## **License Restrictions Warranty/Consequential Damages Disclaimer**

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure, and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or de-compilation of this software, unless required by law for interoperability, is prohibited.

## **Warranty Disclaimer**

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

## **Restricted Rights Notice**

If this software or related documentation is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, the following notice is applicable:

## **U.S. GOVERNMENT RIGHTS**

Oracle programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data delivered to U.S. Government end users are “commercial computer software” or “commercial technical data” pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, documentation, and/or technical data shall be subject to license terms and restrictions as mentioned in Oracle License Agreement, and to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). No other rights are granted to the U.S. Government.

## **Hazardous Applications Notice**

This software is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure the safe use of this software. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software in dangerous applications.

## **Third Party Content, Products, and Services Disclaimer**

This software and documentation may provide access to or information on content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third party content, products, or services.

Refund and Write Off Details.....	135

## **Chapter III: Pricing Management..... 137**

Types of Pricing.....	139
Multi Parameter Based Pricing.....	139
Price Assignment Search Mechanism.....	143
Person Relationship Type Sequence.....	145
Pricing Eligibility.....	147
Persisting Interest Rate for Rate Type Price Items.....	148
Persisting Fee for Fee Type Price Items.....	149
Repricing.....	149
Two-Dimensional Pricing.....	154
Types of Price Item Bundle.....	154
Regular Bundle.....	154
Ratio Bundle.....	156
Phantom Bundle.....	158
Parameter.....	160
Parameter (Used for Searching).....	160
Search Parameter.....	160
Searching for a Parameter.....	163

Defining a Parameter.....	163
Editing a Parameter.....	169
Deleting a Parameter.....	175
Copying a Parameter.....	176
Viewing the Parameter Details.....	182
Parameter (Used for Viewing).....	182
Parameter.....	183
Price Item.....	185
Price Item (Used for Searching).....	186
Search Price Item.....	186
Searching for a Price Item or Price Item Bundle.....	188
Defining a Price Item or Price Item Bundle.....	189
Associating a Parameter with a Price Item or Price Item Bundle.....	192
Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle.....	194
Associating a Price Item or Price Item Bundle with a Division.....	195
Defining Division-Specific Characteristics for a Price Item or Price Item Bundle..	196
Defining Division-Specific SQIs for a Price Item or Price Item Bundle.....	198
Defining a Characteristic for a Price Item or Price Item Bundle.....	199
Copying a Price Item or Price Item Bundle.....	200
Viewing the Price Item or Price Item Bundle Details.....	203
Price Item (Used for Viewing).....	204
Price Item.....	205
Parameters.....	206
Predefined Parameter Values for Price Item.....	207
Divisions.....	207
Division-Specific Characteristics for Price Item.....	208
Division-Specific SQIs for Price Item.....	208
Price Item Relationship.....	209
Editing a Price Item or Price Item Bundle.....	210
Price Item Relationship.....	213
Assigned Price Items.....	214
Viewing the Price Items or Price Item Bundles Associated with a Parent Price Item.....	216
Viewing the Price Items or Price Item Bundles Added to a Price Item Bundle.....	216
Associating a Price Item or Price Item Bundle with a Parent Price Item.....	216
Adding a Price Item or Price Item Bundle to a Price Item Bundle.....	219
Setting the Parameters for a Price Item or Price Item Bundle.....	221
Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle.....	223
Disassociating a Price Item or Price Item Bundle from a Parent Price Item.....	224
Removing a Price Item or Price Item Bundle from a Price Item Bundle.....	225
Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item.....	225
Filtering the Price Items or Price Item Bundles Added to a Price Item Bundle.....	226
Price Item Assignments.....	227
Active Price Lists where Price Item is Assigned.....	227
Persons to whom Price Item is Assigned.....	227
Accounts where Price Item is Assigned.....	228
Viewing the Price Lists, Persons, or Accounts where a Price Item is Assigned.....	228
Price List.....	229
Price List (Used for Searching).....	230
Search Price List.....	230
Price List Price Items.....	233
Searching for a Price List.....	234
Viewing Price Items Assigned to a Price List.....	235

Defining a Price List.....	236
Defining the Price List Hierarchy.....	238
Defining a Characteristic for a Price List.....	240
Associating a Price List with a Division.....	241
Defining Eligibility Criteria for a Price List.....	242
Copying a Price List.....	246
Viewing the Price List Details.....	248
Price List (Used for Viewing).....	249
Price List.....	249
Eligibility Criteria.....	250
Price List Price Items.....	251
Editing a Price List.....	253
Price List Price Item Pricing.....	255
Price List Price Items.....	255
Search Price Item or Price Item Pricing.....	257
Viewing Price Items Assigned to a Price List.....	263
Removing a Price Item Pricing from a Price List.....	264
Viewing a Price Item Pricing Details.....	265
Editing a Price Item Pricing of a Price List.....	265
Assigning a Price Item to a Price List.....	269
Copying a Price Item Pricing.....	273
Price List Assignment.....	278
Price List Assignments.....	279
Price List Price Items.....	281
Search Price List for Assignment.....	283
Viewing Price Lists Assigned to an Account.....	285
Viewing Price Lists Assigned to a Person.....	286
Viewing Price Items Assigned to a Price List of an Account or a Person.....	288
Assigning a Price List to an Account.....	289
Assigning a Price List to a Person.....	292
Defining Characteristics for a Price List Assignment.....	295
Editing the Price List Assignment Details of an Account.....	296
Editing the Price List Assignment Details of a Person.....	299
Price List Assignments.....	302
Persons to whom Price List is Assigned.....	302
Accounts where Price List is Assigned.....	303
Viewing Persons and Accounts where Price List is Assigned.....	304
Entities Eligible for Price List Assignment.....	304
Eligible Accounts.....	305
Eligible Persons.....	305
Assigning a Price List to One or More Eligible Accounts.....	306
Assigning a Price List to One or More Eligible Persons.....	308
Defining a Characteristic for a Price List Assignment.....	309
Pricing (Account).....	310
Effective Price Assignments for Account.....	311
Search Price Item.....	316
Viewing Effective Price Assignments of an Account.....	321
Filtering Effective Price Assignments of an Account.....	322
Exporting Effective Price Assignments of an Account.....	323
Copying a Price Item Pricing.....	326
Viewing a Price Item Pricing.....	327
Editing a Price Item Pricing of an Account.....	329
Overriding a Price Item Pricing of an Account.....	333
Assigning a Price Item to an Account.....	337
Defining Characteristics for a Price Item Pricing.....	341
Defining Parameters for a Price Item Pricing.....	342

Defining TFM Information in a Price Item Pricing.....	343
Pricing (Person).....	344
Effective Price Assignments for Person.....	345
Search Price Item.....	350
Viewing Effective Price Assignments of a Person.....	355
Filtering Effective Price Assignments of a Person.....	356
Exporting Effective Price Assignments of a Person.....	357
Copying a Price Item Pricing.....	360
Viewing a Price Item Pricing.....	361
Editing a Price Item Pricing of a Person.....	363
Overriding a Price Item Pricing of a Person.....	367
Assigning a Price Item to a Person.....	371
Defining Characteristics for a Price Item Pricing.....	375
Defining Parameters for a Price Item Pricing.....	376
Defining TFM Information in a Price Item Pricing.....	377
Price Item Pricing (Used for Viewing).....	378
Price Item Pricing.....	379
Rate and Price Component Summary.....	382
Two-Dimensional Pricing.....	382
Defining a Price Item Pricing.....	383
Editing a Price Item Pricing.....	388
Deleting a Price Item Pricing.....	395
Submitting a Price Item Pricing.....	398
Defining a Price Component for a Rate Component of an Account.....	401
Defining a Price Component for a Rate Component of a Person.....	403
Defining a Price Component for a Rate Component of a Price List.....	405
Editing a Price Component of a Rate Component.....	406
Deleting a Price Component of a Rate Component.....	407
Defining a Tiering Criteria for a Price Component.....	408
Editing a Tiering Criteria of a Price Component.....	410
Deleting a Tiering Criteria of a Price Component.....	413
Defining a Pricing Eligibility Criteria for a Price Component.....	413
Editing a Pricing Eligibility Criteria of a Price Component.....	417
Deleting a Pricing Eligibility Criteria of a Price Component.....	421
Editing the Two-Dimensional Pricing.....	421
Overriding a Price Item Pricing.....	422
Pricing Simulation.....	424
Search Pricing.....	424
Simulation - Effective Pricing Information.....	428
Searching Pricing Simulation for Account or Price List.....	433
Viewing Pricing Simulation.....	433
Exporting Effective Price Simulation.....	434
Eligible Price List.....	436
Search Eligible Price Lists.....	437
Rate Definition.....	438
Rate Schedule Components.....	439
Create/Edit Rate Definition.....	440
Defining Tiering Setup of a Rate Component.....	441
Editing Tiering Setup of a Rate Component.....	442
Deleting Tiering Setup of a Rate Component.....	443
Tiering Criterion.....	444
Tiering Criterion List.....	444
Edit Tiering Criterion.....	444
Create Tiering Criterion.....	445
Creating a Tiering Criterion.....	445
Editing a Tiering Criterion.....	446

Variance Parameter.....	447
Filtering the Variance Parameters.....	447
Defining a Variance Parameter.....	448
Editing a Variance Parameter.....	448
Deleting a Variance Parameter.....	449
Person to Person Relationship Type Sequence.....	449
Search Person Relationship Type Sequence for Price Item.....	450
Search Person Relationship Type Sequence for Division.....	451
Searching Relationship Type Sequence for a Division, Price Item, and Price Item Parameters.....	452
Defining Relationship Type Sequence for a Division, Price Item, and Price Item Parameters.....	453
Editing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	455
Deleting Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	456
Viewing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters.....	457
Searching Relationship Type Sequence for a Division.....	457
Defining Relationship Type Sequence for a Division.....	458
Editing Relationship Type Sequence of a Division.....	459
Deleting Relationship Type Sequence of a Division.....	460
Viewing Relationship Type Sequence of a Division.....	461

## **Chapter IV: Division.....463**

Division Search.....	464
Searching for a Division.....	464
Division.....	465
Defining a Division.....	467
Associating Access Groups with a Division.....	470
Associating Price Items with a Division.....	471
Associating Price Lists with a Division.....	472
Associating Languages with a Division.....	473
Associating Invoice Currencies with a Division.....	474
Associating Person Identifier Types with a Division.....	475
Associating Algorithms with a Division.....	475
Defining Characteristics for a Division.....	479
Associating Bill Messages with a Division.....	480
Associating Party Char Types with a Division.....	481
Associating Bill Cycles with a Division.....	482
Associating Account Identifier Types with a Division.....	483
Defining Division-Specific Characteristics for a Price Item.....	484

## **Chapter V: Approval Workflow..... 487**

Most Commonly Used Terms.....	489
Approval Workflow Process.....	489
Prerequisites.....	491
Approval Transaction.....	493
Search Approval Transaction.....	493
Approval Transaction Log.....	497
Searching for an Approval Transaction.....	498
Viewing the Log of an Approval Transaction.....	498
Comparison: New versus Existing.....	499
Approving an Approval Transaction.....	499

Rejecting an Approval Transaction.....	500
Canceling an Approval Transaction.....	501
Modifying an Approval Transaction.....	502
Withdrawing an Approval Transaction.....	503
Resolving an Approval Transaction.....	503
Approve Price Assignment.....	504
Search.....	504
List of Price Assignments.....	507
Approve Price Assignment - Comparison: New versus Existing.....	508
Approval Transaction Log.....	510
Approving a Price Assignment for an Account.....	511
Approving a Price Assignment for a Person.....	512
Approving a Price Assignment for a Price List.....	513
Rejecting a Price Assignment for an Account.....	514
Rejecting a Price Assignment for a Person.....	515
Rejecting a Price Assignment for a Price List.....	517
Canceling a Price Assignment for an Account.....	518
Canceling a Price Assignment for a Person.....	519
Canceling a Price Assignment for a Price List.....	521
Modify Price Assignment.....	522
Search.....	522
List of Price Assignments.....	526
Modifying a Price Assignment for an Account.....	527
Modifying a Price Assignment for a Person.....	528
Modifying a Price Assignment for a Price List.....	529
Withdrawing a Price Assignment for an Account.....	529
Withdrawing a Price Assignment for a Person.....	530
Withdrawing a Price Assignment for a Price List.....	531
Viewing the Log of an Approval Transaction.....	532
Resolve Price Assignment.....	533
Search.....	533
List of Price Assignments.....	537
Resolving a Price Assignment for an Account.....	538
Resolving a Price Assignment for a Person.....	539
Resolving a Price Assignment for a Price List.....	540
Withdrawing a Price Assignment for an Account.....	540
Withdrawing a Price Assignment for a Person.....	541
Withdrawing a Price Assignment for a Price List.....	542
Viewing the Log of an Approval Transaction.....	543
Approval Workflow Group (Used for Searching).....	544
Search Approval Workflow Group.....	544
Searching for an Approval Workflow Group.....	545
Viewing the Approval Workflow Group Details.....	546
Defining an Approval Workflow Group.....	546
Adding a Business Object.....	550
Defining a Group BO Relation.....	552
Approval Workflow Group (Used for Viewing).....	553
Approval Workflow Group.....	554
Editing an Approval Workflow Group.....	556
Deleting an Approval Workflow Group.....	556
Editing a Business Object.....	557
Deleting a Business Object.....	559
Editing a Group BO Relation.....	559
Deleting a Group BO Relation.....	561
Approval Workflow Chain (Used for Searching).....	561
Search Approval Workflow Chain.....	561

Searching for an Approval Workflow Chain.....	562
Viewing the Approval Workflow Chain Details.....	563
Defining an Approval Workflow Chain.....	563
Defining Approval Levels for an Approval Workflow Chain.....	564
Approval Workflow Chain (Used for Viewing).....	565
Approval Workflow Chain.....	565
Editing an Approval Workflow Chain.....	566
Deleting an Approval Workflow Chain.....	567
Approval Workflow Criterion Type (Used for Searching).....	568
Search Approval Workflow Criterion Type.....	568
Searching for an Approval Workflow Criterion Type.....	568
Viewing the Approval Workflow Criterion Type Details.....	569
Defining an Approval Workflow Criterion Type.....	569
Approval Workflow Criterion Type (Used for Viewing).....	571
Approval Workflow Criterion Type.....	571
Editing an Approval Workflow Criterion Type.....	572
Deleting an Approval Workflow Criterion Type.....	574
Approval Workflow Group Chain Linkage (Used for Searching).....	574
Search Approval Workflow Group Chain Linkage.....	574
Searching for an Approval Workflow Group Chain Linkage.....	575
Viewing the Approval Workflow Group Chain Linkage Details.....	576
Defining an Approval Workflow Group Chain Linkage.....	576
Defining Group Chain Linkage Criteria for an Approval Workflow.....	578
Defining a Field Approval Rule.....	578
Approval Workflow Group Chain Linkage (Used for Viewing).....	580
Approval Workflow Group Chain Linkage.....	581
Editing an Approval Workflow Group Chain Linkage.....	583
Deleting an Approval Workflow Group Chain Linkage.....	584
Approval Workflow Setting (Used for Searching).....	584
Search Approval Workflow Group.....	584
Searching for an Approval Workflow Group.....	585
Viewing the Approval Workflow Setting Details.....	586
Defining Approval Workflow Group Settings.....	586
Approval Workflow Setting (Used for Viewing).....	588
Approval Workflow Group Settings.....	588
Editing Approval Workflow Group Settings.....	590
Deleting Approval Workflow Group Settings.....	590
Regenerating Input and Display UI Maps.....	591
Approval Workflow Reason (Used for Searching).....	591
Approval Workflow Reason List.....	591
Filtering the Approval Workflow Reasons.....	592
Viewing the Approval Workflow Reason Details.....	593
Defining an Approval Workflow Reason.....	593
Approval Workflow Reason (Used for Viewing).....	594
Approval Workflow Reason.....	594
Editing an Approval Workflow Reason.....	595
Deleting an Approval Workflow Reason.....	596

## **Chapter VI: Rules Engine.....597**

Rule Type (Used for Searching).....	599
Search Rule Type.....	599
Searching for a Rule Type.....	600
Defining a Rule Type.....	601
Defining Input and Output Parameters for a Rule Type.....	603
Associating a Characteristic Entity with a Rule Type.....	604

Associating an Algorithm with a Rule Type.....	605
Editing a Rule Type.....	606
Deleting a Rule Type.....	608
Copying a Rule Type.....	609
Viewing the Rule Type Details.....	611
Rule Type (Used for Viewing).....	611
Rule Type.....	611
Rule.....	613
Search.....	613
Searching for a Rule.....	614
Defining a Rule.....	614
Editing a Rule.....	619
Deleting a Rule.....	623
Copying a Rule.....	624
View Rule.....	625
Rule Information.....	625
Viewing the Rule Details.....	627
Rule Check.....	627
Rule Check.....	628

## **Chapter VII: Alternate Sequential Bill Numbers.....631**

Sequential Bill Number Generation Algorithms.....	632
C1_ALTBLLSYS.....	632
C1_ALTBLSYS1.....	632
C1_ALTBLDV.....	635
C1_ALTBLDIV1.....	635
Enabling the Alternate Sequential Bill Numbers Feature.....	638

## **Chapter VIII: Transaction Feed Management.....641**

Prerequisites.....	642
Transaction Rating Before Billing.....	642
Transaction Aggregation.....	650
Header Validation.....	651
Transaction Validation and Initial Price Item Determination.....	653
Price Item Pricing Verification.....	664
Aggregation.....	669
Clean Up.....	673
Transaction Aggregation Batch Processing.....	675
Transaction Disaggregation.....	678
Transaction Disaggregation Batch Processing.....	685
Reseeding.....	686
Transaction Cancellation.....	689
Transaction Cancellation Batch Processing.....	692
Transaction Rollback.....	693
Feed Status Transition.....	695
Transaction Status Transition.....	696
Transaction Leg Status Transition.....	697
Transaction Data File.....	705
Error List.....	708
Feed Management Dashboard.....	744
Search - Feed Level.....	744
Division Level Information.....	746
Transaction Level Information.....	747
Transaction Leg Information.....	748

Transaction Leg Service Quantity.....	749
Transaction Leg Calculation Lines.....	749
Transaction Leg Calc Line Characteristics.....	751
Searching for a Transaction Feed.....	751
Viewing Division Level Details of a Transaction Feed.....	752
Viewing Transactions that Belong to a Division.....	752
Viewing Legs of a Transaction.....	752
Viewing the SQIs Calculated for a Transaction Leg.....	753
Viewing the Calculation Lines of a Transaction Leg.....	754
Viewing Characteristics of a Calculation Line.....	754
View Billed Transactions.....	755
Search Bill.....	755
Bill Segments.....	757
Transaction Details.....	758
SQ Details.....	759
Searching for a Bill.....	759
Viewing the Bill Segments of a Bill.....	760
Viewing Transactions for which the Bill Segment is Generated.....	760
Viewing SQIs Calculated on the Billable Charge.....	761
Transaction Details.....	761
Search.....	761
Searching for an UPLD Transaction.....	762
Searching for an INPD Transaction.....	765
Searching for an COMP Transaction.....	767
Searching for an CNCL Transaction.....	769
Searching for an EROR Transaction.....	771
Searching for an IGNR Transaction.....	773
Searching for an INVL Transaction.....	776
Viewing the Transaction Legs.....	778
Viewing Error Messages.....	780
Viewing the Transaction Details.....	780
Adding a Transaction.....	782
Copying a Transaction.....	785
Transaction Source.....	787
Search Transaction Source.....	788
Searching for a Transaction Source.....	788
Defining a Transaction Source.....	789
Editing a Transaction Source.....	790
Deleting a Transaction Source.....	790
Copying a Transaction Source.....	791
Transaction Record Type.....	792
Search Transaction Record Type.....	792
Searching for a Transaction Record Type.....	793
Defining a Transaction Record Type.....	794
Editing a Transaction Record Type.....	799
Deleting a Transaction Record Type.....	805
Copying a Transaction Record Type.....	806
Transaction Aggregation Rule.....	811
Transaction Aggregation Rules.....	811
Defining Transaction Aggregation Rule for an SQL.....	812
Editing Transaction Aggregation Rule of an SQL.....	813
Deleting Transaction Aggregation Rule of an SQL.....	814
Schedule.....	815
Search Schedule.....	815
Searching for a Schedule.....	816
Viewing the Schedule Details.....	816

Defining a Schedule.....	817
Editing a Schedule.....	818
Deleting a Schedule.....	819
Disaggregation Request.....	819
Search Disaggregation Request.....	820
Searching for a Disaggregation Request.....	820
Creating a Disaggregation Request.....	823
Deleting a Disaggregation Request.....	827
Accumulation Data.....	828

## **Chapter IX: Upload Validated Payment Data.....829**

Payment Upload Process.....	830
Upload Payment Records in the Pre-Staging Area.....	830
Move Payment Records to the Staging Area.....	831
Create Payment Events and Payments.....	831
Prerequisites.....	832
CSV File Format.....	833
Payment Data File Status Transition.....	835
Payment Record Status Transition.....	835
Error Messages.....	837
Payment Upload.....	841
Search Payment Data File.....	842
Payment Data Records.....	844
Payment Data File Log.....	845
Searching for a Payment Data File.....	846
Uploading a Payment Data File.....	846
Replacing an Existing File.....	848
Cancelling a Payment Data File.....	849
Moving the Payment Records to the Staging Area.....	849
Editing a Payment Staging Record.....	850
Viewing the Records of a Payment Data File.....	851
Viewing the Log of a Payment Data File.....	851
Viewing the Error Messages.....	852

## **Chapter X: Freeze Payments on Notification..... 853**

Freeze Payments on Notification Process.....	855
Creating Automatic Payments and Refunds.....	855
Generating a Flat File.....	855
Uploading Response from Auto Clearing House (ACH).....	855
Freezing or Canceling Automatic Payments.....	856
Voiding Refund Requests and Canceling Refund Adjustments.....	857
Generating To Do Entries.....	857
Creating Tender Controls.....	857
Prerequisites.....	858
Automatic Payment or Refund Clearing Staging Record Status Transition.....	859
EDI 824 File Format.....	859
Sample EDI 824 File Format.....	860
Automatic Payment and Refund Upload Reason.....	861
Upload Reasons.....	861
Defining an Upload Reason.....	862
Editing an Upload Reason.....	864
Deleting an Upload Reason.....	866
Automatic Payment and Refund Clearing Staging.....	866
Search Clearing Record.....	867

Associated Clearing Staging Records.....	869
Clearing Staging Upload Reasons.....	870
Clearing Staging Characteristics.....	870
Searching for a Clearing Record.....	871
Viewing the Clearing Staging Records Associated to a Clearing Record.....	871
Viewing the Upload Reason Specified in the Clearing Staging Record.....	872
Viewing the Characteristics of the Clearing Staging Record.....	872
Editing a Clearing Staging Record.....	873
Defining Characteristics for a Clearing Staging Record.....	874
Deleting a Clearing Staging Record.....	875

## **Chapter XI: Trial Billing..... 877**

Trial Bill (Used for Searching).....	879
Search Trial Bill .....	879
Searching for a Trial Bill.....	880
Viewing the Trial Bill Details.....	881
Trial Bill (Used for Viewing).....	882
Trial Bill.....	882
Trial Bill Segments.....	883
Trial Bill Segment Calc Lines.....	885
Trial Bill Segment SQ Details.....	886
Trial Bill Segment Financial Details.....	886
Printing a Trial Bill in the PDF Format.....	887
Viewing the Segments of a Trial Bill.....	887
Filtering the Trial Bill Segments.....	888
Viewing the Calc Lines of a Trial Bill Segment.....	888
Viewing the SQ Details of a Trial Bill Segment.....	889
Viewing the Financial Details of a Trial Bill Segment.....	890

## **Chapter XII: GL Account Validation..... 891**

Static GL Account Validation.....	892
Dynamic GL Account Validation.....	892

## **Chapter XIII: Upload Validated Adjustment Data..... 893**

Prerequisites.....	895
CSV File Format.....	895
Adjustment Upload Request (Without Approval) Status Transition.....	896
Adjustment Upload Request (With Approval) Status Transition.....	897
Algorithms Used in C1-ADJUPLD.....	898
Adjustment Upload Request.....	901
Search Adjustment Upload Request.....	901
Adjustment Upload Request.....	902
Adjustment Data Records.....	905
Searching for an Adjustment Upload Request.....	906
Uploading an Adjustment Data File.....	906
Replacing an Adjustment Data File.....	909
Cancelling an Adjustment Data File.....	911
Creating Adjustments for an Adjustment Data File.....	912
Submitting an Adjustment Data File for Approval.....	913
Approving an Adjustment Data File.....	914
Rejecting an Adjustment Data File.....	915
Viewing the Adjustment Upload Request Details.....	916
Viewing All Records of an Adjustment Data File.....	917

Viewing the Log of an Adjustment Upload Request.....	917
Adding a Log Entry for an Adjustment Upload Request.....	918

## **Chapter XIV: Payment Request..... 921**

Prerequisites.....	923
Payment Request (Without Approval) Status Transition.....	924
Payment Request (With Approval) Status Transition.....	925
Algorithms Used in C1-PaymentRequest.....	926
Algorithms Used in C1-PaymentTransferRequest.....	930
Payment Request Type.....	935
Payment Request Type List.....	935
Payment Request Type.....	936
Defining a Payment Request Type.....	938
Defining Characteristics for a Payment Request Type.....	941
Editing a Payment Request Type.....	942
Copying a Payment Request Type.....	945
Deleting a Payment Request Type.....	948
Viewing the Payment Request Type Details.....	949
Payment Request (Used for Searching).....	949
Search Payment Request.....	950
Searching for a Payment Request.....	952
Viewing the Payment Request Details.....	953
Payment Request (Used for Viewing).....	954
Payment Request.....	954
Payment Distribution.....	960
Creating a Payment Creation Request.....	962
Defining Characteristics for a Payment Tender.....	967
Editing the Payment Amount.....	968
Editing a Payment Request.....	970
Deleting a Payment Request.....	973
Distributing the Tender or Payment Amount.....	974
Distributing and Freezing the Tender or Payment Amount.....	975
Redistributing the Tender or Payment Amount.....	976
Editing the Payment Segment Amount.....	977
Freezing Payments Created Through a Payment Request.....	979
Submitting a Payment Request for Approval.....	980
Approving a Payment Request.....	980
Rejecting a Payment Request.....	982
Discarding a Payment Request.....	984
Viewing the Log of a Payment Request.....	984
Adding a Log Entry for a Payment Request.....	985
Payment Event Summary.....	986
Search Payment Event.....	986
Payments.....	989
Payment Segments.....	991
Searching for a Payment Event.....	991
Creating a Payment Transfer Request.....	992
Cancelling a Payment Event.....	996
Deleting a Payment Event.....	997
Viewing Payments Created Through a Payment Event.....	998
Cancelling a Payment.....	998
Deleting a Payment.....	999
Viewing Payment Segments of a Payment.....	999

**Chapter XV: Account Receivable Central..... 1001**

Single Offset.....	1002
Mass Offset.....	1002
Cross Currency Offset.....	1003
Hold.....	1003
Refund.....	1004
Write Off.....	1004
Dispute.....	1004
Account Receivable Central.....	1004
Search Bill .....	1004
Bill Information.....	1008
Offset Details.....	1008
Hold Details.....	1008
Garnishment Details.....	1009
Bill Line Items.....	1009
Searching for a Bill.....	1009
Viewing the Bill Details.....	1010

**Chapter XVI: Offset Request..... 1011**

Offset Request (Without Approval) Status Transition.....	1012
Offset Request (With Approval) Status Transition.....	1013
Algorithms Used in C1-OffsetRequest.....	1013
Prerequisites.....	1019
Offset Request Type.....	1020
Offset Request Type List.....	1021
Offset Request Type.....	1021
Defining an Offset Request Type.....	1024
Defining Characteristics for an Offset Request Type.....	1026
Editing an Offset Request Type.....	1027
Deleting an Offset Request Type.....	1030
Copying Offset Request Type.....	1031
Viewing the Offset Request Type Details.....	1034
Offset Request (Used for Searching).....	1034
Search Offset Request.....	1034
Searching for an Offset Request.....	1037
Viewing the Offset Request Details.....	1038
Offset Request (Used for Viewing).....	1039
Offset Request - Main.....	1039
Offset Request.....	1039
Selected Bills.....	1041
Search Bill.....	1042
View Adjustments.....	1044
Offset Request - Log.....	1045
Offset Request Log.....	1045
Creating an Offset Request.....	1045
Defining Characteristics for an Offset Request.....	1047
Filtering Credit and Debit Bills of an Offset Request.....	1048
Adding a Credit or Debit Bill to the Offset Request.....	1049
Editing an Offset Request.....	1051
Deleting an Offset Request.....	1053
Submitting an Offset Request.....	1054
Approving an Offset Request.....	1055
Rejecting an Offset Request.....	1056

Viewing the Log of an Offset Request.....	1058
Adding a Log Entry for an Offset Request.....	1058
Unapplying an Offset Request.....	1059

## **Chapter XVII: Funding Request.....1061**

Prerequisites.....	1064
Funding Request (Without Approval) Status Transition.....	1064
Funding Request (With Approval) Status Transition.....	1065
Algorithms Used in C1-FundingReq.....	1066
C1-FUNDINFO.....	1067
C1-FUNDSUBMT.....	1067
C1-FUNDAPP.....	1068
C1-FUNDAPRVD.....	1068
F1-TODOCOMPL.....	1068
F1-AT-RQJ.....	1068
C1-FNDRESUBM.....	1069
C1-FUNDVAL.....	1069
C1-FUNDAPAY.....	1069
C1-FUNDADJCR.....	1069
C1-FUNDCANCL.....	1070
Funding Request Type.....	1070
Funding Request Type List.....	1070
Funding Request Type.....	1071
Defining a Funding Request Type.....	1074
Defining a Characteristic for a Funding Request Type.....	1081
Editing a Funding Request Type.....	1082
Deleting a Funding Request Type.....	1089
Copying a Funding Request Type.....	1090
Viewing the Funding Request Type Details.....	1097
Funding Request (Used for Searching).....	1098
Search Funding Request.....	1098
Searching for a Funding Request.....	1101
Viewing the Funding Request Details.....	1102
Creating a Funding Request.....	1102
Funding Request (Used for Viewing).....	1103
Funding Request - Main.....	1103
Funding Request.....	1104
Search Bill.....	1107
Funding Request - Bills.....	1111
Currency Statistics.....	1111
Selected Bills.....	1111
Funding Payment Details.....	1114
Funding Adjustments.....	1115
Funding Request - Log.....	1115
Funding Request Log.....	1115
Adding a Debit or Credit Bill to a Funding Request.....	1116
Deleting a Debit or Credit Bill from a Funding Request.....	1117
Excluding a Bill from a Funding Request.....	1117
Editing a Funding Request.....	1119
Defining a Characteristic for a Funding Request.....	1121
Deleting a Funding Request.....	1122
Cancelling a Funding Request.....	1123
Submitting a Funding Request.....	1124
Approving a Funding Request.....	1126
Rejecting a Funding Request.....	1128

Requesting to Resubmit a Funding Request.....	1130
Withdrawing a Funding Request.....	1131
Transferring the Funding Amount of a Credit Bill to a Garnishment Contract.....	1132
Viewing the Garnishment Details of a Credit Bill.....	1133
Viewing the Payments Created Through a Funding Request.....	1134
Viewing the Adjustments Created Through a Funding Request.....	1135
Viewing the Log of a Funding Request.....	1135
Adding a Log Entry for a Funding Request.....	1136

## **Chapter XVIII: Refund/Write Off Request..... 1139**

Refund Request (Without Approval) Status Transition.....	1141
Refund Request (With Approval) Status Transition.....	1141
Write Off Request (Without Approval) Status Transition.....	1142
Write Off Request (With Approval) Status Transition.....	1143
Algorithms Used in C1-RefundReq.....	1144
Algorithms Used in C1-WORequest.....	1149
Prerequisites.....	1153
Refund/Write Off Request Type.....	1153
Refund/Write Off Request Type List.....	1157
Refund/Write Off Request Type.....	1158
Defining a Refund or Write Off Request Type.....	1160
Defining Characteristics for a Refund or Write Off Request Type.....	1163
Editing a Refund or Write Off Request Type.....	1164
Deleting a Refund or Write Off Request Type.....	1168
Copying a Refund or Write Off Request Type.....	1168
Viewing the Refund or Write Off Request Type Details.....	1172
Refund/Write Off Request.....	1173
Search Refund/Write Off Request.....	1173
Searching for a Refund or Write Off Request.....	1177
Viewing the Refund Request Details.....	1178
Viewing the Write Off Request Details.....	1178
Refund Request.....	1179
Refund Request - Main.....	1180
Refund Request.....	1180
Refund Details.....	1182
Bill Line Items.....	1183
Refund Request - Bills.....	1184
Search Bills.....	1184
Bill Line Items.....	1186
Refund Request - Payments.....	1186
Search Payment Event.....	1187
Payments.....	1188
Refund Request - Log.....	1188
Refund Request Log.....	1189
Creating a Refund Request.....	1189
Defining Characteristics for a Refund Request.....	1192
Adding a Payment Event to the Refund Request.....	1193
Adding a Payment to the Refund Request.....	1194
Adding a Credit Bill to the Refund Request.....	1195
Adding a Credit Bill Line Item to the Refund Request.....	1196
Editing a Refund Request.....	1198
Editing the Refund Details.....	1200
Deleting a Refund Request.....	1202
Deleting a Bill from the Refund Request.....	1202
Deleting a Bill Line Item from the Refund Request.....	1203

Submitting a Refund Request.....	1203
Approving a Refund Request.....	1206
Rejecting a Refund Request.....	1208
Viewing the Log of a Refund Request.....	1209
Adding a Log Entry for a Refund Request.....	1210
Voiding a Refund Request.....	1211
Write Off Request.....	1212
Write Off Request - Main.....	1213
Write Off Request.....	1213
Write Off Details.....	1215
Bill Line Items.....	1216
Write Off Request - Bills.....	1217
Search Bills.....	1217
Bill Line Items.....	1218
Write Off Request - Log.....	1219
Write Off Request Log.....	1219
Creating a Write Off Request.....	1220
Defining Characteristics for a Write Off Request.....	1222
Adding a Debit Bill to the Write Off Request.....	1223
Adding a Debit Bill Line Item to the Write Off Request.....	1225
Editing a Write Off Request.....	1226
Editing the Write Off Details.....	1228
Deleting a Write Off Request.....	1230
Deleting a Bill from the Write Off Request.....	1230
Deleting a Bill Line Item from the Write Off Request.....	1231
Submitting a Write Off Request.....	1231
Approving a Write Off Request.....	1233
Rejecting a Write Off Request.....	1235
Viewing the Log of a Write Off Request.....	1236
Adding a Log Entry for a Write Off Request.....	1237
Cancelling a Write Off Request.....	1238

## **Chapter XIX: Hold Request..... 1241**

Hold Request (Without Approval) Status Transition.....	1243
Hold Request (With Approval) Status Transition.....	1243
Algorithms Used in C1-HoldRequest.....	1244
Prerequisites.....	1250
Hold Request Type.....	1250
Hold Request Type List.....	1250
Hold Request Type.....	1251
Defining a Hold Request Type.....	1253
Defining Characteristics for a Hold Request Type.....	1256
Editing a Hold Request Type.....	1257
Deleting a Hold Request Type.....	1259
Copying a Hold Request Type.....	1260
Viewing the Hold Request Type Details.....	1263
Hold Request (Used for Searching).....	1264
Search Hold Request.....	1264
Searching for a Hold Request.....	1267
Viewing the Hold Request Details.....	1268
Creating a Hold Request.....	1268
Hold Request (Used for Viewing).....	1273
Hold Request - Main.....	1274
Hold Request.....	1274
Hold Entities.....	1276

Search Account.....	1278
Search Bill.....	1281
Search Person.....	1282
Hold Request - Log.....	1283
Hold Request Log.....	1283
Searching Persons.....	1284
Searching Accounts.....	1284
Searching Bills.....	1285
Adding Persons in a Hold Request.....	1285
Adding Accounts in a Hold Request.....	1286
Adding Bills in a Hold Request.....	1287
Adding Processes in a Hold Request.....	1287
Defining Characteristics for a Hold Request.....	1288
Editing a Hold Request.....	1289
Editing Hold Request Entities.....	1291
Deleting Hold Request Entities.....	1292
Deleting a Hold Request.....	1293
Submitting a Hold Request.....	1294
Approving a Hold Request.....	1295
Releasing a Hold Request.....	1296
Rejecting a Hold Request.....	1297
Resubmitting a Hold Request.....	1298
Viewing the Log of a Hold Request.....	1299
Adding a Log Entry for a Hold Request.....	1300

## **Chapter XX: Delinquency Central..... 1303**

Prerequisites.....	1304
Delinquency Central (Used for Viewing).....	1304
Search Overdue Process.....	1304
Overdue Events.....	1309
Searching for an Overdue Process.....	1310
Viewing Events of an Overdue Process.....	1310
Viewing the Overdue Process Details.....	1311
Overdue Process Information for Account: {Account ID}.....	1311
Person Information.....	1311
Account Information.....	1312
Customer Contact Details.....	1312
Promise To Pay.....	1312
Hold Details.....	1313
Overdue Bills.....	1313
Payment Arrangement.....	1313
Search Bill.....	1314
Searching for a Bill.....	1315
Adding the Customer Contact Details.....	1315
Creating a Hold Request for an Overdue Process.....	1316
Creating a Payment Arrangement for an Overdue Process.....	1317
Defining a Promise To Pay for an Overdue Process.....	1317

## **Chapter XXI: Upload Request..... 1319**

Upload Request (Without Approval) Status Transition.....	1322
Upload Request (With Approval) Status Transition.....	1323
Prerequisites.....	1324
Algorithms Used in C1-BillCycleUpdateUpdReq.....	1325
Algorithms Used in C1-ContractRiderUpdateUpdReq.....	1330

Algorithms Used in C1-HoldUploadRequest.....	1335
Algorithms Used in C1-RefundUploadRequest.....	1342
Algorithms Used in C1-WriteOffUploadRequest.....	1346
Algorithms Used in C1-BillableChargeUploadRequest.....	1350
Algorithms Used in C1-ReinstatementUploadRequest.....	1354

Rejecting an Upload Request.....	1425
Viewing the Data Record Details.....	1426
Viewing the Log of an Upload Request.....	1427
Adding a Log Entry for an Upload Request.....	1428

## **Chapter XXII: General Ledger (GL) Accounting Template.....1429**

GL Accounting Template (Without Approval) Status Transition.....	1434
GL Accounting Template (With Approval) Status Transition.....	1434
Algorithms Used in C1- GLAT.....	1435
Prerequisites.....	1437
GL Accounting Template (Used for Searching).....	1437
Search GL Accounting Template.....	1438
GL Accounting Template Lines.....	1439
Searching for a GL Accounting Template.....	1440
Viewing the GL Accounting Template Details.....	1440
Viewing the GL Accounting Template Lines Details.....	1441
Creating a GL Accounting Template.....	1441
GL Accounting Template (Used for Viewing).....	1443
GL Accounting Template - Main.....	1443
GL Accounting Template.....	1444
GL Accounting Template - Log.....	1445
GL Accounting Template Log.....	1445
Editing a GL Accounting Template.....	1446
Deleting a GL Accounting Template.....	1448
Submitting a GL Accounting Template.....	1448
Approving a GL Accounting Template.....	1449
Rejecting a GL Accounting Template.....	1450
Deactivating a GL Accounting Template.....	1452
Viewing the Log of a GL Accounting Template.....	1453
Adding a Log Entry for a GL Accounting Template.....	1454

## **Chapter XXIII: Payment Agreement Request..... 1455**

Payment Agreement Request (Without Approval) Status Transition.....	1458
Payment Agreement Request (With Approval) Status Transition.....	1459
Prerequisites.....	1460
Algorithms Used in C1-PaymentAgreementRequest.....	1460
Payment Agreement Request Type.....	1461
Payment Agreement Request Type List.....	1461
Payment Agreement Request Type.....	1462
Defining a Payment Agreement Request Type.....	1465
Defining Characteristics for a Payment Agreement Request Type.....	1467
Editing a Payment Agreement Request Type.....	1468
Deleting a Payment Agreement Request Type.....	1471
Copying a Payment Agreement Request Type.....	1471
Viewing the Payment Agreement Request Type Details.....	1474
Payment Agreement Request (Used for Searching).....	1474

Search Payment Agreement Request.....	1475
Bill Details.....	1478
Searching for a Payment Agreement Request.....	1478
Viewing the Bills Added in the Payment Agreement Request.....	1479
Viewing the Payment Agreement Request Details.....	1479
Creating a Payment Agreement Request.....	1480
Defining Characteristics for a Payment Agreement Request.....	1481
Defining Payment Schedule for a Payment Agreement Request.....	1482

Viewing the Log of a Membership.....	1716
Adding a Log Entry for the Membership.....	1716

## **Chapter XXVI: Upload Lockbox Payment and Remittance Advices**

### **Overview..... 1719**

Prerequisites.....	1721
EDI 820 Flat File Description.....	1721
Sample EDI 820 Flat File.....	1723
Upload EDI 820 Files in ORMB.....	1726

## **Chapter XXVII: Deferred Revenue Recognition..... 1729**

Prerequisites.....	1731
Deferred Revenue Recognition Status Transition.....	1731
Algorithms Used in Deferred Revenue Recognition.....	1733
Deferred Revenue Recognition Template (Used for Searching).....	1738
Search Deferred Revenue Recognition Template.....	1738
Searching for a Deferred Revenue Recognition Template.....	1739
Defining a Deferred Revenue Recognition Template.....	1740
Associating Algorithms with a Deferred Revenue Recognition Template.....	1742
Associating Deferred Revenue Recognition Template With A Division.....	1743
Defining Characteristics for a Deferred Revenue Recognition Template.....	1744
Viewing the Deferred Revenue Recognition Template Details.....	1745
Deferred Revenue Recognition Template (Used for Viewing).....	1746
Deferred Revenue Recognition Template.....	1746
Editing a Deferred Revenue Recognition Template.....	1748
Deleting a Deferred Revenue Recognition Template.....	1749
Deferred Revenue Recognition (Used for Searching).....	1749
Search Deferred Revenue Recognition.....	1750
Searching for a Deferred Revenue Recognition.....	1754
Viewing the Deferred Revenue Recognition Details.....	1754
Deferred Revenue Recognition (Used for Viewing).....	1755
Deferred Revenue Recognition - Main.....	1755
Deferred Revenue Recognition.....	1755
Associated Deferred Revenue Recognitions.....	1757
Recognition Schedule.....	1758
Revenue Recognition Items.....	1758
Deferred Revenue Recognition - Log.....	1758
Deferred Revenue Recognition Log.....	1758
Editing a Deferred Revenue Recognition.....	1759
Creating the Deferred Revenue Recognition Schedule.....	1760
Defining Characteristics for a Deferred Revenue Recognition.....	1760
Adding Related Deferred Revenue Recognitions.....	1761
Editing the Deferred Revenue Recognition Schedule Details.....	1762
Viewing the Log of a Deferred Revenue Recognition.....	1763

Adding a Log Entry for a Deferred Revenue Recognition.....	1764

Viewing the Log of a Pay Instruction.....	1815
Discrepancy Report Type.....	1816
Discrepancy Report Type List.....	1816
Discrepancy Report Type.....	1817
Defining a Discrepancy Report Type.....	1818
Defining Characteristics for a Discrepancy Report Type.....	1820
Editing a Discrepancy Report Type.....	1821
Deleting a Discrepancy Report Type.....	1822
Copying a Discrepancy Report Type.....	1822
Viewing the Discrepancy Report Type Details.....	1824
Discrepancy Report (Used for Searching).....	1824
Search Discrepancy Report.....	1824
Searching for a Discrepancy Report.....	1827
Creating a Discrepancy Report.....	1828
Viewing the Discrepancy Report Details.....	1829
Discrepancy Report (Used for Viewing).....	1829
Discrepancy Report - Main.....	1830
Discrepancy Report.....	1830
Discrepancy Line Items.....	1831
Discrepancy Line Item Related Objects.....	1832
Discrepancy Line Items Characteristics Zone.....	1833
Discrepancy Report - Log.....	1833
Discrepancy Report Log.....	1833
Editing a Discrepancy Line Item.....	1833
Deleting a Discrepancy Report.....	1835
Finalizing a Discrepancy Report.....	1835
Adding a Log Entry for a Discrepancy Report.....	1836
Viewing the Log of a Discrepancy Report.....	1836

## **Chapter XXIX: Self-Funded Pricing..... 1839**

Prerequisites.....	1840
Approval Workflow for the Self-Funded Pricing Rules.....	1840

Line Item Extendable Lookup.....	1841
Extendable Lookup Search.....	1842
Searching for the Line Item Extendable Lookup.....	1843
Viewing the Values of the Line Item Extendable Lookup.....	1843
Extendable Lookup (Line Item).....	1844
Extendable Lookup Value List.....	1844
Extendable Lookup Value.....	1845
Defining a Line Item.....	1847
Associating a Line Item with a Pricing Rule Type Category.....	1848
Editing a Line Item.....	1850
Copying a Line Item.....	1852
Deleting a Line Item.....	1854
Viewing the Line Item Details.....	1854
Claim Template Extendable Lookup.....	1855
Extendable Lookup Search.....	1856
Searching for the Claim Template Extendable Lookup.....	1857
Viewing the Values of the Claim Template Extendable Lookup.....	1857
Extendable Lookup (Claim Template).....	1858
Extendable Lookup Value List.....	1858
Extendable Lookup Value.....	1859
Defining a Claim Template.....	1861
Adding a Line Item in a Claim Template.....	1863
Defining the Default Markup or Markdown Values for the Line Items.....	1865
Editing a Claim Template.....	1867
Copying a Claim Template.....	1869
Deleting a Claim Template.....	1870
Viewing the Claim Template Details.....	1871
Rate Option Extendable Lookup.....	1872
Extendable Lookup Search.....	1872
Searching for the Rate Option Extendable Lookup.....	1873
Viewing the Values of the Rate Option Extendable Lookup.....	1874
Extendable Lookup (Rate Option).....	1874
Extendable Lookup Value List.....	1874
Extendable Lookup Value.....	1875
Defining a Rate Option.....	1877
Editing a Rate Option.....	1880
Copying a Rate Option.....	1883
Deleting a Rate Option.....	1885
Viewing the Rate Option Details.....	1886
Pricing Group.....	1887
Viewing the Pricing Groups of a Bill Group.....	1887
Defining a Pricing Group for a Bill Group.....	1888
Editing a Pricing Group of a Bill Group.....	1891
Deleting a Pricing Group of a Bill Group.....	1893
Copying a Pricing Group of a Bill Group.....	1894
Pricing Rule Type.....	1897
Pricing Rule Type List.....	1898
Pricing Rule Type.....	1900
Claim Pricing.....	1908
Defining a Claim Pricing Rule Type.....	1910
Adding Claim Templates in a Claim Pricing Rule Type.....	1913
Adding the Claim-Specific Data in a Pricing Rule Type.....	1914
Editing a Claim Pricing Rule Type.....	1915
Deleting a Claim Pricing Rule Type.....	1918
Viewing the Claim Pricing Rule Type Details.....	1918
Defining a Claim Pricing Rule for a Parent Customer.....	1919

Defining the Markup or Markdown Values for Line Items in a Claim Pricing Rule.....	1921
Defining the Markup or Markdown Values for Line Items for Each Rule in a Claim Pricing Rule.....	1923
Defining Characteristics for a Claim Pricing Rule.....	1925
Editing a Claim Pricing Rule of a Parent Customer.....	1926
Viewing a Claim Pricing Rule of a Parent Customer.....	1928
Deleting a Claim Pricing Rule of a Parent Customer.....	1929
Defining a Claim Pricing Rule for a Bill Group.....	1929
Defining a Claim Pricing Rule for a Bill Group Using a Pricing Group.....	1932
Editing a Claim Pricing Rule of a Bill Group.....	1935
Viewing a Claim Pricing Rule of a Bill Group.....	1936
Deleting a Claim Pricing Rule of a Bill Group.....	1937
Specific Stop-Loss (SSL) Pricing.....	1938
Defining a Specific Stop-Loss (SSL) Pricing Rule Type.....	1940
Adding the SSL-Specific Data in a Pricing Rule Type.....	1943
Editing a Specific Stop-Loss (SSL) Pricing Rule Type.....	1945
Deleting a Specific Stop-Loss (SSL) Pricing Rule Type.....	1948
Viewing the Specific Stop-Loss (SSL) Pricing Rule Type Details.....	1948
Defining a Specific Stop-Loss Pricing Rule for a Parent Customer.....	1949
Defining Accumulation Parameters in a Specific Stop-Loss Pricing Rule.....	1952
Defining Run-in Parameters in a Specific Stop-Loss Pricing Rule.....	1954
Defining Lasering and Exclusion Information in a Specific Stop-Loss Pricing Rule.....	1955
Defining Characteristics for a Specific Stop-Loss Pricing Rule.....	1957
Editing a Specific Stop-Loss Pricing Rule of a Parent Customer.....	1958
Viewing a Specific Stop-Loss Pricing Rule of a Parent Customer.....	1960
Deleting a Specific Stop-Loss Pricing Rule of a Parent Customer.....	1961
Defining a Specific Stop-Loss Pricing Rule for a Bill Group.....	1961
Defining Accumulation Criteria in a Specific Stop-Loss Pricing Rule.....	1964
Defining Claim Pricing Information in a Specific Stop Loss Pricing Rule.....	1966
Defining a Specific Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group.....	1968
Editing a Specific Stop-Loss Pricing Rule of a Bill Group.....	1971
Viewing a Specific Stop-Loss Pricing Rule of a Bill Group.....	1972
Deleting a Specific Stop-Loss Pricing Rule of a Bill Group.....	1973
Aggregate Stop-Loss (ASL) Pricing.....	1973
Defining a Aggregate Stop-Loss (ASL) Pricing Rule Type.....	1976
Adding the ASL-Specific Data in a Pricing Rule Type.....	1979
Editing an Aggregate Stop-Loss (ASL) Pricing Rule Type.....	1981
Deleting an Aggregate Stop-Loss (ASL) Pricing Rule Type.....	1984
Viewing the Aggregate Stop-Loss (ASL) Pricing Rule Type Details.....	1984
Defining an Aggregate Stop-Loss Pricing Rule for a Parent Customer.....	1985
Defining Accumulation Parameters in an Aggregate Stop-Loss Pricing Rule.....	1988
Defining Run-in Parameters in an Aggregate Stop-Loss Pricing Rule.....	1991
Defining Characteristics for an Aggregate Stop-Loss Pricing Rule.....	1992
Editing an Aggregate Stop-Loss Pricing Rule of a Parent Customer.....	1993
Viewing an Aggregate Stop-Loss Pricing Rule of a Parent Customer.....	1996
Deleting an Aggregate Stop-Loss Pricing Rule of a Parent Customer.....	1996
Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group.....	1997
Defining Accumulation Criteria in an Aggregate Stop-Loss Pricing Rule.....	2000
Defining Claim Pricing Rules in an Aggregate Stop-Loss Pricing Rule.....	2002
Defining an Aggregate Stop-Loss Pricing Rule for a Bill Group Using a Pricing Group.....	2004
Editing an Aggregate Stop-Loss Pricing Rule of a Bill Group.....	2007
Viewing an Aggregate Stop-Loss Pricing Rule of a Bill Group.....	2008
Deleting an Aggregate Stop-Loss Pricing Rule of a Bill Group.....	2009
Retention Type Claim Based Pricing.....	2009
Defining a Retention Type Claim Based Pricing Rule Type.....	2011
Adding Claim Based Disposition Details in a Pricing Rule Type.....	2014

Editing a Retention Type Claim Based Pricing Rule Type.....	2015
Deleting a Retention Type Claim Based Pricing Rule Type.....	2017
Viewing the Retention Type Claim Based Pricing Rule Type Details.....	2018
Defining a Retention Type Claim Based Pricing Rule for a Parent Customer.....	2019
Defining Characteristics for a Retention Type Claim Based Pricing Rule.....	2022
Editing a Retention Type Claim Based Pricing Rule of a Parent Customer.....	2023
Deleting a Retention Type Claim Based Pricing Rule of a Parent Customer.....	2026
Defining a Retention Type Claim Based Pricing Rule for a Bill Group.....	2027
Defining Characteristics for a Retention Type Claim Based Pricing Rule.....	2029
Editing a Retention Type Claim Based Pricing Rule of a Bill Group.....	2030
Deleting a Retention Type Claim Based Pricing Rule of a Bill Group.....	2033
Defining a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group.....	2033
Defining Characteristics for a Retention Type Claim Based Pricing Rule for a Bill Group Using a Pricing Group.....	2036
Viewing a Retention Type Claim Based Pricing Rule of a Parent Customer.....	2037
Viewing a Retention Type Claim Based Pricing Rule of a Bill Group.....	2037
Retention Type Enrollment Based Pricing.....	2038
Defining a Retention Type Enrollment Based Pricing Rule Type.....	2040
Adding the Enrollment Specific Data in a Pricing Rule Type.....	2042
Editing a Retention Type Enrollment Based Pricing Rule Type.....	2043
Deleting a Retention Type Enrollment Based Pricing Rule Type.....	2045
Viewing the Retention Type Enrollment Based Pricing Rule Type Details.....	2046
Defining a Retention Type Enrollment Based Pricing Rule for a Parent Customer.....	2047
Defining Characteristics for a Retention Type Enrollment Based Pricing Rule.....	2050
Editing a Retention Type Enrollment Based Pricing Rule of a Parent Customer.....	2051
Deleting a Retention Type Enrollment Based Pricing Rule of a Parent Customer.....	2053
Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group.....	2054
Defining Characteristics for a Retention Type Enrollment Based Pricing Rule.....	2057
Editing a Retention Type Enrollment Based Pricing Rule of a Bill Group.....	2058
Deleting a Retention Type Enrollment Based Pricing Rule of a Bill Group.....	2060
Defining a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.....	2061
Defining Characteristics for a Retention Type Enrollment Based Pricing Rule for a Bill Group Using a Pricing Group.....	2064
Viewing a Retention Type Enrollment Based Pricing Rule of a Parent Customer.....	2065
Viewing a Retention Type Enrollment Based Pricing Rule of a Bill Group.....	2066
Flat Fee Pricing.....	2066
Defining a One-Time Flat Fee Pricing Rule Type.....	2068
Adding the One-Time Flat Fee Specific Data in a Pricing Rule Type.....	2071
Editing a One-Time Flat Fee Pricing Rule Type.....	2072
Deleting a One-Time Flat Fee Pricing Rule Type.....	2075
Viewing the One-Time Flat Fee Pricing Rule Type Details.....	2075
Defining a One-Time Flat Fee Pricing Rule for a Bill Group.....	2076
Defining Characteristics for a One-Time Flat Fee Pricing Rule.....	2078
Editing a One-Time Flat Fee Pricing Rule of a Bill Group.....	2079
Viewing a One-Time Flat Fee Pricing Rule of a Bill Group.....	2081
Deleting a One-Time Flat Fee Pricing Rule of a Bill Group.....	2082
Defining a Bill Period Based Recurring Flat Fee Pricing Rule Type.....	2082
Adding the Recurring Flat Fee Specific Data in a Pricing Rule Type.....	2085
Editing a Bill Period Based Recurring Flat Fee Pricing Rule Type.....	2087
Deleting a Bill Period Based Recurring Flat Fee Pricing Rule Type.....	2090
Viewing the Bill Period Based Recurring Flat Fee Pricing Rule Type Details.....	2090
Defining a Bill Period Based Recurring Flat Fee Pricing Rule for a Bill Group.....	2091
Defining Characteristics for a Bill Period Based Recurring Flat Fee Pricing Rule.....	2093
Editing a Bill Period Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2094

Viewing a Bill Period Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2096
Deleting a Bill Period Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2097
Defining a Frequency Based Recurring Flat Fee Pricing Rule Type.....	2097
Adding the Recurring Flat Fee Specific Data in a Pricing Rule Type.....	2100
Editing a Frequency Based Recurring Flat Fee Pricing Rule Type.....	2101
Deleting a Frequency Based Recurring Flat Fee Pricing Rule Type.....	2104
Viewing the Frequency Based Recurring Flat Fee Pricing Rule Type Details.....	2105
Defining a Frequency Based Recurring Flat Fee Pricing Rule for a Bill Group.....	2106
Defining Characteristics for a Frequency Based Recurring Flat Fee Pricing Rule.....	2108
Editing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2109
Viewing a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2111
Deleting a Frequency Based Recurring Flat Fee Pricing Rule of a Bill Group.....	2112
Ancillary Pricing.....	2112
Defining an Ancillary Pricing Rule Type.....	2115
Adding a Related Pricing Rule Type in an Ancillary Pricing Rule Type.....	2120
Mapping the Transaction Field in an Ancillary Pricing Rule Type.....	2122
Associating an Algorithm with an Ancillary Pricing Rule Type.....	2126
Defining Additional Data in an Ancillary Pricing Rule Type.....	2129
Adding a Price Item in an Ancillary Pricing Rule Type.....	2132
Adding a Price Item Parameter in an Ancillary Pricing Rule Type.....	2135
Defining the Ancillary-Specific Data in an Ancillary Pricing Rule Type.....	2136
Defining Pricing Arrangements in an Ancillary Pricing Rule Type.....	2138
Defining a Characteristic for a Ancillary Pricing Rule Type.....	2139
Editing an Ancillary Pricing Rule Type.....	2140
Deleting an Ancillary Pricing Rule Type.....	2144
Viewing the Ancillary Pricing Rule Type Details.....	2145
Defining an Ancillary Pricing Rule for a Parent Customer.....	2145
Defining Characteristics for an Ancillary Pricing Rule.....	2148
Editing an Ancillary Pricing Rule of a Parent Customer.....	2150
Deleting an Ancillary Pricing Rule of a Parent Customer.....	2152
Defining an Ancillary Pricing Rule for a Bill Group.....	2153
Defining Characteristics for an Ancillary Pricing Rule.....	2156
Editing an Ancillary Pricing Rule of a Bill Group.....	2158
Deleting an Ancillary Pricing Rule of a Bill Group.....	2160
Discount Pricing.....	2161
Types of Discount Arrangement.....	2162
Discount Share.....	2162
Discount Guarantee.....	2162
Defining a Discount Arrangement Pricing Rule Type.....	2162
Associating Algorithms with a Discount Arrangement Pricing Rule Type.....	2166
Defining Additional Data in a Discount Arrangement Pricing Rule Type.....	2169
Adding a Price Item in a Discount Arrangement Pricing Rule Type.....	2171
Adding a Price Item Parameter in a Discount Arrangement Pricing Rule Type.....	2174
Defining a Characteristic for a Discount Arrangement Pricing Rule Type.....	2175
Defining the Discount Specific Data in a Discount Arrangement Pricing Rule Type.....	2176
Editing a Discount Arrangement Pricing Rule Type.....	2179
Deleting a Discount Arrangement Pricing Rule Type.....	2182
Viewing the Discount Arrangement Pricing Rule Type Details.....	2183
Defining a Discount Arrangement Pricing Rule for a Parent Customer.....	2183
Adding the Discount Details in a Discount Arrangement Pricing Rule .....	2186
Defining the Discount Limits in a Discount Arrangement Pricing Rule.....	2187
Excluding a Network or Provider in a Discount Arrangement Pricing Rule.....	2189
Defining a Characteristic for a Discount Arrangement Pricing Rule.....	2190
Editing a Discount Arrangement Pricing Rule of a Parent Customer.....	2191
Deleting a Discount Arrangement Pricing Rule of a Parent Customer.....	2193
Write-Off Charges during Post Runout.....	2194

Level Funding Pricing.....	2194
Defining a Level Funded Pricing Rule Type.....	2198
Associating an Algorithm with a Level Funded Pricing Rule Type.....	2200
Defining Additional Data in a Level Funded Pricing Rule Type.....	2201
Adding a Price Item in a Level Funded Pricing Rule Type.....	2203
Adding a Price Item Parameter in a Pricing Rule Type.....	2206
Defining Characteristics for a Level Funded Pricing Rule Type.....	2208
Defining the Level Funded Specific Additional Data in a Level Funded Pricing Rule Type.....	2209
Editing a Level Funded Pricing Rule Type.....	2213
Deleting a Level Funded Pricing Rule Type.....	2215
Viewing the Level Funded Pricing Rule Type Details.....	2216
Defining a Level Funded Pricing Rule for a Parent Customer.....	2216
Defining Accumulation Parameters in a Level Funded Pricing Rule.....	2219
Defining the Final Settlement Rules in a Level Funded Pricing Rule.....	2221
Defining a Characteristic for a Level Funded Pricing Rule.....	2226
Defining a Level Funded Pricing Rule for a Bill Group.....	2227
Defining Accumulation Criteria in a Level Funded Pricing Rule.....	2230
Defining Claim Pricing Information in a Level Funded Pricing Rule.....	2233
Defining Ancillary Pricing Information in a Level Funded Pricing Rule.....	2236
Defining Discount Arrangement Pricing Information in a Level Funded Pricing Rule.....	2239
Defining Retention Type Claim Based and/or Retention Type Enrollment Based Pricing Rule Information in a Level Funded Pricing Rule.....	2241
Defining a Characteristic for a Level Funded Pricing Rule.....	2242
Pricing Rule (Used for Viewing).....	2243
Claim.....	2244
Aggregate Stop-Loss.....	2246
Specific Stop-Loss.....	2252
Retention Type Claim Based.....	2258
Retention Type Enrollment Based.....	2259
Flat Fee.....	2260
Ancillary.....	2262
Discount Arrangement.....	2264
Level Funded.....	2267

## **Chapter XXX: Self-Funded Billing.....2273**

Pre-requisites.....	2275
Bill Group Derivation and Pricing Parameters.....	2276
Related Pricing Rule Type Eligibility.....	2278
Price Item Eligibility.....	2280
Self-Funded Billing Process.....	2281
Transaction Aggregation.....	2281
Stop Loss Calculation.....	2286
Bill Generation.....	2286
Bill Group Derivation.....	2287
Account and Price Item Derivation (for the Claim Pricing Rule Type Category).....	2290
Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories).....	2295
Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category).....	2308
Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category).....	2320
Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category).....	2330
Bill After Date Determination.....	2339

**Appendix A: Most Commonly Used Tasks..... 2341**

- Changing the Layout..... 2342
  - Adding a Column to the Zone..... 2342
  - Rearranging Columns in the Zone..... 2342
  - Removing a Column from the Zone..... 2342

**Appendix B: Administration.....2345**

- UI Maps..... 2346
  - Creating Display UI Map for an Approval Workflow Group.....2346
  - Creating Input UI Map for an Approval Workflow Group.....2347
- Feature Configurations.....2348
  - Setting the C1\_ACCTINFO Feature Configuration.....2348
  - Setting the C1-ASOBLLNG Feature Configuration..... 2349
  - Setting the C1\_AXENTITY Feature Configuration..... 2357
  - Setting the C1-BILLADJSQ Feature Configuration..... 2358
  - Setting the C1-BILLCYCLE Feature Configuration..... 2359
  - Setting the C1\_CMO Feature Configuration..... 2360
  - Setting the C1\_DIVFUNCT Feature Configuration..... 2361
  - Setting the C1\_EXCHRATE Feature Configuration..... 2362
  - Setting the C1\_EXP\_OVRD Feature Configuration.....2363
  - Setting the C1\_FINTRANOP Feature Configuration..... 2363
  - Setting the C1\_FM Feature Configuration.....2364
  - Setting the C1-PAYPORTAL Feature Configuration.....2371
  - Setting the C1\_PERACCT Feature Configuration.....2373
  - Setting the C1\_PER\_REL Feature Configuration.....2373
  - Setting the C1\_PPARM\_FLG Feature Configuration.....2374
  - Setting the C1\_PRASNORDR Feature Configuration.....2375
  - Setting the C1\_PR\_REC Feature Configuration.....2376
  - Setting the C1-PYREQSRT Feature Configuration.....2377
  - Setting the C1\_RLENG Feature Configuration..... 2378
  - Setting the C1-TXNDMYID Feature Configuration.....2378

# About this Document

---

This document lists and describes various features in Oracle Revenue Management and Billing which can be used in the Healthcare and Insurance domains. It describes all screens related to these features and explains how to perform various tasks through these screens.

## Intended Audience

---

This document is intended for the following audience:

- End-users
- System Administrators
- Consulting Team
- Implementation Team
- Development Team

## Organization of the Document

---

Each insurance feature is described in a separate chapter in this document. All screens related to the feature and tasks related to the screen are explained in each chapter. This document contains the following chapters:

Chapter Number	Chapter Name	Chapter Description
Chapter 1	Self-Funded Customer Management	Explains how to create customers and accounts for billing the self-funded plans.
Chapter 2	Customer 360° View	Explains how to view in-depth information about the person, account, or policy in the <b>Customer 360° View</b> screen. It explains how to create sort records for bill groups and derivation and pricing parameters for bill groups. It explains how to view the pricing rules of a parent customer and the pricing rules defined for a policy of a bill group. It also explains how to define, edit, and delete the different types of pricing rules of a parent customer and bill group. In addition, it explains how to view the detailed information about the bill.
Chapter 3	Pricing Management	Explains the different concepts of the pricing model supported in the application. It explains how to define a parameter, price item, price list, tiering criterion, variance parameter, and person to person relationship type sequence. It also explains how to define pricing for a price item, how to assign a price item to a person, account, or price list, and how to assign a price list to a person or account.
Chapter 4	Division	Describes the different types of division. It also explains how to define a division.

Chapter Number	Chapter Name	Chapter Description
Chapter 5	Approval Workflow	Describes the approval workflow process and explains how to perform various tasks involved in the process. It explains how to implement the approval workflow process for an entity, such as account, person, and so on. It explains how to define an approval workflow group, approval workflow chain, approval workflow criterion type, approval workflow group chain linkage, approval workflow reasons, and approval workflow settings.
Chapter 6	Rules Engine	Describes how the rules engine function. It explains how to define, execute, and maintain business rules separately from the application code.
Chapter 7	Alternate Sequential Bill Numbers	Explains how to generate alternate sequential bill numbers which are either unique throughout the system or within the division.
Chapter 8	Transaction Feed Management	Describes the transaction feed management process and its sub-processes. It explains how to execute each sub-process. It also explains how to view the details of various transactions uploaded in the system. In addition, it explains how to create a transaction source, transaction record type, transaction aggregation rule, aggregation schedule, and disaggregation request.
Chapter 9	Upload Validated Payment Data	Explains how to upload and validate the payment records before you move them to the staging area. It also explains how to create payment events and payments using the validated payment records.
Chapter 10	Freeze Payments on Notification	Explains how the system freezes or cancels the automatic payments, voids the refund requests and cancels the refund adjustments when the review comments are received from the auto clearing house.
Chapter 11	Trial Billing	Explains how to generate trial bills before the actual bill is generated for an account. It also explains how to view the trial bills in the system.
Chapter 12	GL Account Validation	Explains how to enable the static or dynamic GL account validation feature.
Chapter 13	Upload Validated Adjustment Data	Explains how to validate and upload an adjustment data file and create adjustments through an adjustment upload request.
Chapter 14	Payment Request	Explains how to create or transfer payments through a payment request.
Chapter 15	Account Receivable Central	Explains how to use the <b>Account Receivable Central</b> screen to search for a bill which you need to offset against another bill. It explains how to perform single, mass, and cross currency offset against one or more bills. It also enables you to create a hold request, refund request, write off request, and dispute request through this screen.
Chapter 16	Offset Request	Explains how to offset the bill's outstanding amount against one or more bills through an offset request. It explains how to create the offset request types and offset requests in the system.
Chapter 17	Funding Request	Describes how to change the automatic payment amount through the funding process. It explains how to create the funding request types and funding requests in the system.

Chapter Number	Chapter Name	Chapter Description
Chapter 18	Refund/Write Off Request	Describes how to refund a payment or credit bill or bill line item and write off a debit bill or bill line item through a refund or write off request, respectively. It explains how to create the refund or write off request types and refund or write off requests in the system.
Chapter 19	Hold Request	Describes how to hold some processes and/or bills at the account or person level for a time period through a hold request. It explains how to create the hold request types and hold requests in the system.
Chapter 20	Delinquency Central	Explains how to track the overdue processes of a delinquent account through the <b>Delinquency Central</b> screen. It also explains how to create a hold request, payment arrangement, and promise to pay for a delinquent account from this screen.
Chapter 21	Upload Request	Explains how to do the following through an upload request: <ul style="list-style-type: none"> <li>• Update bill cycle of accounts</li> <li>• Update contract riders in contracts</li> <li>• Create hold requests, refund requests, write off requests, or billable charges</li> <li>• Reinstate the policies</li> <li>• Create sort records for bill groups</li> <li>• Create derivation and pricing parameters for bill groups</li> </ul>
Chapter 22	General Ledger (GL) Accounting Template	Describes how to override the distribution code used for creating FT GL entries using the <b>GL Accounting Template</b> feature. It explains how to create the GL accounting templates for each process and sub processes combination.
Chapter 23	Payment Agreement Request	Describes how to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. It explains how to create the payment agreement request types and payment agreement requests in the system.
Chapter 24	Inbound Message	Explains how to create the customer and membership inbound messages through the web services. It explains the XML format in which the customer and membership data should be available while calling the respective web service. It also explains how to create the inbound message types and how to process the inbound messages in the system.
Chapter 25	Policy-Membership Overview	Explains how to create the policy types and policy person roles in the system. It explains how to create the policies, policy plans, memberships in the system.
Chapter 26	Upload Lockbox Payment and Remittance Advices	Explains how to upload lockbox payment and remittance advices received in the <b>Electronic Data Exchange (EDI) 820</b> format. It also explains the format in which EDI 820 flat file should be uploaded in the system.

Chapter Number	Chapter Name	Chapter Description
Chapter 27	Deferred Revenue Recognition	Describes how to recognize the deferred revenue in the system. It explains how to create a deferred revenue recognition template for each distribution code and contract type combination. It also explains how to generate the schedule for a deferred revenue recognition. In addition, it explains how to edit the deferred revenue recognition schedule.
Chapter 28	Reconciliation	Describes how to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. It explains the CSV and EDI 820 file formats in which you can upload the pay instructions. It also explains how to create reconciliation types, reconciliations, discrepancy report types, and discrepancy reports in the system.
Chapter 29	Self-Funded Pricing	Explains how to create the following in the system: <ul style="list-style-type: none"> <li>• Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, One-Time Flat Fees, Bill Period Based Recurring Flat Fees, Frequency Based Recurring Flat Fees, Ancillary, Discount, and Level-Funding pricing rule types</li> <li>• Claim, Specific Stop-Loss, Aggregate Stop-Loss, Retention Type Claim Based, Retention Type Enrollment Based, Ancillary, and Level-Funding pricing rules for the parent customers and the policies of the bill groups</li> <li>• One-Time Flat Fees, Bill Period Based Recurring Flat Fees, and Frequency Based Recurring Flat Fees pricing rules for the policies of the bill groups</li> <li>• Discount pricing rules for the parent customers</li> </ul>
Chapter 30	Self-Funded Billing	Explains the billing process for the self-funded plans.
Appendix A	Most Commonly Used Tasks	Lists and describes some of the common tasks that you may perform while using the application.
Appendix B	Administration	Describes how to create UI maps and set various feature configurations in the system.

## Conventions

---

The following conventions are used across this document:

Convention	Meaning
<b>boldface</b>	Boldface indicates graphical user interface elements associated with an action, or terms defined in the text.
<i>italic</i>	Italic indicates a document or book title.
Monospace	Monospace indicates information that an end-user needs to enter in the application.

# Chapter 1

---

## Self-Funded Customer Management

---

### Topics:

- [Self-Funded Entities](#)

Self-funded health care, also known as Administrative Services Only (ASO), is a self insurance arrangement whereby an employer provides health or disability benefits to employees using the company's own funds. In self-funded health plan, employers (usually larger) operate their own health plan. However, in the fully-insured plan, the employer contracts an insurance company to cover the employees and dependents. Employers choose to self-insure because it allows them to save the profit margin that an insurance company adds to its premium for a fully-insured plan. However, self-insuring exposes the company to much larger risk in the event that more claims than expected must be paid.

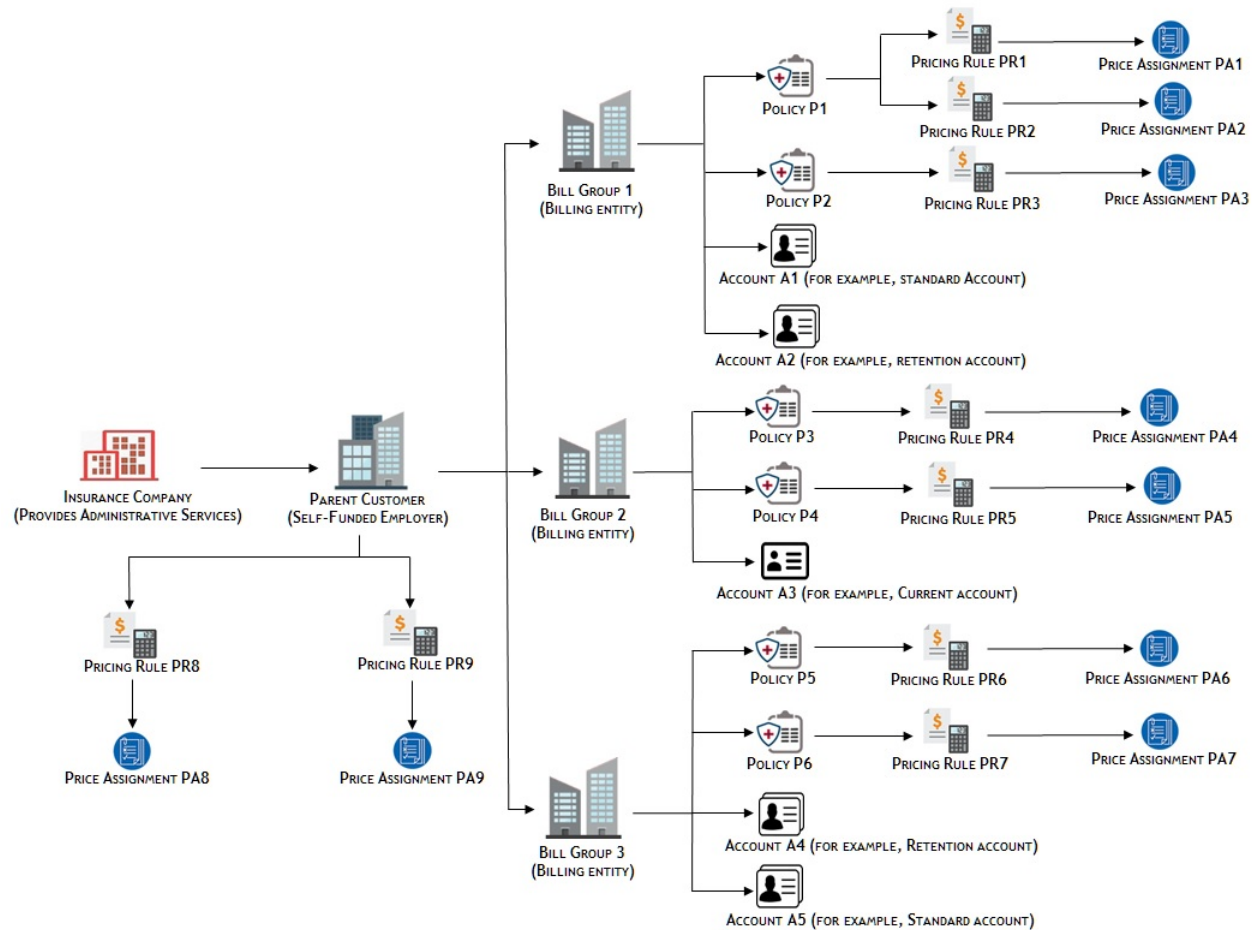

Oracle Revenue Management and Billing (ORMB) supports the following types of self-funding approach:

- **Fully Self-Funded** - In the fully self-funded approach, the employer retains all the risk and bears the claim costs irrespective of any limit.
- **Partially Self-Funded** - In the partially self-funded approach, the employer purchases reinsurance or stop loss coverage to pass the risk to insurance company.

The system enables you to create customers and accounts for the self-funded health care business. This chapter explains how to create different entities involved in the self-funded health care business.

## Self-Funded Entities

The following figure graphically represents the different entities involved in the self-funded health care business:

### Parent Customer

The self-funded employers must be defined as parent customers in the system. You can define a person as the parent customer by setting its person type to **Parent Customer**. You can create a parent customer from the user interface or through an ASO Customer inbound message.

### Bill Groups

The system allows you to define one or more bill groups for a parent customer. The claim, enrollment, and ancillary transactions of the employees are billed to a bill group. Each bill group will handle the claim, enrollment, and ancillary transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on. The system allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for a bill group. These parameters are used to derive the bill group against which the claim, enrollment, and ancillary charges should be billed in the system. The derived bill group is also used for billing the claim based fees, specific stop-loss credits, aggregate stop-loss credits, discount, and level-funding charges.

You can define a person as the bill group by setting its person type to **Bill Group**. The bill groups should be defined as the child persons of the parent customer (i.e. self-funded employer) using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. You can create a bill group from the user interface or through an ASO Customer inbound message.

### Related Topics

For more information on...	See...
Bill Group Derivation and Pricing Parameters	<a href="#">Bill Group Derivation and Pricing Parameters</a> on page 2276
How to setup the <b>C1-ASOBLLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLLNG Feature Configuration</a> on page 2349

## Bill Group's Account

The claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level-funding charges are billed to the bill group's account. Therefore, every bill group should have at least one account in the system. You can create multiple accounts for a bill group. You can create an account for a bill group from the user interface or through an ASO Customer inbound message.

Depending on the employer's preference, the claim charges, specific stop-loss credits, aggregate stop-loss credits, claim based fees, enrollment based fees, ancillary charges, discount, and level-funding charges can be billed on the same or different accounts of the bill group. The system enables you to create different types of accounts (such as, standard and retention) for a bill group. You can specify the type of account by defining the **Invoice Type (C1INVTYP)** characteristic for the account.

**Note:** At present, we have not shipped any predefined values for the **Invoice Type (C1INVTYP)** characteristic type. You must define the predefined characteristic values as per the business requirements.

You can also set the priority for an account based on the invoice type while specifying the billing account information for a price item in a pricing rule type. For example,

Price Item	Priority	Invoice Type	Account
P1	10	Standard	A1
	20	Retention	A2
P2	10	Retention	A2
	20	Standard	A1

Now, when a claim transaction is mapped to P1, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** exists for the bill group. If so, it considers the standard account (A1) of the bill group for billing. However, if an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Standard** does not exist for the bill group, the system checks whether an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** exists for the bill group. If so, it considers the retention account (A2) of the bill group for billing. If an account where the **Invoice Type (C1INVTYP)** characteristic type is set to **Retention** does not exist for the bill group, the status of the transaction is changed to **Error**.

Similarly, when a claim transaction is mapped to P2, the system considers the account of the bill group which is available based on the priority. The system derives the billing account for only those price items for which the effective pricing rule is derived.

The system searches the account of the bill group based on the priority only when the **Invoice Type Characteristic Type** option type of the **C1-ASOBLLNG** feature configuration is set to **C1INVTYP**.

### Related Topics

For more information on...	See...
How to setup the <b>C1-ASOBLLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLLNG Feature Configuration</a> on page 2349

## Self-Funded Policy

You can create a self-funded policy from the user interface or through an ASO Customer inbound message. If the self-funded policy information is given for a bill group in an ASO Customer inbound message, the system does the following:

- Associates the bill group with the policy using the policy person role which is specified in the **Bill Group Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration
- Associates the parent customer with the policy using the policy person role which is specified in the **Parent Customer Policy Person Role** option type of the **C1-ASOBLLNG** feature configuration

## Price Items

Each service offered in the self-funded plan should be defined as a price item in the system. You must add the price item in a pricing rule type. The system then enables you to create a pricing rule for a price item using the respective pricing rule type.

You can define a price item and associate the required parameters with the price item from the user interface. You can use the price item parameters for defining multi parameter based pricing or for aggregating the transactions.

## Pricing Rule Types

You can create a pricing rule using the respective pricing rule type. The system enables you to create pricing rule types of the following categories for the self-funded plan from the user interface:

Pricing Rule Type	Pricing Rule Type Category	Sample Shipped with the Product
Claim	Claim	CLAIM
Retention Type Claim Based	Retention Type Claim Based	RETCLMBSD
Discount Share	Discount Arrangement	DISSHARE
Discount Guarantee	Discount Arrangement	DISGUAR
One-Time Flat Fees	Flat Fees	ONETIMEFLATFEES
Bill Period Based Recurring Flat Fees	Flat Fees	RECFLATFEES_BP
Frequency Based Recurring Flat Fees	Flat Fees	RECFLATFEES_FREQ
Retention Type Enrollment Based	Retention Type Enrollment Based	RETENRLBSD
Ancillary	Ancillary	ANCILLARY
Specific Stop-Loss	Specific Stop-Loss	SSL
Aggregate Stop-Loss	Aggregate Stop-Loss	ASL
Enrollment Based Premium	Level Funded	LVLNRLPRE
Flat Rate Based Premium	Level Funded	LVLFLATPRE

## Pricing Rules

The self-funded plan may offer various services to the employer, such as claim administration, reinsurance or stop-loss, discount or level funding arrangement, and so on. Oracle Revenue Management and Billing enables you to define pricing rules for various services offered in the self-funded plan. The below table lists the pricing rules which you can define for the following services offered in the self-funded plan:

Service	Pricing Rule	Created for....
Claim Administration	Claim	Parent Customer
		Bill Group's Policy where the Parent Customer is the Policy Holder
	Retention Type Claim Based	Parent Customer
		Bill Group's Policy where the Parent Customer is the Policy Holder
Claim Administration	Discount Share	Parent Customer
	Discount Guarantee	Parent Customer
	One-Time Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
	Bill Period Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
	Frequency Based Recurring Flat Fees	Bill Group's Policy where the Parent Customer is the Policy Holder
Enrollment	Retention Type Enrollment Based	Parent Customer
		Bill Group's Policy where the Parent Customer is the Policy Holder
Ancillary, such as Laboratory, Radiology, Pharmacy, Physical Therapy, or Preventive Care	Ancillary	Parent Customer
		Bill Group's Policy where the Parent Customer is the Policy Holder
Stop-Loss	Specific Stop-Loss	Parent Customer
		Bill Group's Policy where the Parent Customer is the Policy Holder
	Aggregate Stop-Loss	Parent Customer

Service	Pricing Rule	Created for....
		Bill Group's Policy where the Parent Customer is the Policy Holder
Level Funding Arrangement	Enrollment Based Premium	Parent Customer
		Bill Group's Policy where the Parent Customer is the Policy Holder
	Flat Rate Based Premium	Parent Customer
		Bill Group's Policy where the Parent Customer is the Policy Holder

You can create the above mentioned self-funded pricing rules for a parent customer or for the policy of the bill group from the user interface and not through an ASO Customer inbound message.

The system creates a price assignment for each pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system first searches for the pricing rule of a price item (i.e. service) at the bill group level. If the effective pricing rule for a price item is available at the bill group level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group level, the system searches for the pricing rule of a price item at the parent customer level. If the effective pricing rule for a price item is available at the parent customer level, the system uses it for deriving the price assignment. However, if the effective pricing rule for a price item is not available at the bill group or parent customer level, the system does not consider the respective price item for billing.

## Price Assignments

The system creates a price assignment for each self-funded pricing rule. In case of the retention type claim and enrollment based pricing rules, the system creates multiple price assignments when different claim based or enrollment based fee is offered for employees with different set of employee attributes.

The system automatically creates a price assignment whenever you create a self-funded pricing rule. The system creates the price assignment in a price list and assigns the price list to the parent customer or bill group. The system creates multiple price assignments when you define a pricing rule for a policy of a bill group using a pricing group.

## Customer 360° View

---

### Topics:

- [Prerequisites](#)
- [Customer 360° View](#)
- [Customer 360° Information](#)
- [Bill Information](#)

Oracle Revenue Management and Billing provides a new screen named **Customer 360° View** which enables you to quickly view in-depth information about the person. This screen can be used to view the 360° information of a person who is associated with the fully-insured or self-funded policy. It provides the following information:

- Basic details, characteristics, child persons, person hierarchy, person billing hierarchy, and the customer contacts of the person.
- Basic details, characteristics, administrative contracts, automatic payment options, billing and adjustment summary, financial and collections summary, and unpaid bills of the person's account.
- Consolidated view of the transactions (such as, billing, payment, payment cancellation, adjustment, adjustment cancellation, automatic payments sent to the auto clearing house for review, refund, write off, excess credit, and reconciliation) which are carried out for the person's account
- Basic details, related persons, and policy plans in the person's policy
- Basic and in-depth details of the pricing rules which are defined for a parent customer who is associated with the self-funded policy.
- Basic and in-depth details of the pricing rules which are defined for a self-funded policy of a bill group.
- Basic details of the pricing groups defined for a bill group who is associated with the self-funded policy.
- Basic details of the approval transactions which are created while defining, editing, and deleting the pricing rules of the parent customer and bill group.
- Basic details of the bill, adjustments which are swept onto the bill, activities (such as, payment, offset, refund, write off, or transfer) through which the bill is settled, high-level summary and details of the bill segments which are included in the bill, active hold requests due to which the bill is kept on hold, offset requests through which the bill is offset against another bill, and refund and write off requests through which the bill or its bill segment is either refunded or written off.

In other words, this feature allows you to drill-down to see or act on all current and historical revenue management and billing details. This allows you to professionally and efficiently handle customer inquiries and complaints at the first point of contact, raising your customer service from previously unattainable levels and reducing the associated time and cost.

## Prerequisites

To setup the Customer 360° View feature, you need do the following:

- Define the required divisions, customer classes, person types, person identifier types, account identifier types, policy types, and policy person roles in the system
- Define values for the **C1-SourceSystemLookup** extendable lookup
- Define the required characteristic types where the characteristic entity is set to **Person**
- Define the required characteristic types where the characteristic entity is set to **Account**
- Define the required characteristic types where the characteristic entity is set to **Policy**
- Define values for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1\_CMO** feature configuration

**Note:** This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

- Define values for **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

**Note:** This prerequisite is not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

- Define value for the **Person Relationship Type** option type in the **C1-ASOBLNG** feature configuration

**Note:** This prerequisite is not required when you are viewing the 360° information of a person who is associated with the fully-insured policy.

## Customer 360° View

The **Customer 360° View** screen allows you to search for a person, its accounts, and policies using various search criteria. It contains the following zone:

- [360° Search](#) on page 52

### 360° Search

The **360° Search** zone allows you to search for a person, account, and policy using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a person, account, or policy. The valid values are: <ul style="list-style-type: none"> <li>• Policy</li> <li>• Person</li> <li>• Account</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Policy</b> option is selected.	
Policy Type	Used to search policies which are created using a particular policy type.	No
	<b>Note:</b> This field appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.	
Source System	Used to search policies which were created in a particular external system.	No
	<b>Note:</b> This field appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.	
Policy Number	Used to search a policy with a particular policy number.	No
	<b>Note:</b> This field appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.	
Policy ID	Used to search a particular policy.	No
	<b>Note:</b> This field appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.	
Policy Person Role	Used to search policies where a person is assigned a particular person role.	No
	<b>Note:</b> This field appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to search a particular person. If you specify the person name while searching for an account, the system searches all accounts where the person is the main customer. However, if you specify the person name while searching for a policy, the system searches all policies where the person is the main customer.	Yes (Conditional)
	<b>Note:</b> This field appears when: <ul style="list-style-type: none"> <li>You select the <b>Policy</b> or <b>Person</b> option from the <b>Search By</b> list.</li> <li>You select the <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.</li> </ul>	<b>Note:</b> This field is required when you are searching for a policy using the policy person role.
Status	Used to search policies with a particular status. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Canceled</li> <li>Pending Cancellation</li> <li>Pending</li> <li>Pending Reinstatement</li> <li>Pending Termination</li> <li>Pending Termination Overridden</li> <li>Post Runout</li> <li>Reinstated</li> <li>Runout</li> <li>Terminated</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.	
Start Date	Used to search policies which are effective from a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Policy</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to search policies which are effective till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Policy</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
Characteristic Type	Used to search persons, accounts, or policies with a particular type of characteristic.	No
	<b>Note:</b> This field appears only when you click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
Characteristic Value	Used to search persons, accounts, or policies with a particular characteristic.	Yes (Conditional)
	<b>Note:</b> This field appears only when you are searching for a person, account, or policy using the characteristic type.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	
Division	Used to search persons or accounts which belong to a particular division.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.	
Customer Class	Used to search accounts or persons' whose accounts belong to a particular customer class.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.	
Person ID	Used to search a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Person Identifier Type	Used to indicate the person identifier type based on which you want to search for a person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
		<b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier	Used to search a person with a particular identifier.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Person Type	Used to search persons of a particular type. The valid values are: <ul style="list-style-type: none"> <li>• Business</li> <li>• Bill Group</li> <li>• Group</li> <li>• Broker</li> <li>• Person</li> <li>• Parent Customer</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
Address	Used to search persons with a particular address or accounts' whose main customer has a particular address.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
City	Used to search persons who belong to a particular city or accounts' whose main customer belongs to a particular city.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	
Phone Number	Used to search a person with a particular phone number or accounts' whose main customer has a particular phone number.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list and click the <b>Advanced Search</b> link available in the right side of the <b>360° Search</b> zone.	

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to indicate the account identifier type based on which you want to search for an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier	Used to search an account with a particular identifier.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	

**Note:**

You must specify at least one search criterion while searching for a person, account, or policy. One more search criterion is required when you are searching for a person or account using the division and/or customer class. Similarly, one more search criterion is required when you are searching for a policy using the policy type and/or source system.

If you have specified any other search criterion along with the person ID, account ID, or policy ID, the system ignores the additional search criterion and searches using the person ID, account ID, or policy ID, respectively.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Information	Displays information about the policy.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the respective policy. This column appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.
Main Customer	Indicates the main customer of the policy or account.
	<b>Note:</b> This column appears only when you select the <b>Policy</b> or <b>Account</b> option from the <b>Search By</b> list.
Source System	Displays the name of the external system in which the policy was created.
	<b>Note:</b> This column appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.

Column Name	Column Description
Policy Number	Displays the policy number.
	<b>Note:</b> This column appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.
Start Date	Displays the date from when the policy is effective.
	<b>Note:</b> This column appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.
End Date	Displays the date till when the policy is effective.
	<b>Note:</b> This column appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.
Status	<p>Indicates the status of the policy. The valid values are:</p> <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Canceled</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reinstatement</li> <li>• Pending Termination</li> <li>• Pending Termination Overridden</li> <li>• Post Runout</li> <li>• Reinstated</li> <li>• Runout</li> <li>• Terminated</li> </ul>
	<b>Note:</b> This column appears only when you select the <b>Policy</b> option from the <b>Search By</b> list.
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.</p>
Person Name	Displays the name of the person.
	<b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.

Column Name	Column Description
Person Type	Indicates the type of the person. The valid values are: <ul style="list-style-type: none"> <li>• Business</li> <li>• Bill Group</li> <li>• Group</li> <li>• Broker</li> <li>• Person</li> <li>• Parent Customer</li> </ul>
	<b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.
Primary Person Identifier Type	Indicates the primary identifier type associated with the person.
	<b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.
Primary Person Identifier	Displays the primary person identifier.
	<b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Division	Indicates the division to which the account belongs.
	<b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Customer Class	Indicates the customer class to which the account belongs.
	<b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Primary Account Identifier Type	Indicates the primary identifier type associated with the account.
	<b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Primary Account Identifier	Displays the primary account identifier.
	<b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.

Column Name	Column Description
Current Balance	Displays the total amount of funds in the account.
	<b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.

**Note:**

You can view the 360° information of the person, account, or policy by clicking the **View** () icon corresponding to the record in the **Search Results** section.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

**Searching for a Person****Prerequisites**

To search for a person, you should have:

- Divisions, customer classes, person types, and person identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Person**)

**Procedure**

To search for a person:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Customer 360° View**.  
The **Customer 360° View** screen appears.
3. Select the **Person** option from the **Search By** list to indicate that you want to search for a person.
4. Enter the required search criteria in the **360° Search** zone.

**Note:**

You must specify at least one search criterion while searching for a person. One more search criterion is required when you are searching for a person using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the second criteria group) and person identifier (in the fourth criteria group), the system searches using the person name instead of the person identifier.

You must specify division and/or customer class when you are searching for a person using the city.

You must specify division, customer class, or any other criteria in the second group when you are searching for a person using the person type.

If you have specified any other search criterion along with the person ID, the system ignores the additional search criterion and searches for the person using the person ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

## 5. Click **Search**.

A list of persons that meet the search criteria appears in the **Search Results** section.

## Searching for an Account

### Prerequisites

To search for an account, you should have:

- Divisions, customer classes, and account identifier types defined in the application
- Characteristic types defined in the application (where the characteristic entity is set to **Account**)

### Procedure

To search for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Customer 360° View**.  
The **Customer 360° View** screen appears.
3. Select the **Account** option from the **Search By** list to indicate that you want to search for an account.

4. Enter the required search criteria in the **360° Search** zone.

**Note:**

You must specify at least one search criterion while searching for an account. One more search criterion is required when you are searching for an account using the division and/or customer class.

The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the former group is used for searching. For example, if you enter the person name (in the fourth criteria group) and account identifier (in the third criteria group), the system searches using the account identifier instead of the person name.

You must specify division and/or customer class when you are searching for an account using the city.

If you have specified any other search criterion along with the account ID, the system ignores the additional search criterion and searches for the account using the account ID.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

**Searching for a Policy**

**Prerequisites**

To search for a policy, you should have:

- Policy types and policy person roles defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Characteristic types defined in the application (where the characteristic entity is set to **Policy**)

**Procedure**

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, click **Customer 360° View**.  
The **Customer 360° View** screen appears.
3. Select the **Policy** option from the **Search By** list to indicate that you want to search for a policy.

4. Enter the required search criteria in the **360° Search** zone.

**Note:**

You must specify at least one search criterion while searching for a policy. One more search criterion is required when you are searching for a policy using the policy type and/or source system.

If you have specified any other search criterion along with the policy ID, the system ignores the additional search criterion and searches for the policy using the policy ID.

You must specify the person name when you are searching for a policy using the policy person role.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Advanced Search** link appears in the right side of the **360° Search** zone. On clicking the **Advanced Search** link, additional fields appear in the zone which help you to refine the search.

If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. Click **Search**.

A list of policies that meet the search criteria appears in the **Search Results** section.

## Viewing the 360° Information of a Person

### Prerequisites

To view the 360° information of a person, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration

**Note:** This prerequisite is not required when you are viewing the 360° information of a person who is associated with the fully-insured policy.

### Procedure

To view the 360° information of a person:

- Search for the person in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View**  icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen. It contains the following zones:

- [Person Information](#) on page 72
- [Person Characteristics](#) on page 74
- [Child Persons](#) on page 74
- [Person Hierarchy](#) on page 75

**Note:** The **Person Hierarchy** zone does not appear when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Person Billing Hierarchy](#) on page 76

**Note:** The **Person Billing Hierarchy** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Derivation and Pricing Parameters](#) on page 79

**Note:** The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Sorting](#) on page 81

**Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Customer Contacts](#) on page 82

3. View the basic details of the person in the **Person Information** zone.
4. View the characteristics defined for the person in the **Person Characteristics** zone.
5. View the child persons included in the person's hierarchy in the **Child Persons** zone.
6. View the accounts and policies where the person is the main customer and memberships where the person is the main subscriber in the **Person Hierarchy** zone.
7. If you are viewing the 360° information of a parent customer, view the bill groups of the parent customer and the bill groups' accounts and policies in the **Person Billing Hierarchy** zone. However, if you are viewing the 360° information of a bill group, view the accounts and policies of the bill group in the **Person Billing Hierarchy** zone.
8. View the derivation and pricing parameters defined for the bill group and sort ID combinations in the **Bill Group Derivation and Pricing Parameters** zone.
9. View the sort IDs defined for the bill groups in the **Bill Group Sorting** zone.
10. View how and when the person was contacted in the **Customer Contacts** zone.
11. If required, you can view the details of the account to which the person is associated in the **Account** tab.

**Note:**

If you are viewing the 360° information of a parent customer, the following zones appears in the **Account** tab when you click the **Broadcast**  icon corresponding to the account in the **Bill Group Accounts** zone:

- Account Information
- Auto Pay Details
- Account Financial and Collections Summary
- Account Characteristics
- Open Bills
- Billed Vs Paid
- Timeline

12. If required, you can view the details of the policy to which the person is associated in the **Policy** tab.
13. If required, you can view the pricing information of a parent customer or bill group in the **Pricing** tab.

**Viewing the 360° Information of an Account****Prerequisites**

To view the 360° information of an account, you should have:

- Value defined for the **Person Relationship Type** option type in the **C1-ASOBLLNG** feature configuration
- Values defined for the **Administrative Contract Type** and **On Account Contract Type** option types in the **C1\_CMO** feature configuration
- Values defined for the **Premium Amount SQI** and **Coverage End Date SQI** option types in the **C1-BILLADJSQ** feature configuration

**Note:** The former prerequisite is not required when you are viewing the 360° information of a person who is associated with the fully-insured policy. The latter two prerequisites are not required when you are viewing the 360° information of a person who is associated with the self-funded policy.

**Procedure**

To view the 360° information of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account whose details you want to view.

The **Account** tab appears in the **Customer 360° Information** screen. It contains the following zones:

- [Bill Group Accounts](#) on page 84

**Note:** The **Bill Group Accounts** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Account Information](#) on page 85
- [Auto Pay Details](#) on page 87
- [Account Characteristics](#) on page 86
- [Administrative Contracts](#) on page 86

**Note:** The **Administrative Contracts** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.

- [Account Financial and Collections Summary](#) on page 87
- [Billing and Adjustment Summary](#) on page 88

**Note:** The **Billing and Adjustment Summary** zone appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**.

- [Open Bills](#) on page 89
  - [Billed Vs Paid](#) on page 90
  - [Timeline](#) on page 93
3. View the accounts of each bill group of the parent customer in the **Bill Group Accounts** zone.
  4. View the basic details of the account in the **Account Information** zone.
  5. View the automatic payment options defined for the account in the **Auto Pay Details** zone.
  6. View the characteristics defined for the account in the **Account Characteristics** zone.
  7. View the account's contracts which should be monitored closely for various administrative reasons in the **Administrative Contracts** zone.
  8. View the financial and collection details of the account in the **Account Financial and Collections Summary** zone.
  9. View the billing and adjustment summary of the account in the **Billing and Adjustment Summary** zone.
  10. View the unpaid bills of the account in the **Open Bills** zone.
  11. View various transactions of the account, such as bills, payments, adjustments, reconciliations, and so on, in the **Billed Vs Paid** zone.
  12. View the number of customer contacts, bills, and payments created for the account in a particular month in the **Timeline** zone.

The following table provides information about the **Customer 360° Information** screen:

If you are viewing the 360° information of...	Then
A person who is associated with the fully-insured policy	<p>The <b>Customer 360° Information</b> screen allows you to view:</p> <ul style="list-style-type: none"> <li>• Basic details, characteristics, child persons, hierarchy, and the customer contacts of the person.</li> <li>• Basic details, characteristics, administrative contracts, automatic payment options, billing and adjustment summary, financial and collections summary, and unpaid bills of the person's account.</li> <li>• Basic details, related persons, and policy plans in the person's policy.</li> </ul>

If you are viewing the 360° information of...	Then
A parent customer who is associated with the self-funded policy	<p>The <b>Customer 360° Information</b> screen allows you to view:</p> <ul style="list-style-type: none"> <li>• Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the parent customer.</li> <li>• Sort IDs of all effective child persons whose person type is set to <b>Bill Group</b> and who are related to the parent customer using a relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</li> <li>• Derivation and pricing parameters defined for the bill group and sort ID combinations.</li> <li>• Accounts of all effective child persons whose person type is set to <b>Bill Group</b> and who are related to the parent customer using a relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLNG</b> feature configuration.</li> <li>• Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of a particular bill group's account.</li> <li>• Basic details and policy persons of a self-funded policy where the parent customer is the policy holder.</li> <li>• Basic details of the pricing rules which are defined for the parent customer.</li> <li>• Summarized tree view listing each bill group of the parent customer and the bill groups' self-funded policies and pricing rules.</li> <li>• Basic details of the self-funded policies which are associated with each bill group of the parent customer.</li> <li>• Basic details of the pricing rules which are defined for the self-funded policies of each bill group.</li> <li>• Basic details of the active pricing groups which are defined for each bill group.</li> <li>• Basic information about the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.</li> </ul>

If you are viewing the 360° information of...	Then
A bill group who is associated with the self-funded policy	<p>The <b>Customer 360° Information</b> screen allows you to view:</p> <ul style="list-style-type: none"> <li>• Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the bill group.</li> <li>• Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the bill group's account.</li> <li>• Basic details and policy persons of a self-funded policy.</li> <li>• Summarized tree view listing the parent customer and pricing rules which are defined for the parent customer.</li> <li>• Basic details of the self-funded policies which are associated with the bill group.</li> <li>• Basic details of the pricing rules which are defined for the self-funded policies of the bill group.</li> <li>• Basic details of the active pricing groups which are defined for the bill group.</li> <li>• Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.</li> </ul>

This screen consists of the following tabs:

- [Customer 360° Information - Person](#) on page 71
- [Customer 360° Information - Account](#) on page 83
- [Customer 360° Information - Policy](#) on page 96
- [Customer 360° Information - Pricing](#) on page 99

**Note:** If a person does not have an account or policy, the data does not appear in the **Account** or **Policy** tab, respectively. And, if the pricing rules are not defined for the parent customer or bill group's policy, the data does not appear in the **Pricing** tab.

## Customer 360° Information - Person

The following table provides information about the **Person** tab:

If you are viewing the 360° information of...	Then...
A person who is associated with the fully-insured policy	The <b>Person</b> tab displays the basic details, characteristics, child persons, hierarchy, and customer contacts of the person.

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	<p>The <b>Person</b> tab displays the following:</p> <ul style="list-style-type: none"> <li>Basic details, characteristics, child persons, billing hierarchy, and customer contacts of the parent customer.</li> <li>Sort IDs of all effective child persons whose person type is set to <b>Bill Group</b> and who are related to the parent customer using a relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.</li> <li>Derivation and pricing parameters defined for the bill group and sort ID combinations.</li> </ul>
A bill group who is associated with the self-funded policy	The <b>Person</b> tab displays the basic details, characteristics, child persons, billing hierarchy, and customer contacts of the bill group.

It contains the following zones:

- [Person Information](#) on page 72
- [Person Characteristics](#) on page 74
- [Child Persons](#) on page 74
- [Person Hierarchy](#) on page 75

**Note:** The **Person Hierarchy** zone does not appear when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Person Billing Hierarchy](#) on page 76

**Note:** The **Person Billing Hierarchy** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Derivation and Pricing Parameters](#) on page 79

**Note:** The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Bill Group Sorting](#) on page 81

**Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Customer Contacts](#) on page 82

### Person Information

The **Person Information** zone displays the details of the person. It contains the following sections:

- **Main** - Displays the basic information about the person. It contains the following fields:

Field Name	Field Description
Person Information	Displays information about the person. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the person.
Person Type	Indicates the type of the person. The valid values are: <ul style="list-style-type: none"> <li>• Business</li> <li>• Bill Group</li> <li>• Group</li> <li>• Broker</li> <li>• Person</li> <li>• Parent Customer</li> </ul>
Date of Birth	Displays the date when the person was born.
	<b>Note:</b> This field appears only when the respective data is available for the person.

- **Person Identifiers** - Lists various types of identification associated with the person. It contains the following columns:

Column Name	Column Description
Person Identifier Type	Indicates the person identifier type.
Person Identifier	Displays the value of the person identifier type.

- **Contact Information** - Displays the contact details of the person. It contains the following fields:

Field Name	Field Description
Country	Indicates the country where the person is located.
Address 1	Displays the first line of the person's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the person's address. It may contain details, such as street name.
Address 3	Displays the third line of the person's address. It may contain the landmark details.
Address 4	Displays the fourth line of the person's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.

Field Name	Field Description
In City Limit	Indicates whether the person resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
City	Displays the city where the person is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the person is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.
Email ID	Displays the e-mail ID of the person.

**Note:** The above mentioned fields appear in the **Contact Information** section only when the respective data is available for the person.

- **Phone Details** – Lists the phone details of the person. It contains the following columns:

Column Name	Column Description
Phone Type	Indicates the type of the phone number.
Phone Number	Displays the phone number of the person.

### Person Characteristics

The **Person Characteristics** zone lists the characteristics defined for the person. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the person.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value. <div> <b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b>. </div>

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

### Child Persons

The **Child Persons** zone lists the child persons included in the person's hierarchy. It contains the following columns:

Column Name	Column Description
Child Person Information	Displays information about the child person. <div> <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the child person. </div>

Column Name	Column Description
Relationship Type	Indicates how the child person is related to the parent person.
Start Date	Displays the date from when the child person is related to the parent person.
End Date	Displays the date till when the child person is related to the parent person.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a child person by clicking the **View** () icon corresponding to the child person in this zone.

You can filter the list using the **Relationship Type** field available in the **Filter** area. By default, the **Filter** area is hidden.

You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Bill Group Derivation and Pricing Parameters

An employer may have different bill groups. Each bill group will handle the claim and enrollment transactions of employees based on the employee attributes, such as location, employment status, employment department, and so on.

Oracle Revenue Management and Billing allows you to define the derivation and pricing parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4 for the bill group and sort ID combination. These parameters are used to derive the bill group against which the claim and enrollment transactions should be billed in the system. For example, if you want bill group 1 to handle claim and enrollment transactions of employees who reside in the western location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 1 where the source system is set to X, parameter 1 is set to Western, and parameter 2 is set to Grade A. Similarly, if you want bill group 2 to handle claim and enrollment transactions of employees who reside in the eastern location of city and belong to grade A and whose transactions are received from the X system, you need to define the derivation and pricing parameters for bill group 2 where the source system is set to X, parameter 1 is set to Eastern, and parameter 2 is set to Grade A.

**Note:** In the above examples, the bill group is derived based on the specified attributes only when the source system, parameter 1, and parameter 2 are mapped to the appropriate transaction fields in the pricing rule type using which the pricing rules are defined for the bill group.

You can also define criteria for a rule in a pricing group using the parameters, such as source system, parameter 1, parameter 2, parameter 3, and parameter 4. If a pricing rule is defined for a bill group using a pricing group, you can define more than one price in the pricing rule which is offered based on the attributes of the employees.

The derivation and pricing parameters for the bill group and sort ID combination are effective from a particular date. However, the effective date must fall within the date range defined for the sort ID of the bill group.

The **Bill Group Derivation and Pricing Parameters** zone lists the derivation and pricing parameters defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define and edit the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination through this zone. You can also upload the derivation and pricing parameters for one or more bill group and sort ID combinations at the same time using the **Upload Request** feature. You can upload the derivation and pricing parameters for a bill group and sort ID combination either from this zone or from the **Upload Request** screen. While creating an upload request for the derivation and pricing parameters, you need to specify the parent customer whose bill groups' derivation and pricing parameters you want to upload. Once the upload request is processed, the derivation and pricing parameters are defined for the bill group and sort ID combination in the system.

This zone contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the derivation and pricing parameters are defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Source System	Indicates the source system from where the claim and enrollment transactions are received.
Parameter 1	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 2	Indicates the employee attribute based on which you want to derive the bill group.

Column Name	Column Description
Parameter 3	Indicates the employee attribute based on which you want to derive the bill group.
Parameter 4	Indicates the employee attribute based on which you want to derive the bill group.
Sort ID	Indicates the sort ID of the bill group.
Effective Date	Displays the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.
Status	Indicates the status of the derivation and pricing parameters defined for the bill group and sort ID combination. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>

In addition, it contains the following buttons:

Button Name	Button Description
Edit	Used to edit the derivation and pricing parameters of a bill group and sort ID combination.

If you want to edit the derivation and pricing parameters of all bill group and sort ID combinations, you need to select the check box corresponding to the column header in this zone, and then click the **Edit** button. However, if you want to edit the derivation and pricing parameters of one or more bill group and sort ID combination, you need to select the check box corresponding to the bill group and sort ID combination, and then click the **Edit** button.

**Note:**

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing.

You can define the derivation and pricing parameters for a bill group (who is effective child person of the parent customer) and sort ID combination by clicking the **Add** link in the upper right corner of this zone. You can also upload the derivation and pricing parameters for one or more bill group (who is effective child person of the parent customer) and sort ID combinations by clicking the **Upload** link in the upper right corner of this zone.

You can filter the list using various search criteria (such as, **Parameter 1**, **Parameter 2**, **Parameter 3**, **Parameter 4**, **Bill Group ID**, **Sort ID**, **Status**, and **Bill Group Name**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

## Bill Group Sorting

Oracle Revenue Management and Billing allows you to define unique sort IDs for a bill group in a given date range. In future, the sort ID will be used to club transactions based on certain parameters and present them in the bill in the ascending or descending order. It may also be used to sort data while generating various reports.

The **Bill Group Sorting** zone lists the sort IDs defined for all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

You can define, edit, and delete a sort ID of a bill group (who is effective child person of the parent customer) through this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) at the same time using the **Upload Request** feature. You can upload the sort IDs for bill groups either from this zone or from the **Upload Request** screen. While creating an upload request for bill group sort IDs, you need to specify the parent customer whose bill groups' sort IDs you want to upload. Once the upload request is processed, the sort ID is defined for the respective bill group in the system.

This zone contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the parent customer's bill group for whom the sort ID is defined. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective bill group (i.e. person).
Bill Group ID	Displays the bill group ID (i.e. person ID).
Sort ID	Displays the sort ID.
Description	Displays the description of the sort ID.
Start Date	Displays the date from when the sort ID is effective for the bill group.
End Date	Displays the date till when the sort ID is effective for the bill group.

In addition, it contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of a bill group's sort ID.
Delete	Used to delete a bill group's sort ID.  <b>Note:</b> You can delete a bill group's sort ID only when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.

If you want to edit or delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header in this zone, and then accordingly click the **Edit** or **Delete** button. However, if you want to edit or delete

one or more sort IDs of effective bill groups, you need to select the check box corresponding to the bill group and sort ID combination, and then accordingly click the **Edit** or **Delete** button.

**Note:**

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

If you select the check box corresponding to the column header in this zone, the system considers only those records which are present on the respective page for editing or deleting.

You can define a sort ID for a bill group (who is effective child person of the parent customer) by clicking the **Add** link in the upper right corner of this zone. You can also upload a set of sort IDs for one or more bill groups (who are effective child persons of the parent customer) by clicking the **Upload** link in the upper right corner of this zone.

You can filter the list using the **Bill Group Name** field available in the **Filter** area. By default, the **Filter** area is hidden.

You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

### Customer Contacts

The **Customer Contacts** zone displays information about how and when the person was contacted. It contains the following columns:

Column Name	Column Description
Contact Date	Displays the date when the person was contacted.
Customer Contact Information	Displays information about the customer contact.
	<b>Note:</b> It has a link. On clicking the link, the <b>Customer Contact</b> screen appears where you can view the details of the customer contact.
Contact Type	Indicates how the person was contacted.
Comments	Displays additional information about the customer contact.

