Upload Request Information	<p>Displays information about the adjustment upload request. The information string contains the following comma-separated values:</p> <ul style="list-style-type: none"> <li>• Upload Request Type Description</li> <li>• Status Description</li> <li>• Upload Request ID</li> </ul> <p><b>Note:</b> This information string is generated using the <b>C1-FLREQ-INF</b> algorithm which is attached to the <b>Information</b> system event in the adjustment upload request business object. If you want to display a different information string, you need to define a custom algorithm type and attach the algorithm in the adjustment upload request business object.</p>
Status	<p>Indicates the status of the adjustment upload request. The valid values are:</p> <ul style="list-style-type: none"> <li>• Approved</li> <li>• Cancelled</li> <li>• Completed</li> <li>• Create Adjustment</li> <li>• Creating Adjustment</li> <li>• Deferred</li> <li>• Pending</li> <li>• Rejected</li> <li>• Pending for Approval</li> </ul>
Status Reason	<p>Indicates the reason why the adjustment data file is cancelled or rejected.</p> <p><b>Note:</b> This field appears only when the adjustment upload request is in the <b>Cancelled</b> or <b>Rejected</b> status.</p>
File Name	Displays the name of the adjustment data file for which the adjustment upload request is created.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Cancel File	Used to cancel an adjustment data file.
	<p><b>Note:</b> The <b>Cancel File</b> button appears only when the adjustment upload request is in the <b>Pending</b> status.</p>

Button Name	Button Description
Create Adjustment	Used to create adjustments for the records which are uploaded through the adjustment data file.  <b>Note:</b> The <b>Create Adjustment</b> button appears only when: <ul style="list-style-type: none"> <li>The adjustment upload request is in the <b>Pending</b> status.</li> <li>The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.</li> </ul>
Submit for Approval	Used to submit the adjustment data file for approval.  <b>Note:</b> The <b>Submit for Approval</b> button appears only when: <ul style="list-style-type: none"> <li>The adjustment upload request is in the <b>Pending</b> status.</li> <li>The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.</li> </ul>
Approve	Used to approve the adjustment data file.  <b>Note:</b> The <b>Approve</b> button appears only when: <ul style="list-style-type: none"> <li>The adjustment upload request is in the <b>Pending for Approval</b> status.</li> <li>A user with the approval To Do role is reviewing the adjustment data file.</li> </ul>
Reject	Used to reject the adjustment data file.  <b>Note:</b> The <b>Reject</b> button appears only when: <ul style="list-style-type: none"> <li>The adjustment upload request is in the <b>Pending for Approval</b> status.</li> <li>A user with the approval To Do role is reviewing the adjustment data file.</li> </ul>

**Note:** The **Record Actions** section does not contain buttons when the status of the adjustment upload request is **Cancelled**, **Completed**, **Deferred**, or **Rejected**.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the adjustment upload request is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears with the details of the respective business object.
Status Date/Time	Displays the date and time when the adjustment upload request status is updated.
Create Date/Time	Displays the date and time when the adjustment upload request is created.

## Adjustment Data Records

The **Adjustment Data Records** zone lists the adjustment records which are uploaded through the adjustment data file. This zone contains the following columns:

Column Name	Column Description
Adjustment Information	<p>Displays information about the adjustment that is created using the adjustment record.</p> <p><b>Note:</b></p> <p>The data appears in this column only when the status of the adjustment upload request is <b>Completed</b>.</p> <p>It has a link. On clicking the link, the <b>Adjustment</b> screen appears with the details of the respective adjustment.</p> <p>The information string appears only when an algorithm of the <b>C1-ADI-INFO</b> algorithm type is attached to the <b>Adjustment Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options — Framework</b> screen.</p>
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Adjustment Match Value	Indicates the contract against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1, Char Type 2, ....., Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 1, Char Value 2, ....., Char Value 5	Displays the value of the characteristic type.

**Searching for an Adjustment Upload Request**

**Prerequisites**

To search for an adjustment upload request, you should have:

- Upload request types defined in the application

**Procedure**

To search for an adjustment upload request:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Financial** and then click **Adjustment Upload Request**.

The **Adjustment Upload Request** screen appears.

4. Enter the search criteria in the **Search Adjustment Upload Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of adjustment upload requests that meet the search criteria appears in the **Search Results** section.

**Uploading an Adjustment Data File**

**Prerequisites**

To upload an adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

**Procedure**

To upload an adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.

A list appears.

2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Financial** and then click **Adjustment Upload Request**.

The **Adjustment Upload Request** screen appears.

4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Upload Adjustment Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file.	Yes
	<b>Note:</b> The list includes only those upload request types which are in the <b>Active</b> status.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
	<b>Note:</b> You can replace an existing file only when the adjustment upload request is in the <b>Pending</b> or <b>Cancelled</b> status.	
File Name	Used to specify the name and path of the adjustment data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the adjustment data file is available in the system.	

5. Select the upload request type using which you want to upload the adjustment data file.
6. Click the **Browse** button corresponding to the **File Name** field.
7. Browse to the location where the adjustment data file that you want to upload is available.
8. Click **Open**.

The **Choose File to Upload** dialog box appears.

The adjustment data file name and path appears in the **File Name** field.

9. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description
Errors	Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column.
	<b>Note:</b> This column appears only when you click the <b>Save</b> button.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.

Column Name	Column Description
Account ID	Indicates the account for which the adjustment must be created.
Match Type	Indicates the match type using which the adjustment must be created.
Match Value	Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Currency Code	Indicates the currency in which the adjustment must be created.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1	Indicates the characteristic that must be defined for the adjustment.
Char Value 1	Displays the value of the characteristic type.
Char Type 2	Indicates the characteristic that must be defined for the adjustment.
Char Value 2	Displays the value of the characteristic type.
Char Type 3	Indicates the characteristic that must be defined for the adjustment.
Char Value 3	Displays the value of the characteristic type.
Char Type 4	Indicates the characteristic that must be defined for the adjustment.
Char Value 4	Displays the value of the characteristic type.
Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 5	Displays the value of the characteristic type.

**Note:** If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

#### 10. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.
- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

## Replacing an Adjustment Data File

### Prerequisites

To replace an existing adjustment data file, you should have:

- Upload request types defined in the application
- Adjustment data in the required CSV file format

### Procedure

To replace an existing adjustment data file:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. Select the **Main Menu** option from the list.
3. From the **Main Menu**, select **Financial** and then click **Adjustment Upload Request**.

The **Adjustment Upload Request** screen appears.

4. Click the **Upload** link in the upper right corner of the **Search Adjustment Upload Request** zone.

The **Adjustment Upload Data File** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to indicate the upload request type using which you want to upload the adjustment data file.	Yes
	<b>Note:</b> The list includes only those upload request types which are in the <b>Active</b> status.	
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
	<b>Note:</b> You can replace an existing file only when the adjustment upload request is in the <b>Pending</b> or <b>Cancelled</b> status.	
File Name	Used to specify the name and path of the adjustment data file that you want to upload.	Yes
	<b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the adjustment data file is available in the system.	

5. Select the upload request type using which you want to upload the adjustment data file.
6. Select the **Replace Existing File** check box to indicate that you want to replace an existing adjustment data file.
7. Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

8. Browse to the location where the adjustment data file that you want to upload is available.
9. Click **Open**.

The adjustment data file name and path appears in the **File Name** field.

10. Click **Submit**.

A grid appears which helps you to preview all records in the adjustment data file. It contains the following columns:

Column Name	Column Description
Errors	Indicates the reason why the adjustment record is invalid. If there are multiple reasons, the comma-separated list of error messages appears in this column.
	<b>Note:</b> This column appears only when you click the <b>Save</b> button.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Indicates the account for which the adjustment must be created.
Match Type	Indicates the match type using which the adjustment must be created.
Match Value	Indicates the entity (such as contract, contract type, and so on) against which the adjustment must be created.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
Adjustment Amount	Displays the adjustment amount.
Currency Code	Indicates the currency in which the adjustment must be created.
Comments	Displays additional information about the adjustment.
Bill ID	Indicates the bill on which the adjustment must be created.
Arrears Date	Displays the date from when the amount is outstanding on the bill.
Char Type 1	Indicates the characteristic that must be defined for the adjustment.
Char Value 1	Displays the value of the characteristic type.
Char Type 2	Indicates the characteristic that must be defined for the adjustment.
Char Value 2	Displays the value of the characteristic type.
Char Type 3	Indicates the characteristic that must be defined for the adjustment.
Char Value 3	Displays the value of the characteristic type.
Char Type 4	Indicates the characteristic that must be defined for the adjustment.
Char Value 4	Displays the value of the characteristic type.
Char Type 5	Indicates the characteristic that must be defined for the adjustment.
Char Value 5	Displays the value of the characteristic type.

**Note:** If you upload an adjustment data file which exceeds the maximum file size defined in the upload request type, the system will not allow you to upload the file.

#### 11. Click **Save**.

The validation process starts immediately. The adjustment record is considered as invalid when:

- Account ID, Account Identifier Type, Account Identifier, Adjustment Type, Currency, Bill ID, Characteristic Type, Characteristic Value, or Match Type is invalid.
- Match Type, Match Value, Adjustment Type, Adjustment Amount, Currency, or Characteristic Value is missing.
- Contract ID does not exist in the system.
- The contract is in the **Cancelled** status.
- Contract type does not exist in the system.
- Account Identifier Type, Account Identifier, or Account ID is missing when the match type is Contract Type.
- No active contract of the specified contract type is available.
- Adjustment amount precision does not match the precision (decimal positions) defined for the currency.
- The adjustment type is not included in the adjustment type profile which is attached to the contract type.
- The characteristic type is not associated with the adjustment type.

If there is an invalid record in the adjustment data file, you will not be able to upload the file.

## Cancelling an Adjustment Data File

There might be situations when incorrect adjustment data file is uploaded in the system. In such case, the system provides you with an ability to cancel the file. However, note that you can cancel an adjustment data file only when the adjustment upload request is in the **Pending** status.

#### Prerequisites

To cancel an adjustment data file, you should have:

- Cancellation reasons defined in the application

**Note:** While cancelling an adjustment data file, you need to specify the reason why you want to cancel the adjustment data file. You can select the appropriate cancellation reason only when you have defined the reasons for the **Cancelled** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

#### Procedure

To cancel an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to cancel) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to cancel.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- Main** – This tab contains the following two zones:
    - Adjustment Upload Request** – Displays the details of the adjustment upload request.
    - Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
  - Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Cancel File** in the **Adjustment Upload Request** zone.

The **Cancellation Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancellation Reason	Used to indicate the reason why you want to cancel the adjustment data file.	Yes

**Note:** The **Cancel File** button appears only when the adjustment upload request is in the **Pending** status.

4. Select the cancellation reason from the list.
5. Click **Save**.

The adjustment data file is cancelled. In addition, the status of the adjustment upload request is changed to **Cancelled**.

Related Topics

Creating Adjustments for an Adjustment Data File

Procedure

To create adjustments for an adjustment data file:

- Search for the adjustment upload request (which is created while uploading the file for which you want to create adjustments) in the **Adjustment Upload Request** screen.
- In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file for which you want to create adjustments.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- Main** – This tab contains the following two zones:
    - Adjustment Upload Request** – Displays the details of the adjustment upload request.
    - Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
  - Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Create Adjustment** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit

(defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

**Note:**

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Create Adjustment** button appears only when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is not configured for the upload request type using which the adjustment data file is uploaded.

## Submitting an Adjustment Data File for Approval

### Procedure

To submit an adjustment data file for approval:

1. Search for the adjustment upload request (which is created while uploading the file that you want to submit for approval) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to submit for approval.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
    - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
    - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click **Submit for Approval** in the **Adjustment Upload Request** zone.

The status of the adjustment upload request is changed to **Pending for Approval**. A To Do is created using the **C1-ADJUP** To Do type. Users having a To Do role to which the **C1-ADJUP** To Do type is associated can view

the To Do from the **To Do List** screen. On clicking the **Submitted Message** link corresponding to the To Do, the **Adjustment Upload Request** screen appears where you can review the records of the adjustment data file.

**Note:**  
The **Submit for Approval** button appears only when:

- The adjustment upload request is in the **Pending** status.
- The approval workflow process is configured for the upload request type using which the adjustment data file is uploaded.

**Related Topics**

**Approving an Adjustment Data File**

**Procedure**

To approve an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
    - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
    - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Review the records of the adjustment data file in the **Adjustment Data Records** zone.
  4. If the adjustment data file is appropriate, then click **Approve** in the **Adjustment Upload Request** zone.

The Defer algorithm attached to the upload request type using which you have uploaded the adjustment data file is triggered. If the number of records in the adjustment data file does not exceed the online record process limit (defined in the Defer algorithm), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**. However, if the number of records in the adjustment data file exceeds the online record process limit, the system creates adjustments in the deferred mode and the status of the adjustment upload request is changed to **Deferred**.

**Note:**

Deferred mode means in the background when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. You can configure the **Upload Request Periodic Monitor (C1-UPLRQ)** batch such that it is executed at regular intervals. When the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked, the system checks whether there are any adjustment upload requests in the **Deferred** status. If there is an adjustment upload request in the **Deferred** status, the system creates adjustments for the adjustment data file. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **Adjustment Data Records** zone and the status of the adjustment upload request is changed to **Completed**.

The **Approve** button appears only when:

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

**Related Topics**

For more information on...	See...
How to search for an adjustment upload request	<a href="#">Searching for an Adjustment Upload Request</a> on page 906

**Rejecting an Adjustment Data File****Prerequisites**

To reject an adjustment data file, you should have:

- Rejection reasons defined in the application

**Note:**

While rejecting an adjustment data file, you need to specify the reason why you want to reject the adjustment data file. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-ADJUPLD** business object in the **Status Reason** screen.

The system does not allow the submitter to approve or reject the adjustment data file.

**Procedure**

To reject an adjustment data file:

1. Search for the adjustment upload request (which is created while uploading the file that you want to review) in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment data file that you want to review.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
  - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
  - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

- Review the records of the adjustment data file in the **Adjustment Data Records** zone.
- If the adjustment data file is not appropriate, then click **Reject** in the **Adjustment Upload Request** zone.

The **Rejection Information** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Rejection Reason	Used to indicate the reason why you want to reject the adjustment data file.	Yes

**Note:**  
 The **Reject** button appears only when:
 

- The adjustment upload request is in the **Pending for Approval** status.
- A user with the approval To Do role is reviewing the adjustment data file.

- Select the rejection reason from the list.
- Click **Save**.

The adjustment data file is rejected. In addition, the status of the adjustment upload request is changed to **Rejected**.

## Viewing the Log of an Adjustment Upload Request

### Procedure

To view the log of an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to view.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
  - **Adjustment Upload Request** – Displays the details of the adjustment upload request.

- **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
  - **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.
3. Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the adjustment upload request.
Details	Displays the details about the action performed on the adjustment upload request.
User	Indicates the user who has performed the action on the adjustment upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the adjustment upload request.
Status Reason	Indicates the reason why the adjustment upload request was rejected or cancelled.

**Note:** You can manually add a log entry for the adjustment upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

How to add a log entry for an adjustment upload request	<a href="#">Adding a Log Entry for an Adjustment Upload Request</a> on page 918

## Adding a Log Entry for an Adjustment Upload Request

### Procedure

To add a log entry for an adjustment upload request:

1. Search for the adjustment upload request in the **Adjustment Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the adjustment upload request whose log you want to edit.

The **Adjustment Upload Request** screen appears. It contains the following two tabs:

- **Main** – This tab contains the following two zones:
  - **Adjustment Upload Request** – Displays the details of the adjustment upload request.
  - **Adjustment Data Records** – Lists the adjustment records which are uploaded through the adjustment data file.
- **Log** – This tab lists the complete trail of actions performed on the adjustment upload request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the adjustment upload request.	Not applicable
Log Details	Used to specify additional comments on the adjustment upload request.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Upload Request Log** zone.

## Payment Request

---

### Topics:

- [Prerequisites](#)
- [Payment Request \(Without Approval\) Status Transition](#)
- [Payment Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-PaymentRequest](#)
- [Algorithms Used in C1-PaymentTransferRequest](#)
- [Payment Request Type](#)
- [Payment Request \(Used for Searching\)](#)
- [Payment Request \(Used for Viewing\)](#)
- [Payment Event Summary](#)

Oracle Revenue Management and Billing facilitates you to create and transfer payments through a payment request. While creating a payment creation or transfer request, you need to specify the payment request type using which you want to create the payment request. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing the payments

While creating a payment creation request, you need to specify the tender amount and match type details. However, while creating a payment transfer request, you need to specify the transfer amount and match type details. The **Payment Request** feature supports the following match types :

- By Bill Regular (Match Entity: Account)
- By Bill (Match Entity: Bill)
- By Bill Weighted (Match Entity: Account)
- By Bill Segments (Match Entity: Account)
- By Suspense Contract (Match Entity: Account)
- By Settlement ID (Match Entity: Account)

You can specify multiple match types along with the entity (such as account or bill) in the payment request. Depending on the match type and match entity selected, the entities (such as unpaid bills, bill segments, or contracts) of the account are considered against which you can match the tender or transfer (payment) amount. Once you update the payment amount against the required entities, you can distribute the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tender are created. The payments are created in the **Freezable** status. If any error occurs while creating a payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating a new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

The system allows you to view the pay segments of a payment and edit the pay segment amount, if required. You can edit the pay segment amount before submitting the payment request for approval or before freezing the payments. If the approval is not required for the payment request, you can directly freeze the payments created through the payment request. However, if the approval is required for the payment request, you need to submit the payment request for approval. Based on the observations, the approver might approve or reject the payment request. On approving a payment creation request or freezing the payments, the status of the payments is changed from **Freezable** to **Frozen**. However, on approving a payment transfer request or freezing the payments, the system does the following:

- Changes the status of the old payments which are in the **Frozen** status to **Cancelled**
- Deletes the old payments which are in the **Error** status
- Changes the status of the new payments which are in the **Freezable** status to **Frozen**
- Changes the status of the payment event to **Balanced** when there are no payments in the **Error** status

On rejecting a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, on rejecting a payment transfer request, the new payments which are created through the payment transfer request are deleted.

During the payment request process, a payment creation or transfer request goes through various statuses in its lifecycle. For more information about the payment request statuses, see [Payment Request \(Without Approval\) Status Transition](#) on page 924 and [Payment Request \(With Approval\) Status Transition](#) on page 925.

Note that the lifecycle of a payment creation and transfer requests is driven by the respective business object using which the payment creation and transfer requests are created. The **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects are shipped with the product. The payment request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-PaymentRequest** and **C1-PaymentTransferRequest** business objects.

For more information on how to setup the payment request process, see [Prerequisites](#) on page 923.

## Prerequisites

To setup the payment request process, you need to do the following:

- Define the following match types:

Match Type	Description	Payment Distribution Override Algorithm	Manual Distribution Algorithm	Entity Type	Match Type Search Zone	Entity Flag
BILLR	By Bill Regular	C1-PDOV-PYBL	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILLW	By Bill Weighted	C1-PDOV-WTBS	C1-MD-BILL	Account	C1_ACCTSRCH	Bill
BILL-WO	By Bill Weighted Outstanding Amount	C1-PDOV-WTOA		Account	C1_ACCT_SRCH	Bill
BILLSEG	By Bill Segment	C1-PDOV-PYBS	C1-MD-BSEG	Account	C1_ACCTSRCH	Bill Segment
BYSATY	By Suspense Contract	C1-PDOV-SATY	C1-MD-ONSA	Account	C1_ACCTSRCH	Contract
SETT-ID	By Settlement ID	C1-PDOV-PYSL	C1-MD-SID	Account	C1_ACCTSRCH	Settlement
BYBILL	By Bill	C1-PDOV-PYBL or C1-PDOV-WTBS	C1-MDBYBILL	Bill	CI_BILL	Bill
BILL-BS	By Bill - Pay By Bill Segment Oldest	C1-PDOV-BSDT		Account	C1_ACCT_SRCH	Bill

**Note:** The **C1-PDOV-BSDT** algorithm for the bill match type BILL-BS is used to distribute the amount among the bill segments of the bill in the order of bill segment start date.

**Note:** The **C1-PDOV-WTOA** algorithm for the bill match type BILL-WOA performs the bill weighted calculation based on the unpaid amount on the bill segment.

- Create a defer algorithm using the **C1-PAY-COUNT** algorithm type
- Define the required payment request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Request Type**
- Define the required characteristic types where the characteristic entity is set to **Payment Tender**
- Define rejected status reasons for the **C1-PaymentRequest** business object
- Define rejected status reasons for the **C1-PaymentTransferRequest** business object
- Define payment cancelation or transfer reasons through the **Payment Cancel Reason** screen

- Assign the **C1-PAYRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a payment request for approval
- Set the **Payment Portal Configuration (C1-PAYPORTAL)** feature configuration
- Set the **Payment Request-Sort Distribution data (C1-PYREQSRT)** feature configuration
- Set the batch control type of the **Payment Request Periodic Monitor (C1-PAYRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

**Payment Request (Without Approval) Status Transition**

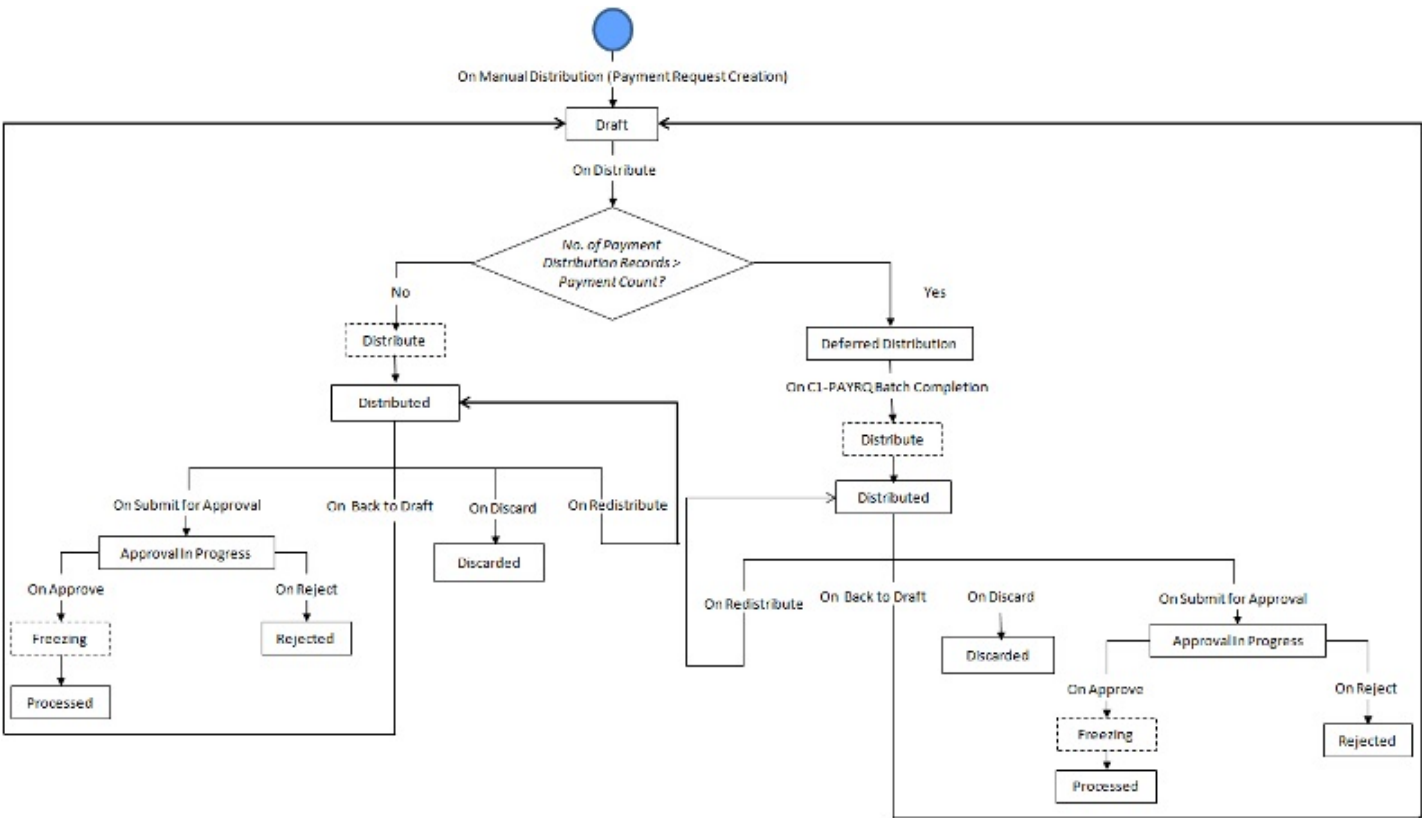

The following figure graphically indicates how a payment creation or transfer request moves from one status to another when the approval workflow is off:

## Payment Request (With Approval) Status Transition

The following figure graphically indicates how a payment creation or transfer request moves from one status to another when approval workflow is on:

**Algorithms Used in C1-PaymentRequest**

The following table lists the algorithms which are attached to the **C1-PaymentRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PAYRQ-INF	C1-PAYRQ-INF	This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> <li>Payment Request Type Description</li> <li>Payment Request Status Description</li> <li>Payment Request ID</li> </ul>
Post-Processing	C1-PAYREQPOS	C1-PAYREQPOS	This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the <b>C1_PAY_DISTRIBUTION</b> table when you remove a match type while editing a payment request.

System Event	Algorithm	Algorithm Type	Description
Validation	C1-PAYREQVAL	C1-PAYREQVAL	<p>This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the <b>Generate Auto Pay</b> option is selected. This algorithm is triggered when you click the <b>Manual Distribution</b> button.</p> <p><b>Note:</b> You do not specify the tender and auto pay details while creating a payment transfer request.</p>

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-PAY-DFT	C1-PAY-DFT	This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.
Draft	Exit	C1-PAYDFTEXT	C1-PAYDFTEXT	This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the <b>Distribute</b> button.
Approval In Progress	Enter	C1-PAY-PFA	C1-PAY-PFA	This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.
Approval In Progress	Exit	C1-PAYPFAEXT	C1-PAYPFAEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Enter	C1-PAY-APP	C1-PAY-APP	This algorithm changes the status of the payment request to <b>Freezing</b> when the approver clicks the <b>Approve</b> button.
Distribute	Enter	C1-PAY-DIST	C1-PAY-DIST	This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to <b>Distributed</b> . However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to <b>Deferred Distribution</b> .
Deferred Distribution	Monitor	C1-PAY-MONT	C1-PAY-MONT	This algorithm is invoked from the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch. It changes the status of the payment request from <b>Deferred Distribution</b> to <b>Distributed</b> .
Distributed	Enter	C1-PAYCREATE	C1-PAYCREATE	This algorithm creates the payment event, payments, payment segments, and payment tender. A payment is created for each record in the <b>C1_PAY_DISTRIBUTION</b> table where the payment amount is greater than or less than zero. The status of the payments is set to <b>Freezable</b> . If any error occurs while creating a payment, the status of the payment is set to <b>Error</b> . The payment event ID is updated corresponding to the payment request in the <b>C1_PAY_REQ</b> table. Finally, the status of the payment request is changed to <b>Distributed</b> .
Distributed	Exit	C1-FRZ-VALID	C1-FRZ-VALID	This algorithm is triggered when you click the <b>Submit for Approval</b> or <b>Freeze</b> button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.

Status	System Event	Algorithm	Algorithm Type	Description
Distributed	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Freezing	Enter	C1-PAY-V-FRZ	C1-PAY-V-FRZ	This algorithm validates whether payment already exists on the entity. It checks the unpaid amount of the entity.
Freezing	Enter	C1-PAY-FRZ	C1-PAY-FRZ	<p>This algorithm fetches the payment event created through the payment request. If you are freezing the payments of a payment creation request, this algorithm does the following:</p> <ul style="list-style-type: none"> <li>Changes the status of the payments which are in the <b>Freezable</b> status to <b>Frozen</b></li> <li>Changes the status of the payment event to <b>Balanced</b> when there are no payments in the <b>Error</b> status</li> </ul> <p>However, if you are freezing the payments of a payment transfer request, this algorithm does the following:</p> <ul style="list-style-type: none"> <li>Changes the status of the old payments which are in the <b>Frozen</b> status to <b>Cancelled</b></li> <li>Deletes the old payments which are in the <b>Error</b> status</li> <li>Changes the status of the new payments which are in the <b>Freezable</b> status to <b>Frozen</b></li> <li>Changes the status of the payment event to <b>Balanced</b> when there are no payments in the <b>Error</b> status</li> </ul>
Processed	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Rejected	Enter	C1-PAY-RJT	C1-PAY-RJT	This algorithm is triggered when the approver clicks the <b>Reject</b> button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.
Discarded	Enter	C1-PAY-RJT	C1-PAY-RJT	This algorithm is triggered when the approver clicks the <b>Reject</b> button. If you are rejecting a payment creation request, this algorithm deletes the payment event, payments, payment segments, and payment tender which are created through the payment creation request. However, if you are rejecting a payment transfer request, this algorithm deletes the new payments which are created through the payment transfer request.
Distribute And Freeze	Enter	C1-ISFREEZE	C1-ISFREEZE	This algorithm invokes the distribute algorithm and set Flag in the payment request clob.

## Algorithms Used in C1-PaymentTransferRequest

The following table lists the algorithms which are attached to the **C1-PaymentTransferRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PAYRQ-INF	C1-PAYRQ-INF	<p>This algorithm generates the payment request information string which appears throughout the application. This algorithm concatenates the following fields:</p> <ul style="list-style-type: none"> <li>• Payment Request Type Description</li> <li>• Payment Request Status Description</li> <li>• Payment Request ID</li> </ul>
Post-Processing	C1-PAYREQPOS	C1-PAYREQPOS	This algorithm invokes the manual distribution algorithm of the match types that are newly added while editing a payment request. It also deletes the respective match type entities from the <b>C1_PAY_DISTRIBUTION</b> table when you remove a match type while editing a payment request.

System Event	Algorithm	Algorithm Type	Description
Validation	C1-PAYREQVAL	C1-PAYREQVAL	<p>This algorithm checks whether the mandatory data (such as payment date, payor account, tender type, tender amount, currency, match type, and match entity) is specified while creating a payment request. It also checks whether auto pay source, auto pay route type, and account number are specified when you select a tender type where the <b>Generate Auto Pay</b> option is selected. This algorithm is triggered when you click the <b>Manual Distribution</b> button.</p> <p><b>Note:</b> You do not specify the tender and auto pay details while creating a payment transfer request.</p>

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentTransferRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-PAY-DFT	C1-PAY-DFT	This algorithm invokes the manual distribution algorithm of the match types that you have selected while creating a payment request.
Draft	Exit	C1-PAYDFTEXT	C1-PAYDFTEXT	This algorithm checks whether the sum of the distributed payment amount is equal to the tender or transfer amount. This algorithm is triggered when you click the <b>Distribute</b> button.
Approval In Progress	Enter	C1-PAY-PFA	C1-PAY-PFA	This algorithm creates the To Do using the To Do type specified in the payment request type using which the payment request is created. The To Do is sent to the users with the approval To Do role specified in the payment request type.
Approval In Progress	Exit	C1-PAYPFAEXT	C1-PAYPFAEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the payment request type. It does not allow the submitter to approve or reject the payment request.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Approved	Enter	C1-PAY-APP	C1-PAY-APP	This algorithm changes the status of the payment request to <b>Freezing</b> when the approver clicks the <b>Approve</b> button.
Distribute	Enter	C1-PAY-DIST	C1-PAY-DIST	This algorithm invokes the defer algorithm specified in the payment request type using which the payment request is created. The defer algorithm checks whether the tender or transfer amount must be distributed in the real time (i.e. immediately) or in the deferred mode. If the tender or transfer amount must be distributed in the real time, the status of the payment request is changed to <b>Distributed</b> . However., if the tender or transfer amount must be distributed in the deferred mode, the status of the payment request is changed to <b>Deferred Distribution</b> .
Deferred Distribution	Monitor	C1-PAY-MONT	C1-PAY-MONT	This algorithm is invoked from the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch. It changes the status of the payment request from <b>Deferred Distribution</b> to <b>Distributed</b> .

Status	System Event	Algorithm	Algorithm Type	Description
Distributed	Enter	C1-PAYTRANS	C1-PAYTRANS	This algorithm is invoked when the status of the payment transfer request is changed to <b>Distributed</b> . A payment is created for each record in the <b>C1_PAY_DISTRIBUTION</b> table where the payment amount is greater than or less than zero. The status of the new payments is set to <b>Freezable</b> . If any error occurs while creating a payment, the status of the payment is set to <b>Error</b> . The payment event ID is updated corresponding to the payment request in the <b>C1_PAY_REQ</b> table. Finally, the status of the payment request is changed to <b>Distributed</b> .
Distributed	Exit	C1-FRZ-VALID	C1-FRZ-VALID	This algorithm is triggered when you click the <b>Submit for Approval</b> or <b>Freeze</b> button. It checks whether the sum of payment segment amount is equal to the payment amount for each payment.
Distributed	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Freezing	Enter	C1-PAY-V-FRZ	C1-PAY-V-FRZ	This algorithm validates the payment that already exists on the entity. It checks the unpaid amount of the entity.

Status	System Event	Algorithm	Algorithm Type	Description

Cancel	-	-	-	-

## Payment Request Type

Oracle Revenue Management and Billing allows you to define a payment request type using which you can create a payment request. A payment request of the specified payment request type is created when you manually distribute the tender or payment amount. It is the payment request type which helps the system to determine:

- Whether to create payment transfer or payment creation request
- Whether payment events and payments must be created in real time (i.e. immediately) or in the deferred mode
- Whether payment creation or transfer instructions must be approved by the approver before freezing payments

The **Payment Request Type** screen allows you to define, edit, copy, and delete a payment request type. This screen consists of the following zones:

- [Payment Request Type List](#) on page 935
- [Payment Request Type](#) on page 936

## Payment Request Type List

The **Payment Request Type List** zone lists payment request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Request Type	Displays the payment request type.
Description	Displays the description of the payment request type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Payment Request Type</b> screen appears where you can edit the details of the payment request type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Payment Request Type</b> screen appears where you can define a payment request type using an existing payment request type.

Column Name	Column Description
Delete	On clicking the <b>Delete</b> (🗑️) icon, you can delete the payment request type.
	<b>Note:</b> You can delete a payment request type only when you have not created a payment request using the payment request type.

On clicking the **Broadcast** (📡) icon corresponding to a payment request type, the **Payment Request Type** zone appears with the details of the respective payment request type.

## Payment Request Type

The **Payment Request Type** zone displays the details of the payment request type. This zone contains the following sections:

- **Main** — This section provides basic information about the payment request type. It contains the following fields:

Field Name	Field Description
Payment Request Type	Displays the payment request type.
Payment Request Business Object	Indicates the business object that will be used to create the payment request. <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the payment request type.
Detailed Description	Displays additional information about the payment request type.
Status	Indicates the status of the payment request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Transfer	Indicates whether the payment request type will be used to create payment transfer or payment creation request.

Field Name	Field Description
Defer Algorithm	<p>Indicates the algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p><b>Note:</b></p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.</p>
Approval Required	Indicates whether approval is required while freezing payments of the payment requests which are created using the payment request type.
Approval To Do Type	<p>Indicates that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve the payment request submitted for approval.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.</p>

- **Characteristics** — This section lists the characteristics defined for the payment request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment request type.

Button Name	Button Description
Delete	Used to delete the payment request type.
	<b>Note:</b> You can delete a payment request type only when you have not created a payment request using the payment request type.
Duplicate	Used to create a new payment request type using an existing payment request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Payment Request Type** zone does not appear in the **Payment Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to a payment request type in the **Payment Request Type List** zone.

## Defining a Payment Request Type

### Prerequisites

To define a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

### Procedure

To define a payment request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Payment Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type Business Object	Used to indicate the business object that you want to use to create the payment request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple payment request type business objects defined in the application. If there is only one payment request type business object defined in the application, the **Payment Request Type** screen appears.

4. Select the required payment request type business object from the respective field.
5. Click **OK**.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to specify the payment request type.	Yes
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p><b>Note:</b></p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked. You can configure the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch such that it is executed at regular intervals. When the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked, the system checks whether there are any payment requests in the <b>Deferred Distribution</b> status. If there is a payment request in the <b>Deferred Distribution</b> status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	<p>Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p><b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.

6. Enter the required details.

**Note:** You can search for an algorithm and To Do type by clicking the **Search**  icon corresponding to the respective field.

7. Define characteristics for the payment request type, if required.  
8. Click **Save**.

The payment request type is defined.

## Defining Characteristics for a Payment Request Type

### Prerequisites

To define characteristics for a payment request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Request Type**)

### Procedure

To define characteristics for a payment request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Request Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment request type.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment request type.

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the payment request type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the payment request type, click the **Delete**  icon corresponding to the characteristic.

## Editing a Payment Request Type

### Prerequisites

To edit a payment request type, you should have:

- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

### Procedure

To edit a payment request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Request Type** sub-menu.  
The **Payment Request Type** screen appears.

4. In the **Payment Request Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the payment request type whose details you want to edit.

The **Payment Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request type.
- **Characteristics** - Used to define characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Displays the payment request type.	Not applicable
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.</p> <p><b>Note:</b></p> <p>Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)</p> <p>Deferred mode means in the background when the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked. You can configure the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch such that it is executed at regular intervals. When the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked, the system checks whether there are any payment requests in the <b>Deferred Distribution</b> status. If there is a payment request in the <b>Deferred Distribution</b> status, the system distributes tender or payment amount and accordingly creates payment event and payments.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	<p>Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.</p> <p><b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.

**Tip:** Alternatively, you can click the **Edit** button in the **Payment Request Type** zone to edit the details of the payment request type.

5. Modify the required details.

**Note:** You can search for an algorithm and To Do type by clicking the **Search**  icon corresponding to the respective field.

6. Define, edit, or remove characteristics from the payment request type, if required.

7. Click **Save**.

The changes made to the payment request type are saved.

## Copying a Payment Request Type

Instead of creating a payment request type from scratch, you can create a new payment request type using an existing payment request type. This is possible through copying a payment request type. On copying a payment request type, the details including the characteristics are copied to the new payment request type. You can then edit the details, if required.

### Prerequisites

To copy a payment request type, you should have:

- Payment request type (whose copy you want to create) defined in the application
- Payment request business objects defined in the application
- Defer algorithm defined using the **C1-PAY-COUNT** algorithm type
- **C1-PAYRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting a payment request for approval

### Procedure

To copy a payment request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Payment Request Type** sub-menu.

The **Payment Request Type** screen appears.

- In the **Payment Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the payment request type whose copy you want to create.

The **Payment Request Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the payment request type.
- Characteristics** - Used to define characteristics for the payment request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to specify the payment request type.	Yes
Business Object	Indicates the payment request type business object used while defining the payment request type.	Not applicable
Payment Request Business Object	Used to indicate the business object that you want to use while creating the payment request.	Yes
Description	Used to specify the description for the payment request type.	Yes
Detailed Description	Used to specify additional information about the payment request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Transfer	Used to indicate whether the payment request type will be used to create payment transfer or payment creation request.	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	Used to attach an algorithm that will be triggered when you distribute tender or payment amount. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count (defined in the Defer algorithm). If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes tender or payment amount and accordingly creates payment event and payments in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes tender or payment amount in the deferred mode.	Yes
	<b>Note:</b> Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)  Deferred mode means in the background when the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked. You can configure the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch such that it is executed at regular intervals. When the <b>Payment Request Periodic Monitor (C1-PAYRQ)</b> batch is invoked, the system checks whether there are any payment requests in the <b>Deferred Distribution</b> status. If there is a payment request in the <b>Deferred Distribution</b> status, the system distributes tender or payment amount and accordingly creates payment event and payments.	
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Approval Required	Used to indicate whether approval is required while freezing payments of the payment requests which are created using the payment request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment request for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.

**Tip:** Alternatively, you can click the **Duplicate** button in the **Payment Request Type** zone to create a copy of the payment request type.

- Enter the required details.

**Note:** You can search for an algorithm and To Do type by clicking the **Search**  icon corresponding to the respective field.

- Define, edit, or remove characteristics from the payment request type, if required.
- Click **Save**.

The new payment request type is defined.

## **Deleting a Payment Request Type**

### **Procedure**

To delete a payment request type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Payment Request Type**.  
A sub-menu appears.
- Click the **Search** option from the **Payment Request Type** sub-menu.  
The **Payment Request Type** screen appears.
- In the **Payment Request Type List** zone, click the **Delete**  icon in the **Delete** column corresponding to the payment request type that you want to delete.  
A message appears confirming whether you want to delete the payment request type.

**Note:** You can delete a payment request type only when you have not created a payment request using the payment request type.

**Tip:** Alternatively, you can click the **Delete** button in the **Payment Request Type** zone to delete the payment request type.

5. Click **OK**.

The payment request type is deleted.

## Payment Request (Used for Searching)

The **Payment Request** screen allows you to search for a payment creation or transfer request using various search criteria. It also allows you to create payment creation and transfer requests. Through this screen, you can navigate to the following screens:

- [Payment Request \(Used for Viewing\)](#) on page 954

This screen consists of the following zones:

- [Search Payment Request](#) on page 950

## Search Payment Request

The **Search Payment Request** zone allows you to search for a payment request using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment request using request or payment details. The valid values are: <ul style="list-style-type: none"> <li>• Request Details</li> <li>• Payment Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Request Details</b> option is selected.	
On or Before Creation Date/Time	Used to search payment requests which are created till a particular date and time.	No
	<b>Note:</b> By default, the current date and time appears in this field.  This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Payment Request Status	Used to search payment requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Deferred Distribution</li> <li>• Discarded</li> <li>• Distribute And Freeze</li> <li>• Distributed</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Payment Request Type	Used to search payment requests which are created using a particular payment request type.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
User ID	Used to search payment requests which are created by a particular user.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Payment Request ID	Used to search a particular payment request.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Payment Event ID	Used to search a payment request through which a payment event is created.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Payment Event Search</b> window appears.	
Payor Account ID	Used to search payment requests which are created for a particular payor account.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	
Payor Name	Used to search payment requests which are created for a particular payor.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	
Payment Date	Used to search payment requests through which payments are created on a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a payment request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the payment request was created in the system.
Payment Request Information	Displays information about the payment request. <b>Note:</b> It has a link. On clicking the link, the <b>Payment Request</b> screen appears where you can view the details of the respective payment request.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Deferred Distribution</li> <li>• Distributed</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> </ul>
Payment Event Information	Displays information about the payment event which is created through the payment request. <b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears with the details of the respective payment event.
Created By	Indicates the user who has created the payment request.
Payor Account Information	Displays information about the payor's account for which the payment request is created. In addition, this column has a context menu which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.

## Searching for a Payment Request

### Prerequisites

To search for a payment request, you should have:

- Payment request types defined in the application

### Procedure

To search for a payment request:

1. Click the **Menu** link in the **Application** toolbar.

A list appears.

- From the **Main** menu, select **Financial** and then click **Payment Request**.

A sub-menu appears.

- Click the **Search** option from the **Payment Request** sub-menu.

The **Payment Request** screen appears.

- Enter the search criteria in the **Search Payment Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of payment requests that meet the search criteria appears in the **Search Results** section.

## Viewing the Payment Request Details

### Procedure

To view the details of a payment request:

- Search for the payment request in the **Payment Request** screen.
- In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
    - **Payment Request** – Displays the details of the payment request.
    - **Payment Distribution** – Lists the payment distribution records of the payment request.
  - **Log** – This tab lists the complete trail of actions performed on the payment request.
- View the details of the payment request in the **Payment Request** zone.
  - View the payment distribution records of the payment request in the **Payment Distribution** zone.

## Payment Request (Used for Viewing)

Once you create a payment creation or transfer request, the **Payment Request** screen allows you to:

- Edit the details of a payment request
- Edit the payment amount against each entity
- Delete a payment request
- View the details of a payment request
- Distribute the tender or payment amount
- Edit the amount of a payment segment
- Freeze the payments created through a payment request
- Submit a payment request for approval before freezing payments
- Approve or reject a payment request
- View the log of a payment request
- Add a log entry for a payment request

This screen consists of the following tabs:

- **Main** – This tab contains the following two zones:
  - **Payment Request** – Displays the details of the payment request.
  - **Payment Distribution** – Lists the payment distribution records of the payment request.
- **Log** – This tab lists the complete trail of actions performed on the payment request.

### Payment Request

The **Payment Request** zone displays the details of the payment request. This zone contains the following sections:

- **Main** — This section provides basic information about the payment request. It contains the following fields:

Field Name	Field Description
Payment Request Information	Displays information about the payment request.
Payment Request Type	Indicates the payment request type using which the payment request is created. <div> <b>Note:</b> It has a link. On clicking the link, the <b>Payment Request Type</b> screen appears where you can view the details of the payment request type.           </div>
Payment Request Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Deferred Distribution</li> <li>• Distributed</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> </ul>

Field Name	Field Description
Status Reason	Indicates the reason why the payment request is rejected.
	<b>Note:</b> This field appears only when the payment request is in the <b>Rejected</b> status. It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the rejected reason.
Payor Account Information	Displays information about the payor's account for which the payment request is created.
	<b>Note:</b> This field appears only when you are viewing the details of a payment creation request. It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Payment Date	Displays the date when the payment event and payments are created.
Payment Event Information	Displays information about the payment event. If you are viewing the details of a payment creation request, this field displays information about the payment event which is created through the payment creation request. However, if you are viewing the details of a payment transfer request, this field displays information about the payment event whose payments you want to transfer.
	<b>Note:</b> This field does not appear when the payment request is in the <b>Rejected</b> status. If you are viewing the details of a payment creation request, this field does not appear when the payment creation request is in the <b>Draft</b> status. It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the respective payment event.
Transfer Amount	Displays the total payment amount which you want to transfer.
	<b>Note:</b> This field appears only when you are viewing the details of a payment transfer request.
Transfer Reason	Indicates the reason why you want to transfer the payment amount.
	<b>Note:</b> This field appears only when you are viewing the details of a payment transfer request.

- **Tender Details** — This section provides details about the tender used in the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following fields:

Field Name	Field Description
Tender Type	Indicates the type of tender through which the payment was made.
Tender Amount	Displays the tender amount.

Field Name	Field Description
Currency	Indicates the currency in which the payment was made.
Check Number	Displays the check number if the payment is made through check.
	<b>Note:</b> This field appears only when the tender type is set to <b>Check</b> .
Auto Pay Route Type Code	Indicates when and how automatic payment request of the account is routed to a financial institution.
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Auto Pay Source Code	Indicates the financial institution that receives the automatic payment request.
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and frozen in the system.
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Account Number	Indicates the bank account number through which the automatic payment was made.
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Expires On	Displays the date when the tender type will expire.
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Name	Displays the name of the person as maintained in the financial institution's system.
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.

Field Name	Field Description
Tender Control Information	Displays information about the tender control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This field appears only when the payment request is in the <b>Distributed</b>, <b>Approval In Progress</b>, <b>Processed</b> , or <b>Rejected</b> status.</p> <p>It has a link. On clicking the link, the <b>Tender Control</b> screen appears where you can view the details of the respective tender control.</p>
Deposit Control Information	Displays information about the deposit control which is created when the payment event and payments are created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>This field appears only when the payment request is in the <b>Distributed</b>, <b>Approval In Progress</b>, <b>Processed</b>, or <b>Rejected</b> status.</p> <p>It has a link. On clicking the link, the <b>Deposit Control</b> screen appears where you can view the details of the respective deposit control.</p>
Pay Tender ID	Displays the payment tender ID.
	<b>Note:</b> This field appears only when the payment request is in the <b>Processed</b> status.
Tender Status	Indicates the current status of the tender. The valid values are: <ul style="list-style-type: none"> <li>Valid</li> <li>Cancelled</li> </ul>
	<b>Note:</b> This field appears only when the payment request is in the <b>Processed</b> status.
MICR ID	Displays the MICR code on the payment.
Ext. Reference ID	Displays the external reference number of the payment on the payment upload interface record.
Person ID	Indicates the person's account ID mentioned in the payment upload interface record.
Name	Indicates the person mentioned in the payment upload interface record.

- **Characteristics** — This section lists the characteristics defined for the payment tender. It appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Match Types** — This section lists the match type details of the payment request. This section appears only when you are viewing the details of a payment creation request. It contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which you want to match the payment.
Match By	Indicates the bill or account (whose entities, such as unpaid bills, unpaid bill segments, settlement IDs, or contracts) must be considered while matching the payment.

