date onwards.	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Pricing Status	Used to search pricing of price items or price item bundles with a particular status. The valid values are: <ul style="list-style-type: none"> Active Draft Inactive Pending in Approval Proposed Rejected Template 	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to search pricing of price items or price item bundles assigned to price lists which are effective till a particular date.	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based • Regular 	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Account ID	Used to search pricing of price items or price item bundles which are assigned to a particular account.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search window appears. This field appears only when you select the Account Override Pricing option from the Search By list.	
Person ID	Used to search pricing of price items or price item bundles which are assigned to a particular person.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears. This field appears only when you select the Person Override Pricing option from the Search By list.	

Note: You must specify at least one search criterion while searching for the pricing of a price item or price item bundle.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the price list belongs. It may also include price items or price item bundles that are already assigned to the price list in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the Assign () icon, the Price Item Pricing screen appears where you can define a new price item pricing.
Price Item Information	Displays details of the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle.
Copy	On clicking the Copy () icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.
Pricing	Displays details of the price item pricing.
	<p>Note:</p> <p>It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the details of the respective price item pricing.</p> <p>You can also perform the following actions on the price item pricing if the Pricing Eligibility check box is selected for the respective price item pricing:</p> <ul style="list-style-type: none"> • Add • Edit • Submit for Validation
Account Information	Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p>Note:</p> <p>This column appears only when you select the Account Override Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Account screen appears where you can view or edit the details of the respective account.</p> <p>The account information string appears only when an algorithm defined using the C1-AC-INFO algorithm type is attached to the Account Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>

Column Name	Column Description
Person Information	<p>Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>This column appears only when you select the Person Override Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Person screen appears where you can view or edit the details of the respective person.</p> <p>The person information string appears only when an algorithm defined using the PERS-INFO algorithm type is attached to the Person Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>
Price List Information	<p>Indicates the price list to which the price item pricing is assigned.</p> <p>Note:</p> <p>This column appears only when you select the Price List Pricing option from the Search By list.</p> <p>It has a link. On clicking the link, the Price List screen appears where you can view or edit the details of the respective price list.</p>
Variance Parameter	<p>Indicates the variance parameter which is used for defining the price item pricing.</p> <p>Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>
Pricing Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).</p> <p>Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.

Column Name	Column Description
Pricing Status	<p>Indicates the status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Active • Draft • Inactive • Pending in Approval • Proposed • Rejected • Template
Rate Schedule	<p>Indicates the rate schedule which is used for defining the price item pricing.</p> <p>Note: It has a link. On clicking the link, the Rate Schedule screen appears where you can view or edit the details of the respective rate schedule.</p>
Price Assignment Usage	<p>Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are:</p> <ul style="list-style-type: none"> • AC • NC
Price Assignment Type	<p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based • Regular <p>Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>
Price Item	<p>Displays the price item or price item bundle code.</p> <p>Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can define the pricing for the respective price item or price item bundle.</p>
Description	Displays the description of the price item or price item bundle.
Global Price List	<p>Indicates whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> • Y • N
Unit of Measure	Indicates the unit of measure associated with the price item or price item bundle.
Bundle	<p>Indicates whether the price item is a bundle or not. The valid values are:</p> <ul style="list-style-type: none"> • Y • N

Column Name	Column Description
Owner ID	Displays the ID of the person for whose account the price list is created.
Party ID	Displays the third party ID.
Price List ID	Indicates the price list to which the price item pricing is assigned.
	Note: This column appears only when you select the Price List Pricing option from the Search By list.
Price Assignment ID	Displays the price assignment ID.
Price Assignment Owner Type Flag	Displays whether price list or party is the owner of the price assignment.
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> • Phantom • Ratio • Regular However, if the price item bundle is available for only pricing and the price item type is Fees then the valid value is Regular .
	Note: This column appears only when you select the Yes option from the Bundle list.
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> • Rate • Fees

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (✖) icon in the upper right corner of this zone.

Editing a Price Item Pricing of a Price List

Prerequisites

To edit a price item pricing of a price list, you should have:

- Transactions mapped to the price item defined in the application

- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

Procedure

To edit a price item pricing of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price List Pricing** column corresponding to the price list whose details you want to view.

The **Price List Price Item Pricing** screen appears.

3. Price assignments effective for the price list appears in the **Price List Price Items** zone.
4. Click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item pricing.
- **TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** - Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be inactive if the price item pricing is already assigned to an account or a person.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular - Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing - Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note:</p> <p>The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing - Invoice Based - Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing - Price Item Based - Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: This field will be enabled for selection if the checkbox is not selected. Assigning a Price Item to a Price List

Prerequisites

To assign a price item to a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application

- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To assign a price item to a price list:

- Search for the price list in the **Price List** screen.
- In the **Search Results** section, click the **View** (🔍) icon in the **Price List Pricing** column corresponding to the price list whose details you want to view.
The **Price List Price Item Pricing** screen appears.
- Search for the price item that you want to assign to the price list in the **Search Price Item or Price Item Pricing** zone by selecting the **Price Item** option from the **Search By** list.
- In the **Search Results** section, click the **Assign** (📌) icon in the **Assign** column corresponding to the price item that you want to assign to the price list.

The **Price Item Pricing** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the price item pricing.
- TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** field is **Pricing and Billing**.

- Characteristics** - Used to define characteristics for the price item pricing.
- Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	Note: By default, the current system date appears in this field. The effective start date cannot be later than the effective end date.	
End Date	Used to specify the date till when the price item pricing is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="602 642 1195 884" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="602 1108 1195 1192" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="602 1417 1195 1501" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes
Pricing Eligibility	Used to indicate whether you want to use the price item for pricing or not.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Draft - Used to indicate that the price assignment is created as a draft. • Proposed - Used to indicate that the price assignment is used for quotations. • Template - Used to indicate that the price assignment is a template price list. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance based on which you want to define the price item pricing.	No
	Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .	
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	Note: Rate schedules control how the bills for the price item will be calculated. The Search () icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears.	
Pricing Rule Type	Used to indicate the rule type which is used for price item pricing. The valid value is: <ul style="list-style-type: none"> • Two-Dimensional 	Yes (Conditional)
	Note: This field is required when you are defining a two-dimensional pricing rule.	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	Note: This field appears only when Price Item is defined as Only Pricing and Price Item Type is defined as Fees .	
Advance Pricing	This field appears only when Price Item field is set to Pricing , Price Item Type field is set to Fees and Price Assignment Type field is set to Post Processing . The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers 	Yes

- Enter the required details in the **Main** section.
- Define TFM Information for the price item pricing, if required.
- Define characteristics for the price item pricing, if required.
- Define parameters for the price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item and assigned to the price list.

Note: A bundle cannot be assigned if its child price items are already assigned to a price list and vice versa, in the same date range.

Copying a Price Item Pricing

Instead of creating a price item pricing from scratch, you can create a new price item pricing using an existing price item pricing. This is possible through copying a price item pricing. On copying a price item pricing, the details including the transaction feed management information, rate schedules, rate components, price components, tiering criteria, pricing eligibility criteria, parameters, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

Prerequisites

To copy a price item pricing, you should have:

- Price item pricing (whose copy you want to create) defined in the application
- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application

- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To copy a price item pricing:

1. Access the **Price List Price Item Pricing** screen.
2. In the **Search Price Item or Price Item Pricing** zone, select the required option from the **Search By** list. Do either of the following:

If you want to...	Then...
Copy a price item pricing that is assigned to a price list	Select Price List Pricing from the Search By list.
Copy a price item pricing that is assigned to an account	Select Account Override Pricing from the Search By list.
Copy a price item pricing that is assigned to a person	Select Person Override Pricing from the Search By list.
Copy a price item pricing that is assigned to a standard product version	Select Standard Product Version from the Search By list.
Copy a price item pricing that is assigned to a packaged product version	Select Packaged Product Version from the Search By list.
Copy a price item pricing that is assigned to a packaged product version - add on service	Select Packaged Product Version - Add on Service from the Search By list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

3. Enter the search criteria in the **Search Price Item or Price Item Pricing** zone to search for the price item pricing whose copy you want to create.
4. Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

5. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create and assign to the price list.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item pricing.
- **TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** - Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>By default, the current system date appears in this field.</p> <p>The effective start date cannot be later than the effective end date.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="602 642 1195 884" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="602 1108 1195 1192" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="602 1417 1195 1501" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes
Pricing Eligibility	Used to indicate whether you want to use the price item for pricing or not.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Draft - Used to indicate that the price assignment is created as a draft. • Proposed - Used to indicate that the price assignment is used for quotations. • Template - Used to indicate that the price assignment is a template price list. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance based on which you want to define the price item pricing.	No
	Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .	
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	Note: Rate schedules control how the bills for the price item will be calculated. The Search () icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears.	
Pricing Rule Type	Used to indicate the rule type which is used for price item pricing. The valid value is: <ul style="list-style-type: none"> • Two-Dimensional 	Yes (Conditional)
	Note: This field is required when you are defining a two-dimensional pricing rule.	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	Note: This field appears only when Price Item is defined as Only Pricing and Price Item Type is defined as Fees .	
Advance Pricing	This field appears only when Price Item field is set to Pricing , Price Item Type field is set to Fees and Price Assignment Type field is set to Post Processing . The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> All Customers New Customers 	Yes

- Enter the required details in the **Main** section.
- Define or edit TFM Information for the price item pricing, if required.
- Define, edit, or remove characteristics from the price item pricing, if required.
- Define, edit, or remove parameters from the price item pricing, if required.
- Click **Save**.

The price item pricing is defined and assigned to the respective price list.

Note:

The **Submit** button appears only when the **Pricing Status** is **Draft**.

The **Edit Price Components** button appears only when you are copying a price item pricing which is in the **Active**, **Proposed**, or **Template** status and which is not past dated. If the approval workflow is on, then the **Edit Price Components** button appears when you are editing a **Proposed** and **Template** price item pricing which is already approved.

A bundle cannot be assigned if its child price items are already assigned to a price list and vice versa, in the same date range.

Tip: Alternatively, you can copy a price item pricing by clicking the **Copy** () icon from the **Copy** column corresponding to the price item pricing in the **Price List Price Items** zone.

Price List Assignment

Once a price list is defined, you can assign it to accounts or persons to indicate the prices that will be charged for the price items or services offered to the accounts or persons. You can assign multiple price lists to an account or a person along with the priority or order in which the pricing should be considered. You can also define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit the price item pricing from the price list hierarchy.

For example, suppose you have PL1 (with priority 10) and PL2 (with priority 20) assigned to an account or a person. While determining pricing for a price item, the system will search for the price item pricing in PL1. If the system does

not find the price item pricing in PL1, it will search for the price item pricing in PL2. The system will behave in this manner only when the price list inheritance for PL1 is set to **No** during the price list assignment.

If the price list inheritance while assigning PL1 and PL2 to an account or a person is set to **Yes**, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing from the price list hierarchy defined for PL1. However, if the system does not find the price item pricing from the price list hierarchy of PL1, it will then search for the price item pricing in PL2 (assigned to the account or person with priority 20). If the system still does not find the price item pricing in PL2, it will search for the price item pricing from the price list hierarchy defined for PL2.

The **Price List Assignment** screen allows you to search and assign a price list to an account or a person. It also allows you to view the price lists that are already assigned to an account or a person. It contains the following zones:

- [Price List Assignments](#) on page 253
- [Price List Price Items](#) on page 255

Note: By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to a price list in the **Price List Assignments** zone.

- [Search Price List for Assignment](#)

Price List Assignments

The **Price List Assignments** zone allows you to search, view, edit, or filter price lists that are currently assigned to the account or person. You can also search for the price lists assigned to the account or person which are either inactive or expired. You will not find any records in this zone if the account or person does not have any price lists assigned to it. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the current, inactive, or historical price list assignments. The valid values are: <ul style="list-style-type: none"> • Current Price List Assignments • Inactive Price List Assignments • Historical Price List Assignments 	Yes
	Note: By default, the Current Price List Assignments option is selected.	
Price List ID	Used to search a particular price list assigned to an account or a person.	No
	Note: The Search  icon appears corresponding to the Price List ID field. On clicking the Search icon, the Price List Search window appears.	
Price List Description	Used to search price list assigned to an account or a person having a particular description.	No
Effective Start Date	Used to search price lists which are assigned to the account or person from a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to search price lists which are assigned to the account or person till a particular date.	No
Assignment Status	<p>Used to search price list assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected <p>Note: The Inactive option is not available in the Assignment Status list when you have selected the Current Price List Assignments or Historical Price List Assignments option from the Search By list.</p> <p>This field is disabled, and by default, the Inactive option is selected when you select the Inactive Price List Assignments option from the Search By list.</p>	No
Price List Inheritance	<p>Used to search price list assignments where the account or person inherits price item pricing from the price list hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • No • Yes 	No

Note: You must specify at least one search criterion while searching for price list assignments.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	<p>Displays information about the price list which is assigned to the account or person.</p> <p>Note: It has a link. On clicking the link, the Price List screen appears with the details of the respective price list.</p>
Effective Start Date	Displays the date from when the price list is assigned to the account or person.
Effective End Date	Displays the date till when the price list is assigned to the account or person.
Priority	Indicates the order in which the assigned price list must be considered while determining the price item pricing for the account or person.

Column Name	Column Description
Assignment Status	Indicates the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected
Price List Inheritance	Indicates whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the account or person can inherit the price item pricing from the price list hierarchy.
Edit	On clicking the Edit (✎) icon, the Price List Assignment screen appears where you can edit the price list assignment details.

Note: Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of the price item pricing information and pricing ID which are separated by a comma (,) for the price list.
	Note: It has a link. On clicking the link, the Price Item Pricing screen appears where you can view the pricing information of the respective price item.

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Pricing Status	Indicates the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> • Active • Draft • Inactive • Proposed • Rejected • Template
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price assignment for price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Copy	On clicking the Copy () icon, the Price Item Pricing screen appears where you can define a new price item pricing using the existing price item pricing.

By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filter** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

Search Price List for Assignment

The **Search Price List for Assignment** zone allows you to search for a price list that you want to assign to the account or person. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search against all price lists or against those price lists which are already assigned to an account or a person. The valid values are: <ul style="list-style-type: none"> • Price List • Assigned Price List 	Yes
	Note: By default, the Price List option is selected.	
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search price lists with a particular description.	No
Effective Start Date	If you have selected the Price List option from the Search By list, this field is used to search price lists which are effective from a particular date onwards. However, if you have selected the Assigned Price List option from the Search By list, this field is used to search price lists which are assigned to an account or a person from a particular date onwards.	No
Effective End Date	If you have selected the Price List option from the Search By list, this field is used to search price lists which are effective till a particular date. However, if you have selected the Assigned Price List option from the Search By list, this field is used to search price lists which are assigned to an account or a person till a particular date.	No
Account ID	Used to search price lists assigned to a particular account.	No
	Note: This field appears only when you have selected the Assigned Price List option from the Search By list.	
Person ID	Used to search price lists assigned to a particular person.	No
	Note: This field appears only when you have selected the Assigned Price List option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Proposed 	No
	Note: This field appears only when you have selected the Price List option from the Search By list.	
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> • Promotional • Standard 	No
	Note: This field appears only when you have selected the Price List option from the Search By list.	
Only Eligible Price Lists	Used to search only those price lists which are eligible for the account or person.	No
	Note: This field appears only when you have selected the Price List option from the Search By list.	
Eligibility Date	Used to search price lists which are eligible for the account or person from a particular date.	No
	Note: This field appears only when you have selected the Price List option from the Search By list. By default, the current date appears in this field when the Only Eligible Price Lists option check box is selected. You can change the value, if required.	

Note: You must specify at least one search criterion while searching for a price list.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price lists that are associated with the division to which the account or person belongs. It may also include price lists that are already assigned to the account or person in case those price lists match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the Assign () icon, the Price List Assignment screen appears where you can assign the price list to the account or person.

Column Name	Column Description
Price List Information	Displays the concatenated string consisting of the price list ID and price list information separated by a comma (,).
	Note: It has a link. On clicking the link, the Price List screen appears where you can view the details of the respective price list.
Account Information	Displays the information about the account.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Person Information	Displays the information about the person.
	Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Effective Start Date	If you have selected the Price List option from the Search By list, the date from when the price list is effective appears in this column. However, if you have selected the Assigned Price List option from the Search By list, the date from when the price list is assigned to the account or person appears in this column.
Effective End Date	If you have selected the Price List option from the Search By list, the date till when the price list is effective appears in this column. However, if you have selected the Assigned Price List option from the Search By list, the date till when the price list is assigned to the account or person appears in this column.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.

Assigning a Price List to an Account

Prerequisites

To assign a price list to an account, you should have:

- Price list defined in the application
- Price list associated with the division to which the account belongs

Procedure

To assign a price list to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account to which you want to assign a price list. A menu appears.
3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** - Lists the price lists that are already assigned to the account.
- **Price List Price Items** - Lists the price items that are assigned to the price list.

Note: By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to a price list in the **Price List Assignments** zone.

- **Search Price List for Assignment** - Enables you to search for a price list that you want to assign to the account.
4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists that are already assigned to an account.
 5. Enter the search criteria in the **Search Price List for Assignment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note:

The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

7. In the **Search Results** section, click the **Assign** () icon corresponding to the price list that you want to assign to the account.

The **Price List Assignment** screen appears. It contains the following sections:

- **Main** - Used to specify basic information while assigning the price list to the account.
- **Characteristics** - Used to define characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account to which you want to assign the price list.	Not applicable
Price List Information	Displays information about the price list that you want to assign to the account.	Not applicable
Effective Start Date	Used to specify the date from when you want to assign the price list to the account.	Yes
	Note: The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date.	

Field Name	Field Description	Mandatory (Yes or No)										
Effective End Date	<p>Used to specify the date till when you want to assign the price list to the account.</p> <p>Note:</p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier:</p> <ul style="list-style-type: none"> • Price list assignment validity end date (which is price list assignment start date + validity period) • Price list effective end date <p>Let us understand this with the help of the following example:</p> <table border="1" data-bbox="521 751 1141 1129"> <tbody> <tr> <td>Price List Effective Start Date</td> <td>01-Jan-2015</td> </tr> <tr> <td>Price List Effective End Date</td> <td>31-Jan-2015</td> </tr> <tr> <td>Validity Period</td> <td>15 Days</td> </tr> <tr> <td>Price List Assignment Start Date</td> <td>15-Jan-2015</td> </tr> <tr> <td>Price List Assignment Validity End Date</td> <td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td> </tr> </tbody> </table> <p>In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date.</p>	Price List Effective Start Date	01-Jan-2015	Price List Effective End Date	31-Jan-2015	Validity Period	15 Days	Price List Assignment Start Date	15-Jan-2015	Price List Assignment Validity End Date	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)	No
Price List Effective Start Date	01-Jan-2015											
Price List Effective End Date	31-Jan-2015											
Validity Period	15 Days											
Price List Assignment Start Date	15-Jan-2015											
Price List Assignment Validity End Date	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)											
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the account.	Yes										
Price List Inheritance	<p>Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes – Used to indicate that the account can inherit the price item pricing from the price list hierarchy. • No – Used to indicate that the account cannot inherit the price item pricing from the price list hierarchy. 	Yes										

Field Name	Field Description	Mandatory (Yes or No)
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active - Used to indicate that you want to use the price item pricing on the price list for billing. • Proposed - Used to indicate that you want to use the price item pricing on the price list for quotations. 	Yes

8. Enter the required details in the **Main** section.
9. Define a list of characteristics for the price list assignment, if required.
10. Click **Save**.

The price list is assigned to the account.

Assigning a Price List to a Person

Prerequisites

To assign a price list to a person, you should have:

- Price list defined in the application
- Price list associated with the division to which the person belongs

Procedure

To assign a price list to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person to whom you want to assign a price list. A menu appears.
3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** - Lists the price lists that are already assigned to the person.
- **Price List Price Items** - Lists the price items that are assigned to the price list.

Note: By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to a price list in the **Price List Assignments** zone.

- **Search Price List for Assignment** - Enables you to search for a price list that you want to assign to the person.

4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to a person.
5. Enter the search criteria in the **Search Price List for Assignment** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

Note:

The search results include only those price lists that are associated with the division to which the person belongs. It may also include price lists that are already assigned to the person in case those price lists match the search criteria.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

7. In the **Search Results** section, click the **Assign** () icon corresponding to the price list that you want to assign to the person.

The **Price List Assignment** screen appears. It contains the following sections:

- **Main** - Used to specify basic information while assigning the price list to the person.
- **Characteristics** - Used to define characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)

Defining Characteristics for a Price List Assignment

Prerequisites

To define characteristics for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

Procedure

To define characteristics for a price list assignment:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing the price list assignment details.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Price List Assignment .
		Note: This field is required when you are defining a characteristic for the price list assignment.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p>Note:</p> <p>If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.</p>	<p>Note: This field is required when you are defining a characteristic for the price list assignment.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price list assignment, click the **Add** (+) icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list assignment, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list assignment.

Price List Assignments

The **Price List Assignments** screen allows you to view the price list assignments of a particular price list. This screen consists of the following zones:

- [Persons to whom Price List is Assigned](#) on page 276
- [Accounts where Price List is Assigned](#) on page 277

Persons to whom Price List is Assigned

The **Persons to whom Price List is Assigned** zone displays the details of the persons to whom the price list is assigned. It contains the following fields:

Field Name	Field Description
Person ID	Displays the person ID.
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Price List Assignment Start Date	Displays the date from when the price list is assigned to the person.
Price List Assignment End Date	Displays the date till when the price list is assigned to the person.
Division	Displays the division to which the person belongs.
Price List Assignment ID	Displays the price list assignment ID.

Viewing Persons and Accounts where Price List is Assigned

Prerequisites

To view persons and accounts where price list is assigned, you should have:

- Persons and accounts created in the application
- Price list defined and assigned to the accounts and persons

Procedure

To view persons and accounts where price list is assigned:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.
A sub-menu appears.
3. Click the **Search** option from the **Price List** sub-menu.
The **Price List** screen appears.
4. You can search for a price list by entering the search criteria in the **Search Price List** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of price lists that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the **View** (🔍) icon in the **Price List Assigned To** column corresponding to the price list whose details you want to view.
The **Price List Assignments** screen appears.
7. You can view the list of persons and accounts where the price list is assigned in the **Price List Assignments** screen.

Entities Eligible for Price List Assignment

The **Entities Eligible for Price List Assignment** screen allows you to search for multiple eligible accounts or persons for price list assignment. This screen consists of the following zones:

- [Eligible Accounts](#) on page 279

- [Eligible Persons](#) on page 279

Eligible Accounts

The **Eligible Accounts** zone allows you to search the eligible accounts for price list assignment. Moreover, it also allows you to assign multiple eligible accounts to a price list. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division whose accounts you want to search.	Yes
Effective Date	Used to indicate the date from when the accounts are eligible for price list assignment.	No
	Note: By default, the date is set to the current date. You can change the date, if required.	
Account ID	Used to indicate the account ID.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays information about the accounts that are eligible for price list assignment. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Assigned	Displays whether the account is assigned to the price list or not. The valid values are: <ul style="list-style-type: none"> • Yes • No

Eligible Persons

The **Eligible Persons** zone allows you to search the eligible persons for price list assignment. Moreover, it also allows you to assign multiple eligible persons to a price list. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division whose persons you want to search.	Yes
Effective Date	Used to indicate the date from when the persons are eligible for price list assignment.	No
	Note: By default, the date is set to the current date. You can change the date, if required.	
Person ID	Used to indicate the person ID.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays information about the persons that are eligible for price list assignment. In addition, this column has a context menu which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person.
Assigned	Displays whether the person is assigned to the price list or not. The valid values are: <ul style="list-style-type: none"> • Yes • No

Assigning a Price List to One or More Eligible Accounts

Prerequisites

To assign a price list to one or more eligible accounts, you should have:

- Price list defined in the application
- Accounts created in the application
- Price list should be associated with the division to which accounts belong.

Procedure

To assign a price list to one or more eligible accounts:

1. Search for the eligible accounts in the **Eligible Accounts** zone of **Entities Eligible for Price List Assignment** screen.
2. In the **Search Results** section, select the one or more accounts that you want to assign to the price list by clicking the check box corresponding to each account.
3. Click the **Assign** button available in the upper left corner of this section.

The **Price List Assignment** screen appears. This screen contains the following two sections:

- **Main** - Used to specify basic details about the price list. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Information	Displays a concatenated string consisting of the price list information separated by a comma (,).	Not applicable
Effective Start Date	Used to specify the date from when the price list is effective.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the price list is effective.	No
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the account.	No
Price List Inheritance	Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active • Proposed 	No
Priority Indicator	Used to set the priority of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Highest - Used when you want the price list assignment to have the highest priority. It checks whether there are any other price list assignments for the account, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with highest priority minus one. • Lowest - Used when you want the price list assignment to have the lowest priority. It checks whether there are any other price list assignments for the account, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with lowest priority plus one. 	No

- **Characteristics** - Used to define a list of characteristics for the price list.

4. Click **Save**.

The price list is assigned to the selected accounts.

Assigning a Price List to One or More Eligible Persons

Prerequisites

To assign a price list to one or more eligible persons, you should have:

- Price list defined in the application
- Persons created in the application
- Price list should be associated with the division to which persons belong.

Procedure

To assign a price list to one or more eligible persons:

1. Search for the eligible Persons in the **Eligible Persons** zone of **Entities Eligible for Price List Assignment** screen.
2. In the **Search Results** section, select the one or more persons to whom you want to assign the price list by clicking the check box corresponding to each person.
3. Click the **Assign** button available in the upper left corner of this section.

The **Price List Assignment** screen appears. This screen contains the following two sections:

- **Main** - Used to specify basic details about the price list. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Information	Displays a concatenated string consisting of the price list information separated by a comma (,).	Not applicable
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
Effective End Date	Used to specify the date till when the price list is effective.	No
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the person.	No
Price List Inheritance	Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Active • Proposed 	No

Field Name	Field Description	Mandatory (Yes or No)
Priority Indicator	Used to set the priority of the price list assignment. The valid values are: <ul style="list-style-type: none"> • Highest - Used when you want the price list assignment to have the highest priority. It checks whether there are any other price list assignments for the person, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with highest priority minus one. • Lowest - Used when you want the price list assignment to have the lowest priority. Defining a Characteristic for a Price List Assignment

Prerequisites

To define a characteristic for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

Procedure

To define a characteristic for a price list assignment:

1. Click the **Characteristics** tab in the **Price List Assignment** screen when you are assigning a price list to multiple persons or accounts and also while editing the price list assignment details of multiple persons or accounts.

The **Characteristics** tab appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price List Assignment .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price list assignment.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search  icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price list assignment.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price list assignment, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the price list assignment, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristic is defined for the price list assignment.

Pricing (Account)

The **Pricing (Account)** screen allows you to:

- View effective price assignments of an account
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to an account
- Edit or override a price item pricing
- Copy a price item pricing and assign it to an account

This screen consists of the following zones:

- [Effective Price Assignments for Account](#) on page 285
- [Search Price Item](#) on page 290

Effective Price Assignments for Account

The **Effective Price Assignments for Account** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the account either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the account belongs. If required, you can filter effective price assignments using various search criteria.

Note: If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Indicates the account whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	Note: By default, this field is set to the system date.	

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Account Agreed – Means price item pricing is agreed for the account. • Account Price List – Means price item pricing is defined in the price list which is assigned to the account. • Account Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account. • Customer Agreed – Means price item pricing is agreed for the main customer in the customer hierarchy. • Customer Price List – Means price item pricing is defined in the price list which is assigned to the main customer. • Default Price List – Means price item pricing defined in the price list is available in the default price list. • Global Price List – Means price item pricing defined in the price list is available in the global price list. • Customer Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer. • Parent Customer Agreed – Means price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Price List – Means price item pricing is defined in the price list which is assigned to the parent customer. • Parent Customer Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. • Product Default Price List – Means product defined in the price list is available in the default price list. 	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Proposed 	No
	Note: By default, the Active option is selected.	
Show Default and Global Pricing	Used to search price assignments inherited from the default or global price list. The valid values are: <ul style="list-style-type: none"> • Yes – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Product-specific default price list defined for the division • Default price list defined for the division • Global price list • No – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Product-specific default price list defined for the division • Default price list defined for the division • Global price list 	No
	Note: By default, the No option is selected.	
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	Used to search the price list using the following values: <ul style="list-style-type: none"> • Best Fit • Exact Match 	No
	Note: By default, the Exact Match option is selected.	

Note: The **Search**  icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- **Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search price assignments which are defined using a particular parameter.	No
	Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	
Parameter Value	Used to search price assignments which are defined using a particular parameter value.	No
	Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	

Note:

The **Search**  icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, you can search for a parameter.

You can only use those parameters where the source entity is set to **Transaction**.

The **Search**  icon appears corresponding to the **Parameter Value** field only when the value type of the parameter is **Predefined** or **Reference**. If the value type of the parameter is **Predefined** then on clicking the **Search** icon, you can search for a predefined parameter value. However, if the value type of the parameter is **Reference** then on clicking the **Search** icon, you can search for a reference parameter value.

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the account.
	Note: It has a link. On clicking the link, the View Price Item Pricing screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

Column Name	Column Description
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> • Account Agreed • Account Price List • Account Inherited Price List • Customer Agreed • Customer Price List • Default Price List • Global Price List • Customer Inherited Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List • Product Default Price List
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	On clicking the Edit () icon, the Price Item Pricing screen appears where you can edit the details of the price item pricing. Note: The Edit icon appears only when the assignment level is Account Agreed .

Column Name	Column Description
Override	<p>On clicking the Override  icon, the Price Item Pricing screen appears where you can override the price item pricing.</p> <p>Note:</p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to Y, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to N.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

Note: The number of records that can be displayed in the **Search Results** section is controlled via the **C1_PR_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1_PR_REC** feature configuration. For more information, refer to [Setting the C1_PR_REC Feature Configuration](#) on page 2183.

Search Price Item

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> • Price Item • Price List Pricing • Account Override Pricing • Person Override Pricing 	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
	Note: This field appears only when you select the Price Item option from the Search By list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears only when you select the Price Item option from the Search By list.	
Bundle	Used to search whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears only when you select the Price Item option from the Search By list.	
Price List ID	Used to search the price list to which the price item pricing is assigned.	No
	Note: This field appears only when you select the Price List Pricing option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template 	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based 	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Account ID	Used to search pricing of price items which are assigned to a particular account.	No
	Note: This field appears only when you select the Account Override Pricing option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search pricing of price items which are assigned to a particular person.	No
	Note: This field appears only when you select the Person Override Pricing option from the Search By list.	

Note:

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search**  icon appears corresponding to the **Price List ID**, **Price Item**, **Account ID**, and **Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the account belongs. It may also include price items or price item bundles that are already assigned to the account in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the Assign  icon, the Price Item Pricing screen appears where you can define a new price item pricing.
	Note: This column appears only when you select the Price Item option from the Search By list.
Price Item Information	Displays details of the price item or price item bundle.
	Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle. This column appears only when you select the Price Item option from the Search By list.
Copy	On clicking the Copy  icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.
Pricing Information	Displays details of the price item pricing.
	Note: This column appears only when you select the Price List Pricing , Account Override Pricing , or Person Override Pricing option from the Search By list.

Column Name	Column Description
Account Information	<p data-bbox="570 207 1461 302">Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 327 1461 663">Note: This column appears only when you select the Account Override Pricing option from the Search By list. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. The account information string appears only when an algorithm defined using the C1-AC-INFO algorithm type is attached to the Account Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>
Person Information	<p data-bbox="570 684 1461 779">Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 804 1461 1119">Note: This column appears only when you select the Person Override Pricing option from the Search By list. It has a link. On clicking the link, the Person screen appears where you can view the details of the respective person. The person information string appears only when an algorithm defined using the PERS-INFO algorithm type is attached to the Person Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>
Price List Information	<p data-bbox="570 1161 1461 1255">Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 1281 1461 1491">Note: This column appears only when you select the Price List Pricing option from the Search By list. Viewing Effective Price Assignments of an Account

Prerequisites

To view effective price assignments of an account, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

Procedure

To view effective price assignments of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Account)** screen appears.
4. View the pricing for price items or price item bundles assigned to the account (either directly or through the customer hierarchy) in the **Effective Price Assignments for Account** zone.
5. Filter the effective price assignments of the account, if required.

Related Topics

For more information on...	See...
How to search for an account	Searching for an Account

How to filter effective price assignments of an account	Filtering Effective Price Assignments of an Account on page 296

Filtering Effective Price Assignments of an Account**Prerequisites**

To filter effective price assignments of an account, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

Procedure

To filter effective price assignments of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Account)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Account** zone.

Note:

You can search for a price item, parameter, or parameter value by clicking the **Search** () icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add** () icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the

Delete () icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Account** zone.

Exporting Effective Price Assignments of an Account

Prerequisites

To export effective price assignments of an account in the CSV format, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

Procedure

To export effective price assignments of an account in the CSV format:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

4. Filter the effective price assignments of the account, if required.
5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.

A message appears confirming whether you want to open or save the EffectivePricing.csv file.

6. Select the **Save As** option from the **Save** list.

The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	Indicates the variance parameter which is used for defining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing — Invoice Based • Post Processing — Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> • Account Agreed • Account Price List • Account Inherited Price List • Customer Agreed • Customer Price List • Customer Inherited Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List

Column Name	Column Description
Price List Description	Displays the description of the price list.
	Note: The description appears only when the assignment level is Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, or Parent Customer Inherited Price List.
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> • Rate Component Sequence • Tiering Setup of the Rate Component
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> • AC • NC
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.

Column Name	Column Description
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item is billed individually or at the price item bundle level.

Copying a Price Item Pricing

Prerequisites

To copy a price item pricing and assign it to an account, you should have:

- Account (to which you want to assign the price item pricing) defined in the application
- Account associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

Procedure

To copy a price item pricing and assign it to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

- In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

- Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the account.
- Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

- In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

- Modify the required pricing details.

Note:

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

- Edit the characteristics of the price item pricing, if required.
- Click **Save**.

A new price item pricing is defined and assigned to the account.

Viewing a Price Item Pricing

Procedure

To view a price item pricing and assignment details:

- Search for the account in the **Customer 360° View** screen.
- In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

- Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

- Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
- In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
 - Pricing Information** – Displays the pricing information of the price item.
 - TFM Information** – Displays the transaction feed management information of the price item.
 - Characteristics** – Displays the details of price item pricing characteristics.
 - Price Item and Parameter Information** – Displays the price item parameter details.
 - Record Actions** – Displays the record actions of the price item pricing.
 - Record Information** – Displays the record information of the price item pricing.
- Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- Rate Components** – Displays the rate components of the price item.
- Price Components** – Displays the details of price components of the price item.
- Tiering Criteria** – Displays the tiering criteria of the price item pricing.

Note: This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

Note: This zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

- View the basic details of price item pricing in the **Price Item Pricing** zone.
- View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
- View the rate components of price item in the **Rate Components** zone.
- View the details of price components of price item in the **Price Components** zone.
- View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
- View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

Editing a Price Item Pricing of an Account

Prerequisites

To edit a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

Procedure

To edit a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Account)** screen appears.
4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="607 642 1117 915" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="607 1171 1117 1255" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="607 1512 1117 1596" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div data-bbox="545 1705 1117 1818" style="border: 1px solid black; padding: 5px;"> <p>Note: This field will be enabled for selection if the checkbox is not selected. Overriding a Price Item Pricing of an Account

Prerequisites

To override a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To override a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Account)** screen appears.
4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Override** () icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.

- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>

		Note: This field is required when you are overriding a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: By default, Yes is selected.	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	Note: This field appears only when Price Item is defined as Only Pricing and Price Item Type is defined as Fees .	

6. Modify the details in the **Main** section, if required.
7. Modify the TFM Information in a price item pricing, if required.
8. Modify the characteristics for a price item pricing, if required.
9. Modify the parameters for a price item pricing, if required.

Note: If you change the effective end date while overriding a price item pricing, you need to specify the parameters which are effective during the date range of start and end date.

10. Click Save.

The price item pricing is overridden.

Assigning a Price Item to an Account**Prerequisites**

To assign a price item to an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To assign a price item to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Account)** screen appears.
4. Search for the price item that you want to assign to the account in the **Search Price Item or Price Item Pricing** zone.
5. In the **Search Results** section, click the **Assign** () icon in the **Assign** column corresponding to the price item that you want to assign to the account.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>By default, the current system date appears in this field.</p> <p>The effective start date cannot be later than the effective end date.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Draft – Indicates that the price assignment is created as a draft. • Proposed – Indicates that the price assignment is used for quotations. 	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<p>Note:</p> <p>Rate schedules control how the bills for the price item will be calculated.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search screen appears.</p>	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> Two-Dimensional 	
		<p>Note: This field is required when you are defining a two-dimensional pricing rule.</p>
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are:	Yes
	<ul style="list-style-type: none"> Yes No 	
	<p>Note: By default, Yes is selected.</p>	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<p>Note: This field appears only when Price Item is defined as Only Pricing and Price Item Type is defined as Fees.</p>	

- Enter the required details in the **Main** section.
- Define TFM Information in a price item pricing, if required.
- Define characteristics for a price item pricing, if required.
- Define parameters for a price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item.

Note: A bundle cannot be assigned if its child price items are already assigned to an account and vice versa, in the same date range.

Defining Characteristics for a Price Item Pricing

Prerequisites

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define characteristics for a price item pricing that is assigned to an account:

- Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price Item Pricing .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the price item pricing.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a characteristic from the price item pricing, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price item pricing.

Defining Parameters for a Price Item Pricing

Prerequisites

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

Procedure

To define parameter details segment for a price item pricing that is assigned to an account:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing. Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears. The parameter search results displays only those parameters where the Price Item check box is selected	Yes
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> Parameter Description Mandatory (Yes or No) Priority 	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

Defining TFM Information in a Price Item Pricing

Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> Yes No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction 	Yes

2. Enter the required details in the **TFM Information** section.

Note: **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The transactions are defined for the price item pricing.

Pricing (Person)

The **Pricing (Person)** screen allows you to:

- View effective price assignments of a person
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to a person

- Edit or override a price item pricing
- Copy a price item pricing and assign it to a person

You can also view effective price assignments of a global person (i.e. a person who is not associated to any division) in this screen. The pricing for all price items or price item bundles assigned to the global person either directly or through a price list appears in this screen. However, you will be able to view pricing for only those price items or price item bundles that are associated to the division to which you have access.

Since a global person is not associated to any division, the system cannot determine the price assignment search order for a global person. Hence, the default search order is defined for global persons through the **C1_PRASNORDR** feature configuration. This feature configuration contains the **Price Assignment Algorithm** option type where you need to specify the algorithm which contains default search order for global persons. You can change this default search order, if required. The valid search order values are — **AGREED_PRICELIST** and **AGREED_FIRST**. You can also create a custom search order, if required.

This screen consists of the following zones:

- [Effective Price Assignments for Person](#) on page 319
- [Search Price Item](#) on page 324

Effective Price Assignments for Person

The **Effective Price Assignments for Person** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the person either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the person belongs. If required, you can filter effective price assignments using various search criteria.

Note: If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Indicates the person whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	Note: By default, this field is set to the current date.	

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Customer Agreed – Means price item pricing is agreed for the main customer in the customer hierarchy. • Customer Price List – Means price item pricing is defined in the price list which is assigned to the main customer. • Customer Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer. • Default Price List – Means price item pricing defined in the price list is available in the default price list. • Global Price List – Means price item pricing defined in the price list is available in the global price list. • Parent Customer Agreed – Means price item pricing is agreed for the parent customer in the customer hierarchy. • Parent Customer Price List – Means price item pricing is defined in the price list which is assigned to the parent customer. • Parent Customer Inherited Price List – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer. 	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No
Pricing Status	<p>Used to search price assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> • Active • Proposed <p>Note: By default, the Active option is selected.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to indicate whether you want to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> • Yes – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Default price list defined for the division • Global price list • No – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> • Default price list defined for the division • Global price list 	No
	Note: By default, the No option is selected.	
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	<p>Used to search the price list using the following values:</p> <ul style="list-style-type: none"> • Best Fit • Exact Match 	No
	Note: By default, the Exact Match option is selected.	

Note: The **Search**  icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- **Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to search price assignments which are defined using a particular parameter.</p>	No
	<p>Note:</p> <p>This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to search price assignments which are defined using a particular parameter value.	No
	Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .	

Note:

The **Search**  icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, you can search for a parameter.

You can only use those parameters where the source entity is set to **Transaction**.

The **Search**  icon appears corresponding to the **Parameter Value** field only when the value type of the parameter is **Predefined** or **Reference**. If the value type of the parameter is **Predefined** then on clicking the **Search** icon, you can search for a predefined parameter value. However, if the value type of the parameter is **Reference** then on clicking the **Search** icon, you can search for a reference parameter value.

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the person.
	Note: It has a link. On clicking the link, the View Price Item Pricing screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> • Customer Agreed • Customer Price List • Customer Inherited Price List • Default Price List • Global Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	<p>On clicking the Edit  icon, the Price Item Pricing screen appears where you can edit the details of the price item pricing.</p> <p>Note: The Edit icon appears only when the assignment level is Customer Agreed.</p>
Override	<p>On clicking the Override  icon, the Price Item Pricing screen appears where you can override the price item pricing.</p> <p>Note:</p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to Y, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the Expire Override Switch option type of the C1_EXP_OVRD feature configuration to N.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

Note: The number of records that can be displayed in the **Search Results** section is controlled via the **C1_PR_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1_PR_REC** feature configuration. For more information, refer to [Setting the C1_PR_REC Feature Configuration](#) on page 2183.

Search Price Item

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> • Price Item • Price List Pricing • Account Override Pricing • Person Override Pricing 	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
	Note: This field appears only when you select the Price Item option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears only when you select the Price Item option from the Search By list.	
Bundle	Used to search whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No
	Note: This field appears only when you select the Price Item option from the Search By list.	
Price List ID	Used to search the price list to which the price item pricing is assigned.	No
	Note: This field appears only when you select the Price List Pricing option from the Search By list.	
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Inactive • Proposed • Rejected • Template 	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based 	No
	Note: This field appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.	
Account ID	Used to search pricing of price items which are assigned to a particular account.	No
	Note: This field appears only when you select the Account Override Pricing option from the Search By list.	
Person ID	Used to search pricing of price items which are assigned to a particular person.	No
	Note: This field appears only when you select the Person Override Pricing option from the Search By list.	

Note:

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search**  icon appears corresponding to the **Price List ID, Price Item, Account ID, and Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the person belongs. However, if the person does not belong to any division, the search will be performed

against all price items or price item bundles defined in the system. It may also include price items or price item bundles that are already assigned to the person in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	<p>On clicking the Assign () icon, the Price Item Pricing screen appears where you can define a new price item pricing.</p> <p>Note: This column appears only when you select the Price Item option from the Search By list.</p>
Price Item Information	<p>Displays details of the price item or price item bundle.</p> <p>Note: It has a link. On clicking the link, the Price Item screen appears where you can view the details of the respective price item or price item bundle. This column appears only when you select the Price Item option from the Search By list.</p>
Copy	<p>On clicking the Copy () icon, the Price Item Pricing screen appears where you can define a new price item pricing using an existing price item pricing.</p>
Pricing Information	<p>Displays details of the price item pricing.</p> <p>Note: This column appears only when you select the Price List Pricing, Account Override Pricing, or Person Override Pricing option from the Search By list.</p>
Account Information	<p>Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note: This column appears only when you select the Account Override Pricing option from the Search By list. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account. The account information string appears only when an algorithm defined using the C1-AC-INFO algorithm type is attached to the Account Information system event in the Algorithms tab of the Installation Options – Framework screen.</p>

Column Name	Column Description
Person Information	<p data-bbox="570 212 1463 304">Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p data-bbox="570 331 1463 661">Note: This column appears only when you select the Person Override Pricing option from the Search By list. Viewing Effective Price Assignments of a Person

Prerequisites

To view effective price assignments of a person, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

Procedure

To view effective price assignments of a person:

- Search for the person in the **Customer 360° View** screen.
- In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

- Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. View the pricing for price items or price item bundles assigned to the person (either directly or through the customer hierarchy) in the **Effective Price Assignments for Person** zone.
5. Filter the effective price assignments of the person, if required.

Related Topics

Filtering Effective Price Assignments of a Person

Prerequisites

To filter effective price assignments of a person, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

Procedure

To filter effective price assignments of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Person** zone.

Note:

You can search for a price item, parameter, or parameter value by clicking the **Search** () icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add** () icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the

Delete () icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Person** zone.

Exporting Effective Price Assignments of a Person

Prerequisites

To export effective price assignments of a person in the CSV format, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

Procedure

To export effective price assignments of a person in the CSV format:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Filter the effective price assignments of the person, if required.

5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.

A message appears confirming whether you want to open or save the EffectivePricing.csv file.

6. Select the **Save As** option from the **Save** list.

The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	Indicates the variance parameter which is used for defining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing – Invoice Based • Post Processing – Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> • Customer Agreed • Customer Price List • Customer Inherited Price List • Parent Customer Agreed • Parent Customer Price List • Parent Customer Inherited Price List
Price List Description	Displays the description of the price list. Note: The description appears only when the assignment level is Customer Price List, Customer Inherited Price List, Parent Customer Price List, or Parent Customer Inherited Price List .

Column Name	Column Description
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> • Rate Component Sequence • Tiering Setup of the Rate Component
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> • AC • NC
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Y • N

Column Name	Column Description
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item or price item bundle's total usage is considered for determining the rate.

Copying a Price Item Pricing

Prerequisites

To copy a price item pricing and assign it to a person, you should have:

- Person (to which you want to assign the price item pricing) defined in the application
- Person associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

Procedure

To copy a price item pricing and assign it to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

5. Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the person.
6. Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

7. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

8. Modify the required pricing details.

Note:

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

9. Edit the characteristics of the price item pricing, if required.

10. Click **Save**.

A new price item pricing is defined and assigned to the person.

Viewing a Price Item Pricing

Procedure

To view a price item pricing and assignment details:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- **Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
 - **Pricing Information** – Displays the pricing information of the price item.
 - **TFM Information** – Displays the transaction feed management information of the price item.
 - **Characteristics** – Displays the details of price item pricing characteristics.
 - **Price Item and Parameter Information** – Displays the price item parameter details.
 - **Record Actions** – Displays the record actions of the price item pricing.
 - **Record Information** – Displays the record information of the price item pricing.
- **Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- **Rate Components** – Displays the rate components of the price item.
- **Price Components** – Displays the details of price components of the price item.
- **Tiering Criteria** – Displays the tiering criteria of the price item pricing.

Note: This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- **Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

Note: This zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

6. View the basic details of price item pricing in the **Price Item Pricing** zone.
7. View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
8. View the rate components of price item in the **Rate Components** zone.
9. View the details of price components of price item in the **Price Components** zone.
10. View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
11. View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

Editing a Price Item Pricing of a Person

Prerequisites

To edit a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

Procedure

To edit a price item pricing of a person:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div data-bbox="607 642 1117 915" style="border: 1px solid black; padding: 5px;"> <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div data-bbox="607 1171 1117 1255" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div data-bbox="607 1512 1117 1596" style="border: 1px solid black; padding: 5px;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes

Overriding a Price Item Pricing of a Person

Prerequisites

To override a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To override a price item pricing of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.
5. In the **Search Results** section, click the **Override** () icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.

- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>

Assigning a Price Item to a Person**Prerequisites**

To assign a price item to a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To assign a price item to a person:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.
A menu appears.
3. Click the **Go To Effective Pricing** menu option.
The **Pricing (Person)** screen appears.
4. Search for the price item that you want to assign to the person in the **Search Price Item or Price Item Pricing** zone.
5. In the **Search Results** section, click the **Assign** () icon in the **Assign** column corresponding to the price item that you want to assign to the person.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>By default, the current system date appears in this field.</p> <p>The effective start date cannot be later than the effective end date.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note:</p> <p>The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> </div>	Yes
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Draft – Indicates that the price assignment is created as a draft. • Proposed – Indicates that the price assignment is used for quotations. 	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<p>Note:</p> <p>Rate schedules control how the bills for the price item will be calculated.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search screen appears.</p>	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is:	Yes (Conditional)
	<ul style="list-style-type: none"> Two-Dimensional 	
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are:	Yes
	<ul style="list-style-type: none"> Yes No <p>Note: By default, Yes is selected.</p>	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<p>Note: This field appears only when Price Item is defined as Only Pricing and Price Item Type is defined as Fees.</p>	

- Enter the required details in the **Main** section.
- Define TFM Information in a price item pricing, if required.
- Define characteristics for a price item pricing, if required.
- Define parameters for a price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item.

Note: A bundle cannot be assigned if its child price items are already assigned to a person and vice versa, in the same date range.

Defining Characteristics for a Price Item Pricing

Prerequisites

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

Procedure

To define characteristics for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Price Item Pricing .	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type. Note: If you select a predefined characteristic type, the Search (🔍) icon appears corresponding to the Characteristic Value field. On clicking the Search icon, the Predefined Characteristic Search window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Yes (Conditional)
		Note: This field is required when you are defining a characteristic for the price item pricing.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a characteristic from the price item pricing, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price item pricing.

Defining Parameters for a Price Item Pricing

Prerequisites

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

Procedure

To define parameter details segment for a price item pricing that is assigned to an account:

- Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameter Search window appears. The parameter search results displays only those parameters where the Price Item check box is selected	Yes
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> Parameter Description Mandatory (Yes or No) Priority 	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

Defining TFM Information in a Price Item Pricing

Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly 	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines Across Transaction 	Yes

2. Enter the required details in the **TFM Information** section.

Note: **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The transactions are defined for the price item pricing.

Price Item Pricing (Used for Viewing)

The **Price Item Pricing** screen allows you to view the details of the price item pricing. It also allows you to edit the details of the existing price item pricing. It contains the following zones:

- [Price Item Pricing](#) on page 353 zone
- [Rate and Price Component Summary](#) on page 356 zone

- [Two-Dimensional Pricing](#) on page 356 zone

Note: The **Two-Dimensional Pricing** zone appears only when the **Pricing Rule Type** is set to **Two-Dimensional**.

Price Item Pricing

The **Price Item Pricing** zone displays the details of the price item pricing. It contains the following sections:

- **Pricing Information** – Displays basic information about the price item pricing. It contains the following fields:

Field Name	Field Description
Start Date	Displays the date from when the pricing of the price item is effective.
End Date	Displays the date till when the pricing of the price item is effective.
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Post Processing – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. • Post Processing – Invoice Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. • Regular – Indicates that the pricing is used to generate regular bill segment. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees. By default, the Regular option is selected in the Bundle Type field for price item which are applicable for Pricing and cannot be edited. The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> </div>
Pricing Eligibility	Indicates whether the price item pricing is eligible for pricing assignment or not.

Field Name	Field Description
Pricing Status	<p>Indicates the pricing assignment status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • Draft • Template • Active • Inactive • Proposed • Rejected
Variance Parameter	<p>Indicates the variance based on which the price item pricing is defined.</p> <p>Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>
Pricing Currency	<p>Indicates the currency in which the price item pricing is defined.</p> <p>Note: It has a link. On clicking the link, the Currency screen appears where you can edit, add, or delete the details of the currency.</p>
Rate Schedule	<p>Indicates the rate schedule that is used to define the price item pricing.</p> <p>Note: It has a link. On clicking the link, the Rate Schedule screen appears where you can view the details of the respective rate schedule.</p>
Pricing Rule Type	<p>Indicates the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> • Two-Dimensional
Print Zero	<p>Indicates the zero pricing displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No
Pricing Frequency	<p>Indicates the pricing frequency for the price item.</p> <p>Note: This field appears only when the Price Item Usage field is set to Pricing and Price Item Type field is set to Fees.</p>
Advance Pricing	<p>This field appears only when Price Item field is set to Pricing, Price Item Type field is set to Fees and Price Assignment Type field is set to Post Processing. The valid values are:</p> <ul style="list-style-type: none"> • Yes • No
Price Assignment Usage	<p>Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are:</p> <ul style="list-style-type: none"> • All Customers • New Customers

- **TFM Information** – Displays information about the transactions mapped to the price item pricing. It contains the following fields:

Field Name	Field Description
Ignore Transaction	Indicates whether the transactions mapped to the price item pricing is considered for billing or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
Do not Aggregate Switch	Indicates whether the transactions mapped to the price item pricing is aggregated for billing or not. The valid values are: <ul style="list-style-type: none"> • Yes • No
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> • Daily • Weekly • Monthly • Quarterly • Yearly
Transaction Rating Criteria	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> • Aggregate Transactions and Then Rate Aggregated SQs • Do Not Rate Transactions • Rate Transaction and Aggregate Calc Lines

Note:

TFM Information section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1_FM feature configuration** is set to **Y** and **Price Item Usage** field is set to **Pricing and Billing**.

TFM Information section does not appear when the **Price Item Usage** field is set to **Pricing** and the **Price Item Type** field is set to **Fees**, if so, then only the **Pricing Frequency** field appears.

- **Characteristics** – Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Price Item and Parameter Information** – Displays information about the parameters associated with the price item pricing. It contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose parameter details are listed in this section.

In addition, this section contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing.
Parameter Value	Displays the value of the parameter.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the price item pricing.
	Note: The Edit button appears only when the price item pricing is in the Draft , or Proposed status.
Delete	Used to delete the price item pricing.
	Note: The Delete button appears only when the price item pricing is in the Draft , or Proposed status.
Submit	Used to submit the price item pricing for validation and processing.
	Note: The Submit button appears only when the price item pricing is in the Draft , or Proposed status.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price item pricing is defined in the application. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Rate and Price Component Summary

The **Rate and Price Component Summary** zone lists information about the following in a tree view:

- **Rate Component** defined for the rate schedule of the price item pricing
- **Price Component** defined for each **Rate Component**
- **Eligibility Criteria** defined for each **Price Component**

Note: This information appears only when eligibility check box is selected in the **Price Item Pricing** screen and details for eligibility criteria is added in the **Price Component** screen.

- **Tiering Criteria** defined for each **Price Component**

Note: This information appears only when the **Tiering Type** for the rate component is **STEP** or **Threshold**.

Two-Dimensional Pricing

The **Two-Dimensional Pricing** zone displays the details of the two-dimensional pricing. It contains the following field:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a comma (,) for an account, person, or price list.

In addition, this section contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Displays the Price Criteria of the price component.
Threshold Parameter	Displays the parameter of the price component eligibility.
Tiering Range	Displays the tiering range of the pricing.

Defining a Price Item Pricing

Prerequisites

To define a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To define pricing for a price item:

1. Do either of the following:

If you want to...	Then...
Define pricing for a price item that you want to assign to a person	<ol style="list-style-type: none"> 1. Access the Pricing (Person) screen. 2. Search for the price item or price item bundle that you want to assign to the person in the Search Price Item or Price Item Pricing zone by selecting the Price Item option from the Search By list. 3. In the Search Results section, click the Assign  icon in the Assign column corresponding to the price item that you want to assign to the person.
Define pricing for a price item that you want to assign to an account	<ol style="list-style-type: none"> 1. Access the Pricing (Account) screen. 2. Search for the price item or price item bundle that you want to assign to the person in the Search Price Item or Price Item Pricing zone by selecting the Price Item option from the Search By list.

If you want to...	Then...
	<p>3. In the Search Results section, click the Assign () icon in the Assign column corresponding to the price item that you want to assign to the account.</p>
Define pricing for a price item that you want to assign to a price list	<p>1. Access the Price list Price Item Pricing screen.</p> <p>2. Search for the price item or price item bundle that you want to assign to the person in the Search Price Item or Price Item Pricing zone by selecting the Price Item option from the Search By list.</p> <p>3. In the Search Results section, click the Assign () icon in the Assign column corresponding to the price item that you want to assign to the price list.</p>

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item pricing.
- **TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** field is **Pricing and Billing**.

- **Characteristics** - Use to define characteristics for the price item pricing.
- **Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p>Note:</p> <p>By default, the current system date appears in this field.</p> <p>The effective start date cannot be later than the effective end date.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p>Note: The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Post Processing – Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. • Post Processing – Invoice Based – Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment is done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not be applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees.</p> </div> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment is done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. • Regular – Used to indicate that the pricing is used to generate regular bill segment. <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p>Note: This is not be applicable for price items which are defined for Pricing and where the Price Item Type field is set to Fees. By default, the Regular option is selected in the Bundle Type field for price items which are applicable for Pricing and cannot be edited. The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item Relationship Type.</p> </div>	Yes
Pricing Eligibility	Used to indicate whether you want to use the price item for pricing or not.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to indicate the status of the price assignment. The valid values are: <ul style="list-style-type: none"> • Draft • Template • Active • Inactive • Proposed • Rejected 	Yes
	<p>Note:</p> <p>By default, the Draft option is selected.</p> <p>You can edit the price item pricing only when it is in the Draft status.</p>	
Variance Parameter	Used to specify the variance based on which you want to define the price item pricing.	No
	<p>Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>	
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining a price item pricing.	Yes
	<p>Note:</p> <p>Rate schedules control how the bills for the price item will be calculated.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears.</p>	
Pricing Rule Type	Used to indicate the rule type which is used for price item pricing. The valid value is: <ul style="list-style-type: none"> • Two-Dimensional 	Yes (Conditional)
	<p>Note: If you are defining a standard price item pricing, the Pricing Rule Type field should be kept blank.</p>	
		<p>Note: This field is required when you want to define Two-Dimensional pricing for the price item or price item bundle.</p>

Field Name	Field Description	Mandatory (Yes or No)
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: By default, Yes is selected.	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	Note: This field appears only when the Price Item Usage field is set to Pricing and Price Item Type field is set to Fees .	
Advance Pricing	This field appears only when Price Item field is set to Pricing , Price Item Type field is set to Fees and Price Assignment Type field is set to Post Processing . The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> • All Customers • New Customers 	Yes
	Note: By default, the All Customers option is selected.	

2. Enter the required details in the **Main** section.
3. Enter the transaction feed management information that you want to map to the price item pricing.
4. Define characteristics for the price item pricing, if required.
5. Associate parameters with the price item pricing, if required.
6. Click **Save**.

The price item pricing is defined.

Note: A bundle cannot be assigned if its child price items are already assigned to a price list, person, or an account, and vice versa, in the same date range.

Editing a Price Item Pricing

Prerequisites

To edit a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

Procedure

To edit a price item pricing:

1. Do either of the following:

If you want to...	Then...
Edit pricing of a price item that is assigned to a person	<ol style="list-style-type: none"> 1. Search for the person in the Customer 360° View screen. 2. If you want to...	Then...
	<ul style="list-style-type: none"> In the Search Results section of Price List Price Items zone, click the link in the Pricing column corresponding to the price item whose pricing details you want to view. The Price Item Pricing screen appears. Click the Edit button in the Record Actions section. The Price Item Pricing screen appears to edit the pricing details of a price item. <div data-bbox="1003 680 1399 793" style="border: 1px solid black; padding: 5px;"> <p>Note: The Edit button appears only when the price item pricing is in the Draft status.</p> </div>

The **Price Item Pricing** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the price item pricing.
- TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

Note: This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1_FM** feature configuration is set to **Y** and **Price Item Available For** field is **Pricing and Billing**.