You can filter the list using various search criteria (such as, **On or Before Contact Date**, **Contact Class**, **Contact Type**, and **Show Open Contacts Only**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

## Customer 360° Information - Account

The following table provides information about the **Account** tab:

If you are viewing the 360° information of...	Then...
A person who is associated with the fully-insured policy	The <b>Account</b> tab displays the basic details, characteristics, administrative contracts, automatic payment options, billing and adjustment summary, financial and collections summary, and unpaid bills of the account.
	<b>Note:</b> If the person has multiple accounts, the system, by default, picks and displays the details of any one of its account.
A parent customer who is associated with the self-funded policy	<p>The <b>Account</b> tab displays the following:</p> <ul style="list-style-type: none"> <li>Accounts of all effective child persons whose person type is set to <b>Bill Group</b> and who are related to the parent customer using a relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.</li> <li>Basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of a particular bill group's account.</li> </ul>
A bill group who is associated with the self-funded policy	The <b>Account</b> tab displays the basic details, characteristics, automatic payment options, financial and collections summary, and unpaid bills of the account.
	<b>Note:</b> If the bill group has multiple accounts, the system, by default, picks and displays the details of any one of its account.

It contains the following zones:

- [Bill Group Accounts](#) on page 84

**Note:** The **Bill Group Accounts** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- [Account Information](#) on page 85
- [Auto Pay Details](#) on page 87
- [Account Characteristics](#) on page 86

### **Bill Group Accounts**

The **Bill Group Accounts** zone lists the accounts of all effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration. It appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**. It contains the following columns:

Column Name	Column Description
Bill Group Name	Displays the name of the bill group (i.e. person).
Account Information	Indicates the account to which the bill group is associated. In addition, a context menu appears corresponding to this column which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Mailing Address	Displays the mailing address of the bill group.
Bill Group ID	Displays the bill group ID (i.e. person ID).

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast**  icon corresponding to an account, the following zones appear in the **Account** tab:

- Account Information
- Auto Pay Details
- Account Financial and Collections Summary
- Account Characteristics
- Open Bills
- Billed Vs Paid
- Timeline

You can filter the list using various search criteria (such as, **Bill Group Name** and **Account ID**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

## Account Information

The **Account Information** zone displays the details of the account. It contains the following sections:

- **Main** – Displays the basic information about the account. It contains the following fields:

Field Name	Field Description
Account Information	<p>Displays information about the account. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p>
Management Group	<p>Indicates the account management group to which the account belongs.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Account Management Group</b> screen appears where you can view the details of the respective account management group.</p> <p>This field appears only when the respective data is available for the account.</p>

- **Contact Information** – Displays the contact details of the account's main customer. It contains the following fields:

Field Name	Field Description
Address Source	Indicates which address should be used to route the account's bills and/or quotes via the postal service.
Country	Indicates the country where the main customer is located.
Address 1	Displays the first line of the main customer's address. It may contain details, such as house number and apartment name.
Address 2	Displays the second line of the main customer's address. It may contain details, such as street name.
Address 3	Displays the third line of the main customer's address. It may contain the landmark details.
Address 4	Displays the fourth line of the main customer's address.
House Type	Indicates the type of the house.
Number 1	Displays the numeric information, if any, related to the address.
Number 2	Displays the numeric information, if any, related to the address.

Field Name	Field Description
In City Limit	Indicates whether the main customer resides within the city limit or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
City	Displays the city where the main customer is located.
Geographic Code	Displays the geographic code of the address.
County	Displays the county where the main customer is located.
State	Indicates the state where the city or county is located.
Postal	Displays the postal or zip code of the address.

**Note:** The above mentioned fields except **Address Source** appear in the **Contact Information** section only when the address source of the main customer is set to **Account Override** and the respective data is available for the account.

- **Account Identifiers** – Lists various types of identification associated with the account. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

### Account Characteristics

The **Account Characteristics** zone lists the characteristics defined for the account. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the account.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.
	<p><b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b>.</p>

You can filter the list using the **Characteristic Type** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

### Administrative Contracts

The **Administrative Contracts** zone lists the account's contracts which should be monitored closely for various administrative reasons. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following columns:

Column Name	Column Description
Contract ID	Displays the contract ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Contract Type	Indicates the type of the contract.
Currency	Indicates the currency in which the contract balance is maintained.
Current Balance	Displays the current balance on the contract.

**Note:**

Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

The data appears in this zone only when you have defined the value for the **Administrative Contract Type** option type in the **C1\_CMO** feature configuration.

**Related Topics**

For more information on...	See...
How to setup the <b>C1_CMO</b> feature configuration	<a href="#">Setting the C1_CMO Feature Configuration</a> on page 2360

**Auto Pay Details**

The **Auto Pay Details** zone lists the automatic payment options defined for the account. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the automatic payment option is effective.
End Date	Displays the date till when the automatic payment option is effective.
Auto Pay Source Code	Indicates the source of funds used to make the automatic payment. For example, debit or credit card.
Last Four Digits of Card	Displays the last four digits of the debit or credit card.
	<b>Note:</b> The data appears in this column only when the external type of the auto pay source code's tender type is set to <b>Credit Card Withdrawal</b> .
Percentage	Indicates the percentage of automatic payment that must be made through the automatic payment option.
Priority	Indicates the order in which the automatic payment option should be considered for the effective date range.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

**Account Financial and Collections Summary**

The **Account Financial and Collections Summary** zone displays the financial and collection details of the account. It contains the following fields:

Field Name	Field Description
Collection Class	Indicates the collection class to which the account belongs.
Current Credit Rating	Indicates the account's credit rating which is effective on the current date.
Last Credit Review Date	Displays the date when the account's debt was last reviewed.
Last Payment Date	Displays the date when the last payment was made for the account.
	<b>Note:</b> The system considers the last payment which is in the <b>Frozen</b> status.
Last Payment Amount	Displays the amount of the last payment.
	<b>Note:</b> The system considers the last payment which is in the <b>Frozen</b> status.
Current Balance	Displays the current balance of the account.
Payoff Balance	Displays the payoff balance of the account.
Account on Hold	Indicates whether the account is on hold or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Account on Promise to Pay	Indicates whether any promise to pay is scheduled for the account on the current or future date. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Account on Payment Arrangement	Indicates whether any payment arrangement exists for the account. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Account on Payment Agreement	Indicates whether any active payment agreement request exists for the account. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

### Billing and Adjustment Summary

The **Billing and Adjustment Summary** zone displays the billing and adjustment summary of the account. It appears when you are viewing the 360° information of a person whose person type is neither **Parent Customer** nor **Bill Group**. It contains the following sections:

- **Quote Billed Balance** – Displays information about the account's billed balance. It contains the following fields:

Field Name	Field Description
Past Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a past due date.
Future Due Billed Balance	Displays the sum of open financial transactions of the account that are listed on a bill with a future due date.
Quote Billed Balance	Displays the sum of past due billed balance and future due billed balance.

- **Future Adjustments and Retroactivity** – Displays information about the account’s future adjustments and retro activities. It contains the following fields:

Field Name	Field Description
Future Adjustments	Displays the sum of adjustment financial transactions of the account which are swept onto the next bill.
Future Retro Terms (Credits)	Displays the sum of canceled bill segment financial transactions of the account which are presented on the next bill.
Future Retro Adds (Debits)	<p>Displays the sum of membership premium billable charges which are not yet billed to the account.</p> <p><b>Note:</b> The data appears in this field only when the values are defined for the <b>Premium Amount SQI</b> and <b>Coverage End Date SQI</b> option types in the <b>C1-BILLADJSQ</b> feature configuration.</p>
Future Balance with Adjustments & Debits/Credits	Displays the sum of quote billed balance, future adjustments, future retro terms (credits), and future retro adds (debits).

### Open Bills

The **Open Bills** zone lists the unpaid bills of the account. By default, the bills where the unpaid amount is greater than zero are listed in this zone. It contains the following columns:

Column Name	Column Description										
Bill Date	<p>Displays the date when the bill was generated.</p> <p><b>Note:</b> The data in this column is presented in a different color depending on the age bucket in which the bill’s days past due falls. The following table lists the color used for presentation in various age buckets:</p> <table> <tr> <th>Age Bucket</th><th>Color</th></tr> <tr> <td>Age 0 to 30 DPD</td><td>Black</td></tr> <tr> <td>Age 31 to 60 DPD</td><td>Green</td></tr> <tr> <td>Age 61 to 90 DPD</td><td>Orange</td></tr> <tr> <td>Age &gt; 90 DPD</td><td>Red</td></tr> </table>	Age Bucket	Color	Age 0 to 30 DPD	Black	Age 31 to 60 DPD	Green	Age 61 to 90 DPD	Orange	Age > 90 DPD	Red
Age Bucket	Color										
Age 0 to 30 DPD	Black										
Age 31 to 60 DPD	Green										
Age 61 to 90 DPD	Orange										
Age > 90 DPD	Red										
Bill ID	<p>Displays the bill ID.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.</p>										
Due Date	Displays the date when the bill is due for payment.										

Column Name	Column Description
Bill Amount	Displays the bill amount.
Bill Status	Indicates the status of the bill. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Complete</li> </ul>
Unpaid Amount	Displays the unpaid amount of the bill.
Age Bucket	Indicates the age bucket in which the bill's days past due falls. The valid values are: <ul style="list-style-type: none"> <li>• Age 0 to 30 DPD</li> <li>• Age 31 to 60 DPD</li> <li>• Age 61 to 90 DPD</li> <li>• Age &gt; 90 DPD</li> </ul>
Days Past Due	Displays the number of days past after the due date.
Overdue Process Information	Indicates the overdue process which is initiated for the bill and is currently in the <b>Active</b> status. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Overdue Process</b> screen appears where you can view the details of the respective overdue process.
Payment Agreement Request Information	Indicates the active payment agreement request in which the bill is included.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Agreement Request</b> screen appears where you can view the details of the respective payment agreement request.

You can view additional information about the bill by clicking the **View** () icon corresponding to the bill in the **Open Bills** zone.

You can filter the list using various search criteria (such as, **On or Before Bill Date** and **Show All Bills**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

**Note:** If you select the **Show All Bills** option, the system lists all bills where the unpaid amount is greater than or equal to zero.

### **Billed Vs Paid**

The **Billed Vs Paid** zone lists the following transactions of the account:

- Bills which are created for the account
- Any excess credit which is made for the account
- Payments which are created or canceled for the account

- Adjustments which are created or canceled for the account
- Refund or Write Off adjustments which are created or canceled for the account
- Payment transfer to the reconciliation contract of the account
- Payment transfer from the reconciliation contract to the payor account's contract
- Reconciliations through which the account's bill segments are reconciled
- Automatic payments sent to the auto clearing house for review before freezing them

**Note:** The excess credit information for the account appears only when you have defined the value for the **On Account Contract Type** option type in the **C1\_CMO** feature configuration. Accordingly, the excess credit information (if any) on the respective contracts is listed in this zone.

It contains the following columns:

Column Name	Column Description
Due Date	Displays the date when the bill is due for payment.
	<b>Note:</b> The data appears in this column only when the transaction type is set to <b>Bill</b> .
Bill ID	Displays the bill ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill. The data appears in this column only when the transaction type is set to <b>Bill</b> .

Column Name	Column Description																						
Transaction Date	<p>The following table indicates the date that appears depending on the type of the transaction:</p> <table> <tr> <th>If the transaction type is...</th><th>Then...</th></tr> <tr> <td>Bill</td><td>Date when the bill is generated for the account</td></tr> <tr> <td>Payment</td><td>Date when the payment is made for the account</td></tr> <tr> <td>Adjustment</td><td>Date when the adjustment is created for the account</td></tr> <tr> <td>Payment Cancellation</td><td>Date when the payment is canceled for the account</td></tr> <tr> <td>Adjustment Cancellation</td><td>Date when the adjustment is canceled for the account</td></tr> <tr> <td>Excess Credit (overpayment)</td><td>Date when the excess credit is made for the account</td></tr> <tr> <td>Reconciliation Contract</td><td>Date when the payment is transferred to the reconciliation contract of the account</td></tr> <tr> <td>Reconciliation Contract - Returned</td><td>Date when the payment made to the reconciliation contract of the account is canceled</td></tr> <tr> <td>Payment Transfer</td><td>Date when the pay instruction for the account is reconciled</td></tr> <tr> <td>Payment Transfer Cancellation</td><td>Date when the reconciliation is canceled</td></tr> </table> <p><b>Note:</b> The data does not appear in this column for automatic payments which are sent to the auto clearing house for review.</p>	If the transaction type is...	Then...	Bill	Date when the bill is generated for the account	Payment	Date when the payment is made for the account	Adjustment	Date when the adjustment is created for the account	Payment Cancellation	Date when the payment is canceled for the account	Adjustment Cancellation	Date when the adjustment is canceled for the account	Excess Credit (overpayment)	Date when the excess credit is made for the account	Reconciliation Contract	Date when the payment is transferred to the reconciliation contract of the account	Reconciliation Contract - Returned	Date when the payment made to the reconciliation contract of the account is canceled	Payment Transfer	Date when the pay instruction for the account is reconciled	Payment Transfer Cancellation	Date when the reconciliation is canceled
If the transaction type is...	Then...																						
Bill	Date when the bill is generated for the account																						
Payment	Date when the payment is made for the account																						
Adjustment	Date when the adjustment is created for the account																						
Payment Cancellation	Date when the payment is canceled for the account																						
Adjustment Cancellation	Date when the adjustment is canceled for the account																						
Excess Credit (overpayment)	Date when the excess credit is made for the account																						
Reconciliation Contract	Date when the payment is transferred to the reconciliation contract of the account																						
Reconciliation Contract - Returned	Date when the payment made to the reconciliation contract of the account is canceled																						
Payment Transfer	Date when the pay instruction for the account is reconciled																						
Payment Transfer Cancellation	Date when the reconciliation is canceled																						
Transaction Type	<p>Indicates the type of the transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• Bill</li> <li>• Payment</li> <li>• Adjustment</li> <li>• Payment Cancellation</li> <li>• Adjustment Cancellation</li> <li>• Excess Credit (overpayment)</li> <li>• Reconciliation Contract</li> <li>• Reconciliation Contract - Returned</li> <li>• Payment Transfer</li> <li>• Payment Transfer Cancellation</li> </ul>																						

Column Name	Column Description
Transaction Description	Displays the description of the transaction.
	<b>Note:</b> The data appears in this column only when the transaction type is set to <b>Adjustment</b> , <b>Adjustment Cancellation</b> , <b>Reconciliation Contract - Returned</b> , <b>Payment Transfer</b> , and <b>Payment Transfer Cancellation</b> . In addition, the data appears in this column when the automatic payments are sent to the auto clearing house for review before freezing them. The transaction description for such payments is set to <b>Pending Payment</b> .
Transaction Amount	Displays the transaction amount.
Unpaid Amount	Displays the unpaid amount of the bill.
	<b>Note:</b> The data appears in this column only when the transaction type is set to <b>Bill</b> .
Payment Date	Displays the date when the payment is created or canceled for the account.
	<b>Note:</b> The data appears in this column only when the transaction type is set to <b>Payment</b> , <b>Payment Cancellation</b> , or <b>Excess Credit (overpayment)</b> .
Tender Type	Indicates the type of tender through which the payment was made.
Check Number/External Reference ID	Displays the check number or external reference ID.
Transaction ID	Displays the payment, adjustment, or reconciliation ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> , <b>Adjustment</b> , or <b>Reconciliation</b> screen appears where you can view the details of the respective transaction.

You can filter the list using the **On or Before Due Date** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

### **Related Topics**

For more information on...	See...
How to setup the <b>C1_CMO</b> feature configuration	<a href="#">Setting the C1_CMO Feature Configuration</a> on page 2360

### **Timeline**

The **Timeline** zone displays the following information in a graphical form:

- Number of customer contacts which are created for the account's main customer in a particular month
- Number of bills which are created for the account in a particular month
- Number of payments which are created for the account in a particular month

It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Month	Used to indicate the month till when you want to display the above stated information.	Yes
	<b>Note:</b> By default, the current month appears in this field.	
Year	Used to indicate the year till when you want to display the above stated information.	Yes
	<b>Note:</b> By default, the current year appears in this field.	

Depending on the month and year specified in the above fields, the data for the respective month and previous 11 months is presented in the grid. For example, if the Month and Year is set to April 2017, then the data for the May 2016, Jun 2016, Jul 2016, Aug 2016, Sep 2016, Oct 2016, Nov 2016, Dec 2016, Jan 2017, Feb 2017, Mar 2017, and Apr 2017 appears in the grid. To view the data for a different period, you must accordingly change the month and year and then click **Search** () icon.

You can use the **Previous 12 Months** () , **Previous Month** () , **Go To Today** () , **Next Month** () , and **Next 12 Months** () icons to change the values specified in the above mentioned fields.

The following table indicates the data and the manner in which the data is presented in the grid:

Row Name	Row Description						
Customer Contacts	A small icon appears for each customer contact which is created for the account’s main customer in the respective month. For example, if two customer contacts are created for the main customer in the month of Jan 2017 and one customer contact is created in the month of Feb 2017, then two icons appear in the Jan 2017 column and one icon appear in the Feb 2017 column. A text indicating the day of the month when the customer contact was created appears on the icon. The following table indicates the color in which the icon appears depending on the condition which is satisfied:						
	<table><tr><th>If the contact action on the customer contact type is...</th><th>Then the icon appears in...</th></tr><tr><td>Set to <b>Send Letter</b></td><td>Red</td></tr><tr><td>Set to <b>Action Algorithm</b></td><td>Yellow</td></tr></table>	If the contact action on the customer contact type is...	Then the icon appears in...	Set to <b>Send Letter</b>	Red	Set to <b>Action Algorithm</b>	Yellow
If the contact action on the customer contact type is...	Then the icon appears in...						
Set to <b>Send Letter</b>	Red						
Set to <b>Action Algorithm</b>	Yellow						
	On clicking the icon, the corresponding customer contact information appears at the bottom of this zone. It has a link. On clicking the link, the <b>Customer Contact</b> screen appears where you can view the details of the respective customer contact.						
	<b>Note:</b> You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the <b>C1-TL-CC-EVT</b> algorithm.						

Row Name	Row Description										
Bills	<p>A small icon appears for each bill which is created for the account in the respective month. For example, if three bills are created for the account in the month of Jan 2017, two bills are created in the month of Feb 2017, and one bill is created in the month of Apr 2017, then three icons appear in the Jan 2017 column, two icons appear in the Feb 2017 column, and one icon appears in the Apr 2017 column. A text indicating the day of the month when the bill was due appears on the icon. You can either display the day of the due date or bill date on the icon depending on the requirement. The following table indicates the color in which the icon appears depending on the condition which is satisfied:</p> <table> <tr> <th>If the bill is...</th><th>Then the icon appears in...</th></tr> <tr> <td>Fully Matched</td><td>Green</td></tr> <tr> <td>Unmatched</td><td>Red</td></tr> <tr> <td>Credit Note</td><td>Blue</td></tr> <tr> <td>Scheduled for billing in the next bill cycle</td><td>Black</td></tr> </table> <p>On clicking the icon, the corresponding bill information appears at the bottom of this zone. It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.</p> <p><b>Note:</b></p> <p>If you want to display the day of the due date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>D</b>. However, if you want to display the day of the bill date on the icon, you must set the <b>Date To Use (D-Due Date, B-Bill Date)</b> parameter in the <b>C1-TL-OI-EVT</b> algorithm to <b>B</b>.</p> <p>You can change the color in which the text appears on the icon and the color in which the icon appears when the above stated conditions are met through the <b>C1-TL-OI-EVT</b> algorithm.</p>	If the bill is...	Then the icon appears in...	Fully Matched	Green	Unmatched	Red	Credit Note	Blue	Scheduled for billing in the next bill cycle	Black
If the bill is...	Then the icon appears in...										
Fully Matched	Green										
Unmatched	Red										
Credit Note	Blue										
Scheduled for billing in the next bill cycle	Black										

Row Name	Row Description												
Payments	<p>A small icon appears for each payment which is created for the account in the respective month. For example, if one payment is created for the account in the month of Aug 2016, three payments are created in the month of Dec 2016, and four payments are created in the month of Mar 2017, then one icon appears in the Aug 2016 column, three icons appear in the Dec 2016 column, and four icons appear in the Mar 2017 column. A text indicating the day of the month when the payment was created appears on the icon. The following table indicates the color in which the icon appears depending on the status of the payment:</p> <table> <tr> <th>Status</th><th>Color</th></tr> <tr> <td>Frozen</td><td>Green</td></tr> <tr> <td>Canceled</td><td>Red</td></tr> <tr> <td>Freezable</td><td>Blue</td></tr> <tr> <td>Error</td><td>Red</td></tr> <tr> <td>Incomplete</td><td>Yellow</td></tr> </table> <p>On clicking the icon, the corresponding payment information appears at the bottom of this zone. It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the respective payment.</p> <p><b>Note:</b> You can change the color in which the text appears on the icon and the color in which the icon appears in the different status through the <b>C1-TL-PY-EVT</b> algorithm.</p>	Status	Color	Frozen	Green	Canceled	Red	Freezable	Blue	Error	Red	Incomplete	Yellow
Status	Color												
Frozen	Green												
Canceled	Red												
Freezable	Blue												
Error	Red												
Incomplete	Yellow												

**Customer 360° Information - Policy**

The following table provides information about the **Policy** tab:

If you are viewing the 360° information of...	Then...
A person who is associated with the fully-insured policy	<p>The <b>Policy</b> tab displays the basic details, policy persons, packaged savings, and policy plans of the fully-insured policy.</p> <p><b>Note:</b> If the person is associated with multiple policies, the system, by default, picks and displays the details of any one of its policy.</p>
A parent customer who is associated with the self-funded policy	<p>The <b>Policy</b> tab displays the basic details and policy persons of the self-funded policy where the parent customer is the policy holder.</p> <p><b>Note:</b> If the parent customer is a policy holder in multiple policies, the system, by default, picks and displays the details of any one of its policy.</p>
A bill group who is associated with the self-funded policy	<p>The <b>Policy</b> tab displays the basic details and policy persons of the self-funded policy.</p> <p><b>Note:</b> If the bill group is associated with multiple policies, the system, by default, picks and displays the details of any one of its policy.</p>

It contains the following zones:

- [Policy Information](#) on page 97
- [Packaged Savings Code](#) on page 98

**Note:** The **Packaged Savings Code** zone appears when you are viewing the 360° information of a person who is associated with the fully-insured policy.

- [Policy Persons](#) on page 98
- [Policy Plans](#) on page 98

### **Related Topics**

### **Policy Information**

The **Policy Information** zone displays the details of the policy. It contains the following sections:

- **Main** – Displays the basic information about the policy. It contains the following fields:

Field Name	Field Description
Policy Information	Displays information about the policy.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the respective policy.
Source System	Displays the name of the external system in which the policy is created.
Policy Number	Displays the policy number.
Status	Indicates the status of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Runout End Date	Displays the date when the runout period of the policy ends.
	<b>Note:</b> This field appears only when you are viewing the 360° information of a person who is associated with a self-funded policy.
Runout Administration Fees	Indicates whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"> <li>• None</li> <li>• Percentage of Claim</li> </ul>
	<b>Note:</b> This field appears only when you are viewing the 360° information of a person who is associated with a self-funded policy.  At present, this field is used only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.

- **Characteristics** – Lists the characteristics defined for the policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

### Packaged Savings Code

The **Packaged Savings Code** zone lists the packaged savings (or discount) offered in the policy plan. It appears when you are viewing the 360° information of a person who is associated with the fully-insured policy. It contains the following columns:

Column Name	Column Description
Start Date	Displays the date from when the packaged savings is effective.
End Date	Displays the date till when the packaged savings is effective.
Packaged Savings Code	Displays the packaged savings code.
Description	Displays the description of the packaged savings.
Billable Charge Information	Indicates the billable charge which is created for the packaged savings.
	<b>Note:</b> It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the respective billable charge.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### Policy Persons

The **Policy Persons** zone lists the persons associated with the policy. It contains the following columns:

Column Name	Column Description
Person Name	Indicates the person who is associated with the policy.
Policy Person Role	Indicates the role of the person with respect to the policy.
Start Date	Displays the date from when the person is associated with the policy.
End Date	Displays the date till when the person is associated with the policy.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can view the 360° information of a policy person by clicking the **View** () icon corresponding to the person in the **Policy Persons** zone.

### Policy Plans

The **Policy Plans** zone lists the policy plans defined in the policy. It contains the following columns:

Column Name	Column Description
Policy Plan Information	Displays information about the policy plan. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy Plan</b> screen appears where you can view the details of the respective policy plan.
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Plan	Indicates the price item associated with the policy plan.
Policy Plan Description	Displays the description of the price item.
No. of Subscribers	Indicates the number of main subscribers in the policy plan.
No. of Members	Indicates the number of members in the policy plan.
Contract ID	Indicates the contract which is created for the policy plan.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Customer 360° Information - Pricing

The following table provides information about the **Pricing** tab:

If you are viewing the 360° information of...	Then...
A person who is associated with the fully-insured policy	No data appears in the <b>Pricing</b> tab.
A parent customer who is associated with the self-funded policy	<p>The <b>Pricing</b> tab displays the following:</p> <ul style="list-style-type: none"> <li>Basic details of the pricing rules which are defined for the parent customer.</li> <li>Summarized tree view listing each bill group of the parent customer and the bill groups' self-funded policies and pricing rules.</li> <li>Basic details of the self-funded policies which are associated with each bill group of the parent customer.</li> <li>Basic details of the pricing rules which are defined for the self-funded policies of each bill group.</li> <li>Basic details of the active pricing groups which are defined for each bill group.</li> <li>Basic information about the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.</li> </ul>

If you are viewing the 360° information of...	Then...
A bill group who is associated with the self-funded policy	<p>The <b>Pricing</b> tab displays the following:</p> <ul style="list-style-type: none"> <li>Summarized tree view listing the parent customer and pricing rules which are defined for the parent customer.</li> <li>Basic details of the self-funded policies which are associated with the bill group.</li> <li>Basic details of the pricing rules which are defined for the self-funded policies of the bill group.</li> <li>Basic details of the active pricing groups which are defined for the bill group.</li> <li>Basic information about the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.</li> </ul>

It contains the following zones:

- [Parent Customer Pricing Rules](#) on page 101

**Note:** The **Parent Customer Pricing Rules** zone appears when you are viewing 360° information of a parent customer who is associated with the self-funded policy.

- [Parent Customer Pricing Rule Summary](#) on page 105

## Parent Customer Pricing Rules

The **Parent Customer Pricing Rules** zone lists the pricing rules which are defined for the parent customer. It appears when you are viewing 360° information of a parent customer who is associated with the self-funded policy. It contains the following columns:

Column Name	Column Description																		
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Pricing Rule Type</b> screen appears where you can view the details of the respective pricing rule type.																		
Pricing Rule Information	Displays information about the pricing rule.  <b>Note:</b> It has a link. On clicking the link, the <b>Pricing Rule</b> screen appears where you can view the details of the respective pricing rule.																		
Price Item Information	Indicates the price item for which the pricing rule is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.																		
Start Date	Displays the date from when the pricing rule is effective.																		
End Date	Displays the date till when the pricing rule is effective.																		
Edit	On clicking the <b>Edit</b> (  ) icon, the following screen appears where you can edit the details of the respective pricing rule: <table border="1"> <thead> <tr> <th>If you are editing...</th><th>Then the following screen appears...</th></tr> </thead> <tbody> <tr> <td>A claim pricing rule</td><td>Claim Pricing Rule</td></tr> <tr> <td>A specific stop-loss pricing rule</td><td>Specific Stop-Loss (SSL) Pricing Rule</td></tr> <tr> <td>An aggregate stop-loss pricing rule</td><td>Aggregate Stop-Loss (ASL) Pricing Rule</td></tr> <tr> <td>A retention type claim based pricing rule</td><td>Retention Type Claim Based Pricing Rule</td></tr> <tr> <td>A retention type enrollment based pricing rule</td><td>Retention Type Enrollment Based Pricing Rule</td></tr> <tr> <td>An ancillary pricing rule</td><td>Ancillary Pricing Rule</td></tr> <tr> <td>A discount arrangement pricing rule</td><td>Discount Arrangement Pricing Rule</td></tr> <tr> <td>A level funded pricing rule</td><td>Level Funded (LF) Pricing Rule</td></tr> </tbody> </table>	If you are editing...	Then the following screen appears...	A claim pricing rule	Claim Pricing Rule	A specific stop-loss pricing rule	Specific Stop-Loss (SSL) Pricing Rule	An aggregate stop-loss pricing rule	Aggregate Stop-Loss (ASL) Pricing Rule	A retention type claim based pricing rule	Retention Type Claim Based Pricing Rule	A retention type enrollment based pricing rule	Retention Type Enrollment Based Pricing Rule	An ancillary pricing rule	Ancillary Pricing Rule	A discount arrangement pricing rule	Discount Arrangement Pricing Rule	A level funded pricing rule	Level Funded (LF) Pricing Rule
If you are editing...	Then the following screen appears...																		
A claim pricing rule	Claim Pricing Rule																		
A specific stop-loss pricing rule	Specific Stop-Loss (SSL) Pricing Rule																		
An aggregate stop-loss pricing rule	Aggregate Stop-Loss (ASL) Pricing Rule																		
A retention type claim based pricing rule	Retention Type Claim Based Pricing Rule																		
A retention type enrollment based pricing rule	Retention Type Enrollment Based Pricing Rule																		
An ancillary pricing rule	Ancillary Pricing Rule																		
A discount arrangement pricing rule	Discount Arrangement Pricing Rule																		
A level funded pricing rule	Level Funded (LF) Pricing Rule																		

Column Name	Column Description
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the pricing rule.
	<b>Note:</b> You can delete a pricing rule only when it is not yet used in the system.
Price List Information	Indicates the price list which contains the price item pricing which is created through the pricing rule.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can define a new pricing rule for the parent customer by clicking the **Add** link in the upper right corner of this zone. You can filter the list using various search criteria (such as, **Price Item**, **Start Date**, **Pricing Rule Type**, **End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

## Bill Group Policy Information

The **Bill Group Policy Information** zone appears when you are viewing 360° information of a parent customer or bill group who is associated with the self-funded policy. If you are viewing the 360° information of a parent customer, the **Bill Group Policy Information** zone lists the policies to which each bill group of the parent customer is associated. However, if you are viewing the 360° information of a bill group, the **Bill Group Policy Information** zone lists the policies to which the bill group is associated. It contains the following columns:

Column Name	Column Description
Bill Group Information	Indicates the bill group to which the policy is associated.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective bill group (i.e. person).
Policy Information	Displays information about the policy.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy</b> screen appears where you can view the details of the respective policy.
Renew	On clicking the <b>Renew</b> (  ) icon, the <b>Policy</b> screen appears where you can renew the policy.
	<b>Note:</b> The <b>Renew</b> icon appears only when the policy is in the <b>In Force/Active</b> status and it is not yet renewed.
Policy Number	Displays the policy number.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Status	Indicates the status of the policy. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• In Force/Active</li> <li>• Runout</li> <li>• Post Runout</li> </ul>
Runout End Date	Displays the date when the runout period of the policy ends.
Renewal Date	Displays the date when the policy is renewed.
	<b>Note:</b> The data appears in this column only when the policy is renewed.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a bill group and policy combination, the **Bill Group Policy Pricing Rules** and **Bill Group Pricing Groups** zones appear.

You can filter the list using various search criteria (such as, **Bill Group Name**, **Policy Start Date**, and **Policy End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

A level funded pricing rule	Level Funded (LF) Pricing Rule																						

Column Name	Column Description
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the pricing rule.
	<b>Note:</b> You can delete a pricing rule only when it is not yet used in the system.
Pricing Group Information	Indicates the pricing group which is used while defining the pricing rule.
Price List Information	Indicates the price list which contains the price item pricing which is created through the pricing rule.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Group Policy Pricing Rules** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears only when you click the **Broadcast** () icon corresponding to a bill group and policy combination in the **Bill Group Policy Information** zone.

You can define a new pricing rule for the bill group by clicking the **Add** link in the upper right corner of this zone.

You can filter the list using various search criteria (such as, **Price Item**, **Start Date**, **Pricing Rule Type**, **End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

## Bill Group Pricing Groups

The **Bill Group Pricing Groups** zone lists the pricing groups which are defined for the bill group. By default, the active pricing groups are listed in this zone. It appears when you are viewing 360° information of a bill group who is associated with the self-funded policy. It contains the following columns:

Column Name	Column Description
Pricing Group	Indicates the pricing group which is created for the bill group.
Status	Indicates the status of the pricing group. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Pricing Group</b> screen appears where you can edit the details of the pricing group.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the pricing group. <div> <b>Note:</b> You can delete a pricing group only when it is not yet used while defining a pricing rule for the bill group. </div>
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Pricing Group</b> screen appears where you can define a new pricing group using an existing pricing group.
Associated Price Items	Indicates the price items whose pricing is defined using the pricing group.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Bill Group Pricing Groups** zone does not appear in the **Pricing** tab of the **Customer 360° Information** screen. It appears only when you click the **Broadcast** () icon corresponding to a bill group in the **Bill Group Policy Information** zone.

You can define a new pricing group for the bill group by clicking the **Add** link in the upper right corner of this zone.

You can filter the list using the **Show All** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (✕) icon in the upper right corner of this zone.

**Note:** If you select the **Yes** option from the **Show All** list, the system lists both the active and inactive pricing groups in the **Bill Group Pricing Groups** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

### Pricing Rule Approval Transactions

The **Pricing Rule Approval Transactions** zone lists the following information:

If you are viewing the 360° information of...	Then...
A parent customer who is associated with the self-funded policy	The <b>Pricing Rule Approval Transactions</b> zone lists the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules.
A bill group who is associated with the self-funded policy	The <b>Pricing Rule Approval Transactions</b> zone lists the approval transactions which are created while defining, editing, and deleting the pricing rules of the bill group.

It contains the following columns:

Column Name	Column Description
Submitted On	Displays the date and time when the approval transaction is created by the submitter.
Approval Transaction ID	Displays the approval transaction ID. <b>Note:</b> It has a link. On clicking the link, the <b>Comparison: New versus Existing</b> screen appears where you can review and accordingly approve, reject, or revert the changes.
Pricing Level	Indicates whether the approval transaction is created for a pricing rule which is defined at the parent customer or bill group level. The valid values are: <ul style="list-style-type: none"> <li>Parent Customer</li> <li>Bill Group</li> </ul>
Person Name	Indicates the person for whom the pricing rule is created.
Pricing Rule Type	Indicates the pricing rule type using which the pricing rule is created.
Price Item Information	Indicates the price item for which the pricing rule is created. <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.

Column Name	Column Description
Start Date	Displays the date from when the pricing rule is effective.
End Date	Displays the date till when the pricing rule is effective.
Approval Status	Indicates the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Deleted</li> <li>• Inprocess</li> <li>• Pending</li> <li>• Rejected</li> </ul>
Action	Indicates the type of action performed by the submitter on the pricing rule. The valid values are: <ul style="list-style-type: none"> <li>• Add</li> <li>• Update</li> <li>• Delete</li> </ul>
Submitted By	Indicates the user who has performed the action on the pricing rule.
Assigned To	Indicates the user to whom the approval transaction is manually assigned for review.
Approved/Rejected By	Indicates the user who has approved or rejected the approval transaction.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using various search criteria (such as, **Status**, **Assigned To**, and **Price Item**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (🔍) icon in the upper right corner of this zone.

## Defining a Sort ID for a Bill Group

### Prerequisites

To define a sort ID for a bill group, you should have:

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration

### Procedure

To define a sort ID for a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** (👁️) icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Sorting** zone.

**Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- Click the **Add** link in the upper right corner of the **Bill Group Sorting** zone.

The **Bill Group Sorting** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to define.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Used to indicate the bill group for whom you want to define the sort ID.	Yes
	<b>Note:</b> The values appear in this list only when there are effective child persons whose person type is set to <b>Bill Group</b> and who are related to the parent customer using a relationship type which is specified in the <b>Person Relationship Type</b> parameter of the <b>C1-ASOBLLNG</b> feature configuration.	
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Used to specify the sort ID.	Yes
Start Date	Used to specify the date from when the sort ID is effective for the bill group.	Yes
	<b>Note:</b> The start date cannot be later than the end date.	
End Date	Used to specify the date till when the sort ID is effective for the bill group.	No
	<b>Note:</b> The end date cannot be earlier than the start date.	

- Enter the required details in the grid.
- If you want to define more than one sort ID for a bill group, click the **Add** (  ) icon and then repeat step 5.

**Note:** However, if you want to remove a sort ID of a bill group, click the **Delete** (  ) icon corresponding to the bill group and sort ID combination.

- Click **Save**.

A sort ID is defined for the bill group.

## Editing a Sort ID of a Bill Group

### Procedure

To edit a sort ID of a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Sorting** zone.

**Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination whose details you want to edit.

**Note:** If you want to edit all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for editing.

5. Click **Edit**.

The **Bill Group Sorting** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' sort IDs you want to edit.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Bill Group Information	Indicates the bill group whose sort ID you want to edit.	Not applicable
Description	Used to specify the description for the sort ID.	Yes
Sort ID	Displays the sort ID.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the sort ID is effective for the bill group.	Yes
	<b>Note:</b> The start date cannot be later than the end date. The start date cannot be later than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	
End Date	Used to specify the date till when the sort ID is effective for the bill group.	No
	<b>Note:</b> The end date cannot be earlier than the start date. The end date cannot be earlier than the effective date specified in the derivation and pricing parameters which are defined for the bill group and sort ID combination.	

6. Modify the details of a bill group's sort ID, if required.

7. Click **Save**.

The changes made to the bill group's sort ID are saved.

## Deleting a Sort ID of a Bill Group

### Procedure

To delete a sort ID of a bill group:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.  
The **Person** tab appears in the **Customer 360° Information** screen.
3. Expand the **Bill Group Sorting** zone.

**Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Sorting** zone, select the check box corresponding to the bill group and sort ID combination that you want to delete.

**Note:** If you want to delete all sort IDs of effective bill groups, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for deleting.

5. Click **Delete**.

A message appears confirming whether you want to delete the bill group's sort ID.

**Note:** You can delete a bill group's sort ID only when the derivation and pricing parameters are not yet defined for the bill group and sort ID combination.

6. Click **OK**.

The bill group's sort ID is deleted.

## **Creating a Bill Group Sorting Upload Request**

### **Procedure**

To create a bill group sorting upload request:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Sorting** zone.

**Note:** The **Bill Group Sorting** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Upload** link in the upper right corner of the **Bill Group Sorting** zone.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request.	Yes
	<b>Note:</b> The list includes only those upload request types where the upload request business object with the <b>Upload Type</b> option type set to <b>BG</b> is selected.	

**Note:** The **Select Upload Request Type** screen appears only when there are multiple upload request types where the upload request business object with the **Upload Type** option type set to **BG** is selected. If there is only one such upload request type defined in the application, the **Bill Group Sorting Upload Request** screen appears.

5. Select the required upload request type from the respective field.
6. Click **OK**.

The **Bill Group Sorting Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the bill group sorting upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group sorting upload request.	Yes
	<p><b>Note:</b></p> <p>By default, the parent customer's ID appears in this field. You can change the person, if required.</p> <p>The system allows you to create a bill group sorting upload request for a person whose person type is set to <b>Parent Customer</b>.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name and path of the file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the file that you want to upload is available in the system.

- Click **Open**.

The file name along with the path appears in the **File Name** field.

- Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.

- Define characteristics for the upload request, if required.

- Click **Save**.

A message appears indicating the number of records which are successfully uploaded. Then, a bill group sorting upload request is created in the **Draft** status. If the bill group ID is available in the record, the status of the record is set to **Pending**. However, if the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination when the bill group ID is not specified in the record, the status of the record is set to **Invalid**.

## Defining the Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

### Prerequisites

To define the derivation and pricing parameters for a bill group and sort ID combination, you should have:

- Effective child persons whose person type is set to **Bill Group** and who are related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration
- Sort ID defined for the bill group
- Values defined for the **C1-SourceSystemLookup** extendable lookup

**Procedure**

To define the derivation and pricing parameters for a bill group and sort ID combination:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

**Note:** The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. Click the **Add** link in the upper right corner of the **Bill Group Derivation and Pricing Parameters** zone.

The **Bill Group Derivation and Pricing Parameters** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups’ derivation and pricing parameters you want to define.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the source system from where the claim and enrollment transactions are received.	Yes
Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group.	Yes
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	
Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group.	No
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	
Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group.	No
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	

Field Name	Field Description	Mandatory (Yes or No)
Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group.	No
	<b>Note:</b> You must not specify the ampersand (&) character in this field.	
Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Yes
	<b>Note:</b> The effective date must be within the date range of the sort ID defined for the bill group.	
Status	Indicates the status of the derivation and pricing parameters for the bill group and sort ID combination. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Not applicable
	<b>Note:</b> By default, the value is set to <b>Active</b> .	
Bill Group Information	Used to indicate the bill group for whom you want to define the derivation and pricing parameters.	Yes
	<b>Note:</b> The values appear in this list only when there are effective child persons whose person type is set to <b>Bill Group</b> and who are related to the parent customer using a relationship type which is specified in the <b>Person Relationship Type</b> parameter of the <b>C1-ASOBLLNG</b> feature configuration.	
Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Sort ID Search</b> window appears.	

- Enter the required details in the grid.
- If you want to define the derivation and pricing parameters for more than one bill group and sort ID combination, click the **Add** (  ) icon and then repeat step 5.

**Note:** However, if you want to remove the derivation and pricing parameters of a bill group and sort ID combination, click the **Delete** (  ) icon corresponding to the bill group and sort ID combination.

- Click **Save**.

The derivation and pricing parameters are defined for the bill group and sort ID combination.

## Editing the Derivation and Pricing Parameters of a Bill Group and Sort ID Combination

### Procedure

To edit the derivation and pricing parameters of a bill group and sort ID combination:

1. Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Expand the **Bill Group Derivation and Pricing Parameters** zone.

**Note:** The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

4. In the **Bill Group Derivation and Pricing Parameters** zone, select the check box corresponding to the bill group and sort ID combination whose details you want to edit.

**Note:** If you want to edit the derivation and pricing parameters of all bill group and sort ID combinations, you need to select the check box corresponding to the column header. In such case, the system considers only those records which are present on the respective page for editing.

5. Click **Edit**.

The **Bill Group Derivation and Pricing Parameters** screen appears. It contains the following field:

Field Name	Field Description
Parent Customer	Indicates the parent customer whose bill groups' derivation and pricing parameters you want to edit.

In addition, it contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Source System	Indicates the source system from where the claim and enrollment transactions are received.	Not applicable
Parameter 1	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Parameter 2	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Parameter 3	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Parameter 4	Indicates the employee attribute based on which you want to derive the bill group.	Not applicable
Effective Date	Displays the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Not applicable
Status	Used to indicate the status of the derivation and pricing parameters for the bill group and sort ID combination. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Bill Group Information	Indicates the bill group for whom the derivation and pricing parameters are defined.	Not applicable
Sort ID	Indicates the sort ID of the bill group for which the derivation and pricing parameters are defined.	Not applicable

- If required, you can inactivate the derivation and pricing parameters of a bill group and sort ID combination.
- Click **Save**.

The changes made to the derivation and pricing parameters of a bill group and sort ID combination are saved.

## **Creating a Bill Group Derivation and Pricing Parameters Upload Request**

### **Procedure**

To create a bill group derivation and pricing parameters upload request:

- Search for a person whose person type is set to **Parent Customer** in the **Customer 360° View** screen.
- In the **Search Results** section, click the **View** () icon corresponding to the person whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

- Expand the **Bill Group Derivation and Pricing Parameters** zone.

**Note:** The **Bill Group Derivation and Pricing Parameters** zone appears when you are viewing the 360° information of a person whose person type is set to **Parent Customer**.

- Click the **Upload** link in the upper right corner of the **Bill Group Derivation and Pricing Parameters** zone.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to create the upload request.	Yes
	<b>Note:</b> The list includes only those upload request types where the upload request business object with the <b>Upload Type</b> option type set to <b>BL</b> is selected.	

**Note:** The **Select Upload Request Type** screen appears only when there are multiple upload request types where the upload request business object with the **Upload Type** option type set to **BL** is selected. If there is only one such upload request type defined in the application, the **Bill Group Derivation and Pricing Parameters Upload Request** screen appears.

5. Select the required upload request type from the respective field.
6. Click **OK**.

The **Bill Group Derivation and Pricing Parameters Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the bill group derivation and pricing parameters upload request will be created.	Not applicable
Parent Customer	Used to indicate the person for whom you want to create the bill group derivation and pricing parameters upload request.	Yes
	<p><b>Note:</b></p> <p>By default, the parent customer's ID appears in this field. You can change the person, if required.</p> <p>The system allows you to create a bill group derivation and pricing parameters upload request for a person whose person type is set to <b>Parent Customer</b>.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to specify the name and path of the file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the file that you want to upload is available in the system.
- Click **Open**.

The file name along with the path appears in the **File Name** field.

- Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
- Define characteristics for the upload request, if required.
- Click **Save**.

A message appears indicating the number of records which are successfully uploaded. Then, a bill group derivation and pricing parameters upload request is created in the **Draft** status. If the bill group ID is available in the record, the status of the record is set to **Pending**. However, if the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination when the bill group ID is not specified in the record, the status of the record is set to **Invalid**.

## Renewing a Self-Funded Policy of a Bill Group

Oracle Revenue Management and Billing enables you to renew a self-funded policy which is associated with a bill group. You can renew a self-funded policy only when it is in the **In Force/Active** status and not yet renewed.

On renewing a self-funded policy, the base policy information is stamped in the renewed policy. Once a policy is renewed, you cannot edit the base policy's end date or manually change the status of the base policy to **Runout**. The system automatically changes the status of the base policy to **Runout** when the status of the renewed policy is changed to **Runout**.

### Procedure

To renew a self-funded policy of a bill group:

1. Search for a bill group who is associated with a self-funded policy in the **Customer 360° View** screen.
2. In the **Search Results** section, click the

**View** () icon corresponding to the bill group whose details you want to view.

The **Person** tab appears in the **Customer 360° Information** screen.

3. Click the **Pricing** tab.

The **Pricing** tab appears.

4. In the **Bill Group Policy Information** zone, click the **Renew** () icon in the **Renew** column corresponding to a policy of the bill group which you want to renew.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the renewed policy.
- **Persons** - Used to associate or disassociate persons from the renewed policy.

**Note:** You cannot disassociate persons who are associated with the base policy using a policy person role which is specified in the **Bill Group Policy Person Role** or **Parent Customer Policy Person Role** option type of the **C1-ASOBLNG** feature configuration.

- **Characteristics** - Used to define characteristics for the renewed policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Base Policy Information	Indicates the policy which you want to renew.	Not applicable
Policy Type	Indicates the policy type using which the base policy is created.	Not applicable
Policy Number	Used to specify the policy number of the renewed policy.	Yes
Description	Used to specify the description for the renewed policy.	No

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the renewed policy is effective.	Yes
	<p><b>Note:</b></p> <p>By default, the start date is set to the base policy's end date plus one day. For example, if the base policy's end date is 12-31-2018, then by default, the renewed policy's start date is set to 01-01-2019.</p> <p>The start date cannot be later than the end date.</p> <p>The start date cannot be earlier than or equal to the base policy's end date.</p>	
End Date	Used to specify the date till when the renewed policy is effective.	Yes
	<p><b>Note:</b> The end date cannot be earlier than the start date.</p>	
Runout End Date	Used to specify the date when the runout period of the renewed policy ends.	No
	<p><b>Note:</b></p> <p>The runout end date cannot be earlier than the renewed policy's end date.</p> <p>You must specify the runout end date when you are renewing a self-funded policy.</p>	
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are:	No
	<ul style="list-style-type: none"> <li>• None</li> <li>• Percentage of Claim</li> </ul> <p><b>Note:</b></p> <p>At present, this field is used only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p> <p>You must specify the runout administration fees when you are renewing a self-funded policy.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Copy Pricing Rules	<p>Used to indicate whether you want to copy the pricing rules of the base policy to the renewed policy. If you select the <b>Copy Pricing Rules</b> option, the system copies the following pricing rules of the base policy:</p> <ul style="list-style-type: none"> <li>• Claim</li> <li>• Retention Type Claim Based</li> <li>• Retention Type Enrollment Based</li> <li>• Recurring Flat Fees</li> <li>• Ancillary</li> <li>• Level Funding</li> </ul>	No
	<p><b>Note:</b></p> <p>While copying a pricing rule, the start and end dates of the new pricing rule are set to the renewed policy's start and end dates, respectively.</p> <p>If there are multiple pricing rules which are created using the same pricing rule type and are effective for the different date range, the system copies only one pricing rule from the base policy with the latest date range.</p>	

**Note:** The **Renew** icon appears only when the policy is in the **In Force/Active** status and it is not yet renewed.

5. Enter the required details in the **Main** section.
6. Associate or disassociate persons from the renewed policy, if required.
7. Define, edit, or remove characteristics from the renewed policy, if required.
8. Click **Save**.

The renewed policy is created in the **Pending** status. The renewal date is stamped corresponding to the base policy in the **Bill Group Policy Information** zone.

## Viewing the Bill Details

## Procedure

To view the details of a bill:

1. Search for the account, whose bill details you want to view, in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **View** () icon corresponding to the account whose details you want to view.

The **Account** tab appears in the **Customer 360° Information** screen.

3. In the **Open Bills** zone, click the **View** () icon corresponding to the bill whose details you want to view.

The **Bill Information** screen appears. It contains the following zones:

- [Bill Information](#) on page 131
  - [Adjustments](#) on page 132
  - [Settlement Activities](#) on page 132
  - [Bill Segment Summary](#) on page 132
  - [Bill Segment Details](#) on page 133
  - [Hold Details](#) on page 134
  - [Offset Details](#) on page 134
  - [Refund and Write Off Details](#) on page 135
4. View the basic details about the bill in the **Bill Information** zone.
  5. View the adjustments which are swept onto the bill in the **Adjustments** zone.
  6. View the activities, such as payment, transfer, offset, refund, or write off through which the bill is settled, in the **Settlement Activities** zone.
  7. View the bill segment information which is summarized based on the coverage period and plan/fee type combination in the **Bill Segment Summary** zone.
  8. View the details of the bill segments which are included in the bill in the **Bill Segment Details** zone.
  9. View the active hold requests due to which the bill is kept on hold in the **Hold Details** zone.
  10. View the offset requests through which the bill is offset against another bill in the **Offset Details** zone.
  11. View the refund and write off requests through which the bill or its bill segment is either refunded or written off in the **Refund and Write Off Details** zone.

## Bill Information

---

The **Bill Information** screen allows you to view:

- Basic details of the bill
- Adjustments which are swept onto the bill
- Activities, such as payment, offset, refund, write off, or transfer through which the bill is settled
- High-level summary and details of the bill segments which are included in the bill
- Active hold requests due to which the bill is kept on hold
- Offset requests through which the bill is offset against another bill
- Refund and write off requests through which the bill or its bill segment is either refunded or written off

It contains the following zones:

- [Bill Information](#) on page 131
- [Adjustments](#) on page 132
- [Settlement Activities](#) on page 132
- [Bill Segment Summary](#) on page 132
- [Bill Segment Details](#) on page 133
- [Hold Details](#) on page 134
- [Offset Details](#) on page 134
- [Refund and Write Off Details](#) on page 135

## Bill Information

The **Bill Information** zone displays the details of the bill. It contains the following section:

- **Main** - Displays the basic information about the bill. It contains the following fields:

Field Name	Field Description
Bill Information	Displays information about the bill. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.
Alternate Bill ID	Displays the alternate bill ID.
	<b>Note:</b> This field appears only when the respective data is available for the bill.
Account Information	Indicates the account for which the bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

## Adjustments

The **Adjustments** zone lists the adjustments which are swept onto the bill. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the adjustment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.
Contract Information	Indicates the contract against which the adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.

## Settlement Activities

You may settle a bill or its bill segment by making a payment, offsetting, refunding, writing off, or by reconciling against pay instructions. The **Settlement Activities** zone lists the activities related to the bill or its bill segment settlement. It contains the following columns:

Column Name	Column Description
Activity Date	Displays the date when the settlement activity was performed in the system.
Activity Type	Indicates the type of the settlement activity. The valid values are: <ul style="list-style-type: none"> <li>• Payment</li> <li>• Offset</li> <li>• Refund</li> <li>• Write Off</li> <li>• Transfer</li> </ul>
Amount	Indicates the amount settled through the activity.
Related Object Information	Displays additional information about the settlement activity.
Related Object ID	Indicates the payment, offset request, refund request, write off request, or reconciliation adjustment which is created during settlement.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment, Offset Request, Refund Request, Write Off Request, or Adjustment</b> screen appears where you can view the details of the respective activity.

## Bill Segment Summary

The system groups the bill segments with the same date range and plan/fee type combination and then provides the summarized information for each combination in the **Bill Segment Summary** zone. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segment.

Column Name	Column Description
End Date	Displays the end date of the bill segment.
Policy Number	Indicates the policy for which the bill segment is generated.
Plan/Fee Type	Indicates the plan code or fee type for which the bill segment is generated.
Amount	Displays the bill segment amount.
Unpaid Amount	Displays the unpaid amount of the bill segment.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Bill Segment Details

The **Bill Segment Details** zone displays the details of the bill segments which are included in the bill. It contains the following columns:

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Policy Number	Indicates the policy for which the bill segment is generated.
Plan/Fee Type	Indicates the plan code or fee type for which the bill segment is generated.
External Membership ID	Indicates the membership in which the member is included.
Member Primary ID	Displays the concatenated string consisting of primary identifier type and primary identifier of the member which are separated by a colon (:).
Member Name	Indicates the member for whom the bill segment is generated.
Coverage Tier	Indicates the coverage tier to which the membership belongs. The valid values are: <ul style="list-style-type: none"> <li>CHILDREN ONLY</li> <li>EMPLOYEE &amp; CHILD(REN)</li> </ul> <p><b>Note:</b> The data appears in this column only when the <b>Coverage Tier (C1CVTIER)</b> characteristic type is defined for the membership.</p>
Status	Indicates the eligibility status of the member. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Cobra</li> <li>Retiree</li> <li>Terminated</li> </ul> <p><b>Note:</b> The data appears in this column only when the <b>Eligibility Status Type (C1ELGSTA)</b> characteristic type is defined for the member.</p>
Amount	Displays the bill segment amount.
Unpaid Amount	Displays the unpaid amount of the bill segment.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **View** () icon corresponding to a bill segment, the **Bill Segment** screen appears where you can view the additional details of the respective bill segment.

You can filter the list using various search criteria (such as, **Coverage Period Start Date** and **Coverage Period End Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Hold Details

The **Hold Details** zone lists the active hold requests due to which the bill is kept on hold. It contains the following columns:

Column Name	Column Description
Hold Request Information	Displays information about the hold request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request.
Entity	Indicates the type of the entity. The valid values are: <ul style="list-style-type: none"><li>• Person</li><li>• Account</li><li>• Bill</li></ul>
Entity Information	Indicates the entity for which the hold request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> , <b>Account</b> , or <b>Bill</b> screen appears where you can view the details of the respective entity.
Start Date	Displays the date from when the entity is kept on hold.
End Date	Displays the date till when the entity is kept on hold.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

Offset Details

The **Offset Details** zone lists the offset requests through which the bill is offset against another bill. It contains the following columns:

Column Name	Column Description
Offset Request Information	Displays information about the offset request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Offset Request</b> screen appears where you can view the details of the respective offset request.
Offset Amount	Indicates the bill amount which is offset against another bill.

Column Name	Column Description
Creation Mode	Indicates the mode in which the offset request is created. The valid values are: <ul style="list-style-type: none"> <li>Automatic</li> <li>Manual</li> </ul>

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Refund and Write Off Details

The **Refund and Write Off Details** zone lists the refund and write off requests through which the bill or its bill segment is either refunded or written off. It contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request. <div> <b>Note:</b> It has a link. On clicking the link, the <b>Refund Request</b> or <b>Write Off Request</b> screen appears depending on whether the request is created for refund or write off. </div>
Refund/Write Off Amount	Displays the total refund or write off amount.
Status	Indicates the status of the refund or write off request. The valid values are: <ul style="list-style-type: none"> <li>Approval In Progress</li> <li>Cancelled</li> <li>Deferred Processing</li> <li>Draft</li> <li>Processed</li> <li>Rejected</li> <li>Voided</li> </ul>
Action	Indicates whether the request is created for refund or write off. The valid values are: <ul style="list-style-type: none"> <li>Refund</li> <li>Write Off</li> </ul>
Account Information	Indicates the account for which the refund or write off request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <div> <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. </div>
Created By	Indicates the user who has created the refund or write off request.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

You can filter the list using the **Action** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

Oracle Revenue Management and Billing allows you to define prices for price item and services offered to the customers. These prices are either standard prices defined in the price lists or override prices that are specific to a customer or an account. The system allows you to define prices at various levels in a customer hierarchy (for example, at the account level, main customer level, or at the parent customer level). You can also define prices in the account's price list, main customer's price list, parent customer's price list, price list's parent price list. As prices can be defined at multiple places, the order in which the system searches for effective price item pricing will affect the price charged to the customer. The search order is configurable, and can vary with each division. You need to define the search order in the price assignment search algorithm (which is also known as crawling algorithm) and then attach the algorithm to the division. You can change the search order at any time.

You need to define the price assignment search algorithm using the C1\_PRASN algorithm type. The price assignment search algorithm is used while:

- Listing effective price item pricing for an account or a customer
- Fetching effective price item pricing while creating recurring and non-recurring bill segments
- Fetching effective post processing pricing while creating post processing bill segments
- Fetching effective price item pricing in the **Price Item Pricing Verification (C1-TXNVP)** batch

For more information about the price assignment search algorithm, see [Price Assignment Search Mechanism](#) on page 143.

Since a global customer is not associated to any division, the system cannot determine the price assignment search order for a global customer. Hence, the default search order is defined for global customers through the **C1\_PRASNORDR** feature configuration. You can change this default search order, if required.

The prices that are specific to a customer or an account are referred to as customer agreed or account agreed prices, respectively. You can override these agreed prices. Customer agreed or account agreed prices are effective for a particular duration and do not expire until you manually specify the end date. However, if you set the **Expire Override Switch** option type of the **C1\_EXP\_OVRD** feature configuration to **Y**, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the **Expire Override Switch** option type of the **C1\_EXP\_OVRD** feature configuration to **N**.

The system allows you to define the following types of pricing:

- Flat Pricing
- Tiered Pricing

For more information about the types of pricing, see [Types of Pricing](#) on page 139.

The price for a price item or service may differ depending upon various transaction, customer or account attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. This multi parameter based pricing feature enables the price analyst to define price item and its parameters which influence pricing. You can then define pricing for the price item based on these parameters. Bundles are offered to customers to provide discounted rates. You can also define pricing for bundles based on multiple parameters. To enable the multi parameter based pricing feature, you must set the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration to **True**. For more information about the multi parameter based pricing feature, see [Multi Parameter Based Pricing](#) on page 139.

## Types of Pricing

The system allows you to define the following types of pricing:

- **Flat Pricing** — Used when you want to charge a fixed price per unit to the customer.
- **Tiered Pricing** — Used when standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization. For example, CG Limited uses wire transfer services provided by a large bank. If CG Limited initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If CG Limited initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, the following tiered pricing is defined:

Quantity Range	Rate (\$) per transfer
0 – 1000	5
1000+	3

You can define two types of tiered pricing:

- **Step Tiered Pricing** — The rate of the first tiering range is used to calculate the charge for the maximum quantity in the range, and for incremental service quantity utilization, the rate of the progressive tiering range is used. This happens till the utilized quantity is exhausted. For example, when you define the following step tiered pricing for Price Item A and the user consumes 60,000 units of the same, the system will charge the first 45,000 units at \$2 per unit and the remaining 15,000 units at \$1 per unit:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

- **Threshold Tiered Pricing** — The rate of the tiering range within which the service quantity utilization falls is used to calculate the charge for the entire volume. For example, when you define the following threshold tiered pricing for Price Item A and the user consumes 75,000 units of the same, the system will charge 75,000 units at \$1 per unit as the service quantity utilization falls within 45000+ tiering range:

Quantity Range	Rate (\$) per unit
0 – 45000	2
45000+	1

## Multi Parameter Based Pricing

Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. You can also define pricing for bundles based on multiple parameters. You can enable or disable the multi parameter based pricing feature by setting the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration. For more information, see [Setting the C1\\_PPARM\\_FLG Feature Configuration](#) on page 2374.

If the multi parameter based pricing feature is disabled, you can define pricing for a price item based on the variance parameter. If the multi parameter based pricing feature is enabled, you can define pricing for a price item based on multiple parameters. For example:

Price Item A	Country	Currency
Pricing 1	US	USD

Price Item A	Country	Currency
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Price Item A based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price item (i.e. Price item A).

Then, when you define Pricing 1 for Price item A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item A	US, USD		0	5000
20	1	Number of Transactions	Price Item A	US, USD		5000	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Price Item A	Germany, USD		0	1000
20	3	Number of Transactions	Price Item A	Germany, USD		1000	

Now, when the user performs 1500 transactions (in USD) of Price Item A in Germany, 12000 transactions (in USD) of Price Item A in US, the system creates two billable charges. In one billable charge (with Price Item A, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Price Item A, Germany and USD combination), the system uses \$3 as the rate for calculating charges.

Note that in this case the parameters based on which you have defined pricing and tiering ranges are same. You can use different parameters while defining pricing and tiering ranges, if required. You can also use another price item or bundle and its parameters while defining tiering ranges. For example:

The following table lists the tiering ranges of Pricing 1 defined for Price Item A where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Price Item B	Germany, USD		0	100
20	1	Number of Transactions	Price Item B	Germany, USD		100	200
30	0.5	Number of Transactions	Price Item B	Germany, USD		200	

Now, when the user performs 1500 transactions (in USD) of Price Item A in US, 200 transactions (in USD) of Price Item B in Germany, the system creates one billable charge. The system adds the transactions with the following combinations and then determines the range of Price Item A within which the total units (i.e. 200) fall:

- Price Item B, Germany, USD

In this case, the total units fall in the 100 – 200 range of Price Item A, and therefore the system uses \$1 as the rate for calculating charges (i.e.  $1500 \times 1 = 1500$ ).

Some parameters might be mandatory and some might be optional while defining price item pricing. You can define price item pricing based on these parameters at various levels, such as:

- Account Agreed
- Account Price List
- Account Inherited Price List
- Customer Agreed
- Customer Price List
- Customer Inherited Price List
- Parent Customer Agreed
- Parent Customer Price List
- Parent Customer Inherited Price List
- Default Price List
- Global Price List

As prices can be defined at multiple levels, the system first searches for exact match at all levels (using the search order). If the system finds the exact match at multiple levels, the price assignment at the higher precedence level is considered. Let us understand this with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters at the Account Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 2 is defined for Price Item A with the following parameters at the Parent Customer Agreed level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters at the Account Price List level:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	—

Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system searches for price with exact match (Type — BT, Country — US, and Currency — USD). The exact match is available at two levels — Account Agreed and Parent Customer Agreed. The system considers the price at the Account Agreed level because this level has higher precedence.

Depending on the search order defined for the division (to which the account belongs), the level with higher precedence changes. Accordingly, the price assignment at the higher precedence level is considered for calculating the charges.

If the system does not find the exact match at any level, it searches for the best fit match at all levels. Let us understand how the best fit match is determined with the help of an example.

Pricing 1 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	-

Pricing 2 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	USD

Pricing 3 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	-
Currency	No	2	-

Pricing 4 is defined for Price Item A with the following parameters:

Parameter	Mandatory (Yes or No)	Priority	Value
Type	Yes	—	BT
Country	No	1	US
Currency	No	2	GBP

The system has Pricing 1, Pricing 2, Pricing 3, and Pricing 4 defined for Price Item A. Now, when the user performs transactions (with the type set to BT in US) of Price Item A in USD, the system does not find price with exact match (Type — BT, Country — US, and Currency — USD). Therefore, it searches for the best fit match.

While searching for the best fit match, the system rules out the optional parameter with lowest priority (i.e. Currency) and checks whether the price (with Type — BT and Country — US) is available. If the price is available, the system considers the price as the best fit match. Therefore, in this case, Pricing 1 is considered as the best fit match.

Suppose, if the price (with Type — BT and Country — US) is not available, then the system rules out the optional parameter with next lowest priority (i.e. Country) and checks whether the price (with Type — BT and Currency — USD) is available. If the price is available, the system considers the price as the best fit match. In this case, Pricing 2 would be considered as the best fit match. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered.

## Price Assignment Search Mechanism

The price assignment search algorithm searches effective price item pricing based on the following parameters:

- **Search Order** — Used to indicate the order in which the system must search effective price item pricing at various levels in the customer hierarchy. This is a mandatory parameter. The valid values are:

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_PRICELIST	<ol style="list-style-type: none"> <li><b>1. Account Agreed</b> — Means price item pricing is agreed for the account in the hierarchy.</li> <li><b>2. Account Price List</b> — Means price item pricing is defined within the price list which is assigned to the account.</li> <li><b>3. Account Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account.</li> <li><b>4. Customer Agreed</b> — Means price item pricing is agreed for the customer in the hierarchy.</li> <li><b>5. Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the customer.</li> <li><b>6. Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer.</li> <li><b>7. Parent Customer Agreed</b> — Means price item pricing is agreed for the parent customer in the hierarchy.</li> <li><b>8. Parent Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the parent customer.</li> <li><b>9. Parent Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.</li> </ol>

If you select the following value...	Then the effective price item pricing is searched at the following levels in the specified order...
AGREED_FIRST	<ol style="list-style-type: none"> <li><b>1. Account Agreed</b> — Means price item pricing is agreed for the account in the hierarchy.</li> <li><b>2. Customer Agreed</b> — Means price item pricing is agreed for the customer in the hierarchy.</li> <li><b>3. Parent Customer Agreed</b> — Means price item pricing is agreed for the parent customer in the hierarchy.</li> <li><b>4. Account Price List</b> — Means price item pricing is defined within the price list which is assigned to the account.</li> <li><b>5. Account Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the account.</li> <li><b>6. Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the customer.</li> <li><b>7. Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the customer.</li> <li><b>8. Parent Customer Price List</b> — Means price item pricing is defined within the price list which is assigned to the parent customer.</li> <li><b>9. Parent Customer Inherited Price List</b> — Means price item pricing is inherited from the hierarchy defined for the price list which is assigned to the parent customer.</li> </ol>

**Note:** In these price assignment search orders, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.

- **Default Price List ID** — Used to indicate the default price list. If the effective price item pricing is not available at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list.
- **Global Price List** — Used to indicate whether the system should consider the price item pricing defined in the global price list. If the effective price item pricing is not available in the default price list or if the default price list is not specified in the price assignment search algorithm, the system checks whether it should consider the price item pricing defined in the global price list. The valid values are:
  - Y
  - N

Finally, if the effective price item pricing is not available in either default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.

- **Prefer Price Item Over Bundle** — Used to indicate whether to prefer price item, regular bundle, or parent bundle pricing when the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) are assigned at the same level. The valid values are:
  - Y
  - N

If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

- **Person Relationship Type Sequence Algorithm** — Used to attach an algorithm which is defined using the C1-CUSRLALGT algorithm type. The attached algorithm is used while searching effective price item pricing at the parent customer level. It indicates whether the system should search person to person relationship type sequence defined:
  - For the division, price item, and price item parameters combination
  - For the division
  - In the C1\_PER\_REL feature configuration

### Related Topics

For more information on...	See...
Person to Person Relationship Type Sequence	<a href="#">Person Relationship Type Sequence</a> on page 145

## Person Relationship Type Sequence

When the price assignment search algorithm searches effective price item pricing at the parent customer level, the system determines the parent customer's person to person relationship type whose price item pricing should be considered. The person to person relationship type sequence indicates the order in which relationship type should be considered while searching for effective price item pricing at the parent customer level. For example, if a customer has two parents – Parent 1 with the relationship type set to “Subsidiary” and Parent 2 with the relationship type set to “Franchise Owner”, and the following person to person relationship type sequence is defined in the system:

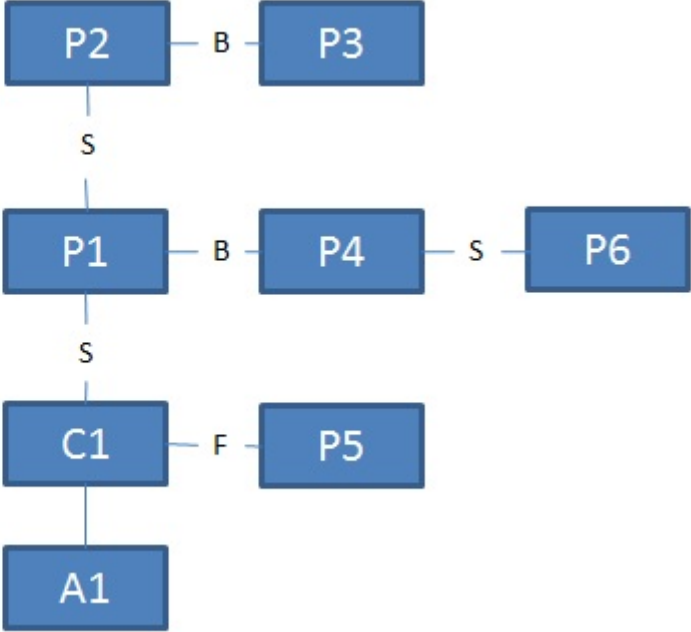

When the price assignment search algorithm searches effective price item pricing at the parent customer level, the system determines the parent customer's person to person relationship type whose price item pricing should be considered. The person to person relationship type sequence indicates the order in which relationship type should be considered while searching for effective price item pricing at the parent customer level. For example, if a customer has two parents – Parent 1 with the relationship type set to “Subsidiary” and Parent 2 with the relationship type set to “Franchise Owner”, and the following person to person relationship type sequence is defined in the system:

Sequence Number	Relationship Type
10	Subsidiary
20	Franchise Owner

In the above example, the system will inherit effective price item pricing (if available) from Parent 1 or within its hierarchy. If the effective price item pricing is not available in the Parent 1 hierarchy, the system will inherit effective price item pricing (if available) from Parent 2 or within its hierarchy. If the effective price item pricing is not available in the Parent 2 hierarchy, an error message occurs indicating that the effective price item pricing is not available.

While searching effective pricing at the parent customer level based on the person to person relationship type sequence, the system will use the depth first search mechanism. Let us understand this with the help of an example.

Person To Person Relationship Type Sequence	
Sequence Number	Relationship Type
10	Subsidiary (S)
20	Branch (B)
30	Franchise Owner (F)

In the above example, if the effective pricing is not available at the account or customer level, the system will search effective pricing at the parent customer level in the following order:

- P1 (because the first relationship type in the sequence is Subsidiary)
- P2 (grandparent of P1 irrespective of the relationship type)
- P3 (because the second relationship type in the sequence is Branch)
- P4 (because the second relationship type in the sequence is Branch)
- P6 (grandparent of P4 irrespective of the relationship type)
- P5 (because the third relationship type in the sequence is Franchise Owner)

The system provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1\_PER\_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1\_PER\_REL feature configuration and accordingly search the effective price item pricing at the parent customer level.

To enable the system to search person to person relationship type sequence at different levels, you need to create an algorithm of the C1-CUSRLALGT algorithm type and attach it to the **Person Relationship Type Sequence Algorithm** parameter in the price assignment search algorithm. The C1-CUSRLALGT algorithm type has the following parameters:

- **Check on Division, Price Item and Price Item Parameters Combination** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division, price item, and price item parameters combination. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Division** - Used to indicate whether you want the system to search person to person relationship type sequence defined for the division. This is a mandatory parameter. The valid values are:

- Y
- N

By default, the value is set to **N**.

- **Check on Feature Configuration** – Used to indicate whether you want the system to consider the person to person relationship type sequence defined in the **C1\_PER\_REL** feature configuration. This is a mandatory parameter. The valid values are:

- **A** – Used when you want to consider all person to person relationship types defined in the feature configuration (in the specified sequence).
- **F** – Used when you want to only consider the person to person relationship type defined with the lowest sequence in the feature configuration.
- **N** – Used when you do not want to consider the person to person relationship type sequence defined in the **C1\_PER\_REL** feature configuration.

By default, the value is set to **F**.

<b>Person to Person Relationship Type Sequence</b> screen	<a href="#">Person to Person Relationship Type Sequence</a> on page 449
How to set the C1_PER_REL feature configuration	<a href="#">Setting the C1_PER_REL Feature Configuration</a> on page 2373

## Pricing Eligibility

Oracle Revenue Management and Billing enables you to define pricing eligibility criteria using the account, person, and product attributes while defining a price item pricing. For example, a bank offers a product named 12 Month Standard Certificate of Deposit (CD). The interest rate charged to a person for this product differs based on two parameters – Deposit Amount and Person Type (Preferred and Non-Preferred). The following table lists the interest rates offered for the 12 Month Standard Certificate of Deposit (CD) product:

Deposit Amount	Non-Preferred	Preferred
Less than \$5,000	0.13%	0.20%
Greater than \$5,000	0.15%	0.22%

Earlier, you were able to define different interest rates based on different parameters using the rate eligibility feature at the rate component level. Considering the above example, you had to define four rate components. The respective rate component would appear while defining price item pricing based on the following:

- The value defined for the **Deposit Amount** characteristic on the account

- The value defined for the **Customer Type** characteristic on the main customer

However, now, you can implement the above scenario using a single rate component instead of maintaining four different rate components. Now, while defining price item pricing, you need to define four different price components for a rate component. For each price component, you need to define the pricing eligibility criteria in the following manner:

Price Component	Rate	Pricing Criteria Eligibility	If True	If False
P1	0.13%	Deposit Amount > 5000	Check Next Condition	Return False
P1	0.13%	Person Type = Non-Preferred	Return True	Return False
P2	0.15%	Deposit Amount < 5000	Check Next Condition	Return False
P2	0.15%	Person Type = Non-Preferred	Return True	Return False
P3	0.20%	Deposit Amount > 5000	Check Next Condition	Return False
P3	0.20%	Person Type = Preferred	Return True	Return False
P4	0.22%	Deposit Amount < 5000	Check Next Condition	Return False
P4	0.22%	Person Type = Preferred	Return True	Return False

You can define pricing eligibility criteria only when the appropriate parameters are created in the system. These parameters must be mapped to either of the following:

- Account attributes, characteristics, usage amounts, or usage counters
- Person attributes, characteristics, usage amounts, or usage counters
- Product attributes or characteristics
- Service Quantity Identifier
- Custom algorithm which returns the appropriate value

In the above example, you can define the pricing eligibility criteria only when the following parameters are defined in the system:

Parameter	Source Entity	Source Type	Source Type Code	Value Type
Deposit Amount	Account	Usage Amount	Deposit Amount	Adhoc
Customer Type	Person	Characteristic	Person Type	Predefined

You can define pricing eligibility criteria for rate components whose tiering type is set to **Flat**, **Threshold**, or **Step**. Each criterion in the pricing eligibility criteria is executed in the specified sequence. If the value of the pricing eligibility criteria is **True**, the rate of the respective price component is passed to the rate component for further calculations.

## Persisting Interest Rate for Rate Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate (i.e. Interest Rate)
- Fees

If the type of a price item is **Rate**, the system calculates and persist the rate for the price item. The rate is persisted only for the price item pricing which is either assigned or inherited by an account. If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**.

#### Related Topics

For more information on...	See...
Repricing	<a href="#">Repricing</a> on page 149

## Persisting Fee for Fee Type Price Items

While defining a price item, you can indicate whether the price item is available for pricing and billing or only for pricing. If the price item is available only for pricing, you can indicate the type of the price item. The valid values for the price item type are:

- Rate
- Fees

The input elements Pricing Frequency, Advance Pricing should be populated if **Price Item** is available for **Pricing Only**, **Price Item Type** is **Fees** and **Price Assignment Type** is **Post-Processing**.

If the type of a price item is **Fee**, the system calculates and persist the fee for the price item.

**Note:** The **Process Fees Request and Persist Fees for an Account (C1-ACFEE)** batch is used to calculate and persist the fees for the account. It must be executed when a user wants to store fees.

#### Related Topics

For more information on...	See...
Repricing	<a href="#">Repricing</a> on page 149

## Repricing

If the account or person attributes are changed, the system allows you to recalculate and persist the interest rate for rate type price items. This process is known as **Repricing**. The **Repricing** process is triggered in the following scenarios when:

- You edit the attributes and characteristics of an account.
- You add or delete the usage amount and counter details of an account.
- You edit the attributes and characteristics of a person.
- You add or delete the usage amount and counter details of a person.
- You define or edit the price item pricing of an active price list which is assigned to an account or a person.
- You define, edit, override, or copy the price item pricing of an account or a person.
- You assign a price list to an account or a person, or edit the price list assignment details of an account or a person.

The system behaves in the following manner in the above scenarios:

Scenario	System Behaviour
On editing the attributes and characteristics of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the account attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p>
	<p><b>Note:</b> On editing the account attributes, the effective date is set to the date when you edit the account attributes. However, on editing the account's characteristic, the effective date is set to the date from when the characteristic is effective for the account.</p>
On adding or deleting the usage amount and counter details of an account	<p>The system checks whether the account is eligible for repricing. If the account is eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p>
	<p><b>Note:</b> The effective date is set to the date from when the usage amount or counter is effective for the account.</p>
On editing the attributes and characteristics of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the person attribute or characteristic whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p>
	<p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>On editing the person attributes, the effective date is set to the date when you edit the person attributes. However, on editing the person's characteristic, the effective date is set to the date from when the characteristic is effective for the person.</p>

Scenario	System Behaviour
On adding or deleting the usage amount and counter details of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, the system checks whether a parameter for the usage amount or counter whichever is changed is already defined in the system. If the required parameters are available in the system, the system creates a repricing request for the account and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p>
	<p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The effective date is set to the date from when the usage amount or counter is effective for the person.</p>
On assigning a price list to an account or editing the price list assignment details of an account	<p>The system creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date.</li> <li>• If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date.</li> </ul> <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day.</li> <li>• If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day.</li> </ul> <p>On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>

Scenario	System Behaviour
On assigning a price list to a person or editing the price list assignment details of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date and/or price list assignment end date is available, the system creates two repricing requests – one request where the effective date is set to the start date and another request where the effective date is set to the end date. The effective date is set to the price assignment start date or price list assignment start date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment Start Date is later than the Price List Assignment Start Date, then the effective date is set to Price Assignment Start Date.</li> <li>• If the Price Assignment Start Date is earlier than or equal to the Price List Assignment Start Date, then the effective date is set to Price List Assignment Start Date.</li> </ul> <p>However, the effective date is set to the price assignment end date or price list assignment end date depending on the following conditions:</p> <ul style="list-style-type: none"> <li>• If the Price Assignment End Date is earlier than the Price List Assignment End Date, then the effective date is set to Price Assignment End Date + 1 Day.</li> <li>• If the Price Assignment End Date is later than or equal to the Price List Assignment End Date, then the effective date is set to Price List Assignment End Date + 1 Day.</li> </ul> <p><b>Note:</b> If the Price List Assignment Start Date and Price List Assignment End Date are earlier than the current date, repricing requests for the accounts are not created in the <b>CI_REPRC_REQ_DTL</b> table.</p> <p>On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>
On defining, editing, overriding, or copying the price item pricing of an account	<p>The system creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>

Scenario	System Behaviour
On defining, editing, overriding, or copying the price item pricing of a person	<p>The system identifies all accounts which belong to the person and its child persons, and then creates a repricing request for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b></p> <p>Only accounts where the person and child person are the main customers are considered for repricing.</p> <p>The system creates the repricing request for the account irrespective of whether the account is eligible for repricing or not.</p>
On defining or editing the price item pricing of an active price list which is assigned to an account or a person	<p>The system creates an entry for the price item pricing in the <b>CI_REPRC_ENTITY_DTL</b> table. On executing the <b>Identify Accounts for Repricing (C1-REPC1)</b> batch, the system identifies the following in the specified order:</p> <ol style="list-style-type: none"> <li>1. Price list on which the price item pricing is assigned</li> <li>2. Account or Person on which the price list is assigned</li> <li>3. All accounts which belong to the person and its child persons when the price list is assigned to a person</li> </ol> <p>Once the accounts are identified, the system checks whether the identified accounts are eligible for repricing. If one or more accounts are eligible for repricing, a repricing request is created for the account, price item, and effective date combination in the <b>CI_REPRC_REQ_DTL</b> table. If the price assignment end date is specified, the system creates two repricing requests – one request where the effective date is set to the price assignment start date and another request where the effective date is set to the price assignment end date + 1 Day. On executing the <b>Process Repricing Request and Persist Pricing for an Account (C1-REPC2)</b> batch, you can recalculate and persist the rate for the account in the <b>CI_PRCE_CALC</b> table.</p> <p><b>Note:</b> Only accounts where the person and child person are the main customers are considered for repricing.</p>

For more information about the **Identify Accounts for Repricing (C1-REPC1)** and **Process Repricing Request and Persist Pricing for an Account (C1-REPC2)** batches, refer to *Oracle Revenue Management and Billing Batch Guide*.

To enable the repricing feature, you need to do the following:

- Define an algorithm using the **C1-REPRCACCT** algorithm type and attach it to the **Audit** algorithm spot of the **C1-AccountBO** business object
- Define an algorithm using the **C1-REPRCACBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-ACCBALCNT** business object

- Define an algorithm using the **C1-REPRCPERS** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PERSON\_BO** business object
- Define an algorithm using the **C1-REPRCPEBC** algorithm type and attach it to the **Audit** algorithm spot of the **C1-PERBALCNT** business object
- Define an algorithm using the **C1\_PLASGNAUD** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PLASGNADD** and **C1\_PLASGNEDIT** business objects
- Define an algorithm using the **C1-PRCASGNAD** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PRICEASGN\_BO** business object
- Define an algorithm using the **C1-REPRCPLPA** algorithm type and attach it to the **Audit** algorithm spot of the **C1\_PRICEASGN\_BO** business object
- Define the required parameters for the account and person attributes, characteristics, usage amount and usage counter

## Two-Dimensional Pricing

---

Oracle Revenue Management and Billing enables you to define two-dimensional pricing for a price item. In the two-dimensional pricing, you can offer rates based on utilization of two service quantity identifiers (SQIs). For example, the rate for a price item can vary for each customer depending on the number of ATM transactions and current monthly balance as shown below: Current Monthly Balance Number of ATM Transactions 0-25 25-50 50-75 75-100 0-10000 2 1.9 1.8 1.7 10000-50000 1.6 1.5 1.4 1.3 50000-100000 1.2 1.1 1.0 0.9 100000-500000 0.8 0.7 0.6 0.5 The system allows you to define two-dimensional pricing in a grid which has X-axis and Y-axis. Both, the X-axis and Y-axis should contain service quantity identifiers (SQIs). The two-dimensional pricing is composed of threshold and step tiered pricing. The X-axis is a threshold tier and Y-axis is a step tier. On creating two-dimensional pricing, one price component is created for each X-axis and Y-axis combination. The step tier is stored as the tiering range whereas the threshold tier is stored as the eligibility criteria in the price component. Note that the tiering ranges and eligibility criteria are automatically created in the price component. You cannot manually add a tiering range and eligibility criteria in the price component. You can define two-dimensional pricing only when the tiering type of the rate components in the rate schedule is set to STEP. A new field named Pricing Rule Type is added in the Price Item Pricing screen. If you select the Two-Dimensional option from the Pricing Rule Type list, you can define two-dimensional pricing for the price item. However, if you do not select the Two-Dimensional option from the Pricing Rule Type list, you can define traditional flat, step, or tiered pricing for the price item. Besides selecting the Two-Dimensional option from the Pricing Rule Type list, you also need to select the Pricing Eligibility option while defining the two-dimensional pricing for the price item.

## Types of Price Item Bundle

---

The system allows you to define the following types of price item bundle:

- [Regular Bundle](#) on page 154
- [Phantom Bundle](#) on page 158
- [Ratio Bundle](#) on page 156

### Regular Bundle

In case of a regular bundle, pricing is defined at the bundle level. The system determines the rate by identifying the tiering range within which the total service quantities used for all price items in the bundle fall. Note that the rate is determined from the tiering range of the price component whose pricing eligibility criteria is met. Let us understand this with the help of an example.

Bundle X, which is a regular bundle, contains the following three price items:

- Price Item A

- Price Item B
- Price Item C

The following tiered pricing is defined for Bundle X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 4000	2
4001 – 8000	1

**Note:** In the above example, the assumption is that there only one rate component, one price component within the rate component, and pricing eligibility criteria is not defined for the price component.

Now, when the user consumes 1500 units of Price Item A, 1000 units of Price Item B, and 2000 units of Price Item C, the system adds the quantities of services used for all price items in Bundle X (i.e. 1500+1000+2000=4500), and then determines the range within which the total units (i.e. 4500) fall. In this case, the total units fall in the 4001 – 8000 range, and therefore the system uses \$1 as the rate for calculating charges.

If the multi parameter based pricing feature is enabled, you can define pricing for regular bundles based on multiple parameters. For example:

Bundle X	Country	Currency
Pricing 1	US	USD
Pricing 2	Germany	USD

Pricing 1 and Pricing 2 are defined for Bundle X based on two parameters — Country and Currency. Before you define pricing based on country and currency, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the regular bundle (i.e. Bundle X) and then add price items (i.e. Price Item A, Price Item B, and Price Item C) to the bundle. Note that you can add a price item to a regular bundle only when the regular bundle and price item have same parameters associated with them for the specified date range. Therefore, before adding Price Item A, Price Item B, and Price Item C to Bundle X, you should ensure that Country and Currency are also associated with these price items.

Then, when you define Pricing 1 for Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to define Pricing 2 with Country set to Germany and Currency set to USD.

The following table lists the tiering ranges defined in Pricing 1 where price item parameters are set to US, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	2	Number of Transactions	Bundle X	US, USD		0	500
20	1	Number of Transactions	Bundle X	US, USD		500	

The following table lists the tiering ranges defined in Pricing 2 where price item parameters are set to Germany, USD:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	4	Number of Transactions	Bundle X	Germany, USD		0	1000
20	3	Number of Transactions	Bundle X	Germany, USD		1000	

Now, when the user performs 500 transactions (in USD) of Bundle X in Germany, 1200 transactions (in USD) of Bundle X in US, the system creates two billable charges. In one billable charge (with Bundle X, US and USD combination), the system uses \$1 as the rate for calculating charges, and in another billable charge (with Bundle X, Germany and USD combination), the system uses \$4 as the rate for calculating charges.

Ratio Bundle

In case of a ratio bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle.

A ratio expresses the magnitude of quantities relative to each other. It has two factors — Numerator and Denominator. For ratio bundle, the ratio of price item quantities is used to determine the rate for volume based pricing. To determine within which range of ratio limit does the price item utilization falls, the ratio of price item quantities is used. Once the range limits are determined, the rate specified for that range is applied to the quantity of the price item used. Let us understand this with the help of an example.

Bundle X, which is a ratio bundle, contains the following price items:

- Price Item A** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	4
0.6 – 0.9	3
0.9+	2

- Price Item B** — It has been added to the bundle using the price item relationship type as Numerator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	5
0.6 – 0.9	4
0.9+	3

- Price Item C** — It has been added to the bundle using the price item relationship type as Denominator. It has the following tiered pricing defined in the system:

Quantity Range	Rate (\$) per unit
0 – 0.6	3
0.6 – 0.9	2
0.9+	1

Now, when the user consumes 500 units of Price Item A, 2500 units of Price Item B, and 4000 units of Price Item C, the system calculates the ratio of price item quantities (i.e. (500+2500)/4000=0.75). Once the ratio is calculated, the system determines the range of each price item within which the ratio (i.e. 0.75) falls. In this case, the ratio falls in the 0.6 – 0.9 range of Price Item A, B, and C. Therefore, the system uses \$3, \$4, and \$2, respectively, as the rate for calculating charges (i.e. ((500\*3)=1500, (2500\*4)=10000, and (4000\*2)=8000).

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a ratio bundle based on multiple parameters. For example:

Bundle X	Country	Currency
Price Item A	US	USD

<b>Bundle X</b>	<b>Country</b>	<b>Currency</b>
Price Item B	Germany	USD
Price Item C	England	USD

Price Item A, Price Item B, and Price Item C are added in Bundle X. Price Item A, Price Item B, and Price Item C utilization in Bundle X is determined based on two parameters — Country and Currency. Before you add price item to a ratio bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item A, Price Item B, and Price Item C) and then add these price items to the bundle (i.e. Bundle X).

While adding Price Item A to Bundle X, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Price Item B to Bundle X with Country set to Germany and Currency set to USD, and Price Item C with Country set to England and Currency set to USD.

The following table lists the tiered pricing defined for Price Item A:

<b>Tier Sequence</b>	<b>Rate</b>	<b>Tiering Criteria</b>	<b>Price Item</b>	<b>Price Parameters</b>	<b>Item</b>	<b>From</b>	<b>To</b>
10	5	Number of Transactions	Bundle X			0	1.75
20	4	Number of Transactions	Bundle X			1.75	2.50
30	3	Number of Transactions	Bundle X			2.50	

The following table lists the tiered pricing defined for Price Item B:

<b>Tier Sequence</b>	<b>Rate</b>	<b>Tiering Criteria</b>	<b>Price Item</b>	<b>Price Parameters</b>	<b>Item</b>	<b>From</b>	<b>To</b>
10	5	Number of Transactions	Bundle X			0	3.5
20	4	Number of Transactions	Bundle X			3.5	

The following table lists the tiered pricing defined for Price Item C:

<b>Tier Sequence</b>	<b>Rate</b>	<b>Tiering Criteria</b>	<b>Price Item</b>	<b>Price Parameters</b>	<b>Item</b>	<b>From</b>	<b>To</b>
10	2	Number of Transactions	Bundle X			0	2.0
20	1	Number of Transactions	Bundle X			2.0	

Now, when the user performs 5000 transactions (in USD) of Price Item A in US, 6000 transactions (in USD) of Price Item B in Germany, and 5000 transactions (in USD) of Price Item C in England, the system creates three billable charges — one for each price item (i.e. Price Item A, Price Item B, and Price Item C). The system calculates the ratio of transactions with the following combinations and then determines the range of each price item within which the ratio (i.e. 2.2) falls:

- Price Item A, US, USD
- Price Item B, Germany, USD
- Price Item C, England, USD

In this case, the ratio falls in the 1.75 – 2.50 range of Price Item A, the 0 – 3.5 range of Price Item B, and in the 2.0 — Infinite range of Price Item C. Therefore, the system uses \$4, \$5, and \$1 as the rate for calculating charges (i.e.  $(5000*4)=20000$  ,  $(6000*5)=30000$  , and  $(5000*1)=5000$ ).

You can also add a price item more than once in a ratio bundle with different set of parameters. For example:

Bundle X	Relationship Type	Country	Currency
Price Item A	Numerator	US	USD
Price Item A	Numerator	England	USD
Price Item B	Numerator	Germany	USD
Price Item C	Denominator	England	USD
Price Item C	Denominator	US	USD

In this case, the system calculates the ratio of transactions with the following combinations and then determines the range of each price item (i.e. Price Item A, Price Item B, and Price Item C) within which the ratio falls:

- Price Item A, US, USD
- Price Item A, England, USD
- Price Item B, Germany, USD
- Price Item C, England, USD
- Price Item C, US, USD

Phantom Bundle

In case of a phantom bundle, pricing is not defined at the bundle level. Instead, pricing is defined separately for each price item in the bundle. The system determines the price by identifying the tiering range of each price item within which the total quantities of services used for all price items in the bundle fall. Let us understand this with the help of an example.

Bundle A, which is a phantom bundle, contains the following two price items:

- **Price Item X** — The following tiered pricing is defined for Price Item X:

Quantity Range	Rate (\$) per unit
1 – 3000	3
3001 – 6000	2

- **Price Item Y** — The following tiered pricing is defined for Price Item Y:

Quantity Range	Rate (\$) per unit
1 – 5000	2
5001 – 10000	1

Now, when the user consumes 2500 units of Price Item X and 3500 units of Price Item Y, the system adds the quantities of services used for all price items in Bundle A (i.e. 2500+3500=6000), and then determines the range of each price item within which the total units (i.e. 6000) fall. In this case, the total units fall in the 3001 – 6000 range of Price Item X and the 5001 – 10000 range of Price Item Y, and therefore the system uses \$2 and \$1, respectively, as the rate for calculating charges (i.e. (2500\*2)= 5000 and (3500\*1)=3500). This helps the customer to take advantage of the lowest rate.

If the multi parameter based pricing feature is enabled, you can determine the price item utilization in a phantom bundle based on multiple parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item Y	Germany	USD

Price Item X and Price Item Y are added in Bundle A. Price Item X and Price Item Y utilization in Bundle A is determined based on two parameters — Country and Currency. Before you add price item to a phantom bundle, you need to define these parameters in the system. Once you define these parameters, you need to associate them to the price items (i.e. Price Item X and Price Item Y) and then add these price items to the bundle (i.e. Bundle A).

While adding Price Item X to Bundle A, you need to set the following price item parameters:

- Country — US
- Currency — USD

Similarly, you need to add Product Y to Bundle A with Country set to Germany and Currency set to USD.

The following table lists the tiered pricing defined for Price Item X:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	3	Number of Transactions	Bundle A			0	5000
20	2	Number of Transactions	Bundle A			5000	10000
30	1	Number of Transactions	Bundle A			10000	

The following table lists the tiered pricing defined for Price Item Y:

Tier Sequence	Rate	Tiering Criteria	Price Item	Price Parameters	Item	From	To
10	5	Number of Transactions	Bundle A			0	5000
20	4	Number of Transactions	Bundle A			5000	

Now, when the user performs 5000 transactions (in USD) of Price Item Y in Germany, 6000 transactions (in USD) of Price Item X in US, the system creates two billable charges — one for Price Item X and another for Price Item Y. The system adds the transactions with the following combinations and then determines the range of each price item within which the total units (i.e. 11000) fall:

- Price Item X, US, USD
- Price Item Y, Germany, USD

In this case, the total units fall in the 10000 – Infinite range of Price Item X and the 5000 – Infinite range of Price Item Y, and therefore the system uses \$1 and \$4, respectively, as the rate for calculating charges (i.e.  $(5000 \times 4) = 20000$  and  $(6000 \times 1) = 6000$ ).

You can also add a price item more than once in a phantom bundle with different set of parameters. For example:

Bundle A	Country	Currency
Price Item X	US	USD
Price Item X	Germany	USD
Price Item Y	Germany	USD
Price Item Y	US	USD

In this case, the system adds the transactions with the following combinations and then determines the range of each price item (i.e. Price Item X and Price Item Y) within which the total units fall:

- Price Item X, US, USD
- Price Item X, Germany, USD
- Price Item Y, Germany, USD

- Price Item Y, US, USD

**Parameter**

The pricing for a price item may differ depending upon various transaction, person, account, or product attributes. Oracle Revenue Management and Billing provides a facility to define pricing for a price item based on multiple parameters. In addition, you can define the pricing, price list, and product eligibility criteria using one or more parameters.

Each parameter must be mapped to the following:

- **Source Entity** - Indicates the entity from where the parameter value is derived. A source entity can be account, person, product, transaction, service quantity identifier, or an algorithm.
- **Source Type** - Indicates the type of source from where the parameter value is derived. A source type can be field, characteristic, usage amount, or usage counter.
- **Source Type Code** - Indicates the source (such as, field, characteristic, usage amount, usage counter, SQI, or algorithm) from where the parameter value is derived.

The system allows you to define the following types of parameters:

- **Adhoc** - Used to store an adhoc value.
- **Predefined** - Used to store a predefined value. For example, you can create a parameter named **Country** where the value type is set to **Predefined** and the following predefined values are added in the parameter:

Parameter Value	Description
AUT	Austria
AUS	Australia
CAN	Canada
CHN	China

In such case, while defining the pricing for a price item using the **Country** parameter, you can use any one of the above mentioned parameter values.

- **Reference** - Used to store a value which is already present in a table. For example, you can create a parameter named **Country** where the value type is set to **Reference** and the reference entity is set to **CI\_COUNTRY\_L** (i.e. where the description of all countries is stored). In such case, while defining the pricing for a price item using the **Country** parameter, you can specify a country which is present in the **CI\_COUNTRY\_L** table in the parameter value.

**Parameter (Used for Searching)**

The **Parameter** screen allows you to define, edit, delete and copy a parameter. It contains the following zone:

- [Search Parameter](#) on page 160

**Search Parameter**

The **Search Parameter** zone allows you to search for a parameter using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search a particular parameter.	No

Field Name	Field Description	Mandatory (Yes or No)
Value Type	Used to search parameters in which you can store a particular type of value. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>	No
Source Entity	Used to search parameters whose value is derived from a particular entity. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>	No
Source Type	Used to search parameters whose value is derived from a particular type of source. The valid values are: <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul>	No
Description	Used to search parameters with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Parameter	Displays the parameter name.
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>
Description	Displays the description of the parameter.

Column Name	Column Description
Source Entity	Indicates the entity from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>
Source Type	Indicates the type of source from where the parameter value is derived. The valid values are: <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul>
View	On clicking the <b>View</b> (  ) icon, the <b>Parameter</b> screen appears where you can view the details of the parameter.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Parameter</b> screen appears where you can edit the details of the parameter.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the parameter. <div> <p><b>Note:</b></p> <p>You can delete a parameter only when the following conditions are met:</p> <ul style="list-style-type: none"> <li>• It is not yet associated to any price item or price item bundle.</li> <li>• It is not yet used while defining the pricing, price list, or product eligibility criteria.</li> </ul> </div>
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Parameter</b> screen appears where you can define a new parameter using an existing parameter.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Searching for a Parameter

### Procedure

To search for a parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Parameter**.  
The **Parameter** screen appears.
3. Enter the search criteria in the **Search Parameter** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of parameters that meet the search criteria appears in the **Search Results** section.

## Defining a Parameter

### Prerequisites

To define a parameter, you should have:

- Validation algorithm defined using the **C1\_PPARM\_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

### Note:

A sample algorithm type named **C1\_PPARM\_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

### Procedure

To define a parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.

- From the **Admin** menu, select **P** and then click **Parameter**.

The **Parameter** screen appears.

- Click the **Add** button in the **Page Title** area of the **Parameter** screen.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the parameter name.	
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Account</li> <li>Algorithm</li> <li>Person</li> <li>Product</li> <li>Service Quantity Identifier</li> <li>Transaction</li> </ul>	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Characteristic</li> <li>Field</li> <li>Usage Amount</li> <li>Usage Counter</li> </ul>	Yes
	<b>Note:</b> This field appears only when the <b>Account</b> , <b>Person</b> , or <b>Product</b> option is selected from the <b>Source Entity</b> list.  The <b>Usage Amount</b> and <b>Usage Counter</b> options do not appear in the <b>Source Type</b> list when the <b>Product</b> option is selected from the <b>Source Entity</b> list.	
Value Type	Used to indicate the type of value that you want to store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>Adhoc</li> <li>Predefined</li> <li>Reference</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)																																							
Source Type Code	Used to indicate the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.	Yes																																							
	<b>Note:</b>  This field does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.  The following table indicates the values that are listed in the <b>Source Type Code</b> field depending on the source entity and source type combination:																																								
	<table><tr><th>Source Entity</th><th>Source Type</th><th>Source Type Code</th></tr><tr><td>Account</td><td>Characteristic</td><td>Lists all characteristics where the characteristic entity is set to <b>Account</b>.</td></tr><tr><td>Account</td><td>Field</td><td>Lists all fields of the <b>CI_ACCT</b> table.</td></tr><tr><td>Account</td><td>Usage Amount</td><td>Lists all values defined for the <b>BAL_FLG</b> lookup field.</td></tr><tr><td>Account</td><td>Usage Counter</td><td>Lists all values defined for the <b>CNT_FLG</b> lookup field.</td></tr><tr><td>Person</td><td>Characteristic</td><td>Lists all characteristics where the characteristic entity is set to <b>Person</b>.</td></tr><tr><td>Person</td><td>Field</td><td>Lists all fields of the <b>CI_PER</b> table.</td></tr><tr><td>Person</td><td>Usage Amount</td><td>Lists all values defined for the <b>BAL_FLG</b> lookup field.</td></tr><tr><td>Person</td><td>Usage Counter</td><td>Lists all values defined for the <b>CNT_FLG</b> lookup field.</td></tr><tr><td>Product</td><td>Characteristic</td><td>Lists all characteristics where the characteristic entity is set to <b>Product</b>.</td></tr><tr><td>Product</td><td>Field</td><td>Lists all fields of the <b>C1_PRODUCT</b> table.</td></tr><tr><td>Supplier</td><td>Characteristic</td><td>Lists all characteristics where the characteristic entity is set to <b>Supplier</b>.</td></tr><tr><td>Supplier</td><td>Field</td><td>Lists all fields of the <b>C1_SUPPLIER</b> table.</td></tr></table>		Source Entity	Source Type	Source Type Code	Account	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Account</b> .	Account	Field	Lists all fields of the <b>CI_ACCT</b> table.	Account	Usage Amount	Lists all values defined for the <b>BAL_FLG</b> lookup field.	Account	Usage Counter	Lists all values defined for the <b>CNT_FLG</b> lookup field.	Person	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Person</b> .	Person	Field	Lists all fields of the <b>CI_PER</b> table.	Person	Usage Amount	Lists all values defined for the <b>BAL_FLG</b> lookup field.	Person	Usage Counter	Lists all values defined for the <b>CNT_FLG</b> lookup field.	Product	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Product</b> .	Product	Field	Lists all fields of the <b>C1_PRODUCT</b> table.	Supplier	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Supplier</b> .	Supplier	Field	Lists all fields of the <b>C1_SUPPLIER</b> table.
	Source Entity		Source Type	Source Type Code																																					
	Account		Characteristic	Lists all characteristics where the characteristic entity is set to <b>Account</b> .

Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <thead> <tr> <th>Source Entity</th><th>Source Type</th><th>Source Type Code</th></tr> </thead> <tbody> <tr> <td>Algorithm</td><td>—</td><td>Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.</td></tr> </tbody> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p><b>Note:</b> This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Validation Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Reference Entity</b> field. On clicking the <b>Search</b> icon, the <b>Reference Table Search</b> window appears.</p> <p>You can only specify a language table, where the <b>DESCR</b> column is available, in the <b>Reference Entity</b> field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.	Yes
	<b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	
Description	Used to specify the description for the parameter value.	Yes

**Note:**

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** () icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** () icon corresponding to the parameter value.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)										
Price Item	Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)										
	<b>Note:</b>  The following table lists the source entity and source type combinations when the <b>Price Item</b> option is disabled in the <b>Parameter Usage</b> section:	<b>Note:</b> You must select this option when you want to associate the parameter with a price item.										
	<table><tr><th>Source Entity</th><th>Source Type</th></tr><tr><td>Account</td><td>Usage Amount</td></tr><tr><td>Account</td><td>Usage Counter</td></tr><tr><td>Person</td><td>Usage Amount</td></tr><tr><td>Person</td><td>Usage Counter</td></tr></table>		Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter
	Source Entity		Source Type									
	Account		Usage Amount									
Account	Usage Counter											
Person	Usage Amount											
Person	Usage Counter											
 The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:												
<table><tr><th>Source Entity</th><th>Source Type</th></tr><tr><td>Algorithm</td><td>—</td></tr><tr><td>Service Quantity Identifier</td><td>—</td></tr></table>	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—						
Source Entity	Source Type											
Algorithm	—											
Service Quantity Identifier	—											
Pricing Eligibility Criteria	Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.	Yes (Conditional)										
	<b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> You must select this option when you want to define a pricing eligibility criteria using the parameter.										
Price List Eligibility Criteria	Used to indicate whether the parameter can be used while defining the price list eligibility criteria.	Yes (Conditional)										
	<b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> You must select this option when you want to define a price list eligibility criteria using the parameter.										

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	<b>Note:</b> This option does not appear when the <b>Algorithm</b> , <b>Service Quantity Identifier</b> , or <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> You must select this option when you want to define a product eligibility criteria using the parameter.

**Note:** You must select at least one option in the **Parameter Usage** section.

- Enter the required details in the **Parameter** screen depending on whether you want to create an adhoc, predefined, or reference parameter.
- Click **Save**.  
The parameter is defined.

**Note:** If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

### Editing a Parameter

#### Prerequisites

To edit a parameter, you should have:

- Validation algorithm defined using the **C1\_PPARM\_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

#### Note:

A sample algorithm type named **C1\_PPARM\_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

### Procedure

To edit a parameter:

- Search for the parameter in the **Parameter** screen.
- In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the parameter whose details you want to edit.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Displays the parameter name.	Not applicable
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Account</li> <li>Algorithm</li> <li>Person</li> <li>Product</li> <li>Service Quantity Identifier</li> <li>Transaction</li> </ul>	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	<div>Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Characteristic</li> <li>Field</li> <li>Usage Amount</li> <li>Usage Counter</li> </ul> </div> <div> <b>Note:</b>  This field appears only when you select the <b>Account</b>, <b>Person</b>, or <b>Product</b> option from the <b>Source Entity</b> list.   The <b>Usage Amount</b> and <b>Usage Counter</b> options do not appear in the <b>Source Type</b> list when the <b>Product</b> option is selected from the <b>Source Entity</b> list. </div>	Yes
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>Adhoc</li> <li>Predefined</li> <li>Reference</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)																																										
Source Type Code	Used to indicate the source, such as, field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.	Yes																																										
	<b>Note:</b>  This field does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.  The following table indicates the values that are listed in the <b>Source Type Code</b> field depending on the source entity and source type combination:

Field Name	Field Description	Mandatory (Yes or No)						
	<table> <tr> <th>Source Entity</th><th>Source Type</th><th>Source Type Code</th></tr> <tr> <td>Algorithm</td><td>—</td><td>Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.</td></tr> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p><b>Note:</b> This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Validation Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Reference Entity</b> field. On clicking the <b>Search</b> icon, the <b>Reference Table Search</b> window appears.</p> <p>You can only specify a language table, where the <b>DESCR</b> column is available, in the <b>Reference Entity</b> field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.	Yes
	<b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	
Description	Used to specify the description for the parameter value.	Yes

**Note:**

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** () icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** () icon corresponding to the parameter value.

You cannot delete a predefined parameter value which is already used in the system.

- **Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)										
Price Item	Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)										
	<b>Note:</b>  The following table lists the source entity and source type combinations when the <b>Price Item</b> option is disabled in the <b>Parameter Usage</b> section:	<b>Note:</b> This field is required when you want to associate the parameter with a price item.										
	<table><tr><th>Source Entity</th><th>Source Type</th></tr><tr><td>Account</td><td>Usage Amount</td></tr><tr><td>Account</td><td>Usage Counter</td></tr><tr><td>Person</td><td>Usage Amount</td></tr><tr><td>Person</td><td>Usage Counter</td></tr></table>		Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter
	Source Entity		Source Type									
	Account		Usage Amount									
Account	Usage Counter											
Person	Usage Amount											
Person	Usage Counter											
 The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:												
<table><tr><th>Source Entity</th><th>Source Type</th></tr><tr><td>Algorithm</td><td>—</td></tr><tr><td>Service Quantity Identifier</td><td>—</td></tr></table>	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—						
Source Entity	Source Type											
Algorithm	—											
Service Quantity Identifier	—											
Pricing Eligibility Criteria	Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.	Yes (Conditional)										
	<b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> This field is required when you want to define a pricing eligibility criteria using the parameter.										
Price List Eligibility Criteria	Used to indicate whether the parameter can be used while defining the price list eligibility criteria.	Yes (Conditional)										
	<b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> This field is required when you want to define a price list eligibility criteria using the parameter.										

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	<b>Note:</b> This option does not appear when the <b>Algorithm</b> , <b>Service Quantity Identifier</b> , or <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> This field is required when you want to define a product eligibility criteria using the parameter.

**Note:**

You must select at least one option in the **Parameter Usage** section.

If the parameter is already associated to a price item or used while defining the pricing, price list, or product eligibility criteria, you cannot deselect the respective option in the **Parameter Usage** section.

3. Modify the required details in the **Parameter** screen.
4. Click **Save**.

The changes made to the parameter are saved.

**Related Topics**

For more information on...	See...
How to search for a parameter	<a href="#">Searching for a Parameter</a> on page 163

**Deleting a Parameter****Procedure**

To delete a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the parameter that you want to delete.

A message appears confirming whether you want to delete the parameter.

**Note:**

You can delete a parameter only when the following conditions are met:

- It is not yet associated to any price item or price item bundle.
- It is not yet used while defining the pricing, price list, or product eligibility criteria.

3. Click **OK**.

The parameter is deleted.

How to search for a parameter	<a href="#">Searching for a Parameter</a> on page 163

Copying a Parameter

Instead of creating a parameter from scratch, you can define a new parameter using an existing parameter. This is possible through copying a parameter. When you copy a parameter, the predefined values, validation algorithm, and reference entity (depending upon the value type) are copied along with other parameter details. You can then edit the details, if required.

**Note:** You cannot change the type of value that you can store in the new parameter (which is created using an existing parameter).

Prerequisites

To copy a parameter, you should have:

- Parameter (whose copy you want to create) defined in the application
- Validation algorithm defined using the **C1\_PPARM\_VAL** algorithm type (in case you want to validate an adhoc parameter value)
- An algorithm defined using the **C1-PPARM-ENT** algorithm type (in case you want to use the algorithm while validating the pricing eligibility criteria)

Note:

A sample algorithm type named **C1\_PPARM\_VAL** is shipped with the product. At present, it allows you to specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

A sample algorithm type named **C1-PPARM-ENT** is shipped with the product. At present, it returns a boolean value true. You can build custom logic in this algorithm which returns a value. This value can then be compared against the parameter value specified in the pricing eligibility criteria.

Procedure

To copy a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the parameter whose copy you want to create.

The **Parameter** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to specify the parameter name.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the parameter name.	