- **Payor Account Details** — This section appears only when you are viewing the details of a payment transfer request. It contains the following columns:

Column Name	Column Description
Payor Account Information	Displays information about the payor's account whose payments you want to transfer.

- **Payment Details** — This section appears only when you are viewing the details of a payment transfer request. It contains the **Show Payments** link. On clicking the link, the **Payment** screen appears where you can view the details of the payment that you want to transfer. In case, you want to transfer multiple payments, the **Payment Search** window appears with the list of payments selected for transfer. You can click the individual payment to view the details in the **Payment** screen. The **Show Payments** link does not appear when you are viewing the details of a payment transfer request which is in the **Processed** status. Instead, the following column appears in this section:

Column Name	Column Description
Payment(s)	Displays information about the payment which is cancelled.

- **Record Actions** — This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the payment request.
	<b>Note:</b> The <b>Edit</b> button appears only when the payment request is in the <b>Draft</b> status.
Delete	Used to delete the payment request.
	<b>Note:</b> The <b>Delete</b> button appears only when the payment request is in the <b>Draft</b> status.
Distribute	Used to distribute the tender or payment amount.
	<b>Note:</b> The <b>Distribute</b> button appears only when the payment request is in the <b>Draft</b> status.
Submit for Approval	Used to submit the payment request for approval.
	<b>Note:</b> The <b>Submit for Approval</b> button appears only when: <ul style="list-style-type: none"> <li>• The payment request is in the <b>Distributed</b> status.</li> <li>• The <b>Approval Required</b> check box is selected in the payment request type using which the payment request is created.</li> </ul>

Column Name	Column Description
Freeze	Used to freeze the payments which are created through the payment request.
	<b>Note:</b> The <b>Freeze</b> button appears only when: <ul style="list-style-type: none"> <li>The payment request is in the <b>Distributed</b> status.</li> <li>The <b>Approval Required</b> check box is not selected in the payment request type using which the payment request is created.</li> </ul>
Approve	Used to approve the payment request.
	<b>Note:</b> The <b>Approve</b> button appears only when: <ul style="list-style-type: none"> <li>The payment request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the payment request.</li> </ul>
Reject	Used to reject the payment request.
	<b>Note:</b> The <b>Reject</b> button appears only when: <ul style="list-style-type: none"> <li>The payment request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the payment request.</li> </ul>
Back to Draft	Used to change the status of the payment request to <b>Draft</b> .
	<b>Note:</b> The <b>Back to Draft</b> button appears only when the payment request is in the <b>Distributed</b> status.
Discard	Used to discard the payment creation or transfer request.
	<b>Note:</b> The <b>Discard</b> button appears only when the payment request is in the <b>Distributed</b> status.
Distribute And Freeze	Used to distribute and freeze the payments at the same time.
	<b>Note:</b> the <b>Distribute And Freeze</b> button appears only when the payment request is in the <b>Draft</b> status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the payment request status is updated
Create Date/Time	Displays the date and time when the payment request is created.

## Payment Distribution

The **Payment Distribution** zone lists the payment distribution records of the payment request. This zone contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the payment was matched.
Payee Account ID	Indicates the account for which the payment was made.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Match Value	Indicates the entity (such as bill ID, bill segment ID, contract ID, or settlement ID) against which the payment was matched.
Match Entity	Indicates the type of entity against which the payment was matched. The valid values are: <ul style="list-style-type: none"> <li>• Bill</li> <li>• Bill Segment</li> <li>• Contract</li> <li>• Settlement</li> </ul>
Amount	Displays the entity amount. In case of contract, the entity amount would be zero.
Write Off Adjustment Amount	Indicates the amount which is either write up or down when the payment against the bill is within the tolerance limit.  <b>Note:</b> The data appears in this column only when the match type is <b>Bill Weighted</b> and the payment amount is within the underpayment or overpayment tolerance limit. This column does not appear when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.
Paid Amount	Displays the amount which is already paid against the entity.  <b>Note:</b> This column appears only when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.
Unpaid Amount	Displays the amount which is eligible for payment against the entity.  <b>Note:</b> This column appears only when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.
Payment Amount	Displays the payment amount. If the <b>Show Default</b> check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the <b>Show Default</b> check box is selected against a match type while creating the payment request, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where <b>Show Default</b> check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can edit the payment amount, if required.
Payment Currency	Indicates the currency in which the payment was made.

Column Name	Column Description
Payment ID	Displays the payment ID.
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Payment</b> screen appears with the details of the respective payment.</p> <p>This column does not appear when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.</p>
Payment Status	<p>Indicates the status of the payment. The valid values are:</p> <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Error</li> <li>• Freezable</li> <li>• Frozen</li> <li>• Incomplete</li> </ul>
	<p><b>Note:</b> This column does not appear when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.</p>
Error Message	Indicates the reason why the payment is in the <b>Error</b> status.
	<p><b>Note:</b> This column does not appear when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.</p>
Detail	On clicking the <b>Detail</b> button, the <b>Edit Payment Segment Amount</b> screen appears where you can edit the payment segment amount.
	<p><b>Note:</b></p> <p>This column does not appear when the payment request is in the <b>Draft</b> or <b>Rejected</b> status.</p> <p>The <b>Detail</b> button appears in the <b>Detail</b> column only when:</p> <ul style="list-style-type: none"> <li>• The payment request is in the <b>Distributed</b> or <b>Approval In Progress</b> status</li> <li>• The payment is in the <b>Freezable</b> status.</li> </ul> <p>However, a user with the approval To Do role will not be able to edit the payment segment amount.</p>
Redistribute	On clicking the <b>Redistribute</b> button, you can redistribute the payment amount among the payment segments.
	<p><b>Note:</b></p> <p>This column appears only when the payment request is in the <b>Distributed</b> or <b>Distribute and Freeze</b> status.</p> <p>The <b>Redistribute</b> button appears in the <b>Redistribute</b> column only when:</p> <ul style="list-style-type: none"> <li>• The payment request is in the <b>Distributed</b> or <b>Approval In Progress</b> status</li> </ul>

You can edit the payment amount by clicking the **Update Payment Amount** button in the upper right corner of this zone.

## Creating a Payment Creation Request

### Prerequisites

To create a payment creation request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is not selected)

### Procedure

To create a payment creation request:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Financial** and then click **Payment Request**.  
A sub-menu appears.
- Click the **Add** option from the **Payment Request** sub-menu.

The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment request.  <b>Note:</b> The list includes only those payment request types where the <b>Transfer</b> check box is not selected.	Yes

**Tip:** Alternatively, you can access the **Select Payment Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Payment Request** screen.

- Select the required payment request type from the respective field.
- Click **OK**.

The **Payment Request** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment request.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment request.  <b>Note:</b> On specify the account ID, additional information about the account appears corresponding to this field.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Payment Date	Used to specify the date when the payment was made.	Yes
	<b>Note:</b> By default, the current date appears in this field.	

- **Tender Details** - Used to specify the tender details in the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment was made.	Yes
Tender Amount	Used to specify the tender amount.	Yes
Currency	Used to indicate the currency in which the payment was made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.	Not applicable
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and freed in the system.	Not applicable
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Account Number	Used to indicate the bank account number through which the automatic payment was made.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	<b>Note:</b> This field is required only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Expires On	Used to specify the date when the tender type will expire.	No
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
Name	Used to specify the name of the person as maintained in the financial institution's system.	No
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
MICR ID	Used to specify the MICR code on the payment.	No
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to indicate the person's account ID mentioned in the payment upload interface record.	No
Name	Used to indicate the person mentioned in the payment upload interface record.	No
Tender Control ID	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Tender Control Search</b> window appears.	

**Note:** If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Tender</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	<b>Note:</b> By default, the <b>Show Default</b> check box is selected when you select the match type.	
Entity	<p>Indicates the match type entity. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Account</b> — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment.</li> <li>• <b>Bill</b> — Enables you to select the unpaid bill against which you want to match the payment.</li> </ul> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.</p>	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity.	Yes

6. Enter the required details.

**Note:**

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search**  icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add**  icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete**  icon corresponding to the match type.

- Define characteristics for the payment tender, if required.
- Click **Manual Distribution**.
 

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	<div>Contracts of the account</div> <div> <b>Note:</b> Only contracts of the contract type where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b> are listed in the <b>Payment Distribution</b> zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b>) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in <b>Payment Distribution</b> zone.           </div>
By Settlement	Account	Unpaid bill segments where the settlement account is stamped

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The tender amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

**Note:**

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs do not exists for the payee account.

**Defining Characteristics for a Payment Tender****Prerequisites**

To define characteristics for a payment tender, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Payment Tender**)

**Procedure**

To define characteristics for a payment tender:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a payment request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Tender</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment tender, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the payment tender, click the **Delete**  icon corresponding to the characteristic.

**Editing the Payment Amount**

**Procedure**

To edit the payment amount against each entity:

- Search for the payment request in the **Payment Request** screen.
- In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

- Click the **Update Payment Amount** button in the upper right corner of the **Payment Distribution** zone.

The **Edit Payment Amount** screen appears. It contains the following two sections:

- Search Criteria** — The **Search Criteria** section allows you to filter the payment distribution records using various search criteria. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to search the entities which are considered using a particular match type.	Yes
	<b>Note:</b> By default, the <b>All</b> option is selected.	
Entity ID	Used to search entities which belong to a particular account.	Yes
	<b>Note:</b> By default, the <b>All</b> option is selected.	
Match Value	Used to search for a particular entity (such as bill, bill segment, contract, or settlement ID).	No
Sort By	Used to sort entity information as per the match type defined in the <b>C1-PYREQSRT</b> feature configuration.	No

- Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Match Type	Indicates the match type using which the entity is considered.
Payee Information	Displays information about the account for which the payment was made.
Entity Information	Displays information about the entity against which the payment was matched.
Amount	Displays the entity amount. In case of contract, the entity amount would be zero.
Paid Amount	Displays the amount which is already paid against the entity.
Unpaid Amount	Displays the amount which is eligible for payment against the entity.
Payment Amount	Used to specify the payment amount.  <b>Note:</b> If the <b>Allow Overpayment</b> option type of the <b>C1-PAYPORTAL</b> feature configuration is set to <b>true</b> , you can specify the payment amount greater than the unpaid amount. In other words, you can make overpayment against an entity.
Payment Currency	Indicates the currency in which the payment was made.

In addition, the **Search Results** section contains the following fields:

Field Name	Field Description
Total Amount	Displays the tender or transfer amount.
Running Total	Displays the sum of payment amount specified against each entity.
Running Balance	Displays the difference between total amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero.

**Note:** Pagination is used to display limited number of records in the **Edit Payment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** (  ), **Previous** (  ), **Next** (  ), and **Last** (  ) to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

4. Modify the payment amount against an entity, if required.

**Note:** The sum of payment amount should be equal to the tender or transfer (payment) amount.

5. Click **Save**.

The changes made to the payment request are saved.

6. Click **Close**.

The payment amount is updated in the **Payment Distribution** zone.

## Editing a Payment Request

### Procedure

To edit a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Edit** button in the **Payment Request** zone.

The **Payment Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment request.	Not applicable
Payment Request Type	Indicates the payment request type using which the payment request is created.	Not applicable
Payor Account Information	Used to indicate the payor account for which you want to create the payment request.  <div> <b>Note:</b> On specify the account ID, additional information about the account appears corresponding to this field.   The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> screen appears. </div>	Yes
Payment Date	Used to specify the date when the payment was made.	Yes

- **Tender Details** - Used to specify the tender details in the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Tender Type	Used to indicate the type of tender through which the payment was made.	Yes
Tender Amount	Used to specify the tender amount.	Yes
Currency	Used to indicate the currency in which the payment was made.	Yes
Check Number	Used to specify the check number if the payment is made through check.	No

Field Name	Field Description	Mandatory (Yes or No)
Auto Pay Route Type Code	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	<b>Note:</b> This field is required only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Schedule Extract Date	Displays the date when the automatic payment request is scheduled to be sent to a financial institution.	Not applicable
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
Auto Pay Source Code	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	<b>Note:</b> This field is required only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Distribution and Freeze Date	Displays the date when the automatic payment must be distributed and freed in the system.	Not applicable
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
Account Number	Used to indicate the bank account number through which the automatic payment was made.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	<b>Note:</b> This field is required only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.
Expires On	Used to specify the date when the tender type will expire.	No
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
Name	Used to specify the name of the person as maintained in the financial institution's system.	No
	<b>Note:</b> This field appears only when you select a tender type where the <b>Generate Auto Pay</b> check box is selected.	
MICR ID	Used to specify the MICR code on the payment.	No

Field Name	Field Description	Mandatory (Yes or No)
Ext. Reference ID	Used to specify the external reference number of the payment on the payment upload interface record.	No
Person ID	Used to indicate the person's account ID mentioned in the payment upload interface record.	No
Name	Used to indicate the person mentioned in the payment upload interface record.	No

**Note:** If the auto pay instructions are defined for the payor account, by default, the auto pay data appears in the **Auto Pay Route Type Code**, **Auto Pay Source Code**, **Account Number**, **Expires On**, and **Name** fields.

- **Characteristics** - Used to define characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Tender</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment tender.

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	<b>Note:</b> By default, the <b>Show Default</b> check box is selected when you select the match type.	

Field Name	Field Description	Mandatory (Yes or No)
Entity	Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> <li><b>Account</b> — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment.</li> <li><b>Bill</b> — Enables you to select the unpaid bill against which you want to match the payment.</li> </ul>	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity.	Yes

**Note:** The **Edit** button appears only when the payment request is in the **Draft** status.

4. Modify the details of the payment request, if required.

**Note:**

You can search for a payor account, auto pay route type, auto pay source, and entity by clicking the **Search**  icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add**  icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete**  icon corresponding to the match type.

You cannot edit an existing row in the **Match Types** section. If you want to edit the details of an existing row, you need to first remove the row and then add it again with the updated information.

5. Define, edit, or remove characteristics from the payment request, if required.

6. Click **Manual Distribution**.

The changes made to the payment request are saved. Depending on the information specified in the **Match Types** section, the entities are listed in the **Payment Distribution** zone. You can edit the payment amount against each entity, if required.

## Deleting a Payment Request

### Procedure

To delete a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request that you want to delete.

The **Payment Request** screen appears.

3. Click the **Delete** button in the **Payment Request** zone.

A message appears confirming whether you want to delete the payment request.

**Note:** The **Delete** button appears only when the payment request is in the **Draft** status.

4. Click **OK**.

The payment request is deleted.

**Related Topics**

For more information on...	See...
How to search for a payment request	<a href="#">Searching for a Payment Request</a> on page 952

**Distributing the Tender or Payment Amount**

**Procedure**

To distribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute.

The **Payment Request** screen appears.

3. Click the **Distribute** button in the **Payment Request** zone.

The **Defer** algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the **Defer** algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes the tender or payment amount in the deferred mode.

**Note:**

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Freezable** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Freezable** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Freezable** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed, the status of the payment request is changed to **Distributed**.

**Note:**

The **Distribute** button appears only when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

## **Distributing and Freezing the Tender or Payment Amount**

### **Procedure**

To distribute and freeze the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to distribute and freeze.

The **Payment Request** screen appears.

3. Click the **Distribute And Freeze** button in the **Payment Request** zone.

The Defer algorithm attached to the payment request type using which you have created the payment request is triggered. This algorithm checks whether the number of payment distribution records in the payment request exceeds the payment count defined in the Defer algorithm. If the number of payment distribution records in the payment request does not exceed the payment count, the system distributes and freezes the tender or payment amount in real time (i.e. immediately). However, if the number of payment distribution records in the payment request exceeds the payment count, the system distributes and freezes the tender or payment amount in the deferred mode.

**Note:**

Number of payment distribution records = (Number of bill segments present in each bill fetched using the Bill Weighted, Bill Regular, and Bill match type algorithm) + (Number of bill segments fetched using the Bill Segment match type algorithm) + (Number of contracts fetched using the Suspense Contract match type algorithm) + (Number of settlements fetched using the Settlement match type algorithm)

Deferred mode means in the background when the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked. You can configure the **Payment Request Periodic Monitor (C1-PAYRQ)** batch such that it is executed at regular intervals. When the **Payment Request Periodic Monitor (C1-PAYRQ)** batch is invoked, the system checks whether there are any payment requests in the **Deferred Distribution** status. If there is a payment request in the **Deferred Distribution** status, the system distributes the tender or payment amount.

On distributing and freezing the tender amount, the payment event, payments, payment segments, and payment tenders are created. The payments are created in the **Frozen** status. If any error occurs while creating the payment, the payment is created in the **Error** status. If all payments of a payment event are in the **Frozen** status, the status of the payment event is set to **Balanced**. However, if any payment of a payment event is in the **Error** status, the status of the payment event is set to **Unbalanced**. On distributing the payment amount (during transfer), the new payments are created in the **Frozen** status. If any error occurs while creating the new payment, the payment is created in the **Error** status. The status of the payment event is set to **Unbalanced**. The old payments in the payment event that you want to transfer remains in the **Frozen** or **Error** status.

Once the tender or payment amount is successfully distributed and frozen, the status of the payment request is changed to **Processed**.

**Note:**

The **Distribute And Freeze** button appears only when the payment request is in the **Draft** status.

The sum of payment amount should be equal to the tender or transfer (payment) amount. Otherwise, the system will not allow you to distribute the tender or payment amount.

Redistributing the Tender or Payment Amount

**Procedure**

To redistribute the tender or payment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose tender or payment amount you want to redistribute.  
The **Payment Request** screen appears.
3. In the **Payment Distribution** zone, click the **Redistribute** button in the **Redistribute** column corresponding to the payment distribution whose tender or payment amount you want to redistribute.

The required payment gets redistributed among the account's contracts.

**Note:** The **Redistribute** button appears only when the payment status is in **Incomplete**, **Error**, or **Freezable** status.

## Editing the Payment Segment Amount

Before you freeze the payments, the system allows you to edit the pay segment amount of the payments which are in the **Freezable** status. You can edit the amount only when there are multiple pay segments in a payment.

### Procedure

To edit the payment segment amount:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose details you want to edit.

The **Payment Request** screen appears.

3. Click the **Detail** button in the **Payment Distribution** zone.

The **Edit Payment Segment Amount** screen appears. It contains the following fields:

Field Name	Field Description
Payment Event Information	Displays information about the payment event which is created through the payment request.
Payment Information	Displays information about the payment which is created through the payment event.
Payee Account Information	Displays information about the account for which the payment is made.
Match Value	Displays information about the entity against which the payment is matched.
Payment Amount	Displays the total payment amount.
Running Total	Displays the sum of payment amount specified against each pay segment.
Running Balance	Displays the difference between total payment amount and running total. The running balance is highlighted in the red color when the difference amount is non-zero.

In addition, this section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sr No	Indicates the sequence number of the pay segment.	Not applicable

Column Name	Column Description	Mandatory (Yes or No)
Entity Information	Displays information about the entity (such as bill segment or contract) against which the pay segment is created.	Not applicable
Total Amount	Displays the entity amount. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total bill segment amount.	Not applicable
Unpaid Amount	Displays the amount which is eligible for payment. If the pay segment is created against a contract, the system considers all bill segments of the bill which are created against the contract and calculates the total unpaid bill segment amount.	Not applicable
Payment Amount	Used to specify the payment amount that you want to distribute against the pay segment.  <b>Note:</b> This field is non-editable when: <ul style="list-style-type: none"> <li>There is only one pay segment in a payment.</li> <li>A user with the approval To Do role is reviewing the pay segment amount.</li> </ul>	Yes
Payment Currency	Indicates the currency in which the payment was made.	Not applicable
Pay Segment ID	Displays the pay segment ID.	Not applicable

**Note:**

The **Detail** button appears in the **Detail** column only when:

- The payment request is in the **Distributed** or **Approval In Progress** status
- The payment is in the **Freezable** status.

Pagination is used to display limited number of records in the **Edit Payment Segment Amount** screen. You can change the number of records displayed per page, if required. You can use the navigation buttons, such as **First** () , **Previous** () , **Next** () , and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

- Modify the payment amount against a pay segment, if required.

**Note:** The sum of payment segment amount should be equal to the payment amount.

- Click **Redistribute**.

The payment amount is redistributed among the pay segments.

**Note:** The **Redistribute** button is disabled when the **Payment Amount** field is non-editable.

- Click **Close**.

## Freezing Payments Created Through a Payment Request

### Procedure

To freeze the payments created through a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose payments you want to freeze.

The **Payment Request** screen appears.

3. If required, you can edit the amount of a payment segment before freezing the payments.
4. Click the **Freeze** button in the **Payment Request** zone.

The system behaves in the following manner:

If you are...	Then
Freezing the payments created through a payment creation request	The status of the payments which are in the <b>Freezable</b> status is changed to <b>Frozen</b> . In addition, the status of the payment request is changed to <b>Processed</b> .
Freezing the payments created through a payment transfer request	The status of the old payments which are in the <b>Frozen</b> status is changed to <b>Cancelled</b> . The old payments which are in the <b>Error</b> status are deleted. The status of the new payments which are in the <b>Freezable</b> status is changed to <b>Frozen</b> . The status of the payment event is changed to <b>Balanced</b> when there are no new payments in the <b>Error</b> status. In addition, the status of the payment request is changed to <b>Processed</b> .

### Note:

The **Freeze** button appears only when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is not selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to freeze the payments created through the payment request.

Submitting a Payment Request for Approval

**Procedure**

To submit a payment request for approval:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request that you want to submit for approval.  
The **Payment Request** screen appears.
3. If required, you can edit the amount of a payment segment before submitting the payment request for approval.
4. Click the **Submit for Approval** button in the **Payment Request** zone.

The status of the payment request is changed to **Approval In Progress**. A To Do is created using the **C1-PAYRQ** To Do type. Users having a To Do role to which the **C1-PAYRQ** To Do type is associated can view the To Do from the **To Do List** screen.

**Note:**

The **Submit for Approval** button appears only when:

- The payment request is in the **Distributed** status.
- The **Approval Required** check box is selected in the payment request type using which the payment request is created.

For each payment, ensure that the sum of payment segment amount is equal to the payment amount. Otherwise, the system will not allow you to submit the payment request for approval.

Approving a Payment Request

You can view the number of payment requests which are pending for approval in the **Payment Request** screen. The approver can review, and accordingly approve or reject the payment request based on the observations.

**Note:** The system will not allow you to approve or reject a payment request submitted by you.

**Procedure**

To approve a payment request:

1. Do either of the following:

If you want to	Then
Approve a payment request through the <b>Payment Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the payment request in the <b>Payment Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Payment Request Information</b> column corresponding to the payment request which you want to review.</li> </ol>
Approve a payment request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-PAYRQ</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the payment request that you want to review.</li> </ol>

The **Payment Request** screen appears.

2. Review the payment request details.
3. Click the **Approve** button in the **Payment Request** zone.

The system behaves in the following manner:

If you are...	Then
Approving a payment creation request	The status of the payments which are in the <b>Freezable</b> status is changed to <b>Frozen</b> . In addition, the status of the payment request is changed to <b>Processed</b> .
Approving a payment transfer request	The status of the old payments which are in the <b>Frozen</b> status is changed to <b>Cancelled</b> . The old payments which are in the <b>Error</b> status are deleted. The status of the new payments which are in the <b>Freezable</b> status is changed to <b>Frozen</b> . The status of the payment event is changed to <b>Balanced</b> when there are no new payments in the <b>Error</b> status. In addition, the status of the payment request is changed to <b>Processed</b> .

**Note:** The **Approve** button appears only when:

- The payment request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment request.

**Related Topics**

**Rejecting a Payment Request**

**Prerequisites**

To reject a payment request, you should have:

- Rejection reasons defined in the application

**Note:**

While rejecting a payment request, you need to specify the reason why you want to reject the payment request. If you are rejecting a payment creation request, you can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-PaymentRequest** business object in the **Status Reason** screen. However, if you are rejecting a payment transfer request, you can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-PaymentTransferRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment request submitted by you.

**Procedure**

To reject a payment request:

- Do either of the following:

If you want to...	Then...
Reject a payment request through the <b>Payment Request</b> screen	<ol style="list-style-type: none"> <li>Search for the payment request in the <b>Payment Request</b> screen.</li> <li>In the <b>Search Results</b> section, click the link in the <b>Payment Request Information</b> column corresponding to the payment request which you want to review.</li> </ol>
Reject a payment request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.</li> </ol>

If you want to...	Then...
	<p>The <b>To Do Type for User Search</b> window appears.</p> <p>3. Enter <b>C1-PAYRQ</b> in the <b>To Do Type</b> field.</p> <p>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.</p> <p>The <b>To Do List</b> screen appears.</p> <p>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</p> <p>6. Click the link in the <b>Message</b> column corresponding to the To Do of the payment request that you want to review.</p>

The **Payment Request** screen appears.

- Review the payment request details.
- If required, you can review the payment segment amount of each payment by clicking the **Detail** button in the **Detail** column corresponding to the payment in the **Payment Distribution** zone.
- Click the **Reject** button in the **Payment Request** zone.

The **Status Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment request.	Yes

**Note:** The **Reject** button appears only when:

- The payment request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

If the approver rejects a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver rejects a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Rejected**.

#### **Related Topics**

For more information on...	See...
How to search for a payment request	<a href="#">Searching for a Payment Request</a> on page 952
<b>Payment Request</b> screen	<a href="#">Payment Request (Used for Viewing)</a> on page 954
<b>Payment Request</b> zone	<a href="#">Payment Request</a> on page 954

Discarding a Payment Request

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request which you want to discard.
3. Click the **Discard** button in the **Payment Request** zone.

**Note:**  

The **Discard** button appears only when the payment request is in **Distributed** status.

If the approver discards a payment creation request, the payment event, payments, payment segments, and payment tender which are created through the payment creation request are deleted. However, if the approver discards a payment transfer request, the new payments which are created through the payment transfer request are deleted. In addition, the status of the payment creation or transfer request is changed to **Discarded**.

Discarding a payment request is similar to rejecting a payment request. However, you can only reject a payment request, when approval workflow is on while creating a payment request but discarding a payment request can be done in both the cases, when the approval workflow is on or off.

Viewing the Log of a Payment Request

Procedure

To view the log of a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose log you want to view.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
    - **Payment Request** – Displays the details of the payment request.
    - **Payment Distribution** – Lists the payment distribution records of the payment request.
  - **Log** – This tab lists the complete trail of actions performed on the payment request.
3. Click the **Log** tab.

The **Payment Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment request.
Details	Displays the details about the action performed on the payment request.
User	Indicates the user who has performed the action on the payment request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment request.
Status Reason	Indicates the reason why the payment request was rejected.

**Note:** You can manually add a log entry for the payment request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

How to add a log entry for a payment request	<a href="#">Adding a Log Entry for a Payment Request</a> on page 985

## Adding a Log Entry for a Payment Request

### Procedure

To add a log entry for a payment request:

1. Search for the payment request in the **Payment Request** screen.
2. In the **Search Results** section, click the link in the **Payment Request Information** column corresponding to the payment request whose log you want to edit.

The **Payment Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
  - **Payment Request** – Displays the details of the payment request.
  - **Payment Distribution** – Lists the payment distribution records of the payment request.
- **Log** – This tab lists the complete trail of actions performed on the payment request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Payment Request Log** zone.

The **Add Payment Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Information	Displays information about the payment request.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Log Details	Used to specify additional comments on the payment request.	Yes

- Enter the comments in the **Log Details** field.
- Click **Save**.

The log entry is added in the **Payment Request Log** zone.

## Payment Event Summary

The **Payment Event Summary** screen allows you to search for a payment event using various search criteria. Through this screen, you can:

- View the payments created through a payment event
- View payment segments of a payment
- Transfer one or more payments of a payment event to another payee account
- Cancel a payment event
- Delete a payment event
- Cancel a payment of a payment event
- Delete a payment of a payment event
- Refund a payment which is matched against the suspense or excess credit contract

This screen consists of following zones:

- [Search Payment Event](#) on page 986
- [Payments](#) on page 989
- [Payment Segments](#) on page 991

### Search Payment Event

The **Search Payment Event** zone allows you to search for a payment event using various search criteria. This zone contains the following two sections:

- Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment event using the payor, payment event, tender, or contract details. The valid values are: <ul style="list-style-type: none"> <li>Payor Account/Payment Event</li> <li>Tender Details</li> <li>Suspense/Excess Credit Contract</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Payor Account/Payment Event</b> option is selected.	
Payment Event ID	Used to search a particular payment event.	No
	<b>Note:</b> This field appears only when you select the <b>Payor Account/Payment Event</b> option from the <b>Search By</b> list. The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Payment Event Search</b> window appears.	
Payor Account ID	Used to search payment events which are created for a particular payor account.	No
	<b>Note:</b> This field appears only when you select the <b>Payor Account/Payment Event</b> option from the <b>Search By</b> list. The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	
Payor Name	Used to search payment events which are created for a particular payor.	No
	<b>Note:</b> This field appears only when you select the <b>Payor Account/Payment Event</b> option from the <b>Search By</b> list.	
Payment Date	Used to search payment events which are created on a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Payor Account/Payment Event</b> option from the <b>Search By</b> list.	
Tender Type	Used to search payment events where a particular tender type is used.	No
	<b>Note:</b> This field appears only when you select the <b>Tender Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Check Number	Used to search a payment event which includes payments made through a particular check.	No
	<b>Note:</b> This field appears only when you select the <b>Tender Details</b> option from the <b>Search By</b> list.	
MICR ID	Used to search payment events which include payments made with a particular MICR code.	No
	<b>Note:</b> This field appears only when you select the <b>Tender Details</b> option from the <b>Search By</b> list.	
Contract ID	Used to search payment events which include payments made against a particular suspense or excess credit contract.	No
	<b>Note:</b> This field appears only when you select the <b>Suspense/ Excess Credit Contract</b> option from the <b>Search By</b> list.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Contract Search</b> window appears.	

**Note:** You must specify at least one search criterion while searching for a payment event.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Payment Event Information	Displays additional information about the payment event.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the respective payment event.
Transfer	On clicking the <b>Transfer</b> button, you can transfer all payments (which are in either <b>Frozen</b> and <b>Error</b> status) of the payment event to another payee account.
	<b>Note:</b> The <b>Transfer</b> button appears only when: <ul style="list-style-type: none"> <li>• One or more payments of the payment event are in the <b>Frozen</b> or <b>Error</b> status.</li> <li>• There is no payment transfer request which is currently in progress for the payment event.</li> </ul>

Column Name	Column Description
Cancel	<p>On clicking the <b>Cancel</b> button, you can cancel all payments (which are in the <b>Frozen</b> status) of the payment event.</p> <p><b>Note:</b> The <b>Cancel</b> button appears only when:</p> <ul style="list-style-type: none"> <li>One or more payments of the payment event are in the <b>Frozen</b> status.</li> <li>One or more payments of the payment event are not in the <b>Freezable</b> or <b>Error</b> status.</li> <li>There is no payment transfer request which is currently in progress for the payment event.</li> </ul>
Delete	<p>On clicking the <b>Delete</b> button, you can delete the payment event.</p> <p><b>Note:</b> The <b>Delete</b> button appears only when the payments of a payment event are in the <b>Freezable</b>, <b>Error</b> or <b>Incomplete</b> status.</p>
Additional Information	Displays information about the status of the payment event.
Payment Date	Displays the date when the payment was made.
Payor Name	<p>Indicates the person who has made the payment.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p>
Payor Account ID	<p>Indicates the account which made the payment.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.</p>
Tender Amount	Displays the tender amount.
Payment Event ID	Displays the payment event ID.

## Payments

The **Payments** zone lists all payments created through the payment event. This zone contains the following columns:

Column Name	Column Description
Payment ID	<p>Displays the payment ID.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> screen appears with the details of the respective payment.</p>

Column Name	Column Description
Payee Account Information	Displays information about the account for which the payment was made. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Payment Amount	Displays the amount paid through the tender.
Payment Currency	Indicates the currency in which the payment was made.
Payment Status	Indicates the status of the payment. The valid values are: <ul style="list-style-type: none"> <li>• Incomplete</li> <li>• Error</li> <li>• Freezable</li> <li>• Frozen</li> <li>• Canceled</li> </ul>
Match Type	Indicates the match type using which the payment was matched.
Match Value	Indicates the entity (such as bill, bill segment, or contract) against which the payment was matched.
Error Message	Indicates the reason why the payment is in the <b>Error</b> status.
Payor Account ID	Indicates the account which made the payment.
Refund Amount	Displays the amount which is already refunded to the payor account.

In addition, this zone contains the following buttons:

Button Name	Button Description
Transfer	Used to transfer the payment to another payee account.
	<b>Note:</b> You can transfer a payment only when it is in the <b>Frozen</b> or <b>Error</b> status.
Cancel	Used to cancel the payment.
	<b>Note:</b> You can cancel a payment only when it is in the <b>Frozen</b> status.
Delete	Used to delete the payment.
	<b>Note:</b> You can delete a payment only when it is in the <b>Freezable</b> or <b>Error</b> status.
Refund	Used to refund the payment amount to the payor account.
	<b>Note:</b> You can refund the payment amount to the payor account only when: <ul style="list-style-type: none"> <li>• The payment is matched against the suspense or excess credit contract.</li> <li>• The payment is in the <b>Frozen</b> status.</li> </ul>

## Payment Segments

The **Payment Segments** zone lists payment segments of a payment. This zone contains the following columns:

Column Name	Column Description
Pay Segment ID	Displays the payment segment ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Pay Segments</b> tab of the <b>Payment</b> screen appears where you view the details of the payment segment.
Contract Information	Displays information about the contract against which the payment segment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Payment Amount	Displays the payment segment amount.
Match Event ID	Indicates the match event which is created for the payment segment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Match Event</b> screen appears where you can view the details of the respective match event.

## Searching for a Payment Event

### Prerequisites

To search for a payment event, you should have:

- Tender types defined in the application

### Procedure

To search for a payment event:

1. Click the **Menu** link in the **Actions/Navigation** area.  
A list appears.
2. Select the **Main Menu** option from the list.

- From the **Main Menu**, select **Financial** and then click **Payment Event Summary**.  
The **Payment Event Summary** screen appears.
- Enter the search criteria in the **Search Payment Event** zone.

**Note:**

You can search for a payment event and payor account by clicking the **Search**  icon corresponding to the respective field.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.  
A list of payment events that meet the search criteria appears in the **Search Results** section.

**Creating a Payment Transfer Request**

The system allows you to transfer payments through a payment request. You can transfer all payments or individual payment of a payment event. You can only transfer payments which are in the **Frozen** or **Error** status.

**Prerequisites**

To create a payment transfer request, you should have:

- Payment request types defined in the application (where the **Transfer** check box is selected)
- Payment cancel reasons defined in the application (where the **Payment Transfer** check box is selected)

**Procedure**

To create a payment transfer request:

- Search for the payment event (whose payments you want to transfer) in the **Payment Event Summary** screen.
- Do either of the following:

If you want to...	Then...
Transfer all payments of a payment event	<ol style="list-style-type: none"> <li>In the <b>Search Results</b> section, click the <b>Transfer</b> button in the <b>Transfer</b> column corresponding to the payment event whose payments you want to transfer.</li> </ol>

If you want to...	Then...
	<p><b>Note:</b> The <b>Transfer</b> button appears only when:</p> <ul style="list-style-type: none"> <li>One or more payments of the payment event are in the <b>Frozen</b> or <b>Error</b> status.</li> <li>There is no payment transfer request which is currently in progress for the payment event.</li> </ul>
Transfer one or more payments of a payment event	<ol style="list-style-type: none"> <li>In the <b>Search Results</b> section, click the <b>Broadcast</b>  icon corresponding to the payment event whose payments you want to view.  The <b>Payments</b> zone appears.</li> <li>Select the check box corresponding to the payments that you want to transfer.</li> <li>Click the <b>Transfer</b> button in the <b>Payments</b> zone.</li> </ol> <p><b>Note:</b> You can transfer a payment only when it is in the <b>Frozen</b> or <b>Error</b> status.</p>

The **Select Payment Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Used to indicate the payment request type using which you want to create the payment request.	Yes
	<b>Note:</b> The list includes only those payment request types where the <b>Transfer</b> check box is selected.	

3. Select the required payment request type from the respective field.

4. Click **OK**.

- Main** - Used to specify basic details about the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Request Type	Indicates the payment request type using which you want to create the payment request.	Not applicable
Payment Event Information	Displays information about the payment event whose payments you want to transfer.	Not applicable
Transfer Amount	Displays the total payment amount which you want to transfer.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Payment Date	Used to specify the date when the payment was transferred.	Yes
	<b>Note:</b> By default, the current date appears in this field.	
Transfer Reason	Used to indicate the reason why you want to transfer the payments.	Yes
	<b>Note:</b> The list includes only those payment cancel reasons where the <b>Payment Transfer</b> check box is selected.	

- **Payor Account Details** — This section contains the following columns:

Column Name	Column Description
Payor Account Information	Displays information about the payor's account whose payments you want to transfer.

- **Payment Details** — This section contains the following columns:

Column Name	Column Description
Payment(s)	Displays information about the payment that you want to transfer.

- **Match Types** - Used to define match types for the payment request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to match the payment.	Yes
Show Default	Used to indicate whether the default payment amount should be displayed against the match type entities.	No
	<b>Note:</b> By default, the <b>Show Default</b> check box is selected when you select the match type.	
Entity	Indicates the match type entity. The valid values are: <ul style="list-style-type: none"> <li>• <b>Account</b> — Enables you to select the account whose unpaid bills, unpaid bill segments, settlement IDs, or contracts must be considered while matching the payment.</li> <li>• <b>Bill</b> — Enables you to select the unpaid bill against which you want to match the payment.</li> </ul>	Not applicable
Entity ID	Used to specify the account or bill ID depending on the match type entity.	Yes

5. Enter the required details.

**Note:**

You can search for an entity (such as account or bill) by clicking the **Search**  icon corresponding to the respective field.

If you want to specify more than one match type within the payment request, click the **Add**  icon in the **Match Types** section and then specify the details. However, if you want to remove a match type from the payment request, click the **Delete**  icon corresponding to the match type.

**6. Click Manual Distribution.**

The payment request is created and the status of the payment request is set to **Draft**. The **Payment Request** screen appears. Depending on the match type and match entity specified while creating the payment request, the following entities are listed in the **Payment Distribution** zone:

Match Type	Match Entity	Entities
By Bill Regular	Account	Unpaid bills of the account
By Bill Weighted	Account	Unpaid bills of the account
By Bill	Bill	Unpaid bill
By Bill Segments	Account	Unpaid bill segments
By Suspense Contract	Account	<div>Contracts of the account</div> <div> <b>Note:</b> Only contracts of the contract type where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b> are listed in the <b>Payment Distribution</b> zone. If no contracts with this specification exist for the account, the system checks whether there is any such contract type (where the <b>Eligible for Billing</b> flag is set to <b>No</b> and <b>Special Role</b> flag is set to <b>Suspense</b>) defined for the division to which the account belongs. If there is any such contract type defined for the division, the system creates the contract for the account using the respective contract type and the same is listed in <b>Payment Distribution</b> zone. </div>
By Settlement	Account	Unpaid bill segments where the settlement account is stamped

If the **Show Default** check box is not selected against a match type while creating the payment request, the payment amount against the respective match type entities is set to zero. However, if the **Show Default** check box is selected against a match type, the payment amount appears against the respective match type entities. The transfer amount is divided among the entities in the sequence of match types (where **Show Default** check box is selected) followed by the sequence of bill, bill segment, or contract start date. You can then edit the payment amount, if required.

**Note:**

If a payment request is already created for a payee account and is currently in progress, the system will not allow you to create another payment request for the payee account until the previous payment request is in the **Processed** or **Rejected** status.

The system does not allow you to create a payment request for a payee account when the respective match type entities (such as unpaid bills, unpaid bill segments, contracts, or settlement IDs) do not exist for the payee account.

**Cancelling a Payment Event****Prerequisites**

To cancel a payment event, you should have:

- Payment cancel reasons defined in the application

**Procedure**

To cancel a payment event:

1. Search for the payment event in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Cancel** button in the **Cancel** column corresponding to the payment event that you want to cancel.

The **Cancel** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the payment event.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Bank	Used to indicate the bank which should be charged for the cancellation.	Yes
Bank Account	Used to indicate the bank account which should be charged for the cancellation.	Yes

**Note:** The **Cancel** button appears only when:

- One or more payments of the payment event are in the **Frozen** status.
- One or more payments of the payment event are not in the **Freezable** or **Error** status.
- There is no payment transfer request which is currently in progress for the payment event.

3. Select the cancel reason, bank, and bank account from the respective fields.
4. Click **OK**.

The payment tender and all payments in the payment event are cancelled.

## Deleting a Payment Event

You can delete a payment event only when the payment(s) of the payment event are in the **Freezable**, **Error**, or **Incomplete** status. On deleting a payment event, the payment event, payments, payment segments, and payment tender are deleted.

#### Procedure

To delete a payment event:

1. Search for the payment event in the **Payment Event Summary** screen.
2. In the **Search Results** section, click the **Delete** button in the **Delete** column corresponding to the payment event that you want to delete.

A message appears confirming whether you want to delete the payment event.

**Note:** The **Delete** button appears only when the payments of a payment event are in the **Freezable**, **Error**, or **Incomplete** status.

3. Click **OK**.

The payment event is deleted.

## Account Receivable Central

---

### Topics:

- [Single Offset](#)
- [Mass Offset](#)
- [Cross Currency Offset](#)
- [Hold](#)
- [Refund](#)
- [Write Off](#)
- [Dispute](#)
- [Account Receivable Central](#)

The Account Receivable Central is a portal which facilitates user to perform Single/Mass/Cross Currency offset operation for a bill's outstanding amount with another bill or multiple bills. You can also refund/write off amount to the account using refund requests and write off requests respectively.

Account Receivable Central also enables to put bill(s) on hold for the funding purpose. It allows you to have a complete overview of the bills. Based on the search criteria, the system returns a list of bills that meet the search criteria.

Account Receivable Central is used for:

- **Single Offset** - Enables single debit bill to be offset against multiple credit bills in the same currency and vice versa.
- **Mass Offset** - Enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.
- **Cross Currency Offset** - Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa.
- **Hold** - Enables bill(s) to be put on hold fully (the bill outstanding amount) or partially (the bill outstanding amount in partial) for a specific period for funding.
- **Refund** - Enables you to refund amount of credit bill or bill line item (credit bill segment or adjustment) to the account through a refund request.
- **Write Off** - Enables you to write off amount to the account through a write off request.
- **Dispute** - Enables you to dispute amount of credit/debit bill or bill item (credit/debit bill segment or adjustment) to the account through a dispute request.

The bill(s) for offsetting can belong to the same person or multiple persons depending upon the option **Allow Offsetting across Persons** set in the feature configuration **C1-OFFSETREQ** which allows offsetting in the system.

## Single Offset

Single Offset enables you to search and add bill to an offset request from the **Account Receivable Central** screen. Single Offset enables single debit bill to be offset against multiple credit bills in the same currency and vice versa. The offset request is created and an offset request ID is generated for the request.

You can search and select credit/debit bills (with outstanding amount) for offsetting belonging to the same or different person. All the selected bills with their outstanding balance are displayed. The display of bills is controlled by **C1-OFFSETREQ** feature configuration. The feature configuration identifies whether offsetting is allowed for bills across persons. To offset bills belonging to different persons, set the **Allow Offsetting Across Persons** option type to **Y**. The bills are displayed having same currency with the default offset amount on the offset request after adding the bills. You can select one or multiple or all the bills displayed and add to the offset request. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request.

Upon adding a bill to the offset request, the default offset amount algorithm **C1-OFST-AMT** configured in the offset request type is invoked. The bills in the offset request are processed based on the logic of oldest bill first. The default offset amount is populated against the selected debit and credit bills. You can also edit the offset amount from the offset request, if required. The offset adjustments for offset requests are created and distributed based on the match type set in the offset distribution algorithm.

You can configure the offset request type to be submitted for offset distribution with or without approval. Upon submitting the offset request for approval, a To Do type is created and sent to the approver for offset request approval. The status of the offset request changes from **Submitted** to **Approval In Progress** in case of offset request with approval and in case of offset request without approval it changes to **Processed**. The approver can either approve or reject the offset request. Once the approver approves the offset request, selected bills are offset and adjustments are created for the bills. The status of the offset request changes from **Approval In Progress** to **Processed**. You can also view the details of the adjustment(s) created. However, if the approver rejects an offset request, a rejection reason should be provided.

A log maintained for offset requests logs complete trail of actions performed on offset request except the actions performed while editing the offset request. On submitting, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type and the **Unapply** button is enabled which cancels the adjustments. Upon cancelling the adjustments, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

**Note:** The **Unapply** button appears only when the offset request is in the **Processed** status

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$1200	—\$800	\$400	Bill 1 amount \$1200 is offset against Bill 2.
Bill 2	—\$1000	\$500	—\$500	From Bill 2, \$500 is offset against from Bill 1.
Bill 3	—\$300	\$300	0	From Bill 3, \$300 is offset against from Bill 1.

## Mass Offset

Mass offset functions is similar to single offset, the only difference is that mass offset enables credit/debit bills to be offset against multiple debit and credit bills in the same currency.

Upon selection of a debit/credit bill from **Account Receivable Central**, you can add more credit/debit bill(s) from the search bills result in offset request. You can filter the bills using the **Bill Type** filter on the bill search zone to select debit/credit bills to be added to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

A log maintained for offset requests logs complete trail of actions performed on offset request. Once you submit the offset request, the offset request status changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type. When the offset request status changes to **Processed** adjustments are created and the **Unapply** button is enabled which cancels the adjustments. Upon unapplying the offset request, the enter status algorithm cancels the offset adjustments and the status of the request changes to **Unapplied Offset**.

Bill Information	Original Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$2000	—\$700	\$1300	The Offset amount \$400 is offset against Bill 2.
Bill 2	—\$400	\$400	0	Bill 2 is offset against \$400 from Bill Outstanding amount of Bill 1 i.e. \$2000.
Bill 3	—\$300	\$300	0	Bill 3 is offset against \$300 from Bill Outstanding amount of Bill 1 i.e. \$1600.

## Cross Currency Offset

Enables single debit bills to be offset against multiple credit bills in currencies other than the bill selected for offset and vice versa. Cross-currency offset enables you to offset credit/debit bills with different currencies. You can add credit/debit bills to the debit/credit bill added from **Account Receivable Central**. After you add a debit bill from **Account Receivable Central**, you cannot add more debit bills to the offset request. While offsetting the credit/debit amount across multiple bills, the oldest bill is offset first.

The **C1-OFFSUBENT** algorithm validates whether the sum of debit offset amount is equal to sum of credit offset amount for all bills selected in the offset request. After validation, status of the offset request changes to **Processed** or **Approval In Progress** depending on the configuration of the offset request type.

Bill Information	Outstanding Amount	Outstanding Amount (in Offset currency)	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$300	\$300	—\$130.1	\$169.9	Outstanding amount \$300 is offset against \$130.1 (£100). (Exchange rate: 1£=1.3\$)
Bill 2	—£100	—\$130.1	\$130.1	0	Outstanding amount £100 (\$130.1) of Bill 2 is offset against \$300 from Bill 1.

**Note:** In case of multiple exchange rates with same date and different timestamps, the latest timestamp is considered.

**Note:** The adjustments are created in the currency of the bill.

## Hold

Account Receivable Central enables bill(s) to be put on hold which belongs to a person's account or all accounts of a particular person. When a bill is put on hold, specific reason must be specified; no funding related activities can be performed for the specified period.

Funding related activities are put on hold from the start date of the hold request. The hold exists till the hold request release date; however you can also release individual bills.

You can only put bills on hold which has **Completed** status. When a person/account is on hold, all the subsequent bills under them are also on hold irrespective of bill status. You can select the bill amount in a bill to be put on hold i.e. you can put the particular bill on hold with partial or full bill amount.

Hold request type is used to define the hold request. In the hold request type, the **Hold Process** is set to **Funding**, which puts hold on only the funding activities of the selected bill belonging to a person or account.

## Refund

---

Enables you to refund amount of credit bill to account through a refund request. For creating a refund request you need to specify the refund request type using which you want to create the refund request. The refund request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the refund request type, the adjustment type should be defined for creating refund adjustments.

## Write Off

---

Enables you to write off the amount to the account through a write off request. For creating a write off request you need to specify the write off request type. The write off request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the write off request type, the adjustment type should be defined for creating write off adjustments.