- Characteristics** - Used to define characteristics for the price item pricing.
- Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

Note: This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective. <div data-bbox="537 1562 1195 1759" style="border: 1px solid black; padding: 5px;"> <p>Note: By default, the current system date appears in this field. The effective start date cannot be later than the effective end date.</p> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
End Date	<p>Used to specify the date till when the price item pricing is effective.</p> <p>Note: The effective end date cannot be earlier than the effective start date.</p>	No
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> • Regular – Used to indicate that the pricing must be used to generate regular bill segment. • Post Processing – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account. <p>Note: The post processing bill segment is generated when the Post Processing Sequence (PPSEQ) characteristic is defined for the price item and when the price item is associated with another price item using the Price Item relationship type.</p> <ul style="list-style-type: none"> • Post Processing – Invoice Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account. <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p> <ul style="list-style-type: none"> • Post Processing – Price Item Based – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account. <p>Note: This will not be applicable for price item which are defined for Only Pricing.</p>	Yes
Pricing Eligibility	Used to indicate whether you want to use the price item for pricing or not.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to indicate the status of the price assignment. The valid values are: <ul style="list-style-type: none"> • Draft - Used to indicate that the price assignment is created as a draft. • Proposed - Used to indicate that the price assignment is used for quotations. • Template - Used to indicate that the price assignment is a template price list. 	Yes
Variance Parameter	Used to specify the variance based on which you want to define the price item pricing. <p>Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False.</p>	No
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing. <p>Note: Rate schedules control how the bills for the price item will be calculated.</p> <p>The Search () icon appears corresponding to this field. On clicking the Search icon, the Rate Schedule Search window appears.</p>	Yes
Pricing Rule Type	Used to indicate the rule type which is used for price item pricing. The valid value is: <ul style="list-style-type: none"> • Two-Dimensional 	Yes (Conditional) <p>Note: This field is required when you are defining a two-dimensional pricing rule.</p>
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item. <p>Note: This field appears only when Price Item is defined as Only Pricing and Price Item Type is defined as Fees.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Advance Pricing	This field appears only when Price Item field is set to Pricing , Price Item Type field is set to Fees and Price Assignment Type field is set to Post Processing . The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> • All Customers • New Customers 	Yes

2. Modify the details in the **Main** section, if required.

Note:

If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.

3. Modify the TFM information that you want to map to the price item pricing, if required.
4. Define, edit or remove characteristics from the price item pricing, if required.
5. Define, edit or remove parameters from the price item pricing, if required.
6. Click **Save**.

Note:

If any value other than **Status** and **End Date** is updated then the price assignment for the price item is ended with **End Date** updated as the current system date and a new price assignment is generated for the price item with new price item pricing ID and start date as the current system date.

The **Submit** button appears only when the **Pricing Status** is **Draft**.

The **Edit Price Components** button appears only when you are editing a price assignment which is in the **Active**, **Proposed**, or **Template** status and which is not past dated; If the approval workflow is on, then the **Edit Price Components** button appears when you are editing a proposed and template price assignment which is already approved.

When the price assignment is in **Draft** status and,

- When the approval workflow is on and is in **Draft** status then it is changed to **Pending in Approval**.

When the price assignment is in **Draft** status and,

- When the approval workflow is off and is in **Draft** status then it is changed to **Active**.

The changes made to the price item pricing are saved.

Sequence	Used to indicate the sequence in which price component should be considered for the rate component while pricing.	Yes
Show Price Component	Used to indicate whether the price component should appear or not.	Yes
Description	Used to specify the description of the price component.	Yes
Rate Value	Used to specify the rate defined for the price component.	Yes

5. Enter the required details in the **Main** section.
6. If you want to define more than one price component for the rate component, click the

Add () icon corresponding to the **Rate Component** and then repeat step 7.

Note: However, if you want to remove a price component from the rate component, click the **Delete** () icon corresponding to the price component.

7. Define a list of tiering criteria for the price component.
8. Define a list of pricing eligibility criteria for the price component.
9. Click **Save**.

The price component is defined for the rate component of a price list.

Editing a Price Component of a Rate Component

Prerequisites

To edit a price component of a rate component, you should have:

- Rate component defined for the price item in the application

Procedure

To edit a price component of a rate component:

1. Ensure that the **Rate and Price Component Summary** zone is expanded in the **Price Item Pricing** screen.
2. Click the **Edit** () icon in the **Price Item Pricing** column corresponding to the price component whose details you want to edit.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the pricing ID and pricing information of the price item.
Rate Component Information	Displays information about the rate component.

In addition, this screen contains the following sections:

- **Main** – Used to specify the basic details about the price component.
- **Tiering Criteria** – Used to specify the details of tiering criteria for the price component.

- **Pricing Eligibility Criteria** – Used to specify the details of parameters which you want to consider while defining the pricing eligibility criteria for the price component.

Note: You can edit a **Price Component** of a **Rate Component** only when the **Pricing Status** of the **Price Item Pricing** is **Draft**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which price component should be considered for the rate component while pricing.	Yes
Show Price Component	Used to indicate whether the price component should appear or not.	Yes
Description	Used to specify the description of the price component.	Yes
Rate Value	Used to specify the rate defined for the price component.	Yes

3. Modify the required details in the **Main** section.
4. Define, edit, or remove tiering criteria from the price component, if required.
5. Define, edit, or remove pricing eligibility criteria from the price component, if required.
6. Click **Save**.

The price component is edited for a rate component.

Deleting a Price Component of a Rate Component

Procedure

To delete a price component of a rate component:

1. Ensure that the **Rate and Price Component Summary** zone is expanded in the **Price Item Pricing** screen.
2. Click the **Delete**  icon in the **Action** column corresponding to the **Price Component** whose details you want to remove from the rate component.

Note: You can delete a **Price Component** of a **Rate Component** only when the **Pricing Status** of the **Price Item Pricing** is **Draft**.

A message appears confirming whether you want to remove the price component of the rate component.

3. Click **OK**.

The price component is removed from the rate component.

Defining a Tiering Criteria for a Price Component**Prerequisites**

To define a tiering criteria for a price component, you should have:

- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application.

Procedure

To define a tiering criteria for a price component:

1. Ensure that the **Tiering Criteria** section is expanded in the **Price Component** screen when you are defining or editing a price component of a rate component.

The **Tiering Criteria** section contains the following columns:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which tiering criteria should be considered.	Yes
Tiering Criterion	Used to select the tiering criterion which is used in the tiering range.	Yes
Lower Limit	Used to specify the lower limit of the pricing range. Note: The system provides you with the facility to specify the lower limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Upper Limit	<p>Used to specify the upper limit of the pricing range.</p> <p>Note:</p> <p>The system provides you with the facility to specify the upper limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.</p> <p>When you define single tier with the maximum value as blank (for example, 0 to BLANK), the system will automatically replace the blank space with 999999999999999999.99.</p>	Yes
Price Item	<p>Used to indicate the price item or price item bundle whose total usage is considered for determining the rate. By default, the price item code for which you are defining the pricing appears in this field. You can specify any other price item or bundle code, if required.</p> <p>Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Price Item Details window appears.</p>	Yes
Price Parameters Item	<p>Used to specify the parameters based on which price item or price item bundle's total usage should be considered for determining the rate. By default, the parameters based on which you are defining the pricing appear in this field. You can specify any other parameters (where the Pricing flag is set to Yes), if required. However, note that you can only select parameters associated with the price item or price item bundle which is used for defining the tiering criteria.</p> <p>Note:</p> <p>This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The Edit () icon appears corresponding to this field. On clicking the Edit icon, the Parameters Search screen appears.</p>	No

2. Enter the required details in the **Tiering Criteria** section.
3. If you want to define more than one tiering criteria for the price component, click the

Add () icon corresponding to the tiering criteria and then repeat step 2.

Note: However, if you want to remove a tiering criteria from the price component, click the **Delete** () icon corresponding to the tiering criteria.

4. Click **Save**.

The tiering criteria is defined for the price component.

Defining a Pricing Eligibility Criteria for a Price Component

Prerequisites

To define a pricing eligibility criteria for a price component, you should have:

- Pricing eligibility defined in the application

Procedure

To define a pricing eligibility criteria for a price component:

1. Ensure that the **Pricing Eligibility Criteria** section is expanded in the **Price Component** screen when you are defining or editing a price component of a rate component.

The **Pricing Eligibility Criteria** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the criteria should be executed in the rule.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the left hand side parameter which you want to use along with the price item for price determination.</p> <p>Note:</p> <p>This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears.</p> <p>You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to Error (ERROR).</p>	Yes
Operator	<p>Used to specify the relational operator to define the relation between the left hand side and right hand side parameters code. The valid values are:</p> <ul style="list-style-type: none"> • < • <= • <> • = • > • >= • Between • In • Like • Not In 	Yes
Parameter Value Type	<p>Used to indicate the type of pricing eligibility. The valid values are:</p> <ul style="list-style-type: none"> • Parameter – Used to indicate the type of parameter. • Value – Used to indicate the type of value. 	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	<p>When the Parameter option is selected for the Parameter Value Type field then it is used to specify the right hand side parameter which you want to use along with the price item or price item bundle for price determination. When the Value option is selected for the Parameter Value Type field then it is used to specify the parameter value.</p> <p>Note:</p> <p>This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARAM_FLG) feature configuration is set to True.</p> <p>The Search () icon appears corresponding to this field only when the Parameter option is selected for the Parameter Value Type field. On clicking the Search icon, the Parameter Search window appears.</p> <p>When the Parameter option is selected for the Parameter Value Type field then you must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to Error (ERROR).</p> <p>When the Value option is selected for the Parameter Value Type field then you can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon (;) in the parameter value.</p>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number should be executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field should be executed. • Rule Is True – Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number should be executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field should be executed. • Rule Is True – Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check Next Condition – Used to indicate that the condition with consecutive sequence number should be executed. • Rule Is False – Used to indicate that the action specified in the Rule False Action field should be executed. • Rule Is True – Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

2. Enter the required details in the **Pricing Eligibility Criteria** section.
3. If you want to define more than one pricing eligibility criteria for the price component, click the **Add** () icon corresponding to the pricing eligibility criteria and then repeat step 2.

Note: However, if you want to remove a pricing eligibility criteria from the price component, click the **Delete** () icon corresponding to the pricing eligibility criteria.

4. Click **Save**.

The pricing eligibility criteria is defined for the price component.

Editing the Two-Dimensional Pricing

Procedure

To edit a two-dimensional pricing:

1. Ensure that the **Two-Dimensional Pricing** zone is expanded in the **Price Item Pricing** screen when you are defining, editing, or copying a price item pricing.
2. Click the **Edit** link in the upper right corner of this zone.

The **Two-Dimensional Pricing** screen appears. It contains the following sections:

- **Step Criterion** - Used to specify details about the tiering criteria.
- **Threshold Parameter** - Used to specify details about the eligibility criteria.

The **Step Criterion** section contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Used to specify the tiering criteria for the price component. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Tiering Criterion Search window appears. On specifying the tiering criteria, the description of the tiering criteria appears below the Step Criterion field.
Tiering Range	Used to specify the range for the tiering criteria of the price component.

The **Threshold Parameter** section contains the following field in a grid:

Field Name	Field Description
Threshold Parameter	Used to specify eligibility criteria range and rate for the price component. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Parameter Search window appears. On specifying the parameter, the description of the parameter appears below the Threshold Parameter field.

- Modify the required details in the **Two-Dimensional Pricing** screen.
- If you want to add more than one tiering range, click the **Add** (⊕) icon and then enter the specific range.

However, if you want to remove a tiering range, click the **Delete** (🗑️) icon corresponding to the range that you want to remove.
- If you want to add more than one eligibility criteria range for the threshold parameter, click the **Add** (⊕) icon and then enter the eligibility criteria range.

However, if you want to remove the eligibility criteria range from the threshold parameter, click the **Delete** (🗑️) icon corresponding to the eligibility criteria range.
- Click **Save**.
The changes made to the two-dimensional pricing are saved.

Overriding a Price Item Pricing

Prerequisites

To override a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

Procedure

To override a price item pricing:

1. Do either of the following:

If you want to...	Then...
Override price item pricing assigned to the person either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> 1. Access the Pricing (Person) screen. 2. In the Effective Price Assignment zone, click the Override  icon in the Override column corresponding to the price item pricing that you want to override.
Override price item pricing assigned to the account either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> 1. Access the Pricing (Account) screen. 2. In the Effective Price Assignment zone, click the Override  icon in the Override column corresponding to the price item pricing that you want to override.

The **Price Item Pricing** screen appears.

2. Modify the required pricing details.

Note:

If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.

While overriding a price item pricing, you can not only edit the existing tiering combination details, but also add additional tiering combinations until the maximum tiering combinations limit is met.

3. Define, edit or remove the price assignment characteristics, if required.
4. Click **Save**.

The price item pricing is overridden.

Related Topics

For more information on...	See...
Price Item Pricing screen	Price Item Pricing
How to edit the characteristics of the price assignment	Editing the Price Assignment Characteristics

Pricing Simulation

The **Pricing Simulation** screen allows you to:

- View pricing simulation details for account or price list
- View effective pricing information
- Search simulation details of account or price list

This screen consists of the following zones:

- [Search Pricing](#) on page 398

Through the **Pricing Simulation** screen, you can navigate to the following screens:

- [Price Item \(Used for Viewing\)](#) on page 178
- [Simulation - Effective Pricing Information](#) on page 402

Search Pricing

The **Search Pricing** zone allows you to search pricing for an account.

In case of bundles, the order in which the price item pricing is listed in this zone is based on the following condition:

- If the system finds pricing for price items that belong to a bundle before finding pricing for the bundle, then the system lists the pricing for price items that belong to the bundle, and not the pricing for the bundle. For example, let say, B0001 is a bundle, and contains C0001 and C0002 price items. If the system finds pricing for B0001, it validates whether the pricing for C0001 and C0002 has already been found. If yes, then the system lists the pricing for C0001 and C0002. If the system does not find pricing for C0001 and C0002 before finding pricing for B0001, it lists the pricing for B0001.

Note: If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following two options:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for pricing using price list or account or person details. The valid values are: <ul style="list-style-type: none"> • Price List • Account /Person 	Yes
	Note: By default, Price List option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to indicate Price List ID for which simulation must be created.	Yes
	<p>Note:</p> <p>This field appears only when the Price List ID option is selected for the Search By field.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Price List Search screen appears.</p>	
Account ID	Used to specify the account for which simulation must be created.	Yes
	<p>Note:</p> <p>This field appears only when the Account option is selected for the Search By field.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Account Search screen appears.</p>	
Person ID	Used to specify the person for which simulation must be created. This field gets auto populated once the Account ID value is defined.	Yes
	<p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Person Search screen appears.</p>	
Simulation Date	Used to search price simulations which are effective from a particular date onwards.	Yes
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> • Active • Proposed 	No
Search Type	Used to indicate whether you want to search the price list using the following values: <ul style="list-style-type: none"> • Best Fit • Exact Match 	No
	<p>Note: By default, Exact Match option is selected.</p>	
Show Default and Global Pricing	Used to indicate whether the product is assigned to a default and global price list. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price items for pricing simulation.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Price Item Search screen appears.	
Description	Used to search price assignments of a price item having a particular description.	No
View Type	Used to indicate whether you want to view summary or tiering details of price components. The valid values are: <ul style="list-style-type: none"> • Detail — Used when you want to view the details of price component with pricing eligibility and tiering criteria. • Summary — Used when you want to view the summary of effective price component. 	No
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing.	No
	Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . The Search  icon appears corresponding to this field. On clicking the Search icon, the Parameter Search screen appears.	
Parameter Value	Displays the value of the parameter or used to specify multiple parameter value.	No
	Note: The Search  icon appears corresponding to this field only when the value type for the Parameter is Reference or Predefined . If the value type of the Parameter is Reference then on clicking the Search icon, the Reference Parameter Value Search screen appears. If the value type of the Parameter is Predefined then on clicking the Search icon, the Predefined Parameter Value Search screen appears.	

To add more than one **Parameter**, click the **Add**  icon and to delete the parameters click the **Delete**  icon corresponding to the **Parameter** field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Note: If default Price List ID is added to the Price List Value and if **Yes** is selected for **Show Default and Global Pricing**, also if Price List is added to the product for selected account then **Search Results** section will display price list assignments for the value and product will be displayed along with the default price list assignments.

Column Name	Column Description
Price Item	Displays the price item code.
	Note: It has a link. On clicking the link, the View Price Item screen appears with the details of the respective price item.
Description	Displays the description of the price item.
Variance Parameters	Indicates the variance parameter which is used for defining the price item pricing.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values used for defining the price item pricing.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing — Invoice Based • Post Processing — Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list.
	Note: The description appears only when the pricing assignment type is Account Price List, or Account Inherited Price List.
Rate Description	Displays the description of the tiering setup of the rate component.
Simulate	On clicking the Simulate  icon, the Simulation — Effective Pricing Information screen appears where you can add the Price Item SQIs and Pricing Eligibility Parameters details that can be passed for pricing simulation.
	Note: This column appears only when the price item is Rate and Fees .
Effective Start Date	Displays the date from when the pricing is effective.
Effective End Date	Displays the date till when the pricing is effective.

Column Name	Column Description
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.

Note:

The number of records that can be displayed in the **Search Results** section of the **Search Pricing** zone is controlled via the **C1_PR_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1_PR_REC** feature configuration. For more information, refer to [Setting the C1_PR_REC Feature Configuration](#) on page 2183.

Simulation - Effective Pricing Information

The **Simulation — Effective Pricing Information** screen contains the following sections:

- **SQIs** — This section contains the following fields:

Field Name	Field Description
SQI	<p>Used to indicate the SQI that you want to associate with the price item.</p> <p>Note:</p> <p>If you want to define more than one price item SQI, click the Add (+) icon corresponding to this field.</p> <p>If you want to remove a price item SQI, click the Delete (🗑️) icon corresponding to this field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the search icon, the Search for Service Quantity Identifier screen appears.</p> <p>This field is required when you want to view the effective pricing simulation.</p>
Value	<p>Used to indicate the SQI value that you want to associate with the price item.</p> <p>Note:</p> <p>If you want to define more than one value, click the Add (+) icon corresponding to this field.</p> <p>If you want to remove a price item SQI value, click the Delete (🗑️) icon corresponding to this field.</p>

- **Pricing Eligibility Parameters** — This section contains the following fields:

Field Name	Field Description
Parameter	<p>Used to specify multiple parameter codes based on which you want to define the pricing</p> <p>Note:</p> <p>This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to true.</p> <p>The Search  icon appears corresponding to this field. On clicking the search icon, the Parameter Search screen appears.</p> <p>If you want to define more than one parameter, click the Add  icon corresponding to this field.</p> <p>If you want to remove a parameter, click the Delete  icon corresponding to this field.</p>
Parameter Value	<p>Displays the value of the parameter or used to specify multiple parameter value.</p> <p>Note:</p> <p>The Search  icon appears corresponding to this field appears only when the value type for the Parameter is defined as Reference or Predefined. If the value type of the Parameter is Reference, then the Reference Parameter Value Search screen appears and if the value type of the Parameter is Predefined, then the Predefined Parameter Value Search screen appears.</p> <p>If you want to define more than one value, click the Add  icon corresponding to this field.</p> <p>If you want to remove a parameter value, click the Delete  icon corresponding to this field.</p>

After providing the required information, when you click on **Simulate** button, the **Effective Pricing Information** zone appears where you can view the effective pricing simulation. This zone contains the following sections:

- **Rate Information** — This section contains the following fields:

Field Name	Field Description
Applicable Rate	Displays the rate applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

Note: This section appears only when **Price Item Type** is **Rate** .

- **Fee Information** — This section contains the following fields:

Field Name	Field Description
Applicable Fee	Displays the fee applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

Note: This section appears only when **Price Item Type** is **Fees** .

- **Price Item and Parameter Information** — This section contains the following fields:

Field Name	Field Description
Price Item	Displays the price item for which pricing is defined.
Description	Displays the description of the price item

The Parameter Information appears only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1_PPARM_FLG)** feature configuration is set to **True**.

This segment contains the following fields:

Field Name	Field Description
Parameter	Specifies multiple parameter codes associated with the price items based on which pricing is defined.
Parameter Information	Displays the parameter information with concatenated comma separated values.
Parameter Value	Displays the value of the parameter.

- **TFM Information** — This section contains the following fields:

Field Name	Field Description
Ignore Transaction	Displays whether the transactions mapped to the price item is considered for billing.
Aggregation Schedule	Displays the aggregation cycle.
Aggregation Transaction	Specifies whether the transactions mapped to the price item are aggregated for billing.
Rating Criteria	Specifies how and when you rate the transaction legs mapped to the price item.

Note: This section appears only when the **Price Item** is available for **Pricing and Billing**.

- **Pricing Information** — This section contains the following fields.

Field Name	Field Description
Effective Start Date	Displays the date from when the price item pricing is effective.
Pricing Currency	Specifies the currency in which you define the price item pricing.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Status	Displays the status of price assignment.
Variance Parameter	Specifies the variance based on which price item pricing is defined. Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Rate Schedule	Specifies the rate schedule used for defining price item pricing.

Field Name	Field Description
Price Assignment Type	Displays the type of price assignment.
Print Zero	Specifies whether zero pricing should be displayed in the bill.
Apply To	Displays whether the price item pricing is applied to all customers or only to the new customers.
Pricing Frequency	Displays the frequency for pricing where Price Item Type is fees.
Advance Pricing	Displays only if Price Item is defined as Pricing Only , Price Item Type is defined as Fees and Price Assignment Type is defined as Post Processing . The valid values are: <ul style="list-style-type: none"> • Yes • No

Pricing Eligibility Criteria and **Tiering Criteria** for each eligibility or tier range are displayed in following fields:

Field Name	Field Description
Rate Component Sequence	Displays the sequence number of the rate component.
Tiering Type	Displays the tiering type of the rate component.
Price Component Sequence	Specifies the sequence of price component whose rate is used for calculation.
Price Component Description	Displays the description of the rate component.
Rate	Specifies the price for the price item.
Contributing Factor	Displays the availability of contributing factor.
Eligibility/Tier Details	On clicking the Add (+) icon, expandable details of Tiering Criteria and Pricing Eligibility Criteria are displayed.

When you click the Add (+) icon, if the price component is scheduled for Flat Rate then, only **Pricing Eligibility Criteria** segment appears. If the price component is scheduled for Step or Threshold then both the segments, **Tiering Criteria** and **Pricing Eligibility Criteria** appears.

Tiering Criteria segment contains the following fields:

Field Name	Field Description
Tiering Criteria	Displays the tiering criteria.
Price Item	Specifies whether the price item or bundle's total usage is considered for determining the rate.
Variance Parameter	Specifies the variance based on which price item or bundle's total usage is considered for determining the rate.
	Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .

Field Name	Field Description
Price Item Parameters	Specifies the parameters based on which price item or bundle's total usage is considered for determining the rate. Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
From	Specifies the lower limit of the tiering range.
To	Specify the upper limit of the tiering range.

Pricing Eligibility Criteria segment contains the following fields:

Field Name	Field Description
Sequence Number	Specifies the order in which the criteria should be executed in the rule.
Parameter	Specifies the left hand side parameter which you want to use along with the price item for price determination. Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Operator	Specifies the relational operator to define the relation between the left hand side and right hand side parameters.
Parameter Value Type	Displays the type of pricing eligibility.
Parameter	Specifies the right hand side parameter which you want to use along with the price item for price determination. Note: This field appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Parameter Value	Specifies the parameter value.
Is True	Displays what should happen when the condition is true (satisfied).
Is False	Displays what should happen when the condition is false (not satisfied).
Is Sufficient	Displays what should happen when the data is insufficient.

This section contains the following links:

Link Name	Link Description
Expand All	Used to define all the Tiering Criteria and Pricing Eligibility Criteria segments.
Collapse All	Used to un-define the displayed Tiering Criteria and Pricing Eligibility Criteria segments.
Expand Only Contributing Factors	Used to define only those Tiering Criteria and Pricing Eligibility Criteria segments with contributing factors.

Searching Pricing Simulation for Account or Price List

Prerequisites

To search pricing simulation for an account or price list, you should have:

- Price Item, Account or Person details defined in the application

Procedure

To search pricing simulation for an account or price list:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.
The **Pricing Simulation** screen appears.
3. In the **Search Pricing** zone, select **Account** or **Price List** depending on what you want search pricing simulation.
4. Enter the additional search criteria, if required.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of pricing details that meet the search criteria appears in the **Search Results** section.

Viewing Pricing Simulation

Prerequisites

To view pricing simulation details of an account, you should have:

- Price items assigned to the account

Procedure

To view pricing simulation of an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

Exporting Effective Price Simulation

Procedure

To export effective price simulation for an account in the CSV format:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Export to Excel** link in the **Search Pricing** zone.
The **File Download** dialog box appears.
5. Click **Save**.
The **Save As** dialog box appears.
6. Browse to the location where you want to save the file.
7. Enter the file name in the respective field, and click **Save**.
The search results are exported in CSV format.

8. Open the CSV file in Microsoft Excel.

It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.
Description	Displays the description of the price item.
Variance	Indicates the variance parameter which is used for defining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Indicates the parameters which are used for defining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> • Regular • Post Processing • Post Processing — Invoice Based • Post Processing — Price Item Based
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list. Note: The description appears only when the pricing assignment type is Account Price List, Customer Price List, or Parent Customer Price List.
Rate	Displays the price of the price item. It also indicates whether the price is a Flat, Threshold, or Step price. The price can be agreed pricing, price list pricing, or pricing inherited from the price list hierarchy. If the price is applicable only to new customers, an asterisk (*) symbol appears corresponding to the price.
Price Component Description	Displays the description of the price component whose rate is used for calculation. Note: The data appears in this column only when the rate corresponding to the price component in the price item pricing is used for calculation.
Effective Start Date	Displays the date from when the pricing assignment is effective.
Effective End Date	Displays the date till when the pricing assignment is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price assignment is applicable to all customers or only to the new customers.
Price Assignment ID	Displays the ID that is generated automatically when the price assignment is done.

Column Name	Column Description
Parent Level	Displays the numerical level of the parent in the hierarchy from whom the pricing is inherited.
Price List ID	Displays the price list ID from where the pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.
Parent Pricelist Level	Indicates the parent level when pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item should be considered for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregate Transaction	Indicates whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> • Y • N
Aggregation Schedule	Indicates the aggregation cycle.
Tiering Criterion	Indicates the tiering criterion.
Tiering Price Item	Indicates whether the price item is billed individually or at the bundle level.

Eligible Price List

The **Eligible Price List** screen allows you to:

- View eligible price list details for account or person
- View pricing simulation details of account or person

This screen consists of the following zones:

- [Search Eligible Price Lists](#) on page 411
- [Pricing Simulation](#) on page 398

Search Eligible Price Lists

The **Search Eligible Price List** zone allows you to search eligible price list for account and person. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible Date	Used to specify the date on which the eligibility check need to be searched.	Yes
Person ID	Used to specify the person for which eligible price list to be searched. Note: The Search (🔍) icon appears corresponding to this field. On clicking the icon, the Person Search screen appears.	No
Account ID	Used to specify the account for which eligible price list to be searched. Note: The Search (🔍) icon appears corresponding to this field. On clicking the icon, the Account Search screen appears.	No
Status	Used to search eligible price list based on status.	Yes
Division	Used to search eligible price list based on division.	Yes
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing. Note: This field appears only when the MultiPrice Parameter option type of the MultiParameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True. The Search (🔍) icon appears corresponding to this field. On clicking the icon, the Parameter Search screen appears.	No
Parameter Value	Displays the value of the parameter or used to specify multiple parameter value. Note: The Search (🔍) icon appears corresponding to this field only when the value type for the Parameter is defined as Reference or Predefined . If the value type of the Parameter is Reference then on clicking the search icon, the Reference Parameter Value Search screen appears else if the value type of the Parameter is Predefined then on clicking the search icon, the Predefined Parameter Value Search screen appears.	No

Note: To add more than one **Parameter**, click the add (+) icon and to delete the parameters click the delete (🗑️) icon corresponding to this field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List ID	Displays the price list ID. Note: It has a link. On clicking the link, the Price List Price Item Assignments screen appears where you can view the details of the respective price list.
Price List Description	Displays the price list description. Note: It has a link. On clicking the link, the Price List Price Item Assignments screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> • Active • Proposed
Availability Start Date	Used to search price lists which are available for assignment from a particular date.
Availability End Date	Used to search price lists which are available for assignment till a particular date.
Effective Start Date	Used to search price lists which are effective from a particular date.
Effective End Date	Used to search price lists which are effective till a particular date.
Simulate	On clicking the Simulate (🔍) icon, the Pricing Simulation Screen appears with the price list ID, account and person fields prepopulated.

Rate Definition

Rate schedules, rate versions, and rate components are used to define the formulas to calculate the total amount charged to a customer for a product. Some examples of formulas are: price times the number of transactions used and a flat monthly charge plus a percentage of the average daily balance.

The rate is a formula with variables whose values are supplied by a user by setting up a price list or override price. For example, a rate might add a flat monthly charge and a percentage of the average daily balance to arrive at the amount

charged to the customer. This rate might be used to calculate the charge for multiple products, each product with its own flat amount and percentage. So, these two factors are defined as variables whose values must be entered by users when they setup price list or override price. In Oracle Revenue Management and Billing (ORMB), these variables are defined as rate components.

The system provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. The **Rate Definition** screen allows you to indicate whether the rate component supports standard flat pricing or tiered pricing. It allows you to define, edit, and delete the tiering setup of a rate component. This screen consists of the following zones:

- [Rate Schedule Components](#) on page 413
- [Create/Edit Rate Definition](#) on page 414

Rate Schedule Components

The **Rate Schedule Components** zone allows you to select the rate schedule whose rate components' tiering setup you want to define or edit. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to select the rate schedule.	Yes

- **Search Results** — On clicking the **Search** button, the rate components of the rate schedule appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Rate Schedule	Displays the rate schedule.
Rate Component Sequence	Displays the sequence number of the rate component.
Rate Component Description	Displays the description of the rate component.
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.
Tiering Type	Displays the tiering type.
Maximum Tiering Combinations	Displays the maximum number of tiering ranges supported by the rate component. Note: Each tiering range supports more than one tiering criteria. For example, a rate component supports tiering based on two different criteria such as transaction volumes from a bundle and balances of the priced product. In such case, for a single rate, it is possible to enter separate tiering range information for each criterion and vary this information by product.
Rate Component Map Description	Displays the description of the tiering setup of the rate component.
Action	Indicates the action that can be performed on the rate component. The valid values are: <ul style="list-style-type: none"> • Add — Allows you to define the tiering setup of the rate component • Edit — Allows you to edit the tiering setup of the rate component

Column Name	Column Description
Rate Component Map ID	Displays the rate component map ID.
	Note: This ID is generated automatically when you define the tiering setup of the rate component.

On clicking the **Broadcast**  icon corresponding to the rate component, the **Create/Edit Rate Definition** zone appears with the details of the respective rate component.

Create/Edit Rate Definition

The **Create/Edit Rate Definition** zone allows you to define and edit tiering setup of the rate component. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Displays the code of the rate schedule.	Not applicable
Rate Component Description	Displays the description of the rate component.	Not applicable
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.	Not applicable
Rate Component Sequence	Displays the sequence number of the rate component.	Not applicable
Tiering Type	Used to specify the tiering type. The valid values are: <ul style="list-style-type: none"> • FLAT • STEP • THRESHOLD 	Yes
	Note: This field is non-editable when you edit the tiering setup of the rate component.	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Tiering Combinations	Used to specify the maximum number of tiering ranges supported by the rate component. Note: This field is non-editable when you: <ul style="list-style-type: none"> Select the tiering type as FLAT or STEP Edit the tiering setup of the rate component By default, 0 appears in this field when you select the tiering type as FLAT , and 1 appears when you select the tiering type as STEP .	Yes
Rate Component Map Description	Used to specify the description for the tiering setup of the rate component. For example, if you want the user to enter price per transaction for a tiering range, enter Price Per Transaction in the Rate Component Map Description field.	Yes

This zone contains the following buttons:

Button Name	Button Description (When the Action is Add)	Button Description (When the Action is Edit)
Save	Used to create the tiering setup.	Used to save the changes made in this zone.
Delete	Note: This button is disabled when you define the tiering setup of the rate component.	Used to delete the tiering setup of the rate component.
		Note: You can delete the tiering setup only when the rate component is not yet used for any product pricing.
Cancel	Used to clear the fields in this zone.	Used to reset the changes made in this zone.

Defining Tiering Setup of a Rate Component

Prerequisites

To define tiering setup of a rate component, you should have:

- Rate schedules defined in the application
- Rate components of the rate schedule defined in the application

Procedure

To define tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.

The **Rate Definition** screen appears.

- Select the rate schedule in the **Rate Schedule Components** zone.
- Click **Search**.

The rate components of the rate schedule appear as the search results.

- Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to define.

The **Create/Edit Rate Definition** zone appears.

- Select the tiering type from the list.
- Enter the maximum number of tiering ranges supported by the rate component.

Note:

The **Maximum Tiering Combinations** field is non-editable when you select the tiering type as **FLAT** or **STEP**. By default, **0** appears in the **Maximum Tiering Combinations** field when you select the tiering type as **FLAT**, and **1** appears when you select the tiering type as **STEP**.

- Enter the description for the tiering setup of the rate component.

For example, if you want the user to enter price per transaction for a tiering range, enter `Price Per Transaction` in the **Rate Component Map Description** field.

- Click **Save**.

The rate component map ID is generated automatically when you define the tiering setup of the rate component.

Editing Tiering Setup of a Rate Component

Procedure

To edit tiering setup of a rate component:

- Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.

The **Rate Definition** screen appears.

- Select the rate schedule in the **Rate Schedule Components** zone.
- Click **Search**.

The rate components of the rate schedule appear as the search results.

- Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to edit.
The **Create/Edit Rate Definition** zone appears.
- Modify the details of the tiering setup.

Note: You can only modify the rate component map description.

- Click **Save**.
The changes made to the tiering setup are saved.

Deleting Tiering Setup of a Rate Component

Procedure

To delete tiering setup of a rate component:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.
The **Rate Definition** screen appears.
- Select the rate schedule in the **Rate Schedule Components** zone.
- Click **Search**.
The rate components of the rate schedule appear as the search results.
- Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to delete.
The **Create/Edit Rate Definition** zone appears.
- Click **Delete**.

The tiering setup of the rate component is deleted, and the action that can be performed on the rate component changes from **Edit** to **Add** in the **Rate Schedule Components** zone.

Note:

The **Delete** button is disabled when you define the tiering setup of the rate component.

You can delete the tiering setup only when the rate component is not yet used for any product pricing.

Tiering Criterion

Oracle Revenue Management and Billing (ORMB) provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization.

Let us understand this with the help of an example. ABC company uses wire transfer services provided by a large bank. If ABC company initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If ABC company initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, you will have to define tiered pricing with the following tiering ranges:

- If the number of wire transfers is greater than 0 and less than or equal to 1000, then charge \$5 per transfer to ABC company.
- If the number of wire transfers is greater than 1000, then charge \$3 per transfer to ABC company.

In the above example, number of wire transfers is the tiering criterion, 0 – 1000 and 1000 – BLANK are tiering ranges, and \$5 and \$3 are rates per transfer.

The **Tiering Criteria** screen allows you to create and edit a tiering criterion. This screen consists of the following zones:

- [Tiering Criterion List](#) on page 418
- [Edit Tiering Criterion](#) on page 418
- [Create Tiering Criterion](#) on page 419

Tiering Criterion List

The **Tiering Criterion List** zone displays tiering criterion that are already defined in the system. This zone contains the following columns:

Column Name	Column Description
Tiering Criterion	Displays the code of the tiering criterion.
Description	Displays the description of the tiering criterion.
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

On clicking the **Broadcast**  icon corresponding to the tiering criterion, the **Edit Tiering Criterion** zone appears with the details of the respective tiering criterion.

Edit Tiering Criterion

The **Edit Tiering Criterion** zone allows you to edit the tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Displays the code of the tiering criterion.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to modify the description of the tiering criterion.	Yes
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.	Not applicable

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Cancel	Used to clear the changes made in this zone.

By default, the **Edit Tiering Criterion** zone does not appear in the **Tiering Criteria** screen. It appears only when you click the **Broadcast**  icon corresponding to the tiering criterion in the **Tiering Criteria List** zone.

Create Tiering Criterion

The **Create Tiering Criterion** zone allows you to create tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Used to specify the code that uniquely identifies the tiering criterion.	Yes
Description	Used to specify the description for the tiering criterion.	Yes
Service Quantity Identifier	Used to specify the Service Quantity Identifier (SQI) for the tiering criterion. Note: During billing, the rating engine uses the SQI to determine which service quantities are applied to tiers.	Yes

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to create the tiering criterion.
Cancel	Used to clear the fields in this zone.

Creating a Tiering Criterion

Prerequisites

To create a tiering criterion, you should have:

- Service Quantity Identifiers (SQIs) defined in the application

Procedure

To create a tiering criterion:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Tiering Criterion**.
The **Tiering Criterion** screen appears.
3. In the **Create Tiering Criterion** zone, enter the code that uniquely identifies the tiering criterion.
4. Enter the description for the tiering criterion.
5. Select the Service Quantity Identifier (SQI) that you want to associate with the tiering criterion.
6. Click **Save**.

The tiering criterion is created.

Variance Parameter

Oracle Revenue Management and Billing allows you to define pricing for a product based on the variance parameter. This helps you to maintain variance based pricing for a product. For example, you can define different product pricing for each country or currency, if required. Before you define product pricing based on a variance parameter, you need to define the variance parameter. The **Variance Parameter** screen allows you to define, edit, and delete a variance parameter. It also allows you to filter the variance parameters using a search criteria.

Filtering the Variance Parameters

Procedure

To filter the variance parameters:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following two sections:

- **Search Criteria**— The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	No

- **Search Results** — On clicking the **Search** button corresponding to the **Variance Parameter** field, the search results are filtered based on the specified criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Variance Parameter	Displays the variance parameter.
Description	Displays the description of the variance parameter.

3. Enter the search criteria in the **Variance Parameter** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Search** button corresponding to the **Variance Parameter** field.

The search results are filtered based on the specified criteria.

Defining a Variance Parameter

Procedure

To define a variance parameter:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	Yes
Description	Used to specify the description for the variance parameter.	Yes

3. Enter the required details.
4. If you want to define more than one variance parameter, click the **Add** (+) icon and then repeat step 4.

Note: However, if you want to remove a variance parameter, click the **Delete** (🗑️) icon corresponding to the variance parameter that you want to delete.

5. Click **Save**.

The variance parameter is defined.

Person to Person Relationship Type Sequence

Oracle Revenue Management and Billing provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1_PER_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1_PER_REL feature configuration and accordingly search effective price item pricing at the parent customer level.

The **Person to Person Relationship Type Sequence** screen allows you to define, edit, and delete person to person relationship type sequence of:

- a division
- a division, price item, and price item parameters combination

This screen consists of the following zones:

- [Search Person Relationship Type Sequence for Price Item](#) on page 424
- [Search Person Relationship Type Sequence for Division](#) on page 425

Search Person Relationship Type Sequence for Price Item

The **Search Person Relationship Type Sequence for Price Item** zone allows you to search person to person relationship type sequence defined for a division, price item, and price item parameters combination. You can also define, edit, and delete person to person relationship type sequence of a division, price item, and price item parameters combination.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item code.	No
Price Item Description	Used to specify the description of the price item.	No
Division	Used to specify the division.	No
	Note: You can only view those divisions to which you have access in the Division list.	

Note: You must specify at least one search criterion while searching person to person relationship type sequence defined for a division, price item, and price item parameters combination.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.
	Note: It has a link. On clicking the link, the View Price Item screen appears with the details of the respective price item.
Description	Displays the description of the price item.
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.
View	On clicking the View  icon, the Person Relationship Type Sequence for Division and Price Item screen appears where you can view person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Edit	On clicking the Edit  icon, the Person Relationship Type Sequence for Division and Price Item screen appears where you can edit person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Delete	On clicking the Delete  icon, you can delete person to person relationship type sequence defined for the division, price item, and price item parameters combination.

You can define person to person relationship type sequence for a division, price item, and price item parameters combination by clicking the **Add** link in the upper right corner of this zone.

Search Person Relationship Type Sequence for Division

The **Search Person Relationship Type Sequence for Division** zone allows you to search person to person relationship type sequence defined for a division. You can also define, edit, and delete person to person relationship type sequence of a division.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division. Note: You can only view those divisions to which you have access in the Division list.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division for which person to person relationship type sequence is defined.
Description	Displays the description of the division.
View	On clicking the View (🔍) icon, the Person Relationship Type Sequence for Division screen appears where you can view person to person relationship type sequence of the division.
Edit	On clicking the Edit (✎) icon, the Person Relationship Type Sequence for Division screen appears where you can edit person to person relationship type sequence of the division.
Delete	On clicking the Delete (🗑️) icon, you can delete the person to person relationship type sequence of the division.

You can define person to person relationship type sequence for a division by clicking the **Add** link in the upper right corner of this zone.

Searching Relationship Type Sequence for a Division, Price Item, and Price Item Parameters

Prerequisites

To search person to person relationship type sequence for a division, price item, and price item parameters combination, you should have:

- Divisions defined in the application

Procedure

To search person to person relationship type sequence for a division, price item, and price item parameters combination:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.
The **Person to Person Relationship Type Sequence** screen appears.
3. Enter the search criteria in the **Search Person Relationship Type Sequence for Price Item** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually whenever required.

4. Click **Search**.

A list of division, price item, and price item parameters combinations that meet the search criteria and for which person to person relationship type sequence is defined appears in the **Search Results** section.

Defining Relationship Type Sequence for a Division, Price Item, and Price Item Parameters

Prerequisites

To define person to person relationship type sequence for a division, price item, and price item parameters combination, you should have:

- Divisions defined in the application
- Price items associated with the division to which the user belongs
- Parameters associated with the price item
- Person relationship types defined in the application

Procedure

To define person to person relationship type sequence for a division, price item, and price item parameters combination:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.

The **Person to Person Relationship Type Sequence** screen appears.

- Click the **Add** link in the upper right corner of the **Search Person Relationship Type Sequence for Price Item** zone.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define price item and price item parameters specific person to person relationship type sequence.	Yes
Price Item	Used to specify the price item code. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Search screen appears.	Yes
Price Item Parameters	Used to specify the price item parameters. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Price Item Parameters Search screen appears.	No

In addition, this screen contains the following section:

- Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

- Enter the required details.

Note: You can search for a price item and price item parameters by clicking the **Search** (🔍) icon corresponding to the respective field.

- If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** (+) icon and then enter the details in the **Person Relationship Type Sequence** section.

Note: However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** (🗑️) icon corresponding to the relationship type.

- Click **Save**.

The person to person relationship type sequence is defined for the division, price item, and price item parameters combination.

Editing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters

Prerequisites

To edit person to person relationship type sequence of a division, price item, and price item parameters combination, you should have:

- Person relationship types defined in the application

Procedure

To edit person to person relationship type sequence of a division, price item, and price item parameters combination:

1. Search person to person relationship type sequence for the division, price item, and price item parameters combination in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the division, price item, and price item parameters combination whose person to person relationship type sequence you want to edit.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.	Not applicable
Price Item	Displays the price item code.	Not applicable
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).	Not applicable

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

- If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** () icon and then enter the details in the **Person Relationship Type Sequence** section.

Note: However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** () icon corresponding to the relationship type.

- Click **Save**.

The changes made to the person to person relationship type sequence are saved.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define person to person relationship type sequence.	Yes

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

4. Enter the required details.
5. If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** () icon and then enter the details in the **Person Relationship Type Sequence** section.

Note: However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** () icon corresponding to the relationship type.

6. Click **Save**.

The person to person relationship type sequence is defined for the division.

Editing Relationship Type Sequence of a Division

Procedure

To edit person to person relationship type sequence of a division:

1. Search person to person relationship type sequence for the division in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **Edit** () icon in the **Edit** column corresponding to the division whose person to person relationship type sequence you want to edit.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Indicates the division for which person to person relationship type sequence is defined.	Not applicable

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

3. If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** () icon and then enter the details in the **Person Relationship Type Sequence** section.

Note: However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** () icon corresponding to the relationship type.

4. Click **Save**.

The changes made to the person to person relationship type sequence are saved.

Deleting Relationship Type Sequence of a Division

Procedure

To delete person to person relationship type sequence of a division:

1. Search person to person relationship type sequence for the division in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **Delete** () icon in the **Delete** column corresponding to the division whose person to person relationship type sequence you want to delete.

A message appears confirming whether you want to delete the person to person relationship type sequence.

3. Click **OK**.

The person to person relationship type sequence of the division is deleted.

Viewing Relationship Type Sequence of a Division

Procedure

To view person to person relationship type sequence of a division:

1. Search person to person relationship type sequence for the division in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the division whose person to person relationship type sequence you want to view.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description
Division	Indicates the division for which person to person relationship type sequence is defined.

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to view person to person relationship type sequence defined for the division. It contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the sequence in which relationship type will be considered while searching for effective price item pricing at the parent customer level.
Relationship Type	Indicates the person to person relationship type.

3. View the person to person relationship type sequence defined for the division in the **Person Relationship Type Sequence for Division** screen.

Division

Topics:

- [Division Search](#)
- [Division](#)

The following two types of divisions are used while defining a contract type:

- **General Ledger (GL) Division** — GL divisions typically comprise of individual entities (for example, companies) in the general ledger. You must set up a GL division for each such entity. The GL division is used to define the accounting period for financial transactions linked to contracts. Contracts are associated with GL divisions through their contract type. The system uses accounting periods to prevent a user from creating financial transactions in the closed periods. It also uses accounting periods when it generates the flat file that contains the consolidated journal entry that is interfaced to the general ledger.
- **Division** — A division is associated with a jurisdiction. A jurisdiction is a geographic-oriented entity with unique business rules. For example, if you conduct business in California and Japan, each jurisdiction has different set of rules, and therefore you need to have a separate jurisdiction for each division. You must set up a division for each jurisdiction in which you conduct the business. For the Pricing Management functionality, setting up a division is mandatory, and the system must contain information about at least one division.

A division is associated with the following:

- **Person** — You may or may not associate person to a division. It is optional. But, when you are using division specific functionality, you have to associate person to a division while creating a local person.
- **Contract** — Contract is associated to a division through its contract type. The contract type controls multiple business rules which are defined for a given jurisdiction and contract type combination. In addition to controlling the business rules defined on the contract's contract type, the contract's division also controls the type of collection criteria used to determine if and how to collect overdue debt.
- **Account** — The division on account when combined with the account's customer class defines the jurisdiction that governs financial business rules (for example, the bill's due date, when and how late payment charges are calculated, etc.). It also allows you to assign To Do entries associated with the account to a given To Do role based on the account's division.

Division Search

The **Division Search** window allows you to search for a division. This screen contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division code.	No
Description	Used to specify the description for the division.	No

- **Search Results** — On clicking the **Search** button corresponding to the respective field, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Displays the division code.
Description	Displays the description of the division.

Searching for a Division

Procedure

To search for a division:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.
A sub-menu appears.
3. Click the **Search** option from the **Division** sub-menu.
The **Division Search** window appears.
4. Enter the code or description of the division in the **Search Criteria** section.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click the **Search** button corresponding to the respective field.
A list of divisions that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the division whose details you want to view or edit.
The **Division** screen appears.

Division

The **Division** screen allows you to define and edit a division. This screen consists of the following tabs:

Tab Name	Tab Description	Mandatory (Yes or No)
Main	Used to define basic details for a division.	Yes
Access Groups	Used to define the users who have right to associate objects (such as persons, accounts, price items, price lists, etc.) with this division. The users can only view those divisions to which they have access in the Division list used across the application.	No
Price Items	Used to define which price items are available to persons or accounts in this division. Note: Once the price item is created, you need to associate it with a division.	No
Price Lists	Used to define which price lists are available to persons or accounts in this division. Note: Once the price list is created, you need to associate it with a division. You can associate a price list with a division only when all price items in the price list are already associated with the division.	No
Languages	Used to limit the languages that you can select for a person's bills and correspondence in this division.	No
Invoice Currencies	Used to limit the invoice currencies that you can select for accounts in this division. Note: Invoice currency is a currency in which the accounts in this division can be billed.	No
Person Identifier Types	Used to limit the person identifier types that you can select for persons in this division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Algorithms	<p>Used to associate algorithms with the division. Once a division is created, you must associate the Price Assignment Search algorithm to it. For the Banking functionality, this is required to ensure that the price item pricing is displayed in the correct order as defined by the algorithm. Each division can have unique hierarchy order or more than one division can have the same hierarchy order. The hierarchy order is also used in billing when the price determination is controlled by the sort order definition of the algorithm.</p> <p>You can define algorithms in the Algorithm screen. The search order is governed by the second parameter of the algorithm, and the valid values for the same are:</p> <ul style="list-style-type: none"> • AGREED_PRICELIST – If you use this search order, the price item pricing is searched in the following order: Account Agreed, Account Price List, Account Inherited Price List, Customer Agreed, Customer Price List, Customer Inherited Price List, Parent Customer Agreed, Parent Customer Price List, and Parent Customer Inherited Price List. <div data-bbox="602 961 1114 1104" style="border: 1px solid black; padding: 5px;"> <p>Note: In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div> <ul style="list-style-type: none"> • AGREED_FIRST - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Customer Agreed, Parent Customer Agreed, Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, and Parent Customer Inherited Price List. <div data-bbox="602 1394 1114 1537" style="border: 1px solid black; padding: 5px;"> <p>Note: In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div>	No
Characteristics	Used to define characteristics for the division.	No
Bill Messages	Used to specify the bill messages that are valid for accounts in this division.	No
Party Char Types	Used to limit the characteristic types that you can select for persons and accounts in this division.	No
Bill Cycles	Used to limit the bill cycles that you can select for accounts in this division.	No
Account Identifier Types	Used to limit the account identifier types that you can select for accounts in this division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Price Item Characteristics	Used to define division-specific characteristics for price items associated with this division.	No

Defining a Division

Prerequisites

To define a division, you should have:

- Work calendars, bill formats, bill route types, time zones, currencies, business objects, To Do types, and To Do roles defined in the application

Procedure

To define a division:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.
A sub-menu appears.
3. Click the **Add** option from the **Division** sub-menu.

The **Division** screen appears. It contains the following tabs:

- Main
- Access Groups
- Price Items
- Price Lists
- Languages
- Invoice Currencies
- Person Identifier Types
- Algorithms
- Characteristics
- Bill Messages
- Party Char Types
- Bill Cycles
- Account Identifier Types
- Price Item Characteristics

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the code that uniquely identifies the division. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Price List Search screen appears.	Yes
Description	Used to specify the description for the division.	Yes
Work Calendar	Used to indicate the days on which this division operates. This calendar is used to ensure that the system calculated dates (for example, bill due date, credit and collection event dates, etc.) fall on a working day.	Yes
Status	Used to indicate the status of the division. You can use either of the following values: <ul style="list-style-type: none"> • Active Indicates that the division can be used in the system • Pending Indicates that the division is still being defined • Retired Indicates that the division is no longer available for use 	Yes
Bill Format	Used to specify the default bill format for accounts in this division.	No
Bill Route Type	Used to specify the default bill route type for accounts in this division.	No

Field Name	Field Description	Mandatory (Yes or No)
Base Currency Code	Used when accounts in this division can be billed in a currency that is different from the currency required by the GL. The system generates GL entries in the currency defined for an account. If you specify the value in this field, the system will convert the GL amounts maintained in the accounts currency into this currency. The financial transactions in both the currencies will be maintained in the system.	No
Time Zone	Used to indicate the time zone in which this division operates.	No
Eligible for Accrual	Used to indicate whether the accounts belonging to the division are eligible for accrual.	No
Accrual Cycle	Used to indicate the accrual cycle for the division.	Yes (Conditional)
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Accrual Cycle Search screen appears.	Note: The field is required when the division is eligible for accrual.
Comments	Used to specify additional details about the division.	No
Business Object	Used to specify a business object that may govern additional rules related to this division.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Business Object Search screen appears.	
To Do Type	Used when you want the To Do entries (associated with accounts in this division) of a given To Do type must be assigned to the users with a given To Do role.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the To Do Type Search screen appears.	
To Do Role	Used when you want the To Do entries (associated with accounts in this division) of a given To Do type must be assigned to the users with a given To Do role.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Role for To Do Type screen appears.	

4. Enter the required details.

Note: You can search for a To Do type and To Do role by clicking the **Search**  icon corresponding to the respective field.

- If you want to add more than one To Do type and To Do role combination for a division, click the **Add** (+) icon and then enter the To Do type and To Do role.

Note: However, if you want to remove a To Do type and To Do role combination from the division, click the **Delete** (🗑️) icon corresponding to the combination.

- Associate access groups, price items, price lists, languages, invoice currencies, person identifier types, algorithms, bill messages, party characteristic types, bill cycles, and account identifier types with the division, if required.
- Define characteristics for the division, if required.
- Define division-specific characteristics for the price items, if required.
- Click the **Save** button in the **Page Title** area.

The division is defined.

Associating Access Groups with a Division

Prerequisites

To associate access groups with a division, you should have:

- Access groups defined in the application

Procedure

To associate access groups with a division:

1. Search for the division to which you want to associate access groups.
2. Click the **Access Groups** tab in the **Division** screen..

The **Access Groups** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Access Group	Used to specify the access group code.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Access Group Search window appears.	
Description	Displays the description of the access group.	Not applicable
	Note: The description appears automatically when you specify the access group.	

3. Enter the access group code.

Note: You can search for an access group by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one access group with the division, click the **Add**  icon and then repeat step 3.

Note: However, if you want to remove an access group from the division, click the **Delete**  icon corresponding to the access group.

5. Click the **Save** button in the **Page Title** area.

The access groups are associated with the division.

Associating Price Items with a Division

Prerequisites

To associate products with a division, you should have:

- Products created in the application

Procedure

To associate products with a division:

1. Search for the division to which you want to associate products.
2. Click the **Products** tab in the **Division** screen.

The **Products** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to specify the product code.	No
Description	Displays the description of the product.	Not applicable
	Note: The description appears automatically when you specify the product code.	

3. Enter the product code.

Note: You can search for a product by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one product with the division, click the **Add**  icon and then repeat step 3.

Note: However, if you want to remove a product from the division, click the **Delete**  icon corresponding to the product.

5. Click the **Save** button in the **Page Title** area.

The products are associated with the division.

Associating Price Lists with a Division

Prerequisites

To associate price lists with a division, you should have:

- Price lists created in the application

Procedure

To associate price lists with a division:

1. Search for the division to which you want to associate price lists.
2. Click the **Price Lists** tab in the **Division** screen.

The **Price Lists** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to specify the price list ID.	No
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Price List Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Description	Displays the description of the price list.	Not applicable
	Note: The description appears automatically when you specify the price list ID.	

- Enter the price list ID.

Note: You can search for a price list by clicking the **Search**  icon corresponding to the field.

- If you want to associate more than one price list with the division, click the **Add**  icon and then repeat step 3.

Note: However, if you want to remove a price list from the division, click the **Delete**  icon corresponding to the price list.

- Click the **Save** button in the **Page Title** area.

The price lists are associated with the division.

Associating Languages with a Division

Prerequisites

To associate languages with a division, you should have:

- Languages defined in the application

Procedure

To associate languages with a division:

- Search for the division to which you want to associate languages.
- Click the **Languages** tab in the **Division** screen.

The **Languages** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Language	Used to specify the language.	No

- Select the language from the list.
- If you want to associate more than one language with the division, click the **Add**  icon and then repeat step 3.

Note: However, if you want to remove a language from the division, click the **Delete**  icon corresponding to the language.

- Click the **Save** button in the **Page Title** area.

The languages are associated with the division.

Associating Invoice Currencies with a Division

Prerequisites

To associate invoice currencies with a division, you should have:

- Currencies defined in the application

Procedure

To associate invoice currencies with a division:

- Search for the division in the **Division** screen.
- Click the **Invoice Currencies** tab.

The **Invoice Currencies** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to specify the currency.	No
Rounding Type	Used to indicate the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> Down Nearest Up 	Yes (Conditional)
		Note: This field is required when you are associating a currency with the division.

- Select the currency and its rounding type from the respective list.
- If you want to associate more than one invoice currency with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an invoice currency from the division, click the **Delete** (🗑️) icon corresponding to the invoice currency.

- Click the **Save** button in the **Page Title** area.

The invoice currencies are associated with the division.

Associating Algorithms with a Division

Prerequisites

To associate algorithms with a division, you should have:

- Algorithms defined in the application

Procedure

To associate algorithms with a division:

1. Search for the division to which you want to associate algorithms.
2. Click the **Algorithms** tab in the **Division** screen.

The **Algorithms** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division Algorithm Entity	<p>Used to indicate the entity to which you want to attach the algorithm. The valid values are:</p> <ul style="list-style-type: none"> • Currency Conversion For Adjustments — Used to attach a date or date and time based currency conversion algorithm which must be triggered during adjustment creation and FT GL creation for adjustments. • Currency Conversion For Bill Segments — Used to attach a date or date and time based currency conversion algorithm which must be triggered during bill segment generation and FT GL creation for bill segments. • Currency Conversion For Payments — Used to attach a date or date and time based currency conversion algorithm which must be triggered during payment and tender creation and during FT GL creation for payments. • TFM - Currency Conversion — Used to attach a date or date and time based currency conversion algorithm which must be triggered during the transaction aggregation process. • Price Assignment Search — Used to attach an algorithm which indicates the order in which the price item pricing must be determined while billing. It also indicates the order in which the price item pricing must be displayed on the Pricing (Account) and Pricing (Person) screens. • Sequential Bill Number Generation — Used to attach an algorithm which indicates how to sequence alternate bill numbers which are unique within the division. • Usage Account Contract Mapping — Used to attach an algorithm which must be triggered when you create a usage account. It checks whether the usage account satisfies any account selection template criteria defined for any active construct. If yes, it includes the usage account in the active construct provided no bills are generated for the construct. • GL Account Validation – Used to attach an algorithm which is triggered during dynamic GL account validation. • TFM - Cancellation Pre-Processing – Used to attach an algorithm which is triggered when you execute the C1-TXCNC batch. This algorithm is used to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process. • TFM - Disaggregation Pre-Processing - Used to attach an algorithm which is triggered when you execute the C1-PDTXN batch. This algorithm is used to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process. 	<p>Yes (Conditional)</p> <p>Note: This field is required when you are associating an algorithm with the division.</p>

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> • TFM - Rollback Pre-Processing - Used to attach an algorithm which is triggered when you execute the C1-TXNRB batch. This algorithm is used to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process. • TFM - Verify Pricing Post-Processing — Used to attach an algorithm which is triggered when you execute the C1-TXNVP batch. This algorithm is used to undertake some post-processing activities on a summary record in the CI_TXN_DTL_PRITM_SUMMARY table. • TFM - Billable Charge Post-Processing — Used to attach an algorithm which is triggered when you execute the C1-TXNSQ and C1-TXNCU batches. This algorithm is used to undertake some post-processing activities on a billable charge. • TFM - Price Item Derivation Post-Processing — Used to attach an algorithm which is triggered when you execute the C1-TXNIP batch. This algorithm is used to undertake some post-processing activities on the transaction legs. • TFM - Rate Post-Processing — Used to attach an algorithm which is triggered when you execute the C1-TXNEX and C1-TXNSQ batches. This algorithm is used to undertake some preprocessing activities while determining rate for transaction legs. • TFM - Rate Pre-Processing — Used to attach an algorithm which is triggered when you execute the C1-TXNEX and C1-TXNSQ batches. This algorithm is used to undertake some post-processing activities after determining rate for transaction legs. 	
Sequence Number	Used to specify the order in which the algorithms with the same entity should be executed.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the division.
Algorithm	Used to specify the algorithm code. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	Yes (Conditional) Note: This field is required when you are associating an algorithm with the division.
Description	Displays the description of the algorithm. Note: The description appears automatically when you specify the algorithm code.	Not applicable

- Enter the required details.