Field Name	Field Description	Mandatory (Yes or No)
Source Entity	Used to indicate the entity from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Account</li> <li>Algorithm</li> <li>Person</li> <li>Product</li> <li>Service Quantity Identifier</li> <li>Transaction</li> </ul>	Yes
Description	Used to specify the description for the parameter.	Yes
Source Type	<div>Used to indicate the type of source from where the parameter value should be derived. The valid values are: <ul style="list-style-type: none"> <li>Characteristic</li> <li>Field</li> <li>Usage Amount</li> <li>Usage Counter</li> </ul> </div> <div> <b>Note:</b>  This field appears only when you select the <b>Account</b>, <b>Person</b>, or <b>Product</b> option from the <b>Source Entity</b> list.   The <b>Usage Amount</b> and <b>Usage Counter</b> options do not appear in the <b>Source Type</b> list when the <b>Product</b> option is selected from the <b>Source Entity</b> list. </div>	Yes
Value Type	Indicates the type of value that you can store in the parameter. The valid values are: <ul style="list-style-type: none"> <li>Adhoc</li> <li>Predefined</li> <li>Reference</li> </ul>	Not applicable

Field Name	Field Description	Mandatory (Yes or No)																																													
Source Type Code	Used to indicate the source, such as, field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value should be derived.	Yes																																													
	<b>Note:</b>  This field does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.  The following table indicates the values that are listed in the <b>Source Type Code</b> field depending on the source entity and source type combination:																																														
	<table><tr><th>Source Entity</th><th>Source Type</th><th>Source Type Code</th></tr><tr><td>Account</td><td>Characteristic</td><td>Lists all characteristics where the characteristic entity is set to <b>Account</b>.</td></tr><tr><td>Account</td><td>Field</td><td>Lists all fields of the <b>CI_ACCT</b> table.</td></tr><tr><td>Account</td><td>Usage Amount</td><td>Lists all values defined for the <b>BAL_FLG</b> lookup field.</td></tr><tr><td>Account</td><td>Usage Counter</td><td>Lists all values defined for the <b>CNT_FLG</b> lookup field.</td></tr><tr><td>Person</td><td>Characteristic</td><td>Lists all characteristics where the characteristic entity is set to <b>Person</b>.</td></tr><tr><td>Person</td><td>Field</td><td>Lists all fields of the <b>CI_PER</b> table.</td></tr><tr><td>Person</td><td>Usage Amount</td><td>Lists all values defined for the <b>BAL_FLG</b> lookup field.</td></tr><tr><td>Person</td><td>Usage Counter</td><td>Lists all values defined for the <b>CNT_FLG</b> lookup field.</td></tr><tr><td>Product</td><td>Characteristic</td><td>Lists all characteristics where the characteristic entity is set to <b>Product</b>.</td></tr><tr><td>Product</td><td>Field</td><td>Lists all fields of the <b>C1_PRODUCT</b> table.</td></tr><tr><td>Supplier</td><td>Characteristic</td><td>Lists all characteristics where the characteristic entity is set to <b>Supplier</b>.</td></tr><tr><td>Supplier</td><td>Field</td><td>Lists all fields of the <b>C1_SUPPLIER</b> table.</td></tr><tr><td>Supplier</td><td>Usage Amount</td><td>Lists all values defined for the <b>BAL_FLG</b> lookup field.</td></tr><tr><td>Supplier</td><td>Usage Counter</td><td>Lists all values defined for the <b>CNT_FLG</b> lookup field.</td></tr></table>		Source Entity	Source Type	Source Type Code	Account	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Account</b> .	Account	Field	Lists all fields of the <b>CI_ACCT</b> table.	Account	Usage Amount	Lists all values defined for the <b>BAL_FLG</b> lookup field.	Account	Usage Counter	Lists all values defined for the <b>CNT_FLG</b> lookup field.	Person	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Person</b> .	Person	Field	Lists all fields of the <b>CI_PER</b> table.	Person	Usage Amount	Lists all values defined for the <b>BAL_FLG</b> lookup field.	Person	Usage Counter	Lists all values defined for the <b>CNT_FLG</b> lookup field.	Product	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Product</b> .	Product	Field	Lists all fields of the <b>C1_PRODUCT</b> table.	Supplier	Characteristic	Lists all characteristics where the characteristic entity is set to <b>Supplier</b> .	Supplier	Field	Lists all fields of the <b>C1_SUPPLIER</b> table.	Supplier	Usage Amount	Lists all values defined for the <b>BAL_FLG</b> lookup field.	Supplier	Usage Counter	Lists all values defined for the <b>CNT_FLG</b> lookup field.
	Source Entity		Source Type	Source Type Code																																											
	Account		Characteristic	Lists all characteristics where the characteristic entity is set to <b>Account</b> .																																											
	Account		Field	Lists all fields of the <b>CI_ACCT</b> table.																																											
	Account		Usage Amount	Lists all values defined for the <b>BAL_FLG</b> lookup field.																																											
	Account		Usage Counter	Lists all values defined for the <b>CNT_FLG</b> lookup field.																																											
	Person		Characteristic	Lists all characteristics where the characteristic entity is set to <b>Person</b> .																																											
	Person		Field	Lists all fields of the <b>CI_PER</b> table.																																											
	Person		Usage Amount	Lists all values defined for the <b>BAL_FLG</b> lookup field.																																											
	Person		Usage Counter	Lists all values defined for the <b>CNT_FLG</b> lookup field.																																											
	Product		Characteristic	Lists all characteristics where the characteristic entity is set to <b>Product</b> .																																											
	Product		Field	Lists all fields of the <b>C1_PRODUCT</b> table.																																											
	Supplier		Characteristic	Lists all characteristics where the characteristic entity is set to <b>Supplier</b> .																																											
Supplier	Field	Lists all fields of the <b>C1_SUPPLIER</b> table.																																													
Supplier	Usage Amount	Lists all values defined for the <b>BAL_FLG</b> lookup field.																																													
Supplier	Usage Counter	Lists all values defined for the <b>CNT_FLG</b> lookup field.																																													

Field Name	Field Description	Mandatory (Yes or No)						
	<table border="1"> <tr> <th>Source Entity</th><th>Source Type</th><th>Source Type Code</th></tr> <tr> <td>Algorithm</td><td>—</td><td>Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.</td></tr> </table>	Source Entity	Source Type	Source Type Code	Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.	
Source Entity	Source Type	Source Type Code						
Algorithm	—	Lists all algorithms which are defined using the <b>C1-PPARM-ENT</b> algorithm type.						
Validation Algorithm	<p>Used to indicate the algorithm using which you want to validate the adhoc parameter value.</p> <p><b>Note:</b> This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Validation Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No						
Reference Entity	<p>Used to indicate the table whose primary key (column) you want to set as the reference entity.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Reference Entity</b> field. On clicking the <b>Search</b> icon, the <b>Reference Table Search</b> window appears.</p> <p>You can only specify a language table, where the <b>DESCR</b> column is available, in the <b>Reference Entity</b> field.</p>	Yes						
Field Name	<p>Indicates the column which is the primary key of the table. The parameter value is then validated against the primary column of the table.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list.</p>	Not applicable						

In addition, this screen contains the following two sections:

- **Parameter Values** - Used to define predefined values for the parameter. It contains the following fields in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.	Yes
	<b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the predefined parameter value.	
Description	Used to specify the description for the parameter value.	Yes

**Note:**

The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

At least one parameter value should be defined for a parameter where the value type is set to **Predefined**.

If you want to define more than one predefined value for the parameter, click the **Add** (+) icon and then specify the details. However, if you want to remove a predefined value of the parameter, click the **Delete** (🗑️) icon corresponding to the parameter value.

- Parameter Usage** - Used to indicate where the parameter can be used in the system. It contains the following options:

Option Name	Option Description	Mandatory (Yes or No)										
Price Item	Used to indicate whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.	Yes (Conditional)										
	<b>Note:</b> The following table lists the source entity and source type combinations when the <b>Price Item</b> option is disabled in the <b>Parameter Usage</b> section:	<b>Note:</b> This field is required when you want to associate the parameter with a price item.										
	<table><tr><th>Source Entity</th><th>Source Type</th></tr><tr><td>Account</td><td>Usage Amount</td></tr><tr><td>Account</td><td>Usage Counter</td></tr><tr><td>Person</td><td>Usage Amount</td></tr><tr><td>Person</td><td>Usage Counter</td></tr></table>		Source Entity	Source Type	Account	Usage Amount	Account	Usage Counter	Person	Usage Amount	Person	Usage Counter
	Source Entity		Source Type									
	Account		Usage Amount									
Account	Usage Counter											
Person	Usage Amount											
Person	Usage Counter											
The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:												
<table><tr><th>Source Entity</th><th>Source Type</th></tr><tr><td>Algorithm</td><td>—</td></tr><tr><td>Service Quantity Identifier</td><td>—</td></tr></table>	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—						
Source Entity	Source Type											
Algorithm	—											
Service Quantity Identifier	—											
Pricing Eligibility Criteria	Used to indicate whether the parameter can be used while defining the pricing eligibility criteria.	Yes (Conditional)										
	<b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> This field is required when you want to define a pricing eligibility criteria using the parameter.										
Price List Eligibility Criteria	Used to indicate whether the parameter can be used while defining the price list eligibility criteria.	Yes (Conditional)										
	<b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> This field is required when you want to define a price list eligibility criteria using the parameter.										

Option Name	Option Description	Mandatory (Yes or No)
Product Eligibility Criteria	Used to indicate whether the parameter can be used while defining the product eligibility criteria.	Yes (Conditional)
	<b>Note:</b> This option does not appear when the <b>Algorithm</b> , <b>Service Quantity Identifier</b> , or <b>Transaction</b> option is selected from the <b>Source Entity</b> list.	<b>Note:</b> This field is required when you want to define a product eligibility criteria using the parameter.

**Note:** You must select at least one option in the **Parameter Usage** section.

3. Enter the required details in the **Parameter** screen depending on whether you want to create an adhoc, predefined, or reference parameter.
4. Click **Save**.
- The parameter is defined.

**Note:** If a parameter is already defined using the source entity, source type, and source type code combination, the system will not allow you to define another parameter with the same combination.

Viewing the Parameter Details

Procedure

To view the details of a parameter:

1. Search for the parameter in the **Parameter** screen.
2. In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the parameter whose details you want to view.
- The **Parameter** screen appears.
3. View the details of the parameter in the **Parameter** screen.

Parameter (Used for Viewing)

The **Parameter** screen allows you to view the details of a parameter. It contains the following zone:

- [Parameter](#) on page 183

## Parameter

The **Parameter** zone displays the details of the parameter. It contains the following sections:

- **Main** – Displays basic information about the parameter. It contains the following fields:

Field Name	Field Description
Parameter	Displays the parameter name.
Description	Displays the description of the parameter.
Value Type	<p>Indicates the type of value that you can store in the parameter. The valid values are:</p> <ul style="list-style-type: none"> <li>• Adhoc</li> <li>• Predefined</li> <li>• Reference</li> </ul>
Validation Algorithm	<p>Indicates the algorithm which is used to validate the adhoc parameter value.</p> <p><b>Note:</b> This field appears only when the <b>Adhoc</b> option is selected from the <b>Value Type</b> list. It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.</p>
Referenced Table	<p>Indicates the table whose primary key (i.e. column) is used to validate the parameter value.</p> <p><b>Note:</b> This field appears only when the <b>Reference</b> option is selected from the <b>Value Type</b> list. It has a link. On clicking the link, the <b>Table</b> screen appears where you can view the details of the respective table.</p>
Source Entity	<p>Indicates the entity from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> <li>• Account</li> <li>• Algorithm</li> <li>• Person</li> <li>• Product</li> <li>• Service Quantity Identifier</li> <li>• Transaction</li> </ul>

Field Name	Field Description
Source Type	<p>Indicates the type of source from where the parameter value is derived. The valid values are:</p> <ul style="list-style-type: none"> <li>• Characteristic</li> <li>• Field</li> <li>• Usage Amount</li> <li>• Usage Counter</li> </ul> <p><b>Note:</b> This field appears only when the <b>Account</b>, <b>Person</b>, or <b>Product</b> option is selected from the <b>Source Entity</b> list.</p>
Source Type Code	<p>Indicates the source, such as field, characteristic, usage amount, usage counter, SQI, or algorithm, from where the parameter value is derived.</p> <p><b>Note:</b> This field does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>

- **Parameter Usage** – Indicates where the parameter can be used in the system. It contains the following options:

Option Name	Option Description						
Price Item	<p>Indicates whether the parameter can be associated with a price item or price item bundle. If a parameter is associated with a price item or price item bundle, you can use the parameter while defining the price item pricing.</p> <p>The following table lists the source entity and source type combinations when the <b>Price Item</b> option does not appear in the <b>Parameter Usage</b> section:</p> <table border="1"> <thead> <tr> <th>Source Entity</th><th>Source Type</th></tr> </thead> <tbody> <tr> <td>Algorithm</td><td>—</td></tr> <tr> <td>Service Quantity Identifier</td><td>—</td></tr> </tbody> </table>	Source Entity	Source Type	Algorithm	—	Service Quantity Identifier	—
Source Entity	Source Type						
Algorithm	—						
Service Quantity Identifier	—						
Pricing Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the pricing eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>						
Price List Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the price list eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>						
Product Eligibility Criteria	<p>Indicates whether the parameter can be used while defining the product eligibility criteria.</p> <p><b>Note:</b> This option does not appear when the <b>Algorithm</b>, <b>Service Quantity Identifier</b>, or <b>Transaction</b> option is selected from the <b>Source Entity</b> list.</p>						

- **Parameter Values** - Lists the predefined values of the parameter. It contains the following columns in the grid:

Column Name	Column Description
Parameter Value	Displays the parameter value.
Description	Displays the description of the parameter value.

**Note:** The **Parameter Values** section appears only when the **Predefined** option is selected from the **Value Type** list.

## Price Item

A bank may offer wide range of services to customers and accordingly charge them fees and/or interest for a service. You can define each charge as a price item in Oracle Revenue Management and Billing. Once a price item is defined, you can define pricing for the price item. The price item pricing can be a standard price defined in the price list or override price that is specific to a person or an account. The system allows you to define price item pricing at various levels in a person hierarchy (for example, at the account level, main customer level, or at the parent customer level). You can also define price item pricing in the account's price list, main customer's price list, parent customer's price list, and price list's parent price list.

You can associate one or more price items with each other, and thereby group them for various reasons, such as reporting, billing, and so on. You can also create a price item bundle and then add price items within the price item bundle. The main objective behind grouping price items or creating price item bundles is to offer discounts based on the volume across price items, facilitate minimum or maximum charge calculations across price items, or offer common price across price items. While associating a price item with the parent price item or adding a price item to the price item bundle, you need to specify how the two price items are related to each other.

The system allows you to define the following types of price item bundle:

- [Regular Bundle](#) on page 154
- [Phantom Bundle](#) on page 158
- [Ratio Bundle](#) on page 156

The system allows you to define price items and price item bundles which are available for only pricing or pricing and billing. If the price item is available for only pricing, you can indicate the type of the price item. The valid values are:

- Rate (i.e. Interest Rate)
- Fees

If the type of a price item is **Rate**, the system calculates and persist the rate for the price item. The rate is persisted only for the price item pricing which is either assigned or inherited by an account. You cannot define a price item bundle when it is available for only pricing and when the price item type is set to **Rate**. When you define a price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1\_PRICING)** feature configuration is automatically associated with the price item or price item bundle.

You can associate a price item or price item bundle to one or more divisions. You can assign a price item or price item bundle to an account, person, or price list only when the account, person, or price list belongs to the division to which the price item or price item bundle is associated. You can define a set of characteristics for a price item or price item bundle which are common across divisions or specific to a division. You can associate one or more parameters to a price item. These parameters can then be used for aggregating transactions and defining the price item pricing. Note that you can associate parameters only to regular price item bundles and not to ratio and phantom price item bundles.

## Price Item (Used for Searching)

The **Price Item** screen allows you to search for a price item or price item bundle using various search criteria. It allows you to create and edit a price item or price item bundle. In addition, it allows you to copy a price item bundle only when **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **False**. This screen consists of the following zones:

- [Search Price Item](#) on page 186

### Search Price Item

The **Search Price Item** zone allows you to search for a price item or price item bundle using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price item or price item bundle using the price item details. The valid value is: <ul style="list-style-type: none"> <li>• Price Item Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Price Item Details</b> option is selected.	
Price Item	Used to search a particular price item or price item bundle.	No
Description	Used to search a price item or price item bundle with a particular description.	No
Division	Used to search price items or price item bundles which are associated with a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price Item Usage	Used to search price items or price item bundles which can be used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	No
	<b>Note:</b> By default, the <b>Pricing and Billing</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Bundle	Used to indicate whether you want to search a price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Price Item Type	Used to search a particular type of price items or price item bundles. The valid values are: <ul style="list-style-type: none"> <li>• Fees</li> <li>• Rate</li> </ul> <div> <b>Note:</b> This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list. </div>	No

**Note:** You must specify at least one search criterion while searching for a price item or price item bundle.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle. <div> <b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle. </div>
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> However, if the price item bundle is available for only pricing and the <b>Price Item Type</b> is set to <b>Fees</b> , the valid value is: <ul style="list-style-type: none"> <li>• Regular</li> </ul>
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul>
Price Item Usage	Indicates whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Price Item</b> screen appears where you can create a new price item or price item bundle using an existing price item or price item bundle.

Column Name	Column Description
Price Item Assigned To	On clicking the <b>View</b> (🔍) icon in the <b>Price Item Assigned To</b> column, the <b>Price Item Assignments</b> screen appears where you can view the active price lists, persons, and accounts to which the price item or price item bundle is assigned.
Price Item Relationship	On clicking the <b>View</b> (🔍) icon in the <b>Price Item Relationship</b> column, the <b>Price Item Relationship</b> screen appears where you can view the list of the price items and price item bundles associated with the parent price item or added to the price item bundle.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Searching for a Price Item or Price Item Bundle

### Prerequisites

To search for a price item or price item bundle, you should have:

- Divisions defined in the application
- Price items or price item bundles associated with the division to which the user belongs

### Procedure

To search for a price item or price item bundle:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price Item**.  
A sub-menu appears.
3. Click the **Search** option from the **Price Item** sub-menu.  
The **Price Item** screen appears.
4. Enter the search criteria in the **Search Price Item** zone depending on whether you want to search for a price item or price item bundle.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

## 5. Click **Search**.

A list of price items or price item bundles that meet the search criteria appears in the **Search Results** section.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Defining a Price Item or Price Item Bundle

### Prerequisites

To define a price item or price item bundle, you should have:

- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1\_PRICING)** feature configuration

### Procedure

To define a price item or price item bundle:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Price Item**.  
A sub-menu appears.
- Click the **Add** option from the **Price Item** sub-menu.

The **Price Item** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the price item or price item bundle.
- Parameters** - Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

#### **Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining the ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- Divisions** - Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs and characteristics for the price item or price item bundle.
- Price Item Characteristics** - Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>Pricing</li> <li>Pricing and Billing</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Pricing and Billing</b> option is selected.	
Price Item Type	Used to indicate the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>Rate</li> <li>Fees</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Fees</b> option is selected. This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list. You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b> .	
Bundle	Used to indicate whether you want to define a price item bundle. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
	<b>Note:</b> By default, the <b>No</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	Used to indicate the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> <li>Phantom</li> <li>Ratio</li> <li>Regular</li> </ul>	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.  All the above mentioned values are available in the list when you are defining a price item bundle which is available for pricing and billing. However, when you are defining a price item bundle which is available for only pricing and when the price item type is set to <b>Fees</b> , you can only define a regular price item bundle. Therefore, by default, the value is set to <b>Regular</b> when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.  You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b> .	<b>Note:</b> This field is required when you are creating a price item bundle.
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
	<b>Note:</b> By default, the <b>No</b> option is selected.	
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle.	Yes
	<b>Note:</b> This field appears only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list.  The <b>Search</b>  icon appears corresponding to the <b>Contract Type</b> field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.	

**Tip:** Alternatively, you can access the **Price Item** screen by clicking the **Add** button in the **Page Title** area of the **Price Item** screen.

4. Enter the required details in the **Main** section.

5. Associate parameters with the price item or price item bundle, if required.
6. Associate the price item or price item bundle to the required divisions.
7. Define the required division-specific SQIs for the price item or price item bundle.
8. Define division-specific characteristics for the price item or price item bundle, if required.
9. Define characteristics for the price item or price item bundle, if required.
10. Click **Save**.

The price item is defined.

**Note:** When you define a price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1\_PRICING)** feature configuration is automatically associated to the price item or price item bundle.

### **Associating a Parameter with a Price Item or Price Item Bundle**

#### **Prerequisites**

To associate a parameter with a price item or price item bundle, you should have:

- Parameters defined in the application (where the **Price Item** option is selected in the **Parameter Usage** section)

#### **Procedure**

To associate a parameter with a price item or price item bundle:

1. Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Parameters** section appears. It contains the following fields in a grid:

<b>Field Name</b>	<b>Field Description</b>	<b>Mandatory (Yes or No)</b>
Effective Start Date	Used to specify the date from when the parameter is effective for the price item or price item bundle.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the parameter is effective for the price item or price item bundle.	No
Parameter	Used to indicate the parameter that you want to associate with the price item or price item bundle.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Parameter</b> field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears. In the <b>Parameter Search</b> window, the system allows you to search only those parameters where the parameter usage is set to <b>Price Item</b> .	
Business Label	Used to specify a business label for the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.	No
Display Order	Used to indicate the order in which the parameter and its value should be displayed in the price item parameter information string across the application.	Yes
Parameter Usage	Used to indicate whether you want to use the parameter for aggregation and/or for defining the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• <b>Aggregation</b> – Indicates that you want to use the parameter for aggregating transactions.</li> <li>• <b>Pricing</b> – Indicates that you want to use the parameter for aggregating transactions and defining the price item pricing.</li> </ul>	Yes
Mandatory	Used to indicate whether the parameter is mandatory while defining the price item pricing.	No
Priority	Used to indicate the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Yes (Conditional)
	<b>Note:</b> This field is disabled when the <b>Mandatory</b> option is selected.	<b>Note:</b> This field is required when the <b>Mandatory</b> option is not selected.

**Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining, editing, or copying ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- Enter the required details in the **Parameters** section.
- If you want to associate more than one parameter with the price item or price item bundle, click the **Add**  icon and then repeat steps 2.

**Note:**

However, if you want to remove a parameter from the price item or price item bundle, click the **Delete** () icon corresponding to the parameter. You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which will be used for aggregation (in other words, where the **Parameter Usage** field is set to **Aggregation**) anytime, whenever required. However, you can add a parameter which will be used for pricing (in other words, where the **Parameter Usage** field is set to **Pricing**) only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

- Click **Save**.  
The parameters are associated with the price item or price item bundle.

**Note:** The priority for all parameters which are mandatory is set to 0.

**Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle**

**Prerequisites**

To define valid predefined parameter values for a price item or price item bundle, you should have:

- Values defined for the predefined parameter which is associated with the price item or price item bundle

**Procedure**

To define valid predefined parameter values for a price item or price item bundle:

- Click the **Parameters** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.  
The **Parameters** section appears.
- Click the **Add** () icon in the **Parameter** column corresponding to the predefined parameter for which you want to define valid values for the price item or price item bundle.  
The following field appears in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to indicate the predefined parameter value which you can use for the price item or price item bundle while defining the pricing.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Parameter Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Parameter Value Search</b> window appears.</p> <p>On specifying the valid predefined parameter value for a price item or price item bundle, the description of the valid predefined parameter value appears corresponding to the <b>Parameter Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining valid predefined parameter values for the price item or price item bundle.</p>

3. Select the predefined parameter value from the respective field.
4. If you want to define more than one valid predefined parameter value for the price item or price item bundle, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a valid predefined parameter value from the price item or price item bundle, click the **Delete**  icon corresponding to the parameter value.

5. Click **Save**.

The valid predefined parameter values are defined for the price item or price item bundle.

## **Associating a Price Item or Price Item Bundle with a Division**

### Prerequisites

To associate a price item or price item bundle with a division, you should have:

- Divisions defined in the application

### Procedure

To associate a price item or price item bundle with a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
SQIs	On clicking the <b>Add</b>  icon, you can define division-specific SQIs for the price item or price item bundle.	No

Field Name	Field Description	Mandatory (Yes or No)
Division Characteristics	On clicking the <b>Add</b> (  ) icon, you can define division-specific characteristics for the price item or price item bundle.	No
Division	Used to indicate the division to which you want to associate the price item or price item bundle.	Yes
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

- Enter the required details in the **Divisions** section.
- If you want to associate the price item or price item bundle with more than one division, click the **Add** (  ) icon and then repeat step 2.

**Note:** However, if you want to remove the price item or price item bundle from a division, click the **Delete** (  ) icon corresponding to the division.

- Define division-specific SQIs for the price item or price item bundle, if required.
- Define division-specific characteristics for the price item or price item bundle, if required.
- Click **Save**.

The price item or price item bundle is associated to the division.

**Tip:** Alternatively, you can associate a price item or price item bundle to a division using the **Division** screen.

## Defining Division-Specific Characteristics for a Price Item or Price Item Bundle

### Prerequisites

To define division-specific characteristics for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Division/Price Item Combination**)
- Price items or price item bundles associated to the division to which the user belongs

### Procedure

To define division-specific characteristics for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** () icon in the **Division Characteristics** column corresponding to the division for which you want to define division-specific price item or price item bundle characteristics.

The following fields appear in the grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the price item or price item bundle characteristic is effective for the division.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Division/Price Item Combination</b> .	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (  ) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item or price item bundle.

3. Enter the required details in the **Divisions** section.
4. If you want to define more than one division-specific characteristic for the price item or price item bundle, click the **Add** () icon and then repeat step 3.

**Note:** However, if you want to remove a division-specific characteristic from the price item or price item bundle, click the **Delete** () icon corresponding to the characteristic.

5. Click **Save**.

The division-specific characteristics are defined for the price item or price item bundle.

## Defining Division-Specific SQIs for a Price Item or Price Item Bundle

### Prerequisites

To define division-specific SQIs for a price item or price item bundle, you should have:

- SQIs defined in the application
- Price items or price item bundles associated with the division to which the user belongs

### Procedure

To define division-specific SQIs for a price item or price item bundle:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Divisions** section appears.

2. Click the **Add** () icon in the **SQIs** column corresponding to the division for which you want to define division-specific price item or price item bundle SQIs.

The following field appears in the grid:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI to which you want to associate the price item or price item bundle in the division.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to the <b>SQI</b> field. On clicking the <b>Search</b> icon, the <b>Service Quantity Identifier Search</b> window appears.</p> <p>On indicating the SQI, the description of the SQI appears corresponding to the <b>SQI</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a division-specific SQI for the price item or price item bundle.</p>

3. Enter the required details in the **Divisions** section.
4. If you want to define more than one division-specific SQI for the price item or price item bundle, click the **Add** () icon and then repeat step 3.

**Note:** However, if you want to remove a division-specific SQI from the price item or price item bundle, click the **Delete** () icon corresponding to the SQI.

5. Click **Save**.

The division-specific SQIs are defined for the price item or price item bundle.

**Defining a Characteristic for a Price Item or Price Item Bundle****Prerequisites**

To define a characteristic for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

**Procedure**

To define a characteristic for a price item or price item bundle:

1. Click the **Price Item Characteristics** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price item or price item bundle.

The **Price Item Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item or price item bundle.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the price item or price item bundle.

2. Enter the required details in the **Price Item Characteristics** section.

- If you want to define more than one characteristic for the price item or price item bundle, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price item or price item bundle, click the **Delete** (🗑️) icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price item or price item bundle.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to define a price item or price item bundle	<a href="#">Defining a Price Item or Price Item Bundle</a> on page 189
How to edit a price item or price item bundle	<a href="#">Editing a Price Item or Price Item Bundle</a> on page 210
How to copy a price item or price item bundle	<a href="#">Copying a Price Item or Price Item Bundle</a> on page 200

### **Copying a Price Item or Price Item Bundle**

Instead of creating a price item or price item bundle from scratch, you can create a new price item or price item bundle using an existing price item or price item bundle. This is possible through copying a price item or price item bundle. On copying a price item or price item bundle, the details including the parameters, divisions, division-specific characteristics, division-specific SQIs, and characteristics are copied to the new price item or price item bundle. You can then edit the details, if required.

### **Prerequisites**

To copy a price item or price item bundle, you should have:

- Price item or price item bundle (whose copy you want to create) defined in the application
- Price item or price item bundle (whose copy you want to create) associated with the division to which the user belongs
- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1\_PRICING)** feature configuration

### **Procedure**

To copy a price item or price item bundle:

- Search for the price item or price item bundle in the **Price Item** screen.
- In the **Search Results** section, click the **Copy** (📄➡️📄) icon in the **Copy** column corresponding to the price item or price item bundle using which you want to define a new price item or price item bundle.

The **Price Item** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the price item or price item bundle.
- Parameters** – Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

**Note:**

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while defining ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** – Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs and characteristics for the price item or price item bundle.
- **Price Item Characteristics** – Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item or price item bundle.	Yes
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>	Yes
Price Item Type	Used to indicate the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul> <div> <b>Note:</b>  This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list.  You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b>. </div>	Yes
Bundle	Used to indicate whether you want to define a price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bundle Type	Used to indicate the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>Phantom</li> <li>Ratio</li> <li>Regular</li> </ul>	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field is enabled only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p> <p>All the above mentioned values are available in the list when you are defining a price item bundle which is available for pricing and billing. However, when you are defining a price item bundle which is available for only pricing and when the price item type is set to <b>Fees</b>, you can only define a regular price item bundle. Therefore, by default, the value is set to <b>Regular</b> when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.</p> <p>You cannot define a price item bundle when it is available for only pricing and when the price item type is set to <b>Rate</b>.</p>	<p><b>Note:</b> This field is required when you are creating a price item bundle.</p>
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle.	Yes
	<p><b>Note:</b></p> <p>This field appears only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Contract Type</b> field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.</p>	

- Enter the required details in the **Main** section.
- Associate, edit, or disassociate parameters from the price item or price item bundle, if required.
- Associate or disassociate the price item or price item bundle from the required divisions.
- Define or remove the division-specific SQIs from the price item or price item bundle, if required.
- Define or remove the division-specific characteristics for the price item or price item bundle, if required.

8. Define, edit, or remove characteristics from the price item or price item bundle, if required.
9. Click **Save**.

The new price item is defined.

**Note:**

When you define a new price item or price item bundle which is available for only pricing, the contract type defined in the **Default Contract Type** option type of the **Pricing Configuration (C1\_PRICING)** feature configuration is automatically associated to the price item or price item bundle.

The system allows you to add a price item to the new price item bundle only when:

- Price item and price item bundle (whose copy you are creating) are associated to the same contract type.
- Price item is associated with the division to which the price item bundle (whose copy you are creating) is associated.
- Another price item bundle with the same price item, relationship type, and date range combination does not exist in the system.

### **Viewing the Price Item or Price Item Bundle Details**

#### **Procedure**

To view the details of a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to view.

The **Price Item** screen appears. It contains the following zones:

- [Price Item](#) on page 205
- [Parameters](#) on page 206
- [Predefined Parameter Values for Price Item](#) on page 207

- [Divisions](#) on page 207
  - [Division-Specific Characteristics for Price Item](#) on page 208
  - [Division-Specific SQIs for Price Item](#) on page 208
  - [Price Item Relationship](#) on page 209
3. View the basic details and characteristics of the price item or price item bundle in the **Price Item** zone.
  4. View the parameters associated with the price item or price item bundle in the **Parameters** zone.
  5. View the valid predefined parameter values of the price item or price item bundle in the **Predefined Parameter Values for Price Item** zone.
  6. View the divisions to which the price item or price item bundle is associated in the **Divisions** zone.
  7. View the division-specific characteristics of the price item or price item bundle in the **Division-Specific Characteristics for Price Item** zone.
  8. View the division-specific SQIs of the price item or price item bundle in the **Division-Specific SQIs for Price Item** zone.
  9. View the price items or price item bundles related to the parent price item or price item bundle in the **Price Item Relationship** zone.

## Price Item (Used for Viewing)

The **Price Item** screen allows you to view the details of the price item or price item bundle. It also allows you to edit the details of the price item or price item bundle. It contains the following zones:

- **Price Item** – Displays the basic details of the price item or price item bundle.
- **Parameters** – Lists the parameters which are associated with the price item or price item bundle.
- **Predefined Parameter Values for Price Item** – Lists the predefined parameter values which are valid for the price item or price item bundle.

**Note:** By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a parameter in the **Parameters** zone.

- **Divisions** – Lists the divisions to which the price item or price item bundle is associated.
- **Division-Specific Characteristics for Price Item** – Lists the characteristics which are defined for the price item or price item bundle in the respective division.

**Note:** By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

- **Division-Specific SQIs for Price Item** – Lists the SQIs to which the price item or price item bundle is associated in the respective division.

**Note:** By default, the **Division-Specific SQIs for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

- **Price Item Relationship** – Lists the price items or price item bundles which are associated with the parent price item or added in the price item bundle.

## Price Item

The **Price Item** zone displays the details of the price item or price item bundle. It contains the following sections:

- **Main** – Displays basic information about the price item or price item bundle. It contains the following fields:

Field Name	Field Description
Price Item	Displays information about the price item or price item bundle.
Description	Displays the description of the price item or price item bundle.
Price Item Usage	Indicates whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>• Pricing</li> <li>• Pricing and Billing</li> </ul>
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul>
	<b>Note:</b> This field appears only when you select the <b>Pricing</b> option from the <b>Price Item Usage</b> list.
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul>
	<b>Note:</b> This field appears only when you select the <b>Yes</b> option from the <b>Bundle</b> list.
Global Price List	Indicates whether the price item or price item bundle is assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Contract Type	Displays the contract type to which the price item or price item bundle is associated.

- **Price Item Characteristics** – Lists the characteristics defined for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item or price item bundle.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price item or price item bundle.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price item or price item bundle is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

### Parameters

The **Parameters** zone lists the parameters to which the price item or price item bundle is associated. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the parameter is effective for the price item or price item bundle.
Effective End Date	Displays the date till when the parameter is effective for the price item or price item bundle.
Parameter	Indicates the parameter to which the price item or price item bundle is associated.  <b>Note:</b> It has a link. On clicking the link, the <b>Parameter</b> screen appears where you can view the details of the respective parameter.
Business Label	Displays the business label of the parameter. If the business label is defined for a parameter, the business label appears instead of the parameter name.
Display Order	Indicates the order in which the parameter and its value should be displayed in the price item parameter information string across the application.

Column Name	Column Description
Parameter Usage	Indicates whether the parameter is used for aggregation and/or for defining the pricing of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• <b>Aggregation</b> – Indicates that the parameter is used for aggregating transactions.</li> <li>• <b>Pricing</b> – Indicates that the parameter is used for aggregating transactions and defining the price item pricing.</li> </ul>
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing.
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.

On clicking the **Broadcast**  icon corresponding to a parameter, the **Predefined Parameter Values for Price Item** zone appears where you can view the valid predefined parameter values of the price item or price item bundle.

<b>Predefined Parameter Values</b> zone	<a href="#">Defining Valid Predefined Parameter Values for a Price Item or Price Item Bundle</a> on page 194

#### Predefined Parameter Values for Price Item

The **Predefined Parameter Values for Price Item** zone lists the predefined parameter values which are valid for the price item or price item bundle. It contains the following columns:

Column Name	Column Description
Parameter Value	Displays the predefined parameter value.
Description	Displays the description of the predefined parameter value.

By default, the **Predefined Parameter Values for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a parameter in the **Parameters** zone.

#### Related Topics

For more information on...	See...
<b>Price Item</b> screen	<a href="#">Price Item (Used for Viewing)</a> on page 204

#### Divisions

The **Divisions** zone lists the divisions to which the price item or price item bundle is associated. It contains the following column:

Column Name	Column Description
Division	Indicates the division to which the price item or price item bundle is associated. <div> <b>Note:</b> It has a link. On clicking the link, the <b>Division</b> screen appears where you can view the details of the respective division. </div>

On clicking the **Broadcast**  icon corresponding to a division, the **Division-Specific Characteristics for Price Item** and **Division-Specific SQIs for Price Item** zones appear.

You can filter the list using the **Division** field available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

### Related Topics

### **Division-Specific Characteristics for Price Item**

The **Division-Specific Characteristics for Price Item** zone lists the characteristics defined for a price item or price item bundle in a specific division. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the price item or price item bundle characteristic is effective for the division.
Characteristic Type	Indicates the characteristic type.  <b>Note:</b> It has a link. On clicking the link, the <b>Characteristic Type</b> screen appears where you can view the details of the respective characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Division-Specific Characteristics for Price Item** zone does not appear in the **Price Item** screen. It appears only when you click the **Broadcast**  icon corresponding to a division in the **Divisions** zone.

### Price Item Relationship

The **Price Item Relationship** zone lists the price items or price item bundles which are associated with the parent price item or added to the price item bundle. It contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Relationship Type	Indicates how the price item or price item bundle is related with the parent price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul>
Bundle Type	Indicates the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul>
	<b>Note:</b> The data appears in this column only when the associated price item is a bundle.

You can filter the list using various search criteria (such as, **Price Item**, **Description**, **Effective Start Date**, and **Relationship Type**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

You can associate or disassociate a price item or price item bundle from a parent price item and add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

## Editing a Price Item or Price Item Bundle

### Prerequisites

To edit a price item or price item bundle, you should have:

- Contract types defined in the application
- Value defined for the **Default Contract Type** option type in the **Pricing Configuration (C1\_PRICING)** feature configuration

### Procedure

To edit a price item or price item bundle:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the link in the **Price Item Information** column corresponding to the price item or price item bundle whose details you want to edit.  
The **Price Item** screen appears.
3. Click the **Edit** button in the **Price Item** zone.

The **Price Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item or price item bundle.
- **Parameters** – Used to associate a parameter with the price item or price item bundle. These associated parameters are then used for aggregating transactions and/or for defining the price item pricing.

#### Note:

The **Parameters** section appears in the **Price Item** screen only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

You cannot associate parameters to ratio and phantom price item bundles. Therefore, while editing the ratio and phantom price item bundles, the **Parameters** section does not appear in the **Price Item** screen.

- **Divisions** – Used to associate the price item or price item bundle with one or more divisions. It also allows you to define division-specific SQIs and characteristics for the price item or price item bundle.
- **Price Item Characteristics** – Used to define characteristics (which are applicable across divisions) for the price item or price item bundle.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Displays the price item or price item bundle.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the price item or price item bundle.	Yes
Price Item Usage	Used to indicate whether the price item or price item bundle is used for only pricing or pricing and billing. The valid values are: <ul style="list-style-type: none"> <li>Pricing</li> <li>Pricing and Billing</li> </ul>	Yes
	<b>Note:</b> The system does not allow you to change the price item usage from <b>Pricing and Billing</b> to <b>Pricing</b> for a price item or price item bundle.	
Price Item Type	Used to indicate the type of price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>Rate</li> <li>Fees</li> </ul>	Yes
	<b>Note:</b> This field appears only when the <b>Price Item Usage</b> field is set to <b>Pricing</b> .	
Bundle	Indicates whether the price item is a bundle. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Not applicable
Bundle Type	Used to indicate the type of the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>Phantom</li> <li>Ratio</li> <li>Regular</li> </ul>	Yes (Conditional)
	<b>Note:</b> This field is required when you are editing a price item bundle.  <b>Note:</b> This field is enabled only when you select the <b>Pricing and Billing</b> option from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.  All the above mentioned values are available in the list when you are editing a price item bundle which is available for pricing and billing. However, when you are editing a price item bundle which is available for only pricing and when the price item type is set to <b>Fees</b> , you can only define a regular price item bundle. Therefore, by default, the value is set to <b>Regular</b> when the <b>Pricing</b> option is selected from the <b>Price Item Usage</b> list and the <b>Yes</b> option from the <b>Bundle</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to indicate whether the price item or price item bundle can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Contract Type	Used to indicate the contract type that you want to associate with the price item or price item bundle. <div> <p><b>Note:</b></p> <p>This field appears only when the <b>Price Item Usage</b> field is set to <b>Pricing and Billing</b>.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Contract Type</b> field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.</p> </div>	Yes

4. Modify the required details in the **Main** section.
5. Associate or disassociate a parameter from the price item or price item bundle, if required.

**Note:**

You can edit the parameter details and remove a parameter from the price item or price item bundle only when the parameter or any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

You can add a parameter which will be used for aggregation (in other words, where the **Parameter Usage** field is set to **Aggregation**) anytime, whenever required. However, you can add a parameter which will be used for pricing (in other words, where the **Parameter Usage** field is set to **Pricing**) only when any other parameter from the same date range is not yet used for aggregation or for defining the price item pricing.

6. Associate or disassociate the price item or price item bundle from the divisions, if required.

**Note:** If the price item or price item bundle is associated to a division to which you do not have access, then the corresponding row in the **Divisions** section is grayed out.

7. Define, edit, or remove division-specific SQIs from the price item or price item bundle, if required.
8. Define, edit, or remove division-specific characteristics from the price item or price item bundle, if required.
9. Define, edit, or remove characteristics from the price item or price item bundle, if required.
10. Click **Save**.

The changes made to the price item or price item bundle are saved.

## Price Item Relationship

Oracle Revenue Management and Billing allows you to associate two or more price items with each other, and thereby group them for various reasons, such as reporting, billing, and so on. In other words, you can define a price item to price item relationship. The price item to which a set of price items are associated is called a parent price item. You can also create a price item bundle and then add price items to the price item bundle. The main objective behind grouping price items or creating price item bundles is to offer discounts based on the volume across price items, facilitate minimum or maximum charge calculations across price items, or offer common price across price items.

While associating a price item with a parent price item or adding a price item to a price item bundle, you need to specify how the price item is related to the parent price item or price item bundle. You can add a price item to a price item bundle using the following relationship types:

- **Bundle** – Used while adding price items in the regular and phantom price item bundles.
- **Denominator** – Used while adding price items in the ratio price item bundles.
- **Numerator** – Used while adding price items in the ratio price item bundles.

However, you can associate a price item or price item bundle with a parent price item using the following relationship types:

- Other
- Custom
- Price Item
- Service
- Service Group

### Note:

You cannot add same set of price items using the same relationship type while defining two or more bundles with the same bundle type. For example, you cannot add P1 and P2 using the relationship type as Bundle while defining regular bundles named BUN1 and BUN2. However, you can use same set of price items while defining two or more price item to price item relationships.

If the multi parameter based pricing feature is enabled, you can add same set of price item and price item parameter combination (using the same relationship type) in more than one bundle (having the same bundle type) provided the price item parameter values are different.

The **Price Item Relationship** screen allows you to view the price items that are already associated with the parent price item or added to the price item bundle. It also allows you to associate or disassociate a price item or price item bundle

from the parent price item, or add or remove a price item or price item bundle from the price item bundle. This screen consists of the following zone:

- [Assigned Price Items](#) on page 214

### Assigned Price Items

The **Assigned Price Items** zone lists the price items or price item bundles that are already associated with the parent price item or added to the price item bundle. You will not find any records in this zone if the parent price item does not have any price item or price item bundle associated with it or if the price item bundle does not have any price item or price item bundle added to it. It contains the following sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to search a particular price item or price item bundle which is associated with the parent price item or added to the price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.	No
Effective Start Date	Used to search price items or price item bundles which are associated with the parent price item or added to the price item bundle from a particular date.	No
Relationship Type	Used to search price items or price item bundles which are related to the parent price item or added to the price item bundle using a particular relationship type. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul>	No

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item Information	Displays information about the price item or price item bundle.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle.
Effective Start Date	Displays the date from when the price item or price item bundle is associated with the parent price item or added to the price item bundle.
Effective End Date	Displays the date till when the price item or price item bundle is associated with the parent price item or added to the price item bundle.

Column Name	Column Description
Relationship Type	<p>Indicates how the price item or price item bundle is related to the parent price item or price item bundle. The valid values are:</p> <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul> <p><b>Note:</b> The <b>Bundle</b> relationship type is used while adding price items in the regular and phantom price item bundles. The <b>Denominator</b> and <b>Numerator</b> relationship types are used while adding price items in the ratio price item bundles. And, all other relationship types, such as <b>Other</b>, <b>Custom</b>, <b>Price Item</b>, <b>Service</b>, and <b>Service Group</b> are used while associating price items to the parent price item.</p>
Price Item Parameters	Indicates the parameters based on which you want to determine pricing for the price item.

You can associate or disassociate a price item or price item bundle from a parent price item, or add or remove a price item or price item bundle from a price item bundle by clicking the **Add/Edit** link in the upper right corner of this zone.

## Viewing the Price Items or Price Item Bundles Associated with a Parent Price Item

### Procedure

To view the price items or price item bundles associated with a parent price item:

1. Search for the price item in the **Price Item** screen.
2. In the **Search Results** section, click the **Price Item Relationship** (  ) icon in the **Price Item Relationship** column corresponding to the price item whose relationship details you want to view.  
The **Price Item Relationship** screen appears.
3. View the price items or price item bundles that are associated with the parent price item in the **Assigned Price Items** zone.

## Associating a Price Item or Price Item Bundle with a Parent Price Item

### Prerequisites

To associate a price item or price item bundle with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs
- Price item or price item bundle associated to at least one division to which the parent price item belongs.

### Procedure

To associate a price item or price item bundle with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **Price Item Relationship** () icon in the **Price Item Relationship** column corresponding to the parent price item to which you want to associate a price item or price item bundle.  
The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.  
The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to associate with the parent price item.	Yes
	<b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.	
Relationship Type	Used to indicate how the price item or price item bundle is related with the parent price item. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul>	Yes
	<b>Note:</b> You can use the <b>Other</b> , <b>Custom</b> , <b>Price Item</b> , <b>Service</b> , or <b>Service Group</b> relationship type while associating a price item or price item bundle to the parent price item.	
Effective Start Date	Used to specify the date from when you want to associate the price item or price item bundle with the parent price item.	Yes
	<b>Note:</b> The effective start date cannot be later than the effective end date.	
Effective End Date	Used to specify the date till when you want to associate the price item or price item bundle with the parent price item.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameters	<p>Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.</p> <p>You must not use the <b>Price Item Parameters</b> field while associating a price item or price item bundle with a parent price item. This is because it is designed to be used while adding a price item or price item bundle to the ratio and phantom price item bundles.</p>	Not applicable
Characteristics	On clicking the <b>Add</b> (  ) icon, you can define relationship-specific characteristics for the price item or price item bundle.	Not applicable

4. Enter the required details in the **Price Item Relationship** screen.

**Note:** You can associate the same set of price items or price item bundles using the same relationship type to more than one parent price item. For example, you can associate the **P1** and **P2** price items using the **Service** relationship type to the **PP1** and **PP2** price items.

5. Define relationship-specific characteristics for the price item or price item bundle, if required.
6. If you want to associate more than one price item or price item bundle with the parent price item, click the **Add** () icon and then repeat the steps from 4 to 5.

**Note:** However, if you want to disassociate a price item or price item bundle from a parent price item, click the **Delete** () icon corresponding to the price item or price item bundle.

7. Click **Save**.

The price item or price item bundle is associated with the parent price item.

## Adding a Price Item or Price Item Bundle to a Price Item Bundle

### Prerequisites

To add a price item or price item bundle to a price item bundle, you should have:

- Price item bundle (to which you want to add a price item or price item bundle) associated with the division to which the user belongs
- Price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated to the same contract type
- Parameters associated with the price item or price item bundle (which you want to add) when you want to determine pricing for the price item based on the parameters in the ratio and phantom price item bundles
- Regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) associated with the same parameters

**Note:** Not only the parameters, but also their details such as parameter usage, mandatory flag, and priority should be identical. Also, the date from when the parameters are effective for the price item bundle (to which you want to add a price item or price item bundle) should be earlier than or equal to the date from when the parameters are effective for the price item or price item bundle (which you want to add).

- Price item or price item bundle (which you want to add) associated to at least one division to which the price item bundle (to which you want to add a price item or price item bundle) belongs

### Procedure

To add a price item or price item bundle to a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price Item Relationship** column corresponding to the price item bundle to which you want to add a price item or price item bundle. The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.

The **Price Item Relationship** screen appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to indicate the price item or price item bundle that you want to add to the price item bundle.	Yes
	<b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to the <b>Price Item</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Relationship Type	Used to indicate how the price item or price item bundle is related to the price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Bundle</li> <li>• Custom</li> <li>• Denominator</li> <li>• Numerator</li> <li>• Other</li> <li>• Price Item</li> <li>• Service</li> <li>• Service Group</li> </ul>	Yes
	<b>Note:</b> You can use the <b>Bundle</b> relationship type while adding a price item or price item bundle in the regular and phantom price item bundles. However, you can use the <b>Denominator</b> and <b>Numerator</b> relationship type while adding a price item or price item bundle in the ratio price item bundles.	
Effective Start Date	Used to specify the date from when the price item or price item bundle is added to the price item bundle.	Yes
	<b>Note:</b> The effective start date cannot be later than the effective end date.	
Effective End Date	Used to specify the date till when the price item or price item bundle is added to the price item bundle.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Price Item Parameters	Used to specify the parameters and their values based on which you want to determine pricing for the price item or price item bundle.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  The <b>Search</b> (  ) icon appears corresponding to the <b>Price Item Parameters</b> field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters</b> screen appears.	
Characteristics	On clicking the <b>Add</b> (  ) icon, you can define relationship-specific characteristics for the price item or price item bundle.	Not applicable

4. Enter the required details in the **Price Item Relationship** screen.

**Note:**

You can add a price item or price item bundle to a regular price item bundle only when the regular price item bundle (to which you want to add a price item or price item bundle) and price item or price item bundle (which you want to add) are associated with the same parameters for the specified date range.

You cannot add the same set of price items using the same relationship type to two or more price item bundles with the same bundle type. For example, you cannot add **P1** and **P2** using the **Bundle** relationship type to the **BUN1** and **BUN2** regular price item bundles.

If the multi parameter based pricing feature is enabled, you can add the same set of price item and price item parameter combination (using the same relationship type) to more than one bundle (with the same bundle type) provided the price item parameter values are different.

You cannot add the same price item or price item bundle in numerator and denominator while defining a ratio price item bundle.

5. Define relationship-specific characteristics for the price item or price item bundle, if required.
6. If you want to add more than one price item or price item bundle to the price item bundle, click the **Add** () icon and then repeat the steps from 4 to 5.

**Note:** However, if you want to remove a price item or price item bundle from a price item bundle, click the **Delete** () icon corresponding to the price item or price item bundle.

7. Click **Save**.

The price item or price item bundle is added to the price item bundle.

**Setting the Parameters for a Price Item or Price Item Bundle****Prerequisites**

To set the parameters for a price item or price item bundle, you should have:

- Parameters (where the **Parameter Usage** field is set to **Pricing**) associated with the price item or price item bundle

**Procedure**

To set the parameters for a price item or price item bundle:

1. Click the **Search** () icon corresponding to the **Price Item Parameters** field.

The **Price Item Parameters** screen appears. It contains the following fields:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle for which you want to set the parameters.
Description	Displays the description of the price item or price item bundle.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameter	Indicates the parameter which is associated with the price item or price item bundle.	Not applicable
	<b>Note:</b> Here, the system displays the price item parameter where the <b>Parameter Usage</b> field is set to <b>Pricing</b> .	
Mandatory	Indicates whether the parameter is mandatory while defining the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Not applicable
Priority	Indicates the priority in which optional parameters should be considered while determining best fit price for the price item or price item bundle.	Not applicable
	<b>Note:</b> The priority for all parameters which are mandatory is set to 0.	
Parameter Value	Used to specify the parameter value.	Yes (Conditional)
	<b>Note:</b> If the parameter value type is <b>Predefined</b> or <b>Reference</b> , the <b>Search</b>  icon appears corresponding to the <b>Parameter Value</b> field. On clicking the <b>Search</b> icon, you can search for a parameter value.  You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	<b>Note:</b> This field is required when you want to determine pricing for the price item or price item bundle based on the parameter.

2. Enter the required details in the **Price Item Parameters** screen.
3. Click **OK**.

A comma-separated list of values appear in the **Price Item Parameters** column corresponding to the price item or price item bundle. The order in which parameter values appear in the price item parameter information string is controlled by the display order (which is defined while associating a parameter with a price item).

**Note:** The value specified for a parameter whose value type is set to **Adhoc** is validated using the validation algorithm attached to the respective parameter.

## Defining Relationship-Specific Characteristics for a Price Item or Price Item Bundle

### Prerequisites

To define relationship-specific characteristics for a price item or price item bundle, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item Relationship**)

### Procedure

To define relationship-specific characteristics for a price item or price item bundle:

1. Click the **Add** (  ) icon in the **Characteristics** column corresponding to the price item or price item bundle for which you want to define relationship-specific characteristics.

A grid appears corresponding to the price item or price item bundle with the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the relationship-specific characteristic is effective for the price item or price item bundle.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Relationship</b> .	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (  ) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a relationship-specific characteristic for the price item or price item bundle.

2. Enter the required details in the **Characteristics** grid.
3. If you want to define more than one relationship-specific characteristic for the price item or price item bundle, click the **Add** (  ) icon and then repeat step 2.

**Note:** However, if you want to remove a relationship-specific characteristic from the price item or price item bundle, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The relationship-specific characteristics are defined for the price item or price item bundle.

## **Disassociating a Price Item or Price Item Bundle from a Parent Price Item**

### **Prerequisites**

To disassociate a price item or price item bundle from a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

### **Procedure**

To disassociate a price item or price item bundle from a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price Item Relationship** column corresponding to the parent price item from which you want to disassociate a price item or price item bundle.  
The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone.  
The **Price Item Relationship** screen appears.
4. Filter the price items or price item bundles associated to the parent price item, if required.
5. In the **Search Results** section, click the **Delete** () icon corresponding to the price item or price item bundle that you want to disassociate from the parent price item.
6. Click **Save**.

The price item or price item bundle is disassociated from the parent price item.

## Removing a Price Item or Price Item Bundle from a Price Item Bundle

### Prerequisites

To remove a price item or price item bundle from a price item bundle, you should have:

- Price item bundle associated with the division to which the user belongs

### Procedure

To remove a price item or price item bundle from a price item bundle:

1. Search for the price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price Item Relationship** column corresponding to the price item bundle from which you want to remove a price item or price item bundle. The **Price Item Relationship** screen appears.
3. Click the **Add/Edit** link in the upper right corner of the **Assigned Price Items** zone. The **Price Item Relationship** screen appears.
4. Filter the price items or price item bundles added to the price item bundle, if required.
5. In the **Search Results** section, click the **Delete** () icon corresponding to the price item or price item bundle that you want to remove from the price item bundle.
6. Click **Save**.  
The price item or price item bundle is removed from the price item bundle.

## Filtering the Price Items or Price Item Bundles Associated with a Parent Price Item

### Prerequisites

To filter the price items or price item bundles associated with a parent price item, you should have:

- Parent price item associated with the division to which the user belongs

### Procedure

To filter the price items or price item bundles associated with a parent price item:

1. Search for the parent price item in the **Price Item** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price Item Relationship** column corresponding to the parent price item whose details you want to view. The **Price Item Relationship** screen appears.
3. Enter the search criteria in the **Assigned Price Items** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

The search results are filtered based on the specified criteria.

### **Viewing the Price Lists, Persons, or Accounts where a Price Item is Assigned**

#### Prerequisites

To view the price lists, persons, or accounts where the price item or price item bundle is assigned, you should have:

- Price item or price item bundle assigned to a price list, person, or account

#### Procedure

To view the price lists, persons, or accounts where the price item or price item bundle is assigned:

1. Search for the price item or price item bundle in the **Price Item** screen.
2. In the **Search Results** section, click the **View** (🔍) icon in the **Price Item Assigned To** column corresponding to the price item or price item bundle whose assignment details you want to view.

The **Price Item Assignments** screen appears.

3. View the price lists where the pricing is defined for the price item or price item bundle in the **Active Price Lists where Price Item is Assigned** zone.
4. View the accounts where the pricing is defined for the price item or price item bundle in the **Accounts where Price Item is Assigned** zone.
5. View the persons where the pricing is defined for the price item or price item bundle in the **Person to whom Price Item is Assigned** zone.

## Price List

A price list allows you to define standard prices for a group of price items. In other words, a price list is a rate card for price items or services which are offered to the accounts or persons. You can create more than one price list. For example, you can create a price list for large, medium-sized, and small customers. You can also create a set of price lists for different regions. You can define two types of price lists — **Standard** and **Promotional**. You can also set eligibility criteria for the price list with effective start date, end date, and description. At present, there is no functionality associated with the price list type. The implementation team can use the price list type to define the custom logic as per the business requirements.

A price list and price item pricing within the price list are effective for a particular duration. You can define multiple pricing for the same price item and variance parameter or product parameters combination within a price list only when the price item pricing date range is different. You can assign the same price item in multiple price lists and define different pricing for the price item in each price list based on the business requirements.

The system enables you to specify the duration for which the price list is available for assignment to an account or a person. However, note that at present, the availability start and end dates are not used in the product while assigning a price list to an account or a person. If required, the implementation team can build the custom logic using the availability start and end dates in the product.

Once you create a price list, you have to assign price items to the price list and define pricing for each price item assigned to the price list. The price lists are then assigned to accounts or persons to indicate the prices that will be charged for various price items or services offered to them. You can assign multiple price lists to an account or a person for an overlapping date range. But, you need to specify the priority or order for the price list in which the pricing from the price list should be considered. You can also assign the same price list to multiple accounts or persons.

You can define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit price item pricing from the price list hierarchy.

The system allows you to create the following:

- **Default Price List** – You can create a price list and set it as a default price list for a particular division. To define a default price list for a division, you need to set the value for the **Default Price List ID** parameter in the price assignment search algorithm which is attached to the division. If the effective price item pricing is not available

at any level in the customer hierarchy, the system checks whether the default price list is specified in the price assignment search algorithm. If the default price list is specified in the algorithm, the system checks whether effective price item pricing is available in the default price list and accordingly uses the price item pricing. You can have the same price list as a the default price list for multiple divisions.

- **Global Price List** – You can create one global price list in the system. It is used only when the price item pricing is not available at any level in the customer hierarchy and in the default price list associated with the division. You can assign only those price items in the global price list whose the **Global Price List** option is set to **Yes**. The global price list is used while searching an effective price item pricing only when the **Global Price List** parameter in the price assignment search algorithm (attached to the division) is set to **Y**. Finally, if the effective price item pricing is not available in the default and/or global price list, an error message occurs indicating that the effective price item pricing is not available in the system.
- **Template Price List** – You can define a template price list and assign template price item pricing to a template price list. You cannot assign template price list to an account or a person. You can only create a copy of a template price item pricing which is assigned to a template price list. Once you create a copy of the template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

## Price List (Used for Searching)

The **Price List** screen allows you to search for a price list using various search criteria. It also allows you to define a price list. This screen consists of the following zones:

- [Search Price List](#) on page 230
- [Price List Price Items](#) on page 233

### Search Price List

The **Search Price List** zone allows you to search for a price list using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a price list using the price list details. The valid value is: <ul style="list-style-type: none"> <li>• Price List Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Price List Details</b> option is selected.	
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search a price list with a particular description.	No
Effective Start Date	Used to search price lists which are effective from a particular date.	No
Effective End Date	Used to search price lists which are effective till a particular date.	No
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> <li>• Promotional</li> <li>• Standard</li> </ul>	No
	<b>Note:</b> By default, the <b>Standard</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to indicate whether you want to search a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Availability Start Date	Used to search price lists which are available for assignment to an account or a person from a particular date. <div> <b>Note:</b> By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone. </div>	No
Availability End Date	Used to search price lists which are available for assignment to an account or a person till a particular date. <div> <b>Note:</b> By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone. </div>	No
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> <li>• Template</li> </ul> <div> <b>Note:</b> By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone. </div>	No
Division	Used to search price lists which are associated with a particular division. <div> <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. </div>	No
Parent Price List	Used to search price lists which inherit pricing from a particular parent price list. <div> <b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.  By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone. </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List Effective Date	Used to search price lists that inherit pricing from a parent price list which is effective from a particular date.	No
	<b>Note:</b> By default this field does not appear. This field appears only when you click the <b>Advanced Search</b> link in the upper right corner of the <b>Search Price List</b> zone.	

**Note:** You must specify at least one search criterion while searching for a price list.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	Displays information about the price list.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Price List</b> screen appears where you can create a new price list using an existing price list.
Price List Pricing	On clicking the <b>View</b> (  ) icon in the <b>Price List Pricing</b> column, the <b>Price List Price Item Pricing</b> screen appears where you can view and edit a list of price items pricing information assigned to the price list.
Price List Assigned To	On clicking the <b>View</b> (  ) icon in the <b>Price List Assigned To</b> column, the <b>Price List Assignments</b> screen appears where you can view the details of the persons and accounts to which the price list is assigned.
Eligible Accounts/ Persons	On clicking the <b>View</b> (  ) icon in the <b>Eligible Accounts/Persons</b> column, the <b>Entities Eligible for Price List Assignment</b> screen appears where you can search for a list of eligible accounts and persons to which you want to assign the price list in a particular division.

**Note:**

However, when you search for a price list by specifying the date (which can be current, past or future date) in the **Parent Price List Effective Date** field, the system retrieves the price lists that meet the search criteria along with the details of the parent price list that is effective on that date.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

- On clicking the **Broadcast**  icon corresponding to the **Price List Information** field, the **Price List Price Items** zone appears where you can view a list of price items to which the price list is assigned.

**Price List Price Items**

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of the price item pricing information and pricing ID which are separated by a comma (,) for the price list.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can view the pricing information of the respective price item.
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b> .

Column Name	Column Description
Pricing Status	Indicates the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Draft</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> <li>• Regular</li> </ul>
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using the existing price item pricing.

By default, the **Price List Price Items** zone does not appear in the **Price List** screen. It appears only when you click the **Broadcast** () icon corresponding to the price list in the **Search Price List** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

### Searching for a Price List

#### Prerequisites

To search for a price list, you should have:

- Divisions defined in the application

- Price list associated with the division to which the user belongs

### **Procedure**

To search for a price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.  
A sub-menu appears.
3. Click the **Search** option from the **Price List** sub-menu.  
The **Price List** screen appears.
4. Enter the search criteria in the **Search Price List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### **Viewing Price Items Assigned to a Price List**

#### **Prerequisites**

To view price items assigned to a price list, you should have:

- An algorithm defined using the **C1-PLPINFO** algorithm type and attached to **Pricelist Products Assignment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

### **Procedure**

To view price items assigned to a price list:

1. Search for the price list in the **Price List** screen.
2. Do either of the following:

If you want to...	Then...
<b>View the price items assigned to the price list in the price list screen</b>	<ol style="list-style-type: none"> <li>1. In the <b>Search Results</b> section, click the <b>Broadcast</b>  icon corresponding to the price list whose price items details you want to view.</li> <li>2. The <b>Price List Price Items</b> zone appears.</li> </ol>

If you want to...	Then...
View the price items assigned to the price list in the price list price item pricing screen	<ol style="list-style-type: none"> <li>1. In the <b>Search Results</b> section, click the link in the <b>Price List Information</b> column corresponding to the price list whose price items details you want to view.</li> <li>2. The <b>Price List</b> screen appears.</li> <li>1. In the <b>Search Results</b> section, click the <b>View</b> (🔍) icon in the <b>Price List Pricing</b> column corresponding to the price list whose price items details you want to view.</li> <li>2. The <b>Price List Price Item Pricing</b> screen appears.</li> </ol>

3. View the price items that are assigned to the price list in the **Price List Price Items** zone.

## Defining a Price List

### Procedure

To define a price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.  
A sub-menu appears.
3. Click the **Add** option from the **Price List** sub-menu.

The **Price List** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to associate the price list with one or more parent price lists for a specified duration.
- **Divisions** - Used to associate the price list with one or more divisions.
- **Eligibility Criteria** - Used to define one or more eligibility criteria for the price list.
- **Characteristics** - Used to define a list of characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	<b>Note:</b> By default, the current date appears in this field.	
Effective End Date	Used to specify the date till when the price list is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>Promotional</li> <li>Standard</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Standard</b> option is selected.	
Global Price List	Used to indicate whether the price list is a global price list or not. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person.	No
	<b>Note:</b> At present, the availability start date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person.	No
	<b>Note:</b> The availability end date cannot be earlier than the availability start date.  At present, the availability end date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Active</b> - Used to indicate that the price list is used for billing.</li> <li>• <b>Proposed</b> - Used to indicate that the price list is used for quotations.</li> <li>• <b>Template</b> - Used to indicate that the price list is a template price list.</li> </ul> <p><b>Note:</b> By default, the <b>Active</b> option is selected.</p>	Yes

**Tip:** Alternatively, you can access the **Price List** screen by clicking the **Add** button in the **Page Title** area of the **Price List** screen.

4. Enter the required details in the **Main** section.

**Note:** By default the **Main** section is displayed.

5. Associate the price list with one or more parent price list, if required.
6. Associate the price list with one or more divisions, if required.
7. Define eligibility criteria for the price list, if required.
8. Define characteristics for the price list, if required.
9. Click **Save**.

The price list is defined.

**Note:** The price list ID is generated automatically when the price list is defined.

### Defining the Price List Hierarchy

Oracle Revenue Management and Billing allows you to define the price list hierarchy. It helps you to inherit the price item pricing from the parent price list if the price item pricing is not available in the price list (assigned to the account, person, or parent person). And, if the price item pricing is not available in the parent price list, the system will search for the price item pricing in the parent's parent price list (i.e. in the grandparent price list) and continue till it reaches the last level in the hierarchy.

In other words, when you define the price list hierarchy and assign the price list to an account or a person, the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned

price list. However, if the price item pricing is available on both the assigned and parent price lists, the system derives the price item pricing from the assigned price list.

You can define multiple parent price lists for a price list. But, only one parent price list is effective for a particular duration. Two or more price lists can have the same parent price list.

### Procedure

To define the price list hierarchy:

1. Click the **Hierarchy** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price list.

The **Hierarchy** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Parent Price List Effective From Date	Used to specify the date from when the price list inherits pricing from the parent price list.	Yes (Conditional)
	<b>Note:</b> The parent price list effective from date cannot be later than the parent price list effective to date and earlier than price list effective end date.	<b>Note:</b> This field is required when you are associating the price list with a parent price list.
Parent Price List Effective To Date	Used to specify the date till when the price list inherits pricing from the parent price list.	No
	<b>Note:</b> The parent price list effective to date cannot be earlier than the parent price list effective from date and later than price list effective end date.	
Parent Price List	Used to specify the parent price list ID to which you want to associate the price list.	Yes (Conditional)
	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.  On specifying the parent price list, the description of the parent price list appears corresponding to the <b>Parent Price List</b> field.	<b>Note:</b> This field is required when you are associating the price list with a parent price list.

2. Enter the required details in the **Hierarchy** section.
3. If you want to associate the price list with more than one parent price list, click the **Add**  icon corresponding to the parent price list and then repeat step 2.

#### Note:

However, If you want to remove a parent price list from the price list hierarchy, click the **Delete**  icon corresponding to the parent price list.

You can associate a price list with multiple parent price lists. But, only one parent price list is effective for a particular duration. Also, while associating a price list with a parent price list, you can only specify a price list which is effective during the specified duration.

4. Click **Save**.

The price list hierarchy is defined.

## **Defining a Characteristic for a Price List**

### **Prerequisites**

To define a characteristic for a price list, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List**)

### **Procedure**

To define a characteristic for a price list:

1. Click the **Characteristics** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price list.

The **Characteristics** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price list.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price List</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the price list.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the price list.

2. Enter the required details in the **Characteristics** section.

3. If you want to define more than one characteristic for the price list, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price list, click the **Delete** (🗑️) icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for the price list.

### **Related Topics**

### **Associating a Price List with a Division**

You can assign a price list only to those accounts or persons which belong to the division to which the price list is associated. Therefore, you need to associate the price list with appropriate divisions.

#### **Prerequisites**

To associate a price list with a division, you should have:

- Divisions defined in the application

#### **Procedure**

To associate a price list with a division:

1. Click the **Divisions** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price list.

The **Divisions** section appears. It contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the price list.	Yes
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

2. Select the required division from the list.
3. If you want to associate the price list with more than one division, click the **Add** (+) icon corresponding to the division and then repeat step 2.

**Note:** However, if you want to remove the price list from a division, click the **Delete** (🗑️) icon corresponding to the division.

4. Click **Save**.

The price list is associated with the division.

**Tip:** Alternatively, you can associate a price list with a division using the **Division** screen.

**Defining Eligibility Criteria for a Price List****Prerequisites**

To define eligibility criteria for a price list, you should have:

- The **Price List Eligibility Criteria** check box selected in the **Parameter Usage** section while defining the parameter

**Procedure**

To define eligibility criteria for a price list:

- Click the **Eligibility** or **Show All** link in the **Section** pane when you are defining, editing, or copying a price list.

The **Eligibility** section appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Criteria	On clicking the <b>Add</b> (  ) icon, you can associate eligibility criteria of parameters for the price list.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a parameter eligibility criteria for the price list.
Effective Start Date	Used to specify the date from when the eligibility criteria is effective for the price list.	Yes (Conditional) <b>Note:</b> This field is required when you are defining an eligibility criteria for the price list.
Effective End Date	Used to specify the date till when the eligibility criteria is effective for the price list.	No
Description	Used to specify the description for the eligibility criteria.	Yes
Sequence Number	Used to indicate the order in which the parameter eligibility criteria for the price list should be executed.  <b>Note:</b> This field appears only when you click the <b>Add</b> (  ) icon in the <b>Criteria</b> column corresponding to the eligibility criteria	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the parameter (on the left hand side) which is used in the pricing eligibility criteria.</p> <p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears.</p> <p>On specifying the value for a parameter, the description of the parameter appears corresponding to the <b>Parameter</b> field.</p> <p>The parameter search results displays only those parameters where the <b>Price List Eligibility Criteria</b> check box is selected.</p> <p>This field appears only when you click the <b>Add</b> () icon in the <b>Criteria</b> column corresponding to the eligibility criteria</p>	Yes
Operator	<p>Used to specify the relational operator to define the relation between the parameter name and value.</p> <p><b>Note:</b> This field appears only when you click the <b>Add</b> () icon in the <b>Criteria</b> column corresponding to the eligibility criteria</p>	Yes
Parameter Value Type	<p>Used to indicate whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value. The valid values are:</p> <ul style="list-style-type: none"> <li>Parameter</li> <li>Value</li> </ul> <p><b>Note:</b> This field appears only when you click the <b>Add</b> () icon in the <b>Criteria</b> column corresponding to the eligibility criteria</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).</p> <p><b>Note:</b></p> <p>On selecting <b>Parameter</b> from the <b>Parameter Value Type</b> column, a <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears.</p> <p>On specifying the value for a parameter, the description of the parameter appears corresponding to the <b>Parameter</b> field.</p> <p>The parameter search results displays only those parameters where the <b>Price List Eligibility Criteria</b> check box is selected.</p> <p>This field appears only when you click the <b>Add</b> () icon in the <b>Criteria</b> column corresponding to the eligibility criteria</p>	Yes
Parameter Value	Used to indicate the parameter value against which you want to compare the parameter (on the left hand side).	
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul> <p><b>Note:</b> This field appears only when you click the <b>Add</b> () icon in the <b>Criteria</b> column corresponding to the eligibility criteria</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul> <p><b>Note:</b> This field appears only when you click the <b>Add</b> (  ) icon in the <b>Criteria</b> column corresponding to the eligibility criteria</p>	Yes
Is Insufficient	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul> <p><b>Note:</b> This field appears only when you click the <b>Add</b> (  ) icon in the <b>Criteria</b> column corresponding to the eligibility criteria</p>	Yes

- Enter the required details in the **Eligibility** section.
- If you want to define more than one eligibility criteria for the price list, click the **Add** (  ) icon corresponding to the criteria and then repeat step 2.

**Note:** However, if you want to remove the eligibility criteria, click the **Delete** (  ) icon corresponding to the criteria.

- If you want to define more than one parameter eligibility criteria for the price list, click the **Add** (  ) icon corresponding to the parameter.

**Note:** However, if you want to remove the parameter eligibility criteria from the price list, click the **Delete** (  ) icon corresponding to the parameter.

- Click **Save**.

The eligibility criteria is defined for the price list.

## Copying a Price List

Instead of creating a price list from scratch, you can create a new price list using an existing price list. This is possible through copying a price list. On copying a price list, the details including the pricing parameters, divisions, characteristics, eligibility criteria, and the assigned price items are copied to the new price list. You can then edit the details, if required.

### Prerequisites

To copy a price list, you should have:

- Price list (whose copy you want to create) defined in the application
- Price list (whose copy you want to create) associated with the division to which the user belongs

### Procedure

To copy a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price list using which you want to define a new price list.

The **Price List** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to associate the price list with one or more parent price lists for a specified duration.
- **Divisions** - Used to associate the price list with one or more divisions.
- **Eligibility Criteria** - Used to define one or more eligibility criteria for the price list.
- **Characteristics** - Used to define a list of characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	<b>Note:</b> The effective start date cannot be later than the effective end date.	
Effective End Date	Used to specify the date till when the price list is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>Promotional</li> <li>Standard</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Standard</b> option is selected.	
Global Price List	Used to Indicate whether the price list is a global price list or not. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Availability Start Date	Used to specify the date from when the price list is available for assignment to an account or a person.	Yes
	<b>Note:</b> At present, the availability start date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Availability End date	Used to specify the date till when the price list is available for assignment to an account or a person.	No
	<b>Note:</b> The availability end date cannot be earlier than the availability start date.  At present, the availability end date is not used in the price item while assigning a price list to an account or a person. It is available for future use.	
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	Yes
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> <li><b>Active</b> - Used to indicate that the price list is used for billing.</li> <li><b>Proposed</b> - Used to indicate that the price list is used for quotations.</li> <li><b>Template</b> - Used to indicate that the price list is a template price list.</li> </ul>	Yes
Copy Pricing	Used to indicate whether you want to copy the pricing information to the price list. The valid values are: <ul style="list-style-type: none"> <li>All</li> <li>None</li> </ul>	Yes

3. Enter the required details in the **Main** section.
4. Add, edit, or remove the parent price list details, if required.
5. Associate or disassociate the price list from the required divisions.
6. Define, edit, or remove eligibility criteria for the price list, if required.
7. Define, edit, or remove characteristics from the price list, if required.
8. Click **Save**.

The new price list is defined.

**Note:** The price list ID is generated automatically when the price list is defined.

### **Viewing the Price List Details**

#### **Procedure**

To view the details of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to view.

The **Price List** screen appears. It contains the following zones:

- [Price List](#) on page 249
  - [Eligibility Criteria](#) on page 250
  - [Price List Price Items](#) on page 233
3. View the basic details, hierarchy, divisions, and characteristics of the price list in the **Price List** zone.
  4. View the eligibility criteria to which the price list is associated in the **Eligibility Criteria** zone.
  5. View the price items that are assigned to the price list in the **Price List Price Items** zone.

## Price List (Used for Viewing)

The **Price List** screen allows you to view the details of a price list. It also allows you to edit a price list. It contains the following zones:

- **Price List** - Displays the basic details of the price list.
- **Eligibility Criteria** - Displays the eligibility criteria for the price list.
- **Price List Price Items** - Displays the price items that are assigned to the price list.

### Price List

The **Price List** zone displays the details of the price list. It contains the following sections:

- **Main** - Displays basic information about the price list. It contains the following fields:

Field Name	Field Description
Price List ID	Displays the price list ID.
Price List Description	Displays the description for the price list.
Effective Start Date	Displays the date from when the price list is effective.
Effective End Date	Displays the date till when the price list is effective.
Price List Type	Indicates the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Promotional</li> <li>• Standard</li> </ul>
Global Price List	Indicates whether the price list is a global price list or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End date	Displays the date till when the price list is available for assignment to an account or a person.
Validity Period (in Days)	Displays the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• <b>Active</b> – Indicates that the price list is used for billing.</li> <li>• <b>Proposed</b> – Indicates that the price list is used for quotations.</li> <li>• <b>Template</b> – Indicates that the price list is a template price list.</li> </ul>

- **Hierarchy** - Lists the parent price list from where the price list inherits the price item pricing for a specified duration. It contains the following columns:

Column Name	Column Description
Parent Price List	Displays the ID of the parent price list.
Parent Price List Effective From Date	Displays the date from when the price list can inherit pricing from the parent price list.

Column Name	Column Description
Parent Price List Effective To Date	Displays the date till when the price list can inherit pricing from the parent price list.

- **Divisions** - Lists the divisions to which the price list is associated. It contains the following column:

Column Name	Column Description
Division	Displays the division to which the price list is associated.
	<b>Note:</b> It has a link. On clicking the link, the <b>Division</b> screen appears where you can view the details of the respective division.

- **Characteristics** - Lists the characteristics that are associated with the price list. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price list.
Characteristic Type	Displays the characteristic type.
Characteristic Value	Displays the value for the characteristic type.

- **Record Actions** - This section contains the following button:

Button Name	Button Description
Edit	Used to edit the details of the price list.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price list is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

### **Eligibility Criteria**

The **Eligibility Criteria** zone lists the criteria to which the price list is associated. It contains the following columns:

Column Name	Column Description
Effective Start Date	Displays the date from when the eligibility criteria is effective for the price list.
Effective End Date	Displays the date till when the eligibility criteria is effective for the price list.
Description	Displays the description for the eligibility criteria.
Sequence	Indicates the order in which the price list eligibility criteria should be executed.

Column Name	Column Description
Parameter	Indicates the parameter (on the left hand side) used in the pricing eligibility criteria.
Operator	Displays the relational operator to define the relation between the parameter name and value.
Parameter Value Type	Indicates whether the parameter (on the left hand side) must be compared against another parameter (on the right hand side) or directly against a parameter value.
Parameter	Indicates the parameter (on the right hand side) against which you want to compare the parameter (on the left hand side).
Parameter Value	Indicates the parameter value against which you want to compare the parameter (on the left hand side).
Is True	Indicates what happens when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> - Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> - Indicates that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> - Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>
Is False	Indicates what happens when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> - Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> - Indicates that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> - Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>
Is Insufficient	Indicates what happens when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> - Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> - Indicates that the action specified in the <b>Rule False Action</b> field should be executed</li> <li>• <b>Rule Is True</b> - Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>

#### Price List Price Items

The **Price List Price Items** zone lists price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of the price item pricing information and pricing ID which are separated by a comma (,) for the price list.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can view the pricing information of the respective price item.
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Pricing Status	Indicates the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Draft</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> <li>• Regular</li> </ul>
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using the existing price item pricing.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

## Editing a Price List

### Procedure

To edit a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the link in the **Price List Information** column corresponding to the price list whose details you want to edit.

The **Price List** screen appears.

3. Click the **Edit** button in the **Price List** zone.

The **Price List** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price list.
- **Hierarchy** - Used to associate the price list with one or more parent price lists for a specified duration.
- **Divisions** - Used to associate the price list with one or more divisions.
- **Eligibility Criteria** - Used to define one or more eligibility criteria for the price list.
- **Characteristics** - Used to define a list of characteristics (which are applicable across divisions) for the price list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to specify the description for the price list.	Yes
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
	<b>Note:</b> The system will not allow you to change the effective start date when: <ul style="list-style-type: none"> <li>• There is a price item assigned to the price list on that date.</li> <li>• The price list is assigned to an account or a person on that date.</li> </ul>	
Effective End Date	Used to specify the date till when the price list is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price List Type	Used to indicate the type of the price list. The valid values are: <ul style="list-style-type: none"> <li>Promotional</li> <li>Standard</li> </ul>	Yes
Global Price List	Used to indicate whether the price list is a global price list or not. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Availability Start Date	Used to the specify the date from when the price list is available for assignment to an account or a person.  <b>Note:</b> At present, the availability start date is not used in the product while assigning a price list to an account or a person. It is available for future use.	No
Availability End Date	Used to the specify the date till when the price list is available for assignment to an account or a person.  <b>Note:</b> The availability end date cannot be earlier than the availability start date.  At present, the availability end date is not used in the product while assigning a price list to an account or a person. It is available for future use.	No
Validity Period (in Days)	Used to specify the period in days for which the price list is valid. It is used to calculate price list assignment validity end date while assigning the price list to an account or a person.	No
Status	Used to indicate the status of the price list. The valid values are: <ul style="list-style-type: none"> <li><b>Active</b> – Used to indicate that the price list is used for billing. This value appears only when you are editing a proposed price list</li> <li><b>Proposed</b> – Used to indicate that the price list is used for quotations.</li> <li><b>Template</b> – Used to indicate that the price list is a template price list.</li> </ul> <b>Note:</b> You cannot change the status of an <b>Active</b> and a <b>Template</b> price list.	Yes

4. Modify the details in the **Main** section, if required.

**Note:** By default the **Main** section is displayed.

5. Add, edit or remove parent price list from the price list hierarchy, if required.

- Associate or disassociate the price list from the divisions, if required.

**Note:** You can only view those divisions to which you have access in the **Division** list. If the price list is associated to a division to which you do not have access, then the **Divisions** section is grayed out.

- Define, edit, or remove eligibility criteria from the price list, if required
- Define, edit, or remove characteristics from the price list, if required.
- Click **Save**.

The changes made to the price list is saved.

## Price List Price Item Pricing

Once a price list is created, you can either assign a price item to the price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to the price list. The **Price List Price Item Pricing** screen allows you to:

- View and filter the price items that are assigned to the price list
- Search and assign price items to the price list
- Copy a price item pricing and assign it to the price list

This screen consists of the following zones:

- [Price List Price Items](#) on page 255
- [Search Price Item or Price Item Pricing](#) on page 257

### Price List Price Items

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of the price item pricing information and pricing ID which are separated by a comma (,) for the price list.  <b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can view the pricing information of the respective price item.

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Pricing Status	Indicates the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Draft</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Edit	On clicking the <b>Edit</b> (  ) icon, you can edit the price item pricing from the price list.
Delete	On clicking the <b>Delete</b> (  ) icon, you can remove the price item pricing from the price list.
	<b>Note:</b> The <b>Delete</b> icon appears in this column only when the price list is not yet assigned to any account or person.  This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

### **Related Topics**

For more information on...	See...

## Search Price Item or Price Item Pricing

You can assign a price item or price item bundle to a price list and then define pricing for the price item or price item bundle, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item or Price Item Pricing** zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search price item, pricing assigned to price list, override pricing for an account or a person, pricing assigned to a standard product version or a packaged product version. The valid values are:</p> <ul style="list-style-type: none"> <li>• Price Item</li> <li>• Price list Pricing</li> <li>• Account Override Pricing</li> <li>• Person Override Pricing</li> <li>• Standard Product Version</li> <li>• Packaged Product Version</li> <li>• Packaged Product Version - Add on Service</li> </ul> <p><b>Note:</b> By default, the <b>Price Item</b> option is selected.</p>	Yes
Price Item	<p>Used to search a particular price item or price item bundle.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field when you select the <b>Price list Pricing</b>, <b>Account Override Pricing</b>, or <b>Person Override Pricing</b> option from the <b>Search by</b> list. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.</p>	No
Description	<p>Used to search price items or price item bundles with a particular description.</p> <p><b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>No</li> <li>Yes</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	
Bundle	Used to indicate whether you want to search for price item bundles. The valid values are: <ul style="list-style-type: none"> <li>No</li> <li>Yes</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	
Price List ID	Used to search pricing of price items or price item bundles which are assigned to a particular price list.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears. This field appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.	
Effective Start Date	Used to search pricing of price items or price item bundles assigned to price lists which are effective from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	
Pricing Status	Used to search pricing of price items or price item bundles with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Draft</li> <li>Inactive</li> <li>Pending in Approval</li> <li>Proposed</li> <li>Rejected</li> <li>Template</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to search pricing of price items or price item bundles assigned to price lists which are effective till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> <li>• Regular</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	
Account ID	Used to search pricing of price items or price item bundles which are assigned to a particular account.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears. This field appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.	
Person ID	Used to search pricing of price items or price item bundles which are assigned to a particular person.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears. This field appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for the pricing of a price item or price item bundle.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the price list belongs. It may also include price items or price item bundles that are already assigned to the price list in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the <b>Assign</b> (  ) icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing.
Price Item Information	Displays details of the price item or price item bundle.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle.
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.
<b>Pricing</b>	Displays details of the price item pricing.
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can view the details of the respective price item pricing.</p> <p>You can also perform the following actions on the price item pricing if the <b>Pricing Eligibility</b> check box is selected for the respective price item pricing:</p> <ul style="list-style-type: none"> <li>• Add</li> <li>• Edit</li> <li>• Submit for Validation</li> </ul>
Account Information	Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears where you can view or edit the details of the respective account.</p> <p>The account information string appears only when an algorithm defined using the <b>C1-AC-INFO</b> algorithm type is attached to the <b>Account Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>

Column Name	Column Description
Person Information	Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view or edit the details of the respective person.</p> <p>The person information string appears only when an algorithm defined using the <b>PERS-INFO</b> algorithm type is attached to the <b>Person Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Price List Information	Indicates the price list to which the price item pricing is assigned.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view or edit the details of the respective price list.</p>
Variance Parameter	Indicates the variance parameter which is used for defining the price item pricing.
	<p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).
	<p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.

Column Name	Column Description
Pricing Status	<p>Indicates the status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Draft</li> <li>• Inactive</li> <li>• Pending in Approval</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Rate Schedule	<p>Indicates the rate schedule which is used for defining the price item pricing.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Rate Schedule</b> screen appears where you can view or edit the details of the respective rate schedule.</p>
Price Assignment Usage	<p>Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are:</p> <ul style="list-style-type: none"> <li>• AC</li> <li>• NC</li> </ul>
Price Assignment Type	<p>Indicates the type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> <li>• Regular</li> </ul> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>
Price Item	<p>Displays the price item or price item bundle code.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can define the pricing for the respective price item or price item bundle.</p>
Description	Displays the description of the price item or price item bundle.
Global Price List	<p>Indicates whether the price item or price item bundle can be assigned to a global price list. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Unit of Measure	Indicates the unit of measure associated with the price item or price item bundle.
Bundle	<p>Indicates whether the price item is a bundle or not. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>

Column Name	Column Description
Owner ID	Displays the ID of the person for whose account the price list is created.
Party ID	Displays the third party ID.
Price List ID	Indicates the price list to which the price item pricing is assigned.
	<b>Note:</b> This column appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.
Price Assignment ID	Displays the price assignment ID.
Price Assignment Owner Type Flag	Displays whether price list or party is the owner of the price assignment.
Bundle Type	Indicates the type of the price item bundle. If the price item bundle is available for pricing and billing, the valid values are: <ul style="list-style-type: none"> <li>• Phantom</li> <li>• Ratio</li> <li>• Regular</li> </ul> However, if the price item bundle is available for only pricing and the price item type is <b>Fees</b> then the valid value is <b>Regular</b> .
	<b>Note:</b> This column appears only when you select the <b>Yes</b> option from the <b>Bundle</b> list.
Price Item Type	Indicates the type of the price item or price item bundle. The valid values are: <ul style="list-style-type: none"> <li>• Rate</li> <li>• Fees</li> </ul>

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (🗑️) icon in the upper right corner of this zone.

### Viewing Price Items Assigned to a Price List

#### Prerequisites

To view price items assigned to a price list, you should have:

- An algorithm defined using the **C1-PLPINFO** algorithm type and attached to **Pricelist Products Assignment Information** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

### Procedure

To view price items assigned to a price list:

- Search for the price list in the **Price List** screen.
- Do either of the following:

If you want to...	Then...
<b>View the price items assigned to the price list in the price list screen</b>	<ol style="list-style-type: none"> <li>In the <b>Search Results</b> section, click the <b>Broadcast</b>  icon corresponding to the price list whose price items details you want to view.</li> <li>The <b>Price List Price Items</b> zone appears.</li> </ol>
<b>View the price items assigned to the price list in the price list price item pricing screen</b>	<ol style="list-style-type: none"> <li>In the <b>Search Results</b> section, click the link in the <b>Price List Information</b> column corresponding to the price list whose price items details you want to view.</li> <li>The <b>Price List</b> screen appears.</li> </ol>
	<ol style="list-style-type: none"> <li>In the <b>Search Results</b> section, click the <b>View</b>  icon in the <b>Price List Pricing</b> column corresponding to the price list whose price items details you want to view.</li> <li>The <b>Price List Price Item Pricing</b> screen appears.</li> </ol>

- View the price items that are assigned to the price list in the **Price List Price Items** zone.

## Removing a Price Item Pricing from a Price List

### Procedure

To remove a price item from a price list:

- Search for the price list in the **Price List** screen.
- In the **Search Results** section, click the **View**  icon from the **Price List Pricing** column corresponding to the price list from which you want to remove a price item.  
The **Price List Price Item Pricing** screen appears.
- Filter the list in the **Price List Price Items** zone, if required.

- Click the **Delete** (🗑️) icon in the **Delete** column corresponding to the price item that you want to remove from the price list.

A message appears confirming whether you want to remove the price item from the price list.

**Note:** The **Delete** icon appears in the **Delete** column only when the price list is not yet assigned to any account or person.

- Click **OK**.

The price item is removed from the price list.

## **Editing a Price Item Pricing of a Price List**

### **Prerequisites**

To edit a price item pricing of a price list, you should have:

- Transactions mapped to the price item defined in the application

- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### **Procedure**

To edit a price item pricing of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price List Pricing** column corresponding to the price list whose details you want to view.  
The **Price List Price Item Pricing** screen appears.
3. Price assignments effective for the price list appears in the **Price List Price Items** zone.
4. Click the **Edit** () icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item pricing.
- **TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** - Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<b>Note:</b> The effective start date cannot be later than the effective end date.  If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.  This field will be inactive if the price item pricing is already assigned to an account or a person.	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> - Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> - Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div> <b>Note:</b>  The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type. </div> <ul style="list-style-type: none"> <li>• <b>Post Processing - Invoice Based</b> - Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div> <b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>. </div> <ul style="list-style-type: none"> <li>• <b>Post Processing - Price Item Based</b> - Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div> <b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>. </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div> <b>Note:</b> This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode. </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> - Indicates that the price assignment is created as a draft.</li> <li>• <b>Active</b> - Indicates that the price assignment is used for billing.</li> <li>• <b>Inactive</b> - Indicates that the price assignment is no longer used for billing.</li> <li>• <b>Proposed</b> - Indicates that the price assignment is to be used for quotations.</li> <li>• <b>Rejected</b> - Indicates that the price assignment is rejected and should not be used for quotations.</li> <li>• <b>Template</b> - Indicates that the price assignment is a template price list.</li> </ul> <p><b>Note:</b> If a price assignment is in <b>Active</b> status, you can change its status to <b>Inactive</b>. If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b>.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <p><b>Note:</b> Rate schedules control how the bills for the price item will be calculated. The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.</p>	Yes
Pricing Rule Type	<p>Used to indicate the rule type which is used for price item pricing. The valid value is:</p> <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are editing a two-dimensional pricing rule.</p>

Field Name	Field Description	Mandatory (Yes or No)
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, <b>Yes</b> is selected.	
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul>	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	

5. Modify the details in the **Main** section, if required.
6. Edit the TFM Information for the price item pricing, if required.
7. Define, edit or remove characteristics from the price item pricing, if required.
8. Define, edit or remove parameters from the price item pricing, if required.
9. Click **Save**.

The changes made to the price item pricing are saved.

## **Assigning a Price Item to a Price List**

### **Prerequisites**

To assign a price item to a price list, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application

- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### Procedure

To assign a price item to a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **View** () icon in the **Price List Pricing** column corresponding to the price list whose details you want to view.  
The **Price List Price Item Pricing** screen appears.
3. Search for the price item that you want to assign to the price list in the **Search Price Item or Price Item Pricing** zone by selecting the **Price Item** option from the **Search By** list.
4. In the **Search Results** section, click the **Assign** () icon in the **Assign** column corresponding to the price item that you want to assign to the price list.

The **Price Item Pricing** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the price item pricing.
- TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** field is **Pricing and Billing**.

- Characteristics** - Used to define characteristics for the price item pricing.
- Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<b>Note:</b> By default, the current system date appears in this field. The effective start date cannot be later than the effective end date.	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b></p> <p>The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	Used to indicate whether you want to use the price item for pricing or not.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> - Used to indicate that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> - Used to indicate that the price assignment is used for quotations.</li> <li>• <b>Template</b> - Used to indicate that the price assignment is a template price list.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance based on which you want to define the price item pricing.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .	
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.	
Pricing Rule Type	Used to indicate the rule type which is used for price item pricing. The valid value is: <ul style="list-style-type: none"> <li>Two-Dimensional</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	
Advance Pricing	This field appears only when <b>Price Item</b> field is set to <b>Pricing</b> , <b>Price Item Type</b> field is set to <b>Fees</b> and <b>Price Assignment Type</b> field is set to <b>Post Processing</b> . The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Define TFM Information for the price item pricing, if required.
- Define characteristics for the price item pricing, if required.
- Define parameters for the price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item and assigned to the price list.

**Note:** A bundle cannot be assigned if its child price items are already assigned to a price list and vice versa, in the same date range.

### Copying a Price Item Pricing

Instead of creating a price item pricing from scratch, you can create a new price item pricing using an existing price item pricing. This is possible through copying a price item pricing. On copying a price item pricing, the details including the transaction feed management information, rate schedules, rate components, price components, tiering criteria, pricing eligibility criteria, parameters, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

### Prerequisites

To copy a price item pricing, you should have:

- Price item pricing (whose copy you want to create) defined in the application
- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application

- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### **Procedure**

To copy a price item pricing:

1. Access the **Price List Price Item Pricing** screen.
2. In the **Search Price Item or Price Item Pricing** zone, select the required option from the **Search By** list. Do either of the following:

<b>If you want to...</b>	<b>Then...</b>
Copy a price item pricing that is assigned to a price list	Select <b>Price List Pricing</b> from the <b>Search By</b> list.
Copy a price item pricing that is assigned to an account	Select <b>Account Override Pricing</b> from the <b>Search By</b> list.
Copy a price item pricing that is assigned to a person	Select <b>Person Override Pricing</b> from the <b>Search By</b> list.
Copy a price item pricing that is assigned to a standard product version	Select <b>Standard Product Version</b> from the <b>Search By</b> list.
Copy a price item pricing that is assigned to a packaged product version	Select <b>Packaged Product Version</b> from the <b>Search By</b> list.
Copy a price item pricing that is assigned to a packaged product version - add on service	Select <b>Packaged Product Version - Add on Service</b> from the <b>Search By</b> list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

3. Enter the search criteria in the **Search Price Item or Price Item Pricing** zone to search for the price item pricing whose copy you want to create.
4. Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

5.

In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create and assign to the price list.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item pricing.
- **TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** - Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<b>Note:</b> By default, the current system date appears in this field. The effective start date cannot be later than the effective end date.	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b></p> <p>The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	Used to indicate whether you want to use the price item for pricing or not.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> - Used to indicate that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> - Used to indicate that the price assignment is used for quotations.</li> <li>• <b>Template</b> - Used to indicate that the price assignment is a template price list.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance based on which you want to define the price item pricing.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .	
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.	
Pricing Rule Type	Used to indicate the rule type which is used for price item pricing. The valid value is: <ul style="list-style-type: none"> <li>Two-Dimensional</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	
Advance Pricing	This field appears only when <b>Price Item</b> field is set to <b>Pricing</b> , <b>Price Item Type</b> field is set to <b>Fees</b> and <b>Price Assignment Type</b> field is set to <b>Post Processing</b> . The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>All Customers</li> <li>New Customers</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Define or edit TFM Information for the price item pricing, if required.
- Define, edit, or remove characteristics from the price item pricing, if required.
- Define, edit, or remove parameters from the price item pricing, if required.
- Click **Save**.

The price item pricing is defined and assigned to the respective price list.

**Note:**

The **Submit** button appears only when the **Pricing Status** is **Draft**.

The **Edit Price Components** button appears only when you are copying a price item pricing which is in the **Active**, **Proposed**, or **Template** status and which is not past dated. If the approval workflow is on, then the **Edit Price Components** button appears when you are editing a **Proposed** and **Template** price item pricing which is already approved.

A bundle cannot be assigned if its child price items are already assigned to a price list and vice versa, in the same date range.

**Tip:** Alternatively, you can copy a price item pricing by clicking the **Copy** () icon from the **Copy** column corresponding to the price item pricing in the **Price List Price Items** zone.

## Price List Assignment

Once a price list is defined, you can assign it to accounts or persons to indicate the prices that will be charged for the price items or services offered to the accounts or persons. You can assign multiple price lists to an account or a person along with the priority or order in which the pricing should be considered. You can also define whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, you can define whether the account or person can inherit the price item pricing from the price list hierarchy.

For example, suppose you have PL1 (with priority 10) and PL2 (with priority 20) assigned to an account or a person. While determining pricing for a price item, the system will search for the price item pricing in PL1. If the system does

not find the price item pricing in PL1, it will search for the price item pricing in PL2. The system will behave in this manner only when the price list inheritance for PL1 is set to **No** during the price list assignment.

If the price list inheritance while assigning PL1 and PL2 to an account or a person is set to **Yes**, the system will search for the price item pricing in PL1. If the system does not find the price item pricing in PL1, it will search for the price item pricing from the price list hierarchy defined for PL1. However, if the system does not find the price item pricing from the price list hierarchy of PL1, it will then search for the price item pricing in PL2 (assigned to the account or person with priority 20). If the system still does not find the price item pricing in PL2, it will search for the price item pricing from the price list hierarchy defined for PL2.

The **Price List Assignment** screen allows you to search and assign a price list to an account or a person. It also allows you to view the price lists that are already assigned to an account or a person. It contains the following zones:

- [Price List Assignments](#) on page 279
- [Price List Price Items](#) on page 281

**Note:** By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to a price list in the **Price List Assignments** zone.

- [Search Price List for Assignment](#)

## Price List Assignments

The **Price List Assignments** zone allows you to search, view, edit, or filter price lists that are currently assigned to the account or person. You can also search for the price lists assigned to the account or person which are either inactive or expired. You will not find any records in this zone if the account or person does not have any price lists assigned to it. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the current, inactive, or historical price list assignments. The valid values are: <ul style="list-style-type: none"> <li>• Current Price List Assignments</li> <li>• Inactive Price List Assignments</li> <li>• Historical Price List Assignments</li> </ul> <p><b>Note:</b> By default, the <b>Current Price List Assignments</b> option is selected.</p>	Yes
Price List ID	Used to search a particular price list assigned to an account or a person. <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Price List ID</b> field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.</p>	No
Price List Description	Used to search price list assigned to an account or a person having a particular description.	No
Effective Start Date	Used to search price lists which are assigned to the account or person from a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to search price lists which are assigned to the account or person till a particular date.	No
Assignment Status	<p>Used to search price list assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> </ul> <p><b>Note:</b></p> <p>The <b>Inactive</b> option is not available in the <b>Assignment Status</b> list when you have selected the <b>Current Price List Assignments</b> or <b>Historical Price List Assignments</b> option from the <b>Search By</b> list.</p> <p>This field is disabled, and by default, the <b>Inactive</b> option is selected when you select the <b>Inactive Price List Assignments</b> option from the <b>Search By</b> list.</p>	No
Price List Inheritance	<p>Used to search price list assignments where the account or person inherits price item pricing from the price list hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• No</li> <li>• Yes</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for price list assignments.

By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of this zone.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List Information	<p>Displays information about the price list which is assigned to the account or person.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears with the details of the respective price list.</p>
Effective Start Date	Displays the date from when the price list is assigned to the account or person.
Effective End Date	Displays the date till when the price list is assigned to the account or person.
Priority	Indicates the order in which the assigned price list must be considered while determining the price item pricing for the account or person.

Column Name	Column Description
Assignment Status	Indicates the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> </ul>
Price List Inheritance	Indicates whether the account or person can avail the price item pricing listed on the parent or grandparent price list if it is not available on the assigned price list. In other words, it indicates whether the account or person can inherit the price item pricing from the price list hierarchy.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Price List Assignment</b> screen appears where you can edit the price list assignment details.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** (📡) icon corresponding to the assigned price list, the **Price List Price Items** zone appears where you can view the price items assigned to the price list.

#### **Price List Price Items**

The **Price List Price Items** zone lists the price items that are assigned to the price list. You will not find any records in this zone if the price list does not have any price items assigned to it. It contains the following columns:

Column Name	Column Description
Pricing	Displays the concatenated string consisting of the price item pricing information and pricing ID which are separated by a comma (,) for the price list. <div> <b>Note:</b> It has a link. On clicking the link, the <b>Price Item Pricing</b> screen appears where you can view the pricing information of the respective price item. </div>

Column Name	Column Description
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item).
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Pricing Status	Indicates the status of pricing for the price item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Draft</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>
Effective Start Date	Displays the date from when the price item pricing is effective for the price list.
Effective End Date	Displays the date till when the price item pricing is effective for the price list.
Price Assignment Type	Indicates the type of the price assignment for price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using the existing price item pricing.

By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to the assigned price list in the **Price List Assignments** zone.

You can filter the list using various search criteria (such as, **Price Item** and **Effective Start Date**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filter** () icon in the upper right corner of this zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

## Search Price List for Assignment

The **Search Price List for Assignment** zone allows you to search for a price list that you want to assign to the account or person. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search against all price lists or against those price lists which are already assigned to an account or a person. The valid values are: <ul style="list-style-type: none"> <li>• Price List</li> <li>• Assigned Price List</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Price List</b> option is selected.	
Price List ID	Used to search a particular price list.	No
Price List Description	Used to search price lists with a particular description.	No
Effective Start Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are effective from a particular date onwards. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are assigned to an account or a person from a particular date onwards.	No
Effective End Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are effective till a particular date. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, this field is used to search price lists which are assigned to an account or a person till a particular date.	No
Account ID	Used to search price lists assigned to a particular account.	No
	<b>Note:</b> This field appears only when you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list.	
Person ID	Used to search price lists assigned to a particular person.	No
	<b>Note:</b> This field appears only when you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search price lists with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>	No
	<b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.	
Price List Type	Used to search a particular type of price lists. The valid values are: <ul style="list-style-type: none"> <li>• Promotional</li> <li>• Standard</li> </ul>	No
	<b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.	
Only Eligible Price Lists	Used to search only those price lists which are eligible for the account or person.	No
	<b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.	
Eligibility Date	Used to search price lists which are eligible for the account or person from a particular date.	No
	<b>Note:</b> This field appears only when you have selected the <b>Price List</b> option from the <b>Search By</b> list.  By default, the current date appears in this field when the <b>Only Eligible Price Lists</b> option check box is selected. You can change the value, if required.	

**Note:** You must specify at least one search criterion while searching for a price list.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price lists that are associated with the division to which the account or person belongs. It may also include price lists that are already assigned to the account or person in case those price lists match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the <b>Assign</b>  icon, the <b>Price List Assignment</b> screen appears where you can assign the price list to the account or person.

Column Name	Column Description
Price List Information	Displays the concatenated string consisting of the price list ID and price list information separated by a comma (,).
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.
Account Information	Displays the information about the account.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Person Information	Displays the information about the person.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Effective Start Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, the date from when the price list is effective appears in this column. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, the date from when the price list is assigned to the account or person appears in this column.
Effective End Date	If you have selected the <b>Price List</b> option from the <b>Search By</b> list, the date till when the price list is effective appears in this column. However, if you have selected the <b>Assigned Price List</b> option from the <b>Search By</b> list, the date till when the price list is assigned to the account or person appears in this column.
Availability Start Date	Displays the date from when the price list is available for assignment to an account or a person.
Availability End Date	Displays the date till when the price list is available for assignment to an account or a person.

## Assigning a Price List to an Account

### Prerequisites

To assign a price list to an account, you should have:

- Price list defined in the application
- Price list associated with the division to which the account belongs

### Procedure

To assign a price list to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account to which you want to assign a price list.  
A menu appears.

3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** - Lists the price lists that are already assigned to the account.
- **Price List Price Items** - Lists the price items that are assigned to the price list.

**Note:** By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to a price list in the **Price List Assignments** zone.

- **Search Price List for Assignment** - Enables you to search for a price list that you want to assign to the account.
4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists that are already assigned to an account.
  5. Enter the search criteria in the **Search Price List for Assignment** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

**Note:**

The search results include only those price lists that are associated with the division to which the account belongs. It may also include price lists that are already assigned to the account in case those price lists match the search criteria.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

- In the **Search Results** section, click the **Assign** () icon corresponding to the price list that you want to assign to the account.

The **Price List Assignment** screen appears. It contains the following sections:

- Main** - Used to specify basic information while assigning the price list to the account.
- Characteristics** - Used to define characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account to which you want to assign the price list.	Not applicable
Price List Information	Displays information about the price list that you want to assign to the account.	Not applicable
Effective Date	<div>           Start           <div>             Used to specify the date from when you want to assign the price list to the account.             <div> <b>Note:</b> The price list assignment start date cannot be earlier than the price list effective start date or later than the price list effective end date.               </div> </div> </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)										
Effective End Date	<p>Used to specify the date till when you want to assign the price list to the account.</p> <p><b>Note:</b></p> <p>The effective end date cannot be earlier than the effective start date.</p> <p>If the validity period is specified for the price list, the price list assignment end date should be earlier than or equal to the following whichever is earlier:</p> <ul style="list-style-type: none"><li>• Price list assignment validity end date (which is price list assignment start date + validity period)</li><li>• Price list effective end date</li></ul> <p>Let us understand this with the help of the following example:</p> <table><tr><td><b>Price List Effective Start Date</b></td><td>01-Jan-2015</td></tr><tr><td><b>Price List Effective End Date</b></td><td>31-Jan-2015</td></tr><tr><td><b>Validity Period</b></td><td>15 Days</td></tr><tr><td><b>Price List Assignment Start Date</b></td><td>15-Jan-2015</td></tr><tr><td><b>Price List Assignment Validity End Date</b></td><td>30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)</td></tr></table> <p>In the above example, the price list assignment end date must be earlier than or equal to the price list assignment validity end date because the price list assignment validity end date is earlier than the price list effective end date.</p>	<b>Price List Effective Start Date</b>	01-Jan-2015	<b>Price List Effective End Date</b>	31-Jan-2015	<b>Validity Period</b>	15 Days	<b>Price List Assignment Start Date</b>	15-Jan-2015	<b>Price List Assignment Validity End Date</b>	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)	No
<b>Price List Effective Start Date</b>	01-Jan-2015											
<b>Price List Effective End Date</b>	31-Jan-2015											
<b>Validity Period</b>	15 Days											
<b>Price List Assignment Start Date</b>	15-Jan-2015											
<b>Price List Assignment Validity End Date</b>	30-Jan-2015 (i.e. 15-Jan-2015 + 15 Days)											
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the account.	Yes										
Price List Inheritance	<p>Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are:</p> <ul style="list-style-type: none"><li>• <b>Yes</b> – Used to indicate that the account can inherit the price item pricing from the price list hierarchy.</li><li>• <b>No</b> – Used to indicate that the account cannot inherit the price item pricing from the price list hierarchy.</li></ul>	Yes										

Field Name	Field Description	Mandatory (Yes or No)
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Active</b> - Used to indicate that you want to use the price item pricing on the price list for billing.</li> <li>• <b>Proposed</b> - Used to indicate that you want to use the price item pricing on the price list for quotations.</li> </ul>	Yes

8. Enter the required details in the **Main** section.
9. Define a list of characteristics for the price list assignment, if required.
10. Click **Save**.

The price list is assigned to the account.

## **Assigning a Price List to a Person**

### **Prerequisites**

To assign a price list to a person, you should have:

- Price list defined in the application
- Price list associated with the division to which the person belongs

### **Procedure**

To assign a price list to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person to whom you want to assign a price list.  
A menu appears.
3. Click the **Go To Price List Assignment** menu option.

The **Price List Assignment** screen appears. It contains the following zones:

- **Price List Assignments** - Lists the price lists that are already assigned to the person.
- **Price List Price Items** - Lists the price items that are assigned to the price list.

**Note:** By default, the **Price List Price Items** zone does not appear in the **Price List Assignment** screen. It appears only when you click the **Broadcast** () icon corresponding to a price list in the **Price List Assignments** zone.

- **Search Price List for Assignment** - Enables you to search for a price list that you want to assign to the person.

4. In the **Search Price List for Assignment** zone, select the **Price List** or **Assigned Price List** option from the **Search By** list depending on whether you want to search against all price lists or against those price lists which are already assigned to a person.
5. Enter the search criteria in the **Search Price List for Assignment** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

6. Click **Search**.

A list of price lists that meet the search criteria appears in the **Search Results** section.

**Note:**

The search results include only those price lists that are associated with the division to which the person belongs. It may also include price lists that are already assigned to the person in case those price lists match the search criteria.

Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

7. In the **Search Results** section, click the **Assign** () icon corresponding to the price list that you want to assign to the person.

The **Price List Assignment** screen appears. It contains the following sections:

- **Main** - Used to specify basic information while assigning the price list to the person.
- **Characteristics** - Used to define characteristics for the price list assignment.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)

How to define characteristics for a price list assignment	<a href="#">Defining Characteristics for a Price List Assignment</a>

## **Defining Characteristics for a Price List Assignment**

### **Prerequisites**

To define characteristics for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

### **Procedure**

To define characteristics for a price list assignment:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing the price list assignment details.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price List Assignment</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b> () icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the price list assignment, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price list assignment, click the **Delete** () icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the price list assignment.

#### **Accounts where Price List is Assigned**

The **Accounts where Price List is Assigned** zone displays the details of the accounts where the price list is assigned. It contains the following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Price List Assignment Start Date	Displays the date from when the price list is assigned to the account.
Price List Assignment End Date	Displays the date till when the price list is assigned to the account.
Division	Displays the division to which the account belongs.
Price List Assignment ID	Displays the price list assignment ID.

## Viewing Persons and Accounts where Price List is Assigned

### Prerequisites

To view persons and accounts where price list is assigned, you should have:

- Persons and accounts created in the application
- Price list defined and assigned to the accounts and persons

### Procedure

To view persons and accounts where price list is assigned:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Price List**.  
A sub-menu appears.
3. Click the **Search** option from the **Price List** sub-menu.  
The **Price List** screen appears.
4. You can search for a price list by entering the search criteria in the **Search Price List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of price lists that meet the search criteria appears in the search results.
6. In the **Search Results** section, click the **View**  icon in the **Price List Assigned To** column corresponding to the price list whose details you want to view.  
The **Price List Assignments** screen appears.
7. You can view the list of persons and accounts where the price list is assigned in the **Price List Assignments** screen.

## Entities Eligible for Price List Assignment

The **Entities Eligible for Price List Assignment** screen allows you to search for multiple eligible accounts or persons for price list assignment. This screen consists of the following zones:

- [Eligible Accounts](#) on page 305

- [Eligible Persons](#) on page 305

## Eligible Accounts

The **Eligible Accounts** zone allows you to search the eligible accounts for price list assignment. Moreover, it also allows you to assign multiple eligible accounts to a price list. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division whose accounts you want to search.	Yes
Effective Date	Used to indicate the date from when the accounts are eligible for price list assignment.	No
	<b>Note:</b> By default, the date is set to the current date. You can change the date, if required.	
Account ID	Used to indicate the account ID.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays information about the accounts that are eligible for price list assignment. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Assigned	Displays whether the account is assigned to the price list or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

## Eligible Persons

The **Eligible Persons** zone allows you to search the eligible persons for price list assignment. Moreover, it also allows you to assign multiple eligible persons to a price list. This zone contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division whose persons you want to search.	Yes
Effective Date	Used to indicate the date from when the persons are eligible for price list assignment.	No
	<b>Note:</b> By default, the date is set to the current date. You can change the date, if required.	
Person ID	Used to indicate the person ID.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Information	Displays information about the persons that are eligible for price list assignment. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Assigned	Displays whether the person is assigned to the price list or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

## Assigning a Price List to One or More Eligible Accounts

### Prerequisites

To assign a price list to one or more eligible accounts, you should have:

- Price list defined in the application
- Accounts created in the application
- Price list should be associated with the division to which accounts belong.

### Procedure

To assign a price list to one or more eligible accounts:

1. Search for the eligible accounts in the **Eligible Accounts** zone of **Entities Eligible for Price List Assignment** screen.
2. In the **Search Results** section, select the one or more accounts that you want to assign to the price list by clicking the check box corresponding to each account.
3. Click the **Assign** button available in the upper left corner of this section.

The **Price List Assignment** screen appears. This screen contains the following two sections:

- **Main** - Used to specify basic details about the price list. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Information	Displays a concatenated string consisting of the price list information separated by a comma (,).	Not applicable
Effective Start Date	Used to specify the date from when the price list is effective.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the price list is effective.	No
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the account.	No
Price List Inheritance	Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>	No
Priority Indicator	Used to set the priority of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Highest</b> - Used when you want the price list assignment to have the highest priority. It checks whether there are any other price list assignments for the account, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with highest priority minus one.</li> <li>• <b>Lowest</b> - Used when you want the price list assignment to have the lowest priority. It checks whether there are any other price list assignments for the account, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with lowest priority plus one.</li> </ul>	No

- **Characteristics** - Used to define a list of characteristics for the price list.

#### 4. Click **Save**.

The price list is assigned to the selected accounts.

## Assigning a Price List to One or More Eligible Persons

### Prerequisites

To assign a price list to one or more eligible persons, you should have:

- Price list defined in the application
- Persons created in the application
- Price list should be associated with the division to which persons belong.

### Procedure

To assign a price list to one or more eligible persons:

1. Search for the eligible Persons in the **Eligible Persons** zone of **Entities Eligible for Price List Assignment** screen.
2. In the **Search Results** section, select the one or more persons to whom you want to assign the price list by clicking the check box corresponding to each person.
3. Click the **Assign** button available in the upper left corner of this section.