## Dispute

---

Enables you to dispute amount of credit/debit bill to an account through a dispute request. For creating a dispute request you need to specify the dispute request type using which you want to create the dispute request. The dispute request can be defined with (single level/multi-level) or without approval workflow. An approval profile should be defined for the approval workflow. While defining the dispute request type, the adjustment type should be defined for creating dispute adjustments.

## Account Receivable Central

---

The **Account Receivable Central** screen allows you to search for bills using various search criteria. This screen consists of the following zones:

- [Search Bill](#) on page 1004

Through the **Account Receivable Central** screen, you can navigate to the following screens:

- [Offset Request \(Used for Viewing\)](#) on page 1039
- [Hold Request \(Used for Viewing\)](#) on page 1273
- [Refund Request](#) on page 1179
- [Write Off Request](#) on page 1212
- [Dispute Request \(Used for Viewing\)](#)

## Search Bill

The **Search Bill** zone allows you to search for bills in the **Accounts Receivable Central** screen using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search bills using bill details, using account details or using person details whose account is linked to a particular bill. The valid values are: <ul style="list-style-type: none"> <li>• <b>Person Details</b></li> <li>• <b>Account Details</b></li> <li>• <b>Bill Details</b></li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person Details</b> option is selected.	
Person ID	Used to select the person ID based on which you want to search for bills of a person.	No
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list. The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Account Search</b> window appears.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list.	
Person Identifier Type	Used to select the identifier type based on which you want to search for bills of a person.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list.	<b>Note:</b> If you enter the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value of the person identifier type.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list.	<b>Note:</b> If you enter the person identifier type as a search criteria, you have to select the person identifier.
Bills on Hold	Used to indicate whether the bill is on hold. The valid values are: <ul style="list-style-type: none"> <li>• No</li> <li>• Yes</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Balance	Used to search bills with a particular balance amount. The valid values are: <ul style="list-style-type: none"> <li>• Equal to Zero</li> <li>• Greater Than Zero</li> <li>• Less Than Zero</li> <li>• Not Equal to Zero</li> </ul>	No
Pending Bills	Used to indicate whether the bill is pending.	No
Account ID	Used to search for bills of a particular account. <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	No
Account Identifier Type	Used to specify the account identifier type of the account whose bill you want to search. <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	No
Account Identifier	Used to select the account identifier based on which you want to search for bills of a particular account. <b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	No
Bill ID	Used to search a particular bill. <b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID. <b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	No
Invoice Currency	Used to search for bills which are billed in a particular currency. <b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No
Bill Outstanding Amount From	Used to search bills with a particular minimum outstanding amount.	

Field Name	Field Description	Mandatory (Yes or No)
To	Used to search bills with a particular maximum outstanding amount.	

**Note:** You must specify at least one search criterion while searching for a bill when you select the **Person Details** or **Account Details** option from the **Search By** list.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Outstanding Amount	Displays the current bill balance amount.
Bill Date	Used to specify the date on which the bill was generated.
Hold Amount	Displays the amount from the bill that is on hold.
Account Information	Displays additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application. A tool tip appears when you hover over this column corresponding to the bill. It indicates the Current Balance, Excess Payment and Unapplied Payments and their values.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective bill.
Person Information	Displays additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears with the details of the respective bill.

This zone contains following buttons:

Button Name	Button Description
Single Offset	Used to add the selected bill with same currency to an offset request.
Mass Offset	Used to add the selected bills with same currency to an offset request.
Cross Currency Offset	Used to add the selected bills with different currency to an offset request.
Hold	Used to add the selected bill to hold request to be put on hold.
Write Off	Used to add the selected bill to a write off request.
Refund	Used to add the selected bill to a refund request.
Dispute	Used to add the selected bill to a dispute request.

## Bill Information

The **Bill Information** screen allows you to view detail information of a particular bill.

This screen consists of the following zones:

- [Hold Details](#) on page 1008
- [Offset Details](#) on page 1008
- [Garnishment Details](#) on page 1009
- [Bill Line Items](#) on page 1009

## Offset Details

The **Offset Details** zone displays details of the offset request. This zone contains following columns:

Column Name	Column Description
Offset Request Information	Displays additional information about the offset request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Offset Request</b> screen appears where you can view the details of the respective offset request.
Offset Amount	Displays the total offset amount.
Creation Mode	Displays the mode of creation for offset request . The valid values are: <ul style="list-style-type: none"> <li>• Automatic</li> <li>• Manual</li> </ul>

## Hold Details

The **Hold Details** zone displays details of the hold request on a bill. This zone contains following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the respective hold request.
Status	Indicates the status of the hold request.
Entity	Displays the type of entity.
Hold Entity	Displays additional information about the bill which is put on hold.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.
Start Date	Displays the start date of the hold request.
End Date	Displays the end date of the hold request.

## Garnishment Details

The **Garnishment Details** zone displays details garnishment details of the offset request. This zone contains following columns:

Column Name	Column Description
Garnishment Contract	Displays additional information about the contract created against the garnishment adjustments. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Garnishment Amount	Displays the total garnishment amount.

## Bill Line Items

The **Bill Line Items** zone displays information about the selected bill's bill line item. This zone contains the following fields:

Field Name	Field Description
Bill Line Item	Displays the bill line item (bill segment/adjustment) of the selected bills.
Bill Line Item Information	Displays the information about the bill line item.  <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen or <b>Adjustments</b> screen appears with the details of the respective bill line item or adjustments.
Amount	Displays the amount of the bill line item.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.

## Searching for a Bill

### Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Account Receivable Central**.  
The **Account Receivable Central** screen appears.

3. Enter the search criteria in the **Search Bill** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

**Note:** The wild card search for searching bill in the **Search Bill** zone is applicable only when you select the **Bill Details** option from the **Search By** list.

4. Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

**Viewing the Bill Details**

**Procedure**

To view the details of a bill:

1. Search for the bill in the **Account Receivable Central** screen.
2. In the **Search Results** section, click the **Show Context Menu** () icon corresponding to the bill whose details you want to view.  
  
A menu appears.
3. Click the **Go To Bill Information** menu option.  
  
The **Bill Information** screen appears.
4. View the details of the bills in the **Bill Information** screen.

## Offset Request

---

### Topics:

- [Offset Request \(Without Approval\) Status Transition](#)
- [Offset Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-OffsetRequest](#)
- [Prerequisites](#)
- [Offset Request Type](#)
- [Offset Request \(Used for Searching\)](#)
- [Offset Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to offset credit and debit bill(s) from the account(s) belonging to different persons. While creating an offset request, you need to specify the offset request type using which you want to create the offset request. You can create an offset request from:

- **Account Receivables Central** screen
- **Offset Request** screen

You can offset the bills across from the account(s) belonging to same or different person. In an offset request you can offset debit bill(s) against credit bill(s) or vice-versa. You can also offset bills with same currency or different currencies.

The offset request type helps the system to determine:

- Whether adjustments must be created in the real time (i.e. immediately) or in the deferred mode (i.e. in the background).
- Whether the offset request must be approved before creating offset adjustments in the system.
- Default adjustment type using which offset adjustments must be created.
- The default offset amount whenever a new bill is added using **C1-OFST-AMT** algorithm.

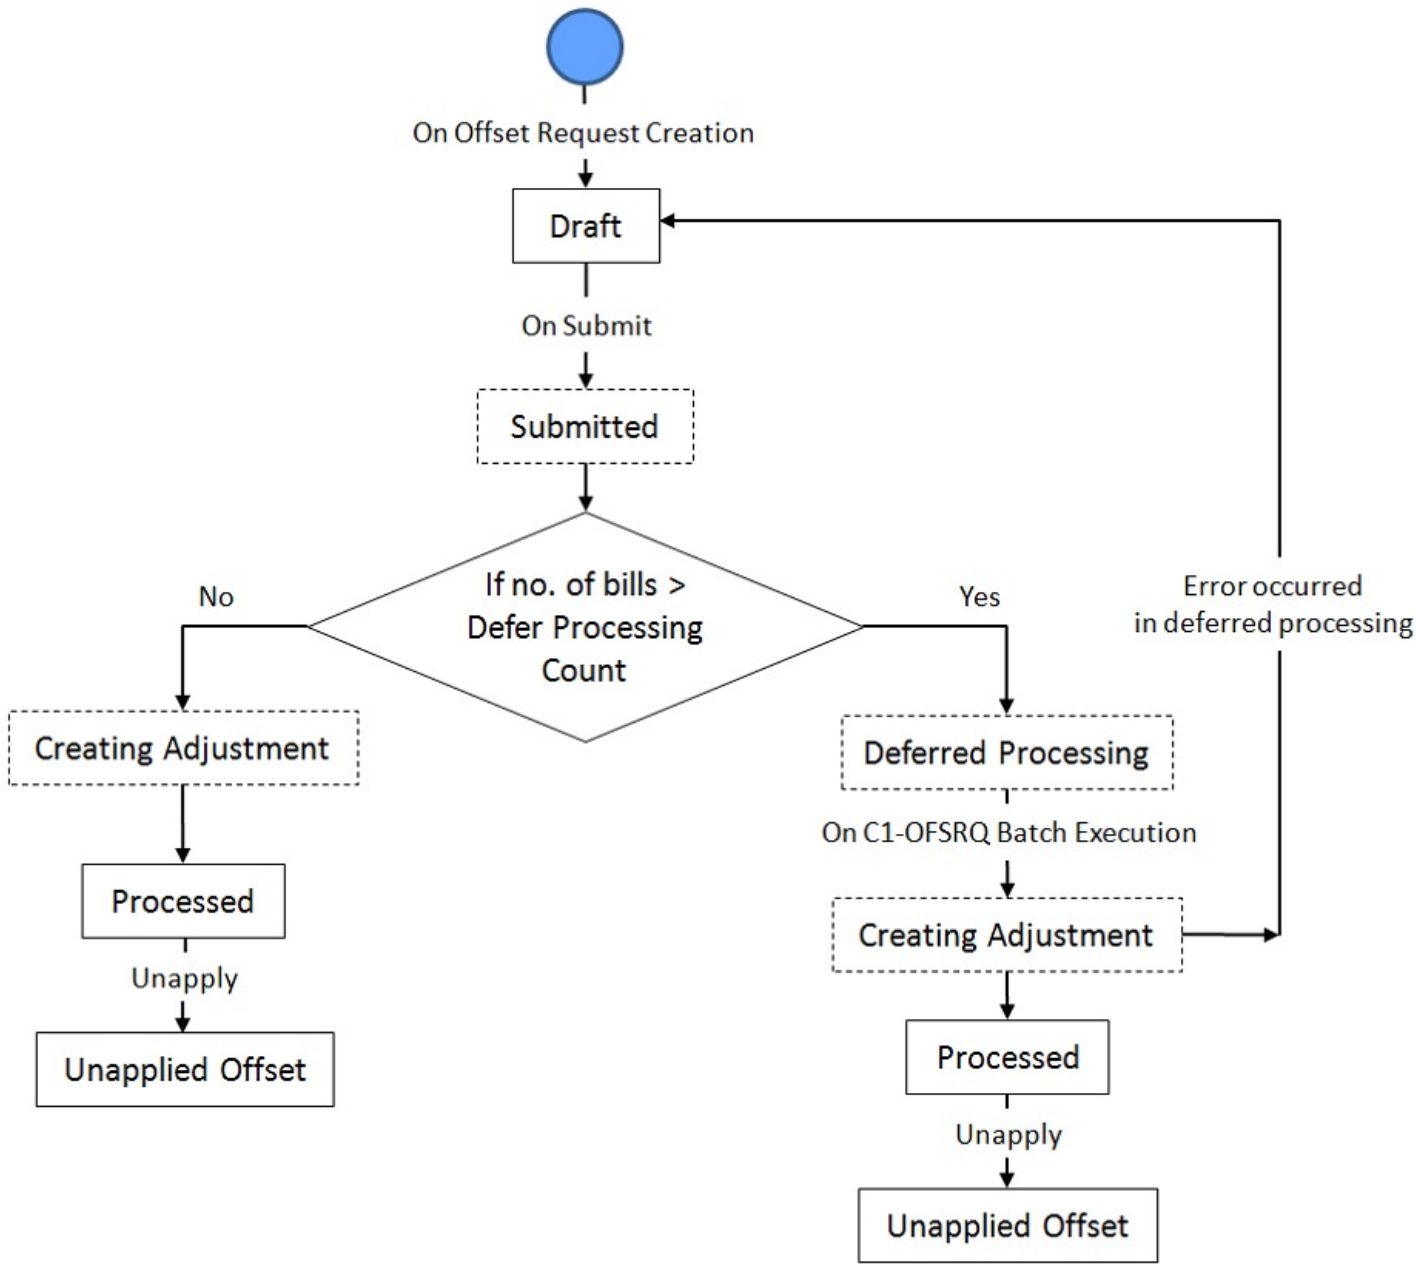

During the offset request process, an offset request goes through various statuses in its lifecycle. For more information about the offset request statuses, see [Offset Request \(Without Approval\) Status Transition](#) on page 1012 and [Offset Request \(With Approval\) Status Transition](#) on page 1013.

Note that the lifecycle of an offset request is driven by business object using which the offset request is created. An offset request business object named **C1-OffsetRequest** is shipped with the product. The offset request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-OffsetRequest** business object.

For more information on how to setup the offset request process, see [Prerequisites](#) on page 1019.

## Offset Request (Without Approval) Status Transition

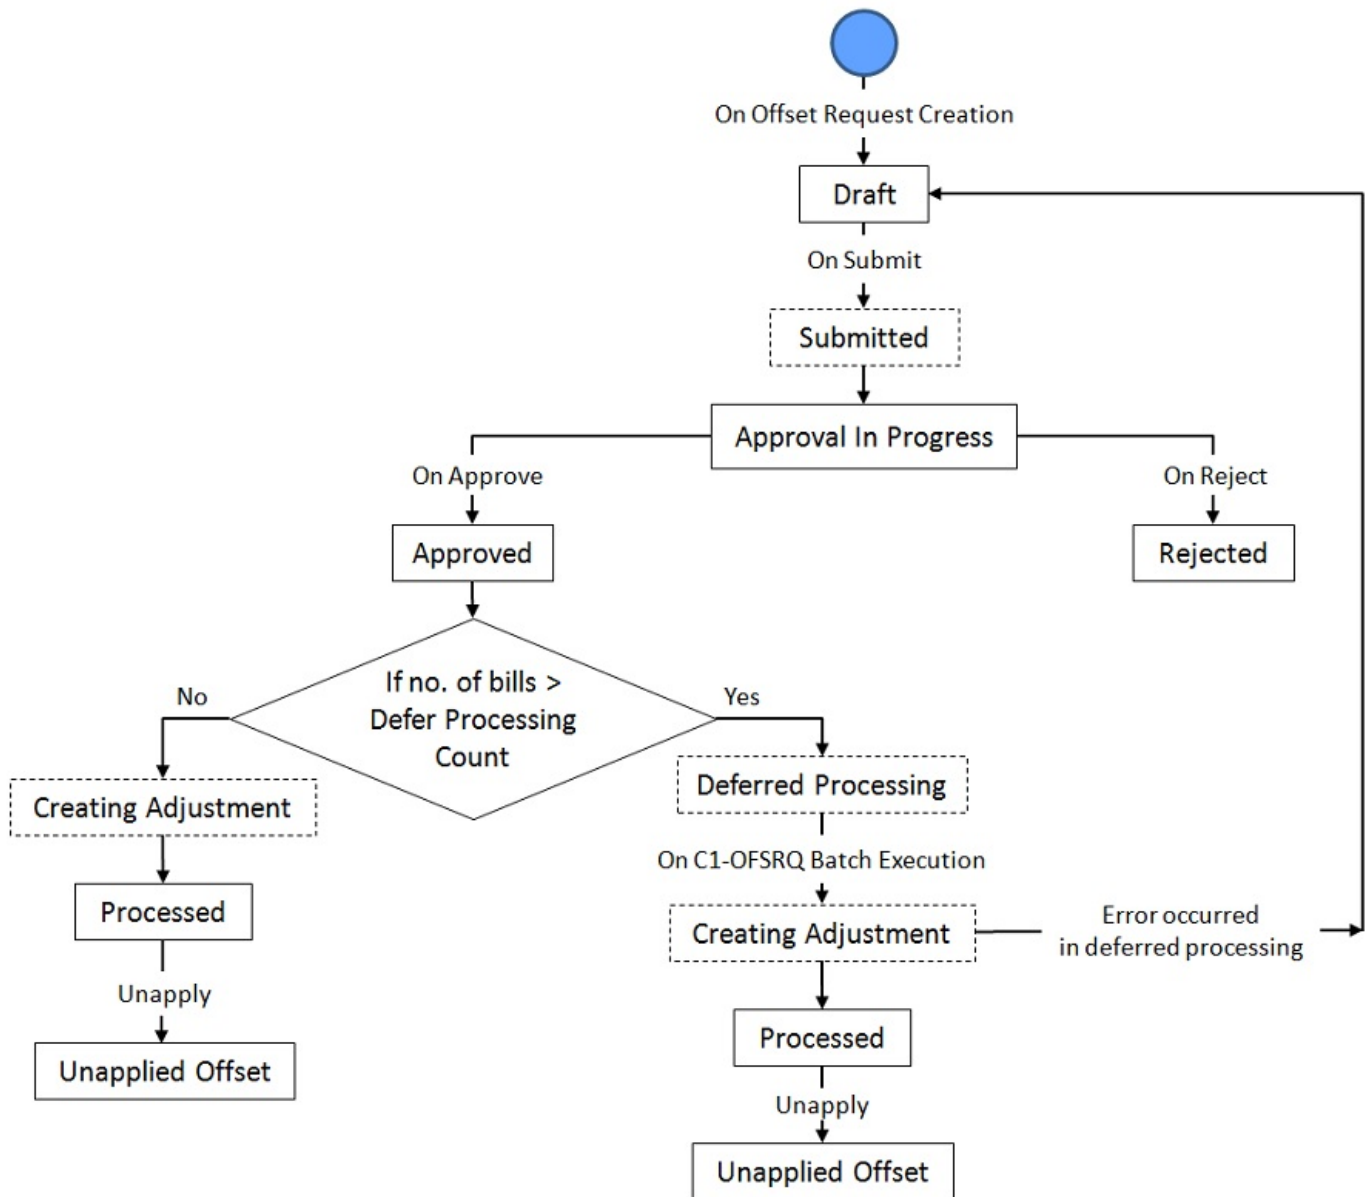

The following figure graphically indicates how an offset request moves from one status to another when approval workflow is off:

## Offset Request (With Approval) Status Transition

The following figure graphically indicates how an offset request moves from one status to another when approval workflow is on:

## Algorithms Used in C1-OffsetRequest

The following table lists the algorithms which are attached to the **C1-OffsetRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-OFFST-INF	C1-OFFST-INF	<p>This algorithm generates the offset request information string which appears throughout the application. It concatenates the following fields:</p> <ul style="list-style-type: none"> <li>Offset Request Type Description</li> <li>Offset Request Status Description</li> <li>Offset Request ID</li> </ul>

The following table lists the algorithms which are used in the lifecycle of the **C1-OffsetRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	-	-	-
Submitted	Enter	C1-OFFSUBENT	C1-OFFSUBENT	<p>This algorithm checks the following:</p> <ul style="list-style-type: none"> <li>If the bill(s) under request has non-zero outstanding amount.</li> <li>The bill status is <b>Completed</b>.</li> <li>Offset amount overridden by the user is non-zero.</li> <li>Sum of all offset amounts for debit bills is equal to sum of all offset amounts for credit bills.</li> <li>At least one debit and one credit bill is selected in the offset request.</li> </ul>
Approval In Progress	Enter	C1-OFFAPPENT	C1-OFFAPPENT	This algorithm creates To Do based on the Approval To Do Type configured in offset request type.
Approval In Progress	Enter	C1-OFFAPPEXT	C1-OFFAPPEXT	This algorithm checks whether an approver is associated with the approval <b>To Do Role</b> specified in the offset request type. It does not allow the submitter to approve or reject the offset request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.

Status	System Event	Algorithm	Algorithm Type	Description
Approved	Enter	C1-OFSAPRENT	C1-OFSAPRENT	This algorithm changes the status of the offset request to <b>Deferred Processing</b> or <b>Creating Adjustment</b> when the approver clicks the <b>Approve</b> button.
Rejected	-	-	-	-
Deferred Processing	Enter	F1-AT-RQJ	F1-AT-RQJ	This algorithm type transitions current state of the business object to the input Next Status or to the status related to the input Next Transition Condition. Only either of the soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Creating Adjustment	Enter	F1-AT-RQJ	F1-AT-RQJ	This algorithm type transitions current state of the business object to the input Next Status or to the status related to the input Next Transition Condition. Only either of the soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment	Enter	C1-OFST-DIST	C1-OFST-DIST	<p>This algorithm is executed on submit or on approve of an offset request. It creates the transfer adjustments between bill segments/contracts of bills selected in an offset request using following two parameters for this algorithm:</p> <p><b>Parameter 1 - Match Type Code:</b> This should be the Match Type defined for payment override distribution in the system. If a bill selected for offsetting is already paid partially using some Match Type, then match events and amounts of offset adjustments follow the same pattern of distribution. However if no payment has been received against a bill, then the Match Type value which is defined as parameter which will be used for the offset distribution. It is assumed the payment and offset distribution of Match Type Code is maintained in the system.</p>

Status	System Event	Algorithm	Algorithm Type	Description
				<p><b>Parameter 2 - Match Type Entity Flag:</b> Valid values for this parameter are 'BILL',' BSEG' and 'SA'. This parameter defines the open item at which the match events are to be created. In case of unpaid bills, new match events will be created based on the value of this parameter. Based on the flag defined for Match Events are created as follows:</p> <ol style="list-style-type: none"> <li>1. If the Match Type Flag is 'BILL', then all FTs on a bill have the same Match Event.</li> <li>2. If the Match Type Flag is 'BSEG', then each line item (bill segment or adjustment) on the bill will have a unique match event.</li> <li>3. If the Match Type Flag is 'SA', then line items belonging to the same contract within a bill will have the same match event.</li> </ol> <p>Offset distribution is performed in steps given below:</p> <ol style="list-style-type: none"> <li>1. Internal Offsetting within each bill: <ul style="list-style-type: none"> <li>• This is done only if a bill has both debit and credit line items.</li> <li>• Internal offsetting happens either at contract level or bill line item level, based on the value of parameter 'Match Type Entity Flag'. If the value is 'BILL' or 'SA', then internal offsetting will be done at contract level and if it is 'BSEG', then internal offsetting is done at bill line item level.</li> <li>• In a bill starting from the highest priority (PAY_PRIORITY_FLG in contract type) credit contract with highest contract type priority/ bill line item, the balance will be offset with the highest priority debit contract/ bill line item by creating</li> </ul> </li> </ol>

Status	System Event	Algorithm	Algorithm Type	Description
				<p>It determines an outstanding amount starting from the oldest bill, for each credit open item (i.e. bill and contract type / bill line item).</p> <p>It invokes Payment Distribution Algorithm Driver (which invokes Payment Distribution Override algorithm in the match type) to determine the distribution of this amount to the debit bill by passing debit Bill ID (starting from the oldest bill), Account ID of the Bill under offset and Match Type code.</p> <p>It creates transfer adjustments from credit bill to debit bill.</p> <p>If there exists balance on credit bill then it is distributed to the next debit bill.</p> <p>The above process is repeated for each credit bill until balance on each credit bill is exhausted.</p>
				<p><b>Note:</b> In case of offset of a partially paid bill, the match type to be defined should be same as the match type used during payment distribution.</p>
				<p><b>Note:</b> In case of a partially refunded or written off bill, the match type should have the same <b>Pay Dist Override Algorithm</b> at the bill segment / adjustments level.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment		C1-UPD-HOLD	C1-UPD-HOLD	<p>This algorithm updates the hold amount or hold entity end date in hold request from the offset request. There are two scenarios:</p> <ul style="list-style-type: none"> <li>• If the outstanding amount on the bill after offsetting is not zero and less than the current hold amount, the hold amount will be updated to the outstanding amount.</li> <li>• If the outstanding amount on the bill after offsetting is zero and the bill is present is some hold request which is active then the end date for the bill will be updated as the system date.</li> </ul> <p>This algorithm also inserts log entries in the offset request and hold request logs. When the hold details for a bill is updated, the bill ID will be stored as part of the offset request logs and the old hold amount/updated hold amount or the end date which is added to the hold entity will be stored as part of the hold request logs.</p>
Processed	-	-	-	-
Unapplied Offset	Enter	C1-UNAPOFST	C1-UNAPOFST	This algorithm cancels all offset adjustments in an offset request.

## Prerequisites

To setup the offset request process, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to **Offset Request Type**
- Define the required characteristic types where the characteristic entity is set to **Offset Request**
- Define unapplied offset and rejected status reasons for the **C1-OffsetRequest** business object
- Assign the **C1-OFSRQ** To Do type to a To Do role whose users must receive To Do generated while submitting an offset request for approval
- Assign the **C1-OFSSB** To Do type to a To Do role whose users must receive To Do generated when an error occurs in case of deferred processing.
- Set the **C1-OFFSETREQ** feature configuration.
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- For the defined adjustment type, the **Print by Default** and **Impact Next Bill Balance** should be unchecked and the **A/P Request Type Code** leave this option blank.

- Define **Exchange Rate** for cross currency offset.
- Define the required offset request types in the system

## Offset Request Type

Oracle Revenue Management and Billing allows you to define:

- **Offset Request Type** — It is used to create an offset request. You can define multiple offset request types in the system. An offset request type helps the system to determine:
  - Whether the offset request must be approved before creating offset adjustments in the system.
  - Default adjustment type using which offset adjustments must be created.
  - Whether adjustments must be created in real time (i.e. immediately) or in the deferred mode (i.e. in the background)
  - The default offset amount whenever a new bill is added using **C1-OFST-AMT** algorithm.

While defining an offset request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the offset request (which is created using the offset request type) is sent for approval before creating the offset adjustments. However, if the **Approval Required** check box is not selected, the offset adjustments are created in real time (i.e. immediately) or in the deferred mode (i.e. in the background) on submitting an offset request.

**Note:** The offset adjustments are created in deferred mode if the number of bills in the offset request are more than the **Defer Processing Count** configured in the offset request type.

Let us understand an offset scenario with the help of some examples.

Bill 1, Bill 2 and Bill 3 are added to an offset request. You can update the offset amount in the offset request. Note that the offset amount must be less than the bill outstanding amount.

Bill Information	Bill Outstanding Amount	Offset Amount	Remaining Bill Balance	Comments
Bill 1	\$1500	—\$500	\$1000	Offset amount \$500 can be split to be offset against Bill 2 and Bill 3.
Bill 2	\$200	—\$200	0	Bill 2 is offset against \$200 from Bill Outstanding amount of Bill 1 i.e. \$1500.
Bill 3	\$300	—\$300	0	Bill 3 is offset against \$300 from Bill Outstanding amount of Bill 1 i.e. \$1500.

The offset request type is defined with or without approval and mapped to an adjustment type creating adjustments. You can cancel the offset adjustment by clicking the **Unapply** button in the **Offset Request** zone.

The **Offset Request Type** screen allows you to define, edit, delete, and copy an offset request type. This screen consists of the following zones:

- [Offset Request Type List](#) on page 1021
- [Offset Request Type](#) on page 1021

## Offset Request Type List

The **Offset Request Type List** zone lists offset request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Offset Request Type</b> screen appears where you can edit the details of the offset request type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Offset Request Type</b> screen appears where you can define an offset request type using an existing offset request type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the offset request type.  <b>Note:</b> You can delete an offset request type only when you have not created an offset request using the offset request type.

On clicking the **Broadcast** () icon corresponding to the offset request type, the **Offset Request Type** zone appears with the details of the respective offset request type.

## Offset Request Type

The **Offset Request Type** zone displays the details of the offset request type. This zone consists of the following sections:

- **Main** — This section provides basic information about The offset request type. It contains the following fields:

Field Name	Field Description
Offset Request Type	Displays the offset request type.
Description	Displays the description of the offset request type.
Offset Request Business Object	Indicates the business object that will be used to create the offset request.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

Field Name	Field Description
Detailed Description	Displays additional information about the offset request type.
Status	Indicates the status of the offset request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Adjustment Type	Indicates the adjustment type using which the offset adjustments must be created.  <b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.
Default Offset Amount Algorithm	Indicates the default offset amount algorithm which calculates the offset amount.
Defer Processing Count	Displays the number of bills to determine if the offset request will be processed in deferred mode.  <b>Note:</b> If the number of bills is less than the <b>Defer Processing Count</b> , the offset request will be processed in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while processing the offset adjustments using the offset request type.
Approval To Do Type	Indicates that the To Do entry of the specified To Do type must be created when you submit the offset request for approval.  <b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.  It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do Type.
Approval To Do Role	Indicates that users with the specified To Do Role can only approve the offset request submitted for approval.  <b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.  It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do Role.
Submitter To Do Type	Indicates the To Do type for the submitter when the offset request moves to <b>Draft</b> status due to error while deferred processing..  <b>Note:</b> It has a link. On clicking the link, the <b>To Do Type</b> screen appears where you can view the details of the respective To Do type.

Field Name	Field Description
Submitter To Do Role	Indicates the To Do role for the submitter when the offset request moves to <b>Draft</b> status due to error while deferred processing..
	<b>Note:</b> It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.

- **Characteristics** — This section lists the characteristics defined for the offset request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the offset request type.
Delete	Used to delete the offset request type.
	<b>Note:</b> You can delete a offset request type only when you have not created an offset request using the offset request type.
Duplicate	Used to create a new offset request type using an existing offset request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the offset request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Offset Request Type** zone does not appear in the **Offset Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the offset request type in the **Offset Request Type List** zone.

## Defining an Offset Request Type

### Prerequisites

To define an offset request type, you should have:

- Offset request business objects defined in the application
- **C1-OFSRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an offset request for approval.
- **C1-OFSRQ** To Do type assigned to a To Do role whose users must receive To Do generated while resubmitting an offset request or in case an error occurs in the deferred processing.

### Procedure

To define an offset request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Offset Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type Business Object	Used to indicate the business object that you want to use to create the offset request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Offset Request Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple offset request type business objects defined in the application. If there is only one offset request type business object defined in the application, the **Offset Request Type** screen appears.

4. Select the required offset request type business object from the respective field.
5. Click **OK**.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object that you want to use while creating the offset request.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the offset request type.	No
Status	<p>Used to indicate the status of the offset request type. The valid values are:</p> <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul> <p><b>Note:</b> You cannot change the status of a offset request type to <b>Inactive</b> if there are offset requests which are created using the offset request type and are currently in the <b>Draft</b> or <b>Approval In Progress</b> or <b>Deferred Processing</b> status.</p>	Yes
Adjustment Type	<p>Used to indicate the adjustment type using which the offset adjustment must be created.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p>	Yes
Default Offset Amount Algorithm	<p>Used to attach an algorithm that will be triggered when you create adjustments. This algorithm calculates the default offset amount whenever a bill is added to an offset request.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes
Defer Processing Count	<p>Displays the number of bills to determine if the offset request will be processed in deferred mode.</p> <p><b>Note:</b> If the number of bills is less than the <b>Defer Processing Count</b>, the offset request will be processed in real time (i.e. immediately).</p>	No
Approval Required	Indicates whether approval is required while processing the offset adjustments using the offset request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to Indicate the To Do entry of the specified To Do type must be created when you submit the offset request for approval.	Yes (Conditional)
	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the offset request submitted for approval.	Yes (Conditional)
		<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Type	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	

6. Enter the required details depending on whether you want to define offset request type.

**Note:** You can search for an adjustment type by clicking the **Search**  icon corresponding to the respective field.

7. Define characteristics for the offset request type, if required.  
8. Click **Save**.

The offset request type is defined.

How to define characteristics for a offset request type	<a href="#">Defining Characteristics for an Offset Request Type</a> on page 1026

## Defining Characteristics for an Offset Request Type

### Prerequisites

To define characteristics for an offset request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request Type**)

### Procedure

To define characteristics for an offset request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an offset request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Offset Request Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the offset request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the offset request type.

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the offset request type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the offset request type, click the **Delete**  icon corresponding to the characteristic.

How to copy an offset request type	<a href="#">Copying Offset Request Type</a> on page 1031

## Editing an Offset Request Type

### Prerequisites

To edit an offset request type, you should have:

- Offset request business objects defined in the application
- **C1-OFSRQ** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an offset request for approval.
- **C1-OFSRQ** To Do type assigned to a To Do role whose users must receive To Do generated while resubmitting an offset request or in case an error occurs in the deferred processing.

**Procedure**

To edit an offset request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.  
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the offset request type whose details you want to edit.

The **Offset Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the offset request type.
- **Characteristics** - Used to define characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object that you want to use while creating the offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes
	<b>Note:</b> You cannot change the status of a offset request type to <b>Inactive</b> if there are offset requests which are created using the offset request type and are currently in the <b>Draft</b> or <b>Approval In Progress</b> or <b>Deferred Processing</b> status.	

Field Name	Field Description	Mandatory (Yes or No)
Adjustment Type	Used to indicate the adjustment type using which the offset adjustment must be created.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.	
Default Offset Amount Algorithm	Used to attach an algorithm that will be triggered when you create adjustments. This algorithm calculates the default offset amount whenever a bill is added to an offset request.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	
Defer Processing Count	Displays the number of bills to determine if the offset request will be processed in deferred mode.	No
	<b>Note:</b> If the number of bills is less than the <b>Defer Processing Count</b> , the offset request will be processed in real time (i.e. immediately).	
Approval Required	Indicates whether approval is required while processing the offset adjustments using the offset request type.	No
Approval To Do Type	Used to Indicate the To Do entry of the specified To Do type must be created when you submit the offset request for approval.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	

**Note:** This field is required when the **Approval Required** check box is selected.

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the offset request submitted for approval.	Yes (Conditional) <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Type	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	

**Tip:** Alternatively, you can click the **Edit** button in the **Offset Request Type** zone to edit the details of the offset request type.

5. Modify the details, if required.

**Note:** You can search for an adjustment type by clicking the **Search**  icon corresponding to the respective field.

6. Define, edit, or remove characteristics from the offset request type, if required.

7. Click **Save**.

The changes made to the offset request type are saved.

**Deleting an Offset Request Type**

**Procedure**

To delete an offset request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.  
The **Offset Request Type** screen appears.

4. In the **Offset Request Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the offset request type that you want to delete.

A message appears confirming whether you want to delete the offset request type.

**Note:** You can delete an offset request type only when you have not defined an offset request using the offset request type.

**Tip:** Alternatively, you can click the **Delete** button in the **Offset Request Type** zone to delete the offset request type.

5. Click **OK**.

The offset request type is deleted.

### Related Topics

## Copying Offset Request Type

Instead of creating an offset request type from scratch, you can create a new offset request type using an existing offset request type. This is possible through copying an offset request type. On copying an offset request type, the details including the characteristics are copied to the new offset request type. You can then edit the details, if required.

### Prerequisites

To copy an offset request type, you should have:

- Offset request type (whose copy you want to create) defined in the application
- Offset request business objects defined in the application

### Procedure

To copy an offset request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **O** and then click **Offset Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Offset Request Type** sub-menu.  
The **Offset Request Type** screen appears.
4. In the **Offset Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the offset request type whose copy you want to create.  
The **Offset Request Type** screen appears. It contains the following sections:
  - **Main** - Used to specify basic details about the offset request type.
  - **Characteristics** - Used to define characteristics for the offset request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to specify the offset request type.	Yes
Description	Used to specify the description for the offset request type.	Yes
Offset Request Business Object	Used to indicate the business object that you want to use while creating the offset request.	Yes
Detailed Description	Used to specify additional information about the offset request type.	No
Status	Used to indicate the status of the offset request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
	<b>Note:</b> You cannot change the status of a offset request type to <b>Inactive</b> if there are offset requests which are created using the offset request type and are currently in the <b>Draft</b> or <b>Approval In Progress</b> or <b>Deferred Processing</b> status.	
Adjustment Type	Used to indicate the adjustment type using which the offset adjustment must be created.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.	
Default Offset Amount Algorithm	Used to attach an algorithm that will be triggered when you create adjustments. This algorithm calculates the default offset amount whenever a bill is added to an offset request.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Displays the number of bills to determine if the offset request will be processed in deferred mode.	No
	<b>Note:</b> If the number of bills is less than the <b>Defer Processing Count</b> , the offset request will be processed in real time (i.e. immediately).	
Approval Required	Indicates whether approval is required while processing the offset adjustments using the offset request type.	No
Approval To Do Type	Used to Indicate the To Do entry of the specified To Do type must be created when you submit the offset request for approval.	Yes (Conditional)
	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the offset request submitted for approval.	Yes (Conditional)
		<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Type	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	

**Tip:** Alternatively, you can click the **Duplicate** button in the **Offset Request Type** zone to create a copy of the offset request type.

- Enter the required details.

**Note:** You can search for an adjustment type by clicking the **Search**  icon corresponding to the respective field.

- Define, edit, or remove characteristics from the offset request type, if required.
- Click **Save**.

The new offset request type is defined.

## Offset Request (Used for Searching)

The **Offset Request** screen allows you to search for an offset request using various search criteria. It also allows you to create an offset request. Through this screen, you can navigate to the following screens:

- [Offset Request \(Used for Viewing\)](#) on page 1039

This screen consists of the following zones:

- [Search Offset Request](#) on page 1034

### Search Offset Request

The **Search Offset Request** zone allows you to search for offset requests using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an offset request using request details or bill details. The valid values are: <ul style="list-style-type: none"> <li>• Request Details</li> <li>• Bill Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Request Details</b> option is selected.	
Created From	Used to search offset requests which are created from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
To	Used to search offset requests which are created till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Status	Used to search offset requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Draft</li> <li>• Deferred Processing</li> <li>• Processed</li> <li>• Rejected</li> <li>• Unapplied Offset</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
User ID	Used to search offset requests which are created by a particular user.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Offset Request Type	Used to search offset requests which are created using a particular offset request type.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Offset Request ID	Used to search a particular offset request.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Person ID	Used to search for offset requests in which bills of a particular person are selected for offsetting.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	
Account ID	Used to search for offset requests in which bills of a particular account are selected for offsetting.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	
Bill ID	Used to search offset requests with a particular bill.	No
	<b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	
Alternate Bill ID	Used to search a particular offset request using the alternate bill ID.	
Bill Date From	Used to search offset requests with bills which are created from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	
To	Used to search offset requests with bills which are created till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for an offset request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the offset request is created.
Offset Request Information	Displays information about the offset request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Offset Request</b> screen appears.
Offset Amount	Displays the total offset amount.
Status	Indicates the status of the offset request.
Created By	Indicates the user who has created the offset request.
Creation Mode	Displays the mode of offset request creation. The valid values are: <ul style="list-style-type: none"> <li>• Automatic</li> <li>• Manual</li> </ul>

## Searching for an Offset Request

### Prerequisites

To search for an offset request, you should have:

- Offset request types defined in the application

### Procedure

To search for an offset request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Offset Request**.  
A sub-menu appears.
3. Click the **Search** option from the **Offset Request** sub-menu.  
The **Offset Request** screen appears.
4. Enter the search criteria in the **Search Offset Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of offset requests that meet the search criteria appears in the **Search Results** section.

**Viewing the Offset Request Details**

**Procedure**

To view the details of an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the offset request. It contains the following zones:
    - **Offset Request** – Displays the details of the offset request.
    - **Selected Bills** – Lists the debit or credit bill line items to be offset.
    - **Search Bill** – Used to debit and credit bills that you want to offset. The bills in the search results added to the offset request can be viewed in the **Selected Bills** zone.
  - **Log** – Lists the complete trail of actions performed on the offset request.
3. View the details of the offset request in the **Offset Request** zone.
  4. View the entities (such as credit or debit bills) which must be offset in the **Selected Bills** zone.

## Offset Request (Used for Viewing)

Once you create an offset request, the **Offset Request** screen allows you to:

- Edit the details of an offset request
- Edit the offset amount of the bills in the offset request
- Delete an offset request
- View the details of an offset request
- Submit an offset request for approval
- Approve or reject an offset request
- View the log of an offset request
- Add a log entry for an offset request

This screen consists of the following tabs:

- **Main** – This tab contains the following two zones:
  - **Offset Request** – Displays the details of the offset request.
  - **Selected Bills** – Lists the selected bills added to the offset request.
  - **Search Bill** – Searches bills using search criteria.
- **Log** – This tab lists the complete trail of actions performed on the offset request.

### Offset Request - Main

The **Main** tab on the **Offset Request** contains the following zones:

- [Offset Request](#) on page 1039
- [Selected Bills](#) on page 1041
- [Search Bill](#) on page 1042

### Offset Request

The **Offset Request** zone displays the details of the offset request. This zone contains the following sections:

- **Main** — This section provides basic information about the offset request. It contains the following fields:

Field Name	Field Description
Offset Request Information	Displays information about the offset request.
Offset Request Type	Indicates the offset request type using which the offset request is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Offset Request Type</b> screen appears where you can view the details of the offset request type.

Field Name	Field Description
Status	<p>Indicates the status of the offset request. The valid values are:</p> <ul style="list-style-type: none"> <li>Approval In Progress</li> <li>Draft</li> <li>Deferred Processing</li> <li>Rejected</li> <li>Processed</li> <li>Unapplied Offset</li> </ul>
Adjustment Type	<p>Indicates the adjustment type using which offset adjustments are created for the offset request. By default, adjustment type defined in the offset request type is displayed.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears with the details of the respective offset request.</p>
Offset Amount	Displays the total debit offset amount.

- **Characteristics** — Lists the characteristics defined for the offset request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the offset request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the offset request.</p> <p><b>Note:</b> The <b>Edit</b> button appears only when the offset request is in the <b>Draft</b> status.</p>
Delete	<p>Used to delete the offset request.</p> <p><b>Note:</b> The <b>Delete</b> button appears only when the offset request is in the <b>Draft</b> status.</p>
Submit	<p>Used to submit the offset request for approval or create offset adjustments in case approval is not configured for the offset request.</p> <p><b>Note:</b> The <b>Submit</b> button appears only when the offset request is in the <b>Draft</b> status.</p>

Button Name	Button Description
Approve	Used to approve the offset request.
	<b>Note:</b> The <b>Approve</b> button appears only when: <ul style="list-style-type: none"> <li>The offset request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the offset request.</li> </ul>
Reject	Used to reject the offset request.
	<b>Note:</b> The <b>Reject</b> button appears only when: <ul style="list-style-type: none"> <li>The offset request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the offset request.</li> </ul>
Unapply	Used to unapply the offset request to cancel the offset adjustments.
	<b>Note:</b> The <b>Unapply</b> button appears only when the offset request is in the <b>Processed</b> status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the offset request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the offset request status is updated
Create Date/Time	Displays the date and time when the offset request is created.

### Selected Bills

The **Selected Bills** zone lists the debit and credit bill(s) that you have added to the offset request. This zone contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Bill Date	Displays the date on which the bill was generated.
Outstanding Amount	Displays the outstanding amount of the bill.
	<b>Note:</b> After the offset request is processed, this field displays the new bill balance instead of <b>Remaining Bill Balance</b> .

Column Name	Column Description
Hold Amount	Displays the bill amount that has been put on hold.
	<b>Note:</b> After the offset request is processed, this field displays the new hold amount instead of <b>Updated Hold Amount</b> .
Offset Amount	Displays the amount that you want to offset.
	<b>Note:</b> By default, the amount which is eligible for offset appears in this field. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Remaining Bill Balance	Displays the difference between bill outstanding amount and offset amount.
	<b>Note:</b> This column appears only when the offset request status is in the <b>Draft</b> or <b>Rejected</b> status.
Updated Hold Amount	Displays the updated hold amount which is the hold amount before the offset request is processed.
	<b>Note:</b> This column appears only when the offset request status is in the <b>Draft</b> or <b>Rejected</b> status.
View Adjustments	Displays the details of adjustments created against the corresponding bill by clicking the <b>View</b> (  ) icon for the respective bill.
	<b>Note:</b> This column appears only when the offset request is in the <b>Processed</b> status.
Account Information	Displays information about the account.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Bill ID	Displays the bill ID.

### Search Bill

The **Search Bill** zone allows you to search for a bill applicable for offset. This zone contains the following fields:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an offset request using person, account, or bill details. The valid values are: <ul style="list-style-type: none"> <li>• Person Details</li> <li>• Account Details</li> <li>• Bill Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Person Details</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for bills which belong to a particular person.	Yes
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list. The <b>Allow Offsetting Across Persons</b> option in the <b>C1-OFFSETREQ</b> feature configuration is set to <b>Y</b> .	
Account ID	Used to search for bills which belong to a particular account.	
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Bill ID	Used to search for a particular bill.	
	<b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	
Bills on Hold	Used to indicate whether the bills are on hold. The valid values are: <ul style="list-style-type: none"> <li>No</li> <li>Yes</li> </ul>	
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list.	
Bill Balance	Used to indicate category for bill balance. The valid values are: <ul style="list-style-type: none"> <li>Equal to Zero</li> <li>Greater Than Zero</li> <li>Lesser Than Zero</li> <li>Not Equal to Zero</li> </ul>	
Bill Date From	Used to search bills applicable for the offset request which are created from a particular date onwards.	Yes
	<b>Note:</b> By default, date before 30 days of the current date appears in this field.	
Bill Date To	Used to search bills applicable for the offset request which are created till a particular date.	Yes
	<b>Note:</b> By default, the current date appears in this field.	
Show Cross Currency Bills	Used to indicate whether the bills are cross currency bills.	Not applicable

**Note:** You must specify at least one search criterion while searching for an offset request.

- Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Display additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Bill Date	Displays the date when the bill was completed.
Due Date	Displays the due date of the bill.
Outstanding Amount	Displays the total outstanding amount of the bill.
Hold Amount	Displays the amount from the bill that has been put on hold.
Outstanding Amount (Offset Currency)	Displays the outstanding amount of the bill in the native currency of the offset request.
	<b>Note:</b> This column appears only if the <b>Show Cross Currency Bills</b> option is checked.
Account Information	Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.

**Related Topics**

**View Adjustments**

The **View Adjustments** screen appears when you click the **View**  icon under **View Adjustments** column in the **Selected Bills** zone on the **Offset Request** screen when the offset request is in **Processed** status. This zone contains the following columns:

Column Name	Column Description
Adjustment Information	Displays the additional information about the bill.
Adjustment Amount	Displays the adjustment amount.
From Bill	Displays the additional information about the bill from the which the offset request is created.
To Bill	Displays the additional information about the bill which is offset against a selected bill.

**Note:** The view icon for **View Adjustments** appears only when the offset request is in the **Processed** status.

## Offset Request - Log

The **Log** tab on the **Offset Request** contains the following zones:

- [Offset Request Log](#) on page 1045

### Offset Request Log

The **Offset Request Log** zone on the **Offset Request** screen lists the complete trail of actions performed on the offset request. It also logs the actions of To Do types, hold amount updated from offset request and error occurred in deferred processing of the offset request. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the offset request.
Details	Displays the details about the action performed on the offset request.
User	Indicates the user who has performed the action on the offset request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the offset request.
Status Reason	Indicates the reason why the offset request was rejected or unapplied offset.

**Note:** You can manually add a log entry for the offset request by clicking the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

## Creating an Offset Request

### Prerequisites

To create an offset request, you should have:

- Offset request types defined in the application.

### Procedure

To create an offset request:

1. Do either of the following:

If you want to...	Then...
Define an offset request from the <b>Account Receivable Central</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>Financial</b> and then click <b>Account Receivable Central</b>.  The <b>Account Receivable Central</b> screen appears.</li> </ol>

If you want to...	Then...
	<ol style="list-style-type: none"> <li>3. Search for the bill in the <b>Account Receivable Central</b> screen.</li> <li>4. In the <b>Search Results</b> section, select the required bill and then click <b>Single Offset</b>, <b>Mass Offset</b>, or <b>Cross Currency Offset</b>, whichever is applicable.</li> </ol>
Define an offset request from the <b>Offset Request</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>Financial</b> and then click <b>Offset Request</b>. A sub-menu appears.</li> <li>3. Click the <b>Add</b> option from the <b>Offset Request</b> sub-menu.</li> </ol>

The **Add Offset Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Type	Used to indicate the request type using which you want to create the offset request.	Yes
Bill	<p>Used to indicate the bill against which you want to create the offset request.</p> <p><b>Note:</b> When you add the bill from <b>Account Receivable Central</b> screen, this field is disabled.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.</p>	Yes

**Tip:** Alternatively, you can access the **Add Offset Request** screen by clicking the **Add** button in the **Page Title** area of the **Offset Request** screen.