Note: You can search for an algorithm by clicking the **Search** (🔍) icon corresponding to the field.

- If you want to associate more than one algorithm with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove an algorithm from the division, click the **Delete** (🗑️) icon corresponding to the algorithm.

- Click the **Save** button in the **Page Title** area.

The algorithms are associated with the division.

Defining Characteristics for a Division

Prerequisites

To define characteristics for a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

Procedure

To define characteristics for a division:

- Search for the division for which you want to define characteristics.
- Click the **Characteristics** tab in the **Division** screen.

The **Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the division.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the division.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Division.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the division.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the division.

- Enter the required details.

Note: If you select a predefined characteristic type, the **Search** (🔍) icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a characteristic from the division, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.

The characteristics are defined for the division.

Associating Bill Messages with a Division

Prerequisites

To associate bill messages with a division, you should have:

- Bill messages defined in the application

Procedure

To associate bill messages with a division:

- Search for the division to which you want to associate bill messages.
- Click the **Bill Messages** tab in the **Division** screen.

The **Bill Messages** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when you want the bill message to appear on the bill.	Yes (Conditional)
		Note: This field is required when you are associating a bill message with the division.

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when you want the bill message to appear on the bill.	No
Bill Message	Used to specify the bill message that is valid for accounts in this division.	Yes (Conditional)
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Bill Message Search window appears.	Note: This field is required when you are associating a bill message with the division.
Description	Displays the description of the bill message.	Not applicable
	Note: The description appears automatically when you specify the message code.	

3. Enter the required details.

Note: You can search for a bill message by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one bill message with the division, click the **Add**  icon and then repeat step 3.

Note: However, if you want to remove a bill message from the division, click the **Delete**  icon corresponding to the message code.

5. Click the **Save** button in the **Page Title** area.

The bill messages are associated with the division.

Associating Party Char Types with a Division

Prerequisites

To associate party char types with a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

Procedure

To associate party char types with a division:

1. Search for the division to which you want to associate party char types.
2. Click the **Party Char Types** tab in the **Division** screen.

The **Party Char Types** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	Used to indicate whether the characteristic type is valid for a person or an account in this division.	Yes (Conditional)
		Note: This field is required when you are associating a party char type with the division.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Division.
		Note: This field is required when you are associating a party char type with the division.

- Enter the required details.
- If you want to associate more than one party char type with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a party char type from the division, click the **Delete** (🗑️) icon corresponding to the characteristic type.

- Click the **Save** button in the **Page Title** area.

The party char types are associated with the division.

Associating Bill Cycles with a Division

Prerequisites

To associate bill cycles with a division, you should have:

- Bill cycles defined in the application

Procedure

To associate bill cycles with a division:

- Search for the division to which you want to associate bill cycles.
- Click the **Bill Cycles** tab in the **Division** screen.

The **Bill Cycles** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Cycle	Used to specify the bill cycle.	No

- Select the bill cycle from the list.

- If you want to associate more than one bill cycle with the division, click the **Add** (+) icon and then repeat step 3.

Note: However, if you want to remove a bill cycle from the division, click the **Delete** (🗑️) icon corresponding to the bill cycle.

- Click the **Save** button in the **Page Title** area.

The bill cycles are associated with the division.

Defining Division-Specific Characteristics for a Price Item

Prerequisites

To define division-specific characteristics for a price item, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division/Price Item Combination)
- Price item associated with the division to which the user belongs

Procedure

To define division-specific characteristics for a price item:

1. Search for the division for which you want to define price item characteristics.
2. Click the **Price Item Characteristics** tab in the **Division** screen.

The **Price Item Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price item	Displays the price item code.	Not applicable
Effective Date	Used to specify the date from when the price item characteristic is effective for the division.	Yes (Conditional)
		Note: This field is required when you are defining a division-specific characteristic for the price item.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		Note: The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
		Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.

3. If the division has multiple price items associated with it, scroll to define characteristics for the required price item.

Note: You can use the **Previous** (←) and **Next** (→) buttons to scroll through the price items while defining their characteristics.

4. Enter the required details.

Note: If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. If you want to define more than one division-specific characteristic for the price item, click the **Add** () icon and then repeat step 4.

Note: However, if you want to remove a division-specific characteristic from the price item, click the **Delete** () icon corresponding to the characteristic.

6. Click the **Save** button in the **Page Title** area.

The division-specific characteristics are defined for the price item.

Oracle Revenue Management and Billing may optionally be configured to use the approval workflow process whenever any addition, modification, or deletion is done manually by a user. The approval workflow process routes any changes made to the business objects (such as person, account, contract, division, and so on) to a group of people for approval. The approval workflow process allows you to manage and track all tasks involved in the approval process.

Approval workflow allows you to define the rules for requiring an approval step before the data changes are committed to the database. Once you establish the approval workflow rules, the application manages the business process flow for having data changes approved before they are reflected in the database.

The system provides you with a flexible set of options used to determine when approvals are required, and how the approval process is to be managed including:

- Turning approval on or off for individual business objects within the application
- Grouping business objects so that approval is required for the group rather than the individual business objects within the group
- Who should approve
- How many levels of approvals are required
- Different approval workflow chains based on different criteria

Once you have turned approval workflow on for an object, or a group of objects, the system will use the approval workflow configuration to manage the entire approval process including:

- Determining whether approval is required based on data changes submitted by a user
- Routing approval workflow requests to one or more qualified approvers
- Managing rejected data changes and sending these back to the submitter for resolution
- Committing the changes once all required approvals are received

- *Approval Workflow Reason
(Used for Viewing)*

Most Commonly Used Terms

Before you understand the approval workflow process, you must familiarize yourself with the following terms:

Term	Description
Submitter	A person who adds, modifies or deletes a business object, such as person, account, contract, and division is called a submitter.
Approver	A person who approves any changes made to a business object is called an approver.
Approval Workflow Group	A group of one or more business objects for which approval is required, under some or all conditions, when data changes are made.
Approval Workflow Chain	The approval workflow chain indicates how many levels of approvals are required to approve the changes made by the submitter.

Approval Workflow Process

When a submitter adds, edits or deletes a business object (for example, an account) that belongs to an approval workflow group, the system checks whether approval workflow is activated for the approval workflow group. If the approval workflow is activated for the group, the system creates an approval workflow request. Every approval workflow request is uniquely identified in the system through the Approval Transaction ID.

The system identifies the approval workflow chain that must be used for approval depending on the pre-configured conditions or criteria. Based on the number of levels defined in the approval workflow chain, the request is sent to the approver at each level in the chain or hierarchy for approval. When the approver at the first level approves the request, a notification is sent to the approver at the second level for approval. This process continues till the approval is received from all levels in the hierarchy. Once the approvers at all levels approve the request, the changes are committed to the database.

However, if an approver at any level in the hierarchy rejects the request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver's comments and resubmits the changes for approval. In this case, the approval process starts once again from the beginning and not from the level at which the request was rejected.

The submitter also has the facility to modify the request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval. The submitter also has the facility to cancel the request.

The following figure indicates the flow of the approval workflow process:

To implement the approval workflow process, you need to define the following:

- [Approval Workflow Group \(Used for Searching\)](#) on page 518
- [Approval Workflow Chain \(Used for Searching\)](#) on page 535
- [Approval Workflow Criterion Type \(Used for Searching\)](#) on page 542
- [Approval Workflow Group Chain Linkage \(Used for Searching\)](#) on page 548
- [Approval Workflow Reason \(Used for Searching\)](#) on page 565
- [Approval Workflow Setting \(Used for Searching\)](#) on page 558

For price list, price item and price assignment, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1PRODUCT** – Contains the C1_PRICEITEM_BO business object
- **C1PRICELST** – Contains the C1_F_ADDPLBO business object
- **C1PRICEASG** – Contains the C1_PRICECOMP and C1_PRICEASGN_BO business objects

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains. To setup the approval workflow process for price assignment, you need to do the following:

For Price Item	<ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICEITEM maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICEITEM_BO as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICEITEM MO. 3. Link the C1PRODUCT group to the appropriate approval workflow chain. 4. Activate the approval workflow for the C1PRODUCT group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y.
----------------	---

For Price List	<ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICELIST maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_F_ADDPLBO as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICELIST MO. 3. Link the C1PRICELST group to the appropriate approval workflow chain. 4. Activate the approval workflow for the C1PRICELST group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y.
For Price Assignments	<ol style="list-style-type: none"> 1. If a Determine BO algorithm is not specified for the C1_PRICECOMP maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICECOMP as the business object on this algorithm. 2. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICECOMP MO. 3. If a Determine BO algorithm is not specified for the C1_PRICEASGN maintenance object, create a Determine BO algorithm using the F1-MOBO algorithm type and specify C1_PRICEASGN_BO as the business object on this algorithm. 4. Attach this algorithm on the Determine BO algorithm spot of the C1_PRICEASGN MO. 5. Link the C1PRICEASG group to the appropriate approval workflow chain. 6. Activate the approval workflow for the C1PRICEASG group by setting the Active flag corresponding to the group in the Approval Workflow Settings screen to Y.

Similarly, for invoicing group, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1IGADD**
- **C1IGUPD**

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains, and activate the approval workflow for these groups by setting the following in the **Approval Workflow Settings** screen:

- Set **Active** flag to **Yes**
- Set **Prevalidation** flag to **Yes**

Note: You must set the **Active** flag to **No** for both the groups in case you do not want to activate the approval workflow for invoicing group. If you set the **Active** flag to **Yes** for either of the groups, approval workflow is triggered when you add and/or edit an invoicing group.

Prerequisites

You need to setup the following prerequisites to implement the approval workflow process:

- **Setup Feature Configuration for Approval Workflow** — If you create new Maintenance Objects (MOs) and want the access control for these MOs in the approval workflow transactions to be based on the access group and division, then you have to create a custom algorithm and attach it to the **Approval Transaction Entity Access Algorithms** option type of the **C1_AXENTITY** feature configuration. Note that you will then have two access algorithms; one default algorithm (that is, **C1-APPTXN**) and another custom algorithm. For more information

about the **C1_AXENTITY** feature configuration, see [Setting the C1_AXENTITY Feature Configuration](#) on page 2163.

- **Create and Attach Determine BO Algorithm** — To use approval workflow for a business object, check the corresponding maintenance object to see if a **Determine BO** algorithm is already attached to it. If not, create a **Determine BO** algorithm using the **F1-MOBO** algorithm type, and specify the appropriate business object name on the newly created algorithm. Attach this algorithm on the **Determine BO** algorithm spot of the maintenance object.
- **Attach Audit Algorithm to Business Objects** — To use the approval workflow process for a business object, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object. Unless you attach the audit algorithm to a business object, the approval workflow process will not be triggered for the respective business object. This step is only required when you are using the base panels. If you have created custom UI maps to enter or modify data for a specific business object, this step is not needed.
- **Attach Validation Algorithms to Business Objects** — The following algorithms are shipped with ORMB:

Business Object	Basic Validation Algorithm	Pending Transaction Validation Algorithm
C1-AppBOChain	C1-GRPCHNALG	C1-APPGRPCHL
C1-AppGrp	C1-GRPALG	C1-APPGROUPV
C1-ApprovalChainEligible	C1-ADMALG	C1-APGBYPORT
C1-ApprovalTransactionChain	C1-APCHALGO	C1-APCHNPEND

The basic validation algorithms are attached to the respective business objects, and then shipped with ORMB. However, the pending transaction validation algorithms are not attached to the respective business objects. If you want to restrict the users from either editing or deleting the approval workflow group, approval workflow settings, approval workflow chain, or approval workflow group chain linkage when the respective approval workflow requests are in the **Pending**, **Work-in-Progress**, or **Rejected** state, then you must attach the pending transaction validation algorithm on the **Validation** algorithm spot of the respective business object.

- **Set Colors for Highlighting during Comparison** — While approving, rejecting, or cancelling approval workflow requests where the submitter action is Update (UPD), you will be able to compare the existing and new data. By default, any modifications are highlighted in the Yellow (9933FF) color and new additions are highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Changing the Highlighting Colors](#).
- **Create To Do Types** — You need to create the To Do types that you want to use in the approval workflow process. Once the To Do type is created, you need to link it to the required To Do roles so that users belonging to the To Do role can view and work on the To Do type.
- **Create To Do Roles** — You need to create the To Do roles that you want to use in the approval workflow process. Once the To Do role is created, you need to add the users whom you want to assign this role.

Note: User who is withdrawing the approval workflow request must be assigned to the To Do role to which the approver at the first level in the hierarchy is assigned. Otherwise, the user will not be able to withdraw the approval workflow request.

- **Create Input UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group. For more information on how to create an Input UI map manually, see [Creating Input UI Map for an Approval Workflow Group](#) on page 2161.
- **Create Display UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group. For more information on

how to create a Display UI map manually, see [Creating Display UI Map for an Approval Workflow Group](#) on page 2160.

Approval Transaction

If an approver at any level in the hierarchy rejects a request, a notification is sent to the submitters having the To Do role to resolve. The submitter then makes the required corrections based on the approver's comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Approval Transaction** screen allows you to resolve or withdraw a request. It consists of the following zones:

- [Search Approval Transaction](#)
- [Approval Transaction Log](#)

Search Approval Transaction

The **Search Approval Transaction** zone allows you to search for an approval transaction using various search criteria. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an approval transaction using the task or approval transaction details. The valid values are: <ul style="list-style-type: none"> • Task Details • Approval Transaction Details 	Yes
	Note: By default, the Task Details option is selected.	
Status	Used to search approval transactions with a particular status. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Inprocess • Pending • Deleted 	No
	Note: This field appears only when you select the Approval Transaction Details option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Task	Used to search approval transactions with a particular task. The valid values are: <ul style="list-style-type: none"> • Approve • Modify • Resolve 	Yes (Conditional)
	Note: This field appears only when you select the Task Details option from the Search By list.	Note: This field is required when you want to search approval transactions using the task details.
Approval Workflow Group	Used to search approval transactions created for the business objects that belong to a particular approval workflow group.	No
Division	Used to search approval transactions which belong to a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Reference ID	Used to search approval transactions created for the business object with a particular reference ID.	No
Approval Transaction ID	Used to search for a particular approval transaction.	No
Created From	Used to search approval transactions which are created from a particular date onwards.	No
Created Until	Used to search approval transactions which are created till a particular date.	No
Action	Used to search approval transactions which are created while adding, updating, or deleting a business object.	No
Submitter ID	Used to search approval transactions which are created by a particular submitter.	No
	Note: This field appears either when you select the Task Details from the Search By list and Approve option from the Task list or when you select the Approval Transaction Details from the Search By list and Processing, Pending, or Deleted option from the Approval Transaction Status list. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Submitter Id for Status window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Approver ID	Used to search approval transactions which are rejected by a particular approver. Note: The Approver ID is displayed when the approval transaction is searched by Task Details and Task is Resolve . It is also displayed when the approval transaction is searched by Approval Transaction Details and Status is Approved, Canceled, or Rejected . The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approver ID Search window appears.	No

Note: You must specify at least one search criterion while searching for an approval transaction. One more search criterion is required when you are searching for an approval transaction using the **Task** field.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID. Note: It has a link. The link appears when you select Task Details option from the Search By list. If the Approve option is selected from the Task list then on clicking the link, Comparison: New versus Existing window appears with the compared details of the new and existing approval transactions. If the Modify option is selected from the Task list then on clicking the link, Modify/Resolve Price List Assignment window appears to modify or resolve the details of price list assignment. If the Resolve option is selected from the Task list then on clicking the link, Modify/Resolve Price List Assignment window appears to modify or resolve the details of price list assignment.
Approval Workflow Group	Displays the code of the approval workflow group.
Submitter Name	Displays the name of submitter who submits the approval transaction details list. Note: This column appears either when you select the Approve or Modify option from the Task list or when you select the Processing, Pending, or Deleted option from the Approval Transaction Status list.
Approver Name	Displays the name of an approver who approves an approval transaction details list. Note: This column appears either when you select the Resolve option from the Task list or when you select the Approved, Canceled, or Rejected option from the Approval Transaction Status list.

Column Name	Column Description
Submitted On	Displays the date and time on which approval transaction is submitted for approval.
	Note: This column appears either when you select the Approve or Modify option from the Task list or when you select the Approved , Pending , or Deleted option from the Approval Transaction Details list.
Action	Indicates the various types of action. The valid values are: <ul style="list-style-type: none"> • Add • Delete (DEL) • Update (UPD)
Division	Displays the division to which the approval transaction belongs.
Status	Displays the status of approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • Processing • Pending • Deleted
	Note: This column appears either when you select Approval Transaction Details option from the Search By list of the search criteria.
To Do Type	Displays the type of To Do (notification) received for the approval transaction.
Approval Transaction Information	Displays additional information about the approval transaction.
Rejected On	Displays the date and time on which the transaction is rejected.
	Note: This column appears either when you select the Resolve option from the Task list or when you select the Rejected , option from the Approval Transaction Details list.
Reject Reason	Displays the reason for which the approval transaction is rejected by the approver.
	Note: This column appears either when you select the Resolve option from the Task list or when you select the Rejected option from the Approval Transaction Details list.
Canceled On	Displays the date and time on which the approval transaction is canceled by the user.
	Note: This column appears when you select the Cancelled option from the Approval Transaction Details list.

Column Name	Column Description
Cancel Reason	Displays the reason for which the approval transaction is canceled by the user.
	Note: This column appears either when you select the Canceled option from the Approval Transaction Details list.
Withdraw	Displays a link to withdraw an approval transaction.
	Note: This column appears either when you select the Modify or Resolve option from the Task list. It has a link and on clicking the link, a message appears to confirm the withdrawal of the respective approval transaction.

On clicking the **Broadcast**  icon corresponding to the approval transaction the **Approval Transaction Log** zone appears with the approval transaction log details.

Related Topics

Approval Transaction Log zone	Approval Transaction Log on page 471
How to search for an approval transaction	Searching for an Approval Transaction on page 472
How to view the log of an approval transaction	Viewing the Log of an Approval Transaction on page 472

Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Displays the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> • Approved • Cancelled • Rejected • InProcess • Pending • Deleted
View	It has a link. On clicking the View link, the Comparison: New versus Existing window appears where you can view the existing and new compared transactions”.
Status Reason	Displays the status reason of the approval transaction.
Comments	Displays additional information about the approval transaction.

By default, the **Banking Approval Transaction Log** zone does not appear. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction in the **Approval Transaction** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

Searching for an Approval Transaction**Procedure**

To search for an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.
The **Approval Transaction** screen appears.
3. Click the **Search** option from the **Approval Transaction** sub-menu.
The **Approval Transaction** screen appears.
4. Enter the search criteria in the **Search Approval Transaction** zone depending on whether you want to search for a task or approval transaction details.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.
A list of task or approval transactions that meet the search criteria appears in the **Search Results** section.

Comparison: New versus Existing

You have to define the reason codes which are used when the approval workflow request is either rejected or cancelled. The reason code helps to indicate the reason why a particular request was rejected or cancelled.

The **Comparison: New versus Existing** screen allows you to view the changes in the new approval transaction compared to the existing one. It contains the following sections:

- New
- Existing

Through this screen you can do the following:

- Approve an approval transaction
- Reject an Approval Transaction
- Cancel an approval transaction
- Modify an approval transaction
- Withdraw an Approval Transaction
- Resolve an approval transaction

Approving an Approval Transaction

You can view the number of approval transactions which are pending for approval in the **Approval Transaction** screen. The approver can review, and accordingly approve, return to the submitter, revert to the original, or cancel the approval transaction based on the observations.

Note: The system will not allow you to approve, return to the submitter, revert to the original or cancel an approval transaction submitted by you.

Procedure

To approve an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.
The **Comparison: New versus Existing** screen appears.
3. Review the compared existing and new approval transactions.
4. Click **Approve**.

A message appears with confirmation on transaction approved successfully.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **OK**.

The approval transaction is removed from the search results.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2163.

6. Review the changes and click **Approve** to accept the changes.

The changes in the approval transaction are approved.

Rejecting an Approval Transaction**Prerequisites**

To return an approval transaction to its submitter, you should have:

- Rejection reasons defined in the application

Note:

While returning an approval transaction, you need to specify the reason why you want to return the approval transaction. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

Procedure

To reject an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.
The **Comparison: New versus Existing** screen appears.
3. Review the compared existing and new approval transactions.
4. Click Return to Submitter.” With stepresult, “The Rejection/Cancelation Reason window appears. It contains the following fie

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.
6. Click **OK**.

The approval transaction is removed from the search results.

Canceling an Approval Transaction

Prerequisites

To revert an approval transaction to its initial status, you should have:

- Cancellation reasons defined in the application

Note:

While reverting an approval transaction, you need to specify the reason why you want to revert the approval transaction. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

Procedure

To cancel an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.
The **Comparison: New versus Existing** screen appears.
3. Review the compared existing and new approval transactions.
4. Click **Revert to Original**.

The **Rejection/Cancellation Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.

A **Comparison: New versus Existing** screen appears where you can view the changes in the new transaction as compared to the existing ones.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2163.

6. Click OK.

The approval transaction is removed from the search results.

Modifying an Approval Transaction**Prerequisites**

To modify an approval transaction, you should have:

- Characteristic Types defined in the application.

Procedure

To Modify an approval transaction:

1. Search for approval transactions with task details and status as Modify in the **Approval Transaction** screen.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is **Update (UPD)**, you will be able to compare the existing and new data, and accordingly take an action.

3. Modify the required details.
4. Click **Save**.

The modifications made to the approval transaction are saved.

Approve Price Assignment

The **Approve Price Assignment** screen allows you to search for the price assignment requests that are pending in your workflow for approval. You can review the changes, and accordingly approve, reject or cancel the request based on your observations. It contains the following zones:

- [Search](#) on page 478
- [List of Price Assignments](#) on page 481
- [Approve Price Assignment - Comparison: New versus Existing](#) on page 482
- [Approval Transaction Log](#) on page 471

Search

The **Search** zone allows you to search for the price assignment requests that are pending in your workflow for approval. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approval Transaction ID 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list. This field appears only when you select the Person or Account option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to specify the value for the person identifier type.	Yes (Conditional)
	Note: If you enter the person identifier as a search criteria, you have to select the person identifier type.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search price assignments which are created for a particular account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Price List Description	Used to search price lists with a particular description.	No
	Note: This field appears only when you select the Price List option from the Search By list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	Note: This field appears only when you select the Submitter ID option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction ID	<p>This field appears only when you select the Approval Transaction ID option from the Search By list.</p> <p>Note:</p> <p>The approval transaction ID is generated automatically when the price assignment request is created.</p> <p>This field appears only when you select the Transaction ID option from the Search By list.</p>	No

Note: You must specify at least one search criterion while searching for a price assignment.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. It contains the following columns:

Column Name	Column Description
Account ID	<p>Displays the account ID.</p> <p>Note: This column appears only when you select the Account option from the Search By list.</p>
Account Identifier Type	<p>Indicates the account identifier type of the account for the price assignments.</p> <p>Note: This column appears only when you select the Account option from the Search By list.</p>
Account Identifier	<p>Displays the value of the account identifier type.</p> <p>Note: This column appears only when you select the Account option from the Search By list.</p>
Price List ID	<p>Note: This column appears only when you select the Price List option from the Search By list.</p>
Price List Description	<p>Displays the description for the price list.</p> <p>Note: This column appears only when you select the Price List option from the Search By list.</p>
Person Identifier	<p>Note: This column appears only when you select the Person option from the Search By list.</p>
Person Name	<p>Displays the name of the person.</p> <p>Note: This column appears only when you select the Person option from the Search By list.</p>
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Submitter ID	Displays the ID of the submitter.
	Note: This column appears only when you select the Submitter ID option from the Search By list.
Approval Transaction ID	Displays the approval transaction ID.
	Note: This column appears only when you select the Approval Transaction ID option from the Search By list.

On clicking the **Broadcast**  icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

Approve Price Assignment - Comparison: New versus Existing

The **Comparison: New versus Existing** zone lists the existing and the new price assignments defined in the system. You can approve, cancel, reject a price assignment through this zone. It contains the following fields:

Field Name	Field Description
Approval Transaction ID	Displays the approval transaction id.
Submitter ID	Displays the submitter id who has created the price assignment request.

Field Name	Field Description
Approval Transaction Information	Displays information about the approval transaction
Action	Indicates the action that can be performed on the price assignment. The valid values are: <ul style="list-style-type: none"> • Add – Allows you to define the tiering setup of the price assignment • DEL – Allows you to delete the tiering setup of the price assignment. • UPD – Allows you to upload the tiering setup of the price assignment.

In addition to the above fields, this zone also contains the following two sections:

- **New** – It consists of the new approved price assignments.
- **Existing** – It consists of the existing or old price assignments.

In addition, this zone also contains the following buttons:

Button Name	Button Description
Approve	Used to approve the price assignment.
Return to Submitter	Used to reject the price assignment.
Revert to Original	Used to cancel the price assignment.

Note:

By default, the **Comparison: New versus Existing** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

The changes made are highlighted in both the sections for the respective fields. The fields change according to the price assignments.

You can click on **Approve** button, **Return to Submitter** button, or **Revert to Original** button to **Approve**, **Reject** or **Cancel** the price assignments, respectively.

Approving a Price Assignment for an Account

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. The approver can review, and accordingly approve, reject or cancel the price assignment based on the observations.

Note: The system will not allow you to approve, reject or cancel a price assignment submitted by you.

Procedure

To approve a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.
The **Approve Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review for approval.
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast**  icon corresponding to the price assignment whose details you want to review and approve.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2163.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.
A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.
8. Click **Approve**.
A message appears with confirmation on transaction approved successfully.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve and then click **Approve**.

9. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

Approving a Price Assignment for a Person

Procedure

To approve a price assignment for a person:

1. Click the **Menu** link in the **Actions/Navigation** area.
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.
The **Approve Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria by selecting **Person** in the **Search By** field.

Note:

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Search Results** appear only when **Person Identifier Type** and **Person Identifier** fields are entered.

4. Click **Search**.
A list of persons that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the person whose price assignments you want to review for approval.
The **List of Price Assignments** zone appears.
6. Click the **Broadcast**  icon corresponding to the **Transaction Id** in the **List of Price Assignments** zone, whose details you want to view and approve.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2163.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

- Review the pricing details, tiering ranges, and price assignment characteristics, and if they are accurate, then click **Approve**.

A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.

- Click **OK**.

A To Do (notification) is sent to the approver at the next level in the hierarchy. You will no longer be able to view this request in your workflow for approval. In case you are the last approver in the hierarchy, the changes are committed to the database.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve, and then click **Approve**.

The **Approve Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria by selecting either **Account** in the **Search By** field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review for approval.
The **List of Price Assignments** zone appears.
6. Click the **Broadcast**  icon corresponding to the **Transaction Id** in the **List of Price Assignments** zone, whose details you want to view and approve.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2163.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

- Review the pricing details, tiering ranges, and price assignment characteristics, and if they are not appropriate, then click **Return to Submitter**.

The **Rejection/Cancellation Reason** screen appears.

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

- Select the reason for rejecting the price assignment request and enter the comments in the respective field.
- Click **OK**.

The **Approve** and **Revert to Original** buttons are disabled. You will no longer be able to view this request in your workflow for approval.

Rejecting a Price Assignment for a Person

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. You can review, and accordingly approve, reject or cancel the price assignment based on the observations.

Note: The system will not allow you to approve, reject or cancel a price assignment submitted by you.

Procedure

To reject a price assignment for a person:

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.
The **Approve Price Assignment** screen appears.
- Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast**  icon corresponding to the person whose price assignments you want to review.
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast**  icon corresponding to the price assignment whose details you want to review.
The **Comparison: New Versus Existing** zone appears.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI_AXENTITY Feature Configuration](#) on page 2163.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.

The **Rejection/Cancellation Reason** screen appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reason Code	Used to specify the reason why the approval workflow request is rejected.	Yes
Rejection/Cancellation Comment	Used to specify additional information while rejecting/cancelling the approval workflow request.	Yes

Tip: Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to reject, and then click **Return to Submitter**.

8. Click **Return to Submitter**.

The **Rejection/Cancellation Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to add additional comments.	No

9. Enter the required details.

10. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

Note: Alternatively, you can cancel the price assignment by selecting the check box corresponding to the price assignment which you want to cancel and then click the **Revert to Original** button in the **List of Price Assignments** zone.

Modify Price Assignment

The submitter has the facility to modify or withdraw a price assignment request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval.

The **Modify Price Assignment** screen allows you to modify or withdraw a price assignment request. It contains the following zones:

- [Search](#) on page 496
- [List of Price Assignments](#) on page 511

Search

The **Search** zone allows you to search for the price assignment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approval Transaction ID 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list. This field appears only when you select the Person or Account option from the Search By list.	
Person Identifier Type	Used to select the identifier type based on which you want to search price assignments through which the person's record is created or updated in the system.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
	Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.	
Account ID	Used to search price assignments which are created for a particular account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	
		Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
	Note: This field appears only when you select the Account option from the Search By list.	
Price List Description	Used to search price lists with a particular description.	No
	Note: This field appears only when you select the Price List option from the Search By list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	Note: This field appears only when you select the Submitter ID option from the Search By list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	Note: The approval transaction ID is generated automatically when the price assignment request is created. This field appears only when you select the Approval Transaction ID option from the Search By list.	

Note: You must specify at least one search criterion while searching for a price assignment.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Indicates the person for whom the price assignment is created.
	Note: This column appears only when you select the Person or Submitter ID option from the Search By list.
Person Name	Displays the name of the person.
	Note: This column appears only when you select the Person or Submitter ID option from the Search By list.
Person Identifier Type	Displays the person identifier type.
	Note: This column appears only when you select the Submitter ID option from the Search By list.
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Account Information	<p>Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p>Note:</p> <p>This column appears only when you select the Account or Submitter ID option from the Search By list.</p> <p>It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.</p>
Account Identifier Type	<p>Indicates the account identifier type of the account for the price assignments.</p> <p>Note: This column appears only when you select the Account or Submitter ID option from the Search By list.</p>
Account Identifier	<p>Displays the value of the account identifier type.</p> <p>Note: This column appears only when you select the Account or Submitter ID option from the Search By list.</p>
Price List ID	<p>Displays the price list ID.</p> <p>Note: This column appears only when you select the Price List option from the Search By list.</p>
Price List Description	<p>Displays the description for the price list.</p> <p>Note: This column appears only when you select the Price List option from the Search By list.</p> <p>Note: This column appears only when you are searching for price assignment requests of a price list.</p>
Submitter ID	<p>Displays the ID of the submitter.</p> <p>Note: This column appears only when you select the Submitter ID option from the Search By list.</p>

On clicking the **Broadcast**  icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	Note: The approval transaction id is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as Add , Update (UPD) , or Delete (DEL) , performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item or price item code.
Description	Displays the description of the price item or price item code.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Approval Transaction Information	Displays information about the approval transaction.
	Note: This information string is generated using the C1-APPTXNINF algorithm.
Modify	It has a link. On clicking the Modify link, the Modify/Resolve Price Assignment screen appears where you can modify the price assignment.
Withdraw	It has a link. On clicking the Withdraw link, you can withdraw and remove the approval transaction from the list of price assignments.
View	It has a link. On clicking the Log link, you can view the approval transaction log details.

By default, the **List of Price Assignments** zone does not appear in the **Modify Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

Modifying a Price Assignment for an Account

You can view the number of price assignments which are pending for modification in the **Modify Price Assignment** screen. The modifier can review, and accordingly modify, withdraw or view log of the price assignment based on the observations.

Procedure

To modify a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Modify Price Assignment**.
The **Modify Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review.
The **List of Price Assignments** zone appears.
6. Click the **Modify** link in the **Modify** column corresponding to the price assignment that you want to modify.
The **Modify/Resolve Price Assignment** screen appears.

Note: Only those users who have access to the application services for each business object within the approval workflow group will be able to modify the details of the price assignment request.

7. Make the required changes.
8. Modify the required details.

The changes made to the price assignment are saved.

Withdrawing a Price Assignment for an Account

Procedure

To withdraw a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. Do the following:

If you want to...	Then...
Withdraw a price assignment request when it is in the Pending Approval status	From the Main menu, select Approval Workflow Management and then click Modify Price Assignment . The Modify Price Assignment screen appears.
Withdraw a price assignment request when it has been rejected by an approver at any level in the hierarchy	From the Main menu, select Approval Workflow Management and then click Resolve Price Assignment . The Resolve Price Assignment screen appears.

3. In the **Search** zone, enter the search criteria, such as the division to which the account belongs, account ID, or account identifier.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignment requests you want to withdraw.
The **List of Price Assignments** zone appears.

Note: The system provides you with a facility to view the log of a price assignment request from the **Modify Price Assignment** and **Resolve Price Assignment** screens before withdrawing a request.

6. Click the **Withdraw** link in the **Withdraw** column corresponding to the price assignment request that you want to withdraw.
A message box appears confirming whether you want to delete the price assignment request.
7. Click **OK**.
You will no longer be able to view this request in your workflow.

Resolve Price Assignment

If an approver at any level in the hierarchy rejects a price assignment request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver’s comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Resolve Price Assignment** screen allows you to resolve or withdraw a price assignment request. It consists of the following zones:

- [Search](#) on page 507
- [List of Price Assignments](#) on page 511

Search

The **Search** zone allows you to search for the price assignment requests rejected by approvers and pending for you to resolve. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search price assignments using various details. The valid values are: <ul style="list-style-type: none"> • Person • Account • Price List • Submitter ID • Approver Transaction ID 	Yes
	Note: By default, the Person option is selected.	
Division	Used to search price assignments which belong to a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Person Identifier Type	Used to specify the identifier type based on which you want to search for price assignment requests of a person.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	Note: This field appears only when you select the Person option from the Search By list.	
Account ID	Used to search for price assignment requests created for an account.	No
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier Type	Used to specify the account identifier type of the account whose price assignment requests you want to search.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to search for price assignment requests created for a price list.	No
	Note: This field appears only when you select the Price List option from the Search By list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	Note: This field appears only when you select the Submitter ID option from the Search By list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	Note: The approval transaction ID is generated automatically when the price assignment request is created. This field appears only when you select the Approval Transaction ID option from the Search By list.	

Note: You must specify at least one search criterion while searching for a price assignments.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Displays the ID linked to the person.
	Note: This column appears only when you are searching for price assignment requests of a person.
Person Name	Displays the name of the person.
	Note: This column appears only when you are searching for price assignment requests of a person.
Division	Displays the division to which the account, person, or price list belongs.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: This column appears only when you are searching for price assignment requests of an account. It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.

Column Name	Column Description
Account Identifier Type	Displays the account identifier type.
	Note: This column appears only when you are searching for price assignment requests of an account.
Account Identifier	Displays the value of the account identifier type.
	Note: This column appears only when you are searching for price assignment requests of an account.
Price List ID	Displays the price list ID.
	Note: This column appears only when you are searching for price assignment requests of a price list.
Price List Description	Displays the description of the price list.
	Note: This column appears only when you are searching for price assignment requests of a price list.
Owner ID	Displays the ID of the person for whose account the approval workflow request is created.
Approval Transaction ID	Displays the approval transaction ID.
	Note: The approval transaction ID is generated automatically when the price assignment request is created.
Person Identifier Type	Displays the person identifier type.
	Note: This column appears only when you are searching for price assignment requests of a person.

On clicking the **Broadcast**  icon corresponding to the account, person, or price list, the **List of Price Assignments** zone appears.

List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	Note: The approval transaction ID is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as Add , Update (UPD) , or Delete (DEL) performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item code.
Description	Displays the description of the product.
Pricing Currency	Indicates the currency in which the product pricing is defined.
Start Date	Displays the date from when the product pricing is effective.
End Date	Displays the date till when the product pricing is effective.
Approver Name	Indicates the approver who has rejected the price assignment request.
Rejected On	Displays the date and time when the price assignment request was rejected by an approver.
Reject Reason	Indicates the reason why the price assignment request was rejected.
Rejection Comments	Displays the additional details entered by an approver on rejecting the price assignment request.
Approval Transaction Information	Displays information about the approval transaction.
	Note: This information string is generated using the C1-APPTXNINF algorithm.
Resolve	On clicking the Resolve link, you can modify the details of the price assignment request, and resubmit it for approval. On resubmitting, the approval workflow process starts once again from the first level in the hierarchy.
Withdraw	On clicking the Withdraw link, you can withdraw the price assignment request. Once you withdraw the request, no further action will be taken on the request.
View	On clicking the Log link, you can view the log of the price assignment request from the Resolve Price Assignment screen before resolving or withdrawing a request.

By default, the **List of Price Assignments** zone does not appear in the **Resolve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

Viewing the Approval Workflow Group Details

Procedure

To view the details of an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to view.

The **Approval Workflow Group** screen appears. It consists of the **Main** tab with the following zone:

- [Approval Workflow Group](#) on page 528

3. View the details of the approval workflow group in the **Approval Workflow Group** zone.

Defining an Approval Workflow Group

Prerequisites

To define an approval workflow group, you should have:

- Input and Display UI maps created in the application in case you want to use custom UI maps.
- Dependency, Approval, and Approval Post Processing algorithms defined in the application in case you want to use any of them.

Note: Before you define an approval workflow group for the User BO, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object belonging to the USER-SC MO, and not the USER MO.

Procedure

To define an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.
3. Click the **Add** button in the **Page Title** area of **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group.
- **Business Objects and Group BO Relation** - Used to add business objects and define group BO Relation for the approval workflow group.

The **Main** section contains the following:

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction Type	Used to indicate the transaction type to which the approval workflow group belongs.	Yes
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Description	Used to specify the approval workflow group with a particular description.	Yes
Display UI Map	Used to specify the UI map that you want to use for viewing data of the business objects within the approval workflow group.	No
	Note: You can search for a UI map, code, and an algorithm by clicking the Search icon () corresponding to the Display UI Map field.	
	Note: If you clear the Display UI Map field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the Regenerate UI Maps icon corresponding to the group in the Approval Workflow Settings screen.	
Input UI Map	Used to specify the UI map that you want to use for modifying data of the business objects within the approval workflow group.	No
	Note: You can search for a UI map, code, and an algorithm by clicking the Search icon () corresponding to the Input UI Map field.	
	Note: If you clear the Input UI Map field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the Regenerate UI Maps icon corresponding to the group in the Approval Workflow Settings screen.	
Dependency Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow group.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon () corresponding to the Dependency Algorithm field.	
	Note: This algorithm can be used to check all prerequisites before creating the approval workflow group.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Algorithm	<p>Used to specify the algorithm that will be triggered after the approval workflow group is approved by the approver at the last level in the hierarchy. The following approval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPPROD - This approval algorithm is used for the C1PRODUCT group, which is shipped with ORMB. • C1-APPPL - This approval algorithm is used for the C1PRICELST group, which is shipped with ORMB. • C1-APPASG - This approval algorithm is used for the C1PRICEASG group, which is shipped with ORMB. • C1-APPALG - This is a standard approval algorithm that you can use for approval workflow groups where custom logic is not required. <p>You can also create your own approval algorithms for custom UIs.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon  corresponding to the Approval Algorithm field.</p>	No
Approval Post Processing Algorithm	<p>Used to specify the algorithm that will be triggered after the changes (which are approved by all approvers' in the hierarchy) are committed to the database.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon  corresponding to the Approval Post Processing Algorithm field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Transaction Creation Algorithm	<p>Used to specify the algorithm that will create approval workflow group. The following transaction creation algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPASGCR - Used to create approval workflow group for price assignment. • C1-AXPROD - Used to create approval workflow group for price item. • C1-AXUSR - Used to create approval workflow group for user. • C1-IGCREATE - Used to create approval workflow group for invoicing group. • C1-AXCREATE - This is a standard transaction creation algorithm that you can use to create approval workflow group for most of the base objects. <p>You can also create your own transaction creation algorithms for custom UIs.</p> <p>In case of the base UIs, this algorithm is only used while modifying or resolving a group. The initial approval transaction creation for base UIs takes place through the Audit algorithm attached on the business object.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon  corresponding to the Transaction Creation Algorithm field.</p>	Yes
Data Retrieval Algorithm	<p>Used to specify the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). The following data retrieval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> • C1-APPIGDR - Used to retrieve data for invoicing group. • C1-AXPRICEOV - Used to retrieve data for price assignment. • C1_APPDATA - This is a standard data retrieval algorithm that you can use to retrieve data for most of the base objects. <p>You can also create your own data retrieval algorithms for custom UIs.</p> <p>Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon  corresponding to the Data Retrieval Algorithm field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Information Algorithm	Used to specify the algorithm information.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.	
Compare Map	Used to specify the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Display UI Map field.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.	
Input Script	Used to specify the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Input UI Map field.	No
	Note: You can search for a Input UI map, code, and an algorithm by clicking the Search icon (🔍) corresponding to the Approval Post Processing Algorithm field.	

4. Enter the required details.
5. Add business objects and group BO relation with the approval workflow group, if required.
6. Click **Save**.

The approval workflow group is defined.

How to add business objects and group BO relation	Adding a Business Object

Adding a Business Object

Prerequisites

To add a business object in the approval workflow group, you should have:

- Business object and approval workflow group created in the application.

Procedure

To add a business object in the approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, Select **A**, and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

- Click the **Add** button in the page-title area of the **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains following sections:

- Main** - Used to specify basic details of the approval workflow group.
- Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects and link them with the approval workflow group.

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the Business Object Code that you want to include in the Approval Workflow Group.	Yes
Reference ID 1	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 2	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 3	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 4	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference Foreign Key 1	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 3	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
List	Used to indicate whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Used to specify the XPATH key of the field or list of fields in the parent business object.	No
To Key	Used to specify the XPATH key of the field or list of fields in the current business object.	No

Note: You can search for a business object and parent business object, by clicking the **Search** () icon placed corresponding to the **Business Object** field.

- If you want to define more than one business and parent business object for the approval workflow group, click the **Add** () icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**

The business object is added in the approval workflow group.

Note: When you add business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps** () icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

Defining a Group BO Relation

Prerequisites

To define a relationship between business object in the approval workflow group, you should have:

- Business objects added in the approval workflow group.

Procedure

To define a relationship between business objects in the approval workflow group:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.

3. Search for an approval workflow group in the **Approval Workflow Group** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.
5. The **Approval Workflow Group** screen appears. It contains following sections:
 - **Main** - Used to specify basic details of the approval workflow group.
 - **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects, and link them with the approval workflow group.
6. Define and edit the approval workflow group details from the **Main** section, if required.
7. If you only want to define a business object, enter the required details in the **Business Objects and Group BO Relation** section.
8. If you want to define a group BO relation with the business object, enter the required details in the following fields.
 - a) **Parent Business Object**
 - b) **From Key**
 - c) **To Key**

Note: If you want to define more than one business or parent object, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a business or parent object, click the **Delete** (🗑️) icon corresponding to the business or parent object field.

9. Click **Save**.

The business object is defined, and its relationship with the parent object is also defined in the approval workflow group.

Approval Workflow Group (Used for Viewing)

Once you define an approval workflow group, the **Approval Workflow Group** screen allows you to:

- Edit the details of an approval workflow group
- Edit the details of business objects and group business object relation
- Delete an approval workflow group
- Delete a business object and a group business object relation
- View the details of an approval workflow group

This screen consists of the following zone:

- [Approval Workflow Group](#) on page 528

Approval Workflow Group

The **Approval Workflow Group** zone displays the details of the approval workflow group. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the name of the approval workflow group.
Description	Displays the description of the approval workflow group.
Display UI Map	Indicates the UI map that will be used for viewing data of the business objects within the approval workflow group. Note: It has a link. On clicking the link, the UI Map screen appears where you can view the details of the respective UI Map.
Input UI Map	Indicates the UI map that will be used for modifying data of the business objects within the approval workflow group. Note: It has a link. On clicking the link, the UI Map screen appears where you can view the details of the respective UI Map.
Dependency Algorithm	Indicates the algorithm that will be triggered before creating the approval workflow request. Note: This algorithm can be used to check all prerequisites before creating the approval workflow request.
Approval Algorithm	Indicates the algorithm that will be triggered after the approval workflow request is approved by the approver at the last level in the hierarchy.
Approval Post Processing Algorithm	Indicates the algorithm that will be triggered after the changes (which are approved by all approvers in the hierarchy) are committed to the database.
Transaction Creation Algorithm	Indicates the algorithm that will create approval workflow requests. Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.
Data Retrieval Algorithm	Indicates the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective algorithm.
Information Algorithm	Indicates the Approval Transaction information from the Approval Transactions that are created for a particular entity, based on the inputs of the XPath paths provided in the Reference IDs.
Compare Map	Indicates the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Display UI Map field.
Input Script	Indicates the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the Input UI Map field.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit the approval workflow group. It is also used to delete the business objects and group BO relation.
Delete	Used to delete an approval workflow group.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow group is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Business Objects And Group BO Relation** - The Business Objects And Group BO Relation contains the following fields:

Field Name	Field Description
Business Object	Indicates the Business Object that you want to include in the Approval Workflow Group.
Reference ID 1	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 2	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 3	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 4	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference Foreign Key 1	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 2	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 3	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 4	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 5	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 6	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.

Field Name	Field Description
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.
Parent Business Object	Indicates the parent business object. This should be one of the business objects within the group.
From Key	Indicates the XPATH key of the field or list of fields in the parent business object.
To Key	Indicates the XPATH key of the field or list of fields in the current business object.

Editing an Approval Workflow Group

Procedure

To edit an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Group** screen appears.

3. Click the **Edit** button in the **Approval workflow Group** zone.
The **Approval Workflow Group** screen appears.
4. Modify the details of the approval workflow group, if required.
5. Define, edit, or remove business objects and group BO relation from the approval workflow group, if required.
6. Click **Save**.

The changes made to the approval workflow group are saved.

Editing a Business Object

Procedure

To edit a business object in the approval workflow group:

1. From the **Admin** menu, select **A** and then click **Approval Workflow Group**.
The **Approval Workflow Group** screen appears.
2. Search for an approval workflow group in the **Search Approval Workflow Group** zone.
3. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.
4. The **Approval Workflow Group** zone appears. Click the **Edit** button from **Record Action** sections.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business objects and link them with the approval workflow group

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Displays the Business Object Code that is included in the Approval Workflow Group.	Yes
Reference ID 1	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 2	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 3	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 4	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference Foreign Key 1	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference Foreign Key 3	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Display the XPATH key of the field or list of fields in the parent business object.	No
To Key	Display the XPATH key of the field or list of fields in the current business object.	No

Note: You can search for a business object or parent business object by clicking the **Search**  icon placed corresponding to the **Business Object** and **Parent Business Object** field.

- If you want to define more than one business object or parent object for the approval workflow group, click the **Add**  icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**.

The changes made to the business object in approval workflow group are saved.

Note: When you change business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps**  icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

Editing a Group BO Relation

Procedure

To edit the business object's relationship details in the approval workflow group:

1. If required, filter the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.

The **Approval Workflow Group** screen appears. It contains following two sections:

- **Main** - Displays the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Displays the fields that allow to define or edit business objects, and link them with the approval workflow group.

3. If required, define and edit the approval workflow group details from the **Main** section.
4. The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the business object that you want to add in the approval workflow group.	Yes
Reference ID 1	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 2	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference ID 3	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 4	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference Foreign Key 1	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 2	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 3	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 4	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 5	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 6	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Displays the parent business object. This should be one of the business objects within the group.	No
From Key	Displays the XPATH key of the field or list of fields in the parent business object.	No
To Key	Displays the XPATH key of the field or list of fields in the current business object.	No

Note: You can search for a parent business object by clicking the **Search** () icon placed corresponding to the field. You can also define a new parent business object by clicking the **Add** () icon placed corresponding to the field.

5. Modify the required details in **Business Objects and Group BO Relation** section.
6. Click **Save**.

The changes made to business object's relationship are saved in the approval workflow group.

Searching for an Approval Workflow Chain

Procedure

To search the approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

3. Enter the search criteria in the **Search Approval Workflow Chain** zone.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow chains that meet the search criteria appears in the **Search Results** section.

Viewing the Approval Workflow Chain Details

Procedure

To view the details of an approval workflow chain:

1. Search for the approval workflow chain in the **Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to view.

The **Approval Workflow Chain** screen appears. It contains the following zone:

- [Approval Workflow Chain](#) on page 539
3. View the details of the approval workflow chain in the **Approval Workflow Chain** zone.

Defining an Approval Workflow Chain

Prerequisites

To define an approval workflow chain, you should have:

- The To Do role and To Do type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

Procedure

To define an approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.
The **Approval Workflow Chain** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Chain** screen.
The **Approval Workflow Chain** screen appears. It contains the following sections:
 - **Main** - Used to specify basic details of the approval workflow chain.
 - **Approval Levels** - Used to specify a level in the approval workflow chain.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to specify the approval workflow chain	Yes
Description	Used to specify the description for the approval workflow chain	Yes

Field Name	Field Description	Mandatory (Yes or No)
To Do Role To Resolve	Used to specify the To Do Role to indicate the users who will receive a notification when the approval transactions are rejected by an approver at any level in the hierarchy.	Yes

- Enter the required details.
- Define approval levels for the approval workflow chain, if required.
- Click **Save**.

The approval workflow chain is defined.

Defining Approval Levels for an Approval Workflow Chain

Prerequisites

To define approval levels in the approval workflow chain, you should have:

- The To Do Role and To Do Type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

Procedure

To define an approval levels for an approval workflow chain:

- Ensure that the **Approval Levels** section is expanded when you are defining or editing an approval workflow chain.

The **Approval Levels** section contains the following fields

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Used to specify the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request. Note: You can search for an action algorithm by clicking the Search  icon corresponding to the Action Algorithm field.	Yes
Approver To Do Role	Used to specify the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy. Note: You can search for an approver to do role by clicking the Search  icon corresponding to the Approver To Do Role field.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approver To Do Type	Used to specify the type of notification that you want to generate when the approver approves or rejects the request.	Yes
	Note: You can search for an approver to do type by clicking the Search (🔍) icon corresponding to the Approver To Do Type field.	

- Enter the required details in the **Approval Levels** section.
- If you want to define more than one approval level for the approval workflow chain, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a approval level from the approval workflow chain, click the **Delete** (🗑️) icon corresponding to the approval level.

Approval Workflow Chain (Used for Viewing)

Once you define an approval workflow chain, the **Approval Workflow Chain** screen allows you to:

- View the details of an approval workflow chain
- Edit an approval workflow chain
- Delete an approval workflow chain

This screen contains the following zone:

- [Approval Workflow Chain](#) on page 539

Approval Workflow Chain

The **Approval Workflow Chain** zone displays the details of the approval workflow chain. It contains the following sections:

- Main** - Displays basic information about the approval workflow chain. It contains the following fields:

Field Name	Field Description
Approval Workflow Chain	Displays the approval workflow chain and levels.
Description	Displays the description of the approval workflow chain and levels.
To Do Role To Resolve	Displays the description of To Do Role role type.

- Approval Levels** - Displays the levels defined in the approval workflow chain.

Field Name	Field Description
Action Algorithm	Indicates the additional action that the system will perform apart from generating a notification when the approver approves or rejects the request.

Field Name	Field Description
Level	Indicates the level in the hierarchy.
Approver To Do Role	Indicates that the users with the specified To Do role will either approve or reject the request at this level in the hierarchy.
Approval To Do Type	Indicates the type of notification that will be generated when the approver approves or rejects the request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit and delete the approval workflow chain and approval levels.
Delete	Used to delete the approval workflow chain.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing an Approval Workflow Chain

Procedure

To edit an approval workflow chain:

1. Search for an approval workflow chain in the **Search Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to edit.

The **Approval Workflow Chain** screen appears.

3. Click the **Edit** button in the **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

- **Main** - Used to specify the basic details of the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Displays the approval workflow chain.	Yes
Description	Displays the description for the approval workflow chain.	Yes
To Do Role To Resolve	Displays the To Do role to indicate the users who will be sent a notification when the approval workflow request is rejected by an approver at any level in the hierarchy.	Yes

- **Approval Levels** - Used to specify a level in the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Displays the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.	Yes
Approver To Do Role	Displays the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.	Yes
Approval To Do Type	Displays the type of notification that you want to generate when the approver approves or rejects the request.	Yes

4. Modify the required details in the **Main** section.
5. Edit, or remove approval levels from the approval workflow chain, if required.
6. Click **Save**.

The changes made to the approval workflow chain screen are saved.

Defining Group Chain Linkage Criteria for an Approval Workflow

Prerequisites

To define group chain linkage criteria for an approval workflow, you should have:

- Approval Workflow Criterion Type defined in the application.

Procedure

To define group chain linkage criteria for an approval workflow:

1. Ensure that the **Group Chain Linkage Criteria** section is expanded when you are defining or editing an approval workflow.

The **Group Chain Linkage Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Displays the Group Chain Linkage ID.	Yes
	Note: The data appears in this field only when you are editing the details of an approval workflow criterion type.	
Criterion Type	Used to indicate the criteria type needed for defining the criterion.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Approval Workflow Chain Search window appears.	
Operator	Used to indicate the relational operator used to define the relation between the criterion type and criterion value.	Yes
Criterion Value	Used to specify the criterion value.	Yes

2. Enter the required details.
3. If you want to define more than one group chain linkage criteria for the approval workflow, click the **Add**  icon, and then repeat step 2.

Note: However, if you want to remove a group chain linkage criteria from the approval workflow, click the **Delete**  icon corresponding to the group chain linkage criteria.

Defining a Field Approval Rule

Prerequisites

To define a field approval rule for an approval workflow group chain linkage, you should have:

- Business Object, Field, and Approval Workflow Chain to be defined in the application.

Procedure

To define a field approval rule for an approval workflow group chain linkage:

1. Ensure that the

Field Approval Rule Criteria section is expanded when you select the Yes option from the Field Approval Rule field of the M

The **Field Approval Rule Criteria** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence.	Used to indicate the order in which the rule criteria should be executed while adding or updating the field value.	Yes
Applicable For	Used to indicate whether the rule criteria should be considered while adding and/or updating the field value. The valid values are: <ul style="list-style-type: none"> • Add • Update • Add and Update 	Yes
Business Object	Used to indicate the business object in which the field is included.	Yes
	Note: The Search  icon appears corresponding to the Business Object field. On clicking the search icon, the Search Group Based Business Object search window appears.	
Field	Used to indicate the field for which you want to define the approval rule criteria.	Yes
	Note: The Search  icon appears corresponding to the Field search field. On clicking the search icon, the Field Search search window appears.	
Approval Workflow Chain	Used to indicate the approval workflow chain that you want to use for the field value approval.	Yes
	Note: The Search  icon appears corresponding to the Approval Workflow Chain field. On clicking the search icon, the Approval Workflow Chain Search search window appears.	
Value Range	Used to indicate whether you want to define value based threshold limit for each approval level.	No
	Note: This field is enabled only when the data type of the field is Numeric .	

Field Name	Field Description	Mandatory (Yes or No)
Hierarchical	Used to indicate whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.	No

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Used to specify the threshold value using which you want to control the approval hierarchy.
Approval Level	Used to indicate the approval level at which approval is required when the field value is within the threshold value. Note: The Search (🔍) icon appears corresponding to the Approval Level field. On clicking the search icon, the Approval Level Search search window appears. Note: The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

- Enter the required details in the **Field Approval Rule Criteria** section.
- If you want to define more than one field approval rule criteria for the approval workflow chain linkage, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a field approval rule criteria from the approval workflow chain linkage, click the **Delete** (🗑️) icon corresponding to the sequence field.
- Click **Save**.

The approval workflow field rule is defined.

Approval Workflow Group Chain Linkage (Used for Viewing)

Once you define an approval workflow group chain linkage, the **Approval Workflow Group Chain Linkage** screen allows you to:

- Edit an approval workflow group chain linkage
- Delete an approval workflow group chain linkage

This screen contains the following zone:

- [Approval Workflow Group Chain Linkage](#) on page 555

For more information on...	See...
How to view the details of an approval workflow group chain linkage	Viewing the Approval Workflow Group Chain Linkage Details on page 550

Approval Workflow Group Chain Linkage

The **Approval Workflow Group Chain Linkage** zone displays the details of the approval workflow group chain linkage. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group chain linkage. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group for which a link is created.
	Note: It has a link. On clicking the link, the Approval Workflow Group screen appears with the details of the respective approval workflow group.
Approval Workflow Chain	Displays the approval workflow chain for which a link is created.
	Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears with the details of the respective approval workflow group.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes • No

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow group chain linkage. Also used to define, edit, delete Group Chain Linkage Criteria and Field Approval Rule Criteria.
Delete	Used to delete the approval workflow group chain linkage.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain linkage is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

- **Group Chain Linkage Criteria** - Lists the group chain linkage criteria..This section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.

Column Name	Column Description
Criterion Type	Displays the criterion type needed for defining the criterion.
	Note: It has a link. On clicking the link, the Approval Workflow Criterion Type screen appears where you can view the details of the respective criterion type.
Operator	Indicates the relational operator used to define the relation between the criterion type and criterion value. The valid values are: <ul style="list-style-type: none"> EQUALS IN
Criterion Value	Displays the criterion value.

- **Field Approval Rule Criteria** - Lists the field approval rule criteria for approval workflow group chain linkage. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the rule criteria should be executed while adding or updating the field value.
Applicable For	Displays the rule criteria which should be considered while adding and/or updating the field value.
Business Object	Displays the business object in which the field is included.
Field	Displays the field for which you want to define the approval rule criteria.
	Note: The Context Menu () icon appears corresponding to the Field search field. On clicking the context menu icon, the Go to Field menu appears. On clicking the Go to Field menu item, the Field screen appears with the details of the respective field.
	Note: It has a link. On clicking the link, the Field screen appears with the details of the respective field.
Approval Workflow Chain	Indicates the approval workflow chain that you want to use for the field value approval.
	Note: It has a link. On clicking the link, the Approval Workflow Chain screen appears with the details of the respective approval workflow chain.
Value Range	Indicates whether you want to define value based threshold limit for each approval level.
	Note: This field is enabled only when the data type of the field is Numeric .

Column Name	Column Description
Hierarchical Approval	Indicates whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.
	Note: This field is enabled only when the Value Range check box is selected.