The **Price List Assignment** screen appears. This screen contains the following two sections:

- **Main** - Used to specify basic details about the price list. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List Information	Displays a concatenated string consisting of the price list information separated by a comma (,).	Not applicable
Effective Start Date	Used to specify the date from when the price list is effective.	Yes
Effective End Date	Used to specify the date till when the price list is effective.	No
Priority	Used to specify the order in which the price list should be considered while determining the price item pricing for the person.	No
Price List Inheritance	Used to indicate whether the account can avail the price item pricing listed on the parent or grandparent price list if it is not available on the price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
Assignment Status	Used to indicate the status of the price list assignment. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Priority Indicator	<p>Used to set the priority of the price list assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Highest</b> - Used when you want the price list assignment to have the highest priority. It checks whether there are any other price list assignments for the person, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with highest priority minus one.</li> <li>• <b>Lowest</b> - Used when you want the price list assignment to have the lowest priority. It checks whether there are any other price list assignments for the person, derives the priority of each such price list assignment, and then sets the priority of the new price list assignment to the existing price list assignment with lowest priority plus one.</li> </ul>	No

- **Characteristics** - Used to define a list of characteristics for the price list.

#### 4. Click **Save**.

The price list is assigned to the selected persons.

### **Defining a Characteristic for a Price List Assignment**

#### **Prerequisites**

To define a characteristic for a price list assignment, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price List Assignment**)

#### **Procedure**

To define a characteristic for a price list assignment:

1. Click the **Characteristics** tab in the **Price List Assignment** screen when you are assigning a price list to multiple persons or accounts and also while editing the price list assignment details of multiple persons or accounts.

The **Characteristics** tab appears. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price list assignment.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price List Assignment</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the price list assignment.

2. Enter the required details in the **Characteristics** section.

3. If you want to define more than one characteristic for the price list assignment, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the price list assignment, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The characteristic is defined for the price list assignment.

## Pricing (Account)

The **Pricing (Account)** screen allows you to:

- View effective price assignments of an account
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to an account
- Edit or override a price item pricing
- Copy a price item pricing and assign it to an account

This screen consists of the following zones:

- [Effective Price Assignments for Account](#) on page 311
- [Search Price Item](#) on page 316

## Effective Price Assignments for Account

The **Effective Price Assignments for Account** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the account either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the account belongs. If required, you can filter effective price assignments using various search criteria.

**Note:** If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Indicates the account whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	<b>Note:</b> By default, this field is set to the system date.	

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account Agreed</b> – Means price item pricing is agreed for the account.</li> <li>• <b>Account Price List</b> – Means price item pricing is defined in the price list which is assigned to the account.</li> <li>• <b>Account Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the account.</li> <li>• <b>Customer Agreed</b> – Means price item pricing is agreed for the main customer in the customer hierarchy.</li> <li>• <b>Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the main customer.</li> <li>• <b>Default Price List</b> – Means price item pricing defined in the price list is available in the default price list.</li> <li>• <b>Global Price List</b> – Means price item pricing defined in the price list is available in the global price list.</li> <li>• <b>Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer.</li> <li>• <b>Parent Customer Agreed</b> – Means price item pricing is agreed for the parent customer in the customer hierarchy.</li> <li>• <b>Parent Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the parent customer.</li> <li>• <b>Parent Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer.</li> <li>• <b>Product Default Price List</b> – Means product defined in the price list is available in the default price list.</li> </ul>	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to search price assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>Active</li> <li>Proposed</li> </ul> <p><b>Note:</b> By default, the <b>Active</b> option is selected.</p>	No
Show Default and Global Pricing	<p>Used to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> <li><b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>Product-specific default price list defined for the division</li> <li>Default price list defined for the division</li> <li>Global price list</li> </ul> </li> <li><b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>Product-specific default price list defined for the division</li> <li>Default price list defined for the division</li> <li>Global price list</li> </ul> </li> </ul> <p><b>Note:</b> By default, the <b>No</b> option is selected.</p>	No
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	<p>Used to search the price list using the following values:</p> <ul style="list-style-type: none"> <li>Best Fit</li> <li>Exact Match</li> </ul> <p><b>Note:</b> By default, the <b>Exact Match</b> option is selected.</p>	No

**Note:** The **Search**  icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	Used to search price assignments which are defined using a particular parameter.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	
Parameter Value	Used to search price assignments which are defined using a particular parameter value.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	

**Note:**

The **Search**  icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, you can search for a parameter.

You can only use those parameters where the source entity is set to **Transaction**.

The **Search**  icon appears corresponding to the **Parameter Value** field only when the value type of the parameter is **Predefined** or **Reference**. If the value type of the parameter is **Predefined** then on clicking the **Search** icon, you can search for a predefined parameter value. However, if the value type of the parameter is **Reference** then on clicking the **Search** icon, you can search for a reference parameter value.

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the account.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

Column Name	Column Description
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> <li>• Product Default Price List</li> </ul>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	<p>On clicking the <b>Edit</b> () icon, the <b>Price Item Pricing</b> screen appears where you can edit the details of the price item pricing.</p> <p><b>Note:</b> The <b>Edit</b> icon appears only when the assignment level is <b>Account Agreed</b>.</p>

Column Name	Column Description
Override	<p>On clicking the <b>Override</b>  icon, the <b>Price Item Pricing</b> screen appears where you can override the price item pricing.</p> <p><b>Note:</b></p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>Y</b>, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>N</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

**Note:** The number of records that can be displayed in the **Search Results** section is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2376.

## Search Price Item

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> <li>• Price Item</li> <li>• Price List Pricing</li> <li>• Account Override Pricing</li> <li>• Person Override Pricing</li> </ul>	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description.  <b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	No
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	No
Bundle	Used to search whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	No
Price List ID	Used to search the price list to which the price item pricing is assigned.  <b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	
Pricing Status	Used to search price item pricing with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	
Price Assignment Type	Used to search a particular type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	
Account ID	Used to search pricing of price items which are assigned to a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search pricing of price items which are assigned to a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.	

**Note:**

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search**  icon appears corresponding to the **Price List ID**, **Price Item**, **Account ID**, and **Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the account belongs. It may also include price items or price item bundles that are already assigned to the account in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	On clicking the <b>Assign</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing.
	<b>Note:</b> This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.
Price Item Information	Displays details of the price item or price item bundle.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle. This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.
Copy	On clicking the <b>Copy</b>  icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.
Pricing Information	Displays details of the price item pricing.
	<b>Note:</b> This column appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.

Column Name	Column Description
Account Information	Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p> <p>The account information string appears only when an algorithm defined using the <b>C1-AC-INFO</b> algorithm type is attached to the <b>Account Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Person Information	Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>The person information string appears only when an algorithm defined using the <b>PERS-INFO</b> algorithm type is attached to the <b>Person Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Price List Information	Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.</p>
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).
	<p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
	<p><b>Note:</b> This column appears only when you select the <b>Price List Pricing</b>, <b>Account Override Pricing</b>, or <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p>

Column Name	Column Description
Effective End Date	Displays the date till when the price item pricing is effective.
	<b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
	<b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
	<b>Note:</b> It has a link. On clicking the link <b>Rate Schedule</b> screen appears. This column appears only when you select the <b>Price List Pricing, Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul>
	<b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.
Price Assignment Type	Indicates the type of the price item pricing. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .

## Viewing Effective Price Assignments of an Account

### Prerequisites

To view effective price assignments of an account, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

**Procedure**

To view effective price assignments of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. View the pricing for price items or price item bundles assigned to the account (either directly or through the customer hierarchy) in the **Effective Price Assignments for Account** zone.
5. Filter the effective price assignments of the account, if required.

**Related Topics**

How to search for an account	<a href="#">Searching for an Account</a> on page 61
<b>Pricing (Account)</b> screen	<a href="#">Pricing (Account)</a> on page 310
<b>Effective Price Assignments for Account</b> zone	<a href="#">Effective Price Assignments for Account</a> on page 311
How to filter effective price assignments of an account	<a href="#">Filtering Effective Price Assignments of an Account</a> on page 322

**Filtering Effective Price Assignments of an Account****Prerequisites**

To filter effective price assignments of an account, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

**Procedure**

To filter effective price assignments of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Account** zone.

**Note:**

You can search for a price item, parameter, or parameter value by clicking the **Search** () icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add** () icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the

**Delete** () icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

### 5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Account** zone.

## Exporting Effective Price Assignments of an Account

### Prerequisites

To export effective price assignments of an account in the CSV format, you should have:

- Price items or price item bundles assigned to the account either directly or through the customer hierarchy

### Procedure

To export effective price assignments of an account in the CSV format:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

4. Filter the effective price assignments of the account, if required.
5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.

A message appears confirming whether you want to open or save the EffectivePricing.csv file.

6. Select the **Save As** option from the **Save** list.

The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	<p>Indicates the variance parameter which is used for defining the price item pricing.</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>
Price Item Parameters	<p>Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing.</p> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing — Invoice Based</li> <li>• Post Processing — Price Item Based</li> </ul>
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Account Agreed</li> <li>• Account Price List</li> <li>• Account Inherited Price List</li> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>

Column Name	Column Description
Price List Description	Displays the description of the price list.
	<b>Note:</b> The description appears only when the assignment level is <b>Account Price List</b> , <b>Account Inherited Price List</b> , <b>Customer Price List</b> , <b>Customer Inherited Price List</b> , <b>Parent Customer Price List</b> , or <b>Parent Customer Inherited Price List</b> .
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Setup of the Rate Component</li> </ul>
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>• AC</li> <li>• NC</li> </ul>
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.

Column Name	Column Description
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quarterly</li> <li>• Yearly</li> </ul>
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item is billed individually or at the price item bundle level.

## **Copying a Price Item Pricing**

### **Prerequisites**

To copy a price item pricing and assign it to an account, you should have:

- Account (to which you want to assign the price item pricing) defined in the application
- Account associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

### **Procedure**

To copy a price item pricing and assign it to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

4. In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

5. Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the account.
6. Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

7. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

8. Modify the required pricing details.

**Note:**

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

9. Edit the characteristics of the price item pricing, if required.
10. Click **Save**.

A new price item pricing is defined and assigned to the account.

## **Viewing a Price Item Pricing**

### **Procedure**

To view a price item pricing and assignment details:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the account whose details you want to view.

A menu appears.

- Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

- Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
- In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
  - Pricing Information** – Displays the pricing information of the price item.
  - TFM Information** – Displays the transaction feed management information of the price item.
  - Characteristics** – Displays the details of price item pricing characteristics.
  - Price Item and Parameter Information** – Displays the price item parameter details.
  - Record Actions** – Displays the record actions of the price item pricing.
  - Record Information** – Displays the record information of the price item pricing.
- Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- Rate Components** – Displays the rate components of the price item.
- Price Components** – Displays the details of price components of the price item.
- Tiering Criteria** – Displays the tiering criteria of the price item pricing.

**Note:** This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

**Note:** This zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

- View the basic details of price item pricing in the **Price Item Pricing** zone.
- View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
- View the rate components of price item in the **Rate Components** zone.
- View the details of price components of price item in the **Price Components** zone.
- View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
- View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

## Editing a Price Item Pricing of an Account

### Prerequisites

To edit a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the account whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Account)** screen appears.

4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b></p> <p>The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field will be enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Active</b> – Indicates that the price assignment is used for billing.</li> <li>• <b>Inactive</b> – Indicates that the price assignment is no longer used for billing.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul> <p><b>Note:</b></p> <p>If a price assignment is in <b>Active</b> status, you can change its status to <b>Inactive</b>.</p> <p>If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b>.</p>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	<p>Used to specify the rate schedule that you want to use while defining price item pricing.</p> <p><b>Note:</b></p> <p>Rate schedules control how the bills for the price item will be calculated.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.</p>	Yes
Pricing Rule Type	<p>Used to indicate the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are editing a two-dimensional pricing rule.</p>
Print Zero	<p>Used to indicate whether zero pricing should be displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul> <p><b>Note:</b> By default, <b>Yes</b> is selected.</p>	Yes
Pricing Frequency	<p>Used to indicate pricing frequency for the price item.</p> <p><b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b>.</p>	Yes

6. Modify the details in the **Main** section, if required.
7. Edit the TFM Information in a price item pricing, if required.
8. Edit the characteristics for a price item pricing, if required.
9. Edit the parameters for a price item pricing, if required.
10. Click **Save**.

The changes made to the price item pricing are saved.

## **Overriding a Price Item Pricing of an Account**

### **Prerequisites**

To override a price item pricing of an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### **Procedure**

To override a price item pricing of an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Price assignments effective for the account appears in the **Effective Price Assignments for Account** zone.
5. In the **Search Results** section, click the **Override** (🔧) icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.

- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>The effective start date cannot be later than the effective end date.</p> <p>If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.</p> <p>This field will be in read-only mode when the price assignment has been used.</p>	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<p><b>Note:</b> The effective end date cannot be earlier than the effective start date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div> <b>Note:</b>  The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type. </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div> <b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>. </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div> <b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>. </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div> <b>Note:</b> This field will be in enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode. </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to indicate the status of the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul>	Yes
	<b>Note:</b> If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b> .	
Pricing Currency	Used to indicate the currency in which you want to override the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are overriding a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, <b>Yes</b> is selected.	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	

6. Modify the details in the **Main** section, if required.
7. Modify the TFM Information in a price item pricing, if required.
8. Modify the characteristics for a price item pricing, if required.
9. Modify the parameters for a price item pricing, if required.

**Note:** If you change the effective end date while overriding a price item pricing, you need to specify the parameters which are effective during the date range of start and end date.

**10. Click Save.**

The price item pricing is overridden.

**Assigning a Price Item to an Account****Prerequisites**

To assign a price item to an account, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

**Procedure**

To assign a price item to an account:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the account whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Account)** screen appears.
4. Search for the price item that you want to assign to the account in the **Search Price Item or Price Item Pricing** zone.
5. In the **Search Results** section, click the **Assign** (📌) icon in the **Assign** column corresponding to the price item that you want to assign to the account.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<b>Note:</b> By default, the current system date appears in this field. The effective start date cannot be later than the effective end date.	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b></p> <p>The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	Used to select pricing eligibility criteria for price item pricing.	No
Pricing Status	<p>Used to indicate the status of the price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul>	Yes
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>Two-Dimensional</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
	<b>Note:</b> By default, <b>Yes</b> is selected.	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	

- Enter the required details in the **Main** section.
- Define TFM Information in a price item pricing, if required.
- Define characteristics for a price item pricing, if required.
- Define parameters for a price item pricing, if required.
- Click **Save**.

The pricing is defined for the price item.

**Note:** A bundle cannot be assigned if its child price items are already assigned to an account and vice versa, in the same date range.

## Defining Characteristics for a Price Item Pricing

### Prerequisites

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

### Procedure

To define characteristics for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Pricing</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the price item pricing, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price item pricing.

## **Defining Parameters for a Price Item Pricing**

### **Prerequisites**

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

### **Procedure**

To define parameter details segment for a price item pricing that is assigned to an account:

1. Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.  <b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> window appears. The parameter search results displays only those parameters where the <b>Price Item</b> check box is selected	Yes
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> <li>Parameter Description</li> <li>Mandatory (Yes or No)</li> <li>Priority</li> </ul>	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

## Defining TFM Information in a Price Item Pricing

### Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

### Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quarterly</li> <li>• Yearly</li> </ul>	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines Across Transaction</li> </ul>	Yes

2. Enter the required details in the **TFM Information** section.

**Note:** **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The transactions are defined for the price item pricing.

## **Pricing (Person)**

The **Pricing (Person)** screen allows you to:

- View effective price assignments of a person
- View the details of an assigned or inherited price item pricing
- Search and assign price items or price item bundles to a person

- Edit or override a price item pricing
- Copy a price item pricing and assign it to a person

You can also view effective price assignments of a global person (i.e. a person who is not associated to any division) in this screen. The pricing for all price items or price item bundles assigned to the global person either directly or through a price list appears in this screen. However, you will be able to view pricing for only those price items or price item bundles that are associated to the division to which you have access.

Since a global person is not associated to any division, the system cannot determine the price assignment search order for a global person. Hence, the default search order is defined for global persons through the **C1\_PRASNORDR** feature configuration. This feature configuration contains the **Price Assignment Algorithm** option type where you need to specify the algorithm which contains default search order for global persons. You can change this default search order, if required. The valid search order values are — **AGREED\_PRICELIST** and **AGREED\_FIRST**. You can also create a custom search order, if required.

This screen consists of the following zones:

- [Effective Price Assignments for Person](#) on page 345
- [Search Price Item](#) on page 350

## Effective Price Assignments for Person

The **Effective Price Assignments for Person** zone lists the price item pricing (i.e. price assignments) which are effective on the current date. In other words, it lists effective pricing for price items or price item bundles assigned to the person either directly or through the customer hierarchy. The order in which the price assignments are listed is controlled by the **Price Assignment Search** algorithm defined for the division to which the person belongs. If required, you can filter effective price assignments using various search criteria.

**Note:** If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Indicates the person whose effective price assignments are listed in this zone.	Not applicable
Effective Pricing Date	Used to search price assignments which are effective on a particular date.	No
	<b>Note:</b> By default, this field is set to the current date.	

Field Name	Field Description	Mandatory (Yes or No)
Assignment Level	<p>Used to search price assignments at a particular level in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Customer Agreed</b> – Means price item pricing is agreed for the main customer in the customer hierarchy.</li> <li>• <b>Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the main customer.</li> <li>• <b>Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the main customer.</li> <li>• <b>Default Price List</b> – Means price item pricing defined in the price list is available in the default price list.</li> <li>• <b>Global Price List</b> – Means price item pricing defined in the price list is available in the global price list.</li> <li>• <b>Parent Customer Agreed</b> – Means price item pricing is agreed for the parent customer in the customer hierarchy.</li> <li>• <b>Parent Customer Price List</b> – Means price item pricing is defined in the price list which is assigned to the parent customer.</li> <li>• <b>Parent Customer Inherited Price List</b> – Means price item pricing is inherited from the parent price list hierarchy defined for the price list which is assigned to the parent customer.</li> </ul>	No
Parent Person	Used to search price assignments which are inherited from a particular parent customer.	No
Pricing Status	<p>Used to search price assignments with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul> <p><b>Note:</b> By default, the <b>Active</b> option is selected.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Show Default and Global Pricing	<p>Used to indicate whether you want to search price assignments inherited from the default or global price list. The valid values are:</p> <ul style="list-style-type: none"> <li><b>Yes</b> – Used when you want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>Default price list defined for the division</li> <li>Global price list</li> </ul> </li> <li><b>No</b> – Used when you do not want to search price assignments inherited from either of the following: <ul style="list-style-type: none"> <li>Default price list defined for the division</li> <li>Global price list</li> </ul> </li> </ul> <p><b>Note:</b> By default, the <b>No</b> option is selected.</p>	No
Price Item	Used to search price assignments of a particular price item or price item bundle.	No
Description	Used to search price assignments of a price item or price item bundle having a particular description.	No
Search Type	<p>Used to search the price list using the following values:</p> <ul style="list-style-type: none"> <li>Best Fit</li> <li>Exact Match</li> </ul> <p><b>Note:</b> By default, the <b>Exact Match</b> option is selected.</p>	No

**Note:** The **Search**  icon appears corresponding to the **Price Item** field. On clicking the **Search** icon, you can search for a price item.

- Price Item Parameters** – The **Price Item Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Parameter	<p>Used to search price assignments which are defined using a particular parameter.</p> <p><b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter Value	Used to search price assignments which are defined using a particular parameter value.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .	

**Note:**

The **Search**  icon appears corresponding to the **Parameter** field. On clicking the **Search** icon, you can search for a parameter.

You can only use those parameters where the source entity is set to **Transaction**.

The **Search**  icon appears corresponding to the **Parameter Value** field only when the value type of the parameter is **Predefined** or **Reference**. If the value type of the parameter is **Predefined** then on clicking the **Search** icon, you can search for a predefined parameter value. However, if the value type of the parameter is **Reference** then on clicking the **Search** icon, you can search for a reference parameter value.

- **Search Results** – On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID for the person.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Price Item Pricing</b> screen appears with the details of the respective price item pricing.
Price Item	Displays the price item or price item bundle code.
Pricing Parameters	Used to specify multiple parameters based on which you want to determine the pricing utilization.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>

Column Name	Column Description
Assignment Level	<p>Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Default Price List</li> <li>• Global Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>
Price List Information	Displays the information about the price list which is assigned to the account.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Edit	<p>On clicking the <b>Edit</b> () icon, the <b>Price Item Pricing</b> screen appears where you can edit the details of the price item pricing.</p> <p><b>Note:</b> The <b>Edit</b> icon appears only when the assignment level is <b>Customer Agreed</b>.</p>
Override	<p>On clicking the <b>Override</b> () icon, the <b>Price Item Pricing</b> screen appears where you can override the price item pricing.</p> <p><b>Note:</b></p> <p>You can override a price item pricing assigned at any level in the customer hierarchy. On overriding a price item pricing, a new price item pricing which is specific to the account is defined at the account level and is then called account agreed pricing.</p> <p>A customer agreed or account agreed price assignments are effective for a particular duration and do not expire until you specify the end date manually. However, if you set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>Y</b>, the system will automatically expire an agreed pricing when the agreed pricing of a customer or an account without end date is overridden. If you do not want an agreed pricing to automatically expire when it is overridden, you must set the <b>Expire Override Switch</b> option type of the <b>C1_EXP_OVRD</b> feature configuration to <b>N</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.

**Note:** The number of records that can be displayed in the **Search Results** section is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2376.

**Search Price Item**

You can either assign a price item to a price list and then define pricing for the price item, or you can copy an existing price item pricing and assign it to a price list. The **Search Price Item** zone allows you to search for a price item pricing which is assigned to an account, person, or a price list. You can then create a new price item pricing using an existing price item pricing through copying the price item pricing. Once you create a copy of an existing price item pricing, the new price item pricing is assigned to the price list. On copying a price item pricing, the pricing details including the price components, eligibility and tiering criteria for each price component, and characteristics are copied to the new price item pricing. You can then edit the details, if required.

The system allows you to create a copy of active, proposed, inactive, rejected, and template price item pricing. Once you create the copy of a template price item pricing, you can save the new price item pricing in either **Active** or **Proposed** status.

The **Search Price Item** zone contains the following two sections:

- Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to search whether you want to search price item pricing for a price item, account, person, or a price list. The valid values are: <ul style="list-style-type: none"> <li>Price Item</li> <li>Price List Pricing</li> <li>Account Override Pricing</li> <li>Person Override Pricing</li> </ul>	Yes
Price Item	Used to search pricing for a particular price item or price item bundle.	No
Description	Used to search price items or price item bundles with a particular description. <div> <b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list. </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Global Price List	Used to search price items or price item bundles which can be assigned to a global price list. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	
Bundle	Used to search whether the price item is a bundle or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.	
Price List ID	Used to search the price list to which the price item pricing is assigned.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.	
Effective Start Date	Used to search price item pricing on price lists which are effective from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	
Effective End Date	Used to search price item pricing on price lists which are effective till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Price List Pricing</b> , <b>Account Override Pricing</b> , or <b>Person Override Pricing</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	<p>Used to search price item pricing with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> <li>• Template</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing</b>, <b>Account Override Pricing</b>, or <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Price Assignment Type	<p>Used to search a particular type of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Price List Pricing</b>, <b>Account Override Pricing</b>, or <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Account ID	<p>Used to search pricing of price items which are assigned to a particular account.</p> <p><b>Note:</b> This field appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list.</p>	No
Person ID	<p>Used to search pricing of price items which are assigned to a particular person.</p> <p><b>Note:</b> This field appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p>	No

**Note:**

You must specify at least one search criterion while searching for a price item or price item bundle.

The **Search**  icon appears corresponding to the **Price List ID**, **Price Item**, **Account ID**, and **Person ID** fields. On clicking the **Search** icon, you can search for a price list, price item, an account, and person.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The search results include only those price items or price item bundles that are associated with the division to which the person belongs. However, if the person does not belong to any division, the search will be performed

against all price items or price item bundles defined in the system. It may also include price items or price item bundles that are already assigned to the person in case those price items or price item bundles match the search criteria.

The **Search Results** section contains the following columns:

Column Name	Column Description
Assign	<p>On clicking the <b>Assign</b> ( icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing.</p> <p><b>Note:</b> This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p>
Price Item Information	<p>Displays details of the price item or price item bundle.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item or price item bundle. This column appears only when you select the <b>Price Item</b> option from the <b>Search By</b> list.</p>
Copy	<p>On clicking the <b>Copy</b> ( icon, the <b>Price Item Pricing</b> screen appears where you can define a new price item pricing using an existing price item pricing.</p>
Pricing Information	<p>Displays details of the price item pricing.</p> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing</b>, <b>Account Override Pricing</b>, or <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Account Information	<p>Indicates the account to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b> This column appears only when you select the <b>Account Override Pricing</b> option from the <b>Search By</b> list. It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. The account information string appears only when an algorithm defined using the <b>C1-AC-INFO</b> algorithm type is attached to the <b>Account Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>

Column Name	Column Description
Person Information	Indicates the person to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>The person information string appears only when an algorithm defined using the <b>PERS-INFO</b> algorithm type is attached to the <b>Person Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options – Framework</b> screen.</p>
Price List Information	Indicates the price list to which the price item pricing is assigned. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Price List Pricing</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Price List</b> screen appears where you can view the details of the respective price list.</p>
Pricing Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item or price item bundle).
	<p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>
Effective Start Date	Displays the date from when the price item pricing is effective.
	<p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Effective End Date	Displays the date till when the price item pricing is effective.
	<p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Pricing Currency	Indicates the currency in which the price item pricing is defined.
	<p><b>Note:</b> This column appears only when you select the <b>Price List Pricing, Account Override Pricing, or Person Override Pricing</b> option from the <b>Search By</b> list.</p>

Column Name	Column Description
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
	<p><b>Note:</b></p> <p>It has a link. On clicking the link <b>Rate Schedule</b> screen appears.</p> <p>This column appears only when you select the <b>Price List Pricing</b>, <b>Account Override Pricing</b>, or <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are:
	<ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul> <p><b>Note:</b> This column appears only when you select the <b>Price List Pricing</b>, <b>Account Override Pricing</b>, or <b>Person Override Pricing</b> option from the <b>Search By</b> list.</p>
Price Assignment Type	Indicates the type of the price item pricing. The valid values are:
	<ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul> <p><b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>

How to copy a price item pricing	<a href="#">Copying a Price Item Pricing</a> on page 360
How to assign a price item or price item bundle to a person	<a href="#">Assigning a Price Item or Price Item Bundle to a Person</a>

## Viewing Effective Price Assignments of a Person

### Prerequisites

To view effective price assignments of a person, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

### Procedure

To view effective price assignments of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. View the pricing for price items or price item bundles assigned to the person (either directly or through the customer hierarchy) in the **Effective Price Assignments for Person** zone.
5. Filter the effective price assignments of the person, if required.

#### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
How to search for a person	<a href="#">Searching for a Person</a> on page 60
<b>Pricing (Person)</b> screen	<a href="#">Pricing (Person)</a> on page 344
<b>Effective Price Assignments for Person</b> zone	<a href="#">Effective Price Assignments for Person</a> on page 345
How to filter effective price assignments of a person	<a href="#">Filtering Effective Price Assignments of a Person</a> on page 356

## **Filtering Effective Price Assignments of a Person**

### **Prerequisites**

To filter effective price assignments of a person, you should have:

- Price items or price item bundles defined in the application
- Parameters defined in the application (where the source entity is set to **Transaction**)
- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

### **Procedure**

To filter effective price assignments of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Enter the search criteria in the **Effective Price Assignments for Person** zone.

**Note:**

You can search for a price item, parameter, or parameter value by clicking the **Search** () icon corresponding to the respective field.

If you want to add more than one parameter in the search criteria, click the **Add** () icon and then enter the parameter name and its value. However, if you want to remove a parameter from the search criteria, click the

**Delete** () icon corresponding to the parameter.

You can only use those parameters where the source entity is set to **Transaction**.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

### 5. Click **Search**.

A list of price assignments which are effective on the specified date and that meet the search criteria are listed in the **Effective Price Assignments for Person** zone.

## Exporting Effective Price Assignments of a Person

### Prerequisites

To export effective price assignments of a person in the CSV format, you should have:

- Price items or price item bundles assigned to the person either directly or through the customer hierarchy

### Procedure

To export effective price assignments of a person in the CSV format:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Filter the effective price assignments of the person, if required.
5. Click the **Export to Excel** link in the **Effective Price Assignment** zone.

A message appears confirming whether you want to open or save the EffectivePricing.csv file.

6. Select the **Save As** option from the **Save** list.

The **Save As** dialog box appears.

7. Browse to the location where you want to save the file.
8. Enter the file name in the respective field, and click **Save**.

The search results are exported in the CSV format.

9. Open the CSV file in Microsoft Excel.

The sheet contains the following columns:

Column Name	Column Description
Price Item	Displays the price item or price item bundle code.
Description	Displays the description of the price item or price item bundle.
Variance	Indicates the variance parameter which is used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this column is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values which are used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing – Invoice Based</li> <li>• Post Processing – Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy. The valid values are: <ul style="list-style-type: none"> <li>• Customer Agreed</li> <li>• Customer Price List</li> <li>• Customer Inherited Price List</li> <li>• Parent Customer Agreed</li> <li>• Parent Customer Price List</li> <li>• Parent Customer Inherited Price List</li> </ul>
Price List Description	Displays the description of the price list.  <b>Note:</b> The description appears only when the assignment level is <b>Customer Price List</b> , <b>Customer Inherited Price List</b> , <b>Parent Customer Price List</b> , or <b>Parent Customer Inherited Price List</b> .

Column Name	Column Description
Rate Description	Displays the description of the rate schedule which is used for defining the price item pricing.
Rate Component Information	Displays a comma-separated string which consists of the following: <ul style="list-style-type: none"> <li>• Rate Component Sequence</li> <li>• Tiering Setup of the Rate Component</li> </ul>
Price Component Sequence	Indicates the sequence number of the price component.
Price Component Description	Displays the description of the price component.
Rate	Indicates the rate defined for the price component.
Effective Start Date	Displays the date from when the price item pricing is effective.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price item pricing is applicable to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>• AC</li> <li>• NC</li> </ul>
Price Assignment ID	Displays the price assignment ID.
Parent Level	Indicates the numerical level of the parent in the customer hierarchy from whom the price item pricing is inherited.
Price List ID	Indicates the price list from where the price item pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the price item pricing is inherited.
Parent Pricelist Level	Indicates the parent level when price item pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>

Column Name	Column Description
Aggregate Transaction	Indicates whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quarterly</li> <li>• Yearly</li> </ul>
Tiering Criterion	Indicates the tiering criterion which is used in the tiering range.
Tiering Price Item	Indicates whether the price item or price item bundle's total usage is considered for determining the rate.

How to search for a person	<a href="#">Searching for a Person</a>

## **Copying a Price Item Pricing**

### **Prerequisites**

To copy a price item pricing and assign it to a person, you should have:

- Person (to which you want to assign the price item pricing) defined in the application
- Person associated with the division to which the user belongs
- Price item pricing (whose copy you want to create) defined in the application

### **Procedure**

To copy a price item pricing and assign it to a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. In the **Search Price Item** zone, select the required option from the **Search By** list to indicate whether you want to search price item pricing assigned to an account, person, or a price list.

The fields in the **Search Criteria** section change depending on the option that you select from the **Search By** list.

5. Enter the search criteria in the **Search Price Item** zone to search for the price item pricing whose copy you want to create and assign it to the person.

6. Click **Search**.

A list of price assignments that meet the search criteria appears in the **Search Results** section.

7. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the price item pricing whose copy you want to create.

The **Price Item Pricing** screen appears.

8. Modify the required pricing details.

**Note:**

If you change the effective start and end dates while copying a price item pricing, you need to specify the parameters which are effective during that date range.

While copying a price item pricing, you can not only edit the existing tiering combination details, but can also add additional tiering combinations until the maximum tiering combinations limit is met.

If you are creating a copy of active, proposed, inactive, rejected, or template price item pricing, you can save the new price item pricing in the **Active** or **Proposed** status.

9. Edit the characteristics of the price item pricing, if required.

10. Click **Save**.

A new price item pricing is defined and assigned to the person.

## **Viewing a Price Item Pricing**

### **Procedure**

To view a price item pricing and assignment details:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the link in the **Pricing Information** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears. It contains the following zones:

- **Price Item Pricing** – Displays the price item pricing details. It contains the following sections:
  - **Pricing Information** – Displays the pricing information of the price item.
  - **TFM Information** – Displays the transaction feed management information of the price item.
  - **Characteristics** – Displays the details of price item pricing characteristics.
  - **Price Item and Parameter Information** – Displays the price item parameter details.
  - **Record Actions** – Displays the record actions of the price item pricing.
  - **Record Information** – Displays the record information of the price item pricing.
- **Rate and Price Component Summary** – Displays the rate and price component summary of the price item.
- **Rate Components** – Displays the rate components of the price item.
- **Price Components** – Displays the details of price components of the price item.
- **Tiering Criteria** – Displays the tiering criteria of the price item pricing.

**Note:** This zone appears only when **Tiering Type** for the rate component is **STEP** or **Threshold**

- **Pricing Eligibility Criteria** – Displays the pricing eligibility criteria of the price item pricing.

**Note:** This zone appears only when eligibility checkbox is selected in the **Price Item Pricing** screen and details for pricing eligibility criteria is added in the **Price Component** screen.

6. View the basic details of price item pricing in the **Price Item Pricing** zone.
7. View the rate and price component summary of price item in the **Rate and Price Component Summary** zone.
8. View the rate components of price item in the **Rate Components** zone.
9. View the details of price components of price item in the **Price Components** zone.
10. View the tiering criteria of price item pricing in the **Tiering Criteria** zone.
11. View the pricing eligibility criteria of price item pricing in the **Pricing Eligibility Criteria** zone.

## Editing a Price Item Pricing of a Person

### Prerequisites

To edit a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing of a person:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.
5. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the price item pricing whose details you want to edit.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<b>Note:</b> The effective start date cannot be later than the effective end date.  If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.  This field will be in read-only mode when the price assignment has been used.	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div> <b>Note:</b>            The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.         </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. ## **Overriding a Price Item Pricing of a Person**

### **Prerequisites**

To override a price item pricing of a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### **Procedure**

To override a price item pricing of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.
5. In the **Search Results** section, click the **Override** (🔧) icon in the **Override** column corresponding to the price item pricing whose details you want to override.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.

- TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- Characteristics** – Used to define characteristics for the price item pricing.
- Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Regular**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<b>Note:</b> The effective start date cannot be later than the effective end date.  If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.  This field will be in read-only mode when the price assignment has been used.	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b></p> <p>The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> </div>	Yes
Pricing Eligibility	<p>Used to select pricing eligibility criteria for price item pricing.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> This field will be in enabled for selection if the checkbox is not selected. If the checkbox appears selected then this field will be in read-only mode.</p> </div>	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to indicate the status of the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Draft</b> – Indicates that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> – Indicates that the price assignment is used for quotations.</li> </ul>	Yes
	<b>Note:</b> If a price assignment is in <b>Draft</b> status, you cannot change its status to <b>Proposed</b> .	
Pricing Currency	Used to indicate the currency in which you want to override the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.	Yes
	<b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> screen appears.	
Pricing Rule Type	Used to indicate the pricing rule type. The valid value is: <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required when you are overriding a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, <b>Yes</b> is selected.	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	

6. Modify the details in the **Main** section, if required.
7. Modify the TFM Information in a price item pricing, if required.
8. Modify the characteristics for a price item pricing, if required.
9. Modify the parameters for a price item pricing, if required.

**Note:** If you change the effective end date while overriding a price item pricing, you need to specify the parameters which are effective during the date range of start and end date.

**10. Click Save.**

The price item pricing is overridden.

**Assigning a Price Item to a Person****Prerequisites**

To assign a price item to a person, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

**Procedure**

To assign a price item to a person:

1. Search for the account in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** (☰) icon corresponding to the person whose details you want to view.  
A menu appears.
3. Click the **Go To Effective Pricing** menu option.  
The **Pricing (Person)** screen appears.
4. Search for the price item that you want to assign to the person in the **Search Price Item or Price Item Pricing** zone.
5. In the **Search Results** section, click the **Assign** (📌) icon in the **Assign** column corresponding to the price item that you want to assign to the person.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the price item pricing.
- **TFM Information** – Used to specify the transaction feed management information about the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

- **Characteristics** – Used to define characteristics for the price item pricing.
- **Price Item and Parameter Information** – Used to define the parameter details segment for the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<b>Note:</b> By default, the current system date appears in this field. The effective start date cannot be later than the effective end date.	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)

## Defining Characteristics for a Price Item Pricing

### Prerequisites

To define characteristics for a price item pricing, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Price Item**)

### Procedure

To define characteristics for a price item pricing that is assigned to an account:

1. Ensure that the **Characteristics** section is expanded when you are defining a price item pricing.

The **Characteristics** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the price item pricing.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Price Item Pricing</b> . <b>Note:</b> This field is required when you are defining a characteristic for the price item pricing.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the price item pricing. <b>Note:</b> If you select a predefined characteristic type, the <b>Search</b> (🔍) icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears. On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the price item pricing, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the price item pricing, click the **Delete** () icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the price item pricing.

## **Defining Parameters for a Price Item Pricing**

### **Prerequisites**

To define parameters for a price item pricing, you should have:

- Parameters associated with the price item, in case, you want to define price item pricing based on multiple parameters

### **Procedure**

To define parameter details segment for a price item pricing that is assigned to an account:

1. Ensure that the **Price Item and Parameter Information** section is expanded when you are defining a price item pricing.

The **Price Item and Parameter Information** section contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose pricing details are listed in this section.

In addition, this section contains a grid which has the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter	Used to indicate the parameter that you want to associate with the price item pricing.	Yes
	<b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameter Search</b> window appears. The parameter search results displays only those parameters where the <b>Price Item</b> check box is selected	
Parameter Information	Displays a comma-separated string which contains of the following: <ul style="list-style-type: none"> <li>Parameter Description</li> <li>Mandatory (Yes or No)</li> <li>Priority</li> </ul>	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	Used to specify the value of the parameter.	Yes

- Enter the required details in the **Price Item and Parameter Information** section.
- If you want to define more than one parameter information for the price item pricing, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a parameter information from the price item pricing, click the **Delete** (🗑️) icon corresponding to the parameter.

- Click **Save**.

The parameters are defined for the price item pricing.

## Defining TFM Information in a Price Item Pricing

### Prerequisites

To define the TFM information in a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Aggregation or Rating Criteria data to be defined for the price item pricing

### Procedure

To define the TFM information in a price item pricing:

- Ensure that the **TFM Information** section is expanded when you are defining a price item pricing.

The **TFM Information** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Ignore Transaction	Used to indicate whether the transactions mapped to the price item is considered for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes
Aggregate Transactions	Used to indicate whether the transactions mapped to the price item is aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Aggregation Schedule	Used to indicate the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quarterly</li> <li>• Yearly</li> </ul>	Yes
Transaction Rating Criteria	Used to indicate how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines Across Transaction</li> </ul>	Yes

2. Enter the required details in the **TFM Information** section.

**Note:** **TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Available For** is **Pricing and Billing**.

3. Click **Save**.

The transactions are defined for the price item pricing.

## **Price Item Pricing (Used for Viewing)**

The **Price Item Pricing** screen allows you to view the details of the price item pricing. It also allows you to edit the details of the existing price item pricing. It contains the following zones:

- [Price Item Pricing](#) on page 379 zone
- [Rate and Price Component Summary](#) on page 382 zone

- [Two-Dimensional Pricing](#) on page 382 zone

**Note:** The **Two-Dimensional Pricing** zone appears only when the **Pricing Rule Type** is set to **Two-Dimensional**.

## Price Item Pricing

The **Price Item Pricing** zone displays the details of the price item pricing. It contains the following sections:

- **Pricing Information** – Displays basic information about the price item pricing. It contains the following fields:

Field Name	Field Description
Start Date	Displays the date from when the pricing of the price item is effective.
End Date	Displays the date till when the pricing of the price item is effective.
Price Assignment Type	<p>Indicates the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Post Processing</b> – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> <li>• <b>Post Processing – Invoice Based</b> – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <p><b>Note:</b> This is not applicable for price items which are defined for <b>Pricing</b> and where the <b>Price Item Type</b> field is set to <b>Fees</b>.</p> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Indicates that the pricing is used to generate post processing bill segment. This type of price assignment is done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> <li>• <b>Regular</b> – Indicates that the pricing is used to generate regular bill segment.</li> </ul> <p><b>Note:</b></p> <p>This is not applicable for price items which are defined for <b>Pricing</b> and where the <b>Price Item Type</b> field is set to <b>Fees</b>.</p> <p>By default, the <b>Regular</b> option is selected in the <b>Bundle Type</b> field for price item which are applicable for <b>Pricing</b> and cannot be edited.</p> <p>The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p>
Pricing Eligibility	Indicates whether the price item pricing is eligible for pricing assignment or not.

Field Name	Field Description
Pricing Status	<p>Indicates the pricing assignment status of the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• Draft</li> <li>• Template</li> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> </ul>
Variance Parameter	<p>Indicates the variance based on which the price item pricing is defined.</p> <p><b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b>.</p>
Pricing Currency	<p>Indicates the currency in which the price item pricing is defined.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Currency</b> screen appears where you can edit, add, or delete the details of the currency.</p>
Rate Schedule	<p>Indicates the rate schedule that is used to define the price item pricing.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Rate Schedule</b> screen appears where you can view the details of the respective rate schedule.</p>
Pricing Rule Type	<p>Indicates the pricing rule type. The valid value is:</p> <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>
Print Zero	<p>Indicates the zero pricing displayed in the bill. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Pricing Frequency	<p>Indicates the pricing frequency for the price item.</p> <p><b>Note:</b> This field appears only when the <b>Price Item Usage</b> field is set to <b>Pricing</b> and <b>Price Item Type</b> field is set to <b>Fees</b>.</p>
Advance Pricing	<p>This field appears only when <b>Price Item</b> field is set to <b>Pricing</b>, <b>Price Item Type</b> field is set to <b>Fees</b> and <b>Price Assignment Type</b> field is set to <b>Post Processing</b>. The valid values are:</p> <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Price Assignment Usage	<p>Indicates whether the price item pricing is applicable to all customers or only to new customers. The valid values are:</p> <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul>

- **TFM Information** – Displays information about the transactions mapped to the price item pricing. It contains the following fields:

Field Name	Field Description
Ignore Transaction	Indicates whether the transactions mapped to the price item pricing is considered for billing or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Do not Aggregate Switch	Indicates whether the transactions mapped to the price item pricing is aggregated for billing or not. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Aggregation Schedule	Indicates the transaction aggregation cycle. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Weekly</li> <li>• Monthly</li> <li>• Quarterly</li> <li>• Yearly</li> </ul>
Transaction Rating Criteria	Indicates how and when the transaction legs mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate Aggregated SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines</li> </ul>

**Note:**

**TFM Information** section appears when the value for **Show Default Values in Price Item Pricing** option type of **C1\_FM feature configuration** is set to **Y** and **Price Item Usage** field is set to **Pricing and Billing**.

**TFM Information** section does not appear when the **Price Item Usage** field is set to **Pricing** and the **Price Item Type** field is set to **Fees**, if so, then only the **Pricing Frequency** field appears.

- **Characteristics** – Lists the characteristics defined for the price item pricing. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the price item pricing.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Price Item and Parameter Information** – Displays information about the parameters associated with the price item pricing. It contains the following field:

Field Name	Field Description
Price Item	Indicates the price item or price item bundle whose parameter details are listed in this section.

In addition, this section contains the following columns:

Column Name	Column Description
Parameter	Indicates the parameter that is associated with the price item pricing.
Parameter Value	Displays the value of the parameter.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the price item pricing.  <b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> , or <b>Proposed</b> status.
Delete	Used to delete the price item pricing.  <b>Note:</b> The <b>Delete</b> button appears only when the price item pricing is in the <b>Draft</b> , or <b>Proposed</b> status.
Submit	Used to submit the price item pricing for validation and processing.  <b>Note:</b> The <b>Submit</b> button appears only when the price item pricing is in the <b>Draft</b> , or <b>Proposed</b> status.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the price item pricing is defined in the application. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Rate and Price Component Summary

The **Rate and Price Component Summary** zone lists information about the following in a tree view:

- **Rate Component** defined for the rate schedule of the price item pricing
- **Price Component** defined for each **Rate Component**
- **Eligibility Criteria** defined for each **Price Component**

**Note:** This information appears only when eligibility check box is selected in the **Price Item Pricing** screen and details for eligibility criteria is added in the **Price Component** screen.

- **Tiering Criteria** defined for each **Price Component**

**Note:** This information appears only when the **Tiering Type** for the rate component is **STEP** or **Threshold**.

## Two-Dimensional Pricing

The **Two-Dimensional Pricing** zone displays the details of the two-dimensional pricing. It contains the following field:

Field Name	Field Description
Pricing Information	Displays the concatenated string consisting of pricing information and pricing ID which are separated by a comma (,) for an account, person, or price list.

In addition, this section contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Displays the <b>Price Criteria</b> of the price component.
Threshold Parameter	Displays the parameter of the price component eligibility.
Tiering Range	Displays the tiering range of the pricing.

## Defining a Price Item Pricing

### Prerequisites

To define a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, and rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### Procedure

To define pricing for a price item:

1. Do either of the following:

If you want to...	Then...
Define pricing for a price item that you want to assign to a person	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Person)</b> screen.</li> <li>2. Search for the price item or price item bundle that you want to assign to the person in the <b>Search Price Item or Price Item Pricing</b> zone by selecting the <b>Price Item</b> option from the <b>Search By</b> list.</li> <li>3. In the <b>Search Results</b> section, click the <b>Assign</b>  icon in the <b>Assign</b> column corresponding to the price item that you want to assign to the person.</li> </ol>
Define pricing for a price item that you want to assign to an account	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Account)</b> screen.</li> <li>2. Search for the price item or price item bundle that you want to assign to the person in the <b>Search Price Item or Price Item Pricing</b> zone by selecting the <b>Price Item</b> option from the <b>Search By</b> list.</li> </ol>

If you want to...	Then...
	<b>3.</b> In the <b>Search Results</b> section, click the <b>Assign</b> (  ) icon in the <b>Assign</b> column corresponding to the price item that you want to assign to the account.
Define pricing for a price item that you want to assign to a price list	<b>1.</b> Access the <b>Price list Price Item Pricing</b> screen.  <b>2.</b> Search for the price item or price item bundle that you want to assign to the person in the <b>Search Price Item or Price Item Pricing</b> zone by selecting the <b>Price Item</b> option from the <b>Search By</b> list.  <b>3.</b> In the <b>Search Results</b> section, click the <b>Assign</b> (  ) icon in the <b>Assign</b> column corresponding to the price item that you want to assign to the price list.

The **Price Item Pricing** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the price item pricing.
- **TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** field is **Pricing and Billing**.

- **Characteristics** - Use to define characteristics for the price item pricing.
- **Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<b>Note:</b> By default, the current system date appears in this field.  The effective start date cannot be later than the effective end date.	
End Date	Used to specify the date till when the price item pricing is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	

Field Name	Field Description	Mandatory (Yes or No)
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Post Processing</b> – Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment is done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This is not be applicable for price items which are defined for <b>Pricing</b> and where the <b>Price Item Type</b> field is set to <b>Fees</b>.</p> </div> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing is used to generate post processing bill segment. This type of price assignment is done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> <li>• <b>Regular</b> – Used to indicate that the pricing is used to generate regular bill segment.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <p><b>Note:</b> This is not be applicable for price items which are defined for <b>Pricing</b> and where the <b>Price Item Type</b> field is set to <b>Fees</b>.  By default, the <b>Regular</b> option is selected in the <b>Bundle Type</b> field for price items which are applicable for <b>Pricing</b> and cannot be edited.  The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item Relationship Type</b>.</p> </div>	Yes
Pricing Eligibility	Used to indicate whether you want to use the price item for pricing or not.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to indicate the status of the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Template</li> <li>• Active</li> <li>• Inactive</li> <li>• Proposed</li> <li>• Rejected</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Draft</b> option is selected. You can edit the price item pricing only when it is in the <b>Draft</b> status.	
Variance Parameter	Used to specify the variance based on which you want to define the price item pricing.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .	
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining a price item pricing.	Yes
	<b>Note:</b> Rate schedules control how the bills for the price item will be calculated. The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.	
Pricing Rule Type	Used to indicate the rule type which is used for price item pricing. The valid value is: <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes (Conditional)
	<b>Note:</b> If you are defining a standard price item pricing, the <b>Pricing Rule Type</b> field should be kept blank.	
		<b>Note:</b> This field is required when you want to define <b>Two-Dimensional</b> pricing for the price item or price item bundle.

Field Name	Field Description	Mandatory (Yes or No)
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> By default, <b>Yes</b> is selected.	
Pricing Frequency	Used to indicate pricing frequency for the price item.	Yes
	<b>Note:</b> This field appears only when the <b>Price Item Usage</b> field is set to <b>Pricing</b> and <b>Price Item Type</b> field is set to <b>Fees</b> .	
Advance Pricing	This field appears only when <b>Price Item</b> field is set to <b>Pricing</b> , <b>Price Item Type</b> field is set to <b>Fees</b> and <b>Price Assignment Type</b> field is set to <b>Post Processing</b> . The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul>	Yes
	<b>Note:</b> By default, the <b>All Customers</b> option is selected.	

2. Enter the required details in the **Main** section.
3. Enter the transaction feed management information that you want to map to the price item pricing.
4. Define characteristics for the price item pricing, if required.
5. Associate parameters with the price item pricing, if required.
6. Click **Save**.

The price item pricing is defined.

**Note:** A bundle cannot be assigned if its child price items are already assigned to a price list, person, or an account, and vice versa, in the same date range.

## Editing a Price Item Pricing

### Prerequisites

To edit a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on those parameters)

### Procedure

To edit a price item pricing:

1. Do either of the following:

If you want to...	Then...
Edit pricing of a price item that is assigned to a person	<ol style="list-style-type: none"> <li>1. Search for the person in the <b>Customer 360° View</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the <b>Show Context Menu</b> () icon corresponding to the person whose details you want to view. A menu appears.</li> <li>3. Click the <b>Go To Effective Pricing</b> menu option. The <b>Pricing (Person)</b> screen appears.</li> <li>4. Price assignments effective for the person appears in the <b>Effective Price Assignments for Person</b> zone.</li> <li>5. You can edit the price item pricing through the following alternatives: <ol style="list-style-type: none"> <li>a. First alternative, <ul style="list-style-type: none"> <li>• In the <b>Search Results</b> section of <b>Effective Price Assignments for Person</b> zone, click the <b>Edit</b> () icon in the <b>Edit</b> column corresponding to the price item pricing whose details you want to edit.</li> </ul> </li> </ol> </li> </ol>

If you want to...	Then...
	<p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of the price item.</p> <p>b. Second alternative,</p> <ul style="list-style-type: none"> <li>In the <b>Search Results</b> section of <b>Effective Price Assignments for Person</b> zone, click the link in the <b>Pricing</b> column corresponding to the price item whose pricing details you want to edit.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears.</p> <ul style="list-style-type: none"> <li>Click the <b>Edit</b> button in the <b>Record Actions</b> section.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of the price item.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.</p> </div>
<p>Edit pricing of a price item that is assigned to an account</p>	<ol style="list-style-type: none"> <li>Search for the account in the <b>Customer 360° View</b> screen.</li> <li>In the <b>Search Results</b> section, click the <b>Show Context Menu</b> () icon corresponding to the account whose details you want to view. A menu appears.</li> <li>Click the <b>Go To Effective Pricing</b> menu option. The <b>Pricing (Account)</b> screen appears.</li> <li>Price assignments effective for the account appears in the <b>Effective Price Assignments for Account</b> zone.</li> <li>You can edit the price item pricing through the following alternatives: <ol style="list-style-type: none"> <li>First alternative, <ul style="list-style-type: none"> <li>In the <b>Search Results</b> section of <b>Effective Price Assignments for Account</b> zone, click the <b>Edit</b> () icon in the <b>Edit</b> column corresponding to the price item pricing whose details you want to edit.</li> </ul> </li> </ol> </li> </ol>

If you want to...	Then...
	<p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of the price item.</p> <p>b. Second alternative,</p> <ul style="list-style-type: none"> <li>In the <b>Search Results</b> section of <b>Effective Price Assignments for Account</b> zone, click the link in the <b>Pricing</b> column corresponding to the price item whose pricing details you want to edit.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears.</p> <ul style="list-style-type: none"> <li>Click the <b>Edit</b> button in the <b>Record Actions</b> section.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of the price item.</p> <div style="border: 1px solid black; padding: 5px; margin-top: 10px;"> <p><b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.</p> </div>
Edit pricing of a price item that is assigned to a price list	<ol style="list-style-type: none"> <li>Search for the price list in the <b>Price List</b> screen.</li> <li>In the <b>Search Results</b> section, click the <b>View</b> () icon in the <b>Price List Pricing</b> column corresponding to the price list whose details you want to edit.</li> </ol> <p>The <b>Price List Price Item Pricing</b> screen appears.</p> <ol style="list-style-type: none"> <li>Price items assigned to the price list appears in the <b>Price List Price Items</b> zone.</li> <li>You can edit the price item pricing through the following alternatives:             <ol style="list-style-type: none"> <li>First alternative,                 <ul style="list-style-type: none"> <li>In the <b>Search Results</b> section of <b>Price List Price Items</b> zone, click the <b>Edit</b> () icon in the <b>Edit</b> column corresponding to the price item pricing whose details you want to edit.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of the price item.</p> </li> <li>Second alternative,</li> </ol> </li> </ol>

If you want to...	Then...
	<ul style="list-style-type: none"> <li>In the <b>Search Results</b> section of <b>Price List Price Items</b> zone, click the link in the <b>Pricing</b> column corresponding to the price item whose pricing details you want to view.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears.</p> <ul style="list-style-type: none"> <li>Click the <b>Edit</b> button in the <b>Record Actions</b> section.</li> </ul> <p>The <b>Price Item Pricing</b> screen appears to edit the pricing details of a price item.</p> <div> <p><b>Note:</b> The <b>Edit</b> button appears only when the price item pricing is in the <b>Draft</b> status.</p> </div>

The **Price Item Pricing** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the price item pricing.
- TFM Information** - Used to specify the transaction feed management information that you want to map to the price item pricing.

**Note:** This section appears in the **Price Item Pricing** screen only when the value for the **Show Default Values in Price Item Pricing** option type for **C1\_FM** feature configuration is set to **Y** and **Price Item Available For** field is **Pricing and Billing**.

- Characteristics** - Used to define characteristics for the price item pricing.
- Price Item and Parameter Information** - Used to associate parameters with the price item pricing.

**Note:** This section appears only when **Price Assignment Type** is **Processing**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when the price item pricing is effective.	Yes
	<p><b>Note:</b></p> <p>By default, the current system date appears in this field.</p> <p>The effective start date cannot be later than the effective end date.</p>	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when the price item pricing is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Price Assignment Type	<p>Used to indicate the type of price assignment. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Regular</b> – Used to indicate that the pricing must be used to generate regular bill segment.</li> <li>• <b>Post Processing</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on usage accounts. The post processing bill segment is generated when you generate the bill for the usage account and not when you bill the usage account through an invoice account.</li> </ul> <p><b>Note:</b></p> <p>The post processing bill segment is generated when the <b>Post Processing Sequence (PPSEQ)</b> characteristic is defined for the price item and when the price item is associated with another price item using the <b>Price Item</b> relationship type.</p> <ul style="list-style-type: none"> <li>• <b>Post Processing – Invoice Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on an invoice account, and, as a result, the post processing bill segment is generated on the invoice account.</li> </ul> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p> <ul style="list-style-type: none"> <li>• <b>Post Processing – Price Item Based</b> – Used to indicate that the pricing must be used to generate post processing bill segment. This type of price assignment can be done on both invoice and usage accounts, but the post processing bill segment is generated only on the invoice account.</li> </ul> <p><b>Note:</b> This will not be applicable for price item which are defined for <b>Only Pricing</b>.</p>	Yes
Pricing Eligibility	Used to indicate whether you want to use the price item for pricing or not.	No

Field Name	Field Description	Mandatory (Yes or No)
Pricing Status	Used to indicate the status of the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• <b>Draft</b> - Used to indicate that the price assignment is created as a draft.</li> <li>• <b>Proposed</b> - Used to indicate that the price assignment is used for quotations.</li> <li>• <b>Template</b> - Used to indicate that the price assignment is a template price list.</li> </ul>	Yes
Variance Parameter	Used to specify the variance based on which you want to define the price item pricing.  <b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .	No
Pricing Currency	Used to indicate the currency in which you want to define the price item pricing.	Yes
Rate Schedule	Used to specify the rate schedule that you want to use while defining price item pricing.  <b>Note:</b> Rate schedules control how the bills for the price item will be calculated.  The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Rate Schedule Search</b> window appears.	Yes
Pricing Rule Type	Used to indicate the rule type which is used for price item pricing. The valid value is: <ul style="list-style-type: none"> <li>• Two-Dimensional</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required when you are defining a two-dimensional pricing rule.
Print Zero	Used to indicate whether zero pricing should be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Pricing Frequency	Used to indicate pricing frequency for the price item.  <b>Note:</b> This field appears only when <b>Price Item</b> is defined as <b>Only Pricing</b> and <b>Price Item Type</b> is defined as <b>Fees</b> .	Yes

Field Name	Field Description	Mandatory (Yes or No)
Advance Pricing	This field appears only when <b>Price Item</b> field is set to <b>Pricing</b> , <b>Price Item Type</b> field is set to <b>Fees</b> and <b>Price Assignment Type</b> field is set to <b>Post Processing</b> . The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Price Assignment Usage	Used to indicate whether the price item pricing is applicable to all customers or only to new customers. The valid values are: <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul>	Yes

2. Modify the details in the **Main** section, if required.

**Note:**

If you change the effective start and end dates while editing a price item pricing, you need to specify the parameters which are effective during that date range.

3. Modify the TFM information that you want to map to the price item pricing, if required.
4. Define, edit or remove characteristics from the price item pricing, if required.
5. Define, edit or remove parameters from the price item pricing, if required.
6. Click **Save**.

**Note:**

If any value other than **Status** and **End Date** is updated then the price assignment for the price item is ended with **End Date** updated as the current system date and a new price assignment is generated for the price item with new price item pricing ID and start date as the current system date.

The **Submit** button appears only when the **Pricing Status** is **Draft**.

The **Edit Price Components** button appears only when you are editing a price assignment which is in the **Active**, **Proposed**, or **Template** status and which is not past dated; If the approval workflow is on, then the **Edit Price Components** button appears when you are editing a proposed and template price assignment which is already approved.

When the price assignment is in **Draft** status and,

- When the approval workflow is on and is in **Draft** status then it is changed to **Pending in Approval**.

When the price assignment is in **Draft** status and,

- When the approval workflow is off and is in **Draft** status then it is changed to **Active**.

The changes made to the price item pricing are saved.

## Defining a Price Component for a Rate Component of a Person

### Prerequisites

To define a price component for a rate component of a person, you should have:

- Rate component defined for the price item in the application

### Procedure

To define price component for a rate component of a person:

1. Search for the person in the **Customer 360° View** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon in the **Person Information** column corresponding to the person whose details you want to view.

A menu appears.

3. Click the **Go To Effective Pricing** menu option.

The **Pricing (Person)** screen appears.

4. Price assignments effective for the person appears in the **Effective Price Assignments for Person** zone.

5. In the **Search Results** section, click the link in the **Pricing** column corresponding to the price item whose pricing details you want to view.

The **Price Item Pricing** screen appears.

**Tip:** Alternatively, you can access the **Price Item Pricing** screen by:

- Searching for a price item in the **Search Price Item or Price Item Pricing** zone.
- In the **Search Results** section, click the **Assign** () icon corresponding to the price item.
- Enter the required details in the **Price Item Pricing** screen and click **Save**.
- The **Price Item Pricing** screen appears.

6. In the **Rate and Price Component Summary** zone, click the **Add** () icon in the **Action** column corresponding to the **Rate Component** for which you want to define the **Price Component**.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the pricing ID and pricing information of the price item.
Rate Component Information	Displays information about the rate component.

In addition, this screen contains the following sections:

- **Main** - Used to specify basic details about the price component.
- **Tiering Criteria** - Used to specify the details of tiering criterion that are used in the tiering range.
- **Pricing Eligibility Criteria** - Used to specify the details of parameters used while defining the pricing eligibility criteria.

**Note:** You can define a **Price Component** for a **Rate Component** only when the **Pricing Status** of the **Price Item Pricing** is set to **Draft**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which price component should be considered for the rate component while pricing.	Yes
Show Price Component	Used to indicate whether the price component should appear or not.	Yes
Description	Used to specify the description of the price component.	Yes
Rate Value	Used to specify the rate defined for the price component.	Yes

- Enter the required details in the **Main** section.
- If you want to define more than one price component for the rate component, click the

Add (  ) icon corresponding to the **Rate Component** and then repeat step 7.

**Note:** However, if you want to remove a price component from the rate component, click the **Delete** (  ) icon corresponding to the price component.

- Define a list of tiering criteria for the price component, if required.
- Define a list of pricing eligibility criteria for the price component, if required.
- Click **Save**.

The price component is defined for the rate component of a person.

## Defining a Price Component for a Rate Component of a Price List

### Prerequisites

To define a price component for a rate component of a price list, you should have:

- Rate component defined for the price item in the application

### Procedure

To define price component for a rate component of a price list:

1. Search for the price list in the **Price List** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the price list whose pricing details you want to view.  
The **Price List Price Item** zone appears.
3. In the **Price List Price Item** zone, click the link in the **Pricing** column corresponding to the price item whose pricing details you want to view.  
The **Price Item Pricing** screen appears.
4. In the **Rate and Price Component Summary** zone, click the **Add**  icon in the **Action** column corresponding to the **Rate Component** for which you want to define the **Price Component**.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the pricing ID and pricing information of the price item.
Rate Component Information	Displays information about the rate component.

In addition, this screen contains the following sections:

- **Main** - Used to specify basic details about the price component.
- **Tiering Criteria** - Used to specify the details of tiering criterion for the price component.
- **Pricing Eligibility Criteria** - Used to specify the details of parameters used while defining the pricing eligibility criteria for the price component.

**Note:** You can define a **Price Component** for the **Rate Component** only when the **Pricing Status** of the **Price Item Pricing** is set to **Draft**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which price component should be considered for the rate component while pricing.	Yes
Show Price Component	Used to indicate whether the price component should appear or not.	Yes
Description	Used to specify the description of the price component.	Yes
Rate Value	Used to specify the rate defined for the price component.	Yes

- Enter the required details in the **Main** section.
- If you want to define more than one price component for the rate component, click the **Add** (  ) icon corresponding to the **Rate Component** and then repeat step 7.

**Note:** However, if you want to remove a price component from the rate component, click the **Delete** (  ) icon corresponding to the price component.

- Define a list of tiering criteria for the price component.
- Define a list of pricing eligibility criteria for the price component.
- Click **Save**.

The price component is defined for the rate component of a price list.

**Editing a Price Component of a Rate Component**

**Prerequisites**

To edit a price component of a rate component, you should have:

- Rate component defined for the price item in the application

**Procedure**

To edit a price component of a rate component:

- Ensure that the **Rate and Price Component Summary** zone is expanded in the **Price Item Pricing** screen.
- Click the **Edit** (  ) icon in the **Price Item Pricing** column corresponding to the price component whose details you want to edit.

The **Price Component** screen appears. It contains the following fields:

Field Name	Field Description
Pricing Information	Displays the pricing ID and pricing information of the price item.
Rate Component Information	Displays information about the rate component.

In addition, this screen contains the following sections:

- Main** – Used to specify the basic details about the price component.
- Tiering Criteria** – Used to specify the details of tiering criteria for the price component.

- **Pricing Eligibility Criteria** – Used to specify the details of parameters which you want to consider while defining the pricing eligibility criteria for the price component.

**Note:** You can edit a **Price Component** of a **Rate Component** only when the **Pricing Status** of the **Price Item** **Pricing** is **Draft**.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which price component should be considered for the rate component while pricing.	Yes
Show Price Component	Used to indicate whether the price component should appear or not.	Yes
Description	Used to specify the description of the price component.	Yes
Rate Value	Used to specify the rate defined for the price component.	Yes

3. Modify the required details in the **Main** section.
4. Define, edit, or remove tiering criteria from the price component, if required.
5. Define, edit, or remove pricing eligibility criteria from the price component, if required.
6. Click **Save**.

The price component is edited for a rate component.

**Defining a Tiering Criteria for a Price Component**

**Prerequisites**

To define a tiering criteria for a price component, you should have:

- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application.

**Procedure**

To define a tiering criteria for a price component:

1. Ensure that the **Tiering Criteria** section is expanded in the **Price Component** screen when you are defining or editing a price component of a rate component.

The **Tiering Criteria** section contains the following columns:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the sequence in which tiering criteria should be considered.	Yes
Tiering Criterion	Used to select the tiering criterion which is used in the tiering range.	Yes
Lower Limit	Used to specify the lower limit of the pricing range.	Yes
	<b>Note:</b> The system provides you with the facility to specify the lower limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.	

Field Name	Field Description	Mandatory (Yes or No)
Upper Limit	<p>Used to specify the upper limit of the pricing range.</p> <p><b>Note:</b></p> <p>The system provides you with the facility to specify the upper limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.</p> <p>When you define single tier with the maximum value as blank (for example, 0 to BLANK), the system will automatically replace the blank space with 999999999999999999.99.</p>	Yes
Price Item	<p>Used to indicate the price item or price item bundle whose total usage is considered for determining the rate. By default, the price item code for which you are defining the pricing appears in this field. You can specify any other price item or bundle code, if required.</p> <p><b>Note:</b> The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Details</b> window appears.</p>	Yes
Price Parameters Item	<p>Used to specify the parameters based on which price item or price item bundle's total usage should be considered for determining the rate. By default, the parameters based on which you are defining the pricing appear in this field. You can specify any other parameters (where the <b>Pricing</b> flag is set to <b>Yes</b>), if required. However, note that you can only select parameters associated with the price item or price item bundle which is used for defining the tiering criteria.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Edit</b> () icon appears corresponding to this field. On clicking the <b>Edit</b> icon, the <b>Parameters Search</b> screen appears.</p>	No

- Enter the required details in the **Tiering Criteria** section.
- If you want to define more than one tiering criteria for the price component, click the

**Add** () icon corresponding to the tiering criteria and then repeat step 2.

**Note:** However, if you want to remove a tiering criteria from the price component, click the **Delete** () icon corresponding to the tiering criteria.

4. Click **Save**.

The tiering criteria is defined for the price component.

	<b>Note:</b> The system provides you with the facility to specify the upper limit value with a precision of up to 18 places before decimal and 18 places after decimal. This gives you the flexibility to specify very large and very low values in the tiering range.  When you define single tier with the maximum value as blank (for example, 0 to BLANK), the system will automatically replace the blank space with 9999999999999999.99.	
Price Item	Used to indicate the price item or price item bundle whose total usage is considered for determining the rate. By default, the price item code for which you are defining the pricing appears in this field. You can specify any other price item or bundle code, if required.	Yes
	<b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Details</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Price Item Parameters	<p>Used to specify the parameters based on which the price item or price item bundle's total usage should be considered for determining the rate. By default, the parameters based on which you are defining the pricing appear in this field. You can specify any other parameters (where the <b>Pricing</b> flag is set to <b>Yes</b>), if required. However, note that you can only select parameters associated with the price item or price item bundle which is used for defining the tiering criteria.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Edit</b> () icon appears corresponding to this field. On clicking the <b>Edit</b> icon, the <b>Tier Parameters</b> screen appears.</p>	No

2. Modify the required details in the **Tiering Criteria** section.

3. Click **Save**.

The changes made to the tiering criteria is saved.

## Deleting a Tiering Criteria of a Price Component

### Procedure

To delete a tiering criteria of a price component:

1. Ensure that the **Tiering Criteria** section is expanded in the **Price Component** screen when you are defining or editing a price component of a rate component.
2. Click the **Delete**  icon corresponding to the **Tiering Criteria** whose details you want to remove from the price component.
3. Click **Save**.

The tiering criteria is removed from the price component.

## Defining a Pricing Eligibility Criteria for a Price Component

### Prerequisites

To define a pricing eligibility criteria for a price component, you should have:

- Pricing eligibility defined in the application

### Procedure

To define a pricing eligibility criteria for a price component:

1. Ensure that the **Pricing Eligibility Criteria** section is expanded in the **Price Component** screen when you are defining or editing a price component of a rate component.

The **Pricing Eligibility Criteria** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the criteria should be executed in the rule.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter	<p>Used to indicate the left hand side parameter which you want to use along with the price item for price determination.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears.</p> <p>You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (ERROR)</b>.</p>	Yes
Operator	<p>Used to specify the relational operator to define the relation between the left hand side and right hand side parameters code. The valid values are:</p> <ul style="list-style-type: none"> <li>• &lt;</li> <li>• &lt;=</li> <li>• &lt;&gt;</li> <li>• =</li> <li>• &gt;</li> <li>• &gt;=</li> <li>• Between</li> <li>• In</li> <li>• Like</li> <li>• Not In</li> </ul>	Yes
Parameter Value Type	<p>Used to indicate the type of pricing eligibility. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Parameter</b> – Used to indicate the type of parameter.</li> <li>• <b>Value</b> – Used to indicate the type of value.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	<p>When the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field then it is used to specify the right hand side parameter which you want to use along with the price item or price item bundle for price determination. When the <b>Value</b> option is selected for the <b>Parameter Value Type</b> field then it is used to specify the parameter value.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> () icon appears corresponding to this field only when the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears.</p> <p>When the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field then you must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (ERROR)</b>.</p> <p>When the <b>Value</b> option is selected for the <b>Parameter Value Type</b> field then you can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon (;) in the parameter value.</p>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

- Enter the required details in the **Pricing Eligibility Criteria** section.
- If you want to define more than one pricing eligibility criteria for the price component, click the

Add (  ) icon corresponding to the pricing eligibility criteria and then repeat step 2.

**Note:** However, if you want to remove a pricing eligibility criteria from the price component, click the **Delete** (  ) icon corresponding to the pricing eligibility criteria.

- Click **Save**.

The pricing eligibility criteria is defined for the price component.

## Editing a Pricing Eligibility Criteria of a Price Component

### Prerequisites

To edit a pricing eligibility criteria for a price component, you should have:

- Pricing eligibility defined in the application

### Procedure

To edit a pricing eligibility criteria for a price component:

1. Ensure that the **Pricing Eligibility Criteria** section is expanded in the **Price Component** screen when you are defining or editing a price component of a rate component.

The **Pricing Eligibility Criteria** sections contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the criteria should be executed in the rule.	Yes
Parameter	<p>Used to indicate the left hand side parameter which you want to use along with the price item for price determination.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears.</p> <p>You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (ERROR)</b>.</p>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Operator	<p>Used to specify the relational operator to define the relation between the left hand side and right hand side parameters code. The valid values are:</p> <ul style="list-style-type: none"> <li>• &lt;</li> <li>• &lt;=</li> <li>• &lt;&gt;</li> <li>• =</li> <li>• &gt;</li> <li>• &gt;=</li> <li>• Between</li> <li>• In</li> <li>• Like</li> <li>• Not In</li> </ul>	Yes
Parameter Value Type	<p>Used to indicate the type of pricing eligibility. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Parameter</b> – Used to indicate the type of parameter.</li> <li>• <b>Value</b> – Used to indicate the type of value.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	<p>When the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field then it is used to specify the right hand side parameter which you want to use along with the price item or price item bundle for price determination. When the <b>Value</b> option is selected for the <b>Parameter Value Type</b> field then it is used to specify the parameter value.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARAM_FLG)</b> feature configuration is set to <b>True</b>.</p> <p>The <b>Search</b> () icon appears corresponding to this field only when the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears.</p> <p>When the <b>Parameter</b> option is selected for the <b>Parameter Value Type</b> field then you must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (ERROR)</b>.</p> <p>When the <b>Value</b> option is selected for the <b>Parameter Value Type</b> field then you can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon (;) in the parameter value.</p>	Yes
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is False	Used to indicate what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is Insufficient	Used to indicate what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check Next Condition</b> – Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule Is False</b> – Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule Is True</b> – Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

2. Modify the required details in the **Pricing Eligibility Criteria** section.
3. Click **Save**.

The changes made to the pricing eligibility criteria is saved.

## Deleting a Pricing Eligibility Criteria of a Price Component

### Procedure

To delete a pricing eligibility criteria of a price component:

1. Ensure that the **Pricing Eligibility Criteria** section is expanded in the **Price Component** screen when you are defining or editing a price component of a rate component.
2. Click the **Delete**  icon corresponding to the **Pricing Eligibility Criteria** whose details you want to remove from the price component.
3. Click **Save**.

The pricing eligibility criteria is removed from the price component.

### Related Topics

For more information on...	See...
<b>Rate and Price Component Summary</b> zone	<a href="#">Rate and Price Component Summary</a> on page 382
How to define a pricing eligibility criteria for a price component.	<a href="#">Defining a Pricing Eligibility Criteria for a Price Component</a> on page 413

## Editing the Two-Dimensional Pricing

### Procedure

To edit a two-dimensional pricing:

1. Ensure that the **Two-Dimensional Pricing** zone is expanded in the **Price Item Pricing** screen when you are defining, editing, or copying a price item pricing.
2. Click the **Edit** link in the upper right corner of this zone.

The **Two-Dimensional Pricing** screen appears. It contains the following sections:

- **Step Criterion** - Used to specify details about the tiering criteria.
- **Threshold Parameter** - Used to specify details about the eligibility criteria.

The **Step Criterion** section contains the following fields in a grid:

Field Name	Field Description
Step Criterion	Used to specify the tiering criteria for the price component.
	<p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Tiering Criterion Search</b> window appears.</p> <p>On specifying the tiering criteria, the description of the tiering criteria appears below the <b>Step Criterion</b> field.</p>
Tiering Range	Used to specify the range for the tiering criteria of the price component.

The **Threshold Parameter** section contains the following field in a grid:

Field Name	Field Description
Threshold Parameter	Used to specify eligibility criteria range and rate for the price component.
	<p><b>Note:</b></p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> window appears.</p> <p>On specifying the parameter, the description of the parameter appears below the <b>Threshold Parameter</b> field.</p>

3. Modify the required details in the **Two-Dimensional Pricing** screen.

- 4.

If you want to add more than one tiering range, click the **Add** () icon and then enter the specific range.

However, if you want to remove a tiering range, click the **Delete** () icon corresponding to the range that you want to remove.

5. If you want to add more than one eligibility criteria range for the threshold parameter, click the

**Add** () icon and then enter the eligibility criteria range.

However, if you want to remove the eligibility criteria range from the threshold parameter, click the **Delete** () icon corresponding to the eligibility criteria range.

6. Click **Save**.

The changes made to the two-dimensional pricing are saved.

How to search for a price list	<a href="#">Searching for a Price List</a> on page 234

## Overriding a Price Item Pricing

### Prerequisites

To override a price item pricing, you should have:

- Transactions mapped to the price item defined in the application
- Rate schedules, rate versions, rate components defined in the application
- Tiering criteria defined in the application
- Tiering setup for the rate components defined in the application
- Pricing eligibility defined in the application
- Parameters associated with the price item (in case you want to define price item pricing based on multiple parameters)

### **Procedure**

To override a price item pricing:

1. Do either of the following:

<b>If you want to...</b>	<b>Then...</b>
Override price item pricing assigned to the person either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Person)</b> screen.</li> <li>2. In the <b>Effective Price Assignment</b> zone, click the <b>Override</b>  icon in the <b>Override</b> column corresponding to the price item pricing that you want to override.</li> </ol>
Override price item pricing assigned to the account either directly or through the customer hierarchy or price list	<ol style="list-style-type: none"> <li>1. Access the <b>Pricing (Account)</b> screen.</li> <li>2. In the <b>Effective Price Assignment</b> zone, click the <b>Override</b>  icon in the <b>Override</b> column corresponding to the price item pricing that you want to override.</li> </ol>

The **Price Item Pricing** screen appears.

2. Modify the required pricing details.

#### **Note:**

If you change the effective start and end dates while overriding a price item pricing, you need to specify the parameters which are effective during that date range.

While overriding a price item pricing, you can not only edit the existing tiering combination details, but also add additional tiering combinations until the maximum tiering combinations limit is met.

3. Define, edit or remove the price assignment characteristics, if required.
4. Click **Save**.

The price item pricing is overridden.

### **Related Topics**

<b>For more information on...</b>	<b>See...</b>
<b>Price Item Pricing</b> screen	<a href="#"><i>Price Item Pricing</i></a>
How to edit the characteristics of the price assignment	<a href="#"><i>Editing the Price Assignment Characteristics</i></a>

## Pricing Simulation

The **Pricing Simulation** screen allows you to:

- View pricing simulation details for account or price list
- View effective pricing information
- Search simulation details of account or price list

This screen consists of the following zones:

- [Search Pricing](#) on page 424

Through the **Pricing Simulation** screen, you can navigate to the following screens:

- [Price Item \(Used for Viewing\)](#) on page 204
- [Simulation - Effective Pricing Information](#) on page 428

## Search Pricing

The **Search Pricing** zone allows you to search pricing for an account.

In case of bundles, the order in which the price item pricing is listed in this zone is based on the following condition:

- If the system finds pricing for price items that belong to a bundle before finding pricing for the bundle, then the system lists the pricing for price items that belong to the bundle, and not the pricing for the bundle. For example, let say, B0001 is a bundle, and contains C0001 and C0002 price items. If the system finds pricing for B0001, it validates whether the pricing for C0001 and C0002 has already been found. If yes, then the system lists the pricing for C0001 and C0002. If the system does not find pricing for C0001 and C0002 before finding pricing for B0001, it lists the pricing for B0001.

**Note:** If the effective pricing is available for the price item, regular bundle (to which the price item belongs), and parent (regular) bundle (i.e. to which the regular bundle belongs) at the same level, the system lists the pricing depending on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system lists effective pricing which is available for the price item. If the effective pricing is not available for the price item, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system lists effective pricing which is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system lists effective pricing which is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system lists effective pricing which is available for the price item at the same level.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following two options:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for pricing using price list or account or person details. The valid values are: <ul style="list-style-type: none"><li>• Price List</li><li>• Account /Person</li></ul>	Yes
	<b>Note:</b> By default, <b>Price List</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to indicate Price List ID for which simulation must be created.	Yes
	<p><b>Note:</b></p> <p>This field appears only when the <b>Price List ID</b> option is selected for the <b>Search By</b> field.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> screen appears.</p>	
Account ID	Used to specify the account for which simulation must be created.	Yes
	<p><b>Note:</b></p> <p>This field appears only when the <b>Account</b> option is selected for the <b>Search By</b> field.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> screen appears.</p>	
Person ID	Used to specify the person for which simulation must be created. This field gets auto populated once the Account ID value is defined.	Yes
	<p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> screen appears.</p>	
Simulation Date	Used to search price simulations which are effective from a particular date onwards.	Yes
Pricing Status	Used to search price assignments with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Proposed</li> </ul>	No
Search Type	Used to indicate whether you want to search the price list using the following values: <ul style="list-style-type: none"> <li>Best Fit</li> <li>Exact Match</li> </ul>	No
	<b>Note:</b> By default, <b>Exact Match</b> option is selected.	
Show Default and Global Pricing	Used to indicate whether the product is assigned to a default and global price list. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price items for pricing simulation.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.	
Description	Used to search price assignments of a price item having a particular description.	No
View Type	Used to indicate whether you want to view summary or tiering details of price components. The valid values are: <ul style="list-style-type: none"> <li>• <b>Detail</b> — Used when you want to view the details of price component with pricing eligibility and tiering criteria.</li> <li>• <b>Summary</b> — Used when you want to view the summary of effective price component.</li> </ul>	No
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing.	No
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> . The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Parameter Search</b> screen appears.	
Parameter Value	Displays the value of the parameter or used to specify multiple parameter value.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field only when the value type for the <b>Parameter</b> is <b>Reference</b> or <b>Predefined</b> . If the value type of the <b>Parameter</b> is <b>Reference</b> then on clicking the <b>Search</b> icon, the <b>Reference Parameter Value Search</b> screen appears. If the value type of the <b>Parameter</b> is <b>Predefined</b> then on clicking the <b>Search</b> icon, the <b>Predefined Parameter Value Search</b> screen appears.	

To add more than one **Parameter**, click the **Add**  icon and to delete the parameters click the **Delete**  icon corresponding to the **Parameter** field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

**Note:** If default Price List ID is added to the Price List Value and if **Yes** is selected for **Show Default and Global Pricing**, also if Price List is added to the product for selected account then **Search Results** section will display price list assignments for the value and product will be displayed along with the default price list assignments.

Column Name	Column Description
Price Item	Displays the price item code.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Price Item</b> screen appears with the details of the respective price item.
Description	Displays the description of the price item.
Variance Parameters	Indicates the variance parameter which is used for defining the price item pricing.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item). A tool tip appears when you hover over this column corresponding to the price item. It indicates the price item parameters and their values used for defining the price item pricing.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing — Invoice Based</li> <li>• Post Processing — Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list.
	<b>Note:</b> The description appears only when the pricing assignment type is Account Price List, or Account Inherited Price List.
Rate Description	Displays the description of the tiering setup of the rate component.
Simulate	On clicking the Simulate  icon, the <b>Simulation — Effective Pricing Information</b> screen appears where you can add the <b>Price Item SQIs</b> and <b>Pricing Eligibility Parameters</b> details that can be passed for pricing simulation.
	<b>Note:</b> This column appears only when the price item is <b>Rate</b> and <b>Fees</b> .
Effective Start Date	Displays the date from when the pricing is effective.
Effective End Date	Displays the date till when the pricing is effective.

Column Name	Column Description
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.

**Note:**

The number of records that can be displayed in the **Search Results** section of the **Search Pricing** zone is controlled via the **C1\_PR\_REC** feature configuration. You can change the number of records that can be displayed using the **Effective Pricing RecordSet Limit** option type of the **C1\_PR\_REC** feature configuration. For more information, refer to [Setting the C1\\_PR\\_REC Feature Configuration](#) on page 2376.

How to view effective pricing of a simulation	<a href="#">Simulation - Effective Pricing Information</a> on page 428

## Simulation - Effective Pricing Information

The **Simulation — Effective Pricing Information** screen contains the following sections:

- **SQIs** — This section contains the following fields:

Field Name	Field Description
SQI	Used to indicate the SQI that you want to associate with the price item.
	<p><b>Note:</b></p> <p>If you want to define more than one price item SQI, click the <b>Add</b> (+) icon corresponding to this field.</p> <p>If you want to remove a price item SQI, click the <b>Delete</b> (🗑️) icon corresponding to this field.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the search icon, the <b>Search for Service Quantity Identifier</b> screen appears.</p> <p>This field is required when you want to view the effective pricing simulation.</p>
Value	Used to indicate the SQI value that you want to associate with the price item.
	<p><b>Note:</b></p> <p>If you want to define more than one value, click the <b>Add</b> (+) icon corresponding to this field.</p> <p>If you want to remove a price item SQI value, click the <b>Delete</b> (🗑️) icon corresponding to this field.</p>

- **Pricing Eligibility Parameters** — This section contains the following fields:

Field Name	Field Description
Parameter	<p>Used to specify multiple parameter codes based on which you want to define the pricing</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to true.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the search icon, the <b>Parameter Search</b> screen appears.</p> <p>If you want to define more than one parameter, click the <b>Add</b>  icon corresponding to this field.</p> <p>If you want to remove a parameter, click the <b>Delete</b>  icon corresponding to this field.</p>
Parameter Value	<p>Displays the value of the parameter or used to specify multiple parameter value.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field appears only when the value type for the <b>Parameter</b> is defined as <b>Reference</b> or <b>Predefined</b>. If the value type of the <b>Parameter</b> is <b>Reference</b>, then the <b>Reference Parameter Value Search</b> screen appears and if the value type of the <b>Parameter</b> is <b>Predefined</b>, then the <b>Predefined Parameter Value Search</b> screen appears.</p> <p>If you want to define more than one value, click the <b>Add</b>  icon corresponding to this field.</p> <p>If you want to remove a parameter value, click the <b>Delete</b>  icon corresponding to this field.</p>

After providing the required information, when you click on **Simulate** button, the **Effective Pricing Information** zone appears where you can view the effective pricing simulation. This zone contains the following sections:

- **Rate Information** — This section contains the following fields:

Field Name	Field Description
Applicable Rate	Displays the rate applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

**Note:** This section appears only when **Price Item Type** is **Rate** .

- **Fee Information** — This section contains the following fields:

Field Name	Field Description
Applicable Fee	Displays the fee applicable for which pricing is defined.
Contributing Price Components are	Displays how the price components are contributed.

**Note:** This section appears only when **Price Item Type** is **Fees** .

- **Price Item and Parameter Information** — This section contains the following fields:

Field Name	Field Description
Price Item	Displays the price item for which pricing is defined.
Description	Displays the description of the price item

The Parameter Information appears only when the **Multi Price Parameter** option type of the **Multi Parameter Based Pricing (C1\_PPARM\_FLG)** feature configuration is set to **True**.

This segment contains the following fields:

Field Name	Field Description
Parameter	Specifies multiple parameter codes associated with the price items based on which pricing is defined.
Parameter Information	Displays the parameter information with concatenated comma separated values.
Parameter Value	Displays the value of the parameter.

- **TFM Information** — This section contains the following fields:

Field Name	Field Description
Ignore Transaction	Displays whether the transactions mapped to the price item is considered for billing.
Aggregation Schedule	Displays the aggregation cycle.
Aggregation Transaction	Specifies whether the transactions mapped to the price item are aggregated for billing.
Rating Criteria	Specifies how and when you rate the transaction legs mapped to the price item.

**Note:** This section appears only when the **Price Item** is available for **Pricing and Billing**.

- **Pricing Information** — This section contains the following fields.

Field Name	Field Description
Effective Start Date	Displays the date from when the price item pricing is effective.
Pricing Currency	Specifies the currency in which you define the price item pricing.
Effective End Date	Displays the date till when the price item pricing is effective.
Pricing Status	Displays the status of price assignment.
Variance Parameter	Specifies the variance based on which price item pricing is defined.
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Rate Schedule	Specifies the rate schedule used for defining price item pricing.

Field Name	Field Description
Price Assignment Type	Displays the type of price assignment.
Print Zero	Specifies whether zero pricing should be displayed in the bill.
Apply To	Displays whether the price item pricing is applied to all customers or only to the new customers.
Pricing Frequency	Displays the frequency for pricing where <b>Price Item Type</b> is fees.
Advance Pricing	Displays only if <b>Price Item</b> is defined as <b>Pricing Only</b> , <b>Price Item Type</b> is defined as <b>Fees</b> and <b>Price Assignment Type</b> is defined as <b>Post Processing</b> . The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

**Pricing Eligibility Criteria** and **Tiering Criteria** for each eligibility or tier range are displayed in following fields:

Field Name	Field Description
Rate Component Sequence	Displays the sequence number of the rate component.
Tiering Type	Displays the tiering type of the rate component.
Price Component Sequence	Specifies the sequence of price component whose rate is used for calculation.
Price Component Description	Displays the description of the rate component.
Rate	Specifies the price for the price item.
Contributing Factor	Displays the availability of contributing factor.
Eligibility/Tier Details	On clicking the Add (+) icon, expandable details of <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> are displayed.

When you click the Add (+) icon, if the price component is scheduled for Flat Rate then, only **Pricing Eligibility Criteria** segment appears. If the price component is scheduled for Step or Threshold then both the segments, **Tiering Criteria** and **Pricing Eligibility Criteria** appears.

**Tiering Criteria** segment contains the following fields:

Field Name	Field Description
Tiering Criteria	Displays the tiering criteria.
Price Item	Specifies whether the price item or bundle's total usage is considered for determining the rate.
Variance Parameter	Specifies the variance based on which price item or bundle's total usage is considered for determining the rate.
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .

Field Name	Field Description
Price Item Parameters	Specifies the parameters based on which price item or bundle's total usage is considered for determining the rate.
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
From	Specifies the lower limit of the tiering range.
To	Specify the upper limit of the tiering range.

**Pricing Eligibility Criteria** segment contains the following fields:

Field Name	Field Description
Sequence Number	Specifies the order in which the criteria should be executed in the rule.
Parameter	Specifies the left hand side parameter which you want to use along with the price item for price determination.
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Operator	Specifies the relational operator to define the relation between the left hand side and right hand side parameters.
Parameter Value Type	Displays the type of pricing eligibility.
Parameter	Specifies the right hand side parameter which you want to use along with the price item for price determination.
	<b>Note:</b> This field appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Parameter Value	Specifies the parameter value.
Is True	Displays what should happen when the condition is true (satisfied).
Is False	Displays what should happen when the condition is false (not satisfied).
Is Sufficient	Displays what should happen when the data is insufficient.

This section contains the following links:

Link Name	Link Description
Expand All	Used to define all the <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> segments.
Collapse All	Used to un-define the displayed <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> segments.
Expand Only Contributing Factors	Used to define only those <b>Tiering Criteria</b> and <b>Pricing Eligibility Criteria</b> segments with contributing factors.

## Searching Pricing Simulation for Account or Price List

### Prerequisites

To search pricing simulation for an account or price list, you should have:

- Price Item, Account or Person details defined in the application

### Procedure

To search pricing simulation for an account or price list:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.  
The **Pricing Simulation** screen appears.
3. In the **Search Pricing** zone, select **Account** or **Price List** depending on what you want search pricing simulation.
4. Enter the additional search criteria, if required.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of pricing details that meet the search criteria appears in the **Search Results** section.

### Related Topics

<b>Pricing Simulation</b> screen	<a href="#">Pricing Simulation</a> on page 424
<b>Search Pricing</b> zone	<a href="#">Search Pricing</a> on page 424

## Viewing Pricing Simulation

### Prerequisites

To view pricing simulation details of an account, you should have:

- Price items assigned to the account

**Procedure**

To view pricing simulation of an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.  
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

**Exporting Effective Price Simulation**

**Procedure**

To export effective price simulation for an account in the CSV format:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Pricing Simulation**.  
The **Pricing Simulation** screen appears.
3. You can search for an account by entering the search criteria in the **Search Pricing** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Export to Excel** link in the **Search Pricing** zone.  
The **File Download** dialog box appears.
5. Click **Save**.  
The **Save As** dialog box appears.
6. Browse to the location where you want to save the file.
7. Enter the file name in the respective field, and click **Save**.  
The search results are exported in CSV format.

## 8. Open the CSV file in Microsoft Excel.

It contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.
Description	Displays the description of the price item.
Variance	Indicates the variance parameter which is used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Indicates the parameters which are used for defining the price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Price Assignment Type	Indicates the type of price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Regular</li> <li>• Post Processing</li> <li>• Post Processing — Invoice Based</li> <li>• Post Processing — Price Item Based</li> </ul>
Assignment Level	Indicates the level at which the price item pricing is defined in the customer hierarchy.
Price List Description	Displays the description of the price list.  <b>Note:</b> The description appears only when the pricing assignment type is Account Price List, Customer Price List, or Parent Customer Price List.
Rate	Displays the price of the price item. It also indicates whether the price is a Flat, Threshold, or Step price. The price can be agreed pricing, price list pricing, or pricing inherited from the price list hierarchy. If the price is applicable only to new customers, an asterisk (*) symbol appears corresponding to the price.
Price Component Description	Displays the description of the price component whose rate is used for calculation.  <b>Note:</b> The data appears in this column only when the rate corresponding to the price component in the price item pricing is used for calculation.
Effective Start Date	Displays the date from when the pricing assignment is effective.
Effective End Date	Displays the date till when the pricing assignment is effective.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
From	Displays the lower limit of the tiering range.
To	Displays the upper limit of the tiering range.
Price Assignment Usage	Indicates whether the price assignment is applicable to all customers or only to the new customers.
Price Assignment ID	Displays the ID that is generated automatically when the price assignment is done.

Column Name	Column Description
Parent Level	Displays the numerical level of the parent in the hierarchy from whom the pricing is inherited.
Price List ID	Displays the price list ID from where the pricing is inherited.
Price List Start Date	Displays the date from when the price list is effective.
Parent Person	Displays the name of the parent or grandparent customer from whom the pricing is inherited.
Parent Pricelist Level	Indicates the parent level when pricing is inherited from the price list hierarchy. If the pricing is inherited from the assigned price list, the parent price list level will be 0. However, if the pricing is inherited from the parent price list in the hierarchy, the parent price list level will be 1. And, if the pricing is inherited from the grandparent price list in the hierarchy, the parent price list level will be 2, and so on.
Ignore Transaction	Indicates whether the transactions mapped to the price item should be considered for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregate Transaction	Indicates whether the transactions mapped to the price item should be aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Aggregation Schedule	Indicates the aggregation cycle.
Tiering Criterion	Indicates the tiering criterion.
Tiering Price Item	Indicates whether the price item is billed individually or at the bundle level.

## Eligible Price List

The **Eligible Price List** screen allows you to:

- View eligible price list details for account or person
- View pricing simulation details of account or person

This screen consists of the following zones:

- [Search Eligible Price Lists](#) on page 437
- [Pricing Simulation](#) on page 424

## Search Eligible Price Lists

The **Search Eligible Price List** zone allows you to search eligible price list for account and person. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Eligible Date	Used to specify the date on which the eligibility check need to be searched.	Yes
Person ID	Used to specify the person for which eligible price list to be searched.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the icon, the <b>Person Search</b> screen appears.	No
Account ID	Used to specify the account for which eligible price list to be searched.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the icon, the <b>Account Search</b> screen appears.	No
Status	Used to search eligible price list based on status.	Yes
Division	Used to search eligible price list based on division.	Yes
Parameter	Used to specify multiple parameter codes based on which you want to define the pricing.  <b>Note:</b> This field appears only when the <b>MultiPrice Parameter</b> option type of the <b>MultiParameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to True.  The Search (🔍) icon appears corresponding to this field. On clicking the icon, the <b>Parameter Search</b> screen appears.	No
Parameter Value	Displays the value of the parameter or used to specify multiple parameter value.  <b>Note:</b> The Search (🔍) icon appears corresponding to this field only when the value type for the <b>Parameter</b> is defined as <b>Reference</b> or <b>Predefined</b> . If the value type of the <b>Parameter</b> is <b>Reference</b> then on clicking the search icon, the <b>Reference Parameter Value Search</b> screen appears else if the value type of the <b>Parameter</b> is <b>Predefined</b> then on clicking the search icon, the <b>Predefined Parameter Value Search</b> screen appears.	No

**Note:** To add more than one **Parameter**, click the add (+) icon and to delete the parameters click the delete (🗑️) icon corresponding to this field.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price List ID	Displays the price list ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List Price Item Assignments</b> screen appears where you can view the details of the respective price list.
Price List Description	Displays the price list description.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price List Price Item Assignments</b> screen appears where you can view the details of the respective price list.
Status	Indicates the status of the price list. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Proposed</li> </ul>
Availability Start Date	Used to search price lists which are available for assignment from a particular date.
Availability End Date	Used to search price lists which are available for assignment till a particular date.
Effective Start Date	Used to search price lists which are effective from a particular date.
Effective End Date	Used to search price lists which are effective till a particular date.
Simulate	On clicking the <b>Simulate</b> (🔄) icon, the <b>Pricing Simulation Screen</b> appears with the price list ID, account and person fields prepopulated.

## Rate Definition

Rate schedules, rate versions, and rate components are used to define the formulas to calculate the total amount charged to a customer for a product. Some examples of formulas are: price times the number of transactions used and a flat monthly charge plus a percentage of the average daily balance.

The rate is a formula with variables whose values are supplied by a user by setting up a price list or override price. For example, a rate might add a flat monthly charge and a percentage of the average daily balance to arrive at the amount

charged to the customer. This rate might be used to calculate the charge for multiple products, each product with its own flat amount and percentage. So, these two factors are defined as variables whose values must be entered by users when they setup price list or override price. In Oracle Revenue Management and Billing (ORMB), these variables are defined as rate components.

The system provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. The **Rate Definition** screen allows you to indicate whether the rate component supports standard flat pricing or tiered pricing. It allows you to define, edit, and delete the tiering setup of a rate component. This screen consists of the following zones:

- [Rate Schedule Components](#) on page 439
- [Create/Edit Rate Definition](#) on page 440

## Rate Schedule Components

The **Rate Schedule Components** zone allows you to select the rate schedule whose rate components' tiering setup you want to define or edit. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Used to select the rate schedule.	Yes

- **Search Results** — On clicking the **Search** button, the rate components of the rate schedule appear in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Rate Schedule	Displays the rate schedule.
Rate Component Sequence	Displays the sequence number of the rate component.
Rate Component Description	Displays the description of the rate component.
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.
Tiering Type	Displays the tiering type.
Maximum Tiering Combinations	Displays the maximum number of tiering ranges supported by the rate component.  <b>Note:</b> Each tiering range supports more than one tiering criteria. For example, a rate component supports tiering based on two different criteria such as transaction volumes from a bundle and balances of the priced product. In such case, for a single rate, it is possible to enter separate tiering range information for each criterion and vary this information by product.
Rate Component Map Description	Displays the description of the tiering setup of the rate component.
Action	Indicates the action that can be performed on the rate component. The valid values are: <ul style="list-style-type: none"> <li>• <b>Add</b> — Allows you to define the tiering setup of the rate component</li> <li>• <b>Edit</b> — Allows you to edit the tiering setup of the rate component</li> </ul>

Column Name	Column Description
Rate Component Map ID	Displays the rate component map ID.
	<b>Note:</b> This ID is generated automatically when you define the tiering setup of the rate component.

On clicking the **Broadcast**  icon corresponding to the rate component, the **Create/Edit Rate Definition** zone appears with the details of the respective rate component.

**Related Topics**

**Create/Edit Rate Definition**

The **Create/Edit Rate Definition** zone allows you to define and edit tiering setup of the rate component. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rate Schedule	Displays the code of the rate schedule.	Not applicable
Rate Component Description	Displays the description of the rate component.	Not applicable
Effective Start Date	Displays the date from when the rate version to which the rate component belongs is effective.	Not applicable
Rate Component Sequence	Displays the sequence number of the rate component.	Not applicable
Tiering Type	Used to specify the tiering type. The valid values are: <ul style="list-style-type: none"><li>• FLAT</li><li>• STEP</li><li>• THRESHOLD</li></ul>	Yes
	<b>Note:</b> This field is non-editable when you edit the tiering setup of the rate component.	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Tiering Combinations	Used to specify the maximum number of tiering ranges supported by the rate component.	Yes
	<b>Note:</b> This field is non-editable when you: <ul style="list-style-type: none"> <li>• Select the tiering type as <b>FLAT</b> or <b>STEP</b></li> <li>• Edit the tiering setup of the rate component</li> </ul> By default, <b>0</b> appears in this field when you select the tiering type as <b>FLAT</b> , and <b>1</b> appears when you select the tiering type as <b>STEP</b> .	
Rate Component Map Description	Used to specify the description for the tiering setup of the rate component. For example, if you want the user to enter price per transaction for a tiering range, enter <i>Price Per Transaction</i> in the <b>Rate Component Map Description</b> field.	Yes

This zone contains the following buttons:

Button Name	Button Description (When the Action is Add)	Button Description (When the Action is Edit)
Save	Used to create the tiering setup.	Used to save the changes made in this zone.
Delete	<b>Note:</b> This button is disabled when you define the tiering setup of the rate component.	Used to delete the tiering setup of the rate component.
		<b>Note:</b> You can delete the tiering setup only when the rate component is not yet used for any product pricing.
Cancel	Used to clear the fields in this zone.	Used to reset the changes made in this zone.

## Defining Tiering Setup of a Rate Component

### Prerequisites

To define tiering setup of a rate component, you should have:

- Rate schedules defined in the application
- Rate components of the rate schedule defined in the application

### Procedure

To define tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- 2. From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.

The **Rate Definition** screen appears.

- 3. Select the rate schedule in the **Rate Schedule Components** zone.
- 4. Click **Search**.

The rate components of the rate schedule appear as the search results.

- 5. Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to define.  
The **Create/Edit Rate Definition** zone appears.

- 6. Select the tiering type from the list.
- 7. Enter the maximum number of tiering ranges supported by the rate component.

**Note:**  
The **Maximum Tiering Combinations** field is non-editable when you select the tiering type as **FLAT** or **STEP**.  
By default, **0** appears in the **Maximum Tiering Combinations** field when you select the tiering type as **FLAT**, and **1** appears when you select the tiering type as **STEP**.

- 8. Enter the description for the tiering setup of the rate component.  
For example, if you want the user to enter price per transaction for a tiering range, enter `Price Per Transaction` in the **Rate Component Map Description** field.
- 9. Click **Save**.  
The rate component map ID is generated automatically when you define the tiering setup of the rate component.

**Related Topics**

For more information on...	See...
<b>Rate Definition</b> screen	<a href="#">Rate Definition</a> on page 438
<b>Rate Schedule Components</b> zone	<a href="#">Rate Schedule Components</a> on page 439
<b>Create/Edit Rate Definition</b> zone	<a href="#">Create/Edit Rate Definition</a> on page 440

**Editing Tiering Setup of a Rate Component**

**Procedure**

To edit tiering setup of a rate component:

- 1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
- 2. From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.  
The **Rate Definition** screen appears.
- 3. Select the rate schedule in the **Rate Schedule Components** zone.
- 4. Click **Search**.  
The rate components of the rate schedule appear as the search results.

5. Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to edit.  
The **Create/Edit Rate Definition** zone appears.
6. Modify the details of the tiering setup.

**Note:** You can only modify the rate component map description.

7. Click **Save**.  
The changes made to the tiering setup are saved.

## Deleting Tiering Setup of a Rate Component

### Procedure

To delete tiering setup of a rate component:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Rate Definition**.  
The **Rate Definition** screen appears.
3. Select the rate schedule in the **Rate Schedule Components** zone.
4. Click **Search**.  
The rate components of the rate schedule appear as the search results.
5. Click the **Broadcast**  icon corresponding to the rate component whose tiering setup you want to delete.  
The **Create/Edit Rate Definition** zone appears.
6. Click **Delete**.

The tiering setup of the rate component is deleted, and the action that can be performed on the rate component changes from **Edit** to **Add** in the **Rate Schedule Components** zone.

**Note:**

The **Delete** button is disabled when you define the tiering setup of the rate component.

You can delete the tiering setup only when the rate component is not yet used for any product pricing.

## Tiering Criterion

Oracle Revenue Management and Billing (ORMB) provides you with the ability to create tiered pricing in case standard flat pricing is not sufficient to meet the business needs. Through tiered pricing, you can offer more favorable pricing to the customers based on service quantity utilization.

Let us understand this with the help of an example. ABC company uses wire transfer services provided by a large bank. If ABC company initiates up to 1,000 wire transfers, the fee charged by the bank will be \$5 per transfer. If ABC company initiates more than 1,000 wire transfers, the fee will be \$3 per transfer. To introduce this flexibility in the pricing model, you will have to define tiered pricing with the following tiering ranges:

- If the number of wire transfers is greater than 0 and less than or equal to 1000, then charge \$5 per transfer to ABC company.
- If the number of wire transfers is greater than 1000, then charge \$3 per transfer to ABC company.

In the above example, number of wire transfers is the tiering criterion, 0 – 1000 and 1000 – BLANK are tiering ranges, and \$5 and \$3 are rates per transfer.

The **Tiering Criteria** screen allows you to create and edit a tiering criterion. This screen consists of the following zones:

- [Tiering Criterion List](#) on page 444
- [Edit Tiering Criterion](#) on page 444
- [Create Tiering Criterion](#) on page 445

### Tiering Criterion List

The **Tiering Criterion List** zone displays tiering criterion that are already defined in the system. This zone contains the following columns:

Column Name	Column Description
Tiering Criterion	Displays the code of the tiering criterion.
Description	Displays the description of the tiering criterion.
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

On clicking the **Broadcast**  icon corresponding to the tiering criterion, the **Edit Tiering Criterion** zone appears with the details of the respective tiering criterion.

### Edit Tiering Criterion

The **Edit Tiering Criterion** zone allows you to edit the tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Displays the code of the tiering criterion.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to modify the description of the tiering criterion.	Yes
Service Quantity Identifier	Displays the Service Quantity Identifier (SQI) of the tiering criterion.	Not applicable

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to save the changes made in this zone.
Cancel	Used to clear the changes made in this zone.

By default, the **Edit Tiering Criterion** zone does not appear in the **Tiering Criteria** screen. It appears only when you click the **Broadcast**  icon corresponding to the tiering criterion in the **Tiering Criteria List** zone.

#### Related Topics

For more information on...	See...
How to edit a tiering criterion	<a href="#">Editing a Tiering Criterion</a> on page 446

## Create Tiering Criterion

The **Create Tiering Criterion** zone allows you to create tiering criterion. This zone contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tiering Criterion	Used to specify the code that uniquely identifies the tiering criterion.	Yes
Description	Used to specify the description for the tiering criterion.	Yes
Service Quantity Identifier	Used to specify the Service Quantity Identifier (SQI) for the tiering criterion.  <b>Note:</b> During billing, the rating engine uses the SQI to determine which service quantities are applied to tiers.	Yes

This zone contains the following two buttons:

Button Name	Button Description
Save	Used to create the tiering criterion.
Cancel	Used to clear the fields in this zone.

## Creating a Tiering Criterion

#### Prerequisites

To create a tiering criterion, you should have:

- Service Quantity Identifiers (SQIs) defined in the application

**Procedure**

To create a tiering criterion:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Tiering Criterion**.  
The **Tiering Criterion** screen appears.
3. In the **Create Tiering Criterion** zone, enter the code that uniquely identifies the tiering criterion.
4. Enter the description for the tiering criterion.
5. Select the Service Quantity Identifier (SQI) that you want to associate with the tiering criterion.
6. Click **Save**.  
The tiering criterion is created.

**Related Topics**

<b>Create Tiering Criterion</b> zone	<a href="#">Create Tiering Criterion</a> on page 445

**Editing a Tiering Criterion**

**Procedure**

To edit a tiering criterion:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Tiering Criterion**.  
The **Tiering Criterion** screen appears.
3. In the **Tiering Criterion** zone, click the **Broadcast**  icon corresponding to the tiering criterion whose details you want to edit.  
The **Edit Tiering Criterion** zone appears.
4. Modify the description of the tiering criterion, if required.
5. Click **Save**.  
The changes made to the tiering criterion are saved.

## Variance Parameter

Oracle Revenue Management and Billing allows you to define pricing for a product based on the variance parameter. This helps you to maintain variance based pricing for a product. For example, you can define different product pricing for each country or currency, if required. Before you define product pricing based on a variance parameter, you need to define the variance parameter. The **Variance Parameter** screen allows you to define, edit, and delete a variance parameter. It also allows you to filter the variance parameters using a search criteria.

### Filtering the Variance Parameters

#### Procedure

To filter the variance parameters:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following two sections:

- **Search Criteria**— The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	No

- **Search Results** — On clicking the **Search** button corresponding to the **Variance Parameter** field, the search results are filtered based on the specified criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Variance Parameter	Displays the variance parameter.
Description	Displays the description of the variance parameter.

3. Enter the search criteria in the **Variance Parameter** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click the **Search** button corresponding to the **Variance Parameter** field.

The search results are filtered based on the specified criteria.

Defining a Variance Parameter

Procedure

To define a variance parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **V** and then click **Variance Parameter**.

The **Variance Parameter** screen appears. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Variance Parameter	Used to specify the variance parameter.	Yes
Description	Used to specify the description for the variance parameter.	Yes

3. Enter the required details.
4. If you want to define more than one variance parameter, click the **Add** (+) icon and then repeat step 4.

**Note:** However, if you want to remove a variance parameter, click the **Delete** (🗑️) icon corresponding to the variance parameter that you want to delete.

5. Click **Save**.

The variance parameter is defined.

Editing a Variance Parameter

Procedure

To edit a variance parameter:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **V** and then click **Variance Parameter**.  
The **Variance Parameter** screen appears.
3. If required, you can filter the variance parameters in the **Variance Parameter** screen.

A list of variance parameters that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Variance Parameter	Displays the variance parameter.	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Description	Used to specify the description for the variance parameter.	Yes

4. Modify the required details.

5. Click **Save**.

The changes made to the variance parameter are saved.

## Person to Person Relationship Type Sequence

Oracle Revenue Management and Billing provides you the flexibility to define person to person relationship type sequence:

- For each division, price item, and price item parameters combination
- For each division
- In the C1\_PER\_REL feature configuration

The system will first check whether the person to person relationship type sequence is defined for the division, price item, and price item parameters combination. If the person to person relationship type sequence is defined for the division, price item, and price item parameters combination, the system will search effective price item pricing at the parent customer level based on the sequence defined for the combination. However, if the person to person relationship type sequence is not defined for the division, price item, and price item parameters combination, the system will check whether the person to person relationship type sequence is defined for the division. If the person to person relationship type sequence is defined for the division, the system will search effective price item pricing at the parent customer level based on the sequence defined for the division. However, if the person to person relationship type sequence is not defined for the division, the system will consider the person to person relationship type sequence defined in the C1\_PER\_REL feature configuration and accordingly search effective price item pricing at the parent customer level.

The **Person to Person Relationship Type Sequence** screen allows you to define, edit, and delete person to person relationship type sequence of:

- a division
- a division, price item, and price item parameters combination

This screen consists of the following zones:

- [Search Person Relationship Type Sequence for Price Item](#) on page 450
- [Search Person Relationship Type Sequence for Division](#) on page 451

## Search Person Relationship Type Sequence for Price Item

The **Search Person Relationship Type Sequence for Price Item** zone allows you to search person to person relationship type sequence defined for a division, price item, and price item parameters combination. You can also define, edit, and delete person to person relationship type sequence of a division, price item, and price item parameters combination.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price Item	Used to specify the price item code.	No
Price Item Description	Used to specify the description of the price item.	No
Division	Used to specify the division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

**Note:** You must specify at least one search criterion while searching person to person relationship type sequence defined for a division, price item, and price item parameters combination.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Price Item	Displays the price item code.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Price Item</b> screen appears with the details of the respective price item.
Description	Displays the description of the price item.
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.
View	On clicking the <b>View</b>  icon, the <b>Person Relationship Type Sequence for Division and Price Item</b> screen appears where you can view person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Edit	On clicking the <b>Edit</b>  icon, the <b>Person Relationship Type Sequence for Division and Price Item</b> screen appears where you can edit person to person relationship type sequence defined for the division, price item, and price item parameters combination.
Delete	On clicking the <b>Delete</b>  icon, you can delete person to person relationship type sequence defined for the division, price item, and price item parameters combination.

You can define person to person relationship type sequence for a division, price item, and price item parameters combination by clicking the **Add** link in the upper right corner of this zone.

## Search Person Relationship Type Sequence for Division

The **Search Person Relationship Type Sequence for Division** zone allows you to search person to person relationship type sequence defined for a division. You can also define, edit, and delete person to person relationship type sequence of a division.

This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division for which person to person relationship type sequence is defined.
Description	Displays the description of the division.
View	On clicking the <b>View</b> (🔍) icon, the <b>Person Relationship Type Sequence for Division</b> screen appears where you can view person to person relationship type sequence of the division.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Person Relationship Type Sequence for Division</b> screen appears where you can edit person to person relationship type sequence of the division.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the person to person relationship type sequence of the division.

You can define person to person relationship type sequence for a division by clicking the **Add** link in the upper right corner of this zone.

## **Defining Relationship Type Sequence for a Division, Price Item, and Price Item Parameters**

### **Prerequisites**

To define person to person relationship type sequence for a division, price item, and price item parameters combination, you should have:

- Divisions defined in the application
- Price items associated with the division to which the user belongs
- Parameters associated with the price item
- Person relationship types defined in the application

### **Procedure**

To define person to person relationship type sequence for a division, price item, and price item parameters combination:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.

The **Person to Person Relationship Type Sequence** screen appears.

- Click the **Add** link in the upper right corner of the **Search Person Relationship Type Sequence for Price Item** zone.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define price item and price item parameters specific person to person relationship type sequence.	Yes
Price Item	Used to specify the price item code.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> screen appears.	
Price Item Parameters	Used to specify the price item parameters.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Parameters Search</b> screen appears.	