2. Select the required offset request type and bill from the respective fields.

**Note:** You can search for an account by clicking the **Search**  icon corresponding to the respective field.

3. Click **Save**.

The offset request is defined and the status of the offset request is set to **Draft**. The **Offset Request** screen appears where you can view the details of the offset request. It contains the following tabs:

- **Main** – Displays information about the offset request. It contains the following zones:
  - **Offset Request** – Displays the details of the offset request.
  - **Selected Bills** – Lists the bills with debit and credit line items of the account which must be offset.

- **Search Bill** — Used to search bills with debit and credit line items that you want to offset. This tab appears only when the offset request is in the **Draft** status.
  - **Log** – Lists the complete trail of actions performed on the offset request.
4. Add debit and credit line items that you want to offset.
  5. Edit the offset amount of each entity, if required.
  6. Define characteristics for the offset request, if required.

How to define characteristics for an offset request	<a href="#">Defining Characteristics for an Offset Request</a> on page 1047

## Defining Characteristics for an Offset Request

### Prerequisites

To define characteristics for an offset request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Offset Request**)

### Procedure

To define characteristics for an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

3. Click the **Edit** button in the **Offset Request** zone.

The **Offset Request** screen appears.

**Note:** The **Edit** button appears only when the offset request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the offset request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the offset request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the offset request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Offset Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the offset request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the offset request.

5. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the offset request, click the **Add**  icon and then repeat step 5.

**Note:** However, if you want to remove a characteristic from the offset request, click the **Delete**  icon corresponding to the characteristic.

## Filtering Credit and Debit Bills of an Offset Request

### Procedure

To filter bills of an offset request:

1. Search for the bills in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to view.

The **Offset Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the offset request. It contains the following zones:
  - **Offset Request** – Displays the details of the offset request.
  - **Selected Bills** – Lists the debit and credit bill(s) to be offset.
  - **Search Bill** – Used to search bills with debit or credit bill(s) that you want to offset. The debit or credit bill(s) in the search results added to the offset request can be viewed in the **Selected Bills** zone.
- **Log** – Lists the complete trail of actions performed on the offset request.

You can filter the bills using **Bill Balance** search criteria available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of the **Selected Bills** zone.

### 3. Click **Search**.

The search results are filtered based on the specified criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Due Date	Displays the due date of the bill.
Outstanding Amount	Displays the outstanding amount of the bill.
	<b>Note:</b> After the offset request is processed, this field displays the new bill balance instead of <b>Remaining Bill Balance</b> .
Hold Amount	Displays the bill amount that has been put on hold.
	<b>Note:</b> After the offset request is processed, this field displays the new hold amount instead of <b>Updated Hold Amount</b> .
Offset Amount	Displays the amount that you want to offset.
	<b>Note:</b> By default, the amount which is eligible for offset appears in this field. You can edit the amount, if required. However, you cannot specify the amount greater than the remaining bill balance.
Remaining Bill Balance	Displays the difference between bill outstanding amount and the offset amount.
	<b>Note:</b> This column appears only when the offset request status is in the <b>Draft</b> or <b>Rejected</b> status.
Updated Hold Amount	Displays the updated hold amount.
	<b>Note:</b> This column appears only when the offset request status is in the <b>Draft</b> or <b>Rejected</b> status.

## Adding a Credit or Debit Bill to the Offset Request

You can add the credit/debit bills to an offset request. While adding a credit/debit bill to an offset request, you can either:

- Add selected credit/debit bill to the offset request from the **Account Receivable Central** screen only before creating the offset request.
- Add selected credit/debit bill(s) to the offset request from the **Offset Request** screen.

### **Prerequisites**

To add credit/debit bill(s) to the offset request, you should have:

- Completed bills for the account/person.

### **Procedure**

To add credit/debit bill(s) to the offset request:

1. Do either of the following:

<b>If you want to...</b>	<b>Then...</b>
Add a credit/debit bill from the <b>Offset Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the bills in the <b>Search Bill</b> zone on the <b>Offset Request</b> screen.</li> <li>2. Select a bill and click the <b>Add</b> button.</li> </ol> <p>The selected bill(s) are added to the offset request. You can view the added bills in the <b>Offset Request</b> screen.</p>
Create single offset request	<ol style="list-style-type: none"> <li>1. Search for the bill in the <b>Account Receivable Central</b> screen.</li> <li>2. From the search results, select a bill and click the <b>Single Offset</b> button.</li> </ol> <p>The selected bill is added to an offset request. You can view the added bill in the <b>Offset Request</b> screen.</p>
Create mass offset request	<ol style="list-style-type: none"> <li>1. Search for the bills in the <b>Account Receivable Central</b> screen.</li> <li>2. From the search results, select a bill and click the <b>Mass Offset</b> button.</li> </ol> <p>The selected bill is added to an offset request and you can add more bills with same currency to the offset request from the <b>Search Bill</b> zone in the <b>Offset Request</b> screen. You can view the added bills in the <b>Offset Request</b> screen.</p>
Create cross currency offset request	<ol style="list-style-type: none"> <li>1. Search for the bills in the <b>Account Receivable Central</b> screen.</li> <li>2. From the search results, select a bill and click the <b>Cross Currency Offset</b> button.</li> </ol> <p>The selected bills is added to an offset request and you can add more bills with different currencies to the offset request from the <b>Search Bill</b> zone in the <b>Offset Request</b> screen. You can view the added bills in the <b>Offset Request</b> screen.</p>

**Note:** You can add only one bill from **Account Receivable Central** screen. You cannot remove the bill added from the **Account Receivable Central** screen.

- After selecting the required fields in the **Add Offset Request** screen, the selected bill appears in the **Offset Request** screen.

## Editing an Offset Request

### Prerequisites

To edit an offset request, you should have:

- Adjustment types defined in the application

### Procedure

To edit an offset request:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose details you want to edit.

The **Offset Request** screen appears.

- Click the **Edit** button in the **Offset Request** zone.

The **Offset Request** screen appears. It contains the following sections:

- Main** — Used to edit the offset details, such as the amount which must be offset and the adjustment type using which the offset adjustment must be created. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Offset Request Information	Displays information about the offset request.	Not applicable
Offset Request Type	Indicates the offset request type using which the offset request is created.	Not applicable
Adjustment Type	Used to indicate the adjustment type using which the offset adjustment must be created.	Yes
Comments	Used to specify additional information about the offset request.	No

- Characteristics** — Used to define characteristics for the offset request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the offset request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the offset request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Offset Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the offset request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the offset request.

- **Offset Details** — Used to edit the offset details, such as the amount which must be offset. It contains the following fields:

Column Name	Column Description
Total Debit Offset Amount	Displays the total debit amount of the all the bills added in the offset request.
Total Credit Offset Amount	Displays the total credit amount of the all the bills added in the offset request.
Total Offset Amount	Displays the total credit and debit amount of the all the bills added in the offset request.
Bill Information	Displays additional information about the bill.
Outstanding Amount	Displays the outstanding amount of the bill.
Due Date	Displays the due date of the bill.
Hold Amount	Displays the amount of the bill that has been put on hold.
Outstanding Amount (Offset Currency)	Displays the outstanding amount of the bill in the native currency of the offset request.
	<b>Note:</b> This column appears only in case of cross currency offset.
Offset Amount	Displays the amount that you want to offset.
	<b>Note:</b> By default, the amount which is eligible for offset appears in this field. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Remaining Bill Balance	Displays the difference between bill outstanding amount and the offset amount.
Updated Hold Amount	Displays the updated hold amount.

**Note:**

The **Edit** button appears only when the offset request is in the **Draft** status.

4. Modify the details of the offset request, if required.
5. Define, edit, or remove characteristics of the offset request, if required.
6. Click **Save**.

The changes made to the offset request are saved.

<b>Offset Request</b> zone	<a href="#">Offset Request</a> on page 1039
How to search for an offset request	<a href="#">Searching for an Offset Request</a> on page 1037

Submitting an Offset Request

Prerequisites

To submit an offset request, you should have:

- Debit and credit bill(s) added in the offset request.

Procedure

To submit an offset request:

- Search for the offset request in the **Offset Request** screen.
- In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to delete.

The **Offset Request** screen appears.

- Click the **Submit** button in the **Offset Request** zone.

The system behaves in the following manner:

If...	Then
The <b>Approval Required</b> check box is selected in the offset request type using which the offset request is created	A To Do of the <b>C1-OFSRQ</b> To Do type is created and sent to the approver. The status of the offset request is changed to <b>Approval In Progress</b> .
The <b>Approval Required</b> check box is not selected in the offset request type using which the offset request is created.	<div> The offset adjustments are created using the specified adjustment type and the status of the offset request is changed to <b>Processed</b>. </div> <div> <b>Note:</b> The offset adjustments are created in the <b>Frozen</b> status. If a match event is present for the bill line items, the existing match event is stamped on the offset adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the offset adjustments and on the corresponding financial transactions. If you are doing a partial offset for any entity, the corresponding match event status is set to <b>Open</b>. However, if the entire eligible amount is offset, the corresponding match event status is set to <b>Balanced</b>. </div>

**Note:** The **Offset Amount** should be less than or equal to current **Outstanding Amount** of the bill.

**Note:** The **Submit** button appears only when the offset request is in the **Draft** status.

Related Topics

For more information on...	See...
<b>Offset Request</b> screen	<a href="#">Offset Request (Used for Searching)</a> on page 1034
<b>Offset Request</b> zone	<a href="#">Offset Request</a> on page 1039

## Approving an Offset Request

You can view the number of offset requests which are pending for approval in the **Offset Request** screen. The approver can review, and accordingly approve or reject the offset request based on the observations.

**Note:** The system will not allow you to approve or reject an offset request submitted by you.

### Procedure

To approve an offset request:

1. Do either of the following:

If you want to...	Then...
Approve an offset request through the <b>Offset Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the offset request in the <b>Offset Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Offset Request Information</b> column corresponding to the offset request which you want to review.</li> </ol>
Approve an offset request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-OFSRQ</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the offset request that you want to review.</li> </ol>

The **Offset Request** screen appears.

2. Review the offset request details.
3. Click the **Approve** button in the **Offset Request** zone.

If the number of bills in the offset request does not exceed the defer processing count (defined in the Offset Request Type), the system creates adjustments in the real time (i.e. immediately). In addition, the adjustment information string appears corresponding to each adjustment record in the **View Adjustments** screen and the status of the offset request is changed to **Processed**. However, if the number of bills in the offset request exceeds the defer processing count, the system creates adjustments in the deferred mode and the status of the adjustment offset request is changed to **Deferred Processing**.

**Note:** Deferred mode means in the background when the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is invoked. When the **Offset Request Periodic Monitor (C1-OFSRQ)** batch is invoked, the system checks whether there are any offset requests in the **Deferred Processing** status. If there is an offset request in the **Deferred Processing** status, the system creates adjustments for the offset request. Once the adjustments are created, the adjustment information string appears corresponding to each adjustment record in the **View Adjustments** screen and the status of the offset request is changed to **Processed**.

**Note:**

The **Approve** button appears only when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

How to search for an offset request	<a href="#">Searching for an Offset Request</a> on page 1037

**Rejecting an Offset Request**

**Prerequisites**

To reject an offset request, you should have:

- Rejection reasons defined in the application

**Note:**

While rejecting an offset request, you need to specify the reason why you want to reject the offset request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-OffsetRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject an offset request submitted by you.

**Procedure**

To reject an offset request:

1. Do either of the following:

If you want to...	Then...
Reject an offset request through the <b>Offset Request</b> screen	<ol style="list-style-type: none"><li>1. Search for the offset request in the <b>Offset Request</b> screen.</li><li>2. In the <b>Search Results</b> section, click the link in the <b>Offset Request Information</b> column corresponding to the offset request which you want to review.</li></ol>

If you want to...	Then...
Reject an offset request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-OFSRQ</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the offset request that you want to review.</li> </ol>

The **Offset Request** screen appears.

2. Review the offset request details.
3. Click the **Reject** button in the **Offset Request** zone.

The **Reject Offset Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the offset request.	Yes
Comments	Used to specify additional information while rejecting the offset request.	No

**Note:** The **Reject** button appears only when:

- The offset request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the offset request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the offset request is changed to **Rejected**.

Viewing the Log of an Offset Request

Procedure

To view the log of an offset request:

- 1. Search for the offset request in the **Offset Request** screen.
- 2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose log you want to view.

The **Offset Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the offset request. It contains the following zones:
  - **Offset Request** – Displays the details of the offset request.
  - **Selected Bills** – Lists the debit and credit bill line items which must be offset.
  - **Search Bill** – Used to search debit and credit bill line items that you want to offset.
- **Log** – Lists the complete trail of actions performed on the offset request.

- 3. Click the **Log** tab.

The **Offset Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the offset request.
Details	Displays the details about the action performed on the offset request.
User	Indicates the user who has performed the action on the offset request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the offset request.
Status Reason	Indicates the reason why the offset request was rejected or cancelled.

**Note:** You can manually add a log entry for the offset request by clicking the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

Adding a Log Entry for an Offset Request

**Procedure**

To add a log entry for an offset request:

1. Search for the offset request in the **Offset Request** screen.
2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request whose log you want to edit.

The **Offset Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the offset request. It contains the following zones:
  - **Offset Request** – Displays the details of the offset request.
  - **Selected Bills** – Lists the debit and credit bill line items which must be offset.
  - **Search Bill** – Used to search debit and credit bill line items that you want to offset.
- **Log** – Lists the complete trail of actions performed on the offset request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Offset Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the offset request.	Not applicable
Log Details	Used to specify additional comments on the offset request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Offset Request Log** zone.

**Unapplying an Offset Request**

There might be situations when an incorrect offset request is processed in the system. In such case, the system provides you with an ability to unapply the offset request. However, you can unapply an offset request only when the offset request is in the **Processed** status.

**Prerequisites**

To unapply an offset request, you should have:

- Unapply reasons defined in the application

**Note:** While unapplying an offset request, you need to specify the reason why you want to unapply the offset request. You can select the appropriate unapply reason only when you have defined the reasons for the **Unapplied Offset** status of the **C1-OffsetRequest** business object in the **Status Reason** screen.

**Procedure**

To unapply an offset request:

- 1. Search for the offset request in the **Offset Request** screen.
- 2. In the **Search Results** section, click the link in the **Offset Request Information** column corresponding to the offset request that you want to unapply.

The **Offset Request** screen appears.

- 3. Click the **Unapply** button in the **Offset Request** zone.

The **Unapply Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to unapply the offset request.	Yes
Comments	Used to specify additional information while cancelling the offset request.	No

**Note:** The **Unapply** button appears only when the offset request is in the **Processed** status.

- 4. Select the unapply reason from the **Unapply Reason** list.
- 5. Click **Save**.

The status of the offset request is changed to **Unapplied Offset**.

## Funding Request

---

### Topics:

- [Prerequisites](#)
- [Funding Request \(Without Approval\) Status Transition](#)
- [Funding Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-FundingReq](#)
- [Funding Request Type](#)
- [Funding Request \(Used for Searching\)](#)
- [Funding Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the automatic payment facility for an account. The system automatically calculates the automatic payment amount during the bill completion and stamps these details against the bill in the **CI\_BILL\_ACH** table. However, there might be situations when you would like to do the following before stamping the automatic payment amount against the bill in the **CI\_BILL\_ACH** table:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

The system enables you to change the automatic payment amount through the funding process. The funding process supports all three automatic payment creation options (i.e. Create At Bill Completion, Create On Extract Date, and Freeze Payment on Notification).

While creating a funding request, you need to specify a funding request type using which you want to create the funding request. It is the funding request type which helps the system to determine:

- The business object using which the funding request should be created in the system.
- The currency in which the total debit and credit amount should be calculated.
- The account funding currency characteristic type which must be defined on the account. This characteristic indicates that the funding amount of the account's bills should be calculated in the specified currency.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill.

**Note:** In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.

**Note:** In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.

- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.
- The currency conversion algorithms which must be used while determining the approval hierarchy for the funding request.

**Note:** The **Funding Request (C1-FundingReq)** business object is shipped with the product.

Once you specify a funding request type, the funding request is created in the **Draft** status. You can then add one or more debit or credit bills in the funding request. Note that you can only add bills of those accounts for which the **Defer Auto Pay** option is selected on the customer class. Once the bills are added, you can submit a funding request. Before you submit a funding request, you can do the following:

- Hold certain amount on the bill through a hold request
- Offset the bill against another bill through an offset request
- Transfer the amount on the credit bill to one or more garnishment contracts of the account

**Note:** The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

The system calculates the funding amount in the following manner:

Bill Type	Funding Amount for the Bill
Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)
Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in the funding request)

You can delete, cancel, or submit a funding request which is in the **Draft** status. On canceling a funding request, the status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. On submitting a funding request, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. Once the **Funding Request Periodic Monitor (C1-FNDRQ)** batch is executed, it checks whether there are any funding requests in the **Deferred Processing** status. If so, it changes the status of the funding request to **Create Funding**.

Once the status of a funding request is changed to **Create Funding**, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the **CI\_BILL\_ACH** table. Then, on executing the **Create Automatic**

**Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

You can optionally configure the approval process for the funding request. If the **Approval Required** option is selected in the funding request type, the status of the funding request is changed to **Approval In Progress** on submitting the funding request. The system calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, the system uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount, the system automatically approves the funding request and changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the system creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy.

Once the approver at the first level in the approval hierarchy approves the funding request, the system checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the system changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

If an approver rejects a funding request, the status of the funding request is changed to **Rejected**. And, if an approver requests to resubmit a funding request for approval, the status of the funding request is changed to **Draft**. You can then edit the funding request and resubmit it for approval. The system allows the submitter to withdraw the funding request when it is in the **Approval In Progress** status. On withdrawing a funding request, the status of the funding request is changed to **Draft**.

If a funding request is created automatically through a custom batch, the system allows you to manually exclude some bills from the funding request when it is in the **Draft** status. You can exclude a bill from a funding request by changing its status to **Excluded**.

For more information on how to setup the funding request process, see [Prerequisites](#) on page 1064.

## Prerequisites

---

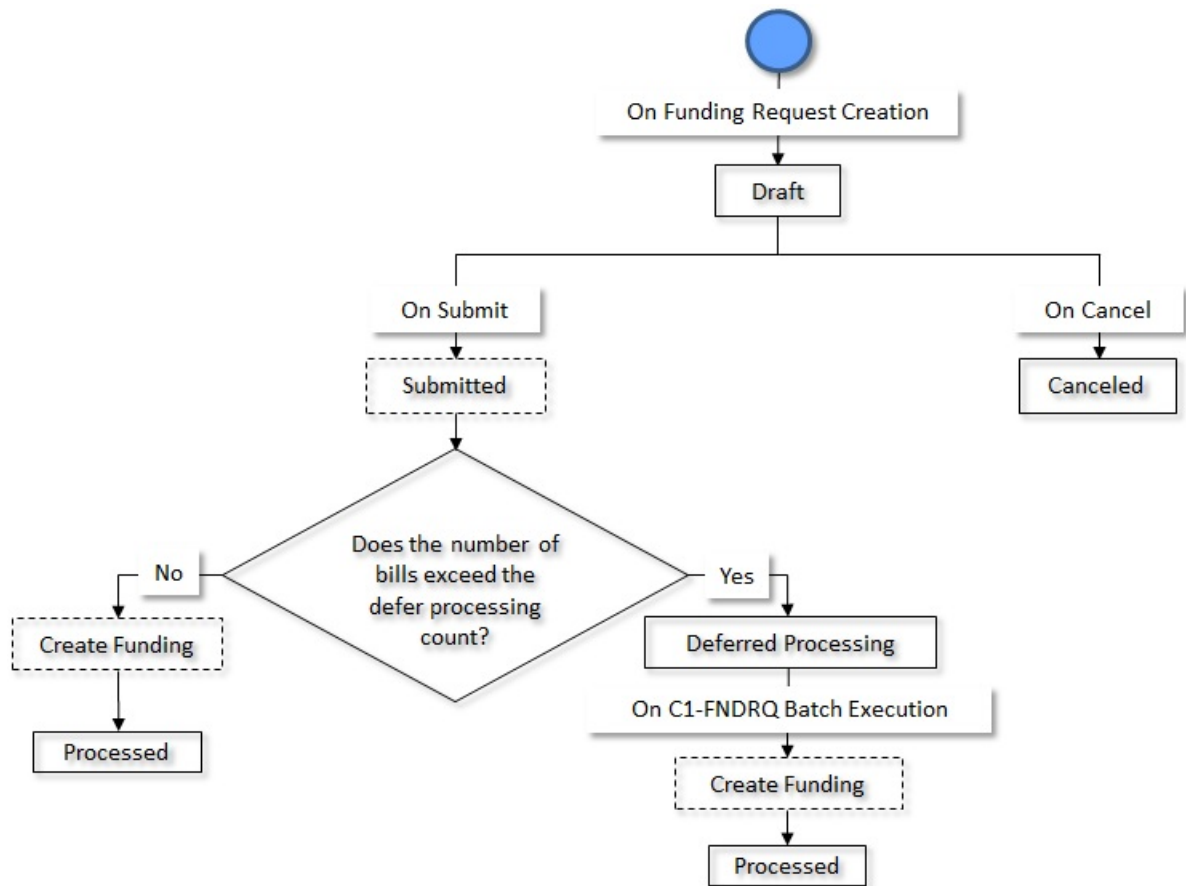

To setup the funding request process, you need to do the following:

- Define the required funding request types in the system
- Define the required funding adjustment types where the **A/P Request Type Code** field is set to **REFUND**
- Define the required garnishment adjustment types where the **A/P Request Type Code** field is not set to **REFUND**
- Define the required characteristic types where the characteristic entity is set to **Funding Request Type**
- Define the required characteristic types where the characteristic entity is set to **Funding Request**
- Define the required approval profiles with the debit and credit approval hierarchy in the system
- Specify the **C1-FNDAP** To Do type in the approval profile which you want to use in the funding request's approval process
- Specify the **C1-FNDSB** as the submitter To Do type in the funding request types
- Define the status reasons for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen
- Assign the **C1-FNDAP** To Do type to a To Do role whose users must receive a To Do while submitting a funding request for approval
- Assign the **C1-FNDSB** To Do type to a To Do role whose users must receive a To Do when an approver requests to resubmit the funding request for approval
- Select the **Defer Auto Pay** option on the customer class of the accounts for which you want to use the funding process
- Define the values for the **CAN\_RSN\_CD\_FLG** lookup field
- Define the **Funding Currency** characteristic type where the characteristic entity is set to **Account**
- Define a currency conversion algorithm for payments using the **C1\_CURALGPY** algorithm type
- Define a currency conversion algorithm for adjustments using the **C1\_CURALGAD** algorithm type
- Attach the currency conversion algorithms to the **Currency Conversion For Adjustments** and **Currency Conversion For Payments** algorithm spots to the required divisions
- Set the batch control type of the **Funding Request Periodic Monitor (C1-FNDRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## Funding Request (Without Approval) Status Transition

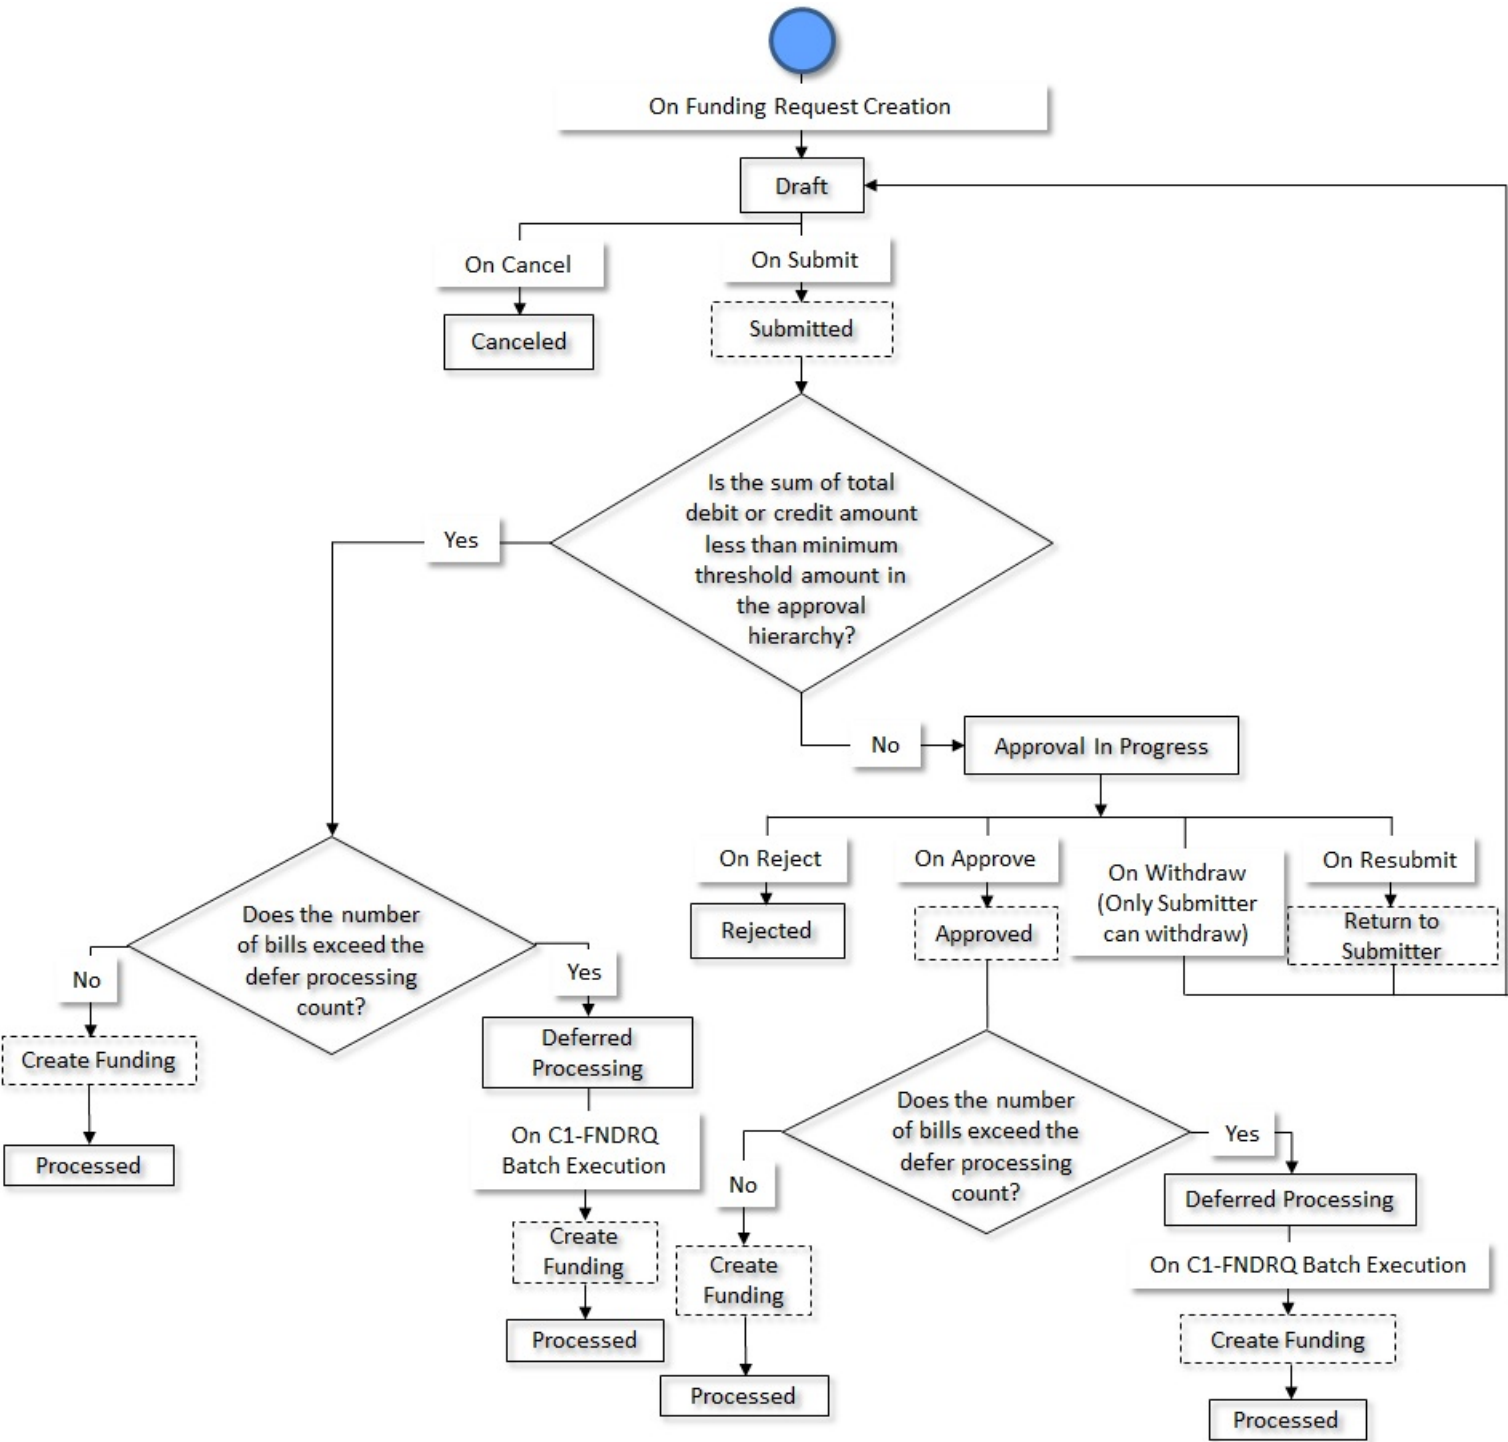

---

The following figure graphically indicates how a funding request moves from one status to another when the approval process is not configured in the funding request type:

## Funding Request (With Approval) Status Transition

The following figure graphically indicates how a funding request moves from one status to another when the approval process is configured in the funding request type:

Algorithms Used in C1-FundingReq

Processed	-	-	-	-
Canceled	Enter	C1-FUNDCANCL	C1-FUNDCANCL	Refer to <a href="#">C1-FUNDCANCL</a> on page 1070

## C1-FUNDINFO

This algorithm generates the funding request information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

1. Funding Request Type Description
2. Funding Request Status Description
3. Funding Request ID

## C1-FUNDSUBMT

This algorithm is invoked when you submit a funding request. If the approval process is not configured in the funding request type, it changes the status of the funding request to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count. If the approval process is configured in the funding request type, it calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. If the sum total is less than the minimum threshold amount in the approval hierarchy, the funding request is automatically approved by the system and the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding

request exceeds the defer processing count. However, if the sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**.

**Note:** If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

## C1-FUNDAPP

This algorithm is invoked when the status of the funding request is changed to **Approval In Progress**. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, a log entry is created for the funding request when the To Do is created.

**Note:** If a funding request needs approval from the subsequent level in the approval hierarchy, this algorithm creates a To Do and assigns it to the users with the To Do role defined at the subsequent level in the approval hierarchy.

## C1-FUNDAPRVD

This algorithm is invoked when you approve a funding request. It checks whether the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy. If the sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to **Approval In Progress**. However, if the sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy, the status of the funding request is changed to either **Deferred Processing** or **Create Funding** depending on whether the number of bills in the funding request exceeds the defer processing count.

**Note:** If the **Currency Conversion Required** option is selected in the approval profile, the system does currency conversion when the sum total of the debit and credit amount is in a currency which is different from the installation options currency. During the currency conversion of the sum total which is in debit, the system uses the currency conversion algorithm specified in the **Currency Conversion Payment Algorithm** field of the funding request type. However, during the currency conversion of the sum total which is in credit, the system uses the currency conversion algorithm specified in the **Currency Conversion Adjustment Algorithm** field of the funding request type.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## C1-FNDRESUBM

This algorithm is invoked when the status of the funding request is changed to **Return to Submitter**. It changes the status of the funding request to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. In addition, it creates a To Do using the submitter To Do type which is specified in the funding request type. Once a To Do is created, it is assigned to all users with a submitter To Do role which is specified in the funding request type.

## C1-FUNDVAL

This algorithm is invoked when the status of the funding request is changed to **Create Funding**. It checks whether the funding amount of a debit bill is equal to the bill outstanding amount minus hold and offset amount set on the bill (i.e.  $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount}$ ). Similarly, it checks whether the funding amount of a credit bill is equal to the bill outstanding amount minus hold, offset, and garnishment amount set on the bill (i.e.  $\text{Funding Amount} = \text{Outstanding Bill Amount} - \text{Hold Amount} - \text{Offset Amount} - \text{Garnishment Amount}$ ). If so, it executes the next algorithm. However, if the funding amount is incorrect, the status of the record in the funding request is changed to **Error**.

## C1-FUNDAPAY

If the funding amount of a bill is in debit, it stamps the funding amount as the automatic payment amount against the bill in the **CI\_BILL\_ACH** table. Then, on executing the **Create Automatic Payments and Refunds (APAYCRET)** batch, the system creates automatic payment and payment event for such bill.

It considers the records in the funding request which are in the **Pending** status. Once the **CI\_BILL\_ACH** table is updated, the status of the record in the funding request is changed to **Processed**. If any error occurs while updating the **CI\_BILL\_ACH** table, the status of the record in the funding request is changed to **Error**.

## C1-FUNDADJCR

If the funding amount of a bill is in credit, it creates the A/P adjustments using the funding adjustment type. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account.

It considers the records in the funding request which are in the **Pending** status. Once the adjustments are created, the status of the record in the funding request is changed to **Processed**. If any error occurs while creating the adjustments, the status of the record in the funding request is changed to **Error**.

### Points to Note:

- The system uses the funding and garnishment adjustment types from the funding request.
- The main customer's address is used while creating the A/P adjustment for a credit bill.
- The garnishment adjustments are created against the garnishment contracts of the account. A garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.
- The system allows you to transfer funding amount to multiple garnishment contracts of the account. Accordingly, the number of non A/P adjustments will be created using the garnishment adjustment type.

It contains the following parameters:

- **Adjustment Type** - Used to indicate the adjustment type using which the adjustment should be created against the credit bill for internal offsetting.
- **Match Type Entity Flag** - Used to indicate the match type entity on which a new match event must be created when no payment exists for the credit bill. The valid values are:
  - **BILL** - Used when you want to create the same match event on all financial transactions of a bill.
  - **BSEG** - Used when you want to create a unique match event for each bill line item (such as, bill segment or adjustment).

- **SA** - Used when you want to create the same match event on the bill line items which are created against the same contract.

C1-FUNDCANCL

This algorithm is invoked when you cancel a funding request. It excludes all debit and credit bills from the funding request and changes the status of each record in the funding request to **Excluded**. In addition, the status of the funding request is changed to **Canceled**.

Funding Request Type

Oracle Revenue Management and Billing allows you to define a funding request type using which you can create a funding request. It is the funding request type which helps the system to determine the following:

- The business object using which the funding request should be created in the system.
- The currency in which the funding amount should be calculated.
- The default funding adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.

**Note:** In the **Default Funding Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is set to **REFUND**.

- The default garnishment adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is moved to the garnishment contract of the account.

**Note:** In the **Default Garnishment Adjustment Type** field, you can only specify an adjustment type where the **A/P Request Type Code** field is not set to **REFUND**.

- Whether the approval is required for the funding request.
- An algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.
- Whether a funding request must be processed in the deferred mode when the number of bills in the funding request exceeds the defer processing count.

The **Funding Request Type** screen allows you to define, edit, delete, and copy a funding request type. It contains the following zones:

- [Funding Request Type List](#) on page 1070
- [Funding Request Type](#) on page 1071

Funding Request Type List

The **Funding Request Type List** zone lists the funding request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Edit	On clicking the <b>Edit</b>  icon, the <b>Funding Request Type</b> screen appears where you can edit the details of the funding request type.

Column Name	Column Description
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Funding Request Type</b> screen appears where you can define a new funding request type using an existing funding request type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the funding request type.  <b>Note:</b> You can delete a funding request type only when you have not created a funding request using the funding request type.

On clicking the **Broadcast** () icon corresponding to a funding request type, the **Funding Request Type** zone appears with the details of the respective funding request type.

How to view the details of a funding request type	<a href="#">Viewing the Funding Request Type Details</a> on page 1097

## Funding Request Type

The **Funding Request Type** zone displays the details of the funding request type. It contains of the following sections:

- **Main** - Displays the basic information about the funding request type. It contains the following fields:

Field Name	Field Description
Funding Request Type	Displays the funding request type.
Description	Displays the description of the funding request type.
Funding Request Business Object	Indicates the business object that will be used to create the funding request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the funding request type.
Status	Indicates the status of the funding request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Funding Amount Currency	Indicates the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the <b>Statistics</b> section of the <b>Funding Request</b> zone.
Account Funding Currency Characteristic Type	Indicates the characteristic type which should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.

Field Name	Field Description
Default Funding Adjustment Type	Indicates the adjustment type using which the funding adjustments must be created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.
Default Garnishment Adjustment Type	Indicates the garnishment adjustment type using which the garnishment adjustments must be created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears with the details of the respective adjustment type.
Threshold Range Algorithm	Indicates the threshold range for a bill based on the payments done for the bill.
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.
Defer Processing Count	Displays the number of bills to determine if the funding request will be processed in deferred mode.
	<b>Note:</b> If the number of bills is less than the <b>Defer Processing Count</b> , the funding request will be processed in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while creating the funding adjustments using the funding request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the funding request type.
	<b>Note:</b> The <b>Approval Profile</b> field appears only when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>Approval Profile</b> screen appears where you can view the details of the respective approval profile.
Submitter To Do Type	Indicates the To Do type for the submitter when the funding request type is resubmitted by the approver.
	<b>Note:</b> The <b>Submitter To Do Type</b> field appears only when the <b>Approval Required</b> check box is selected. It has a link. On clicking the link, the <b>To Do Type</b> screen appears where you can view the details of the respective To Do type.

Field Name	Field Description
Submitter To Do Role	Indicates the To Do role for the submitter when the funding request type is resubmitted by the approver.
	<p><b>Note:</b></p> <p>The <b>Submitter To Do Role</b> field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.</p>
Currency Conversion Adjustment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.
Currency Conversion Payment Algorithm	Indicates the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.

- **Characteristics** - The **Characteristics** section lists the characteristics defined for the funding request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - The **Record Actions** section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request type.
Delete	Used to delete the funding request type.
	<b>Note:</b> You can delete a funding request type only when you have not created a funding request using the funding request type.
Duplicate	Used to create a new funding request type using an existing funding request type.

- **Record Information** - The **Record Information** section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Funding Request Type** zone does not appear in the **Funding Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the funding request type in the **Funding Request Type List** zone.

**Defining a Funding Request Type****Prerequisites**

To define a funding request type, you should have:

- Funding request type business objects defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1\_CURALGPY** and **C1\_CURALGAD** algorithm type, respectively

**Procedure**

To define a funding request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Funding Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type Business Object	Used to indicate the business object using which you want to create the funding request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Funding Request Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple funding request type business objects defined in the application. If there is only one funding request type business object defined in the application, the **Funding Request Type** screen appears.

4. Select the required funding request type business object from the respective field.
5. Click **OK**.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
	<b>Note:</b> You cannot change the status of a funding request type to <b>Inactive</b> when the corresponding funding request is in a status other than <b>Processed</b> or <b>Rejected</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the <b>Statistics</b> section of the <b>Funding Request</b> zone.	Yes
	<b>Note:</b>  The list includes only those currencies which are defined in the system.  If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.	

Field Name	Field Description	Mandatory (Yes or No)
Account Funding Currency Characteristic Type	<p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Account Funding Currency Characteristic Type</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Type Search</b> window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p> <p>The converted amount appears in the <b>Funding Currency Amount</b> column of the <b>Selected Bills</b> zone in the <b>Funding Request</b> screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.</p>	Yes
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Default Funding Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Funding Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is set to <b>REFUND</b>.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Default Garnishment Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Garnishment Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	
Threshold Range Algorithm	Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.	No
	<p><b>Note:</b></p> <p>You must specify an algorithm which is created using the <b>C1-FDRTTR</b> algorithm type in the <b>Threshold Range Algorithm</b> field.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Threshold Range Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.	No
	<p><b>Note:</b></p> <p>You cannot specify a negative value in the <b>Defer Processing Count</b> field.</p> <p>Deferred mode means in the background when the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch is invoked. You can configure the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p>	
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.	Yes (Conditional)
	<p><b>Note:</b> This field appears only when the <b>Approval Required</b> option is selected.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> You must specify the <b>C1-FNDSB To Do</b> type in the <b>Submitter To Do Type</b> field.  The <b>Search</b>  icon appears corresponding to the <b>Submitter To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.  This field appears only when the <b>Approval Required</b> option is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> option is selected.  The list includes only those To Do roles which are associated to the specified submitter To Do type.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> option is selected.  The <b>Search</b>  icon appears corresponding to the <b>Currency Conversion Adjustment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	<b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.

Field Name	Field Description	Mandatory (Yes or No)
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> option is selected.  The <b>Search</b>  icon appears corresponding to the <b>Currency Conversion Payment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	<b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.

6. Enter the required details in the **Main** section.
7. Define characteristics for the funding request type, if required.
8. Click **Save**.

The funding request type is defined.

How to define a characteristic for a funding request type	<a href="#">Defining a Characteristic for a Funding Request Type</a> on page 1081

## Defining a Characteristic for a Funding Request Type

### Prerequisites

To define a characteristic for a funding request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request Type**)

### Procedure

To define a characteristic for a funding request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a funding request type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Funding Request Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the funding request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, you can search for a predefined characteristic value.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the funding request type.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the funding request type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the funding request type, click the **Delete**  icon corresponding to the characteristic.

How to define a funding request type	<a href="#">Defining a Funding Request Type</a> on page 1074
How to edit a funding request type	<a href="#">Editing a Funding Request Type</a> on page 1082
How to copy a funding request type	<a href="#">Copying a Funding Request Type</a> on page 1090

## Editing a Funding Request Type

### Prerequisites

To edit a funding request type, you should have:

- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)

- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1\_CURALGPY** and **C1\_CURALGAD** algorithm type, respectively

### **Procedure**

To edit a funding request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.  
The **Funding Request Type** screen appears.
4. In the **Funding Request Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the funding request type whose details you want to edit.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Displays the funding request type.	Not applicable
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
	<b>Note:</b> You cannot change the status of a funding request type to <b>Inactive</b> when the corresponding funding request is in a status other than <b>Processed</b> or <b>Rejected</b> .	
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the <b>Statistics</b> section of the <b>Funding Request</b> zone.	Yes
	<b>Note:</b> The list includes only those currencies which are defined in the system.  If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.	

Field Name	Field Description	Mandatory (Yes or No)
Account Funding Currency Characteristic Type	<p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Account Funding Currency Characteristic Type</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Type Search</b> window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p> <p>The converted amount appears in the <b>Funding Currency Amount</b> column of the <b>Selected Bills</b> zone in the <b>Funding Request</b> screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.</p>	Yes
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Default Funding Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Funding Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is set to <b>REFUND</b>.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Default Garnishment Adjustment Type	<p>Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Default Garnishment Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Garnishment Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	Yes
Threshold Range Algorithm	<p>Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.</p> <p><b>Note:</b></p> <p>You must specify an algorithm which is created using the <b>C1-FDRTTR</b> algorithm type in the <b>Threshold Range Algorithm</b> field.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Threshold Range Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.	No
	<p><b>Note:</b></p> <p>You cannot specify a negative value in the <b>Defer Processing Count</b> field.</p> <p>Deferred mode means in the background when the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch is invoked. You can configure the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p>	
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.	Yes (Conditional)
	<p><b>Note:</b> This field appears only when the <b>Approval Required</b> option is selected.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> You must specify the <b>C1-FNDSB To Do</b> type in the <b>Submitter To Do Type</b> field.  The <b>Search</b>  icon appears corresponding to the <b>Submitter To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.  This field appears only when the <b>Approval Required</b> option is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> option is selected.  The list includes only those To Do roles which are associated to the specified submitter To Do type.	<b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> option is selected.  The <b>Search</b>  icon appears corresponding to the <b>Currency Conversion Adjustment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	<b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.

Field Name	Field Description	Mandatory (Yes or No)
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> option is selected.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Currency Conversion Payment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	<p><b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.</p>

**Tip:** Alternatively, you can edit the details of a funding request type by clicking the **Edit** button in the **Funding Request Type** zone.

5. Modify the details in the **Main** section, if required.
6. Define, edit, or remove characteristics from the funding request type, if required.
7. Click **Save**.

The changes made to the funding request type are saved.

## Deleting a Funding Request Type

### Procedure

To delete a funding request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.  
The **Funding Request Type** screen appears.

4. In the **Funding Request Type List** zone, click the **Delete** (  ) icon in the **Delete** column corresponding to the funding request type that you want to delete.

A message appears confirming whether you want to delete the funding request type.

**Note:** You can delete a funding request type only when you have not created a funding request using the funding request type.

**Tip:** Alternatively, you can delete a funding request type by clicking the **Delete** button in the **Funding Request Type** zone.

5. Click **OK**.

The funding request type is deleted.

**Related Topics**

For more information on...	See...
<b>Funding Request Type</b> screen	<a href="#">Funding Request Type</a> on page 1070

<b>Funding Request Type</b> zone	<a href="#">Funding Request Type</a> on page 1071

**Copying a Funding Request Type**

Instead of creating a funding request type from scratch, you can create a new funding request type using an existing funding request type. This is possible through copying a funding request type. On copying a funding request type, the details including the characteristics are copied to the new funding request type. You can then edit the details, if required.

**Prerequisites**

To copy a funding request type, you should have:

- Funding request type (whose copy you want to create) defined in the application
- Funding request business objects defined in the application
- Currencies defined in the application
- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)
- A threshold range algorithm defined using the **C1-FDRTTR** algorithm type
- Required approval profiles defined in the application
- A To Do role assigned to the **C1-FNDSB** To Do type in the application
- Funding currency characteristic type defined in the application (where the characteristic entity is set to **Account**)
- A currency conversion algorithm defined for payments and adjustments using the **C1\_CURALGPY** and **C1\_CURALGAD** algorithm type, respectively

**Procedure**

To copy a funding request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **F** and then click **Funding Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Funding Request Type** sub-menu.

The **Funding Request Type** screen appears.

- In the **Funding Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the funding request type whose copy you want to create.

The **Funding Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request type.
- **Characteristics** - Used to define characteristics for the funding request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to specify the funding request type.	Yes
Business Object	Indicates the business object using which you are defining the funding request type.	Not applicable
Description	Used to specify the description for the funding request type.	Yes
Funding Request Business Object	Used to indicate the business object using which you want to create the funding request.	Yes
Detailed Description	Used to specify additional information about the funding request type.	No
Status	Used to indicate the status of the funding request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
	<b>Note:</b> You cannot change the status of a funding request type to <b>Inactive</b> when the corresponding funding request is in a status other than <b>Processed</b> or <b>Rejected</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Funding Amount Currency	Used to indicate the currency in which the total debit and credit amount should be calculated in the funding request. The total debit and credit amount appears in the <b>Statistics</b> section of the <b>Funding Request</b> zone.	Yes
	<b>Note:</b>  The list includes only those currencies which are defined in the system.  If the currency specified in this field is different from the bill's currency, the system does currency conversion before calculating the total debit and credit amount in the funding request. The total debit amount is the sum of funding amount of all bills whose funding amount is in debit. However, the total credit amount is the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. While calculating the total debit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, while calculating the total credit amount, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.	