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Displays the threshold value using which you want to control the approval hierarchy.
Approval Level	Displays the approval level at which approval is required when the field value is within the threshold value.
	Note: The Search  icon appears corresponding to the Approval Level field. On clicking the search icon, the Approval Level Search search window appears.
	Note: The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

Editing an Approval Workflow Group Chain Linkage

Prerequisites

To edit an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group, and Approval Workflow Chain defined in the application.

Procedure

To edit an approval workflow group chain linkage:

1. Search for the Approval Workflow Group Chain Linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to edit.
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Edit** button in the **Approval Workflow Group Chain Linkage** zone.
The **Approval Workflow Group Chain Linkage** screen appears.
4. Define or edit approval workflow group chain linkage, if required.
5. Define, edit or remove approval workflow criterion from the approval workflow group chain linkage, if required.
6. Define, edit or remove field approval rule criteria from the approval workflow group chain linkage, if required.
7. Click **Save**.

The changes made to the approval workflow group chain linkage screen are saved.

Deleting an Approval Workflow Group Chain Linkage

Procedure

To delete an approval workflow group chain linkage:

1. Search for an approval workflow group chain linkage in the **Search Approval Workflow Group Chain Linkage** zone.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain that you want to delete.
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Delete** button in the **Approval Workflow Group Chain Linkage** zone.
A message appears confirming whether you want to delete the approval workflow group chain linkage.
4. Click **OK**.
The approval workflow group chain linkage is deleted.

Searching for an Approval Workflow Group

Prerequisites

To search for an approval workflow group, you should have:

- Approval Workflow Group defined in the application.
- Active flag should be set to **Yes**

Procedure

To search for an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Setting**.
The **Approval Workflow Setting** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Group** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow groups that meet the search criteria appears in the **Search Results** section.

Defining Approval Workflow Group Settings

Prerequisites

To define an approval workflow group setting, you should have:

- Approval Workflow Group defined in the application.
- Active flag set to **Yes**

Procedure

To define an approval workflow group setting:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Setting**.
The **Approval Workflow Settings** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Settings** screen.

The **Approval Workflow Settings** screen appears. It contains the following section:

- **Main** - Used to specify the details for the approval workflow settings.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Approval Chain Selection Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow request.	Yes
	Note: This algorithm identifies the approval workflow chain that must be used for the approval workflow group.	
	Note: You can search for an approval chain selection algorithm by clicking the Search (🔍) icon corresponding to the Approval Chain Selection Algorithm field.	
Prevalidation	Used to indicate whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
	Note: You can search for a prevalidation by clicking the Search (🔍) icon corresponding to the Prevalidation field.	
Approval Reason Required	Used to indicate whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> • Yes • No 	Yes
Active	Used to indicate whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes - Used when you want to activate the approval workflow for the business objects in the approval workflow group. • No - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group. • Conditional - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Conditional Algorithm	Used to specify the algorithm that will be used to determine the business objects for which the approval workflow must be activated.	Yes
	Note: This field appears only when the Conditional option is selected from the Active list.	

4. Enter the required details.

5. Click **Save**.

The approval workflow group setting is defined.

Approval Workflow Group Settings

The **Approval Workflow Group Settings** zone displays the details of the approval workflow group settings. It contains the following sections:

- **Main** - Displays the basic information about the approval workflow group settings. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group.

Field Name	Field Description
Approval Chain Selection Algorithm	Displays the algorithm that will be triggered after creating the approval workflow request.
	Note: This algorithm identifies the approval workflow chain that must be used for the approval workflow group.
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective approval chain selection algorithm.
Prevalidation	Indicates whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> • Yes • No
Approval Reason Required	Indicates whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> • Yes • No
Active	Indicates whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> • Yes - Used when you want to activate the approval workflow for the business objects in the approval workflow group. • No - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group. • Conditional - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.
Conditional Algorithm	Displays the algorithm that will be used to determine the business objects for which the approval workflow must be activated.
	Note: This field appears only when the Conditional option is selected from the Active list.
	Note: It has a link. On clicking the link, the Algorithm screen appears where you can view the details of the respective conditional algorithm.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the settings of the approval workflow group.
Delete	Used to delete the approval workflow group setting.
Regenerate UI Maps	Used to regenerate the approval workflow group setting UI Maps.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.

Editing Approval Workflow Group Settings

Prerequisites

To edit approval workflow group settings, you should have:

- Approval Chain Selection Algorithm defined in the application.
- Prevalidation, Approval Reason Required, and Active flag defined in the application.
- Conditional Algorithm defined in the application

Procedure

To edit approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Settings** screen appears.

3. Click the **Edit** button in the **Approval Workflow Group Settings** zone.

The **Approval Workflow Group Settings** screen appears.

4. Edit the settings for the approval workflow group, if required.
5. Click **Save**.

The changes made to the approval workflow group settings are saved.

Chapter 6

Multi-Currency Accounts

Topics:

- [Creating Adjustments](#)
- [Generating Bills](#)
- [Applying Payments](#)
- [Monitoring Overdue Debt](#)
- [Generating History](#)

Oracle Revenue Management and Billing allows you to change the currency in which an account is invoiced. While the charges on a bill must be in a single currency, accounts can now be billed in different currencies over time. For example, when a person opens an account, he/she might be billed in US Dollars. However, with the Multi-Currency Accounts feature enabled, the same account can be billed in Euros in the near future. You can use the Multi-Currency Accounts functionality only when:

- You set the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration.
- The account's person class is enabled for open item accounting. In other words, the **Open Item Accounting** check box of the account's customer class is selected.
- The account does not have any active or pending loans, payment plans, payment arrangements, or recurring charge contracts.

The following are some limitations while using the Multi-Currency Accounts functionality:

- Overdue charges in multiple currencies may not be referred to a collection agency. Such cases would be handled via a manual referral.
- Because the account's customer class must be enabled for open-item accounting, you can only use Overdue Processing to collect overdue bills. The Collections and Severance processes are not supported for open-item accounting.
- Write offs involving multiple currencies must be performed manually.
- Budgets, deposits, pay plans, and payment arrangements are not supported.

Note: If there is an outstanding debt for an account in more than one currency, the system displays "***" instead of the total account balance across the application.

To use the Multi-Currency Accounts functionality, you need to:

- Set the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration
- Define required currencies along with currency symbols
- Define invoice currencies for divisions. This is because while changing the invoice currency of an account, you can only view those invoice currencies that are associated to the account's division.
- Define the required exchange rates for currency conversion

- Create tender control and deposit control for every invoice currency defined in the system
- Define an adjustment type that you want to use during currency conversion, and link it to the relevant adjustment profile
- Define an adjustment type that you want to use during Write off process, and link it to the relevant adjustment profile
- Define a contract type that you want to use during over payments to transfer the credit balance to other contracts
- Set the collection method of the account's customer class to **Overdue**
- Setup auto-pay to debit the bill amount, and not the account's balance
- Setup the account's customer class to keep credits on a separate contract

The following business processes are enhanced for implementing the Multi-Currency Accounts functionality:

- [Creating Adjustments](#) on page 573
- [Generating Bills](#) on page 573
- [Applying Payments](#) on page 573
- [Monitoring Overdue Debt](#) on page 573
- [Generating History](#) on page 573

For more information on...	See...
How to set the Multi-Currency Accounts (C1_MLTCURACC) feature configuration	Setting the C1_MLTCURACC Feature Configuration on page 2176

Creating Adjustments

If you are using the Multi-Currency Accounts functionality, you can create adjustments in the currency which is different from the account's invoice currency.

Generating Bills

A bill is generated in the account's invoice currency. If you change the invoice currency of an account, any new bills will be generated in the new currency. For example, if you have changed the invoice currency of an account from US Dollars to Euros on 1st Feb 2010, all bills generated thereafter will be generated in Euros.

When a bill is completed and adjustments are swept onto the bill, adjustments that are created in the currency which is different from the account's invoice currency will be converted to the account's invoice currency. The system will create a transfer adjustment for each adjustment that is converted to provide complete audit information. The adjustment type specified in the **Transfer Adjustment Type for Currency Conversion** option type of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration will be used for the conversion. The original adjustment and to-side of the transfer adjustment will be placed on the same match event.

Also, during bill completion, the Contract Type – Bill Completion algorithm type, **CREDIT-XFER**, which is usually specified on the credit contract, will automatically convert credit amounts in one currency to the invoice currency before distributing those credits.

Applying Payments

If you are using the Multi-Currency Accounts feature, you can apply payments in the currency which is different from the account's invoice currency. However, note that the currency used for payment cannot be different from the one used for billing.

When applying a payment, you can only select **Bill ID** as the match type. Also, all tenders for the same payment event must be in the same currency.

Monitoring Overdue Debt

Currency code is now optional while defining collection class overdue rules. When a batch job is processed, the Overdue Debt Monitor will search for overdue rules that match the account's collection class, division, and currency. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the Overdue Debt Monitor will search for overdue rules that match the account's collection class and division. If overdue rules for that combination are found, those rules will be executed. If the overdue rules are not found, the account will be skipped.

Generating History

If the account has financial transactions in multiple currencies, zero appears throughout the **Current Balance** and **Payoff Balance** columns in the following screens:

- Account Financial History
- Contract Financial History
- View Account Financial Transaction History

Chapter 7

Rules Engine

Topics:

- [Rule Type \(Used for Searching\)](#)
- [Rule Type \(Used for Viewing\)](#)
- [Rule](#)
- [View Rule](#)
- [Rule Check](#)

A rules engine executes one or more business rules in a runtime production environment. It allows you to define, execute, and maintain these business rules separately from the application code. You can then use these business rules in any program to facilitate operational decisions at runtime. For example, you might use business rules in the Collection module to decide the collection strategy or in the Banking module to derive charges codes or price items for the transaction.

A rules engine allows you to classify these rules using the rule type. It also allows you to define the relationship between two or more rules and set the priority for each rule. When a calling program invokes these rules using the rule type, all effective rules with the specified rule type are executed, starting with the rule having highest priority. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Each rule contains one or more criteria. Depending on whether the criteria is satisfied, the system either executes the next criteria or indicates whether the rule is true or false. The rules engine allows you to define what should happen when the rule is true or false. In both the cases, you can enforce the system to either:

- Execute any dependent rule
- Execute a rule with the same rule type having lower priority
- Return the output parameters and their values to the calling program

You can define a criteria for a rule only using the input parameters that are defined for the rule type. Also, when the rule is true, you can only return the output parameters that are defined for the rule type to the calling programs. Therefore, in case you want to use any field in the rule, you have to associate it with the rule type as an input or output parameter.

A rules engine also allows you to execute preprocessing and postprocessing algorithms. A preprocessing algorithm is triggered before executing any criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. A postprocessing algorithm is triggered after executing all criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.

Oracle Revenue Management and Billing provides you with the Rule Check utility. It allows you to validate whether rules defined with a specific rule type get executed as expected. On validating, it indicates the sequence in which the rules were executed, the total execution time, and displays the output parameters of the rule that was successfully executed.

Normally, in the Transaction Feed Management feature, the transaction legs are created using the output parameters of the rule where the criteria returns **Rule**

Is True and the rule true action is set to **Success**. Oracle Revenue Management and Billing also enables you to accumulate the output parameters of all rules where the criteria returns **Rule Is True** irrespective of whether the rule true action is set to **Next Dependent**, **Next Rule by Priority**, or **Success**. This accumulation process continues until a rule is executed where the criteria returns **Rule Is True** and the rule true action is set to **Success**. Once the output parameters are accumulated, the transactions legs are created using these accumulated output parameters. You can enable the rule output accumulation feature for the Transaction Feed Management module by setting the **Rule Output Accumulation** option type in the **C1_FM** feature configuration to **true**.

There might be situations when duplicate transaction legs are created through the rule output accumulation process. The system enables you to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. If the **Remove Duplicates from Accumulated Rule Output** option type in **C1_FM** feature configuration is set to **true**, the system does not create duplicate transaction legs during the transaction aggregation cycle.

Note: The transaction legs with the same account ID, price item, variance parameter or price item parameters, and processing date are considered as duplicate transaction legs.

Rule Type (Used for Searching)

A rule type can be used for defining rule based auto pay instructions or business rules for mapping transactions with the price items. If you want to use the rule type for defining rule based auto pay instructions, you must set the **Rule Type Usage** field to **Auto Pay**. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave the **Rule Type Usage** field blank.

It is the rule type which helps the system to determine:

- Fields that can be used while defining criteria for business rules or rule based auto pay instructions
- Entities whose characteristics can be used while defining criteria for rule based auto pay instructions
- Algorithms which must be used for deriving information from the financial transaction
- Maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type

The **Rule Type** screen allows you to search for a rule type using various search criteria. It also allows you to define, edit, delete, and copy a rule type. It contains the following zone:

- [Search Rule Type](#) on page 577

Search Rule Type

The **Search Rule Type** zone allows you to search for a rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to search a particular rule type.	No
Description	Used to search rule types with a particular description.	No
Rule Type Usage	Used to indicate whether you want to search rule types which are used for defining rule based auto pay instructions or which are used for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> • Auto Pay <p>Note: If you want to search rule types which are used for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Rule Type	Displays the rule type.
Description	Displays the description of the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.

Column Name	Column Description
View	On clicking the View () icon, the Rule Type screen appears where you can view the details of the rule type.
Edit	On clicking the Edit () icon, the Rule Type screen appears where you can edit the details of the rule type.
Delete	On clicking the Delete () icon, you can delete the rule type.
	Note: You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.
Copy	On clicking the Copy () icon, the Rule Type screen appears where you can create a new rule type using an existing rule type.

Searching for a Rule Type

Prerequisites

To search for a rule type, you should have:

- Values defined for the **C1_RULE_USAGE_FLG** lookup field

Procedure

To search for a rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.
A sub-menu appears.
3. Click the **Search** option from the **Rule Type** sub-menu.
The **Rule Type** screen appears.
4. Enter the search criteria in the **Search Rule Type** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rule types that meet the search criteria appears in the **Search Results** section.

Defining a Rule Type

Prerequisites

To define a rule type, you should have:

- Values defined for the **C1_RULE_USAGE_FLG** lookup field

Procedure

To define a rule type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.
A sub-menu appears.
3. Click the **Add** option from the **Rule Type** sub-menu.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> Auto Pay <p>Note: If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to Auto Pay. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. <p>Note:</p> <p>This field appears only when you select the Auto Pay option from the Rule Type Usage list.</p> <p>The maximum rule count cannot be less than or equal to zero.</p>	No

Tip: Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Rule Type** screen.

- Enter the required details in the **Main** section.
- Define input and output parameters for the rule type.
- Associate one or more characteristic entities with the rule type, if required.

Note: You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The rule type is defined.

Defining Input and Output Parameters for a Rule Type

Prerequisites

To define the input and output parameters for a rule type, you should have:

- Fields defined in the application
- Field search zone defined in the application

Procedure

To define the input and output parameters for a rule type:

1. Ensure that the **Input and Output Parameters** section is expanded when you are defining, editing, or copying a rule type.

The **Input and Output Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number for the input or output parameter.	Yes
Field	Used to indicate the field that you want to use as the input or output parameter. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Field Search window appears.	Yes
Rule Input/Output	Used to indicate whether you want to use the field as input and/or output parameter while defining a business rule. The valid values are: <ul style="list-style-type: none"> • Input • Input and Output • Output Note: By default, the Input option is selected. This field appears only when you do not select the Auto Pay option from the Rule Type Usage list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Search Zone	Used to indicate the search zone that you want to use for searching the field value while defining criteria for rule based auto pay instructions.	No
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Zone Search window appears.</p> <p>This field appears only when you select the Auto Pay option from the Rule Type Usage list.</p>	

- Enter the required details in the **Input and Output Parameters** section.

<p>Note:</p> <p>At present, the following fields are only supported while defining a rule type where the Rule Type Usage field is set to Auto Pay:</p> <ul style="list-style-type: none"> • Policy Number • Plan Number • Price Item <p>If you want to use any other field while defining criteria for rule based auto pay instructions, the implementation team will have to develop the custom logic to implement the requirement.</p>
--

- If you want to define more than one input or output parameter for the rule type, click the **Add**  icon and then repeat step 2.

<p>Note: However, if you want to remove an input or output parameter from the rule type, click the Delete  icon corresponding to the parameter.</p>
--

Associating a Characteristic Entity with a Rule Type

Prerequisites

To associate a characteristic entity with a rule type, you should have:

- Values defined for the **RULE_CRITERIA_ENTITY_FLG** lookup field

Procedure

To associate a characteristic entity with a rule type:

- Ensure that the **Rule Criteria Characteristic Entities** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Characteristic Entities** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	<p>Used to indicate the entity whose characteristics you want to use while defining criteria for rule based auto pay instructions. The valid values are:</p> <ul style="list-style-type: none"> • Adjustment • Billable Charge • Policy • Policy Plan • Price Item 	Yes
	<p>Note: At present, the characteristics of the above listed entities are only supported while defining criteria for rule based auto pay instructions. If you want to use characteristics of any other entity, the implementation team will have to develop the custom logic to implement the requirement.</p>	

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Characteristic Entities** section.
3. If you want to associate more than one characteristic entity with the rule type, click the **Add (+)** icon and then repeat step 2.

Note: However, if you want to remove a characteristic entity from the rule type, click the **Delete (🗑)** icon corresponding to the characteristic entity.

Associating an Algorithm with a Rule Type

Prerequisites

To associate an algorithm with a rule type, you should have:

- Rule criteria derivation algorithm defined using the **C1-APRCRIDER** algorithm type

Procedure

To associate an algorithm with a rule type:

1. Ensure that the **Rule Criteria Derivation Algorithms** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Derivation Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm should be executed.	Yes
Algorithm	<p>Used to attach an algorithm which you want to use for deriving the following from the financial transaction:</p> <ul style="list-style-type: none"> • Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters • Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities <p>Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Derivation Algorithms** section.
3. If you want to associate more than one algorithm with the rule type, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove an algorithm from the rule type, click the **Delete**  icon corresponding to the algorithm.

How to copy a rule type	Copying a Rule Type on page 587

Editing a Rule Type

Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.	Not applicable
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. Note: This field appears only when the Rule Type Usage field is set to Auto Pay . The maximum rule count cannot be less than or equal to zero. You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.	No

Tip: Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove input or output parameters from the rule type, if required.

Note: You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

5. Associate or remove one or more characteristic entities from the rule type, if required.

Note:

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

Deleting a Rule Type**Procedure**

To delete a rule type:

- Search for the rule type in the **Rule Type** screen.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule type that you want to delete.

A message appears confirming whether you want to delete the rule type.

Note: You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.

- Click **OK**.

The rule type is deleted.

Copying a Rule Type

Instead of creating a rule type from scratch, you can create a new rule type using an existing rule type. This is possible through copying a rule type. On copying a rule type, the details including the input and output parameters, rule criteria characteristic entities, and rule criteria derivation algorithms are copied to the new rule type. You can then edit the details, if required.

Prerequisites

To copy a rule type, you should have:

- Rule type (whose copy you want to create) defined in the application
- Values defined for the **C1_RULE_USAGE_FLG** lookup field

Procedure

To copy a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the rule type whose copy you want to create.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
 - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
 - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> Auto Pay <p>Note: If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to Auto Pay. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.</p>	No
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. <p>Note:</p> <p>This field appears only when you select the Auto Pay option from the Rule Type Usage list.</p> <p>The maximum rule count cannot be less than or equal to zero.</p>	No

- Enter the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.
- Associate or remove one or more characteristic entities from the rule type, if required.

Note: You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

Note: You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The new rule type is defined.

Rule Type zone	Rule Type

Rule Type (Used for Viewing)

The **Rule Type** screen allows you to view the details of the rule type. It contains the following zone:

- [Rule Type](#) on page 589

Rule Type

The **Rule Type** zone displays the details of the rule type. It contains the following sections:

- **Main** - Displays basic information about the rule type. It contains the following fields:

Field Name	Field Description
Rule Type	Displays the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. Note: This field appears only when the rule type usage is specified while defining the rule type.
Description	Displays the description of the rule type.
Maximum Rule Count	Indicates the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type. Note: This field appears only when the Rule Type Usage field is set to Auto Pay .

- **Input and Output Parameters** - Lists the input and output parameters defined for the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number of the input or output parameter.
Field	Indicates the field which is used as the input or output parameter.
Type	Indicates whether the field is used as input and/or output parameter while defining a business rule.
Search Zone	Indicates the search zone that is used for searching the field value while defining criteria for rule based auto pay instructions. Note: It has a link. On clicking the link, the Zone screen appears where you can view the details of the zone.

- **Rule Criteria Characteristic Entities** - This section contains the following column:

Column Name	Column Description
Characteristic Entity	Indicates the entity whose characteristics can be used while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"> • Adjustment • Billable Charge • Policy • Policy Plan • Price Item

- **Rule Criteria Derivation Algorithms** - Lists the algorithms attached to the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithm should be executed.
Algorithm	Indicates the algorithm attached to the rule type which derives the following from the financial transaction: <ul style="list-style-type: none"> • Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters • Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

Note: The **Rule Criteria Characteristic Entities** and **Rule Criteria Derivation Algorithms** sections appear only when the **Rule Type Usage** field is set to **Auto Pay**.

You can edit the details of the rule type by clicking the **Edit** link in the upper-right corner of this zone.

Rule

The **Rule** screen allows you to define, edit, delete, and copy a rule. This screen consists of the following zones:

- [Search](#) on page 591

Search

The **Search** zone allows you to search for a rule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	No
Rule Type	Used to specify the type of rule.	No
Description	Used to specify the description for the rule.	No
Rule Priority	Used to specify the priority of the rule.	No
Effective Start Date	Used to specify the date from when the rule is effective.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Priority	Displays the priority of the rule.
Code	Displays the rule code.
Description	Displays the description of the rule.
Type	Displays the type of rule.
Start Date	Displays the date from when the rule is effective.
End Date	Displays the date till when the rule is effective.
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
View	On clicking the View () icon, the View Rule screen appears where you can view the details of the rule.
Edit	On clicking the Edit () icon, the Edit Rule screen appears where you can edit the details of the rule.
Delete	On clicking the Delete () icon, you can delete the rule.
	Note: You can delete a rule only if it is not used.

Column Name	Column Description
Copy	On clicking the Copy () icon, the Copy Rule screen appears where you can create a rule using an existing rule.

You can create a new rule by clicking the **Add** link in the upper right corner of this zone.

Searching for a Rule

Procedure

To search for a rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.
A sub-menu appears.
3. Click the **Search** option from the **Rule** sub-menu.
The **Rule** screen appears.
4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rules that meet the search criteria appears in the **Search Results** section.

Defining a Rule

Prerequisites

To define a rule, you should have:

- Rule types defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

Procedure

To define a rule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.
A sub-menu appears.
3. Click the **Add** option from the **Rule** sub-menu.

The **Add Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule. Note: You cannot define two rules with the same rule type and priority in the same duration.	Yes
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective. Note: The effective end date cannot be earlier than the effective start date.	No
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	<p>Note:</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	
Rule True Action	<p>Used to indicate what should happen when all conditions in the rule are satisfied and returns Rule is True. The valid values are:</p> <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is true. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true. • Success — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs. 	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list.	<p>Yes (Conditional)</p> <p>Note: This field is required when you select Next Dependent Rule from the Rule True Action list.</p>
Rule False Action	<p>Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns Rule is False. The valid values are:</p> <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is false. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false. • Success — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs. 	Yes

Field Name	Field Description	Mandatory (Yes or No)
Dependent Rule	Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list.	Yes (Conditional) Note: This field is required when you select Next Dependent Rule from the Rule False Action list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter. Note: For more information about the output parameters that you can specify while defining a rule, see Transaction Validation and Initial Price Item Determination on page 671. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.	Yes
Parameter Value	Used to specify the value for the parameter. Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes
Parameter Name	Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name. Note: If a business label is defined for a user defined field (that you have selected), the business label appears in the Parameter Name field. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	<p>Used to specify the parameter value.</p> <p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
Is Insufficient	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

Tip: Alternatively, you can access the **Add Rule** screen by clicking the **Add** link in the upper right corner of the **Search** zone in the **Rule** screen.

- Enter the required details.

Note:

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

- Click **Save**.

The rule is defined.

Editing a Rule**Prerequisites**

To edit a rule, you should have:

- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them.

Procedure

To edit a rule:

- Search for the rule in the **Rule** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule whose details you want to edit.

The **Edit Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule. Note: You cannot define two rules with the same rule type and priority in the same duration.	Yes
Effective Start Date	Used to specify the date from when the rule is effective.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the rule is effective.	No
	Note: The effective end date cannot be earlier than the effective start date.	
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	Note: The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns Rule is True . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is true. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true. • Success — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs. 	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list.	Yes (Conditional)
		Note: This field is required when you select Next Dependent Rule from the Rule True Action list.

Field Name	Field Description	Mandatory (Yes or No)
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns Rule is False . The valid values are: <ul style="list-style-type: none"> • Next Dependent Rule — Used to indicate that the dependent rule should be executed when the rule is false. • Next Rule by Priority — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false. • Success — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs. 	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list.	Yes (Conditional) Note: This field is required when you select Next Dependent Rule from the Rule False Action list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter. Note: For more information about the output parameters that you can specify while defining a rule, see Transaction Validation and Initial Price Item Determination on page 671. The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.	Yes
Parameter Value	Used to specify the value for the parameter. Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	<p>Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name.</p> <p>Note:</p> <p>If a business label is defined for a user defined field (that you have selected), the business label appears in the Parameter Name field.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p>	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value	<p>Used to specify the parameter value.</p> <p>Note: You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;). in the parameter value.</p> <p>The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Search Rule Type Field window appears.</p>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check next condition — Used to indicate that the condition with consecutive sequence number should be executed. • Rule is false — Used to indicate that the action specified in the Rule False Action field should be executed. • Rule is true — Used to indicate that the action specified in the Rule True Action field should be executed. 	Yes

Tip: Alternatively, you can access the **Edit Rule** screen by clicking the **Edit** link in the **View Rule** screen.

3. Modify the required details.

Note: You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

4. Add or remove output parameters or criteria from the rule, if required.

Note: If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The changes made to the rule are saved.

Deleting a Rule

Procedure

To delete a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule that you want to delete.

A message appears confirming whether you want to delete the rule.

Note: You can delete a rule only if it is not used.

3. Click **OK**.

The rule is deleted.

Copying a Rule

Instead of creating a rule from scratch, you can also create a new rule using an existing rule. You can do this by copying a rule. When you copy a rule, the output parameters and criteria defined for the original rule are copied to the new rule. You can then add or remove parameters or criteria from the new rule.

Prerequisites

To copy a rule, you should have:

- Rule (whose copy you want to create) defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

Procedure

To copy a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Copy** () icon corresponding to the rule whose copy you want to create.

The **Copy Rule** screen appears.

3. Enter the new rule code and the description for the new rule.
4. Modify the required details.
5. Add or remove output parameters or criteria from the new rule.

Note:

You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;), in the parameter value.

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** () icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** () icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** () icon corresponding to it.

For more information about the output parameters that you can specify while defining a rule, see [Transaction Validation and Initial Price Item Determination](#) on page 671.

6. Click **Save**.

The new rule is defined.

How to define a rule	Defining a Rule on page 592

View Rule

The **View Rule** screen allows you to view the details of a rule. This screen consists of the following zones:

- [Rule Information](#) on page 603

Rule Information

The **Rule Information** zone displays information about the rule. This zone contains the following fields:

Field Name	Field Description
Rule Code	Displays the rule code.
Rule Type	Indicates the type of rule.
Description	Displays the description of the rule.
Rule Priority	Indicates the priority of the rule. Note: You can use the Move Up (↑) and Move Down (↓) icons corresponding to this field to view the details of a rule (having the same rule type) with a higher or lower priority. Note that this functionality is available only when you access the View Rule screen through the Rule screen.
Effective Start Date	Displays the date from when the rule is effective.
Effective End Date	Displays the date till when the rule is effective.
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered after executing the criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
Rule True Action	Indicates what should happen when all conditions in the rule are satisfied and returns Rule is True .
Dependent Rule	Indicates the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule True Action list.
Rule False Action	Indicates what should happen when any of the criteria in the rule is not satisfied and returns Rule is False .
Dependent Rule	Indicates the next dependent rule that must be executed when Next Dependent Rule is selected from the Rule False Action list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Lists the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the name of the parameter. In addition, this column has a context menu which helps in navigating to the Field screen.
Parameter Value	Displays the value of the parameter.

- **Criteria** — Lists the criteria defined in the rule. This section contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the order in which the criteria should be executed in the rule.
Parameter Type	Indicates whether the input parameter is a field or an algorithm.
Parameter Name	Displays the field or algorithm name which is used as an input parameter.
Operator	Indicates the relational operator used to define the relation between the parameter name and value.
Parameter Value	Displays the parameter value.
Is True	Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> • Check next condition — Indicates that the condition with consecutive sequence number should be executed. • Rule is false — Indicates that the action specified in the Rule False Action field should be executed. • Rule is true — Indicates that the action specified in the Rule True Action field should be executed.
Is False	Indicates what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> • Check next condition — Indicates that the condition with consecutive sequence number should be executed. • Rule is false — Indicates that the action specified in the Rule False Action field should be executed. • Rule is true — Indicates that the action specified in the Rule True Action field should be executed.
Is Insufficient	Indicates what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> • Check next condition — Indicates that the condition with consecutive sequence number should be executed. • Rule is false — Indicates that the action specified in the Rule False Action field should be executed. • Rule is true — Indicates that the action specified in the Rule True Action field should be executed.

The **Edit** link appears in the upper-right corner of the **Rule Information** zone. On clicking the **Edit** link, the **Edit Rule** screen appears where you can edit the details of the rule.

Rule Check

The **Rule Check** screen allows you to validate whether rules of a particular rule type are executed as expected. On validating, it indicates the sequence in which all effective rules were executed, the total execution time, and the output parameters of the rule that was successfully executed. This screen consists of the following sections:

- Rule Type Input Parameters
- Rule Output Parameters
- Rule Execution

Rule Type Input Parameters

The **Rule Type Input Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No
	Note: If you do not specify the effective date, the system executes all rules which are effective on the system date.	
Parameter Name	Indicates the input parameter.	Not applicable
	Note: The input parameters listed change depending on the rule type that you have selected.	
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

Rule Output Parameters

The **Rule Output Parameters** section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> • Success — Indicates that one of the rule was successfully executed and returned the output parameters. • Fail — Indicates that none of the rules with the specified rule type were successfully executed. • Error — Indicates that an error occurred while executing a rule.
Execution Time	Displays the total time taken to execute all effective rules with the specified rule type.
Error	Displays the error message indicating the error that occurred while executing a rule.
	Note: This field appears only when the status is Error .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

Rule Execution

The **Rule Execution** section indicates the sequence in which all effective rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Indicates the rule that was executed.
Rule Type	Indicates the type of rule.
Rule Priority	Indicates the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

Rule Check

The **Rule Check** zone allows you to validate whether rules of a particular rule type are executed as expected. It indicates the sequence in which all effective rules were executed along with the total execution time. This zone consists of the following sections:

- **Rule Type Input Parameters** — This sections contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter Name	Indicates the input parameter.	Not applicable
	Note: The input parameters listed change depending on the rule type that you have selected.	
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

- **Rule Output Parameters** — This section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> • Success — Indicates that one of the rule was successfully executed and returned the output parameters. • Fail — Indicates that none of the rules with the specified rule type were successfully executed. • Error — Indicates that an error occurred while executing a rule.
Execution Time	Displays the total time taken to execute a set of rules.
Error	Displays the error message indicating the error that occurred while executing a rule.
	Note: This field appears only when the status is Error .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

- **Rule Execution** — Indicates the sequence in which the rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Displays the rule code.
Rule Type	Displays the type of rule.
Rule Priority	Displays the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

Alternate Sequential Bill Numbers

Topics:

- [Sequential Bill Number Generation Algorithms](#)
- [Enabling the Alternate Sequential Bill Numbers Feature](#)

Each bill is uniquely identified by its bill ID. Bill ID is a random, system-generated number. In some locales, bills have an additional identifier known as alternate sequential bill number. Alternate sequential bill numbers are system-generated, sequential numbers. For example, the first bill generated by the system is assigned a sequential bill number of 1, the next bill is assigned a value of 2, and so on.

If you want to generate alternate sequential bill numbers, you must select the **Use Sequential Bill Numbers** check box in the **Billing** tab of the **Installation Options** screen. However, you can only generate alternate sequential bill numbers for bills that are complete and for which the alternate sequential bill numbers are not yet generated.

You can configure the application to generate alternate sequential bill numbers which are either unique throughout the system or within the division. The **Assign Sequential Bill Numbers (ASSGNSBN)** batch allows you to generate alternate sequential bill numbers for completed bills. You need to configure this batch such that it is executed at regular intervals. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

Sequential Bill Number Generation Algorithms

The following table lists the sequential bill number generation algorithm types shipped with the product:

If you want to generate...	Then create algorithm using the following algorithm type....
Alternate sequential bill numbers unique throughout the system	C1_ALTBLLSYS on page 610
Alternate sequential bill numbers unique within the division	C1_ALTBLDV on page 613
Alternate sequential bill numbers unique throughout the system and in the required format using a set of parameters	C1_ALTBSYS1 on page 610 Note: The alternate sequential bill number will be unique throughout the system only when you configure the algorithm parameters appropriately.
Alternate sequential bill numbers unique within the division and in the required format using a set of parameters	C1_ALTBLDIV1 on page 613 Note: The alternate sequential bill number will be unique within the division only when you configure the algorithm parameters appropriately.

C1_ALTBLLSYS

The **C1_ALTBLLSYS** algorithm type is used to generate alternate bill ID for a completed bill. The alternate bill ID is sequenced using the sequence number, and is unique throughout the system. This algorithm type does not have any parameters.

C1_ALTBSYS1

The **C1_ALTBSYS1** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
'X'	Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.

Parameter	Description
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Account_Identifier_Type> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> • “yyyy” or “yy” for year • “MM” or “M” for month • “dd” or “d” for day <p>Note: The date format should either start or end with the year.</p>
SEQ_NBR	The sequence number generated by the database. It should not be more than 12 characters.
FIXED_SUFFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	<p>or</p> <p>Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.</p>

You can specify the above mentioned parameters against any of the following parameters available in the C1_ALTBLSYS1 algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7

- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS_DIVISION
- Field2 — ‘|’
- Field3 — SEQ_NBR
- Field4 — ‘-’
- Field5 — FIXED_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS_DIVISION|SEQ_NBR-01 format. For example, DIV1|12345678-01. If you want to generate unique alternate bill ID, we recommend you to use the **SEQ_NBR** parameter while creating an algorithm using the **C1_ALTBLSYS1** algorithm type.

Note that if you do not specify the value for any parameters while creating an algorithm using the **C1_ALTBLSYS1** algorithm type, the system will generate the alternate bill ID using the sequence number.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1_ALTBLSYS1** is already shipped with the product. You can create custom algorithms using the **C1_ALTBLSYS1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

C1_ALTBLDV

The **C1_ALTBLDV** algorithm type is used to generate alternate bill ID for a completed bill which is unique within the division. For example, two bills (such as B1 and B2) belonging to the same division (such as D1) cannot have the same alternate bill ID. However, two bills (such as B1 and B2) belonging to different divisions, (such as D1 and D2) can have the same alternate bill ID.

This algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Initial Bill Sequence Number	Used to specify the initial alternate bill ID that you want to use while sequencing. Note: If you do not specify any value for this parameter, by default, the system will generate the initial alternate bill ID for sequencing.	No

C1_ALTBLDIV1

The **C1_ALTBLDIV1** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
‘X’	Here, X stands for a separator. For example, ‘;’. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.

Parameter	Description
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Account_Identifier_Type> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> • <Characteristic_Type> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number. • <CharStartPosition> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character). • <CharCount> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five. <p>Note: If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> • “yyyy” or “yy” for year • “MM” or “M” for month • “dd” or “d” for day <p>Note: The date format should either start or end with the year.</p>
FIXED_SUFFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	<p>or</p> <p>Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.</p>

You can specify the above mentioned parameters against any of the following parameters available in the C1_ALTBLDIV1 algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9

- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS_DIVISION
- Field2 — ‘|’
- Field3 — BILL_DT=MMddy
- Field4 — ‘-’
- Field5 — FIXED_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS_DIVISION|MMddy-01 format. For example, DIV1|110501-01. Note that if you do not specify the value for any of these algorithm type parameters, the system will not generate the alternate bill ID for a completed bill.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1_ALTBLDIV1** is already shipped with the product. You can create custom algorithms using the **C1_ALTBLDIV1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

Enabling the Alternate Sequential Bill Numbers Feature

Prerequisites

To enable the alternate sequential bill numbers feature, you should have:

- An algorithm created using the **C1_ALTBLLSYS**, **C1_ALTBLSYS1**, **C1_ALTBLDV**, or **C1_ALTBLDIV1** algorithm type depending on which you want to use for alternate sequential bill number generation

Procedure

To enable the alternate sequential bill numbers feature:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **I** and then click **Installation Options**.

The **Installation Options** screen appears.

3. Click the **Billing** tab.

The **Billing** tab appears.

4. Select the **Use Sequential Bill Numbers** check box to indicate that you want to generate alternate sequential bill numbers for completed bills.

The **Sequential Invoice** field is enabled.

5. Select the **System-wide** or **Division-specific** option from the **Sequential Invoice** list depending on whether you want alternate sequential bill numbers to be unique throughout the system or within the division.

6. Do either of the following:

If you want to generate...	Then
Alternate sequential bill numbers unique throughout the system	<ol style="list-style-type: none"> 1. Attach an algorithm created using the C1_ALTBLLSYS algorithm type to the Sequence Generation Algorithm field to indicate how the alternate bill numbers which are unique throughout the system should be sequenced.

If you want to generate...	Then
	<p data-bbox="721 212 1399 310">Note: The Sequence Generation Algorithm field is enabled only when you select the System-wide option from the Sequential Invoice list.</p> <ol data-bbox="686 346 1399 422" style="list-style-type: none"> <li data-bbox="686 346 1399 422">2. Click the Save button in the Page Title area. The changes made to the installation options are saved.
Alternate sequential bill numbers unique within the division	<ol data-bbox="686 499 1399 1289" style="list-style-type: none"> <li data-bbox="686 499 1399 575">1. Chapter 9

Currency Conversion

Topics:

- [Prerequisites](#)
- [Bill Segment Generation](#)
- [Adjustment Creation](#)
- [Payment and Tender Creation](#)
- [Transaction Aggregation](#)
- [FT GL Creation](#)
- [Currency Conversion Algorithms](#)
- [Exchange Rate \(Used for Searching\)](#)
- [Exchange Rate \(Used for Viewing\)](#)

Oracle Revenue Management and Billing supports currency conversion using an exchange rate. The currency conversion feature is used only when the multi-currency accounts feature is enabled. In other words, you can use the currency conversion feature only when the **Allow Multi-Currency Accounts** option type of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration is set to **Y**.

The currency conversion can take place during the following business processes which are configured in the system:

- Bill Segment Generation
- Adjustment Creation
- Payment and Tender Creation
- FT GL Creation
- Transaction Aggregation

To enable the currency conversion feature, you need to attach the currency conversion algorithm at the division level. The system facilitates you to define different conversion currency algorithm for each business process. The currency conversion feature functions only when the appropriate exchange rate is available in the system. Otherwise, erroneous results might occur.

The system allows you to define date or date and time based global and division-specific exchange rates. The date based exchange rate mean that the exchange rate is applicable throughout the day. However, the date and time based exchange rate mean that the exchange rate is applicable from that date and time onwards.

Note: At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during

currency conversion. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

While converting the amount from the source currency to the target currency (i.e. FROM CCY to TO CCY), the system uses the precision (i.e. decimal positions) of the target currency (i.e. TO CCY). For example, if you set the decimal positions for USD and INR to 1 and 2, respectively, the system uses 1 decimal position during currency conversion from INR to USD.

The system provides you with a facility to define whether you want to enable or disable the currency conversion feature for a rate component. If the currency conversion feature is enabled for a rate component, the currency conversion will take place while generating bill segments for the rate (i.e. rate component) based billable charges.

Prerequisites

To setup the currency conversion feature, you need to do the following:

- Define the required divisions and currencies in the system
- Define the values for the **CONV_TYPE_FLG** and **EXCH_RATE_SRC_FLG** lookup fields
- Define the Determine Business Object algorithm using the **F1-MOBO** algorithm type and attach it to the **C1_EXCHRATE** maintenance object

Note: The **C1-ExchangeRate** and **C1_EXCHRATE_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1_EXCHRATE_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Define the required exchange rates for currency conversion
- Set the following option types of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration:
 - Allow Multi-Currency Accounts
 - Transfer Adjustment Type
- Set the **Allow Currency Conversion** field for each rate component to either **Yes** or **No** depending on whether you want to enable the currency conversion feature for the rate (i.e. rate component) based billable charges
- Create an algorithm of the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type and attach it to the **Currency Conversion For Bill Segments** algorithm spot of the division when you want to enable currency conversion during:
 - Bill Segment Generation
 - FT GL Creation for Bill Segments

Note: The **C1_CURALGBS** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTBS** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type and attach it to the **Currency Conversion For Adjustments** algorithm spot of the division when you want to enable currency conversion during:
 - Adjustment Creation
 - FT GL Creation for Adjustments

Note: The **C1_CURALGAD** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTAD** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1_CURALGPY** or **C1_EXCRTPY** algorithm type and attach it to the **Currency Conversion For Payments** algorithm spot of the division when you want to enable currency conversion during:
 - Payment and Tender Creation
 - FT GL Creation for Payments

Note: The **C1_CURALGPY** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTPY** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **C1_CURALGTFM** or **C1_EXCRTTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division when you want to enable currency conversion during transaction aggregation

Note: The **C1_CURALGTFM** algorithm type uses date based exchange rate during currency conversion. However, the **C1_EXCRTTFM** algorithm type uses date and time based exchange rate during currency conversion.

- Create an algorithm of the **FTFREZGLEXTN** algorithm type and attach it on the **FT Freeze** system event of the customer class for which you want to create FT GL extension

Bill Segment Generation

The system allows you to generate bill segments using the following:

- **Pass through billable charges** — If the pass through billable charges have a bill line currency which is different from the account's invoice currency, the bill line amount is converted into the account's invoice currency during the bill segment generation.
- **Rate based billable charges** — If the rate based billable charges have a pricing currency which is different from the account's invoice currency, the amount is converted into the account's invoice currency during the bill segment generation.

In addition, during the post processing bill segment generation, if the pricing currency is different from the account's invoice currency, then the amount is converted into the account's invoice currency. The currency conversion is done only when you have an algorithm of the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. In addition, the currency conversion is done for rate based billable charges only when the **Allow Currency Conversion** field in the respective rate component is set to **Yes**. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the bill segment will change to **Error**.

C1_CURALGBS algorithm type	CI_CURALGBS on page 626
C1_EXCRTBS algorithm type	CI_EXCRTBS on page 633

Adjustment Creation

There might be situations when the adjustment currency is different from the account's invoice currency. The system enables you to determine whether currency conversion must be done during adjustment creation or during bill completion. If you clear the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during adjustment creation. However, if you select the **Print by Default** check box in the respective adjustment type, the currency conversion takes place during bill completion and not during adjustment creation. A transfer adjustment is created in the account's invoice currency and the reverse adjustment is created against the original adjustment in the adjustment currency when you complete the next bill of the account. The system creates the transfer and reverse adjustments using the adjustment type specified in the **Transfer Adjustment Type** option type of the **Multi-Currency Accounts (C1_MLTCURACC)** feature configuration.

The currency conversion is done only when you have an algorithm of the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the transfer adjustment will not be created.

Related Topics

For more information on...	See...
C1_CURALGAD algorithm type	CI_CURALGAD on page 627
C1_EXCRTAD algorithm type	CI_EXCRTAD on page 634

Payment and Tender Creation

If the payment currency is different from the account's invoice currency, the amount is converted into the account's invoice currency during payment and tender creation. The currency conversion is done only when you have an algorithm of the **C1_CURALGPY** or **C1_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the payment and tenders will not be created.

Note:

The currency conversion feature is available only when the payment currency (i.e. tender currency) is different from the payor account's invoice currency and not when the payor account's invoice currency is different from the payee account's invoice currency.

The currency conversion feature for payments is currently not supported from the **Payment Portal** screen and while uploading payment data from an external source.

C1_CURALGPY algorithm type	CI_CURALGPY on page 629
C1_EXCRTPY algorithm type	CI_EXCRTPY on page 636

Transaction Aggregation

If the transaction or user defined (UDF) currency is different from the pricing currency, the amount is converted into the pricing currency when you are aggregating transactions based on the transaction or UDF amount. The currency conversion is done only when you have an algorithm of the **C1_CURALGTFM** or **C1_EXCRTTFM** algorithm type attached on the **TFM - Currency Conversion** algorithm spot of the respective division. Otherwise, the currency conversion will not happen. If the required exchange rate is not available during currency conversion, the status of the transaction will change to **Error**.

C1_CURALGTFM algorithm type	CI_CURALGTFM on page 631
C1_EXCRTTFM algorithm type	CI_EXCRTTFM on page 638

FT GL Creation

During FT GL creation, the system creates an FT GL extension when the account's invoice currency is different from the division's base currency. The FT GL extension is created for the following financial transaction (FT) types:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

The FT GL extension is created for bill segments only when you have an algorithm of the **C1_CURALGBS** or **C1_EXCRTBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments only when you have an algorithm of the **C1_CURALGPY** or **C1_EXCRTPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments only when you have an algorithm of the **C1_CURALGAD** or **C1_EXCRTAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division. Otherwise, the currency conversion will not happen and the FT GL extension will not be created. In addition, if the required exchange rate is not available during currency conversion, the FT GL extension will not be created.

C1_CURALGBS

The **C1_CURALGBS** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1_CURALGBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field.	

Parameter	Description	Mandatory (Yes or No)
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

C1_CURALGAD

The **C1_CURALGAD** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate

3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1_CURALGAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First <p>If you do not specify the value for this parameter, by default, the system uses the Division First search order.</p>	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

C1_CURALGPY

The **C1_CURALGPY** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency

8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1_CURALGPY** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No

Parameter	Description	Mandatory (Yes or No)
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No

C1_CURALGTFM

The **C1_CURALGTFM** algorithm type is used to convert the amount in one currency to another currency using date based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)

7. Global exchange rate through base currency

8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_CURALGTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1_CURALGTFM** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field.	
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First <p>If you do not specify the value for this parameter, by default, the system uses the Division First search order.</p>	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No <p>If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.</p>	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No <p>If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.</p>	No

C1_EXCRTBS

The **C1_EXCRTBS** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTBS** algorithm type on the **Currency Conversion For Bill Segments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Bill Segment Generation
- FT GL Creation for Bill Segments

The **C1_EXCRTBS** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion.	No
	Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field.	

Parameter	Description	Mandatory (Yes or No)
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order.	No
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. Note: The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field.	No

C1_EXCRTAD

The **C1_EXCRTAD** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or

direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTAD** algorithm type on the **Currency Conversion For Adjustments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Adjustment Creation
- FT GL Creation for Adjustments

The **C1_EXCRTAD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No

C1_EXCRTPY

The **C1_EXCRTPY** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Global direct exchange rate

3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTPY** algorithm type on the **Currency Conversion For Payments** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during:

- Payment and Tender Creation
- FT GL Creation for Payments

The **C1_EXCRTPY** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm.	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. Note: The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field.	No

How to setup the currency conversion feature	Prerequisites on page 621

C1_EXCRTTFM

The **C1_EXCRTTFM** algorithm type is used to convert the amount in one currency to another currency using date and time based exchange rate. You can define date or date and time based global and division-specific exchange rates. The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen.

The system allows you to indicate the order, in which the exchange rate must be searched, in the currency conversion algorithm. If you use the **Direct Rate First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate

2. Global direct exchange rate
3. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
4. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
5. Division-specific exchange rate through base currency
6. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

If you use the **Division First** search order, the system searches for an exchange rate in the specified order:

1. Division-specific direct exchange rate
2. Division-specific direct reverse exchange rate (if the **Division Reverse Rate** parameter is set to **Yes**)
3. Division-specific exchange rate through base currency
4. Division-specific reverse exchange rate through base currency (if the **Division Reverse Rate** parameter is set to **Yes**)
5. Global direct exchange rate
6. Global direct reverse exchange rate (if the **Global Reverse Rate** parameter is set to **Yes**)
7. Global exchange rate through base currency
8. Global reverse exchange rate through base currency (if the **Global Reverse Rate** parameter is set to **Yes**)

You need to attach an algorithm of the **C1_EXCRTTFM** algorithm type on the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature. Once the algorithm is attached, the currency conversion will take place during the transaction aggregation process when the transaction or UDF currency is different from the pricing currency.

The **C1_EXCRTTFM** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Override Base Currency	Used to specify the base currency. This will override division's base currency while searching for an exchange rate through base currency.	No
Conversion Type	Used when you want to use the exchanges rates with a particular conversion type during currency conversion. Note: The parameter value must be already defined as a value in the CONV_TYPE_FLG lookup field.	No
Search Order (Valid Values: Division First, Direct Rate First)	Used to indicate the order in which you want to search for an exchange rate during currency conversion. The valid values are: <ul style="list-style-type: none"> • Direct Rate First • Division First If you do not specify the value for this parameter, by default, the system uses the Division First search order.	No

Parameter	Description	Mandatory (Yes or No)
Division Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for division-specific reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No <p>If you do not specify the value for this parameter, by default, the system does not use the division-specific reverse exchange rate.</p>	No
Global Reverse Rate (Valid Values: Yes, No)	Used to indicate whether you want the system to search for global reverse exchange rate (i.e. To CCY to From CCY). The valid values are: <ul style="list-style-type: none"> • Yes • No <p>If you do not specify the value for this parameter, by default, the system does not use the global reverse exchange rate.</p>	No
Exchange Rate Override Algorithm	Used to attach a custom algorithm when you want to use an exchange rate search mechanism other than the one defined in this algorithm. <p>Note: A sample algorithm type named C1_EXCRTOVRD is shipped with the product. It is used to fetch the exchange rate which is available corresponding to the transaction in the C1_TXN_DETAIL table. The exchange rate is then used by the algorithm which is created using the C1_EXCRTTFM algorithm type to convert the transaction amount from the transaction currency to the pricing currency. You must specify the column from where the exchange rate must be picked during currency conversion in the Transaction Detail Field for Exchange Rate parameter.</p>	No
Exchange Rate Source	Used when you want to use the exchanges rates received from a particular source during currency conversion. <p>Note: The parameter value must be already defined as a value in the EXCH_RATE_SRC_FLG lookup field.</p>	No

FTFREZGLEXTN

The **FTFREZGLEXTN** algorithm type is used to create FT GL extension for the following financial transaction (FT) types when the account's invoice currency is different from the division's base currency:

- Adjustment
- Adjustment Cancellation
- Bill Segment
- Bill Cancellation
- Pay Segment
- Pay Cancellation

You need to attach an algorithm of the **FTFREZGLEXTN** algorithm type on the **FT Freeze** system event of the customer class. The FT GL extension is created for bill segments only when you have an algorithm of the **C1_CURALGBS** algorithm type attached on the **Currency Conversion For Bill Segments** algorithm spot of the respective division. The FT GL extension is created for payments only when you have an algorithm of the **C1_CURALGPY** algorithm type attached on the **Currency Conversion For Payments** algorithm spot of the respective division. The FT GL extension is created for adjustments only when you have an algorithm of the **C1_CURALGAD** algorithm type attached on the **Currency Conversion For Adjustments** algorithm spot of the respective division.

The **FTFREZGLEXTN** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Adjustments with Freeze At Will	Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the Freeze At Will option. The valid values are: <ul style="list-style-type: none"> • A (Accounting Date) – Used to search for an exchange rate which is effective on the accounting date. • R (Arrears Date) - Used to search for an exchange rate which is effective on the arrears date. • F (FT Freeze Date) - Used to search for an exchange rate which is effective on the FT freeze date. • C (FT Create Date) - Used to search for an exchange rate which is effective on the FT creation date. 	Yes

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Adjustments with Freeze At Bill Completion	<p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for adjustments with the Freeze At Bill Completion option. The valid values are:</p> <ul style="list-style-type: none"> • A (Accounting Date) – Used to search for an exchange rate which is effective on the accounting date. • R (Arrears Date) - Used to search for an exchange rate which is effective on the arrears date. • F (FT Freeze Date) - Used to search for an exchange rate which is effective on the FT freeze date. • C (FT Create Date) - Used to search for an exchange rate which is effective on the FT creation date. 	Yes
Exchange Rate Date Type for Payments (Valid Values: A, R, F, C)	<p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for payments. The valid values are:</p> <ul style="list-style-type: none"> • A (Accounting Date) – Used to search for an exchange rate which is effective on the accounting date. • R (Arrears Date) - Used to search for an exchange rate which is effective on the arrears date. • F (FT Freeze Date) - Used to search for an exchange rate which is effective on the FT freeze date. • C (FT Create Date) - Used to search for an exchange rate which is effective on the FT creation date. 	Yes

Parameter	Description	Mandatory (Yes or No)
Exchange Rate Date Type for Bill Segments (Valid Values: A, R, F, C, E)	<p>Used to indicate the date on which the exchange rate should be picked up when FT GL extension is created for bill segments. The valid values are:</p> <ul style="list-style-type: none"> • A (Accounting Date) – Used to search for an exchange rate which is effective on the accounting date. • R (Arrears Date) - Used to search for an exchange rate which is effective on the arrears date. • F (FT Freeze Date) - Used to search for an exchange rate which is effective on the FT freeze date. • C (FT Create Date) - Used to search for an exchange rate which is effective on the FT creation date. • E (Bill Segment End Date) - Used to search for an exchange rate which is effective on the bill segment end date. <p>Note: If you set the Exchange Rate Date Type for Bill Segments parameter to R, ensure that you set the Bill Segment Freeze Option to Freeze At Bill Completion in the Billing tab of the Installation Options screen. Otherwise, erroneous results might occur.</p>	Yes

C1_EXCRTOVRD

The **C1_EXCRTOVRD** algorithm type is used to fetch the exchange rate which is available corresponding to the transaction in the **CI_TXN_DETAIL** table. The exchange rate is then used by the algorithm which is created using the **C1_EXCRTTFM** algorithm type to convert the transaction amount from the transaction currency to the pricing currency. If you want to fetch exchange rate from the **CI_TXN_DETAIL** table, you need to create an algorithm using the **C1_EXCRTOVRD** algorithm type and attach it to the **Exchange Rate Override Algorithm** parameter in the algorithm which is created using the **C1_EXCRTTFM** algorithm type.

The **C1_EXCRTOVRD** algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Transaction Detail Field for Exchange Rate	Used to indicate the column of the CI_TXN_DETAIL table from where the exchange rate must be picked during currency conversion.	Yes

C1_EXCRTTFM algorithm type	CI_EXCRTTFM on page 638

Exchange Rate (Used for Searching)

You can define date or date and time based global and division-specific exchange rates. The date based exchange rate means that the exchange rate is applicable throughout the day. However, the date and time based exchange rate means that the exchange rate is applicable from that date and time onwards. The global exchange rate can be used for all divisions, whereas the division-specific exchange range can only be used for the division for which the exchange rate is defined.

Note: At present, time is not passed as input from any module (such as, payments, adjustments, billing, transaction feed management, and so on) during currency conversion. Therefore, even if you define date and time based exchange rates and use the date and time based currency conversion algorithms at the division level, the system will not search date and time based exchange rate when multiple exchange rates are available on the same day. The system will randomly pick an exchange rate on that day. The implementation team has to build the custom logic to pass or input time to the date and time based currency conversion algorithms in order to derive the appropriate exchange rate.

The system might use the direct division-specific or global exchange rate (i.e. FROM CCY to TO CCY) or direct reverse division-specific or global exchange rate (i.e. TO CCY to FROM CCY) during currency conversion. If either direct or direct reverse exchange rate is not available, the system might use division-specific or global exchange rate through base currency during currency conversion. For example, if the FROM CCY is Canadian Dollars, TO CCY is Japanese Yen, and the division's base currency is U.S. Dollars, the system will first convert the amount from Canadian Dollars to U.S. Dollars and then convert the amount from U.S. Dollars to Japanese Yen. You can define the order in which exchange rate must be searched in the currency conversion algorithm.

The **Exchange Rate** screen allows you to search for date or date and time based global and division-specific exchange rate using various search criteria. It also allows you to define, edit, and delete an exchange rate. This screen consists of the following zones:

- [Search Exchange Rate](#) on page 644

Search Exchange Rate

The **Search Exchange Rate** zone allows you to search for an exchange rate using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search date or date and time based exchange rates. The valid values are: <ul style="list-style-type: none"> • Date/Time and Exchange Rate Source • Date 	Yes
	Note: By default, the Date/Time and Exchange Rate Source option is selected.	
From Currency	Used to search exchange rates with a particular source currency.	No
To Currency	Used to search exchange rates with a particular target currency.	No

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to search exchange rates which are defined for a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Conversion Type	Used to search exchange rates which are defined using a particular conversion type.	No
Effective Start Date/ Time	Used to search exchange rates which are effective from a particular date and time onwards.	No
	Note: This field appears only when you select the Date/Time and Exchange Rate Source option from the Search By list.	
Effective End Date/ Time	Used to search exchange rates which are effective till a particular date and time.	No
	Note: This field appears only when you select the Date/Time and Exchange Rate Source option from the Search By list.	
Effective Start Date	Used to search exchange rates which are effective from a particular date onwards.	No
	Note: This field appears only when you select the Date option from the Search By list.	
Effective End Date	Used to search exchange rates which are effective till a particular date.	No
	Note: This field appears only when you select the Date option from the Search By list.	
Exchange Rate Source	Used to search exchange rates which are received from a particular source.	No
	Note: This field appears only when you select the Date/Time and Exchange Rate Source option from the Search By list.	

Note: You must specify at least one search criterion while searching for an exchange rate.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Exchange Rate ID	Displays the exchange rate ID.
	Note: It has a link. On clicking the link, the Exchange Rate screen appears with the details of the respective exchange rate.

Column Name	Column Description
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Division	Indicates the division for which the exchange rate is defined.
	Note: The data does not appear in this column when the exchange rate is a global exchange rate.
Exchange Rate Source	Indicates the source from where the exchange rate is received.
	Note: This column appears only when you select the Date/Time and Exchange Rate Source option from the Search By list.
Conversion Type	Indicates the conversion type of the exchange rate.
Effective Start Date/Time	Displays the date and time from when the exchange rate is effective.
	Note: This column appears only when you select the Date/Time and Exchange Rate Source option from the Search By list.
Effective End Date/Time	Displays the date and time till when the exchange rate is effective.
	Note: This column appears only when you select the Date/Time and Exchange Rate Source option from the Search By list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.
Effective Start Date	Displays the date from when the exchange rate is effective.
	Note: This column appears only when you select the Date option from the Search By list.
Effective End Date	Displays the date till when the exchange rate is effective.
	Note: This column appears only when you select the Date option from the Search By list. The data does not appear in this column when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.
Inverse Rate	Displays the reverse exchange rate.
Edit	On clicking the Edit  icon, the Add/Edit Exchange Rate screen appears where you can edit the details of the exchange rate.
Delete	On clicking the Delete  icon, you can delete the exchange rate.