In addition, this screen contains the following section:

- Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

- Enter the required details.

**Note:** You can search for a price item and price item parameters by clicking the **Search**  icon corresponding to the respective field.

- If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add**  icon and then enter the details in the **Person Relationship Type Sequence** section.

**Note:** However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete**  icon corresponding to the relationship type.

- Click **Save**.

The person to person relationship type sequence is defined for the division, price item, and price item parameters combination.

## Editing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters

### Prerequisites

To edit person to person relationship type sequence of a division, price item, and price item parameters combination, you should have:

- Person relationship types defined in the application

### Procedure

To edit person to person relationship type sequence of a division, price item, and price item parameters combination:

1. Search person to person relationship type sequence for the division, price item, and price item parameters combination in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the division, price item, and price item parameters combination whose person to person relationship type sequence you want to edit.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.	Not applicable
Price Item	Displays the price item code.	Not applicable
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).	Not applicable

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

- If you want to define more than one relationship type in the person to person relationship type sequence, click the Add (  ) icon and then enter the details in the **Person Relationship Type Sequence** section.

**Note:** However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** (  ) icon corresponding to the relationship type.

- Click **Save**.

The changes made to the person to person relationship type sequence are saved.

**Related Topics**

**Deleting Relationship Type Sequence of a Division, Price Item, and Price Item Parameters**

**Procedure**

To delete person to person relationship type sequence of a division, price item, and price item parameters combination:

- Search person to person relationship type sequence for the division, price item, and price item parameters combination in the **Person to Person Relationship Type Sequence** screen.
- In the **Search Results** section, click the **Delete** (  ) icon in the **Delete** column corresponding to the division, price item, and price item parameters combination whose person to person relationship type sequence you want to delete.

A message appears confirming whether you want to delete the person to person relationship type sequence.

- Click **OK**.

The person to person relationship type sequence of the division, price item, and price item parameters combination is deleted.

**Related Topics**

## Viewing Relationship Type Sequence of a Division, Price Item, and Price Item Parameters

### Procedure

To view person to person relationship type sequence of a division, price item, and price item parameters combination:

1. Search person to person relationship type sequence for the division, price item, and price item parameters combination in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the division, price item, and price item parameters combination whose person to person relationship type sequence you want to view.

The **Person Relationship Type Sequence for Division and Price Item** screen appears. It contains the following fields:

Field Name	Field Description
Division	Indicates the division for which price item and price item parameters specific person to person relationship type sequence is defined.
Price Item	Displays the price item code.
Price Item Parameters	Displays a comma-separated list of parameter values. The order in which parameter values appear in this field is controlled by the display order (which is defined while associating a parameter with a price item).

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to view person to person relationship type sequence defined for the division, price item, and price item parameters combination. It contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the sequence in which relationship type will be considered while searching for effective price item pricing at the parent customer level.
Relationship Type	Indicates the person to person relationship type.

3. View the person to person relationship type sequence defined for the division, price item, and price item parameters combination in the **Person Relationship Type Sequence for Division and Price Item** screen.

**Defining Relationship Type Sequence for a Division**

**Prerequisites**

To define person to person relationship type sequence for a division, you should have:

- Divisions defined in the application

**Procedure**

To define person to person relationship type sequence for a division:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Pricing Management** and then click **Person to Person Relationship Type Sequence**.  
The **Person to Person Relationship Type Sequence** screen appears.
- Click the **Add** link in the upper right corner of the **Search Person Relationship Type Sequence for Division** zone.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division for which you want to define person to person relationship type sequence.	Yes

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

4. Enter the required details.
5. If you want to define more than one relationship type in the person to person relationship type sequence, click the Add (  ) icon and then enter the details in the **Person Relationship Type Sequence** section.

**Note:** However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** (  ) icon corresponding to the relationship type.

6. Click **Save**.

The person to person relationship type sequence is defined for the division.

## Editing Relationship Type Sequence of a Division

### Procedure

To edit person to person relationship type sequence of a division:

1. Search person to person relationship type sequence for the division in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **Edit** (  ) icon in the **Edit** column corresponding to the division whose person to person relationship type sequence you want to edit.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Indicates the division for which person to person relationship type sequence is defined.	Not applicable

In addition, this screen contains the following section:

- Person Relationship Type Sequence** — This section allows you to define person to person relationship type sequence for the division. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the sequence in which relationship type should be considered while searching for effective price item pricing at the parent customer level.	Yes
Relationship Type	Used to indicate the person to person relationship type.	Yes

- If you want to define more than one relationship type in the person to person relationship type sequence, click the **Add** () icon and then enter the details in the **Person Relationship Type Sequence** section.

**Note:** However, if you want to remove a relationship type from the person to person relationship type sequence, click the **Delete** () icon corresponding to the relationship type.

- Click **Save**.

The changes made to the person to person relationship type sequence are saved.

**Deleting Relationship Type Sequence of a Division**

**Procedure**

To delete person to person relationship type sequence of a division:

- Search person to person relationship type sequence for the division in the **Person to Person Relationship Type Sequence** screen.
- In the **Search Results** section, click the **Delete** () icon in the **Delete** column corresponding to the division whose person to person relationship type sequence you want to delete.

A message appears confirming whether you want to delete the person to person relationship type sequence.

- Click **OK**.

The person to person relationship type sequence of the division is deleted.

## Viewing Relationship Type Sequence of a Division

### Procedure

To view person to person relationship type sequence of a division:

1. Search person to person relationship type sequence for the division in the **Person to Person Relationship Type Sequence** screen.
2. In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the division whose person to person relationship type sequence you want to view.

The **Person Relationship Type Sequence for Division** screen appears. It contains the following fields:

Field Name	Field Description
Division	Indicates the division for which person to person relationship type sequence is defined.

In addition, this screen contains the following section:

- **Person Relationship Type Sequence** — This section allows you to view person to person relationship type sequence defined for the division. It contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the sequence in which relationship type will be considered while searching for effective price item pricing at the parent customer level.
Relationship Type	Indicates the person to person relationship type.

3. View the person to person relationship type sequence defined for the division in the **Person Relationship Type Sequence for Division** screen.

## Division

---

### Topics:

- [Division Search](#)
- [Division](#)

The following two types of divisions are used while defining a contract type:

- **General Ledger (GL) Division** — GL divisions typically comprise of individual entities (for example, companies) in the general ledger. You must set up a GL division for each such entity. The GL division is used to define the accounting period for financial transactions linked to contracts. Contracts are associated with GL divisions through their contract type. The system uses accounting periods to prevent a user from creating financial transactions in the closed periods. It also uses accounting periods when it generates the flat file that contains the consolidated journal entry that is interfaced to the general ledger.
- **Division** — A division is associated with a jurisdiction. A jurisdiction is a geographic-oriented entity with unique business rules. For example, if you conduct business in California and Japan, each jurisdiction has different set of rules, and therefore you need to have a separate jurisdiction for each division. You must set up a division for each jurisdiction in which you conduct the business. For the Pricing Management functionality, setting up a division is mandatory, and the system must contain information about at least one division.

A division is associated with the following:

- **Person** — You may or may not associate person to a division. It is optional. But, when you are using division specific functionality, you have to associate person to a division while creating a local person.
- **Contract** — Contract is associated to a division through its contract type. The contract type controls multiple business rules which are defined for a given jurisdiction and contract type combination. In addition to controlling the business rules defined on the contract's contract type, the contract's division also controls the type of collection criteria used to determine if and how to collect overdue debt.
- **Account** — The division on account when combined with the account's customer class defines the jurisdiction that governs financial business rules (for example, the bill's due date, when and how late payment charges are calculated, etc.). It also allows you to assign To Do entries associated with the account to a given To Do role based on the account's division.

Division Search

The **Division Search** window allows you to search for a division. This screen contains the following two sections:

- Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the division code.	No
Description	Used to specify the description for the division.	No

- Search Results** — On clicking the **Search** button corresponding to the respective field, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Displays the division code.
Description	Displays the description of the division.

How to search for a division	<a href="#">Searching for a Division</a> on page 464

Searching for a Division

Procedure

To search for a division:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **D** and then click **Division**.  
A sub-menu appears.
- Click the **Search** option from the **Division** sub-menu.  
The **Division Search** window appears.
- Enter the code or description of the division in the **Search Criteria** section.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click the **Search** button corresponding to the respective field.  
A list of divisions that meet the search criteria appears in the search results.
- In the **Search Results** section, click the division whose details you want to view or edit.  
The **Division** screen appears.

## Division

The **Division** screen allows you to define and edit a division. This screen consists of the following tabs:

Tab Name	Tab Description	Mandatory (Yes or No)
Main	Used to define basic details for a division.	Yes
Access Groups	Used to define the users who have right to associate objects (such as persons, accounts, price items, price lists, etc.) with this division. The users can only view those divisions to which they have access in the <b>Division</b> list used across the application.	No
Price Items	Used to define which price items are available to persons or accounts in this division.  <b>Note:</b> Once the price item is created, you need to associate it with a division.	No
Price Lists	Used to define which price lists are available to persons or accounts in this division.  <b>Note:</b> Once the price list is created, you need to associate it with a division.  You can associate a price list with a division only when all price items in the price list are already associated with the division.	No
Languages	Used to limit the languages that you can select for a person's bills and correspondence in this division.	No
Invoice Currencies	Used to limit the invoice currencies that you can select for accounts in this division.  <b>Note:</b> Invoice currency is a currency in which the accounts in this division can be billed.	No
Person Identifier Types	Used to limit the person identifier types that you can select for persons in this division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Algorithms	<p>Used to associate algorithms with the division. Once a division is created, you must associate the <b>Price Assignment Search</b> algorithm to it. For the Banking functionality, this is required to ensure that the price item pricing is displayed in the correct order as defined by the algorithm. Each division can have unique hierarchy order or more than one division can have the same hierarchy order. The hierarchy order is also used in billing when the price determination is controlled by the sort order definition of the algorithm.</p> <p>You can define algorithms in the <b>Algorithm</b> screen. The search order is governed by the second parameter of the algorithm, and the valid values for the same are:</p> <ul style="list-style-type: none"> <li>• <b>AGREED_PRICELIST</b> – If you use this search order, the price item pricing is searched in the following order: Account Agreed, Account Price List, Account Inherited Price List, Customer Agreed, Customer Price List, Customer Inherited Price List, Parent Customer Agreed, Parent Customer Price List, and Parent Customer Inherited Price List.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div> <ul style="list-style-type: none"> <li>• <b>AGREED_FIRST</b> - If you use this search order, the price item pricing is searched in the following order: Account Agreed, Customer Agreed, Parent Customer Agreed, Account Price List, Account Inherited Price List, Customer Price List, Customer Inherited Price List, Parent Customer Price List, and Parent Customer Inherited Price List.</li> </ul> <div style="border: 1px solid black; padding: 5px; margin: 5px 0;"> <p><b>Note:</b> In this search order, the account agreed level has highest precedence and parent customer inherited price list level has lowest precedence.</p> </div>	No
Characteristics	Used to define characteristics for the division.	No
Bill Messages	Used to specify the bill messages that are valid for accounts in this division.	No
Party Char Types	Used to limit the characteristic types that you can select for persons and accounts in this division.	No
Bill Cycles	Used to limit the bill cycles that you can select for accounts in this division.	No
Account Identifier Types	Used to limit the account identifier types that you can select for accounts in this division.	No

Tab Name	Tab Description	Mandatory (Yes or No)
Price Item Characteristics	Used to define division-specific characteristics for price items associated with this division.	No

## **Defining a Division**

### **Prerequisites**

To define a division, you should have:

- Work calendars, bill formats, bill route types, time zones, currencies, business objects, To Do types, and To Do roles defined in the application

### **Procedure**

To define a division:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Division**.  
A sub-menu appears.
3. Click the **Add** option from the **Division** sub-menu.

The **Division** screen appears. It contains the following tabs:

- Main
- Access Groups
- Price Items
- Price Lists
- Languages
- Invoice Currencies
- Person Identifier Types
- Algorithms
- Characteristics
- Bill Messages
- Party Char Types
- Bill Cycles
- Account Identifier Types
- Price Item Characteristics

The **Main** tab contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to specify the code that uniquely identifies the division.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> screen appears.	
Description	Used to specify the description for the division.	Yes
Work Calendar	Used to indicate the days on which this division operates. This calendar is used to ensure that the system calculated dates (for example, bill due date, credit and collection event dates, etc.) fall on a working day.	Yes
Status	Used to indicate the status of the division. You can use either of the following values: <ul style="list-style-type: none"> <li>• <b>Active</b> Indicates that the division can be used in the system</li> <li>• <b>Pending</b> Indicates that the division is still being defined</li> <li>• <b>Retired</b> Indicates that the division is no longer available for use</li> </ul>	Yes
Bill Format	Used to specify the default bill format for accounts in this division.	No
Bill Route Type	Used to specify the default bill route type for accounts in this division.	No

Field Name	Field Description	Mandatory (Yes or No)
Base Currency Code	Used when accounts in this division can be billed in a currency that is different from the currency required by the GL. The system generates GL entries in the currency defined for an account. If you specify the value in this field, the system will convert the GL amounts maintained in the accounts currency into this currency. The financial transactions in both the currencies will be maintained in the system.	No
Time Zone	Used to indicate the time zone in which this division operates.	No
Eligible for Accrual	Used to indicate whether the accounts belonging to the division are eligible for accrual.	No
Accrual Cycle	Used to indicate the accrual cycle for the division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Accrual Cycle Search</b> screen appears.	Yes (Conditional)  <b>Note:</b> The field is required when the division is eligible for accrual.
Comments	Used to specify additional details about the division.	No
Business Object	Used to specify a business object that may govern additional rules related to this division.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> screen appears.	Yes
To Do Type	Used when you want the To Do entries (associated with accounts in this division) of a given To Do type must be assigned to the users with a given To Do role.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> screen appears.	No
To Do Role	Used when you want the To Do entries (associated with accounts in this division) of a given To Do type must be assigned to the users with a given To Do role.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Role for To Do Type</b> screen appears.	No

4. Enter the required details.

**Note:** You can search for a To Do type and To Do role by clicking the **Search**  icon corresponding to the respective field.

- If you want to add more than one To Do type and To Do role combination for a division, click the **Add** (+) icon and then enter the To Do type and To Do role.

**Note:** However, if you want to remove a To Do type and To Do role combination from the division, click the **Delete** (🗑️) icon corresponding to the combination.

- Associate access groups, price items, price lists, languages, invoice currencies, person identifier types, algorithms, bill messages, party characteristic types, bill cycles, and account identifier types with the division, if required.
- Define characteristics for the division, if required.
- Define division-specific characteristics for the price items, if required.
- Click the **Save** button in the **Page Title** area.

The division is defined.

**Associating Access Groups with a Division**

**Prerequisites**

To associate access groups with a division, you should have:

- Access groups defined in the application

**Procedure**

To associate access groups with a division:

1. Search for the division to which you want to associate access groups.
2. Click the **Access Groups** tab in the **Division** screen..

The **Access Groups** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Access Group	Used to specify the access group code.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Access Group Search</b> window appears.	
Description	Displays the description of the access group.	Not applicable
	<b>Note:</b> The description appears automatically when you specify the access group.	

3. Enter the access group code.

**Note:** You can search for an access group by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one access group with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove an access group from the division, click the **Delete**  icon corresponding to the access group.

5. Click the **Save** button in the **Page Title** area.

The access groups are associated with the division.

## Associating Price Items with a Division

### Prerequisites

To associate products with a division, you should have:

- Products created in the application

### Procedure

To associate products with a division:

1. Search for the division to which you want to associate products.
2. Click the **Products** tab in the **Division** screen.

The **Products** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Product	Used to specify the product code.	No
Description	Displays the description of the product.	Not applicable
	<b>Note:</b> The description appears automatically when you specify the product code.	

3. Enter the product code.

**Note:** You can search for a product by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one product with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a product from the division, click the **Delete**  icon corresponding to the product.

5. Click the **Save** button in the **Page Title** area.

The products are associated with the division.

## Associating Price Lists with a Division

### Prerequisites

To associate price lists with a division, you should have:

- Price lists created in the application

### Procedure

To associate price lists with a division:

1. Search for the division to which you want to associate price lists.
2. Click the **Price Lists** tab in the **Division** screen.

The **Price Lists** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price List ID	Used to specify the price list ID.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price List Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Description	Displays the description of the price list.	Not applicable
	<b>Note:</b> The description appears automatically when you specify the price list ID.	

- Enter the price list ID.

**Note:** You can search for a price list by clicking the **Search**  icon corresponding to the field.

- If you want to associate more than one price list with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a price list from the division, click the **Delete**  icon corresponding to the price list.

- Click the **Save** button in the **Page Title** area.

The price lists are associated with the division.

## Associating Languages with a Division

### Prerequisites

To associate languages with a division, you should have:

- Languages defined in the application

### Procedure

To associate languages with a division:

- Search for the division to which you want to associate languages.
- Click the **Languages** tab in the **Division** screen.

The **Languages** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Language	Used to specify the language.	No

- Select the language from the list.
- If you want to associate more than one language with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a language from the division, click the **Delete**  icon corresponding to the language.

- Click the **Save** button in the **Page Title** area.

The languages are associated with the division.

## Associating Invoice Currencies with a Division

**Prerequisites**

To associate invoice currencies with a division, you should have:

- Currencies defined in the application

**Procedure**

To associate invoice currencies with a division:

- Search for the division in the **Division** screen.
- Click the **Invoice Currencies** tab.

The **Invoice Currencies** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Currency	Used to specify the currency.	No
Rounding Type	Used to indicate the rounding type for the currency. The valid values are: <ul style="list-style-type: none"> <li>Down</li> <li>Nearest</li> <li>Up</li> </ul>	Yes (Conditional) <div> <b>Note:</b> This field is required when you are associating a currency with the division. </div>

- Select the currency and its rounding type from the respective list.
- If you want to associate more than one invoice currency with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove an invoice currency from the division, click the **Delete** (🗑️) icon corresponding to the invoice currency.

- Click the **Save** button in the **Page Title** area.

The invoice currencies are associated with the division.

## Associating Person Identifier Types with a Division

### Prerequisites

To associate person identifier types with a division, you should have:

- Person identifier types defined in the application

### Procedure

To associate person identifier types with a division:

1. Search for the division to which you want to associate person identifier types.
2. Click the **Person Identifier Types** tab in the **Division** screen.

The **Person Identifier Types** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to specify the person identifier type.	No

3. Select the person identifier type from the list.
4. If you want to associate more than one person identifier type with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a person identifier type from the division, click the **Delete** (🗑️) icon corresponding to the person identifier type.

5. Click the **Save** button in the **Page Title** area.

The person identifier types are associated with the division.

## Associating Algorithms with a Division

### Prerequisites

To associate algorithms with a division, you should have:

- Algorithms defined in the application

### Procedure

To associate algorithms with a division:

1. Search for the division to which you want to associate algorithms.
2. Click the **Algorithms** tab in the **Division** screen.

The **Algorithms** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division Algorithm Entity	<p>Used to indicate the entity to which you want to attach the algorithm. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Currency Conversion For Adjustments</b> — Used to attach a date or date and time based currency conversion algorithm which must be triggered during adjustment creation and FT GL creation for adjustments.</li> <li>• <b>Currency Conversion For Bill Segments</b> — Used to attach a date or date and time based currency conversion algorithm which must be triggered during bill segment generation and FT GL creation for bill segments.</li> <li>• <b>Currency Conversion For Payments</b> — Used to attach a date or date and time based currency conversion algorithm which must be triggered during payment and tender creation and during FT GL creation for payments.</li> <li>• <b>TFM - Currency Conversion</b> — Used to attach a date or date and time based currency conversion algorithm which must be triggered during the transaction aggregation process.</li> <li>• <b>Price Assignment Search</b> — Used to attach an algorithm which indicates the order in which the price item pricing must be determined while billing. It also indicates the order in which the price item pricing must be displayed on the <b>Pricing (Account)</b> and <b>Pricing (Person)</b> screens.</li> <li>• <b>Sequential Bill Number Generation</b> — Used to attach an algorithm which indicates how to sequence alternate bill numbers which are unique within the division.</li> <li>• <b>Usage Account Contract Mapping</b> — Used to attach an algorithm which must be triggered when you create a usage account. It checks whether the usage account satisfies any account selection template criteria defined for any active construct. If yes, it includes the usage account in the active construct provided no bills are generated for the construct.</li> <li>• <b>GL Account Validation</b> – Used to attach an algorithm which is triggered during dynamic GL account validation.</li> <li>• <b>TFM - Cancellation Pre-Processing</b> – Used to attach an algorithm which is triggered when you execute the C1-TXCNC batch. This algorithm is used to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process.</li> <li>• <b>TFM - Disaggregation Pre-Processing</b> - Used to attach an algorithm which is triggered when you execute the C1-PDTXN batch. This algorithm is used to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process.</li> </ul>	Yes (Conditional)
		<p><b>Note:</b> This field is required when you are associating an algorithm with the division.</p>

Field Name	Field Description	Mandatory (Yes or No)
	<ul style="list-style-type: none"> <li>• <b>TFM - Rollback Pre-Processing</b> - Used to attach an algorithm which is triggered when you execute the C1-TXNRB batch. This algorithm is used to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process.</li> <li>• <b>TFM - Verify Pricing Post-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNVP batch. This algorithm is used to undertake some post-processing activities on a summary record in the CI_TXN_DTL_PRITM_SUMMARY table.</li> <li>• <b>TFM - Billable Charge Post-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNSQ and C1-TXNCU batches. This algorithm is used to undertake some post-processing activities on a billable charge.</li> <li>• <b>TFM - Price Item Derivation Post-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNIP batch. This algorithm is used to undertake some post-processing activities on the transaction legs.</li> <li>• <b>TFM - Rate Post-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNEX and C1-TXNSQ batches. This algorithm is used to undertake some preprocessing activities while determining rate for transaction legs.</li> <li>• <b>TFM - Rate Pre-Processing</b> — Used to attach an algorithm which is triggered when you execute the C1-TXNEX and C1-TXNSQ batches. This algorithm is used to undertake some post-processing activities after determining rate for transaction legs.</li> </ul>	
Sequence Number	Used to specify the order in which the algorithms with the same entity should be executed.	Yes (Conditional)
		<b>Note:</b> This field is required when you are associating an algorithm with the division.
Algorithm	Used to specify the algorithm code.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	<b>Note:</b> This field is required when you are associating an algorithm with the division.
Description	Displays the description of the algorithm.	Not applicable
	<b>Note:</b> The description appears automatically when you specify the algorithm code.	

3. Enter the required details.

**Note:** You can search for an algorithm by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one algorithm with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove an algorithm from the division, click the **Delete**  icon corresponding to the algorithm.

5. Click the **Save** button in the **Page Title** area.

The algorithms are associated with the division.

## Defining Characteristics for a Division

### Prerequisites

To define characteristics for a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

### Procedure

To define characteristics for a division:

1. Search for the division for which you want to define characteristics.
2. Click the **Characteristics** tab in the **Division** screen.

The **Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the division.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the division.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Division. <b>Note:</b> This field is required when you are defining a characteristic for the division.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the division.

- Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a characteristic from the division, click the **Delete**  icon corresponding to the characteristic.

- Click the **Save** button in the **Page Title** area.

The characteristics are defined for the division.

## Associating Bill Messages with a Division

### Prerequisites

To associate bill messages with a division, you should have:

- Bill messages defined in the application

### Procedure

To associate bill messages with a division:

- Search for the division to which you want to associate bill messages.
- Click the **Bill Messages** tab in the **Division** screen.

The **Bill Messages** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the date from when you want the bill message to appear on the bill.	Yes (Conditional)
		<b>Note:</b> This field is required when you are associating a bill message with the division.

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when you want the bill message to appear on the bill.	No
Bill Message	Used to specify the bill message that is valid for accounts in this division.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Bill Message Search</b> window appears.	<b>Note:</b> This field is required when you are associating a bill message with the division.
Description	Displays the description of the bill message.	Not applicable
	<b>Note:</b> The description appears automatically when you specify the message code.	

3. Enter the required details.

**Note:** You can search for a bill message by clicking the **Search**  icon corresponding to the field.

4. If you want to associate more than one bill message with the division, click the **Add**  icon and then repeat step 3.

**Note:** However, if you want to remove a bill message from the division, click the **Delete**  icon corresponding to the message code.

5. Click the **Save** button in the **Page Title** area.

The bill messages are associated with the division.

## Associating Party Char Types with a Division

### Prerequisites

To associate party char types with a division, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division)

### Procedure

To associate party char types with a division:

1. Search for the division to which you want to associate party char types.
2. Click the **Party Char Types** tab in the **Division** screen.

The **Party Char Types** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	Used to indicate whether the characteristic type is valid for a person or an account in this division.	Yes (Conditional)
		<b>Note:</b> This field is required when you are associating a party char type with the division.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Division.	<b>Note:</b> This field is required when you are associating a party char type with the division.

3. Enter the required details.
4. If you want to associate more than one party char type with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a party char type from the division, click the **Delete** (🗑️) icon corresponding to the characteristic type.

5. Click the **Save** button in the **Page Title** area.
- The party char types are associated with the division.

**Associating Bill Cycles with a Division**

**Prerequisites**

To associate bill cycles with a division, you should have:

- Bill cycles defined in the application

**Procedure**

To associate bill cycles with a division:

1. Search for the division to which you want to associate bill cycles.
2. Click the **Bill Cycles** tab in the **Division** screen.

The **Bill Cycles** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Bill Cycle	Used to specify the bill cycle.	No

3. Select the bill cycle from the list.

4. If you want to associate more than one bill cycle with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a bill cycle from the division, click the **Delete** (🗑️) icon corresponding to the bill cycle.

5. Click the **Save** button in the **Page Title** area.

The bill cycles are associated with the division.

## Associating Account Identifier Types with a Division

### Prerequisites

To associate account identifier types with a division, you should have:

- Account Identifier Types defined in the application

### Procedure

To associate account identifier types with a division:

- Search for the division to which you want to associate account identifier types.
- Click the **Account Identifier Types** tab in the **Division** screen.

The **Account Identifier Types** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	No

- Select the account identifier type from the list.
- If you want to associate more than one account identifier type with the division, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove an account identifier type from the division, click the **Delete** (🗑️) icon corresponding to the account identifier type.

5. Click the **Save** button in the **Page Title** area.

The account identifier types are associated with the division.

**Defining Division-Specific Characteristics for a Price Item**

**Prerequisites**

To define division-specific characteristics for a price item, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Division/Price Item Combination)
- Price item associated with the division to which the user belongs

**Procedure**

To define division-specific characteristics for a price item:

1. Search for the division for which you want to define price item characteristics.
2. Click the **Price Item Characteristics** tab in the **Division** screen.

The **Price Item Characteristics** tab appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Price item	Displays the price item code.	Not applicable
Effective Date	Used to specify the date from when the price item characteristic is effective for the division.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Division/Price Item Combination.	<b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a division-specific characteristic for the price item.

3. If the division has multiple price items associated with it, scroll to define characteristics for the required price item.

**Note:** You can use the **Previous** (⏮️) and **Next** (⏭️) buttons to scroll through the price items while defining their characteristics.

4. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

5. If you want to define more than one division-specific characteristic for the price item, click the **Add** () icon and then repeat step 4.

**Note:** However, if you want to remove a division-specific characteristic from the price item, click the **Delete** () icon corresponding to the characteristic.

6. Click the **Save** button in the **Page Title** area.

The division-specific characteristics are defined for the price item.

Oracle Revenue Management and Billing may optionally be configured to use the approval workflow process whenever any addition, modification, or deletion is done manually by a user. The approval workflow process routes any changes made to the business objects (such as person, account, contract, division, and so on) to a group of people for approval. The approval workflow process allows you to manage and track all tasks involved in the approval process.

Approval workflow allows you to define the rules for requiring an approval step before the data changes are committed to the database. Once you establish the approval workflow rules, the application manages the business process flow for having data changes approved before they are reflected in the database.

The system provides you with a flexible set of options used to determine when approvals are required, and how the approval process is to be managed including:

- Turning approval on or off for individual business objects within the application
- Grouping business objects so that approval is required for the group rather than the individual business objects within the group
- Who should approve
- How many levels of approvals are required
- Different approval workflow chains based on different criteria

Once you have turned approval workflow on for an object, or a group of objects, the system will use the approval workflow configuration to manage the entire approval process including:

- Determining whether approval is required based on data changes submitted by a user
- Routing approval workflow requests to one or more qualified approvers
- Managing rejected data changes and sending these back to the submitter for resolution
- Committing the changes once all required approvals are received

- *Approval Workflow Reason  
(Used for Viewing)*

## Most Commonly Used Terms

---

Before you understand the approval workflow process, you must familiarize yourself with the following terms:

Term	Description
Submitter	A person who adds, modifies or deletes a business object, such as person, account, contract, and division is called a submitter.
Approver	A person who approves any changes made to a business object is called an approver.
Approval Workflow Group	A group of one or more business objects for which approval is required, under some or all conditions, when data changes are made.
Approval Workflow Chain	The approval workflow chain indicates how many levels of approvals are required to approve the changes made by the submitter.

## Approval Workflow Process

---

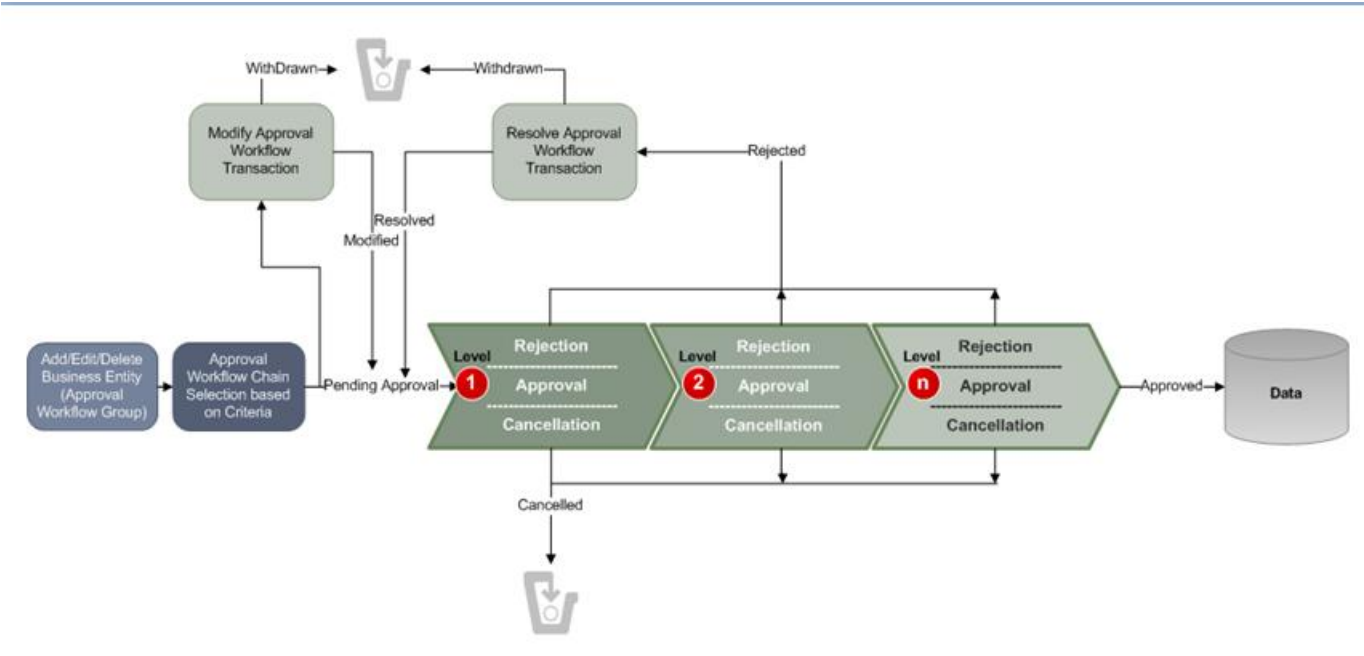

When a submitter adds, edits or deletes a business object (for example, an account) that belongs to an approval workflow group, the system checks whether approval workflow is activated for the approval workflow group. If the approval workflow is activated for the group, the system creates an approval workflow request. Every approval workflow request is uniquely identified in the system through the Approval Transaction ID.

The system identifies the approval workflow chain that must be used for approval depending on the pre-configured conditions or criteria. Based on the number of levels defined in the approval workflow chain, the request is sent to the approver at each level in the chain or hierarchy for approval. When the approver at the first level approves the request, a notification is sent to the approver at the second level for approval. This process continues till the approval is received from all levels in the hierarchy. Once the approvers at all levels approve the request, the changes are committed to the database.

However, if an approver at any level in the hierarchy rejects the request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver's comments and resubmits the changes for approval. In this case, the approval process starts once again from the beginning and not from the level at which the request was rejected.

The submitter also has the facility to modify the request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval. The submitter also has the facility to cancel the request.

The following figure indicates the flow of the approval workflow process:

To implement the approval workflow process, you need to define the following:

- [Approval Workflow Group \(Used for Searching\)](#) on page 544
- [Approval Workflow Chain \(Used for Searching\)](#) on page 561
- [Approval Workflow Criterion Type \(Used for Searching\)](#) on page 568
- [Approval Workflow Group Chain Linkage \(Used for Searching\)](#) on page 574
- [Approval Workflow Reason \(Used for Searching\)](#) on page 591
- [Approval Workflow Setting \(Used for Searching\)](#) on page 584

For price list, price item and price assignment, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1PRODUCT** – Contains the C1\_PRICEITEM\_BO business object
- **C1PRICELST** – Contains the C1\_F\_ADDPLBO business object
- **C1PRICEASG** – Contains the C1\_PRICECOMP and C1\_PRICEASGN\_BO business objects

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains. To setup the approval workflow process for price assignment, you need to do the following:

For Price Item	<ol style="list-style-type: none"><li>1. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICEITEM</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_PRICEITEM_BO</b> as the business object on this algorithm.</li><li>2. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICEITEM</b> MO.</li><li>3. Link the <b>C1PRODUCT</b> group to the appropriate approval workflow chain.</li><li>4. Activate the approval workflow for the <b>C1PRODUCT</b> group by setting the <b>Active</b> flag corresponding to the group in the <b>Approval Workflow Settings</b> screen to <b>Y</b>.</li></ol>
----------------	--

For Price List	<ol style="list-style-type: none"> <li>1. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICELIST</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_F_ADDPLBO</b> as the business object on this algorithm.</li> <li>2. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICELIST</b> MO.</li> <li>3. Link the <b>C1PRICELST</b> group to the appropriate approval workflow chain.</li> <li>4. Activate the approval workflow for the <b>C1PRICELST</b> group by setting the <b>Active</b> flag corresponding to the group in the <b>Approval Workflow Settings</b> screen to <b>Y</b>.</li> </ol>
For Price Assignments	<ol style="list-style-type: none"> <li>1. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICECOMP</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_PRICECOMP</b> as the business object on this algorithm.</li> <li>2. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICECOMP</b> MO.</li> <li>3. If a <b>Determine BO</b> algorithm is not specified for the <b>C1_PRICEASGN</b> maintenance object, create a <b>Determine BO</b> algorithm using the <b>F1-MOBO</b> algorithm type and specify <b>C1_PRICEASGN_BO</b> as the business object on this algorithm.</li> <li>4. Attach this algorithm on the <b>Determine BO</b> algorithm spot of the <b>C1_PRICEASGN</b> MO.</li> <li>5. Link the <b>C1PRICEASG</b> group to the appropriate approval workflow chain.</li> <li>6. Activate the approval workflow for the <b>C1PRICEASG</b> group by setting the <b>Active</b> flag corresponding to the group in the <b>Approval Workflow Settings</b> screen to <b>Y</b>.</li> </ol>

Similarly, for invoicing group, the approval workflow configuration is shipped with ORMB. The following groups are available in the system:

- **C1IGADD**
- **C1IGUPD**

After creating the approval workflow chains, you need to link these groups to the corresponding approval workflow chains, and activate the approval workflow for these groups by setting the following in the **Approval Workflow Settings** screen:

- Set **Active** flag to **Yes**
- Set **Prevalidation** flag to **Yes**

**Note:** You must set the **Active** flag to **No** for both the groups in case you do not want to activate the approval workflow for invoicing group. If you set the **Active** flag to **Yes** for either of the groups, approval workflow is triggered when you add and/or edit an invoicing group.

## Prerequisites

You need to setup the following prerequisites to implement the approval workflow process:

- **Setup Feature Configuration for Approval Workflow** — If you create new Maintenance Objects (MOs) and want the access control for these MOs in the approval workflow transactions to be based on the access group and division, then you have to create a custom algorithm and attach it to the **Approval Transaction Entity Access Algorithms** option type of the **C1\_AXENTITY** feature configuration. Note that you will then have two access algorithms; one default algorithm (that is, **C1-APPTXN**) and another custom algorithm. For more information

about the **C1\_AXENTITY** feature configuration, see [Setting the C1\\_AXENTITY Feature Configuration](#) on page 2357.

- **Create and Attach Determine BO Algorithm** — To use approval workflow for a business object, check the corresponding maintenance object to see if a **Determine BO** algorithm is already attached to it. If not, create a **Determine BO** algorithm using the **F1-MOBO** algorithm type, and specify the appropriate business object name on the newly created algorithm. Attach this algorithm on the **Determine BO** algorithm spot of the maintenance object.
- **Attach Audit Algorithm to Business Objects** — To use the approval workflow process for a business object, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object. Unless you attach the audit algorithm to a business object, the approval workflow process will not be triggered for the respective business object. This step is only required when you are using the base panels. If you have created custom UI maps to enter or modify data for a specific business object, this step is not needed.
- **Attach Validation Algorithms to Business Objects** — The following algorithms are shipped with ORMB:

Business Object	Basic Validation Algorithm	Pending Transaction Validation Algorithm
C1-AppBOChain	C1-GRPCHNALG	C1-APPGRPCHL
C1-AppGrp	C1-GRPALG	C1-APPGROUPV
C1-ApprovalChainEligible	C1-ADMALG	C1-APGBYPORT
C1-ApprovalTransactionChain	C1-APCHALGO	C1-APCHNPEND

The basic validation algorithms are attached to the respective business objects, and then shipped with ORMB. However, the pending transaction validation algorithms are not attached to the respective business objects. If you want to restrict the users from either editing or deleting the approval workflow group, approval workflow settings, approval workflow chain, or approval workflow group chain linkage when the respective approval workflow requests are in the **Pending**, **Work-in-Progress**, or **Rejected** state, then you must attach the pending transaction validation algorithm on the **Validation** algorithm spot of the respective business object.

- **Set Colors for Highlighting during Comparison** — While approving, rejecting, or cancelling approval workflow requests where the submitter action is Update (UPD), you will be able to compare the existing and new data. By default, any modifications are highlighted in the Yellow (9933FF) color and new additions are highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Changing the Highlighting Colors](#).
- **Create To Do Types** — You need to create the To Do types that you want to use in the approval workflow process. Once the To Do type is created, you need to link it to the required To Do roles so that users belonging to the To Do role can view and work on the To Do type.
- **Create To Do Roles** — You need to create the To Do roles that you want to use in the approval workflow process. Once the To Do role is created, you need to add the users whom you want to assign this role.

**Note:** User who is withdrawing the approval workflow request must be assigned to the To Do role to which the approver at the first level in the hierarchy is assigned. Otherwise, the user will not be able to withdraw the approval workflow request.

- **Create Input UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate an Input UI map, and associate it with the approval workflow group. Alternatively, you can create an Input UI map manually, and attach it to the approval workflow group. For more information on how to create an Input UI map manually, see [Creating Input UI Map for an Approval Workflow Group](#) on page 2347.
- **Create Display UI Map for an Approval Workflow Group** — The system provides you with the ability to automatically generate a Display UI map, and associate it with the approval workflow group. Alternatively, you can create a Display UI map manually, and attach it to the approval workflow group. For more information on

how to create a Display UI map manually, see [Creating Display UI Map for an Approval Workflow Group](#) on page 2346.

## Approval Transaction

If an approver at any level in the hierarchy rejects a request, a notification is sent to the submitters having the To Do role to resolve. The submitter then makes the required corrections based on the approver's comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Approval Transaction** screen allows you to resolve or withdraw a request. It consists of the following zones:

- [Search Approval Transaction](#)
- [Approval Transaction Log](#)

## Search Approval Transaction

The **Search Approval Transaction** zone allows you to search for an approval transaction using various search criteria. It contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an approval transaction using the task or approval transaction details. The valid values are: <ul style="list-style-type: none"> <li>• Task Details</li> <li>• Approval Transaction Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Task Details</b> option is selected.	
Status	Used to search approval transactions with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• Inprocess</li> <li>• Pending</li> <li>• Deleted</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Approval Transaction Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Task	Used to search approval transactions with a particular task. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Modify</li> <li>• Resolve</li> </ul>	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Task Details</b> option from the <b>Search By</b> list.	<b>Note:</b> This field is required when you want to search approval transactions using the task details.
Approval Workflow Group	Used to search approval transactions created for the business objects that belong to a particular approval workflow group.	No
Division	Used to search approval transactions which belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Reference ID	Used to search approval transactions created for the business object with a particular reference ID.	No
Approval Transaction ID	Used to search for a particular approval transaction.	No
Created From	Used to search approval transactions which are created from a particular date onwards.	No
Created Until	Used to search approval transactions which are created till a particular date.	No
Action	Used to search approval transactions which are created while adding, updating, or deleting a business object.	No
Submitter ID	Used to search approval transactions which are created by a particular submitter.	No
	<b>Note:</b> This field appears either when you select the <b>Task Details</b> from the <b>Search By</b> list and <b>Approve</b> option from the <b>Task</b> list or when you select the <b>Approval Transaction Details</b> from the <b>Search By</b> list and <b>Processing, Pending, or Deleted</b> option from the <b>Approval Transaction Status</b> list.  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Submitter Id for Status</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Approver ID	Used to search approval transactions which are rejected by a particular approver.	No
	<p><b>Note:</b></p> <p>The <b>Approver ID</b> is displayed when the approval transaction is searched by <b>Task Details</b> and <b>Task</b> is <b>Resolve</b>. It is also displayed when the approval transaction is searched by <b>Approval Transaction Details</b> and Status is <b>Approved</b>, <b>Canceled</b>, or <b>Rejected</b>.</p> <p>The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Approver ID Search</b> window appears.</p>	

**Note:** You must specify at least one search criterion while searching for an approval transaction. One more search criterion is required when you are searching for an approval transaction using the **Task** field.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	<p><b>Note:</b> It has a link. The link appears when you select <b>Task Details</b> option from the <b>Search By</b> list. If the <b>Approve</b> option is selected from the <b>Task</b> list then on clicking the link, <b>Comparison: New versus Existing</b> window appears with the compared details of the new and existing approval transactions. If the <b>Modify</b> option is selected from the <b>Task</b> list then on clicking the link, <b>Modify/Resolve Price List Assignment</b> window appears to modify or resolve the details of price list assignment. If the <b>Resolve</b> option is selected from the <b>Task</b> list then on clicking the link, <b>Modify/Resolve Price List Assignment</b> window appears to modify or resolve the details of price list assignment.</p>
Approval Workflow Group	Displays the code of the approval workflow group.
Submitter Name	Displays the name of submitter who submits the approval transaction details list.
	<p><b>Note:</b> This column appears either when you select the <b>Approve</b> or <b>Modify</b> option from the <b>Task</b> list or when you select the <b>Processing</b>, <b>Pending</b>, or <b>Deleted</b> option from the <b>Approval Transaction Status</b> list.</p>
Approver Name	Displays the name of an approver who approves an approval transaction details list.
	<p><b>Note:</b> This column appears either when you select the <b>Resolve</b> option from the <b>Task</b> list or when you select the <b>Approved</b>, <b>Canceled</b>, or <b>Rejected</b> option from the <b>Approval Transaction Status</b> list.</p>

Column Name	Column Description
Submitted On	Displays the date and time on which approval transaction is submitted for approval.
	<b>Note:</b> This column appears either when you select the <b>Approve</b> or <b>Modify</b> option from the <b>Task</b> list or when you select the <b>Approved</b> , <b>Pending</b> , or <b>Deleted</b> option from the <b>Approval Transaction Details</b> list.
Action	Indicates the various types of action. The valid values are: <ul style="list-style-type: none"> <li>• Add</li> <li>• Delete (DEL)</li> <li>• Update (UPD)</li> </ul>
Division	Displays the division to which the approval transaction belongs.
Status	Displays the status of approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• Processing</li> <li>• Pending</li> <li>• Deleted</li> </ul>
	<b>Note:</b> This column appears either when you select <b>Approval Transaction Details</b> option from the <b>Search By</b> list of the search criteria.
To Do Type	Displays the type of <b>To Do</b> (notification) received for the approval transaction.
Approval Transaction Information	Displays additional information about the approval transaction.
Rejected On	Displays the date and time on which the transaction is rejected.
	<b>Note:</b> This column appears either when you select the <b>Resolve</b> option from the <b>Task</b> list or when you select the <b>Rejected</b> , option from the <b>Approval Transaction Details</b> list.
Reject Reason	Displays the reason for which the approval transaction is rejected by the approver.
	<b>Note:</b> This column appears either when you select the <b>Resolve</b> option from the <b>Task</b> list or when you select the <b>Rejected</b> option from the <b>Approval Transaction Details</b> list.
Canceled On	Displays the date and time on which the approval transaction is canceled by the user.
	<b>Note:</b> This column appears when you select the <b>Cancelled</b> option from the <b>Approval Transaction Details</b> list.

Column Name	Column Description
Cancel Reason	Displays the reason for which the approval transaction is canceled by the user.
	<b>Note:</b> This column appears either when you select the <b>Canceled</b> option from the <b>Approval Transaction Details</b> list.
Withdraw	Displays a link to withdraw an approval transaction.
	<b>Note:</b> This column appears either when you select the <b>Modify</b> or <b>Resolve</b> option from the <b>Task</b> list. It has a link and on clicking the link, a message appears to confirm the withdrawal of the respective approval transaction.

On clicking the **Broadcast**  icon corresponding to the approval transaction the **Approval Transaction Log** zone appears with the approval transaction log details.

## Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Displays the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• InProcess</li> <li>• Pending</li> <li>• Deleted</li> </ul>
View	It has a link. On clicking the <b>View</b> link, the <b>Comparison: New versus Existing</b> window appears where you can view the existing and new compared transactions”.
Status Reason	Displays the status reason of the approval transaction.
Comments	Displays additional information about the approval transaction.

By default, the **Banking Approval Transaction Log** zone does not appear. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction in the **Approval Transaction** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

**Searching for an Approval Transaction****Procedure**

To search for an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.  
The **Approval Transaction** screen appears.
3. Click the **Search** option from the **Approval Transaction** sub-menu.  
The **Approval Transaction** screen appears.
4. Enter the search criteria in the **Search Approval Transaction** zone depending on whether you want to search for a task or approval transaction details.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of task or approval transactions that meet the search criteria appears in the **Search Results** section.

## Comparison: New versus Existing

You have to define the reason codes which are used when the approval workflow request is either rejected or cancelled. The reason code helps to indicate the reason why a particular request was rejected or cancelled.

The **Comparison: New versus Existing** screen allows you to view the changes in the new approval transaction compared to the existing one. It contains the following sections:

- New
- Existing

Through this screen you can do the following:

- Approve an approval transaction
- Reject an Approval Transaction
- Cancel an approval transaction
- Modify an approval transaction
- Withdraw an Approval Transaction
- Resolve an approval transaction

## Approving an Approval Transaction

You can view the number of approval transactions which are pending for approval in the **Approval Transaction** screen. The approver can review, and accordingly approve, return to the submitter, revert to the original, or cancel the approval transaction based on the observations.

**Note:** The system will not allow you to approve, return to the submitter, revert to the original or cancel an approval transaction submitted by you.

### Procedure

To approve an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.  
The **Comparison: New versus Existing** screen appears.
3. Review the compared existing and new approval transactions.
4. Click **Approve**.

A message appears with confirmation on transaction approved successfully.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **OK**.

The approval transaction is removed from the search results.

Note:

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2357.

6. Review the changes and click **Approve** to accept the changes.

The changes in the approval transaction are approved.

**Rejecting an Approval Transaction**

**Prerequisites**

To return an approval transaction to its submitter, you should have:

- Rejection reasons defined in the application

Note:

While returning an approval transaction, you need to specify the reason why you want to return the approval transaction. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

**Procedure**

To reject an approval transaction:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.  
The **Comparison: New versus Existing** screen appears.
- Review the compared existing and new approval transactions.
- Click Return to Submitter.” With stepresult, “The Rejection/Cancelation Reason window appears. It contains the following fie

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.
6. Click **OK**.

The approval transaction is removed from the search results.

## Canceling an Approval Transaction

### Prerequisites

To revert an approval transaction to its initial status, you should have:

- Cancellation reasons defined in the application

### **Note:**

While reverting an approval transaction, you need to specify the reason why you want to revert the approval transaction. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the business object in the **Status Reason** screen.

The system will not allow you to approve, return or revert an approval transaction submitted by you.

### Procedure

To cancel an approval transaction:

1. Search for approval transactions with task details and status as Approve in the **Approval Transaction** screen.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to review.  
The **Comparison: New versus Existing** screen appears.
3. Review the compared existing and new approval transactions.
4. Click **Revert to Original**.

The **Rejection/Cancellation Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	Yes
Comments	Used to specify additional information while rejecting the usage record.	Yes

5. Enter the required details.

A **Comparison: New versus Existing** screen appears where you can view the changes in the new transaction as compared to the existing ones.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2357.

6. Click **OK**.

The approval transaction is removed from the search results.

**Modifying an Approval Transaction****Prerequisites**

To modify an approval transaction, you should have:

- Characteristic Types defined in the application.

**Procedure**

To Modify an approval transaction:

1. Search for approval transactions with task details and status as Modify in the **Approval Transaction** screen.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. From the **Main** menu, select **Approval Workflow Management** and then click **Approval Transaction**.

A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is **Update (UPD)**, you will be able to compare the existing and new data, and accordingly take an action.

3. Modify the required details.
4. Click **Save**.

The modifications made to the approval transaction are saved.

## Withdrawing an Approval Transaction

### Procedure

To withdraw an approval transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. In the **Search Results** section, click the link in the **Withdraw** column corresponding to the approval transaction which you want to withdraw.  
A message appears confirming whether you want to withdraw the approval transaction.
3. Click **OK**.  
A message appears confirming whether you want to delete the approval transaction.
4. Click **OK**.  
The approval transaction is deleted.

## Resolving an Approval Transaction

### Prerequisites

To resolve an approval transaction, you should have:

- Characteristic Types defined in the application.

### Procedure

To resolve an approval transaction:

1. Search for approval transactions with task details and status as Resolve in the **Approval Transaction** screen.  
A list appears.
2. In the **Search Results** section, click the link in the **Approval Transaction ID** column corresponding to the approval transaction which you want to resolve.  
A screen appears where you can review the changes, and accordingly modify or resolve the request based on your observations. In case where the submitter action is Update (UPD), you will be able to compare the existing and new data, and accordingly take an action.
3. Make the required changes.
4. Click **Save**.  
The changes resolve for the approval transaction are saved.

## Approve Price Assignment

The **Approve Price Assignment** screen allows you to search for the price assignment requests that are pending in your workflow for approval. You can review the changes, and accordingly approve, reject or cancel the request based on your observations. It contains the following zones:

- [Search](#) on page 504
- [List of Price Assignments](#) on page 507
- [Approve Price Assignment - Comparison: New versus Existing](#) on page 508
- [Approval Transaction Log](#) on page 497

## Search

The **Search** zone allows you to search for the price assignment requests that are pending in your workflow for approval. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Price List</li> <li>• Submitter ID</li> <li>• Approval Transaction ID</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person</b> option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.  This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to specify the value for the person identifier type.	Yes (Conditional)
	<b>Note:</b> If you enter the person identifier as a search criteria, you have to select the person identifier type.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search price assignments which are created for a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Price List Description	Used to search price lists with a particular description.	No
	<b>Note:</b> This field appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	<b>Note:</b> This field appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction ID	This field appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.	No
	<b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.  This field appears only when you select the <b>Transaction ID</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a price assignment.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. It contains the following columns:

Column Name	Column Description
Account ID	Displays the account ID.
	<b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Account Identifier Type	Indicates the account identifier type of the account for the price assignments.
	<b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Account Identifier	Displays the value of the account identifier type.
	<b>Note:</b> This column appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Price List ID	
	<b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.
Price List Description	Displays the description for the price list.
	<b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.
Person Identifier	
	<b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.
Person Name	Displays the name of the person.
	<b>Note:</b> This column appears only when you select the <b>Person</b> option from the <b>Search By</b> list.
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Submitter ID	Displays the ID of the submitter.
	<b>Note:</b> This column appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.
Approval Transaction ID	Displays the approval transaction ID.
	<b>Note:</b> This column appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.

On clicking the **Broadcast**  icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

**Approve Price Assignment - Comparison: New versus Existing**

The **Comparison: New versus Existing** zone lists the existing and the new price assignments defined in the system. You can approve, cancel, reject a price assignment through this zone. It contains the following fields:

Field Name	Field Description
Approval Transaction ID	Displays the approval transaction id.
Submitter ID	Displays the submitter id who has created the price assignment request.

Field Name	Field Description
Approval Transaction Information	Displays information about the approval transaction
Action	Indicates the action that can be performed on the price assignment. The valid values are: <ul style="list-style-type: none"> <li>• Add – Allows you to define the tiering setup of the price assignment</li> <li>• DEL – Allows you to delete the tiering setup of the price assignment.</li> <li>• UPD – Allows you to upload the tiering setup of the price assignment.</li> </ul>

In addition to the above fields, this zone also contains the following two sections:

- **New** – It consists of the new approved price assignments.
- **Existing** – It consists of the existing or old price assignments.

In addition, this zone also contains the following buttons:

Button Name	Button Description
Approve	Used to approve the price assignment.
Return to Submitter	Used to reject the price assignment.
Revert to Original	Used to cancel the price assignment.

**Note:**

By default, the **Comparison: New versus Existing** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

The changes made are highlighted in both the sections for the respective fields. The fields change according to the price assignments.

You can click on **Approve** button, **Return to Submitter** button, or **Revert to Original** button to **Approve**, **Reject** or **Cancel** the price assignments, respectively.

## Approval Transaction Log

The **Approval Transaction Log** zone displays the complete trail of submitter and approver actions performed on the approval transaction. It contains the following columns:

Column Name	Column Description
Date Time	Displays the date and time when the action was performed on the approval transaction.
User Name	Indicates the user who has performed the action on the approval transaction.
Status	Indicates the status of the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Rejected</li> <li>• Inprocess</li> <li>• Pending</li> <li>• Initial</li> <li>• Deleted</li> </ul>
Status Reason	Indicates the reason why the approval transaction was rejected or cancelled.
Comments	Displays the additional details entered by the approver on rejecting or cancelling the approval transaction.

### Note:

By default, the **Approval Transaction Log** zone does not appear in the **Approve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the approval transaction ID in the **List Of Price Assignments** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

## Approving a Price Assignment for an Account

You can view the number of price assignments which are pending for approval in the **Approve Price Assignment** screen. The approver can review, and accordingly approve, reject or cancel the price assignment based on the observations.

**Note:** The system will not allow you to approve, reject or cancel a price assignment submitted by you.

### Procedure

To approve a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.  
The **Approve Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review for approval.  
The **List of Price Assignments** zone appears.
6. In the **List of Price Assignments** zone, click the **Broadcast**  icon corresponding to the price assignment whose details you want to review and approve.  
The **Comparison: New Versus Existing** zone appears.

### **Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2357.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

7. Review the compared existing and new approval transactions.  
A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.
8. Click **Approve**.  
A message appears with confirmation on transaction approved successfully.

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve and then click **Approve**.

9. Click **OK**.

The approval transaction is removed from the **List of Price Assignments** zone.

## Approving a Price Assignment for a Person

**Procedure**

To approve a price assignment for a person:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Approve Price Assignment**.  
The **Approve Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria by selecting **Person** in the **Search By** field.

**Note:**

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

The **Search Results** appear only when **Person Identifier Type** and **Person Identifier** fields are entered.

4. Click **Search**.  
A list of persons that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the person whose price assignments you want to review for approval.  
The **List of Price Assignments** zone appears.
6. Click the **Broadcast**  icon corresponding to the **Transaction Id** in the **List of Price Assignments** zone, whose details you want to view and approve.  
The **Comparison: New Versus Existing** zone appears.

**Note:**

By default, any modifications will be highlighted in the Yellow (9933FF) color and new additions will be highlighted in the Purple (FFFF66) color. You can easily change these default colors. For more information on how to set the colors used for highlighting, see [Setting the CI\\_AXENTITY Feature Configuration](#) on page 2357.

Only those users who have access to the application services for each business object within the approval workflow group will be able to view the details of the price assignment request.

- Review the pricing details, tiering ranges, and price assignment characteristics, and if they are accurate, then click **Approve**.

A message appears indicating that the price assignment request is sent to the approver at the next level in the hierarchy for approval. However, if you are the last approver in the hierarchy, a message appears indicating that the price assignment request is approved successfully.

- Click **OK**.

A To Do (notification) is sent to the approver at the next level in the hierarchy. You will no longer be able to view this request in your workflow for approval. In case you are the last approver in the hierarchy, the changes are committed to the database.

**Tip:** Alternatively, in the **List of Price Assignments** zone, you can select the check box corresponding to the price assignment request that you want to approve, and then click **Approve**.

## Modify Price Assignment

The submitter has the facility to modify or withdraw a price assignment request before the approver at the first level in the hierarchy approves or rejects the request. Once the changes are made, the submitter submits the request for approval.

The **Modify Price Assignment** screen allows you to modify or withdraw a price assignment request. It contains the following zones:

- [Search](#) on page 522
- [List of Price Assignments](#) on page 537

### Search

The **Search** zone allows you to search for the price assignment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for price assignments using the account, person, price list, submitter ID or transaction ID. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Price List</li> <li>• Submitter ID</li> <li>• Approval Transaction ID</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person</b> option is selected.	
Division	Used to search price assignments which are associated with a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.	
Person Identifier Type	Used to select the identifier type based on which you want to search price assignments through which the person's record is created or updated in the system.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
		<b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search price assignments which are created for a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to select the identifier type based on which you want to search price assignments of an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account whose price assignments you want to view.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Price List Description	Used to search price lists with a particular description.	No
	<b>Note:</b> This field appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	<b>Note:</b> This field appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	<b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.  This field appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a price assignment.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Indicates the person for whom the price assignment is created.
	<b>Note:</b> This column appears only when you select the <b>Person</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.
Person Name	Displays the name of the person.
	<b>Note:</b> This column appears only when you select the <b>Person</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.
Person Identifier Type	Displays the person identifier type.
	<b>Note:</b> This column appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.
Division	Displays the division to which the account, person, or price list belongs.

Column Name	Column Description
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Account</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.</p> <p>It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p>
Account Identifier Type	Indicates the account identifier type of the account for the price assignments.
	<p><b>Note:</b> This column appears only when you select the <b>Account</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.</p>
Account Identifier	Displays the value of the account identifier type.
	<p><b>Note:</b> This column appears only when you select the <b>Account</b> or <b>Submitter ID</b> option from the <b>Search By</b> list.</p>
Price List ID	Displays the price list ID.
	<p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p>
Price List Description	Displays the description for the price list.
	<p><b>Note:</b> This column appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.</p>
	<p><b>Note:</b> This column appears only when you are searching for price assignment requests of a price list.</p>
Submitter ID	Displays the ID of the submitter.
	<p><b>Note:</b> This column appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.</p>

On clicking the **Broadcast**  icon corresponding to the account, person, price list, or submitter ID the **List of Price Assignments** zone appears with the list of price assignments.

## List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	<b>Note:</b> The approval transaction id is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as <b>Add</b> , <b>Update (UPD)</b> , or <b>Delete (DEL)</b> , performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item or price item code.
Description	Displays the description of the price item or price item code.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Start Date	Displays the date from when the price item pricing is effective.
End Date	Displays the date till when the price item pricing is effective.
Approval Transaction Information	Displays information about the approval transaction.
	<b>Note:</b> This information string is generated using the <b>C1-APPTXNINF</b> algorithm.
Modify	It has a link. On clicking the <b>Modify</b> link, the <b>Modify/Resolve Price Assignment</b> screen appears where you can modify the price assignment.
Withdraw	It has a link. On clicking the <b>Withdraw</b> link, you can withdraw and remove the approval transaction from the list of price assignments.
View	It has a link. On clicking the <b>Log</b> link, you can view the approval transaction log details.

By default, the **List of Price Assignments** zone does not appear in the **Modify Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

## Modifying a Price Assignment for an Account

You can view the number of price assignments which are pending for modification in the **Modify Price Assignment** screen. The modifier can review, and accordingly modify, withdraw or view log of the price assignment based on the observations.

### Procedure

To modify a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Modify Price Assignment**.  
The **Modify Price Assignment** screen appears.
3. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignments you want to review.  
The **List of Price Assignments** zone appears.
6. Click the **Modify** link in the **Modify** column corresponding to the price assignment that you want to modify.  
The **Modify/Resolve Price Assignment** screen appears.

**Note:** Only those users who have access to the application services for each business object within the approval workflow group will be able to modify the details of the price assignment request.

7. Make the required changes.
8. Modify the required details.

The changes made to the price assignment are saved.

## **Modifying a Price Assignment for a Person**

### **Procedure**

To modify a price assignment for a person:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Modify Price Assignment**.  
The **Modify Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria, such as the division to which the person belongs or the person identification type and value.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of persons that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the person whose price assignment requests you want to modify.  
The **List of Price Assignments** zone appears.
6. Click the **Modify** link in the **Modify** column corresponding to the price assignment request that you want to modify.

The **Modify/Resolve Price Assignment** screen appears where you can modify the pricing details, tiering ranges, and price assignment characteristics.

**Note:** Only those users who have access to the application services for each business object within the approval workflow group will be able to modify the details of the price assignment request.

7. Make the required changes.
8. Click **Save**.

The price assignment for a person is updated.

## Resolve Price Assignment

If an approver at any level in the hierarchy rejects a price assignment request, a notification is sent to the submitter who has made the changes. The submitter then makes the required corrections based on the approver's comments, and resubmits the changes for approval. In this case, the approval process starts once again from the beginning, and not from the level at which the request was rejected.

The **Resolve Price Assignment** screen allows you to resolve or withdraw a price assignment request. It consists of the following zones:

- [Search](#) on page 533
- [List of Price Assignments](#) on page 537

### Search

The **Search** zone allows you to search for the price assignment requests rejected by approvers and pending for you to resolve. It contains the following two sections:

- Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search price assignments using various details. The valid values are: <ul style="list-style-type: none"> <li>• Person</li> <li>• Account</li> <li>• Price List</li> <li>• Submitter ID</li> <li>• Approver Transaction ID</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person</b> option is selected.	
Division	Used to search price assignments which belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Person Identifier Type	Used to specify the identifier type based on which you want to search for price assignment requests of a person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Person Identifier	Used to specify the ID linked to the person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Account ID	Used to search for price assignment requests created for an account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to specify the account identifier type of the account whose price assignment requests you want to search.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier	Used to specify the value of the account identifier type.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Price List Description	Used to search for price assignment requests created for a price list.	No
	<b>Note:</b> This field appears only when you select the <b>Price List</b> option from the <b>Search By</b> list.	
Submitter ID	Used to search for price assignment requests that are created by a particular submitter.	No
	<b>Note:</b> This field appears only when you select the <b>Submitter ID</b> option from the <b>Search By</b> list.	
Approval Transaction ID	Used to search the price assignment request using the approval transaction ID.	No
	<b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.  This field appears only when you select the <b>Approval Transaction ID</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a price assignments.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Identifier	Displays the ID linked to the person.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a person.
Person Name	Displays the name of the person.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a person.
Division	Displays the division to which the account, person, or price list belongs.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of an account.  It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

Column Name	Column Description
Account Identifier Type	Displays the account identifier type.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of an account.
Account Identifier	Displays the value of the account identifier type.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of an account.
Price List ID	Displays the price list ID.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a price list.
Price List Description	Displays the description of the price list.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a price list.
Owner ID	Displays the ID of the person for whose account the approval workflow request is created.
Approval Transaction ID	Displays the approval transaction ID.
	<b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.
Person Identifier Type	Displays the person identifier type.
	<b>Note:</b> This column appears only when you are searching for price assignment requests of a person.

On clicking the **Broadcast**  icon corresponding to the account, person, or price list, the **List of Price Assignments** zone appears.

## List of Price Assignments

The **List of Price Assignments** zone lists price assignment requests specific to an account, a person, or a price list. It contains the following columns:

Column Name	Column Description
Approval Transaction ID	Displays the approval transaction ID.
	<b>Note:</b> The approval transaction ID is generated automatically when the price assignment request is created.
Submitter Name	Indicates the submitter who has created the price assignment request.
Action	Indicates the type of action, such as <b>Add</b> , <b>Update (UPD)</b> , or <b>Delete (DEL)</b> performed by the submitter during price assignment.
Submitted On	Displays the date and time when the price assignment request was created by the submitter.
To Do Type	Displays the type of To Do (notification) received for the price assignment request.
Price Item	Displays the price item code.
Description	Displays the description of the product.
Pricing Currency	Indicates the currency in which the product pricing is defined.
Start Date	Displays the date from when the product pricing is effective.
End Date	Displays the date till when the product pricing is effective.
Approver Name	Indicates the approver who has rejected the price assignment request.
Rejected On	Displays the date and time when the price assignment request was rejected by an approver.
Reject Reason	Indicates the reason why the price assignment request was rejected.
Rejection Comments	Displays the additional details entered by an approver on rejecting the price assignment request.
Approval Transaction Information	Displays information about the approval transaction.
	<b>Note:</b> This information string is generated using the <b>C1-APPTXNINF</b> algorithm.
Resolve	On clicking the <b>Resolve</b> link, you can modify the details of the price assignment request, and resubmit it for approval. On resubmitting, the approval workflow process starts once again from the first level in the hierarchy.
Withdraw	On clicking the <b>Withdraw</b> link, you can withdraw the price assignment request. Once you withdraw the request, no further action will be taken on the request.
View	On clicking the <b>Log</b> link, you can view the log of the price assignment request from the <b>Resolve Price Assignment</b> screen before resolving or withdrawing a request.

By default, the **List of Price Assignments** zone does not appear in the **Resolve Price Assignment** screen. It appears only when you click the **Broadcast**  icon corresponding to the account, person, or price list in the **Search** zone.

## Resolving a Price Assignment for an Account

### Procedure

To resolve a price assignment for an account:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Resolve Price Assignment**.  
The **Resolve Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria, such as the division to which the account belongs, account ID, or account identifier.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of accounts that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the account whose price assignment requests you want to resolve.  
The **List of Price Assignments** zone appears.
6. Click the **Resolve** link in the **Resolve** column corresponding to the price assignment request that you want to resolve.  
The **Modify/Resolve Price Assignment** screen appears where you can modify the pricing details, tiering ranges, and price assignment characteristics.

**Note:** Only those users who have access to the application services for each business object within the approval workflow group will be able to resolve the request and resubmit it for approval.

7. Make the required changes.
8. Click **Save**.  
The price assignment is updated and resubmitted for approval.

## Resolving a Price Assignment for a Person

### Procedure

To resolve a price assignment for a person:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Approval Workflow Management** and then click **Resolve Price Assignment**.  
The **Resolve Price Assignment** screen appears.
3. In the **Search** zone, enter the search criteria, such as the division to which the person belongs or the person identification type and value.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of persons that meet the search criteria appears in the **Search Results** section.
5. Click the **Broadcast**  icon corresponding to the person whose price assignment requests you want to resolve.  
The **List of Price Assignments** zone appears.
6. Click the **Resolve** link in the **Resolve** column corresponding to the price assignment request that you want to resolve.  
A screen appears where you can modify the pricing details, tiering ranges, and price assignment characteristics.

**Note:** Only those users who have access to the application services for each business object within the approval workflow group will be able to resolve the request, and resubmit it for approval.

7. Make the required changes.
8. Click **Save**.  
The price assignment is updated and resubmitted for approval.

Withdrawing a Price Assignment for an Account

Procedure

To withdraw a price assignment for an account:

- Click the **Menu** link in the **Application** toolbar.

A list appears.

2. Do the following:

If you want to...	Then...
Withdraw a price assignment request when it is in the Pending Approval status	From the <b>Main</b> menu, select <b>Approval Workflow Management</b> and then click <b>Modify Price Assignment</b> . The <b>Modify Price Assignment</b> screen appears.
Withdraw a price assignment request when it has been rejected by an approver at any level in the hierarchy	From the <b>Main</b> menu, select <b>Approval Workflow Management</b> and then click <b>Resolve Price Assignment</b> . The <b>Resolve Price Assignment</b> screen appears.

3. In the **Search** zone, enter the search criteria, such as the division to which the account belongs, account ID, or account identifier.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of accounts that meet the search criteria appears in the **Search Results** section.

5. Click the **Broadcast**  icon corresponding to the account whose price assignment requests you want to withdraw.

The **List of Price Assignments** zone appears.

**Note:** The system provides you with a facility to view the log of a price assignment request from the **Modify Price Assignment** and **Resolve Price Assignment** screens before withdrawing a request.

6. Click the **Withdraw** link in the **Withdraw** column corresponding to the price assignment request that you want to withdraw.

A message box appears confirming whether you want to delete the price assignment request.

7. Click **OK**.

You will no longer be able to view this request in your workflow.

Approval Workflow Group zone	<a href="#">Search Approval Workflow Group</a> on page 544

## Defining an Approval Workflow Group

### Prerequisites

To define an approval workflow group, you should have:

- Input and Display UI maps created in the application in case you want to use custom UI maps.
- Dependency, Approval, and Approval Post Processing algorithms defined in the application in case you want to use any of them.

**Note:** Before you define an approval workflow group for the User BO, you need to attach the **C1-APPTXNBAS** algorithm on the **Audit** algorithm spot of the business object belonging to the USER-SC MO, and not the USER MO.

### Procedure

To define an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.
3. Click the **Add** button in the **Page Title** area of **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the approval workflow group.
- **Business Objects and Group BO Relation** - Used to add business objects and define group BO Relation for the approval workflow group.

The **Main** section contains the following:

Field Name	Field Description	Mandatory (Yes or No)
Approval Transaction Type	Used to indicate the transaction type to which the approval workflow group belongs.	Yes
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Description	Used to specify the approval workflow group with a particular description.	Yes
Display UI Map	Used to specify the UI map that you want to use for viewing data of the business objects within the approval workflow group.	No
	<b>Note:</b> You can search for a UI map, code, and an algorithm by clicking the <b>Search</b> icon (  ) corresponding to the Display UI Map field.	
	<b>Note:</b> If you clear the <b>Display UI Map</b> field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the <b>Regenerate UI Maps</b> icon corresponding to the group in the <b>Approval Workflow Settings</b> screen.	
Input UI Map	Used to specify the UI map that you want to use for modifying data of the business objects within the approval workflow group.	No
	<b>Note:</b> You can search for a UI map, code, and an algorithm by clicking the <b>Search</b> icon (  ) corresponding to the Input UI Map field.	
	<b>Note:</b> If you clear the <b>Input UI Map</b> field, you need to either manually specify the UI map or automatically regenerate the UI map by clicking the <b>Regenerate UI Maps</b> icon corresponding to the group in the <b>Approval Workflow Settings</b> screen.	
Dependency Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow group.	No
	<b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (  ) corresponding to the Dependency Algorithm field.	
	<b>Note:</b> This algorithm can be used to check all prerequisites before creating the approval workflow group.	

Field Name	Field Description	Mandatory (Yes or No)
Approval Algorithm	<p>Used to specify the algorithm that will be triggered after the approval workflow group is approved by the approver at the last level in the hierarchy. The following approval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> <li>• <b>C1-APPPROD</b> - This approval algorithm is used for the C1PRODUCT group, which is shipped with ORMB.</li> <li>• <b>C1-APPPL</b> - This approval algorithm is used for the C1PRICELST group, which is shipped with ORMB.</li> <li>• <b>C1-APPPASG</b> - This approval algorithm is used for the C1PRICEASG group, which is shipped with ORMB.</li> <li>• <b>C1-APPALG</b> - This is a standard approval algorithm that you can use for approval workflow groups where custom logic is not required.</li> </ul> <p>You can also create your own approval algorithms for custom UIs.</p> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon () corresponding to the Approval Algorithm field.</p>	No
Approval Post Processing Algorithm	<p>Used to specify the algorithm that will be triggered after the changes (which are approved by all approvers' in the hierarchy) are committed to the database.</p> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon () corresponding to the Approval Post Processing Algorithm field.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Transaction Creation Algorithm	<p>Used to specify the algorithm that will create approval workflow group. The following transaction creation algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> <li>• <b>C1-APPASGCR</b> - Used to create approval workflow group for price assignment.</li> <li>• <b>C1-AXPROD</b> - Used to create approval workflow group for price item.</li> <li>• <b>C1-AXUSR</b> - Used to create approval workflow group for user.</li> <li>• <b>C1-IGCREATE</b> - Used to create approval workflow group for invoicing group.</li> <li>• <b>C1-AXCREATE</b> - This is a standard transaction creation algorithm that you can use to create approval workflow group for most of the base objects.</li> </ul> <p>You can also create your own transaction creation algorithms for custom UIs.</p> <p>In case of the base UIs, this algorithm is only used while modifying or resolving a group. The initial approval transaction creation for base UIs takes place through the Audit algorithm attached on the business object.</p> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Transaction Creation Algorithm field.</p>	Yes
Data Retrieval Algorithm	<p>Used to specify the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD). The following data retrieval algorithms are shipped with ORMB:</p> <ul style="list-style-type: none"> <li>• <b>C1-APPIGDR</b> - Used to retrieve data for invoicing group.</li> <li>• <b>C1-AXPRICEOV</b> - Used to retrieve data for price assignment.</li> <li>• <b>C1_APPDATA</b> - This is a standard data retrieval algorithm that you can use to retrieve data for most of the base objects.</li> </ul> <p>You can also create your own data retrieval algorithms for custom UIs.</p> <p><b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon  corresponding to the Data Retrieval Algorithm field.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Information Algorithm	Used to specify the algorithm information.	No
	<b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (  ) corresponding to the Approval Post Processing Algorithm field.	
Compare Map	Used to specify the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Display UI Map</b> field.	No
	<b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (  ) corresponding to the Approval Post Processing Algorithm field.	
Input Script	Used to specify the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Input UI Map</b> field.	No
	<b>Note:</b> You can search for a Input UI map, code, and an algorithm by clicking the <b>Search</b> icon (  ) corresponding to the Approval Post Processing Algorithm field.	

- Enter the required details.
- Add business objects and group BO relation with the approval workflow group, if required.
- Click **Save**.

The approval workflow group is defined.

<b>Approval Workflow Group</b> zone	<a href="#">Approval Workflow Group</a> on page 554
How to add business objects and group BO relation	<a href="#">Adding a Business Object</a>

## Adding a Business Object

### Prerequisites

To add a business object in the approval workflow group, you should have:

- Business object and approval workflow group created in the application.

### Procedure

To add a business object in the approval workflow group:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, Select **A**, and then click **Approval Workflow Group**.

The **Approval Workflow Group** screen appears.

3. Click the **Add** button in the page-title area of the **Approval Workflow Group** screen.

The **Approval Workflow Group** screen appears. It contains following sections:

- **Main** - Used to specify basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects and link them with the approval workflow group.

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the Business Object Code that you want to include in the Approval Workflow Group.	Yes
Reference ID 1	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 2	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 3	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference ID 4	Used to specify the XPATH key of the field in the business object that you want to display in the approval transaction information string.	Yes
Reference Foreign Key 1	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 3	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Used to specify the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
List	Used to indicate whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Used to specify the XPATH key of the field or list of fields in the parent business object.	No
To Key	Used to specify the XPATH key of the field or list of fields in the current business object.	No

**Note:** You can search for a business object and parent business object, by clicking the **Search**  icon placed corresponding to the **Business Object** field.

- If you want to define more than one business and parent business object for the approval workflow group, click the **Add**  icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**

The business object is added in the approval workflow group.

**Note:** When you add business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps**  icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

## Defining a Group BO Relation

### Prerequisites

To define a relationship between business object in the approval workflow group, you should have:

- Business objects added in the approval workflow group.

### Procedure

To define a relationship between business objects in the approval workflow group:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, Select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.

3. Search for an approval workflow group in the **Approval Workflow Group** screen.
4. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.
5. The **Approval Workflow Group** screen appears. It contains following sections:
  - **Main** - Used to specify basic details of the approval workflow group.
  - **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business and parent objects, and link them with the approval workflow group.
6. Define and edit the approval workflow group details from the **Main** section, if required.
7. If you only want to define a business object, enter the required details in the **Business Objects and Group BO Relation** section.
8. If you want to define a group BO relation with the business object, enter the required details in the following fields.
  - a) **Parent Business Object**
  - b) **From Key**
  - c) **To Key**

**Note:** If you want to define more than one business or parent object, click the **Add** (+) icon and then repeat step 2. However, if you want to remove a business or parent object, click the **Delete** (🗑️) icon corresponding to the business or parent object field.

9. Click **Save**.

The business object is defined, and its relationship with the parent object is also defined in the approval workflow group.

## **Approval Workflow Group (Used for Viewing)**

Once you define an approval workflow group, the **Approval Workflow Group** screen allows you to:

- Edit the details of an approval workflow group
- Edit the details of business objects and group business object relation
- Delete an approval workflow group
- Delete a business object and a group business object relation
- View the details of an approval workflow group

This screen consists of the following zone:

- [Approval Workflow Group](#) on page 554

## Approval Workflow Group

The **Approval Workflow Group** zone displays the details of the approval workflow group. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the name of the approval workflow group.
Description	Displays the description of the approval workflow group.
Display UI Map	Indicates the UI map that will be used for viewing data of the business objects within the approval workflow group.  <b>Note:</b> It has a link. On clicking the link, the <b>UI Map</b> screen appears where you can view the details of the respective UI Map.
Input UI Map	Indicates the UI map that will be used for modifying data of the business objects within the approval workflow group.  <b>Note:</b> It has a link. On clicking the link, the <b>UI Map</b> screen appears where you can view the details of the respective UI Map.
Dependency Algorithm	Indicates the algorithm that will be triggered before creating the approval workflow request.  <b>Note:</b> This algorithm can be used to check all prerequisites before creating the approval workflow request.
Approval Algorithm	Indicates the algorithm that will be triggered after the approval workflow request is approved by the approver at the last level in the hierarchy.
Approval Post Processing Algorithm	Indicates the algorithm that will be triggered after the changes (which are approved by all approvers in the hierarchy) are committed to the database.
Transaction Creation Algorithm	Indicates the algorithm that will create approval workflow requests.  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.
Data Retrieval Algorithm	Indicates the algorithm that will be triggered to retrieve the original data of the business objects within the approval workflow group. This will help an approver to compare the original and new data in case where the submitter action is Update (UPD).  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.
Information Algorithm	Indicates the Approval Transaction information from the Approval Transactions that are created for a particular entity, based on the inputs of the XPath paths provided in the Reference IDs.
Compare Map	Indicates the customized Display UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Display UI Map</b> field.
Input Script	Indicates the customized Input UI map that you want to use for the approval workflow group. It overrides the UI map specified in the <b>Input UI Map</b> field.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit the approval workflow group. It is also used to delete the business objects and group BO relation.
Delete	Used to delete an approval workflow group.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow group is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

- **Business Objects And Group BO Relation** - The Business Objects And Group BO Relation contains the following fields:

Field Name	Field Description
Business Object	Indicates the Business Object that you want to include in the Approval Workflow Group.
Reference ID 1	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 2	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 3	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference ID 4	Indicates the XPATH key of the field in the business object that you want to display in the approval transaction information string.
Reference Foreign Key 1	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 2	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 3	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 4	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 5	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.
Reference Foreign Key 6	Indicates the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.

Field Name	Field Description
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.
Parent Business Object	Indicates the parent business object. This should be one of the business objects within the group.
From Key	Indicates the XPATH key of the field or list of fields in the parent business object.
To Key	Indicates the XPATH key of the field or list of fields in the current business object.

## Editing an Approval Workflow Group

### Procedure

To edit an approval workflow group:

1. Search for the approval workflow group in the **Approval Workflow Group**.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Group** screen appears.

3. Click the **Edit** button in the **Approval workflow Group** zone.

The **Approval Workflow Group** screen appears.

4. Modify the details of the approval workflow group, if required.
5. Define, edit, or remove business objects and group BO relation from the approval workflow group, if required.
6. Click **Save**.

The changes made to the approval workflow group are saved.

## Deleting an Approval Workflow Group

### Procedure

To delete an approval workflow group:

1. Search for the approval workflow group in the **Search Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group that you want to delete.
3. Click the **Delete** button in the **Approval Workflow Group** zone.

A message appears confirming whether you want to delete the approval workflow group.

4. Click **OK**.

The approval workflow group is deleted.

## Editing a Business Object

### Procedure

To edit a business object in the approval workflow group:

1. From the **Admin** menu, select **A** and then click **Approval Workflow Group**.  
The **Approval Workflow Group** screen appears.
2. Search for an approval workflow group in the **Search Approval Workflow Group** zone.
3. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.
4. The **Approval Workflow Group** zone appears. Click the **Edit** button from **Record Action** sections.

The **Approval Workflow Group** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Used to specify the fields that allow to define business objects and link them with the approval workflow group

The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Displays the Business Object Code that is included in the Approval Workflow Group.	Yes
Reference ID 1	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 2	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 3	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference ID 4	Displays the XPATH key of the field in the business object that you want to use as criteria for searching approval workflow groups.	No
Reference Foreign Key 1	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 2	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference Foreign Key 3	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 4	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 5	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
Reference Foreign Key 6	Displays the XPATH key of the field in the business object that you want to use for validating whether duplicate approval transaction exists in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Used to specify the parent business object. This should be one of the business objects within the group.	No
From Key	Display the XPATH key of the field or list of fields in the parent business object.	No
To Key	Display the XPATH key of the field or list of fields in the current business object.	No

**Note:** You can search for a business object or parent business object by clicking the **Search**  icon placed corresponding to the **Business Object** and **Parent Business Object** field.

- If you want to define more than one business object or parent object for the approval workflow group, click the **Add**  icon placed corresponding to the field.
- Enter the required details in **Main** and **Business Objects and Group BO Relation** sections.
- Click **Save**.

The changes made to the business object in approval workflow group are saved.

**Note:** When you change business objects in an approval workflow group, you need to regenerate the Input and Display UI maps by clicking the **Regenerate UI Maps**  icon corresponding to the group in the **Approval Workflow Settings** screen. You must do this only when you are using automatically generated UI maps, and not otherwise.

## Deleting a Business Object

### Procedure

To delete a business object in the approval workflow group:

1. Search for an approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.

The **Approval Workflow Group** zone appears.

3. In the View section of **Approval Workflow Group**, click the **Edit** button.

The **Approval Workflow Group** window appears.

4. In the **Business Objects and Group BO Relation** zone, click the **Delete** (🗑️) icon corresponding to the business object that you want to delete.
5. Click **Save**.

The business object is deleted from the approval workflow group.

## Editing a Group BO Relation

### Procedure

To edit the business object's relationship details in the approval workflow group:

1. If required, filter the approval workflow group in the **Approval Workflow Group** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group.

The **Approval Workflow Group** screen appears. It contains following two sections:

- **Main** - Displays the basic details of the approval workflow group.
- **Business Objects and Group BO Relation** - Displays the fields that allow to define or edit business objects, and link them with the approval workflow group.

3. If required, define and edit the approval workflow group details from the **Main** section.
4. The **Business Objects and Group BO Relation** section contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to specify the business object that you want to add in the approval workflow group.	Yes
Reference ID 1	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 2	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No

Field Name	Field Description	Mandatory (Yes or No)
Reference ID 3	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference ID 4	Used to indicate the XPATH key of the field that you want to concatenate in the approval transaction information string.	No
Reference Foreign Key 1	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 2	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 3	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 4	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 5	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
Reference Foreign Key 6	Used to indicate the XPATH key of the field that you want to use while validating whether a duplicate approval transaction does not exist in the system.	No
List	Indicates whether the group contains one or multiple instance of the business object. For example, if you want to create a group that contains multiple account objects, you need to set this flag for the Account BO to True. If you want to create a group that contains single instance of the business object, you must set this flag for the business object to False.	Yes
Parent Business Object	Displays the parent business object. This should be one of the business objects within the group.	No
From Key	Displays the XPATH key of the field or list of fields in the parent business object.	No
To Key	Displays the XPATH key of the field or list of fields in the current business object.	No

**Note:** You can search for a parent business object by clicking the **Search** () icon placed corresponding to the field. You can also define a new parent business object by clicking the **Add** () icon placed corresponding to the field.

5. Modify the required details in **Business Objects and Group BO Relation** section.
6. Click **Save**.

The changes made to business object's relationship are saved in the approval workflow group.

**Approval Workflow Chain (Used for Searching)**

The **Approval Workflow Chain** screen allows you to search for approval workflow chain using various search criteria. Through this screen, you can navigate to the following screen:

- [Approval Workflow Chain \(Used for Viewing\)](#) on page 565

This screen consists of the following zone:

- [Search Approval Workflow Chain](#) on page 561

**Search Approval Workflow Chain**

The **Search Approval Workflow Chain** zone allows you to search for an approval workflow chain using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to search a particular approval workflow chain.	No
Description	Used to search approval workflow chains with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Chain	Displays the approval workflow chain.
Description	Displays the description of the approval workflow chain.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears where you can view the details of the respective approval workflow chain.

**Note:** You must specify at least one search criterion while searching for an approval workflow chain.

#### Related Topics

For more information on...	See...
How to search for an approval workflow chain	<a href="#">Searching for an Approval Workflow Chain</a> on page 562
How to view the details of an approval workflow chain	<a href="#">Viewing the Approval Workflow Chain Details</a> on page 563

## Searching for an Approval Workflow Chain

### Procedure

To search the approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

3. Enter the search criteria in the **Search Approval Workflow Chain** zone.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of approval workflow chains that meet the search criteria appears in the **Search Results** section.

## Defining an Approval Workflow Chain

### Prerequisites

To define an approval workflow chain, you should have:

- The To Do role and To Do type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

### Procedure

To define an approval workflow chain:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Chain**.  
The **Approval Workflow Chain** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Chain** screen.  
The **Approval Workflow Chain** screen appears. It contains the following sections:
  - **Main** - Used to specify basic details of the approval workflow chain.
  - **Approval Levels** - Used to specify a level in the approval workflow chain.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Used to specify the approval workflow chain	Yes
Description	Used to specify the description for the approval workflow chain	Yes

Field Name	Field Description	Mandatory (Yes or No)
To Do Role To Resolve	Used to specify the To Do Role to indicate the users who will receive a notification when the approval transactions are rejected by an approver at any level in the hierarchy.	Yes

- Enter the required details.
- Define approval levels for the approval workflow chain, if required.
- Click **Save**.

The approval workflow chain is defined.

## Defining Approval Levels for an Approval Workflow Chain

### Prerequisites

To define approval levels in the approval workflow chain, you should have:

- The To Do Role and To Do Type defined in the application.
- Action algorithms defined in the application, in case you want to use any of them.

### Procedure

To define an approval levels for an approval workflow chain:

- Ensure that the **Approval Levels** section is expanded when you are defining or editing an approval workflow chain.

The **Approval Levels** section contains the following fields

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Used to specify the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.	Yes
	<b>Note:</b> You can search for an action algorithm by clicking the <b>Search</b>  icon corresponding to the <b>Action Algorithm</b> field.	
Approver To Do Role	Used to specify the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.	Yes
	<b>Note:</b> You can search for an approver to do role by clicking the <b>Search</b>  icon corresponding to the <b>Approver To Do Role</b> field.	

Field Name	Field Description	Mandatory (Yes or No)
Approver To Do Type	Used to specify the type of notification that you want to generate when the approver approves or rejects the request.	Yes
	<b>Note:</b> You can search for an approver to do type by clicking the <b>Search</b>  icon corresponding to the <b>Approver To Do Type</b> field.	

- Enter the required details in the **Approval Levels** section.
- If you want to define more than one approval level for the approval workflow chain, click the **Add**  icon and then repeat step 2. However, if you want to remove a approval level from the approval workflow chain, click the **Delete**  icon corresponding to the approval level.

## Approval Workflow Chain (Used for Viewing)

Once you define an approval workflow chain, the **Approval Workflow Chain** screen allows you to:

- View the details of an approval workflow chain
- Edit an approval workflow chain
- Delete an approval workflow chain

This screen contains the following zone:

- [Approval Workflow Chain](#) on page 565

## Approval Workflow Chain

The **Approval Workflow Chain** zone displays the details of the approval workflow chain. It contains the following sections:

- Main** - Displays basic information about the approval workflow chain. It contains the following fields:

Field Name	Field Description
Approval Workflow Chain	Displays the approval workflow chain and levels.
Description	Displays the description of the approval workflow chain and levels.
To Do Role To Resolve	Displays the description of To Do Role role type.

- Approval Levels** - Displays the levels defined in the approval workflow chain.

Field Name	Field Description
Action Algorithm	Indicates the additional action that the system will perform apart from generating a notification when the approver approves or rejects the request.

Field Name	Field Description
Level	Indicates the level in the hierarchy.
Approver To Do Role	Indicates that the users with the specified To Do role will either approve or reject the request at this level in the hierarchy.
Approval To Do Type	Indicates the type of notification that will be generated when the approver approves or rejects the request.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit and delete the approval workflow chain and approval levels.
Delete	Used to delete the approval workflow chain.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing an Approval Workflow Chain

### Procedure

To edit an approval workflow chain:

1. Search for an approval workflow chain in the **Search Approval Workflow Chain** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow chain whose details you want to edit.

The **Approval Workflow Chain** screen appears.

3. Click the **Edit** button in the **Approval Workflow Chain**.

The **Approval Workflow Chain** screen appears.

- **Main** - Used to specify the basic details of the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Chain	Displays the approval workflow chain.	Yes
Description	Displays the description for the approval workflow chain.	Yes
To Do Role To Resolve	Displays the To Do role to indicate the users who will be sent a notification when the approval workflow request is rejected by an approver at any level in the hierarchy.	Yes

- **Approval Levels** - Used to specify a level in the approval workflow chain. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action Algorithm	Displays the additional action that you want the system to perform apart from generating a notification when the approver approves or rejects the request.	Yes
Approver To Do Role	Displays the To Do role to indicate the users who will either approve or reject the request at this level in the hierarchy.	Yes
Approval To Do Type	Displays the type of notification that you want to generate when the approver approves or rejects the request.	Yes

4. Modify the required details in the **Main** section.
5. Edit, or remove approval levels from the approval workflow chain, if required.
6. Click **Save**.

The changes made to the approval workflow chain screen are saved.

### Search Approval Workflow Criterion Type

The **Search Approval Workflow Criterion Type** zone allows you to search for an approval workflow criterion type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Criterion Type	Used to search a particular approval workflow criterion type.	Yes
Description	Used to specify the description for the approval workflow criteria type.	No

**Note:** You must specify at least one search criterion while searching for an approval workflow criterion type.

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Criterion Type	Displays the approval workflow criterion type.
Description	Displays the description of the approval workflow criterion type.

How to search for an approval workflow criterion type	<a href="#">Searching for an Approval Workflow Criterion Type</a> on page 568
How to view the details of an approval workflow criterion type	<a href="#">Viewing the Approval Workflow Criterion Type Details</a> on page 569

### Searching for an Approval Workflow Criterion Type

#### Procedure

To search the approval workflow criterion type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Criterion Type**.  
The **Approval Workflow Criterion Type** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Criterion Type** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**

A list of approval workflow criterion types that meet the search criteria appears in the **Search Results** section.

#### Related Topics

Approval Workflow Criterion Type zone	<a href="#">Search Approval Workflow Criterion Type</a> on page 568

## Viewing the Approval Workflow Criterion Type Details

### Procedure

To view the details of an approval workflow criterion type:

1. If required, filter the approval workflow criterion type details in the **Search Approval Workflow Criterion Type** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow criterion type whose details you want to view.

The **Approval Workflow Criterion** screen appears. It contains the following zone:

- [Approval Workflow Criterion Type](#) on page 571

3. View the details of the approval workflow criterion type in the **Approval Workflow Criterion Type** zone.

#### Related Topics

## Defining an Approval Workflow Criterion Type

### Prerequisites

To define an approval workflow criterion type, you should have:

- Algorithm, Business object, and Field object defined in the application.

### Procedure

To define an approval workflow criterion type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Approval Workflow Criterion Type**.

The **Approval Workflow Criterion Type** screen appears.

- Click the **Add** button in the **Page Title** area of the **Approval Workflow Criterion Type** screen.

The **Approval Workflow Criterion Type** screen appears. It contains the following section:

- Main** - Used to specify basic details about the approval workflow criterion type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Criterion Type	Used to specify the approval workflow criterion type.	Yes
Description	Used to specify the description for the approval workflow criterion type.	Yes
Derived From	Used to indicate the option which triggers the approval workflow. The valid values are: <ul style="list-style-type: none"> <li>Algorithm</li> <li>Business Object</li> </ul>	Yes
Algorithm	Used to indicate the algorithm for which you want to define the approval workflow criterion type.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the Search icon, the Algorithm Search window appears.  This field appears only when you select the Algorithm option from the Derived From list.	Yes
Business Object	Used to indicate the business object for which you want to define the approval workflow criterion type.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the Search icon, the Business Object Search window appears.  This field appears only when you select the Business Object option from the Derived From list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Field	Used to indicate the field that you want to use to define the criteria for associating approval workflow requests with the approval workflow chains.	Yes
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon corresponding to this field. On clicking the Search icon, the Field Search window appears.</p> <p>This field appears only when you select the Business Object option from the Derived From list.</p>	

4. Enter the required details.

5. Click **Save**.

The approval workflow criterion type is created.

Approval Workflow Criterion Type screen	<a href="#">Approval Workflow Criterion Type (Used for Viewing)</a> on page 571
Search Approval Workflow Criterion Type zone	<a href="#">Search Approval Workflow Criterion Type</a> on page 568

## Approval Workflow Criterion Type (Used for Viewing)

Once you define an approval workflow criterion type, the **Approval Workflow Criterion Type** screen allows you to:

- Edit the details of an approval workflow criterion type
- Delete an approval workflow criterion type

This screen contains the following zone:

- [Approval Workflow Criterion Type](#) on page 571

## Approval Workflow Criterion Type

The **Approval Workflow Criterion Type** zone displays the details of the approval workflow criterion types. It contains the following sections:

- **Main** - Displays basic information about the approval workflow criterion type. It contains the following fields:

Field Name	Field Description
Approval Workflow Criterion Type	Displays the approval workflow criterion type.
Description	Displays the description of the approval workflow criterion type.
Derived From	Indicates the criteria type that triggers the approval workflow. The valid values are: <ul style="list-style-type: none"> <li>• Algorithm</li> <li>• Business Object</li> </ul>

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow criterion type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Field	Indicates the field using which the criteria for associating approval workflow requests with the approval workflow chains will be defined.
	<b>Note:</b> It has a link. On clicking the link, the <b>Fields</b> screen appears where you can view the details of the respective field.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the approval workflow criterion type.
Delete	Used to delete the approval workflow criterion type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain and levels is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing an Approval Workflow Criterion Type

### Procedure

To edit an approval workflow criterion type:

1. Search for the approval workflow criterion type in the **Approval Workflow Criterion Type** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow criterion type whose details you want to edit.

The **Approval Workflow Criterion Type** screen appears.

3. Click the **Edit** button in the **Approval Workflow Criterion Type** zone.

The **Approval Workflow Criterion Type** screen appears. It contains the following section:

- **Main** - This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Criterion Type	Displays the approval workflow criterion type.	Yes
Description	Displays the description for the approval workflow criterion type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Derived From	Displays an option which triggers the approval workflow.	Yes
Algorithm	Displays the algorithm for which you want to define the approval workflow criterion type.	Yes
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon corresponding to this field. On clicking the Search icon, the Algorithm Search window appears</p> <p>This field appears only when you select the Algorithm option form the Derived From list.</p>	
Business Object	Displays the business object which is used to define the approval workflow criterion type.	Yes
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon corresponding to this field. On clicking the Search icon, the Business Object Search window appears.</p> <p>This field appears only when you select the Business Object option form the Derived From list.</p>	
Field	Displays the field which is used to define the criteria for associating approval workflow requests with the approval workflow chains.	Yes
	<p><b>Note:</b></p> <p>The Search  icon corresponding to the respective field. On clicking the Search icon, the Field Search window appears.</p> <p>This field appears only when you select the Business Object option form the Derived From list.</p>	

4. Modify the required details in the **Approval Workflow Criterion Type** screen.

5. Click **Save**.

The changes made to the approval workflow criterion type screen are saved.

## Deleting an Approval Workflow Criterion Type

### Procedure

To delete an approval workflow criterion type:

1. Search for the approval workflow criterion type in the **Approval Workflow Criterion Type** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow criterion type whose details you want to delete.

The **Approval Workflow Criterion Type** screen appears.

3. Click the **Delete** button in the **Approval Workflow Criterion Type** zone.

A message appears confirming whether you want to delete the approval workflow criterion type.

4. Click **OK**.

The approval workflow criterion type is deleted.

## Search Approval Workflow Group Chain Linkage

The **Search Approval Workflow Group Chain Linkage** zone allows you to search for an approval workflow group chain linkage using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Used to search a particular approval workflow group chain linkage.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to search a group chain linkage for which an approval workflow group is defined.	Yes
Approval Workflow Chain	Used to search a group chain linkage for which an approval workflow chain is defined.	Yes

**Note:** You must specify at least one search criterion while searching for an approval workflow group chain linkage.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.
Approval Workflow Group	Indicates the approval workflow group for which the link is created. <b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Group Chain Linkage</b> screen appears with the details of the respective business object.
Approval Workflow Chain	Indicates the approval workflow chain for which the link is created.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

## Defining an Approval Workflow Group Chain Linkage

### Prerequisites

To define an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group and Approval Workflow Chain defined in the application.

### Procedure

To define an approval workflow group chain linkage:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **A** and then click **Approval Workflow Group Chain Linkage**.

The **Approval Workflow Group Chain Linkage** screen appears.

- Click the **Add** button in the **Page Title** area of the **Approval Workflow Group Chain Linkage** screen.

The **Approval Workflow Group Chain Linkage** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the approval workflow group chain linkage.
- Group Chain Linkage Criteria** - Used to define group chain linkage criteria for the approval workflow type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to indicate the approval workflow group.	Yes
	<b>Note:</b> You can search for an approval workflow group type by clicking the Search (  ) icon corresponding to the field.	
Approval Workflow Chain	Used to indicate the approval workflow chain.	Yes
	<b>Note:</b> You can search for an approval workflow chain by clicking the Search (  ) icon corresponding to the field.	
Field Approval Rule	Used to indicate whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	Yes

- Enter the required details.
- Define group chain linkage criteria for the approval workflow, if required.
- Define field approval rule criteria for the approval workflow, if required.
- Click **Save**.

The approval workflow group chain linkage is created.

## Defining Group Chain Linkage Criteria for an Approval Workflow

### Prerequisites

To define group chain linkage criteria for an approval workflow, you should have:

- Approval Workflow Criterion Type defined in the application.

### Procedure

To define group chain linkage criteria for an approval workflow:

1. Ensure that the **Group Chain Linkage Criteria** section is expanded when you are defining or editing an approval workflow.

The **Group Chain Linkage Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Group Chain Linkage ID	Displays the Group Chain Linkage ID.	Yes
	<b>Note:</b> The data appears in this field only when you are editing the details of an approval workflow criterion type.	
Criterion Type	Used to indicate the criteria type needed for defining the criterion.	Yes
	<b>Note:</b> The Search (🔍) icon appears corresponding to this field. On clicking the Search icon, the Approval Workflow Chain Search window appears.	
Operator	Used to indicate the relational operator used to define the relation between the criterion type and criterion value.	Yes
Criterion Value	Used to specify the criterion value.	Yes

2. Enter the required details.
3. If you want to define more than one group chain linkage criteria for the approval workflow, click the **Add** (+) icon, and then repeat step 2.

**Note:** However, if you want to remove a group chain linkage criteria from the approval workflow, click the **Delete** (🗑️) icon corresponding to the group chain linkage criteria.

### Related Topics

## Defining a Field Approval Rule

### Prerequisites

To define a field approval rule for an approval workflow group chain linkage, you should have:

- Business Object, Field, and Approval Workflow Chain to be defined in the application.

## Procedure

To define a field approval rule for an approval workflow group chain linkage:

1. Ensure that the

**Field Approval Rule Criteria** section is expanded when you select the Yes option from the Field Approval Rule field of the M

The **Field Approval Rule Criteria** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence.	Used to indicate the order in which the rule criteria should be executed while adding or updating the field value.	Yes
Applicable For	Used to indicate whether the rule criteria should be considered while adding and/or updating the field value. The valid values are: <ul style="list-style-type: none"> <li>• Add</li> <li>• Update</li> <li>• Add and Update</li> </ul>	Yes
Business Object	Used to indicate the business object in which the field is included.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Business Object</b> field. On clicking the search icon, the <b>Search Group Based Business Object</b> search window appears.	
Field	Used to indicate the field for which you want to define the approval rule criteria.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Field</b> search field. On clicking the search icon, the <b>Field Search</b> search window appears.	
Approval Workflow Chain	Used to indicate the approval workflow chain that you want to use for the field value approval.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Approval Workflow Chain</b> field. On clicking the search icon, the <b>Approval Workflow Chain Search</b> search window appears.	
Value Range	Used to indicate whether you want to define value based threshold limit for each approval level.	No
	<b>Note:</b> This field is enabled only when the data type of the field is <b>Numeric</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Hierarchical	Used to indicate whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.	No

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Used to specify the threshold value using which you want to control the approval hierarchy.
Approval Level	Used to indicate the approval level at which approval is required when the field value is within the threshold value.
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Approval Level</b> field. On clicking the search icon, the <b>Approval Level Search</b> search window appears.
	<b>Note:</b> The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

- Enter the required details in the **Field Approval Rule Criteria** section.
- If you want to define more than one field approval rule criteria for the approval workflow chain linkage, click the **Add**  icon and then repeat step 2. However, if you want to remove a field approval rule criteria from the approval workflow chain linkage, click the **Delete**  icon corresponding to the sequence field.
- Click **Save**.
 

The approval workflow field rule is defined.

For more information on...	See...
How to view the details of an approval workflow group chain linkage	<a href="#">Viewing the Approval Workflow Group Chain Linkage Details</a> on page 576

## Approval Workflow Group Chain Linkage

The **Approval Workflow Group Chain Linkage** zone displays the details of the approval workflow group chain linkage. It contains the following sections:

- **Main** - Displays basic information about the approval workflow group chain linkage. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group for which a link is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Group</b> screen appears with the details of the respective approval workflow group.
Approval Workflow Chain	Displays the approval workflow chain for which a link is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears with the details of the respective approval workflow group.
Field Approval Rule	Indicates whether you want to configure approval rule for one or more fields of the business objects which are included in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the approval workflow group chain linkage. Also used to define, edit, delete Group Chain Linkage Criteria and Field Approval Rule Criteria.
Delete	Used to delete the approval workflow group chain linkage.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow chain linkage is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

- **Group Chain Linkage Criteria** - Lists the group chain linkage criteria..This section contains the following columns:

Column Name	Column Description
Group Chain Linkage ID	Displays the ID which is generated automatically when the link is created.

Column Name	Column Description
Criterion Type	Displays the criterion type needed for defining the criterion.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Criterion Type</b> screen appears where you can view the details of the respective criterion type.
Operator	Indicates the relational operator used to define the relation between the criterion type and criterion value. The valid values are: <ul style="list-style-type: none"> <li>EQUALS</li> <li>IN</li> </ul>
Criterion Value	Displays the criterion value.

- **Field Approval Rule Criteria** - Lists the field approval rule criteria for approval workflow group chain linkage. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the rule criteria should be executed while adding or updating the field value.
Applicable For	Displays the rule criteria which should be considered while adding and/or updating the field value.
Business Object	Displays the business object in which the field is included.
Field	Displays the field for which you want to define the approval rule criteria.
	<b>Note:</b> The <b>Context Menu</b> (  ) icon appears corresponding to the <b>Field</b> search field. On clicking the context menu icon, the <b>Go to Field</b> menu appears. On clicking the <b>Go to Field</b> menu item, the <b>Field</b> screen appears with the details of the respective field.
	<b>Note:</b> It has a link. On clicking the link, the <b>Field</b> screen appears with the details of the respective field.
Approval Workflow Chain	Indicates the approval workflow chain that you want to use for the field value approval.
	<b>Note:</b> It has a link. On clicking the link, the <b>Approval Workflow Chain</b> screen appears with the details of the respective approval workflow chain.
Value Range	Indicates whether you want to define value based threshold limit for each approval level.
	<b>Note:</b> This field is enabled only when the data type of the field is <b>Numeric</b> .

Column Name	Column Description
Hierarchical Approval	Indicates whether multi-level or single-level approval is required while adding or updating the field value beyond the threshold limit.
	<b>Note:</b> This field is enabled only when the <b>Value Range</b> check box is selected.

If the **Value Range** check box is selected, a grid appears with the following set of fields:

Field	Field Description
Threshold Value	Displays the threshold value using which you want to control the approval hierarchy.
Approval Level	Displays the approval level at which approval is required when the field value is within the threshold value.
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to the <b>Approval Level</b> field. On clicking the search icon, the <b>Approval Level Search</b> search window appears.
	<b>Note:</b> The search results will include all those levels which are defined in the approval workflow chain.
Approval Level Information	Displays additional information about the approval level.

## Editing an Approval Workflow Group Chain Linkage

### Prerequisites

To edit an approval workflow group chain linkage, you should have:

- Business Object, Field, Criterion Type, Approval Workflow Group, and Approval Workflow Chain defined in the application.

### Procedure

To edit an approval workflow group chain linkage:

1. Search for the Approval Workflow Group Chain Linkage in the **Approval Workflow Group Chain Linkage** screen.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain whose details you want to edit.  
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Edit** button in the **Approval Workflow Group Chain Linkage** zone.  
The **Approval Workflow Group Chain Linkage** screen appears.
4. Define or edit approval workflow group chain linkage, if required.
5. Define, edit or remove approval workflow criterion from the approval workflow group chain linkage, if required.
6. Define, edit or remove field approval rule criteria from the approval workflow group chain linkage, if required.
7. Click **Save**.

The changes made to the approval workflow group chain linkage screen are saved.

## Deleting an Approval Workflow Group Chain Linkage

### Procedure

To delete an approval workflow group chain linkage:

1. Search for an approval workflow group chain linkage in the **Search Approval Workflow Group Chain Linkage** zone.
2. In the **Search Results** section, click the link in the **Approval Workflow Group** column corresponding to the approval workflow chain that you want to delete.  
The **Approval Workflow Group Chain Linkage** screen appears.
3. Click the **Delete** button in the **Approval Workflow Group Chain Linkage** zone.  
A message appears confirming whether you want to delete the approval workflow group chain linkage.
4. Click **OK**.  
The approval workflow group chain linkage is deleted.

## Searching for an Approval Workflow Group

### Prerequisites

To search for an approval workflow group, you should have:

- Approval Workflow Group defined in the application.
- Active flag should be set to **Yes**

### Procedure

To search for an approval workflow group:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, Select **A** and then click **Approval Workflow Setting**.  
The **Approval Workflow Setting** screen appears.
3. Enter the search criteria in the **Search Approval Workflow Group** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

#### 4. Click **Search**.

A list of approval workflow groups that meet the search criteria appears in the **Search Results** section.

## Viewing the Approval Workflow Setting Details

### Procedure

To view the details of approval workflow setting:

1. Search for an approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to view.

The **Approval Workflow Settings** screen appears.

3. View the details of the approval workflow group in the **Approval Workflow Group Settings** zone.

### Related Topics

## Defining Approval Workflow Group Settings

### Prerequisites

To define an approval workflow group setting, you should have:

- Approval Workflow Group defined in the application.
- Active flag set to **Yes**

### Procedure

To define an approval workflow group setting:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Setting**.  
The **Approval Workflow Settings** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Settings** screen.

The **Approval Workflow Settings** screen appears. It contains the following section:

- **Main** - Used to specify the details for the approval workflow settings.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Group	Used to specify the approval workflow group.	Yes
Approval Chain Selection Algorithm	Used to specify the algorithm that will be triggered before creating the approval workflow request.	Yes
	<b>Note:</b> This algorithm identifies the approval workflow chain that must be used for the approval workflow group.	
	<b>Note:</b> You can search for an approval chain selection algorithm by clicking the <b>Search</b>  icon corresponding to the <b>Approval Chain Selection Algorithm</b> field.	
Prevalidation	Used to indicate whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
	<b>Note:</b> You can search for a prevalidation by clicking the <b>Search</b>  icon corresponding to the <b>Prevalidation</b> field.	
Approval Reason Required	Used to indicate whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	Yes
Active	Used to indicate whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• <b>Yes</b> - Used when you want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>No</b> - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>Conditional</b> - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Conditional Algorithm	Used to specify the algorithm that will be used to determine the business objects for which the approval workflow must be activated.	Yes
	<b>Note:</b> This field appears only when the <b>Conditional</b> option is selected from the <b>Active</b> list.	

4. Enter the required details.

5. Click **Save**.

The approval workflow group setting is defined.

## Approval Workflow Setting (Used for Viewing)

Once the approval workflow group setting is defined, the **Approval Workflow Settings** screen allows you to:

- View the details of an approval workflow setting
- Edit the approval workflow group settings
- Delete an approval workflow group settings
- Regenerate approval workflow setting UI maps

This screen consists of the following zone:

- [Approval Workflow Group Settings](#) on page 588

For more information on...	See...
How to edit the approval workflow group settings	<a href="#">Editing Approval Workflow Group Settings</a> on page 590
How to delete an approval workflow group settings	<a href="#">Deleting Approval Workflow Group Settings</a> on page 590
How to regenerate UI Maps	<a href="#">Regenerating Input and Display UI Maps</a> on page 591

## Approval Workflow Group Settings

The **Approval Workflow Group Settings** zone displays the details of the approval workflow group settings. It contains the following sections:

- **Main** - Displays the basic information about the approval workflow group settings. It contains the following fields:

Field Name	Field Description
Approval Workflow Group	Displays the approval workflow group.

Field Name	Field Description
Approval Chain Selection Algorithm	Displays the algorithm that will be triggered after creating the approval workflow request.
	<b>Note:</b> This algorithm identifies the approval workflow chain that must be used for the approval workflow group.
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective approval chain selection algorithm.
Prevalidation	Indicates whether validation must be done before the approval workflow request is created. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Approval Reason Required	Indicates whether you want the approver to add reason and comments while approving the approval transaction. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Active	Indicates whether the approval workflow is required for the business objects in the approval workflow group. The valid values are: <ul style="list-style-type: none"> <li>• <b>Yes</b> - Used when you want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>No</b> - Used when you do not want to activate the approval workflow for the business objects in the approval workflow group.</li> <li>• <b>Conditional</b> - Used when you want to activate the approval workflow for business objects that satisfy particular criteria (for example, when the person or account belongs to a particular division). Note that, at present, this functionality works only for an approval workflow group which consists of a single business object.</li> </ul>
Conditional Algorithm	Displays the algorithm that will be used to determine the business objects for which the approval workflow must be activated.
	<b>Note:</b> This field appears only when the <b>Conditional</b> option is selected from the <b>Active</b> list.
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective conditional algorithm.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the settings of the approval workflow group.
Delete	Used to delete the approval workflow group setting.
Regenerate UI Maps	Used to regenerate the approval workflow group setting UI Maps.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the approval workflow reason is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing Approval Workflow Group Settings

### Prerequisites

To edit approval workflow group settings, you should have:

- Approval Chain Selection Algorithm defined in the application.
- Prevalidation, Approval Reason Required, and Active flag defined in the application.
- Conditional Algorithm defined in the application

### Procedure

To edit approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group whose details you want to edit.