Field Name	Field Description	Mandatory (Yes or No)
Account Funding Currency Characteristic Type	<p>Used to indicate the characteristic type. This characteristic should be defined on the account. This characteristic indicates that the funding amount of the account's bills should be converted in the specified currency.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Account Funding Currency Characteristic Type</b> field. On clicking the <b>Search</b> icon, the <b>Characteristic Type Search</b> window appears.</p> <p>You must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p> <p>The converted amount appears in the <b>Funding Currency Amount</b> column of the <b>Selected Bills</b> zone in the <b>Funding Request</b> screen.</p> <p>If the funding amount is in debit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division. However, if the funding amount is in credit, the system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.</p>	Yes
Default Funding Adjustment Type	<p>Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill on submitting the funding request.</p> <p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Default Funding Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Funding Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is set to <b>REFUND</b>.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Default Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Default Garnishment Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Default Garnishment Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	
Threshold Range Algorithm	Used to attach an algorithm which helps to calculate the threshold range for a bill based on the number of payments made for the bill in the specified period.	No
	<p><b>Note:</b></p> <p>You must specify an algorithm which is created using the <b>C1-FDRTTR</b> algorithm type in the <b>Threshold Range Algorithm</b> field.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Threshold Range Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate whether a funding request must be processed in the deferred mode (i.e. in the background) when the number of bills in the funding request exceeds the defer processing count.	No
	<p><b>Note:</b></p> <p>You cannot specify a negative value in the <b>Defer Processing Count</b> field.</p> <p>Deferred mode means in the background when the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch is invoked. You can configure the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch such that it is executed at regular intervals. For more information about the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch, refer to <i>Oracle Revenue Management and Billing Batch Guide</i>.</p> <p>If the number of bills in a funding request does not exceed the defer processing count, the system will process the funding request in real time (i.e. immediately).</p>	
Approval Required	Used to indicate whether the approval is required before creating payments for debit bills and A/P adjustments for credit bills through the funding request.	No
Approval Profile	Used to indicate the approval profile using which the system should determine the debit or credit hierarchy level from where the approval is required. The system considers the debit or credit hierarchy level where the funding amount of the debit or credit bill falls within the threshold limit.	Yes (Conditional)
	<p><b>Note:</b> This field appears only when the <b>Approval Required</b> option is selected.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p><b>Note:</b></p> <p>You must specify the <b>C1-FNDSB To Do</b> type in the <b>Submitter To Do Type</b> field.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Submitter To Do Type</b> field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p> <p>This field appears only when the <b>Approval Required</b> option is selected.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Submitter To Do Role	Used to indicate that the users with the specified To Do role must receive a To Do when the approver rejects the funding request or raises the request for resubmitting the funding request.	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> option is selected.</p> <p>The list includes only those To Do roles which are associated to the specified submitter To Do type.</p>	<p><b>Note:</b> This field is required when the <b>Approval Required</b> option is selected.</p>
Currency Conversion Adjustment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in credit) is different from the installation options currency.	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> option is selected.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Currency Conversion Adjustment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	<p><b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.</p>

Field Name	Field Description	Mandatory (Yes or No)
Currency Conversion Payment Algorithm	Used to indicate the currency conversion algorithm. It is used while determining the approval hierarchy for a funding request when the sum total of the debit and credit amount (i.e. which is in debit) is different from the installation options currency.	Yes (Conditional)
	<p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> option is selected.</p> <p>The <b>Search</b>  icon appears corresponding to the <b>Currency Conversion Payment Algorithm</b> field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	<p><b>Note:</b> This field is required when the <b>Currency Conversion Required</b> option is selected in the approval profile.</p>

**Tip:** Alternatively, you can copy a funding request type by clicking the **Duplicate** button in the **Funding Request Type** zone.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics from the funding request type, if required.
7. Click **Save**.

The new funding request type is defined.

## Viewing the Funding Request Type Details

### Procedure

To view the details of a funding request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **F** and then click **Funding Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Funding Request Type** sub-menu.  
The **Funding Request Type** screen appears.

4. In the **Funding Request Type List** zone, click the **Broadcast**  icon corresponding to the funding request type whose details you want to view.
- The **Funding Request Type** zone appears.
5. View the details of the funding request type in the **Funding Request Type** zone.

**Related Topics**

<b>Funding Request Type</b> zone	<a href="#">Funding Request Type</a> on page 1071

## Funding Request (Used for Searching)

The **Funding Request** screen allows you to search for a funding request using various search criteria. It also allows you to create a funding request. It contains the following zone:

- [Search Funding Request](#) on page 1098

Through this screen, you can navigate to the following screen:

- [Funding Request \(Used for Viewing\)](#) on page 1103

## Search Funding Request

The **Search Funding Request** zone allows you to search for a funding request using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a funding request using the funding request or bill details. The valid values are: <ul style="list-style-type: none"><li>• Request Details</li><li>• Bill Details</li></ul>	Yes
	<b>Note:</b> By default, the <b>Request Details</b> option is selected.	
Created From	Used to search funding requests which are created from a particular date onwards.	No
	<b>Note:</b> This field appears only when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to search funding requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Approval In Progress</li> <li>Deferred Processing</li> <li>Draft</li> <li>Processed</li> <li>Rejected</li> </ul>	No
	<b>Note:</b> This field appears only when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
Created To	Used to search funding requests which are created till a particular date.	No
	<b>Note:</b> This field appears only when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
User ID	Used to search funding requests which are created by a particular user.	No
	<b>Note:</b> This field appears only when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
Funding Request Type	Used to search funding requests which are created using a particular funding request type.	No
	<b>Note:</b> This field appears only when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
Person Name	Used to search funding requests which includes bills of a particular person.	No
	<b>Note:</b> This field appears only when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
Funding Request ID	Used to search a particular funding request.	No
	<b>Note:</b> This field appears only when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	
Creation Mode	Used to search funding requests which are created in a particular mode. The valid values are: <ul style="list-style-type: none"> <li>Automatic</li> <li>Manual</li> </ul>	No
	<b>Note:</b> This field appears only when the <b>Request Details</b> option is selected from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Bill ID	Used to search funding requests which include a particular bill.	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.  The <b>Search</b>  icon appears corresponding to the <b>Bill ID</b> field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	
Bill Date From	Used to search funding requests which include bills that are created from a particular date onwards.	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Alternate Bill ID	Used to search funding requests which include a particular bill.	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Bill Date To	Used to search funding requests which include bills that are created till a particular date.	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Division	Used to search funding requests which includes bills of accounts which belong to a particular division.	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.  You can only view those divisions to which you have access in the <b>Division</b> list.	

**Note:** You must specify at least one search criterion while searching for a funding request.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date Time	Displays the date and time when the funding request is created.
Funding Request Information	Displays information about the funding request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Funding Request</b> screen appears where you can view the details of the respective funding request.

Column Name	Column Description
Status	Indicates the status of the funding request. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Deferred Processing</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> </ul>
Total Debit Amount	Displays the total amount of the debit bills which are added in the funding request.
Total Credit Amount	Displays the total amount of the credit bills which are added in the funding request.
Created By	Indicates the user who has created the funding request.
Creation Mode	Indicates how the funding request is created. The valid values are: <ul style="list-style-type: none"> <li>• Automatic</li> <li>• Manual</li> </ul>

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

How to search for a funding request	<a href="#">Searching for a Funding Request</a> on page 1101

## Searching for a Funding Request

### Prerequisites

To search for a funding request, you should have:

- Funding request types defined in the application

### Procedure

To search for a funding request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Funding Request**.  
A sub-menu appears.
3. Click the **Search** option from the **Funding Request** sub-menu.  
The **Funding Request** screen appears.
4. Enter the search criteria in the **Search Funding Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of funding requests that meet the search criteria appears in the **Search Results** section.

**Related Topics**

<b>Search Funding Request</b> zone	<a href="#">Search Funding Request</a> on page 1098

**Viewing the Funding Request Details**

**Procedure**

To view the details of a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. View the details of the funding request in the **Funding Request** zone.
5. View the credit and/or debit bills added in the funding request in the **Selected Bills** zone.

**Related Topics**

**Creating a Funding Request**

**Prerequisites**

To create a funding request, you should have:

- Funding request types defined in the application

**Procedure**

To create a funding request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Funding Request**.  
A sub-menu appears.

- Click the **Add** option from the **Funding Request** sub-menu.

The **Add Funding Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Type	Used to indicate the funding request type using which you want to create the funding request.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Funding Request** screen.

- Select the required funding request type from the respective field.
- Click **OK**.

The funding request is created in the **Draft** status.

## Funding Request (Used for Viewing)

The **Funding Request** screen allows you to:

- Edit the details of a funding request
- Delete or cancel a funding request
- View the details of a funding request
- Submit a funding request for processing
- Approve or reject a funding request
- Request the submitter to resubmit a funding request for approval
- Withdraw a funding request
- View the log of a funding request
- Add a log entry for a funding request

It consists of the following tabs:

- [Funding Request - Main](#) on page 1103
- [Funding Request - Bills](#) on page 1111
- [Funding Request - Log](#) on page 1115

### Funding Request - Main

The **Main** tab displays information about the funding request. It contains the following zones:

- [Funding Request](#) on page 1104

- [Search Bill](#) on page 1107

## Funding Request

The **Funding Request** zone displays the details of the funding request. It contains the following sections:

- **Main** - Displays basic information about the funding request. It contains the following fields:

Field Name	Field Description
Funding Request Information	Displays information about the funding request.
Funding Request Type	Indicates the funding request type using which the funding request is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Funding Request Type</b> screen appears where you can view the details of the respective funding request type.
Status	Indicates the status of the funding request. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Deferred Processing</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> </ul>
Status Reason	Indicates the reason why the funding request is rejected.  <b>Note:</b> This field appears only when the funding request is in the <b>Rejected</b> status. It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the respective status reason.
Funding Adjustment Type	Indicates the adjustment type using which the A/P adjustment is created against a credit bill.  <b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.
Garnishment Adjustment Type	Indicates the adjustment type using which the garnishment adjustment is created when the amount from the credit bill is transferred to the garnishment contract of the account.  <b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.
Comments	Displays additional information entered while rejecting the funding request.  <b>Note:</b> This field appears only when the funding request is in the <b>Rejected</b> status.
Creation Mode	Indicates whether the funding request is created automatically or manually. The valid values are: <ul style="list-style-type: none"> <li>• Automatic</li> <li>• Manual</li> </ul>

- **Statistics** - Displays analytical information about the funding request. It contains the following fields:

Field Name	Field Description
Total Records	Displays the total number of debit or credit bills which are added in the funding request.
Total Records Processed	Displays the total number of debit or credit bills for which payments or adjustments are successfully created in the system.
Total Records Excluded	Displays the total number of debit or credit bills which are excluded from the automatic funding request.
Total Records In Error	Displays the total number of debit or credit bills for which payments or adjustments was not successfully created in the system.
Total Payment Incoming Events Created	Displays the total number of payment events created against the debit bills in the funding request.
Total Adjustments Created	Displays the total number of adjustments created against the credit bills in the funding request.
Total Credit Funding Amount	Displays the sum of funding amount and garnishment amount of all bills whose funding amount is in credit. The sum total is calculated in the funding amount currency which is specified in the funding request type.
	<b>Note:</b> If the credit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the <b>Currency Conversion For Adjustments</b> algorithm spot of the account's division.
Total Debit Funding Amount	Displays the sum of funding amount of all bills whose funding amount is in debit. The sum total is calculated in the funding amount currency which is specified in the funding request type.
	<b>Note:</b> If the debit bill's currency is different from the funding amount currency, the system does the currency conversion before calculating the sum total. The system uses the currency conversion algorithm attached to the <b>Currency Conversion For Payments</b> algorithm spot of the account's division.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the funding request.
	<b>Note:</b> The <b>Edit</b> button appears only when the funding request is in the <b>Draft</b> status.
Delete	Used to delete the funding request.
	<b>Note:</b> The <b>Delete</b> button appears only when the funding request is in the <b>Draft</b> status.

Button Name	Button Description
Submit	Used to submit the funding request.
	<b>Note:</b> The <b>Submit</b> button appears only when the funding request is in the <b>Draft</b> status.
Cancel	Used to cancel the funding request.
	<b>Note:</b> The <b>Cancel</b> button appears only when the funding request is in the <b>Draft</b> status.
Approve	Used to approve the funding request.
	<b>Note:</b> The <b>Approve</b> button appears only when: <ul style="list-style-type: none"> <li>The funding request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the funding request.</li> </ul>
Reject	Used to reject the funding request.
	<b>Note:</b> The <b>Reject</b> button appears only when: <ul style="list-style-type: none"> <li>The funding request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the funding request.</li> </ul>
Re Submit	Used to request for resubmitting the funding request.
	<b>Note:</b> The <b>Re Submit</b> button appears only when: <ul style="list-style-type: none"> <li>The funding request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the funding request.</li> </ul>
Withdraw	Used to withdraw the funding request.
	<b>Note:</b> The <b>Withdraw</b> button appears only when: <ul style="list-style-type: none"> <li>The funding request is in the <b>Approval In Progress</b> status.</li> <li>A user with the submitter To Do role is viewing the funding request.</li> </ul>

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the funding request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the funding request status is updated
Create Date/Time	Displays the date and time when the funding request is created.

- **Characteristics** - Lists the characteristics defined for the funding request. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the funding request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

### Search Bill

The **Search Bill** zone allows you to search for a bill using various search criteria. It appears only when the funding request is in the **Draft** status and the creation mode is set to **Manual**. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using the person, account, or bill details. The valid values are: <ul style="list-style-type: none"> <li>• Bill Details</li> <li>• Account Details</li> <li>• Person Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Bill Details</b> option is selected.	
Bill ID	Used to search a particular bill.	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.  The <b>Search</b>  icon appears corresponding to the <b>Bill ID</b> field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	

Field Name	Field Description	Mandatory (Yes or No)
Bill Date From	Used to search bills which are created from a particular date onwards.	Yes
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list. By default, the current date appears in this field.	
Alternate Bill ID	Used to search a particular bill.	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Bill Date To	Used to search bills which are created till a particular date.	Yes
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list. By default, the current date appears in this field.	
Bill Balance	Used to indicate whether you want to search bills with debit or credit balance. The valid values are: <ul style="list-style-type: none"> <li>• Credit</li> <li>• Debit</li> </ul>	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Bill Due Date From	Used to search bills which are due from a particular date onwards.	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Division	Used to search bills of accounts which belong to a particular division.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list. This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Bill Due Date To	Used to search bills which are due till a particular date.	No
	<b>Note:</b> This field appears only when the <b>Bill Details</b> option is selected from the <b>Search By</b> list.	
Account ID	Used to search bills of a particular account.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Account Details</b> option is selected from the <b>Search By</b> list.	<b>Note:</b> This field is required when the <b>Account Details</b> option is selected from the <b>Search By</b> list.
Person ID	Used to search bills which belong to a particular person.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	<b>Note:</b> This field is required when: <ul style="list-style-type: none"> <li>The <b>Person Details</b> option is selected from the <b>Search By</b> list.</li> <li>The person name is not specified in the search criteria.</li> </ul>
Person Name	Used to search bills which are created for accounts of a particular person.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	<b>Note:</b> This field is required when: <ul style="list-style-type: none"> <li>The <b>Person Details</b> option is selected from the <b>Search By</b> list.</li> <li>The person ID is not specified in the search criteria.</li> </ul>
Country	Used to search bills of persons who reside in a particular country.	No
	<b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a bill.

- Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description						
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.						
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.						
Due Date	Displays the date when the bill is due for payment.						
Outstanding Amount	Displays the unpaid amount of the bill.						
Hold Amount	Displays the amount of the bill which is kept on hold through a hold request.						
Funding Amount	Displays the bill amount which can be used for the funding process. It is calculated in the following manner:						
	<table><tr><th>Bill Type</th><th>Funding Amount for the Bill</th></tr><tr><td>Debit Bill</td><td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)</td></tr><tr><td>Credit Bill</td><td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)</td></tr></table>	Bill Type	Funding Amount for the Bill	Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)	Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)
	Bill Type	Funding Amount for the Bill					
	Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)					
Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)						
Person Name	Indicates the person to whom the bill belongs. In addition, this column has a context menu which helps in navigating to other screens in the application.						
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.						
Bill ID	Displays the bill ID.						
Defer Auto Pay	Indicates whether the <b>Defer Auto Pay</b> option is selected on the customer class of the account for which the bill is created. The valid values are: <ul style="list-style-type: none"><li>N</li><li>Y</li></ul>						

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Add	Used to add a bill to the funding request.

A check box appears corresponding to each bill. On selecting the check box, you can add the bill to the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to add all bills listed in the respective page to the funding request.

How to add a debit or credit bill to a funding request	<a href="#">Adding a Debit or Credit Bill to a Funding Request</a> on page 1116

## Funding Request - Bills

The **Bills** tab lists the bills which are added in the funding request. It contains the following zones:

- [Currency Statistics](#) on page 1111
- [Selected Bills](#) on page 1111
- [Funding Payment Details](#) on page 1114

**Note:** This zone appears only when the funding request is in the **Processed** status and the funding amount of the bill is in debit.

- [Funding Adjustments](#) on page 1115

**Note:** This zone appears only when the funding request is in the **Processed** status and the funding amount of the bill is in credit.

## Currency Statistics

A funding request might include bills in different currencies. The **Currency Statistics** zone lists the sum total of various amount of bills which are created in the same currency. It contains the following columns:

Column Name	Column Description
Currency Code	Indicates the currency in which the sum total is calculated.
	<b>Note:</b> Here, the system lists those currencies in which the bills added to the funding request are created.
Total Outstanding Amount	Displays the sum of outstanding amount of all bills which are created in the respective currency.
Total Hold Amount	Displays the sum of hold amount of all bills which are created in the respective currency.
Total Garnishment Amount	Displays the sum of garnishment amount of all bills which are created in the respective currency.
Total Debit Funding Amount	Displays the sum of funding amount (which is in debit) of all bills which are created in the respective currency.
Total Credit Funding Amount	Displays the sum of funding amount (which is in credit) of all bills which are created in the respective currency.

## Selected Bills

The **Selected Bills** zone lists the debit and credit bills which are added to the funding request. It contains the following columns:

Column Name	Column Description
Bill Date	Displays the date when the bill is created.
Person Identifier	Displays the primary identifier of the person for whom the bill is created.
Person Country	Indicates the country where the person is located.

Column Name	Column Description						
Invoice Account Identifier	Displays the primary identifier of the account for which the bill is created.						
Funding Amount	<p>Displays the bill amount which can be used for the funding process. It is calculated in the following manner:</p> <table> <tr> <th>Bill Type</th><th>Funding Amount for the Bill</th></tr> <tr> <td>Debit Bill</td><td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)</td></tr> <tr> <td>Credit Bill</td><td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)</td></tr> </table> <p><b>Note:</b> The funding amount is calculated in the bill's currency.</p>	Bill Type	Funding Amount for the Bill	Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)	Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)
Bill Type	Funding Amount for the Bill						
Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)						
Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)						
Currency Code	Indicates the currency in which the funding amount is calculated.						
Hold Amount	Displays the amount of the bill which is kept on hold through a hold request.						
Offset Amount	Displays the amount of the bill which is offset against another bill through an offset request.						
Garnishment Amount	Displays the amount of the credit bill which is transferred to the garnishment contracts of the account through the funding request.						
Original Outstanding Amount	Displays the original outstanding amount when the bill was added in the funding request.						
Bill ID	<p>Displays the bill ID.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.</p>						
Open Bills	<p>Indicates whether there are any unpaid bills of the person. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>						
Garnishment Contract	<p>Indicates whether the garnishment contract exists for the account. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <p><b>Note:</b></p> <p>This column appears only when the funding request is in the <b>Draft</b> status.</p> <p>The data appears in this column only when a credit bill is added to the funding request.</p> <p>It has a link. On clicking the link, the <b>Edit Garnishment Details</b> screen appears where you can transfer the funding amount from the credit bill to one or more garnishment contracts of the account.</p>						

Column Name	Column Description
Garnishment	<p>On clicking the <b>View</b> (🔍) icon, the <b>View Garnishment Details</b> screen appears where you can view the funding amount transferred to the different garnishment contracts of the account.</p> <p><b>Note:</b></p> <p>This column does not appear when the funding request is in the <b>Draft</b> status.</p> <p>The <b>View</b> (🔍) icon appears in this column only when the funding request is in the <b>Processed</b> status.</p>
Record Status	<p>Indicates the status of the bill record in the funding request. The valid values are:</p> <ul style="list-style-type: none"> <li>• Excluded</li> <li>• Invalid</li> <li>• Masked</li> <li>• Pending</li> <li>• Processed</li> <li>• Valid</li> <li>• Error</li> </ul>
Threshold Range	Indicates the threshold range for a bill which is calculated based on the number of payments made for the bill in the specified period.
Person Name	Indicates the person whose bill is added in the funding request.
Bill Information	Displays the information about the bill.
Split Banking	<p>Indicates whether the split automatic payment feature is used for the account. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
Funding Currency Amount	Displays the funding amount which is converted in the funding currency defined on the account.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

In addition, this section contains the following button:

Button Name	Button Description
Delete	<p>Used to delete a bill from the funding request.</p> <p><b>Note:</b> The <b>Delete</b> button appears only when the funding request is created manually and it is in the <b>Draft</b> status.</p>
Edit	<p>Used to exclude a debit or credit bill from the funding request.</p> <p><b>Note:</b> The <b>Edit</b> button appears only when the funding request is created automatically and it is in the <b>Draft</b> status.</p>

Button Name	Button Description
Hold	Used to create a hold request for one or more bills. However, you cannot select more than 20 bills. On activating or releasing a hold request, the funding amount is automatically updated in the funding request.
	<b>Note:</b> The <b>Hold</b> button appears only when the funding request is in the <b>Draft</b> status.
Offset	Used to create an offset request for a bill. On processing or unapplying an offset request, the funding amount is automatically updated in the funding request.
	<b>Note:</b> The <b>Offset</b> button appears only when the funding request is in the <b>Draft</b> status.

A check box appears corresponding to each bill when the funding request is in the **Draft** status. On selecting the check box, you can delete the bill from the funding request. You can also select multiple bills at the same time. In addition, you can select the check box corresponding to the column header. This allows you to delete all bills listed in the respective page from the funding request.

On clicking the **Broadcast**  icon corresponding to a debit or credit bill, the **Funding Payment Details** or **Funding Adjustments** zone appears, respectively.

**Note:** The **Broadcast** icon does not appear when the funding request is in the **Draft** status.

You can filter the list using various search criteria (such as, **Bill ID**, **Alternate Bill ID**, **Record Status**, **Bill Balance**, **Funding Amount From**, **Person ID**, **Funding Amount To**, **Currency**, **Funding Amount Threshold Range**, and **Country**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters**  icon in the upper right corner of this zone.

### **Funding Payment Details**

The **Funding Payment Details** zone lists the payment events which are created for a debit bill through the funding request. It appears only when the funding request is in the **Processed** status. It contains the following columns:

Column Name	Column Description
Payment Event Information	Displays information about the payment event.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the respective payment event.
Payment Amount	Displays the amount for which automatic payment is created.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### Funding Adjustments

The **Funding Adjustments** zone lists the funding and garnishment adjustments which are created for a credit bill through the funding request. It appears only when the funding request is in the **Processed** status. It contains the following columns:

Column Name	Column Description
Adjustment Information	Displays information about the funding or garnishment adjustment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.
Adjustment Amount	Displays the adjustment amount.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

## Funding Request - Log

The **Log** tab contains the following zone:

- [Funding Request Log](#) on page 1115

### Funding Request Log

The **Funding Request Log** zone lists the complete trail of actions performed on the funding request. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the funding request.
Details	Displays the details of the action performed on the funding request.
User	Indicates the user who has performed the action on the funding request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the funding request.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

Column Name	Column Description
Status Reason	Indicates the reason why the funding request was rejected by the approver.
	<b>Note:</b> The data appears in this column only when the funding request is in the <b>Rejected</b> status.

**Note:** You can manually add a log entry for the funding request by clicking the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

## **Adding a Debit or Credit Bill to a Funding Request**

In a funding request, you can only add the debit or credit bills of the accounts for which the **Defer Auto Pay** option is selected on the respective customer class.

### **Procedure**

To add a debit or credit bill to a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Ensure that the **Main** tab is selected.
4. Enter the search criteria in the **Search Bill** zone.

#### **Note:**

The **Search Bill** zone appears only when the funding request is in the **Draft** status.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of bills that meet the search criteria appears in the **Search Results** section.

6. Select the check box corresponding to a bill that you want to add to the funding request.
7. Click the **Add** button in the **Search Bill** zone.

A message appears indicating that the bill is added to the funding request.

**Note:** You can only add a debit or credit bill of an account for which the **Defer Auto Pay** option is selected on the respective customer class.

8. Click **OK**.

The bill is added to the funding request. The status of the bill record in the funding request is set to **Pending**.

## Deleting a Debit or Credit Bill from a Funding Request

**Procedure**

To delete a debit or credit bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.  
The **Funding Request** screen appears.
3. Click the **Bills** tab.  
The **Bills** tab appears.
4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to delete from the funding request.
5. Click the **Delete** button in the **Selected Bills** zone.

A message appears confirming whether you want to delete the bill from the funding request.

**Note:** The **Delete** button appears only when the funding request is in the **Draft** status.

6. Click **OK**.

The debit or credit bill is deleted from the funding request.

**Related Topics**

## Excluding a Bill from a Funding Request

If the funding request is manually created through the user interface, you add or delete bills from the funding request when it is in the **Draft** status. However, if the funding request is automatically created through a custom logic, the system allows you to exclude the required bills from the funding request when it is in the **Draft** status. In such case, the status of the record in the funding request is changed to **Excluded**. The excluded bills can then be included in some other funding request.

**Prerequisites**

To exclude a bill from a funding request, you should have:

- Values defined for the **CAN\_RSN\_CD\_FLG** lookup field

**Procedure**

To exclude a bill from a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.  
The **Funding Request** screen appears.
3. Click the **Bills** tab.  
The **Bills** tab appears.
4. In the **Selected Bills** zone, select the check box corresponding to a bill that you want to exclude from the funding request.
5. Click the **Edit** button in the **Selected Bills** zone.

The **Edit Funding Request Details** screen appears. It contains the following field:

Field Name	Field Description
Funding Request Information	Displays the information about the funding request.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)						
Bill Information	Displays the information about the bill.	Not applicable						
Garnishment Amount	Displays the funding amount which is transferred to the garnishment contracts of the account.	Not applicable						
Funding Amount	<div>Displays the bill amount which can be used for the funding process. It is calculated in the following manner:</div> <table><tr><th>Bill Type</th><th>Funding Amount for the Bill</th></tr><tr><td>Debit Bill</td><td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)</td></tr><tr><td>Credit Bill</td><td>Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)</td></tr></table>	Bill Type	Funding Amount for the Bill	Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)	Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)	Not applicable
Bill Type	Funding Amount for the Bill							
Debit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request)							
Credit Bill	Outstanding Bill Amount – Hold Amount (set on the bill in a hold request) – Offset Amount (set on the bill in an offset request) – Garnishment Amount (set on the bill in a funding request)							

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the record in the funding request. The valid values are: <ul style="list-style-type: none"> <li>Excluded</li> <li>Invalid</li> <li>Masked</li> <li>Pending</li> <li>Processed</li> <li>Valid</li> </ul>	Yes
Cancel Reason	Used to indicate the reason why you want to exclude the bill from the funding request.	Yes (Conditional)
	<b>Note:</b> The list includes only those values which are defined in the <b>CAN_RSN_CD_FLG</b> lookup field.	<b>Note:</b> This field is required when you want to exclude the bill from the funding request.

**Note:** The **Edit** button appears only when the creation mode of the funding request is set to **Automatic** and the funding request is in the **Draft** status.

6. Select the **Excluded** option from the **Status** field.
7. Select the required cancel reason from the respective field.
8. Click **Save**.

The bill is excluded from the funding request. The status of the bill record in the funding request is set to **Excluded**.

## Editing a Funding Request

### Prerequisites

To edit a funding request, you should have:

- Funding adjustment types defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment types defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

### Procedure

To edit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.

The **Funding Request** screen appears.

3. Click the **Edit** button in the **Funding Request** zone.

The **Edit Funding Request** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the funding request.
- **Characteristics** - Used to define a characteristic for the funding request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Funding Request Information	Displays information about the funding request.	Not applicable
Funding Adjustment Type	Used to indicate the adjustment type using which the A/P adjustment should be created against a credit bill.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Funding Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Funding Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is set to <b>REFUND</b>.</p>	<p><b>Note:</b> This field is required while creating an A/P adjustment against a credit bill.</p>
Garnishment Adjustment Type	Used to indicate the adjustment type using which the garnishment adjustment should be created when the amount from the credit bill is transferred to the garnishment contract of the account.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The <b>Search</b>  icon appears corresponding to the <b>Garnishment Adjustment Type</b> field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.</p> <p>In the <b>Garnishment Adjustment Type</b> field, you can only specify an adjustment type where the <b>A/P Request Type Code</b> field is not set to <b>REFUND</b>.</p>	<p><b>Note:</b> This field is required while creating garnishment adjustments for a credit bill.</p>
Comments	Used to specify additional information about the funding request.	No

**Note:** The **Edit** button appears only when the funding request is in the **Draft** status.

4. Modify the details of the funding request, if required.
5. Define, edit, or remove characteristics from the funding request, if required.

6. Click **Save**.

The changes made to the funding request are saved.

How to define a characteristic for a funding request	<a href="#">Defining a Characteristic for a Funding Request</a> on page 1121

## Defining a Characteristic for a Funding Request

### Prerequisites

To define a characteristic for a funding request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Funding Request**)

### Procedure

To define a characteristic for a funding request:

1. Ensure that the **Characteristics** section is expanded when you are editing a funding request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the funding request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the funding request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Funding Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the funding request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<p><b>Note:</b></p> <p>If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, you can search for a predefined characteristic value.</p> <p>On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>	<p><b>Note:</b> This field is required when you are defining a characteristic for the funding request.</p>

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the funding request, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the funding request, click the **Delete**  icon corresponding to the characteristic.

How to edit a funding request	<a href="#">Editing a Funding Request</a> on page 1119

## Deleting a Funding Request

### Procedure

To delete a funding request:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to delete.

The **Funding Request** screen appears.

- Click the **Delete** button in the **Funding Request** zone.

A message appears confirming whether you want to delete the funding request.

**Note:** The **Delete** button appears only when the funding request is in the **Draft** status.

- Click **OK**.

The funding request is deleted.

## Cancelling a Funding Request

### Prerequisites

To cancel a funding request, you should have:

- Reasons defined for the **Canceled** status of the **C1-FundingRequest** business object in the **Status Reason** screen

### Procedure

To cancel a funding request:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to cancel.

The **Funding Request** screen appears.

- Click the **Cancel** button in the **Funding Request** zone.

The **Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the funding request.	Yes
	<b>Note:</b> The list includes only those reasons which are defined for the <b>Canceled</b> status of the <b>C1-FundingRequest</b> business object in the <b>Status Reason</b> screen.	

**Note:** The **Cancel** button appears only when the funding request is in the **Draft** status.

- Select the cancellation reason from the **Status Reason** list.
- Click **Save**.

The status of all records in the funding request is changed to **Excluded** and the status of the funding request is changed to **Canceled**. The excluded bills can then be included in some other funding request.

## Submitting a Funding Request

### Prerequisites

To submit a funding request, you should have:

- At least one debit or credit bill in the funding request
- Funding and garnishment adjustment types defined in the funding request
- Funding adjustment type defined in the application (where the **A/P Request Type Code** field is set to **REFUND**)
- Garnishment adjustment type defined in the application (where the **A/P Request Type Code** field is not set to **REFUND**)

### Procedure

To submit a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to submit.

The **Funding Request** screen appears.

3. Click the **Submit** button in the **Funding Request** zone.

The system behaves in the following manner:

If...	Then...						
The <b>Approval Required</b> option is selected in the funding request type using which the funding request is created	It calculates the sum of total debit and credit amount in the funding request. Depending on whether the sum total is debit or credit, it uses the debit or credit hierarchy in the approval profile (which is specified in the funding request type), respectively. Depending on the sum total amount, the system behaves in the following manner:						
	<table><tr><th>If...</th><th>Then...</th></tr><tr><td>The sum total is less than the minimum threshold amount in the approval hierarchy</td><td>The system automatically approves the funding request and changes the status of the funding request to either <b>Deferred Processing</b> or <b>Create Funding</b> depending on whether the number of bills in the funding request exceeds the defer processing count.</td></tr><tr><td>The sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy</td><td>The system changes the status of the funding request to <b>Approval In Progress</b>. It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.</td></tr></table>	If...	Then...	The sum total is less than the minimum threshold amount in the approval hierarchy	The system automatically approves the funding request and changes the status of the funding request to either <b>Deferred Processing</b> or <b>Create Funding</b> depending on whether the number of bills in the funding request exceeds the defer processing count.	The sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy	The system changes the status of the funding request to <b>Approval In Progress</b> . It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.
	If...	Then...					
	The sum total is less than the minimum threshold amount in the approval hierarchy	The system automatically approves the funding request and changes the status of the funding request to either <b>Deferred Processing</b> or <b>Create Funding</b> depending on whether the number of bills in the funding request exceeds the defer processing count.					
The sum total is equal to or greater than the threshold amount specified at the first level in the approval hierarchy	The system changes the status of the funding request to <b>Approval In Progress</b> . It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the first level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.						

If...	Then...
The <b>Approval Required</b> option is not selected in the funding request type using which the funding request is created	<p>The system changes the status of the funding request to either <b>Deferred Processing</b> or <b>Create Funding</b> depending on whether the number of bills in the funding request exceeds the defer processing count.</p> <p>Once the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch is executed, it checks whether there are any funding requests in the <b>Deferred Processing</b> status. If so, it changes the status of the funding request to <b>Create Funding</b>.</p> <p>Once the status of a funding request is changed to <b>Create Funding</b>, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the <b>CI_BILL_ACH</b> table. Then, on executing the <b>Create Automatic Payments and Refunds (APAYCRET)</b> batch, the system creates automatic payment and payment event for such bill.</p>
	<p><b>Note:</b> The funding and garnishment adjustments are created in the <b>Frozen</b> status.</p>

**Note:** The **Submit** button appears only when the funding request is in the **Draft** status.

**Approving a Funding Request**

You can view the number of funding requests which are pending for approval in the **Funding Request** screen. The approver can review, and accordingly approve, reject, or ask the submitter to resubmit the funding request based on the observations.

**Note:** The system will not allow you to approve, reject or resubmit a funding request submitted by you.

**Procedure**

To approve a funding request:

- Do either of the following:

If you want to...	Then...
Approve a funding request through the <b>Funding Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the funding request in the <b>Funding Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Funding Request Information</b> column corresponding to the funding request which you want to review.</li> </ol>
Approve a funding request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-FNDAP</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the funding request that you want to review.</li> </ol>

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is accurate, then click the **Approve** button in the **Funding Request** zone.

The system behaves in the following manner:

If...	Then...
The sum total of the debit and credit amount is equal to or greater than the threshold amount specified at the next level in the approval hierarchy	The system changes the status of the funding request to <b>Approval In Progress</b> . It creates a To Do using the To Do type specified in the approval profile and assigns it to the users with the To Do role defined at the next level in the approval hierarchy. In addition, it creates a log entry for the funding request when the To Do is created.

If...	Then...
The sum total of the debit and credit amount is less than the threshold amount specified at the next level in the approval hierarchy	<p>The system changes the status of the funding request to either <b>Deferred Processing</b> or <b>Create Funding</b> depending on whether the number of bills in the funding request exceeds the defer processing count.</p> <p>Once the <b>Funding Request Periodic Monitor (C1-FNDRQ)</b> batch is executed, it checks whether there are any funding requests in the <b>Deferred Processing</b> status. If so, it changes the status of the funding request to <b>Create Funding</b>.</p> <p>Once the status of a funding request is changed to <b>Create Funding</b>, the system creates the A/P adjustment against a bill when the funding amount of the bill is in credit. It also creates non A/P adjustments using the garnishment adjustment type when the funding amount of a credit bill is transferred to the garnishment contracts of the account. However, if the funding amount of a bill is in debit, the funding amount is stamped as the automatic payment amount against the bill in the <b>CI_BILL_ACH</b> table. Then, on executing the <b>Create Automatic Payments and Refunds (APAYCRET)</b> batch, the system creates automatic payment and payment event for such bill.</p> <p><b>Note:</b> The funding and garnishment adjustments are created in the <b>Frozen</b> status.</p>

**Note:** The **Approve** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

**Rejecting a Funding Request**

**Prerequisites**

To reject a funding request, you should have:

- Reasons defined for the **Rejected** status of the **C1-FundingRequest** business object in the **Status Reason** screen

**Note:** The system will not allow you to approve, reject or resubmit a funding request submitted by you.

**Procedure**

To reject a funding request:

1. Do either of the following:

If you want to...	Then...
Reject a funding request through the <b>Funding Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the funding request in the <b>Funding Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Funding Request Information</b> column corresponding to the funding request which you want to review.</li> </ol>
Reject a funding request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-FNDAP</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the funding request that you want to review.</li> </ol>

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incorrect, then click the **Reject** button in the **Funding Request** zone.

The **Reject Funding Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the funding request.	Yes
	<b>Note:</b> The list includes only those reasons which are defined for the <b>Rejected</b> status of the <b>C1-FundingRequest</b> business object in the <b>Status Reason</b> screen.	
Comments	Used to specify additional information while rejecting the funding request.	No

**Note:** The **Reject** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the funding request is changed to **Rejected**.

**Requesting to Resubmit a Funding Request**

**Procedure**

To request for resubmitting a funding request:

1. Do either of the following:

If you want to...	Then...
Request for resubmitting a funding request through the <b>Funding Request</b> screen	<div><div>1. Search for the funding request in the <b>Funding Request</b> screen.</div><div>2. In the <b>Search Results</b> section, click the link in the <b>Funding Request Information</b> column corresponding to the funding request which you want to review.</div></div>
Request for resubmitting a funding request from the <b>To Do List</b> screen	<div><div>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</div><div>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.  The <b>To Do Type for User Search</b> window appears.</div><div>3. Enter <b>C1-FNDAP</b> in the <b>To Do Type</b> field.</div><div>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.  The <b>To Do List</b> screen appears.</div></div>

If you want to...	Then...
	<ol style="list-style-type: none"> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the funding request that you want to review.</li> </ol>

The **Funding Request** screen appears.

2. Review the details in the **Funding Request** screen.
3. If the information in the funding request is incomplete and you want the submitter to make the required changes and resubmit the request, click the **Re Submit** button in the **Funding Request** zone.

The **Resubmit Funding Request** window appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify the changes which the submitter should make in the funding request before resubmitting it for approval.	Yes

**Note:** The **Re Submit** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the funding request.

4. Enter the comments in the respective field and then click **Save**.

A To Do is created using the submitter To Do type and assigned to all users with a submitter To Do role specified in the funding request type. In addition, the status of the funding request is changed to **Draft**.

## Withdrawing a Funding Request

### Prerequisites

To withdraw a funding request, you should have:

- Submitter To Do role (which is specified in the funding request type) associated with the **C1-FNDAP** To Do type

### Procedure

To withdraw a funding request:

1. Search for the funding request in the **Funding Request** screen.

- 2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request that you want to withdraw.

The **Funding Request** screen appears.

- 3. If you want to make some changes in the funding request which is already sent for approval, click the **Withdraw** button in the **Funding Request** zone.

The status of the funding request is changed to **Draft**. The submitter can then make the required changes and resubmit the funding request for approval. The To Do for approver is automatically closed when the submitter withdraws the funding request. Note that the To Do for approver is automatically closed only when the submitter To Do role is associated with the To Do type specified in the approval profile.

**Note:** The **Withdraw** button appears only when:

- The funding request is in the **Approval In Progress** status.
- A user with the submitter To Do role is viewing the funding request.

**Transferring the Funding Amount of a Credit Bill to a Garnishment Contract**

**Prerequisites**

To transfer the funding amount of a credit bill to a garnishment contract, you should have:

- At least one garnishment contract on the account

**Note:** The garnishment contract is a contract which is created using a contract type where the **Special Role Flag** field is set to **Garnishment**.

**Procedure**

To transfer the funding amount of a credit bill to a garnishment contract:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to edit.  
The **Funding Request** screen appears.
3. Click the **Bills** tab.  
The **Bills** tab appears.
4. In the **Selected Bills** zone, click the link on the value **Y** in the **Garnishment Contract** column corresponding to a credit bill whose funding amount you want to transfer to a garnishment contract.  
The **Edit Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Information	Indicates the credit bill whose funding amount you want to transfer to a garnishment contract of the account.

In addition, this screen contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Garnishment Contract	Used to indicate the garnishment contract of the account.	Yes
Garnishment Amount	Used to specify the amount that you want to transfer to the garnishment contract.	Yes

- Enter the required details in the **Edit Garnishment Details** screen.
- If you want to transfer the funding amount of the credit bill to more than one garnishment contract of the account, click the **Add** (+) icon and then repeat step 5.

**Note:** However, if you want to remove a garnishment record from the funding request, click the **Delete** (🗑️) icon corresponding to the garnishment record.

- Click **Save**.

The changes made to the funding request are saved.

## Viewing the Garnishment Details of a Credit Bill

### Procedure

To view the garnishment details of a credit bill:

- Search for the funding request in the **Funding Request** screen.
- In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

- Click the **Bills** tab.

The **Bills** tab appears.

- In the **Selected Bills** zone, click the **Broadcast** (📡) icon in the **Garnishment** column corresponding to the credit bill whose garnishment details you want to view.

The **View Garnishment Details** screen appears. It contains the following field:

Field Name	Field Description
Bill Info	Indicates the credit bill whose garnishment details you are viewing.

In addition, this screen contains the following columns:

Column Name	Column Description
Garnishment Contract	Indicates the garnishment contract of the account against which amount from the credit bill is transferred.
Garnishment Amount	Displays the amount which is transferred to the garnishment contract.

**Note:**

The **Garnishment** column does not appear when the funding request is in the **Draft** status.

The **View**  icon appears in the **Garnishment** column only when the funding request is in the **Processed** status.

**Viewing the Payments Created Through a Funding Request**

**Procedure**

To view the payments created through a funding request:

- 1. Search for the funding request in the **Funding Request** screen.
- 2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

- 3. Click the **Bills** tab.

The **Bills** tab appears.

- 4. In the **Selected Bills** zone, click the **Broadcast**  icon corresponding to a debit bill whose payment details you want to view.

The **Funding Payments Details** zone appears.

**Note:** The **Broadcast**  icon appears only when the funding request is in the **Processed** status.

- 5. View the payments created for the debit bill through the funding request in the **Funding Payments Details** zone.

**Note:** The data appears in the **Funding Payments Details** zone only when the **Create Automatic Payments and Refunds (APAYCRET)** batch is executed to create the automatic payment and payment event for the debit bill. For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*.

## Viewing the Adjustments Created Through a Funding Request

### Procedure

To view the adjustments created through a funding request:

1. Search for the funding request in the **Funding Request** screen.
2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose details you want to view.

The **Funding Request** screen appears.

3. Click the **Bills** tab.

The **Bills** tab appears.

4. In the **Selected Bills** zone, click the **Broadcast**

 icon corresponding to a credit bill whose adjustment details you want to view.

The **Funding Adjustments** zone appears.

**Note:** The **Broadcast**  icon appears only when the funding request is in the **Processed** status.

5. View the A/P adjustments and garnishment adjustments (if any) created for the credit bill through the funding request in the **Funding Adjustments** zone.

## Viewing the Log of a Funding Request

**Procedure**

To view the log of a funding request:

- 1. Search for the funding request in the **Funding Request** screen.
- 2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to view.

The **Funding Request** screen appears.

- 3. Click the **Log** tab.

The **Log** tab appears.

- 4. View the complete trail of actions performed on the funding request in the **Funding Request Log** zone.

<b>Funding Request Log</b> zone	<a href="#">Funding Request Log</a> on page 1115

**Adding a Log Entry for a Funding Request**

**Procedure**

To add a log entry for a funding request:

- 1. Search for the funding request in the **Funding Request** screen.
- 2. In the **Search Results** section, click the link in the **Funding Request Information** column corresponding to the funding request whose log you want to edit.

The **Funding Request** screen appears.

- 3. Click the **Log** tab.

The **Log** tab appears.

- 4. Click the **Add Log Entry** link in the upper right corner of the **Funding Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the funding request.	Not applicable
Log Details	Used to specify additional comments on the funding request.	Yes

- 5. Enter the comments in the **Log Details** field.
- 6. Click **Save**.

The log entry is added in the **Funding Request Log** zone.

- [Prerequisites](#)
- [Refund/Write Off Request Type](#)
- [Refund/Write Off Request](#)
- [Refund Request](#)
- [Write Off Request](#)

Oracle Revenue Management and Billing allows you to refund and write off amount to the account. If the amount received from the payor account is matched against the suspense or excess credit contract, the system facilitates you to refund the amount to the payor. In addition, you can refund the amount of a credit bill line item, such as credit bill segment or adjustment, if required. To refund the amount to the account holder, you need to create refund adjustments through a refund request. While creating a refund request, you need to specify the refund request type using which you want to create the refund request. It is the refund request type which helps the system to determine:

- Whether the refund request must be approved before creating refund adjustments in the system
- Approval profile using which the refund request must be approved
- Whether multi-level or single-level approval is required while creating refund adjustments in the system
- Tolerance limit for refund (i.e. minimum refund amount)
- Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
- Default adjustment type using which refund adjustments must be created

The system allows you to create refund adjustments only using those adjustment types where A/P request type is defined. Once the refund adjustments are created, the A/P Extract process will extract the information and accordingly refund the amount to the payor. During the refund request process, a refund request goes through various statuses in its lifecycle. For more information about the refund request statuses, see [Refund Request \(Without Approval\) Status Transition](#) on page 1141 and [Refund Request \(With Approval\) Status Transition](#) on page 1141.

Note that the lifecycle of a refund request is driven by the business object using which the refund request is created. A refund request business object named **C1-RefundReq** is shipped with the product. The refund request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-RefundReq** business object.

Similarly, the system facilitates you to write off the amount to the account through a write off request. While creating a write off request, you need to specify the write off request type using which you want to create the write off request. It is the write off request type which helps the system to determine:

- Whether the write off request must be approved before creating write off adjustments in the system
- Approval profile using which the write off request must be approved

- Whether multi-level or single-level approval is required while creating write off adjustments in the system
- Default adjustment type using which write off adjustments must be created

The system allows you to create write off adjustments only using those adjustment types where A/P request type is not defined. During the write off request process, a write off request goes through various statuses in its lifecycle. For more information about the write off request statuses, see [Write Off Request \(Without Approval\) Status Transition](#) on page 1142 and [Write Off Request \(With Approval\) Status Transition](#) on page 1143.

Note that the lifecycle of a write off request is driven by the business object using which the write off request is created. A write off request business object named **C1-WORequest** is shipped with the product. The write off request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-WORequest** business object.

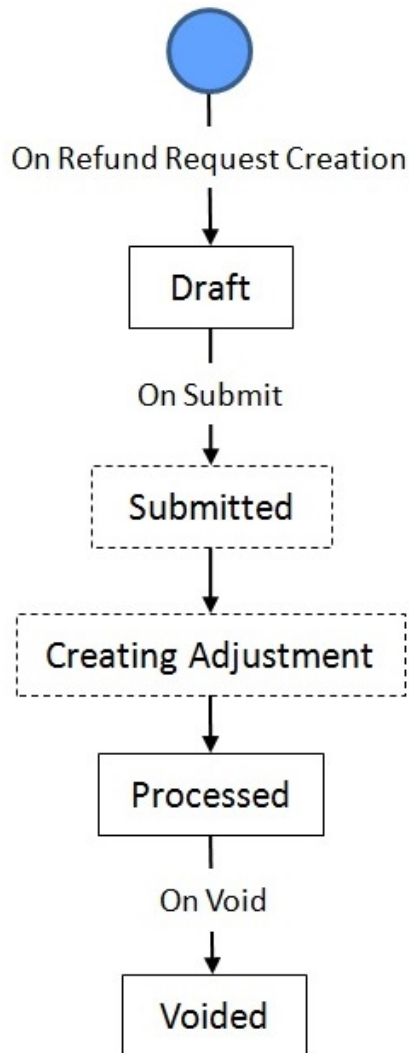

For more information on how to setup the refund and write off request processes, see [Prerequisites](#) on page 1153.