Note:

If you specify the effective start date and time while searching for an exchange rate, the system searches exchange rates which are effective from the specified date and time onwards. Let us understand this with the help of an example. The following table lists the exchange rates which are defined in the system where the From Currency is USD, To Currency is INR, and Division is D1:

Exchange Rate	Effective Start Date and Time	Effective End Date and Time
RT1	01-01-2014 12:00:00 PM	-
RT2	02-01-2014 12:00:00 PM	-
RT3	03-01-2014 12:00:00 PM	-

Now, when you search for exchange rates using the following search criteria, the system accordingly displays the search results:

Search Criteria	Search Results
Effective Start Date and Time: 01-01-2014 12:00:00 PM	All three exchange rates — RT1, RT2, and RT3 — will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 31-01-2014 22:00:00 PM	RT1 will appear in the search results.
Effective Start Date and Time: 01-01-2014 12:00:00 PM; Effective End Date and Time: 02-01-2014 22:00:00 PM	RT1 and RT2 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM	RT2 and RT3 will appear in the search results.
Effective Start Date and Time: 02-01-2014 12:00:00 PM; Effective End Date and Time: 02-28-2014 22:00:00 PM	RT2 will appear in the search results.
Effective Start Date and Time: 03-01-2014 12:00:00 PM	RT3 will appear in the search results.

Searching for an Exchange Rate**Prerequisites**

To search for an exchange rate, you should have:

- Currencies and divisions defined in the application

- Conversion types defined in the **CONV_TYPE_FLG** lookup field
- Exchange rate sources defined in the **EXCH_RATE_SRC_FLG** lookup field

Procedure

To search for an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.
A sub-menu appears.
3. Click the **Search** option from the **Exchange Rate** sub-menu.
The **Exchange Rate** screen appears.
4. Select the required option from the **Search By** list depending on whether you want to search date or date and time based exchange rates.
5. Enter the search criteria in the **Search Exchange Rate** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all the input fields except the date fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of exchange rates that meet the search criteria appears in the **Search Results** section.

Defining an Exchange Rate

Prerequisites

To define an exchange rate, you should have:

- Determine Business Object algorithm defined using the **F1-MOBO** algorithm type and attached to the **C1_EXCHRATE** maintenance object

Note: The **C1-ExchangeRate** and **C1_EXCHRATE_BO** business objects are shipped with the product. The **C1-ExchangeRate** business object is used while defining and editing date and time based exchange rates. However, the **C1_EXCHRATE_BO** business object is used while defining and editing date based exchange rates. Depending on whether you want to define date or date and time based exchange rates, you need to accordingly set the **Business Object** parameter in the Determine Business Object algorithm. The system will then accordingly display the fields while defining or editing an exchange rate.

- Currencies and divisions defined in the application
- Conversion types defined in the **CONV_TYPE_FLG** lookup field
- Exchange rate sources defined in the **EXCH_RATE_SRC_FLG** lookup field

Procedure

To define an exchange rate:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Exchange Rate**.
A sub-menu appears.
3. Click the **Add** option from the **Exchange Rate** sub-menu.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the business object using which you are defining an exchange rate.	Not applicable
From Currency	Used to indicate the currency that you want to translate. In other words, it is used to indicate the source currency.	Yes
To Currency	Used to indicate the currency in which you want to translate the source currency. In other words, it is used to indicate the target currency.	Yes
Conversion Type	Used to indicate the conversion type for the exchange rate.	Yes
Division	Used to indicate the division for which you want to define the exchange rate.	Yes (Conditional)
	<p>Note:</p> <p>You can only view those divisions to which you have access in the Division list.</p> <p>You must leave this field blank while defining a global exchange rate.</p>	<p>Note: This field is required when you are defining a division-specific exchange rate.</p>
Exchange Rate Source	Used to indicate the source from where the exchange rate is received.	No
	<p>Note: This field appears only when you are defining a date and time based exchange rate.</p>	
Effective Start Date/Time	Used to specify the date and time from when the exchange rate is effective.	Yes
	<p>Note:</p> <p>This field appears only when you are defining a date and time based exchange rate.</p> <p>By default, the time is set to 12:00 AM. You can change the time, if required.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date/ Time	Used to specify the date and time till when the exchange rate is effective.	Yes (Conditional)
	<p>Note:</p> <p>The effective end date and time cannot be earlier than the effective start date and time.</p> <p>You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date and time.</p> <p>This field appears only when you are defining a date and time based exchange rate.</p> <p>By default, the time is set to 12:00 AM. You can change the time, if required.</p>	<p>Note: If the End Date Required for Division Override option type of the C1_EXCHRATE feature configuration is set to Y, this field is required when you are defining a division-specific exchange rate.</p>
Effective Start Date	Used to specify the date from when the exchange rate is effective.	Yes
	<p>Note: This field appears only when you are defining a date based exchange rate.</p>	
Effective End Date	Used to specify the date till when the exchange rate is effective.	Yes (Conditional)
	<p>Note:</p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>You must leave this field blank while defining a global exchange rate. This is because a global exchange rate does not have an end date.</p> <p>This field appears only when you are defining a date based exchange rate.</p>	<p>Note: If the End Date Required for Division Override option type of the C1_EXCHRATE feature configuration is set to Y, this field is required when you are defining a division-specific exchange rate.</p>
Exchange Rate	Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency.	Yes
	<p>Note: The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).</p>	
Spread	Used to specify the spread for the exchange rate.	No

Tip: Alternatively, you can access the **Add/Edit Exchange Rate** screen by clicking the **Add Exchange Rate** button in the **Page Title** area of the **Exchange Rate** screen.

4. Enter the required details in the **Add/Edit Exchange Rate** screen.
5. Define characteristics for the exchange rate, if required.

Note: You can define characteristics only when you are defining a date and time based exchange rate.

6. Click **Save**.

The exchange rate is defined in the system.

Note: If an exchange rate is already defined with a source and conversion type combination on a given date and time, the system will not allow you to define another exchange rate with the same specifications.

How to define characteristics for an exchange rate	Defining Characteristics for an Exchange Rate on page 651
How to set the C1_EXCHRATE feature configuration	Setting the C1_EXCHRATE Feature Configuration on page 2166

Defining Characteristics for an Exchange Rate

Prerequisites

To define characteristics for an exchange rate, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Exchange Rate**)

Procedure

To define characteristics for an exchange rate:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an exchange rate.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the exchange rate.	Yes (Conditional) Note: This field is required when you are defining a characteristic for the exchange rate.
Characteristic Type	Used to indicate the characteristic type. Note: The list includes only those characteristic types where the characteristic entity is set to Exchange Rate .	Yes (Conditional) Note: This field is required when you are defining a characteristic for the exchange rate.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	Note: On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.	Note: This field is required when you are defining a characteristic for the exchange rate.

Note: The **Characteristics** section appears only when you are defining or editing a date and time based exchange rate.

- Enter the required details in the **Characteristics** section.

Note: If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the exchange rate, click the **Add**  icon and then repeat step 2.

Note: However, if you want to remove a characteristic from the exchange rate, click the **Delete**  icon corresponding to the characteristic.

Related Topics

How to define an exchange rate	Defining an Exchange Rate on page 648
How to edit an exchange rate	Editing an Exchange Rate on page 652

Editing an Exchange Rate

Procedure

To edit an exchange rate:

- Search for the exchange rate in the **Exchange Rate** screen.
- In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the exchange rate whose details you want to edit.

The **Add/Edit Exchange Rate** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Exchange Rate ID	Displays the exchange rate ID.	Not applicable
Business Object	Indicates the business object used while defining an exchange rate.	Not applicable
From Currency	Indicates the currency which is translated. In other words, it is the source currency.	Not applicable
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Conversion Type	Indicates the conversion type of the exchange rate.	Not applicable
Division	Indicates the division for which the exchange rate is defined. Note: The data does not appear corresponding to this field when the exchange rate is a global exchange rate.	Not applicable
Exchange Rate Source	Indicates the source from where the exchange rate is received. Note: This field appears only when you are editing a date and time based exchange rate.	Not applicable
Effective Start Date/Time	Displays the date and time from when the exchange rate is effective. Note: This field appears only when you are editing a date and time based exchange rate.	Not applicable
Effective End Date/Time	Used to specify the date and time till when the exchange rate is effective. Note: The effective end date and time cannot be earlier than the effective start date and time. This field appears only when you are editing a date and time based exchange rate. This field is non-editable when you are editing a date and time based global exchange rate. This is because a global exchange rate does not have an end date and time.	Yes (Conditional) Note: If the End Date Required for Division Override option type of the C1_EXCHRATE feature configuration is set to Y , this field is required when you are defining a division-specific exchange rate.
Effective Start Date	Displays the date from when the exchange rate is effective. Note: This field appears only when you are editing a date based exchange rate.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the exchange rate is effective.	Yes (Conditional)
	<p>Note:</p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>This field appears only when you are editing a date based exchange rate.</p> <p>This field is non-editable when you are editing a date based global exchange rate. This is because a global exchange rate does not have an end date.</p>	<p>Note: If the End Date Required for Division Override option type of the C1_EXCHRATE feature configuration is set to Y, this field is required when you are defining a division-specific exchange rate.</p>
Exchange Rate	Used to specify the exchange rate. In other words, it is the number of units of the target currency that is equivalent to a single unit of the source currency.	Yes
	<p>Note: The system provides you with the facility to specify the exchange rate value with a precision of upto 18 decimal places (0.000000000000000001).</p>	
Spread	Used to specify the spread for the exchange rate.	No

Tip: Alternatively, you can click the **Edit** button in the **Exchange Rate** zone to edit the details of the exchange rate.

3. Modify the required details in the **Add/Edit Exchange Rate** screen.
4. Define, edit, or remove characteristics from the exchange rate, if required.

Note: The **Characteristics** section appears only when you are editing a date and time based exchange rate.

5. Click **Save**.

The changes made to the exchange rate are saved.

Deleting an Exchange Rate

Procedure

To delete an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.

- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the exchange rate that you want to delete.

A message appears confirming whether you want to delete the exchange rate.

Tip: Alternatively, you can click the **Delete** button in the **Exchange Rate** zone to delete the exchange rate.

- Click **OK**.

The exchange rate is deleted.

Exchange Rate (Used for Viewing)

Once you define an exchange rate, the **Exchange Rate** screen allows you to:

- Edit the details of the exchange rate
- Delete the exchange rate
- View the details of the exchange rate
- View the log of the exchange rate

This screen consists of the following zones:

- [Exchange Rate](#) on page 655
- [Exchange Rate Log](#) on page 657

Exchange Rate

The **Exchange Rate** zone displays the details of the exchange rate. This zone contains the following sections:

- Main** — This section provides basic information about the exchange rate. It contains the following fields:

Field Name	Field Description
Exchange Rate ID	Displays the exchange rate ID.
From Currency	Indicates the currency which is translated. In other words, it is the source currency.
To Currency	Indicates the currency in which the source currency is translated. In other words, it is the target currency.
Conversion Type	Indicates the conversion type of the exchange rate.

Field Name	Field Description
Division	Indicates the division for which the exchange rate is defined.
	<p>Note:</p> <p>The data does not appear corresponding to this field when the exchange rate is a global exchange rate.</p> <p>It has a link. On clicking the link, the Division screen appears with the details of the respective division.</p>
Exchange Rate Source	Indicates the source from where the exchange rate is received.
	<p>Note: This field appears only when you are viewing the details of a date and time based exchange rate.</p>
Effective Start Date/Time	Displays the date and time from when the exchange rate is effective.
	<p>Note: This field appears only when you are viewing the details of a date and time based exchange rate.</p>
Effective End Date/Time	Displays the date and time till when the exchange rate is effective.
	<p>Note:</p> <p>This field appears only when you are viewing the details of a date and time based exchange rate.</p> <p>The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date and time.</p>
Effective Start Date	Displays the date from when the exchange rate is effective.
	<p>Note: This field appears only when you are viewing the details of a date based exchange rate.</p>
Effective End Date	Displays the date till when the exchange rate is effective.
	<p>Note:</p> <p>This field appears only when you are viewing the details of a date based exchange rate.</p> <p>The data does not appear corresponding to this field when the exchange rate is a global exchange rate. This is because a global exchange rate does not have an end date.</p>
Exchange Rate	Displays the exchange rate.
Spread	Indicates the spread for the exchange rate.

- **Characteristics** — This section lists the characteristics defined for the exchange rate. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the exchange rate.
Characteristic Type	Indicates the characteristic type.

Column Name	Column Description
Characteristic Value	Displays the value of the characteristic type.

Note: The **Characteristics** section appears only when you are viewing the details of a date and time based exchange rate.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the exchange rate.
Delete	Used to delete the exchange rate.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the exchange rate is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. Note: It has a link. On clicking the link, the Business Object screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the exchange rate is created.

Related Topics

Exchange Rate Log

The **Exchange Rate Log** zone lists the complete trail of actions performed on the exchange rate. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the exchange rate.
Details	Displays the details about the action performed on the exchange rate.
User	Indicates the user who has performed the action on the exchange rate.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity which is generated when the action is performed on the exchange rate. Note: At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Column Name	Column Description
Status Reason	Indicates the reason why the status was changed.
	Note: At present, no data appears in this column. The implementation team can create a custom exchange rate business object with the status lifecycle.

Viewing the Exchange Rate Details

Procedure

To view the details of an exchange rate:

1. Search for the exchange rate in the **Exchange Rate** screen.
2. In the **Search Results** section, click the link in the **Exchange Rate ID** column corresponding to the exchange rate whose details you want to view.

The **Exchange Rate** screen appears. It contains the following zones:

- **Exchange Rate** — Displays the details of the exchange rate.
 - **Exchange Rate Log** — Lists the complete trail of actions performed on the exchange rate.
3. View the details of the exchange rate in the **Exchange Rate** zone.
 4. View the log of the exchange rate in the **Exchange Rate Log** zone.

- [Accumulation Data](#)

Oracle Revenue Management and Billing provides you with a facility to upload banking and Administrative Services Only (ASO) transactions received from various product processors or applications for billing. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

For more information on how to upload the data using the **File Upload Interface** feature, refer to the respective feature documentation. Once the transaction data is uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Product
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price item can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. During the transaction feed management process, each transaction goes through various statuses until it is billed to the person. For more information about the transaction statuses, see [Transaction Status Transition](#) on page 712.

The transaction feed management process includes the following sub-processes:

- [Transaction Aggregation](#) on page 668
- [Transaction Disaggregation](#) on page 694
- [Transaction Cancellation](#) on page 705
- [Transaction Rollback](#) on page 709

Prerequisites

To setup the transaction feed management process, you need to do the following:

- Define the required transaction sources in the system
- Define the required transaction record types for each transaction source
- Associate the required SQIs with a price item —division combination
- Define the required transaction aggregation rule for each SQI
- Define the aggregation schedules in the system
- Define the required rules in the system to determine initial price item for transactions
- Attach a validation algorithm to each account identifier type (to ensure that the account identifier type and account identifier combination is unique in or across divisions)
- Attach the **Price Assignment Search** algorithm to each division
- Define the **TFM - Processing Date** characteristic for each division
- Create an algorithm of the **C1_CURALGTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature
- Define the required exchange rates for currency conversion
- Define values for the PAGE_NUMBER lookup field
- Create an algorithm of the **C1_RTCL_POPC** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the required division

Besides this, you need to setup the following feature configurations:

- *Rule Engine (C1_RLENG)*
- *Dummy Header (C1-TXNDMYID)*
- *Multi Parameter Based Pricing (C1_PPARAM_FLG)*
- *Feed Management (C1_FM)*

Transaction Rating Before Billing

The system provides the flexibility to rate the transaction legs either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price items can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. This will help to reduce the performance issues which are caused when large volume of transactions are rated at the time of billing.

The system offers the following ways in which a transaction leg can be priced, rated and billed:

1. **Rate the Transaction Leg During Billing** – In this approach, you can use either of the following ways:
 - a. Determine effective pricing for a transaction leg, create a billable charge for the transaction leg, and then determine the rate during billing.
 - b. Determine effective pricing for a transaction leg, create a billable charge for aggregated transaction legs, and then determine the rate during billing.
2. **Rate the Transaction Leg Prior to Billing** – In this approach, you can use either of the following ways:
 - a. Determine effective pricing and rate for a transaction leg, and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation

parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.

- b. Determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.
- c. Determine effective pricing and rate for a transaction leg and create a pass through billable charge for the transaction leg which is billed during billing.

3. Ignore the Transaction Leg for Billing – In this approach, you can use either of the following ways:

- a. Determine effective pricing for a transaction leg, but the billable charge is not created for the transaction leg.
- b. Determine effective pricing and rate for a transaction leg, but the billable charge is not created for the transaction leg.

Note:

Once the rate is determined for transaction legs, a set of rate component characteristics and their values are grouped. For example, if a price assignment has the following rate components, the system creates two groups — Group A and Group B:

- RC1, Char1=Y, Char2=Y
- RC2, Char1=N, Char2=Y
- RC3, Char1=Y, Char2=Y

Group A contains Char1=Y, Char2=Y and Group B contains Char1=N, Char2=Y. These groups are used for accumulating pre-calculated charges. A unique aggregation parameter group ID is generated for each group. If a group with a set of rate component characteristics and their values already exists in the system, a new group is not created. Instead, the existing group is used for accumulating pre-calculated charges. The aggregation parameter group ID is created only when you attach an algorithm of the **C1_RTCL_POPC** algorithm type on the **TFM - Rate Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

While defining a price item pricing, you need to specify the rating criteria which indicates how and when you want to rate the transaction legs. The valid values are:

- Do Not Rate Transactions (DNRT)
- Aggregate transactions and then rate aggregated SQs (AGTR)
- Rate individual transactions and aggregate calc lines across transactions (RITA)
- Rate Transactions (RITX)

Along with the **Rating Criteria** field, the **Ignore Transaction** and **Aggregate Transaction** fields help the system to determine how and when the corresponding transaction leg must be rated. The following table indicates how to configure the system in order to use the above mentioned ways:

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3a	Yes	Not applicable	Do Not Rate Transactions (DNRT)	Not applicable because ignored transactions are not considered for billing.

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3b	Yes	Not applicable	Rate Transactions (RITX)	Update Status (C1-TXNEX)
1b	No	Yes	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2b	No	Yes	Aggregate transactions and then rate aggregated SQs (AGTR)	Service Quantity Calculation (C1-TXNSQ)
2a	No	Yes	Rate individual transactions and aggregate calc lines across transactions (RITA)	Update Status (C1-TXNEX)
1a	No	No	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2c	No	No	Rate Transactions (RITX)	Service Quantity Calculation (C1-TXNSQ)

Let us understand the following transaction rating ways with the help of an example:

- 2a
- 2b
- 2c

The following table lists the account, price item, and price item parameters combination to which transaction T1 and T2 are mapped:

Transaction	Transaction Volume	Transaction Date	Account	Price Item	Price Item Parameter Group ID	Price Assignment ID	Aggregation Schedule
T1	300	01/01/2015	A1	P1	PG1	PA1	Monthly
T1	300	01/01/2015	A2	P1	PG1	PA2	Monthly
T2	200	15/01/2015	A1	P1	PG1	PA1	Monthly
T2	200	15/01/2015	A3	P1	PG1	PA3	Monthly

The following table lists the rate components available on the PA1, PA2, and PA3 price assignments:

Transaction	Price Assignment ID	Rate Component	Currency Code	Distribution Code	Description on Bill	Aggregation Parameter Group ID (Rate Component's Characteristics)
T1	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T1	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T1	PA2	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T1	PA2	RC4-0.2*Transaction Volume	USD	BK-AR4	ABC	Char2=Y
T2	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T2	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T2	PA3	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T2	PA3	RC4-0.2*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y

Now, if you use **RITA (2a)** approach, the system will rate a transaction leg and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1- A1P1PG1- PA1, T2- A1P1PG1- PA1	RC1	$300*0.1 = 30$, $200*0.1 = 20$	$30+20 = 50$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1– A1P1PG1– PA1, T2– A1P1PG1– PA1	RC2	$300 * 0.2 = 60$, $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2– A3P1PG1– PA3	RC3, RC4	$200 * 0.3 = 60$, $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Now, if you use **RITX (2c)** approach, the system will rate a transaction leg and calculate charges for each transaction leg in a separate pass through billable charge, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC1	$300 * 0.1 = 30$	30	The pass through charge is calculated for the transaction leg.
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC2	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC1	$200 * 0.1 = 20$	20	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC2	$200 * 0.2 = 40$	40	The pass through charge is calculated for the transaction leg.
BC4	01/01/2015	31/01/2015	T2-A3P1PG1-PA3	RC3, RC4	$200 * 0.3 = 60$, $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1, BC2, and BC3 will have two pass through lines, whereas the BC4 will have one pass through line.

Now, if you use **AGTR (2b)** approach, the system will determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics), as shown in the following table:

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC1	500*0.1 = 50	50	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC2	500*0.2 = 100	100	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC3	300*0.3 = 90	90	The pass through charge is calculated for the transaction leg.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC4	300*0.2 = 60	60	The pass through charge is calculated for the transaction leg.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A3P1PG1- PA3- Monthly	200	BC3	01/01/2015	31/01/2015	RC3, RC4	200*0.3 = 60, 200*0.2 = 40	60+40 = 100	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Transaction Aggregation

The transaction aggregation process includes the following sub-processes:

- [Header Validation](#) on page 669
- [Transaction Validation and Initial Price Item Determination](#) on page 671
- [Price Item Pricing Verification](#) on page 681
- [Aggregation](#) on page 685
- [Clean Up](#) on page 689

The following figure graphically explains the transaction aggregation process:

Header Validation

Once the file is uploaded in the system, you can execute the **Header Validation (C1-TXNHV)** batch to validate the file or header level information. It checks whether:

- Transaction Header ID and Transaction Source is available in the header.
- At least one transaction record is available in the file.
- The number of transaction records in the file matches the total transaction records in the header.
- The sum of transaction amount matches the total transaction amount in the header.
- The sum of transaction volume matches the total transaction volume in the header.
- File with the same header date and transaction header ID is not available in the system.
- External reference number is specified in each transaction record of the file.

If the file or header information is validated successfully, the status of the file or feed is changed to **Validated (VALI)** and the status of all transactions in the feed remains as **Uploaded (UPLD)**. However, if the header validation fails, the status of the feed and all transactions in the feed is changed to **Invalid (INVL)**.

The **Header Validation (C1-TXNHV)** batch is a multi-threaded batch. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to validate a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to validate the transaction feeds which are received from a particular transaction source.	No
Checksum Validation Required	Used to indicate whether the following should be validated: <ul style="list-style-type: none"> The number of transaction records in the file matches the total transaction records in the header. The sum of transaction amount matches the total transaction amount in the header. The sum of transaction volume matches the total transaction volume in the header. The valid values are: <ul style="list-style-type: none"> Y N 	No
Duplicate Check Required	Used to indicate whether the following should be validated: <ul style="list-style-type: none"> File with the same header date and external header ID is not available in the system. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: The duplicate check is done only against the transaction feeds which are in the Validated (VALI) status and not against the transaction feeds which are in the Uploaded (UPLD) status.</p>	No
Allow Positive Transaction Volume in Header	Used to indicate whether you want to allow positive value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: By default, the parameter value is set to Y.</p>	Yes
Allow Negative Transaction Volume in Header	Used to indicate whether you want to allow negative value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> Y N <p>Note: By default, the parameter value is set to N.</p>	Yes

Parameter Name	Description	Mandatory (Yes or No)
Allow Zero Transaction Volume in Header	Used to indicate whether you want to allow zero value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> • Y • N 	Yes
	Note: By default, the parameter value is set to N.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Validation and Initial Price Item Determination

This process includes the following three sub-processes:

- **Transaction Validation** - In this sub-process, the transaction records are validated. The transaction level validations are done to check the integrity of the data. During the transaction validation, the system checks whether:
 - Transaction source is defined in the system.
 - Transaction record type is defined for the transaction source in the system.
 - Division and currencies are defined in the system.
 - The account with the specified account identifier, account identifier type and division exists in the system.

Note: This validation is done only when the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration is set to **Y**. If you set the **Transaction Detail Account Validation** option type of the **Feed Management (C1_FM)** feature configuration to **N**, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.

- User ID (if available in the transaction information) is defined in the system.
- The value other than 'Y' or 'N' is not specified in the **Manual Switch** column.
- The value other than '+' or '-' is not specified in the **Credit/Debit Indicator** column.
- Transaction Amount is specified when Transaction Currency is specified, and vice versa.
- Additional Amount 1 is specified when Amount 1 Currency Code is specified, and vice versa.
- Additional Amount 2 is specified when Amount 2 Currency Code is specified, and vice versa.
- Additional Amount 3 is specified when Amount 3 Currency Code is specified, and vice versa.
- Additional Amount 4 is specified when Amount 4 Currency Code is specified, and vice versa.
- Additional Amount 5 is specified when Amount 5 Currency Code is specified, and vice versa.
- Additional Amount 6 is specified when Amount 6 Currency Code is specified, and vice versa.
- Additional Amount 7 is specified when Amount 7 Currency Code is specified, and vice versa.
- Additional Amount 8 is specified when Amount 8 Currency Code is specified, and vice versa.
- Additional Amount 9 is specified when Amount 9 Currency Code is specified, and vice versa.
- Additional Amount 10 is specified when Amount 10 Currency Code is specified, and vice versa.

If the transaction information is invalid or incorrect (for example, division is invalid), the status of the transaction is changed to **Error (EROR)**. But, if the transaction information is not available, the status of the transaction is changed to **Invalid (INVL)**.

- **Initial Price Item Determination** - Once the transaction records are validated, the account which will bear the charges for the transaction and the price item and variance parameter or price item parameters to which the transaction will be mapped are determined using certain business rules. These business rules are invoked through a rule type. Depending on the transaction record type, a rule type is invoked for each transaction. The effective rules with the specified rule type are executed, starting with the rule having highest priority, until a rule is satisfied. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Note: The system determines rules which are effective based on the **Processing Date for Transaction Feed Management** characteristic defined for the division to which the transaction belongs. The system uses the **Processing Date for Transaction Feed Management** characteristic which is effective on the transaction date. If the **Processing Date for Transaction Feed Management** characteristic type is set to BATCH_DT, the system executes rules which are effective on the batch business date. However, if the **Processing Date for Transaction Feed Management** characteristic type is set to TXN_DT, the system executes rules which are effective on the transaction date. Note that the transaction date must be earlier than or equal to the batch business date. And, if the **Processing Date for Transaction Feed Management** characteristic is not defined for the division to which a transaction belongs, the system, by default, executes rules which are effective on the transaction date.

Each rule contains one or more conditions or criteria. For example, Rule A states that if the transaction record type is R001 and the division is New York, then set the following output parameters:

- ACCT_NO1_Val - Account 1
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X

Here, Transaction Record Type = R001 and Division = New York are two conditions. If these two conditions in the rule are satisfied, then set three output parameters - ACCT_NO1_Val, DIVISION1_VAL and PRODUCT1_1_Val. Now, when this rule is executed and the transaction satisfies this criteria, the transaction is mapped to Price Item X and Account 1 which belongs to D1 bears the charges for the transaction. In case, the rule has four output parameters (ACCT_NO1_Val set to Account 1, DIVISION1_VAL set to D1, PRODUCT1_1_Val set to Price Item X, and PRODUCT1_2_Val set to Price Item Y), the transaction will be mapped to both the price items (i.e. Price Item X and Price Item Y) and Account 1 which belongs to D1 bears the charges for the transaction. A transaction can be mapped to one or more price items or to one or more price item and TOU (variance parameter) combinations. If the multi parameter based pricing feature is enabled, you can map a transaction to one or more price item and price item parameters combinations. Let us understand this with the help of an example.

Rule B states that if the transaction is performed in US and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - US
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country
- PVL1_2_1_VAL - US

- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, Account A which belongs to D1 bears the charges for the transaction which is mapped to the following price item and price item parameters combinations:

- Price Item X, Country - US, Currency - USD
- Price Item Y, Country - US, Currency - USD

More than one account can bear the charges for a transaction and each account can belong to a different division. You can map a transaction to one or more price items, to one or more price item and TOU (variance parameter) combinations, or to one or more price item and price item parameters combinations. The system allows you to map price items for each account. For example, Rule C states that if the transaction is performed in UK and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT_NO1_Val - Account A
- DIVISION1_VAL - D1
- PRODUCT1_1_Val - Price Item X
- PCD1_1_1_VAL - Country
- PVL1_1_1_VAL - UK
- PCD1_1_2_VAL - Currency
- PVL1_1_2_VAL - USD
- PRODUCT1_2_Val - Price Item Y
- PCD1_2_1_VAL - Country
- PVL1_2_1_VAL - UK
- PCD1_2_2_VAL - Currency
- PVL1_2_2_VAL - USD
- ACCT_NO2_Val - Account B
- DIVISION2_VAL - D2
- PRODUCT2_1_Val - Price Item A
- PCD2_1_1_VAL - Country
- PVL2_1_1_VAL - US
- PCD2_1_2_VAL - Currency
- PVL2_1_2_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, the transaction is mapped to the following price item and price item parameters combinations:

Charges Borne By	Division to which the account belongs...	Price Item	Country	Currency
Account A	D1	Price Item X	UK	USD
Account A	D1	Price Item Y	UK	USD
Account B	D2	Price Item A	US	USD

You can limit the maximum accounts that can bear the charges for a transaction, maximum price item that can be mapped to a transaction, and maximum parameters that can be used with each price item to determine price item pricing. For more information, see [Defining a Transaction Record Type](#) on page 810. You can also define rules to ignore transactions based on the transaction attributes. If the rule returns the **IGNORE_SW** equal to **Y**, the status of the transaction is changed to **Ignored (IGNR)** and no further processing takes place on the transaction.

You can use the following output parameters while defining rules in the system:

Output Parameter	Naming Convention	Example	Description
Account Identifier	ACCT_NOX_Val	ACCT_NO1_Val, ACCT_NO2_Val, ACCT_NO3_Val,	Used to indicate the account which must bear the charges for the transaction.
Account Identifier Column Name	ACCT_NOX_Col	ACCT_NO1_Col, ACCT_NO2_Col, ACCT_NO3_Col, ...	Used to indicate the column from where the account identifier corresponding to the transaction (in the transaction details) must be picked.
Account Identifier Type	ACCT_NO_TYPEX_Val	ACCT_NO_TYPE1_Val, ACCT_NO_TYPE2_Val, ACCT_NO_TYPE3_Val, ...	Used to indicate the type of account identifier.
Account Identifier Type Column Name	ACCT_NO_TYPEX_Col	ACCT_NO_TYPE1_Col, ACCT_NO_TYPE2_Col, ACCT_NO_TYPE3_Col, ...	Used to indicate the column from where the account identifier type corresponding to the transaction (in the transaction details) must be picked.
Account Division	DIVISIONX_VAL	DIVISION1_VAL	Used to indicate the division to which the account belongs.
Account Division Column Name	DIVISIONX_COL	DIVISION1_COL	Used to indicate the column from where the division corresponding to the transaction (in the transaction details) must be picked.
Price Item Name	PRODUCTX_Y_Val	PRODUCT1_1_Val, PRODUCT2_1_Val, PRODUCT2_2_Val,	Used to indicate the price item to which the transaction must be mapped.
	Note: Here, X represents the account and Y represents the price item.		
Price Item Column Name	PRODUCTX_Y_Col	PRODUCT1_1_Col,, PRODUCT2_1_Col, PRODUCT2_2_Col, ...	Used to indicate the column from where the price item corresponding to the transaction (in the transaction details) must be picked.
	Note: Here, X represents the account and Y represents the price item.		

Output Parameter	Naming Convention	Example	Description
TOU	TOUX_Y_Val	TOU1_1_Val, TOU2_1_Val, TOU2_2_Val, ...	Used to indicate the variance parameter which you want to use along with the price item for price determination.
	Note: Here, X represents the account and Y represents the price item.		Note: This output parameter appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
TOU Column Name	TOUX_Y_Col	TOU1_1_Col, TOU2_1_Col, TOU2_2_Col, ...	Used to indicate the column from where the variance parameter corresponding to the transaction (in the transaction details) must be picked.
	Note: Here, X represents the account and Y represents the price item.		Note: This output parameter appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Parameter Code	PCDX_Y_Z_VAL	PCD1_1_1_VAL, PCD1_2_1_VAL, PCD2_1_1_VAL, ...	Used to indicate the parameter which you want to use along with the price item for price determination.
	Note: Here, X represents the account, Y represents the price item, and Z represents the parameter.		Note: This output parameter appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True . You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to Error (EROR) .
Note: At present, the system does not support the Parameter Code Column output parameter.			

Output Parameter	Naming Convention	Example	Description
Parameter Value	PVLX_Y_Z_VAL	PVL1_1_1_VAL, PVL1_2_1_VAL, PVL2_1_1_VAL, ...	Used to specify the value for the parameter.
	<p>Note: Here, X represents the account, Y represents the price item, and Z represents the parameter.</p>		<p>Note:</p> <p>This output parameter appears only when the Multi Price Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The parameter value must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to Error (EROR).</p>
Parameter Value Column Name	PVLX_Y_Z_COL	PVL1_1_1_COL, PVL1_2_1_COL, PVL2_1_1_COL, ...	Used to indicate the column from where the parameter value corresponding to the transaction (in the transaction details) must be picked.
	<p>Note: Here, X represents the account, Y represents the price item, and Z represents the parameter.</p>		<p>Note:</p> <p>This output parameter appears only when the Multi Price Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True.</p> <p>The column from where the parameter value is picked must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to Error (EROR).</p>

Output Parameter	Naming Convention	Example	Description
Processing Date Type	PRCS_DTX_Y_TYP	PRCS_DT1_1_TYP, PRCS_DT1_2_TYP, PRCS_DT2_1_TYP, ...	<p>Used to indicate the date type using which you want to determine the effective price item parameters, pricing, and exchange rate. The valid values are:</p> <ul style="list-style-type: none"> • TXN_DT - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the transaction date. • Batch_DT - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the batch business date.
	<p>Note: Here, X represents the account and Y represents the price item.</p>		

Output Parameter	Naming Convention	Example	Description
Processing Date	PRCS_DTX_Y_VAL	PRCS_DT1_1_VAL, PRCS_DT1_2_VAL, PRCS_DT2_1_VAL, ...	Used to specify a custom date on which you want to determine the effective price item parameters, pricing, and exchange rate.
	<p>Note: Here, X represents the account and Y represents the price item.</p>		<p>Note:</p> <p>The custom date must be a date other than the transaction or batch business date.</p> <p>Based on the Processing Date for Transaction Feed Management characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_VAL output parameter. In other words, the PRCS_DTX_Y_VAL output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.</p>
Ignore Transaction	IGNORE_SW		<p>Used to ignore transactions based on the transaction attributes. The valid values are:</p> <ul style="list-style-type: none"> • Y • N

Once the transaction satisfies any rule (invoked through the rule type), one transaction leg is created for each account, division, price item, and variance parameter or price item parameters combination. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1, T2, and T3 are mapped:

Transaction	Charges Borne By	Division to which the account belongs...	Price Item	Variance Parameter	Price Item Parameters
T1	A1	D1	P1	-	Country - US, Currency - USD
T1	A1	D1	P2	-	Country - Germany, Currency - USD
T1	A2	D2	P3	USD	-
T2	A1	D1	P1	-	Country - US, Currency - USD
T2	A2	D2	P2	USD	-
T3	A1	D1	P3	-	Country - Germany, Currency - USD

In such case, the system will create three legs for T1, two legs for T2, and one leg for T3. Each transaction leg will have its own status. The status of the transaction legs and transaction is changed to **Initial Price Item Determined (INPD)**. However, if a transaction does not satisfy any rule, the status of the transaction is changed to **Error (EROR)**.

Note:
<p>During this sub-process, the system validates the following:</p> <ul style="list-style-type: none"> • Whether the price item parameters specified in the output parameters are effective for the price item on the processing date. • Whether the mandatory price item parameter which is effective on the processing date is specified in the output parameter. • Whether the parameter value is specified for all mandatory price item parameters which are effective on the processing date. <p>If any of the above validation fails, the status of the transaction is changed to Error (EROR) and no transaction legs are created.</p>

- **Parameter Group Creation** - Once the transaction legs are created, the price item parameters of each transaction leg are grouped. For example, when a transaction is mapped to the following price item and price item parameters combinations, the system creates three groups - Group A, Group B, and Group C:
 - Account A, Price Item X, Country - US, Currency - USD
 - Account A, Price Item Y, Country - Germany, Currency - USD
 - Account B, Price Item X, Country - England, Currency - USD

Group A contains Country - US, Currency - USD; Group B contains Country - Germany, Currency - USD; and Group C contains Country - England, Currency - USD.

A set of price item parameters are grouped only when the multi parameter based pricing feature is enabled. A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

You can execute this process through a multi-threaded batch named **Validate Transaction and Derive Price Item (C1-TXNIP)**. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Batch Business Date	Used to identify the transactions for which you want to perform validation and determine price item. The system considers the transactions whose transaction date is earlier than or equal to the batch business date.	No
	<p>Note:</p> <p>If you do not specify any date, the batch business date is set to the current date.</p> <p>The batch business date used while executing the C1-TXNIP batch is stamped in the database. It is then used while executing all other consequent batches in the transaction aggregation cycle.</p>	
Transaction Header ID	Used when you want to validate and derive price item for the transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to validate and derive price item for the transactions which are received from a particular transaction source.	No
Division	Used when you want to validate and derive price item for the transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: By default, the parameter value is set to N.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

A log is generated if the **Logging Rules for Transaction Feed** option type in the **Rule Engine (C1_RLENG)** feature configuration is set to **True**. This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.

Note:

You can aggregate transaction legs in a billable charge using aggregation parameters other than account ID, price item code, variance or price item parameters, aggregation start date, and aggregation end date. The additional aggregation parameters can be stamped in the form of aggregation parameter group ID while performing post-processing activities for each transaction leg. This aggregation parameter group ID will be used in subsequent batches during the transaction aggregation cycle. If you want to perform some post-processing activities on the transaction legs, you need to attach a post-processing algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs. This algorithm is triggered only for transactions which are in the **Initial Price Item Determined (INPD)** status. It is triggered before the price item parameter group is created.

A sample post-processing algorithm type named **C1_PRDR_POPC** is shipped with the price item. It does not have any business logic. If you want to undertake some post-processing activities for a transaction leg, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Price Item Derivation Post-Processing** algorithm spot of the respective division. You can refer to the **C1_PRDR_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch is executed, the processing date is stamped against each transaction leg in the database. If a custom processing date is specified for a particular account and price item combination, the custom processing date is stamped against the respective transaction leg. Otherwise, the processing date defined for the division to which a transaction belongs is stamped against the legs of the respective transaction. The processing date which is stamped against a transaction leg in the database is used while executing all subsequent batches in the transaction aggregation cycle.

How to define a rule	Defining a Rule on page 592

Price Item Pricing Verification

In this process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or TOU combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the Prefer Price Item Over Bundle parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>If the price item belongs to a regular bundle and the effective pricing is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the regular bundle, the system checks whether the effective pricing is available for the parent bundle (if assigned) at the account level. If the effective pricing is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to Error (EROR). If the effective pricing is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to Error (EROR).</p>
Enabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or price item parameters (parameter group) combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the Prefer Price Item Over Bundle parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>The system searches for a price with exact match at all levels defined in the search order. If the exact match is available at two or more levels, the price assignment at the higher precedence level is considered for calculating the charges. But, if the system does not find the exact match at any level, it searches for the best fit match at all levels. For more information about best fit match, see Multi Parameter Based Pricing on page 113. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered for calculating the charges.</p> <p>If the price item belongs to a regular bundle and the exact or best fit price is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the regular bundle, the system checks whether the exact or best fit price is available for the parent bundle (if assigned) at the account level. If the exact or best fit price is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to Error (EROR). If the exact or best fit price is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to Error (EROR).</p>

Note:

The processing date which is stamped against a transaction leg is used to determine effective pricing for the transaction leg.

The order in which the system searches effective pricing for the price item, regular bundle, or parent (regular) bundle at the same level depends on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

In addition, the status of the transaction and transaction leg is changed to **Error (EROR)** when:

- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.

Once the effective pricing is determined for the initial or final price item, the values of the following pricing attributes are retrieved:

- Ignore Transaction
- Aggregate Transaction
- Aggregation Schedule
- Rating Criteria
- Price Assignment ID
- Account ID (in case of account agreed and price list pricing)
- Person ID (in case of customer agreed and price list pricing)
- Price List ID (in case of price list pricing)
- Contract ID
- Regular Bundle Code
- Pricing Currency

You can execute this process through a multi-threaded batch named **Price Item Pricing Verification (C1-TXNVP)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to find the price item pricing for transactions which are received in a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to find the price item pricing for transactions which are received from a particular transaction source.	No
Division	Used when you want to find the price item pricing for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note that the **Price Item Pricing Verification (C1-TXNVP)** batch does not change the status of the transaction and its legs. You need to execute the **Update Status (C1-TXNEX)** batch to update the status of the transaction and its legs. Besides updating the status, the **Update Status (C1-TXNEX)** batch determines the rate for transaction legs whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 660.

You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> • Y • N 	No
	Note: By default, the parameter value is set to N.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

You must specify same parameters in the **Product Pricing Verification (C1-TXNVP)** and **Update Status (C1-TXNEX)** batches. Otherwise, erroneous results might occur.

If you want to do some preprocessing activities before invoking the rates engine, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities before invoking the rates engine, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

If a transaction leg is ignored and not considered for billing, the status of the transaction leg is changed to **Ignored (IGNR)**, whereas the status of the transaction remains as **Initial Price Item Determined (INPD)**. However, if all legs of a transaction are ignored and not considered for billing, the status of the transaction and transaction legs is changed to **Ignored (IGNR)**.

You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the product pricing information in the following tables:

- CI_PRC_AGRD
- CI_PRC_PL
- CI_PRC_INH_PL

But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the product pricing information in the above mentioned tables. If there are any pricing changes, you will have to update these tables before executing the **Price Item Pricing Verification (C1-TXNVP)** batch. You can update the product pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch. Ideally, you must execute the **Refresh Pricing (C1-TXNRP)** batch after you execute the **Flush All Caches (F1-FLUSH)** batch in the transaction aggregation cycle. You can specify the following parameters while executing the **Refresh Pricing (C1-TXNRP)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to update the price item pricing information of accounts belonging to a particular division.	No
Chunk Size	Used to specify the number of persons whose regular and post-processing price item pricing information you want to update in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Leg Status Transition	Transaction Leg Status Transition on page 713
How to set the C1_FM feature configuration	Setting the C1_FM Feature Configuration on page 2168

Aggregation

Once the price item pricing verification is complete, you can aggregate the transaction legs, create a billable charge, and update the **SQL** values in the billable charge. In the aggregation process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks the value defined in the Aggregate Transaction field. If the Aggregate Transaction field is set to No, the system creates one billable charge (with the Billable status) for each transaction leg. However, if the Aggregate Transaction field is set to Yes, the system creates one billable charge (with the Billable status) for all transactions legs having the same price item and TOU combination and whose transaction date falls between the aggregation schedule.</p> <p>Note:</p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to Error (EROR).</p> <p>If the aggregated billable charge already exists for the account, price item and TOU combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>
Enabled	<p>The system checks the value defined in the Aggregate Transaction field. If the Aggregate Transaction field is set to No, the system creates one billable charge (with the Billable status) for each transaction leg. However, if the Aggregate Transaction field is set to Yes, the system creates one billable charge (with the Billable status) for all transaction legs having the same price item and price item parameters (parameter group) combination and whose transaction date falls between the aggregation schedule.</p> <p>Note:</p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to Error (EROR).</p> <p>If the aggregated billable charge already exists for the account, price item and price item parameters combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>

The transaction aggregation is done based on the aggregation schedule defined in the price item pricing. You can use the following standard schedules or you can create your own custom schedules for aggregation:

- Daily
- Weekly
- Monthly
- Quarterly
- Yearly

Once the billable charge is created, the system aggregates the SQIs defined for the price item — division combination using the aggregation function and then updates the billable charge with the respective SQI values. If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

Once the SQI values are updated in the billable charge, the rate is determined for the transaction leg whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 660.

Note: If you want to do some preprocessing activities while determining rate, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1_RTCL_PRPC** is shipped with the price item. It does not have any business logic. If you want to undertake some preprocessing activities while determining rate for transaction legs, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_RTCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the billable charge is created and updated successfully, the status of the transaction leg is changed to **Completed (COMP)**. However, if the SQIs are not defined for the price item — division combination, the transaction aggregation rule is not defined for the SQI, or if the exchange rate is not available during currency conversion, the status of the transaction leg is changed to **Error (EROR)**. If all legs of a transaction are in the **Completed (COMP)** status, the status of the transaction is changed to **Completed (COMP)**. But, if any of the transaction leg is in the **Error (EROR)** status, the status of the transaction is changed to **Error (EROR)**.

You can execute this process through a multi-threaded batch named **Service Quantity Calculation (C1-TXNSQ)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to create the billable charges for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to create the billable charges for transactions which are received from a particular transaction source.	No
Division	Used when you want to create the billable charges for transactions belonging to a particular division.	No

Parameter Name	Description	Mandatory (Yes or No)
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

The **Service Quantity Calculation (C1-TXNSQ)** batch does not change the status of the transaction and its legs. You need to execute the **Mark Completion (C1-TXNCM)** batch to update the status of the transaction and its legs. Besides updating the status, the **Mark Completion (C1-TXNCM)** batch does the following with other legs when billable charge is not created for one or more transaction legs:

Rate for other transaction leg is determined using the following set of pricing attributes...	Then....
Ignore Transaction is set to Yes and Rating Criteria is set to Rate Transactions (RITX)	The corresponding calculation lines of the transaction leg are deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to No , and Rating Criteria is set to Rate Transactions (RITX)	The corresponding billable charge and calculation lines of the transaction leg are deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA)	The corresponding calculation lines of the transaction leg are deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR)	The corresponding billable charge and calculation lines are not deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to No , and Rating Criteria is set to Do Not Rate Transactions	The corresponding non-aggregated billable charge is deleted.

You can specify either of the following parameters while executing the **Mark Completion (C1-TXNCM)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

You must specify same parameters in the **Service Quantity Calculation (C1-TXNSQ)** and **Mark Completion (C1-TXNCM)** batches. Otherwise, erroneous results might occur.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Leg Status Transition	Transaction Leg Status Transition on page 713

Clean Up

There might be situations when a transaction is mapped to one or more price items and due to some reasons a billable charge could not be created for one of the price item. And, therefore the status of the transaction is changed to **Error (EROR)**. In such case, you need to either recalculate SQIs in the aggregated billable charge or delete the aggregated billable charge depending on whether the aggregated billable charge includes transaction legs in the **Completed (COMP)** status. You can perform this clean up process through a multi-threaded batch named **Clean Up (C1-TXNCU)**.

When the transaction legs in the **Error (EROR)** and **Completed (COMP)** statuses are aggregated together in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Do Not Rate Transactions	The SQIs are recalculated in the billable charge.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR)	The SQIs are recalculated in the billable charge and the rate is determined for aggregated service quantities. Once the rate is determined, pass through charges are calculated and accumulated accordingly.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA)	The pass through charges are recalculated and accumulated accordingly.

However, when the transaction legs in the **Error (EROR)** status are only aggregated in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Do Not Rate Transactions	The aggregated billable charge is deleted.

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Aggregate transactions and then rate aggregated SQs (AGTR)	The aggregated billable charge and the corresponding calculation lines are deleted.
Ignore Transaction is set to No , Aggregate Transaction is set to Yes , and Rating Criteria is set to Rate individual transactions and aggregate calc lines across transactions (RITA)	The aggregated billable charge is deleted.

Note:

If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

The SQIs in an aggregated billable charge are recalculated only when the **SQ Recalculation Required** option type in the **C1_FM** feature configuration is set to **Y**. If you set the **SQ Recalculation Required** option type in the **C1_FM** feature configuration to **N**, the SQIs are not recalculated in an aggregated billable charge. We recommend you to recalculate SQIs in an aggregated billable charge when more than one account bears the charges for a transaction.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1_BCHG_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1_BCHG_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Besides the transaction aggregation process, the **Clean Up (C1-TXNCU)** batch is also used during the following sub-processes:

- **Cancellation** — During the cancellation process, it deletes non-aggregated billable charges and recalculates SQIs in aggregated billable charges.
- **Disaggregation** — During the disaggregation process, it deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation.

You can specify either of the following parameters while executing the **Clean Up (C1-TXNCU)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to update or delete billable charges created for transactions which are received in a particular transaction feed.	Yes (Conditional)
	Note: This parameter should not be used during the disaggregation process.	Note: This parameter is required when you set the request type to CNCL .

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to update or delete billable charges created for transactions which are received from a particular transaction source.	No
	Note: This parameter should not be used during the cancellation and disaggregation processes.	
Division	Used when you want to update or delete billable charges created for transactions belonging to a particular division.	No
	Note: This parameter should not be used during the cancellation process.	
Account ID	Used when you want to update or delete billable charges created for transactions of a particular account.	No
	Note: This parameter should be used only during the disaggregation process.	
Bill Cycle	Used when you want to update or delete billable charges created for transactions of accounts having a particular bill cycle.	No
	Note: This parameter should be used only during the disaggregation process.	
Disaggregate Transactions From Date	Used when you want to update or delete billable charges created for transactions which were performed from a particular date onwards.	Yes (Conditional)
	Note: You must specify the date in the YYYY-MM-DD format. This parameter should be used only during the disaggregation process.	
Request Type	Used to indicate the process during which you want to execute the batch. The valid values are: <ul style="list-style-type: none"> • CNCL • EROR • DISAGG 	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Leg Status Transition	Transaction Leg Status Transition on page 713
How to set the C1_FM feature configuration	Setting the C1_FM Feature Configuration on page 2168

Transaction Aggregation Batch Processing

During the transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Price Item Pricing Verification (C1-TXNVP)
6. Update Status (C1-TXNEX)
7. Service Quantity Calculation (C1-TXNSQ)
8. Mark Completion (C1-TXNCM)
9. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch locks the **CI_TXN_DTL_PRITM_SUMMARY** table before inserting records to ensure that only unique records are inserted in this table. The locking mechanism results in performance issue when there is no or very little aggregation of transactions. Therefore, we recommend you to use an alternative transaction aggregation process when the aggregation ratio is low. You can enable the alternative transaction aggregation process by setting the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration to **true**. In this alternative transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)
6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The following figure graphically explains the sequence in which you need to execute the batches during the transaction aggregation process:

Note:

You need to remember the following points during the transaction aggregation process:

- Before you start the transaction aggregation process, you need to execute the **Flush All Caches (F1-FLUSH)** batch to clean the cache. This batch has one parameter named **Thread Pool** which allows you to clean cache of a particular thread pool. In case you want to reprocess the error transactions from the earlier cycle, you need to execute the **Rollback (C1-TXNRB)** batch.
- You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **true**, the system will store the price item pricing information in the following tables:
 - CI_PRC_AGRD
 - CI_PRC_PL
 - CI_PRC_INH_PL

But, if you set the **Use Materialized Views** option type of the **C1_FM** feature configuration to **false**, the system will not store the price item pricing information in the above mentioned tables. If there are any pricing changes, you can update the price item pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch.

- The **Header Validation (C1-TXNHV)** batch is optional. You can directly execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch once the transactions are uploaded in the system.
- The system allows you to execute each batch consecutively. You can execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and same parameters, or with the different division and different parameters. But, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and different parameters. For example, once you execute this batch with division as D1 and transaction source as S1, you cannot execute this batch again with division as D1 and transaction source as S2 until the former transaction aggregation cycle is complete.
- Once the **Price Item Pricing Verification (C1-TXNVP)** batch is executed, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. Similarly, once the **Service Quantity Calculation (C1-TXNSQ)** batch is executed, you cannot execute the **Price Item Pricing Verification (C1-TXNVP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. This rule is applicable to all subsequent batches in the transaction aggregation cycle.
- During the transaction aggregation process, you must specify the same division and same parameters across each batch. Otherwise, erroneous results might occur.
- If you have already executed the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch without any division, then you cannot execute this batch once again with a division unless and until the transaction aggregation cycle is complete.

Transaction Disaggregation

As the aggregation cycle is different from the billing cycle, there might be situations when due to pricing changes, the billable charges are no longer valid. In such cases, you need to disaggregate the transactions. In the following scenarios, the system automatically creates a disaggregation request in the **CI_TXN_DISAGG_REQ** table:

If...	Then
A price item is assigned to an account	A disaggregation request is created for the account.

If...	Then
<p>The following values in the price item pricing assigned to an account is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Aggregation Schedule • Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter 	<p>A disaggregation request is created for the account.</p>
<p>A price item is assigned to a person</p>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>The following values in the price item pricing assigned to a person is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Aggregation Schedule • Ignore Transaction • Aggregate Transaction • Rating Criteria • Price Item Parameter 	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>A price list is assigned to an account.</p>	<p>A disaggregation request is created for the account.</p>
<p>The following values in the price list assigned to an account is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Priority • Price List Inheritance 	<p>A disaggregation request is created for the account.</p>
<p>A price list is assigned to a person.</p>	<p>A disaggregation request is created for each account of the person and its child person.</p>
<p>The following values in the price list assigned to a person is changed:</p> <ul style="list-style-type: none"> • Effective Start Date • Effective End Date • Priority • Price List Inheritance 	<p>A disaggregation request is created for each account of the person and its child person.</p>

However, there are various other scenarios for which you have to disaggregate the transactions. But, at the moment, the system does not automatically create a disaggregation request for these scenarios in the CL_TXN_DISAGG_REQ table. You will have to create an appropriate disaggregation request in this table. The system allows you to create a

disaggregation request manually through the **Disaggregation Request** screen or through a batch named **Disaggregation Request Creation (C1-DISTG)**.

In the following scenarios, you have to create an appropriate disaggregation request for the account or person, respectively:

- Effective price item pricing assigned to an account is overridden.
- Variance parameter in the price item pricing assigned to an account is changed.
- A price list assignment has expired or a price list is no longer available to an account.
- Effective price item pricing assigned to a person is overridden.
- Variance parameter in the price item pricing assigned to a person is changed.
- A price list assignment has expired or a price list is no longer available to a person.
- A price item is added to a price list.
- The following details in the price item pricing assigned to a price list is changed:
 - Variance Parameter
 - Effective Start Date
 - Effective End Date
 - Aggregation Schedule
 - Ignore Transaction
 - Rating Criteria
 - Aggregate Transaction
- A new bundle is created.
- A price item is added to a bundle.
- A price item is removed from a bundle.
- A bundle is eliminated (that is, all its price item are removed).
- A price item is added.
- A price list hierarchy is changed.
- SQIs associated with a price item - division combination are changed.
- Transaction aggregation rule defined for an SQI is changed or deleted.
- Business rules used for initial price item mapping are changed.

At present, the system disaggregates transactions at the account level and not at the price item level. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1 is mapped:

Transaction	Account	Price Item
T1	A1	P1
T1	A1	P2
T1	A2	P1
T1	A2	P2

Now, if the pricing of P1 assigned to A1 changes, the system creates a disaggregation request for A1 and identifies all transaction legs which are mapped to A1 for disaggregation. In this example, the system will consider the first two transaction legs - T1-A1-P1 and T1-A1-P2 - for disaggregation even if the pricing of P2 assigned to A1 has not changed.

The **Disaggregation Request Creation (C1-DISTG)** batch creates a disaggregation request for an account. When you create a disaggregation request for an account, the transactions mapped to the account are disaggregated. This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to create disaggregation request for accounts belonging to a particular division.	No
Person ID	Used when you want to create disaggregation request for accounts belonging to a particular person.	No
Bill Cycle	Used when you want to create disaggregation request for accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to create disaggregation request for accounts for which transactions were performed from a particular date onwards.	Yes
	Note: You must specify the date in the YYYY-MM-DD format.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Before you proceed with the disaggregation process, you need to ensure that there are no pending bills for the accounts whose transactions need to be disaggregated. If there are pending bills for these accounts, you need to first execute the **Pending Bill Segments Deletion (C1-BSEGD)** batch and then execute the **Pending Bill Deletion (C1-PNBD)** batch. While executing these batches in the specified order, ensure that you specify the same parameters in both these batches. For more information about these batches, see *Oracle Revenue Management and Billing Batch Execution Guide*.

Note: The **Pending Bill Deletion (C1-PNBD)** batch deletes those pending bills which are generated through the billing batches (i.e. **BILLING** or **C1-PNDBL**). It does not delete pending bills which are generated through the user interface. Also, it deletes regular pending bills and not adhoc pending bills.

Once a disaggregation request is either manually or automatically created for an account, you need to execute the following batches in the specified order to disaggregate transactions:

- **Identify Transactions for Disaggregation (C1-IDENT)** - This batch fetches disaggregation requests which are created for accounts from the CI_TXN_DISAGG_REQ table. It identifies the transactions and the corresponding aggregated and non-aggregated billable charges for disaggregation. If the bill segment of a billable charge is in the **Pending Cancel** or **Frozen** status, the system will not identify the billable charge for deletion. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to identify the transactions of accounts belonging to a particular division for disaggregation.	No
Account ID	Used when you want to identify the transactions of a particular account for disaggregation.	No
Bill Cycle	Used when you want to identify the transactions of accounts having a particular bill cycle for disaggregation.	No

Parameter Name	Description	Mandatory (Yes or No)
Disaggregate Transactions From Date	Used when you want to identify the transactions which were performed from a particular date onwards for disaggregation.	No
	<p>Note:</p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The aggregated billable charge, which is affected, should not contain a transaction leg whose transaction date is earlier than the date specified in this parameter. Otherwise, erroneous results will occur. Therefore, ensure that you specify the appropriate value for the Disaggregate Transactions From Date parameter.</p>	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Post-Processing Algorithm	Used to attach a post-processing algorithm. This algorithm is triggered once the transactions and corresponding billable charges are identified for disaggregation.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to exclude the aggregated and non-aggregated billable charges which are in the Canceled status during the disaggregation process. The valid values are:	No
	<ul style="list-style-type: none"> • Y • N <p>Note: If you do not specify any value, by default, the parameter value is set to N.</p>	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

- **Process Non-Aggregated Transactions (C1-PDTXN)** - This batch processes the identified transactions, deletes the required transaction legs, and changes the status of the transaction to **Uploaded (UPLD)**. If a non-aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
 - The billable charge is cancelled.
 - The corresponding transaction leg and calculation lines (if any) are deleted.
 - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if a non-aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, the corresponding calculation lines (if any), and transaction leg are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If a non-aggregated billable charge is in the **Cancel** status, then the corresponding transaction leg and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. If the rate is determined for a transaction leg which is in the **Ignored (IGNR)** status, the calculation lines are deleted along with the transaction leg during disaggregation.