The **Approval Workflow Settings** screen appears.

3. Click the **Edit** button in the **Approval Workflow Group Settings** zone.

The **Approval Workflow Group Settings** screen appears.

4. Edit the settings for the approval workflow group, if required.
5. Click **Save**.

The changes made to the approval workflow group settings are saved.

### Related Topics

<b>Approval Workflow Group Settings</b> zone	<a href="#">Approval Workflow Group Settings</a> on page 588

## Deleting Approval Workflow Group Settings

### Procedure

To delete approval workflow group settings:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group that you want to delete.

The **Approval Workflow Settings** screen appears.

3. Click the **Delete** button in the **Approval Workflow Group Settings** zone.

A message appears confirming whether you want to delete the approval workflow group settings.

4. Click **OK**.

The approval workflow setting is deleted.

## Regenerating Input and Display UI Maps

### Procedure

To regenerate UI Maps for an approval workflow group setting:

1. Search for the approval workflow group in the **Approval Workflow Setting** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the approval workflow group for which you want to regenerate UI maps.  
The **Approval Workflow Settings** screen appears.

3. Click the **Regenerate UI Maps** button in the **Approval Workflow Group Settings** zone.

A message appears confirming whether you want to replace the existing Input and Display UI Maps.

4. Click **OK**.

The Input and Display UI Maps are generated.

## Approval Workflow Reason (Used for Searching)

The **Approval Workflow Reason** screen allows you to search for an approval workflow reason using various search criteria. It also allows you to define an approval workflow reason. It contains the following zone:

- [Approval Workflow Reason List](#) on page 591

### Approval Workflow Reason List

The **Approval Workflow Reason List** zone lists the approval workflow reasons that are already defined in the system. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to search a particular approval workflow reason.	No
Description	Used to search approval workflow reasons with a particular description.	No

- **Search Results** - On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Approval Workflow Reason	Displays the approval workflow reason.
Description	Displays the description of the approval workflow reason.
Reason Category	Indicates the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>

## Filtering the Approval Workflow Reasons

### Procedure

To filter the approval workflow reasons:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. Enter the required search criteria in the **Approval Workflow Reason List** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
The search results are filtered based on the specified criteria.

**Defining an Approval Workflow Reason****Prerequisites**

To define an approval workflow reason, you should have:

- Values defined for the **APPTXN\_REASON\_TYPE** lookup field

**Procedure**

To define an approval workflow reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Approval Workflow Reason**.  
The **Approval Workflow Reason** screen appears.
3. Click the **Add** button in the **Page Title** area of the **Approval Workflow Reason** screen.

The **Approval Workflow Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Approval Workflow Reason	Used to specify the approval workflow reason.	Yes
Description	Used to specify the description for the approval workflow reason.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Reason Category	Used to indicate the category to which the approval workflow reason belongs. The valid values are: <ul style="list-style-type: none"> <li>• Approve</li> <li>• Cancel</li> <li>• Reject</li> </ul>	Yes

4. Enter the required details in the **Approval Workflow Reason** screen.
5. Click **Save**.

The approval workflow reason is defined.

## Rules Engine

---

### Topics:

- [Rule Type \(Used for Searching\)](#)
- [Rule Type \(Used for Viewing\)](#)
- [Rule](#)
- [View Rule](#)
- [Rule Check](#)

A rules engine executes one or more business rules in a runtime production environment. It allows you to define, execute, and maintain these business rules separately from the application code. You can then use these business rules in any program to facilitate operational decisions at runtime. For example, you might use business rules in the Collection module to decide the collection strategy or in the Banking module to derive charges codes or price items for the transaction.

A rules engine allows you to classify these rules using the rule type. It also allows you to define the relationship between two or more rules and set the priority for each rule. When a calling program invokes these rules using the rule type, all effective rules with the specified rule type are executed, starting with the rule having highest priority. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

Each rule contains one or more criteria. Depending on whether the criteria is satisfied, the system either executes the next criteria or indicates whether the rule is true or false. The rules engine allows you to define what should happen when the rule is true or false. In both the cases, you can enforce the system to either:

- Execute any dependent rule
- Execute a rule with the same rule type having lower priority
- Return the output parameters and their values to the calling program

You can define a criteria for a rule only using the input parameters that are defined for the rule type. Also, when the rule is true, you can only return the output parameters that are defined for the rule type to the calling programs. Therefore, in case you want to use any field in the rule, you have to associate it with the rule type as an input or output parameter.

A rules engine also allows you to execute preprocessing and postprocessing algorithms. A preprocessing algorithm is triggered before executing any criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated. A postprocessing algorithm is triggered after executing all criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.

Oracle Revenue Management and Billing provides you with the Rule Check utility. It allows you to validate whether rules defined with a specific rule type get executed as expected. On validating, it indicates the sequence in which the rules were executed, the total execution time, and displays the output parameters of the rule that was successfully executed.

Normally, in the Transaction Feed Management feature, the transaction legs are created using the output parameters of the rule where the criteria returns **Rule**

**Is True** and the rule true action is set to **Success**. Oracle Revenue Management and Billing also enables you to accumulate the output parameters of all rules where the criteria returns **Rule Is True** irrespective of whether the rule true action is set to **Next Dependent**, **Next Rule by Priority**, or **Success**. This accumulation process continues until a rule is executed where the criteria returns **Rule Is True** and the rule true action is set to **Success**. Once the output parameters are accumulated, the transactions legs are created using these accumulated output parameters. You can enable the rule output accumulation feature for the Transaction Feed Management module by setting the **Rule Output Accumulation** option type in the **C1\_FM** feature configuration to **true**.

There might be situations when duplicate transaction legs are created through the rule output accumulation process. The system enables you to indicate whether duplicate transaction legs must be created during the transaction aggregation cycle through the rule output accumulation process. If the **Remove Duplicates from Accumulated Rule Output** option type in **C1\_FM** feature configuration is set to **true**, the system does not create duplicate transaction legs during the transaction aggregation cycle.

**Note:** The transaction legs with the same account ID, price item, variance parameter or price item parameters, and processing date are considered as duplicate transaction legs.

## Rule Type (Used for Searching)

A rule type can be used for defining rule based auto pay instructions or business rules for mapping transactions with the price items. If you want to use the rule type for defining rule based auto pay instructions, you must set the **Rule Type Usage** field to **Auto Pay**. However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave the **Rule Type Usage** field blank.

It is the rule type which helps the system to determine:

- Fields that can be used while defining criteria for business rules or rule based auto pay instructions
- Entities whose characteristics can be used while defining criteria for rule based auto pay instructions
- Algorithms which must be used for deriving information from the financial transaction
- Maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type

The **Rule Type** screen allows you to search for a rule type using various search criteria. It also allows you to define, edit, delete, and copy a rule type. It contains the following zone:

- [Search Rule Type](#) on page 599

## Search Rule Type

The **Search Rule Type** zone allows you to search for a rule type using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to search a particular rule type.	No
Description	Used to search rule types with a particular description.	No
Rule Type Usage	Used to indicate whether you want to search rule types which are used for defining rule based auto pay instructions or which are used for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> <li>• Auto Pay</li> </ul>	No
	<b>Note:</b> If you want to search rule types which are used for defining business rules for mapping transactions with the price items, you must leave this field blank.	

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Rule Type	Displays the rule type.
Description	Displays the description of the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.

Column Name	Column Description
View	On clicking the <b>View</b> (  ) icon, the <b>Rule Type</b> screen appears where you can view the details of the rule type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Rule Type</b> screen appears where you can edit the details of the rule type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the rule type.  <b>Note:</b> You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Rule Type</b> screen appears where you can create a new rule type using an existing rule type.

## Searching for a Rule Type

### Prerequisites

To search for a rule type, you should have:

- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

### Procedure

To search for a rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Rule Type** sub-menu.  
The **Rule Type** screen appears.
4. Enter the search criteria in the **Search Rule Type** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rule types that meet the search criteria appears in the **Search Results** section.

### Related Topics

## Defining a Rule Type

### Prerequisites

To define a rule type, you should have:

- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

### Procedure

To define a rule type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Rule Type** sub-menu.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> <li>Auto Pay</li> </ul>	No
	<b>Note:</b> If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to <b>Auto Pay</b> . However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.	
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.	No
	<b>Note:</b> This field appears only when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.  The maximum rule count cannot be less than or equal to zero.	

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Rule Type** screen.

- Enter the required details in the **Main** section.
- Define input and output parameters for the rule type.
- Associate one or more characteristic entities with the rule type, if required.

**Note:** You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The rule type is defined.

## Defining Input and Output Parameters for a Rule Type

### Prerequisites

To define the input and output parameters for a rule type, you should have:

- Fields defined in the application
- Field search zone defined in the application

### Procedure

To define the input and output parameters for a rule type:

1. Ensure that the **Input and Output Parameters** section is expanded when you are defining, editing, or copying a rule type.

The **Input and Output Parameters** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number for the input or output parameter.	Yes
Field	Used to indicate the field that you want to use as the input or output parameter.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Field Search</b> window appears.	Yes
Rule Input/Output	Used to indicate whether you want to use the field as input and/or output parameter while defining a business rule. The valid values are: <ul style="list-style-type: none"> <li>• Input</li> <li>• Input and Output</li> <li>• Output</li> </ul> <b>Note:</b> By default, the <b>Input</b> option is selected.  This field appears only when you do not select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Search Zone	Used to indicate the search zone that you want to use for searching the field value while defining criteria for rule based auto pay instructions.	No
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Zone Search</b> window appears.</p> <p>This field appears only when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.</p>	

2. Enter the required details in the **Input and Output Parameters** section.

**Note:**

At present, the following fields are only supported while defining a rule type where the **Rule Type Usage** field is set to **Auto Pay**:

- Policy Number
- Plan Number
- Price Item

If you want to use any other field while defining criteria for rule based auto pay instructions, the implementation team will have to develop the custom logic to implement the requirement.

3. If you want to define more than one input or output parameter for the rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove an input or output parameter from the rule type, click the **Delete**  icon corresponding to the parameter.

## Associating a Characteristic Entity with a Rule Type

### Prerequisites

To associate a characteristic entity with a rule type, you should have:

- Values defined for the **RULE\_CRITERIA\_ENTITY\_FLG** lookup field

### Procedure

To associate a characteristic entity with a rule type:

1. Ensure that the **Rule Criteria Characteristic Entities** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Characteristic Entities** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Entity	<p>Used to indicate the entity whose characteristics you want to use while defining criteria for rule based auto pay instructions. The valid values are:</p> <ul style="list-style-type: none"> <li>• Adjustment</li> <li>• Billable Charge</li> <li>• Policy</li> <li>• Policy Plan</li> <li>• Price Item</li> </ul> <p><b>Note:</b> At present, the characteristics of the above listed entities are only supported while defining criteria for rule based auto pay instructions. If you want to use characteristics of any other entity, the implementation team will have to develop the custom logic to implement the requirement.</p>	Yes

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- Enter the required details in the **Rule Criteria Characteristic Entities** section.
- If you want to associate more than one characteristic entity with the rule type, click the **Add (+)** icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic entity from the rule type, click the **Delete (🗑)** icon corresponding to the characteristic entity.

## Associating an Algorithm with a Rule Type

### Prerequisites

To associate an algorithm with a rule type, you should have:

- Rule criteria derivation algorithm defined using the **C1-APRCRIDER** algorithm type

### Procedure

To associate an algorithm with a rule type:

- Ensure that the **Rule Criteria Derivation Algorithms** section is expanded when you are defining, editing, or copying a rule type.

The **Rule Criteria Derivation Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm should be executed.	Yes
Algorithm	<p>Used to attach an algorithm which you want to use for deriving the following from the financial transaction:</p> <ul style="list-style-type: none"> <li>• Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters</li> <li>• Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities</li> </ul> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

2. Enter the required details in the **Rule Criteria Derivation Algorithms** section.
3. If you want to associate more than one algorithm with the rule type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove an algorithm from the rule type, click the **Delete**  icon corresponding to the algorithm.

## Editing a Rule Type

### Procedure

To edit a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the rule type whose details you want to edit.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Displays the rule type.	Not applicable
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.	Not applicable
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	<div>Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.</div> <div> <b>Note:</b>            This field appears only when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b>.            The maximum rule count cannot be less than or equal to zero.            You cannot reduce the maximum rule count when one or more auto pay instructions contain the specified number of rules.         </div>	No

**Tip:** Alternatively, you can edit the details of a rule type by clicking the **Edit** link in the **Rule Type** zone.

3. Modify the required details in the **Main** section.
4. Define, edit, or remove input or output parameters from the rule type, if required.

**Note:** You cannot edit or remove an input or output parameter from the rule type when it is used for defining criteria in a business rule or rule based auto pay instruction.

5. Associate or remove one or more characteristic entities from the rule type, if required.

**Note:**

You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

You cannot remove a characteristic entity from the rule type when it is used for defining criteria in a rule based auto pay instruction.

- Associate or remove one or more rule criteria derivation algorithm from the rule type, if required.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The changes made to the rule type are saved.

**Deleting a Rule Type****Procedure**

To delete a rule type:

- Search for the rule type in the **Rule Type** screen.
- In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule type that you want to delete.

A message appears confirming whether you want to delete the rule type.

**Note:** You can delete a rule type only when the rule based auto pay instructions or business rules are not yet defined using the rule type.

- Click **OK**.

The rule type is deleted.

## Copying a Rule Type

Instead of creating a rule type from scratch, you can create a new rule type using an existing rule type. This is possible through copying a rule type. On copying a rule type, the details including the input and output parameters, rule criteria characteristic entities, and rule criteria derivation algorithms are copied to the new rule type. You can then edit the details, if required.

### Prerequisites

To copy a rule type, you should have:

- Rule type (whose copy you want to create) defined in the application
- Values defined for the **C1\_RULE\_USAGE\_FLG** lookup field

### Procedure

To copy a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the rule type whose copy you want to create.

The **Rule Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the rule type.
- **Input and Output Parameters** - Used to define input and output parameters for the rule type.
- **Rule Criteria Characteristic Entities** - Used to indicate the entities whose characteristics you can use while defining rule based auto pay instructions using the rule type.

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

- **Rule Criteria Derivation Algorithms** - Used to attach algorithms which you want to use for deriving the following from the financial transaction:
  - Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters
  - Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities

**Note:** This section appears only when you select the **Auto Pay** option from the **Rule Type Usage** list.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type Usage	Used to indicate whether you want to use the rule type for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items. The valid value is: <ul style="list-style-type: none"> <li>Auto Pay</li> </ul>	No
	<b>Note:</b> If you want to use the rule type for defining rule based auto pay instructions, you must set the rule type usage to <b>Auto Pay</b> . However, if you want to use the rule type for defining business rules for mapping transactions with the price items, you must leave this field blank.	
Description	Used to specify the description for the rule type.	Yes
Maximum Rule Count	Used to indicate the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.	No
	<b>Note:</b> This field appears only when you select the <b>Auto Pay</b> option from the <b>Rule Type Usage</b> list.  The maximum rule count cannot be less than or equal to zero.	

- Enter the required details in the **Main** section.
- Define, edit, or remove input or output parameters from the rule type, if required.
- Associate or remove one or more characteristic entities from the rule type, if required.

**Note:** You must specify at least one input or output parameter when you want to use the rule type for defining business rules for mapping transactions with the price items. However, you must specify at least one input or output parameter or associate at least one characteristic entity when you want to use the rule type for defining rule based auto pay instructions.

- Associate the rule criteria derivation algorithm when you want to use the rule type for defining rule based auto pay instructions.

**Note:** You must associate the rule criteria derivation algorithm with the rule type when the **Rule Type Usage** field is set to **Auto Pay**.

- Click **Save**.

The new rule type is defined.

## Viewing the Rule Type Details

### Procedure

To view the details of a rule type:

1. Search for the rule type in the **Rule Type** screen.
2. In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the rule type whose details you want to view.

The **Rule Type** screen appears.

3. View the details of the rule type in the **Rule Type** zone.

### Related Topics

How to search for a rule type	<a href="#">Searching for a Rule Type</a> on page 600
<b>Rule Type</b> screen	<a href="#">Rule Type (Used for Viewing)</a> on page 611
<b>Rule Type</b> zone	<a href="#">Rule Type</a>

## Rule Type (Used for Viewing)

The **Rule Type** screen allows you to view the details of the rule type. It contains the following zone:

- [Rule Type](#) on page 611

## Rule Type

The **Rule Type** zone displays the details of the rule type. It contains the following sections:

- **Main** - Displays basic information about the rule type. It contains the following fields:

Field Name	Field Description
Rule Type	Displays the rule type.
Rule Type Usage	Indicates whether the rule type is used for defining rule based auto pay instructions or for defining business rules for mapping transactions with the price items.  <b>Note:</b> This field appears only when the rule type usage is specified while defining the rule type.
Description	Displays the description of the rule type.
Maximum Rule Count	Indicates the maximum number of rules that can be defined when the rule based auto pay instruction is created using the rule type.  <b>Note:</b> This field appears only when the <b>Rule Type Usage</b> field is set to <b>Auto Pay</b> .

- **Input and Output Parameters** - Lists the input and output parameters defined for the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Displays the sequence number of the input or output parameter.
Field	Indicates the field which is used as the input or output parameter.
Type	Indicates whether the field is used as input and/or output parameter while defining a business rule.
Search Zone	Indicates the search zone that is used for searching the field value while defining criteria for rule based auto pay instructions.
	<b>Note:</b> It has a link. On clicking the link, the <b>Zone</b> screen appears where you can view the details of the zone.

- **Rule Criteria Characteristic Entities** - This section contains the following column:

Column Name	Column Description
Characteristic Entity	Indicates the entity whose characteristics can be used while defining criteria for rule based auto pay instructions. The valid values are: <ul style="list-style-type: none"> <li>• Adjustment</li> <li>• Billable Charge</li> <li>• Policy</li> <li>• Policy Plan</li> <li>• Price Item</li> </ul>

- **Rule Criteria Derivation Algorithms** - Lists the algorithms attached to the rule type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithm should be executed.
Algorithm	Indicates the algorithm attached to the rule type which derives the following from the financial transaction: <ul style="list-style-type: none"> <li>• Values of all those fields (such as, policy number, plan number, or price item) which are selected in the rule type as the input and output parameters</li> <li>• Characteristics of all those entities which are selected in the rule type as the rule criteria characteristic entities</li> </ul>

**Note:** The **Rule Criteria Characteristic Entities** and **Rule Criteria Derivation Algorithms** sections appear only when the **Rule Type Usage** field is set to **Auto Pay**.

You can edit the details of the rule type by clicking the **Edit** link in the upper-right corner of this zone.

### **Related Topics**

For more information on...	See...
How to edit a rule type	<a href="#">Editing a Rule Type</a> on page 606

## Rule

The **Rule** screen allows you to define, edit, delete, and copy a rule. This screen consists of the following zones:

- [Search](#) on page 613

## Search

The **Search** zone allows you to search for a rule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	No
Rule Type	Used to specify the type of rule.	No
Description	Used to specify the description for the rule.	No
Rule Priority	Used to specify the priority of the rule.	No
Effective Start Date	Used to specify the date from when the rule is effective.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Priority	Displays the priority of the rule.
Code	Displays the rule code.
Description	Displays the description of the rule.
Type	Displays the type of rule.
Start Date	Displays the date from when the rule is effective.
End Date	Displays the date till when the rule is effective.
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
View	On clicking the <b>View</b> (  ) icon, the <b>View Rule</b> screen appears where you can view the details of the rule.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Edit Rule</b> screen appears where you can edit the details of the rule.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the rule.
<b>Note:</b> You can delete a rule only if it is not used.	

Column Name	Column Description
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Copy Rule</b> screen appears where you can create a rule using an existing rule.

You can create a new rule by clicking the **Add** link in the upper right corner of this zone.

## Searching for a Rule

### Procedure

To search for a rule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.  
A sub-menu appears.
3. Click the **Search** option from the **Rule** sub-menu.  
The **Rule** screen appears.
4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of rules that meet the search criteria appears in the **Search Results** section.

## Defining a Rule

### Prerequisites

To define a rule, you should have:

- Rule types defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

### **Procedure**

To define a rule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Rule**.  
A sub-menu appears.
3. Click the **Add** option from the **Rule** sub-menu.

The **Add Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule.	Yes
	<b>Note:</b> You cannot define two rules with the same rule type and priority in the same duration.	
Effective Start Date	Used to specify the date from when the rule is effective.	Yes
Effective End Date	Used to specify the date till when the rule is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is true.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.	Yes (Conditional) <b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule True Action</b> list.
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is false.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.	Yes (Conditional)  <b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter.  <b>Note:</b> For more information about the output parameters that you can specify while defining a rule, see <a href="#">Transaction Validation and Initial Price Item Determination</a> .  The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.	Yes
Parameter Value	Used to specify the value for the parameter.  <b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes
Parameter Name	Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name.  <b>Note:</b> If a business label is defined for a user defined field (that you have selected), the business label appears in the <b>Parameter Name</b> field.  The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.	Yes
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Value	Used to specify the parameter value.	Yes
	<p><b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p>	
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is Insufficient	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Add Rule** screen by clicking the **Add** link in the upper right corner of the **Search** zone in the **Rule** screen.

4. Enter the required details.

**Note:**

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The rule is defined.

<b>Rule</b> screen	<a href="#">Rule</a> on page 613
<b>Search</b> zone	<a href="#">Search</a> on page 613

**Editing a Rule****Prerequisites**

To edit a rule, you should have:

- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them.

**Procedure**

To edit a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Edit** (✎) icon in the **Edit** column corresponding to the rule whose details you want to edit.

The **Edit Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Code	Used to specify the rule code.	Yes
Rule Type	Used to specify the type of rule.	Yes
Description	Used to specify the description for the rule.	Yes
Rule Priority	Used to specify the priority of the rule.	Yes
	<b>Note:</b> You cannot define two rules with the same rule type and priority in the same duration.	
Effective Start Date	Used to specify the date from when the rule is effective.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Effective End Date	Used to specify the date till when the rule is effective.	No
	<b>Note:</b> The effective end date cannot be earlier than the effective start date.	
Preprocessing Algorithm	Used to specify the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Postprocessing Algorithm	Used to specify the algorithm that will be triggered when the rule is true. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.	No
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Rule True Action	Used to indicate what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> . The valid values are: <ul style="list-style-type: none"> <li>• <b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is true.</li> <li>• <b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is true.</li> <li>• <b>Success</b> — Used to indicate that no more rules should be executed when the rule is true. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.	Yes (Conditional)
		<b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule True Action</b> list.

Field Name	Field Description	Mandatory (Yes or No)
Rule False Action	Used to indicate what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> . The valid values are: <ul style="list-style-type: none"> <li><b>Next Dependent Rule</b> — Used to indicate that the dependent rule should be executed when the rule is false.</li> <li><b>Next Rule by Priority</b> — Used to indicate that the rule of the same rule type having lower priority should be executed when the rule is false.</li> <li><b>Success</b> — Used to indicate that no more rules should be executed when the rule is false. The output parameters and their values are returned to the calling programs.</li> </ul>	Yes
Dependent Rule	Used to specify the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.	Yes (Conditional)
		<b>Note:</b> This field is required when you select <b>Next Dependent Rule</b> from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Used to specify the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to specify the parameter.  <b>Note:</b> For more information about the output parameters that you can specify while defining a rule, see <a href="#">Transaction Validation and Initial Price Item Determination</a> .  The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.	Yes
Parameter Value	Used to specify the value for the parameter.  <b>Note:</b> You can specify any special characters except ampersand (&), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.	Yes

- **Criteria** — Used to define criteria for the rule. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence Number	Used to indicate the order in which the criteria should be executed in the rule.	Yes

Column Name	Column Description	Mandatory (Yes or No)
Parameter Name	Used to indicate whether you want to specify a field or an algorithm as an input parameter. It also allows you to specify the field or algorithm name.	Yes
	<p><b>Note:</b></p> <p>If a business label is defined for a user defined field (that you have selected), the business label appears in the <b>Parameter Name</b> field.</p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p>	
Operator	Used to specify the relational operator to define the relation between the parameter name and value.	Yes
Parameter Value	Used to specify the parameter value.	Yes
	<p><b>Note:</b> You can specify any special characters except ampersand (&amp;), comma (,), underscore (_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.</p> <p>The <b>Search</b> () icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Rule Type Field</b> window appears.</p>	
Is True	<p>Used to indicate what should happen when the condition is true (satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes
Is False	<p>Used to indicate what should happen when the condition is false (not satisfied). The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

Column Name	Column Description	Mandatory (Yes or No)
Is Insufficient	<p>Used to indicate what should happen when the data is insufficient. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Used to indicate that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Used to indicate that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Used to indicate that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Edit Rule** screen by clicking the **Edit** link in the **View Rule** screen.

3. Modify the required details.

**Note:** You can search for a parameter, dependent rule and an algorithm by clicking the **Search** (🔍) icon corresponding to the respective field.

4. Add or remove output parameters or criteria from the rule, if required.

**Note:** If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** (+) icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** (🗑️) icon corresponding to it.

5. Click **Save**.

The changes made to the rule are saved.

## Deleting a Rule

### Procedure

To delete a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the rule that you want to delete.

A message appears confirming whether you want to delete the rule.

**Note:** You can delete a rule only if it is not used.

3. Click **OK**.

The rule is deleted.

**Copying a Rule**

Instead of creating a rule from scratch, you can also create a new rule using an existing rule. You can do this by copying a rule. When you copy a rule, the output parameters and criteria defined for the original rule are copied to the new rule. You can then add or remove parameters or criteria from the new rule.

**Prerequisites**

To copy a rule, you should have:

- Rule (whose copy you want to create) defined in the application
- Preprocessing and postprocessing algorithms, dependent rules, and parameters defined in the application in case you want to use any of them

**Procedure**

To copy a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **Copy** () icon corresponding to the rule whose copy you want to create.

The **Copy Rule** screen appears.

3. Enter the new rule code and the description for the new rule.
4. Modify the required details.
5. Add or remove output parameters or criteria from the new rule.

**Note:**

You can specify any special characters except ampersand (&), comma (,), underscore (\_), equal to (=), tilde (~), and semi-colon(;) in the parameter value.

You can search for a parameter, dependent rule and an algorithm by clicking the **Search** () icon corresponding to the respective field.

If you want to associate more than one output parameter with the rule or define more than one criteria for the rule, click the **Add** () icon and then specify the details. However, if you want to remove an output parameter or a criteria from the rule, click the **Delete** () icon corresponding to it.

For more information about the output parameters that you can specify while defining a rule, see [Transaction Validation and Initial Price Item Determination](#).

6. Click **Save**.

The new rule is defined.

## View Rule

The **View Rule** screen allows you to view the details of a rule. This screen consists of the following zones:

- [Rule Information](#) on page 625

### Rule Information

The **Rule Information** zone displays information about the rule. This zone contains the following fields:

Field Name	Field Description
Rule Code	Displays the rule code.
Rule Type	Indicates the type of rule.
Description	Displays the description of the rule.
Rule Priority	Indicates the priority of the rule.  <b>Note:</b> You can use the <b>Move Up</b> (↑) and <b>Move Down</b> (↓) icons corresponding to this field to view the details of a rule (having the same rule type) with a higher or lower priority. Note that this functionality is available only when you access the <b>View Rule</b> screen through the <b>Rule</b> screen.
Effective Start Date	Displays the date from when the rule is effective.
Effective End Date	Displays the date till when the rule is effective.
Preprocessing Algorithm	Indicates the algorithm that will be triggered before executing the criteria in the rule. It pre-processes the input parameters and then returns processed values against which the criteria is validated.
Postprocessing Algorithm	Indicates the algorithm that will be triggered after executing the criteria in the rule. It post-processes the output parameters and returns the updated values to the calling programs or dependent rules.
Rule True Action	Indicates what should happen when all conditions in the rule are satisfied and returns <b>Rule is True</b> .
Dependent Rule	Indicates the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule True Action</b> list.
Rule False Action	Indicates what should happen when any of the criteria in the rule is not satisfied and returns <b>Rule is False</b> .
Dependent Rule	Indicates the next dependent rule that must be executed when <b>Next Dependent Rule</b> is selected from the <b>Rule False Action</b> list.

In addition, it contains the following two sections:

- **Rule Output Parameters** — Lists the output parameters that must be returned to the calling programs or dependent rules when all conditions in the rule are satisfied. This section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the name of the parameter. In addition, this column has a context menu which helps in navigating to the <b>Field</b> screen.
Parameter Value	Displays the value of the parameter.

- **Criteria** — Lists the criteria defined in the rule. This section contains the following columns:

Column Name	Column Description
Sequence Number	Indicates the order in which the criteria should be executed in the rule.
Parameter Type	Indicates whether the input parameter is a field or an algorithm.
Parameter Name	Displays the field or algorithm name which is used as an input parameter.
Operator	Indicates the relational operator used to define the relation between the parameter name and value.
Parameter Value	Displays the parameter value.
Is True	Indicates what should happen when the condition is true (satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>
Is False	Indicates what should happen when the condition is false (not satisfied). The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>
Is Insufficient	Indicates what should happen when the data is insufficient. The valid values are: <ul style="list-style-type: none"> <li>• <b>Check next condition</b> — Indicates that the condition with consecutive sequence number should be executed.</li> <li>• <b>Rule is false</b> — Indicates that the action specified in the <b>Rule False Action</b> field should be executed.</li> <li>• <b>Rule is true</b> — Indicates that the action specified in the <b>Rule True Action</b> field should be executed.</li> </ul>

The **Edit** link appears in the upper-right corner of the **Rule Information** zone. On clicking the **Edit** link, the **Edit Rule** screen appears where you can edit the details of the rule.

#### **Related Topics**

How to view the details of a rule	<a href="#">Viewing the Rule Details</a> on page 627

## Viewing the Rule Details

### Procedure

To view the details of a rule:

1. Search for the rule in the **Rule** screen.
2. In the **Search Results** section, click the **View** () icon in the **View** column corresponding to the rule whose details you want to view.

The **View Rule** screen appears.

3. View the details of the rule in the **Rule Information** zone.

### Related Topics

How to search for a rule	<a href="#">Searching for a Rule Type</a> on page 600

## Rule Check

The **Rule Check** screen allows you to validate whether rules of a particular rule type are executed as expected. On validating, it indicates the sequence in which all effective rules were executed, the total execution time, and the output parameters of the rule that was successfully executed. This screen consists of the following sections:

- Rule Type Input Parameters
- Rule Output Parameters
- Rule Execution

### Rule Type Input Parameters

The **Rule Type Input Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No
	<b>Note:</b> If you do not specify the effective date, the system executes all rules which are effective on the system date.	
Parameter Name	Indicates the input parameter.	Not applicable
	<b>Note:</b> The input parameters listed change depending on the rule type that you have selected.	
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

### **Rule Output Parameters**

The **Rule Output Parameters** section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> <li>• <b>Success</b> — Indicates that one of the rule was successfully executed and returned the output parameters.</li> <li>• <b>Fail</b> — Indicates that none of the rules with the specified rule type were successfully executed.</li> <li>• <b>Error</b> — Indicates that an error occurred while executing a rule.</li> </ul>
Execution Time	Displays the total time taken to execute all effective rules with the specified rule type.
Error	Displays the error message indicating the error that occurred while executing a rule.
	<b>Note:</b> This field appears only when the status is <b>Error</b> .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

### **Rule Execution**

The **Rule Execution** section indicates the sequence in which all effective rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Indicates the rule that was executed.
Rule Type	Indicates the type of rule.
Rule Priority	Indicates the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

## **Rule Check**

The **Rule Check** zone allows you to validate whether rules of a particular rule type are executed as expected. It indicates the sequence in which all effective rules were executed along with the total execution time. This zone consists of the following sections:

- **Rule Type Input Parameters** — This sections contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
Effective Date	Used when you want to execute the rules which are effective on a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Parameter Name	Indicates the input parameter.	Not applicable
	<b>Note:</b> The input parameters listed change depending on the rule type that you have selected.	
Parameter Value	Used to specify the value for the input parameter.	Yes

In addition, this section contains the **Check Rule** button. On clicking the button, you can validate the sequence in which the rules with the specified rule type are executed.

- **Rule Output Parameters** — This section contains the following fields:

Field Name	Field Description
Status	Displays the status of the rule execution. The valid values are: <ul style="list-style-type: none"> <li>• <b>Success</b> — Indicates that one of the rule was successfully executed and returned the output parameters.</li> <li>• <b>Fail</b> — Indicates that none of the rules with the specified rule type were successfully executed.</li> <li>• <b>Error</b> — Indicates that an error occurred while executing a rule.</li> </ul>
Execution Time	Displays the total time taken to execute a set of rules.
Error	Displays the error message indicating the error that occurred while executing a rule.
	<b>Note:</b> This field appears only when the status is <b>Error</b> .

In addition, this section contains the following columns:

Column Name	Column Description
Parameter Name	Displays the output parameter of the rule that was successfully executed.
Parameter Value	Displays the value of the output parameter.

- **Rule Execution** — Indicates the sequence in which the rules with the specified rule type were executed. This section contains the following columns:

Column Name	Column Description
Rule Code	Displays the rule code.
Rule Type	Displays the type of rule.
Rule Priority	Displays the priority of the rule.
Rule Status Flag	Indicates whether the rule was true or false.
Rule Next Action	Indicates the action that took place when the rule was true or false.

## Alternate Sequential Bill Numbers

---

### Topics:

- [Sequential Bill Number Generation Algorithms](#)
- [Enabling the Alternate Sequential Bill Numbers Feature](#)

Each bill is uniquely identified by its bill ID. Bill ID is a random, system-generated number. In some locales, bills have an additional identifier known as alternate sequential bill number. Alternate sequential bill numbers are system-generated, sequential numbers. For example, the first bill generated by the system is assigned a sequential bill number of 1, the next bill is assigned a value of 2, and so on.

If you want to generate alternate sequential bill numbers, you must select the **Use Sequential Bill Numbers** check box in the **Billing** tab of the **Installation Options** screen. However, you can only generate alternate sequential bill numbers for bills that are complete and for which the alternate sequential bill numbers are not yet generated.

You can configure the application to generate alternate sequential bill numbers which are either unique throughout the system or within the division. The **Assign Sequential Bill Numbers (ASSGNSBN)** batch allows you to generate alternate sequential bill numbers for completed bills. You need to configure this batch such that it is executed at regular intervals. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

## Sequential Bill Number Generation Algorithms

The following table lists the sequential bill number generation algorithm types shipped with the product:

If you want to generate...	Then create algorithm using the following algorithm type....
Alternate sequential bill numbers unique throughout the system	<a href="#">C1_ALTBLLSYS</a> on page 632
Alternate sequential bill numbers unique within the division	<a href="#">C1_ALTBLDV</a> on page 635
Alternate sequential bill numbers unique throughout the system and in the required format using a set of parameters	<a href="#">C1_ALTBLSYS1</a> on page 632 <b>Note:</b> The alternate sequential bill number will be unique throughout the system only when you configure the algorithm parameters appropriately.
Alternate sequential bill numbers unique within the division and in the required format using a set of parameters	<a href="#">C1_ALTBLDIV1</a> on page 635 <b>Note:</b> The alternate sequential bill number will be unique within the division only when you configure the algorithm parameters appropriately.

### C1\_ALTBLLSYS

The **C1\_ALTBLLSYS** algorithm type is used to generate alternate bill ID for a completed bill. The alternate bill ID is sequenced using the sequence number, and is unique throughout the system. This algorithm type does not have any parameters.

### C1\_ALTBLSYS1

The **C1\_ALTBLSYS1** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
'X'	Here, X stands for a separator. For example, ','. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.

Parameter	Description
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Account_Identifier_Type&gt;</b> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.</li> </ul>
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddyy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> <li>• “yyyy” or “yy” for year</li> <li>• “MM” or “M” for month</li> <li>• “dd” or “d” for day</li> </ul> <p><b>Note:</b> The date format should either start or end with the year.</p>
SEQ_NBR	The sequence number generated by the database. It should not be more than 12 characters.
FIXED_SUFFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	or Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.

You can specify the above mentioned parameters against any of the following parameters available in the **C1\_ALTBLSYS1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7

- Field8
- Field9
- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS\_DIVISION
- Field2 — ‘|’
- Field3 — SEQ\_NBR
- Field4 — ‘-’
- Field5 — FIXED\_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS\_DIVISION|SEQ\_NBR-01 format. For example, DIV1|12345678-01. If you want to generate unique alternate bill ID, we recommend you to use the **SEQ\_NBR** parameter while creating an algorithm using the **C1\_ALTBLSYS1** algorithm type.

Note that if you do not specify the value for any parameters while creating an algorithm using the **C1\_ALTBLSYS1** algorithm type, the system will generate the alternate bill ID using the sequence number.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1\_ALTBLSYS1** is already shipped with the product. You can create custom algorithms using the **C1\_ALTBLSYS1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

## C1\_ALTBLDV

The **C1\_ALTBLDV** algorithm type is used to generate alternate bill ID for a completed bill which is unique within the division. For example, two bills (such as B1 and B2) belonging to the same division (such as D1) cannot have the same alternate bill ID. However, two bills (such as B1 and B2) belonging to different divisions, (such as D1 and D2) can have the same alternate bill ID.

This algorithm type contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Initial Bill Sequence Number	Used to specify the initial alternate bill ID that you want to use while sequencing.  <b>Note:</b> If you do not specify any value for this parameter, by default, the system will generate the initial alternate bill ID for sequencing.	No

## C1\_ALTBLDIV1

The **C1\_ALTBLDIV1** algorithm type is used to generate alternate bill ID for a completed bill. You can generate alternate bill ID in the required format using the following parameters:

Parameter	Description
‘X’	Here, X stands for a separator. For example, ‘.’. The separator must be enclosed within single quotes. It will act as a delimiter in the alternate sequential bill number.
CIS_DIVISION	The division to which the account belongs. It is retrieved from the bill. It should not be more than five characters.

Parameter	Description
BILL_CYC_CD	The bill cycle of the account for which the bill is generated. It is retrieved from the bill. It should not be more than four characters.
ACCT_IDENTIFIER=<Account_Identifier_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Account_Identifier_Type&gt;</b> - Used to indicate the account identifier type whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the account identifier. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the account identifier. If you do not specify the count, by default, it is set to five.</li> </ul>
CHARACC=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the account's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>

Parameter	Description
CHARPER=<Characteristic_Type>,<CharStartPosition>,<CharCount>	<p>Here, you need to specify the following information separated by a comma:</p> <ul style="list-style-type: none"> <li>• <b>&lt;Characteristic_Type&gt;</b> - Used to indicate the person's characteristic whose value must be used to generate the alternate sequential bill number.</li> <li>• <b>&lt;CharStartPosition&gt;</b> - Used to indicate the starting position from where you want to extract the characters from the characteristic value. If you do not specify the starting position, by default, it is set to zero (0) (i.e. from the first character).</li> <li>• <b>&lt;CharCount&gt;</b> - Used to indicate the number of characters that you want to extract from the characteristic value. If you do not specify the count, by default, it is set to five.</li> </ul> <p><b>Note:</b> If the same characteristic is defined multiple times for an account, the characteristic value which is effective on the batch business date is considered.</p>
BILL_DT=MMddyy	<p>The date when the bill is created for the account. It should not be more than six characters. You can use the following patterns in the date format:</p> <ul style="list-style-type: none"> <li>• “yyyy” or “yy” for year</li> <li>• “MM” or “M” for month</li> <li>• “dd” or “d” for day</li> </ul> <p><b>Note:</b> The date format should either start or end with the year.</p>
FIXED_SUFFIX=XX	Here, X stands for a letter or a group of letters that you want to add at the end of the alternate sequential bill number.
LEFT_PADDING_CHAR=ZERO LEFT_PADDING_CHAR=SPACE	<p>or</p> <p>Indicates whether you want to add zero or space when the number of characters derived from the account's or person's characteristic value is less than the character count. The padding is added to the left.</p>

You can specify the above mentioned parameters against any of the following parameters available in the **C1\_ALTBLDIV1** algorithm type:

- Field1
- Field2
- Field3
- Field4
- Field5
- Field6
- Field7
- Field8
- Field9

- Field10

None of these algorithm type parameters are mandatory. The system will concatenate the parameter values and then generate alternate bill ID in the required format. For example, if you created the algorithm using the following parameters:

- Field1 — CIS\_DIVISION
- Field2 — ‘|’
- Field3 — BILL\_DT=MMddyy
- Field4 — ‘-’
- Field5 — FIXED\_SUFFIX=01

In this case, the system will generate the alternate bill ID in the CIS\_DIVISION|MMddyy-01 format. For example, DIV1|110501-01. Note that if you do not specify the value for any of these algorithm type parameters, the system will not generate the alternate bill ID for a completed bill.

While specifying the value for these parameters, you need to ensure that the length of the alternate bill ID should not exceed 30 characters. An algorithm named **C1\_ALTBLDIV1** is already shipped with the product. You can create custom algorithms using the **C1\_ALTBLDIV1** algorithm type to design the required alternate bill ID format using the above mentioned parameters.

## Enabling the Alternate Sequential Bill Numbers Feature

### Prerequisites

To enable the alternate sequential bill numbers feature, you should have:

- An algorithm created using the **C1\_ALTBLLSYS**, **C1\_ALTBLSYS1**, **C1\_ALTBLDV**, or **C1\_ALTBLDIV1** algorithm type depending on which you want to use for alternate sequential bill number generation

### Procedure

To enable the alternate sequential bill numbers feature:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Installation Options**.  
The **Installation Options** screen appears.
3. Click the **Billing** tab.  
The **Billing** tab appears.
4. Select the **Use Sequential Bill Numbers** check box to indicate that you want to generate alternate sequential bill numbers for completed bills.  
The **Sequential Invoice** field is enabled.
5. Select the **System-wide** or **Division-specific** option from the **Sequential Invoice** list depending on whether you want alternate sequential bill numbers to be unique throughout the system or within the division.
6. Do either of the following:

If you want to generate...	Then
Alternate sequential bill numbers unique throughout the system	<ol style="list-style-type: none"><li>1. Attach an algorithm created using the <b>C1_ALTBLLSYS</b> algorithm type to the <b>Sequence Generation Algorithm</b> field to indicate how the alternate bill numbers which are unique throughout the system should be sequenced.</li></ol>

If you want to generate...	Then
	<div data-bbox="721 207 1399 310"> <p><b>Note:</b> The <b>Sequence Generation Algorithm</b> field is enabled only when you select the <b>System-wide</b> option from the <b>Sequential Invoice</b> list.</p> </div> <ol style="list-style-type: none"> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the installation options are saved.</li> </ol>
Alternate sequential bill numbers unique within the division	<ol style="list-style-type: none"> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the installation options are saved.</li> <li>Search for the division, whose accounts' bills should have alternate sequential bill numbers unique within the division, in the <b>Division</b> screen. The <b>Division</b> screen appears.</li> <li>Click the <b>Algorithms</b> tab. The <b>Algorithms</b> tab appears.</li> <li>Select the <b>Sequential Bill Number Generation</b> option from the <b>Division Algorithm Entity</b> list.</li> <li>Enter the sequence number to indicate the order in which the algorithms with the same entity should be executed.</li> <li>Attach an algorithm created using the <b>C1_ALTBOLDV</b> algorithm type to the respective field to indicate how alternate bill numbers which are unique within the division should be sequenced.</li> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the division are saved.</li> </ol>
Alternate sequential bill numbers unique throughout the system and in the required format using a set of parameters	<ol style="list-style-type: none"> <li>Attach an algorithm created using the <b>C1_ALTBLSYS1</b> algorithm type to the <b>Sequence Generation Algorithm</b> field to indicate how the alternate bill numbers which are unique throughout the system should be generated.</li> </ol> <div data-bbox="721 1493 1399 1780"> <p><b>Note:</b></p> <p>The <b>Sequence Generation Algorithm</b> field is enabled only when you select the <b>System-wide</b> option from the <b>Sequential Invoice</b> list.</p> <p>The alternate sequential bill number will be unique throughout the system only when you configure the algorithm parameters appropriately.</p> </div> <ol style="list-style-type: none"> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the installation options are saved.</li> </ol>

If you want to generate...	Then
Alternate sequential bill numbers unique within the division and in the required format using a set of parameters	<ol style="list-style-type: none"> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the installation options are saved.</li> <li>Search for the division, whose accounts' bills should have alternate sequential bill numbers unique within the division, in the <b>Division</b> screen. The <b>Division</b> screen appears.</li> <li>Click the <b>Algorithms</b> tab. The <b>Algorithms</b> tab appears.</li> <li>Select the <b>Sequential Bill Number Generation</b> option from the <b>Division Algorithm Entity</b> list.</li> <li>Enter the sequence number to indicate the order in which the algorithms with the same entity should be executed.</li> <li>Attach an algorithm created using the <b>C1_ALTBLDIV1</b> algorithm type to the respective field to indicate how the alternate bill numbers which are unique within the division should be generated.</li> </ol> <div> <b>Note:</b> The alternate sequential bill number will be unique within the division only when you configure the algorithm parameters appropriately. </div> <ol style="list-style-type: none"> <li>Click the <b>Save</b> button in the <b>Page Title</b> area. The changes made to the division are saved.</li> </ol>

- [Disaggregation Request](#)
- [Accumulation Data](#)

Oracle Revenue Management and Billing provides you with a facility to upload banking and Administrative Services Only (ASO) transactions received from various product processors or applications for billing. You can use the **File Upload Interface** feature to upload transaction data files in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

For more information on how to upload the data using the **File Upload Interface** feature, refer to the respective feature documentation. Once the transaction data is uploaded in the system, you need to:

- Validate Header Details
- Validate Transaction Details and Determine Initial Product
- Verify Price Item Pricing
- Rate Transactions Before Billing (if required)
- Create and Update Billable Charge with the SQI values
- Clean-up Unwanted Data

The system provides the flexibility to rate the transactions either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price item can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. During the transaction feed management process, each transaction goes through various statuses until it is billed to the person. For more information about the transaction statuses, see [Transaction Status Transition](#) on page 696.

The transaction feed management process includes the following sub-processes:

- [Transaction Aggregation](#)
- [Transaction Disaggregation](#) on page 678
- [Transaction Cancellation](#) on page 689
- [Transaction Rollback](#) on page 693

## Prerequisites

---

To setup the transaction feed management process, you need to do the following:

- Define the required transaction sources in the system
- Define the required transaction record types for each transaction source
- Associate the required SQIs with a price item —division combination
- Define the required transaction aggregation rule for each SQI
- Define the aggregation schedules in the system
- Define the required rules in the system to determine initial price item for transactions
- Attach a validation algorithm to each account identifier type (to ensure that the account identifier type and account identifier combination is unique in or across divisions)
- Attach the **Price Assignment Search** algorithm to each division
- Define the **TFM - Processing Date** characteristic for each division
- Create an algorithm of the **C1\_CURALGTFM** algorithm type and attach it to the **TFM - Currency Conversion** algorithm spot of the division for which you want to enable the currency conversion feature
- Define the required exchange rates for currency conversion
- Define values for the PAGE\_NUMBER lookup field
- Create an algorithm of the **C1\_RTCL\_POPC** algorithm type and attach it to the **TFM - Rate Post-Processing** algorithm spot of the required division

Besides this, you need to setup the following feature configurations:

- *Rule Engine (C1\_RLENG)*
- *Dummy Header (C1-TXNDMYID)*
- *Multi Parameter Based Pricing (C1\_PPARM\_FLG)*
- *Feed Management (C1\_FM)*

## Transaction Rating Before Billing

---

The system provides the flexibility to rate the transaction legs either prior to billing or during billing. Based on the business requirements, you can configure the system such that transactions mapped to some price items can be rated at a frequency which is different than the account's billing frequency. For example, daily, weekly, etc. This will help to reduce the performance issues which are caused when large volume of transactions are rated at the time of billing.

The system offers the following ways in which a transaction leg can be priced, rated and billed:

1. **Rate the Transaction Leg During Billing** – In this approach, you can use either of the following ways:
  - a. Determine effective pricing for a transaction leg, create a billable charge for the transaction leg, and then determine the rate during billing.
  - b. Determine effective pricing for a transaction leg, create a billable charge for aggregated transaction legs, and then determine the rate during billing.
2. **Rate the Transaction Leg Prior to Billing** – In this approach, you can use either of the following ways:
  - a. Determine effective pricing and rate for a transaction leg, and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation

parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.

- b. Determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics). The pass through billable charge is then billed during billing.
- c. Determine effective pricing and rate for a transaction leg and create a pass through billable charge for the transaction leg which is billed during billing.

**3. Ignore the Transaction Leg for Billing** – In this approach, you can use either of the following ways:

- a. Determine effective pricing for a transaction leg, but the billable charge is not created for the transaction leg.
- b. Determine effective pricing and rate for a transaction leg, but the billable charge is not created for the transaction leg.

**Note:**

Once the rate is determined for transaction legs, a set of rate component characteristics and their values are grouped. For example, if a price assignment has the following rate components, the system creates two groups — Group A and Group B:

- RC1, Char1=Y, Char2=Y
- RC2, Char1=N, Char2=Y
- RC3, Char1=Y, Char2=Y

Group A contains Char1=Y, Char2=Y and Group B contains Char1=N, Char2=Y. These groups are used for accumulating pre-calculated charges. A unique aggregation parameter group ID is generated for each group. If a group with a set of rate component characteristics and their values already exists in the system, a new group is not created. Instead, the existing group is used for accumulating pre-calculated charges. The aggregation parameter group ID is created only when you attach an algorithm of the **C1\_RTCL\_POPC** algorithm type on the **TFM - Rate Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

While defining a price item pricing, you need to specify the rating criteria which indicates how and when you want to rate the transaction legs. The valid values are:

- Do Not Rate Transactions (DNRT)
- Aggregate transactions and then rate aggregated SQs (AGTR)
- Rate individual transactions and aggregate calc lines across transactions (RITA)
- Rate Transactions (RITX)

Along with the **Rating Criteria** field, the **Ignore Transaction** and **Aggregate Transaction** fields help the system to determine how and when the corresponding transaction leg must be rated. The following table indicates how to configure the system in order to use the above mentioned ways:

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3a	Yes	Not applicable	Do Not Rate Transactions (DNRT)	Not applicable because ignored transactions are not considered for billing.

Transaction Rating Approach and Way	Ignore Transaction (Yes or No)	Aggregate Transaction (Yes or No)	Rating Criteria	Batch in which the Rate is Determined
3b	Yes	Not applicable	Rate Transactions (RITX)	Update Status (C1-TXNEX)
1b	No	Yes	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2b	No	Yes	Aggregate transactions and then rate aggregated SQs (AGTR)	Service Quantity Calculation (C1-TXNSQ)
2a	No	Yes	Rate individual transactions and aggregate calc lines across transactions (RITA)	Update Status (C1-TXNEX)
1a	No	No	Do Not Rate Transactions (DNRT)	Not applicable because the rate is determined during billing.
2c	No	No	Rate Transactions (RITX)	Service Quantity Calculation (C1-TXNSQ)

Let us understand the following transaction rating ways with the help of an example:

- 2a
- 2b
- 2c

The following table lists the account, price item, and price item parameters combination to which transaction T1 and T2 are mapped:

Transaction	Transaction Volume	Transaction Date	Account	Price Item	Price Item Parameter Group ID	Price Assignment ID	Aggregation Schedule
T1	300	01/01/2015	A1	P1	PG1	PA1	Monthly
T1	300	01/01/2015	A2	P1	PG1	PA2	Monthly
T2	200	15/01/2015	A1	P1	PG1	PA1	Monthly
T2	200	15/01/2015	A3	P1	PG1	PA3	Monthly

The following table lists the rate components available on the PA1, PA2, and PA3 price assignments:

Transaction	Price Assignment ID	Rate Component	Currency Code	Distribution Code	Description on Bill	Aggregation Parameter Group ID (Rate Component's Characteristics)
T1	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T1	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T1	PA2	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T1	PA2	RC4-0.2*Transaction Volume	USD	BK-AR4	ABC	Char2=Y
T2	PA1	RC1-0.1*Transaction Volume	USD	BK-AR1	XYZ	Char1=Y
T2	PA1	RC2-0.2*Transaction Volume	USD	BK-AR2	ABC	Char2=Y
T2	PA3	RC3-0.3*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y
T2	PA3	RC4-0.2*Transaction Volume	USD	BK-AR3	XYZ	Char1=Y

Now, if you use **RITA (2a)** approach, the system will rate a transaction leg and accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1– A1P1PG1– PA1, T2– A1P1PG1– PA1	RC1	$300 * 0.1 = 30$ , $200 * 0.1 = 20$	$30 + 20 = 50$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1– A1P1PG1– PA1, T2– A1P1PG1– PA1	RC2	$300 \times 0.2 = 60$ , $200 \times 0.2 = 40$	$60 + 40 = 100$	The pass through charge is calculated for each transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC3	$300 \times 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1– A2P1PG1– PA2	RC4	$300 \times 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2– A3P1PG1– PA3	RC3, RC4	$200 \times 0.3 = 60$ , $200 \times 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

Now, if you use **RITX (2c)** approach, the system will rate a transaction leg and calculate charges for each transaction leg in a separate pass through billable charge, as shown in the following table:

Billable Charge	Start Date	End Date	Transaction Leg	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC1	$300 * 0.1 = 30$	30	The pass through charge is calculated for the transaction leg.
BC1	01/01/2015	31/01/2015	T1-A1P1PG1-PA1	RC2	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC3	$300 * 0.3 = 90$	90	The pass through charge is calculated for the transaction leg.
BC2	01/01/2015	31/01/2015	T1-A2P1PG1-PA2	RC4	$300 * 0.2 = 60$	60	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC1	$200 * 0.1 = 20$	20	The pass through charge is calculated for the transaction leg.
BC3	01/01/2015	31/01/2015	T2-A1P1PG1-PA1	RC2	$200 * 0.2 = 40$	40	The pass through charge is calculated for the transaction leg.
BC4	01/01/2015	31/01/2015	T2-A3P1PG1-PA3	RC3, RC4	$200 * 0.3 = 60$ , $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1, BC2, and BC3 will have two pass through lines, whereas the BC4 will have one pass through line.

Now, if you use **AGTR (2b)** approach, the system will determine effective pricing for a transaction leg, aggregate the transaction legs, determine rate for aggregated service quantities, and then accumulate pre-calculated charges in a pass through billable charge based on the distribution code, currency code, description on bill, aggregation parameter group ID (which is created based on the rate component characteristics), as shown in the following table:

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC1	500*0.1 = 50	50	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A1P1PG1- PA1- Monthly	300+200 = 500	BC1	01/01/2015	31/01/2015	RC2	500*0.2 = 100	100	The transaction volume of T1 and T2 legs having the same price item and price item parameters combination and whose transaction date falls between the aggregation schedule is first aggregated and then pass through charge is calculated for aggregated service quantities.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC3	300*0.3 = 90	90	The pass through charge is calculated for the transaction leg.
A2P1PG1- PA2- Monthly	300	BC2	01/01/2015	31/01/2015	RC4	300*0.2 = 60	60	The pass through charge is calculated for the transaction leg.

Account- Price Item- Price Item Parameter Group- Price Assignment- Aggregation Schedule	Total Transaction Volume	Billable Charge	Start Date	End Date	Rate Component	Calculation Details	Pass Through Charge (\$)	Comments
A3P1PG1- PA3- Monthly	200	BC3	01/01/2015	31/01/2015	RC3, RC4	$200 * 0.3 = 60,$ $200 * 0.2 = 40$	$60 + 40 = 100$	The pass through charges are calculated for the transaction leg and then accumulated because the distribution code, currency code, description on bill, and characteristics of the rate components are same.

In the above example, the BC1 and BC2 will have two pass through lines, whereas the BC3 will have one pass through line.

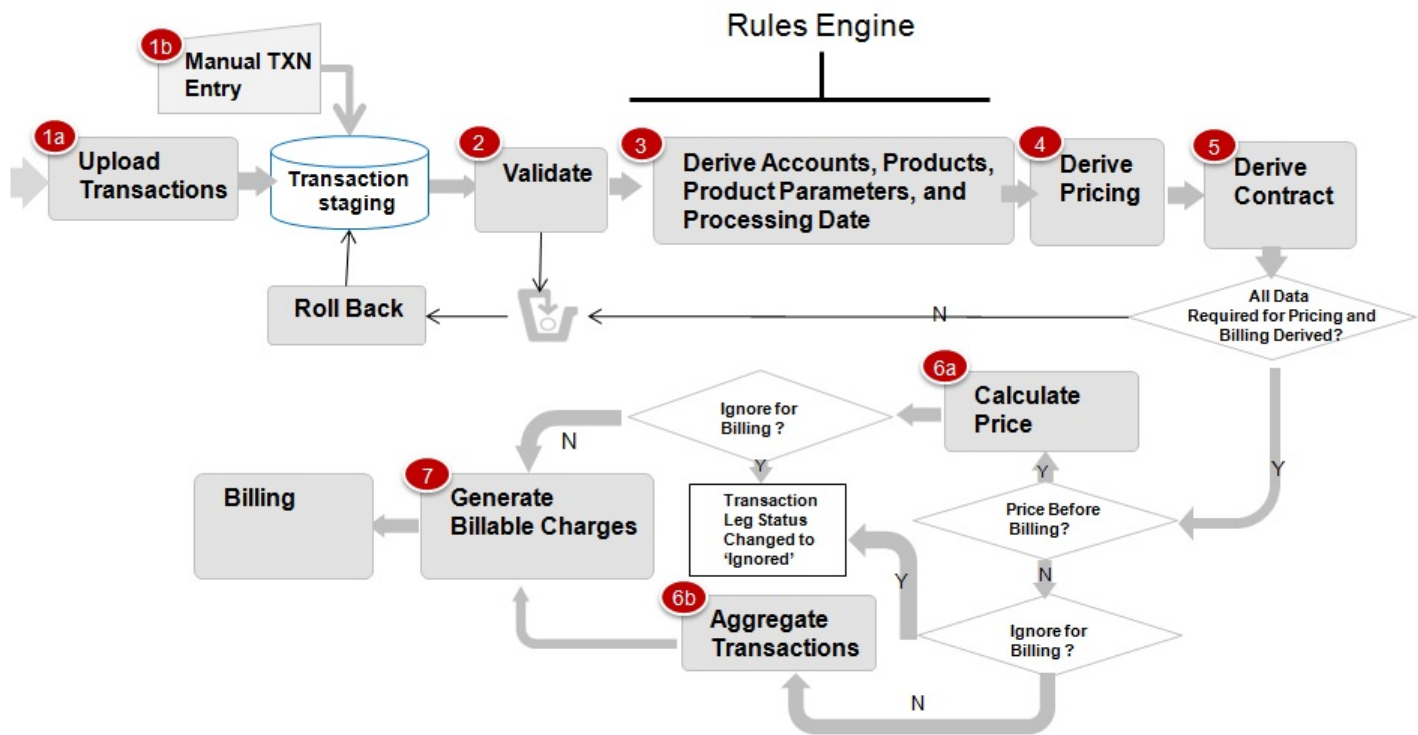

## Transaction Aggregation

---

The transaction aggregation process includes the following sub-processes:

- [Header Validation](#) on page 651
- [Transaction Validation and Initial Price Item Determination](#) on page 653
- [Price Item Pricing Verification](#) on page 664
- [Aggregation](#) on page 669
- [Clean Up](#) on page 673

The following figure graphically explains the transaction aggregation process:

## Header Validation

Once the file is uploaded in the system, you can execute the **Header Validation (C1-TXNHV)** batch to validate the file or header level information. It checks whether:

- Transaction Header ID and Transaction Source is available in the header.
- At least one transaction record is available in the file.
- The number of transaction records in the file matches the total transaction records in the header.
- The sum of transaction amount matches the total transaction amount in the header.
- The sum of transaction volume matches the total transaction volume in the header.
- File with the same header date and transaction header ID is not available in the system.
- External reference number is specified in each transaction record of the file.

If the file or header information is validated successfully, the status of the file or feed is changed to **Validated (VALI)** and the status of all transactions in the feed remains as **Uploaded (UPLD)**. However, if the header validation fails, the status of the feed and all transactions in the feed is changed to **Invalid (INVL)**.

The **Header Validation (C1-TXNHV)** batch is a multi-threaded batch. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to validate a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to validate the transaction feeds which are received from a particular transaction source.	No
Checksum Validation Required	<p>Used to indicate whether the following should be validated:</p> <ul style="list-style-type: none"> <li>The number of transaction records in the file matches the total transaction records in the header.</li> <li>The sum of transaction amount matches the total transaction amount in the header.</li> <li>The sum of transaction volume matches the total transaction volume in the header.</li> </ul> <p>The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
Duplicate Check Required	<p>Used to indicate whether the following should be validated:</p> <ul style="list-style-type: none"> <li>File with the same header date and external header ID is not available in the system.</li> </ul> <p>The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> The duplicate check is done only against the transaction feeds which are in the <b>Validated (VALID)</b> status and not against the transaction feeds which are in the <b>Uploaded (UPLD)</b> status.</p>	No
Allow Positive Transaction Volume in Header	<p>Used to indicate whether you want to allow positive value in the total transaction volume which is specified in the header record. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> By default, the parameter value is set to <b>Y</b>.</p>	Yes
Allow Negative Transaction Volume in Header	<p>Used to indicate whether you want to allow negative value in the total transaction volume which is specified in the header record. The valid values are:</p> <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul> <p><b>Note:</b> By default, the parameter value is set to <b>N</b>.</p>	Yes

Parameter Name	Description	Mandatory (Yes or No)
Allow Zero Transaction Volume in Header	Used to indicate whether you want to allow zero value in the total transaction volume which is specified in the header record. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	Yes
	<b>Note:</b> By default, the parameter value is set to N.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## Transaction Validation and Initial Price Item Determination

This process includes the following two sub-processes:

- **Transaction Validation** - In this sub-process, the transaction records are validated. The transaction level validations are done to check the integrity of the data. During the transaction validation, the system checks whether:
  - Transaction source is defined in the system.
  - Transaction record type is defined for the transaction source in the system.
  - Division and currencies are defined in the system.
  - The account with the specified account identifier, account identifier type and division exists in the system.

**Note:** This validation is done only when the **Transaction Detail Account Validation** option type of the **Feed Management (C1\_FM)** feature configuration is set to **Y**. If you set the **Transaction Detail Account Validation** option type of the **Feed Management (C1\_FM)** feature configuration to **N**, the system overrides the transaction's account identifier type, account identifier, and division with the first derived account's account identifier type, account identifier, and division, respectively.

- User ID (if available in the transaction information) is defined in the system.
- The value other than 'Y' or 'N' is not specified in the **Manual Switch** column.
- The value other than '+' or '-' is not specified in the **Credit/Debit Indicator** column.
- Transaction Amount is specified when Transaction Currency is specified, and vice versa.
- Additional Amount 1 is specified when Amount 1 Currency Code is specified, and vice versa.
- Additional Amount 2 is specified when Amount 2 Currency Code is specified, and vice versa.
- Additional Amount 3 is specified when Amount 3 Currency Code is specified, and vice versa.
- Additional Amount 4 is specified when Amount 4 Currency Code is specified, and vice versa.
- Additional Amount 5 is specified when Amount 5 Currency Code is specified, and vice versa.
- Additional Amount 6 is specified when Amount 6 Currency Code is specified, and vice versa.
- Additional Amount 7 is specified when Amount 7 Currency Code is specified, and vice versa.
- Additional Amount 8 is specified when Amount 8 Currency Code is specified, and vice versa.
- Additional Amount 9 is specified when Amount 9 Currency Code is specified, and vice versa.
- Additional Amount 10 is specified when Amount 10 Currency Code is specified, and vice versa.

If the transaction information is invalid or incorrect (for example, division is invalid), the status of the transaction is changed to **Error (EROR)**. But, if the transaction information is not available, the status of the transaction is changed to **Invalid (INVL)**.

- **Pricing Rule Type or Rule Type Determination** - If the transaction validation is successful, the system checks whether a primary pricing rule type is specified in the respective transaction record type. If a primary pricing rule type is specified in the transaction record type, the system calls the primary pricing rule type and invokes the algorithms which are attached to the following system events of the primary pricing rule type in the specified sequence:
  1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
  2. **Bill Group Derivation** - For more information, refer to the [Bill Group Derivation](#) on page 2287 section.
  3. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a primary pricing rule types with different category:

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Claim	C1_ACCPRIDRV	<a href="#">Account and Price Item Derivation (for the Claim Pricing Rule Type Category)</a> on page 2290
Retention Type Enrollment Based	C1_ACCPRIDRV	<a href="#">Account and Price Item Derivation (for the Retention Type Enrollment Based Pricing Rule Type Category)</a> on page 2320
Ancillary	C1_ACCPRIDRV	<a href="#">Account and Price Item Derivation (for the Ancillary Pricing Rule Type Category)</a> on page 2330

Once the primary pricing rule type is called, the system calls the eligible related pricing rule types (if any) defined in the primary pricing rule type. Note that the related pricing rule types are called one by one in the specified sequence. The system invokes the algorithms which are attached to the following system events of the related pricing rule type in the specified sequence:

1. **Transaction Validation** - At present, the product has not shipped an algorithm type for the **Transaction Validation** system event. If required, you can create a custom algorithm type which validates the transaction before deriving the transaction legs.
2. **Account and Price Item Derivation** - Depending on the category to which the pricing rule type belongs, you need to attach different algorithm to the **Account and Price Item Derivation** system event. The following table lists the algorithms that you can attach to a related pricing rule type with different category:

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Specific Stop-Loss	C1_ACCPRISL	<a href="#">Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)</a> on page 2295
Aggregate Stop-Loss	C1_ACCPRISL	<a href="#">Account and Price Item Derivation (for the Specific Stop-Loss and Aggregate Stop-Loss Pricing Rule Type Categories)</a> on page 2295

Pricing Rule Type Category	Algorithm	For more information on how the system derives the transaction legs, refer to...
Retention Type Claim Based	C1_ACCPRIDRV	<a href="#">Account and Price Item Derivation (for the Retention Type Claim Based Pricing Rule Type Category)</a> on page 2308

However, if a primary pricing rule type is not specified in the transaction record type, the system determines the account which will bear the charges for the transaction and the price item and variance parameter or price item parameters to which the transaction will be mapped using rules which are invoked through the rule type. Depending on the transaction record type, a rule type is invoked for each transaction. The effective rules with the specified rule type are executed, starting with the rule having highest priority, until a rule is satisfied. For example, a rule with the priority 10 will be executed before a rule with the priority 20.

**Note:** The system determines rules which are effective based on the **TFM - Processing Date** characteristic defined for the division to which the transaction belongs. The system uses the **TFM - Processing Date** characteristic which is effective on the transaction date. If the **TFM - Processing Date** characteristic type is set to BATCH\_DT, the system executes rules which are effective on the batch business date. However, if the **TFM - Processing Date** characteristic type is set to TXN\_DT, the system executes rules which are effective on the transaction date. Note that the transaction date must be earlier than or equal to the batch business date. And, if the **TFM - Processing Date** characteristic is not defined for the division to which a transaction belongs, the system, by default, executes rules which are effective on the transaction date.

Each rule contains one or more conditions or criteria. For example, Rule A states that if the transaction record type is R001 and the division is New York, then set the following output parameters:

- ACCT\_NO1\_Val - Account 1
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X

Here, Transaction Record Type = R001 and Division = New York are two conditions. If these two conditions in the rule are satisfied, then set three output parameters - ACCT\_NO1\_Val, DIVISION1\_VAL and PRODUCT1\_1\_Val. Now, when this rule is executed and the transaction satisfies this criteria, the transaction is mapped to Price Item X and Account 1 which belongs to D1 bears the charges for the transaction. In case, the rule has four output parameters (ACCT\_NO1\_Val set to Account 1, DIVISION1\_VAL set to D1, PRODUCT1\_1\_Val set to Price Item X, and PRODUCT1\_2\_Val set to Price Item Y), the transaction will be mapped to both the price items (i.e. Price Item X and Price Item Y) and Account 1 which belongs to D1 bears the charges for the transaction. A transaction can be mapped to one or more price items or to one or more price item and TOU (variance parameter) combinations. If the multi parameter based pricing feature is enabled, you can map a transaction to one or more price item and price item parameters combinations. Let us understand this with the help of an example.

Rule B states that if the transaction is performed in US and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT\_NO1\_Val - Account A
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X
- PCD1\_1\_1\_VAL - Country
- PVL1\_1\_1\_VAL - US
- PCD1\_1\_2\_VAL - Currency
- PVL1\_1\_2\_VAL - USD
- PRODUCT1\_2\_Val - Price Item Y
- PCD1\_2\_1\_VAL - Country

- PVL1\_2\_1\_VAL - US
- PCD1\_2\_2\_VAL - Currency
- PVL1\_2\_2\_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, Account A which belongs to D1 bears the charges for the transaction which is mapped to the following price item and price item parameters combinations:

- Price Item X, Country - US, Currency - USD
- Price Item Y, Country - US, Currency - USD

More than one account can bear the charges for a transaction and each account can belong to a different division. You can map a transaction to one or more price items, to one or more price item and TOU (variance parameter) combinations, or to one or more price item and price item parameters combinations. The system allows you to map price items for each account. For example, Rule C states that if the transaction is performed in UK and the transaction amount exceeds 1000 USD, then set the following output parameters:

- ACCT\_NO1\_Val - Account A
- DIVISION1\_VAL - D1
- PRODUCT1\_1\_Val - Price Item X
- PCD1\_1\_1\_VAL - Country
- PVL1\_1\_1\_VAL - UK
- PCD1\_1\_2\_VAL - Currency
- PVL1\_1\_2\_VAL - USD
- PRODUCT1\_2\_Val - Price Item Y
- PCD1\_2\_1\_VAL - Country
- PVL1\_2\_1\_VAL - UK
- PCD1\_2\_2\_VAL - Currency
- PVL1\_2\_2\_VAL - USD
- ACCT\_NO2\_Val - Account B
- DIVISION2\_VAL - D2
- PRODUCT2\_1\_Val - Price Item A
- PCD2\_1\_1\_VAL - Country
- PVL2\_1\_1\_VAL - US
- PCD2\_1\_2\_VAL - Currency
- PVL2\_1\_2\_VAL - USD

Now, when this rule is executed and the transaction satisfies the criteria, the transaction is mapped to the following price item and price item parameters combinations:

Charges Borne By	Division to which the account belongs...	Price Item	Country	Currency
Account A	D1	Price Item X	UK	USD
Account A	D1	Price Item Y	UK	USD
Account B	D2	Price Item A	US	USD

You can limit the maximum accounts that can bear the charges for a transaction, maximum price item that can be mapped to a transaction, and maximum parameters that can be used with each price item to determine price item pricing. For more information, see [Defining a Transaction Record Type](#) on page 794. You can also define rules to ignore transactions based on the transaction attributes. If the rule returns the **IGNORE\_SW** equal to **Y**, the status of the transaction is changed to **Ignored (IGNR)** and no further processing takes place on the transaction.

You can use the following output parameters while defining rules in the system:

Output Parameter	Naming Convention	Example	Description
Account Identifier	ACCT_NOX_Val	ACCT_NO1_Val, ACCT_NO2_Val, ACCT_NO3_Val, ....	Used to indicate the account which must bear the charges for the transaction.
Account Identifier Column Name	ACCT_NOX_Col	ACCT_NO1_Col, ACCT_NO2_Col, ACCT_NO3_Col, ...	Used to indicate the column from where the account identifier corresponding to the transaction (in the transaction details) must be picked.
Account Identifier Type	ACCT_NO_TYPEX_Val	ACCT_NO_TYPE1_Val, ACCT_NO_TYPE2_Val, ACCT_NO_TYPE3_Val, ...	Used to indicate the type of account identifier.
Account Identifier Type Column Name	ACCT_NO_TYPEX_Col	ACCT_NO_TYPE1_Col, ACCT_NO_TYPE2_Col, ACCT_NO_TYPE3_Col, ...	Used to indicate the column from where the account identifier type corresponding to the transaction (in the transaction details) must be picked.
Account Division	DIVISIONX_VAL	DIVISION1_VAL	Used to indicate the division to which the account belongs.
Account Division Column Name	DIVISIONX_COL	DIVISION1_COL	Used to indicate the column from where the division corresponding to the transaction (in the transaction details) must be picked.
Price Item Name	PRODUCTX_Y_Val	PRODUCT1_1_Val, PRODUCT2_1_Val, PRODUCT2_2_Val, ....	Used to indicate the price item to which the transaction must be mapped.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		
Price Item Column Name	PRODUCTX_Y_Col	PRODUCT1_1_Col,, PRODUCT2_1_Col, PRODUCT2_2_Col, ...	Used to indicate the column from where the price item corresponding to the transaction (in the transaction details) must be picked.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		

Output Parameter	Naming Convention	Example	Description
TOU	TOUX_Y_Val	TOU1_1_Val, TOU2_1_Val, TOU2_2_Val, ...	Used to indicate the variance parameter which you want to use along with the price item for price determination.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		<b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
TOU Column Name	TOUX_Y_Col	TOU1_1_Col, TOU2_1_Col, TOU2_2_Col, ...	Used to indicate the column from where the variance parameter corresponding to the transaction (in the transaction details) must be picked.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		<b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Parameter Code	PCDX_Y_Z_VAL	PCD1_1_1_VAL, PCD1_2_1_VAL, PCD2_1_1_VAL, ...	Used to indicate the parameter which you want to use along with the price item for price determination.
	<b>Note:</b> At present, the system does not support the Parameter Code Column output parameter.		<b>Note:</b>  This output parameter appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  You must not specify any special character except underscore (_) in the parameter code. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .
	<b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.		

Output Parameter	Naming Convention	Example	Description
Parameter Value	PVLX_Y_Z_VAL	PVL1_1_1_VAL, PVL1_2_1_VAL, PVL2_1_1_VAL, ...	Used to specify the value for the parameter.
	<b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.		<b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  The parameter value must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .
Parameter Value Column Name	PVLX_Y_Z_COL	PVL1_1_1_COL, PVL1_2_1_COL, PVL2_1_1_COL, ...	Used to indicate the column from where the parameter value corresponding to the transaction (in the transaction details) must be picked.
	<b>Note:</b> Here, X represents the account, Y represents the price item, and Z represents the parameter.		<b>Note:</b> This output parameter appears only when the <b>Multi Price Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .  The column from where the parameter value is picked must not contain the equal to (=) and tilde (~) symbols. Otherwise, the status of the transaction is changed to <b>Error (EROR)</b> .

Output Parameter	Naming Convention	Example	Description
Processing Date Type	PRCS_DTX_Y_TYP	PRCS_DT1_1_TYP, PRCS_DT1_2_TYP, PRCS_DT2_1_TYP, ...	<p>Used to indicate the date type using which you want to determine the effective price item parameters, pricing, and exchange rate. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>TXN_DT</b> - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the transaction date.</li> <li>• <b>Batch_DT</b> - Used when you want to determine price item parameters, pricing, and exchange rate which are effective on the batch business date.</li> </ul>
	<p><b>Note:</b> Here, X represents the account and Y represents the price item.</p>		
			<p><b>Note:</b> Based on the <b>TFM - Processing Date</b> characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_TYP output parameter. In other words, the PRCS_DTX_Y_TYP output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.</p>

Output Parameter	Naming Convention	Example	Description
Processing Date	PRCS_DTX_Y_VAL	PRCS_DT1_1_VAL, PRCS_DT1_2_VAL, PRCS_DT2_1_VAL, ...	Used to specify a custom date on which you want to determine the effective price item parameters, pricing, and exchange rate.
	<b>Note:</b> Here, X represents the account and Y represents the price item.		<b>Note:</b> The custom date must be a date other than the transaction or batch business date.  Based on the <b>TFM - Processing Date</b> characteristic defined for the division to which a transaction belongs, the system determines the rules, price item parameters, pricing, and exchange rate which are effective on the transaction or batch business date. The price item parameters, pricing, and exchange rate which are effective is determined for all account and price item combinations to which the transaction is mapped. If you want to use a custom processing date for a particular account and price item combination to which the transaction is mapped, you need to set the PRCS_DTX_Y_VAL output parameter. In other words, the PRCS_DTX_Y_VAL output parameter helps you to override the processing date for a particular account and price item combination. However, the overridden processing date is used only while determining effective price item parameters, pricing, and exchange rate.
Ignore Transaction	IGNORE_SW		Used to ignore transactions based on the transaction attributes. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>

Once the transaction satisfies any rule (invoked through the rule type), one transaction leg is created for each account, division, price item, and variance parameter or price item parameters combination. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1, T2, and T3 are mapped:

Transaction	Charges Borne By	Division to which the account belongs...	Price Item	Variance Parameter	Price Item Parameters
T1	A1	D1	P1	-	Country - US, Currency - USD
T1	A1	D1	P2	-	Country - Germany, Currency - USD
T1	A2	D2	P3	USD	-
T2	A1	D1	P1	-	Country - US, Currency - USD
T2	A2	D2	P2	USD	-
T3	A1	D1	P3	-	Country - Germany, Currency - USD

In such case, the system will create three legs for T1, two legs for T2, and one leg for T3. Each transaction leg will have its own status. The status of the transaction legs and transaction is changed to **Initial Price Item Determined (INPD)**. However, if a transaction does not satisfy any rule, the status of the transaction is changed to **Error (EROR)**.

**Note:**

During this sub-process, the system validates the following:

- Whether the price item parameters specified in the output parameters are effective for the price item on the processing date.
- Whether the mandatory price item parameter which is effective on the processing date is specified in the output parameter.
- Whether the parameter value is specified for all mandatory price item parameters which are effective on the processing date.

If any of the above validation fails, the status of the transaction is changed to **Error (EROR)** and no transaction legs are created.

Once the transaction legs are created, the price item parameters of each transaction leg are grouped. For example, when a transaction is mapped to the following price item and price item parameters combinations, the system creates three groups - Group A, Group B, and Group C:

- Account A, Price Item X, Country - US, Currency - USD
- Account A, Price Item Y, Country - Germany, Currency - USD
- Account B, Price Item X, Country - England, Currency - USD

Group A contains Country - US, Currency - USD; Group B contains Country - Germany, Currency - USD; and Group C contains Country - England, Currency - USD.

A set of price item parameters are grouped only when the multi parameter based pricing feature is enabled. A group is used to determine the price item pricing. A unique group ID is generated for each group. If a group with a set of price item parameters already exists in the system, a new group is not created. Instead, the existing group is used for determining the price item pricing.

You can execute this process through a multi-threaded batch named **Validate Transaction and Derive Price Item (C1-TXNIP)**. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Batch Business Date	Used to identify the transactions for which you want to perform validation and determine price item. The system considers the transactions whose transaction date is earlier than or equal to the batch business date.	No
	<p><b>Note:</b></p> <p>If you do not specify any date, the batch business date is set to the current date.</p> <p>The batch business date used while executing the <b>C1-TXNIP</b> batch is stamped in the database. It is then used while executing all other consequent batches in the transaction aggregation cycle.</p>	
Transaction Header ID	Used when you want to validate and derive price item for the transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to validate and derive price item for the transactions which are received from a particular transaction source.	No
Division	Used when you want to validate and derive price item for the transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	No
	<b>Note:</b> By default, the parameter value is set to <b>N</b> .	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

A log is generated if the **Logging Rules for Transaction Feed** option type in the **Rule Engine (C1\_RLENG)** feature configuration is set to **True**. This log indicates the rules that were executed for each transaction and whether each rule passed or failed during the execution.

**Note:**

You can aggregate transaction legs in a billable charge using aggregation parameters other than account ID, price item code, variance or price item parameters, aggregation start date, and aggregation end date. The additional aggregation parameters can be stamped in the form of aggregation parameter group ID while performing post-processing activities for each transaction leg. This aggregation parameter group ID will be used in subsequent batches during the transaction aggregation cycle. If you want to perform some post-processing activities on the transaction legs, you need to attach a post-processing algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs. This algorithm is triggered only for transactions which are in the **Initial Price Item Determined (INPD)** status. It is triggered before the price item parameter group is created.

A sample post-processing algorithm type named **C1\_PRDR\_POPC** is shipped with the price item. It does not have any business logic. If you want to undertake some post-processing activities for a transaction leg, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Price Item Derivation Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_PRDR\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Once the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch is executed, the processing date is stamped against each transaction leg in the database. If a custom processing date is specified for a particular account and price item combination, the custom processing date is stamped against the respective transaction leg. Otherwise, the processing date defined for the division to which a transaction belongs is stamped against the legs of the respective transaction. The processing date which is stamped against a transaction leg in the database is used while executing all subsequent batches in the transaction aggregation cycle.

Rules Engine	<a href="#">Rules Engine</a> on page 597
How to define a rule	<a href="#">Defining a Rule</a> on page 614

**Price Item Pricing Verification**

In this process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or TOU combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the <b>Prefer Price Item Over Bundle</b> parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>If the price item belongs to a regular bundle and the effective pricing is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the regular bundle, the system checks whether the effective pricing is available for the parent bundle (if assigned) at the account level. If the effective pricing is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the effective pricing is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to <b>Error (EROR)</b>. If the effective pricing is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to <b>Error (EROR)</b>.</p>
Enabled	<p>The system checks whether effective pricing is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or price item parameters (parameter group) combination on the processing date. The system searches for the price item, regular bundle or parent bundle pricing depending on the value defined for the <b>Prefer Price Item Over Bundle</b> parameter in the price assignment search algorithm (which is defined for the division to which the account belongs).</p> <p>The system searches for a price with exact match at all levels defined in the search order. If the exact match is available at two or more levels, the price assignment at the higher precedence level is considered for calculating the charges. But, if the system does not find the exact match at any level, it searches for the best fit match at all levels. For more information about best fit match, see <a href="#">Multi Parameter Based Pricing</a> on page 139. If the system finds the best fit match with same weight at multiple levels, the price assignment at the higher precedence level is considered for calculating the charges.</p> <p>If the price item belongs to a regular bundle and the exact or best fit price is available for the regular bundle at the account level, the system considers the regular bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the regular bundle, the system checks whether the exact or best fit price is available for the parent bundle (if assigned) at the account level. If the exact or best fit price is available for the parent bundle, the system considers the parent bundle as the final price item and maps it to the transaction leg. If the exact or best fit price is not available for the price item, regular bundle, or parent bundle, the status of the transaction leg is changed to <b>Error (EROR)</b>. If the exact or best fit price is not available for one or more price items to which a transaction is mapped, the status of the transaction is also changed to <b>Error (EROR)</b>.</p>

**Note:**

The processing date which is stamped against a transaction leg is used to determine effective pricing for the transaction leg.

The order in which the system searches effective pricing for the price item, regular bundle, or parent (regular) bundle at the same level depends on the value defined for the **Prefer Price Item Over Bundle** parameter in the price assignment search algorithm. If the value of the **Prefer Price Item Over Bundle** parameter is set to **Y**, the system first searches whether effective pricing is available for the price item. If the effective pricing is not available for the price item, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the parent bundle at the same level. However, if the value of the **Prefer Price Item Over Bundle** parameter is set to **N**, the system first searches whether effective pricing is available for the parent bundle. If the effective pricing is not available for the parent bundle, then the system searches whether effective pricing is available for the regular bundle at the same level. If the effective pricing is not available for the regular bundle, then the system searches whether effective pricing is available for the price item at the same level.

In addition, the status of the transaction and transaction leg is changed to **Error (EROR)** when:

- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.

Once the effective pricing is determined for the initial or final price item, the values of the following pricing attributes are retrieved:

- Ignore Transaction
- Aggregate Transaction
- Aggregation Schedule
- Rating Criteria
- Price Assignment ID
- Account ID (in case of account agreed and price list pricing)
- Person ID (in case of customer agreed and price list pricing)
- Price List ID (in case of price list pricing)
- Contract ID
- Regular Bundle Code
- Pricing Currency

In addition, the system invokes the algorithms attached to the following algorithm spots of the derived account's division in the specified sequence for the self-funded health care business:

1. **TFM - Contract Derivation** - You can attach an algorithm created using the **SA\_DERV\_POPC** algorithm type to this algorithm spot. If the account has multiple active contracts of the contract type which is associated with the price item, this algorithm derives the contract which is associated with the policy and maps it to the transaction leg. The manner in which the system derives the active contract for the account differs in the following scenarios:

If the effective pricing rule stamped against the transaction leg is defined at ...	Then...
The bill group level	The system first fetches the policy derived for the transaction and then derives the active contract which is associated with the policy.
The parent customer level	The system first fetches the bill group to which the account belongs and then the policy where the bill group is associated with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLLNG</b> feature configuration. Once the policy is derived, the system derives the active contract which is associated with the policy.

2. **TFM - Verify Pricing Post-Processing** - You can attach an algorithm created using the **C1-VRPR\_POPC** algorithm type to this algorithm spot. This algorithm removes the price assignment ID and price item parameter group ID from the summary ID column of each transaction leg.

You can execute this process through a multi-threaded batch named **Price Item Pricing Verification (C1-TXNVP)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to find the price item pricing for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to find the price item pricing for transactions which are received from a particular transaction source.	No
Division	Used when you want to find the price item pricing for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note that the **Price Item Pricing Verification (C1-TXNVP)** batch does not change the status of the transaction and its legs. You need to execute the **Update Status (C1-TXNEX)** batch to update the status of the transaction and its legs. Besides updating the status, the **Update Status (C1-TXNEX)** batch determines the rate for transaction legs whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **Yes** and **Rating Criteria** is set to **Rate Transactions (RITX)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 642.

You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No

Parameter Name	Description	Mandatory (Yes or No)
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Shuffle Work Unit	Used to indicate whether you want to shuffle the work units across threads to correct the uneven thread processing time. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>	No
	<b>Note:</b> By default, the parameter value is set to N.	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

You must specify same parameters in the **Product Pricing Verification (C1-TXNVP)** and **Update Status (C1-TXNEX)** batches. Otherwise, erroneous results might occur.

If you want to do some preprocessing activities before invoking the rates engine, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1\_RTCL\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities before invoking the rates engine, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_RTCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

If a transaction leg is ignored and not considered for billing, the status of the transaction leg is changed to **Ignored (IGNR)**, whereas the status of the transaction remains as **Initial Price Item Determined (INPD)**. However, if all legs of a transaction are ignored and not considered for billing, the status of the transaction and transaction legs is changed to **Ignored (IGNR)**.

You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **true**, the system will store the product pricing information in the following tables:

- CI\_PRC\_AGRD
- CI\_PRC\_PL
- CI\_PRC\_INH\_PL

But, if you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **false**, the system will not store the product pricing information in the above mentioned tables. If there are any pricing changes, you will have to update these tables before executing the **Price Item Pricing Verification (C1-TXNVP)** batch. You can update the product pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch. Ideally, you must execute the **Refresh Pricing (C1-TXNRP)** batch after you execute the **Flush All Caches (F1-FLUSH)** batch in the

transaction aggregation cycle. You can specify the following parameters while executing the **Refresh Pricing (C1-TXNRP)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to update the price item pricing information of accounts belonging to a particular division.	No
Chunk Size	Used to specify the number of persons whose regular and post-processing price item pricing information you want to update in each work unit.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## Aggregation

Once the price item pricing verification is complete, you can aggregate the transaction legs, create a billable charge, and update the SQI values in the billable charge. In the aggregation process, the system behaves in the following manner:

If the Multi Parameter Based Pricing feature is...	Then...
Disabled	<p>The system checks the value defined in the <b>Aggregate Transaction</b> field. If the <b>Aggregate Transaction</b> field is set to <b>No</b>, the system creates one billable charge (with the <b>Billable</b> status) for each transaction leg. However, if the <b>Aggregate Transaction</b> field is set to <b>Yes</b>, the system creates one billable charge (with the <b>Billable</b> status) for all transactions legs having the same price item and TOU combination and whose transaction date falls between the aggregation schedule.</p> <p><b>Note:</b></p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to <b>Error (EROR)</b>.</p> <p>If the aggregated billable charge already exists for the account, price item and TOU combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>

If the Multi Parameter Based Pricing feature is...	Then...
Enabled	<p>The system checks the value defined in the <b>Aggregate Transaction</b> field. If the <b>Aggregate Transaction</b> field is set to <b>No</b>, the system creates one billable charge (with the <b>Billable</b> status) for each transaction leg. However, if the <b>Aggregate Transaction</b> field is set to <b>Yes</b>, the system creates one billable charge (with the <b>Billable</b> status) for all transaction legs having the same price item and price item parameters (parameter group) combination and whose transaction date falls between the aggregation schedule.</p> <p><b>Note:</b></p> <p>During the billable charge creation, the system also considers the contract start and end dates along with the aggregation schedule. If the contract start date falls between the aggregation schedule, the billable charge start date is equal to the contract start date. If the contract start date is earlier than the aggregation schedule start date, the billable charge start date is equal to the aggregation schedule start date. If the contract end date is earlier than the aggregation schedule end date, the billable charge end date is equal to the contract end date. If the contract end date is later than the aggregation schedule end date, the billable charge end date is equal to the aggregation schedule end date. However, if the contract start date is later than the aggregation schedule end date or if the contract end date is earlier than the aggregation schedule start date, the status of the transaction leg is changed to <b>Error (EROR)</b>.</p> <p>If the aggregated billable charge already exists for the account, price item and price item parameters combination and there is no bill segment associated with the billable charge, the system will update the SQI values in the existing billable charge.</p>

The transaction aggregation is done based on the aggregation schedule defined in the price item pricing. You can use the following standard schedules or you can create your own custom schedules for aggregation:

- Daily
- Weekly
- Monthly
- Quarterly
- Yearly

Once the billable charge is created, the system aggregates the SQIs defined for the price item — division combination using the aggregation function and then updates the billable charge with the respective SQI values. If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

Once the SQI values are updated in the billable charge, the rate is determined for the transaction leg whose effective pricing has either of the following set of attributes:

- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **Yes**, and **Rating Criteria** is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**
- **Ignore Transaction** is set to **No**, **Aggregate Transaction** is set to **No**, and **Rating Criteria** is set to **Rate Transactions (RITX)**

Each set of pricing attributes indicates how the transaction legs must be rated before billing. For more information about the different ways in which a transaction leg can be rated, see [Transaction Rating Before Billing](#) on page 642.

**Note:** If you want to do some preprocessing activities while determining rate, you need to attach a preprocessing algorithm on the **TFM - Rate Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample preprocessing algorithm type named **C1\_RTCL\_PRPC** is shipped with the price item. It does not have any business logic. If you want to undertake some preprocessing activities while determining rate for transaction legs, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rate Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_RTCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

In addition, the system invokes the algorithm attached to the following algorithm spot of the derived account's division for the self-funded health care business:

- **TFM - Billable Charge Post Processing** - You can attach an algorithm created using the **C1\_BCHG\_POPC** algorithm type to this algorithm spot. This algorithm invokes the algorithm which is attached to the **Bill After Date Determination** system event of the respective pricing rule type. For more information, refer to the [Bill After Date Determination](#) on page 2339 section.

Once the billable charge is created and updated successfully, the status of the transaction leg is changed to **Completed (COMP)**. However, if the SQIs are not defined for the price item — division combination, the transaction aggregation rule is not defined for the SQI, or if the exchange rate is not available during currency conversion, the status of the transaction leg is changed to **Error (EROR)**. If all legs of a transaction are in the **Completed (COMP)** status, the status of the transaction is changed to **Completed (COMP)**. But, if any of the transaction leg is in the **Error (EROR)** status, the status of the transaction is changed to **Error (EROR)**.

You can execute this process through a multi-threaded batch named **Service Quantity Calculation (C1-TXNSQ)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to create the billable charges for transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to create the billable charges for transactions which are received from a particular transaction source.	No
Division	Used when you want to create the billable charges for transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

The **Service Quantity Calculation (C1-TXNSQ)** batch does not change the status of the transaction and its legs. You need to execute the **Mark Completion (C1-TXNCM)** batch to update the status of the transaction and its legs. Besides updating the status, the **Mark Completion (C1-TXNCM)** batch does the following with other legs when billable charge is not created for one or more transaction legs:

<b>Rate for other transaction leg is determined using the following set of pricing attributes...</b>	<b>Then....</b>
<b>Ignore Transaction</b> is set to <b>Yes</b> and <b>Rating Criteria</b> is set to <b>Rate Transactions (RITX)</b>	The corresponding calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>No</b> , and <b>Rating Criteria</b> is set to <b>Rate Transactions (RITX)</b>	The corresponding billable charge and calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The corresponding calculation lines of the transaction leg are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The corresponding billable charge and calculation lines are not deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>No</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The corresponding non-aggregated billable charge is deleted.

You can specify either of the following parameters while executing the **Mark Completion (C1-TXNCM)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to change the status of transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to change the status of transactions which are received from a particular transaction source.	No
Division	Used when you want to change the status of transactions belonging to a particular division.	No
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

You must specify same parameters in the **Service Quantity Calculation (C1-TXNSQ)** and **Mark Completion (C1-TXNCM)** batches. Otherwise, erroneous results might occur.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1\_BCHG\_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **Feed Management Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_BCHG\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 697

## Clean Up

There might be situations when a transaction is mapped to one or more price items and due to some reasons a billable charge could not be created for one of the price item. And, therefore the status of the transaction is changed to **Error (EROR)**. In such case, you need to either recalculate SQIs in the aggregated billable charge or delete the aggregated billable charge depending on whether the aggregated billable charge includes transaction legs in the **Completed (COMP)** status. You can perform this clean up process through a multi-threaded batch named **Clean Up (C1-TXNCU)**.

When the transaction legs in the **Error (EROR)** and **Completed (COMP)** statuses are aggregated together in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The SQIs are recalculated in the billable charge.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The SQIs are recalculated in the billable charge and the rate is determined for aggregated service quantities. Once the rate is determined, pass through charges are calculated and accumulated accordingly.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The pass through charges are recalculated and accumulated accordingly.

However, when the transaction legs in the **Error (EROR)** status are only aggregated in a billable charge, the **Clean Up (C1-TXNCU)** batch does the following:

Billable charge contain transaction legs with the following set of pricing attributes...	Then....
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Do Not Rate Transactions</b>	The aggregated billable charge is deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Aggregate transactions and then rate aggregated SQs (AGTR)</b>	The aggregated billable charge and the corresponding calculation lines are deleted.
<b>Ignore Transaction</b> is set to <b>No</b> , <b>Aggregate Transaction</b> is set to <b>Yes</b> , and <b>Rating Criteria</b> is set to <b>Rate individual transactions and aggregate calc lines across transactions (RITA)</b>	The aggregated billable charge is deleted.

**Note:**

If the aggregation function is based on the transaction amount or on any other user defined amount and the transaction or user defined currency is different from the pricing currency, the system does currency conversion if the appropriate exchange rate is available in the system. The processing date which is stamped against a transaction leg is used to determine effective exchange rate for the transaction leg.

The SQIs in an aggregated billable charge are recalculated only when the **SQ Recalculation Required** option type in the **C1\_FM** feature configuration is set to **Y**. If you set the **SQ Recalculation Required** option type in the **C1\_FM** feature configuration to **N**, the SQIs are not recalculated in an aggregated billable charge. We recommend you to recalculate SQIs in an aggregated billable charge when more than one account bears the charges for a transaction.

If you want to perform some post-processing activities on a billable charge, you need to attach a post-processing algorithm on the **TFM - Billable Charge Post-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered once the billable charge is created and SQIs are updated in the billable charge. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs. A sample post-processing algorithm type named **C1\_BCHG\_POPC** is shipped with the product. It does not have any business logic. If you want to undertake some post-processing activities on a billable charge, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Billable Charge Post-Processing** algorithm spot of the respective division. You can refer to the **C1\_BCHG\_POPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Besides the transaction aggregation process, the **Clean Up (C1-TXNCU)** batch is also used during the following sub-processes:

- **Cancellation** — During the cancellation process, it deletes non-aggregated billable charges and recalculates SQIs in aggregated billable charges.
- **Disaggregation** — During the disaggregation process, it deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation.

You can specify either of the following parameters while executing the **Clean Up (C1-TXNCU)** batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to update or delete billable charges created for transactions which are received in a particular transaction feed.	Yes (Conditional)  <b>Note:</b> This parameter is required when you set the request type to <b>CNCL</b> .
	<b>Note:</b> This parameter should not be used during the disaggregation process.	
Transaction Source	Used when you want to update or delete billable charges created for transactions which are received from a particular transaction source.	No
	<b>Note:</b> This parameter should not be used during the cancellation and disaggregation processes.	
Division	Used when you want to update or delete billable charges created for transactions belonging to a particular division.	No
	<b>Note:</b> This parameter should not be used during the cancellation process.	

Parameter Name	Description	Mandatory (Yes or No)
Account ID	Used when you want to update or delete billable charges created for transactions of a particular account.	No
	<b>Note:</b> This parameter should be used only during the disaggregation process.	
Bill Cycle	Used when you want to update or delete billable charges created for transactions of accounts having a particular bill cycle.	No
	<b>Note:</b> This parameter should be used only during the disaggregation process.	
Disaggregate Transactions From Date	Used when you want to update or delete billable charges created for transactions which were performed from a particular date onwards.	Yes (Conditional)
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format. This parameter should be used only during the disaggregation process.	
Request Type	Used to indicate the process during which you want to execute the batch. The valid values are: <ul style="list-style-type: none"> <li>• CNCL</li> <li>• EROR</li> <li>• DISAGG</li> </ul>	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

For more information on...	See...
Transaction Leg Status Transition	<a href="#">Transaction Leg Status Transition</a> on page 697
How to set the C1_FM feature configuration	<a href="#">Setting the C1_FM Feature Configuration</a> on page 2364

## Transaction Aggregation Batch Processing

During the transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)

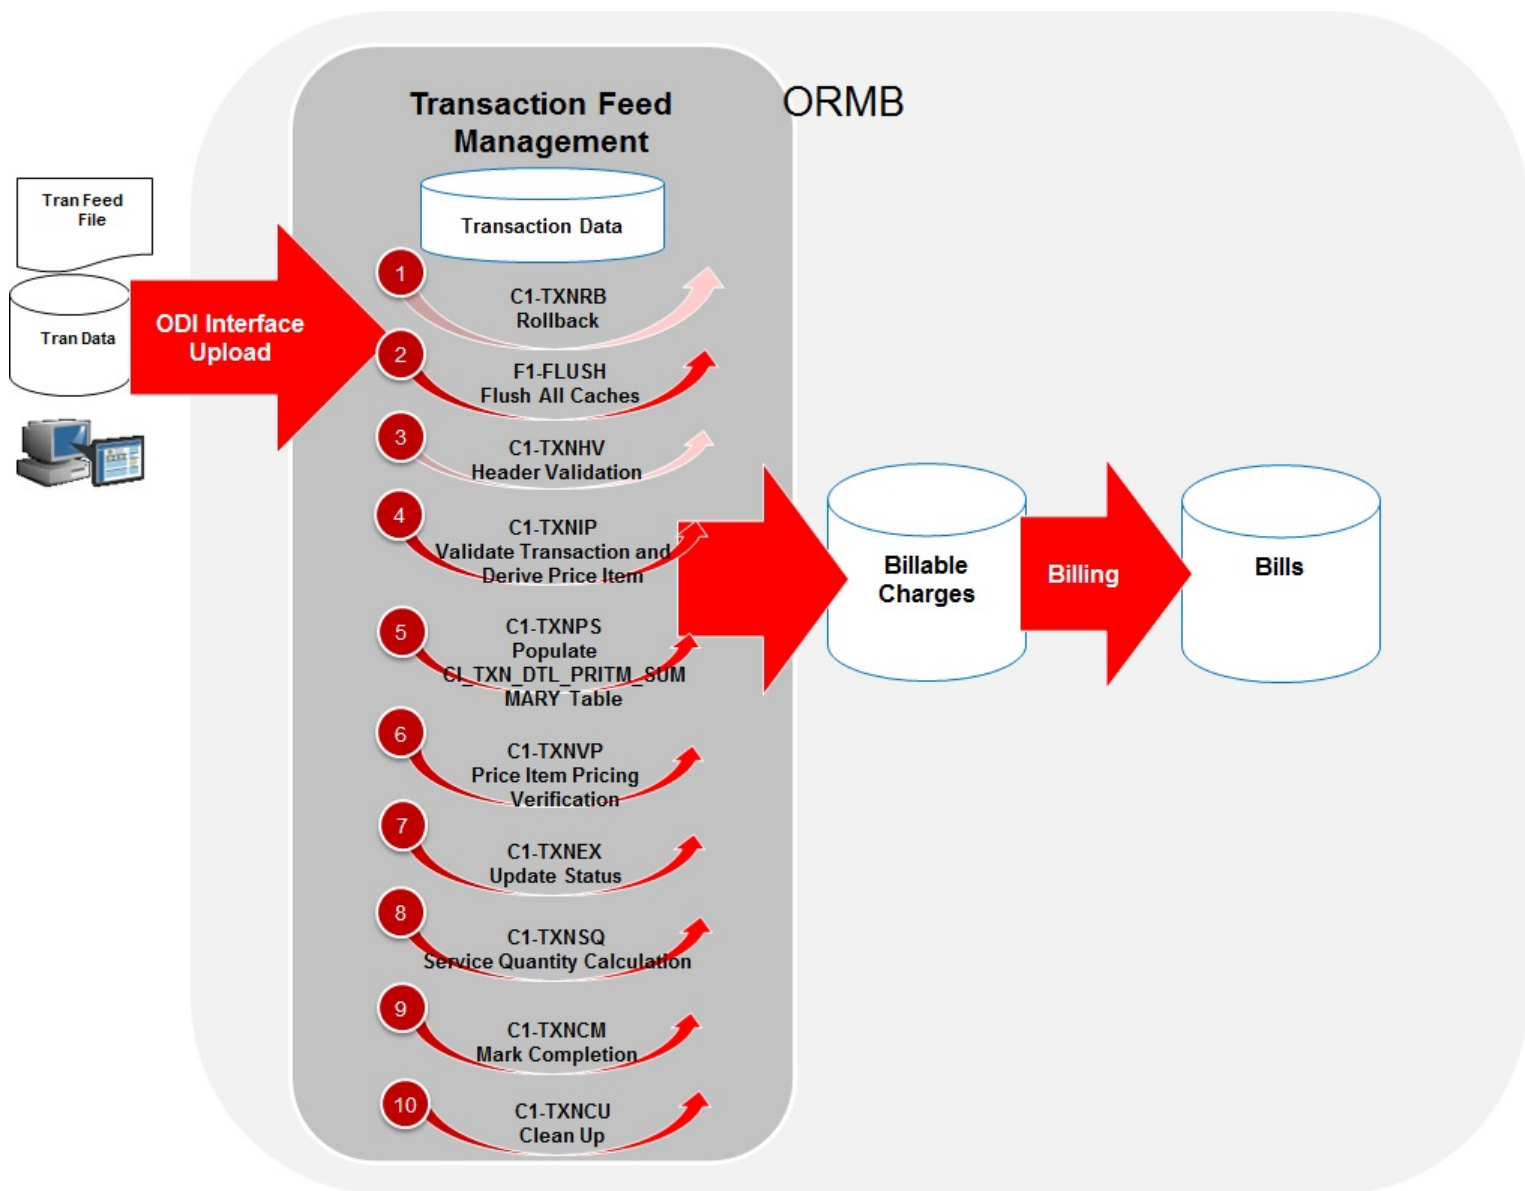

4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Price Item Pricing Verification (C1-TXNVP)
6. Update Status (C1-TXNEX)
7. Service Quantity Calculation (C1-TXNSQ)
8. Mark Completion (C1-TXNCM)
9. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The **Validate Transaction and Derive Price Item (C1-TXNIP)** batch locks the **CI\_TXN\_DTL\_PRITM\_SUMMARY** table before inserting records to ensure that only unique records are inserted in this table. The locking mechanism results in performance issue when there is no or very little aggregation of transactions. Therefore, we recommend you to use an alternative transaction aggregation process when the aggregation ratio is low. You can enable the alternative transaction aggregation process by setting the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1\_FM** feature configuration to **true**. In this alternative transaction aggregation process, you need to execute the following batches in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)
6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **EROR**

The following figure graphically explains the sequence in which you need to execute the batches during the transaction aggregation process:

**Note:**

You need to remember the following points during the transaction aggregation process:

- Before you start the transaction aggregation process, you need to execute the **Flush All Caches (F1-FLUSH)** batch to clean the cache. This batch has one parameter named **Thread Pool** which allows you to clean cache of a particular thread pool. In case you want to reprocess the error transactions from the earlier cycle, you need to execute the **Rollback (C1-TXNRB)** batch.
- You can store the price item pricing information, and thereby improve the **Price Item Pricing Verification (C1-TXNVP)** batch performance. If you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **true**, the system will store the price item pricing information in the following tables:
  - CI\_PRC\_AGRD
  - CI\_PRC\_PL
  - CI\_PRC\_INH\_PL

But, if you set the **Use Materialized Views** option type of the **C1\_FM** feature configuration to **false**, the system will not store the price item pricing information in the above mentioned tables. If there are any pricing changes, you can update the price item pricing information in these tables by executing the **Refresh Pricing (C1-TXNRP)** batch.

- The **Header Validation (C1-TXNHV)** batch is optional. You can directly execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch once the transactions are uploaded in the system.
- The system allows you to execute each batch consecutively. You can execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and same parameters, or with the different division and different parameters. But, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch consecutively with the same division and different parameters. For example, once you execute this batch with division as D1 and transaction source as S1, you cannot execute this batch again with division as D1 and transaction source as S2 until the former transaction aggregation cycle is complete.
- Once the **Price Item Pricing Verification (C1-TXNVP)** batch is executed, you cannot execute the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. Similarly, once the **Service Quantity Calculation (C1-TXNSQ)** batch is executed, you cannot execute the **Price Item Pricing Verification (C1-TXNVP)** batch again with the same division and same parameters unless and until the transaction aggregation cycle is complete. This rule is applicable to all subsequent batches in the transaction aggregation cycle.
- During the transaction aggregation process, you must specify the same division and same parameters across each batch. Otherwise, erroneous results might occur.
- If you have already executed the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch without any division, then you cannot execute this batch once again with a division unless and until the transaction aggregation cycle is complete.

Transaction Disaggregation

As the aggregation cycle is different from the billing cycle, there might be situations when due to pricing changes, the billable charges are no longer valid. In such cases, you need to disaggregate the transactions. In the following scenarios, the system automatically creates a disaggregation request in the CI\_TXN\_DISAGG\_REQ table:

If...	Then
A price item is assigned to an account	A disaggregation request is created for the account.

If...	Then
<p>The following values in the price item pricing assigned to an account is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Aggregation Schedule</li> <li>• Ignore Transaction</li> <li>• Aggregate Transaction</li> <li>• Rating Criteria</li> <li>• Price Item Parameter</li> </ul>	A disaggregation request is created for the account.
A price item is assigned to a person	A disaggregation request is created for each account of the person and its child person.
<p>The following values in the price item pricing assigned to a person is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Aggregation Schedule</li> <li>• Ignore Transaction</li> <li>• Aggregate Transaction</li> <li>• Rating Criteria</li> <li>• Price Item Parameter</li> </ul>	A disaggregation request is created for each account of the person and its child person.
A price list is assigned to an account.	A disaggregation request is created for the account.
<p>The following values in the price list assigned to an account is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Priority</li> <li>• Price List Inheritance</li> </ul>	A disaggregation request is created for the account.
A price list is assigned to a person.	A disaggregation request is created for each account of the person and its child person.
<p>The following values in the price list assigned to a person is changed:</p> <ul style="list-style-type: none"> <li>• Effective Start Date</li> <li>• Effective End Date</li> <li>• Priority</li> <li>• Price List Inheritance</li> </ul>	A disaggregation request is created for each account of the person and its child person.

However, there are various other scenarios for which you have to disaggregate the transactions. But, at the moment, the system does not automatically create a disaggregation request for these scenarios in the CL\_TXN\_DISAGG\_REQ table. You will have to create an appropriate disaggregation request in this table. The system allows you to create a

disaggregation request manually through the **Disaggregation Request** screen or through a batch named **Disaggregation Request Creation (C1-DISTG)**.

In the following scenarios, you have to create an appropriate disaggregation request for the account or person, respectively:

- Effective price item pricing assigned to an account is overridden.
- Variance parameter in the price item pricing assigned to an account is changed.
- A price list assignment has expired or a price list is no longer available to an account.
- Effective price item pricing assigned to a person is overridden.
- Variance parameter in the price item pricing assigned to a person is changed.
- A price list assignment has expired or a price list is no longer available to a person.
- A price item is added to a price list.
- The following details in the price item pricing assigned to a price list is changed:
  - Variance Parameter
  - Effective Start Date
  - Effective End Date
  - Aggregation Schedule
  - Ignore Transaction
  - Rating Criteria
  - Aggregate Transaction
- A new bundle is created.
- A price item is added to a bundle.
- A price item is removed from a bundle.
- A bundle is eliminated (that is, all its price item are removed).
- A price item is added.
- A price list hierarchy is changed.
- SQIs associated with a price item - division combination are changed.
- Transaction aggregation rule defined for an SQI is changed or deleted.
- Business rules used for initial price item mapping are changed.

At present, the system disaggregates transactions at the account level and not at the price item level. Let us understand this with the help of an example. The following table lists the accounts and price items to which T1 is mapped:

Transaction	Account	Price Item
T1	A1	P1
T1	A1	P2
T1	A2	P1
T1	A2	P2

Now, if the pricing of P1 assigned to A1 changes, the system creates a disaggregation request for A1 and identifies all transaction legs which are mapped to A1 for disaggregation. In this example, the system will consider the first two transaction legs - T1-A1-P1 and T1-A1-P2 - for disaggregation even if the pricing of P2 assigned to A1 has not changed.

The **Disaggregation Request Creation (C1-DISTG)** batch creates a disaggregation request for an account. When you create a disaggregation request for an account, the transactions mapped to the account are disaggregated. This batch is a multi-threaded batch. The multi-threading is based on account ID and chunks for multi-threading are created based on numerical distribution of account ID. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to create disaggregation request for accounts belonging to a particular division.	No
Person ID	Used when you want to create disaggregation request for accounts belonging to a particular person.	No
Bill Cycle	Used when you want to create disaggregation request for accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to create disaggregation request for accounts for which transactions were performed from a particular date onwards.	Yes
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Before you proceed with the disaggregation process, you need to ensure that there are no pending bills for the accounts whose transactions need to be disaggregated. If there are pending bills for these accounts, you need to first execute the **Pending Bill Segments Deletion (C1-BSEGD)** batch and then execute the **Pending Bill Deletion (C1-PNBD)** batch. While executing these batches in the specified order, ensure that you specify the same parameters in both these batches. For more information about these batches, see *Oracle Revenue Management and Billing Batch Execution Guide*.

**Note:** The **Pending Bill Deletion (C1-PNBD)** batch deletes those pending bills which are generated through the billing batches (i.e. **BILLING** or **C1-PNDBL**). It does not delete pending bills which are generated through the user interface. Also, it deletes regular pending bills and not adhoc pending bills.