### Algorithms Used in C1-RefundReq

The following table lists the algorithms which are attached to the **C1-RefundReq** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	<p>This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:</p> <ul style="list-style-type: none"> <li>• Refund or Write Off Request Type Description</li> <li>• Refund or Write Off Request Status Description</li> <li>• Refund or Write Off Request ID</li> </ul>
Post-Processing	C1-REFWOPOSP	C1-REFWOPOSP	<p>This algorithm recalculates and updates the total refund amount in the <b>Refund Request</b> zone when you change the refund amount against an entity while editing a refund request.</p>
Validation	C1-REFUNDVAL	C1-REFUNDVAL	<p>This algorithm validates the following for each entity that you have selected in the refund request:</p> <ul style="list-style-type: none"> <li>• The mandatory data, such as refund amount and adjustment type, is specified.</li> <li>• The refund amount is not less than zero.</li> <li>• The refund amount is not greater than the entity amount.</li> <li>• The refund amount is not greater than the eligible refund amount.</li> <li>• The partial refund is not done at the payment event or bill level.</li> </ul>

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-REF-DFT	C1-REF-DFT	<p>This algorithm fetches the account's main customer's name and address and displays in the <b>Refund Request</b> zone. In addition, when you refund the payments from the <b>Payment Event Summary</b> screen, this algorithm does the following:</p> <ul style="list-style-type: none"> <li>• The total eligible refund amount is calculated and accordingly displayed in the <b>Refund Request</b> screen.</li> <li>• The default refund adjustment type specified in the refund request type is fetched and displayed against the selected payment event or payments.</li> <li>• On selecting a payment event for refund, if all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the <b>Refund Details</b> zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the <b>Refund Details</b> zone.</li> </ul>
Submitted	Enter	C1-REFUNDSUB	C1-REFUNDSUB	<p>This algorithm checks the following:</p> <ul style="list-style-type: none"> <li>• Whether the approval is required for the refund request. If the approval is required for a refund request, the status of the refund request is changed to <b>Approval In Progress</b>. However, if the approval is not required for a refund request, the status of the refund request is changed to <b>Creating Adjustment</b>.</li> <li>• At least one entity, such as payment event, payment, or credit bill line item (such as credit bill segment or adjustment) is selected in the refund request.</li> <li>• Whether the approval profile attached to the refund request type has the credit hierarchy and C1-REFRQ To Do type defined.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Enter	C1-REFUNDAPP	C1-REFUNDAPP	<p>This algorithm creates the following:</p> <ul style="list-style-type: none"> <li>• A To Do using the To Do type specified in the approval profile which is attached to the refund request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not.</li> <li>• A log entry is added when a To Do is created using the To Do type.</li> </ul>
Approved	Enter	C1-REFAPPRVD	C1-REFAPPRVD	<p>This algorithm is triggered when the approver clicks the <b>Approve</b> button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the refund request is changed to <b>Approval In Progress</b> and the algorithm attached to the <b>Approval In Progress</b> status is invoked. If further approval is not required, the status of the refund request is changed to <b>Creating Adjustment</b>.</p>
Rejected	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment	Enter	C1-REFADJCRI	C1-REFADJCRI	<p>This algorithm does the following:</p> <ul style="list-style-type: none"> <li>Creates the refund adjustments for the refund request. These refund adjustments are created in the <b>Frozen</b> status. The adjustment ID is displayed corresponding to the entity in the <b>Refund Details</b> zone.</li> <li>Stamps the bill ID of credit line item on the adjustment and the corresponding financial transaction.</li> <li>If a match event is present for the credit bill line item and for payments which are matched against the excess credit contract, the existing match event is stamped on the refund or write up adjustment and the corresponding financial transaction. However, when a match event is not present for payments which are matched against the suspense contract or if the match event does not exist, a new match event is created and stamped on the refund or write up adjustment and the corresponding financial transaction.</li> <li>If you are doing a partial refund for any entity, the corresponding match event status is set to <b>Open</b>. However, if you are refunding the entire eligible amount, the corresponding match event status is set to <b>Balanced</b>.</li> <li>The details of the refund adjustments are added in the <b>A/P Check Request (CL_ADJ_APREQ)</b> table.</li> <li>If a write up adjustment is created, the write up adjustment type specified in the refund request type is displayed corresponding to the entity in the <b>Refund Details</b> zone.</li> </ul>
Processed	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Voided	Enter	C1-REFVOID	C1-REFVOID	<p>This algorithm is invoked on click of the <b>Void</b> button for a refund request which is in processed state.</p> <p>The algorithm cancels all the frozen adjustments created for the refund request.</p> <p>The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (<b>F1_BUS_OBJ_STATUS_RSN_CHAR</b> table). If the reason is not found, it will use the status reason selected by the user</p>

## Algorithms Used in C1-WORequest

The following table lists the algorithms which are attached to the **C1-WORequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-REFREQINF	C1-REFREQINF	<p>This algorithm generates the refund and write off request information string which appears throughout the application. It concatenates the following fields:</p> <ul style="list-style-type: none"> <li>Refund or Write Off Request Type Description</li> <li>Refund or Write Off Request Status Description</li> <li>Refund or Write Off Request ID</li> </ul>
Post-Processing	C1-WOPOSP	C1-WOPOSP	<p>This algorithm recalculates and updates the total write off amount in the <b>Write Off Request</b> zone when you change the write off amount against an entity while editing a write off request.</p>

System Event	Algorithm	Algorithm Type	Description
Validation	C1-WOBOVAL	C1-WOBOVAL	<p>This algorithm validates the following for each entity that you have selected in the write off request:</p> <ul style="list-style-type: none"> <li>• The mandatory data, such as write off amount and adjustment type, is specified.</li> <li>• The write off amount is not less than zero.</li> <li>• The write off amount is not greater than the entity amount.</li> <li>• The write off amount is not greater than the eligible write off amount.</li> <li>• The partial write off is not done at the bill level.</li> <li>• The A/P Request Type is not defined in the selected adjustment type.</li> </ul>

The following table lists the algorithms which are used in the lifecycle of the **C1-WORequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Submitted	Enter	C1-WOSUBMIT	C1-WOSUBMIT	<p>This algorithm checks the following:</p> <ul style="list-style-type: none"> <li>• Whether the approval is required for the write off request. If the approval is required for a write off request, the status of the write off request is changed to <b>Approval In Progress</b>. However, if the approval is not required for a write off request, the status of the write off request is changed to <b>Creating Adjustment</b>.</li> <li>• At least one debit bill line item (such as debit bill segment or adjustment) is selected in the write off request.</li> <li>• Whether the approval profile attached to the write off request type has the debit hierarchy and C1-WOREQ To Do type defined.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Enter	C1-WOAPPROVL	C1-WOAPPROVL	<p>This algorithm creates the following:</p> <ul style="list-style-type: none"> <li>• A To Do using the To Do type specified in the approval profile which is attached to the write off request type. The To Do is sent to the appropriate users in the approval hierarchy depending on whether hierarchical approval is required or not.</li> <li>• A log entry is added when a To Do is created using the To Do type.</li> </ul>
Approved	Enter	C1-WOAPPROVD	C1-WOAPPROVD	<p>This algorithm is triggered when the approver clicks the <b>Approve</b> button. It checks whether the approval is required from users at the next level in the approval hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the write off request is changed to <b>Approval In Progress</b> and the algorithm attached to the <b>Approval In Progress</b> status is invoked. If further approval is not required, the status of the write off request is changed to <b>Creating Adjustment</b>.</p>
Rejected	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Creating Adjustment	Enter	C1-WOADCRT	C1-WOADCRT	<p>This algorithm does the following:</p> <ul style="list-style-type: none"> <li>Creates the write off adjustments for the write off request. These write off adjustments are created in the <b>Frozen</b> status. The adjustment ID is displayed corresponding to the entity in the <b>Write Off Details</b> zone.</li> <li>Stamps the bill ID of debit line item on the adjustment and the corresponding financial transaction.</li> <li>If a match event is present for the debit bill line item, the existing match event is stamped on the write off adjustment and the corresponding financial transaction. However, if the match event does not exist, a new match event is created and stamped on the write off adjustment and the corresponding financial transaction.</li> <li>If you are doing a partial write off for any entity, the corresponding match event status is set to <b>Open</b>. However, if the entire eligible amount is written off, the corresponding match event status is set to <b>Balanced</b>.</li> </ul>
Processed	-	-	-	-
Cancelled	Enter	C1-WOCANCEL	C1-WOCANCEL	<p>This algorithm is invoked on click of the <b>Cancel</b> button for a write off request which is in the <b>Processed</b> state.</p> <p>This algorithm cancels all the frozen adjustments created for the write off request.</p> <p>The algorithm fetches the adjustment cancel reason required for cancelling the adjustments in the status reason characteristics (<b>F1_BUS_OBJ_STATUS_RSN_CHAR</b> table). If the reason is not found, it will use the status reason selected by the user.</p>

## Prerequisites

---

To setup the refund request process, you need to do the following:

- Define the required adjustment types (for creating refund adjustments) where A/P request type is defined
- Define the required adjustment types (for creating write up adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define voided and rejected status reasons for the **C1-RefundReq** business object
- Assign the **C1-REFRQ** To Do type to a To Do role whose users must receive To Do generated while submitting a refund request for approval
- Define the required approval profiles with the credit hierarchy and **C1-REFRQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- Define the required refund request types in the system

To setup the write off request process, you need to do the following:

- Define the required adjustment types (for creating write off adjustments) where A/P request type is not defined
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request Type**
- Define the required characteristic types where the characteristic entity is set to **Refund Write Off Request**
- Define cancelled and rejected status reasons for the **C1-WOREquest** business object
- Assign the **C1-WOREQ** To Do type to a To Do role whose users must receive To Do generated while submitting a write off request for approval
- Define the required approval profiles with the debit hierarchy and **C1-WOREQ** To Do type
- Define an algorithm of the **C1-ADI-INFO** algorithm type and attach to the **Adjustment Information** system event in the **Algorithms** tab of the **Installation Options — Framework** screen
- Define the required write off request types in the system

## Refund/Write Off Request Type

---

Oracle Revenue Management and Billing allows you to define:

- **Refund Request Type** — It is used to create a refund request. You can define multiple refund request types in the system. A refund request type helps the system to determine:
  - Whether the refund request must be approved before creating refund adjustments in the system
  - Approval profile using which the refund request must be approved
  - Whether multi-level or single-level approval is required while creating refund adjustments in the system
  - Tolerance limit for refund (i.e. minimum refund amount)
  - Adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount
  - Default adjustment type using which refund adjustments must be created

- **Write Off Request Type** — It is used to create a write off request. You can define multiple write off request types in the system. A write off request type helps the system to determine:
  - Whether the write off request must be approved before creating write off adjustments in the system
  - Approval profile using which the write off request must be approved
  - Whether multi-level or single-level approval is required while creating write off adjustments in the system
  - Default adjustment type using which write off adjustments must be created

While defining a refund or write off request type where approval workflow is required, you need to select the **Approval Required** check box. If the **Approval Required** check box is selected, the refund or write off request (which is created using the refund or write off request type) is sent for approval before creating the refund or write off adjustments. However, if the **Approval Required** check box is not selected, the refund or write off adjustments are created immediately on submitting a refund or write off request. The approval process is configured through the approval profile. The approval profile allows you to define the approval hierarchy. You can define a debit and credit hierarchy in the approval profile using the threshold amount. The debit approval hierarchy is used for approving write off request and credit approval hierarchy is used for approving refund request. Therefore, while defining an approval profile for refund, you need to define credit hierarchy and set the To Do Type to **C1-REFRQ**. However, while defining an approval profile for write off, you need to define debit hierarchy and set the To Do Type to **C1-WOREQ**.

You can define an approval hierarchy where users with different To Do role at each level can approve or reject the refund or write off request. For example, you can define an approval profile called A1 with two levels of approval. At the first level, a user with the *Manager* To Do role will approve or reject the refund or write off request, and at the second level, a user with the *Senior Manager* To Do role will approve or reject the refund or write off request. On submitting a refund or write off request where approval is required, a notification in the form of To Do is sent to all users with the To Do role defined at the first level in the hierarchy. Once the request is approved at the first level, a notification is sent to all users with the To Do role defined at the next level in the hierarchy. This process continues till the approval is received from all levels in the hierarchy. Once users at all levels approve the refund or write off request, the refund or write off adjustments are created. However, if an approver at any level in the hierarchy rejects the request, the refund or write off adjustments are not created.

The approval hierarchy is controlled by the threshold amount. For example, you define an approval profile called A1 with two levels of approval — First Level (Threshold Amount: 300, To Do Role: *Manager*) and Second Level (Threshold Amount: 500, To Do Role: *Senior Manager*). Now, if the total refund or write off amount is equal to 300 or less than 500, then the approval is required only from the first level in the hierarchy and not from the second level in the hierarchy. However, if the total refund or write off amount is equal to or greater than 500, then the approval is required from the first level and then from the second level in the hierarchy. But, if the total refund or write off amount is less than 300, then the approval is not required from any levels in the hierarchy. The system will automatically approve the refund or write off request and create the refund or write off adjustments.

The system supports both single-level and multi-level approval process while approving refund or write off request. If the **Hierarchical Approval** check box is selected while defining a refund or write off request type, the approval hierarchy defined in the approval profile is followed based on the threshold limit. However, if the **Hierarchical Approval** check box is not selected while defining a refund or write off request type, the approval is required only from the approval level where the total refund or write off amount falls within the threshold limit. Let us understand this with the help of some examples.

### **Example 1**

Refund Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval	
R1	Refund Analyst	<u>Credit Hierarchy</u>	Yes	
		Threshold Amount		To Do Role
		\$500		Senior Analyst
		\$750		Manager
		\$1500		Senior Manager
R2	Refund Analyst	<u>Credit Hierarchy</u>	No	
		Threshold Amount		To Do Role
		\$500		Senior Analyst
		\$750		Manager
		\$1500		Senior Manager

The following table indicates how the system will behave in different refund scenarios:

Refund Request	Refund Request Type	Total Refund Amount (\$)	Comments
RR1	R1	200	This refund request is automatically approved by the system because the total refund amount is less than \$500.
RR2	R1	750	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> <li>1. Users with the Senior Analyst To Do role</li> <li>2. Users with the Manager To Do role</li> </ol> <p>This is because the total refund amount is either equal to \$750 or less than \$1500 and hierarchical approval is required.</p>
RR3	R1	2000	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> <li>1. Users with the Senior Analyst To Do role</li> <li>2. Users with the Manager To Do role</li> <li>3. Users with the Senior Manager To Do role</li> </ol> <p>This is because the total refund amount is greater than \$1500 and hierarchical approval is required.</p>
RR4	R2	200	This refund request is automatically approved by the system because the total refund amount is less than \$500.

Refund Request	Refund Request Type	Total Refund Amount (\$)	Comments
RR5	R2	750	The To Do is sent for approval to users with the Manager To Do role. This is because the total refund amount is either equal to \$750 or less than \$1500 and hierarchical approval is not required.
RR6	R2	2000	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total refund amount is greater than \$1500 and hierarchical approval is not required.

**Example 2**

Write Off Request Type	Approval Profile	Approval Hierarchy	Hierarchical Approval
W1	Write Off Analyst	<b>Debit Hierarchy</b>	Yes
		Threshold Amount	
		\$100	
		\$200	
		\$300	
W2	Write Off Analyst	<b>Debit Hierarchy</b>	No
		Threshold Amount	
		\$100	
		\$200	
		\$300	

The following table indicates how the system will behave in different write off scenarios:

Write Off Request	Write Off Request Type	Total Write Off Amount (\$)	Comments
WO1	W1	90	This write off request is automatically approved by the system because the total write off amount is less than \$100.
WO2	W1	250	The To Do is sent for approval to the following users in the specified order: <ol style="list-style-type: none"> <li>Users with the Senior Analyst To Do role</li> <li>Users with the Manager To Do role</li> </ol> This is because the total write off amount is either equal to \$200 or less than \$300 and hierarchical approval is required.

Write Off Request	Write Off Request Type	Total Write Off Amount (\$)	Comments
WO3	W1	500	<p>The To Do is sent for approval to the following users in the specified order:</p> <ol style="list-style-type: none"> <li>1. Users with the Senior Analyst To Do role</li> <li>2. Users with the Manager To Do role</li> <li>3. Users with the Senior Manager To Do role</li> </ol> <p>This is because the total write off amount is greater than \$300 and hierarchical approval is required.</p>
WO4	W2	90	This write off request is automatically approved by the system because the total write off amount is less than \$100.
WO5	W2	250	The To Do is sent for approval to users with the Manager To Do role. This is because the total write off amount is either equal to \$200 or less than \$300 and hierarchical approval is not required.
WO6	W2	500	The To Do is sent for approval to users with the Senior Manager To Do role. This is because the total write off amount is greater than \$300 and hierarchical approval is not required.

The **Refund/Write Off Request Type** screen allows you to define, edit, delete, and copy a refund and write off request type. This screen consists of the following zones:

- [Refund/Write Off Request Type List](#) on page 1157
- [Refund/Write Off Request Type](#) on page 1158

## Refund/Write Off Request Type List

The **Refund/Write Off Request Type List** zone lists refund and write off request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Refund/Write Off Request Type	Displays the refund or write off request type.
Description	Displays the description of the refund or write off request type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Refund/Write Off Request Type</b> screen appears where you can edit the details of the refund and write off request type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Refund/Write Off Request Type</b> screen appears where you can define a refund and write off request type using an existing refund and write off request type.
Delete	<p>On clicking the <b>Delete</b> () icon, you can delete the refund or write off request type.</p> <p><b>Note:</b> You can delete a refund or write off request type only when you have not created a refund or write off request using the refund or write off request type.</p>

On clicking the **Broadcast**  icon corresponding to refund or write off request type, the **Refund/Write Off Request Type** zone appears with the details of the respective refund or write off request type.

## Refund/Write Off Request Type

The **Refund/Write Off Request Type** zone displays the details of the refund or write off request type. This zone consists of the following sections:

- **Main** — This section provides basic information about the refund or write off request type. It contains the following fields:

Field Name	Field Description
Refund/Write Off Request Type	Displays the refund or write off request type.
Refund/Write Off Request Business Object	Indicates the business object that will be used to create the refund or write off request.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears with the details of the respective business object.
Description	Displays the description of the refund or write off request type.
Detailed Description	Displays additional information about the refund or write off request type.
Status	Indicates the status of the refund or write off request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Action	Indicates whether the request type is created for refund or write off. The valid values are: <ul style="list-style-type: none"> <li>• Refund</li> <li>• Write Off</li> </ul>
Minimum Refund Amount	Displays the minimum refund amount.  <b>Note:</b> This field appears only when the <b>Action</b> field is set to <b>Refund</b> .

Field Name	Field Description
Write Up Adjustment Type	Indicates the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount.
	<b>Note:</b> This field appears only when the <b>Action</b> field is set to <b>Refund</b> .
Approval Required	Indicates whether approval is required while creating the refund or write off adjustments using the refund or write off request type.
Approval Profile	Indicates the approval profile which must be used to define approval hierarchy for the refund or write off request type.
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.  It has a link. On clicking the link, the <b>Approval Profile</b> screen appears with the details of the respective approval profile.
Hierarchical Approval	Indicates whether multi-level or single approval is required while creating the refund or write off adjustments using the refund or write off request type.
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.
Adjustment Type	Indicates the adjustment type using which the refund or write off adjustments must be created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears with the details of the respective adjustment type.

- **Characteristics** — This section lists the characteristics defined for the refund or write off request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund or write off request type.
Delete	Used to delete the refund or write off request type.
	<b>Note:</b> You can delete a refund or write off request type only when you have not created a refund or write off request using the refund or write off request type.
Duplicate	Used to create a new refund or write off request type using an existing refund or write off request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund or write off request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Refund/Write Off Request Type** zone does not appear in the **Refund/Write Off Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the refund or write off request type in the **Refund/Write Off Request Type List** zone.

## Defining a Refund or Write Off Request Type

### Prerequisites

To define a refund or write off request type, you should have:

- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

### Procedure

To define a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Refund/Write Off Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type Business Object	Used to indicate the business object that you want to use to create the refund or write off request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple refund and write off request type business objects defined in the application. If there is only one refund and write off request type business object defined in the application, the **Refund/Write Off Request Type** screen appears.

4. Select the required refund and write off request type business object from the respective field.
5. Click **OK**.

The **Refund/Write Off Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the refund or write off request type.
- **Characteristics** - Used to define characteristics for the refund or write off request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes
Business Object	Indicates the refund and write off request type business object used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object that you want to use while creating the refund or write off request.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No
Status	<p>Used to indicate the status of the refund or write off request type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <p><b>Note:</b> You cannot change the status of a refund or write off request type to <b>Inactive</b> if there are refund or write off requests which are created using the refund or write off request type and are currently in the <b>Draft</b> or <b>Approval In Progress</b> status.</p>	Yes
Action	<p>Used to indicate whether the request type is created for refund or write off. The valid values are:</p> <ul style="list-style-type: none"> <li>• Refund</li> <li>• Write Off</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Minimum Refund Amount	Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment.	Yes
	<b>Note:</b> This field appears only when the <b>Action</b> field is set to <b>Refund</b> .	
Write Up Adjustment Type	Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount.	Yes
	<b>Note:</b> This field appears only when the <b>Action</b> field is set to <b>Refund</b> .  You can create write up adjustments only using those adjustment types where A/P request type is not defined.	
Approval Required	Used to indicate whether approval is required while creating the refund or write off adjustments using the refund or write off request type.	No
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the refund or write off request type.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the refund or write off adjustments using the refund or write off request type.	No
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Refund Adjustment Type	Used to indicate the adjustment type using which the refund adjustments must be created. This default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request.	Yes
	<b>Note:</b> This field appears only when the <b>Action</b> field is set to <b>Refund</b> . The list includes only those adjustment types where A/P request type is defined.	
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request.	Yes
	<b>Note:</b> This field appears only when the <b>Action</b> field is set to <b>Write Off</b> . You can create write off adjustments only using those adjustment types where A/P request type is not defined.	

6. Enter the required details depending on whether you want to define refund or write off request type.

**Note:** You can search for an adjustment type by clicking the **Search**  icon corresponding to the respective field.

7. Define characteristics for the refund or write off request type, if required.  
 8. Click **Save**.

The refund or write off request type is defined.

## Defining Characteristics for a Refund or Write Off Request Type

### Prerequisites

To define characteristics for a refund or write off request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request Type**)

### Procedure

To define characteristics for a refund or write off request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a refund or write off request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Refund Write Off Request Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the refund or write off request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the refund or write off request type.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the refund or write off request type, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the refund or write off request type, click the **Delete** () icon corresponding to the characteristic.

Copying a Refund or Write Off Request Type

Instead of creating a refund or write off request type from scratch, you can create a new refund or write off request type using an existing refund or write off request type. This is possible through copying a refund or write off request type. On copying a refund or write off request type, the details including the characteristics are copied to the new refund or write off request type. You can then edit the details, if required.

**Prerequisites**

To copy a refund or write off request type, you should have:

- Refund or Write Off request type (whose copy you want to create) defined in the application
- Refund or Write Off request business objects defined in the application
- Approval profiles defined in the application
- Adjustment types with and without A/P request type defined in the application

**Procedure**

To copy a refund or write off request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **R** and then click **Refund/Write Off Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Refund/Write Off Request Type** sub-menu.

The **Refund/Write Off Request Type** screen appears.

4. In the **Refund/Write Off Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the refund or write off request type whose copy you want to create.

The **Refund/Write Off Request Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the refund or write off request type.
- **Characteristics** - Used to define characteristics for the refund or write off request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to specify the refund or write off request type.	Yes
Business Object	Indicates the refund and write off request type business object used while defining the refund or write off request type.	Not applicable
Refund/Write Off Request Business Object	Used to indicate the business object that you want to use while creating the refund or write off request.	Yes
Description	Used to specify the description for the refund or write off request type.	Yes
Detailed Description	Used to specify additional information about the refund or write off request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to indicate the status of the refund or write off request type. The valid values are:</p> <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul> <p><b>Note:</b> You cannot change the status of a refund or write off request type to <b>Inactive</b> if there are refund or write off requests which are created using the refund or write off request type and are currently in the <b>Draft</b> or <b>Approval In Progress</b> status.</p>	Yes
Action	<p>Used to indicate whether the request type is created for refund or write off. The valid values are:</p> <ul style="list-style-type: none"> <li>Refund</li> <li>Write Off</li> </ul>	Yes
Minimum Refund Amount	<p>Used to specify the minimum refund amount. This field is used to define tolerance limit for refund. If the total refund amount in a refund request is less than the minimum refund amount, the system creates a write up adjustment. However, if the total refund amount in a refund request is equal to or greater than the minimum refund amount, the system creates a refund adjustment.</p> <p><b>Note:</b> This field appears only when the <b>Action</b> field is set to <b>Refund</b>.</p>	Yes
Write Up Adjustment Type	<p>Used to indicate the adjustment type using which the write up adjustment must be created when the total refund amount is less than the minimum refund amount.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Action</b> field is set to <b>Refund</b>.</p> <p>You can create write up adjustments only using those adjustment types where A/P request type is not defined.</p>	Yes
Approval Required	Used to indicate whether approval is required while creating the refund or write off adjustments using the refund or write off request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Approval Profile	Used to indicate the approval profile which must be used to define approval hierarchy for the refund or write off request type.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	
Hierarchical Approval	Used to indicate whether multi-level or single-level approval is required while creating the refund or write off adjustments using the refund or write off request type.	No
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	
Refund Adjustment Type	Used to indicate the adjustment type using which the refund adjustments must be created. This default adjustment type appears when you select the payments or credit bill line items for refund. You can then change the adjustment type, if required, while editing a refund request.	Yes
	<b>Note:</b>  This field appears only when the <b>Action</b> field is set to <b>Refund</b> .  The list includes only those adjustment types where A/P request type is defined.	
Write Off Adjustment Type	Used to indicate the adjustment type using which the write off adjustments must be created. This default adjustment type appears when you select the debit bill line items for write off. You can then change the adjustment type, if required, while editing a write off request.	Yes
	<b>Note:</b>  This field appears only when the <b>Action</b> field is set to <b>Write Off</b> .  You can create write off adjustments only using those adjustment types where A/P request type is not defined.	

**Tip:** Alternatively, you can click the **Duplicate** button in the **Refund/Write Off Request Type** zone to create a copy of the refund or write off request type.

5. Enter the required details in the **Main** section.

**Note:** You can search for an adjustment type by clicking the **Search**  icon corresponding to the respective field.

6. Define, edit, or remove characteristics from the refund or write off request type, if required.

7. Click **Save**.

The new refund or write off request type is defined.

Search By	<p>Used to indicate whether you want to search for a refund or write off request using request, payment, or bill details. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Request Details</b> — Used when you want to search for refund and/or write off requests.</li> <li>• <b>Payment Details</b> — Used when you want to search for refund requests.</li> <li>• <b>Bill Details</b> — Used when you want to search for refund and/or write off requests.</li> </ul> <p><b>Note:</b> By default, the <b>Request Details</b> option is selected.</p>	Yes
Action	<p>Used to indicate whether you want to search for refund or write off requests. The valid values are:</p> <ul style="list-style-type: none"> <li>• Refund</li> <li>• Write Off</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Request Details</b> or <b>Bill Details</b> option from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request Type	Used to search refund or write off requests which are created using a particular refund or write off request type.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list. The refund or write off request types are listed only when you set the <b>Action</b> field to either <b>Refund</b> or <b>Write Off</b> .	
Status	Used to search refund or write off requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Cancelled</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> <li>• Voided</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list. The <b>Voided</b> status is applicable while searching for refund requests and the <b>Cancelled</b> status is applicable while searching for write off requests.	
User ID	Used to search refund or write off requests which are created by a particular user.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Created From	Used to search refund or write off requests which are created from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
To	Used to search refund or write off requests which are created till a particular date.	No
	<b>Note:</b> By default, the current date appears in this field. This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Refund/Write Off Request ID	Used to search a particular refund or write off request.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Payment Event ID	Used to search refund requests which includes a particular payment event for refund.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	
Payor Account ID	Used to search refund requests which are created for a particular payor account.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	
Payor Name	Used to search refund requests which are created for a particular payor.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	
Payment Date	Used to search refund requests which includes payments made on a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	
MICR ID	Used to search refund requests which includes payments made with a particular MICR code.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	
Check Number	Used to search refund request which includes payment made through a particular check.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.	
Bill ID	Used to search refund or write off requests which includes bill segments or adjustments of a particular bill.	No
	<b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Bill Date From	Used to search refund or write off requests which includes bill segments or adjustments of bills which are created from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	
To	Used to search refund or write off requests which includes bill segments or adjustments of bills which are created till a particular date.	No
	<b>Note:</b> By default, the current date appears in this field. This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a refund or write off request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the refund or write off request is created.
Refund/Write Off Request Information	Displays information about the refund or write off request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Refund Request</b> or <b>Write Off Request</b> screen appears depending on whether the request is for refund or write off.
Status	Indicates the status of the refund or write off request.
Action	Indicates whether the request is created for refund or write off. The valid values are: <ul style="list-style-type: none"> <li>• Refund</li> <li>• Write Off</li> </ul>
	<b>Note:</b> This column appears only when you select the <b>Request Details</b> or <b>Bill Details</b> option from the <b>Search By</b> list.
Refund/Write Off Amount	Displays the total refund or write off amount.
	<b>Note:</b> This column appears only when you select the <b>Request Details</b> or <b>Bill Details</b> option from the <b>Search By</b> list.
Refund Amount	Displays the total refund amount.
	<b>Note:</b> This column appears only when you select the <b>Payment Details</b> option from the <b>Search By</b> list.

Column Name	Column Description
Account Information	Displays additional information about the account for which the refund or write off request is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Created By	Indicates the user who has created the refund or write off request.

## Searching for a Refund or Write Off Request

### Prerequisites

To search for a refund or write off request, you should have:

- Refund or Write Off request types defined in the application

### Procedure

To search for a refund or write off request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Refund/Write Off Request**.  
A sub-menu appears.
3. Click the **Search** option from the **Refund/Write Off Request** sub-menu.  
The **Refund/Write Off Request** screen appears.
4. Enter the search criteria in the **Search Refund/Write Off Request** zone depending on whether you want to search for a refund or write off request.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of refund or write off requests that meet the search criteria appears in the **Search Results** section.

Viewing the Refund Request Details

Procedure

To view the details of a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to view.

The **Refund Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the refund request. It contains the following zones:
    - **Refund Request** – Displays the details of the refund request.
    - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
  - **Payments** — Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
  - **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears only when the refund request is in the **Draft** status.
  - **Log** – Lists the complete trail of actions performed on the refund request.
3. View the details of the refund request in the **Refund Request** zone.
  4. View the entities (such as payment events, payments, or credit bill line items) which must be refunded in the **Refund Details** zone.

Viewing the Write Off Request Details

Procedure

To view the details of a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to view.

The **Write Off Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the write off request. It contains the following zones:
    - **Write Off Request** – Displays the details of the write off request.
    - **Write Off Details** – Lists the debit bill line items, such as debit bill segments and adjustments, of the account which must be written off.
  - **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears only when the write off request is in the **Draft** status.
  - **Log** – Lists the complete trail of actions performed on the write off request.
3. View the details of the write off request in the **Write Off Request** zone.
  4. View the entities (such as debit bill segments and adjustments) which must be written off in the **Write Off Details** zone.

## Refund Request

Once you create a refund request, the **Refund Request** screen allows you to:

- Edit and delete a refund request
- View the details of a refund request
- Submit a refund request for approval
- Approve or reject a refund request
- View the log of a refund request
- Add a log entry for a refund request
- Void a refund request

This screen consists of the following tabs:

- **Main** – Displays information about the refund request. It contains the following zones:
  - **Refund Request** – Displays the details of the refund request.
  - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
  - **Bill Line Items** — Displays the details of the bill which must be refunded.

**Note:** This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Refund Details** zone.

- **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. It contains the following zones:
  - **Search Bills** — Lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.
  - **Bill Line Items** — Lists the debit and credit bill segments and adjustments of the bill.

This tab appears only when the refund request is in the **Draft** status.

- **Payments** — Used to search payment events or individual payments that you want to refund. It contains the following zones:
  - **Search Payment Event** — Lists the payment events which are created for the account. You can filter the payment events using various search criteria.
  - **Payments** — Lists all payments created through the payment event.

This tab appears only when the refund request is in the **Draft** status.

- **Log** – Lists the complete trail of actions performed on the refund request.

Refund Request - Main

The **Main** tab displays information about the refund request. It contains the following zones:

- [Refund Request](#) on page 1180
- [Refund Details](#) on page 1182
- [Bill Line Items](#) on page 1183

Refund Request

The **Refund Request** zone displays the details of the refund request. This zone contains the following sections:

- **Main** — This section provides basic information about the refund request. It contains the following fields:

Field Name	Field Description
Refund Request Information	Displays information about the refund request.
Refund Request Type	Indicates the refund request type using which the refund request is created. <div><b>Note:</b> It has a link. On clicking the link, the <b>Refund/Write Off Request Type</b> screen appears where you can view the details of the refund request type.</div>
Status	Indicates the status of the refund request. The valid values are: <ul style="list-style-type: none"><li>• Draft</li><li>• Approval In Progress</li><li>• Rejected</li><li>• Processed</li><li>• Voided</li></ul>

Field Name	Field Description
Status Reason	Indicates the reason why the refund request is rejected or voided.  <b>Note:</b> This field appears only when the refund request is in the <b>Rejected</b> or <b>Voided</b> status. It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the rejected or voided reason.
Account Information	Indicates the account for which the refund request is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Person Name	Indicates the person for whom the refund request is created.
Override Address	Indicates whether the account's mailing address is overridden.
Address 1	Displays the house number and apartment name.
Address 2	Displays the street name.
Address 3	Indicates the landmark, if available.
Address 4	Displays the village, town, or city name.
City	Displays the city name.
State	Displays the state name.
Country	Displays the country name.
Postal	Displays the postal or zip code.
Comments	Displays additional information about the refund request.
Total Refund Amount	Displays the total refund amount.

- **Characteristics** — Lists the characteristics defined for the refund request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the refund request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the refund request.  <b>Note:</b> The <b>Edit</b> button appears only when the refund request is in the <b>Draft</b> status.

Button Name	Button Description
Delete	Used to delete the refund request.
	<b>Note:</b> The <b>Delete</b> button appears only when the refund request is in the <b>Draft</b> status.
Submit	Used to submit the refund request for approval.
	<b>Note:</b> The <b>Submit</b> button appears only when the refund request is in the <b>Draft</b> status.
Approve	Used to approve the refund request.
	<b>Note:</b> The <b>Approve</b> button appears only when: <ul style="list-style-type: none"> <li>The refund request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the refund request.</li> </ul>
Reject	Used to reject the refund request.
	<b>Note:</b> The <b>Reject</b> button appears only when: <ul style="list-style-type: none"> <li>The refund request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the refund request.</li> </ul>
Void	Used to void the refund request.
	<b>Note:</b> The <b>Void</b> button appears only when the refund request is in the <b>Processed</b> status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the refund request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the refund request status is updated
Create Date/Time	Displays the date and time when the refund request is created.

### Refund Details

The **Refund Details** zone lists the payment events, payments, and credit bill line items (such as bill segments and adjustments) that you have added to the refund request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a payment event, payment, bill, bill segment, or an adjustment.

Column Name	Column Description
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Refund Amount	<p>Displays the amount that must be refunded.</p> <p><b>Note:</b> By default, the amount which is eligible for refund appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.</p>
Contract Information	<p>Displays additional information about the contract against which the bill segment or adjustment is created or against which the payment is matched. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.</p>
Adjustment Type	<p>Indicates the adjustment type using which the refund adjustment must be created.</p> <p><b>Note:</b> By default, the adjustment type specified in the refund request type appears in this column. You can change the adjustment type, if required, by editing the refund request.</p>
Adjustment Information	<p>Displays information about the refund adjustment.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.</p> <p>The data appears in this column only when the status of the refund request is <b>Processed</b>.</p> <p>The information string appears only when an algorithm of the <b>C1-ADI-INFO</b> algorithm type is attached to the <b>Adjustment Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options — Framework</b> screen.</p>

**Note:** On clicking the Broadcast  icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

### Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.
	<b>Note:</b> If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment.

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Refund Details** zone.

#### Related Topics

How to add a credit bill line item to the refund request	<a href="#">Adding a Credit Bill Line Item to the Refund Request</a> on page 1196

## Refund Request - Bills

The **Bills** tab allows you to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. It contains the following zones:

- [Search Bills](#) on page 1184
- [Bill Line Items](#) on page 1186

### Search Bills

The **Search Bills** zone lists completed bills of the account which are either with credit balance or have one or more credit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a bill using bill or bill and price item details. The valid values are: <ul style="list-style-type: none"> <li>Bill Details</li> <li>Bill and Price Item Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Bill Details</b> option is selected.	
Bill ID	Used to search a particular bill.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No
Price Item	Used to search bills which are created for a particular price item.	No
	<b>Note:</b> This field appears only when you select <b>Bill and Price Item Details</b> option from the <b>Search By</b> list. You can search for a price item by clicking the <b>search</b>  icon corresponding to the field.	

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Amount	Displays the total bill amount.

If you want to refund a bill with credit balance and all credit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All credit bill segments and adjustments of the bill are added in the **Refund Details** zone on the **Main** tab. However, if you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

**Note:** If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

### Bill Line Items

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill segment or an adjustment.
Entity Information	Displays additional information about the bill segment or adjustment. If the entity is a bill segment, the context menu appears in the column which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. If the entity is a bill segment, the <b>Bill Segment</b> screen appears where you can view the details of the respective bill segment on clicking the link. However, if the entity is an adjustment, the <b>Adjustment</b> screen appears with the details of the respective adjustment on clicking the link.
Entity Amount	Displays the bill segment or adjustment amount.
Eligible Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.
	<b>Note:</b> If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.
Amount Refunded	Displays the amount which is already refunded to the account.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.

You can select one or more credit bill segments or adjustments and click the **Add** button in this zone to add selected credit bill segments or adjustments to the refund request.

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Search Bills** zone.

## Refund Request - Payments

The **Payments** tab allows you to search payment events or individual payments that you want to refund. It contains the following zones:

- [Search Payment Event](#) on page 1187
- [Payments](#) on page 1188

### Search Payment Event

The **Search Payment Event** zone lists the payment events which are created for the account. You can filter the payment events using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a payment event using the payment details. The valid values are: <ul style="list-style-type: none"> <li>Payment Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Payment Details</b> option is selected.	
Payment Event ID	Used to search a particular payment event.	No
Suspense/Excess Credit Contract	Used to search payment events which include payments made against a particular suspense or excess credit contract.	No
	<b>Note:</b> The suspense and excess credit contracts are listed only when these contracts are associated with the account	
Check Number	Used to search a payment event which includes payment made through a particular check.	No
Payment Date	Used to search payment events which include payments created from a particular date onwards.	No
To	Used to search payment events which include payments created till a particular date.	No
MICR ID	Used to search payment events which include payments made with a particular MICR code.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Payment Event Information	Displays additional information about the payment event.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment Event</b> screen appears where you can view the details of the respective payment event.
Payment Date	Displays the date when the payments were created.
Tender Amount	Displays the tender amount.
Payment Event ID	Displays the payment event ID.

If you want to refund all payments of a payment event, you need to select the check box corresponding to the payment event and then click the **Add** button in the **Search Results** section. If all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details**

zone on the **Main** tab. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

**Note:** If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

### Related Topics

How to add a payment event to the refund request	<a href="#">Adding a Payment Event to the Refund Request</a> on page 1193

### **Payments**

The **Payments** zone lists only those payments which are created through the payment event and are currently in the **Frozen** status. This zone contains the following columns:

Column Name	Column Description
Payment ID	Displays the payment ID.
	<b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the respective payment.
Payee Account Information	Displays additional information about the account for which the payment was made.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Payment Amount	Displays the payment amount.
Payment Currency	Indicates the currency in which the payment was made.
Payment Status	Indicates the status of the payment.
Match Type	Indicates the match type using which the payment was matched.
Match Value	Indicates the entity (such as bill, contract, and so on) against which the payment was matched.
Amount Refunded	Displays the amount which is already refunded to the payor account.

You can select one or more payments and click the **Add** button in this zone to add selected payments to the refund request.

By default, the **Payments** zone does not appear in the **Payments** tab. It appears only when you click the **Broadcast**  icon corresponding to the payment event in the **Search Payment Event** zone.

## Creating a Refund Request

### Prerequisites

To create a refund request, you should have:

- Refund request types defined in the application

### Procedure

To create a refund request:

1. Do either of the following:

If you want to...	Then...
Define a refund request from the <b>Account Receivable Central</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Main</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>Financial</b> and then click <b>Account Receivable Central</b>.</li> <li>3. Search for the bill in the <b>Account Receivable Central</b> screen.</li> <li>4. In the <b>Search Results</b> section, select the required bill and then click <b>Refund</b>.</li> </ol>

If you want to...	Then...
	<b>Note:</b> Only one bill at a time is allowed to select for <b>Refund Request</b> from the <b>Account Receivable Central</b> screen.
Define a refund request from the <b>Refund Request</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Main</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>Financial</b> and then click <b>Refund/Write Off Request</b>. A sub-menu appears.</li> <li>3. Click the <b>Add</b> option from the <b>Refund/Write Off Request</b> sub-menu.</li> </ol>

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	<p>Displays the type of request (refund or write off) to be created.</p> <p><b>Note:</b> This field is pre-populated if the refund request is created from the <b>Account Receivable Central</b> screen. This field is editable if the refund request is created from the <b>Refund/Write Off Request</b> screen.</p>	Not applicable
Refund/Write Off Request Type	<p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p><b>Note:</b> The refund request types are listed when you set the <b>Action</b> field to <b>Refund</b> and the write off request types are listed when you set the <b>Action</b> field to <b>Write Off</b>.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account	Used to indicate the account for which you want to create the refund or write off request.	Yes
	<p><b>Note:</b></p> <p>This field is pre-populated if the refund request is created from the <b>Account Receivable Central</b> screen.</p> <p>This field is editable if the refund request is created from the <b>Refund/Write Off Request</b> screen.</p> <p>You can search for an account by clicking the <b>Search</b>  icon corresponding to the respective field.</p>	

**Tip:**

Alternatively, you can access the **Select Request Type** screen:

- By clicking the **Add** button in the **Page Title** area of **Refund/Write Off Request** screen.
- By selecting the payment which you want to refund in the **Payment Event Summary** screen and then clicking the **Refund** button. Note that the system will allow you to refund only those payments which are in the **Frozen** status and matched against the suspense or excess credit contract.

2. Select the required refund request type from the respective field.

3. Click **Save**.

The refund request is defined and the status of the refund request is set to **Draft**. The **Refund Request** screen appears where you can view the details of the refund request. It contains the following tabs:

**Note:** The refund request can be created only for bill with outstanding amount lesser than zero.

- **Main** – Displays information about the refund request. It contains the following zones:
    - **Refund Request** – Displays the details of the refund request.
    - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
  - **Payments** — Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
  - **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears only when the refund request is in the **Draft** status.
  - **Log** – Lists the complete trail of actions performed on the refund request.
4. Add payment events, payments, or credit bill line items that you want to refund.
  5. Edit the refund amount of each entity, if required.
  6. Define characteristics for the refund request, if required.
  7. Override the address if you want to sent the refund to an address other than the account's main customer address.

How to define characteristics for a refund request	<a href="#">Defining Characteristics for a Refund Request</a> on page 1192

**Defining Characteristics for a Refund Request**

**Prerequisites**

To define characteristics for a refund request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

**Procedure**

To define characteristics for a refund request:

- Search for the refund request in the **Refund/Write Off Request** screen.
- In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.

The **Refund Request** screen appears.

- Click the **Edit** button in the **Refund Request** zone.

The **Edit Refund Request** screen appears.

**Note:** The **Edit** button appears only when the refund request is in the **Draft** status.

- Ensure that the **Characteristics** section is expanded when you are editing the refund request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Refund Write Off Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the refund request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the refund request.

5. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the refund request, click the **Add**  icon and then repeat step 5.

**Note:** However, if you want to remove a characteristic from the refund request, click the **Delete**  icon corresponding to the characteristic.

## Adding a Payment Event to the Refund Request

### Prerequisites

To add a payment event to the refund request, you should have:

- Payments made by the account for which you need to create the refund request

### Procedure

To add a payment event to the refund request:

1. Click the **Payments** tab in the **Refund Request** screen.

The **Payments** tab appears.

2. Filter the payment events, if required, in the **Search Payment Event** zone.

**Note:** You can only refund payments, which are matched against suspense or excess credit contracts, to the payor account. Therefore, you can only view payment events which includes payments matched against suspense or excess credit contracts. If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

3. Select the check box corresponding to the payment event, whose payments you want to refund, in the **Search Results** section.

**Note:** You can add more than one payment event to the refund request at the same time.

4. Click **Add**.

A message appears indicating that the selected payment events are added to the refund request.

5. Click **OK**.

Note that the entity is added in the **Refund Details** zone on the **Main** tab.

**Note:**  
 You can only refund payments which are in the **Frozen** status.  
  
 If all payments in the payment event are matched against the same suspense or excess credit contract, the payment event is added in the **Refund Details** zone. However, if the payments in the payment event are matched against different suspense or excess credit contracts, the payments of the payment event are added in the **Refund Details** zone.

Adding a Payment to the Refund Request

Prerequisites

To add a payment to the refund request, you should have:

- Payments made by the account for which you need to create the refund request

Procedure

To add a payment to the refund request:

1. Click the **Payments** tab in the **Refund Request** screen.

The **Payments** tab appears.

2. Filter the payment events, if required, in the **Search Payment Event** zone.

**Note:** You can only refund payments, which are matched against suspense or excess credit contracts, to the payor account. Therefore, you can only view payment events which includes payments matched against suspense or excess credit contracts. If a refund request is currently in progress for a payment event or for any payment of a payment event, those payments events of the account are not listed in the **Search Payment Event** zone.

3. In the **Search Results** section, click the **Broadcast**  icon corresponding to the payment event whose payments you want to view.

The **Payments** zone appears.

4. Select the check box corresponding to the payment that you want to refund.

**Note:** You can add more than one payment to the refund request at the same time.

5. Click **Add**.

A message appears indicating that the selected payments are added to the refund request.

6. Click **OK**.

Note that the payments are added in the **Refund Details** zone on the **Main** tab.

**Note:** You can only refund payments which are in the **Frozen** status.

**Adding a Credit Bill to the Refund Request**

You can refund the credit bills to the account.

**Prerequisites**

To add a credit bill to the refund request, you should have:

- Completed bills for the account with one or more credit line items

**Procedure**

To add a credit bill to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.  
The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

**Note:** If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add the credit bill to the refund request	<ol style="list-style-type: none"> <li>1. In the <b>Search Bills</b> zone, select the bills that you want to refund.</li> <li>2. Click the <b>Add</b> button available at the upper left corner of the <b>Search Bills</b> zone.</li> </ol>
	<b>Note:</b> Default adjustment type selected in the write off request type should be non A/P.
A bill has credit balance and one or more debit line items and you want to add the credit bill to the refund request	<ol style="list-style-type: none"> <li>1. In the <b>Search Bills</b> zone, select the bills that you want to refund.</li> <li>2. Click the <b>Add</b> button available at the upper left corner of the <b>Search Bills</b> zone.</li> </ol>
	<b>Note:</b> Default adjustment type selected in the write off request type should be non A/P.

4. Click **Add**.

A message appears indicating that the selected bills are added to the refund request.

**Note:** If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click **OK**.

Note that all the credit bill segments or adjustments of the bills are added in the **Refund Details** zone on the **Main** tab.

**Note:**  
Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.  
The system will not allow you to add a debit line item to the **Refund Details** zone.

**Adding a Credit Bill Line Item to the Refund Request**

You can refund the credit bill line items, such as bill segments and adjustments, to the account. While adding a credit bill line item to the refund request, you can either:

- Directly add all credit line items of a bill to the refund request by adding the bill which has all bill segments and adjustments in credit
- Individually add a credit bill segment or adjustment of a bill (with one or more credit line items) to the refund request

**Prerequisites**

To add a credit bill line item to the refund request, you should have:

- Completed bills for the account with one or more credit line items

**Procedure**

To add a credit bill line item to the refund request:

1. Click the **Bills** tab in the **Refund Request** screen.  
The **Bills** tab appears.
2. Filter the bills, if required, in the **Search Bills** zone.

**Note:** If a refund request is currently in progress for a credit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all debit line items are not listed in the **Search Bills** zone.

3. Do either of the following:

If...	Then...
A bill has all credit line items and you want to add a particular credit bill line item to the refund request	<ol style="list-style-type: none"> <li>1. In the <b>Search Bills</b> zone, click the <b>Broadcast</b>  icon corresponding to the bill whose line items you want to view. The <b>Bill Line Items</b> zone appears.</li> <li>2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund.</li> </ol>
A bill has credit balance and one or more debit line items	<ol style="list-style-type: none"> <li>1. In the <b>Search Bills</b> zone, click the <b>Broadcast</b>  icon corresponding to the bill whose line items you want to view. The <b>Bill Line Items</b> zone appears.</li> <li>2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund.</li> </ol>
A bill has debit balance and one or more credit line items	<ol style="list-style-type: none"> <li>1. In the <b>Search Bills</b> zone, click the <b>Broadcast</b>  icon corresponding to the bill whose line items you want to view. The <b>Bill Line Items</b> zone appears.</li> <li>2. Select the check box corresponding to the credit bill segment or adjustment that you want to refund.</li> </ol>

4. Click **Add**.

A message appears indicating that the selected bill segments or adjustments are added to the refund request.

**Note:** If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the credit line items by directly adding the bill. In such case, you need to individually select the credit bill segments and adjustments of the bill and then add them to the refund request.