If aggregated billable charge exists for a transaction leg, then the corresponding transaction legs and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to disaggregate the transactions of accounts belonging to a particular division.	No
Account ID	Used when you want to disaggregate the transactions of a particular account.	No
Bill Cycle	Used when you want to disaggregate the transactions of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to disaggregate the transactions which were performed from a particular date onwards. Note: You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process, you need to attach a preprocessing algorithm on the **TFM - Disaggregation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Process Non-Aggregated Transactions (C1-PDTEXN)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_DSAG_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the disaggregation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Disaggregation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_DSAG_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

- **Clean Up (C1-TXNCU)** - This batch deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation. If an aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
 - The billable charge is cancelled.
 - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if an aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, and the corresponding calculation lines (if any) are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If an aggregated billable charge is in the **Cancel** status, then the corresponding calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

While executing the **Clean Up (C1-TXNCU)** batch during disaggregation, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 689.

- **Update Disaggregation Request Status (C1-DRSUA)** - This batch changes the status of the disaggregation request in the **CI_TXN_DISAGG_REQ** table to **COMPLETE**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Account ID	Used when you want to update the disaggregation requests' status of a particular account.	No
Division	Used when you want to update the disaggregation requests' status of accounts belonging to a particular division.	No
Bill Cycle	Used when you want to update the disaggregation requests' status of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to update the disaggregation requests' status of accounts whose transactions were performed from a particular date onwards and the bill segments created for these transactions are in the Pending Cancel or Frozen status. Note: You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Update Status Algorithm	Used to attach a custom algorithm which indicates when the status of the disaggregation request in the CI_TXN_DISAGG_REQ table must be changed to COMPLETE . Note: If an algorithm is specified in this parameter, the system uses the custom logic and not the in-built logic for updating the status of the disaggregation requests.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to change the status of the disaggregation request to COMPLETE when the canceled billable charges are excluded during the disaggregation process. The valid values are: <ul style="list-style-type: none"> • Y • N Note: If you do not specify any value, by default, the parameter value is set to N. You must specify the same value for this parameter while executing the Identify Transactions for Disaggregation (C1-IDENT) and Update Disaggregation Request Status (C1-DRSUA) batches during the disaggregation process. Otherwise, erroneous results will occur.	No

Parameter Name	Description	Mandatory (Yes or No)
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Transaction Leg Status Transition	Transaction Leg Status Transition on page 713
How to create a disaggregation request manually	Creating a Disaggregation Request on page 839

Transaction Disaggregation Batch Processing

During the transaction disaggregation process, you need to execute the following batches in the specified order:

1. Disaggregation Request Creation (C1-DISTG)
2. Pending Bill Segments Deletion (C1-BSEGD)
3. Pending Bill Deletion (C1-PNBD)
4. Identify Transactions for Disaggregation (C1-IDENT)
5. Process Non-Aggregated Transactions (C1-PDTXN)
6. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
7. Update Disaggregation Request Status (C1-DRSUA)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction disaggregation process:

Reseeding

In the self-funded health care business, there might be situations when you may want to disaggregate the claim, enrollment, and ancillary transactions. The system enables you to disaggregate the claim, enrollment, and ancillary transactions until these transactions are not billed to the customer. If a transaction is billed to the customer, you cannot disaggregate the transaction using the normal transaction disaggregation process.

In the following scenarios, you may want to disaggregate the claim or ancillary transactions once these are billed to the customer:

- The changes are made to the specific stop-loss (SSL), aggregate stop-loss (ASL), discount arrangement, or level funded pricing rule which is used during the transaction aggregation process.
- A new pricing rule is created using a specific stop-loss (SSL) or aggregate stop-loss (ASL) pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a discount arrangement pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a level funded pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

- A specific stop-loss, aggregate stop-loss, discount arrangement, or level funded pricing rule type is added as related pricing rule type in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

The former scenario arises due to change in pricing rule, whereas the latter four scenarios arise due to the late setup. In such scenarios, you can create the **Accumulation Group Based Disaggregation Request** (also known as **Re seeding Request**) to disaggregate the claim and ancillary transactions. In the **Accumulation Group Based Disaggregation** (also known as **Re seeding**) feature, the system allows you to create the re seeding requests for the accounts using a parent accumulation group. At present, you can create the re seeding requests for the accounts only from the user interface and not through the **Disaggregation Request Creation (C1-DISTG)** batch.

While creating a re seeding request using the **Parent Accumulation Group** request type, you can specify the accumulation type (i.e. whether it is stop-loss or discount arrangement). If the accumulation type is set to **Stop Loss**, the system provides the **Disaggregate All Account** option. If you select the **Disaggregate All Account** option, the system considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a re seeding request for each such account. However, if you do not select the **Disaggregate All Account** option, the system considers accounts of only those bill groups where the parent accumulation group is used for creating the specific stop-loss and aggregate stop-loss pricing rules and then creates a re seeding request for each such account. In addition, the system creates a re seeding request for the ASSL and ASL Credit accounts which are specified in the specific stop-loss and aggregate stop-loss pricing rules, respectively. Note that the re seeding requests are created for the ASSL and ASL Credit accounts irrespective of whether the **Disaggregate All Account** option is selected or not.

However, if the accumulation type is set to **Discount Arrangement**, the system does not provide the **Disaggregate All Account** option. In this case, the system, by default, considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a re seeding request for each such account.

Note: In the late setup scenarios, you need to ensure that the pricing rules are created before you create the re seeding requests for accounts.

In the **Re seeding** process, you need to execute the following batches in the specified sequence:

1. **Identify Transactions for Disaggregation (C1-IDENT)** - It fetches the re seeding requests for accounts and then identifies the claim or ancillary transactions for disaggregation. If the re seeding request is created due to change in a pricing rule, the **BILLABLE_CHG_ACT_CD** column corresponding to the specific stop-loss, aggregate stop-loss, discount, or level-funded billable charges in the **CI_DISAGG_BCHG_DETAIL** table is set to **Billable Charge is Part of Frozen Bill Segment (40)**. It indicates that no action must be taken on these billable charges. And, if the re seeding request is created due to the late setup scenarios, the claim or ancillary transaction and its legs are moved to the **CI_TXN_DETAIL_STG** and **CI_TXN_DTL_PRITM_STG** tables, respectively. In addition, the status of the claim or ancillary transaction is changed to **Uploaded**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.
2. **Process Non-Aggregated Transactions (C1-PDTXN)** - If the re seeding request is created due to change in a pricing rule, it does the following:
 - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in the **Frozen** or **Pending Cancel** status, are forcibly deleted from the **CI_TXN_DTL_PRITM** table.
 - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in a status other than **Frozen** or **Pending Cancel**, are moved to the **CI_TXN_DTL_PRITM_STG** table. And, the claim or ancillary transaction is moved to the **CI_TXN_DETAIL_STG** table and its status is changed to **Uploaded**.

Irrespective of whether the re seeding request is created due to change in a pricing rule or the late setup scenarios, this batch does not perform any actions on the claim, claim based fee, and ancillary transaction legs and their billable charges. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

3. **Transaction Cleanup Batch (C1-TXNCU)** - While executing the **Clean Up (C1-TXNCU)** batch during re seeding, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

- 4. Update Disaggregation Request Status (C1-DRSUA)** - Once the claim or ancillary transaction is successfully disaggregated, the status of the reseeded request is changed to **COMPLETE**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

When you re-aggregate the claim or ancillary transactions which were disaggregated due to late setup, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and their billable charges. However, when you re-aggregate the claim or ancillary transactions which were disaggregated due to change in a pricing rule, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and the billable charges for the delta amount (which resulted due to change in pricing).

If the accumulation type is set to **Stop Loss**, the system deletes the specific stop-loss transaction legs. In addition, it deletes the aggregate stop-loss transaction legs (if any), discount arrangement transaction legs (if any), and level funded transaction legs (if any) whose calculation is based on the specific stop-loss transaction legs.

However, if the accumulation type is set to **Discount Arrangement**, the system deletes the discount arrangement transaction legs. It deletes the specific stop-loss transaction legs (if any), aggregate stop-loss transaction legs (if any), and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the specific stop-loss pricing rule. However, it deletes the aggregate stop-loss transaction legs (if any) and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the aggregate stop-loss pricing rule.

For example, the CLAIM pricing rule type contains the SSL, ASL, DISCOUNT, and LEVEL FUNDED pricing rule types as the related pricing rule types, and the SSL and ASL pricing rules contain the following discount arrangement pricing rules:

Discount Arrangement Pricing Rule	Included in the SSL Pricing Rule (Yes or No)	Included in the ASL Pricing Rule (Yes or No)
DISCOUNT1	Yes	No
DISCOUNT2	No	Yes

Now, if the reseeded request (where the accumulation type is set to **Stop Loss**) is created for an account due to change in the SSL pricing rule, the system behaves in the following manner for the C1 claim transaction:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	Yes	Yes	No	Yes
ASL	Yes	Yes	No	Yes
DISCOUNT	No	No	No	No
LEVEL FUNDED	Yes	Yes	No	Yes
DISCOUNT1	Yes	Yes	No	Yes
DISCOUNT2	Yes	Yes	No	Yes

However, if the reseeded request (where the accumulation type is set to **Discount Arrangement**) is created for an account due to change in the DISCOUNT2 pricing rule, the system behaves in the following manner for the C1 claim transaction:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	No	No	No	No
ASL	Yes	Yes	No	Yes
DISCOUNT	No	No	No	No
LEVEL FUNDED	Yes	Yes	No	Yes
DISCOUNT1	No	No	No	No
DISCOUNT2	Yes	Yes	No	Yes

Let us take another example where the related pricing rule types are not specified in the CLM1 pricing rule type. Therefore, the system just created claim-specific transaction legs and billable charges for the C2 claim transaction. These claim billable charges are then billed to the customer. Now, if you add the SSL and ASL pricing rule types as the related pricing rule types in the CLM1 pricing rule type and create a reseeding request (where the accumulation type is set to **Stop Loss**) for an account, the system behaves in the following manner for the C2 claim transaction when the transaction incurred and paid dates fall within the incurred and paid date ranges defined in the parent accumulation group:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	Not applicable	Yes	Not applicable	Yes
ASL	Not applicable	Yes	Not applicable	Yes
DISCOUNT1	Not applicable	Yes	Not applicable	Yes
DISCOUNT2	Not applicable	Yes	Not applicable	Yes

Transaction Cancellation

There might be situations when incorrect transaction data file is uploaded in the system. In such cases, the system provides you with an ability to cancel the whole transaction feed. You can cancel a transaction feed either before the transaction aggregation process starts (that is, before executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch) or after the transaction aggregation process ends (that is, after executing the **Clean Up (C1-TXNCU)** batch). In other words, you cannot cancel a transaction feed during the transaction aggregation process. Once the transaction feed is cancelled, the status of the feed and all transactions in the feed is changed to **Cancelled (CNCL)**.

The following table explains how the system behaves:

When you cancel a transaction feed for which...	Then
<p>A bill (with the Pending status) is already generated in the system</p>	<p>The corresponding billable charges, bill segments, and bill are deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL).</p> <p>Note:</p> <p>If a pending bill has a bill segment in the Frozen or Pending Cancel status, the system does not allow you to cancel the transaction feed.</p> <p>If a pending bill has a bill segment in the Cancel status, the system behaves in the following manner:</p> <ul style="list-style-type: none"> • Deletes all other bill segments which are not in the Cancel status. • The billable charge corresponding to the bill segment which is not in the Cancel status is deleted if the billable charge is in the Billable status and if the billable charge only includes transactions from the feed that you want to cancel. • The billable charge corresponding to the bill segment which is not in the Cancel status is not deleted or recalculated if the billable charge is in the Cancelled status. • The billable charge corresponding to the bill segment which is in the Cancel status is cancelled if the billable charge only includes transactions from the feed that you want to cancel. • The SQIs in the billable charge are recalculated if the billable charge includes transactions from multiple feeds. <p>If a bill is created for transactions which are uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> • The bill and their corresponding bill segments are deleted. • The SQIs are recalculated in the corresponding billable charges. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to Cancelled (CNCL). • The status of Feed A is changed to Cancelled (CNCL). • The status of the transactions uploaded through Feed B remains the same (i.e. Completed (COMP)).
<p>A bill (with the Complete status) already exists in the system</p>	<p>The system does not allow you to cancel the transaction feed.</p>

When you cancel a transaction feed for which...	Then
A bill (with the Complete status) has all bill segments in the Cancelled status	The corresponding billable charges are cancelled. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL) .
A billable charge (with the Billable status) exists in the system	<p>The billable charge is deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to Cancelled (CNCL).</p> <p>Note:</p> <p>In case a billable charge is created for transactions uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> • The SQIs are recalculated in the billable charge. • The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted. • The status of the transactions uploaded through Feed A is changed to Cancelled (CNCL). • The status of Feed A is changed to Cancelled (CNCL). • The status of the transactions uploaded through Feed B remains the same (i.e. Completed (COMP)).
A billable charge (with the Cancelled status) exists in the system	The billable charge is not deleted. However, the corresponding transaction legs and their calculation lines (if any) are deleted and the status of the transactions is changed to Cancelled (CNCL) .

To cancel a transaction feed, you need to execute the following batches in the specified order:

1. **Pending Bill Deletion (C1-DELBL)** — This batch deletes the bills (with the **Pending** status) and their corresponding bill segments. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to delete bills which include charges for transactions which are received in a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

2. **Clean Up (C1-TXNCU)** — This batch deletes non-aggregated and aggregated billable charges. An aggregated billable charge is deleted only when it includes legs of transactions from the feed that you want to cancel. If an aggregated billable charge includes legs of transactions from multiple feeds, the SQIs and calculation lines (if any) are recalculated in the aggregated billable charge. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**, is cancelled or deleted during the cancellation process. Note that while executing this batch, the **Request Type** parameter must be set to **CNCL**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 689.

3. **Cancellation (C1-TXCNC)** — This batch deletes the transaction legs. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)** or **Rate Transactions (RITX)**, is cancelled or deleted during the cancellation process. Finally, this batch changes the status of the feed and all transactions in the feed to **Cancelled (CNCL)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to cancel a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process, you need to attach a preprocessing algorithm on the **TFM - Cancellation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Cancellation (C1-TXCNC)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_CNCL_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the cancellation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Cancellation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_CNCL_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Leg Status Transition	Transaction Leg Status Transition on page 713

Transaction Cancellation Batch Processing

During the transaction cancellation process, you need to execute the following batches in the specified order:

1. Pending Bill Deletion (C1-DELBL)
2. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **CNCL**
3. Cancellation (C1-TXCNC)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction cancellation process:

Transaction Rollback

In the transaction aggregation process, an error occurs when:

- Transaction validation fails.
- Transaction does not satisfy any rule invoked through the rule type.
- Effective pricing is not available for one or more price items to which a transaction is mapped.
- SQIs are not defined for the price item — division combination.
- Transaction aggregation rule is not defined for the SQI.
- Exchange rate is not available during currency conversion.
- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.
- Price Item parameters specified in the output parameters are not effective for the price item on the processing date.
- Mandatory price item parameter which is effective on the processing date is not specified in the output parameter.
- Parameter value is not specified for all mandatory price item parameters which are effective on the processing date.

In such cases, the status of the transaction is changed to **Error**. You can configure the required setup and then execute the following batches once again in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)

Note: You must execute the **Populate CI_TXN_DTL_PRITM_SUMMARY Table (C1-TXNPS)** batch only when the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1_FM** feature configuration is set to **true**.

6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU)

But, before you execute these batches, you need to rollback the transaction status to **Uploaded (UPLD)**. The system allows you to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. When you rollback a transaction, the corresponding transaction legs are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. On rolling back a transaction leg whose effective pricing has the **Ignore Transaction** field set to **Yes** and the **Rating Criteria** field set to **Rate Transactions (RITX)**, the corresponding calculation lines are also deleted along with the transaction leg. If you rollback a partially disaggregated transaction which is in the **Error (EROR)** status, the transaction legs which are in the **Error (EROR)** status are only deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

You need to execute the **Rollback (C1-TXNRB)** batch to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Status	Used to indicate whether you want to rollback transactions which are in the Ignored or Error status. The valid values are: <ul style="list-style-type: none"> • IGNR • EROR 	Yes
Transaction Header ID	Used when you want to rollback transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to rollback transactions which are received from a particular transaction source.	No
Division	Used when you want to rollback transactions belonging to a particular division.	No
Rollback From Date	Used when you want to rollback transactions which were performed from a particular date onwards. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: You must specify the date in the YYYY-MM-DD format. The rollback from date cannot be later than the rollback to date.</p> </div>	No
Rollback To Date	Used when you want to rollback transactions which were performed till a particular date. <div style="border: 1px solid black; padding: 5px; margin-top: 5px;"> <p>Note: You must specify the date in the YYYY-MM-DD format. The rollback to date cannot be earlier than the rollback from date.</p> </div>	No

Parameter Name	Description	Mandatory (Yes or No)
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process, you need to attach a preprocessing algorithm on the **Transaction Feed Management Rollback Preprocessing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Rollback (C1-TXNRB)** batch. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1_ROBK_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the rollback process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rollback Pre-Processing** algorithm spot of the respective division. You can refer to the **C1_ROBK_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Feed Status Transition

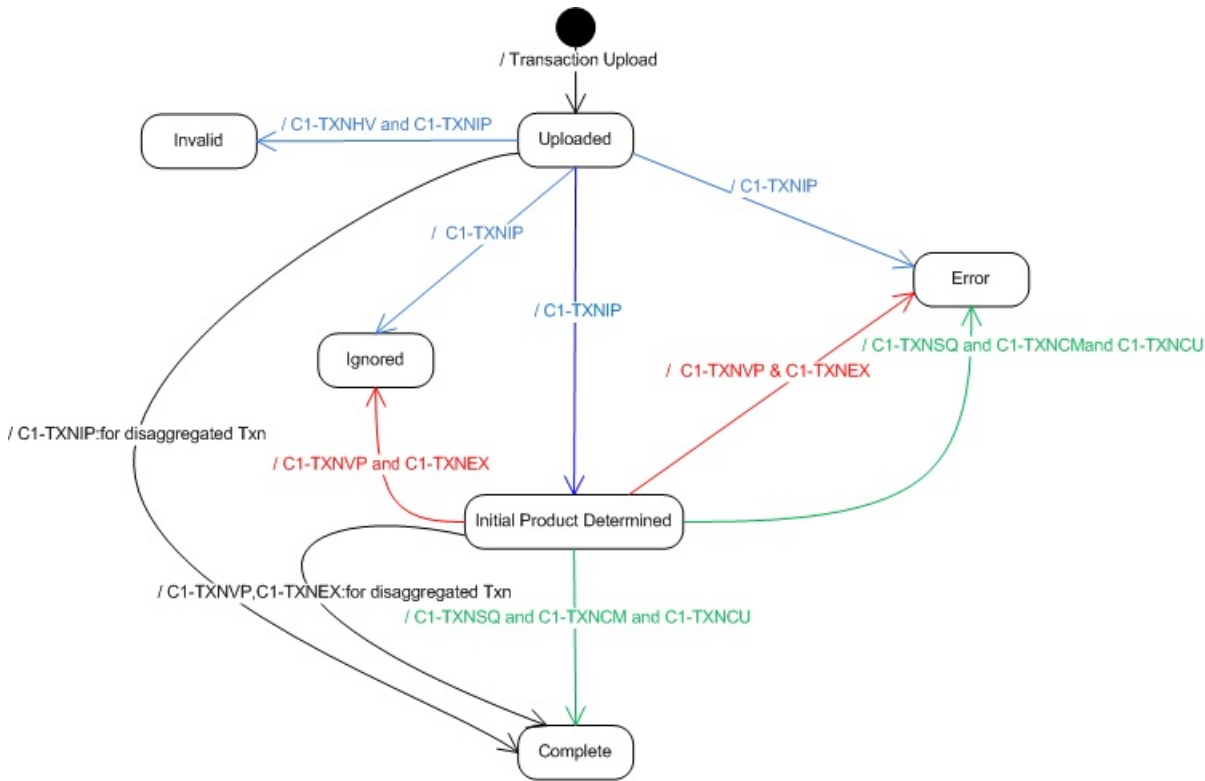

The following figure graphically indicates how a feed moves from one status to another during the transaction feed management process:

Transaction Status Transition

Aggregation

The following figure graphically indicates how a transaction moves from one status to another during the aggregation process:

Disaggregation, Rollback, and Cancellation

The following figure graphically indicates how a transaction moves from one status to another during the disaggregation, rollback, and cancellation processes:

Transaction Leg Status Transition

This section explains how a transaction leg moves from one status to another during the following sub-processes:

- Transaction Aggregation

Note: This is the aggregation process for transactions that are recently uploaded or reaggregated after being fully disaggregated.

- Transaction Rollback
- Transaction Cancellation
- Transaction Disaggregation
- Transaction Reaggregation

Note: This is the aggregation process for transactions that are reaggregated after being partially disaggregated.

Transaction Aggregation

The following table indicates how a transaction leg moves from one status to another during the aggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNIP	Transaction validation fails due to incomplete transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	INVALID	Not applicable as the transaction legs are not yet created
2	C1-TXNIP	Transaction validation fails due to invalid or incorrect transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
3	C1-TXNIP	Transaction validation is successful but no product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
4	C1-TXNIP	Transaction validation is successful and product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
5	C1-TXNIP	Transaction validation is successful and the transaction is ignored by the rule based on the transaction attributes	UPLOADED	Not applicable as the transaction legs are not yet created	IGNORED	Not applicable as the transaction legs are not yet created
6	C1-TXNVP and C1-TXNEX	Effective pricing is not found for any of the transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
7	C1-TXNVP and C1-TXNEX	Ignore Transaction flag is set to Y in the effective pricing for one or more transaction legs but not for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED (when Ignore Transaction flag is set to Y in the effective pricing) INITIAL PRODUCT DETERMINED (when Ignore Transaction flag is set to N in the effective pricing)
8	C1-TXNVP and C1-TXNEX	Ignore Transaction flag is set to Y in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED	IGNORED

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
9	C1-TXNVP and C1-TXNEX	Ignore Transaction flag is set to N in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
10	C1-TXNSQ and C1-TXNCM	SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	COMPLETED	COMPLETED

Transaction Rollback

The following table indicates how a transaction leg moves from one status to another during the rollback process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNRB	Transactions with the Error (EROR) status are rolled back	ERROR	ERROR	UPLOADED	Not applicable as the transaction legs are not yet created
2	C1-TXNRB	Transactions with the Ignored (IGNR) status are rolled back	IGNORED	IGNORED	UPLOADED	Not applicable as the transaction legs are not yet created

Transaction Cancellation

The following table indicates how a transaction leg moves from one status to another during the cancellation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXCNC	Transactions in any status are cancelled	UPLOADED, INITIAL PRODUCT DETERMINED, ERROR, COMPLETED, INVALID, or IGNORED	INITIAL PRODUCT DETERMINED, ERROR, IGNORED, or COMPLETED	CANCELLED	CANCELLED

Transaction Disaggregation

The following table indicates how a transaction leg moves from one status to another during the disaggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-DISTG	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status
2	C1-DISTG	Transactions in the INVALID or CANCELLED status cannot be disaggregated. In addition, the newly uploaded transactions and fully disaggregated transactions which are in the UPLOADED status cannot be disaggregated.	CANCELLED, INVALID, or UPLOADED	Not applicable as the transactions will not have any legs in these statuses	No change in the status	Not applicable as the transactions will not have any legs in these statuses
3	C1-IDENT	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
4	C1-IDENT	Transaction has already been disaggregated and is in the UPLOADED status. The transaction legs which were not affected are moved in the staging table and the transaction legs which were affected are deleted. Now, if the effective pricing is changed for the account to which the transaction leg in the staging table is mapped, then that transaction leg must be disaggregated. Thus, disaggregation is done even though the transaction is in the UPLOADED status.	UPLOADED	UPLOADED	No change in the status	No change in the status
5	C1-PDTXN	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED Note: The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	UPLOADED	Transaction legs which are affected during disaggregation are deleted and the other legs which are not affected are moved to the staging table.

Transaction Reaggregation

The following table indicates how a transaction leg moves from one status to another during the reaggregation process:

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
1	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED
2	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. IGNORE_SW is set to Y).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
3	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. All the transaction legs were in the COMPLETED status. One of the transaction legs in the COMPLETED status was disaggregated. During reaggregation, no product was derived for this transaction leg.	COMPLETED	COMPLETED	ERROR	Derived Leg: No new transaction leg was created Existing Legs: COMPLETED
4	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, no product was derived for the transaction.	ERROR	No Transaction Legs Exist	ERROR	Derived Leg: No new transaction leg was created Existing Legs: None
5	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, a product was derived for the transaction.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Leg: INITIAL PRODUCT DETERMINED Existing Legs: None

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
6	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated. During reaggregation, the effective pricing was not found for the transaction leg.	COMPLETED	COMPLETED, IGNORED	ERROR	Derived Leg: ERROR Existing Legs: COMPLETED and IGNORED
7	C1-TXNVP and C1-TXNEX	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, the effective pricing is found for the transaction legs.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Legs: INITIAL PRODUCT DETERMINED Existing Legs: None
8	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. Ignore Transaction flag is set to Y).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED Existing Legs: COMPLETED and IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
9	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. Ignore Transaction flag is set to Y).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED
10	C1-TXNSQ and C1-TXNCM	While reaggregating transaction legs, SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion.	COMPLETED, ERROR, IGNORED Note: There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	ERROR	Derived Legs: ERROR Existing Legs: No change in the status
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs which were earlier disaggregated and now reaggregated.	COMPLETED, ERROR, IGNORED Note: There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	COMPLETED	Derived Leg: COMPLETED Existing Legs: No change in the status

Transaction Data File

You can upload a transaction data file in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Before uploading a transaction data file, you need to ensure that it contains the following:

- **File Header** - Every file must have one header record. It should contain the following details:

Header Data	Description	Mandatory (Yes or No)
Transaction Source	Used to specify the source from where the transactions are received.	Yes
Header Date (YYYYMMDD)	Used to specify the header date.	Yes
Transaction Header ID	Used to specify the external transaction header ID.	Yes
File Name	Used to specify the file name.	Yes
Number of Transactions	Used to specify the total number of transaction records in the file.	Yes
Total Transaction Volume	Used to specify the total transaction volume.	Yes
Total Transaction Amount	Used to specify the total transaction amount.	Yes

- **Transaction Record** - Every file must have one or more transaction records. It should contain the following details:

Record Data	Description	Mandatory (Yes or No)
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Source	Used to specify the source from where the transaction is received.	Yes
Transaction Date (YYYYMMDD)	Used to specify the date when the transaction was performed.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	Yes
Customer Reference Number	Used to indicate the customer who has performed the transaction.	No
Division	Used to specify the division to which the transaction belongs.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Transaction Amount	Used to specify the transaction amount.	Yes

Record Data	Description	Mandatory (Yes or No)
Transaction Currency	Used to specify the currency in which the transaction was performed.	Yes
	Note: If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction. The valid values are: <ul style="list-style-type: none"> • Plus (+) • Minus (-) 	Yes
Account Identifier Type	Used to indicate the account identifier type.	Yes
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes
UDF_NUM_1, UDF_NUM_2, UDF_NUM_3, ..., UDF_NUM_20	Used to specify additional information about the transaction.	No
UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10	Used to specify additional transaction amount.	Yes (Conditional)
		Note: The UDF_AMT_N is required when the corresponding UDF_CCY_N is specified.
UDF_CCY_1, UDF_CCY_2, UDF_CCY_3,, UDF_CCY_10	Used to specify additional transaction currency. Note: If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	Yes (Conditional)
		Note: The UDF_CCY_N is required when the corresponding UDF_AMT_N is specified.
UDF_DTTM_1, UDF_DTTM_2,, UDF_DTTM_5	Used to specify additional information about the transaction.	No
UDF_CHAR_1, UDF_CHAR_2, UDF_CHAR_3, ..., UDF_CHAR_50	Used to specify additional information about the transaction.	No
	Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	

Error List

The following table lists the errors that may occur while executing various batches in the transaction feed management process. It also indicates how you can resolve these errors.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	102	{Checksum Validation Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> The value other than 'Y', 'y', 'N' or 'n' is specified for the Checksum Validation Required parameter.
C1-TXNHV	102	{Duplicate Check Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> The value other than 'Y', 'y', 'N' or 'n' is specified for the Duplicate Check Required parameter.
C1-TXNHV	1314	The Transaction Source is mandatory.	17000	The possible issues could be: <ul style="list-style-type: none"> The data is not available in the Transaction Source column.
C1-TXNHV	1332	Sum of transaction records in the header does not match the total number of records in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system.
C1-TXNHV	1333	Sum of transaction volume in the header does not match the total transaction volume in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system.
C1-TXNHV	1334	Sum of transaction amount in the header does not match the total transaction amount in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system.
C1-TXNHV	1338	The Transaction Header ID already exists in the system. Please enter unique header ID.	17000	The possible issues could be: <ul style="list-style-type: none"> The same file is uploaded multiple times in the system.
C1-TXNHV	1341	Exception occurred during the transaction header validation.	17000	The possible issues could be: <ul style="list-style-type: none"> The data is not available in the required format.
C1-TXNHV	1421	Transaction records does not exist in the file. Please check.	17000	The possible issues could be: <ul style="list-style-type: none"> Inappropriate file is uploaded in the system.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	1422	Sum of transaction records in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> The value available in the Number of Transactions column is less than or equal to zero.
C1-TXNHV	1423	Sum of transaction volume in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> The value available in the Total Transaction Volume column is less than or equal to zero.
C1-TXNHV	1663	Transaction Header External Id is missing.	17000	The possible issues could be: <ul style="list-style-type: none"> The data is not available in the Transaction Header ID column.
C1-TXNHV	1664	Header Transaction Amount should be greater than 0.	17000	The possible issues could be: <ul style="list-style-type: none"> The value available in the Total Transaction Amount column is less than or equal to zero.
C1-TXNIP	102	{Chunk Size} field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Chunk Size parameter is less than or equal to one.
C1-TXNIP	102	{ Maximum Batch Size } field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Maximum Batch Count parameter is greater than the value specified for the Chunk Size parameter.
C1-TXNIP	106	Value { Given Transaction Header Id } too long for field { transactionHeaderId }. Maximum length: 14. Found: { Length of given Transaction Header Id}	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Transaction Header ID parameter exceeds the maximum length of 14 characters.
C1-TXNIP	106	Value { Given Transaction Source Code } too long for field { transactionSource }. Maximum length: 30. Found: { Length of given Transaction Source Code}	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Transaction Source parameter exceeds the maximum length of 30 characters.
C1-TXNIP	106	Value { Given Transaction Division } too long for field { division }. Maximum length: 5 Found: { Length of given Transaction Division}	11001	The possible issues could be: <ul style="list-style-type: none"> The value specified for the Division parameter exceeds the maximum length of 5 characters.

Feed Management Dashboard

The **Feed Management Dashboard** screen allows you to view the details of a transaction feed. It allows you to drill down and view:

- Transaction volume details of a feed at the division level
- Transactions in a feed which belong to a division
- Legs of a transaction
- SQIs which are associated with the price item-division combination to which a transaction is mapped
- Calculation lines generated for a transaction leg
- Characteristics defined for each calculation line

This screen consists of the following zones:

- [Search - Feed Level](#) on page 760
- [Division Level Information](#) on page 762
- [Transaction Level Information](#) on page 763
- [Transaction Leg Information](#) on page 764
- [Transaction Leg Service Quantity](#) on page 765
- [Transaction Leg Calculation Lines](#) on page 765
- [Transaction Leg Calc Line Characteristics](#) on page 767

Search - Feed Level

The **Search - Feed Level** zone allows you to search for a transaction feed using various search criteria. You can view the details of a transaction feed which is already uploaded in the system. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Feed Header Date From	Used to search for transaction feeds having header date later than or equal to the specified date.	No
Feed Header Date To	Used to search for transaction feeds having header date earlier than or equal to the specified date.	No
Transaction Source	Used to search for transaction feeds received from a particular transaction source.	No
File Name	Used to search for a transaction feed based on the file name.	No
Feed Load Date From	Used to search for transaction feeds which are uploaded on or later than the specified date.	No
Feed Load Date To	Used to search for transaction feeds which are uploaded on or earlier than the specified date.	No
Transaction Header ID	Used to search for a transaction feed based on the header ID.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the file from where the transaction feed is uploaded.
Transaction Source	Displays the transaction source from where the transaction feed is received.
Transaction Header ID	Displays the transaction header ID.
	Note: The transaction header ID is generated automatically when the file is uploaded.
Transaction Header External ID	Displays the ID mentioned in the file header.
Feed Header Date	Displays the date mentioned in the file header.
Feed Load Date	Displays the date when the transaction feed was uploaded in the system.
Feed Status	Displays the status of the transaction feed. The valid values are: <ul style="list-style-type: none"> • Uploaded - Indicates that the transaction feed is uploaded. • Validated - Indicates that the file header is validated. • Cancelled - Indicates that the transaction feed is cancelled. • Invalid - Indicates that the file header validation failed.
Error Message	Indicates the reason why the file header validation failed.
Total Volume	Displays the total transaction volume of the feed.
Uploaded Volume	Displays the total transaction volume which is uploaded in the system.
INPD Volume	Displays the total transaction volume which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume for which billable charges are created and completed in the system.

Column Name	Column Description
Error Volume	Displays the total transaction volume which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume which is cancelled in the system.
Ignored Volume	Displays the total transaction volume which is ignored in the system.
Invalid Volume	Displays the total transaction volume which is invalid.

Division Level Information

The **Division Level Information** zone allows you to drill down and view the transaction volume details of a feed at the division level. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used when you want to view the transaction volume details of a particular division received through the feed. Note: You can only view those divisions to which you have access in the Division list.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division.
Total Volume	Displays the total transaction volume of the division.
Uploaded Volume	Displays the total transaction volume (of the division) which is uploaded in the system.
INPD Volume	Displays the total transaction volume (of the division) which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume (of the division) for which billable charges are created and completed in the system.
Error Volume	Displays the total transaction volume (of the division) which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume (of the division) which is cancelled in the system.
Ignored Volume	Displays the total transaction volume (of the division) which is ignored in the system.
Invalid Volume	Displays the total transaction volume (of the division) which is invalid.

By default, the **Division Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction feed in the **Search — Feed Level** zone.

Transaction Level Information

The **Transaction Level Information** zone lists transactions in a feed which belong to a division. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Transaction Status	Used to search transactions with a particular status.	No
External Reference Number	Used to search a transaction with a particular external reference number.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
External Reference Number	Displays the external reference number of the transaction.
Division	Indicates the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction was performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.

Column Name	Column Description
Customer Reference Number	Indicates the customer who performed the transaction.
Transaction Status	Indicates the status of the transaction.
Error Message	Indicates the reason why the validation, price item determination, or billable charge creation process failed.
Rule	Indicates the rule which was met while determining initial price item for the transaction. Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction. Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction.

Transaction Leg Information

The **Transaction Leg Information** zone lists the legs of a transaction. It contains the following columns:

Column Name	Column Description
Transaction ID	Indicates the transaction to which the transaction leg belongs.
Sequence	Displays the sequence number of transaction leg.
Account Identifier Type	Indicates the type of account identifier to which the transaction is mapped.
Account Identifier	Indicates the account which will bear the charges for the transaction.
Price Item	Indicates the price item to which the transaction is mapped.
Variance	Indicates the variance parameter which is used along with the price item for determining price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

Column Name	Column Description
Billable Charge ID	Indicates the billable charge which is created for the transaction leg.
	<p>Note:</p> <p>The data appears in this column only when the billable charge is created for the transaction leg.</p> <p>It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the billable charge.</p>
Transaction Calculation ID	Displays the transaction calculation ID.
	Note: The data appears in this column only when the transaction leg is rated before billing.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction in the **Transaction Level Information** zone.

Transaction Leg Service Quantity

The **Transaction Leg Service Quantity** zone lists the SQIs which are associated with the price item-division combination to which a transaction is mapped. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Daily Service Quantity	Displays the SQI value which is calculated using the transaction aggregation rule defined for the price item - division combination.

By default, the **Transaction Leg Service Quantity** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Transaction Leg Calculation Lines

During the pass through charge calculation, a calculation line is created for each rate component. The **Transaction Leg Calculation Lines** zone lists the calculation lines created for a transaction leg. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate	Displays the rate which is used for calculation.
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off. This amount appears in the invoice currency.
Precise Calculated Amount	Displays the calculated charge amount. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"> • Y • N
Description on Bill	Displays the summarized information about the calculation line that will be printed on the bill.
Distribution Code	Indicates the distribution code associated with the rate component.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Transaction Leg Calc Line Characteristics

The **Transaction Leg Calc Line Characteristics** zone lists the characteristics defined for each calculation line. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Transaction Leg Calc Line Characteristics** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

Searching for a Transaction Feed

Procedure

To search for a transaction feed:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Feed Management Dashboard**.
The **Feed Management Dashboard** screen appears.
3. Enter the search criteria in the **Search — Feed Level** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction feeds that meet the search criteria appears in the **Search Results** section.

View Billed Transactions

The **View Billed Transactions** screen allows you to view the transactions which are billed to the person. This screen consists of the following zones:

- [Search Bill](#) on page 771
- [Bill Segments](#) on page 773
- [Transaction Details](#) on page 774
- [SQ Details](#) on page 775

You can also access this screen from the **Bill** screen by selecting the **Go To View Billed Transactions** option from the **Bill ID** context menu. The only difference is that the **Search Bill** zone does not appear when you access this screen from the **Bill** screen.

Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search bills of a particular person. Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Person Search window appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to search a particular bill.	No
	Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Bill Search window appears.	
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Division	Used to search bills of accounts that belong to a particular division.	Yes (Conditional)
	Note: You can only view those divisions to which you have access in the Division list.	
Primary Account Identifier Type	Used to select the identifier type based on which you want to search bills of a particular account.	Yes (Conditional)
		Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used when you want search bills of a particular account.	Yes (Conditional)
		Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Primary Person Identifier Type	Used to select the identifier type based on which you want to search bills of a particular person.	Yes (Conditional)
		Note: If you enter the person identifier as a search criteria, you have to select the person identifier type.
Primary Person Identifier	Used when you want search bills of a particular person.	Yes (Conditional)
		Note: If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Bill Completion From Date	Used to search bills which are completed on or later than the specified date.	No
Bill Completion To Date	Used to search bills which are completed on or earlier than the specified date.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Status	Used to search bills with a particular status. The valid values are: <ul style="list-style-type: none"> Complete Pending 	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID. Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Bill Status	Displays the status of the bill.
Completion Date	Displays the date when the bill was completed.
Total Bill Amount	Displays the total amount billed to the person.
Invoice Currency	Displays the currency in which the amount is billed to the person.
Account Identifier Type	Displays the primary account identifier type.
Account Identifier	Indicates the account for which the bill is created.
Person Identifier Type	Displays the primary person identifier type.
Person Identifier	Indicates the person for whom the bill is created.
Division	Displays the division to which the account belongs.
Alternate Bill ID	Displays the alternate bill ID.

Bill Segments

The **Bill Segments** zone lists the bill segments of a bill. This zone contains the following columns:

Column Name	Column Description
Bill Segment ID	Displays the bill segment ID. Note: It has a link. On clicking the link, the Bill Segment screen appears with the details of the respective bill segment.
Status	Indicates the status of the bill segment.

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Amount	Displays the amount of the bill segment.
Currency	Indicates the currency in which the bill segment is generated.
Price Item	Indicates the price item for which the bill segment is generated.
Variance Parameter	Indicates the variance parameter which is used along with the price item for determining price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Billable Charge ID	Indicates the billable charge for which the bill segment is generated. Note: It has a link. On clicking the link, the Billable Charge screen appears where you can view the details of the respective billable charge.
Account Information	Indicates the member account (in the invoicing group) for which the bill segment is generated.
Invoice Construct ID	Indicates the construct through which the bill segment is generated.

By default, the **Bill Segments** zone does not appear in the **View Billed Transactions** screen. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Search** zone.

Transaction Details

The **Transaction Details** zone lists the transactions for which the billable charge (corresponding to the bill segment) is created. This zone contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. Note: It has a link. On clicking the link, the Transaction Details screen appears with the details of the respective transaction.
Transaction Date	Displays the date when the transaction was performed.
Transaction Volume	Displays the transaction volume.

Column Name	Column Description
Transaction Amount	Displays the transaction amount.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Initial Price Item	Indicates the price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction.
	Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction.

By default, the **Transaction Details** zone does not appear in the **View Billed Transactions** screen. It appears only when you click the **Broadcast**  icon corresponding to the bill segment in the **Bill Segments** zone.

Searching for an UPLD Transaction

Procedure

To search for an uploaded transaction:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.
The **Transaction Details** screen appears.

3. Select the **Uploaded** option from the **Search By** list to indicate that you want to search for a transaction which is recently uploaded in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	Note: You can only view those divisions to which you have access in the Division list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
	Note: It has a link. On clicking the link, the Transaction Details screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No
Manual Entry	Indicates whether the transaction is manually added in the system. The valid values are: <ul style="list-style-type: none"> • Yes • No
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Transaction Information	Displays additional information about the transaction.
	Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction.

6. View the legs of the transaction in the **Transaction Legs** zone, if required.

Note: You can only view the legs of an uploaded transaction which is partially disaggregated.

Searching for an INPD Transaction

Procedure

To search for a transaction for which a price item is determined:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.

The **Transaction Details** screen appears.

3. Select the **Initial Price Item Determined** option from the **Search By** list to indicate that you want to search for a transaction for which a price item is determined in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division. Note: You can only view those divisions to which you have access in the Division list.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Price Item	Used to search transactions which are mapped to a particular price item.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No 	No

4. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all the input fields except the date fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID. Note: It has a link. On clicking the link, the Transaction Details screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Rule	Indicates the rule which was met while determining initial price item for the transaction. Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction. Note: It has a link. On clicking the link, the Transaction Details screen appears where you can view the details of the transaction.

6. View the legs of the transaction in the **Transaction Legs** zone, if required.

Viewing the Transaction Legs

Procedure

To view the legs of a transaction:

- Search for the transaction in the **Transaction Details** screen.
- In the **Search Results** section, click the **Broadcast**  icon corresponding to the transaction whose legs you want to view.

The **Transaction Legs** zone appears. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
Transaction Leg Status	Indicates the status of the transaction leg. The valid values are: <ul style="list-style-type: none"> Uploaded (UPLD) Initial Price Item Derived (INPD) Ignored (IGNR) Error (EROR) Completed (COMP)
Account Information	Indicates the account which will bear the charges for the transaction. The string includes the account identifier type, account identifier, and division (to which the derived account belongs).
Initial Price Item Code	Indicates the initial price item to which the transaction is mapped.

Column Name	Column Description
Variance Parameter	Indicates the variance parameter which is used along with the final price item for determining price item pricing.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the final price item for determining price item pricing.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
Final Price Item Code	Indicates the final price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	Note: It has a link. On clicking the link, the Rule screen appears where you can view the details of the rule.
Price Assignment ID	Indicates the effective pricing which is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or variance parameter or price item parameters (parameter group) combination on the processing date.
Aggregate Transaction	Indicates whether the transaction leg is aggregated. The valid values are: <ul style="list-style-type: none"> • Yes • No
Billable Charge ID	Indicates the billable charge in which the transaction leg is included for billing.
Division	Indicates the division to which the derived account belongs. The derived account means the account which will bear the charges for the transaction.
Sequence Number	Displays the sequence number of the transaction leg.
Error Message	Indicates the reason why the price item pricing verification or billable charge creation process failed.

Note:

The **Broadcast**  icon appears corresponding to an UPLD, INPD, IGNR, EROR and COMP transaction. This is because you can only view legs of an UPLD, INPD, IGNR, EROR and COMP transaction.

You can only view the legs of an uploaded transaction which is partially disaggregated.

3. View the details of the transaction legs in the **Transaction Legs** zone.

Viewing Error Messages

Procedure

To view the error messages logged for a transaction:

1. Search for the transaction which is in the **Invalid (INVL)** or **Error (EROR)** status in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the transaction whose error messages you want to view.

The **Transaction Error Messages** zone appears. It contains the following columns:

Column Name	Column Description
Error Message	Indicates the reason why the transaction is in the Invalid (INVL) or Error (EROR) status.

Note: The **Transaction Error Messages** zone appears when the transactions are in the **Invalid (INVL)** status and when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

3. View the error messages in the **Transaction Error Messages** zone.

Procedure

To view the details of a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose details you want to view.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description
Transaction ID	Displays the transaction ID. Note: The transaction ID is generated automatically when the transaction is uploaded or manually created in the system.
Transaction Source	Displays the transaction source from where the transaction was received.
Division	Displays the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Manual Entry	Indicates whether the transaction was manually entered in the system.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Indicates the person who performed the transaction.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Currency	Indicates the currency in which the transaction was performed.
Transaction Volume	Displays the transaction volume.
Account ID	Indicates the account for which the transaction was performed.
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Displays additional information about the transaction. Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Displays additional information about the transaction. Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.

Field Name	Field Description
Additional Date 1, Additional Date 2,, Additional Date 5	Displays additional information about the transaction.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20	Displays additional information about the transaction.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	
Additional Data 1, Additional Data 2, Additional Data 3,, Additional Data 50	Displays additional information about the transaction.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.

How to copy a transaction	Copying a Transaction on page 801

Adding a Transaction

Prerequisites

To add a transaction manually, you should have:

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To add a transaction manually:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.
The **Transaction Details** screen appears.
3. Click the **Add** link in the upper right corner of the **Search** zone.
The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction was received.	Yes
Division	Used to specify the division to which the transaction belongs.	Yes
	Note: You can only view those divisions to which you have access in the Division list.	
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction was performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Customer Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional)
		Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes (Conditional)
		Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction was performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional)
	Note: These fields appear only when you select the transaction source and record type from the respective list.	Note: This field is required when you are specifying the currency in the corresponding field.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

Field Name	Field Description	Mandatory (Yes or No)
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional)
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Note: These fields appear only when you select the transaction source and record type from the respective list.	Note: This field is required when you are specifying the amount in the corresponding field.
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Note: These fields appear only when you select the transaction source and record type from the respective list.	
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Note: These fields appear only when you select the transaction source and record type from the respective list.	
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	Note: These fields appear only when you select the transaction source and record type from the respective list.	

4. Enter the required details.
5. Click **Save**.

The transaction is added in the system. If the following option types are set in the **Dummy Header (C1-TXNDMYID)** feature configuration, the header details including the header ID are generated automatically for the manually added transaction:

- Dummy File Name
- Dummy Header ID
- Dummy Transaction Source
- Dummy Header Date

Note: The header ID remains same for all transactions which are manually created on a particular date. You can cancel manually added transactions using the Transaction Header ID.

Copying a Transaction

Instead of adding a transaction from scratch, you can create a copy of similar transaction and then edit it accordingly.

Prerequisites

To copy a transaction, you should have:

- Transaction (whose copy you want to create) available in the application
- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To copy a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose copy you want to create.

The **Transaction Details** screen appears. Note that the fields are in the read-only mode.

3. Click **Copy**.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction was received.	Yes
Division	Used to specify the division to which the transaction belongs. Note: You can only view those divisions to which you have access in the Division list.	Yes
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction was performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Price Item Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes (Conditional) Note: If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction was performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional) Note: This field is required when you are specifying the currency in the corresponding field.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional) Note: This field is required when you are specifying the amount in the corresponding field.
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

Field Name	Field Description	Mandatory (Yes or No)
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3,, Additional Numeric Data 20	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50	Used to specify additional information about the transaction.	No
Note: If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

4. Enter the required details.
5. Click **Save**.

The new transaction is added in the system.

Transaction Source

The **Transaction Source** screen allows you to define, edit, delete, and copy a transaction source. This screen consists of the following zones:

- [Search Transaction Source](#) on page 804

Search Transaction Source

The **Search Transaction Source** zone allows you to search for a transaction source. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search a particular transaction source.	No
Description	Used to search transaction sources with a particular description.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Source	Displays the transaction source.
Description	Displays the description of the transaction source.
Account Identifier Type	Indicates the type of account identifier that will be received from the transaction source.
Edit	On clicking the Edit  icon, the Transaction Source screen appears where you can edit the details of the transaction source.
Delete	On clicking the Delete  icon, you can delete the transaction source.
	Note: You can only delete a transaction source which is not yet used.
Copy	On clicking the Copy  icon, the Transaction Source screen appears where you can create a transaction source using an existing transaction source.

You can create a new transaction source by clicking the **Add** link in the upper right corner of this zone.

Searching for a Transaction Source

Procedure

To search for a transaction source:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **T** and then click **Transaction Source**.

The **Transaction Source** screen appears.

- Enter the search criteria in the **Search Transaction Source** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of transaction sources that meet the search criteria appears in the **Search Results** section.

Defining a Transaction Source

Prerequisites

To define a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To define a transaction source:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **T** and then click **Transaction Source**.

The **Transaction Source** screen appears.

- Click the **Add** link in the upper right corner of the **Search Transaction Source** zone.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes
	Note: You cannot specify any special character except underscore (_) in the transaction source.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- Enter the required details.
- Click **Save**.

The transaction source is defined.

Editing a Transaction Source

Prerequisites

To edit a transaction source, you should have:

- Account identifier types defined in the application

Procedure

To edit a transaction source:

- Search for the transaction source in the **Transaction Source** screen.
- In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the transaction source whose details you want to edit.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Displays the transaction source.	Not applicable
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- Modify the required details.
- Click **Save**.

The changes made to the transaction source are saved.

Deleting a Transaction Source

Procedure

To delete a transaction source:

- Search for the transaction source in the **Transaction Source** screen.

- In the **Search Results** section, click the **Delete** () icon in the **Delete** column corresponding to the transaction source that you want to delete.

A message appears confirming whether you want to delete the transaction source.

Note: You can only delete a transaction source which is not yet used.

- Click **OK**.

The transaction source is deleted.

How to search for a transaction source	Searching for a Transaction Source on page 804

Copying a Transaction Source

Instead of creating a transaction source from scratch, you can create a new transaction source using an existing transaction source. This is possible through copying a transaction source. Once you create a copy of a transaction source, the record types defined for the original transaction source are also copied to the new transaction source.

Prerequisites

To copy a transaction source, you should have:

- Transaction source (whose copy you want to create) defined in the application
- Account identifier types defined in the application

Procedure

To copy a transaction source:

- Search for the transaction source in the **Transaction Source** screen.
- In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the transaction source whose copy you want to create.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes
	Note: You cannot specify any special character except underscore (_) in the transaction source.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- Enter the required details.
- Click **Save**.

The new transaction source is defined.

How to search for a transaction source	Searching for a Transaction Source on page 804

Transaction Record Type

The **Transaction Record Type** screen allows you to define, edit, delete, and copy a transaction record type. While defining a transaction record type, you need to define a rule type. This rule type is invoked for transactions with the transaction source and record type combination. While defining a rule type, you can select the transaction detail fields that you want to use as input or output parameters in a rule.

Besides using the transaction detail fields, the system allows you to use fields which are not part of the standard transaction details. These fields are referred to as temporary fields and are defined similar to other fields, but are not associated with any ORMB tables. You need to associate temporary fields with the rule type while defining a transaction record type. Once associated, you can use the temporary field as input or output parameter while defining a rule using the rule type.

Note: At present, you can only associate a temporary field with a rule type, but cannot use the temporary field in a rule which is created using the rule type. The latter part of the functionality will be available in a future release of Oracle Revenue Management and Billing.

The **Transaction Record Type** screen consists of the following zones:

- [Search Transaction Record Type](#) on page 808

Search Transaction Record Type

The **Search Transaction Record Type** zone allows you to search for a transaction record type. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search transaction record types defined for a particular transaction source.	No
Transaction Record Type	Used to search a particular transaction record type.	No
Description	Used to search transaction record types with a particular description.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Record Type	Displays the transaction record type.
Description	Displays the description of the transaction record type.
Transaction Source	Indicates the transaction source for which the transaction record type is defined.

Column Name	Column Description
Rule Type	Indicates the rule type that is invoked for the transaction record type. Note: It has a link. On clicking the link, the View Rule Type screen appears where you can view the details of the respective rule type.
Edit	On clicking the Edit () icon, the Transaction Record Type screen appears where you can edit the details of the transaction record type.
Delete	On clicking the Delete () icon, you can delete the transaction record type. Note: You can delete a transaction record type when: <ul style="list-style-type: none"> • It is not yet used. • Rules are not yet defined using the rule type which is invoked by the transaction source and record type combination.
Copy	On clicking the Copy () icon, the Transaction Record Type screen appears where you can create a new transaction record type using an existing transaction record type.

You can create a new transaction record type by clicking the **Add** link in the upper right corner of this zone.

Defining a Transaction Record Type

Prerequisites

To define a transaction record type, you should have:

- Transaction sources defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To define a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.

The **Transaction Record Type** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Transaction Record Type** zone.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	Note: You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
	Note: You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	<p>Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.</p> <p>Note: This algorithm checks whether:</p> <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	No
Info String Algorithm	<p>Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.</p> <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 	Yes
	<p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p>	

4. Enter the required details.

Note: You can search for a transaction source and algorithm by clicking the **Search**  icon corresponding to the respective field.

5. Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
6. If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

Note:

You can search for a field by clicking the **Search**  icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add**  icon and then repeat step 7. However, if you want to remove a temporary field from the transaction record type, click the **Delete**  icon corresponding to the temporary field.

7. Click **Save**.

The transaction record type is defined.

Editing a Transaction Record Type

Prerequisites

To edit a transaction record type, you should have:

- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To edit a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the transaction record type whose details you want to edit.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	Note: The Search  icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	Note: You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	Note: You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.	No
	Note: This algorithm checks whether: <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Info String Algorithm	<p>Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.</p> <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	No
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> • 00 • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 • 11 • 12 • 13 • 14 • 15 	Yes
	<p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<p>Note:</p> <p>The Search () icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p>	

3. Modify the required details.

Note:

You can search for an algorithm and field by clicking the **Search** () icon corresponding to the respective field. You can edit and remove an input or output parameter from a rule type only when it is not yet used in a rule (which is created using the rule type).

If you want to add more than one temporary field to the transaction record type, click the **Add** () icon and then specify the details in the **Temporary Fields** section. However, if you want to remove a temporary field from the transaction record type, click the **Delete** () icon corresponding to the temporary field.

4. Click **Save**.

The changes made to the transaction record type are saved.

Deleting a Transaction Record Type

Procedure

To delete a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Delete** () icon in the **Delete** column corresponding to the transaction record type that you want to delete.

A message appears confirming whether you want to delete the transaction record type.

Note: You can only delete a transaction record type which is not yet used.

3. Click **OK**.

The transaction record type is deleted.

Copying a Transaction Record Type

Instead of creating a transaction record type from scratch, you can create a new transaction record type using an existing transaction record type. This is possible through copying a transaction record type. Once you create a copy of a transaction record type, the input or output parameters and temporary fields are also copied to the new transaction record type. You can then edit the details, if required.

Prerequisites

To copy a transaction record type, you should have:

- Transaction record type (whose copy you want to create) defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

Procedure

To copy a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Copy** ( icon in the **Copy** column corresponding to the transaction record type whose copy you want to create.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	Note: The Search () icon appears corresponding to this field. On clicking the Search icon, the Search Transaction Source window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	Note: You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	Note: You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Validation Algorithm	<p>Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.</p> <p>Note: This algorithm checks whether:</p> <ul style="list-style-type: none"> • The values specified against the output parameters exist in the system • The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	No
Info String Algorithm	<p>Used to specify the algorithm that will generate the information string which appears in the Transaction Information column throughout the application.</p> <p>Note: This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	No
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> • 01 • 02 • 03 • 04 • 05 • 06 • 07 • 08 • 09 • 10 <p>Note: At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Items to be mapped	<p data-bbox="586 212 1157 302">Used to indicate the maximum number of price items to which a transaction can be mapped for each account. 	<p>Note: At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p>Note: The business label appears when you add, copy, or view a transaction in the Transaction Details screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

Note: At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT_NBR), Account Identifier Type (ACCT_NBR_TYPE_CD), Division (CIS_DIVISION), Currency Code (CURRENCY_CD), Customer Reference Number (CUST_REF_NBR), Do not Aggregate Switch (DO_NOT_AGG_SW), External Reference Number (EXT_TXN_NBR), Credit/Debit Indicator (HOW_TO_USE_TXN_FLG), Manual Entry (MANUAL_SW), Transaction Amount (TXN_AMT), Transaction Date (TXN_DTTM), Transaction Record Type (TXN_REC_TYPE_CD), Transaction Source (TXN_SOURCE_CD), Transaction Upload Date (TXN_UPLOAD_DTTM), Transaction Volume (TXN_VOL), Additional Amount 1 (UDF_AMT_1), Additional Amount 2 (UDF_AMT_2), Additional Amount 3 (UDF_AMT_3), Additional Amount 4 (UDF_AMT_4), Additional Amount 5 (UDF_AMT_5), Additional Amount 6 (UDF_AMT_6), Additional Amount 7 (UDF_AMT_7), Additional Amount 8 (UDF_AMT_8), Additional Amount 9 (UDF_AMT_9), Additional Amount 10 (UDF_AMT_10), Additional Data 1 (UDF_CHAR_1), Additional Data 2 (UDF_CHAR_2), Additional Data 3 (UDF_CHAR_3), Additional Data 4 (UDF_CHAR_4), Additional Data 5 (UDF_CHAR_5), Additional Data 6 (UDF_CHAR_6), Additional Data 7 (UDF_CHAR_7), Additional Data 8 (UDF_CHAR_8), Additional Data 9 (UDF_CHAR_9), Additional Data 10 (UDF_CHAR_10), Additional Data 11 (UDF_CHAR_11), Additional Data 12 (UDF_CHAR_12), Additional Data 13 (UDF_CHAR_13), Additional Data 14 (UDF_CHAR_14), Additional Data 15 (UDF_CHAR_15), Additional Data 16 (UDF_CHAR_16), Additional Data 17 (UDF_CHAR_17), Additional Data 18 (UDF_CHAR_18), Additional Data 19 (UDF_CHAR_19), Additional Data 20 (UDF_CHAR_20), Additional Data 21 (UDF_CHAR_21), Additional Data 22 (UDF_CHAR_22), Additional Data 23 (UDF_CHAR_23), Additional Data 24 (UDF_CHAR_24), Additional Data 25 (UDF_CHAR_25), Additional Data 26 (UDF_CHAR_26), Additional Data 27 (UDF_CHAR_27), Additional Data 28 (UDF_CHAR_28), Additional Data 29 (UDF_CHAR_29), Additional Data 30 (UDF_CHAR_30), Additional Data 31 (UDF_CHAR_31), Additional Data 32 (UDF_CHAR_32), Additional Data 33 (UDF_CHAR_33), Additional Data 34 (UDF_CHAR_34), Additional Data 35 (UDF_CHAR_35), Additional Data 36 (UDF_CHAR_36), Additional Data 37 (UDF_CHAR_37), Additional Data 38 (UDF_CHAR_38), Additional Data 39 (UDF_CHAR_39), Additional Data 40 (UDF_CHAR_40), Additional Data 41 (UDF_CHAR_41), Additional Data 42 (UDF_CHAR_42), Additional Data 43 (UDF_CHAR_43), Additional Data 44 (UDF_CHAR_44), Additional Data 45 (UDF_CHAR_45), Additional Data 46 (UDF_CHAR_46), Additional Data 47 (UDF_CHAR_47), Additional Data 48 (UDF_CHAR_48), Additional Data 49 (UDF_CHAR_49), Additional Data 50 (UDF_CHAR_50), Amount 1 Currency Code (UDF_CURRENCY_CD_1), Amount 2 Currency Code (UDF_CURRENCY_CD_2), Amount 3 Currency Code (UDF_CURRENCY_CD_3), Amount 4 Currency Code (UDF_CURRENCY_CD_4), Amount 5 Currency Code (UDF_CURRENCY_CD_5), Amount 6 Currency Code (UDF_CURRENCY_CD_6), Amount 7 Currency Code (UDF_CURRENCY_CD_7), Amount 8 Currency Code (UDF_CURRENCY_CD_8), Amount 9 Currency Code (UDF_CURRENCY_CD_9), Amount 10 Currency Code (UDF_CURRENCY_CD_10), Additional Date 1 (UDF_DTTM_1), Additional Date 2 (UDF_DTTM_2), Additional Date 3 (UDF_DTTM_3), Additional Date 4 (UDF_DTTM_4), Additional Date 5 (UDF_DTTM_5), Additional Numeric Data 1 (UDF_NBR_1), Additional Numeric Data 2 (UDF_NBR_2), Additional Numeric Data 3 (UDF_NBR_3), Additional Numeric Data 4 (UDF_NBR_4), Additional Numeric Data 5 (UDF_NBR_5), Additional Numeric Data 6 (UDF_NBR_6), Additional Numeric Data 7 (UDF_NBR_7), Additional Numeric Data 8 (UDF_NBR_8), Additional Numeric Data 9 (UDF_NBR_9), Additional Numeric Data 10 (UDF_NBR_10), Additional Numeric Data 11 (UDF_NBR_11), Additional Numeric Data 12 (UDF_NBR_12), Additional Numeric Data 13 (UDF_NBR_13), Additional Numeric Data 14 (UDF_NBR_14), Additional Numeric Data 15 (UDF_NBR_15), Additional Numeric Data 16 (UDF_NBR_16), Additional Numeric Data 17 (UDF_NBR_17), Additional Numeric Data 18 (UDF_NBR_18), Additional Numeric Data 19 (UDF_NBR_19), Additional Numeric Data 20 (UDF_NBR_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<p>Note:</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Transaction Record Type Tempo Field Search window appears.</p>	

- Enter the required details.