Once a disaggregation request is either manually or automatically created for an account, you need to execute the following batches in the specified order to disaggregate transactions:

- **Identify Transactions for Disaggregation (C1-IDENT)** - This batch fetches disaggregation requests which are created for accounts from the CI\_TXN\_DISAGG\_REQ table. It identifies the transactions and the corresponding aggregated and non-aggregated billable charges for disaggregation. If the bill segment of a billable charge is in the **Pending Cancel** or **Frozen** status, the system will not identify the billable charge for deletion. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to identify the transactions of accounts belonging to a particular division for disaggregation.	No
Account ID	Used when you want to identify the transactions of a particular account for disaggregation.	No
Bill Cycle	Used when you want to identify the transactions of accounts having a particular bill cycle for disaggregation.	No

Parameter Name	Description	Mandatory (Yes or No)
Disaggregate Transactions From Date	Used when you want to identify the transactions which were performed from a particular date onwards for disaggregation.	No
	<p><b>Note:</b></p> <p>You must specify the date in the YYYY-MM-DD format.</p> <p>The aggregated billable charge, which is affected, should not contain a transaction leg whose transaction date is earlier than the date specified in this parameter. Otherwise, erroneous results will occur. Therefore, ensure that you specify the appropriate value for the <b>Disaggregate Transactions From Date</b> parameter.</p>	
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Post-Processing Algorithm	Used to attach a post-processing algorithm. This algorithm is triggered once the transactions and corresponding billable charges are identified for disaggregation.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to exclude the aggregated and non-aggregated billable charges which are in the <b>Canceled</b> status during the disaggregation process. The valid values are:	No
	<ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b> If you do not specify any value, by default, the parameter value is set to N.</p>	
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

- **Process Non-Aggregated Transactions (C1-PDTXN)** - This batch processes the identified transactions, deletes the required transaction legs, and changes the status of the transaction to **Uploaded (UPLD)**. If a non-aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The corresponding transaction leg and calculation lines (if any) are deleted.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if a non-aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, the corresponding calculation lines (if any), and transaction leg are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If a non-aggregated billable charge is in the **Cancel** status, then the corresponding transaction leg and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. If the rate is determined for a transaction leg which is in the **Ignored (IGNR)** status, the calculation lines are deleted along with the transaction leg during disaggregation.

If aggregated billable charge exists for a transaction leg, then the corresponding transaction legs and calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Division	Used when you want to disaggregate the transactions of accounts belonging to a particular division.	No
Account ID	Used when you want to disaggregate the transactions of a particular account.	No
Bill Cycle	Used when you want to disaggregate the transactions of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to disaggregate the transactions which were performed from a particular date onwards.  <b>Note:</b> You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the disaggregation process, you need to attach a preprocessing algorithm on the **TFM - Disaggregation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Process Non-Aggregated Transactions (C1-PDTEXN)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_DSAG\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the disaggregation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Disaggregation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_DSAG\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

- **Clean Up (C1-TXNCU)** - This batch deletes an aggregated billable charge when all the corresponding transaction legs which were aggregated in the billable charge are deleted during disaggregation. If an aggregated billable charge exists for a transaction leg and the corresponding bill segment is in the **Cancel** status, then:
  - The billable charge is cancelled.
  - The status of the transaction is changed to **Uploaded (UPLD)**.

However, if an aggregated billable charge exists for a transaction leg, but if the bill segment is not yet generated, then the billable charge, and the corresponding calculation lines (if any) are deleted, and the status of the transaction is changed to **Uploaded (UPLD)**. If an aggregated billable charge is in the **Cancel** status, then the corresponding calculation lines (if any) are deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

While executing the **Clean Up (C1-TXNCU)** batch during disaggregation, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 673.

- **Update Disaggregation Request Status (C1-DRSUA)** - This batch changes the status of the disaggregation request in the **CI\_TXN\_DISAGG\_REQ** table to **COMPLETE**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Account ID	Used when you want to update the disaggregation requests' status of a particular account.	No
Division	Used when you want to update the disaggregation requests' status of accounts belonging to a particular division.	No
Bill Cycle	Used when you want to update the disaggregation requests' status of accounts having a particular bill cycle.	No
Disaggregate Transactions From Date	Used when you want to update the disaggregation requests' status of accounts whose transactions were performed from a particular date onwards and the bill segments created for these transactions are in the <b>Pending Cancel</b> or <b>Frozen</b> status.  <b>Note:</b> You must specify the date in the YYYY-MM-DD format.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Update Status Algorithm	Used to attach a custom algorithm which indicates when the status of the disaggregation request in the <b>CI_TXN_DISAGG_REQ</b> table must be changed to <b>COMPLETE</b> .  <b>Note:</b> If an algorithm is specified in this parameter, the system uses the custom logic and not the in-built logic for updating the status of the disaggregation requests.	No
Exclude Canceled Billable Charges (Y or N)	Used to indicate whether you want to change the status of the disaggregation request to <b>COMPLETE</b> when the canceled billable charges are excluded during the disaggregation process. The valid values are:  <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <b>Note:</b> If you do not specify any value, by default, the parameter value is set to N.  You must specify the same value for this parameter while executing the <b>Identify Transactions for Disaggregation (C1-IDENT)</b> and <b>Update Disaggregation Request Status (C1-DRSUA)</b> batches during the disaggregation process. Otherwise, erroneous results will occur.	No

Parameter Name	Description	Mandatory (Yes or No)
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

## **Transaction Disaggregation Batch Processing**

---

During the transaction disaggregation process, you need to execute the following batches in the specified order:

1. Disaggregation Request Creation (C1-DISTG)
2. Pending Bill Segments Deletion (C1-BSEGD)
3. Pending Bill Deletion (C1-PNBD)
4. Identify Transactions for Disaggregation (C1-IDENT)
5. Process Non-Aggregated Transactions (C1-PDTXN)
6. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **DISAGG**
7. Update Disaggregation Request Status (C1-DRSUA)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction disaggregation process:

## Reseeding

In the self-funded health care business, there might be situations when you may want to disaggregate the claim, enrollment, and ancillary transactions. The system enables you to disaggregate the claim, enrollment, and ancillary transactions until these transactions are not billed to the customer. If a transaction is billed to the customer, you cannot disaggregate the transaction using the normal transaction disaggregation process.

In the following scenarios, you may want to disaggregate the claim or ancillary transactions once these are billed to the customer:

- The changes are made to the specific stop-loss (SSL), aggregate stop-loss (ASL), discount arrangement, or level funded pricing rule which is used during the transaction aggregation process.
- A new pricing rule is created using a specific stop-loss (SSL) or aggregate stop-loss (ASL) pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a discount arrangement pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.
- A new pricing rule is created using a level funded pricing rule type which is added in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

- A specific stop-loss, aggregate stop-loss, discount arrangement, or level funded pricing rule type is added as related pricing rule type in the claim or ancillary pricing rule type using which the claim or ancillary transaction is processed.

The former scenario arises due to change in pricing rule, whereas the latter four scenarios arise due to the late setup. In such scenarios, you can create the **Accumulation Group Based Disaggregation Request** (also known as **Re seeding Request**) to disaggregate the claim and ancillary transactions. In the **Accumulation Group Based Disaggregation** (also known as **Re seeding**) feature, the system allows you to create the re seeding requests for the accounts using a parent accumulation group. At present, you can create the re seeding requests for the accounts only from the user interface and not through the **Disaggregation Request Creation (C1-DISTG)** batch.

While creating a re seeding request using the **Parent Accumulation Group** request type, you can specify the accumulation type (i.e. whether it is stop-loss or discount arrangement). If the accumulation type is set to **Stop Loss**, the system provides the **Disaggregate All Account** option. If you select the **Disaggregate All Account** option, the system considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a re seeding request for each such account. However, if you do not select the **Disaggregate All Account** option, the system considers accounts of only those bill groups where the parent accumulation group is used for creating the specific stop-loss and aggregate stop-loss pricing rules and then creates a re seeding request for each such account. In addition, the system creates a re seeding request for the ASSL and ASL Credit accounts which are specified in the specific stop-loss and aggregate stop-loss pricing rules, respectively. Note that the re seeding requests are created for the ASSL and ASL Credit accounts irrespective of whether the **Disaggregate All Account** option is selected or not.

However, if the accumulation type is set to **Discount Arrangement**, the system does not provide the **Disaggregate All Account** option. In this case, the system, by default, considers accounts of all bill groups of the parent customer (for whom the parent accumulation group is created) and then creates a re seeding request for each such account.

**Note:** In the late setup scenarios, you need to ensure that the pricing rules are created before you create the re seeding requests for accounts.

In the **Re seeding** process, you need to execute the following batches in the specified sequence:

1. **Identify Transactions for Disaggregation (C1-IDENT)** - It fetches the re seeding requests for accounts and then identifies the claim or ancillary transactions for disaggregation. If the re seeding request is created due to change in a pricing rule, the **BILLABLE\_CHG\_ACT\_CD** column corresponding to the specific stop-loss, aggregate stop-loss, discount, or level-funded billable charges in the **CI\_DISAGG\_BCHG\_DETAIL** table is set to **Billable Charge is Part of Frozen Bill Segment (40)**. It indicates that no action must be taken on these billable charges. And, if the re seeding request is created due to the late setup scenarios, the claim or ancillary transaction and its legs are moved to the **CI\_TXN\_DETAIL\_STG** and **CI\_TXN\_DTL\_PRITM\_STG** tables, respectively. In addition, the status of the claim or ancillary transaction is changed to **Uploaded**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.
2. **Process Non-Aggregated Transactions (C1-PDTXN)** - If the re seeding request is created due to change in a pricing rule, it does the following:
  - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in the **Frozen** or **Pending Cancel** status, are forcibly deleted from the **CI\_TXN\_DTL\_PRITM** table.
  - The specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs, whose corresponding bill segments are in a status other than **Frozen** or **Pending Cancel**, are moved to the **CI\_TXN\_DTL\_PRITM\_STG** table. And, the claim or ancillary transaction is moved to the **CI\_TXN\_DETAIL\_STG** table and its status is changed to **Uploaded**.

Irrespective of whether the re seeding request is created due to change in a pricing rule or the late setup scenarios, this batch does not perform any actions on the claim, claim based fee, and ancillary transaction legs and their billable charges. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

3. **Transaction Cleanup Batch (C1-TXNCU)** - While executing the **Clean Up (C1-TXNCU)** batch during re seeding, you must set the **Request Type** parameter to **DISAGG**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

- Update Disaggregation Request Status (C1-DRSUA)** - Once the claim or ancillary transaction is successfully disaggregated, the status of the reseeding request is changed to **COMPLETE**. For more information about the parameters, refer to *ORMB - Transaction Feed Management - Batch Execution Guide*.

When you re-aggregate the claim or ancillary transactions which were disaggregated due to late setup, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and their billable charges. However, when you re-aggregate the claim or ancillary transactions which were disaggregated due to change in a pricing rule, the system creates the specific stop-loss, aggregate stop-loss, discount arrangement, and stop-loss and discount specific level funded transaction legs and the billable charges for the delta amount (which resulted due to change in pricing).

If the accumulation type is set to **Stop Loss**, the system deletes the specific stop-loss transaction legs. In addition, it deletes the aggregate stop-loss transaction legs (if any), discount arrangement transaction legs (if any), and level funded transaction legs (if any) whose calculation is based on the specific stop-loss transaction legs.

However, if the accumulation type is set to **Discount Arrangement**, the system deletes the discount arrangement transaction legs. It deletes the specific stop-loss transaction legs (if any), aggregate stop-loss transaction legs (if any), and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the specific stop-loss pricing rule. However, it deletes the aggregate stop-loss transaction legs (if any) and level funded transaction legs (if any) when the discount arrangement pricing rule is used in the aggregate stop-loss pricing rule.

For example, the CLAIM pricing rule type contains the SSL, ASL, DISCOUNT, and LEVEL FUNDED pricing rule types as the related pricing rule types, and the SSL and ASL pricing rules contain the following discount arrangement pricing rules:

Discount Rule	Arrangement Pricing	Included in the SSL Pricing Rule (Yes or No)	Included in the ASL Pricing Rule (Yes or No)
DISCOUNT1		Yes	No
DISCOUNT2		No	Yes

Now, if the reseeding request (where the accumulation type is set to **Stop Loss**) is created for an account due to change in the SSL pricing rule, the system behaves in the following manner for the C1 claim transaction:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	Yes	Yes	No	Yes
ASL	Yes	Yes	No	Yes
DISCOUNT	No	No	No	No
LEVEL FUNDED	Yes	Yes	No	Yes
DISCOUNT1	Yes	Yes	No	Yes
DISCOUNT2	Yes	Yes	No	Yes

However, if the reseeding request (where the accumulation type is set to **Discount Arrangement**) is created for an account due to change in the DISCOUNT2 pricing rule, the system behaves in the following manner for the C1 claim transaction:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	No	No	No	No
ASL	Yes	Yes	No	Yes
DISCOUNT	No	No	No	No
LEVEL FUNDED	Yes	Yes	No	Yes
DISCOUNT1	No	No	No	No
DISCOUNT2	Yes	Yes	No	Yes

Let us take another example where the related pricing rule types are not specified in the CLM1 pricing rule type. Therefore, the system just created claim-specific transaction legs and billable charges for the C2 claim transaction. These claim billable charges are then billed to the customer. Now, if you add the SSL and ASL pricing rule types as the related pricing rule types in the CLM1 pricing rule type and create a reseeding request (where the accumulation type is set to **Stop Loss**) for an account, the system behaves in the following manner for the C2 claim transaction when the transaction incurred and paid dates fall within the incurred and paid date ranges defined in the parent accumulation group:

Transaction Leg	Existing Transaction Leg Deleted (Yes or No)	New Transaction Leg Created (Yes or No)	Existing Billable Charge Deleted (Yes or No)	New Billable Charge Created for Delta Charges (Yes or No)
Claim	No	No	No	No
SSL	Not applicable	Yes	Not applicable	Yes
ASL	Not applicable	Yes	Not applicable	Yes
DISCOUNT1	Not applicable	Yes	Not applicable	Yes
DISCOUNT2	Not applicable	Yes	Not applicable	Yes

## Transaction Cancellation

There might be situations when incorrect transaction data file is uploaded in the system. In such cases, the system provides you with an ability to cancel the whole transaction feed. You can cancel a transaction feed either before the transaction aggregation process starts (that is, before executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch) or after the transaction aggregation process ends (that is, after executing the **Clean Up (C1-TXNCU)** batch). In other words, you cannot cancel a transaction feed during the transaction aggregation process. Once the transaction feed is cancelled, the status of the feed and all transactions in the feed is changed to **Cancelled (CNCL)**.

The following table explains how the system behaves:

When you cancel a transaction feed for which...	Then
A bill (with the <b>Pending</b> status) is already generated in the system	The corresponding billable charges, bill segments, and bill are deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .
	<p><b>Note:</b></p> <p>If a pending bill has a bill segment in the <b>Frozen</b> or <b>Pending Cancel</b> status, the system does not allow you to cancel the transaction feed.</p> <p>If a pending bill has a bill segment in the <b>Cancel</b> status, the system behaves in the following manner:</p> <ul style="list-style-type: none"> <li>• Deletes all other bill segments which are not in the <b>Cancel</b> status.</li> <li>• The billable charge corresponding to the bill segment which is not in the <b>Cancel</b> status is deleted if the billable charge is in the <b>Billable</b> status and if the billable charge only includes transactions from the feed that you want to cancel.</li> <li>• The billable charge corresponding to the bill segment which is not in the <b>Cancel</b> status is not deleted or recalculated if the billable charge is in the <b>Cancelled</b> status.</li> <li>• The billable charge corresponding to the bill segment which is in the <b>Cancel</b> status is cancelled if the billable charge only includes transactions from the feed that you want to cancel.</li> <li>• The SQIs in the billable charge are recalculated if the billable charge includes transactions from multiple feeds.</li> </ul> <p>If a bill is created for transactions which are uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> <li>• The bill and their corresponding bill segments are deleted.</li> <li>• The SQIs are recalculated in the corresponding billable charges.</li> <li>• The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted.</li> <li>• The status of the transactions uploaded through Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of the transactions uploaded through Feed B remains the same (i.e. <b>Completed (COMP)</b> ).</li> </ul>
A bill (with the <b>Complete</b> status) already exists in the system	The system does not allow you to cancel the transaction feed.

When you cancel a transaction feed for which...	Then
A bill (with the <b>Complete</b> status) has all bill segments in the <b>Cancelled</b> status	The corresponding billable charges are cancelled. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .
A billable charge (with the <b>Billable</b> status) exists in the system	<p>The billable charge is deleted. The corresponding transaction legs and their calculation lines (if any) are deleted, and the status of the transactions is changed to <b>Cancelled (CNCL)</b>.</p> <p><b>Note:</b></p> <p>In case a billable charge is created for transactions uploaded through multiple transaction feeds (for example, Feed A and Feed B and you want to cancel Feed A), then:</p> <ul style="list-style-type: none"> <li>• The SQIs are recalculated in the billable charge.</li> <li>• The legs of transactions uploaded through Feed A and the corresponding calculation lines (if any) are deleted.</li> <li>• The status of the transactions uploaded through Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of Feed A is changed to <b>Cancelled (CNCL)</b>.</li> <li>• The status of the transactions uploaded through Feed B remains the same (i.e. <b>Completed (COMP)</b> ).</li> </ul>
A billable charge (with the <b>Cancelled</b> status) exists in the system	The billable charge is not deleted. However, the corresponding transaction legs and their calculation lines (if any) are deleted and the status of the transactions is changed to <b>Cancelled (CNCL)</b> .

To cancel a transaction feed, you need to execute the following batches in the specified order:

1. **Pending Bill Deletion (C1-DELBL)** — This batch deletes the bills (with the **Pending** status) and their corresponding bill segments. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to delete bills which include charges for transactions which are received in a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

2. **Clean Up (C1-TXNCU)** — This batch deletes non-aggregated and aggregated billable charges. An aggregated billable charge is deleted only when it includes legs of transactions from the feed that you want to cancel. If an aggregated billable charge includes legs of transactions from multiple feeds, the SQIs and calculation lines (if any) are recalculated in the aggregated billable charge. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Aggregate transactions and then rate aggregated SQs (AGTR)**, is cancelled or deleted during the cancellation process. Note that while executing this batch, the **Request Type** parameter must be set to **CNCL**. For more information about the parameters that you can specify while executing this batch, refer to [Clean Up](#) on page 673.

3. **Cancellation (C1-TXCNC)** — This batch deletes the transaction legs. The corresponding calculation lines are deleted whenever an aggregated billable charge, which includes transaction legs whose rating criteria is set to **Rate individual transactions and aggregate calc lines across transactions (RITA)** or **Rate Transactions (RITX)**, is cancelled or deleted during the cancellation process. Finally, this batch changes the status of the feed and all transactions in the feed to **Cancelled (CNCL)**. You can specify either of the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Header ID	Used when you want to cancel a particular transaction feed.	Yes
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

Note:

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the cancellation process, you need to attach a preprocessing algorithm on the **TFM - Cancellation Pre-Processing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Cancellation (C1-TXCNC)** batch. Note that the system invokes the algorithm which is attached on the derived account's division and not on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_CNCL\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the cancellation process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Cancellation Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_CNCL\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

Transaction Cancellation Batch Processing

During the transaction cancellation process, you need to execute the following batches in the specified order:

1. Pending Bill Deletion (C1-DELBL)
2. Clean Up (C1-TXNCU) with the **Request Type** parameter set to **CNCL**
3. Cancellation (C1-TXCNC)

The following figure graphically explains the sequence in which you need to execute the batches during the transaction cancellation process:

## Transaction Rollback

In the transaction aggregation process, an error occurs when:

- Transaction validation fails.
- Transaction does not satisfy any rule invoked through the rule type.
- Effective pricing is not available for one or more price items to which a transaction is mapped.
- SQIs are not defined for the price item — division combination.
- Transaction aggregation rule is not defined for the SQL.
- Exchange rate is not available during currency conversion.
- There is no contract available with the specified contract type on the transaction date or when the contract is inactive.
- There are multiple effective contracts of the same contract type (available on the transaction date) in **Active**, **Pending Stop**, or **Stop** status.
- The **Price Assignment Search** algorithm is not defined for the division.
- The parameter values are either not defined or invalid in the **Price Assignment Search** algorithm on the processing date.
- The period in which the transaction date falls is not defined in the aggregation schedule.
- Price Item parameters specified in the output parameters are not effective for the price item on the processing date.
- Mandatory price item parameter which is effective on the processing date is not specified in the output parameter.
- Parameter value is not specified for all mandatory price item parameters which are effective on the processing date.

In such cases, the status of the transaction is changed to **Error**. You can configure the required setup and then execute the following batches once again in the specified order:

1. Flush All Caches (F1-FLUSH)
2. Refresh Pricing (C1-TXNRP)
3. Header Validation (C1-TXNHV)
4. Validate Transaction and Derive Price Item (C1-TXNIP)
5. Populate CI\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)

**Note:** You must execute the **Populate C1\_TXN\_DTL\_PRITM\_SUMMARY Table (C1-TXNPS)** batch only when the **Use C1-TXNPS During Transaction Aggregation** option type in the **C1\_FM** feature configuration is set to **true**.

6. Price Item Pricing Verification (C1-TXNVP)
7. Update Status (C1-TXNEX)
8. Service Quantity Calculation (C1-TXNSQ)
9. Mark Completion (C1-TXNCM)
10. Clean Up (C1-TXNCU)

But, before you execute these batches, you need to rollback the transaction status to **Uploaded (UPLD)**. The system allows you to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. When you rollback a transaction, the corresponding transaction legs are deleted and the status of the transaction is changed to **Uploaded (UPLD)**. On rolling back a transaction leg whose effective pricing has the **Ignore Transaction** field set to **Yes** and the **Rating Criteria** field set to **Rate Transactions (RITX)**, the corresponding calculation lines are also deleted along with the transaction leg. If you rollback a partially disaggregated transaction which is in the **Error (EROR)** status, the transaction legs which are in the **Error (EROR)** status are only deleted and the status of the transaction is changed to **Uploaded (UPLD)**.

You need to execute the **Rollback (C1-TXNRB)** batch to rollback transactions which are in the **Ignored (IGNR)** and **Error (EROR)** status. You can specify the following parameters while executing this batch:

Parameter Name	Description	Mandatory (Yes or No)
Transaction Status	Used to indicate whether you want to rollback transactions which are in the <b>Ignored</b> or <b>Error</b> status. The valid values are: <ul style="list-style-type: none"> <li>IGNR</li> <li>EROR</li> </ul>	Yes
Transaction Header ID	Used when you want to rollback transactions which are received in a particular transaction feed.	No
Transaction Source	Used when you want to rollback transactions which are received from a particular transaction source.	No
Division	Used when you want to rollback transactions belonging to a particular division.	No
Rollback From Date	Used when you want to rollback transactions which were performed from a particular date onwards. <div> <b>Note:</b>  You must specify the date in the YYYY-MM-DD format.  The rollback from date cannot be later than the rollback to date. </div>	No
Rollback To Date	Used when you want to rollback transactions which were performed till a particular date. <div> <b>Note:</b>  You must specify the date in the YYYY-MM-DD format.  The rollback to date cannot be earlier than the rollback from date. </div>	No

Parameter Name	Description	Mandatory (Yes or No)
Chunk Size	Used to specify the number of transactions you want to execute in each work unit.	Yes
Maximum Batch Count	Used to specify the maximum number of transactions after which the data must be transferred to the database.	Yes
Thread Pool Name	Used to specify the thread pool on which you want to execute the batch.	No

**Note:**

If you want to undertake some preprocessing activities (such as cleaning data in any custom tables) during the rollback process, you need to attach a preprocessing algorithm on the **Transaction Feed Management Rollback Preprocessing** algorithm entity in the **Algorithms** tab of the **Division** screen. This algorithm is triggered when you execute the **Rollback (C1-TXNRB)** batch. Note that the system invokes the algorithm which is attached on the division to which the transaction belongs.

A sample preprocessing algorithm type named **C1\_ROBK\_PRPC** is shipped with the product. It does not have any business logic. If you want to undertake some preprocessing activities during the rollback process, you need to create custom algorithm type and attach the respective algorithm on the **TFM - Rollback Pre-Processing** algorithm spot of the respective division. You can refer to the **C1\_ROBK\_PRPC** algorithm type to understand the input parameters that must be passed to the custom algorithm type.

## Feed Status Transition

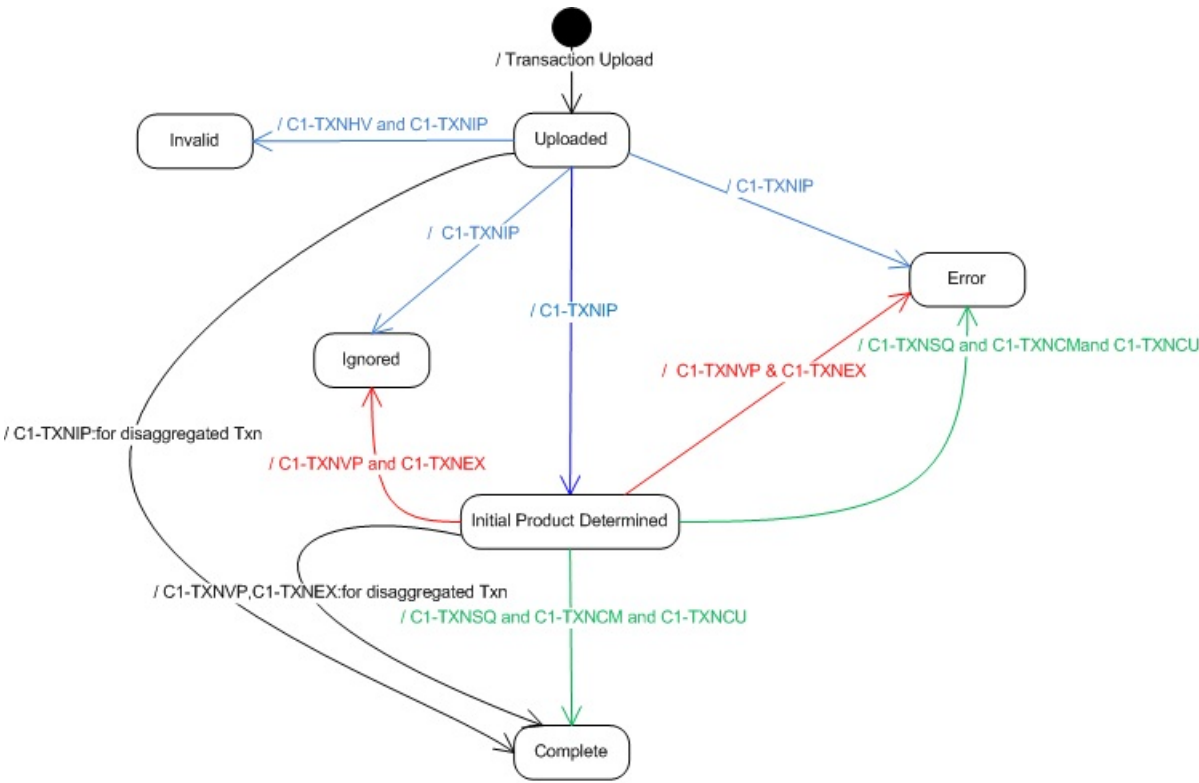

The following figure graphically indicates how a feed moves from one status to another during the transaction feed management process:

Transaction Status Transition

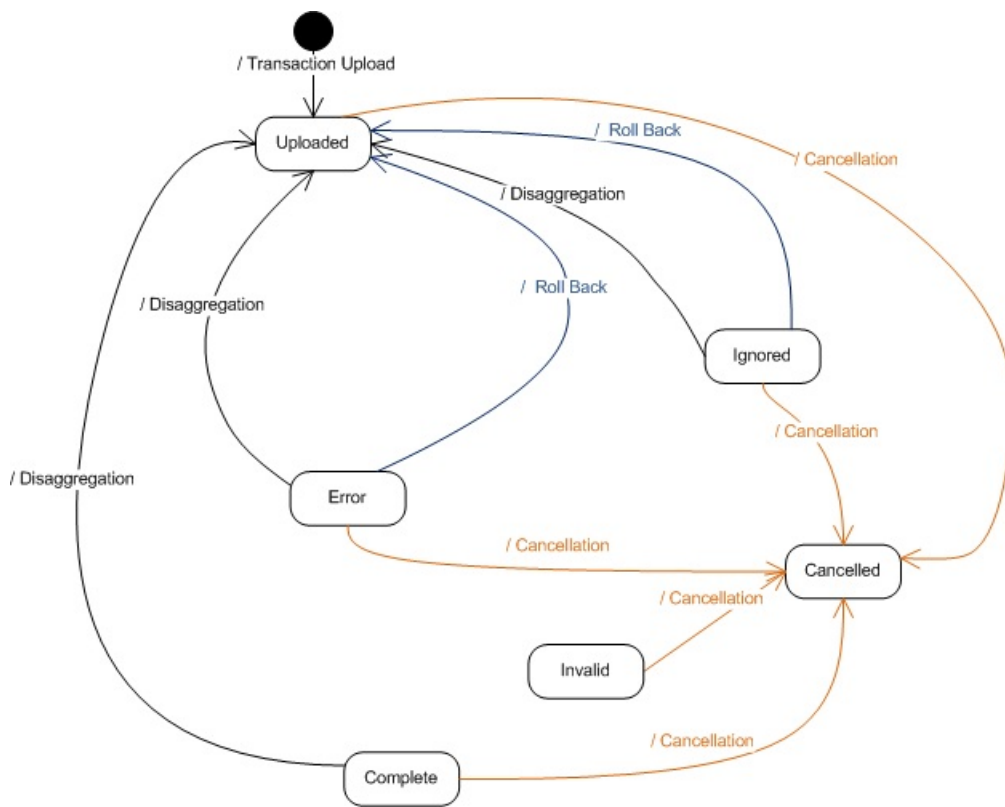

Aggregation

The following figure graphically indicates how a transaction moves from one status to another during the aggregation process:

Disaggregation, Rollback, and Cancellation

The following figure graphically indicates how a transaction moves from one status to another during the disaggregation, rollback, and cancellation processes:

## Transaction Leg Status Transition

This section explains how a transaction leg moves from one status to another during the following sub-processes:

- Transaction Aggregation

**Note:** This is the aggregation process for transactions that are recently uploaded or reaggregated after being fully disaggregated.

- Transaction Rollback
- Transaction Cancellation
- Transaction Disaggregation
- Transaction Reaggregation

**Note:** This is the aggregation process for transactions that are reaggregated after being partially disaggregated.

### Transaction Aggregation

The following table indicates how a transaction leg moves from one status to another during the aggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNIP	Transaction validation fails due to incomplete transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	INVALID	Not applicable as the transaction legs are not yet created
2	C1-TXNIP	Transaction validation fails due to invalid or incorrect transaction data	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
3	C1-TXNIP	Transaction validation is successful but no product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	ERROR	Not applicable as the transaction legs are not yet created
4	C1-TXNIP	Transaction validation is successful and product is derived	UPLOADED	Not applicable as the transaction legs are not yet created	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
5	C1-TXNIP	Transaction validation is successful and the transaction is ignored by the rule based on the transaction attributes	UPLOADED	Not applicable as the transaction legs are not yet created	IGNORED	Not applicable as the transaction legs are not yet created
6	C1-TXNVP and C1-TXNEX	Effective pricing is not found for any of the transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
7	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing for one or more transaction legs but not for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED (when <b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing) INITIAL PRODUCT DETERMINED (when <b>Ignore Transaction</b> flag is set to <b>N</b> in the effective pricing)
8	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>Y</b> in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	IGNORED	IGNORED

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
9	C1-TXNVP and C1-TXNEX	<b>Ignore Transaction</b> flag is set to <b>N</b> in the effective pricing for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED
10	C1-TXNSQ and C1-TXNCM	SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQI, or Exchange rate is not available during currency conversion	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	ERROR	ERROR
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs	INITIAL PRODUCT DETERMINED	INITIAL PRODUCT DETERMINED	COMPLETED	COMPLETED

### **Transaction Rollback**

The following table indicates how a transaction leg moves from one status to another during the rollback process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXNRB	Transactions with the Error (EROR) status are rolled back	ERROR	ERROR	UPLOADED	Not applicable as the transaction legs are not yet created
2	C1-TXNRB	Transactions with the Ignored (IGNR) status are rolled back	IGNORED	IGNORED	UPLOADED	Not applicable as the transaction legs are not yet created

### **Transaction Cancellation**

The following table indicates how a transaction leg moves from one status to another during the cancellation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-TXCNC	Transactions in any status are cancelled	UPLOADED, INITIAL PRODUCT DETERMINED, ERROR, COMPLETED, INVALID, or IGNORED	INITIAL PRODUCT DETERMINED, ERROR, IGNORED, or COMPLETED	CANCELLED	CANCELLED

**Transaction Disaggregation**

The following table indicates how a transaction leg moves from one status to another during the disaggregation process:

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
1	C1-DISTG	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED  <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status
2	C1-DISTG	Transactions in the INVALID or CANCELLED status cannot be disaggregated. In addition, the newly uploaded transactions and fully disaggregated transactions which are in the UPLOADED status cannot be disaggregated.	CANCELLED, INVALID, or UPLOADED	Not applicable as the transactions will not have any legs in these statuses	No change in the status	Not applicable as the transactions will not have any legs in these statuses
3	C1-IDENT	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED  <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	No change in the status	No change in the status

Sr. No.	Batch	Event	Pre Event Transaction Status	Pre Event Transaction Leg Status	Post Event Transaction Status	Post Event Transaction Leg Status
4	C1-IDENT	Transaction has already been disaggregated and is in the UPLOADED status. The transaction legs which were not affected are moved in the staging table and the transaction legs which were affected are deleted. Now, if the effective pricing is changed for the account to which the transaction leg in the staging table is mapped, then that transaction leg must be disaggregated. Thus, disaggregation is done even though the transaction is in the UPLOADED status.	UPLOADED	UPLOADED	No change in the status	No change in the status
5	C1-PDTXN	Transactions in the COMPLETED, ERROR, or IGNORED status are disaggregated.	COMPLETED, ERROR, or IGNORED <b>Note:</b> The transactions in the ERROR or IGNORED status must have legs for disaggregation.	COMPLETED, ERROR, or IGNORED	UPLOADED	Transaction legs which are affected during disaggregation are deleted and the other legs which are not affected are moved to the staging table.

### **Transaction Reaggregation**

The following table indicates how a transaction leg moves from one status to another during the reaggregation process:

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
1	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. <b>IGNORE_SW</b> is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED  Existing Legs: COMPLETED and IGNORED
2	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the business rule (i.e. <b>IGNORE_SW</b> is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED  Existing Legs: IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
3	C1-TXNIP	Transaction in the COMPLETED status was disaggregated. All the transaction legs were in the COMPLETED status. One of the transaction legs in the COMPLETED status was disaggregated. During reaggregation, no product was derived for this transaction leg.	COMPLETED	COMPLETED	ERROR	Derived Leg: No new transaction leg was created  Existing Legs: COMPLETED
4	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, no product was derived for the transaction.	ERROR	No Transaction Legs Exist	ERROR	Derived Leg: No new transaction leg was created  Existing Legs: None
5	C1-TXNIP	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, a product was derived for the transaction.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Leg: INITIAL PRODUCT DETERMINED  Existing Legs: None

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
6	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated. During reaggregation, the effective pricing was not found for the transaction leg.	COMPLETED	COMPLETED, IGNORED	ERROR	Derived Leg: ERROR  Existing Legs: COMPLETED and IGNORED
7	C1-TXNVP and C1-TXNEX	Transaction in the ERROR status was disaggregated. It had no transaction legs. During reaggregation, the effective pricing is found for the transaction legs.	ERROR	No Transaction Legs Exist	INITIAL PRODUCT DETERMINED	Derived Legs: INITIAL PRODUCT DETERMINED  Existing Legs: None
8	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had four transaction legs – two in the COMPLETED status and other two in the IGNORED status. A transaction leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. <b>Ignore Transaction</b> flag is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	COMPLETED	Derived Leg: IGNORED  Existing Legs: COMPLETED and IGNORED

Sr. No.	Batch	Event	Transaction Status Before Disaggregation	Transaction Leg Status Before Disaggregation	Transaction Status After Reaggregation	Transaction Leg Status After Reaggregation
9	C1-TXNVP and C1-TXNEX	Transaction in the COMPLETED status was disaggregated. It had one transaction leg in the COMPLETED status and all other transaction legs in the IGNORED status. The leg in the COMPLETED status was disaggregated due to change in the effective pricing (i.e. <b>Ignore Transaction</b> flag is set to <b>Y</b> ).	COMPLETED	COMPLETED, IGNORED	IGNORED	Derived Leg: IGNORED Existing Legs: IGNORED
10	C1-TXNSQ and C1-TXNCM	While reaggregating transaction legs, SQIs are not defined for the product — division combination, Transaction aggregation rule is not defined for the SQL, or Exchange rate is not available during currency conversion.	COMPLETED, ERROR, IGNORED <b>Note:</b> There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	ERROR	Derived Legs: ERROR Existing Legs: No change in the status
11	C1-TXNSQ and C1-TXNCM	Billable charges are created successfully for all transaction legs which were earlier disaggregated and now reaggregated.	COMPLETED, ERROR, IGNORED <b>Note:</b> There must be no legs for the transaction in the IGNORED status.	COMPLETED, ERROR	COMPLETED	Derived Leg: COMPLETED Existing Legs: No change in the status

## Transaction Data File

You can upload a transaction data file in the following formats:

- Comma Separated Values
- JavaScript Object Notation
- Fixed Position
- Pipe Separated Values
- Tilde Separated Values
- Extensible Markup Language

Before uploading a transaction data file, you need to ensure that it contains the following:

- **File Header** - Every file must have one header record. It should contain the following details:

Header Data	Description	Mandatory (Yes or No)
Transaction Source	Used to specify the source from where the transactions are received.	Yes
Header Date (YYYYMMDD)	Used to specify the header date.	Yes
Transaction Header ID	Used to specify the external transaction header ID.	Yes
File Name	Used to specify the file name.	Yes
Number of Transactions	Used to specify the total number of transaction records in the file.	Yes
Total Transaction Volume	Used to specify the total transaction volume.	Yes
Total Transaction Amount	Used to specify the total transaction amount.	Yes

- **Transaction Record** - Every file must have one or more transaction records. It should contain the following details:

Record Data	Description	Mandatory (Yes or No)
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Source	Used to specify the source from where the transaction is received.	Yes
Transaction Date (YYYYMMDD)	Used to specify the date when the transaction was performed.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	Yes
Customer Reference Number	Used to indicate the customer who has performed the transaction.	No
Division	Used to specify the division to which the transaction belongs.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Transaction Amount	Used to specify the transaction amount.	Yes

Record Data	Description	Mandatory (Yes or No)
Transaction Currency	Used to specify the currency in which the transaction was performed.	Yes
	<b>Note:</b> If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or a credit transaction. The valid values are: <ul style="list-style-type: none"> <li>Plus (+)</li> <li>Minus (-)</li> </ul>	Yes
Account Identifier Type	Used to indicate the account identifier type.	Yes
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes
UDF_NUM_1, UDF_NUM_2, UDF_NUM_3, ..., UDF_NUM_20	Used to specify additional information about the transaction.	No
UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10	Used to specify additional transaction amount.	Yes (Conditional)  <b>Note:</b> The UDF_AMT_N is required when the corresponding UDF_CCY_N is specified.
UDF_CCY_1, UDF_CCY_2, UDF_CCY_3, ....., UDF_CCY_10	Used to specify additional transaction currency.  <b>Note:</b> If you specify a currency other than the pricing currency, the system will do the currency conversion when the appropriate exchange rate is available in the system.	Yes (Conditional)  <b>Note:</b> The UDF_CCY_N is required when the corresponding UDF_AMT_N is specified.
UDF_DTTM_1, UDF_DTTM_2, ....., UDF_DTTM_5	Used to specify additional information about the transaction.	No
UDF_CHAR_1, UDF_CHAR_2, UDF_CHAR_3, ..., UDF_CHAR_50	Used to specify additional information about the transaction.  <b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	No

## Error List

The following table lists the errors that may occur while executing various batches in the transaction feed management process. It also indicates how you can resolve these errors.

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	102	{Checksum Validation Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value other than 'Y', 'y', 'N' or 'n' is specified for the <b>Checksum Validation Required</b> parameter.</li> </ul>
C1-TXNHV	102	{Duplicate Check Required} field invalid.	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value other than 'Y', 'y', 'N' or 'n' is specified for the <b>Duplicate Check Required</b> parameter.</li> </ul>
C1-TXNHV	1314	The Transaction Source is mandatory.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The data is not available in the <b>Transaction Source</b> column.</li> </ul>
C1-TXNHV	1332	Sum of transaction records in the header does not match the total number of records in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1333	Sum of transaction volume in the header does not match the total transaction volume in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1334	Sum of transaction amount in the header does not match the total transaction amount in the file.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>
C1-TXNHV	1338	The Transaction Header ID already exists in the system. Please enter unique header ID.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The same file is uploaded multiple times in the system.</li> </ul>
C1-TXNHV	1341	Exception occurred during the transaction header validation.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The data is not available in the required format.</li> </ul>
C1-TXNHV	1421	Transaction records does not exist in the file. Please check.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>Inappropriate file is uploaded in the system.</li> </ul>

Batch Name	Message Number	Error Message	Message Category	Possible Issues
C1-TXNHV	1422	Sum of transaction records in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The value available in the <b>Number of Transactions</b> column is less than or equal to zero.</li> </ul>
C1-TXNHV	1423	Sum of transaction volume in the header cannot be zero. Please enter valid data in the header.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The value available in the <b>Total Transaction Volume</b> column is less than or equal to zero.</li> </ul>
C1-TXNHV	1663	Transaction Header External Id is missing.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The data is not available in the <b>Transaction Header ID</b> column.</li> </ul>
C1-TXNHV	1664	Header Transaction Amount should be greater than 0.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>The value available in the <b>Total Transaction Amount</b> column is less than or equal to zero.</li> </ul>
C1-TXNIP	102	{Chunk Size} field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Chunk Size</b> parameter is less than or equal to one.</li> </ul>
C1-TXNIP	102	{ Maximum Batch Size } field invalid	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Maximum Batch Count</b> parameter is greater than the value specified for the <b>Chunk Size</b> parameter.</li> </ul>
C1-TXNIP	106	Value { Given Transaction Header Id } too long for field { transactionHeaderId }. Maximum length: 14. Found: { Length of given Transaction Header Id }	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Transaction Header ID</b> parameter exceeds the maximum length of 14 characters.</li> </ul>
C1-TXNIP	106	Value { Given Transaction Source Code } too long for field { transactionSource }. Maximum length: 30. Found: { Length of given Transaction Source Code }	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Transaction Source</b> parameter exceeds the maximum length of 30 characters.</li> </ul>
C1-TXNIP	106	Value { Given Transaction Division } too long for field { division }. Maximum length: 5 Found: { Length of given Transaction Division }	11001	The possible issues could be: <ul style="list-style-type: none"> <li>The value specified for the <b>Division</b> parameter exceeds the maximum length of 5 characters.</li> </ul>

Batch Name	Message Number	Error Message	Message Category	Possible Issues

## Feed Management Dashboard

The **Feed Management Dashboard** screen allows you to view the details of a transaction feed. It allows you to drill down and view:

- Transaction volume details of a feed at the division level
- Transactions in a feed which belong to a division
- Legs of a transaction
- SQIs which are associated with the price item-division combination to which a transaction is mapped
- Calculation lines generated for a transaction leg
- Characteristics defined for each calculation line

This screen consists of the following zones:

- [Search - Feed Level](#) on page 744
- [Division Level Information](#) on page 746
- [Transaction Level Information](#) on page 747
- [Transaction Leg Information](#) on page 748
- [Transaction Leg Service Quantity](#) on page 749
- [Transaction Leg Calculation Lines](#) on page 749
- [Transaction Leg Calc Line Characteristics](#) on page 751

### Search - Feed Level

The **Search - Feed Level** zone allows you to search for a transaction feed using various search criteria. You can view the details of a transaction feed which is already uploaded in the system. This zone contains the following two sections:

- Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Feed Header Date From	Used to search for transaction feeds having header date later than or equal to the specified date.	No
Feed Header Date To	Used to search for transaction feeds having header date earlier than or equal to the specified date.	No
Transaction Source	Used to search for transaction feeds received from a particular transaction source.	No
File Name	Used to search for a transaction feed based on the file name.	No
Feed Load Date From	Used to search for transaction feeds which are uploaded on or later than the specified date.	No
Feed Load Date To	Used to search for transaction feeds which are uploaded on or earlier than the specified date.	No
Transaction Header ID	Used to search for a transaction feed based on the header ID.	No

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the file from where the transaction feed is uploaded.
Transaction Source	Displays the transaction source from where the transaction feed is received.
Transaction Header ID	Displays the transaction header ID.
	<b>Note:</b> The transaction header ID is generated automatically when the file is uploaded.
Transaction Header External ID	Displays the ID mentioned in the file header.
Feed Header Date	Displays the date mentioned in the file header.
Feed Load Date	Displays the date when the transaction feed was uploaded in the system.
Feed Status	Displays the status of the transaction feed. The valid values are: <ul style="list-style-type: none"> <li>• <b>Uploaded</b> - Indicates that the transaction feed is uploaded.</li> <li>• <b>Validated</b> - Indicates that the file header is validated.</li> <li>• <b>Cancelled</b> - Indicates that the transaction feed is cancelled.</li> <li>• <b>Invalid</b> - Indicates that the file header validation failed.</li> </ul>
Error Message	Indicates the reason why the file header validation failed.
Total Volume	Displays the total transaction volume of the feed.
Uploaded Volume	Displays the total transaction volume which is uploaded in the system.
INPD Volume	Displays the total transaction volume which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume for which billable charges are created and completed in the system.

Column Name	Column Description
Error Volume	Displays the total transaction volume which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume which is cancelled in the system.
Ignored Volume	Displays the total transaction volume which is ignored in the system.
Invalid Volume	Displays the total transaction volume which is invalid.

## Division Level Information

The **Division Level Information** zone allows you to drill down and view the transaction volume details of a feed at the division level. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used when you want to view the transaction volume details of a particular division received through the feed.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Division	Indicates the division.
Total Volume	Displays the total transaction volume of the division.
Uploaded Volume	Displays the total transaction volume (of the division) which is uploaded in the system.
INPD Volume	Displays the total transaction volume (of the division) which is validated and for which price item is determined in the system.
Completed Volume	Displays the total transaction volume (of the division) for which billable charges are created and completed in the system.
Error Volume	Displays the total transaction volume (of the division) which could not pass through the validation, price item determination, or billable charge creation process.
Cancelled Volume	Displays the total transaction volume (of the division) which is cancelled in the system.
Ignored Volume	Displays the total transaction volume (of the division) which is ignored in the system.
Invalid Volume	Displays the total transaction volume (of the division) which is invalid.

By default, the **Division Level Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction feed in the **Search — Feed Level** zone.

## Transaction Level Information

The **Transaction Level Information** zone lists transactions in a feed which belong to a division. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Transaction Status	Used to search transactions with a particular status.	No
External Reference Number	Used to search a transaction with a particular external reference number.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
External Reference Number	Displays the external reference number of the transaction.
Division	Indicates the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction was performed.
Transaction Volume	Displays the transaction volume.
Transaction Amount	Displays the transaction amount.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.

Column Name	Column Description
Customer Reference Number	Indicates the customer who performed the transaction.
Transaction Status	Indicates the status of the transaction.
Error Message	Indicates the reason why the validation, price item determination, or billable charge creation process failed.
Rule	Indicates the rule which was met while determining initial price item for the transaction.  <b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction.  <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

**Transaction Leg Information**

The **Transaction Leg Information** zone lists the legs of a transaction. It contains the following columns:

Column Name	Column Description
Transaction ID	Indicates the transaction to which the transaction leg belongs.
Sequence	Displays the sequence number of transaction leg.
Account Identifier Type	Indicates the type of account identifier to which the transaction is mapped.
Account Identifier	Indicates the account which will bear the charges for the transaction.
Price Item	Indicates the price item to which the transaction is mapped.
Variance	Indicates the variance parameter which is used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .

Column Name	Column Description
Billable Charge ID	Indicates the billable charge which is created for the transaction leg.
	<b>Note:</b> The data appears in this column only when the billable charge is created for the transaction leg. It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the billable charge.
Transaction Calculation ID	Displays the transaction calculation ID.
	<b>Note:</b> The data appears in this column only when the transaction leg is rated before billing.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Information** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction in the **Transaction Level Information** zone.

## Transaction Leg Service Quantity

The **Transaction Leg Service Quantity** zone lists the SQIs which are associated with the price item-division combination to which a transaction is mapped. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Daily Service Quantity	Displays the SQI value which is calculated using the transaction aggregation rule defined for the price item - division combination.

By default, the **Transaction Leg Service Quantity** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

#### Related Topics

## Transaction Leg Calculation Lines

During the pass through charge calculation, a calculation line is created for each rate component. The **Transaction Leg Calculation Lines** zone lists the calculation lines created for a transaction leg. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Price Component ID	Indicates the price component which is used during calculation.
Rate	Displays the rate which is used for calculation.
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Calculated Amount	Displays the calculated charge amount which is rounded off. This amount appears in the invoice currency.
Precise Calculated Amount	Displays the calculated charge amount. This amount appears in the invoice currency.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Base Amount	Displays the total amount derived from the cross-referenced line(s) that the current line then used to calculate the charge amount.
Pricing Amount	Displays the calculated charge amount. This amount appears in the pricing currency.
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Print	Indicates whether information about the calculation line must be printed on the person's bill. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Description on Bill	Displays the summarized information about the calculation line that will be printed on the bill.
Distribution Code	Indicates the distribution code associated with the rate component.
Pricing Currency	Indicates the currency in which the price item pricing is defined.
Aggregation Parameter Group ID	Indicates the aggregation parameter group using which the transaction leg is aggregated in the billable charge.

By default, the **Transaction Leg Calculation Lines** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

## Transaction Leg Calc Line Characteristics

The **Transaction Leg Calc Line Characteristics** zone lists the characteristics defined for each calculation line. It contains the following columns:

Column Name	Column Description
Transaction Calculation ID	Displays the transaction calculation ID.
Sequence	Indicates the sequence in which the calculation line was created. It is the sequence of the rate component which is used in the rate schedule.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

By default, the **Transaction Leg Calc Line Characteristics** zone does not appear in the **Feed Management Dashboard** screen. It appears only when you click the **Broadcast**  icon corresponding to the transaction leg, which is rated before billing, in the **Transaction Leg Information** zone.

## Searching for a Transaction Feed

### Procedure

To search for a transaction feed:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Feed Management Dashboard**.  
The **Feed Management Dashboard** screen appears.
3. Enter the search criteria in the **Search — Feed Level** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of transaction feeds that meet the search criteria appears in the **Search Results** section.

## View Billed Transactions

The **View Billed Transactions** screen allows you to view the transactions which are billed to the person. This screen consists of the following zones:

- [Search Bill](#) on page 755
- [Bill Segments](#) on page 757
- [Transaction Details](#) on page 758
- [SQ Details](#) on page 759

You can also access this screen from the **Bill** screen by selecting the **Go To View Billed Transactions** option from the **Bill ID** context menu. The only difference is that the **Search Bill** zone does not appear when you access this screen from the **Bill** screen.

## Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search bills of a particular person.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to search a particular bill.	No
	<b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Division	Used to search bills of accounts that belong to a particular division.	Yes (Conditional)
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Primary Account Identifier Type	Used to select the identifier type based on which you want to search bills of a particular account.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Primary Account Identifier	Used when you want search bills of a particular account.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Primary Person Identifier Type	Used to select the identifier type based on which you want to search bills of a particular person.	Yes (Conditional)
		<b>Note:</b> If you enter the person identifier as a search criteria, you have to select the person identifier type.
Primary Person Identifier	Used when you want search bills of a particular person.	Yes (Conditional)
		<b>Note:</b> If you specify the person identifier type as a search criteria, you have to enter the person identifier.
Bill Completion From Date	Used to search bills which are completed on or later than the specified date.	No
Bill Completion To Date	Used to search bills which are completed on or earlier than the specified date.	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Status	Used to search bills with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Complete</li> <li>Pending</li> </ul>	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID. <b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Bill Status	Displays the status of the bill.
Completion Date	Displays the date when the bill was completed.
Total Bill Amount	Displays the total amount billed to the person.
Invoice Currency	Displays the currency in which the amount is billed to the person.
Account Identifier Type	Displays the primary account identifier type.
Account Identifier	Indicates the account for which the bill is created.
Person Identifier Type	Displays the primary person identifier type.
Person Identifier	Indicates the person for whom the bill is created.
Division	Displays the division to which the account belongs.
Alternate Bill ID	Displays the alternate bill ID.

## Bill Segments

The **Bill Segments** zone lists the bill segments of a bill. This zone contains the following columns:

Column Name	Column Description
Bill Segment ID	Displays the bill segment ID. <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen appears with the details of the respective bill segment.
Status	Indicates the status of the bill segment.

Column Name	Column Description
Start Date	Displays the start date of the bill segment.
End Date	Displays the end date of the bill segment.
Amount	Displays the amount of the bill segment.
Currency	Indicates the currency in which the bill segment is generated.
Price Item	Indicates the price item for which the bill segment is generated.
Variance Parameter	Indicates the variance parameter which is used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the price item for determining price item pricing.  <b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Billable Charge ID	Indicates the billable charge for which the bill segment is generated.  <b>Note:</b> It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the respective billable charge.
Account Information	Indicates the member account (in the invoicing group) for which the bill segment is generated.
Invoice Construct ID	Indicates the construct through which the bill segment is generated.

By default, the **Bill Segments** zone does not appear in the **View Billed Transactions** screen. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Search** zone.

## Transaction Details

The **Transaction Details** zone lists the transactions for which the billable charge (corresponding to the bill segment) is created. This zone contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.  <b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Date	Displays the date when the transaction was performed.
Transaction Volume	Displays the transaction volume.

Column Name	Column Description
Transaction Amount	Displays the transaction amount.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Initial Price Item	Indicates the price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

By default, the **Transaction Details** zone does not appear in the **View Billed Transactions** screen. It appears only when you click the **Broadcast**  icon corresponding to the bill segment in the **Bill Segments** zone.

## Transaction Details

The **Transaction Details** screen allows you to search for transactions using various search criteria. It also allows you to add and copy a transaction. This screen consists of the following zones:

- [Search](#) on page 761

### Search

The **Search** zone allows you to search for transactions using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. You can select either of the following query options:
  - **Uploaded** — Used to indicate that you want to search for a transaction which is recently uploaded in the system.
  - **Initial Price Item Determined** — Used to indicate that you want to search for a transaction for which a price item is determined in the system.
  - **Ignored** — Used to indicate that you want to search for a transaction which is ignored in the system.
  - **Error** — Used to indicate that you want to search for a transaction which could not pass through the validation, price item determination, or billable charge creation process.
  - **Cancelled** — Used to indicate that you want to search for a transaction which is cancelled in the system.
  - **Completed** — Used to indicate that you want to search for a transaction for which billable charge is completed in the system.
  - **Invalid** — Used to indicate that you want to search for a transaction which is invalid.
- **Search Results** — The **Search Results** section displays the records based on the specified search criteria. The columns in the search results change depending on the query option selected.

You can also add a transaction manually by clicking the **Add** link in the upper right corner of this zone.

## **Searching for an UPLD Transaction**

### **Procedure**

To search for an uploaded transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.  
The **Transaction Details** screen appears.

3. Select the **Uploaded** option from the **Search By** list to indicate that you want to search for a transaction which is recently uploaded in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Manual Entry	Indicates whether the transaction is manually added in the system. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Transaction Information	Displays additional information about the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

6. View the legs of the transaction in the **Transaction Legs** zone, if required.

**Note:** You can only view the legs of an uploaded transaction which is partially disaggregated.

## Searching for an INPD Transaction

### Procedure

To search for a transaction for which a price item is determined:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.

The **Transaction Details** screen appears.

3. Select the **Initial Price Item Determined** option from the **Search By** list to indicate that you want to search for a transaction for which a price item is determined in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Price Item	Used to search transactions which are mapped to a particular price item.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all the input fields except the date fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

##### 5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Transaction Information	Displays additional information about the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

## Searching for an COMP Transaction

### Procedure

To search for a transaction for which billable charge is completed:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.

The **Transaction Details** screen appears.

3. Select the **Completed** option from the **Search By** list to indicate that you want to search for a transaction for which billable charge is completed in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Billable Charge ID	Used to search transactions which are included in a particular billable charge.	No

Field Name	Field Description	Mandatory (Yes or No)
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

## Searching for an CNCL Transaction

### Procedure

To search for a cancelled transaction:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.  
The **Transaction Details** screen appears.
- Select the **Cancelled** option from the **Search By** list to indicate that you want to search for a transaction which is cancelled in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No

Field Name	Field Description	Mandatory (Yes or No)
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Manual Entry	Indicates whether the transaction is manually added in the system. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Date	Displays the date when the transaction was performed.

Column Name	Column Description
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Transaction Information	Displays additional information about the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

## Searching for an EROR Transaction

### Procedure

To search for a transaction with an error:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.  
The **Transaction Details** screen appears.
3. Select the **Error** option from the **Search By** list to indicate that you want to search for a transaction which could not pass through the validation, price item determination, or billable charge creation process.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Indicates the person who performed the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Date	Displays the date when the transaction was performed.

Column Name	Column Description
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Error Message	<p>Indicates the reason why the validation and price item determination process failed.</p> <p><b>Note:</b> If the error occurred while executing the <b>Validate Transaction and Derive Price Item (C1-TXNIP)</b> batch, a generic message appears indicating that the transaction is in the <b>Error (EROR)</b> status due to one or more reasons. You can view all error messages logged for the transaction in the <b>Transaction Error Messages</b> zone. However, if the error occurred while executing the <b>Price Item Pricing Verification (C1-TXNVP)</b> or <b>Service Quantity Calculation (C1-TXNSQ)</b> batch, a generic message appears indicating that one or more transaction legs are in the <b>Error (EROR)</b> status. You can view the error message corresponding to the transaction leg in the <b>Transaction Legs</b> zone.</p>
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Rule	<p>Indicates the rule which was met while determining initial price item for the transaction.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.</p> <p>This column is blank when the error has occurred while determining initial price item for the transaction.</p>
Transaction Information	<p>Displays additional information about the transaction.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.</p>

- View the legs of the transaction in the **Transaction Legs** zone, if required.
- View the error messages logged for the transaction in the **Transaction Error Messages** zone, if required.

## Searching for an IGNR Transaction

**Procedure**

To search for an ignored transaction:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.

The **Transaction Details** screen appears.

3. Select the **Ignored** option from the **Search By** list to indicate that you want to search for a transaction which is ignored in the system.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

##### 5. Click **Search**.

## Searching for an INVL Transaction

### Procedure

To search for an invalid transaction:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.  
The **Transaction Details** screen appears.
3. Select the **Invalid** option from the **Search By** list to indicate that you want to search for a transaction which is invalid.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
External Reference Number	Used to search a transaction with a particular external reference number.	No
Division	Used to search transactions that belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Source	Used to search transactions received from a particular transaction source.	No
Transaction Record Type	Used to search transactions with a particular record type.	No
Account Identifier Type	Used to select the identifier type based on which you want to search transactions of an account.	No
Account Identifier	Used to search transactions which are performed for a particular account.	No
Transaction Date	Used to search transactions which are performed on a particular date.	No
Transaction Upload Date	Used to search transactions which are uploaded in the system on a particular date.	No
Transaction Header ID	Used to search transactions which are uploaded through a particular transaction feed.	No

Field Name	Field Description	Mandatory (Yes or No)
Disaggregated	Used to indicate whether you want to search transactions which were disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No

4. Enter the search criteria in the **Search** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of transactions that meet the search criteria appears in the search results. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears with the details of the respective transaction.
Transaction Source	Displays the transaction source from where the transaction was received.
Transaction Record Type	Displays the record type of the transaction.
Transaction Upload Date	Displays the date when the transaction was uploaded in the system.
Transaction Header ID	Indicates the transaction feed through which the transaction was uploaded in the system.
External Reference Number	Displays the external reference number of the transaction.
Disaggregation Status	Indicates whether the transaction was disaggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Transaction Date	Displays the date when the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Volume	Displays the transaction volume.
Division	Indicates the division to which the transaction belongs.
Account Information	Indicates the account for which the transaction was performed. The string includes the account identifier type and account identifier.
Transaction Information	Displays additional information about the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Transaction Details</b> screen appears where you can view the details of the transaction.

Column Name	Column Description
Error Message	Indicates the reason why the transaction is invalid.
	<b>Note:</b> A generic message appears indicating that the error occurred due to one or more reasons. You can view all error messages logged for the transaction in the <b>Transaction Error Messages</b> zone.

- View the error messages logged for the transaction in the **Transaction Error Messages** zone, if required.

**Viewing the Transaction Legs**

**Procedure**

To view the legs of a transaction:

- Search for the transaction in the **Transaction Details** screen.
- In the **Search Results** section, click the **Broadcast**  icon corresponding to the transaction whose legs you want to view.

The **Transaction Legs** zone appears. It contains the following columns:

Column Name	Column Description
Transaction ID	Displays the transaction ID.
Transaction Leg Status	Indicates the status of the transaction leg. The valid values are: <ul style="list-style-type: none"> <li>Uploaded (UPLD)</li> <li>Initial Price Item Derived (INPD)</li> <li>Ignored (IGNR)</li> <li>Error (EROR)</li> <li>Completed (COMP)</li> </ul>
Account Information	Indicates the account which will bear the charges for the transaction. The string includes the account identifier type, account identifier, and division (to which the derived account belongs).
Initial Price Item Code	Indicates the initial price item to which the transaction is mapped.

Column Name	Column Description
Variance Parameter	Indicates the variance parameter which is used along with the final price item for determining price item pricing.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>False</b> .
Price Item Parameters	Displays a comma-separated list of parameter values. It indicates the price item parameters and their values which are used along with the final price item for determining price item pricing.
	<b>Note:</b> This column appears only when the <b>Multi Price Parameter</b> option type of the <b>Multi Parameter Based Pricing (C1_PPARM_FLG)</b> feature configuration is set to <b>True</b> .
Final Price Item Code	Indicates the final price item to which the transaction is mapped.
Rule	Indicates the rule which was met while determining initial price item for the transaction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rule</b> screen appears where you can view the details of the rule.
Price Assignment ID	Indicates the effective pricing which is available for the account, price item or regular bundle (to which the price item belongs) or parent (regular) bundle (to which the regular bundle belongs) and/or variance parameter or price item parameters (parameter group) combination on the processing date.
Aggregate Transaction	Indicates whether the transaction leg is aggregated. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Billable Charge ID	Indicates the billable charge in which the transaction leg is included for billing.
Division	Indicates the division to which the derived account belongs. The derived account means the account which will bear the charges for the transaction.
Sequence Number	Displays the sequence number of the transaction leg.
Error Message	Indicates the reason why the price item pricing verification or billable charge creation process failed.

**Note:**

The **Broadcast**  icon appears corresponding to an UPLD, INPD, IGNR, EROR and COMP transaction. This is because you can only view legs of an UPLD, INPD, IGNR, EROR and COMP transaction.

You can only view the legs of an uploaded transaction which is partially disaggregated.

### 3. View the details of the transaction legs in the **Transaction Legs** zone.

How to search for a transaction for which billable charge is completed	<a href="#">Searching for an COMP Transaction</a> on page 767

Viewing Error Messages

Procedure

To view the error messages logged for a transaction:

1. Search for the transaction which is in the **Invalid (INVL)** or **Error (EROR)** status in the **Transaction Details** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the transaction whose error messages you want to view.

The **Transaction Error Messages** zone appears. It contains the following columns:

Column Name	Column Description
Error Message	Indicates the reason why the transaction is in the <b>Invalid (INVL)</b> or <b>Error (EROR)</b> status.

**Note:** The **Transaction Error Messages** zone appears when the transactions are in the **Invalid (INVL)** status and when the errors occur while executing the **Validate Transaction and Derive Price Item (C1-TXNIP)** batch. It does not appear when the errors occur while executing the **Price Item Pricing Verification (C1-TXNVP)** or **Service Quantity Calculation (C1-TXNSQ)** batch.

3. View the error messages in the **Transaction Error Messages** zone.

Related Topics

How to search for a transaction with an error	<a href="#">Searching for an EROR Transaction</a> on page 771
How to search for an invalid transaction	<a href="#">Searching for an INVL Transaction</a> on page 776

Viewing the Transaction Details

Procedure

To view the details of a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose details you want to view.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description
Transaction ID	Displays the transaction ID.
	<b>Note:</b> The transaction ID is generated automatically when the transaction is uploaded or manually created in the system.
Transaction Source	Displays the transaction source from where the transaction was received.
Division	Displays the division to which the transaction belongs.
Transaction Record Type	Displays the record type of the transaction.
Transaction Date	Displays the date when the transaction was performed.
Manual Entry	Indicates whether the transaction was manually entered in the system.
Credit/Debit Indicator	Indicates whether the transaction is a debit or credit transaction.
External Reference Number	Displays the external reference number of the transaction.
Customer Reference Number	Indicates the person who performed the transaction.
Account Identifier Type	Displays the type of account identifier.
Account Identifier	Indicates the account for which the transaction was performed.
Transaction Amount	Displays the transaction amount.
Transaction Currency	Indicates the currency in which the transaction was performed.
Transaction Volume	Displays the transaction volume.
Account ID	Indicates the account for which the transaction was performed.
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Displays additional information about the transaction.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Displays additional information about the transaction.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	

Field Name	Field Description
<div>Additional Date 1, Additional Date 2, ....., Additional Date 5</div> <div> <b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name. </div>	Displays additional information about the transaction.
<div>Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ....., Additional Numeric Data 20</div> <div> <b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name. </div>	
<div>Additional Data 1, Additional Data 2, Additional Data 3, ....., Additional Data 50</div> <div> <b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name. </div>	Displays additional information about the transaction.

Adding a Transaction

Prerequisites

To add a transaction manually, you should have:

- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

Procedure

To add a transaction manually:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Transaction Feed Management** and then click **Transaction Details**.  
The **Transaction Details** screen appears.
- Click the **Add** link in the upper right corner of the **Search** zone.  
The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction was received.	Yes
Division	Used to specify the division to which the transaction belongs.	Yes
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction was performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Customer Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional)
		<b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes (Conditional)
		<b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction was performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional)
	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	<b>Note:</b> This field is required when you are specifying the currency in the corresponding field.
	<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	

Field Name	Field Description	Mandatory (Yes or No)
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional)
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	<b>Note:</b> This field is required when you are specifying the amount in the corresponding field.
Additional Date 1, Additional Date 2, ..., Additional Date 5	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ....., Additional Numeric Data 20	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	
Additional Data 1, Additional Data 2, Additional Data 3, ..., Additional Data 50	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.	<b>Note:</b> These fields appear only when you select the transaction source and record type from the respective list.	

4. Enter the required details.

5. Click **Save**.

The transaction is added in the system. If the following option types are set in the **Dummy Header (C1-TXNDMYID)** feature configuration, the header details including the header ID are generated automatically for the manually added transaction:

- Dummy File Name
- Dummy Header ID
- Dummy Transaction Source
- Dummy Header Date

**Note:** The header ID remains same for all transactions which are manually created on a particular date. You can cancel manually added transactions using the Transaction Header ID.

## Copying a Transaction

Instead of adding a transaction from scratch, you can create a copy of similar transaction and then edit it accordingly.

### Prerequisites

To copy a transaction, you should have:

- Transaction (whose copy you want to create) available in the application
- Divisions, account identifier types, transaction sources, transaction record types, and currencies defined in the application

### Procedure

To copy a transaction:

1. Search for the transaction in the **Transaction Details** screen.
2. In the **Search Results** section, click the link in the **Transaction ID** column corresponding to the transaction whose copy you want to create.

The **Transaction Details** screen appears. Note that the fields are in the read-only mode.

3. Click **Copy**.

The **Transaction Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source from where the transaction was received.	Yes
Division	Used to specify the division to which the transaction belongs.	Yes
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	
Transaction Record Type	Used to specify the record type of the transaction.	Yes
Transaction Date	Used to specify the date when the transaction was performed.	Yes
Manual Entry	Indicates that the transaction is manually entered in the system.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Credit/Debit Indicator	Used to indicate whether the transaction is a debit or credit transaction.	Yes
External Reference Number	Used to specify the external reference number of the transaction.	No
Price Item Reference Number	Used to indicate the person who performed the transaction.	No
Account Identifier Type	Used to specify the type of account identifier.	Yes (Conditional)  <b>Note:</b> If you enter the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which the transaction was performed.	Yes (Conditional)  <b>Note:</b> If you specify the account identifier type as a search criteria, you have to enter the account identifier.
Transaction Amount	Used to specify the transaction amount.	Yes
Transaction Currency	Used to indicate the currency in which the transaction was performed.	Yes
Transaction Volume	Used to specify the transaction volume.	Yes
Additional Amount 1, Additional Amount 2, ..., Additional Amount 10	Used to specify additional information about the transaction.	Yes (Conditional)  <b>Note:</b> This field is required when you are specifying the currency in the corresponding field.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Amount 1 Currency Code, Amount 2 Currency Code, ..., Amount 10 Currency Code	Used to specify additional information about the transaction.	Yes (Conditional)  <b>Note:</b> This field is required when you are specifying the amount in the corresponding field.
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

Field Name	Field Description	Mandatory (Yes or No)
Additional Date 1, Additional Date 2, ....., Additional Date 5	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Numeric Data 1, Additional Numeric Data 2, Additional Numeric Data 3, ....., Additional Numeric Data 20	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		
Additional Data 1, Additional Data 2, Additional Data 3, ....., Additional Data 50	Used to specify additional information about the transaction.	No
<b>Note:</b> If the business label is defined for any of these user defined fields, the business label appears instead of the field name.		

4. Enter the required details.

5. Click **Save**.

The new transaction is added in the system.

## Transaction Source

The **Transaction Source** screen allows you to define, edit, delete, and copy a transaction source. This screen consists of the following zones:

- [Search Transaction Source](#) on page 788

## Search Transaction Source

The **Search Transaction Source** zone allows you to search for a transaction source. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search a particular transaction source.	No
Description	Used to search transaction sources with a particular description.	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Source	Displays the transaction source.
Description	Displays the description of the transaction source.
Account Identifier Type	Indicates the type of account identifier that will be received from the transaction source.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Transaction Source</b> screen appears where you can edit the details of the transaction source.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the transaction source. <b>Note:</b> You can only delete a transaction source which is not yet used.
Copy	On clicking the <b>Copy</b> (📄📄) icon, the <b>Transaction Source</b> screen appears where you can create a transaction source using an existing transaction source.

You can create a new transaction source by clicking the **Add** link in the upper right corner of this zone.

How to copy a transaction source	<a href="#">Copying a Transaction Source</a> on page 791

## Searching for a Transaction Source

### Procedure

To search for a transaction source:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **T** and then click **Transaction Source**.

The **Transaction Source** screen appears.

- Enter the search criteria in the **Search Transaction Source** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of transaction sources that meet the search criteria appears in the **Search Results** section.

## Defining a Transaction Source

### Prerequisites

To define a transaction source, you should have:

- Account identifier types defined in the application

### Procedure

To define a transaction source:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **T** and then click **Transaction Source**.

The **Transaction Source** screen appears.

- Click the **Add** link in the upper right corner of the **Search Transaction Source** zone.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the transaction source.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- Enter the required details.
- Click **Save**.

The transaction source is defined.

**Editing a Transaction Source**

**Prerequisites**

To edit a transaction source, you should have:

- Account identifier types defined in the application

**Procedure**

To edit a transaction source:

- Search for the transaction source in the **Transaction Source** screen.
- In the **Search Results** section, click the **Edit** () icon in the **Edit** column corresponding to the transaction source whose details you want to edit.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Displays the transaction source.	Not applicable
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

- Modify the required details.
- Click **Save**.

The changes made to the transaction source are saved.

**Related Topics**

**Deleting a Transaction Source**

**Procedure**

To delete a transaction source:

- Search for the transaction source in the **Transaction Source** screen.

2. In the **Search Results** section, click the **Delete** () icon in the **Delete** column corresponding to the transaction source that you want to delete.

A message appears confirming whether you want to delete the transaction source.

**Note:** You can only delete a transaction source which is not yet used.

3. Click **OK**.

The transaction source is deleted.

### **Related Topics**

For more information on...	See...
How to search for a transaction source	<a href="#">Searching for a Transaction Source</a> on page 788

## **Copying a Transaction Source**

Instead of creating a transaction source from scratch, you can create a new transaction source using an existing transaction source. This is possible through copying a transaction source. Once you create a copy of a transaction source, the record types defined for the original transaction source are also copied to the new transaction source.

### **Prerequisites**

To copy a transaction source, you should have:

- Transaction source (whose copy you want to create) defined in the application
- Account identifier types defined in the application

### **Procedure**

To copy a transaction source:

1. Search for the transaction source in the **Transaction Source** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the transaction source whose copy you want to create.

The **Transaction Source** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to specify the transaction source.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the transaction source.	
Description	Used to specify the description for the transaction source.	Yes
Account Identifier Type	Used to indicate the type of account identifier that will be received from the transaction source.	Yes

3. Enter the required details.
4. Click **Save**.

The new transaction source is defined.

### **Related Topics**

For more information on...	See...
How to search for a transaction source	<a href="#">Searching for a Transaction Source</a> on page 788

## Transaction Record Type

The **Transaction Record Type** screen allows you to define, edit, delete, and copy a transaction record type. While defining a transaction record type, you need to define a rule type. This rule type is invoked for transactions with the transaction source and record type combination. While defining a rule type, you can select the transaction detail fields that you want to use as input or output parameters in a rule.

Besides using the transaction detail fields, the system allows you to use fields which are not part of the standard transaction details. These fields are referred to as temporary fields and are defined similar to other fields, but are not associated with any ORMB tables. You need to associate temporary fields with the rule type while defining a transaction record type. Once associated, you can use the temporary field as input or output parameter while defining a rule using the rule type.

**Note:** At present, you can only associate a temporary field with a rule type, but cannot use the temporary field in a rule which is created using the rule type. The latter part of the functionality will be available in a future release of Oracle Revenue Management and Billing.

The **Transaction Record Type** screen consists of the following zones:

- [Search Transaction Record Type](#) on page 792

### Search Transaction Record Type

The **Search Transaction Record Type** zone allows you to search for a transaction record type. This zone contains the following two sections:

- Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to search transaction record types defined for a particular transaction source.	No
Transaction Record Type	Used to search a particular transaction record type.	No
Description	Used to search transaction record types with a particular description.	No

- Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Transaction Record Type	Displays the transaction record type.
Description	Displays the description of the transaction record type.
Transaction Source	Indicates the transaction source for which the transaction record type is defined.

Column Name	Column Description
Rule Type	Indicates the rule type that is invoked for the transaction record type.
	<b>Note:</b> It has a link. On clicking the link, the <b>View Rule Type</b> screen appears where you can view the details of the respective rule type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Transaction Record Type</b> screen appears where you can edit the details of the transaction record type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the transaction record type.
	<b>Note:</b> You can delete a transaction record type when: <ul style="list-style-type: none"> <li>• It is not yet used.</li> <li>• Rules are not yet defined using the rule type which is invoked by the transaction source and record type combination.</li> </ul>
Copy	On clicking the <b>Copy</b> (  ) icon, the <b>Transaction Record Type</b> screen appears where you can create a new transaction record type using an existing transaction record type.

You can create a new transaction record type by clicking the **Add** link in the upper right corner of this zone.

**Defining a Transaction Record Type**

**Prerequisites**

To define a transaction record type, you should have:

- Transaction sources defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

**Procedure**

To define a transaction record type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Record Type**.  
The **Transaction Record Type** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Transaction Record Type** zone.  
The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Transaction Source</b> window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore ( <b>_</b> ) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to specify the rule type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	<p>Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.</p> <p><b>Note:</b> This algorithm checks whether:</p> <ul style="list-style-type: none"> <li>• The values specified against the output parameters exist in the system</li> <li>• The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination</li> </ul> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Info String Algorithm	Used to specify the algorithm that will generate the information string which appears in the <b>Transaction Information</b> column throughout the application.	No
	<p><b>Note:</b> This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes
Maximum Price Items to be mapped	<p>Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• 00</li> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> <li>• 11</li> <li>• 12</li> <li>• 13</li> <li>• 14</li> <li>• 15</li> </ul> <p><b>Note:</b> At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	Yes

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p><b>Note:</b> The business label appears when you add, copy, or view a transaction in the <b>Transaction Details</b> screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

**Note:** At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT\_NBR), Account Identifier Type (ACCT\_NBR\_TYPE\_CD), Division (CIS\_DIVISION), Currency Code (CURRENCY\_CD), Customer Reference Number (CUST\_REF\_NBR), Do not Aggregate Switch (DO\_NOT\_AGG\_SW), External Reference Number (EXT\_TXN\_NBR), Credit/Debit Indicator (HOW\_TO\_USE\_TXN\_FLG), Manual Entry (MANUAL\_SW), Transaction Amount (TXN\_AMT), Transaction Date (TXN\_DTTM), Transaction Record Type (TXN\_REC\_TYPE\_CD), Transaction Source (TXN\_SOURCE\_CD), Transaction Upload Date (TXN\_UPLOAD\_DTTM), Transaction Volume (TXN\_VOL), Additional Amount 1 (UDF\_AMT\_1), Additional Amount 2 (UDF\_AMT\_2), Additional Amount 3 (UDF\_AMT\_3), Additional Amount 4 (UDF\_AMT\_4), Additional Amount 5 (UDF\_AMT\_5), Additional Amount 6 (UDF\_AMT\_6), Additional Amount 7 (UDF\_AMT\_7), Additional Amount 8 (UDF\_AMT\_8), Additional Amount 9 (UDF\_AMT\_9), Additional Amount 10 (UDF\_AMT\_10), Additional Data 1 (UDF\_CHAR\_1), Additional Data 2 (UDF\_CHAR\_2), Additional Data 3 (UDF\_CHAR\_3), Additional Data 4 (UDF\_CHAR\_4), Additional Data 5 (UDF\_CHAR\_5), Additional Data 6 (UDF\_CHAR\_6), Additional Data 7 (UDF\_CHAR\_7), Additional Data 8 (UDF\_CHAR\_8), Additional Data 9 (UDF\_CHAR\_9), Additional Data 10 (UDF\_CHAR\_10), Additional Data 11 (UDF\_CHAR\_11), Additional Data 12 (UDF\_CHAR\_12), Additional Data 13 (UDF\_CHAR\_13), Additional Data 14 (UDF\_CHAR\_14), Additional Data 15 (UDF\_CHAR\_15), Additional Data 16 (UDF\_CHAR\_16), Additional Data 17 (UDF\_CHAR\_17), Additional Data 18 (UDF\_CHAR\_18), Additional Data 19 (UDF\_CHAR\_19), Additional Data 20 (UDF\_CHAR\_20), Additional Data 21 (UDF\_CHAR\_21), Additional Data 22 (UDF\_CHAR\_22), Additional Data 23 (UDF\_CHAR\_23), Additional Data 24 (UDF\_CHAR\_24), Additional Data 25 (UDF\_CHAR\_25), Additional Data 26 (UDF\_CHAR\_26), Additional Data 27 (UDF\_CHAR\_27), Additional Data 28 (UDF\_CHAR\_28), Additional Data 29 (UDF\_CHAR\_29), Additional Data 30 (UDF\_CHAR\_30), Additional Data 31 (UDF\_CHAR\_31), Additional Data 32 (UDF\_CHAR\_32), Additional Data 33 (UDF\_CHAR\_33), Additional Data 34 (UDF\_CHAR\_34), Additional Data 35 (UDF\_CHAR\_35), Additional Data 36 (UDF\_CHAR\_36), Additional Data 37 (UDF\_CHAR\_37), Additional Data 38 (UDF\_CHAR\_38), Additional Data 39 (UDF\_CHAR\_39), Additional Data 40 (UDF\_CHAR\_40), Additional Data 41 (UDF\_CHAR\_41), Additional Data 42 (UDF\_CHAR\_42), Additional Data 43 (UDF\_CHAR\_43), Additional Data 44 (UDF\_CHAR\_44), Additional Data 45 (UDF\_CHAR\_45), Additional Data 46 (UDF\_CHAR\_46), Additional Data 47 (UDF\_CHAR\_47), Additional Data 48 (UDF\_CHAR\_48), Additional Data 49 (UDF\_CHAR\_49), Additional Data 50 (UDF\_CHAR\_50), Amount 1 Currency Code (UDF\_CURRENCY\_CD\_1), Amount 2 Currency Code (UDF\_CURRENCY\_CD\_2), Amount 3 Currency Code (UDF\_CURRENCY\_CD\_3), Amount 4 Currency Code (UDF\_CURRENCY\_CD\_4), Amount 5 Currency Code (UDF\_CURRENCY\_CD\_5), Amount 6 Currency Code (UDF\_CURRENCY\_CD\_6), Amount 7 Currency Code (UDF\_CURRENCY\_CD\_7), Amount 8 Currency Code (UDF\_CURRENCY\_CD\_8), Amount 9 Currency Code (UDF\_CURRENCY\_CD\_9), Amount 10 Currency Code (UDF\_CURRENCY\_CD\_10), Additional Date 1 (UDF\_DTTM\_1), Additional Date 2 (UDF\_DTTM\_2), Additional Date 3 (UDF\_DTTM\_3), Additional Date 4 (UDF\_DTTM\_4), Additional Date 5 (UDF\_DTTM\_5), Additional Numeric Data 1 (UDF\_NBR\_1), Additional Numeric Data 2 (UDF\_NBR\_2), Additional Numeric Data 3 (UDF\_NBR\_3), Additional Numeric Data 4 (UDF\_NBR\_4), Additional Numeric Data 5 (UDF\_NBR\_5), Additional Numeric Data 6 (UDF\_NBR\_6), Additional Numeric Data 7 (UDF\_NBR\_7), Additional Numeric Data 8 (UDF\_NBR\_8), Additional Numeric Data 9 (UDF\_NBR\_9), Additional Numeric Data 10 (UDF\_NBR\_10), Additional Numeric Data 11 (UDF\_NBR\_11), Additional Numeric Data 12 (UDF\_NBR\_12), Additional Numeric Data 13 (UDF\_NBR\_13), Additional Numeric Data 14 (UDF\_NBR\_14), Additional Numeric Data 15 (UDF\_NBR\_15), Additional Numeric Data 16 (UDF\_NBR\_16), Additional Numeric Data 17 (UDF\_NBR\_17), Additional Numeric Data 18 (UDF\_NBR\_18), Additional Numeric Data 19 (UDF\_NBR\_19), Additional Numeric Data 20 (UDF\_NBR\_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Transaction Record Type Tempo Field Search</b> window appears.	

4. Enter the required details.

**Note:** You can search for a transaction source and algorithm by clicking the **Search**  icon corresponding to the respective field.

5. Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
6. If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

**Note:**

You can search for a field by clicking the **Search**  icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add**  icon and then repeat step 7. However, if you want to remove a temporary field from the transaction record type, click the **Delete**  icon corresponding to the temporary field.

7. Click **Save**.

The transaction record type is defined.

## Editing a Transaction Record Type

### Prerequisites

To edit a transaction record type, you should have:

- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

### Procedure

To edit a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Edit**  icon in the **Edit** column corresponding to the transaction record type whose details you want to edit.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Transaction Source</b> window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes
Rule Validation Algorithm	Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.	No
	<b>Note:</b> This algorithm checks whether: <ul style="list-style-type: none"> <li>• The values specified against the output parameters exist in the system</li> <li>• The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination</li> </ul> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Info String Algorithm	Used to specify the algorithm that will generate the information string which appears in the <b>Transaction Information</b> column throughout the application.	No
	<p><b>Note:</b> This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	
Maximum Accounts to be charged	Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:	Yes
	<ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Items to be mapped	Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are: <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul>	Yes
	<b>Note:</b> At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• 00</li> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> <li>• 11</li> <li>• 12</li> <li>• 13</li> <li>• 14</li> <li>• 15</li> </ul> <p><b>Note:</b> At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	Yes

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p><b>Note:</b> The business label appears when you add, copy, or view a transaction in the <b>Transaction Details</b> screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

**Note:** At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT\_NBR), Account Identifier Type (ACCT\_NBR\_TYPE\_CD), Division (CIS\_DIVISION), Currency Code (CURRENCY\_CD), Customer Reference Number (CUST\_REF\_NBR), Do not Aggregate Switch (DO\_NOT\_AGG\_SW), External Reference Number (EXT\_TXN\_NBR), Credit/Debit Indicator (HOW\_TO\_USE\_TXN\_FLG), Manual Entry (MANUAL\_SW), Transaction Amount (TXN\_AMT), Transaction Date (TXN\_DTTM), Transaction Record Type (TXN\_REC\_TYPE\_CD), Transaction Source (TXN\_SOURCE\_CD), Transaction Upload Date (TXN\_UPLOAD\_DTTM), Transaction Volume (TXN\_VOL), Additional Amount 1 (UDF\_AMT\_1), Additional Amount 2 (UDF\_AMT\_2), Additional Amount 3 (UDF\_AMT\_3), Additional Amount 4 (UDF\_AMT\_4), Additional Amount 5 (UDF\_AMT\_5), Additional Amount 6 (UDF\_AMT\_6), Additional Amount 7 (UDF\_AMT\_7), Additional Amount 8 (UDF\_AMT\_8), Additional Amount 9 (UDF\_AMT\_9), Additional Amount 10 (UDF\_AMT\_10), Additional Data 1 (UDF\_CHAR\_1), Additional Data 2 (UDF\_CHAR\_2), Additional Data 3 (UDF\_CHAR\_3), Additional Data 4 (UDF\_CHAR\_4), Additional Data 5 (UDF\_CHAR\_5), Additional Data 6 (UDF\_CHAR\_6), Additional Data 7 (UDF\_CHAR\_7), Additional Data 8 (UDF\_CHAR\_8), Additional Data 9 (UDF\_CHAR\_9), Additional Data 10 (UDF\_CHAR\_10), Additional Data 11 (UDF\_CHAR\_11), Additional Data 12 (UDF\_CHAR\_12), Additional Data 13 (UDF\_CHAR\_13), Additional Data 14 (UDF\_CHAR\_14), Additional Data 15 (UDF\_CHAR\_15), Additional Data 16 (UDF\_CHAR\_16), Additional Data 17 (UDF\_CHAR\_17), Additional Data 18 (UDF\_CHAR\_18), Additional Data 19 (UDF\_CHAR\_19), Additional Data 20 (UDF\_CHAR\_20), Additional Data 21 (UDF\_CHAR\_21), Additional Data 22 (UDF\_CHAR\_22), Additional Data 23 (UDF\_CHAR\_23), Additional Data 24 (UDF\_CHAR\_24), Additional Data 25 (UDF\_CHAR\_25), Additional Data 26 (UDF\_CHAR\_26), Additional Data 27 (UDF\_CHAR\_27), Additional Data 28 (UDF\_CHAR\_28), Additional Data 29 (UDF\_CHAR\_29), Additional Data 30 (UDF\_CHAR\_30), Additional Data 31 (UDF\_CHAR\_31), Additional Data 32 (UDF\_CHAR\_32), Additional Data 33 (UDF\_CHAR\_33), Additional Data 34 (UDF\_CHAR\_34), Additional Data 35 (UDF\_CHAR\_35), Additional Data 36 (UDF\_CHAR\_36), Additional Data 37 (UDF\_CHAR\_37), Additional Data 38 (UDF\_CHAR\_38), Additional Data 39 (UDF\_CHAR\_39), Additional Data 40 (UDF\_CHAR\_40), Additional Data 41 (UDF\_CHAR\_41), Additional Data 42 (UDF\_CHAR\_42), Additional Data 43 (UDF\_CHAR\_43), Additional Data 44 (UDF\_CHAR\_44), Additional Data 45 (UDF\_CHAR\_45), Additional Data 46 (UDF\_CHAR\_46), Additional Data 47 (UDF\_CHAR\_47), Additional Data 48 (UDF\_CHAR\_48), Additional Data 49 (UDF\_CHAR\_49), Additional Data 50 (UDF\_CHAR\_50), Amount 1 Currency Code (UDF\_CURRENCY\_CD\_1), Amount 2 Currency Code (UDF\_CURRENCY\_CD\_2), Amount 3 Currency Code (UDF\_CURRENCY\_CD\_3), Amount 4 Currency Code (UDF\_CURRENCY\_CD\_4), Amount 5 Currency Code (UDF\_CURRENCY\_CD\_5), Amount 6 Currency Code (UDF\_CURRENCY\_CD\_6), Amount 7 Currency Code (UDF\_CURRENCY\_CD\_7), Amount 8 Currency Code (UDF\_CURRENCY\_CD\_8), Amount 9 Currency Code (UDF\_CURRENCY\_CD\_9), Amount 10 Currency Code (UDF\_CURRENCY\_CD\_10), Additional Date 1 (UDF\_DTTM\_1), Additional Date 2 (UDF\_DTTM\_2), Additional Date 3 (UDF\_DTTM\_3), Additional Date 4 (UDF\_DTTM\_4), Additional Date 5 (UDF\_DTTM\_5), Additional Numeric Data 1 (UDF\_NBR\_1), Additional Numeric Data 2 (UDF\_NBR\_2), Additional Numeric Data 3 (UDF\_NBR\_3), Additional Numeric Data 4 (UDF\_NBR\_4), Additional Numeric Data 5 (UDF\_NBR\_5), Additional Numeric Data 6 (UDF\_NBR\_6), Additional Numeric Data 7 (UDF\_NBR\_7), Additional Numeric Data 8 (UDF\_NBR\_8), Additional Numeric Data 9 (UDF\_NBR\_9), Additional Numeric Data 10 (UDF\_NBR\_10), Additional Numeric Data 11 (UDF\_NBR\_11), Additional Numeric Data 12 (UDF\_NBR\_12), Additional Numeric Data 13 (UDF\_NBR\_13), Additional Numeric Data 14 (UDF\_NBR\_14), Additional Numeric Data 15 (UDF\_NBR\_15), Additional Numeric Data 16 (UDF\_NBR\_16), Additional Numeric Data 17 (UDF\_NBR\_17), Additional Numeric Data 18 (UDF\_NBR\_18), Additional Numeric Data 19 (UDF\_NBR\_19), Additional Numeric Data 20 (UDF\_NBR\_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Transaction Record Type Tempo Field Search</b> window appears.	

### 3. Modify the required details.

#### Note:

You can search for an algorithm and field by clicking the **Search**  icon corresponding to the respective field. You can edit and remove an input or output parameter from a rule type only when it is not yet used in a rule (which is created using the rule type).

If you want to add more than one temporary field to the transaction record type, click the **Add**  icon and then specify the details in the **Temporary Fields** section. However, if you want to remove a temporary field from the transaction record type, click the **Delete**  icon corresponding to the temporary field.

### 4. Click **Save**.

The changes made to the transaction record type are saved.

How to search for a transaction record type	<a href="#">Searching for a Transaction Record Type</a> on page 793

## Deleting a Transaction Record Type

#### Procedure

To delete a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Delete**  icon in the **Delete** column corresponding to the transaction record type that you want to delete.

A message appears confirming whether you want to delete the transaction record type.

**Note:** You can only delete a transaction record type which is not yet used.

### 3. Click **OK**.

The transaction record type is deleted.

## Copying a Transaction Record Type

Instead of creating a transaction record type from scratch, you can create a new transaction record type using an existing transaction record type. This is possible through copying a transaction record type. Once you create a copy of a transaction record type, the input or output parameters and temporary fields are also copied to the new transaction record type. You can then edit the details, if required.

### Prerequisites

To copy a transaction record type, you should have:

- Transaction record type (whose copy you want to create) defined in the application
- Validation algorithm defined using the C1-RULE-VAL algorithm type
- Transaction Information String algorithm defined using the C1-TXDETINFO algorithm type
- Fields (that you want to use as input or output parameter) defined in the application

### Procedure

To copy a transaction record type:

1. Search for the transaction record type in the **Transaction Record Type** screen.
2. In the **Search Results** section, click the **Copy** () icon in the **Copy** column corresponding to the transaction record type whose copy you want to create.

The **Transaction Record Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Transaction Source	Used to indicate the transaction source for which you want to define the transaction record type.	Yes
	<b>Note:</b> The <b>Search</b> (  ) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Search Transaction Source</b> window appears.	
Transaction Record Type	Used to specify the transaction record type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the transaction record type.	
Description	Used to specify the description for the transaction record type.	Yes
Rule Type	Used to specify the rule type.	Yes
	<b>Note:</b> You cannot specify any special character except underscore (_) in the rule type.	
Rule Type Description	Used to specify the description for the rule type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Rule Validation Algorithm	<p>Used to specify the validation algorithm that will be triggered when a rule is defined using the rule type.</p> <p><b>Note:</b> This algorithm checks whether:</p> <ul style="list-style-type: none"> <li>• The values specified against the output parameters exist in the system</li> <li>• The same price item parameter (for example, PCD1_1_1_VAL) is not used multiple times for a division, account, and price item combination</li> </ul> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Info String Algorithm	<p>Used to specify the algorithm that will generate the information string which appears in the <b>Transaction Information</b> column throughout the application.</p> <p><b>Note:</b> This algorithm concatenates the fields (related to the transaction) and delimiters specified as parameters in the algorithm.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No
Maximum Accounts to be charged	<p>Used to indicate the maximum number of accounts which can bear the charges for a transaction. The valid values are:</p> <ul style="list-style-type: none"> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> </ul> <p><b>Note:</b> At present, the system supports maximum 10 accounts which can bear the charges for a transaction.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Items to be mapped	Used to indicate the maximum number of price items to which a transaction can be mapped for each account. The valid values are: <ul style="list-style-type: none"> <li>01</li> <li>02</li> <li>03</li> <li>04</li> <li>05</li> <li>06</li> <li>07</li> <li>08</li> <li>09</li> <li>10</li> </ul>	Yes
	<b>Note:</b> At present, the system supports maximum 10 price items to which a transaction can be mapped for each account.	

Field Name	Field Description	Mandatory (Yes or No)
Maximum Price Item Parameters	<p>Used to indicate the maximum number of parameters that can be used with each price item to determine the price item pricing. The valid values are:</p> <ul style="list-style-type: none"> <li>• 00</li> <li>• 01</li> <li>• 02</li> <li>• 03</li> <li>• 04</li> <li>• 05</li> <li>• 06</li> <li>• 07</li> <li>• 08</li> <li>• 09</li> <li>• 10</li> <li>• 11</li> <li>• 12</li> <li>• 13</li> <li>• 14</li> <li>• 15</li> </ul> <p><b>Note:</b> At present, the system supports maximum 15 parameters that can be used with each price item to determine the price item pricing.</p>	Yes

In addition, this screen contains the following two sections:

- **Input/Output Parameters** — Enables you to select the transaction detail fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rule Input/Output	Used to indicate whether you want to use the transaction detail field as input or output parameter.	No
Transaction Field	Displays the transaction field name.	Not applicable
Business Label	<p>Used to specify a business label for the user defined fields.</p> <p><b>Note:</b> The business label appears when you add, copy, or view a transaction in the <b>Transaction Details</b> screen. The label changes depending on the transaction source and record type combination that you have selected.</p>	No

**Note:** At present, you can use the following transaction fields as input or output parameter while defining a rule — Account Identifier (ACCT\_NBR), Account Identifier Type (ACCT\_NBR\_TYPE\_CD), Division (CIS\_DIVISION), Currency Code (CURRENCY\_CD), Customer Reference Number (CUST\_REF\_NBR), Do not Aggregate Switch (DO\_NOT\_AGG\_SW), External Reference Number (EXT\_TXN\_NBR), Credit/Debit Indicator (HOW\_TO\_USE\_TXN\_FLG), Manual Entry (MANUAL\_SW), Transaction Amount (TXN\_AMT), Transaction Date (TXN\_DTTM), Transaction Record Type (TXN\_REC\_TYPE\_CD), Transaction Source (TXN\_SOURCE\_CD), Transaction Upload Date (TXN\_UPLOAD\_DTTM), Transaction Volume (TXN\_VOL), Additional Amount 1 (UDF\_AMT\_1), Additional Amount 2 (UDF\_AMT\_2), Additional Amount 3 (UDF\_AMT\_3), Additional Amount 4 (UDF\_AMT\_4), Additional Amount 5 (UDF\_AMT\_5), Additional Amount 6 (UDF\_AMT\_6), Additional Amount 7 (UDF\_AMT\_7), Additional Amount 8 (UDF\_AMT\_8), Additional Amount 9 (UDF\_AMT\_9), Additional Amount 10 (UDF\_AMT\_10), Additional Data 1 (UDF\_CHAR\_1), Additional Data 2 (UDF\_CHAR\_2), Additional Data 3 (UDF\_CHAR\_3), Additional Data 4 (UDF\_CHAR\_4), Additional Data 5 (UDF\_CHAR\_5), Additional Data 6 (UDF\_CHAR\_6), Additional Data 7 (UDF\_CHAR\_7), Additional Data 8 (UDF\_CHAR\_8), Additional Data 9 (UDF\_CHAR\_9), Additional Data 10 (UDF\_CHAR\_10), Additional Data 11 (UDF\_CHAR\_11), Additional Data 12 (UDF\_CHAR\_12), Additional Data 13 (UDF\_CHAR\_13), Additional Data 14 (UDF\_CHAR\_14), Additional Data 15 (UDF\_CHAR\_15), Additional Data 16 (UDF\_CHAR\_16), Additional Data 17 (UDF\_CHAR\_17), Additional Data 18 (UDF\_CHAR\_18), Additional Data 19 (UDF\_CHAR\_19), Additional Data 20 (UDF\_CHAR\_20), Additional Data 21 (UDF\_CHAR\_21), Additional Data 22 (UDF\_CHAR\_22), Additional Data 23 (UDF\_CHAR\_23), Additional Data 24 (UDF\_CHAR\_24), Additional Data 25 (UDF\_CHAR\_25), Additional Data 26 (UDF\_CHAR\_26), Additional Data 27 (UDF\_CHAR\_27), Additional Data 28 (UDF\_CHAR\_28), Additional Data 29 (UDF\_CHAR\_29), Additional Data 30 (UDF\_CHAR\_30), Additional Data 31 (UDF\_CHAR\_31), Additional Data 32 (UDF\_CHAR\_32), Additional Data 33 (UDF\_CHAR\_33), Additional Data 34 (UDF\_CHAR\_34), Additional Data 35 (UDF\_CHAR\_35), Additional Data 36 (UDF\_CHAR\_36), Additional Data 37 (UDF\_CHAR\_37), Additional Data 38 (UDF\_CHAR\_38), Additional Data 39 (UDF\_CHAR\_39), Additional Data 40 (UDF\_CHAR\_40), Additional Data 41 (UDF\_CHAR\_41), Additional Data 42 (UDF\_CHAR\_42), Additional Data 43 (UDF\_CHAR\_43), Additional Data 44 (UDF\_CHAR\_44), Additional Data 45 (UDF\_CHAR\_45), Additional Data 46 (UDF\_CHAR\_46), Additional Data 47 (UDF\_CHAR\_47), Additional Data 48 (UDF\_CHAR\_48), Additional Data 49 (UDF\_CHAR\_49), Additional Data 50 (UDF\_CHAR\_50), Amount 1 Currency Code (UDF\_CURRENCY\_CD\_1), Amount 2 Currency Code (UDF\_CURRENCY\_CD\_2), Amount 3 Currency Code (UDF\_CURRENCY\_CD\_3), Amount 4 Currency Code (UDF\_CURRENCY\_CD\_4), Amount 5 Currency Code (UDF\_CURRENCY\_CD\_5), Amount 6 Currency Code (UDF\_CURRENCY\_CD\_6), Amount 7 Currency Code (UDF\_CURRENCY\_CD\_7), Amount 8 Currency Code (UDF\_CURRENCY\_CD\_8), Amount 9 Currency Code (UDF\_CURRENCY\_CD\_9), Amount 10 Currency Code (UDF\_CURRENCY\_CD\_10), Additional Date 1 (UDF\_DTTM\_1), Additional Date 2 (UDF\_DTTM\_2), Additional Date 3 (UDF\_DTTM\_3), Additional Date 4 (UDF\_DTTM\_4), Additional Date 5 (UDF\_DTTM\_5), Additional Numeric Data 1 (UDF\_NBR\_1), Additional Numeric Data 2 (UDF\_NBR\_2), Additional Numeric Data 3 (UDF\_NBR\_3), Additional Numeric Data 4 (UDF\_NBR\_4), Additional Numeric Data 5 (UDF\_NBR\_5), Additional Numeric Data 6 (UDF\_NBR\_6), Additional Numeric Data 7 (UDF\_NBR\_7), Additional Numeric Data 8 (UDF\_NBR\_8), Additional Numeric Data 9 (UDF\_NBR\_9), Additional Numeric Data 10 (UDF\_NBR\_10), Additional Numeric Data 11 (UDF\_NBR\_11), Additional Numeric Data 12 (UDF\_NBR\_12), Additional Numeric Data 13 (UDF\_NBR\_13), Additional Numeric Data 14 (UDF\_NBR\_14), Additional Numeric Data 15 (UDF\_NBR\_15), Additional Numeric Data 16 (UDF\_NBR\_16), Additional Numeric Data 17 (UDF\_NBR\_17), Additional Numeric Data 18 (UDF\_NBR\_18), Additional Numeric Data 19 (UDF\_NBR\_19), Additional Numeric Data 20 (UDF\_NBR\_20).

- **Temporary Fields** — Enables you to select non-transactional fields that you can use as input or output parameter while defining a rule. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Temporary Field	Used to indicate the non-transactional field that you want to use as input or output parameter.	No
	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Transaction Record Type Tempo Field Search</b> window appears.	

- Enter the required details.

**Note:** You can search for an algorithm by clicking the **Search**  icon corresponding to the respective field.

- Select the check box corresponding to the transaction fields that you want to use as input or output parameters.
- If required, you can select a non-transactional field as input or output parameter in the **Temporary Fields** section.

**Note:**

You can search for a field by clicking the **Search**  icon corresponding to the respective field.

If you want to add more than one temporary field to the transaction record type, click the **Add**  icon and then repeat step 5. However, if you want to remove a temporary field from the transaction record type, click the **Delete**  icon corresponding to the temporary field.

- Click **Save**.

The new transaction record type is defined.

## Transaction Aggregation Rule

The **Transaction Aggregation Rule** screen allows you to define transaction aggregation rule for an SQL. You can also edit and delete the transaction aggregation rule of an SQL. This screen consists of the following zones:

- [Transaction Aggregation Rules](#) on page 811

### Transaction Aggregation Rules

The **Transaction Aggregation Rules** zone lists transaction aggregation rules that are already defined in the system. You can define, edit, and delete a transaction aggregation rule through this zone.

This zone contains the following columns:

Column Name	Column Description
SQL Description	Displays the description of the service quantity identifier (SQI).
Aggregation Function	Indicates the formula used in the transaction aggregation rule defined for the SQI.
Function	Indicates the function used for aggregation.
Transaction Parameter	Indicates the transaction parameter used for aggregation.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Transaction Aggregation Rule</b> screen appears where you can edit the aggregation rule.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the transaction aggregation rule.

You can define transaction aggregation rule for an SQI by clicking the **Add** link in the upper right corner of this zone. You can also change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

How to delete transaction aggregation rule of an SQI	<a href="#">Deleting Transaction Aggregation Rule of an SQI</a> on page 814

## Defining Transaction Aggregation Rule for an SQI

### Prerequisites

To define transaction aggregation rule for an SQI, you should have:

- SQI defined in the application

### Procedure

To define transaction aggregation rule for an SQI:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.  
The **Transaction Aggregation Rule** screen appears.
3. Click the **Add** link in the upper right corner of the **Transaction Aggregation Rules** zone.  
The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Used to indicate the SQI for which you want to define the transaction aggregation rule.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Function	Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> <li>SUM()</li> <li>MIN()</li> <li>MAX()</li> <li>COUNT()</li> </ul>	Yes
Transaction Parameter	Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> <li>TXN_AMT</li> <li>TXN_VOL</li> <li>UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10</li> <li>UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20</li> </ul>	Yes

4. Enter the required details.

5. Click **Save**.

The transaction aggregation rule is defined for the SQI.

## Editing Transaction Aggregation Rule of an SQI

### Procedure

To edit the transaction aggregation rule of an SQI:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.

The **Transaction Aggregation Rule** screen appears.

3. Click the **Edit** () icon in the **Edit** column corresponding to the SQI whose transaction aggregation rule you want to edit.

The **Transaction Aggregation Rule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
SQI	Indicates the SQI for which the transaction aggregation rule is defined.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Function	Used to indicate the function that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> <li>SUM()</li> <li>MIN()</li> <li>MAX()</li> <li>COUNT()</li> </ul>	Yes
Transaction Parameter	Used to indicate the transaction parameter that you want to use for aggregation. The valid values are: <ul style="list-style-type: none"> <li>TXN_AMT</li> <li>TXN_VOL</li> <li>UDF_AMT_1, UDF_AMT_2, UDF_AMT_3, ..., UDF_AMT_10</li> <li>UDF_NBR_1, UDF_NBR_2, UDF_NBR_3, ..., UDF_NBR_20</li> </ul>	Yes

4. Modify the required details.

5. Click **Save**.

The changes made to the transaction aggregation rule are saved.

## **Deleting Transaction Aggregation Rule of an SQI**

### **Procedure**

To delete the transaction aggregation rule of an SQI:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **T** and then click **Transaction Aggregation Rule**.

The **Transaction Aggregation Rule** screen appears.

3. Click the **Delete** () icon in the **Delete** column corresponding to the SQI whose transaction aggregation rule you want to delete.

A message appears confirming whether you want to delete the transaction aggregation rule.

4. Click **OK**.

The transaction aggregation rule is deleted.

## Schedule

The **Schedule** screen allows you to define, edit, and delete a schedule. This screen consists of the following zones:

- [Search Schedule](#) on page 815

### Search Schedule

The **Search Schedule** zone allows you to search for a schedule. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Used to search a particular schedule.	No
Description	Used to search schedules with a particular .description	No

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Schedule	Displays the schedule.
Description	Displays the description of the schedule.
View	On clicking the <b>View</b>  icon, the <b>View Schedule</b> screen appears where you can view the details of the schedule.
Edit	On clicking the <b>Edit</b>  icon, the <b>Edit Schedule</b> screen appears where you can edit the details of the schedule.
Delete	On clicking the <b>Delete</b>  icon, you can delete the schedule.
	<b>Note:</b> You can only delete a schedule which is not yet used.

You can create a new schedule by clicking the **Add** link in the upper right corner of this zone.

## Searching for a Schedule

### Procedure

To search for a schedule:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **S** and then click **Schedule**.  
The **Schedule** screen appears.
3. Enter the search criteria in the **Search Schedule** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
The search results appear.

## Defining a Schedule

### Procedure

To define a schedule:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **S** and then click **Schedule**.

The **Schedule** screen appears.

3. Click the **Add** link in the upper right corner of the **Search Schedule** zone.

The **Add Schedule** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule	Used to specify the schedule code.	Yes
Description	Used to specify the description for the schedule.	Yes

In addition, this screen contains the following two sections:

- **Schedule Periods** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Start Date	Used to specify the start date of the schedule period.	Yes
	<b>Note:</b> The start date cannot be later than the end date.	
End Date	Used to specify the end date of the schedule period.	Yes
	<b>Note:</b> The end date cannot be earlier than the start date.	

**Note:** At least one schedule period must be defined in the schedule. Also, ensure that the schedule periods do not have overlapping days.

- **Schedule Types** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Schedule Type	Used to indicate the functionality where you want to use the schedule. You can use a schedule for more than one functionality.	Yes

4. Enter the required details.

- 5.

If you want to define more than one period in the schedule, click the **Add** () icon and then specify the details.

**Note:** However, if you want to remove a period from the schedule, click the **Delete** () icon corresponding to the period.

6. Click **Save**.

The schedule is defined.

## Disaggregation Request

Through the **Disaggregation Request Creation (C1-DISTG)** batch, you can only create a disaggregation request for an account. However, from the **Disaggregation Request** screen, you can create a disaggregation request for a person and account. When you create a disaggregation request for a person, the system does not create the disaggregation request for the person. Instead, the system creates the disaggregation request for all accounts of the person (where the person is the main customer) and its child persons.

The **Disaggregation Request** screen allows you to search for disaggregation requests using various search criteria. It also allows you to create and delete a disaggregation request. This screen consists of the following zone:

- [Search Disaggregation Request](#) on page 820

Search Disaggregation Request

The **Search Disaggregation Request** zone allows you to search for disaggregation requests using various search criteria. This zone contains the following two sections:

- Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. You can select either of the following query options:
  - Person** — Used to indicate that you want to search for a disaggregation request created for a person.
  - Account** — Used to indicate that you want to search for a disaggregation request created for an account.
- Search Results** — The **Search Results** section displays the records based on the specified search criteria. The columns in the search results change depending on the query option selected.

You can create a disaggregation request manually by clicking the **Add** link in the upper right corner of this zone.

How to create a disaggregation request manually	<a href="#">Creating a Disaggregation Request</a> on page 823
How to delete a disaggregation request	<a href="#">Deleting a Disaggregation Request</a> on page 827

Searching for a Disaggregation Request

Procedure

To search for a disaggregation request:

- Click the **Menu** link in the **Application** toolbar.  
 A list appears.
- From the **Main** menu, select **Transaction Feed Management** and then click **Disaggregation Request**.  
 The **Disaggregation Request** screen appears.
- Select the **Person** or **Account** option from the **Search By** list depending on whether you want to search for a disaggregation request created for a person or an account.

The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
PersonName	Used to search disaggregation requests which are created for a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Request Date From	Used to search disaggregation requests which are created from a particular date onwards.	Yes
Request Date To	Used to search disaggregation requests which are created till a particular date.	Yes
Processing Date From	Used to search disaggregation requests which are processed from a particular date onwards.	No

Field Name	Field Description	Mandatory (Yes or No)
Processing Date To	Used to search disaggregation requests which are processed till a particular date.	No
Request Source	Used to search disaggregation requests which are created automatically, manually, or through the batch process. The valid values are: <ul style="list-style-type: none"> <li>AUTOMATIC</li> <li>BATCH</li> <li>MANUAL</li> </ul>	No
Request Status	Used to search disaggregation requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>COMPLETE</li> <li>PENDING</li> </ul>	No
Person ID	Used to search disaggregation requests which are created for a particular person.  <b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	No
Division	Used to search disaggregation requests which are created for persons or accounts that belong to a particular division.  <b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	Yes (Conditional)  <b>Note:</b> This field is required when you are searching for disaggregation requests created for an account.
Person Identifier Type	Used to select the person identifier type based on which you want to search disaggregation requests created for a person.  <b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you enter person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used when you want to search disaggregation requests created for a person.  <b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	Yes (Conditional)  <b>Note:</b> If you specify person identifier type as a search criteria, you have to enter the person identifier.
Account ID	Used to search disaggregation requests which are created for a particular account.  <b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	No

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to select the account identifier type based on which you want to search disaggregation requests created for an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you enter account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used when you want to search disaggregation requests created for an account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify account identifier type as a search criteria, you have to enter the account identifier.

- Enter the search criteria in the **Search Disaggregation Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of disaggregation requests that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Request ID	Displays the disaggregation request ID.
Request Date	Displays the date when the disaggregation request was created.
Status	Indicates the status of the disaggregation request. The valid values are: <ul style="list-style-type: none"> <li>COMPLETE</li> <li>PENDING</li> </ul>
Person ID	Indicates the person for whom the disaggregation request is created.
Person Information	Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application. <p><b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears with the details of the respective person.</p>
Account ID	Indicates the account for which the disaggregation request is created.
Account Information	Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. <p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.</p>
Processing Date	Displays the date when the disaggregation request was processed.

Column Name	Column Description
Delete	On clicking the <b>Delete</b> button, you can delete the disaggregation request.
	<b>Note:</b> You can only delete a disaggregation request which is in the <b>Pending</b> status.