5. Click **OK**.

Note that the credit bill segments or adjustments are added in the **Refund Details** zone on the **Main** tab.

**Note:**

Irrespective of whether you select a credit bill, or credit bill segments or adjustments, the credit bill segments or adjustments are added in the **Refund Details** zone. The credit bill is not added to the **Refund Details** zone.

The system will not allow you to add a debit line item to the **Refund Details** zone.

Editing a Refund Request

Prerequisites

To edit a refund request, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit a refund request:

- Search for the refund request in the **Refund/Write Off Request** screen.
- In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose details you want to edit.  
The **Refund Request** screen appears.

- Click the **Edit** button in the **Refund Request** zone.

The **Edit Refund Request** screen appears. It contains the following section:

Field Name	Field Description	Mandatory (Yes or No)
Refund Request Information	Displays information about the refund request.	Not applicable
Account Information	Indicates the account for which the refund request is created.	Not applicable
Person Name	Used to indicate the person for whom the refund request is created.	No
Override Address	Used to indicate whether the account's mailing address must be overridden.	No
	<b>Note:</b> By default, the account's main customer's address appears in the following fields — Address 1, Address 2, Address 3, Address 4, City, Country, State, and Postal. You can override the address in these fields, if required.	
Address 1	Used to specify the house number and apartment name.	No
Address 2	Used to specify the street name.	No
Address 3	Used to specify any landmark, if available.	No
Address 4	Used to specify the village, town, or city name.	No
City	Used to specify the city name.	No
Country	Used to specify the country name.	No

Field Name	Field Description	Mandatory (Yes or No)
State	Used to specify the state name.	No
Postal	Used to specify the postal or zip code.	No
Comments	Used to specify additional information about the refund request.	No

In addition, this screen contains the following two sections:

- **Characteristics** — Used to define characteristics for the refund request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the refund request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the refund request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Refund Write Off Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the refund request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the refund request.

4. Modify the details of the refund request, if required.
5. Define, edit, or remove characteristics from the refund request, if required.
6. Click **Save**.

The changes made to the refund request are saved.

Editing the Refund Details

Prerequisites

To edit the refund details, you should have:

- Adjustment types with A/P request type defined in the application

Procedure

To edit the refund details:

- Search for the refund request in the **Refund/Write Off Request** screen.
- In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose bill line item details you want to edit.

The **Refund Request** screen appears. You can edit the bill line items by either of the following ways:

If...	Then
Select the bill whose details you want to edit in the <b>Refund Details</b> zone and click the <b>Edit</b> button available in the upper left corner of this zone.	The <b>Edit Request Details</b> screen appears.
In the <b>Refund Details</b> zone, click the <b>Broadcast</b>  icon corresponding to the bill whose line items details you want to edit.	The <b>Bill Line Items</b> zone appears.
	<div>Note: This zone appears only when the Entity Type is <b>Bill</b>.</div> <ol style="list-style-type: none"> <li>Select the bill line item whose details you want to edit in the <b>Bill Line Items</b> zone and click the <b>Edit</b> button available in the upper left corner of this zone.</li> </ol> <p>The <b>Edit Request Details</b> screen appears.</p>

**Note:** A bill line item from the refund request can be edited only when the refund request is in the **Draft** status.

The **Edit Request Details** screen contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request ID	Displays the refund request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable
Adjustment Type	Indicates the adjustment type of the refund request type.  You can search for an adjustment type by clicking the <b>Search</b>  icon corresponding to the field.	No

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are <ul style="list-style-type: none"> <li>• Adjustments</li> <li>• Bill</li> <li>• Bill Segment</li> <li>• Payment Event</li> <li>• Payment</li> </ul>
Entity ID	Displays the entity ID.
Entity Amount	Displays the entity amount.
Currency	Displays the currency in which the entity was created.
Request Amount	Displays the amount that must be refunded.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created. <div> <b>Note:</b>  You can search for an account by clicking the <b>Search</b>  icon corresponding to the field. </div>
Bill ID	Displays the bill ID.

In addition to the above columns, the screen has following button:

Button Name	Button Description
Override	Used to override an adjustment type of the refund request.

**Note:**

In the **Bill Line Items** zone, click the **Broadcast**  icon corresponding to the bill line item which you want to delete

Pagination is used to display limited number of records in the **Search Results** section. By default, 10 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** () , **Previous** () , **Next** () , and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE\_NUMBER** lookup field.

3. Modify the details of the bill line items.

4. Click **Save**.

The changes made to the refund bill line items are saved.

## Submitting a Refund Request

### Prerequisites

To submit a refund request, you should have:

- Payment events, payments, or credit bill line items added in the refund request

**Procedure**

To submit a refund request:

1. Search for the refund request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request that you want to submit.

The **Refund Request** screen appears.

3. Click the **Submit** button in the **Refund Request** zone.

The system behaves in the following manner:

If...	Then...
The <b>Approval Required</b> and <b>Hierarchical Approval</b> check boxes are selected in the refund request type using which the refund request is created	A To Do of the <b>C1-REFRQ</b> To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the refund request is changed to <b>Approval In Progress</b> .
The <b>Approval Required</b> check box is selected, but the <b>Hierarchical Approval</b> check box is not selected in the refund request type using which the refund request is created	A To Do of the <b>C1-REFRQ</b> To Do type is created and sent to the approver at the hierarchy level where the total refund amount falls within the threshold limit. In addition, the status of the refund request is changed to <b>Approval In Progress</b> .
The <b>Approval Required</b> check box is not selected in the refund request type using which the refund request is created	The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to <b>Processed</b> .
	<b>Note:</b> The refund adjustments are created in the <b>Frozen</b> status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the refund adjustments and on the corresponding financial transactions. However, when a match event is not present for the payments which are matched against the suspense contract or if the match events does not exist, a new match event is created and stamped on the refund adjustments and on the corresponding financial transactions. If you are doing a partial refund for any entity, the corresponding match event status is set to <b>Open</b> . However, if you are refunding the entire eligible amount, the corresponding match event status is set to <b>Balanced</b> .

If...	Then...
The total refund amount is less than minimum refund amount	The write up adjustment is created using the write up adjustment type specified in the refund request type. In addition, the status of the refund request is changed to <b>Processed</b> .
	<b>Note:</b> The write up adjustment is created in the <b>Frozen</b> status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the write up adjustment and on the corresponding financial transaction. However, when a match event is not present for the payments which are matched against the suspense contract or if the match events does not exist, a new match event is created and stamped on the write up adjustment and on the corresponding financial transaction. If you are doing a partial refund for any entity, the corresponding match event status is set to <b>Open</b> . However, if you are refunding the entire eligible amount, the corresponding match event status is set to <b>Balanced</b> .
The total refund amount is less than the minimum threshold amount	The refund request is automatically approved by the system and refund adjustments are created using the specified adjustment types. In addition, the status of the refund request is changed to <b>Processed</b> .
	<b>Note:</b> The refund adjustments are created in the <b>Frozen</b> status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the refund adjustments and on the corresponding financial transactions. However, when a match event is not present for the payments which are matched against the suspense contract or if the match events does not exist, a new match event is created and stamped on the refund adjustments and on the corresponding financial transactions. If you are doing a partial refund for any entity, the corresponding match event status is set to <b>Open</b> . However, if you are refunding the entire eligible amount, the corresponding match event status is set to <b>Balanced</b> .

**Note:** The **Submit** button appears only when the refund request is in the **Draft** status.

**Approving a Refund Request**

You can view the number of refund requests which are pending for approval in the **Refund/Write Off Request** screen. The approver can review, and accordingly approve or reject the refund request based on the observations.

**Note:** The system will not allow you to approve or reject a refund request submitted by you.

**Procedure**

To approve a refund request:

- Do either of the following:

If you want to...	Then...
Approve a refund request through the <b>Refund/Write Off Request</b> screen	<ol style="list-style-type: none"> <li>Search for the refund request in the <b>Refund/Write Off Request</b> screen.</li> <li>In the <b>Search Results</b> section, click the link in the <b>Refund/Write Off Request Information</b> column corresponding to the refund request which you want to review.</li> </ol>
Approve a refund request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.  The <b>To Do Type for User Search</b> window appears.</li> <li>Enter <b>C1-REFRQ</b> in the <b>To Do Type</b> field.</li> <li>Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.  The <b>To Do List</b> screen appears.</li> <li>Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>Click the link in the <b>Message</b> column corresponding to the To Do of the refund request that you want to review.</li> </ol>

The **Refund Request** screen appears.

- Review the refund request details.
- Click the **Approve** button in the **Refund Request** zone.

The system behaves in the following manner:

If...	Then
The <b>Hierarchical Approval</b> check box is selected in the refund request type using which the refund request is created and the total refund amount is greater than the threshold amount specified at the next level in the approval hierarchy	A To Do of the <b>C1-REFRQ</b> To Do type is created and sent to the approver at the next level in the approval hierarchy, and the status of the refund request remains as <b>Approval In Progress</b> .
The <b>Hierarchical Approval</b> check box is selected in the refund request type using which the refund request is created and the total refund amount is less than the threshold amount specified at the next level in the approval hierarchy	<p>The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to <b>Processed</b>.</p> <p><b>Note:</b> The refund adjustments are created in the <b>Frozen</b> status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the refund adjustments and on the corresponding financial transactions. However, when a match event is not present for the payments which are matched against the suspense contract or if the match events does not exist, a new match event is created and stamped on the refund adjustments and on the corresponding financial transactions. If you are doing a partial refund for any entity, the corresponding match event status is set to <b>Open</b>. However, if you are refunding the entire eligible amount, the corresponding match event status is set to <b>Balanced</b>.</p>
The <b>Hierarchical Approval</b> check box is not selected in the refund request type using which the refund request is created	<p>The refund adjustments are created using the specified adjustment types and the status of the refund request is changed to <b>Processed</b>.</p> <p><b>Note:</b> The refund adjustments are created in the <b>Frozen</b> status. If a match event is present for the credit bill line items (such as bill segments and adjustments) and for the payments which are matched against the excess credit contract, the existing match event is stamped on the refund adjustments and on the corresponding financial transactions. However, when a match event is not present for the payments which are matched against the suspense contract or if the match events does not exist, a new match event is created and stamped on the refund adjustments and on the corresponding financial transactions. If you are doing a partial refund for any entity, the corresponding match event status is set to <b>Open</b>. However, if you are refunding the entire eligible amount, the corresponding match event status is set to <b>Balanced</b>.</p>

**Note:** The **Approve** button appears only when:

- The refund request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the refund request.

**Rejecting a Refund Request**

**Prerequisites**

To reject a refund request, you should have:

- Rejection reasons defined in the application

**Note:**

While rejecting a refund request, you need to specify the reason why you want to reject the refund request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-RefundReq** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a refund request submitted by you.

**Procedure**

To reject a refund request:

1. Do either of the following:

If you want to...	Then...
Reject a refund request through the <b>Refund/Write Off Request</b> screen	<ol style="list-style-type: none"><li>1. Search for the refund request in the <b>Refund/Write Off Request</b> screen.</li><li>2. In the <b>Search Results</b> section, click the link in the <b>Refund/Write Off Request Information</b> column corresponding to the refund request which you want to review.</li></ol>
Reject a refund request from the <b>To Do List</b> screen	<ol style="list-style-type: none"><li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li><li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.  The <b>To Do Type for User Search</b> window appears.</li></ol>

If you want to...	Then...
	<ol style="list-style-type: none"> <li>3. Enter <b>C1-REFRQ</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the refund request that you want to review.</li> </ol>

The **Refund Request** screen appears.

2. Review the refund request details.
3. Click the **Reject** button in the **Refund Request** zone.

The **Reject Refund Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the refund request.	Yes
Comments	Used to specify additional information while rejecting the refund request.	No

**Note:** The **Reject** button appears only when:

- The refund request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the refund request.

4. Select the rejection reason from the **Status Reason** list.
5. Click **Save**.

The status of the refund request is changed to **Rejected**.

## Viewing the Log of a Refund Request

### Procedure

To view the log of a refund request:

- 1. Search for the refund request in the **Refund/Write Off Request** screen.
- 2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose log you want to view.

The **Refund Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the refund request. It contains the following zones:
  - **Refund Request** – Displays the details of the refund request.
  - **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
  - **Bill Line Items** — Displays the details of the bill which must be refunded.

Note:

This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Refund Details** zone.

- **Payments** — Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
  - **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears only when the refund request is in the **Draft** status.
  - **Log** – Lists the complete trail of actions performed on the refund request.
- 3. Click the **Log** tab.
  - 4. View the log of the refund request in the **Refund Request Log** zone.

**Note:** You can manually add a log entry for the refund request by clicking the **Add Log Entry** link in the upper right corner of the **Refund Request Log** zone.

**Adding a Log Entry for a Refund Request**

**Procedure**

To add a log entry for a refund request:

- 1. Search for the refund request in the **Refund/Write Off Request** screen.
- 2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request whose log you want to edit.

The **Refund Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the refund request. It contains the following zones:
  - **Refund Request** – Displays the details of the refund request.

- **Refund Details** – Lists the entities, such as payment events, payments, and/or credit bill line items (such as credit bill segments and adjustments), of the account which must be refunded.
  - **Payments** — Used to search payment events or individual payments that you want to refund. This tab appears only when the refund request is in the **Draft** status.
  - **Bills** — Used to search bills with credit line items, such as credit bill segments and adjustments, that you want to refund. This tab appears only when the refund request is in the **Draft** status.
  - **Log** – Lists the complete trail of actions performed on the refund request.
- Click the **Log** tab.
- The **Log** tab appears.

- Click the **Add Log Entry** link in the upper right corner of the **Refund Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the refund request.	Not applicable
Log Details	Used to specify additional comments on the refund request.	Yes

- Enter the comments in the **Log Details** field.
  - Click **Save**.
- The log entry is added in the **Refund Request Log** zone.

## **Voiding a Refund Request**

There might be situations when incorrect refund request is processed in the system. In such case, the system provides you with an ability to void or cancel the refund request. However, note that you can void a refund request only when the refund request is in the **Processed** status.

#### **Prerequisites**

To void a refund request, you should have:

- Void reasons defined in the application

**Note:** While voiding a refund request, you need to specify the reason why you want to void the refund request. You can select the appropriate void reason only when you have defined the reasons for the **Voided** status of the **C1-RefundReq** business object in the **Status Reason** screen.

#### **Procedure**

To void a refund request:

- Search for the refund request in the **Refund/Write Off Request** screen.
- In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the refund request that you want to void.

The **Refund Request** screen appears.

3. Click the **Void** button in the **Refund Request** zone.

The **Void Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to void the refund request.	Yes
Comments	Used to specify additional information while voiding the refund request.	No

**Note:** The **Void** button appears only when the refund request is in the **Processed** status.

4. Select the void reason from the **Status Reason** list.
5. Click **Save**.

The status of the refund request is changed to **Voided**.

**Note:** The **C1-REFVOID** algorithm cancels all the frozen adjustments created for the refund request which is in the **Processed** state.

# Write Off Request

Once you create a write off request, the **Write Off Request** screen allows you to:

- Edit and delete a write off request
- View the details of a write off request
- Submit a write off request for approval
- Approve or reject a write off request
- View the log of a write off request
- Add a log entry for a write off request
- Cancel a write off request

This screen consists of the following tabs:

- **Main** – Displays information about the write off request. It contains the following zones:
  - **Write Off Request** – Displays the details of the write off request.
  - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
  - **Bill Line Items** — Displays the details of the bill which must be written off.

**Note:**

This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

- **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:
  - **Search Bills** — Lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria.
  - **Bill Line Items** — Lists the debit and credit bill segments and adjustments of the bill.

This tab appears only when the write off request is in the **Draft** status.

- **Log** — Lists the complete trail of actions performed on the write off request.

## Write Off Request - Main

The **Main** tab displays information about the write off request. It contains the following zones:

- [Write Off Request](#) on page 1213
- [Write Off Details](#) on page 1215
- [Bill Line Items](#) on page 1216

## Write Off Request

The **Write Off Request** zone displays the details of the write off request. This zone contains the following sections:

- **Main** — This section provides basic information about the write off request. It contains the following fields:

Field Name	Field Description
Write Off Request Information	Displays information about the write off request.
Write Off Request Type	Indicates the write off request type using which the write off request is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Refund/Write Off Request Type</b> screen appears where you can view the details of the write off request type.
Status	Indicates the status of the write off request. The valid values are: <ul style="list-style-type: none"> <li>• Draft</li> <li>• Approval In Progress</li> <li>• Rejected</li> <li>• Processed</li> <li>• Cancelled</li> </ul>

Field Name	Field Description
Status Reason	Indicates the reason why the write off request is rejected or cancelled.  <b>Note:</b> This field appears only when the write off request is in the <b>Rejected</b> or <b>Cancelled</b> status. It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the rejected or cancelled reason.
Account Information	Indicates the account for which the write off request is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective account.
Comments	Displays additional information about the write off request.
Total Write Off Amount	Displays the total write off amount.

- **Characteristics** — Lists the characteristics defined for the write off request. It contains the following fields:

Field Name	Field Description
Effective Date	Indicates the date from when the characteristic is effective for the write off request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the write off request.  <b>Note:</b> The <b>Edit</b> button appears only when the write off request is in the <b>Draft</b> status.
Delete	Used to delete the write off request.  <b>Note:</b> The <b>Delete</b> button appears only when the write off request is in the <b>Draft</b> status.
Submit	Used to submit the write off request for approval.  <b>Note:</b> The <b>Submit</b> button appears only when the write off request is in the <b>Draft</b> status.
Approve	Used to approve the write off request.  <b>Note:</b> The <b>Approve</b> button appears only when: <ul style="list-style-type: none"> <li>• The write off request is in the <b>Approval In Progress</b> status.</li> <li>• A user with the approval To Do role is reviewing the write off request.</li> </ul>

Button Name	Button Description
Reject	Used to reject the write off request.
	<b>Note:</b> The <b>Reject</b> button appears only when: <ul style="list-style-type: none"> <li>The write off request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the write off request.</li> </ul>
Cancel	Used to cancel the write off request.
	<b>Note:</b> The <b>Cancel</b> button appears only when the write off request is in the <b>Processed</b> status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the write off request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the write off request status is updated
Create Date/Time	Displays the date and time when the write off request is created.

### Write Off Details

The **Write Off Details** zone lists the debit bill line items (such as bill segments and adjustments) that you have added to the write off request. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the entity ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Indicates the currency in which the entity was created.
Entity Amount	Displays the entity amount.
Write Off Amount	Displays the amount that must be written off.
	<b>Note:</b> By default, the amount which is eligible for write off appears in this column. You can edit the amount, if required. However, you cannot specify the amount greater than the eligible amount.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.

Column Name	Column Description
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created.
	<b>Note:</b> By default, the adjustment type specified in the write off request type appears in this column. You can change the adjustment type, if required, by editing the write off request.
Adjustment Information	Displays information about the write off adjustment.
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the respective adjustment.</p> <p>The data appears in this column only when the status of the write off request is <b>Processed</b>.</p> <p>The information string appears only when an algorithm of the <b>C1-ADI-INFO</b> algorithm type is attached to the <b>Adjustment Information</b> system event in the <b>Algorithms</b> tab of the <b>Installation Options — Framework</b> screen.</p>

**Note:**

On clicking the **Broadcast**  icon corresponding to the entity type as **Bill**, the **Bill Line Items** zone appears with the details of the respective bill.

In addition to above columns, this screen contains following buttons:

Button Name	Button Description
Edit	Used to edit the details of bill line items.
Delete	Used to delete the bill line items.

**Bill Line Items**

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Entity ID	Displays the bill segment or adjustment ID.
Entity Type	Indicates whether the entity is a bill, bill segment or an adjustment.
Currency	Displays the currency in which the entity was created.
Entity Amount	Displays the bill segment or adjustment amount.
Request Amount	Displays the bill segment or adjustment amount which is eligible for refund. In other words, it means entity amount minus amount refunded.
	<b>Note:</b> If the bill segment or adjustment has debit balance, the eligible amount for refund would be zero.

Column Name	Column Description
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Adjustment Type	Indicates the adjustment type using which the refund adjustment must be created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.
Adjustment Information	Displays information about the refund adjustment.

By default, the **Bill Line Items** zone does not appear in the **Main** tab. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Write Off Details** zone.

### Related Topics

How to add a debit bill line item to the write off request	<a href="#">Adding a Debit Bill Line Item to the Write Off Request</a> on page 1225

## Write Off Request - Bills

The **Bills** tab allows you to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. It contains the following zones:

- [Search Bill](#)
- [Bill Line Items](#) on page 1218

### Search Bills

The **Search Bills** zone lists completed bills of the account which are either with debit balance or have one or more debit line items, such as bill segments and adjustments. You can filter the bills using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate that you want to search for a bill using the bill details. The valid values are: <ul style="list-style-type: none"> <li>• Bill Details</li> <li>• Bill and Price Item Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Bill Details</b> option is selected.	
Bill ID	Used to search a particular bill.	No
Bill Date From	Used to search bills which are created from a particular date onwards.	No

Field Name	Field Description	Mandatory (Yes or No)
To	Used to search bills which are created till a particular date.	No
Price Item	Used to search bills which are created for a particular price item.  <b>Note:</b> This field appears only when you select <b>Bill and Price Item Details</b> option from the <b>Search By</b> list. You can search for a price item by clicking the <b>search</b>  icon corresponding to the field.	No

- **Search Results** — On clicking the **Search** button, the search results are filtered based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Amount	Displays the total bill amount.

If you want to write off a bill with debit balance and all debit line items, you need to select the check box corresponding to the bill and then click the **Add** button in the **Search Results** section. All debit bill segments and adjustments of the bill are added in the **Write Off Details** zone on the **Main** tab. However, if you select a bill (with debit balance) which contains one or more credit line items or if you select a bill (with credit balance) which contains one or more debit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

**Note:** If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

How to add a debit bill line item to the write off request	<a href="#">Adding a Debit Bill Line Item to the Write Off Request</a> on page 1225

### **Bill Line Items**

The **Bill Line Items** zone lists the debit and credit bill segments and adjustments of the bill. This zone contains the following columns:

Column Name	Column Description
Entity ID	Displays the bill segment or adjustment ID.

Column Name	Column Description
Entity Type	Indicates whether the entity is a bill segment or an adjustment.
Entity Information	Displays additional information about the bill segment or adjustment. If the entity is a bill segment, the context menu appears in the column which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. If the entity is a bill segment, the <b>Bill Segment</b> screen appears where you can view the details of the respective bill segment on clicking the link. However, if the entity is an adjustment, the <b>Adjustment</b> screen appears with the details of the respective adjustment on clicking the link.
Entity Amount	Displays the bill segment or adjustment amount.
Eligible Amount	Displays the bill segment or adjustment amount which is eligible for write off. In other words, it means entity amount minus amount written off.
	<b>Note:</b> If the bill segment or adjustment has credit balance, the eligible amount for write off would be zero.
Amount Written Off	Displays the amount which is already written off to the account.
Contract Information	Displays additional information about the contract against which the bill segment or adjustment is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.

You can select one or more debit bill segments or adjustments and click the **Add** button in this zone to add selected debit bill segments or adjustments to the write off request.

By default, the **Bill Line Items** zone does not appear in the **Bills** tab. It appears only when you click the **Broadcast**  icon corresponding to the bill in the **Search Bills** zone.

## Creating a Write Off Request

### Prerequisites

To create a write off request, you should have:

- Write off request types defined in the application

### Procedure

To create a write off request:

1. Do either of the following:

If you want to...	Then...
Define a write off request from the <b>Account Receivable Central</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Main</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>Financial</b> and then click <b>Account Receivable Central</b>.</li> <li>3. Search for the bill in the <b>Account Receivable Central</b> screen.</li> <li>4. In the <b>Search Results</b> section, select the required bill and then click <b>Write Off</b>.</li> </ol> <p><b>Note:</b> Only one bill at a time is allowed to select for <b>Write Off Request</b> from the <b>Account Receivable Central</b> screen.</p>
Define a write off request from the <b>Write Off Request</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Main</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>Financial</b> and then click <b>Refund/Write Off Request</b>.</li> </ol>

If you want to...	Then...
	<p>A sub-menu appears.</p> <p>3. Click the <b>Add</b> option from the <b>Refund/Write Off Request</b> sub-menu.</p>

The **Select Request Type** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Action	<p>Displays the type of request (refund or write off) to be created.</p> <p><b>Note:</b></p> <p>This field is pre-populated if the write off request is created from the <b>Account Receivable Central</b> screen.</p> <p>This field is editable if the write off request is created from the <b>Refund/Write Off Request</b> screen.</p>	Yes
Refund/Write Off Request Type	<p>Used to indicate the request type using which you want to create the refund or write off request.</p> <p><b>Note:</b> The refund request types are listed when you set the <b>Action</b> field to <b>Refund</b> and the write off request types are listed when you set the <b>Action</b> field to <b>Write Off</b>.</p>	Yes
Account	<p>Used to indicate the account for which you want to create the refund or write off request.</p> <p><b>Note:</b></p> <p>This field is pre-populated if the write off request is created from the <b>Account Receivable Central</b> screen.</p> <p>This field is editable if the write off request is created from the <b>Refund/Write Off Request</b> screen.</p> <p>You can search for an account by clicking the <b>Search</b>  icon corresponding to the respective field.</p>	Yes

**Tip:** Alternatively, you can access the **Select Request Type** screen by clicking the **Add** button in the **Page Title** area of the **Refund/Write Off Request** screen.

2. Select the required write off request type and account from the respective fields.
3. Click **Save**.

The write off request is defined and the status of the write off request is set to **Draft**. The **Write Off Request** screen appears with the details of the write off request. It contains the following tabs:

**Note:** The write off request can be created only for bill with outstanding amount greater than zero.

- **Main** – Displays information about the write off request. It contains the following zones:
    - **Write Off Request** – Displays the details of the write off request.
    - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
  - **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears only when the write off request is in the **Draft** status.
  - **Log** – Lists the complete trail of actions performed on the write off request.
4. Add debit bill line items that you want to write off.
  5. Edit the write off amount of each entity, if required.
  6. Define characteristics for the write off request, if required.

How to define characteristics for a write off request	<a href="#">Defining Characteristics for a Write Off Request</a> on page 1222

**Defining Characteristics for a Write Off Request**

**Prerequisites**

To define characteristics for a write off request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Refund Write Off Request**)

**Procedure**

To define characteristics for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.  
 The **Write Off Request** screen appears.
3. Click the **Edit** button in the **Write Off Request** zone.  
 The **Edit Write Off Request** screen appears.

**Note:** The **Edit** button appears only when the write off request is in the **Draft** status.

4. Ensure that the **Characteristics** section is expanded when you are editing the write off request.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Refund Write Off Request</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the write off request.

5. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

6. If you want to define more than one characteristic for the write off request, click the **Add**  icon and then repeat step 5.

**Note:** However, if you want to remove a characteristic from the write off request, click the **Delete**  icon corresponding to the characteristic.

## Adding a Debit Bill to the Write Off Request

### Prerequisites

To add a debit bill to the write off request, you should have:

- Completed bills for the account with one or more debit line items

### Procedure

To add a debit bill to the write off request:

- Click the **Bills** tab in the **Write Off Request** screen.

The **Bills** tab appears.

- Filter the bills, if required, in the **Search Bills** zone.

**Note:** If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

- Do either of the following:

If...	Then...
A bill has all debit line items and you want to add the debit bill to the write off request	<ol style="list-style-type: none"> <li>In the <b>Search Bills</b> zone, select the bills that you want to write off.</li> <li>Click the <b>Add</b> button available at the upper left corner of the <b>Search Bills</b> zone.</li> </ol>
	<b>Note:</b> Default adjustment type selected in the write off request type should be non A/P.
A bill has debit balance and one or more credit line items and you want to add the debit bill to the write off request	<ol style="list-style-type: none"> <li>In the <b>Search Bills</b> zone, select the bills that you want to write off.</li> <li>Click the <b>Add</b> button available at the upper left corner of the <b>Search Bills</b> zone.</li> </ol>
	<b>Note:</b> Default adjustment type selected in the write off request type should be non A/P.

- Click **Add**.

A message appears indicating that the selected bills are added to the write off request.

**Note:** If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

- Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

**Note:**  
 Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone.  
 The system will not allow you to add a credit line item to the **Write Off Details** zone.

## Adding a Debit Bill Line Item to the Write Off Request

You can write off the debit bill line items, such as bill segments and adjustments, of the account. While adding a debit bill line item to the write off request, you can either:

- Directly add all debit line items of a bill to the write off request by adding the bill which has all bill segments and adjustments in debit
- Individually add a debit bill segment or adjustment of a bill (with one or more debit line items) to the write off request

### Prerequisites

To add a debit bill line item to the write off request, you should have:

- Completed bills for the account with one or more debit line items

### Procedure

To add a debit bill line item to the write off request:

1. Click the **Bills** tab in the **Write Off Request** screen.

The **Bills** tab appears.

2. Filter the bills, if required, in the **Search Bills** zone.

**Note:** If a write off request is currently in progress for a debit bill segment or adjustment of a bill, those bills of the account are not listed in the **Search Bills** zone. In addition, a bill with all credit line items are not listed in the **Search Bills** zone.

3. Do any of the following:

If...	Then...
A bill has all debit line items and you want to add a particular debit bill line item to the write off request	<ol style="list-style-type: none"> <li>1. In the <b>Search Bills</b> zone, click the <b>Broadcast</b>  icon corresponding to the bill whose line items you want to view. The <b>Bill Line Items</b> zone appears.</li> <li>2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.</li> </ol>
A bill has debit balance and one or more credit line items	<ol style="list-style-type: none"> <li>1. In the <b>Search Bills</b> zone, click the <b>Broadcast</b>  icon corresponding to the bill whose line items you want to view. The <b>Bill Line Items</b> zone appears.</li> <li>2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.</li> </ol>
A bill has credit balance and one or more debit line items	<ol style="list-style-type: none"> <li>1. In the <b>Search Bills</b> zone, click the <b>Broadcast</b>  icon corresponding to the bill whose line items you want to view. The <b>Bill Line Items</b> zone appears.</li> </ol>

If...	Then...
	2. Select the check box corresponding to the debit bill segment or adjustment that you want to write off.

4. Click **Add**.

A message appears indicating that the selected bill segments or adjustments are added to the write off request.

**Note:** If you select a bill (with credit balance) which contains one or more debit line items or if you select a bill (with debit balance) which contains one or more credit line items, the system will not allow you to add the debit line items by directly adding the bill. In such case, you need to individually select the debit bill segments and adjustments of the bill and then add them to the write off request.

5. Click **OK**.

Note that the debit bill segments or adjustments are added in the **Write Off Details** zone on the **Main** tab.

**Note:**  
Irrespective of whether you select a debit bill, or debit bill segments or adjustments, the debit bill segments or adjustments are added in the **Write Off Details** zone. The debit bill is not added to the **Write Off Details** zone.  
The system will not allow you to add a credit line item to the **Write Off Details** zone.

**Editing a Write Off Request**

**Prerequisites**

To edit a write off request, you should have:

- Adjustment types without A/P request type defined in the application

**Procedure**

To edit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose details you want to edit.

The **Write Off Request** screen appears.

3. Click the **Edit** button in the **Write Off Request** zone.

The **Edit Write Off Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Write Off Request Information	Displays information about the write off request.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Account Information	Indicates the account for which the write off request is created.	Not applicable
Comments	Used to specify additional information about the write off request.	No

In addition, this screen contains the following two sections:

- **Characteristics** — Used to define characteristics for the write off request. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the write off request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the write off request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Refund Write Off Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the write off request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the write off request.

4. Modify the details of the write off request, if required.
5. Define, edit, or remove characteristics from the write off request, if required.
6. Click **Save**.

The changes made to the write off request are saved.

## Editing the Write Off Details

### Prerequisites

To edit the write off details, you should have:

- Adjustment types with A/P request type defined in the application

### Procedure

To edit the write off details:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose bill line item details you want to edit.

The **Write Off Request** screen appears. You can edit the bill line items of the write off request by using either of the following ways:

If...	Then...
Select the bill whose details you want to edit in the <b>Write Off Details</b> zone and click the <b>Edit</b> button available in the upper left corner of this zone.	The <b>Edit Request Details</b> screen appears.
In the <b>Write Off Details</b> zone, click the <b>Broadcast</b>  icon corresponding to the bill whose line items details you want to edit.	The <b>Bill Line Items</b> zone appears.
	<b>Note:</b> This zone appears only when the Entity Type is <b>Bill</b> .  <ol style="list-style-type: none"><li>1. Select the bill line item whose details you want to edit in the <b>Bill Line Items</b> zone and click the <b>Edit</b> button available in the upper left corner of this zone.  The <b>Edit Request Details</b> screen appears.</li></ol>

**Note:** A bill line item from the write off request can be edited only when the write off request is in the **Draft** status.

The **Edit Request Details** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request ID	Displays the write off request ID.	Not applicable
Account Information	Displays additional information about the account.	Not applicable
Adjustment Type	Indicates the adjustment type of the write off request type.  You can search for an adjustment type by clicking the <b>Search</b>  icon corresponding to the field.	No

In addition to these fields, this screen contains following columns:

Column Name	Column Description
Entity Type	Indicates the entity type. The valid values are <ul style="list-style-type: none"> <li>• Adjustments</li> <li>• Bill</li> <li>• Bill Segment</li> <li>• Payment Event</li> <li>• Payment</li> </ul>
Entity ID	Displays the entity ID.
Entity Amount	Displays the entity amount.
Currency	Displays the currency in which the entity was created.
Request Amount	Displays the amount that must be write off.
Adjustment Type	Indicates the adjustment type using which the write off adjustment must be created. <div> <b>Note:</b>  You can search for an account by clicking the <b>Search</b>  icon corresponding to the field. </div>
Bill ID	Displays the bill ID.

In addition to the above columns, the screen has following button:

Button Name	Button Description
Override	Used to override an adjustment type of the write off request.

**Note:**

Pagination is used to display limited number of records in the **Search Results** section. By default, 10 records are displayed in the **Search Results** section. You can change the number of records displayed per page, if required.

You can use the navigation buttons, such as **First** () , **Previous** () , **Next** () , and **Last** () to navigate between pages. You can also select the page to which you want to navigate from the **Go To** list.

The values appear in the **Page Limit** list only when you define values for the **PAGE\_NUMBER** lookup field.

3. Modify the details of the bill line items.

4. Click **Save**.

The changes made to the write off bill line items are saved.

## Submitting a Write Off Request

### Prerequisites

To submit a write off request, you should have:

- Debit bill line items added in the write off request

### Procedure

To submit a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.

2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to submit.

The **Write Off Request** screen appears.

3. Click the **Submit** button in the **Write Off Request** zone.

The system behaves in the following manner:

If...	Then
The <b>Approval Required</b> and <b>Hierarchical Approval</b> check boxes are selected in the write off request type using which the write off request is created	A To Do of the <b>C1-WOREQ</b> To Do type is created and sent to the approver at the first level in the approval hierarchy, and the status of the write off request is changed to <b>Approval In Progress</b> .
The <b>Approval Required</b> check box is selected, but the <b>Hierarchical Approval</b> check box is not selected in the write off request type using which the write off request is created	A To Do of the <b>C1-WOREQ</b> To Do type is created and sent to the approver at the hierarchy level where the total write off amount falls within the threshold limit. In addition, the status of the write off request is changed to <b>Approval In Progress</b> .
The <b>Approval Required</b> check box is not selected in the write off request type using which the write off request is created	<p>The write off adjustments are created using the specified adjustment types and the status of the write off request is changed to <b>Processed</b>.</p> <p><b>Note:</b> The write off adjustments are created in the <b>Frozen</b> status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to <b>Open</b>. However, if the entire eligible amount is written off, the corresponding match event status is set to <b>Balanced</b>.</p>
The total write off amount is less than the minimum threshold amount	<p>The write off request is automatically approved by the system and write off adjustments are created using the specified adjustment types. In addition, the status of the write off request is changed to <b>Processed</b>.</p> <p><b>Note:</b> The write off adjustments are created in the <b>Frozen</b> status. If a match event is present for the debit bill line items (such as bill segments and adjustments), the existing match event is stamped on the write off adjustments and on the corresponding financial transactions. However, if the match events does not exist, a new match event is created and stamped on the write off adjustments and on the corresponding financial transactions. If you are doing a partial write off for any entity, the corresponding match event status is set to <b>Open</b>. However, if the entire eligible amount is written off, the corresponding match event status is set to <b>Balanced</b>.</p>

## Rejecting a Write Off Request

### Prerequisites

To reject a write off request, you should have:

- Rejection reasons defined in the application

### **Note:**

While rejecting a write off request, you need to specify the reason why you want to reject the write off request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-WORequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a write off request submitted by you.

### Procedure

To reject a write off request:

1. Do either of the following:

If you want to...	Then...
Reject a write off request through the <b>Refund/Write Off Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the write off request in the <b>Refund/Write Off Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Refund/Write Off Request Information</b> column corresponding to the write off request which you want to review.</li> </ol>
Reject a write off request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.  The <b>To Do Type for User Search</b> window appears.</li> </ol>

If you want to...	Then...
	<p><b>3.</b> Enter <b>C1-WOREQ</b> in the <b>To Do Type</b> field.</p> <p><b>4.</b> Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.</p> <p>The <b>To Do List</b> screen appears.</p> <p><b>5.</b> Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</p> <p><b>6.</b> Click the link in the <b>Message</b> column corresponding to the To Do of the write off request that you want to review.</p>

The **Write Off Request** screen appears.

- Review the write off request details.
- Click the **Reject** button in the **Write Off Request** zone.

The **Reject Write Off Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the write off request.	Yes
Comments	Used to specify additional information while rejecting the write off request.	No

**Note:** The **Reject** button appears only when:

- The write off request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the write off request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the write off request is changed to **Rejected**.

<b>Write Off Request</b> zone	<a href="#">Write Off Request</a> on page 1213

**Viewing the Log of a Write Off Request**

**Procedure**

To view the log of a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose log you want to view.

The **Write Off Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the write off request. It contains the following zones:
  - **Write Off Request** – Displays the details of the write off request.
  - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.
  - **Bill Line Items** — Displays the details of the bill which must be written off.

**Note:**

This zone appears when you click the Broadcast  icon corresponding to the entity type as **Bill** in the **Write Off Details** zone.

- **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears only when the write off request is in the **Draft** status.
  - **Log** – Lists the complete trail of actions performed on the write off request.
3. Click the **Log** tab
  4. View the log of the write off request in the **Write Off Request Log** zone.

**Note:** You can manually add a log entry for the write off request by clicking the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

<b>Write Off Request Log</b> zone	<a href="#">Write Off Request Log</a> on page 1219

## Adding a Log Entry for a Write Off Request

### Procedure

To add a log entry for a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request whose log you want to edit.

The **Write Off Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the write off request. It contains the following zones:
  - **Write Off Request** – Displays the details of the write off request.
  - **Write Off Details** – Lists the debit bill line items (such as debit bill segments and adjustments) of the account which must be written off.

- **Bills** — Used to search bills with debit line items, such as debit bill segments and adjustments, that you want to write off. This tab appears only when the write off request is in the **Draft** status.
  - **Log** – Lists the complete trail of actions performed on the write off request.
3. Click the **Log** tab.
- The **Log** tab appears.
4. Click the **Add Log Entry** link in the upper right corner of the **Write Off Request Log** zone.

The **Add Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Request Information	Displays information about the write off request.	Not applicable
Log Details	Used to specify additional comments on the write off request.	Yes

5. Enter the comments in the **Log Details** field.
  6. Click **Save**.
- The log entry is added in the **Write Off Request Log** zone.

**Cancelling a Write Off Request**

There might be situations when incorrect write off request is processed in the system. In such case, the system provides you with an ability to cancel the write off request. However, note that you can cancel a write off request only when the write off request is in the **Processed** status.

**Prerequisites**

To cancel a write off request, you should have:

- Cancel reasons defined in the application

**Note:** While cancelling a write off request, you need to specify the reason why you want to cancel the write off request. You can select the appropriate cancel reason only when you have defined the reasons for the **Cancelled** status of the **C1-WORequest** business object in the **Status Reason** screen.

**Procedure**

To cancel a write off request:

1. Search for the write off request in the **Refund/Write Off Request** screen.
  2. In the **Search Results** section, click the link in the **Refund/Write Off Request Information** column corresponding to the write off request that you want to cancel.
- The **Write Off Request** screen appears.
3. Click the **Cancel** button in the **Write Off Request** zone.

The **Cancel Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the write off request.	Yes
Comments	Used to specify additional information while cancelling the write off request.	No

**Note:** The **Cancel** button appears only when the write off request is in the **Processed** status.

- Select the cancel reason from the **Status Reason** list.
- Click **Save**.

The status of the write off request is changed to **Cancelled**.

**Note:** The **C1-WOCANCEL** algorithm cancels all the frozen adjustments created for the write off request which is in the **Processed** state.

## Hold Request

---

### Topics:

- [Hold Request \(Without Approval\) Status Transition](#)
- [Hold Request \(With Approval\) Status Transition](#)
- [Algorithms Used in C1-HoldRequest](#)
- [Prerequisites](#)
- [Hold Request Type](#)
- [Hold Request \(Used for Searching\)](#)
- [Hold Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing allows you to hold the amount for Person, Account or Bills. Hold is a way to prevent certain types of activities from taking place for a customer over a given period of time. The activities that need to be on Hold vary according to the reason for hold, such as due to a climate disaster the collection activity remains on Hold until disaster period is over.

Hold Request is a object which contains list of processes to be kept on hold for certain entities such as account, person, and bill for certain period of time. The hold period is defined as the duration between Hold Request Start Date and End Date. Each Hold Request contains an entity and processes on hold. There could exists multiple hold requests for an entity for different hold reasons and processes.

Following are the hold request entities:

- **Person:** If the person is on hold then all entities linked to that person where the person is financially responsible, such as accounts and its bills will be on hold.
- **Account:** If the account is on hold then all the bills of that account will be on hold.
- **Bill:** A bill will be on complete or partial hold.

In Hold Request, following mentioned processes can be on hold:

- **Auto Pay** — If the auto payment process is on hold then, then auto pay for the bills of the account added in hold request will be on hold till the request is released. However, you can do the manual payments. On activation of the hold request, **Defer Auto Pay Date** field (in Account screen) is populated with some future date. If billing process is on hold then auto payment process would also go on hold.
- **Bill Generation** — If the bill generation process is on hold then, then new bills will not be created for the account added in hold request till request is released. On activation of the hold request, **Bill After** date field (in Account screen) is populated with either hold request end date or some future date until that date billing is kept on hold. Whenever hold request is released for billing process then **Bill After** date field will be populated as system date.

**Note:** During the tenure of a hold request if customer does not require pending bills to be used for bill generation, bill in pending for accounts under hold are identified during activation of hold request which can be deleted by execution of the **C1-DELBI** batch . For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*

- **Overdue** — If the overdue process is on hold then bills associated with accounts in the hold request will be on hold for overdue process. It means existing overdue will be cancelled. New overdue process will get created once hold request is released. On activation of the hold request, **Postpone Credit Review** field (in Account screen) is populated with either hold request end date or some future date. When hold request is released, **Postpone Credit Review** field would be set as system date. If the overdue process is on hold then request for policy termination due to non payment will be on hold.
- **Funding** — A list of bills identified for a full bill amount or a partial bill amount will be kept on hold for a funding process.

**Note:**

For Funding process, Person, Bill, and Account entities can be put on hold. However, for processes like Auto pay, Bill Generation, and Overdue, only Account entity can be put on hold.

Processes and Entities start dates and end dates are expected to be within the limit of Hold Request Start Date and End Date.

You need to specify the hold request type while creating a hold request. Hold request type helps the system to determine:

- Whether to allow the partial hold for bill or not
- Whether hold request must be approved by the approver before keeping entities and processes on hold

It is possible for a given entity, such as a person or account, to be affected by hold request with differing periods or at differing levels. For example, if there is a hold request added for a person manually and another hold request is there due to some other reason for an account belongs to the person who is already on hold. The system assumes that both hold requests are in effect for the account and that the period of accounts starts from the start of the earlier hold request record (for the account) until the later of the two release dates.

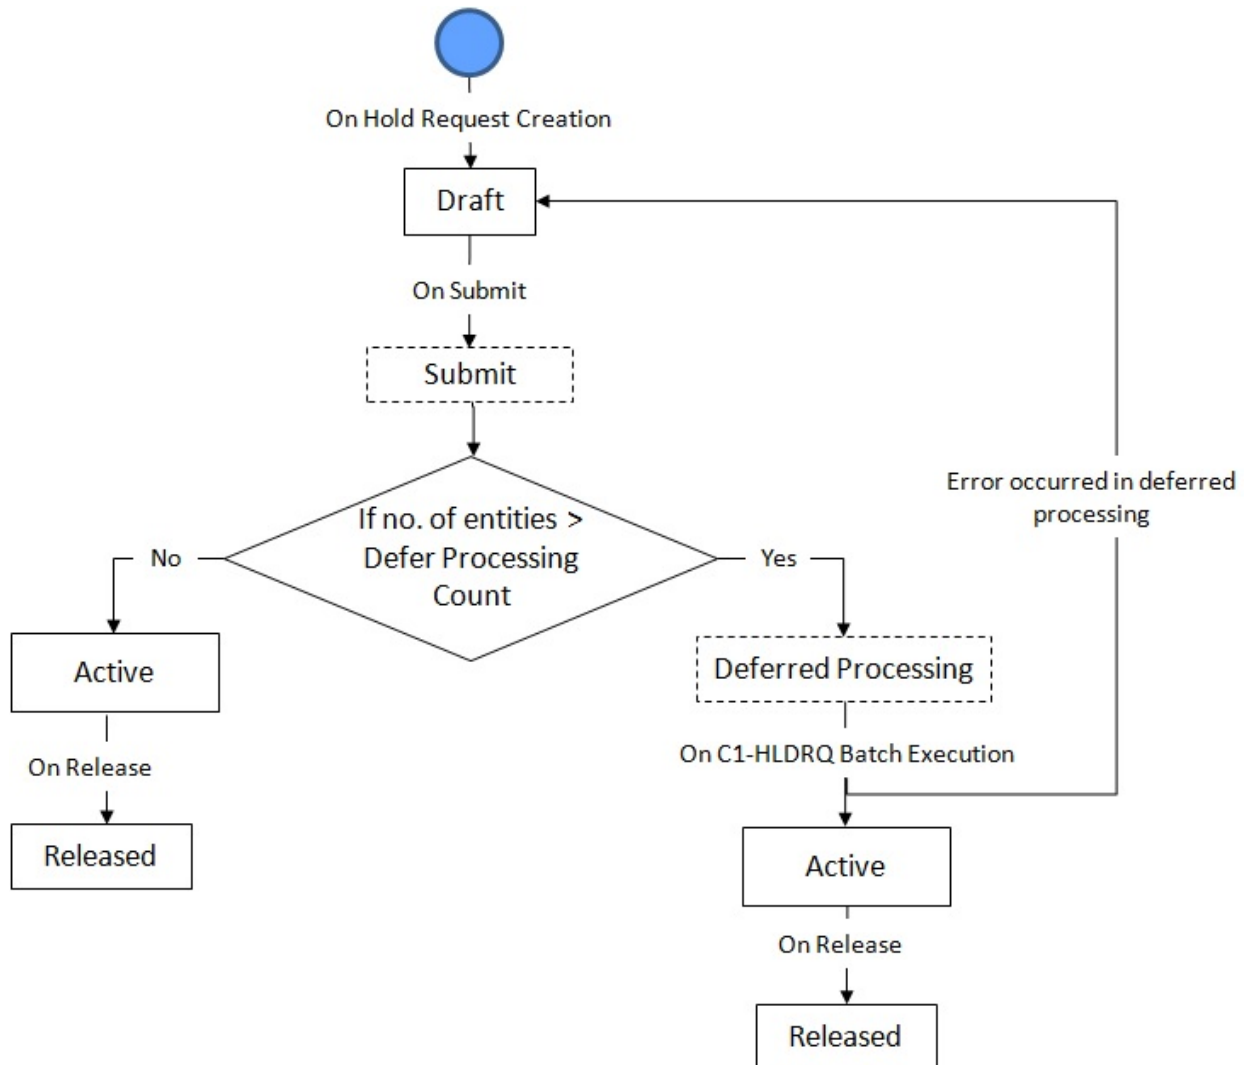

During the hold request process, a hold request goes through various statuses in its lifecycle. For more information about the hold request statuses, see [Hold Request \(Without Approval\) Status Transition](#) on page 1243 and [Hold Request \(With Approval\) Status Transition](#) on page 1243

Note that the lifecycle of a hold request is driven by the business object using which the hold request is created. A hold request business object named **C1-HoldRequest** is shipped with the product. The hold request feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-HoldRequest** business object. In addition, you can configure the search feature by setting **Fkref** feature configuration for each entity, such as person, account and bill.