Note: You can search for an algorithm by clicking the **Search**  icon corresponding to the respective field.

- Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
- If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

Note:

You can search for a field by clicking the **Search**  icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add**  icon and then repeat step 5. However, if you want to remove a temporary field from the transaction record type, click the

Delete  icon corresponding to the temporary field.

- Click **Save**.

The new transaction record type is defined.

Transaction Aggregation Rule

The **Transaction Aggregation Rule** screen allows you to define transaction aggregation rule for an SQL. You can also edit and delete the transaction aggregation rule of an SQL. This screen consists of the following zones:

- [Transaction Aggregation Rules](#) on page 827

Transaction Aggregation Rules

The **Transaction Aggregation Rules** zone lists transaction aggregation rules that are already defined in the system. You can define, edit, and delete a transaction aggregation rule through this zone.

This zone contains the following columns:

Column Name	Column Description
SQL Description	Displays the description of the service quantity identifier (SQI).
Aggregation Function	Indicates the formula used in the transaction aggregation rule defined for the SQI.
Function	Indicates the function used for aggregation.
Transaction Parameter	Indicates the transaction parameter used for aggregation.
Edit	On clicking the Edit (✎) icon, the Transaction Aggregation Rule screen appears where you can edit the aggregation rule.
Delete	On clicking the Delete (🗑) icon, you can delete the transaction aggregation rule.

You can define transaction aggregation rule for an SQI by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

Defining Transaction Aggregation Rule for an SQI

Prerequisites

To define transaction aggregation rule for an SQI, you should have:

- SQI defined in the application

Procedure

To define transaction aggregation rule for an SQI:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
The **Transaction Aggregation Rule** screen appears.
3. Click the **Add** link in the upper right corner of the **Transaction Aggregation Rules** zone.
The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQL	Used to indicate the SQI for which you want to define the transaction aggregation rule.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Function	Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> SUM() MIN() MAX() COUNT() 	Yes
Transaction Parameter	Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> TXN_AMT TXN_VOL UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20 	Yes

- Enter the required details.
- Click **Save**.

The transaction aggregation rule is defined for the SQI.

Editing Transaction Aggregation Rule of an SQI

Procedure

To edit the transaction aggregation rule of an SQI:

- Click the **Admin** link in the **Application** toolbar.
A list appears.
- From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
The **Transaction Aggregation Rule** screen appears.
- Click the **Edit**  icon in the **Edit** column corresponding to the SQI whose transaction aggregation rule you want to edit.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Indicates the SQI for which the transaction aggregation rule is defined.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Function	Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> SUM() MIN() MAX() COUNT() 	Yes
Transaction Parameter	Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> TXN_AMT TXN_VOL UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10 UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20 	Yes

4. Modify the required details.
5. Click **Save**.

The changes made to the transaction aggregation rule are saved.

Deleting Transaction Aggregation Rule of an SQI

Procedure

To delete the transaction aggregation rule of an SQI:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.
The **Transaction Aggregation Rule** screen appears.
3. Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the SQI whose transaction aggregation rule you want to delete.
A message appears confirming whether you want to delete the transaction aggregation rule.
4. Click **OK**.
The transaction aggregation rule is deleted.

Schedule

The **Schedule** screen allows you to define, edit, and delete a schedule. This screen consists of the following zones:

- [Search Schedule](#) on page 831

Search Schedule

The **Search Schedule** zone allows you to search for a schedule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Used to search a particular schedule.	No
Description	Used to search schedules with a particular .description	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Schedule	Displays the schedule.
Description	Displays the description of the schedule.
View	On clicking the View  icon, the View Schedule screen appears where you can view the details of the schedule.
Edit	On clicking the Edit  icon, the Edit Schedule screen appears where you can edit the details of the schedule.
Delete	On clicking the Delete  icon, you can delete the schedule.
	Note: You can only delete a schedule which is not yet used.

You can create a new schedule by clicking the **Add** link in the upper right corner of this zone.

Searching for a Schedule

Procedure

To search for a schedule:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.
The **Schedule** screen appears.
3. Enter the search criteria in the **Search Schedule** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
The search results appear.

Defining a Schedule

Procedure

To define a schedule:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **S** and then click **Schedule**.

The **Schedule** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Schedule** zone.

The **Add Schedule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Used to specify the schedule code.	Yes
Description	Used to specify the description for the schedule.	Yes

In addition, this screen contains the following two sections:

- **Schedule Periods** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the start date of the schedule period.	Yes
	Note: The start date cannot be later than the end date.	
End Date	Used to specify the end date of the schedule period.	Yes
	Note: The end date cannot be earlier than the start date.	

Note: At least one schedule period must be defined in the schedule. Also, ensure that the schedule periods do not have overlapping days.

- **Schedule Types** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Type	Used to indicate the functionality where you want to use the schedule. You can use a schedule for more than one functionality.	Yes

4. Enter the required details.

- 5.

If you want to define more than one period in the schedule, click the **Add** () icon and then specify the details.

Note: However, if you want to remove a period from the schedule, click the **Delete** () icon corresponding to the period.

6. Click **Save**.

The schedule is defined.

Disaggregation Request

Through the **Disaggregation Request Creation (C1-DISTG)** batch, you can only create a disaggregation request for an account. However, from the **Disaggregation Request** screen, you can create a disaggregation request for a person and account. When you create a disaggregation request for a person, the system does not create the disaggregation request for the person. Instead, the system creates the disaggregation request for all accounts of the person (where the person is the main customer) and its child persons.

The **Disaggregation Request** screen allows you to search for disaggregation requests using various search criteria. It also allows you to create and delete a disaggregation request. This screen consists of the following zone:

- [Search Disaggregation Request](#) on page 836

Search Disaggregation Request

The **Search Disaggregation Request** zone allows you to search for disaggregation requests using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. You can select either of the following query options:
 - **Person** — Used to indicate that you want to search for a disaggregation request created for a person.
 - **Account** — Used to indicate that you want to search for a disaggregation request created for an account.
- **Search Results** — The **Search Results** section displays the records based on the specified search criteria. The columns in the search results change depending on the query option selected.

You can create a disaggregation request manually by clicking the **Add** link in the upper right corner of this zone.

Searching for a Disaggregation Request

Procedure

To search for a disaggregation request:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Disaggregation Request**.
The **Disaggregation Request** screen appears.
3. Select the **Person** or **Account** option from the **Search By** list depending on whether you want to search for a disaggregation request created for a person or an account.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
PersonName	Used to search disaggregation requests which are created for a particular person.	No
	Note: This field appears only when you select the Person option from the Search By list.	
Request Date From	Used to search disaggregation requests which are created from a particular date onwards.	Yes
Request Date To	Used to search disaggregation requests which are created till a particular date.	Yes
Processing Date From	Used to search disaggregation requests which are processed from a particular date onwards.	No

Field Name	Field Description	Mandatory (Yes or No)
Processing Date To	Used to search disaggregation requests which are processed till a particular date.	No
Request Source	Used to search disaggregation requests which are created automatically, manually, or through the batch process. The valid values are: <ul style="list-style-type: none"> • AUTOMATIC • BATCH • MANUAL 	No
Request Status	Used to search disaggregation requests with a particular status. The valid values are: <ul style="list-style-type: none"> • COMPLETE • PENDING 	No
Person ID	Used to search disaggregation requests which are created for a particular person. Note: This field appears only when you select the Person option from the Search By list.	No
Division	Used to search disaggregation requests which are created for persons or accounts that belong to a particular division. Note: You can only view those divisions to which you have access in the Division list.	Yes (Conditional) Note: This field is required when you are searching for disaggregation requests created for an account.
Person Identifier Type	Used to select the person identifier type based on which you want to search disaggregation requests created for a person. Note: This field appears only when you select the Person option from the Search By list.	Yes (Conditional) Note: If you enter person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used when you want to search disaggregation requests created for a person. Note: This field appears only when you select the Person option from the Search By list.	Yes (Conditional) Note: If you specify person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search disaggregation requests which are created for a particular account. Note: This field appears only when you select the Account option from the Search By list.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the account identifier type based on which you want to search disaggregation requests created for an account.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you enter account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used when you want to search disaggregation requests created for an account.	Yes (Conditional)
	Note: This field appears only when you select the Account option from the Search By list.	Note: If you specify account identifier type as a search criteria, you have to enter the account identifier.

- Enter the search criteria in the **Search Disaggregation Request** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of disaggregation requests that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Request ID	Displays the disaggregation request ID.
Request Date	Displays the date when the disaggregation request was created.
Status	Indicates the status of the disaggregation request. The valid values are: <ul style="list-style-type: none"> COMPLETE PENDING
Person ID	Indicates the person for whom the disaggregation request is created.
Person Information	Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Person screen appears with the details of the respective person.
Account ID	Indicates the account for which the disaggregation request is created.
Account Information	Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	Note: It has a link. On clicking the link, the Account screen appears with the details of the respective account.
Processing Date	Displays the date when the disaggregation request was processed.

Column Name	Column Description
Delete	On clicking the Delete button, you can delete the disaggregation request.
	Note: You can only delete a disaggregation request which is in the Pending status.

Creating a Disaggregation Request

Prerequisites

To create a disaggregation request manually, you should have:

- Divisions, person identifier types, account identifier types, bill cycles, and invoice currencies defined in the application
- Price list assigned to the person or account (in case you want to search a person or an account based on an assigned price list)

Procedure

To create a disaggregation request manually:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Disaggregation Request**.
The **Disaggregation Request** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Disaggregation Request** zone.

The **Add Disaggregation Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to indicate whether you want to create disaggregation request for a person or an account. The valid values are: <ul style="list-style-type: none"> • Account • Person 	Yes
Division	Used to specify the division to which the person or account belongs.	Yes (Conditional)
	Note: You can only view those divisions to which you have access in the Division list.	Note: This field is required when you are creating a disaggregation request for an account.

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to indicate the account for which you want to create a disaggregation request.	No
	Note: This field is enabled only when you select the Account option from the Request Type list.	
Person ID	Used to indicate the person for whom you want to create a disaggregation request.	No
	Note: This field is enabled only when you select the Person option from the Request Type list.	
Account Identifier Type	Used to specify the account identifier type based on which you want to search for an account.	Yes (Conditional)
	Note: This field is enabled only when you select the Account option from the Request Type list.	Note: If you enter account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which you want to create a disaggregation request.	Yes (Conditional)
	Note: This field is enabled only when you select the Account option from the Request Type list.	Note: If you specify account identifier type as a search criteria, you have to enter the account identifier.
Person Identifier Type	Used to specify the person identifier type based on which you want to search for a person.	Yes (Conditional)
	Note: This field is enabled only when you select the Person option from the Request Type list.	Note: If you enter person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to indicate the person for whom you want to create a disaggregation request.	Yes (Conditional)
	Note: This field is enabled only when you select the Person option from the Request Type list.	Note: If you specify person identifier type as a search criteria, you have to enter the person identifier.
Bill Cycle	Used when you want to search accounts having a particular bill cycle.	No
	Note: This field is enabled only when you select the Account option from the Request Type list.	
Person Name	Used to specify the name of the person.	No

Field Name	Field Description	Mandatory (Yes or No)
Invoice Currency	Used when you want to search accounts having a particular invoice currency.	No
	Note: This field is enabled only when you select the Account option from the Request Type list.	
With Assigned Price List	Used when you want to search for a person or an account to which a particular price list is assigned.	Yes (Conditional)
		Note: This field is required when you want to search for a person or an account based on an assigned price list.
Price List Assigned From	Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range.	Yes (Conditional)
		Note: This field is required when you want to search for a person or an account based on an assigned price list.
Price List Assigned To	Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range.	Yes (Conditional)
		Note: This field is required when you want to search for a person or an account based on an assigned price list.

- Select the **Person** or **Account** option from the **Request Type** list depending on whether you want to search for a person or an account.
- Enter the search criteria in the **Search** section.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE_NUMBER** lookup field.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of persons or accounts that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the account.
	Note: The data appears in this column only when you search for an account.
Account Identifier	Displays the value of the primary account identifier type.
	Note: The data appears in this column only when you search for an account.
Division	Displays the division to which the person or account belongs.
Person Identifier Type	Displays the primary person identifier type of the person.
	Note: The data appears in this column only when you search for a person.
Person Identifier	Displays the value of the primary person identifier type.
	Note: The data appears in this column only when you search for a person.
Person Name	Displays the name of the person.
With Assigned Price List	Displays the price list assigned to the person or account.
	Note: The data appears in this column only when you search for a person or an account based on an assigned price list.
Price List Assigned From	Displays the date from when the price list is assigned to the person or account.
	Note: The data appears in this column only when you search for a person or an account based on an assigned price list.
Price List Assigned To	Displays the date till when the price list is assigned to the person or account.
	Note: The data appears in this column only when you search for a person or an account based on an assigned price list.
Account Info	Displays additional information about the account.
	Note: The data appears in this column only when you search for an account.
Bill Cycle	Indicates the bill cycle defined for the account.
	Note: The data appears in this column only when you search for an account.

Note:

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE_NUMBER** lookup field.

- Do either of the following:

If you want to...	Then...
Create disaggregation request for one or more persons or accounts	<ol style="list-style-type: none"> <li data-bbox="805 226 1399 323">1. In the Search Results section, select the check box corresponding to the person or account for which you want to create a disaggregation request. <li data-bbox="805 348 1399 554">2. Click Disaggregate. If you have selected an account, the disaggregation request is created for the account. However, if you have selected a person, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person.
Create disaggregation request for all persons or accounts that meet the search criteria	<ol style="list-style-type: none"> <li data-bbox="805 609 1399 751">1. Click Disaggregate All. A message appears confirming whether you want to create disaggregation requests for all persons or accounts that meet the search criteria. <li data-bbox="805 777 1399 1050">2. Click OK. If the accounts are listed in the Search Results section, the disaggregation request is created for each account (listed on the respective page). However, if the persons are listed in the Search Results section, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person.

Deleting a Disaggregation Request

Procedure

To delete a disaggregation request:

1. Search for the disaggregation request in the **Disaggregation Request** screen.
2. In the **Search Results** section, click the **Delete** button in the **Delete** column corresponding to the disaggregation request that you want to delete.

A message appears confirming whether you want to delete the disaggregation request.

Note:

You can only delete a disaggregation request which is in the **Pending** status.

If the disaggregation process is already started for a disaggregation request, we recommend you not to delete the disaggregation request from the system. Otherwise, erroneous results might occur.

3. Click OK.

The disaggregation request is deleted.

Accumulation Data

The information will be available shortly!

Chapter 11

On Demand Billing

Topics:

- [Prerequisites](#)
- [CSV File Format for Banking Usage Data](#)
- [CSV File Format for Insurance Usage Data](#)
- [Usage Record Status Transition](#)
- [File Type](#)
- [On Demand Billing](#)
- [Usage Data Processing](#)

Oracle no longer supports the Off Cycle Billing feature introduced in Oracle Revenue Management and Billing Version 2.2.4.2. Instead, the On Demand Billing feature has been introduced to facilitate adhoc billing. Earlier, you were only able to carry out billing based on the bill cycle (defined for the account). In other words, you were able to generate a bill for a bill cycle using the billable charges whose start and end dates fall within the bill cycle. However, there might be situations where you have received certain billing information after the bill is generated for the bill cycle. In such scenarios, you would like to generate a separate bill for the newly created billable charges. The system now allows you to generate an adhoc bill. However, note that you cannot generate adhoc bills through the **Bill** screen.

A bill is generated using the billable charges. Now, in order to differentiate between the normal and adhoc billable charges, you need to set the **Adhoc Bill** flag for the billable charges. If the value of the **Adhoc Bill** flag is set to **Y**, the system will consider the billable charge during adhoc billing. And, if the value of the **Adhoc Bill** flag is set to **N**, the system will consider the billable charge during regular billing based on the bill cycle.

A new batch named **Adhoc Billing (C1-FABL)** is created which generates adhoc bills. Both, automatically generated and manually created billable charges (with the **Adhoc Bill** flag set to **Y**) are considered during adhoc billing.

With Oracle Revenue Management and Billing V2.4.0.0.0, the On Demand Billing feature has been enhanced to facilitate billing for multiple usage data files in one go. Till now you were only able to create billable charges and bill for only one usage data file at a time using the using the **On Demand Billing** screen. However, there might be situations where you want to upload multiple usage data files and generate billable charges for the usage records (of a single or multiple accounts) that you may want to group together based on certain criteria. For example, you may want to generate billable charges for all debit transactions of one or more accounts. In such scenarios, you can now upload multiple usage data files using a file group and create billable charges for the records uploaded through the **Usage Data Processing** screen. You can create file groups based on various criteria to upload multiple usage data files. For example, you may want to create a file group for uploading usage data files of accounts that need to be billed for the services to be charged for using the credit card facility. You can create a file group using the **On Demand Billing** screen. You can then upload one or more usage data files using the file group through the **Usage Data Processing** screen. Oracle Revenue Management and Billing provides you with a facility to upload usage data received from various product processors or banking applications for billing. You can upload a usage data file in the CSV format. The **Usage Data Processing** screen allows you to upload usage data files for both banking and insurance modules. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format,

see CSV File Format for Banking and CSV File Format for Insurance. When you upload a usage data file, mapping algorithm parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The status of each usage record is changed to Valid or Invalid depending on whether the usage record was validated successfully or not. Once a usage record is successfully validated, you can submit the valid records and create billable charges for them. Once the usage data files are uploaded and billable charges are generated through the **Usage Data Processing** screen, you can then create and freeze the bills using the **On Demand Billing** screen.

You can optionally configure the system to use the approval workflow process for a usage data file. On submitting a valid record, the approval workflow process routes the usage record to the approver for approval. The approver receives a notification to approve the valid records. The approver can either approve or reject one or more valid records. Once the approver approves a valid record, a billable charge is created for the usage record. However, if the approver rejects a valid record, a notification is sent to the submitter to resolve the usage record. The submitter can then correct the existing data or add missing data (based on the review comments), and can again submit the valid record for approval. Once the valid record is approved, a billable charge is created for the usage record.

The system generates the bills based on the Bill After Date. The Bill After Date indicates the date after which adhoc or normal bills must be generated. In case of adhoc billing, the Bill After Date is specified for a file group using which you can upload one or more usage data files.

While uploading usage data files for adhoc billing, you may or may not specify the Bill After Date for a file group. The system behaves in the following manner when:

- **Bill After Date — Specified:** Adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.
- **Bill After Date — Not Specified:** During the upload process, the Bill After Date is set to the current date. And, adhoc bill is generated for the usage data file and account combination when the Bill After Date is equal to or earlier than the current date.

In case of regular billing, you may or may not specify the Bill After Date while uploading a usage data file. The system behaves in the following manner when:

- **Bill After Date — Specified:** Normal bill is generated for the account in the bill cycle in which the bill after date falls.
- **Bill After Date — Not Specified:** Normal bill is generated for the account based on the bill cycle defined for the account.

Once the adhoc or normal bills are generated for a usage data file, you can freeze and complete the bills. Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a usage data file from the **On Demand Billing** screen.

During the on demand billing process, each usage record of a file goes through various statuses until it is billed to the person. For more information about the usage record statuses, see [Usage Record Status Transition](#) on page 854.

Prerequisites

To setup the on demand billing process, you need to do the following:

- Ensure approver's user group has access to the **F1-DFLTS** application service
- Create a To Do Type for submitter named **C1-ODBSU** using the following information:
 - **Navigation Option** — C1_SUBMIT
 - **Priority** — Priority 10 – Highest
 - **Message Category** — 17000
 - **Message Number** — 1470
 - **Sort Keys** — Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Usage Data ID	Yes	Descending

- **Drill Keys** — Define the following drill keys for the To Do type:

Table Name	Field Name
CI_BCHG_STG	BCHG_HSTG_ID
CI_BCHG_STG	FILE_NAME
CI_BCHG_STG	BCHG_STG_STAT_FLG

- Create a To Do Type for approver named **C1-ODBAP** using the following information:
 - **Navigation Option** — CI_NDAP
 - **Priority** — Priority 10 – Highest
 - **Message Category** — 17000
 - **Message Number** — 1470
 - **Sort Keys** — Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Usage Data ID	Yes	Descending

- **Drill Keys** — Define the following drill keys for the To Do type:

Table Name	Field Name
CI_BCHG_STG	BCHG_HSTG_ID
CI_BCHG_STG	FILE_NAME

- Create a To Do role named **C1-ODBSU** for submitter and **C1-ODBAP** for approver
- Assign the **C1-ODBSU** To Do type to the **C1-ODBSU** To Do role
- Assign the **C1-ODBAP** To Do type to the **C1-ODBAP** To Do role
- Create a To Do role named **C1-ODFU** and assign users to this To Do role. The users who have the **C1-ODFU** To Do role will receive the To Do entries generated while executing the **Upload and Validate Usage Data File (C1-ODFU)** batch.

- Assign the **C1-ODFU** To Do type to the **C1-ODFU** To Do role
- Create a To Do role named **C1-ODBCH** and assign users to this To Do role. The users who have the **C1-ODBCH** To Do role will receive the To Do entries generated while executing the **Billable Charge Creation (C1-ODBCH)** batch.
- Assign the **C1-ODBCH** To Do type to the **C1-ODBCH** To Do role
- Create a To Do role named **C1-FABL** and assign users to this To Do role. The users who have the **C1-FABL** To Do role will receive the To Do entries generated while executing the **Adhoc Billing (C1-FABL)** batch.
- Assign the **C1-FABL** To Do type to the **C1-FABL** To Do role
- Create a To Do role named **C1-FCADH** and assign users to this To Do role. The users who have the **C1-FCADH** To Do role will receive the To Do entries generated while executing the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch.
- Assign the **C1-FCADH** To Do type to the **C1-FCADH** To Do role
- Set e-mail address for the users who are going to use the **On Demand Billing** screen (otherwise To Do entry will not be generated on executing the above batches)
- Create a mapping algorithm using the **C1-CSVPMALGO** algorithm type
- Create a validation algorithm using the **C1-VLDALGO** algorithm type
- Create an extract algorithm using the **C1-EXTALGO** algorithm type
- Create a To Do algorithm using the **C1_ODBDALGO** algorithm type and set the following parameters in the algorithm:
 - **To Do Role for Submitter** — Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver.
 - **To Do Type for Submitter** — Used to indicate that a To Do entry of the specified To Do type must be created when the approver rejects the records.
 - **To Do Role for Approver** — Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter.
 - **To Do Type for Approver** — Used to indicate that a To Do entry of the specified To Do type must be created when the submitter submits the valid records for approval.
- Define the required file types in the system
- Define values for the following lookup fields:
 - ODB_CAN_RSN_FLG
 - ODB_REJ_RSN_FLG
 - PAGE_NUMBER
- If you want to create billable charges with future date for a contract, then ensure that the **Use Calendar Billing** option is set to **Allow Advanced Billing** in the respective contract type.
- Create an algorithm using the **C1-ODDFILEIN** algorithm type and attach it to the **Upload File Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen.

Besides this, you need to setup the following feature configurations:

- On Demand Billing (C1-ODBFC)
- Multi Parameter Based Pricing (C1_PPARAM_FLG)

Related Topics

How to set the On Demand Billing (C1-ODBFC) feature configuration	Setting the C1-ODBFC Feature Configuration on page 2177
How to set the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration	Setting the C1_PPARM_FLG Feature Configuration on page 2182

CSV File Format for Banking Usage Data

Before uploading a usage data file for banking, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
DATA IDENTIFIER	Used to specify the serial number of the usage record.	No
ACCOUNT ID TYPE	Used to specify the account identifier type.	Yes
ACCOUNT IDENTIFIER	Used to indicate the account to which the usage record belongs.	Yes
START DATE	Used to specify the date from when the price item was used. Note: You must specify the date in the YYYY-MM-DD format.	No
END DATE	Used to specify the date till when the price item was used. Note: You must specify the date in the YYYY-MM-DD format.	No
DIVISION	Used to specify the division to which the usage record belongs.	Yes
DESCRIPTION	Used to specify the description for the usage record. It is shown on the billable charge.	Yes
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Used to specify the description for the line item (charge).	Yes (Conditional) Note: This data is required when the charge amount is specified.
AMOUNT1, AMOUNT2,, AMOUNT10	Used to specify the charge amount.	Yes (Conditional) Note: This data is required when the bill line description or currency is specified.

Column Name	Description	Mandatory (Yes or No)
CURRENCY1, CURRENCY2, CURRENCY10	Used to specify the currency in which the amount is charged. Note: If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional) Note: This data is required when the charge amount is specified.
MEMO ONLY1, MEMO ONLY2, MEMO ONLY10	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> true false Note: By default, the value will be set to false if the column does not contain any value.	No
SUMMARY1, SUMMARY2, SUMMARY10	Used to indicate whether the charge should be included in the summary line or not. The valid values are: <ul style="list-style-type: none"> true false Note: By default, the value will be set to true if the column does not contain any value.	No
SHOW ON BILL1, SHOW ON BILL2, SHOW ON BILL10	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> true false Note: By default, the value will be set to true if the column does not contain any value.	No
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, GL DISTRIBUTION CODE 10	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional) Note: This data is required when false is specified in the Memo Only column corresponding to the bill line description.
PRICE ITEM	Used to specify the price item code.	Yes
VARIANCE	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	No

Column Name	Description	Mandatory (Yes or No)
PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing.	Yes (Conditional)
	Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Note: This data is required when the parameter value is specified.
PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15	Used to specify the parameter value.	Yes (Conditional)
	Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Note: This data is required when the parameter type is specified.
SQI1, SQI2,, SQI10	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional)
		Note: This data is required when the service quantity is specified.
SQIVALUE1, SQIVALUE2,, SQIVALUE10	Used to specify the number of units of the service quantity.	Yes (Conditional)
		Note: This data is required when the SQI is specified.
CHARTYPE1, CHARTYPE2,, CHARTYPE10	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional)
		Note: This data is required when the characteristic value is specified.
CHARVAL1, CHARVAL2,, CHARVAL10	Used to specify the value of the characteristic type.	Yes (Conditional)
		Note: This data is required when the characteristic type is specified.

Note:

The column names in the CSV file must be in the Upper case. Otherwise, erroneous results might occur when you upload the usage data file.

While uploading a file using a file type where business labels are defined for usage data fields, the CSV file should contain the business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

CSV File Format for Insurance Usage Data

Before uploading a usage data file for insurance, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
DATA IDENTIFIER	Used to specify the serial number of the usage record.	No

Column Name	Description	Mandatory (Yes or No)
START DATE	Used to specify the date from when the price item was used.	No
	Note: You must specify the date in the YYYY-MM-DD format.	
END DATE	Used to specify the date till when the price item was used.	No
	Note: You must specify the date in the YYYY-MM-DD format.	
CONTRACT ID	Used to specify the contract ID.	Yes
CHARGE TYPE	Used to indicate the charge type.	No
DESCRIPTION	Used to specify the description for the usage record. It is shown on the billable charge.	Yes
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Used to specify the description for the line item (charge).	Yes (Conditional)
		Note: This data is required when the charge amount is specified.
AMOUNT1, AMOUNT2, AMOUNT10	Used to specify the charge amount.	Yes (Conditional)
		Note: This data is required when the bill line description or currency is specified.
CURRENCY1, CURRENCY2, CURRENCY10	Used to specify the currency in which the amount is charged.	Yes (Conditional)
		Note: This data is required when the charge amount is specified.
MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10	Used to indicate whether the charge should be included in the bill amount or not. The valid values are: <ul style="list-style-type: none"> • true • false 	No

Column Name	Description	Mandatory (Yes or No)
SUMMARY1, SUMMARY2,, SUMMARY10	Used to indicate whether the charge should be included in the summary line or not. The valid values are: <ul style="list-style-type: none"> true false 	No
	Note: By default, the value will be set to true if the column does not contain any value.	
SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are: <ul style="list-style-type: none"> true false 	No
	Note: By default, the value will be set to true if the column does not contain any value.	
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional)
		Note: This data is required when false is specified in the Memo Only column corresponding to the bill line description.
PRICE ITEM	Used to specify the price item code.	Yes
VARIANCE	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	No
PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing.	Yes (Conditional)
	Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Note: This data is required when the parameter value is specified.
PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15	Used to specify the parameter value.	Yes (Conditional)
	Note: If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	Note: This data is required when the parameter type is specified.
SQI1, SQI2,, SQI10	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional)
		Note: This data is required when the service quantity is specified.

Column Name	Description	Mandatory (Yes or No)
SQIVALUE1, SQIVALUE2, SQIVALUE10	Used to specify the number of units of the service quantity.	Yes (Conditional) Note: This data is required when the SQL is specified.
CHARTYPE1, CHARTYPE2, CHARTYPE10	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional) Note: This data is required when the characteristic value is specified.
CHARVAL1, CHARVAL2, CHARVAL10	Used to specify the value of the characteristic type.	Yes (Conditional) Note: This data is required when the characteristic type is specified.
RECURRING FLAG	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set invoice frequency.	No
BILL PERIOD	Used to indicate the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required when the recurring flag is equal to Bill Period.
FREQUENCY	Used to indicate the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional) Note: This data is required when the recurring flag is equal to Frequency.

Note:

The column names in the CSV file must be in the Upper case. Otherwise, erroneous results might occur when you upload the usage data file.

While uploading a file using a file type where business labels are defined for usage data fields, the CSV file should contain the business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

Usage Record Status Transition

The following figure graphically indicates how a usage record moves from one status to another during the on demand billing process:

File Type

Oracle Revenue Management and Billing allows you to define file types using which you can upload a usage or payment data file. It is the file type which helps the system to understand how to process the file. The feed type specified in the file type indicates the type of data that you can upload using the file type. You can upload the following types of data using a file type:

- Banking Usage Data
- Insurance Usage Data
- Payment Upload Data

The following table lists the algorithms that you need to specify while defining file types for uploading usage or payment data:

Feed Type	Algorithm	Mandatory (Yes or No)	Algorithm Type Shipped with the Product...	Algorithm Type Purpose
Payment Upload Data	Mapping algorithm	Yes	C1-CSVUPLPAY	Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database.
Payment Upload Data	Validation algorithm	Yes	C1-PUPLVALID	Validates a payment data file.

Feed Type	Algorithm	Mandatory (Yes or No)	Algorithm Type Shipped with the Product...	Algorithm Type Purpose
Banking Usage Data	Mapping algorithm	Yes	C1-CSVPMALGO	Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface .
Banking Usage Data	Validation algorithm	No	C1-VLDALGO	Validates a usage data file.
Banking Usage Data	To Do algorithm	No	C1_ODBTDALGO	Initiates the approval process for usage records before creating the billable charges.
Banking Usage Data	Extract algorithm	No	C1-EXTALGO	Extracts the usage records along with the error messages (if any) in the CSV format.
Insurance Usage Data	Mapping algorithm	Yes	C1-CSVPMALGO	Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface .
Insurance Usage Data	Validation algorithm	No	None	-
			Note: You need to design custom algorithm type to validate insurance usage data.	
Insurance Usage Data	To Do algorithm	No	C1_ODBTDALGO	Initiates the approval process for usage records before creating the billable charges.
Insurance Usage Data	Extract algorithm	No	C1-EXTALGO	Extracts the usage records along with the error messages (if any) in the CSV format.

The **File Type** screen allows you to define, edit, and delete a file type. This screen consists of the following zones:

- [File Types](#) on page 856

File Types

The **File Types** zone lists the file types that are already defined in the system. You can define, edit and delete a file type through this zone.

This zone contains the following columns:

Column Name	Column Description
File Type	Displays the file type.
Description	Displays the description of the file type.

Column Name	Column Description
Feed Type	Indicates the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> Banking Usage Data Insurance Usage Data Payment Upload Data
Mapping Algorithm	Indicates the mapping algorithm which is triggered when you upload a file.
Validation Algorithm	Indicates the validation algorithm which is triggered once the file is uploaded in the system.
To Do Algorithm	Indicates whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required.
Extract Algorithm	Indicates the extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format.
Edit	On clicking the Edit () icon, the File Type screen appears where you can edit the details of the file type.
	Note: You can edit the details of a file type only when no files are uploaded using the file type.
Delete	On clicking the Delete () icon, you can delete the file type.
	Note: You can only delete a file type which is not yet used for uploading a file.

You can define a file type by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2156.

Related Topics

For more information on...	See...
How to define a file type	Defining a File Type on page 857
How to edit a file type	Editing a File Type on page 862
How to delete a file type	Deleting a File Type on page 867

Defining a File Type

Prerequisites

To define a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1_ODBDALGO** algorithm type

Procedure

To define a file type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **File Type**.

The **File Type** screen appears.

- Click the **Add** link in the upper right corner of the **File Types** zone.

The **File Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to specify the file type.	Yes
Description	Used to specify the description for the file type.	Yes
Feed Type	Used to indicate the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> Banking Usage Data Insurance Usage Data Payment Upload Data 	Yes
Disable Move to Staging	Used to indicate whether you want to disable the Move to Staging functionality in the Payment Upload screen. Note: This field appears only when you select the Payment Upload Data option from the Feed Type list.	No

Field Name	Field Description	Mandatory (Yes or No)
Mapping Algorithm	<p>Used to attach a mapping algorithm which is triggered when you upload a file.</p> <p>Note:</p> <p>The C1-CSVUPLPAY algorithm type is designed for uploading payment data and the C1-CSVPMALGO algorithm type is designed for uploading usage data. The C1-CSVUPLPAY algorithm type does the following:</p> <ol style="list-style-type: none"> 1. Validates whether the file is in the CSV format 2. Validates whether at least one payment record is available in the CSV file 3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database 4. Uploads the payments records in the pre-staging area <p>However, the C1-CSVPMALGO algorithm type does the following:</p> <ol style="list-style-type: none"> 1. Validates whether the file is in the CSV format 2. Validates whether the CSV file contains data in the required format 3. Validates whether the following data is available for each usage record: <ul style="list-style-type: none"> • Account Identifier Type • Account Identifier • Division • Price Item • Description 4. Parses the flat file in the CSV format and maps the columns in the CSV file to an XML schema named Interface <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
To Do Algorithm	<p>Used to indicate whether the usage records must be approved before creating the billable charges. If the algorithm is attached, it means the approval is required.</p> <p>Note:</p> <p>The C1_ODBTDALGO algorithm type contains the following parameters:</p> <ul style="list-style-type: none"> • To Do Role For Submitter — Used to indicate that users with the specified To Do role can only resolve the records which are rejected by the approver. • To Do Type For Submitter — Used to indicate that a To Do using the specified To Do type must be created when the approver rejects the records. • To Do Role For Approver — Used to indicate that users with the specified To Do role can only approve the records submitted by the submitter. • To Do Type For Approver — Used to indicate that a To Do using the specified To Do type must be created when the submitter submits the valid records for approval. <p>This field is disabled when you select the Payment Upload Data option from the Feed Type list.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Validation Algorithm	Used to attach a validation algorithm which is triggered once the file is uploaded in the system.	Yes (Conditional) Note: This field is required when you select the Payment Upload Data option from the Feed Type list.
	<p>Note:</p> <p>The C1-PUPLVALID algorithm type is designed for validating a payment data file. It has some pre-defined validations based on which the status of the payment record is set to Valid, Invalid, or Error. For more information about the pre-defined validations, see Upload Payment Records in the Pre-Staging Area on page 936.</p> <p>However, the C1-VLDALGO algorithm type is designed for validating a banking usage data file. It checks whether account identifier specified for each usage record contains any special characters. You can define any custom validations in this algorithm, if required. You cannot use an algorithm created using the C1-VLDALGO algorithm type to validate an insurance usage data file. If you want to validate an insurance usage data file, you need to create a custom algorithm type.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	
Extract Algorithm	Used to attach an extract algorithm which extracts the usage records along with the error messages (if any) in the CSV format.	No
	<p>Note: This field is disabled when you select the Payment Upload Data option from the Feed Type list.</p> <p>The Search  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.</p>	

In addition, it contains the following two sections:

- **Map Divisions** — Used to indicate the divisions for which you want to use the file type.

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division.	No
	Note: You can only view those divisions to which you have access in the Division list.	

Note: This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list.

- **Custom Labels** — Used to specify business labels for the usage data fields. The usage data fields will change depending on whether you have selected the **Banking Usage Data** or **Insurance Usage Data** option from the **Feed Type** list.

Note:

This section does not appear when you select the **Payment Upload Data** option from the **Feed Type** list. If you have defined the business label for a usage data field, the CSV file should contain business label in the respective column. Otherwise, the usage data file will not be uploaded in the system.

4. Enter the required details.

Note:

You can search for an algorithm by clicking the **Search** () icon corresponding to the respective field.

If you want to associate more than one division with the file type, click the **Add** () icon and then specify the details in the **Map Divisions** section. However, if you want to remove a division from the file type, click the **Delete** () icon corresponding to the division.

5. Click **Save**.

The file type is defined.

Editing a File Type**Prerequisites**

To edit a file type, you should have:

- Mapping algorithm defined using the **C1-CSVUPLPAY** or **C1-CSVPMALGO** algorithm type
- Validation algorithm defined using the **C1-PUPLVALID** or **C1-VLDALGO** algorithm type.
- Extract algorithm defined using the **C1-EXTALGO** algorithm type
- To Do algorithm defined using the **C1_ODBDALGO** algorithm type

Note: You can edit the details of a file type only when no files are uploaded using the file type.

Procedure

To edit a file type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.
The **File Type** screen appears.
3. Click the **Edit** () icon in the **Edit** column corresponding to the file type whose details you want to edit.

The **File Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to specify the file type.	Yes
Description	Used to specify the description for the file type.	Yes
Feed Type	Used to indicate the type of data that you can upload using the file type. The valid values are: <ul style="list-style-type: none"> • Banking Usage Data • Insurance Usage Data • Payment Upload Data 	Yes
Disable Move to Staging	Used to indicate whether you want to disable the Move to Staging functionality in the Payment Upload screen. Note: This field appears only when you select the Payment Upload Data option from the Feed Type list.	No

Field Name	Field Description	Mandatory (Yes or No)
Mapping Algorithm	<p>Used to attach a mapping algorithm which is triggered when you upload a file.</p> <p>Note:</p> <p>The C1-CSVUPLPAY algorithm type is designed for uploading payment data and the C1-CSVPMALGO algorithm type is designed for uploading usage data. Deleting a File Type**Procedure**

To delete a file type:

1. Click the **Admin** link in the **Application** toolbar.
A list appears.
2. From the **Admin** menu, select **F** and then click **File Type**.
The **File Type** screen appears.
3. Click the **Delete**  icon in the **Delete** column corresponding to the file type that you want to delete.
A message appears confirming whether you want to delete the file type.

Note: You can only delete a file type which is not yet used for uploading a file.

4. Click **OK**.

The file type is deleted.

On Demand Billing

The **On Demand Billing** screen allows you to search for a file group based on various search criteria. Through this screen, you can:

- Define a file group
- Edit a file group
- Delete a file group
- Close a file group
- Generate adhoc bills for a file group
- Freeze and complete adhoc bills of a file group
- View all bills generated for a file group
- View usage data files of a file group
- Cancel a usage data file

This screen consists of the following zones:

- [Search](#) on page 868

Search

The **Search** zone allows you to search for file groups for which bills are processed and/or generated in the system. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Group	Used to specify the file group.	No
Description	Used to specify the description for the file group.	No
User ID	Used to specify the name of the user who has uploaded the usage data files in the file group.	No
Bill After Date	Used to specify the date after which the bills must be generated for the file group.	No
Status	Used to indicate the status of the file group. The valid values are: <ul style="list-style-type: none"> • Closed • Open 	No

Note: You must specify at least one search criterion while searching for a file group.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Group	Displays the name of the file group.
	Note: It has a link. On clicking the link, the File Group screen appears where you can view the details of the file group.
Bill After Date	Displays the date after which the bills must be generated for the file group.
Default Usage Start Date	Displays the date from when the price item was used.
Default Usage End Date	Displays the date till when the price item was used.
Status	Displays the status of the file group. The valid values are: <ul style="list-style-type: none"> • Open • Close
Close	On clicking the Close (✖) icon, you can close a file group.
	Note: You can only close a file group in which all the records of the usage data files are either in the processed or cancelled status.
Generate Bill	On clicking the Generate Bill (📄) icon, you can generate bills for a file group.
Complete Bill	On clicking the Complete Bill (✅) icon, you can freeze and complete the bills of a file group.
Total	Displays the total number of records that are uploaded through the file group.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Submitted	Displays the number of valid records which are submitted for approval.
Processed	Displays the number of valid records for which billable charges are already created.
Rejected	Displays the number of records which are rejected by the approver.
Cancelled	Displays the number of records which are cancelled in the system.
Unbilled	Displays the number of records for which billable charges are created, but are not yet billed to the person.
Billed	Displays the number of records for which billable charges are created and billed to the person.
Bills	Displays the number of bills generated for the file group.
	Note: It has a link. On clicking the link, the View Bill Data screen appears where you can view all bills generated for the usage data file.
Last Batch Status	Indicates the batch that was last executed on the file group and its current status.
	Note: It has a link. On clicking the link, the Batch Run Tree screen appears where you can view the execution details of the batch.

Group Files

The **Group Files** zone allows you to view the usage data files uploaded using a file group. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name of the usage data file.	No
File Type	Used to specify the type of usage data file.	No
File Upload From Date	Used to specify the start date of the period during which the usage data file that you want to search was uploaded in the system.	No
File Upload To Date	Used to specify the end date of the period during which the usage data file that you want to search was uploaded in the system.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Information	Displays the name of the usage data file of the file group and its related details.
Total	Displays the total number of records that are uploaded through the usage data file.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Submitted	Displays the number of valid records which are submitted for approval.
Rejected	Displays the number of records which are rejected by the approver.

Column Name	Column Description
Processed	Displays the number of valid records for which billable charges are already created.
Cancelled	Displays the number of records of a usage data file which are cancelled.
UnBilled	Displays the number of records for which billable charges are created, but are not yet billed to the person.
Billed	Displays the number of records for which billable charges are created and billed to the person.
Cancel	On clicking the Cancel () icon, you can cancel a file.

By default, the **Group Files** zone does not appear in the **On Demand Billing** screen. It appears only when you click the **Broadcast** () icon corresponding to the file group in the **Search Results** section.

Note: By default, the **Group Files** zone displays a list of usage data files that are uploaded using the file group in the **Search Results** section. However, you can filter the list of usage data files by specifying a search criteria in the **Search Criteria** section.

Searching for a File Group

Procedure

To search for a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.
A list of file groups that meet the search criteria appears in the **Search Results** section.

Defining a File Group

Prerequisites

To define a file group, you should have:

- Access to the divisions for which you want to define the file group

Procedure

To define a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Click the **Add** link in the upper right corner of the **Search** zone.

The **File Group** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Group	Used to specify the file group.	Yes
Description	Used to specify the description for the file group.	Yes
Bill After Date	Used to specify the date after which the bill must be generated for the file group.	Yes
Default Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required.	Yes
	Note: The default usage start date cannot be later than the default usage end date.	
Default Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required.	Yes
	Note: The default usage end date cannot be earlier than the default usage start date.	

In addition, the **File Group** screen contains the following section:

Map Divisions— The **Map Divisions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define the file group.	No
		Note: If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file.

- Enter the required details.
- If you want to define the file group for more than one division, click the **Add** (+) icon and then repeat step 5.

Note: However, if you want to remove a division from the file group, click the **Delete** (🗑️) icon corresponding to the division.

- Click **Save**.

The file group is defined.

Editing a File Group

Procedure

To edit a file group:

Note: You can edit the details of a file group only when no usage data files of this group have been uploaded in the system or all the records in the usage data files of a file group are cancelled.

- Click the **Menu** link in the **Application** toolbar.
A list appears.
- Select **Financial** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
- Search for the file group in the **On Demand Billing** screen.
- In the **Search Results** section, click the link in the **File Group** column corresponding to the file group whose details you want to edit.

The **File Group** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Group	Displays the file group.	Not applicable
Description	Used to specify the description for the file group.	Yes
Bill After Date	Used to specify the date after which the bill must be generated for the file group	Yes
Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file.	Yes
	Note: The default usage start date cannot be later than the default usage end date.	
Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file.	Yes
	Note: The default usage end date cannot be earlier than the default usage start date.	

In addition, the **Add/Edit File Group** screen contains the following section:

- **Map Divisions**— The **Map Divisions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define the file group.	No
		Note: If you do not associate division(s) with the file group, the file group is not available for uploading a usage data file. This means only those file groups for which you have specified division(s) can be used for uploading a usage data file.

5. Modify the required details.

Note: If you want to define the file group for more than one division, click the **Add** () icon and then specify the details. However, if you want to remove a division from the file group, click the **Delete** () icon corresponding to it.

6. Click **Save**.

The changes made to the file group are saved.

Deleting a File Group

Procedure

To delete a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. Select **Financial** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the link in the **File Group** column corresponding to the file group that you want to delete.
The **File Group** screen appears.
5. Click **Delete**.
The file group is deleted.

Note: The delete button appears only if the file group is not yet used. In other words, you cannot delete a file group that you have used for uploading usage data files.

Closing a File Group

Procedure

To close a file group:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **On Demand Billing**.
The **On Demand Billing** screen appears.
3. Search for the file group in the **On Demand Billing** screen.
4. In the **Search Results** section, click the **Close** (✖) icon in the **Close** column corresponding to the file group that you want to close.

The status of the file group is changed to **Closed**.

Note: You can only close a file group in which all the records of the usage data files are either in the processed, cancelled, or rejected status. However, you may close a file group in which all the records are not in the cancelled and/or processed status, but in that case a to do entry is sent to the approver for approval of the pending records.

Generating Adhoc Bills for a File Group

The **On Demand Billing** screen allows you to generate adhoc bills for a file group. However, you can generate bills only after you close the file group for which you want to generate adhoc bills.

Procedure

To generate adhoc bills for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Generate Bill** () icon corresponding to the file group for which you want to generate the adhoc bills.

The **Generate Bill** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cutoff Date	Used to specify the cutoff date for the bill.	Yes
Accounting Date	Used to specify the accounting date of the bill.	Yes

3. Enter the required details.
4. Click **OK**.

The adhoc bills are generated for the usage data files of a file group. An adhoc bill is generated for a usage data file and account combination when the bill after date is equal to or earlier than the current date. The status of the usage records is changed to **Billed**. If the total number of billable charges created for a usage data file exceeds the online bill creation limit, a batch job is created using the **Adhoc Billing (C1-FABL)** batch. A message appears indicating the batch job ID. This batch job creates adhoc bills for the usage data file.

Note:

You can change the online bill creation limit, whenever required, using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Adhoc Billing (C1-FABL)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If an adhoc bill with the **Pending** status already exists for a usage data file and account combination, then the existing bill is deleted and regenerated. However, you can generate the bill again for a file group only after manually deleting the bill from the **Bill** screen.

On successful completion of the **Adhoc Billing (C1-FABL)** batch, a To Do entry is created using the **C1-FABL To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-FABL To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of billable charges which were processed
- Number of billable charges for which the bill after date is a future date
- Number of adhoc bills generated for the usage data file
- Number of billable charges which could not be processed successfully

Once the batch is executed successfully, the status of the usage records in a usage data file of a file group is changed to **Billed**.

Freezing All Bills of a File Group

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for the usage data files of a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

Procedure

To freeze and complete all adhoc bills generated for a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Freeze and Complete** (🔒) icon corresponding to the file group whose adhoc bills you want to freeze and complete.

The **Complete Bill** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Date	Used to specify the date on which the bill was completed.	Yes
Accounting Date	Used to specify the accounting date of the bill.	Yes

3. Enter the required details.

4. Click **OK** in the message box.

A batch job is created using the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch. A message appears indicating the batch job ID. This batch job freezes and completes all adhoc bills of the usage data file which are in the **Pending** status. The system does not freeze and complete pending adhoc bills which have bill segments in the **Error** status. For more information on the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

Note:

On successful completion of the **Freeze and Complete Adhoc Bills (C1-FCADH)** batch, a To Do entry is created using the **C1-FCADH To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-FCADH To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of bills which were picked up for completion
- Number of bills which were completed
- Number of bills which could not be completed successfully

Once the batch is executed successfully, the status of the bills is changed to **Complete**.

Freezing Selected Bills of a File Group

Oracle Revenue Management and Billing provides you with the ability to freeze and complete adhoc bills generated for a file group from the **On Demand Billing** screen. You can either freeze and complete all or selected adhoc bills, whenever required. However, you cannot freeze and complete normal or regular bills from the **On Demand Billing** screen.

Procedure

To freeze and complete selected adhoc bills of a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose adhoc bills you want to freeze and complete.

The **View Bill Data** screen appears.

3. Select the check box corresponding to the pending adhoc bill that you want to freeze and complete.

Note: The check box does not appear corresponding to the completed adhoc bills and pending adhoc bills which have bill segments in the **Error** status.

4. Click **Freeze/Complete**.

The **Complete Bill** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Date	Used to specify the date on which the bill was completed.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Accounting Date	Used to specify the accounting date of the bill.	Yes

- Enter the required details.
- Click **OK** in the message box.

The status of the bills is changed to **Complete**.

Note:

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a file group are in the **Complete** status
- Multiple bills are generated for a usage data file of a file group and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen only when there is at least one pending bill for a file group where none of the bill segments are in the **Error** status.

Viewing All Bills Generated for a File Group

Procedure

To view all bills generated for a file group:

- Search for the file group in the **On Demand Billing** screen.
- In the **Search Results** section, click the link in the **Bills** column corresponding to the file group whose bills you want to view.

The **View Bill Data** screen appears. It contains the following fields:

Field Name	Field Description
File Group	Displays the name of the file group.
Description	Displays the description of the file group.
Bill Generation Date	Used to specify the date when the bills were generated for the file group.
Billing Method	Indicates the type of billing used for the file group. The valid values are: <ul style="list-style-type: none"> Adhoc Billing
Bill Status	Used to indicate the status of the bill. The valid values are: <ul style="list-style-type: none"> Pending Complete

In addition, this screen contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
	Note: It has a link. On clicking the link, the Bill screen appears with the details of the respective bill.
Alternate Bill ID	Displays the alternate bill ID.
Bill Status	Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> • Pending • Complete
Bill Date	Displays the date when the bill was completed.
Accounting Date	Displays the accounting date for which the financial transaction of the bill is created.
Invoice Amount	Displays the total amount billed to the person.
Invoice Currency	Displays the currency in which the amount is billed to the person.
Invoice Account ID	Indicates the account for which the bill is created.
	Note: It has a link. On clicking the link, the Account screen appears where you can view the details of the respective account.
Display Bill	On clicking this link, you can view the details of the respective bill.
	Note: This link appears only for the bills that are in the Complete status. The facility to view the generated bills in PDF format is available only if Oracle Documaker is integrated with Oracle Revenue Management and Billing.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. Click **Search**.
4. View the bills generated for the usage data file in the **View Bill Data** screen.
5. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

6. If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
7. If required, you can freeze and complete adhoc bills which are generated for the usage data file.

Note:

The **Freeze/Complete** button is not available in the **View Bill Data** screen when:

- All bills generated for a usage data file are in the **Complete** status
- Multiple bills are generated for a usage data file and one or more bill segments of each bill are in the **Error** status

In other words, the **Freeze/Complete** button is available in the **View Bill Data** screen only when there is at least one pending bill for a usage data file where none of the bill segments are in the **Error** status.

Viewing Usage Data Files of a File Group**Procedure**

To view usage data files of a file group:

1. Search for the file group in the **On Demand Billing** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the file group whose usage data files you want to view.

The **Group Files** zone appears.

3. View the usage data files of the file group in the **Group Files** zone.

Usage Data Processing

The **Usage Data Processing** screen allows you to search for a usage data file based on various search criteria. Through this screen, you can:

- Upload a usage data file
- Cancel a usage data file

- View all records uploaded through a usage data file
- View the valid, invalid, and cancelled records of a usage data file
- View the valid records of a usage data file which are submitted for approval
- View the valid records of a usage data file for which billable charges are already created
- View the rejected, billed and unbilled records of a usage data file
- Submit the valid records of a usage data file and create billable charges for them
- Approve or reject one or more valid records of a usage data file
- Revalidate the valid and invalid records of a usage data file
- Edit the valid, invalid and rejected records of a usage data file
- Export the usage data of a usage data file into a CSV file

This screen consists of the following zones:

- [Search](#) on page 882

Search

The **Search** zone allows you to search for usage data files that are uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name of the usage data file.	No
File Type	Used to indicate the type of usage data file.	No
File Upload From Date	Used when you want to search for usage data files that were uploaded from a particular date onwards.	No
To	Used when you want to search for usage data files that were uploaded till a particular date.	No
User ID	Used to specify the name of the user who has uploaded the usage data file.	No
Billing Method	Used to specify the type of billing used for the usage data file. The valid values are: <ul style="list-style-type: none"> • Adhoc Billing • Regular Billing 	No
File Group	Used to specify the file group of the usage data file.	No

Note: You must specify at least one search criterion while searching for a usage data file.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Information	Displays the name of the usage data file and its related details.

Column Name	Column Description
Revalidate	On clicking the Revalidate () icon, you can execute the validation process once again on the valid, invalid, and rejected records.
	Note: The Revalidate icon appears only when the usage records are in the Valid , Invalid , and/or Rejected status. In other words, you cannot revalidate a usage data file for which billable charges are created or when the bills are generated for a usage data file.
Cancel	On clicking the Cancel () icon, you can cancel all valid, invalid, and rejected records of the usage data file.
	Note: The Cancel icon appears only when the usage records are in the Valid , Invalid , and/or Rejected status. In other words, you cannot cancel a usage data file for which billable charges are created or when the bills are generated for a usage data file.
Submit	On clicking the Submit () icon, you can submit the valid records and create billable charges for them. If the valid usage records need to be approved before creating the billable charges, a To Do entry is created for the approver to approve the valid records.
	Note: The Submit icon appears only when all the records of a usage data file are in the Valid status. In other words, if a usage data file contains records in the Invalid status, you cannot create billable charges for a usage data file.
Approve	On clicking the Approve () icon, the approver can approve all valid records of the usage data file.
	Note: The Approve icon appears only when the usage data file (with all usage records in the Valid status) is uploaded using a file type to which the To Do algorithm (for enabling approval workflow) is attached.
Total	Displays the total number of records that are uploaded through the usage data file.
	Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all records uploaded through the usage data file.
Valid	Displays the number of records which are successfully validated in the system.
	Note: It has a link. On clicking the link, the Usage Data screen appears where you can view and edit all valid records of the usage data file.
Invalid	Displays the number of records which could not pass through the validation process in the system.
	Note: It has a link. On clicking the link, the Usage Data screen appears where you can view and edit all invalid records of the usage data file.

Column Name	Column Description
Submitted	Displays the number of valid records which are submitted for approval.
	Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all submitted records of the usage data file.
Rejected	Displays the number of records which are rejected by the approver.
	Note: It has a link. On clicking the link, the Usage Data screen appears where you can view and edit all rejected records of the usage data file.
Processed	Displays the number of valid records for which billable charges are already created.
	Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all processed records of the usage data file.
Billed	Displays the number of records for which billable charges are created and billed to the person.
	Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all billed records of the usage data file.
Unbilled	Displays the number of records for which billable charges are created, but are not yet billed to the person.
	Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all unbilled records of the usage data file.
Cancelled	Displays the number of records which are cancelled in the system.
	Note: It has a link. On clicking the link, the Usage Data screen appears where you can view all cancelled records of the usage data file.
Batch Run Status	Indicates the batch that was last executed on the usage data file and its current status.
	Note: It has a link. On clicking the link, the Batch Run Tree screen appears where you can view the execution details of the batch.

You can upload a usage data file by clicking the **Upload** link in the upper right corner of this zone.

Searching for a Usage Data File

Procedure

To search for a usage data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Usage Data Processing**.
The **Usage Data Processing** screen appears.
3. Enter the search criteria in the **Search** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of usage data files that meet the search criteria appears in the **Search Results** section.

Uploading a Usage Data File

Prerequisites

To upload a usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format
- File group using which you want to upload the usage data files is in **Open** status

Procedure

To upload a usage data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Usage Data Processing**.
The **Usage Data Processing** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Method	Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"> • Adhoc Billing • Regular Billing 	Yes
File Group	Used to specify the file group to which you want to add the usage data file. Note: This field appears only when you select the Adhoc Billing option from the File Group list. You can only view those file groups that are in the open status and to which you have access in the File Group list.	Yes (Conditional) Note: If you select the billing method as Adhoc Billing , you have to specify the file group to which you want to add the usage data file.
Bill After Date	Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field. Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date.	Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the bill after date.

Field Name	Field Description	Mandatory (Yes or No)
Default Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required.	Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the default usage start date.
	Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date.	
Default Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required.	Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the default usage end date.
	Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date.	
File Type	Used to specify the type of usage data file.	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
File Name	Used to specify the name and path of the usage data file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the usage data file is available in the system.	