### Related Topics

## Creating a Disaggregation Request

### Prerequisites

To create a disaggregation request manually, you should have:

- Divisions, person identifier types, account identifier types, bill cycles, and invoice currencies defined in the application
- Price list assigned to the person or account (in case you want to search a person or an account based on an assigned price list)

### Procedure

To create a disaggregation request manually:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Transaction Feed Management** and then click **Disaggregation Request**.  
The **Disaggregation Request** screen appears.
3. Click the **Add** link in the upper right corner of the **Search Disaggregation Request** zone.

The **Add Disaggregation Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Type	Used to indicate whether you want to create disaggregation request for a person or an account. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> </ul>	Yes
Division	Used to specify the division to which the person or account belongs.	Yes (Conditional)
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	<b>Note:</b> This field is required when you are creating a disaggregation request for an account.

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to indicate the account for which you want to create a disaggregation request.	No
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	
Person ID	Used to indicate the person for whom you want to create a disaggregation request.	No
	<b>Note:</b> This field is enabled only when you select the <b>Person</b> option from the <b>Request Type</b> list.	
Account Identifier Type	Used to specify the account identifier type based on which you want to search for an account.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	<b>Note:</b> If you enter account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to indicate the account for which you want to create a disaggregation request.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	<b>Note:</b> If you specify account identifier type as a search criteria, you have to enter the account identifier.
Person Identifier Type	Used to specify the person identifier type based on which you want to search for a person.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Person</b> option from the <b>Request Type</b> list.	<b>Note:</b> If you enter person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to indicate the person for whom you want to create a disaggregation request.	Yes (Conditional)
	<b>Note:</b> This field is enabled only when you select the <b>Person</b> option from the <b>Request Type</b> list.	<b>Note:</b> If you specify person identifier type as a search criteria, you have to enter the person identifier.
Bill Cycle	Used when you want to search accounts having a particular bill cycle.	No
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	
Person Name	Used to specify the name of the person.	No

Field Name	Field Description	Mandatory (Yes or No)
Invoice Currency	Used when you want to search accounts having a particular invoice currency.	No
	<b>Note:</b> This field is enabled only when you select the <b>Account</b> option from the <b>Request Type</b> list.	
With Assigned Price List	Used when you want to search for a person or an account to which a particular price list is assigned.	Yes (Conditional)
		<b>Note:</b> This field is required when you want to search for a person or an account based on an assigned price list.
Price List Assigned From	Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range.	Yes (Conditional)
		<b>Note:</b> This field is required when you want to search for a person or an account based on an assigned price list.
Price List Assigned To	Used when you want to search for a person or an account based on an assigned price list which is effective within the specified date range.	Yes (Conditional)
		<b>Note:</b> This field is required when you want to search for a person or an account based on an assigned price list.

- Select the **Person** or **Account** option from the **Request Type** list depending on whether you want to search for a person or an account.
- Enter the search criteria in the **Search** section.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** () , **Previous** () , **Next** () , and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE\_NUMBER** lookup field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the '%' wildcard character in all input fields except the date and ID fields. The '%' wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of persons or accounts that meet the search criteria appears in the **Search Results** section. It contains the following columns:

Column Name	Column Description
Account Identifier Type	Displays the primary account identifier type of the account.
	<b>Note:</b> The data appears in this column only when you search for an account.
Account Identifier	Displays the value of the primary account identifier type.
	<b>Note:</b> The data appears in this column only when you search for an account.
Division	Displays the division to which the person or account belongs.
Person Identifier Type	Displays the primary person identifier type of the person.
	<b>Note:</b> The data appears in this column only when you search for a person.
Person Identifier	Displays the value of the primary person identifier type.
	<b>Note:</b> The data appears in this column only when you search for a person.
Person Name	Displays the name of the person.
With Assigned Price List	Displays the price list assigned to the person or account.
	<b>Note:</b> The data appears in this column only when you search for a person or an account based on an assigned price list.
Price List Assigned From	Displays the date from when the price list is assigned to the person or account.
	<b>Note:</b> The data appears in this column only when you search for a person or an account based on an assigned price list.
Price List Assigned To	Displays the date till when the price list is assigned to the person or account.
	<b>Note:</b> The data appears in this column only when you search for a person or an account based on an assigned price list.
Account Info	Displays additional information about the account.
	<b>Note:</b> The data appears in this column only when you search for an account.
Bill Cycle	Indicates the bill cycle defined for the account.
	<b>Note:</b> The data appears in this column only when you search for an account.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. By default, 20 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** () , **Previous** () , **Next** () , and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE\_NUMBER** lookup field.

7. Do either of the following:

If you want to...	Then...
Create disaggregation request for one or more persons or accounts	<ol style="list-style-type: none"> <li>1. In the <b>Search Results</b> section, select the check box corresponding to the person or account for which you want to create a disaggregation request.</li> <li>2. Click <b>Disaggregate</b>.  If you have selected an account, the disaggregation request is created for the account. However, if you have selected a person, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person.</li> </ol>
Create disaggregation request for all persons or accounts that meet the search criteria	<ol style="list-style-type: none"> <li>1. Click <b>Disaggregate All</b>.  A message appears confirming whether you want to create disaggregation requests for all persons or accounts that meet the search criteria.</li> <li>2. Click <b>OK</b>.  If the accounts are listed in the <b>Search Results</b> section, the disaggregation request is created for each account (listed on the respective page). However, if the persons are listed in the <b>Search Results</b> section, the disaggregation request is created for each account of the person (where the person is the main customer) and its child person.</li> </ol>

## Deleting a Disaggregation Request

### Procedure

To delete a disaggregation request:

1. Search for the disaggregation request in the **Disaggregation Request** screen.
2. In the **Search Results** section, click the **Delete** button in the **Delete** column corresponding to the disaggregation request that you want to delete.

A message appears confirming whether you want to delete the disaggregation request.

**Note:**  
 You can only delete a disaggregation request which is in the **Pending** status.  
 If the disaggregation process is already started for a disaggregation request, we recommend you not to delete the disaggregation request from the system. Otherwise, erroneous results might occur.

3. Click **OK**.  
 The disaggregation request is deleted.

## Upload Validated Payment Data

---

### Topics:

- [Payment Upload Process](#)
- [Prerequisites](#)
- [CSV File Format](#)
- [Payment Data File Status Transition](#)
- [Payment Record Status Transition](#)
- [Error Messages](#)
- [Payment Upload](#)

Oracle Revenue Management and Billing until now provided you with an ability to interface payments from an external source, such as remittance processor. The system supported two mechanisms to upload payment data — one using which you can populate payment upload staging records and another using which you can populate payment event upload staging records. The system now enables you to validate the payment records before you move them to the staging area. The system provides the pre-staging area where you can upload and validate the payment records. The system provides a user interface which helps you to upload a payment data file in the pre-staging area. It also helps you to perform various tasks, such as:

- Track the status of the payment records and the payment data file
- Move the payment records to the staging area
- Cancel a payment data file
- View the log of a payment data file

You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 833. At present, the system supports only the CSV file format. This is because the payment data mapping algorithm type shipped with the product is designed to support the CSV format. If you want to use any other file format, you need to define custom mapping algorithm type that supports the required file format.

The file type using which you upload a payment data file indicates the mapping and validation algorithms that you want to use for the payment data file. On uploading a payment data file, the mapping algorithm parses the CSV file and uploads the payments records in the pre-staging area. The validation process starts immediately after the file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. Once the validation process is complete, you can move the payment records from the pre-staging to staging area. Once the payment records are moved to the staging area, the system creates payment events, tenders, payments and payment segments through a batch process. For more information about the payment upload process, see [Payment Upload Process](#) on page 830.

During the payment upload process, a payment data file and each record of the file goes through various statuses until the payment events and payments are created. For more information about the payment data file and payment record statuses, see [Payment Data File Status Transition](#) on page 835 and [Payment Record Status Transition](#) on page 835, respectively.

## Payment Upload Process

---

The payment upload process includes the following sub-processes:

- [Upload Payment Records in the Pre-Staging Area](#) on page 830
- [Move Payment Records to the Staging Area](#) on page 831
- [Create Payment Events and Payments](#) on page 831

### Upload Payment Records in the Pre-Staging Area

Oracle Revenue Management and Billing allows you to validate the payment records before you move them to the staging area. You can upload and validate the payment records in the pre-staging area. You can upload a payment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. For more information about the CSV file format, see [CSV File Format](#) on page 833.

While uploading a payment data file, you need to specify the file type using which you want to upload the payment data file. The file type indicates the mapping and validation algorithms that you want to use for the payment data file. Therefore, while defining a file type using which you want to upload a payment data file, you need to:

- Set the feed type to **Payment Upload Data**
- Attach mapping algorithm which is created using the **C1-CSVUPLPAY** algorithm type
- Attach validation algorithm which is created using the **C1-PUPLVALID** algorithm type

On uploading a payment data file, the mapping algorithm does the following:

1. Validates whether the file is in the CSV format
2. Validates whether at least one payment record is available in the CSV file
3. Parses the flat file in the CSV format and maps the columns in the CSV file to various tables in the database
4. Uploads the payments records in the pre-staging area

The validation process starts immediately after the payment data file is uploaded in the system. During the validation process, the system and custom validations (if any) are executed. The system checks whether:

- The data is available in the **Tender ID**, **Tender Amount**, **Payment Amount**, **Date Received**, **Bank Account**, and **Payment Type** columns in the CSV file.
- The data is available in the **Match Type** and **Match Value** columns in the CSV file.

**Note:** This validation is done only when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The payee and payor accounts specified in the payment record exists in the system.
- The payee account with the specified account identifier type and account identifier combination exists in the system.
- A valid currency code is specified in the payment record.

**Note:** If the currency code is not specified, the currency is set to the payor account's invoice currency.

- The payment type (i.e. tender type) specified in the payment record exists in the system.
- The account identifier type specified in the payment record exists in the system.

**Note:** This validation is done only when the payee account ID is not specified in the payment record.

- The match type specified in the payment record exists in the system.

**Note:** This validation is done only when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

- The characteristic type specified in the payment record exists in the system.
- The characteristic value matches any predefined value when the characteristic value type is set to **Predefined Value**.
- The characteristic value is specified in the payment record when the characteristic type is specified and vice-versa.

You can upload a file by clicking the **Upload** link in the **Payment Upload** screen. On uploading a payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 835.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. Once the payment records are uploaded and validated in the pre-staging area, you can do either of the following:

- Move the payment records to the staging area
- Cancel a payment data file
- Replace the existing payment data file

**Note:** If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

## Move Payment Records to the Staging Area

Once the payment records are uploaded and validated in the pre-staging area, you can move the records to the staging area. The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area. In such scenario, you need to correct the invalid payment records and upload the same file once again in the system. In addition, if you have cancelled a payment data file, you cannot move any records (including valid and error records) of the payment data file to the staging area.

You can move the payment records to the staging area by clicking the **Move to Staging** icon corresponding to the payment data file in the **Payment Upload** screen. The **Move to Staging** icon appears only when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

On clicking the **Move to Staging** icon, the payment records are copied (and not moved) from the pre-staging to staging area and the status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**. Once you move the payment records to the staging area, you can edit the payment staging records, if required.

## Create Payment Events and Payments

Once the payment records are moved to the staging area, the system creates payment events for the payment data file in the background when the **Payment Upload (PUPL)** batch is invoked. You can configure the **Payment Upload (PUPL)** batch such that it is executed at regular intervals. When the **Payment Upload (PUPL)** batch is invoked, the

system checks whether there are any deposit control, tender control, payment tender, and payment staging records in the **Pending** status. If there are staging records in the **Pending** status, the system creates the following entities:

- Deposit Control
- Tender Control
- Payment Events
- Payment Tenders
- Payments
- Payment Segments
- Financial Transactions (when the payments are frozen)

The status of the deposit control, tender control, payment tender, and payment staging records is changed to **Complete**. If any error occurs while creating payment event for a payment record, the status of the deposit control, tender control, payment tender, and payment staging records is changed to **Error**. In addition, the status of the payment record in the pre-staging area is changed to **Error in Staging**.

Traditionally, the **Payment Upload (PUPL)** batch considered staging records which are in the **Error** or **Pending** status. If a staging record is in the **Error** status, the system used to reset the status to **Pending** and then further processed the staging record. This system behavior still exists for staging records which are not uploaded through the **Payment Upload** process. If the staging records are uploaded through the **Payment Upload** process, you need to manually correct the staging records and change the status of deposit control, tender control, payment tender, and payment staging records to **Pending**. The corrected staging records will then be processed when the **Payment Upload (PUPL)** batch is invoked at subsequent interval.

## Prerequisites

---

To setup the payment upload process, you need to do the following:

- Define the required match types with the appropriate payment distribution override and manual distribution algorithms.
- Define the required tender types in the system.
- Define the required currency codes in the system.
- Define the required tender sources in the system.
- Define the required characteristic types where the characteristic entity is set to **Payment**.
- Create a mapping algorithm using the **C1-CSVUPLPAY** algorithm type.
- Create a validation algorithm using the **C1-PUPLVALID** algorithm type.
- Define the required file types where the feed type is set to **Payment Upload Data**.
- Assign the **PUPL To Do** type to a To Do role whose users must receive the To Do generated while executing the **Payment Upload (PUPL)** batch.
- Set the batch control type of the **Payment Upload (PUPL)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## CSV File Format

Before uploading a payment data file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account ID	Used to specify the payee account ID.	Yes
Match Type	Used to specify the match type using which you want to match the payment.	Yes (Conditional) <b>Note:</b> This data is required when the match value is specified.
Match Value	Used to specify the entity (such as bill, contract, and so on) against which you want to match the payment.	Yes (Conditional) <b>Note:</b> This data is required when the match type is specified.
Tender ID	Used to specify the payment tender ID. <b>Note:</b> If the tender ID is same for two or more payment records, the system will create multiple payments against one tender. In other words, there will be multiple payments which are created through the payment event.	Yes
Tender Amount	Used to specify the tender amount. <b>Note:</b> You must not specify the value less than or equal to 0. The precision specified for the tender amount must not exceed the decimal places defined for the currency in the system.	Yes
Payment Amount	Used to specify the amount paid through the tender. <b>Note:</b> You must not specify the value less than or equal to 0. The precision specified for the payment amount must not exceed the decimal places defined for the currency in the system.	Yes
Date Received	Used to specify the date when the payment is made. <b>Note:</b> You must specify the date in the MM/DD/YYYY format.	Yes
Bank Account	Used to specify the external source ID which is associated with the tender source.	Yes

Column Name	Description	Mandatory (Yes or No)
Payment Type	Used to specify the type of tender through which the payment is made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Currency	Used to specify the currency in which the payment is made. <b>Note:</b> If the currency is not specified, it is set to the payor account's invoice currency.	No
Account ID Type	Used to specify the account identifier type.	Yes (Conditional) <b>Note:</b> This data is required when the account identifier is specified.
Account Identifier	Used to specify the account for which the payment is made.	Yes (Conditional) <b>Note:</b> This data is required when the account identifier type is specified.
Payment Char Type1, Payment Char Type2, ....., Payment Char Type5	Used to indicate the characteristic that must be defined for the payment.	Yes (Conditional) <b>Note:</b> This data is required when the characteristic value is specified.
Payment Char Value1, Payment Char Value2, ....., Payment Char Value5	Used to specify the value for the characteristic type.	Yes (Conditional) <b>Note:</b> This data is required when the characteristic type is specified.
MICR ID	Used to specify the MICR code.	No
Payor ID	Used to specify the payor account ID. <b>Note:</b> If the payor account ID is not specified, the payor account ID is set to the payee account ID assuming that the payor and payee are the same.	No

**Note:**

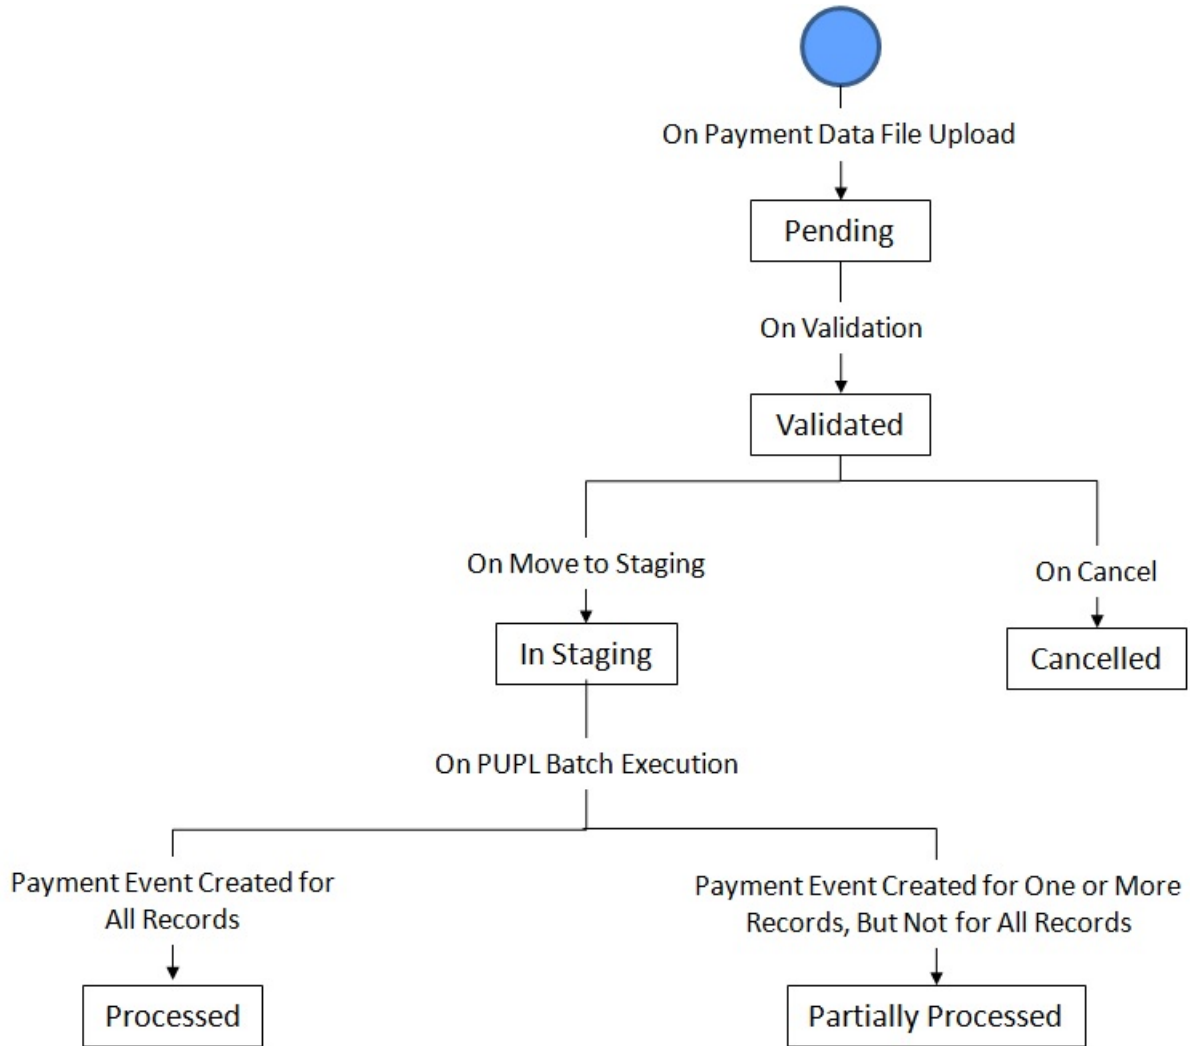

If a payment data file contains column names other than those mentioned in the above table, the system will not upload the payment data file.

If a payment data file contains more than 1000 payment records, the system will not allow you to upload the payment data file in the system. Therefore, ensure that a payment data file contains less than 1000 payment records.

## Payment Data File Status Transition

---

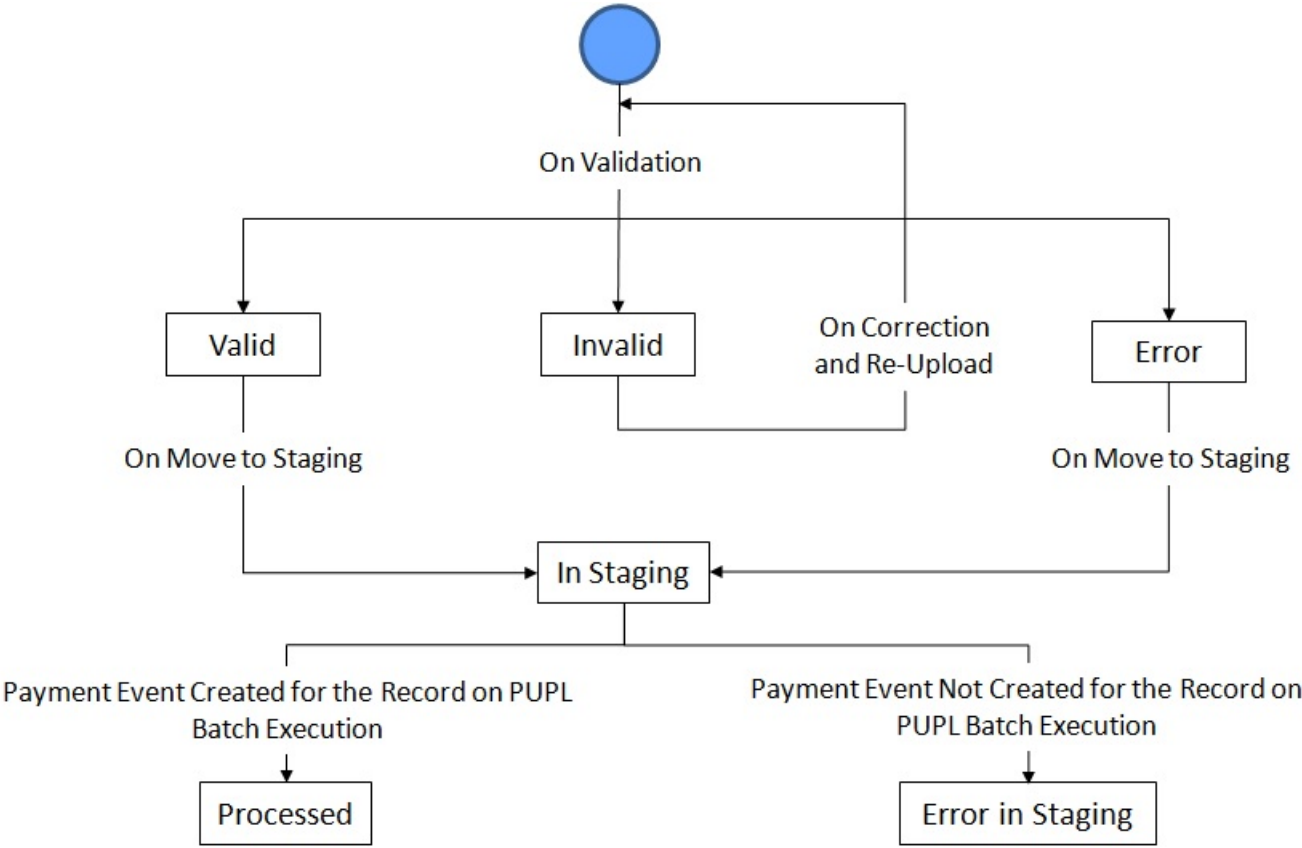

The following figure graphically indicates how a payment data file moves from one status to another during the payment upload process:

## Payment Record Status Transition

---

The following figure graphically indicates how a payment record moves from one status to another during the payment upload process:

The following table lists the scenarios when a payment record is set to **Invalid** or **Error** status:

Scenario	Payment Record Status
The system could not find the payee account ID for a given account identifier type and account identifier combination when the payee account ID is not specified in the payment record.	Invalid
The payee account ID specified in the payment record does not exist in the system.	Invalid
The payee account ID, account identifier type, or account identifier are not specified in the payment record.	Invalid
The match type is not specified in the payment record.	Invalid
The match type specified in the payment record does not exist in the system.	Error
The match value is not specified in the payment record.	Invalid
The currency code does not exist in the system.	Invalid
The tender amount is either zero or not specified in the payment record.	Invalid
The payment amount is either zero or not specified in the payment record.	Invalid
The bank account is not specified in the payment record.	Invalid
The payment type (i.e. tender type) does not exist in the system.	Invalid

Scenario	Payment Record Status
The payment type is not specified in the payment record.	Invalid
The tender ID is not specified in the payment record.	Invalid
The date received is not specified in the payment record.	Invalid
The payor account ID specified in the payment record does not exist in the system.	Invalid
The characteristic type specified in the payment record does not exist in the system.	Invalid
If a characteristic type is specified, but the characteristic value is not specified in the payment record.	Invalid
If a characteristic value is specified, but the characteristic type is not specified in the payment record.	Invalid
The characteristic value does not match any predefined value when the characteristic value type is set to <b>Predefined Value</b> .	Invalid

**Note:** The system does the match type and match value related validations only when the **Is Match Type Validation Required (Y/N)** parameter is set to **Y** in the validation algorithm.

## Error Messages

The following table lists the errors that may occur during the payment upload process. It also indicates how you can resolve these errors.

Message Number	Error Message	Message Category	Possible Issues
80110	File cannot be reuploaded as some records have already been processed.	11111	The possible issues could be: <ul style="list-style-type: none"> <li>You are trying to replace an existing file whose payment records are already moved to the staging area and/or for which payment events are already created.</li> </ul>
1463	This file already exists in the system. Please check.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>You are trying to upload a file which is already uploaded in the system without selecting the <b>Replace Existing File</b> check box.</li> </ul>
1465	Please upload a file in the CSV format.	17000	The possible issues could be: <ul style="list-style-type: none"> <li>You are trying to upload a file which is not in the CSV format.</li> </ul>
80113	Duplicate Header for column %1 in file.	11111	The possible issues could be: <ul style="list-style-type: none"> <li>The file has two or more columns with the same header.</li> </ul>

Message Number	Error Message	Message Category	Possible Issues

13605	Tender control (%1/%2/%3) Total Tender Amount not equal to sum of Tender Amounts	11	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The sum of payment tender staging amount does not match the total tender amount specified in tender control staging record.</li> </ul>
13606	Tender control (%1/%2/%3) tender count does not equal the number of Tenders	11	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The number of payment tender staging records does not match the total number of tenders specified in the tender control staging record.</li> </ul>
13607	Suspense Contract does not exist for External Source ID (%1)	11	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>The suspense contract is not defined for the tender source.</li> </ul>
13608	Many Tender Sources found for External Source ID (%1)	11	<p>The possible issues could be:</p> <ul style="list-style-type: none"> <li>There are multiple tender sources in the system with the same external source ID.</li> </ul>

Message Number	Error Message	Message Category	Possible Issues
13701	Pay Tender (%1/%2/%3/%4) Amount not equal to sum of Pay Amounts	11	The possible issues could be: <ul style="list-style-type: none"> <li>The sum of payment staging amount does not match the total amount specified in payment tender staging record.</li> </ul>
13705	Payment (%1/%2/%3/%4) Person ID (%5) exists on multiple accounts.	11	The possible issues could be: <ul style="list-style-type: none"> <li>There are multiple payment records having contracts with the same old account ID but their payee account ID is different.</li> </ul>
80194	File has no records to upload	11111	The possible issues could be: <ul style="list-style-type: none"> <li>You are trying to upload a file without any payment records.</li> </ul>
80195	Incorrect header: %1	11111	The possible issues could be: <ul style="list-style-type: none"> <li>One or more column names in the payment data file are incorrect.</li> </ul>
80196	Maximum file name size allowed is 60 characters	11111	The possible issues could be: <ul style="list-style-type: none"> <li>The file name contains more than 60 characters.</li> </ul>
80199	Missing value for column %1	11111	The possible issues could be: <ul style="list-style-type: none"> <li>The match type is not specified in the payment record.</li> <li>The match value is not specified in the payment record.</li> <li>The payment type is not specified in the payment record.</li> </ul>

## Payment Upload

The **Payment Upload** screen allows you to search for a payment data file using various search criteria. Through this screen, you can:

- Upload a payment data file
- Cancel a payment data file
- View the records uploaded through a payment data file
- View the log of a payment data file
- Move the payment records to the staging area
- Edit a payment staging record
- Replace an existing payment data file
- View the reasons why the payment record is in the **Error** or **Invalid** status

This screen consists of the following zones:

- [Search Payment Data File](#) on page 842
- [Payment Data Records](#) on page 844
- [Payment Data File Log](#) on page 845

## Search Payment Data File

The **Search Payment Data File** zone allows you to search for a payment data file which is uploaded and/or processed in the system. This zone contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Name	Used to search a particular payment data file.	No
User ID	Used to search payment data files which are uploaded by a particular user.	No
Upload From Date	Used to search payment data files which are uploaded from a particular date onwards.  <b>Note:</b> By default, the date is set to the current date minus 7 days. You can change the date, if required.	No
To	Used to search payment data files which are uploaded till a particular date.  <b>Note:</b> By default, the date is set to the current date. You can change the date, if required.	No
File Type	Used to search payment data files which are uploaded using a particular file type.	No
File Status	Used to search payment data files with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Cancelled</li> <li>• In Staging</li> <li>• Partially Processed</li> <li>• Pending</li> <li>• Processed</li> <li>• Validated</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for a payment data file.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
File Name	Displays the name of the payment data file.
File Type	Indicates the type of the payment data file.
Upload Date	Displays the date and time when the payment data file was uploaded in the system.

Column Name	Column Description
Status	<p>Indicates the status of the payment data file. The valid values are:</p> <ul style="list-style-type: none"> <li>Cancelled</li> <li>In Staging</li> <li>Partially Processed</li> <li>Pending</li> <li>Processed</li> <li>Validated</li> </ul>
Total	Displays the total number of records that are uploaded through the payment data file.
Valid	Displays the number of records which are successfully validated in the system.
Invalid	Displays the number of records which could not pass through the validation process in the system.
Error	Displays the number of records where the data is incorrect.
In Staging	Displays the number of records which are copied from the pre-staging to staging area.
Processed	Displays the number of records for which payment events are created.
Staging Error	Displays the number of records for which payment events could not be created.
Cancel	<p>On clicking the <b>Cancel</b> (  ) icon, you can cancel the payment data file.</p> <p><b>Note:</b> The <b>Cancel</b> icon appears only when the status of the payment data file is <b>Validated</b>. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.</p>
Move to Staging	<p>On clicking the <b>Move to Staging</b> (  ) icon, you can move the valid and error records of the payment data file to the staging area.</p> <p><b>Note:</b></p> <p>The <b>Move to Staging</b> icon appears only when:</p> <ul style="list-style-type: none"> <li>The status of the payment data file is <b>Validated</b>.</li> <li>There are no invalid records in the payment data file.</li> <li>The <b>Disable Move to Staging</b> check box is not selected in the respective file type.</li> </ul>

You can upload a payment data file by clicking the **Upload** link in the upper right corner of this zone. On clicking the **Broadcast** (  ) icon corresponding to the payment data file, the **Payment Data Records** and **Payment Data File Log** zones appear.

## Payment Data Records

The **Payment Data Records** zone lists the records of the payment data file. This zone contains the following columns:

Column Name	Column Description
Payor Account ID	Indicates the account which made the payment.
Payee Account ID	Indicates the account for which the payment was made.
Match Type	Indicates the match type using which the payment must be matched.
Match Value	Indicates the entity (such as bill, contract, and so on) against which the payment must be matched.
Pay Tender ID	Displays the payment tender ID.
Tender Amount	Displays the tender amount.
Payment Amount	Displays the amount paid through the tender.
Currency	Indicates the currency in which the payment was made.
Date Received	Displays the date when the payment was made.
Bank Account	Displays the bank account from which the payment was made.
Tender Type	Indicates the type of tender through which the payment was made.
Check Number	Displays the check number if the payment was made through check.
MICR ID	Displays the MICR code.
Status	Indicates the status of the payment record. The valid values are: <ul style="list-style-type: none"> <li>Valid</li> <li>Invalid</li> <li>Error</li> <li>In Staging</li> <li>Processed</li> <li>Error in Staging</li> </ul>

Column Name	Column Description
Payment Event Information	Displays information about the payment event which is created for the payment record.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears with the details of the respective payment event. The data appears in this column only when the status of the payment record is <b>Processed</b> .
Payment Staging Record	On clicking the <b>Edit</b> (✎) icon, the <b>Payment Upload Staging</b> screen appears where you can edit the details of the payment staging record.
	<b>Note:</b> The <b>Edit</b> icon appears only when the status of the payment record is <b>In Staging</b> .
Error Message	On clicking the <b>View</b> (🔍) icon, the <b>Error Messages</b> window appears where you can view the reasons why the status of the payment record is <b>Invalid</b> or <b>Error</b> .
	<b>Note:</b> The <b>View</b> icon appears only when the status of the payment record is <b>Error</b> or <b>Invalid</b> .

**Note:** Pagination is used to display limited number of records in the **Payment Data Records** zone. By default, 20 records are displayed in this zone. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

By default, the **Payment Data Records** zone does not appear in the **Payment Upload** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

#### Related Topics

How to view the reasons why the status of the payment record is <b>Invalid</b> or <b>Error</b>	<a href="#">Viewing the Error Messages</a> on page 852

## Payment Data File Log

The **Payment Data File Log** zone lists the complete trail of actions performed on the payment data file. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment data file.
Log Details	Displays the details about the action performed on the payment data file.
User	Indicates the user who has performed the action on the payment data file.

By default, the **Payment Data File Log** zone does not appear in the **Payment Upload** screen. It appears only when you click the **Broadcast** (📡) icon corresponding to the payment data file in the **Search Payment Data File** zone.

**Searching for a Payment Data File**

**Prerequisites**

To search for a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)

**Procedure**

To search for a payment data file:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Upload**.  
The **Payment Upload** screen appears.
3. Enter the search criteria in the **Search Payment Data File** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of payment data files that meet the search criteria appears in the **Search Results** section.

**Related Topics**

<b>Payment Upload</b> screen	<a href="#">Payment Upload</a> on page 841
<b>Search Payment Data File</b> zone	<a href="#">Search Payment Data File</a> on page 842

**Uploading a Payment Data File**

**Prerequisites**

To upload a payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)
- Payment data in the required CSV file format

**Procedure**

To upload a payment data file:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Upload**.  
The **Payment Upload** screen appears.

- Click the **Upload** link in the upper right corner of the **Search Payment Data File** zone.

The **Upload Payment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
File Type	Used to indicate the type of payment data file.	Yes
	<b>Note:</b> The list includes only those file types where the feed type is set to <b>Payment Upload Data</b> .	
File Name	Used to specify the name and path of the payment data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the payment data file is available in the system.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No

- Select the type of payment data file from the **File Type** list.
- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the payment data file that you want to upload is available.
- Click **Open**.

The payment data file name and path appears in the **File Name** field.

- Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

**Note:** If a payment data file contains more than 1000 payment records, the system will not allow you to upload the payment data file in the system. Therefore, ensure that a payment data file contains less than 1000 payment records.

- Click **OK** in the message box.

On uploading the payment data file, the payment records are copied to the pre-staging area and the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is set to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is set to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 835.

Once the validation process is completed, the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

### Related Topics

## Replacing an Existing File

### Prerequisites

To replace an existing payment data file, you should have:

- File types defined in the application (where the feed type is set to Payment Upload Data)
- Payment data in the required CSV file format

### Procedure

To replace an existing payment data file:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Payment Upload**.  
The **Payment Upload** screen appears.
3. Click the **Upload** link in the upper right corner of the **Search Payment Data File** zone.  
The **Upload Payment Data File** screen appears.
4. Select the type of payment data file from the **File Type** list.
5. Click the **Browse** button corresponding to the **File Name** field.  
The **Choose File to Upload** dialog box appears.
6. Browse to the location where the payment data file that you want to upload is available.
7. Click **Open**.  
The payment data file name and path appears in the **File Name** field.
8. Select the **Replace Existing File** check box.

**Note:** You can replace an existing file only when the payment data file is in the **Validated** status. In other words, you cannot replace a file whose payment records are already moved to the staging area and/or for which payment events are already created.

9. Click **Upload**.

A message appears indicating that the payment data file is uploaded successfully. If an error occurs while parsing, the payment data file is not uploaded in the system.

10. Click **OK** in the message box.

Once the payment data file is successfully uploaded, the status of the payment data file is set to **Pending**. The validation process starts immediately after the payment data file is uploaded in the system. If a payment record is successfully validated, the status of the payment record is changed to **Valid**. If a payment record contains incorrect or missing data, the status of the payment record is changed to either **Invalid** or **Error** depending on the scenario. For more information about the scenarios when a payment record is set to the **Invalid** or **Error** status, see [Payment Record Status Transition](#) on page 835. You can view the details of the uploaded payment data file and its records in the **Payment Upload** screen.

Once the validation process is completed, the payment records are copied to the pre-staging area and the status of the payment data file is changed to **Validated**. If a payment data file contains an invalid record, you need to

correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

### Related Topics

For more information on...	See...
<b>Payment Upload</b> screen	<a href="#">Payment Upload</a> on page 841
<b>Search Payment Data File</b> zone	<a href="#">Search Payment Data File</a> on page 842

## Cancelling a Payment Data File

There might be situations when incorrect payment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel a payment data file only when it is in the **Validated** status. In other words, you cannot cancel a payment data file when its records are moved to the staging area or when the payment events are created for the payment data file.

### Procedure

To cancel a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Cancel** (  ) icon in the **Cancel** column corresponding to the payment data file that you want to cancel.

A message appears confirming whether you want to cancel the payment data file.

**Note:** The **Cancel** icon appears only when the status of the payment data file is **Validated**.

3. Click **OK**.

The status of the payment data file is changed to **Cancelled**.

### Related Topics

How to search for a payment data file	<a href="#">Searching for a Payment Data File</a> on page 846

## Moving the Payment Records to the Staging Area

### Procedure

To move the payment records to the staging area:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Move to Staging** (  ) icon in the **Move to Staging** column corresponding to the payment data file whose records you want to move to the staging area.

A message appears confirming whether you want to move all payment records to the payment upload staging area.

**Note:**

The **Move to Staging** icon appears only when:

- The status of the payment data file is **Validated**.
- There are no invalid records in the payment data file.
- The **Disable Move to Staging** check box is not selected in the respective file type.

The system allows you to move only valid and error records of a payment data file to the staging area. If a payment data file contains an invalid record, you cannot move any record of the payment data file to the staging area.

3. Click **OK** in the message box.

A message appears indicating that the payment records are successfully copied from the pre-staging to staging area.

4. Click **OK** in the message box.

The status of the payment data file is changed to **In Staging**. In addition, the status of the payment records in the pre-staging area is changed to **In Staging** and the status of the deposit control, tender control, and payment tender staging records is set to **Pending**.

**Related Topics**

For more information on...	See...
How to search for a payment data file	<a href="#">Searching for a Payment Data File</a> on page 846

Editing a Payment Staging Record

You can edit a payment record only when it is moved from the pre-staging to staging area. On editing a payment record in the staging area, the system does not reflect the changes in the pre-staging area. It only reflects the changes in the staging area.

**Procedure**

To edit a payment staging record:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the payment data file whose staging records you want to edit.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. In the **Payment Data Records** zone, click the **Edit**  icon in the **Payment Staging Record** column corresponding to the payment record whose details you want to edit in the staging area.

The **Payment Upload Staging** screen appears. It contains the following tabs:

- **Tender Details** — Enables you to view and edit the tender control staging details.
- **Payment Advice** — Enables you to view and edit the payment staging details.
- **Payment Characteristics** — Enables you to view and edit the payment characteristic staging details.

**Note:** The **Edit** icon appears only when the status of the payment record is **In Staging**.

4. Modify the required details.
5. Click the **Save** link in the **Application** toolbar.

The changes made to the payment staging record are saved.

## Viewing the Records of a Payment Data File

#### Procedure

To view the records of a payment data file:

1. Search for the payment data file in the **Payment Upload** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the payment data file whose records you want to view.

The **Payment Data Records** and **Payment Data File Log** zones appear.

3. View the details of the payment records, which are uploaded through the payment data file, in the **Payment Data Records** zone.

#### Related Topics

For more information on...	See...
How to search for a payment data file	<a href="#">Searching for a Payment Data File</a> on page 846

Viewing the Error Messages

The system allows you to view the reasons why the payment record in a payment data file is in the **Error** or **Invalid** status.

Procedure

To view the error messages:

- 1. Search for the payment data file in the **Payment Upload** screen.
- 2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the payment data file whose payment records are in the **Error** or **Invalid** status.

The **Payment Data Records** and **Payment Data File Log** zones appear.

- 3. In the **Payment Data Records** zone, click the **View**  icon in the **Error Message** column corresponding to the payment record which is in the **Error** or **Invalid** status.

The **Error Messages** window appears. It lists the reasons why the payment record is in the **Error** or **Invalid** status. If the payment record is in the **Invalid** status, you need to correct or add missing data in the CSV file and then upload the file once again. Unless, a payment data file has no invalid records, you cannot move any record of the payment data file to the staging area.

**Note:** The **View** icon appears only when the status of the payment record is **Error** or **Invalid**.

- 4. View the reasons in the **Error Messages** window.
- 5. Click **OK**.

## Freeze Payments on Notification

---

### Topics:

- [Freeze Payments on Notification Process](#)
- [Prerequisites](#)
- [Automatic Payment or Refund Clearing Staging Record Status Transition](#)
- [EDI 824 File Format](#)
- [Sample EDI 824 File Format](#)
- [Automatic Payment and Refund Upload Reason](#)
- [Automatic Payment and Refund Clearing Staging](#)

Oracle Revenue Management and Billing facilitates you to create automatic payments and refunds when the automatic payment option is enabled for an account. A clearing record is created for each automatic payment and refund in the system. You can then send the automatic payment and refund clearing records to the auto clearing house for verification. The system provides the mechanism to extract the automatic payment clearing records in a flat file. You can then send the flat file to the auto clearing house for verification. However, the implementation team will have to write the custom logic to extract the automatic refund clearing records in a file which you can then send to the auto clearing house for verification.

Once the auto clearing house reviews the automatic payment clearing records, the system allows you to upload review comments received in the EDI 824 file format. On uploading an EDI 824 file, an automatic payment clearing staging record is created for each valid automatic payment clearing ID. The data received from the auto clearing house is stored in the following staging tables:

- `CI_APAY_STAGE_UP`
- `CI_APAY_STAGE_UP_REM`
- `CI_APAY_STGUP_CHAR`

The implementation team will have to write the custom logic to upload review comments for automatic refund clearing records in the above mentioned staging tables. The review comments for automatic payment clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. payment cancelation reason or NOC reason) which will help you to determine whether the automatic payment must be frozen or cancelled in the system. Similarly, the review comments for automatic refund clearing records can be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) which will help you to determine whether the refund request must be voided and refund adjustments must be cancelled in the system.

Once the review comments are received from the auto clearing house, you can do the following:

- Freeze or cancel the automatic payments
- Void the refund requests and cancel the refund adjustments

For more detailed information about the freeze payments on notification process, see [Freeze Payments on Notification Process](#) on page 855.

The system allows you to define upload reasons, payment cancelation reasons, NOC reasons, and void status reasons. The system also allows you to edit and delete the automatic payment and refund clearing staging records through the user interface. However, you can edit an automatic payment or refund clearing staging record only when it is in the **Pending** or **Error** status, and you can

delete an automatic payment or refund clearing staging record only when it is in the **Pending** status. During the freeze payments on notification process, the automatic payment and refund clearing staging records go through various statuses in its lifecycle. For more information about the statuses, see [Automatic Payment or Refund Clearing Staging Record Status Transition](#) on page 859.

For more information on how to setup the freeze payments on notification process, see [Prerequisites](#) on page 858.

## Freeze Payments on Notification Process

---

The Freeze Payments on Notification process includes the following sub-processes:

1. [Creating Automatic Payments and Refunds](#) on page 855
2. [Generating a Flat File](#) on page 855
3. [Uploading Response from Auto Clearing House \(ACH\)](#) on page 855
4. [Freezing or Canceling Automatic Payments](#) on page 856
5. [Voiding Refund Requests and Canceling Refund Adjustments](#) on page 857
6. [Generating To Do Entries](#) on page 857
7. [Creating Tender Controls](#) on page 857

Note that during the freeze payments on notification process, you need to execute the following batches in the specified order:

1. Create Automatic Payments and Refunds (APAYCRET)
2. Activate Automatic Payments (ACTVTAPY)
3. Extract Automatic Payments (APAYACH)
4. Upload Response from Auto Clearing House (C1-APACK)
5. Freeze or Cancel Automatic Payments (APAYRA)
6. Cancel Automatic Refunds (AREFRA)
7. To Do Creation for Automatic Payment Exception Records (APAYUPTD)
8. Create Tender Controls for Automatic Payments (BALAPY)

For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

### Creating Automatic Payments and Refunds

If you have configured the automatic payment option for an account, the system calculates the automatic payment amount and extract date during the bill completion and stamps these details against the bill in the **CI\_BILL\_ACH** table. The **Create Automatic Payments and Refunds (APAYCRET)** batch allows you to create automatic payment and refund request depending on whether the automatic payment amount is in debit or credit. It also creates a clearing record for each automatic payment and refund in the **CI\_APAY\_CLR\_STG** and **CI\_ADJ\_CLR\_STG** tables, respectively. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

### Generating a Flat File

Unless you activate a clearing record, you cannot extract the clearing record in a flat file. The **Activate Automatic Payments (ACTVTAPY)** batch allows you to activate a clearing record. It stamps the **APAYACH** batch control and incremental batch run number on the clearing record.

Once the clearing records are activated, you can extract the clearing records in a flat file. The **Extract Automatic Payments (APAYACH)** batch allows you to extract the clearing records with the latest batch run number in a flat file. The flat file is then sent to the auto clearing house for review. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

**Note:** At present, you cannot activate and extract the automatic refund clearing records using the **Activate Automatic Payments (ACTVTAPY)** and **Extract Automatic Payments (APAYACH)** batches, respectively. The implementation team will have to write the custom logic to activate and extract automatic refund clearing records in a flat file.

### Uploading Response from Auto Clearing House (ACH)

Once the auto clearing house reviews the automatic payment clearing records, the review comments can be shared in the EDI 824 file format. An EDI 824 file may contain the review comments for one or more automatic payment clearing records. You can upload these EDI 824 files and store the review comments in the staging area using the **Upload Response from Auto Clearing House (C1-APACK)** batch.

On uploading an EDI 824 file, the system checks whether the automatic payment clearing ID specified in each record exists in the system. If so, it creates an automatic payment clearing staging record for the automatic payment clearing

ID in the **CI\_APAY\_STAGE\_UP** table. If the acknowledgement code in the record is set to **TE** or **TR**, the system considers that the auto clearing house has rejected the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Reject Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI\_APAY\_STAGE\_UP\_REM** table. In addition, the error code (i.e. payment cancelation reason) is stored corresponding to the automatic payment clearing staging record in the **CI\_APAY\_STAGE\_UP\_REM** table.

However, if the acknowledgement code is blank or if the acknowledgement code is set to a value other than **TE** or **TR**, the system considers that the auto clearing house has accepted the automatic payment clearing record. The reason code (i.e. upload reason) specified in the **Success Upload Reason** parameter of the **C1-APAY** algorithm is stored corresponding to the automatic payment clearing staging record in the **CI\_APAY\_STAGE\_UP\_REM** table. In addition, the error code (i.e. NOC reason) is stored corresponding to the automatic payment clearing staging record in the **CI\_APAY\_STAGE\_UP\_REM** table. In this case, the record may contain more than one error code.

The status of the automatic payment clearing staging record is set to **Pending**. If the error code (i.e. payment cancelation reason or NOC reason) is invalid, the status of the automatic payment clearing staging record is set to **Error**. An exception is logged in the **CI\_APAY\_STGUP\_EXC** table. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is set to **Error** and an exception is logged in the **CI\_APAY\_STGUP\_EXC** table.

The system sets the automatic payment distribution and freeze date (i.e. **APAY\_DIST\_FRZ\_DT**) for each automatic payment clearing record (for which automatic payment clearing staging record is added in the system) to the payment date (which is stored on the payment event). For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

**Note:** An additional table named **CI\_APAY\_STGUP\_CHAR** is available which the implementation team can use to store additional information about the automatic payment clearing staging record in the form of characteristics.

To ensure that the EDI 824 files are uploaded successfully, you need to set the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:

- **Line Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of line.
- **Field Separator** - Used to indicate the character specified in the EDI 824 files to represent the end of data record.
- **Reject Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has rejected the automatic payment clearing record.
- **Success Upload Reason** - Used to indicate the upload reason which you want to use when the auto clearing house has accepted the automatic payment clearing record with or without Notice to Change (NOC).

**Note:** You must specify an upload reason which is already defined in the system.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 859.

## Freezing or Canceling Automatic Payments

Once the review comments are received in the form of reason and error codes for an automatic payment clearing record, you need to freeze or cancel the automatic payment based on the reason code. You can freeze or cancel automatic payments through the **Freeze or Cancel Automatic Payments (APAYRA)** batch.

On executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, the system checks whether the reason code (i.e. upload reason) and error code (i.e. payment cancelation reason or NOC reason) specified in the automatic payment clearing staging record exist in the system. This batch considers only those automatic payment clearing staging records which are in the **Pending** status and for which payment freeze date is specified in the automatic payment clearing record. If the reason code and error code exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm cancels the automatic payment and payment event. If the type of reason code is **Success**, the attached algorithm freezes the automatic payment on the payment freeze date. However, if the type of reason code is **Success** and the error code is specified along with the reason code, the attached algorithm freezes the automatic payment on the payment freeze date, stores error codes (i.e.

NOC reasons) as payment tender characteristics and then creates a To Do entry to notify user about these NOC reasons. Finally, the status of the automatic payment clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, payment cancelation reason, or NOC reason) specified in the automatic payment clearing staging record does not exist in the system, the status of the automatic payment clearing staging record is changed to **Error**. In addition, if the status of the NOC reason is **Inactive** in the system, the status of the automatic payment clearing staging record is changed to **Error**. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

## Voiding Refund Requests and Canceling Refund Adjustments

Once the auto clearing house reviews the automatic refund clearing records and shares the review comments, the implementation team will have to store the review comments in the following staging tables:

- **CI\_APAY\_STAGE\_UP** – Used to store the automatic payment or refund clearing staging record for an automatic payment or refund clearing record, respectively. The status of the automatic payment or refund clearing staging record must be set to **Pending**.
- **CI\_APAY\_STAGE\_UP\_REM** – Used to store the reason and error codes of each automatic payment or refund clearing staging record.
- **CI\_APAY\_STGUP\_CHAR** – Used to store additional information about the automatic payment or refund clearing staging record in the form of characteristics.

The review comments must be received in the form of reason (i.e. upload reason) and error codes (i.e. void status reason) for an automatic refund clearing record. On executing the **Cancel Automatic Refunds (AREFRA)** batch, it checks whether the reason and error codes specified in the automatic refund clearing staging record exist in the system. If the reason and error codes exist in the system, the system executes the algorithms attached to the reason code in the specified sequence. If the type of reason code is **Cancel**, the attached algorithm changes the status of the refund request to **Voided** and the corresponding refund adjustments are canceled. If the type of reason code is **Success**, no changes are made to the refund request and refund adjustments. Finally, the status of the automatic refund clearing staging record is changed to **Complete**.

If the reason code and/or error code (i.e. upload reason, void status reason) specified in the automatic refund clearing staging record does not exist in the system, the status of the automatic refund clearing staging record is changed to **Error**.

## Generating To Do Entries

If an exception occurs while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch, you can notify the user about such exception. The **To Do Creation for Automatic Payment Exception Records (APAYUPTD)** batch allows you to create a To Do using the APAYUPTD To Do type when an exception is logged for an automatic payment clearing staging record in the **CI\_APAY\_STGUP\_EXC** table. The system creates one To Do entry for all exceptions that have occurred for an automatic payment clearing staging record. For more information about these batches, see *Oracle Revenue Management and Billing Batch Guide*.

**Note:** At present, a To Do is not created when an exception is logged for an automatic refund clearing staging record in the **CI\_APAY\_STGUP\_EXC** table while executing the **Cancel Automatic Refunds (AREFRA)** batch.

## Creating Tender Controls

Once you freeze the automatic payments, you need to create tender and deposit controls. The **Create Tender Controls for Automatic Payments (BALAPY)** batch allows you to create tender and deposit controls for each automatic payment which is frozen, but not yet linked to any tender control. One tender control is created for the **APAYACH** batch control and batch run number combination. The payment tenders of these automatic payments are then linked to the tender control.

This batch also balances the open tender control records and changes the status of the tender and deposit controls, accordingly. For more information about the batch, see *Oracle Revenue Management and Billing Batch Guide*.

## Prerequisites

---

To setup the freeze payments on notification process, you need to do the following:

- Define the automatic payment instructions for the account for which you want to enable the automatic payment option.

**Note:** You can either define non-rule based effective dated automatic payment instructions in the **Auto Pay** tab of the **Account** screen or define rule based effective dated automatic payment instructions through the **Auto Pay Rule** screen.

- Set the **Autopay Creation Option** field to **Freeze Payment on Notification** in the **Billing** tab of the **Installation Options** screen.
- Create an automatic payment creation algorithm using the **APAY-CREATE** algorithm type and attach it to the **Automatic Payment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create an automatic refund creation algorithm using the **C1-AREF-CRET** algorithm type and attach it to the **Automatic Adjustment Creation** system event in the **Algorithms** tab of the **Installation Options - Framework** screen.
- Create a date calculation algorithm using the **APAY-DTCALC** algorithm type and attach it to the **Autopay Date Calculation Alg** spot of the auto pay route type which is specified on the account's automatic payment instruction.
- Define the required upload reasons in the system.
- Define the required payment cancelation reasons in the system.
- Define values for the **APAY\_UPL\_NOC\_LOOKUP** lookup field.

**Note:** The **APAY\_UPL\_NOC\_LOOKUP** lookup field is used to define NOC reasons. The NOC reason specified in the automatic payment clearing staging record must exist in this lookup field and its status must be **Active**. Otherwise, the status of the automatic payment clearing staging record is changed to **Error**.

- Define voided status reasons for the **C1-RefundReq** business object.
- Create an automatic payment success algorithm using the **C1-APAY-SUCC** algorithm type and attach it to the reason code where the reason type is set to **Success**.

**Note:** You must attach the automatic payment success algorithm to an upload reason which you want to use while freezing automatic payments.

- Create an automatic payment cancel algorithm using the **C1-APAY-CAN** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

**Note:** You must attach the automatic payment cancel algorithm to an upload reason which you want to use while canceling automatic payments.

- Create a void automatic refund algorithm using the **C1-AREF-VOID** algorithm type and attach it to the reason code where the reason type is set to **Cancel**.

**Note:** You must attach the void automatic refund algorithm to an upload reason which you want to use while voiding automatic refunds.

- Create a characteristic type where the characteristic entity is set to **Payment Tender**. And, then specify this characteristic type as the value for the **Tender Characteristic Type** parameter in an algorithm which is created using the **C1-APAY-SUCC** algorithm type.

- Assign the **C1-ACH** To Do type to a To Do role whose users must receive the To Do entries generated when automatic payments are frozen with a Notice to Change (NOC).
- Assign the **APAYUPTD** To Do type to a To Do role whose users must receive the To Do entries generated when exceptions have occurred while executing the **Freeze or Cancel Automatic Payments (APAYRA)** batch.
- Define values for the following parameters in an algorithm which is created using the **C1-APAY** algorithm type:
  - Line Separator
  - Field Separator
  - Reject Upload Reason
  - Success Upload Reason

## Automatic Payment or Refund Clearing Staging Record Status Transition

The following figure graphically indicates how an automatic payment or refund clearing staging record moves from one status to another during the freeze payments on notification process:

## EDI 824 File Format

Before uploading the EDI 824 file, you need to ensure that the file contains the following tags and attributes:

Tag	Attribute	Description	Mandatory (Yes or No)
OTI	Reference Number	Used to specify the automatic payment clearing ID. It indicates the automatic payment clearing record for which the review comments are received from the auto clearing house.	Yes
OTI	Acknowledgement Code	Used to indicate whether the automatic payment clearing record is accepted or rejected by the auto clearing house. If you want to reject the automatic payment clearing record, you must specify <b>TE</b> or <b>TR</b> as the acknowledgement code. However, if you want to approve the automatic payment clearing record, you can either specify any value other than <b>TE</b> or <b>TR</b> or leave this attribute blank.	No
TED	Error Code	Used to indicate either of the following: <ul style="list-style-type: none"> <li>The payment cancellation reason when the automatic payment clearing record is rejected by the auto clearing house.</li> </ul>	Yes (Conditional)
		<b>Note:</b> You must specify a payment cancellation reason which is already defined in the system.	<b>Note:</b> This attribute is required when the automatic payment clearing record is rejected by the auto clearing house.
		<ul style="list-style-type: none"> <li>The Notice to Change (NOC) reason when the automatic payment clearing record is accepted by the auto clearing house with a Notice to Change (NOC).</li> </ul>	
		<b>Note:</b> You must specify a NOC reason which is already defined in the <b>APAY_UPL_NOC_LOOKUP</b> lookup field.	
TED	Error Description	Used to specify the reason why the automatic payment clearing record is either rejected or accepted with a Notice to Change (NOC).	No

## Sample EDI 824 File Format

```

OTI*TR*TN*411302586842\
TED*WA01*WRONG ACCOUNT\
OTI*TF*TN*411302525641\
OTI*TO*TN*806152348038\
TED*BR01*Bill Reopened\
OTI*TO*TN*806152307159\
OTI*TE*TN*806152307229\
TED*WA01*WRONG ACCOUNT\

```

Here, TR, TF, TO, and TE are acknowledgement codes. TR and TE indicate that the automatic payment clearing records are rejected. And, TF and TO indicate that the automatic payment clearing records are accepted with or without a Notice to Change (NOC).

Here, 411302586842, 411302525641, 806152348038, 806152307159, and 806152307229 are automatic payment clearing records, and WA01 and BR01 are error codes. WA01 is a payment cancellation reason and BR01 is a NOC reason. The string “WRONG ACCOUNT” and “Bill Reopened” are error descriptions.

For more information about the EDI 824 file format, see [EDI 824 File Format](#) on page 859.

## Automatic Payment and Refund Upload Reason

Once the auto clearing house reviews the automatic payment and refund clearing records, an appropriate upload reason must be received for each clearing record. The upload reason indicates the following:

- Whether the automatic payment must be frozen or cancelled in the system
- Whether the automatic refund must be canceled in the system (i.e. the refund request must be voided and refund adjustments must be canceled)

The **Automatic Payment and Refund Upload Reason** screen allows you to define, edit, and delete an upload reason. It contains the following zone:

- [Upload Reasons](#) on page 861

## Upload Reasons

The **Upload Reasons** zone lists upload reasons that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Reason	Displays the upload reason.
Reason Type	Indicates the type of upload reason. The valid values are: <ul style="list-style-type: none"> <li>• Cancel</li> <li>• Success</li> </ul>
Eligible for Processing	Indicates whether the algorithms attached to the upload reason must be triggered while executing the <b>Freeze or Cancel Automatic Payments (APAYRA)</b> or <b>Cancel Automatic Refunds (AREFRA)</b> batch. The valid values are: <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Description	Displays the description of the upload reason.
Edit	On clicking the <b>Edit</b> (✎) icon, the <b>Automatic Payment and Refund Upload Reason</b> screen appears where you can edit the details of the upload reason.
Delete	On clicking the <b>Delete</b> (🗑) icon, you can delete the upload reason.

You can define an upload reason by clicking the **Add** link in the upper right corner of this zone.

## Defining an Upload Reason

### Prerequisites

To define an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

### Procedure

To define an upload reason:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.

The **Automatic Payment and Refund Upload Reason** screen appears.

3. Click the **Add** link in the upper right corner of the **Upload Reasons** zone.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason.	Yes
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> <li>• <b>Cancel</b> — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided.</li> <li>• <b>Success</b> — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the <b>C1-ACH</b> To Do type for all NOC reasons specified in the automatic payment clearing staging record.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the <b>Freeze or Cancel Automatic Payments (APAYRA)</b> or <b>Cancel Automatic Refunds (AREFRA)</b> batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional) <b>Note:</b> This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to <b>Success</b> , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to <b>Cancel</b> , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Code Search</b> window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are attaching an algorithm to the upload reason.

- Enter the required details in the **Automatic Payment and Refund Upload Reason** screen.

**Note:** If you want to attach more than one algorithm to the upload reason, click the **Add**  icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete**  icon corresponding to the algorithm.

- Click **Save**.

The upload reason is defined.

Editing an Upload Reason

Prerequisites

To edit an upload reason, you should have:

- Automatic payment success algorithm defined using the **C1-APAY-SUCC** algorithm type
- Automatic payment cancel algorithm defined using the **C1-APAY-CAN** algorithm type
- Void automatic refund algorithm defined using the **C1-AREF-VOID** algorithm type

Procedure

To edit an upload reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.  
The **Automatic Payment and Refund Upload Reason** screen appears.
3. In the **Upload Reasons** zone, click the **Edit**  icon in the **Edit** column corresponding to the upload reason whose details you want to edit.

The **Automatic Payment and Refund Upload Reason** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Displays the upload reason.	Not applicable
Description	Used to specify the description for the upload reason.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> <li>• <b>Cancel</b> — This type of upload reason indicates that you must cancel the automatic payment or refund in the system. In this case, the error code indicates the reason why the automatic payment is cancelled or the refund request is voided.</li> <li>• <b>Success</b> — This type of upload reason indicates that you must freeze the automatic payment on the payment freeze date. If the error code is specified, it indicates that you must freeze the automatic payment, and at the same time notify user that the automatic payment is accepted with a Notice to Change (NOC). The NOC reason is stored as payment tender characteristic in the system. You can specify more than one error code (i.e. NOC reasons) with this type of upload reason. On freezing an automatic payment, the user is notified about these NOC reasons through a To Do entry. The system creates one To Do entry using the <b>C1-ACH</b> To Do type for all NOC reasons specified in the automatic payment clearing staging record.</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Eligible for Processing	Used to indicate whether the algorithms attached to the upload reason must be triggered while executing the <b>Freeze or Cancel Automatic Payments (APAYRA)</b> or <b>Cancel Automatic Refunds (AREFRA)</b> batch.	No

In addition, this screen contains a grid where you can attach algorithms to the upload reason. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithm must be triggered.	Yes (Conditional) <b>Note:</b> This field is required when you are attaching an algorithm to the upload reason.
Algorithm	Used to attach an algorithm to the upload reason. If the type of the upload reason is set to <b>Success</b> , you must attach the automatic payment success algorithm. However, if the type of the upload reason is set to <b>Cancel</b> , you must attach either automatic payment cancel or void automatic refund algorithm depending on whether the upload reason will be used for automatic payment or automatic refund cancelation.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Code Search</b> window appears. On specifying the algorithm code, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are attaching an algorithm to the upload reason.

4. Modify the required details in the **Automatic Payment and Refund Upload Reason** screen.

**Note:** If you want to attach more than one algorithm to the upload reason, click the **Add**  icon and then specify the details. However, if you want to remove an algorithm from the upload reason, click the **Delete**  icon corresponding to the algorithm.

5. Click **Save**.

The changes made to the upload reason are saved.

## Deleting an Upload Reason

### Procedure

To delete an upload reason:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **A** and then click **Automatic Payment and Refund Upload Reason**.  
The **Automatic Payment and Refund Upload Reason** screen appears.
3. In the **Upload Reasons** zone, click the **Delete** (  ) icon in the **Delete** column corresponding to the upload reason that you want to delete.  
A message appears confirming whether you want to delete the upload reason.
4. Click **OK**.  
The upload reason is deleted.

## Automatic Payment and Refund Clearing Staging

The **Automatic Payment and Refund Clearing Staging** screen allows you to search for automatic payment or refund clearing records using various search criteria. In addition, you can:

- View the automatic payment or refund clearing staging records associated to a clearing record
- View the upload reason and payment cancelation reason or NOC reason specified in the automatic payment clearing staging record
- View the upload reason and void status reason specified in the automatic refund clearing staging record
- View the characteristics defined for the automatic payment or refund clearing staging record
- Edit an automatic payment or refund clearing staging record
- Delete an automatic payment or refund clearing staging record

This screen contains the following zones:

- [Search Clearing Record](#) on page 867
- [Associated Clearing Staging Records](#) on page 869
- [Clearing Staging Upload Reasons](#) on page 870
- [Clearing Staging Characteristics](#) on page 870

## Search Clearing Record

The **Search Clearing Record** zone allows you to search for automatic payment and refund clearing records using various search criteria. It contains the following two sections:

- **Search Criteria** — the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for the automatic payment or refund clearing records. The valid values are: <ul style="list-style-type: none"> <li>• Automatic Payment</li> <li>• Automatic Refund</li> </ul>	Yes
Clearing ID	Used to search a particular clearing record.	No
Account ID	Used to search clearing records which are created for a particular account.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	No
Person Name	Used to search clearing records which are created for accounts of a particular person.	No
Extract From Date	Used to search clearing records that are extracted on or after a particular date.	No
Extract To Date	Used to search clearing records that are extracted on or before a particular date.	No
Bill ID	Used to search clearing records which are created against a bill.	No
Alternate Bill ID	Used to search clearing records which are created against a bill with the specified alternate bill ID.	No
Batch Control	Used to search clearing records where the <b>APAYACH</b> batch control is stamped. The valid value is <b>APAYACH</b> .	No
Batch Run Number	Used to search clearing records which are activated in a particular batch run.	No

**Note:** You must specify at least one search criterion while searching for a clearing record.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Clearing ID	Displays the clearing ID.

Column Name	Column Description
Account Information	Indicates the account for which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Bill Information	Indicates the bill against which the clearing record is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Payment Amount	Displays the payment amount.
	<b>Note:</b> This column appears only when you select the <b>Automatic Payment</b> option from the <b>Search By</b> list.
Pay Tender ID	Displays the payment tender ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the respective tender.  This column appears only when you select the <b>Automatic Payment</b> option from the <b>Search By</b> list.
Tender Status	Indicates the current status of the payment tender. The valid values are: <ul style="list-style-type: none"> <li>Valid</li> <li>Canceled</li> </ul>
	<b>Note:</b> This column appears only when you select the <b>Automatic Payment</b> option from the <b>Search By</b> list.
Extract Date	Displays the date when the clearing record is extracted in a flat file.
Payment Freeze Date	Displays the date when the automatic payment must be frozen in the system.
	<b>Note:</b> This column appears only when you select the <b>Automatic Payment</b> option from the <b>Search By</b> list.
External Source ID	Indicates the tender source through which the payment was remitted.
Entity Type	Indicates the type of entity which is created for automatic refund. The valid value is: <ul style="list-style-type: none"> <li>Refund Request</li> </ul>
	<b>Note:</b> This column appears only when you select the <b>Automatic Refund</b> option from the <b>Search By</b> list.
Entity ID	Displays the entity ID.
	<b>Note:</b> This column appears only when you select the <b>Automatic Refund</b> option from the <b>Search By</b> list.

Column Name	Column Description
Account Number	Indicates the bank account through which the automatic payment is made.
Batch Control	Indicates the batch control which is stamped on the clearing record.
Batch Run Number	Indicates the batch run in which the clearing record was activated.
Alternate Bill ID	Indicates the bill against which the clearing record is created.

### Related Topics

How to search for a clearing record	<a href="#">Searching for a Clearing Record</a> on page 871

## Associated Clearing Staging Records

The **Associated Clearing Staging Records** zone lists the automatic payment or refund clearing staging records which are added corresponding to the clearing record. You can edit and delete an automatic payment or refund clearing staging record through this zone. It contains the following columns:

Column Name	Column Description
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Status	Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Complete</li> <li>• Error</li> </ul>
Edit	<p>On clicking the <b>Edit</b> () icon, the <b>Edit Clearing Staging Record</b> screen appears where you can edit the details of the clearing staging record.</p> <p><b>Note:</b> You can edit a clearing staging record only when it is in the <b>Pending</b> or <b>Error</b> status.</p>
Delete	<p>On clicking the <b>Delete</b> () icon, you can delete the clearing staging record.</p> <p><b>Note:</b> You can delete a clearing staging record only when it is in the <b>Pending</b> status.</p>

By default, the **Associated Clearing Staging Records** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears only when you click the **Broadcast** () icon corresponding to the clearing record in the **Search Clearing Record** zone.

## Clearing Staging Upload Reasons

The **Clearing Staging Upload Reasons** zone lists the reason code (i.e. upload reason) and error code (i.e. payment cancellation reason, Notice to Change (NOC) reasons, or void status reason) specified in the automatic payment or refund clearing staging record. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the sequence in which the upload reason should be considered while freezing or canceling the automatic payment or while canceling the automatic refund.
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Upload Reason	Indicates whether the auto clearing house has accepted or rejected the clearing record.
Cancel Reason	Indicates the reason why the auto clearing house has rejected the clearing record. If the clearing record is created for an automatic payment, the payment cancellation reason appears in this column. However, if the clearing record is created for an automatic refund, the void status reason appears in this column.
NOC Reason	Indicates the reason why the auto clearing house has accepted the clearing record with a Notice to Change (NOC).
NOC Reason Description	Displays the description of the NOC reason.

By default, the **Clearing Staging Upload Reasons** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears only when you click the **Broadcast**  icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

### Related Topics

For more information on...	See...
How to view the upload reason specified in the clearing staging record	<a href="#">Viewing the Upload Reason Specified in the Clearing Staging Record</a> on page 872

## Clearing Staging Characteristics

The **Clearing Staging Characteristics** zone lists the characteristics defined for the automatic payment or refund clearing staging record. It contains the following columns:

Column Name	Column Description
Clearing Staging ID	Displays the clearing staging ID.
Clearing ID	Indicates the clearing record against which the clearing staging record is added.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the characteristic value.

By default, the **Clearing Staging Characteristics** zone does not appear in the **Automatic Payment and Refund Clearing Staging** screen. It appears only when you click the **Broadcast**  icon corresponding to the clearing staging record in the **Associated Clearing Staging Records** zone.

### Related Topics

## Searching for a Clearing Record

### Procedure

To search for a clearing record:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Automatic Payment and Refund Clearing Staging**.  
The **Automatic Payment and Refund Clearing Staging** screen appears.
3. Enter the search criteria in the **Search Clearing Record** zone depending on whether you want to search for automatic payment or refund clearing records.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of clearing records that meet the search criteria appears in the **Search Results** section.

## Editing a Clearing Staging Record

### Prerequisites

To edit a clearing staging record, you should have:

- Upload reasons defined in the application
- NOC reasons defined in the **APAY\_UPL\_NOC\_LOOKUP** lookup field.
- Payment cancelation reasons defined in the application
- Reasons defined for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen

**Note:** You can edit a clearing staging record only when it is in the **Pending** or **Error** status. On editing a clearing staging record which is in the **Error** status, the status of the clearing staging record is changed to **Pending**. Also, the exceptions logged for the clearing staging record are deleted from the **CI\_APAY\_STGUP\_EXC** table.

### Procedure

To edit a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.
2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the clearing record whose associated clearing staging record you want to edit.

The **Associated Clearing Staging Records** zone appears.

3. In the **Associated Clearing Staging Records** zone, click the **Edit**  icon in the **Edit** column corresponding to the clearing staging record whose details you want to edit.

The **Edit Clearing Staging Record** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Clearing Staging ID	Displays the clearing staging ID.	Not applicable
Clearing ID	Indicates the clearing record against which the clearing staging record is added.	Not applicable
Status	Indicates the status of the clearing staging record. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Complete</li> <li>• Error</li> </ul>	Not applicable
Upload Date	Used to specify the date when the clearing staging record was uploaded or added in the system.	Yes

In addition, this screen contains the following two sections:

- **Upload Reasons** — Used to add, edit, or remove the reason code (i.e. upload reason) and error (sub reason) codes from the clearing staging record. It contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Upload Reason	Used to specify the upload reason. It indicates whether the auto clearing house has accepted or rejected the clearing record.	Yes
Reason Type	Used to indicate the type of upload reason. The valid values are: <ul style="list-style-type: none"> <li>• Cancel</li> <li>• Success</li> </ul>	Yes
Sub Reason Code	Used to specify either of the following: <ul style="list-style-type: none"> <li>• Payment cancellation reason or void status reason (for automatic refund) when the reason type is set to <b>Cancel</b></li> <li>• Notice to Change (NOC) reason when the reason type is set to <b>Success</b></li> </ul>	No
Sub Reason Description	Used to specify the description of the NOC reason.	No

**Note:** The upload reason, payment cancellation reason, void status reason, and NOC reasons must be already defined in the system. If you specify an invalid reason and sub reason codes, the status of the clearing staging record is changed to **Error** when you execute the **Freeze or Cancel Automatic Payments (APAYRA)** or **Cancel Automatic Refunds (AREFRA)** batch.

- **Characteristics** — Used to define characteristics for the clearing staging record.
4. Modify the required details in the **Edit Clearing Staging Record** screen.

**Note:** If you want to add more than one reason or sub reason code, click the **Add** (+) icon in the **Upload Reasons** section and then specify the required details. However, if you want to remove a reason or sub reason code, click the **Delete** (🗑️) icon corresponding to the reason.

5. Define characteristics for the clearing staging record, if required.
6. Click **Save**.

The changes made to the clearing staging record are saved.

How to search for a clearing record	<a href="#">Searching for a Clearing Record</a> on page 871
Associated Clearing Staging Records zone	<a href="#">Associated Clearing Staging Records</a> on page 869
How to define characteristics for a clearing staging record	<a href="#">Defining Characteristics for a Clearing Staging Record</a> on page 874

## **Defining Characteristics for a Clearing Staging Record**

### **Prerequisites**

To define characteristics for a clearing staging record, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Auto Payment Upload**)

### **Procedure**

To define characteristics for a clearing staging record:

1. Ensure that the **Characteristics** section is expanded when you are editing a clearing staging record.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the clearing staging record.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Auto Payment Upload</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the clearing staging record.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the clearing staging record.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the clearing staging record, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the clearing staging record, click the **Delete**  icon corresponding to the characteristic.

### **Related Topics**

For more information on...	See...
How to edit a clearing staging record	<a href="#">Editing a Clearing Staging Record</a> on page 873

## **Deleting a Clearing Staging Record**

### **Procedure**

To delete a clearing staging record:

1. Search for the clearing record in the **Automatic Payment and Refund Clearing Staging** screen.

- 2. In the **Search Results** section, click the **Broadcast**  icon corresponding to the clearing record whose associated clearing staging record you want to delete.

The **Associated Clearing Staging Records** zone appears.

- 3. In the **Associated Clearing Staging Records** zone, click the **Delete** () icon in the **Delete** column corresponding to the clearing staging record that you want to delete.

A message appears confirming whether you want to delete the clearing staging record.

**Note:** You can delete a clearing staging record only when it is in the **Pending** status.

- 4. Click **OK**.

The clearing staging record is deleted.

# Chapter 11

---

## Trial Billing

---

### Topics:

- [Trial Bill \(Used for Searching\)](#)
- [Trial Bill \(Used for Viewing\)](#)

Oracle Revenue Management and Billing facilitates you to generate trial bills before actual bill is generated for an account. This helps to review the trial bill and make the required corrections before the actual bill is generated. The Trial Billing feature is currently designed and developed for open item accounting and not for balance forward accounting.

The process of trial and actual billing is identical. The only difference is that you cannot freeze and complete the trial bills. Also, during trial billing, the account balance is not updated. It is updated only when the actual bill is generated. You can generate trial bill only in case of regular billing, and not in case of adhoc billing. The trial bills can be generated only through the batch process. To generate trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** – This batch is used to generate pending trial or actual bills for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch is used to generate bill segments for pending trial or actual bills.
3. **Bill Completion (C1-BLPPR)** – This batch is used to generate post-processing bill segments in the pending trial or actual bills during the bill completion process. The adjustments, if any, created on the accounts are swept onto the pending trial or actual bills. In addition, the bill routing information and bill messages are stamped on the pending trial or actual bills. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. However, in case of pending trial bill, the currency conversion for adjustments is done, but the transfer adjustments are not created. Finally, the status of the actual bill is set to **Complete**, whereas the status of the trial bill remains as **Pending**.

**Note:** The adjustments which are in the **Freezable** status are not swept onto the trial bills. Only adjustments which are in the **Frozen** status are swept onto the trial bills.

The **Trial Bill** check box is added in the **Main** tab of the **Account** screen. If you leave the **Process All or Selected Accounts** parameter blank while executing the above batches, all accounts (that meet the criteria) irrespective of whether the **Trial Bill** check box is selected or not are considered for generating the trial bills. However, if the **Process All or Selected Accounts** parameter is set to **Y**, then only those accounts that meet the criteria and where the **Trial Bill** check box is selected are considered for generating the trial bills.

You can create an actual bill using a trial bill. While creating actual bills using trial bills, you need to specify the trial billing batch run number whose trial bills

you want to convert to the actual bills. To create actual bills using trial bills, you need to execute the following batches in the specified order:

1. **Pending Bill Generation (C1-PNDBL)** - This batch generates pending actual bill for accounts that meet the criteria.
2. **Bill Segment Generation (C1-BLGEN)** – This batch copies regular bill segments which are generated for the trial bill and stamps them onto the pending actual bill. It also copies the corresponding financial transactions (FTs).
3. **Bill Completion (C1-BLPPR)** – This batch copies post-processing bill segments which are generated for the trial bill and stamps them onto the pending actual bill. The bill routing information and bill messages are copied from the trial bill to the pending actual bill. The adjustment, if any, created on the account are swept onto the pending actual bill. They are not copied from the respective trial bill. If the adjustment currency is different from the account's invoice currency, the transfer adjustment is created on the pending actual bill. Finally, the status of the actual bill is set to **Complete**.

The actual bill ID, bill segment ID and FT ID are different from the trial bill ID, bill segment ID and FT ID, respectively. If an actual bill is created using a trial bill, the system will stamp the trial bill ID on the actual bill. This helps you to track the trial bill of an actual bill.

The system allows you to view a trial bill through a user interface. It also allows you to print the trial bill in the PDF format. You can print a trial bill only when Oracle Documaker is integrated with Oracle Revenue Management and Billing. For more information about the batches, see *Oracle Revenue Management and Billing Batch Guide*.

## Trial Bill (Used for Searching)

The **Trial Bill** screen allows you to search for a trial bill using various search criteria. It contains the following zone:

- [Search Trial Bill](#) on page 879

Through this screen, you can navigate to the following screen:

- [Trial Bill \(Used for Viewing\)](#) on page 882

### Search Trial Bill

The **Search Trial Bill** zone allows you to search for trial bills using various search criteria. It contains the following two sections:

- **Search Criteria** — The criteria are grouped as indicated by line separators between the criteria. Each group is independent from the other, and only one group is used at a time for searching. If you enter criteria in more than one group, the criteria from the first group is used for searching. For example, if you enter the criteria in the Account ID and Trial Bill Description fields (which are in different criteria groups), the system searches for trial bills using the account ID. The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a trial bill using the trial bill details. The valid value is: <ul style="list-style-type: none"> <li>• Trial Bill Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Trial Bill Details</b> option is selected.	
Person ID	Used to search trial bills which are generated for a particular person.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	
Trial Bill ID	Used to search for a particular trial bill.	No
Account ID	Used to search trial bills which are generated for a particular account.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	
Division	Used to search trial bills which are generated for accounts belonging to a particular division.	No
From Trial Bill Date	Used to search trial bills which are generated from a particular date onwards.	No
Invoice Currency	Used to search trial bills which are generated in a particular invoice currency.	No
To Trial Bill Date	Used to search trial bills which are generated till a particular date.	No

Field Name	Field Description	Mandatory (Yes or No)
Batch Run Date	Used to search trial bills which are generated on a particular batch run date.	No
Trial Bill Description	Used to search trial bills which are generated in a particular batch run.	Yes (Conditional)
		<b>Note:</b> This field is required when you are searching for trial bills using the batch run date.

**Note:** You must specify at least one search criterion while searching for a trial bill.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Information	Displays additional information about the trial bill. <b>Note:</b> It has a link. On clicking the link, the <b>Trial Bill</b> screen appears where you can view the details of the respective trial bill.
Current Charges	Displays the trial bill amount.
Account Information	Indicates the account for which the trial bill is generated. In addition, this column has a context menu which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Person Name	Indicates the person for whom the trial bill is generated.
Division	Indicates the division to which the account belongs.
Batch Run Date	Displays the date when the batch is executed to generate the trial bill.
Batch Run Number	Indicates the batch run in which the trial bill is generated.

## Searching for a Trial Bill

### Prerequisites

To search for a trial bill, you should have:

- Divisions and currencies defined in the application

### Procedure

To search for a trial bill:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Financial** and then click **Trial Bill**.

The **Trial Bill** screen appears.

- Enter the search criteria in the **Search Trial Bill** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of trial bills that meet the search criteria appears in the **Search Results** section.

## Viewing the Trial Bill Details

#### Procedure

To view the details of a trial bill:

- Search for the trial bill in the **Trial Bill** screen.
- In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.  
The **Trial Bill** screen appears.
- View the basic details of the trial bill in the **Trial Bill** zone.
- View the segments of the trial bill in the **Trial Bill Segments** zone.
- View the calc lines of a trial bill segment in the **Trial Bill Segment Calc Lines** zone.
- View the service quantity details of a trial bill segment in the **Trial Bill Segment SQ Details** zone.
- View the financial details of a trial bill segment in the **Trial Bill Segment Financial Details** zone.

How to view the financial details of a trial bill segment	<a href="#">Viewing the Financial Details of a Trial Bill Segment</a> on page 890

**Trial Bill (Used for Viewing)**

The **Trial Bill** screen allows you to:

- View the details of a trial bill, such as the trial bill summary, trial bill messages, and trial bill characteristics
- View the segments of a trial bill
- View the calculation lines, service quantity details, and financial details of a trial bill segment

It contains the following zones:

- [Trial Bill](#) on page 882
- [Trial Bill Segments](#) on page 883
- [Trial Bill Segment Calc Lines](#) on page 885
- [Trial Bill Segment SQ Details](#) on page 886
- [Trial Bill Segment Financial Details](#) on page 886

**Trial Bill**

The **Trial Bill** zone displays the details of the trial bill. It contains the following sections:

- **Main** — This section provides basic information about the trial bill. It contains the following fields:

Field Name	Field Description
Trial Bill ID	Displays the trial bill ID.
Trial Bill Information	Displays additional information about the trial bill.
Trial Bill Description	Displays the description of the batch run in which the trial bill is generated.
Account Information	Indicates the account for which the trial bill is generated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<div> <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account. </div>

- **Trial Bill Summary** — This section summarizes the financial impact of the bill. It contains the following fields:

Field Name	Field Description
New Charges	Displays the total amount of frozen bill segment financial transactions which are linked to the trial bill.
Adjustments	Displays the total amount of frozen and/or canceled adjustment financial transactions which are linked to the trial bill.
Corrections	Displays the total amount of canceled and/or rebilled bill segment financial transactions which are linked to the trial bill.
Total	Displays the sum of new charges, adjustments, and corrections.
No. of Bill Segments in Error	Indicates the number of bill segments in the trial bill which are in the <b>Error</b> status.

- **Trial Bill Messages** — This section lists the bill messages that are stamped on the trial bill. It contains the following columns:

Column Name	Column Description
Message Code	Displays the code that uniquely identifies the bill message.
Message on Bill	Displays the bill message.
Priority	Indicates the priority which determines the order in which the bill message must be printed on the trial bill.
Insert Code	Indicates whether the bill message must be sent separately along with the trial bill.

- **Characteristics** — This section lists characteristics defined for the trial bill. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

In addition, this zone contains a button named **Display Trial Bill** which allows you to print a trial bill in the PDF format.

### Related Topics

How to print a trial bill in the PDF format	<a href="#">Printing a Trial Bill in the PDF Format</a> on page 887

## Trial Bill Segments

The **Trial Bill Segments** zone lists the segments of the trial bill. You can filter the trial bill segments using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search trial bill segments which are generated for a particular usage account.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Contract Type	Used to search trial bill segments which are generated against a particular type of contract.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.	
Trial Bill Segment Type	Used to search for a particular type of trial bill segments. The valid values are: <ul style="list-style-type: none"> <li>• Post Processing</li> <li>• Regular</li> </ul>	No
Price Item	Used to search trial bill segments which are generated for a particular price item.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Price Item Search</b> window appears.	
Trial Bill Segment Status	Used to search trial bill segments in a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Error</li> <li>• Freezable</li> </ul>	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Trial Bill Segment ID	Displays the trial bill segment ID.
Status	Indicates the status of the trial bill segment. The valid values are: <ul style="list-style-type: none"> <li>• Error</li> <li>• Freezable</li> </ul>
Start Date	Displays the start date of the trial bill segment.
End Date	Displays the end date of the trial bill segment.
Calculated Amount (Pricing Currency)	Displays the trial bill segment amount in the pricing currency.
Price Item	Indicates the price item for which the trial bill segment is generated.
Pricing Parameters	Indicates the price item parameters which are used along with the price item for determining the price item pricing.
Rate Schedule	Indicates the rate schedule which is used for defining the price item pricing.
Price Assignment ID	Indicates the price item pricing which is used during calculation.

Column Name	Column Description
Billable Charge ID	Indicates the billable charge for which the trial bill segment is generated.
	<b>Note:</b> It has a link. On clicking the link, the <b>Billable Charge</b> screen appears where you can view the details of the respective billable charge.
Construct ID	Indicates the construct through which the trial bill segment is generated.
	<b>Note:</b> It has a link. On clicking the link, the <b>Construct</b> screen appears where you can view the details of the respective construct.

On clicking the **Broadcast**  icon corresponding to the trial bill segment, the **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, and **Trial Bill Segment Financial Details** zones appear with the details of the respective trial bill segment.

## Trial Bill Segment Calc Lines

The **Trial Bill Segment Calc Lines** zone lists the calculation lines which indicate how the system calculated the trial bill segment amount. It contains the following columns:

Column Name	Column Description
Sequence No.	Indicates the sequence in which the calculation line is created while calculating the trial bill segment amount.
Description on Bill	Displays the summarized information about the calculation line that will be printed on the trial bill.
Calculated Amount (Pricing Currency)	Displays the calculated charge amount associated with the calculation line in the pricing currency.
Calculated Amount (Invoice Currency)	Displays the calculated charge amount associated with the calculation line in the invoice currency.
Print	Indicates whether information about the calculation line will be printed on the person's trial bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Appears in Summary	Indicates whether the calculation line amount will appear in the summary of the trial bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Exchange Rate	Indicates the exchange rate which is used when the invoice currency is different from the pricing currency.
Price Component ID	Indicates the price component which is used during calculation.

Column Name	Column Description
Service Quantity Identifier	Indicates the service quantity identifier (SQI) of the service quantity which is priced on the calculation line.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.
Base Amount	Displays the total amount derived from the cross-referenced lines that the current line then used to calculate the charge amount.
Rate Component Sequence	Indicates the sequence of the rate component on the effective rate version which is used while calculating the line.
Exempt Amount	Displays the amount of the calculated charge that the person does not have to pay due to tax exemption.
Distribution Code	Indicates the distribution code associated with the rate component.

By default, the **Trial Bill Segment Calc Lines** zone does not appear in the **Trial Bill** screen. It appears only when you click the **Broadcast**  icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

## Trial Bill Segment SQ Details

The **Trial Bill Segment SQ Details** zone lists the service quantity identifiers associated with the contract against which the trial bill segment is created. It contains the following columns:

Column Name	Column Description
SQI	Indicates the service quantity identifier.
Billable Service Quantity	Displays the SQI value used by the rates engine for calculation.

By default, the **Trial Bill Segment SQ Details** zone does not appear in the **Trial Bill** screen. It appears only when you click the **Broadcast**  icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

#### Related Topics

For more information on...	See...
How to view the service quantity details of a trial bill segment	<a href="#">Viewing the SQ Details of a Trial Bill Segment</a> on page 889

## Trial Bill Segment Financial Details

The **Trial Bill Segment Financial Details** zone lists the distribution codes which indicate the GL accounts that will be affected by the trial bill segment financial transaction. It contains the following columns:

Column Name	Column Description
Sequence No.	Indicates the sequence in which the distribution code will be considered for deriving the GL account.
Distribution Code	Indicates the distribution code associated with the rate component used for calculating the trial bill segment amount.

Column Name	Column Description
Amount	Displays the amount that will be debited or credited to the GL account.

By default, the **Trial Bill Segment Financial Details** zone does not appear in the **Trial Bill** screen. It appears only when you click the **Broadcast**  icon corresponding to the trial bill segment in the **Trial Bill Segment** zone.

## Printing a Trial Bill in the PDF Format

### Prerequisites

To print a trial bill in the PDF format, you should have:

- Oracle Documaker integrated with Oracle Revenue Management and Billing

### Procedure

To print a trial bill in the PDF format:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill that you want to print in the PDF format.

The **Trial Bill** screen appears.

3. Click the **Display Trial Bill** button in the **Trial Bill** zone.

The trial bill is printed in the PDF format.

### Related Topics

For more information on...	See...

<b>Trial Bill</b> screen	<a href="#">Trial Bill (Used for Viewing)</a> on page 882
<b>Trial Bill</b> zone	<a href="#">Trial Bill</a> on page 882

## Viewing the Segments of a Trial Bill

### Procedure

To view the segments of a trial bill:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. View the segments of the trial bill in the **Trial Bill Segments** zone.
4. If required, you can filter the trial bill segments using various search criteria.

Related Topics

<b>Trial Bill</b> screen	<a href="#">Trial Bill (Used for Viewing)</a> on page 882
<b>Trial Bill Segments</b> zone	<a href="#">Trial Bill Segments</a> on page 883
How to filter the trial bill segments	<a href="#">Filtering the Trial Bill Segments</a> on page 888

Filtering the Trial Bill Segments

Prerequisites

To filter the trial bill segments, you should have:

- Usage accounts, contract types, and price items defined in the application

Procedure

To filter the trial bill segments:

- Search for the trial bill in the **Trial Bill** screen.
- In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

- Enter the search criteria in the **Trial Bill Segments** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

The search results are filtered based on the specified criteria.

## **Viewing the SQ Details of a Trial Bill Segment**

#### **Procedure**

To view the service quantity details of a trial bill segment:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. If required, you can filter the trial bill segments in the **Trial Bill Segments** zone.

4. In the **Search Results** section, click the **Broadcast**  icon corresponding to the trial bill segment whose details you want to view.

The **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, and **Trial Bill Segment Financial Details** zones appear.

5. View the service quantity details of the trial bill segment in the **Trial Bill Segment SQ Details** zone.

## Viewing the Financial Details of a Trial Bill Segment

### Procedure

To view the financial details of a trial bill segment:

1. Search for the trial bill in the **Trial Bill** screen.
2. In the **Search Results** section, click the link in the **Trial Bill Information** column corresponding to the trial bill whose details you want to view.

The **Trial Bill** screen appears.

3. If required, you can filter the trial bill segments in the **Trial Bill Segments** zone.
4. In the **Search Results** section, click the **Broadcast**  icon corresponding to the trial bill segment whose details you want to view.

The **Trial Bill Segment Calc Lines**, **Trial Bill Segment SQ Details**, and **Trial Bill Segment Financial Details** zones appear.

5. View the financial details of the trial bill segment in the **Trial Bill Segment Financial Details** zone.

# Chapter 12

---

## GL Account Validation

---

### Topics:

- [Static GL Account Validation](#)
- [Dynamic GL Account Validation](#)

Oracle Revenue Management and Billing allows you to validate the GL account statically and dynamically. The static GL account validation means you can validate the GL account while creating or editing a distribution code. And, the dynamic GL account validation means you can validate the GL account while assigning it to trial and actual financial transactions through the batch process.

For more information about static GL account validation and dynamic GL account validation, refer to [Static GL Account Validation](#) on page 892 and [Dynamic GL Account Validation](#) on page 892, respectively.

## Static GL Account Validation

---

If you want to validate the GL account while creating or editing a distribution code, you need to select the **Validate GL Account** check box in the **Distribution Code** screen. If the GL account is valid, the following string appears below the check box while saving the distribution code:

“GL Account is validated on YYYY-MM-DD”

And, if the GL account is invalid, the following string appears below the check box while saving the distribution code:

“GL Account is invalid”

If you want to enable the static GL account validation feature on the **Distribution Code** screen, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to the **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen. Both these algorithm types have one parameter named **GL Account Length**. You need to set the value of this parameter while creating the algorithm using the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type. If you attach an algorithm of the **C1-GLVAL** algorithm type, the system checks whether the length of GL account is greater than or equal to the value defined in the **GL Account Length** parameter. If the length is greater than or equal to the specified length, the GL account is considered as valid. And, if the length is less than the specified length, the GL account is considered as invalid.

And, if you attach an algorithm of the **C1-GLVAL-COB** algorithm type, the system checks whether the length of GL account is equal to the value defined in the **GL Account Length** parameter. If the length is equal to the specified length, the GL account is considered as valid. And, if the length is less than or greater than the specified length, the GL account is considered as invalid.

## Dynamic GL Account Validation

---

If you want to validate GL account while assigning it to trial and actual financial transactions, you need to set the **Validate GL Account** parameter to **Y** while executing the batch. If the GL account is valid, the date when the GL account is validated is added in the GLA\_VAL\_DT column of the CI\_TRL\_FT\_GL or CI\_FT\_GL table, respectively, depending on whether the GL account is assigned to a trial or actual financial transaction.

If you want to enable the dynamic GL account validation feature in the C1-GLASN or GLASSGN2 batch, you need to define an algorithm of the **C1-GLVAL** or **C1-GLVAL-COB** algorithm type and attach the algorithm to either of the following:

- The **GL Account Validation** algorithm entity in the **Algorithms** tab of the **Division** screen
- The **GL Account Validation** system event in the **Algorithms** tab of the **Installation Options – Framework** screen

If the GL account validation algorithm is defined at both these algorithm spots, the algorithm defined at the division level always takes precedence over the algorithm defined in the installation options during dynamic GL account validation.

## Upload Validated Adjustment Data

---

### Topics:

- [Prerequisites](#)
- [CSV File Format](#)
- [Adjustment Upload Request \(Without Approval\) Status Transition](#)
- [Adjustment Upload Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-ADJUPLD](#)
- [Adjustment Upload Request](#)

Oracle Revenue Management and Billing until now provided you with an ability to upload adjustment data received from an external source system and create adjustments using the **C1-ADUP1** and **C1-ADUP2** batches. However, there was no user interface available through which you can upload an adjustment data file and create adjustments from the adjustment records. Now, the system provides a user interface which helps you to upload an adjustment data file.

You can upload an adjustment data file in the CSV format. You need to ensure that the CSV file is in the required format; otherwise the file will not be uploaded in the system. At present, the system supports only the CSV file format. For more information about the CSV file format, see [CSV File Format](#) on page 895.

While uploading an adjustment data file, you need to specify the upload request type using which you want to upload the adjustment data file. It is the upload request type which helps the system to determine:

- Whether adjustments must be created in the real time (i.e. immediately) or in the deferred mode (i.e. in the background)
- Whether the size of the adjustment data file exceeds the maximum file size defined in the upload request type
- Whether the adjustment data file must be approved by the approver before creating adjustments

All records are validated before uploading an adjustment data file. During the validation process, the system and custom validations (if any) are executed. If there is any invalid record, the system does not allow you to upload the adjustment data file. The system indicates the reason why the adjustment record could not pass through the validation process. You need to first correct the adjustment record in the CSV file and then upload the adjustment data file.

An upload request of the specified upload request type is created when an adjustment data file is successfully uploaded in the system. You can track an adjustment data file through an upload request. During the adjustment upload process, an adjustment upload request goes through various statuses in its lifecycle. For more information about the adjustment upload request statuses, see [Adjustment Upload Request \(Without Approval\) Status Transition](#) on page 896 and [Adjustment Upload Request \(With Approval\) Status Transition](#) on page 897.

Note that the lifecycle of an adjustment upload request is driven by the business object using which the adjustment upload request is created. An adjustment upload request business object named **C1-ADJUPLD** is shipped with the product. The adjustment upload feature explained in this section is documented based on the lifecycle and logic defined in the **C1-ADJUPLD** business object.

If required, the implementation team can create a custom adjustment upload request business object.

Once the adjustment upload request is created, you can perform various tasks, such as:

- Track the status of an adjustment upload request
- View the details of an adjustment upload request
- View all records of an adjustment data file
- Cancel an adjustment data file
- Create adjustments for an adjustment data file
- Submit the adjustment data file for approval
- Approve or reject an adjustment data file based on the observations

## Prerequisites

To setup the adjustment upload process, you need to do the following:

- Define the required upload request types in the system
- Create a defer algorithm using the **C1-UPLDEFEVL** algorithm type
- Create an algorithm using the **C1-MTCIALG** algorithm type if you want to create adjustments using the Contract match type
- Create an algorithm using the **C1-MTCTALG** algorithm type if you want to create adjustments using the Contract Type match type
- Define the required characteristic types where the characteristic entity is set to Upload Request Type
- Define cancellation and rejection reasons for the **C1-ADJUPLD** business object
- Assign the **C1-ADJUP** To Do type to a To Do role whose users must receive To Do entries generated while submitting an upload request (i.e. an adjustment data file) for approval
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## CSV File Format

Before uploading an adjustment data file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		<b>Note:</b> This data is required when the match type is Contract Type and account ID is not specified.
Account Identifier	Used to specify the account identifier.	Yes (Conditional)
		<b>Note:</b> This data is required when the match type is Contract Type and account ID is not specified.
Account ID	Used to indicate the account for which the adjustment must be created.	Yes (Conditional)
		<b>Note:</b> This data is required when the match type is Contract Type and the account identifier type and account identifier are not specified.

Column Name	Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which the adjustment must be created.	Yes
Match Value	Used to indicate the entity (such as contract, contract type, and so on) against which the adjustment must be created.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.	Yes
	<b>Note:</b> The adjustment type must be included in the adjustment type profile which is attached to the contract type.	
Adjustment Amount	Used to specify the adjustment amount.	Yes
	<b>Note:</b> The adjustment amount precision must match the precision (decimal positions) defined for the currency.	
Currency Code	Used to indicate the currency in which the adjustment must be created.	Yes
Comments	Used to specify additional information about the adjustment.	No
Bill ID	Used to indicate the bill on which the adjustment must be created.	No
Arrears Date	Used to specify the date from when the amount is outstanding on the bill.	No
Char Type 1, Char Type 2, ....., Char Type 5	Used to indicate the characteristic that must be defined for the adjustment.	Yes (Conditional)
		<b>Note:</b> This data is required if the characteristic value is specified.
Char Value 1, Char Value 2, ....., Char Value 5	Used to specify the value for the characteristic type.	Yes (Conditional)
		<b>Note:</b> This data is required if the characteristic type is specified.

**Note:** If an adjustment data file contains column names other than those mentioned in the above table, the system will not upload the adjustment data file.

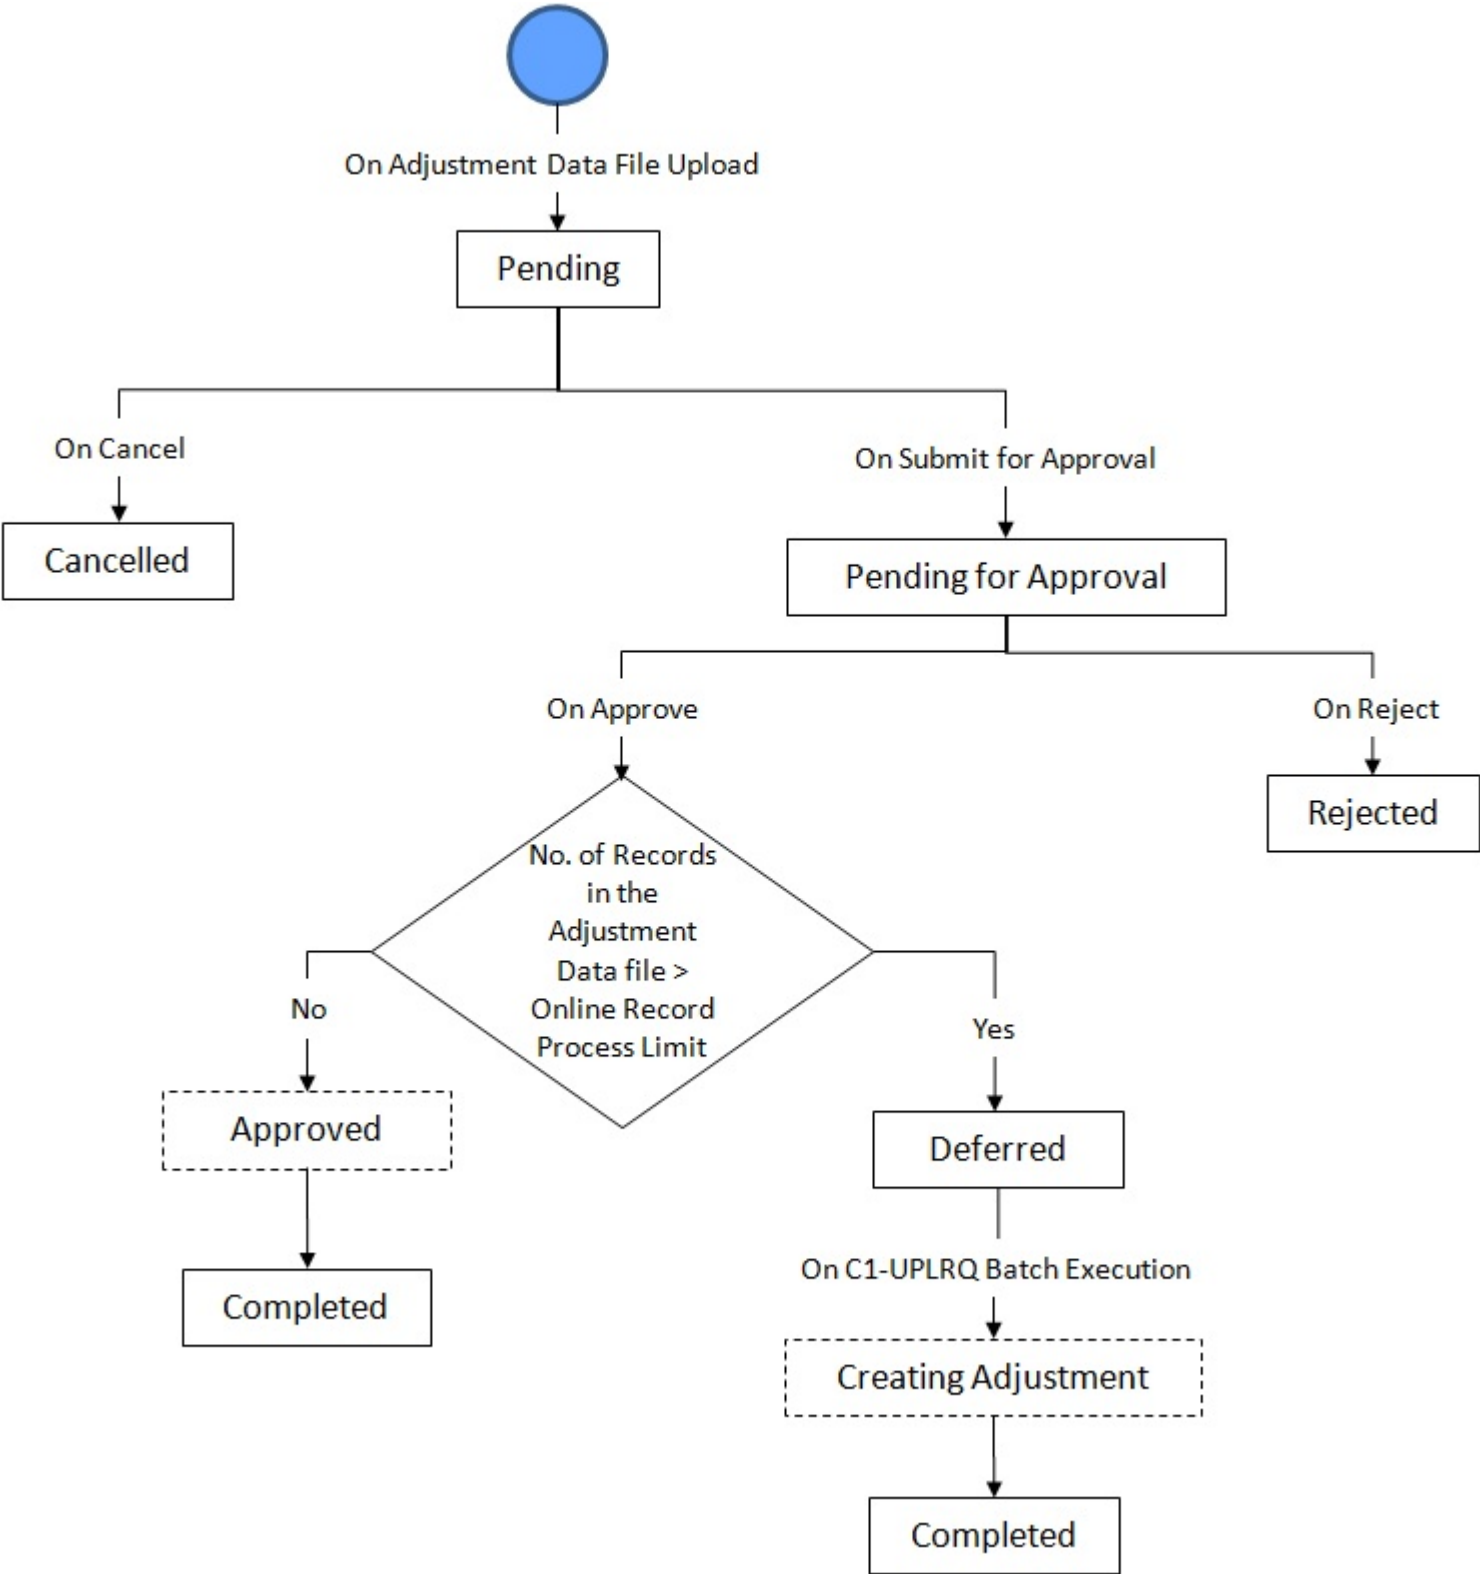

## Adjustment Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is off:

## Adjustment Upload Request (With Approval) Status Transition

The following figure graphically indicates how an adjustment upload request moves from one status to another when approval workflow is on:

### Algorithms Used in C1-ADJUPLD

The following table lists the algorithms which are attached to the **C1-ADJUPLD** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-FLREQ-INF	C1-FLREQ-INF	<p>This algorithm formats the upload request information that appears throughout the system for the BO. The algorithm formats the information as follows: Upload Request type description, Status description, ID. This algorithm generates the upload request information string which appears throughout the application. This algorithm concatenates the following fields:</p> <ul style="list-style-type: none"> <li>• Upload Request Type Description</li> <li>• Upload Request Description</li> <li>• Upload Request ID</li> </ul>
Validation	C1-ADVALREQ	C1-ADVALREQ	<p>This algorithm will be called from a business service and is responsible for validating the uploaded CSV file and identify if any records are invalid. The validations to be performed are mentioned below: 1. Mandatory column data checks 2. Check for valid values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount. 3. This algorithm will also call the match type algorithm linked to the request type to derive and validate the value for contract ID. This algorithm validates the uploaded CSV file and identifies invalid records, if any. The validations performed are as follows:</p> <ul style="list-style-type: none"> <li>• Validating mandatory column data</li> <li>• Validating values for account, match type, match value, adjustment type, adjustment characteristics type, currency and amount.</li> <li>• Invoke the match type algorithm linked to the request type to derive and validate the value for contract ID.</li> </ul>

The following table lists the algorithms which are used in the lifecycle of the **C1-ADJUPLD** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Cancelled	-	-	-	-
Create Adjustment	Enter	C1-ADJUPLDEF	C1-ADJUPLDEF	<p>This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates and creates adjustment. It evaluates, if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the <b>Enter</b> status algorithm when the request object is changed to <b>Create</b> or <b>Approved</b> status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Deferred	Monitor	C1-ADJ-MNTR	C1-ADJ-MNTR	This algorithm will be invoked from the Upload Request Monitor batch. This will be responsible for BO transition from 'Deferred' to 'Creating' status. This algorithm is triggered from the <b>Upload Request Monitor</b> batch. This algorithm transitions the business object status from <b>Deferred</b> to <b>Creating</b> .
Pending for Approval	Enter	C1-ADJUPAPVL	C1-ADJUPAPVL	This algorithm will be responsible of creating To Do for the approver to approve or reject the uploaded file data. To Do will be created using the To Do Type linked to the request type to the approver(s) who are associated with the To Do Role linked to the request type. This will be invoked by the Enter Status algorithm when the Request object enters 'SUBMITTED - Pending For Approver' status. This algorithm creates the To Do using the To Do Type for the approver to approve or reject the uploaded file data. This To Do Type is linked to the request type to the approver(s) associated with the To Do Role linked to the request type. This algorithm is triggered by the <b>Enter</b> status algorithm when the request object enters <b>Submitted - Pending For Approver</b> status.
Approved	Enter	C1-ADJUPDEF	C1-ADJUPDEF	This algorithm will evaluate if request processing should be done in real time or deferred for offline processing. This will be invoked by the Enter Status algorithm when the Request object enters 'CREATE' or 'APPROVED' status. This algorithm evaluates if request should be processed in real time or deferred for offline processing. This algorithm is triggered by the <b>Enter</b> status algorithm when the request object is changed to <b>Create</b> or <b>Approved</b> status.
Rejected	-	-	-	-
Completed	-	-	-	-
Creating Adjustment	Enter	C1-ADJCRTION	C1-ADJCRTION	This algorithm is responsible for creating Adjustment for the uploaded file. The adjustment ID will be updated back in the request table to link the request with the adjustments. This algorithm creates an adjustment for the uploaded file. In addition, the adjustment ID is stamped on the adjustment and on the corresponding financial transaction.

## Adjustment Upload Request

The **Adjustment Upload Request** screen allows you to search for an adjustment upload request using various search criteria. Through this screen, you can:

- Upload an adjustment data file
- Cancel an adjustment data file
- View the details of an adjustment upload request
- View all adjustment records which are uploaded through an adjustment data file
- Create adjustments for an adjustment data file
- Submit an adjustment data file for approval
- Approve or reject an adjustment data file
- View the log of an adjustment upload request
- Add a log entry for an adjustment upload request

This screen consists of the following zones:

- [Search Adjustment Upload Request](#) on page 901

## Search Adjustment Upload Request

The **Search Adjustment Upload Request** zone allows you to search for an adjustment upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The fields in the **Search Criteria** section change depending on the query option selected. At present, there is only one query option named **Upload Request**. On selecting the **Upload Request** query option, the **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to search adjustment upload requests which are created using a particular upload request type.	No
Status	Used to search adjustment upload requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Completed</li> <li>• Create Adjustment</li> <li>• Creating Adjustment</li> <li>• Deferred</li> <li>• Pending</li> <li>• Rejected</li> <li>• Pending For Approval</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Upload From Date	Used to search adjustment upload requests which are created from a particular date onwards.	No
	<b>Note:</b> By default, the current date appears in this field.	
To	Used to search adjustment upload requests which are created till a particular date.	No
	<b>Note:</b> By default, the current date appears in this field.	
File Name	Used to search an adjustment upload request which is created while uploading an adjustment data file.	No

**Note:** You must specify at least one search criterion while searching for an adjustment upload request.

- Search Results** — On clicking the **Refresh** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the adjustment data file is uploaded in the system.
Upload Request Information	Displays information about the adjustment upload request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Upload Request</b> screen appears where you can view the details of the respective upload request.
Status	Indicates the status of the adjustment upload request.
Upload Request Type	Indicates the upload request type using which the adjustment data file is uploaded in the system.
File Name	Displays the name of the adjustment data file.

You can upload an adjustment data file by clicking the **Upload** link in the upper right corner of this zone.

**Related Topics**

For more information on...	See...
How to search for an adjustment upload request	<a href="#">Searching for an Adjustment Upload Request</a> on page 906

### Adjustment Upload Request

The **Adjustment Upload Request** zone displays the details of the adjustment upload request. This zone contains the following sections:

- Header** — This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