4. Enter the required details.
5. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the usage data file that you want to upload is available.
7. Click **Open**.
The usage data file name and path appears in the **File Name** field.
8. Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

Note:

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files — each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

9. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Replacing an Existing File**Prerequisites**

To replace an existing usage data file, you should have:

- File types defined in the application
- Usage data in the required CSV file format

- File group using which you want to upload the usage data files is in **Open** status

Procedure

To replace an existing usage data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. Select **Financial** and then click **Usage Data Processing**.
The **Usage Data Processing** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search** zone.

The **Upload Usage Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Billing Method	Used to specify the type of billing you want to use for the usage data file. The valid values are: <ul style="list-style-type: none"> • Adhoc Billing • Regular Billing 	Yes
File Group	Used to specify the file group to which you want to add the usage data file.	Yes (Conditional)
	Note: This field appears only when you select the Adhoc Billing option from the File Group list. You can only view those file groups that are in the open status and to which you have access in the File Group list.	Note: If you select the billing method as Adhoc Billing , you have to specify the file group to which you want to add the usage data file.
Bill After Date	Used to specify the date after which the bills must be generated for the usage data file. By default, the current date appears in this field.	Yes (Conditional)
	Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the bill after date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date.	Note: If you select the billing method as Regular Billing , you have to specify the bill after date.
Default Usage Start Date	Used to specify the date from when the price item was used. The default usage start date is used when the start date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage start date, if required.	Yes (Conditional)
	Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage start date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage start date cannot be later than the default usage end date.	Note: If you select the billing method as Regular Billing , you have to specify the default usage start date.

Field Name	Field Description	Mandatory (Yes or No)
Default Usage End Date	Used to specify the date till when the price item was used. The default usage end date is used when the end date is not specified for a record in the usage data file. By default, the current date appears in this field. You can change the default usage end date, if required.	Yes (Conditional) Note: If you select the billing method as Regular Billing , you have to specify the default usage end date.
	Note: If you have selected the billing method as Adhoc Billing , this field appears in read-only mode and displays the default usage end date as defined for the selected file group. If you have selected the billing method as Regular Billing then this field is enabled displaying the current date. The default usage end date cannot be earlier than the default usage start date.	
File Type	Used to specify the type of usage data file.	Yes
Replace Existing File	Used to indicate that you want to replace any existing file in the system.	Yes
File Name	Used to specify the name and path of the usage data file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the usage data file is available in the system.	

4. Select the **Replace Existing File** check box.

Note: You can replace an existing file only when the usage records of a usage data file are in any of the statuses:

- **Valid** and/or **Invalid**
- **Rejected**
- **Cancelled**

In other words, you cannot replace a file when the billable charges are already created for the usage records of a usage data file, or are pending for approval with the approver.

5. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

6. Browse to the location where the usage data file that you want to replace is available.

7. Click **Open**.

The usage data file name and path appears in the **File Name** field.

8. Click **Upload**.

A message appears indicating that the usage data file has been uploaded successfully. If an error occurs while parsing, the usage data file is not uploaded in the system.

Note:

The validation process starts immediately after the file is uploaded in the system. If a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**. You can view the details of the uploaded file and its records in the **Usage Data Processing** screen.

If the usage data file size exceeds the file size limit set in the **C1-ODBFC** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job uploads and validates the usage data file. You can change the file size limit using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

The number of usage records that are parsed and mapped in an XML file depends on the value defined for the **Staging XML Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration. For example, if the **Staging XML Size** option type is set to 100 and a usage data file contains 500 records, then the system creates 5 XML files — each containing 100 records.

If a batch job is created automatically, the number of usage records that are validated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records that were uploaded in the system
- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

9. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Viewing All Records of a Usage Data File**Procedure**

To view all records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Total** column corresponding to the usage data file whose records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the usage records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Used to specify the status of the usage record. The valid values are: <ul style="list-style-type: none"> • Valid • Invalid • Submitted for Approval • Processed • Rejected • Cancelled 	No
Division	Used to specify the division to which the usage record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the usage records.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose usage records you want to view.	Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record. Note: This column appears only for the valid records for which billable charges have been created.
ACCOUNT ID TYPE	Indicates the account identifier type.

Column Name	Column Description
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15	Displays the value of the price item parameter. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
SQI1, SQI2,, SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.

Column Name	Column Description
SQIVALUE1, SQIVALUE2,, SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2,, AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2,, CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2,, SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2,, CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2,, CHARVAL10	Displays the value of the characteristic type.

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

Note: You can download details of all the records of a usage data file in a CSV file format using the **Export TO Excel** link provided in the **Search** section.

- View the records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) buttons to navigate between pages.
- If required, you can filter the usage records in the **Usage Data** screen.
- If required, you can click the **Export TO Excel** link to download details of all the records of a usage data file in a CSV file format.

Viewing Valid Records of a Usage Data File**Procedure**

To view valid records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Valid** column corresponding to the usage data file whose valid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the valid records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Status	Indicates that all valid records are displayed in the Usage Data screen.	Not applicable
Division	Used to specify the division to which the valid record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the valid records.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose valid records you want to view.	Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all valid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column.

Column Name	Column Description
END DATE	Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15	Displays the value of the price item parameter. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
SQI1, SQI2,, SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2,, SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2,, AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2,, CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.

Column Name	Column Description
SUMMARY1, SUMMARY2,, SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2,, CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2,, CHARVAL10	Displays the value of the characteristic type.

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** () , **Previous** () , **Next** () , and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the valid records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** () , **Previous** () , **Next** () , and **Last** () buttons to navigate between pages.
6. If required, you can filter the valid records in the **Usage Data** screen.

Viewing Invalid Records of a Usage Data File

Procedure

To view invalid records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Invalid** column corresponding to the usage data file whose invalid records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the invalid records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Status	Indicates that all invalid records are displayed in the Usage Data screen.	Not applicable
Division	Used to specify the division to which the invalid record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the invalid records.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose invalid records you want to view.	Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all invalid records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	Note: This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	Note: This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	Note: If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.
	Note: If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15	Displays the value of the price item parameter.
	Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
SQI1, SQI2,, SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.

Column Name	Column Description
SQIVALUE1, SQIVALUE2,, SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2,, AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2,, CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2,, SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2,, CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2,, CHARVAL10	Displays the value of the characteristic type.

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the invalid records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) buttons to navigate between pages.

Viewing Submitted Records of a Usage Data File**Procedure**

To view submitted records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Submitted** column corresponding to the usage data file whose submitted records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the submitted records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all records submitted for approval are displayed in the Usage Data screen.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division to which the submitted record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the submitted records.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose submitted records you want to view.	Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all submitted records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column.

Column Name	Column Description
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15	Displays the value of the price item parameter. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
SQI1, SQI2,, SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2,, SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2,, AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2,, CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2,, SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.

Column Name	Column Description
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2, ..., GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2,, CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2,, CHARVAL10	Displays the value of the characteristic type.

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Viewing Processed Records of a Usage Data File

Procedure

To view processed records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Processed** column corresponding to the usage data file whose processed records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the processed records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all processed records are displayed in the Usage Data screen.	Not applicable
Division	Used to specify the division to which the processed record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the processed records.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose processed records you want to view.	Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all processed records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.

Column Name	Column Description
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15	Displays the value of the price item parameter. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
SQI1, SQI2,, SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQVALUE1, SQVALUE2,, SQVALUE10	Displays the number of units of the service quantity.

Column Name	Column Description
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2,, AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2,, CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2,, SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2,, CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2,, CHARVAL10	Displays the value of the characteristic type.

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the processed records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<), **Previous** (<), **Next** (>), and **Last** (>>) buttons to navigate between pages.
- If required, you can filter the processed records in the **Usage Data** screen.

Viewing Cancelled Records of a Usage Data File**Procedure**

To view cancelled records of a usage data file:

- Search for the usage data file in the **Usage Data Processing** screen.
- In the **Search Results** section, click the link in the **Cancelled** column corresponding to the usage data file whose cancelled records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- Search Criteria** — This section allows you to filter the cancelled records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Usage Record Status	Indicates that all cancelled records are displayed in the Usage Data screen.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division to which the cancelled record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the cancelled records.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose cancelled records you want to view.	Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all cancelled records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record. Note: This column appears only if you have cancelled a valid record for which billable charges have been created.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column.

Column Name	Column Description
END DATE	Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15	Displays the value of the price item parameter. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
SQI1, SQI2,, SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2,, SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2,, AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2,, CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.

Column Name	Column Description
SUMMARY1, SUMMARY2,, SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2,, CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2,, CHARVAL10	Displays the value of the characteristic type.
REASON	Indicates the reason why the usage record was cancelled.
COMMENTS	Displays additional information entered while cancelling a usage record.

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- View the cancelled records of the usage data file in the **Usage Data** screen.
- If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

- If required, you can click the **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) buttons to navigate between pages.
- If required, you can filter the cancelled records in the **Usage Data** screen.

Viewing Rejected Records of a Usage Data File**Procedure**

To view rejected records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Rejected** column corresponding to the usage data file whose rejected records you want to view.

The **Usage Data** screen appears. It contains the following two sections:

- **Search Criteria** — This section allows you to filter the rejected records based on the various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Displays the name of the usage data file.	Not applicable
File Type	Indicates the type of the usage data file.	Not applicable
Default Usage Start Date	Displays the usage start date entered while uploading the usage data file.	Not applicable
Default Usage End Date	Displays the usage end date entered while uploading the usage data file.	Not applicable
Status	Indicates that all rejected records are displayed in the Usage Data screen.	Not applicable
Division	Used to specify the division to which the rejected record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the rejected records.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose rejected records you want to view.	Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all rejected records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID.
	Note: This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type.
	Note: This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used.
	Note: If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used.
	Note: If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing.
	Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
PARAM TYPE 1, PARAM TYPE 2,, PARAM TYPE 15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing.
	Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

Column Name	Column Description
PARAM VALUE 1, PARAM VALUE 2,, PARAM VALUE 15	Displays the value of the price item parameter. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
SQI1, SQI2,, SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2,, SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2,, AMOUNT10	Displays the charge amount.
CURRENCY 1, CURRENCY 2,, CURRENCY 10	Displays the currency in which the amount is charged.
MEMO ONLY 1, MEMO ONLY 2,, MEMO ONLY 10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY 1, SUMMARY 2,, SUMMARY 10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL 1, SHOW ON BILL 2,, SHOW ON BILL 10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE 1, CHARTYPE 2,, CHARTYPE 10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL 1, CHARVAL 2,, CHARVAL 10	Displays the value of the characteristic type.
REASON	Indicates the reason why the usage record was rejected by the approver.
COMMENTS	Displays additional information entered while rejecting a usage record.

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the rejected records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) buttons to navigate between pages.

Division	Used to specify the division to which the unbilled record belongs.	No
Account Identifier Type	Used to specify the identifier type based on which you want to search for the unbilled records.	Yes (Conditional) Note: If you enter the account identifier as a search criteria, you have to enter the account identifier type.
Account Identifier	Used to indicate the account whose unbilled records you want to view.	Yes (Conditional) Note: If you enter the account identifier type as a search criteria, you have to enter the account identifier.

- **Search Results** — By default, all unbilled records of the usage data file are listed in the **Search Results** section. You can filter the search results based on the specified criteria. the **Search Results** section contains the following columns:

Column Name	Column Description
BILLABLE CHARGE ID	Indicates the billable charge which is generated for the usage record.
ACCOUNT ID TYPE	Indicates the account identifier type.
ACCOUNT IDENTIFIER	Indicates the account to which the usage record belongs.
ACCOUNT INFORMATION	Displays information about the account.
DIVISION	Indicates the division to which the usage record belongs.
CONTRACT ID	Displays the contract ID. Note: This column appears only if usage data files are uploaded for the insurance module.
CHARGE TYPE	Indicates the charge type. Note: This column appears only if usage data files are uploaded for the insurance module.
START DATE	Displays the date from when the price item was used. Note: If the start date is not available, the default usage start date appears in this column.
END DATE	Displays the date till when the price item was used. Note: If the end date is not available, the default usage end date appears in this column.
DESCRIPTION	Displays the description of the usage record. It is shown on the billable charge.
PRICE ITEM	Displays the price item code.
VARIANCE	Indicates the variance that must be used along with the price item for determining the price item pricing. Note: This column appears only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to False .
PARAM TYPE1, PARAM TYPE2,, PARAM TYPE15	Indicates the price item parameter that must be used along with the price item for determining the price item pricing. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .

Column Name	Column Description
PARAM VALUE1, PARAM VALUE2,, PARAM VALUE15	Displays the value of the price item parameter. Note: These columns appear only when the Multi Price Parameter option type of the Multi Parameter Based Pricing (C1_PPARM_FLG) feature configuration is set to True .
SQI1, SQI2,, SQI10	Indicates the service quantity identifier that must be used for calculating the price item charges.
SQIVALUE1, SQIVALUE2,, SQIVALUE10	Displays the number of units of the service quantity.
BILL LINE DESCRIPTION1, BILL LINE DESCRIPTION2,, BILL LINE DESCRIPTION10	Displays the description of the line item (charge).
AMOUNT1, AMOUNT2,, AMOUNT10	Displays the charge amount.
CURRENCY1, CURRENCY2,, CURRENCY10	Displays the currency in which the amount is charged.
MEMO ONLY1, MEMO ONLY2,, MEMO ONLY10	Indicates whether the charge should be included in the bill amount or not.
SUMMARY1, SUMMARY2,, SUMMARY10	Indicates whether the charge should be included in the summary line or not.
SHOW ON BILL1, SHOW ON BILL2,, SHOW ON BILL10	Indicates whether the charge should appear on the person's printed bill or not.
GL DISTRIBUTION CODE 1, GL DISTRIBUTION CODE 2,, GL DISTRIBUTION CODE 10	Displays the distribution code which indicates the GL account associated with the charge.
CHARTYPE1, CHARTYPE2,, CHARTYPE10	Indicates the characteristic that must be defined for the billable charge.
CHARVAL1, CHARVAL2,, CHARVAL10	Displays the value of the characteristic type.

Note:

If you have defined business labels for usage data fields, the columns will appear with the business labels defined for the respective column.

Only those columns that contain data in the CSV file appear in the **Usage Data** screen. For example, if information about characteristics is provided in the CHARTYPE4 and CHARVAL4 columns of the CSV file, then only the CHARTYPE4 and CHARVAL4 columns appear in the **Usage Data** screen. Similarly, if information about the line item (charge) is provided in the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, and GL DISTRIBUTION CODE 6 columns of the CSV file, then only the BILL LINE DESCRIPTION6, AMOUNT6, CURRENCY6, MEMO ONLY6, SUMMARY6, SHOW ON BILL6, AND GL DISTRIBUTION CODE 6 columns appear in the **Usage Data** screen.

Note:

Pagination is used to display limited number of records in the **Search Results** section. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

3. View the unbilled records of the usage data file in the **Usage Data** screen.
4. If required, you can change the number of records displayed per page.

Note: By default, the number of records that appear in each page depends on the minimum value defined in the **PAGE_NUMBER** lookup field. For example, if the **PAGE_NUMBER** lookup field has four values — 10, 20, 30, and 40, then the number of records displayed in each page, by default, would be 10.

5. If required, you can click the **First** (<<<), **Previous** (<), **Next** (>), and **Last** (>>>) buttons to navigate between pages.
6. If required, you can filter the unbilled records in the **Usage Data** screen.

Submitting a Valid Record**Procedure**

To submit a valid record:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the **Submit** (🖱️) icon corresponding to the usage data file whose valid records you want to submit.

The system behaves in the following manner when:

- **Billing Method** — **Adhoc Billing, Approval Workflow — Off, and Bill After Date — Current or Future Date**: A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **Y** and

the **Bill After Date** is stamped on the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**.

- **Billing Method — Adhoc Billing, Approval Workflow — On, and Bill After Date — Current or Future Date:** A To Do entry is created for the approver to approve the valid records. The status of the usage record is changed to **Submitted**.
- **Billing Method — Regular Billing, Approval Workflow — Off, and Bill After Date — Specified:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **N** and the **Bill After Date** is stamped on the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**. The bills will be generated for the account in the bill cycle in which the bill after date falls.
- **Billing Method — Regular Billing, Approval Workflow — Off, and Bill After Date — Not Specified:** A billable charge is created for each valid usage record. The **Adhoc Bill** flag is set to **N** in the billable charge. If the total number of valid records in a usage data file exceeds the transaction limit, a batch job is created using the **Billable Charge Creation (C1-ODBCH)** batch. A message appears indicating the batch job ID. This batch job creates a billable charge for each valid usage record. The status of the usage record is changed to **Processed**. The bills will be generated for the account based on the bill cycle defined for the account.
- **Billing Method — Regular Billing and Approval Workflow — On:** A To Do entry is created for the approver to approve the valid records. The status of the usage record is changed to **Submitted**.

Note:

You can change the transaction limit, whenever required, using the **On Demand Billing (C1-ODBFC)** feature configuration. For more information on the **Billable Charge Creation (C1-ODBCH)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If you want to create billable charges for valid usage records where start date is a future date, then ensure that the **Use Calendar Billing** option is set to **Allow Advanced Billing** in the respective contract type.

If a batch job is created automatically, the number of valid records for which billable charges are created in each work unit depends on the value defined for the **Billable Charge Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

In case an account belongs to an invoicing group, the billable charge is created for the member account and the bill is generated for the master account.

On successful completion of the **Billable Charge Creation (C1-ODBCH)** batch, a To Do entry is created using the **C1-ODBCH To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-ODBCH To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records for which billable charges were created
- Number of records for which billable charges could not be created successfully

3. If a batch job is created automatically, click **OK** in the message box.

Approving a Valid Record

You can view the number of records which are pending for approval in the **Submitted** column corresponding to the usage data file in the **Usage Data Processing** screen. The approver can review, and accordingly approve or reject the usage record based on the observations.

Note: The system will not allow you to approve or reject a usage record submitted by you.

Procedure

To approve a valid record:

1. Do either of the following:

If you want to...	Then...
Approve the usage record from the Usage Data Processing screen	<ol style="list-style-type: none"> 1. Search for the usage data file in the Usage Data Processing screen. 2. In the Search Results section, click the Approve () icon corresponding to the usage data file whose records you want to review.
Approve the usage record from the To Do List screen	<ol style="list-style-type: none"> 1. From the Main Menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 2. Select the type of To Do entries you want to view. The To Do List screen appears. 3. Select Open from the Filter by list to view all unassigned To Dos. 4. Click the Submitted Message link corresponding to the To Do entry whose records you want to review.

The **Usage Data** screen appears.

2. Review the usage records which you want approve or reject.
3. Do either of the following:

If you want to...	Then...
Approve one or more usage records	<ol style="list-style-type: none"> 1. If the usage record is accurate, then select the check box corresponding to the usage record. 2. Click Approve. The system behaves in the following manner when: <ul style="list-style-type: none"> • Billing Method — Adhoc Billing and Bill After Date — Current or Future Date: A billable charge is created for each valid record which is approved. The Adhoc Bill flag is set to Y and

Rejecting a Valid Record

You can view the number of records which are pending for approval in the **Submitted** column corresponding to the usage data file in the **Usage Data Processing** screen. The approver can review, and accordingly approve or reject the usage record based on the observations.

Note: The system will not allow you to approve or reject a usage record submitted by you.

Procedure

To reject a valid record:

1. Do either of the following:

If you want to...	Then...
Reject the usage record from the Usage Data Processing screen	<ol style="list-style-type: none"> 1. Search for the usage data file in the Usage Data Processing screen. 2. In the Search Results section, click the Approve (✓) icon corresponding to the usage data file whose records you want to review.
Reject the usage record from the To Do List screen	<ol style="list-style-type: none"> 1. From the Main Menu, select To Do and then click To Do List. The To Do Type for User Search window appears. 2. Select the type of To Do entries you want to view. The To Do List screen appears. 3. Select Open from the Filter by list to view all unassigned To Dos. 4. Click the Submitted Message link corresponding to the To Do entry whose records you want to review.

The **Usage Data** screen appears.

2. Review the usage records which you want approve or reject.
3. Do either of the following:

If you want to...	Then...
Reject one or more usage records	<ol style="list-style-type: none"> 1. If the usage record is not appropriate, then select the check box corresponding to the usage record. 2. Click Reject.
Reject all usage records	<ol style="list-style-type: none"> 1. Click Reject All.

The **Rejection Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reason	Used to indicate the reason why you want to reject the usage record.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

4. Select the reason for rejecting the usage record and enter the comments in the respective field.

Note: The **ODB_REJ_RSN_FLG** lookup field values appear in the **Reason** list.

5. Click **OK**.

The status of the usage record is changed to **Rejected**. A To Do entry is created for the submitter to include correct or missing data.

Cancelling a Usage Data File

There might be situations when incorrect usage data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. Once the usage data file is cancelled, the status of the file and all usage records in the file is changed to **Cancelled**. However, note that you can cancel a usage data file only when there are no records (in other words, zero records) in the **Processed** and **Submitted** statuses.

Procedure

To cancel a usage data file:

1. Do either of the following:

If you want to...	Then...
Cancel the usage data file from the Usage Data Processing screen	<ol style="list-style-type: none"> 1. Search for the usage data file in the Usage Data Processing screen. 2. In the Search Results section, click the Cancel () icon corresponding to the usage data file that you want to cancel.
Cancel the usage data file from the On Demand Billing screen	<ol style="list-style-type: none"> 1. From the Main Menu, select Financial and then click On Demand Billing. The On Demand Billing screen appears. 2. Search for the file group whose usage data file you want to cancel. The search results appears. 3. Click the Broadcast () icon corresponding to the required file group. The Group Files zone appears. The Group Files zone lists the usage data files that are uploaded using the file group. 4. Click the Cancel () icon corresponding to the usage data file that you want to cancel.

A message appears confirming whether you want to cancel the usage data file.

2. Click **OK**.

The **Cancel Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reason	Used to indicate the reason why you want to cancel the usage data file.	Yes
Comments	Used to specify additional information while cancelling the usage data file.	Yes

3. Select the reason for cancelling the usage data file and enter the comments in the respective field.

Note: The **ODB_CAN_RSN_FLG** lookup field values appear in the **Reason** list.

4. Click **OK**.

The status of the usage data file is changed to **Cancelled**.

Revalidating a Usage Data File

There might be situations when you want to execute the validation process once again on the usage data file. For example, initially when the usage data file was uploaded, accounts didn't have an active contract and therefore the status of the usage records was set to **Invalid**. Later, a contract was created and activated for each account (whose usage records are available in the usage data file). In such case, you need to execute the validation process once again on the usage data file. However, note that when you revalidate a usage data file, only the records in the **Valid** and **Invalid** status are revalidated.

Procedure

To revalidate a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. Click the **Revalidate** () icon corresponding to the usage data file on which you want to execute the validation process once again.

The valid and invalid records are revalidated, and accordingly the status of records is changed. A message appears indicating that the validation process has completed successfully.

Note:

If the usage data file size exceeds the file size limit set in the **On Demand Billing (C1-ODBFC)** feature configuration, a batch job is created using the **Upload and Validate Usage Data File (C1-ODFU)** batch. A message appears indicating the batch job ID. This batch job revalidates the usage data file. For more information on the **Upload and Validate Usage Data File (C1-ODFU)** batch, see *Oracle Revenue Management and Billing Batch Execution Guide*.

If a batch job is created automatically, the number of usage records that are revalidated in each work unit depends on the value defined for the **Validation Chunk Size** option type in the **On Demand Billing (C1-ODBFC)** feature configuration.

On successful completion of the **Upload and Validate Usage Data File (C1-ODFU)** batch, a To Do entry is created using the **C1-ODFU To Do** type. You can view this To Do entry only when you are assigned a To Do role which is mapped to the **C1-ODFU To Do** type. This To Do indicates whether the batch was successfully executed or not. If the batch was successfully executed, it indicates the following:

- Number of records which were successfully validated
- Number of records which could not pass through the validation process
- Number of records which failed to validate due to some technical reasons

3. Click **OK** in the message box.

Once a usage record is successfully validated, the status of the usage record is changed to **Valid**. And, if a usage record could not pass through the validation process, the status of the usage record is changed to **Invalid**.

Editing a Valid, Invalid, or Rejected Usage Record

If the usage record validation fails or the approver rejects the usage record due to some reason, the status of the record is changed to **Invalid** or **Rejected**, respectively. You need to then correct the existing data or add the missing data. The system allows you to edit the valid, invalid, and rejected usage records.

Procedure

To edit a valid, invalid or rejected usage record:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. Depending on whether you want to edit a valid, invalid, or rejected record, click the link in the **Valid**, **Invalid**, or **Rejected** column corresponding to the usage data file whose records you want to edit.

The **Usage Data** screen appears. The columns in the **Search Results** section are editable.

Note:

In case of rejected records, all columns except the **Reason** and **Comments** columns are editable.

In case of invalid record, the field with incorrect or missing data is highlighted with the red color. This helps to easily identify the reason why the validation process failed.

3. Enter the correct or missing data in the respective field.
4. Click **Save**.

All valid, invalid, or rejected usage records are validated once again. Once the validation process has completed successfully, the status of the records is changed accordingly.

Exporting Usage Data into CSV file

Oracle Revenue Management and Billing provides you the facility to export the usage data into a CSV file. However, you can download the usage data in a CSV file only if the billable charges are not yet created. In other words, you can download the usage data only when all the records of a usage data file are in the valid and/or invalid status. Once the usage data is downloaded, you can edit the usage records and reupload the usage data file.

Note: When you download the usage data file using the **Export To Excel** option, the downloaded file is saved on your system with a unique ID. Once you make the required changes in the downloaded usage data file, you need to save the modified file with the same name as it exists in Oracle Revenue Management and Billing, and then upload the file into the system to replace the existing file.

Procedure

To export usage data into CSV file:

1. Search for the usage data file in the **Usage Data Processing** screen.
2. In the **Search Results** section, click the link in the **Total** column corresponding to the usage data file whose usage records you want to export.
The **Usage Data** screen appears.
3. Click the **Export TO Excel** link in the **Search** section to download details of all the valid and/or invalid records of a usage data file in a CSV file format.
A message appears indicating that all valid and invalid records will be exported.
4. Click **OK**.

The system prompts you to save the file.

How to search for a usage data file	Searching for a Usage Data File on page 885

Filtering Usage Records

Procedure

To filter records of a usage data file:

1. Search for the usage data file in the **Usage Data Processing** screen.

- Depending on whether you want to filter total, valid, invalid, submitted, processed, rejected, cancelled, billed, or unbilled usage records, click the link in the respective column corresponding to the usage data file.

The **Usage Data** screen appears.

- Enter the search criteria based on which you want to filter the records.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

The search results are filtered based on the specified criteria.

Chapter 12

Upload Validated Payment Data

Topics:

- [Payment Upload Process](#)
- [Prerequisites](#)
- [CSV File Format](#)
- [Payment Data File Status Transition](#)
- [Payment Record Status Transition](#)
- [Error Messages](#)
- [Payment Upload](#)

Oracle Revenue Management and Billing until now provided you with an ability to interface payments from an external source, such as remittance processor. The system supported two mechanisms to upload payment data — one using which you can populate payment upload staging records and another using which you can populate payment event upload staging records. The system now enables you to validate the payment records before you move them to the staging area. The system provides the pre-staging area where you can upload and validate the payment records. The system provides a user interface which helps you to upload a payment data file in the pre-staging area. It also helps you to perform various tasks, such as:

- Track the status of the payment records and the payment data file
- Move the payment records to the staging area
- Cancel a payment data file
- View the log of a payment data file

You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 939. At present, the system supports only the CSV file format. This is because the payment data mapping algorithm type shipped with the product is designed to support the CSV format. If you want to use any other file format, you need to define custom mapping algorithm type that supports the required file format.

The file type using which you upload a payment data file indicates the mapping and validation algorithms that you want to use for the payment data file. On uploading a payment data file, the mapping algorithm parses the CSV file and uploads the payments records in the pre-staging area. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. Once the validation process is complete, you can move the payment records from the pre-staging to staging area. Once the payment records are moved to the staging area, the system creates payment events, tenders, payments and payment segments through a batch process. For more information about the payment upload process, see [Payment Upload Process](#) on page 936.

During the payment upload process, a payment data file and each record of the file goes through various statuses until the payment events and payments are created. For more information about the payment data file and payment record statuses, see [Payment Data File Status Transition](#) on page 941 and [Payment Record Status Transition](#) on page 941, respectively.

Payment Upload Process

The payment upload process includes the following sub-processes:

- [Upload Payment Records in the Pre-Staging Area](#) on page 936
- [Move Payment Records to the Staging Area](#) on page 937
- [Create Payment Events and Payments](#) on page 937

Upload Payment Records in the Pre-Staging Area

Oracle Revenue Management and Billing allows you to validate the payment records before you move them to the staging area. You can upload and validate the payment records in the pre-staging area. You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 939.

While uploading a payment data file, you need to specify the file type using which you want to upload the payment data file. The file type indicates the mapping and validation algorithms that you want to use for the payment data file. Therefore, while defining a file type using which you want to upload a payment data file, you need to:

- Set the feed type to **Payment Upload Data**
- Attach mapping algorithm which is created using the **C1-CSVUPLPAY** algorithm type
- Attach validation algorithm which is created using the **C1-PUPLVALID** algorithm type

On uploading a payment data file, the mapping algorithm does the following:

1. Validates whether the file is in the CSV format
2. Validates whether at least one payment record is available in the CSV file
3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database
4. Uploads the payments records in the pre-staging area

The validation process starts immediately after the payment data file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The system checks whether:

- The data is available in the **Tender ID, Tender Amount, Payment Amount, Date Received, Bank Account, and Payment Type** columns in the CSV file.
- The data is available in the **Match Type and Match Value** columns in the CSV file.

Note: This validation is done only when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The payee and payor accounts specified in the payment record exists in the system.
- The payee account with the specified account identifier type and account identifier combination exists in the system.
- A valid currency code is specified in the payment record.

Note: If the currency code is not specified, the currency is set to the payor account's invoice currency.

- The payment type (i.e. tender type) specified in the payment record exists in the system.
- The account identifier type specified in the payment record exists in the system.

Note: This validation is done only when the payee account ID is not specified in the payment record.

- The match type specified in the payment record exists in the system.

Note: This validation is done only when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The characteristic type specified in the payment record exists in the system.
- The characteristic value matches any predefined value when the characteristic value type is set to **Predefined Value**.
- The characteristic value is specified in the payment record when the characteristic type is specified and vice-versa.

You can upload a file by clicking the **Upload** link in the **Payment Upload** screen. On uploading a payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 941.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. Once the payment records are uploaded and validated in the pre-staging area, you can do either of the following:

- Move the payment records to the staging area
- Cancel a payment data file
- Replace the existing payment data file

Note: If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Move Payment Records to the Staging Area

Once the payment records are uploaded and validated in the pre-staging area, you can move the records to the staging area. The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area. In such scenario, you need to correct the invalid payment records and upload the same file once again in the system. In addition, if you have cancelled a payment data file, you cannot move any records (including valid and error records) of the payment data file to the staging area.

You can move the payment records to the staging area by clicking the **Move to Staging** icon corresponding to the payment data file in the **Payment Upload** screen. The **Move to Staging** icon appears only when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

On clicking the **Move to Staging** icon, the payment records are copied (and not moved) from the pre-staging to staging area and the status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**. Once you move the payment records to the staging area, you can edit the payment staging records, if required.

Create Payment Events and Payments

Once the payment records are moved to the staging area, the system creates payment events for the payment data file in the background when the **Payment Upload (PUPL)** batch is invoked. You can configure the **Payment Upload (PUPL)** batch such that it is executed at regular intervals. When the **Payment Upload (PUPL)** batch is invoked, the

system checks whether there are any deposit control, tender control, payment tender, and payment staging records in the **Pending** status. If there are staging records in the **Pending** status, the system creates the following entities:

- Deposit Control
- Tender Control
- Payment Events
- Payment Tenders
- Payments
- Payment Segments
- Financial Transactions (when the payments are frozen)

The status of the deposit control, tender control, payment tender, and payment staging records is changed to **Complete**. If any error occurs while creating payment event for a payment record, the status of the deposit control, tender control, payment tender, and payment staging records is changed to **Error**. In addition, the status of the payment record in the pre-staging area is changed to **Error in Staging**.

Traditionally, the **Payment Upload (PUPL)** batch considered staging records which are in the **Error** or **Pending** status. If a staging record is in the **Error** status, the system used to reset the status to **Pending** and then further processed the staging record. This system behavior still exists for staging records which are not uploaded through the **Payment Upload** process. If the staging records are uploaded through the **Payment Upload** process, you need to manually correct the staging records and change the status of deposit control, tender control, payment tender, and payment staging records to **Pending**. The corrected staging records will then be processed when the **Payment Upload (PUPL)** batch is invoked at subsequent interval.

Prerequisites

To setup the payment upload process, you need to do the following:

- Define the required match types with the appropriate payment distribution override and manual distribution algorithms.
- Define the required tender types in the system.
- Define the required currency codes in the system.
- Define the required tender sources in the system.
- Define the required characteristic types where the characteristic entity is set to **Payment**.
- Create a mapping algorithm using the **C1-CSVUPLPAY** algorithm type.
- Create a validation algorithm using the **C1-PUPLVALID** algorithm type.
- Define the required file types where the feed type is set to **Payment Upload Data**.
- Assign the **PUPL To Do** type to a To Do role whose users must receive the To Do generated while executing the **Payment Upload (PUPL)** batch.
- Set the batch control type of the **Payment Upload (PUPL)** batch to **Timed** and define the following attributes:
 - Time Interval
 - Timer Active
 - User ID
 - Batch Language
 - Email Address

CSV File Format

Before uploading a payment data file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account ID	Used to specify the payee account ID.	Yes
Match Type	Used to specify the match type using which you want to match the payment.	Yes (Conditional) Note: This data is required when the match value is specified.
Match Value	Used to specify the entity (such as bill, contract, and so on) against which you want to match the payment.	Yes (Conditional) Note: This data is required when the match type is specified.
Tender ID	Used to specify the payment tender ID. Note: If the tender ID is same for two or more payment records, the system will create multiple payments against one tender. In other words, there will be multiple payments which are created through the payment event.	Yes
Tender Amount	Used to specify the tender amount. Note: You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	Yes
Payment Amount	Used to specify the amount paid through the tender. Note: You must not specify the value less than or equal to 0. The precision specified for the payment amount must not exceed the decimal places defined for the currency in the system.	Yes
Date Received	Used to specify the date when the payment is made. Note: You must specify the date in the MM/DD/YYYY format.	Yes
Bank Account	Used to specify the external source ID which is associated with the tender source.	Yes

Column Name	Description	Mandatory (Yes or No)
Payment Type	Used to specify the type of tender through which the payment is made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Currency	Used to specify the currency in which the payment is made. Note: If the currency is not specified, it is set to the payor account's invoice currency.	No
Account ID Type	Used to specify the account identifier type.	Yes (Conditional) Note: This data is required when the account identifier is specified.
Account Identifier	Used to specify the account for which the payment is made.	Yes (Conditional) Note: This data is required when the account identifier type is specified.
Payment Char Type1, Payment Char Type2,, Payment Char Type5	Used to indicate the characteristic that must be defined for the payment.	Yes (Conditional) Note: This data is required when the characteristic value is specified.
Payment Char Value1, Payment Char Value2,, Payment Char Value5	Used to specify the value for the characteristic type.	Yes (Conditional) Note: This data is required when the characteristic type is specified.
MICR ID	Used to specify the MICR code.	No
Payor ID	Used to specify the payor account ID. Note: If the payor account ID is not specified, the payor account ID is set to the payee account ID assuming that the payor and payee are the same.	No

Note:

If a payment data file contains column names other than those mentioned in the above table, the system will not upload the payment data file.

If a payment data file contains more than 1000 payment records, the system will not allow you to upload the payment data file in the system. Therefore, ensure that a payment data file contains less than 1000 payment records.

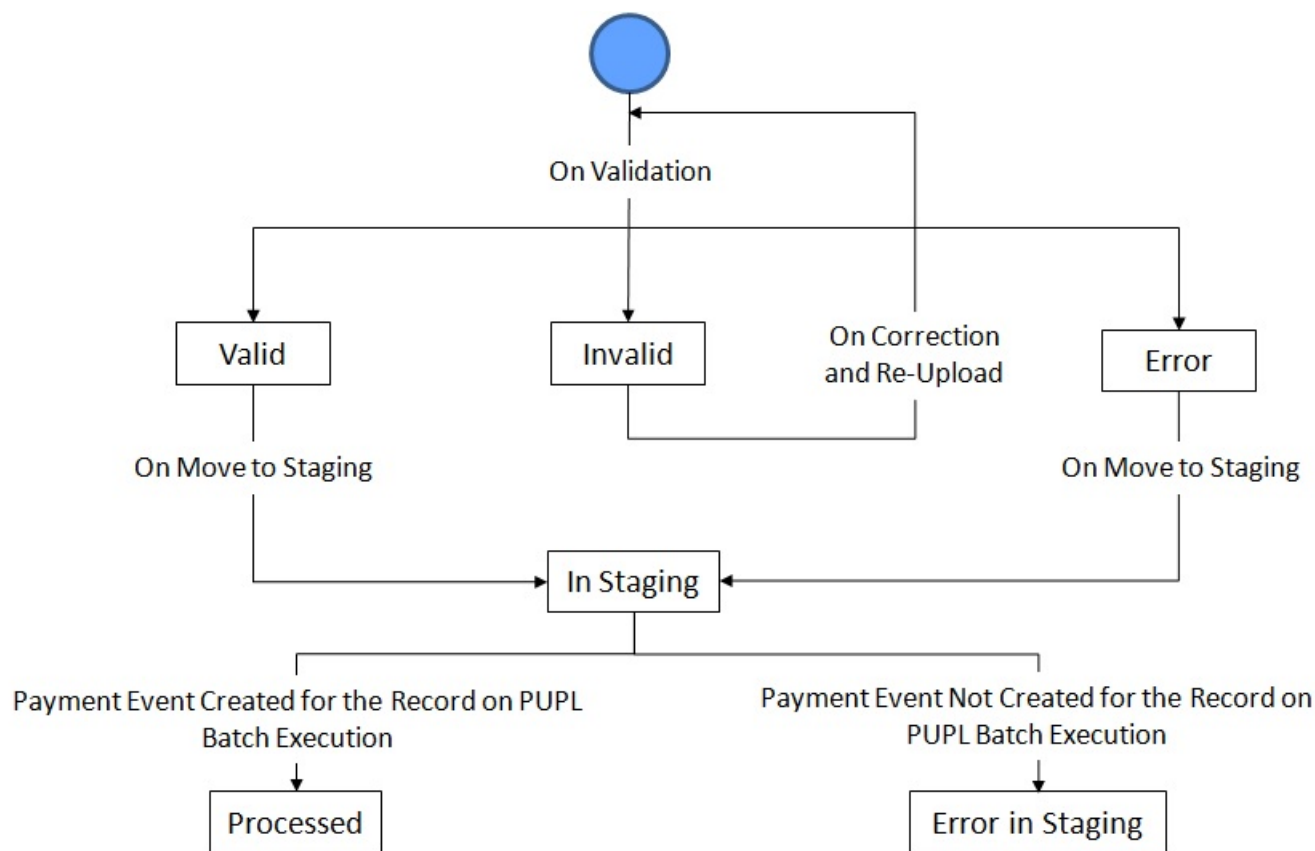

Payment Data File Status Transition

The following figure graphically indicates how a payment data file moves from one status to another during the payment upload process:

Payment Record Status Transition

The following figure graphically indicates how a payment record moves from one status to another during the payment upload process:

The following table lists the scenarios when a payment record is set to **Invalid** or **Error** status:

Scenario	Payment Record Status
The system could not find the payee account ID for a given account identifier type and account identifier combination when the payee account ID is not specified in the payment record.	Invalid
The payee account ID specified in the payment record does not exist in the system.	Invalid
The payee account ID, account identifier type, or account identifier are not specified in the payment record.	Invalid
The match type is not specified in the payment record.	Invalid
The match type specified in the payment record does not exist in the system.	Error
The match value is not specified in the payment record.	Invalid
The currency code does not exist in the system.	Invalid
The tender amount is either zero or not specified in the payment record.	Invalid
The payment amount is either zero or not specified in the payment record.	Invalid
The bank account is not specified in the payment record.	Invalid
The payment type (i.e. tender type) does not exist in the system.	Invalid

Scenario	Payment Record Status
The payment type is not specified in the payment record.	Invalid
The tender ID is not specified in the payment record.	Invalid
The date received is not specified in the payment record.	Invalid
The payor account ID specified in the payment record does not exist in the system.	Invalid
The characteristic type specified in the payment record does not exist in the system.	Invalid
If a characteristic type is specified, but the characteristic value is not specified in the payment record.	Invalid
If a characteristic value is specified, but the characteristic type is not specified in the payment record.	Invalid
The characteristic value does not match any predefined value when the characteristic value type is set to Predefined Value .	Invalid

Note: The system does the match type and match value related validations only when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

Error Messages

The following table lists the errors that may occur during the payment upload process. It also indicates how you can resolve these errors.

Message Number	Error Message	Message Category	Possible Issues
80110	File cannot be reuploaded as some records have already been processed.	11111	The possible issues could be: <ul style="list-style-type: none"> You are trying to replace an existing file whose payment records are already moved to the staging area and/or for which payment events are already created.
1463	This file already exists in the system. Please check.	17000	The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file which is already uploaded in the system without selecting the Replace Existing File check box.
1465	Please upload a file in the CSV format.	17000	The possible issues could be: <ul style="list-style-type: none"> You are trying to upload a file which is not in the CSV format.
80113	Duplicate Header for column %1 in file.	11111	The possible issues could be: <ul style="list-style-type: none"> The file has two or more columns with the same header.

Message Number	Error Message	Message Category	Possible Issues																																				
80111	Length of value %1 too long for Field %2. Maximum length: %3 Found %4.	11111	<p>The possible issues could be:</p> <ul style="list-style-type: none"> The length of value specified in the column exceeds the maximum field length. The following table lists the maximum length of each field: <table border="1" data-bbox="1089 436 1461 1661"> <thead> <tr> <th data-bbox="1089 436 1317 520">Column Name</th> <th data-bbox="1317 436 1461 520">Maximum Length</th> </tr> </thead> <tbody> <tr> <td data-bbox="1089 520 1317 569">Account ID</td> <td data-bbox="1317 520 1461 569">10</td> </tr> <tr> <td data-bbox="1089 569 1317 617">Match Type</td> <td data-bbox="1317 569 1461 617">8</td> </tr> <tr> <td data-bbox="1089 617 1317 665">Match Value</td> <td data-bbox="1317 617 1461 665">30</td> </tr> <tr> <td data-bbox="1089 665 1317 714">Tender ID</td> <td data-bbox="1317 665 1461 714">12</td> </tr> <tr> <td data-bbox="1089 714 1317 762">Tender Amount</td> <td data-bbox="1317 714 1461 762">15</td> </tr> <tr> <td data-bbox="1089 762 1317 810">Payment Amount</td> <td data-bbox="1317 762 1461 810">15</td> </tr> <tr> <td data-bbox="1089 810 1317 858">Date Received</td> <td data-bbox="1317 810 1461 858">10</td> </tr> <tr> <td data-bbox="1089 858 1317 907">Bank Account</td> <td data-bbox="1317 858 1461 907">30</td> </tr> <tr> <td data-bbox="1089 907 1317 955">Payment Type</td> <td data-bbox="1317 907 1461 955">4</td> </tr> <tr> <td data-bbox="1089 955 1317 1003">Check Number</td> <td data-bbox="1317 955 1461 1003">10</td> </tr> <tr> <td data-bbox="1089 1003 1317 1052">Currency</td> <td data-bbox="1317 1003 1461 1052">3</td> </tr> <tr> <td data-bbox="1089 1052 1317 1100">Account ID Type</td> <td data-bbox="1317 1052 1461 1100">8</td> </tr> <tr> <td data-bbox="1089 1100 1317 1192">Account Identifier</td> <td data-bbox="1317 1100 1461 1192">30</td> </tr> <tr> <td data-bbox="1089 1192 1317 1381">Payment Char Type1, Payment Char Type2,, Payment Char Type5</td> <td data-bbox="1317 1192 1461 1381">8</td> </tr> <tr> <td data-bbox="1089 1381 1317 1560">Payment Char Value1, Payment Char Value2,, Payment Char Value5</td> <td data-bbox="1317 1381 1461 1560">254</td> </tr> <tr> <td data-bbox="1089 1560 1317 1608">MICR ID</td> <td data-bbox="1317 1560 1461 1608">30</td> </tr> <tr> <td data-bbox="1089 1608 1317 1661">Payor ID</td> <td data-bbox="1317 1608 1461 1661">10</td> </tr> </tbody> </table>	Column Name	Maximum Length	Account ID	10	Match Type	8	Match Value	30	Tender ID	12	Tender Amount	15	Payment Amount	15	Date Received	10	Bank Account	30	Payment Type	4	Check Number	10	Currency	3	Account ID Type	8	Account Identifier	30	Payment Char Type1, Payment Char Type2,, Payment Char Type5	8	Payment Char Value1, Payment Char Value2,, Payment Char Value5	254	MICR ID	30	Payor ID	10

80199	Missing value for column %1	11111	The possible issues could be: <ul style="list-style-type: none"> The match type is not specified in the payment record. The match value is not specified in the payment record. The payment type is not specified in the payment record.

Payment Upload

The **Payment Upload** screen allows you to search for a payment data file using various search criteria. Through this screen, you can:

- Upload a payment data file
- Cancel a payment data file
- View the records uploaded through a payment data file
- View the log of a payment data file
- Move the payment records to the staging area
- Edit a payment staging record
- Replace an existing payment data file
- View the reasons why the payment record is in the **Error** or **Invalid** status

This screen consists of the following zones:

- [Search Payment Data File](#) on page 948
- [Payment Data Records](#) on page 950
- [Payment Data File Log](#) on page 951

Search Payment Data File

The **Search Payment Data File** zone allows you to search for a payment data file which is uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to search a particular payment data file.	No
User ID	Used to search payment data files which are uploaded by a particular user.	No
Upload From Date	Used to search payment data files which are uploaded from a particular date onwards. Note: By default, the date is set to the current date minus 7 days. You can change the date, if required.	No
To	Used to search payment data files which are uploaded till a particular date. Note: By default, the date is set to the current date. You can change the date, if required.	No
File Type	Used to search payment data files which are uploaded using a particular file type.	No
File Status	Used to search payment data files with a particular status. The valid values are: <ul style="list-style-type: none"> • Cancelled • In Staging • Partially Processed • Pending • Processed • Validated 	No

Note: You must specify at least one search criterion while searching for a payment data file.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the payment data file.
File Type	Indicates the type of the payment data file.
Upload Date	Displays the date and time when the payment data file was uploaded in the system.

Column Name	Column Description
Status	Indicates the status of the payment data file. The valid values are: <ul style="list-style-type: none"> Cancelled In Staging Partially Processed Pending Processed Validated
Total	Displays the total number of records that are uploaded through the payment data file.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Error	Displays the number of records where the data is incorrect.
In Staging	Displays the number of records which are copied from the pre-staging to staging area.
Processed	Displays the number of records for which payment events are created.
Staging Error	Displays the number of records for which payment events could not be created.
Cancel	On clicking the Cancel () icon, you can cancel the payment data file. <p>Note: The Cancel icon appears only when the status of the payment data file is Validated. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.</p>
Move to Staging	On clicking the Move to Staging () icon, you can move the valid and error records of the payment data file to the staging area. <p>Note: The Move to Staging icon appears only when:</p> <ul style="list-style-type: none"> The status of the payment data file is Validated. There are no invalid records in the payment data file. The Disable Move to Staging check box is not selected in the respective file type.

You can upload a payment data file by clicking the **Upload** link in the upper right corner of this zone. On clicking the **Broadcast** () icon corresponding to the payment data file, the **Payment Data Records** and **Payment Data File Log** zones appear.

Payment Data Records

The **Payment Data Records** zone lists the records of the payment data file. This zone contains the following columns:

Column Name	Column Description
Payor Account ID	Indicates the account which made the payment.
Payee Account ID	Indicates the account for which the payment was made.
Match Type	Indicates the match type using which the payment must be matched.
Match Value	Indicates the entity (such as bill, contract, and so on) against which the payment must be matched.
Pay Tender ID	Displays the payment tender ID.
Tender Amount	Displays the tender amount.
Payment Amount	Displays the amount paid through the tender.
Currency	Indicates the currency in which the payment was made.
Date Received	Displays the date when the payment was made.
Bank Account	Displays the bank account from which the payment was made.
Tender Type	Indicates the type of tender through which the payment was made.
Check Number	Displays the check number if the payment was made through check.
MICR ID	Displays the MICR code.
Status	Indicates the status of the payment record. The valid values are: <ul style="list-style-type: none"> • Valid • Invalid • Error • In Staging • Processed • Error in Staging

Column Name	Column Description
Payment Information Event	Displays information about the payment event which is created for the payment record.
	<p>Note:</p> <p>It has a link. On clicking the link, the Payment Event screen appears with the details of the respective payment event.</p> <p>The data appears in this column only when the status of the payment record is Processed.</p>
Payment Staging Record	On clicking the Edit (✎) icon, the Payment Upload Staging screen appears where you can edit the details of the payment staging record.
	<p>Note: The Edit icon appears only when the status of the payment record is In Staging.</p>
Error Message	On clicking the View (👁) icon, the Error Messages window appears where you can view the reasons why the status of the payment record is Invalid or Error .
	<p>Note: The View icon appears only when the status of the payment record is Error or Invalid.</p>

Note: Pagination is used to display limited number of records in the **Payment Data Records** zone. By default, 20 records are displayed in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Payment Data Records** zone does not appear in the **Payment Upload** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

Payment Data File Log

The **Payment Data File Log** zone lists the complete trail of actions performed on the payment data file. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment data file.
Log Details	Displays the details about the action performed on the payment data file.
User	Indicates the user who has performed the action on the payment data file.

By default, the **Payment Data File Log** zone does not appear in the **Payment Upload** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

Searching for a Payment Data File

Prerequisites

To search for a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)

Procedure

To search for a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Upload**.
The **Payment Upload** screen appears.
3. Enter the search criteria in the **Search Payment Data File** zone.

Note: ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of payment data files that meet the search criteria appears in the **Search Results** section.

Uploading a Payment Data File

Prerequisites

To upload a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)
- Payment data in the required CSV file format

Procedure

To upload a payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Upload**.
The **Payment Upload** screen appears.

- Click the **Upload** link in the upper right corner of the **Search Payment Data File** zone.

The **Upload Payment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to indicate the type of payment data file.	Yes
	Note: The list includes only those file types where the feed type is set to Payment Upload Data .	
File Name	Used to specify the name and path of the payment data file that you want to upload.	Yes
	Note: You can also click the Browse button corresponding to this field to browse to the location where the payment data file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No

- Select the type of payment data file from the **File Type** list.
- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the payment data file that you want to upload is available.
- Click **Open**.

The payment data file name and path appears in the **File Name** field.

- Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

Note: If a payment data file contains more than 1000 payment records, the system will not allow you to upload the payment data file in the system. Therefore, ensure that a payment data file contains less than 1000 payment records.

- Click **OK** in the message box.

On uploading the payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 941.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Replacing an Existing File

Prerequisites

To replace an existing payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)
- Payment data in the required CSV file format

Procedure

To replace an existing payment data file:

1. Click the **Menu** link in the **Application** toolbar.
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Upload**.
The **Payment Upload** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search Payment Data File** zone.
The **Upload Payment Data File** screen appears.
4. Select the type of payment data file from the **File Type** list.
5. Click the **Browse** button corresponding to the **File Name** field.
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the payment data file that you want to upload is available.
7. Click **Open**.
The payment data file name and path appears in the **File Name** field.
8. Select the **Replace Existing File** check box.

Note: You can replace an existing file only when the payment data file is in the **Validated** status. In other words, you cannot replace a file whose payment records are already moved to the staging area and/or for which payment events are already created.

9. Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

10. Click **OK** in the message box.

Once the payment data file is successfully uploaded, the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is changed to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is changed to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 941. You can view the details of the uploaded payment data file and its records in the **Payment Upload** screen.

Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to

correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Canceling a Payment Data File

There might be situations when incorrect payment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel a payment data file only when it is in the **Validated** status. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.

Procedure

To cancel a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Cancel** () icon in the **Cancel** column corresponding to the payment data file that you want to cancel.

A message appears confirming whether you want to cancel the payment data file.

Note: The **Cancel** icon appears only when the status of the payment data file is **Validated**.

3. Click **OK**.

The status of the payment data file is changed to **Cancelled**.

Moving the Payment Records to the Staging Area

Procedure

To move the payment records to the staging area:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Move to Staging** () icon in the **Move to Staging** column corresponding to the payment data file whose records you want to move to the staging area.

A message appears confirming whether you want to move all payment records to the payment upload staging area.

Note:

The **Move to Staging** icon appears only when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area.

3. Click **OK** in the message box.

A message appears indicating that the payment records are successfully copied from the pre-staging to staging area.

4. Click **OK** in the message box.

The status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**.

Editing a Payment Staging Record

You can edit a payment record only when it is moved from the pre-staging to staging area. On editing a payment record in the staging area, the system does not reflect the changes in the pre-staging area. It only reflects the changes in the staging area.

Procedure

To edit a payment staging record:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the payment data file whose staging records you want to edit.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. In the **Payment Data Records** zone, click the **Edit**  icon in the **Payment Staging Record** column corresponding to the payment record whose details you want to edit in the staging area.

The **Payment Upload Staging** screen appears. It contains the following tabs:

- **Tender Details** — Enables you to view and edit the tender control staging details.
- **Payment Advice** — Enables you to view and edit the payment staging details.
- **Payment Characteristics** — Enables you to view and edit the payment characteristic staging details.

Note: The **Edit** icon appears only when the status of the payment record is **In Staging**.

4. Modify the required details.
5. Click the **Save** link in the **Application** toolbar.

The changes made to the payment staging record are saved.

Viewing the Records of a Payment Data File

Procedure

To view the records of a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the payment data file whose records you want to view.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. View the details of the payment records, which are uploaded through the payment data file, in the **Payment Data Records** zone.

Viewing the Log of a Payment Data File

Procedure

To view the log of a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the payment data file whose log you want to view.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. View the actions performed on the payment data file in the **Payment Data File Log** zone.

Viewing the Error Messages

The system allows you to view the reasons why the payment record in a payment data file is in the **Error** or **Invalid** status.

Procedure

To view the error messages:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the payment data file whose payment records are in the **Error** or **Invalid** status.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. In the **Payment Data Records** zone, click the **View**  icon in the **Error Message** column corresponding to the payment record which is in the **Error** or **Invalid** status.

The **Error Messages** window appears. It lists the reasons why the payment record is in the **Error** or **Invalid** status. If the payment record is in the **Invalid** status, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

Note: The **View** icon appears only when the status of the payment record is **Error** or **Invalid**.

4. View the reasons in the **Error Messages** window.
5. Click **OK**.

Freeze Payments on Notification

Topics:

- [Freeze Payments on Notification Process](#)
- [Prerequisites](#)
- [Automatic Payment or Refund Clearing Staging Record Status Transition](#)
- [EDI 824 File Format](#)
- [Sample EDI 824 File Format](#)
- [Automatic Payment and Refund Upload Reason](#)
- [Automatic Payment and Refund Clearing Staging](#)

Oracle Revenue Management and Billing facilitates you to create automatic payments and refunds when the automatic payment option is enabled for an account. A clearing record is created for each automatic payment and refund in the system. You can then send the automatic payment and refund clearing records to the auto clearing house for verification. The system provides the mechanism to extract the automatic payment clearing records in a flat file. You can then send the flat file to the auto clearing house for verification. However, the implementation team will have to write the custom logic to extract the automatic refund clearing records in a file which you can then send to the auto clearing house for verification.

Once the auto clearing house reviews the automatic payment clearing records, the system allows you to upload review comments received in the EDI 824 file format. On uploading an EDI 824 file, an automatic payment clearing staging record is created for each valid automatic payment clearing ID. The data received from the auto clearing house is stored in the following staging tables:

- CI_APAY_STAGE_UP
- CI_APAY_STAGE_UP_REM
- CI_APAY_STGUP_CHAR

The implementation team will have to write the custom logic to upload review comments for automatic refund clearing records in the above mentioned staging tables. The review comments for automatic payment clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. payment cancelation reason or NOC reason) which will help you to determine whether the automatic payment must be frozen or cancelled in the system. Similarly, the review comments for automatic refund clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) which will help you to determine whether the refund request must be voided and refund adjustments must be cancelled in the system.

Once the review comments are received from the auto clearing house, you can do the following:

- Freeze or cancel the automatic payments
- Void the refund requests and cancel the refund adjustments

For more detailed information about the freeze payments on notification process, see [Freeze Payments on Notification Process](#) on page 961.

The system allows you to define upload reasons, payment cancelation reasons, NOC reasons, and void status reasons. The system also allows you to edit and delete the automatic payment and refund clearing staging records through the user interface. However, you can edit an automatic payment or refund clearing staging record only when it is in the **Pending** or **Error** status, and you can

delete an automatic payment or refund clearing staging record only when it is in the **Pending** status. During the freeze payments on notification process, the automatic payment and refund clearing staging records go through various statuses in its lifecycle. For more information about the statuses, see [Automatic Payment or Refund Clearing Staging Record Status Transition](#) on page 965.

For more information on how to setup the freeze payments on notification process, see [Prerequisites](#) on page 964.

Freeze Payments on Notification Process

The Freeze Payments on Notification process includes the following sub-processes:

1. [Creating Automatic Payments and Refunds](#) on page 961
2. [Generating a Flat File](#) on page 961
3. [Uploading Response from Auto Clearing House \(ACH\)](#) on page 961
4. [Freezing or Canceling Automatic Payments](#) on page 962
5. [Voiding Refund Requests and Canceling Refund Adjustments](#) on page 963
6. [Generating To Do Entries](#) on page 963
7. [Creating Tender Controls](#) on page 963

Note that during the freeze payments on notification process, you need to execute the following batches in the specified order:

1. Create Automatic Payments and Refunds (APAYCRET)
2. Activate Automatic Payments (ACTVTAPY)
3. Extract Automatic Payments (APAYACH)
4. Upload Response from Auto Clearing House (C1-APACK)
5. Freeze or Cancel Automatic Payments (APAYRA)
6. Cancel Automatic Refunds (AREFRA)
7. To Do Creation for Automatic Payment Exception Records (APAYUPTD)
8. Create Tender Controls for Automatic Payments (BALAPY)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

Creating Automatic Payments and Refunds

If you have configured the automatic payment option for an account, the system calculates the automatic payment amount and extract date during the bill completion and stamps these details against the bill in the **CI_BILL_ACH** table. The **Create Automatic Payments and Refunds (APAYCRET)** batch allows you to create automatic payment and refund request depending on whether the automatic payment amount is in debit or credit. It also creates a clearing record for each automatic payment and refund in the **CI_APAY_CLR_STG** and **CI_ADJ_CLR_STG** tables, respectively. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

Generating a Flat File

Unless you activate a clearing record, you cannot extract the clearing record in a flat file. The **Activate Automatic Payments (ACTVTAPY)** batch allows you to activate a clearing record. It stamps the **APAYACH** batch control and incremental batch run number on the clearing record.