For more information on how to setup the hold request processes, see [Prerequisites](#) on page 1250.

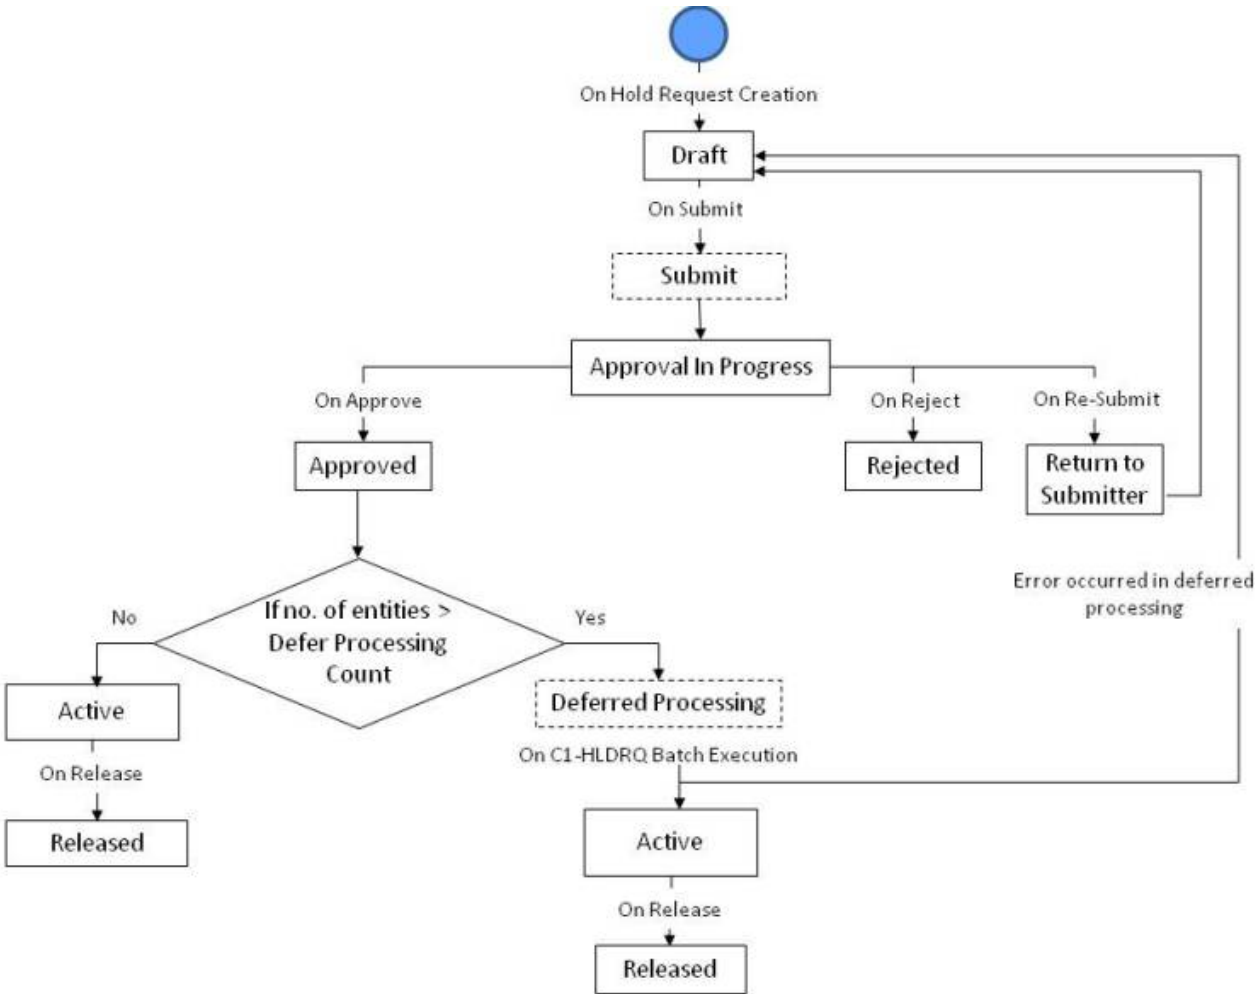

## Hold Request (Without Approval) Status Transition

The following figure graphically indicates how a hold request moves from one status to another when approval workflow is off:

## Hold Request (With Approval) Status Transition

The following figure graphically indicates how a hold request moves from one status to another when approval workflow is on:

## Algorithms Used in C1-HoldRequest

The following table lists the algorithms which are attached to the **C1-HoldRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-HOLD-INF	C1-HOLD-INF	<div>This algorithm generates hold request information string which appears throughout the application. This algorithm concatenates the following fields:</div> <ul style="list-style-type: none"><li>• Hold Request Type</li><li>• Status</li><li>• Entity</li><li>• Hold Request ID</li></ul>

System Event	Algorithm	Algorithm Type	Description
Validation	C1-HLDVALDN	C1-HLDVALDN	<p>This algorithm validates following during different statuses:</p> <p>For <b>Draft</b> status, it checks the following:</p> <ul style="list-style-type: none"> <li>At least one Process is present in the request. Entity selection is optional</li> <li>No duplicate entity and process is allowed in a single request.</li> <li>Same entity cannot be placed on hold with the same <b>Hold Reason</b> in multiple Hold Requests.</li> <li>Request start date is earlier than or equal to process and entity start date.</li> <li>Request End Date is later than or equal to process and entity end date.</li> <li>At least one process start date is earlier than or equal to any entity start date.</li> <li>At least one process end date is later than or equal to any entity end date.</li> <li>For Bill and Person entity, <b>Bill Generation</b>, <b>Overdue</b>, and <b>Auto Pay</b> processes cannot be selected as the hold processes in a hold request.</li> <li>For Bill entity, it checks if hold amount is less than or equal to bill outstanding amount</li> <li>For Bill entity, to add a new bill to the request, the selected bill should be with a non-zero outstanding amount.</li> <li>Each Entities start date should lie within at least one process start date and end date in a request.</li> </ul> <p>For <b>Active</b> state following are some additional validations:</p> <ul style="list-style-type: none"> <li>Hold Process or Entities cannot be deleted.</li> <li>Hold Request or Entity or Process Start Date cannot be modified.</li> <li>Hold Reason cannot be modified</li> <li>Hold Request or Process or Entity End Date can be updated as either equal or greater than system date.</li> <li>Process can be added with start date as system date.</li> <li>Entity cannot be added in hold request.</li> <li>If entity or process end date is in past then it cannot be updated.</li> </ul>

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-HLDARCTR	C1-HLDARCTR	This algorithm transitions the request to active status when the request is created from <b>Account Receivable Central</b> and <b>Delinquency Control</b> .
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for primary key of the current business object, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submit	Enter	C1-HOLDSUBMT	C1-HOLDSUBMT	This algorithm checks the following: <ul style="list-style-type: none"> <li>Whether the approval is required for the hold request. If the approval is required for a hold request, the status of the hold request is changed to <b>Approval In Progress</b>. However, if the approval is not required for a hold request, the status of the hold request is changed to <b>Active</b> or <b>Deferred Processing</b> depending on the Defer Processing Count specified in the hold request type.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
Active	Enter	C1-HOLDACTV	C1-HOLDACTV	<p>This algorithm is invoked on Active button and validates following:</p> <ul style="list-style-type: none"> <li>Entities Start Date is on or after Hold Request Start Date</li> <li>Entities End Date is on or before Hold Request End Date</li> <li>For an Entity Bill, Hold Amount is not more than bill outstanding amount or Bill outstanding amount is not equal to zero.</li> <li>Updates and processes entities start date to system date.</li> <li>It updates following mentioned date to minimum of Entity End Date or Process End Date: <ul style="list-style-type: none"> <li>Bill After Date - For Bill Generation Process.</li> <li>Postpone Credit review Date Until- For Overdue Process.</li> <li>Defer Auto Pay Date - For Auto pay process.</li> </ul> </li> <li><b>Parameter-Alert Type</b>-Using this Alert Type alerts are shown in the dashboard. A alert will have hyperlink which will enable user to navigate to <b>Alerts</b> tab on account.</li> <li>Start Dates and End Dates of Alert types are maintained based on the Hold Requests associated with the account.</li> </ul> <p><b>Note:</b> If entity end date is empty, process end date will be considered. If process end date and entity is empty, Hold Request End Date will be considered.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Deferred Processing	Monitor	F1-AT-RQJ	F1-AT-RQJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Only one of the soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.
Approval In Progress	Enter	C1-HOLDAPP	C1-HOLDAPP	This algorithm creates To Do based on 'Approval To Do Type configured in Hold Request Type.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Approved	Enter	C1-HOLDAPRVD	C1-HOLDAPRVD	This algorithm is triggered when the approver clicks the <b>Approve</b> button. It checks whether the approval is required from users at the next level in the approval profile hierarchy. If the approval is required from the next level in the approval hierarchy, the status of the hold request is changed to <b>Approval In Progress</b> . If further approval is not required, the status of the hold request is changed to <b>Active</b> or <b>Deferred Processing</b> depending on the Defer Processing Count specified in the hold request type.

Status	System Event	Algorithm	Algorithm Type	Description
Return to Submitter	Enter	C1-HLDRESUBM	C1-HLDRESUBM	This algorithm is triggered when the approver clicks the <b>Re Submit</b> button. A To Do is created and sent to the submitter. It transitions the status of the hold request from <b>Approval In Progress</b> to <b>Draft</b> . The submitter can make required changes to the request details and submit it again. The To Do Type and To Do Role for submitter is specified in hold request type.
Rejected	-	-	-	-
Released	Enter	C1-RELENTITY	C1-RELENTITY	<p>This algorithm is invoked on <b>Release</b> button and updates following date to system date for all entities in the Hold Request:</p> <ul style="list-style-type: none"> <li>• Bill After Date - For Bill Generation Process</li> <li>• Postpone Credit review Date Until- For Overdue Process</li> <li>• Defer Auto Pay Date - For Auto pay process</li> <li>• Parameter-Alert Type-Using this Alert Type alerts are shown in the dashboard. A alert will have hyperlink which will enable user to navigate to Alerts tab on account</li> <li>• Start Dates and End Dates of Alert types are maintained based on the Hold Requests associated with the account.</li> </ul>
Released	Enter	C1-RLSHOLD	C1-RLSHOLD	<p>This algorithm is invoked on click of <b>Release</b> button in hold request and updates the following:</p> <ul style="list-style-type: none"> <li>• Hold Request End Date is updated to System Date</li> <li>• Processes End Date is updated to System Date</li> <li>• Entities End Date is updated to System Date</li> <li>• Hold request status is changed to <b>Released</b> after <b>Hold Release Reason</b> is accepted.</li> </ul>

## Prerequisites

---

To setup the hold request process, you need to do the following:

- Define the release status reasons for the **C1-HoldRequest** business object
- Define the required hold reasons in the system
- Define rejected status reasons for the **C1-HoldRequest** business object
- Assign the **C1-HLDAP** To Do type to a To Do role whose users must receive To Do generated while submitting a hold request for approval
- Assign the **C1-HOLSB** To Do type to a To Do role whose users must receive To Do generated while resubmitting a hold request
- Define the required hold request types in the system
- Define the required characteristic types where the characteristic entity is set to **Hold Request**
- Define the required characteristic types where the characteristic entity is set to **Hold Request Type**
- Set the batch control type of the **Hold Request Periodic Monitor (C1-HLDRQ)** and **Hold Request Monitor (C1-HLMON)** batches to Timed and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

**Note:** For more information about the batch, refer to *Oracle Revenue Management and Billing Batch Guide*

## Hold Request Type

---

Oracle Revenue Management and Billing allows you to define a hold request type using which you can create a hold request.

The **Hold Request Type** screen allows you to define, edit, copy, and delete a hold request type. This screen consists of the following zones:

- [Hold Request Type List](#) on page 1250
- [Hold Request Type](#) on page 1251

### Hold Request Type List

The **Hold Request Type List** zone lists hold request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.

Column Name	Column Description
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Hold Request Type</b> screen appears where you can edit the details of the hold request type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Hold Request Type</b> screen appears where you can define a hold request type using an existing hold request type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the hold request type.  <b>Note:</b> You can delete a hold request type only when you have not created a hold request using the hold request type.

On clicking the **Broadcast** () icon corresponding to the hold request type, the **Hold Request Type** zone appears with the details of the respective hold request type.

### Related Topics

For more information on...	See...
How to define a hold request type	<a href="#">Defining a Hold Request Type</a> on page 1253
How to edit a hold request type	<a href="#">Editing a Hold Request Type</a> on page 1257

How to view the details of a hold request type	<a href="#">Viewing the Hold Request Type Details</a> on page 1263

## Hold Request Type

The **Hold Request Type** zone displays the details of the hold request type. This zone consists of the following sections:

- **Main** — This section provides basic information about the hold request type. It contains the following fields:

Field Name	Field Description
Hold Request Type	Displays the hold request type.
Description	Displays the description of the hold request type.
Hold Request Business Object	Indicates the business object that will be used to create the hold request.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Detailed Description	Displays additional information about the hold request type.
Status	Indicates the status of the hold request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Allow Partial Hold for Bill	Indicates whether the partial hold amount is allowed for a bill.

Field Name	Field Description
Defer Processing Count	Displays the number of entities to determine if the hold request will be processed in deferred mode.
	<b>Note:</b> If the number of entities is less than the <b>Defer Processing Count</b> , the hold request will be processed in real time (i.e. immediately).
Approval Required	Indicates whether approval is required while creating the hold request using hold request type.
Approval To Do Type	Indicates that To Do of the specified To Do type must be created when you submit the hold request for approval.
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.  It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type.
Approval To Do Role	Indicates that users with the specified To Do role can only approve the hold request submitted for approval.
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.  It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.
Submitter To Do Type	Indicates the To Do type of the submitter.
	<b>Note:</b> It has a link. On clicking the link, the <b>To Do Type</b> screen appears where you can view the details of the respective To Do type.
Submitter To Do Role	Indicates the To Do role of the submitter.
	<b>Note:</b> It has a link. On clicking the link, the <b>To Do Role</b> screen appears where you can view the details of the respective To Do role.

- **Hold Processes** —This section displays the list of processes to be kept on hold for the hold request type.
- **Characteristics** — This section lists the characteristics defined for the hold request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request type.
Delete	Used to delete the hold request type. <b>Note:</b> You can delete a hold request type only when you have not created a hold request using the hold request type.
Duplicate	Used to create a new hold request type using an existing hold request type.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the hold request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Hold Request Type** zone does not appear in the **Hold Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the hold request type in the **Hold Request Type List** zone.

### Related Topics

## Defining a Hold Request Type

### Prerequisites

To define a hold request type, you should have:

- Hold request business objects defined in the application

### Procedure

To define a hold request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Hold Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type Business Object	Used to indicate the business object that you want to use to create the hold request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple hold request type business objects defined in the application. If there is only one hold request type business object defined in the application, the **Hold Request Type** screen appears.

- Select the required hold request type business object from the respective field.
- Click **OK**.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request type.
- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the hold request type business object used while defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object that you want to use while creating the hold request.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No
Status	<p>Used to indicate the status of the hold request type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul> <p><b>Note:</b> You cannot change the status of a hold request type to <b>Inactive</b> if there are hold requests which are created using the hold request type and are currently in the <b>Draft</b> or <b>Approval In Progress</b> status.</p>	Yes
Allow Partial Hold for Bill	Used to indicate whether the partial hold amount will be accepted for a bill.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	Used to indicate the number of entities to determine if the hold request will be processed in deferred mode.	No
	<b>Note:</b> If the number of entities is less than the <b>Defer Processing Count</b> , the hold request will be processed in real time (i.e. immediately).  Defer processing count should be a numerical value without decimal points.	
Approval Required	Used to indicate whether approval is required while creating the hold request using hold request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	
Submitter To Do Type	Used to indicate the To Do type for the submitter.	No
Submitter To Do Role	Used to indicate the To Do role for the submitter.	No

**Note:**

**Deferred** mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. When the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked, the system checks whether there are any hold requests in the **Deferred** status. If there is an hold request in the **Deferred** status, then its status is changed to **Active**.

6. Enter the required details.

**Note:** You can search for **To Do Type** by clicking the **Search**  icon corresponding to the respective field.

7. Define processes to hold for the hold request type.

Note:

At least one hold process needs to be selected for defining a hold request type.

8. Define characteristics for the hold request type, if required.
9. Click **Save**.
- The hold request type is defined.

Defining Characteristics for a Hold Request Type

Prerequisites

To define characteristics for a hold request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Hold Request Type**)

Procedure

To define characteristics for a hold request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a hold request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Hold Request Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the hold request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the hold request type.

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search** () icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the hold request type, click the **Add** () icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the hold request type, click the **Delete** () icon corresponding to the characteristic.

## Editing a Hold Request Type

### Prerequisites

To edit a hold request type, you should have:

- Hold request business objects defined in the application

### Procedure

To edit a hold request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Hold Request Type** sub-menu.  
The **Hold Request Type** screen appears.
4. In the **Hold Request Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the hold request type whose details you want to edit.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request type.
- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Displays the hold request type.	Not applicable
Business Object	Indicates the hold request type business object used while defining the hold request type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object that you want to use while creating the hold request.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No
Status	Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
	<b>Note:</b> You cannot change the status of a hold request type to <b>Inactive</b> if there are hold requests which are created using the hold request type and are currently in the <b>Draft</b> or <b>Approval In Progress</b> status.	
Allow Partial Hold for Bill	Used to indicate whether the partial hold amount will be accepted for a bill.	Yes
Defer Processing Count	Used to indicate the number of entities to determine if the hold request will be processed in deferred mode.	No
	<b>Note:</b> If the number of entities is less than the <b>Defer Processing Count</b> , the hold request will be processed in real time (i.e. immediately).  Defer processing count should be a numerical value without decimal points.	
Approval Required	Used to indicate whether approval is required while creating the hold request using hold request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	
		<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected
Submitter To Do Type	Used to indicate the To Do type for the submitter.	No
Submitter To Do Role	Used to indicate the To Do role for the submitter.	No

**Note:**

**Deferred** mode means in the background when the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked. You can configure the **Hold Request Periodic Monitor (C1-HLDRQ)** batch such that it is executed at regular intervals. When the **Hold Request Periodic Monitor (C1-HLDRQ)** batch is invoked, the system checks whether there are any hold requests in the **Deferred** status. If there is an hold request in the **Deferred** status, then its status is changed to **Active**.

**Tip:** Alternatively, you can click the **Edit** button in the **Hold Request Type** zone to edit the details of the hold request type.

5. Modify the details, if required.
6. Define, edit, or remove characteristics from the hold request type, if required.
7. Click **Save**.

The changes made to the hold request type are saved.

**Deleting a Hold Request Type****Procedure**

To delete a hold request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **H** and then click **Hold Request Type**.

A sub-menu appears.

- 3. Click the **Search** option from the **Hold Request Type** sub-menu.

The **Hold Request Type** screen appears.

- 4. In the **Hold Request Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the hold request type that you want to delete.

A message appears confirming whether you want to delete the hold request type.

**Note:** You can delete a hold request type only when you have not defined a hold request using the hold request type.

**Tip:** Alternatively, you can click the **Delete** button in the **Hold Request Type** zone to delete the hold request type.

- 5. Click **OK**.

The hold request type is deleted.

**Copying a Hold Request Type**

Instead of creating a hold request type from scratch, you can create a new hold request type using an existing hold request type. This is possible through copying a hold request type. On copying a hold request type, the details including the characteristics are copied to the new hold request type. You can then edit the details, if required.

**Prerequisites**

To copy a hold request type, you should have:

- Hold request type (whose copy you want to create) defined in the application
- Hold request business objects defined in the application

**Procedure**

To copy a hold request type:

- 1. Click the **Admin** link in the **Application** toolbar.

A list appears.

- 2. From the **Admin** menu, select **H** and then click **Hold Request Type**.

A sub-menu appears.

- 3. Click the **Search** option from the **Hold Request Type** sub-menu.

The **Hold Request Type** screen appears.

- 4. In the **Hold Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the hold request type whose copy you want to create.

The **Hold Request Type** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request type.
- **Hold Processes** — Used to define the processes to hold for the hold request type.
- **Characteristics** — Used to define characteristics for the hold request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.	Yes
Business Object	Indicates the hold request type business object used while defining the hold request type.	Not applicable
Description	Used to specify the description for the hold request type.	Yes
Hold Request Business Object	Used to indicate the business object that you want to use while creating the hold request.	Yes
Detailed Description	Used to specify additional information about the hold request type.	No
Status	Used to indicate the status of the hold request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
	<b>Note:</b> You cannot change the status of a hold request type to <b>Inactive</b> if there are hold requests which are created using the hold request type and are currently in the <b>Draft</b> or <b>Approval In Progress</b> status.	
Allow Partial Hold for Bill	Used to indicate whether the partial hold amount will be accepted for a bill.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Defer Processing Count	used to indicate the number of bills to determine if the hold request will be processed in deferred mode.	No
	<p><b>Note:</b></p> <p>Deferred mode means in the background when the <b>Hold Request Periodic Monitor (C1-HLDRQ)</b> batch is invoked. You can configure the <b>Hold Request Periodic Monitor (C1-HLDRQ)</b> batch such that it is executed at regular intervals. When the <b>Hold Request Periodic Monitor (C1-HLDRQ)</b> batch is invoked, the system checks whether there are any hold requests in the <b>Deferred</b> status. If there is an hold request in the <b>Deferred</b> status, then its status is changed to <b>Active</b>.</p> <p>If the number of bills is less than the Defer Processing Count, the hold request will be processed in real time (i.e. immediately).</p> <p>Defer processing count should be a numerical value without decimal points.</p>	
Approval Required	Used to indicate whether approval is required while creating the hold request using hold request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the hold request for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the hold request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected
Submitter To Do Type	Used to indicate the To Do type for the submitter.	No
Submitter To Do Role	Used to indicate the To Do role for the submitter.	No

**Tip:** Alternatively, you can click the **Duplicate** button in the **Hold Request Type** zone to create a copy of the hold request type.

5. Enter the required details.
6. Define, edit or remove processes from the hold request type, if required.
7. Define, edit, or remove characteristics from the hold request type, if required.
8. Click **Save**.

The new hold request type is defined.

## Hold Request (Used for Searching)

The **Hold Request** screen allows you to search for a hold request using various search criteria. It also allows you to create a hold request. Through this screen, you can navigate to the following screen:

- [Hold Request \(Used for Viewing\)](#) on page 1273

This screen consists of the following zone:

- [Search Hold Request](#) on page 1264

## Search Hold Request

The **Search Hold Request** zone allows you to search for hold requests using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a hold request using request or bill details. The valid values are: <ul style="list-style-type: none"> <li>• Request Details</li> <li>• Bill Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Request Details</b> option is selected.	
Hold Request Type	Used to search hold requests which are created using a particular hold request type.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Hold Process	Used to search hold requests which are created using a particular hold process.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Status	Used to search hold requests with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Draft</li> <li>• Released</li> <li>• Approval In Progress</li> <li>• Deferred Processing</li> <li>• Rejected</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search hold requests which are created for a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list. You can search for an account by clicking the <b>Search</b>  icon corresponding to the field.	
Entity	Used to search hold request with a particular entity. The valid values are: <ul style="list-style-type: none"> <li>• Account</li> <li>• Person</li> <li>• Bill</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
User ID	Used to search hold requests which are created by a particular user.	
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Start Date	Used to search hold requests which are created from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
End Date	Used to search hold requests which are created till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	
Hold Request ID	Used to search a particular hold request.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search hold requests which are created for a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Request Details</b> option from the <b>Search By</b> list. You can search for a person by clicking the <b>Search</b>  icon corresponding to the field.	
Bill ID	Used to search hold requests which includes bill segments or adjustments of a particular bill.	No
	<b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list. You can search for a bill by clicking the <b>Search</b>  icon corresponding to the field.	
Bill Date From	Used to search hold requests which includes bill segments or adjustments of bills which are created from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	
To	Used to search hold requests which includes bill segments or adjustments of bills which are created till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Bill Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a hold request.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Create Date/Time	Displays the date and time when the hold request is created.
Hold Request Information	Displays information about the hold request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the respective hold request.

Column Name	Column Description
Status	Indicates the status of the hold request. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Draft</li> <li>Released</li> </ul>
Start Date	Displays the date when the hold request is created.
End Date	Displays the date when the hold request is released.
Hold Processes	Displays the hold processes using which hold request is created.
Hold Reason	Displays the hold reason for the hold request.
Created By	Indicates the user who has created the hold request.

## **Searching for a Hold Request**

### **Prerequisites**

To search for a hold request, you should have:

- Hold request types defined in the application

### **Procedure**

To search for a hold request:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Main** menu, select **Financial** and then click **Hold Request**.  
A sub-menu appears.
- Click the **Search** option from the **Hold Request** sub-menu.  
The **Hold Request** screen appears.
- Enter the search criteria in the **Search Hold Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of hold requests that meet the search criteria appears in the **Search Results** section.

Viewing the Hold Request Details

Procedure

To view the details of a hold request:

- 1. Search for the hold request in the **Hold Request** screen.
- 2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to view.

The **Hold Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the hold request. It contains the following zones:
  - **Hold Request** – Displays the details of the hold request.
  - **Hold Entities** – Lists the entities, such as person, accounts, or bills that are on hold request.
  - **Search Account** — Searches the accounts to be put on hold.

Note: This zone appears only when hold request is for **Account** and its status is **Draft**.

- **Search Bill** — Searches the bills to be put on hold.

Note: This zone appears only when hold request is for **Bill** and its status is **Draft**.

- **Search Person** — Searches the persons to be put on hold.

Note: This zone appears only when hold request is for **Person** and its status is **Draft**.

- **Log** – Lists the complete trail of actions performed on the hold request.

- 3. View the details of the hold request in the **Hold Request** zone.
- 4. View the hold request entities (such as person, accounts, or bills) in the **Hold Entities** zone.

Creating a Hold Request

Prerequisites

To create a hold request, you should have:

- Hold request types defined in the application.

**Procedure**

To create a hold request:

1. Do either of the following:

If you want to...	Then...
Define a hold request from the <b>Account Receivable Central</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>Financial</b> and then click <b>Account Receivable Central</b>. The <b>Account Receivable Central</b> screen appears.</li> <li>3. Search for the bill in the <b>Account Receivable Central</b> screen.</li> <li>4. In the <b>Search Results</b> section, select the required bill and then click <b>Hold</b>.</li> </ol> <div data-bbox="816 829 1399 1056"> <p><b>Note:</b> Bills are selected to be on hold from <b>Account Receivable Central</b>. Only one bill at a time is allowed to select for <b>Hold Request</b> from <b>Account Receivable Central</b></p> </div>
Define a hold request from the <b>Delinquency Central</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>Credit &amp; Collection</b> and then click <b>Delinquency Central</b>. The <b>Delinquency Central</b> screen appears.</li> <li>3. Search for the overdue process in the <b>Delinquency Central</b> screen.</li> <li>4. In the <b>Search Results</b> section, select the required overdue process and then click <b>Create Hold Request</b>.</li> </ol> <div data-bbox="816 1560 1399 1787"> <p><b>Note:</b> Accounts are selected to be on hold from <b>Delinquency Central</b> screen Only one account at a time is allowed to select for <b>Hold Request</b> from <b>Delinquency Central</b> screen.</p> </div>
Define a hold request from the <b>Hold Request</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> </ol>

If you want to...	Then...
	<ol style="list-style-type: none"> <li>From the <b>Main</b> menu, select <b>Financial</b> and then click <b>Hold Request</b>. A sub-menu appears.</li> <li>Click the <b>Add</b> option from the <b>Hold Request</b> sub-menu.</li> </ol>

The **Add Hold Request** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Used to indicate the request type using which you want to create the hold request.	Yes

**Tip:** Alternatively, you can access the **Add Hold Request** screen by clicking the **Add** button in the **Page Title** area of the **Hold Request** screen.

- Select the required hold request type from the respective fields.
- Click **OK**.

The hold request is defined and the status of the hold request is set to **Draft**. The **Hold Request** screen appears where you can view the details of the hold request. It contains the following sections:

- Main** – Used to specify basic details about the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Type	Indicates the hold request type using which you want to create the hold request.	Not applicable
Start Date	<p>Used to specify the date from when the hold request is effective.</p> <p><b>Note:</b> The hold request start date cannot be later than the hold request end date. By default, system date appears in this field.</p>	Yes
End Date	<p>Used to specify the date till when the hold request is effective.</p> <p><b>Note:</b> The hold request end date cannot be earlier than the hold request start date.</p>	Yes
Hold Reason	<p>Used to indicate the reason why you want to hold the entity.</p> <p><b>Note:</b> The hold reason must exist in the <b>HOLD_REASON_FLG</b> lookup field and its status must be <b>Active</b>.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> <li>Account</li> <li>Bill</li> <li>Person</li> </ul>	Yes
	<b>Note:</b> If bill is kept on hold using <b>Account Receivable Central</b> screen, then this field will display <b>Bill</b> as an entity and <b>Hold Entities</b> section will display information about this bill.	
Comments	Used to specify the additional information about hold request.	No

- **Hold Entities** — Used to specify details of the selected hold entity. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Entity ID	Used to specify the hold entity ID.	Yes
	<b>Note:</b> You can search for an entity ID by clicking the <b>search</b>  icon corresponding to the field  If the hold entity is account, you must specify the account ID in this field. If the hold entity is person, you must specify the person ID in this field. And, if the hold entity is bill, you must specify the bill ID in this field.  .	
Start Date	Used to specify the date from when you want to hold the entity.	Yes
	<b>Note:</b> By default, system date appears in this field  The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates.  The hold entity start date cannot be later than the hold entity end date.	

Field Name	Field Description	Mandatory (Yes or No)
End Date	Used to specify the date till when you want to hold the entity.	No
	<b>Note:</b> The hold entity end date must be between hold request start and end dates and between the process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date.	
Hold Amount	Displays the amount which is kept on hold.	Not applicable
	<b>Note:</b> This column appears only when the hold entity is <b>Bill</b> .	

- **Hold Processes** — Used to indicate the processes to be on hold for the hold request. By default, processes are defined on the hold request type. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that needs to be kept on hold.	Yes
Start Date	Used to specify the date from when process is to be on hold for the hold request.	Yes
	<b>Note:</b> By default, system date appears in this field The hold process start date must be between the hold request start and end dates.	
End Date	Used to specify the date till when the process is to be on hold.	No

- **Characteristics** — Used to define the characteristics for the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the hold request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Hold Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the hold request.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the hold request.

#### 4. Enter the required details

**Note:**

Processes and Entities start dates and end dates are expected to be within the limit of Hold Request Start Date and End date.

You can search for a hold entity by clicking the **search**  icon corresponding to the respective field.

5. Add entities and processes for the hold request.
6. Define characteristics for the hold request, if required.
7. Click **Save**.

The hold request is created and the status of the hold request is set to **Draft**. The **Hold Request** screen appears with the details of hold request.

**Note:** It is recommended that user should set the **C1-HLMON** batch every time the hold request is generated. Otherwise, alert would be shown in the dashboard which may not give the proper representation of active hold requests.

## Hold Request (Used for Viewing)

Once you create a hold request, the **Hold Request** screen allows you to:

- Add entities in a hold request
- Add processes in a hold request

- Edit the details of a hold request
- Edit the hold amount against each entity. This is valid for only bill.
- Delete a hold request
- View the details of a hold request
- Submit a hold request for approval
- Approve or reject a hold request
- Resubmit a hold request for approval
- Activate and Release a hold request
- View the log of a hold request
- Add a log entry for a hold request

This screen consists of the following tabs:

- **Main** – Displays information about the hold request. It contains the following zones:
  - **Hold Request** – Displays the details of the hold request.
  - **Hold Entities** – Lists the entities, such as person, accounts, or bills that are on hold request.
  - **Search Account** — Searches the accounts to be put on hold.

**Note:** This zone appears only when hold request is for **Account** and its status is **Draft**.

- **Search Bill** — Searches the bills to be put on hold.

**Note:** This zone appears only when hold request is for **Bill** and its status is **Draft**.

- **Search Person** — Searches the persons to be put on hold.

**Note:** This zone appears only when hold request is for **Person** and its status is **Draft**.

- **Log** — Lists complete trail of actions performed on the hold request. This tab contains the following zone:
  - **Hold Request Log** — Displays the actions performed on the hold request.

## Hold Request - Main

The **Main** tab on the **Hold Request** contains the following zones:

- [Hold Request](#) on page 1274
- [Hold Entities](#) on page 1276
- [Search Account](#) on page 1278

**Note:** This zone appears only when hold request is for **Account** and its status is **Draft** .

- [Search Bill](#) on page 1281

**Note:** This zone appears only when hold request is for **Bill** and its status is **Draft** .

- [Search Person](#) on page 1282

**Note:** This zone appears only when hold request is for **Person** and its status is **Draft** .

## Hold Request

The **Hold Request** zone displays the details of the hold request. This zone contains the following sections:

- **Main** — This section provides basic information about the hold request. It contains the following fields:

Field Name	Field Description
Hold Request Information	Displays information about the hold request.
Hold Request Type	Indicates the hold request type using which the hold request is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Hold Request Type</b> screen appears where you can view the details of the hold request type.
Status	Indicates the status of the hold request.
Status Reason	Indicates the reason why the hold request is released.  <b>Note:</b> This field appears only when the hold request is in the <b>Released</b> status. It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the released reason.
Start Date	Displays the date when the hold request is created.
End Date	Displays the date when the hold request is released.
Hold Reason	Displays the reason of hold request.
Entity	Displays the hold request entity.
Comments	Displays the additional information for a hold request.

- **Hold Processes** — Lists the processes that are on hold in the hold request. It contains the following columns:

Column Name	Column Description
Hold Process	Lists the processes that are on hold.
Start Date	Displays the date from when the process is to be on hold for hold request.
End Date	Displays the date till when the process is to be on hold for hold request.

- **Characteristics** — Lists the characteristics defined for the hold request. It contains the following fields:

Field Name	Field Description
Effective Date	Displays the date from when hold request is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the hold request.  <b>Note:</b> The <b>Edit</b> button appears only when the hold request is in the <b>Draft</b> or <b>Active</b> status.

Button Name	Button Description
Delete	Used to delete the hold request.
	<b>Note:</b> The <b>Delete</b> button appears only when the hold request is in the <b>Draft</b> status.
Submit	Used to activate the hold request.
	<b>Note:</b> The <b>Submit</b> button appears only when the hold request is in the <b>Draft</b> status.
Re Submit	Used to re-submit the hold request.
	<b>Note:</b> the <b>Re Submit</b> button appears only when the hold request is in the <b>Approval In Progress</b> status.
Approve	Used to approve the hold request.
	<b>Note:</b> the <b>Approve</b> button appears only when the hold request is in the <b>Approval In Progress</b> status.
Reject	Used to reject the hold request.
	<b>Note:</b> the <b>Reject</b> button appears only when the hold request is in the <b>Approval In Progress</b> status.
Release	Used to release the hold request.
	<b>Note:</b> The <b>Release</b> button appears only when the hold request is in the <b>Active</b> status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the hold request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the hold request status is updated.
Create Date/Time	Displays the date and time when the hold request is created.

### Hold Entities

The **Hold Entities** zone on the **Hold Request** screen lists the entities that are on hold request. This zone contains the following columns:

Column Name	Column Description
Person Information	Displays information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears with details of the respective person.
Account Information	Displays information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with details of the respective account.
Bill Information	Displays information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with details of the respective bill.
Start Date	Displays the date from when the entity is on hold.
End Date	Displays the date till when the entity is on hold.
	<b>Note:</b> When hold request for entity is released, then its end date gets updated to the release date only when its end date lies between the hold request start date and end date .
Hold Amount	Displays the amount on hold.
	<b>Note:</b> This column appears only when the entity bill is on hold.
Bill After Date	Displays the date after which bills can be generated.
	<b>Note:</b> This column appears only when the entity account is on hold.
Postpone Credit Review Until	Displays the date till when overdue process is to be on hold.
	<b>Note:</b> This column appears only when the entity account is on hold.
Defer Auto Pay Date	Displays the date from when auto pay process is to be put on deferred mode.
	<b>Note:</b> This column appears only when the entity account is on hold.

**Note:**

You can directly edit the start and end date of the hold entities by selecting the corresponding column and then click the **Edit** button available on the upper left corner of the **Hold Entities** zone.

You can directly delete the hold entities by selecting the corresponding column and then click the **Delete** button available on the upper left corner of the **Hold Entities** zone.

## Search Account

The **Search Account** zone searches for accounts to add in a hold request. This zone contains the following sections:

- **Search Criteria** — This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	<p>Used to indicate whether you want to search for accounts using account or policy details.</p> <p>The valid values are:</p> <ul style="list-style-type: none"> <li>• Account Details</li> <li>• Policy Details</li> </ul> <p><b>Note:</b> By default, the <b>Account Details</b> option is selected.</p>	Yes
Account ID	<p>Used to search for a particular account.</p> <p><b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list. You can search for an account by clicking the <b>Search</b>  icon corresponding to the field.</p>	No
Address Source	<p>Used to indicate the source of address. The valid values are:</p> <ul style="list-style-type: none"> <li>• Account Override</li> <li>• Mailing Location on Account</li> <li>• Person</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.</p>	No
Division	<p>Used to search for accounts which belong to a particular division.</p> <p><b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.</p>	No
Customer Class	<p>Used to indicate the customer class to which the account belongs.</p> <p><b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Bill Cycle	Used to indicate the bill cycle of the account.	No
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Price Item	Used to search a particular price item.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list. You can search for a price item by clicking the <b>Search</b>  icon corresponding to the field.	
Policy Plan Number	Used to indicate the plan number of the policy.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Policy Type	Used to indicate the type of policy.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Source System	Used to indicate the name of the external system from where the policy originated.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Policy Number	Used to indicate the policy number.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Status	Used to indicate the status of the policy. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• In Force/ Active</li> <li>• Pending Cancellation</li> <li>• Pending Resinstatement</li> <li>• Pending Termination</li> <li>• Reinstate</li> <li>• Terminated</li> <li>• Cancelled</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Policy Start Date	Used to indicate the date from when the policy is effective.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Policy End Date	Used to indicate the date till when the policy is effective.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Characteristic Type/Value	Used to indicate the characteristic Type/ Value associated with the policy.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
State	Used to indicate the state name.	No
County	Used to indicate the county name.	No
Postal	Used to indicate the postal or zip code.	No

**Note:**

You must specify at least one search criterion while searching for accounts.

ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Account Information	Displays the account information.
Country	Displays the country name.
State	Displays the state name.
County	Displays the county name.
Postal	Displays the postal or zip code.
Customer Class	Displays the customer class of the account.
Division	Displays the division to which the account belongs.
Entity ID	Displays the entity ID.

## Editing a Hold Request

### Procedure

To edit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.

The **Hold Request** screen appears.

3. Click the **Edit** button in the **Hold Request** zone.

**Note:** The **Edit** button appears only when the hold request is in the **Draft** or **Active** status.

The **Hold Request** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Hold Request Type	Displays the hold request type using which the hold request is created.	Not applicable
Start Date	Used to specify the date till when you want to hold the entity.  <b>Note:</b> The hold entity end date must be between hold request start and end dates and between the process's start and end dates. The hold entity end date cannot be earlier than the hold entity start date.	Yes
End Date	Used to specify the date till when the hold request is effective.  <b>Note:</b> The hold request end date cannot be earlier than the hold request start date.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Hold Reason	Used to indicate the reason why you want to hold the entity.	Yes
	<b>Note:</b> The hold reason must exist in the <b>HOLD_REASON_FLG</b> lookup field and its status must be <b>Active</b> .	<b>Note:</b> This field cannot be edited if hold request is in <b>Active</b> status.
Entity	Displays the hold entity.	Not applicable
Comments	Used to specify the additional information about hold request.	No

- **Hold Processes** — Used to specify the processes on hold in the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Process	Used to indicate the process that needs to be kept on hold.	Yes
Start Date	Used to specify the date from when process is to be on hold for the hold request.	Yes
	<b>Note:</b> This field is not editable when hold request is in <b>Active</b> status. The hold process start date must be between the hold request start and end dates.	
End Date	Used to specify the date till when the hold process is to be on hold.	No

- **Characteristics** — Used to define characteristics for the hold request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the hold request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Hold Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the hold request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the hold request.

4. Modify the details of the hold request, if required.

**Note:**

If you want to specify more than one hold processes, click the **Add** (+) icon corresponding to the process and then specify the details.

However, if you want to remove a hold process from the hold request, click the **Delete** (🗑️) icon corresponding to the process.

5. Define, edit, or remove characteristics from the hold request, if required.
6. Click **Save**.

The changes made to the hold request are saved.

## Deleting Hold Request Entities

### Procedure

To delete hold request entities:

1. Search for the hold request in the **Hold Request** screen.

2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold request* whose details you want to delete.

The **Hold Request** screen appears.

3. Select the entities to delete in the **Hold Entities** zone and click the **Delete** button available in the upper left corner.

A message appears confirming whether you want to delete the hold entity.

**Note:**

The **Delete** button appears only when the hold request is in the **Draft** or **Active** status.

4. Click **OK**.

The hold entities are deleted.

**Note:** No deletion is allowed on entities of hold requests which are in active status and are added from **Account Receivable Central** or **Delinquency Central**.

## Deleting a Hold Request

### Procedure

To delete a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the *hold request* that you want to delete.

The **Hold Request** screen appears.

3. Click the **Delete** button in the **Hold Request** zone.

A message appears confirming whether you want to delete the hold request.

**Note:** The **Delete** button appears only when the hold request is in the **Draft** status.

4. Click **OK**.

The hold request is deleted.

**Note:**

You can delete a hold request only when its status is **Draft**.

Bills added from ARC cannot be deleted from the **Hold Request** screen.

**Submitting a Hold Request**

**Prerequisites**

To submit a hold request, you should have:

- Hold Request Types, Hold Processes and Hold Entities defined in the request.

**Procedure**

To submit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request that you want to submit.

The **Hold Request** screen appears.

3. Click the **Submit** button in the **Hold Request** zone.

The system behaves in the following manner:

If...	Then
The <b>Approval Required</b> check box is selected in the hold request type using which the hold request is created.	A To Do of the <b>C1-HLDAP</b> To Do type is created and sent to the approver and the status of the hold request is changed to <b>Approval In Progress</b> .
The <b>Approval Required</b> check box is not selected in the hold request type using which the hold request is created.	The hold request is created using the specified hold request types and the status of the hold request is changed to <b>Active</b> or <b>Deferred Processing</b> as specified in the hold request type.

**Note:**

The **Submit** button appears only when the hold request is in the **Draft** status.

Once the request is activated, the **Release** button appears in the **Record Actions** section.

If hold request start date is in past and its status is draft then, on activation of the hold request, the start date is changed to the system date.

For Active hold request, **C1-DELBI** batch will delete all pending bill segments and bills under account for bill generation process.

For more information about the **Delete Pending Bill segments and Bills (C1-DELBI) batch**, refer to Oracle Revenue Management and Billing Batch Guide.

## Approving a Hold Request

You can view the number of hold requests which are pending for approval in the **Hold Request** screen. The approver can review, and accordingly approve, reject or resubmit the hold request based on the observations.

**Note:** The system will not allow you to approve, reject or resubmit a hold request submitted by you.

### Procedure

To approve a hold request:

1. Do either of the following:

If you want to...	Then...
Approve a hold request through the <b>Hold Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the hold request in the <b>Hold Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Hold Request Information</b> column corresponding to the hold request which you want to review.</li> </ol>
Approve a hold request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-HLDAP</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the hold request that you want to review.</li> </ol>

The **Hold Request** screen appears.

2. Review the hold request details.

3. Click the **Approve** button in the **Hold Request** zone.

The system behaves in the following manner:

If you are...	Then...
Approving a Hold request	The status of the hold request is changed to <b>Active</b> or <b>Deferred Processing</b> as specified in the hold request type.

**Note:**  
The **Approve** button appears only when the hold request is in the **Approval In Progress** status.  
You can also resubmit the hold request if any changes are required in the hold request. Upon clicking the **Resubmit** button, provide the comments to make the required changes for the hold request.

**Releasing a Hold Request**

**Procedure**

To release a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose details you want to edit.

The **Hold Request** screen appears.

3. Click the **Release** button in the **Hold Request** zone.

The **Release Reason** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Release Reason	Used to indicate the reason for releasing the hold request.	Yes
Comments	Used to specify the additional comments on the release reason	No

4. Ensure the required release reason.
5. click **Save**.

The hold request is released.

**Note:**

The **Release** button appears only when the hold request is in the **Active** status.

Once the hold request is in **Released** status, the **End Date** of processes and entities gets updated.

**Rejecting a Hold Request****Prerequisites**

To reject a hold request, you should have:

- Rejection reasons defined in the application

**Note:**

While rejecting a hold request, you need to specify the reason why you want to reject the hold request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-HoldRequest** business object in the **Status Reason** screen.

The system will not allow you to approve, reject or resubmit a hold request submitted by you.

**Procedure**

To reject a hold request:

1. Do either of the following:

If you want to	Then
Reject a hold request through the <b>Hold Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the hold request in the <b>Hold Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Hold Request Information</b> column corresponding to the hold request which you want to review.</li> </ol>
Reject a hold request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.  The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-HLDAP</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.</li> </ol>

If you want to	Then
	<p>The <b>To Do List</b> screen appears.</p> <p>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</p> <p>6. Click the link in the <b>Message</b> column corresponding to the To Do of the hold request that you want to review.</p>

The **Hold Request** screen appears.

- 2. Review the hold request details.
- 3. Click the **Reject** button in the **Hold Request** zone.

The **Reject Hold Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the hold request.	Yes
Comments	Used to specify additional information while rejecting the hold request.	No

**Note:** The **Reject** button appears only when:

- The hold request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the hold request.

- 4. Select the rejection reason from the **Status Reason** list.
- 5. Click **Save**.

The status of the hold request is changed to **Rejected**.

**Resubmitting a Hold Request**

**Prerequisites**

To resubmit a hold request, you should have:

- Entities added in the hold request which is submitted for approval.

While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the hold request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

**Procedure**

To resubmit a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request that you want to resubmit.

The **Hold Request** screen appears.

3. Click the **Re Submit** button in the **Hold Request** zone.

The **Resubmit Hold Request** screen appears.

**Note:** The **Re Submit** button appears only when the hold request is in the **Approval In Progress** status.

A To Do of the **C1-HOLSB** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the hold request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

**Viewing the Log of a Hold Request****Procedure**

To view the log of a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose log you want to view.

The **Hold Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the hold request. It contains the following zones:
  - **Hold Request** – Displays the details of the hold request.
  - **Hold Entities** – Lists the hold entities records of the hold request.
  - **Search Account** – Searches the accounts to be put on hold.

**Note:** This zone appears only when hold request is for **Account** and its status is **Draft**.

- **Search Bill** – Searches the bills to be put on hold.

**Note:** This zone appears only when hold request is for **Bill** and its status is **Draft**.

- **Search Person** – Searches the persons to be put on hold.

**Note:** This zone appears only when hold request is for **Person** and its status is **Draft**.

- **Log** – Lists the complete trail of actions performed on the hold request. This tab contains the following zone:
  - **Hold Request Log** – Displays the trail of actions performed on the particular hold request.

3. Click the **Log** tab.

The **Hold Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the hold request.
Details	Displays the details about the action performed on the hold request.
User	Indicates the user who has performed the action on the hold request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the hold request.
Status Reason	Indicates the reason why the hold request was rejected or voided.

**Note:** You can manually add a log entry for the hold request by clicking the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

## Adding a Log Entry for a Hold Request

### Procedure

To add a log entry for a hold request:

1. Search for the hold request in the **Hold Request** screen.
2. In the **Search Results** section, click the link in the **Hold Request Information** column corresponding to the hold request whose log you want to edit.

The **Hold Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the hold request. It contains the following zones:
  - **Hold Request** – Displays the details of the hold request.
  - **Hold Entities** – Lists the hold entities records of the hold request.
  - **Search Account** – Searches the accounts to be put on hold.

**Note:** This zone appears only when hold request is for **Account** and its status is **Draft**.

- **Search Bill** – Searches the bills to be put on hold.

**Note:** This zone appears only when hold request is for **Bill** and its status is **Draft**.

- **Search Person** – Searches the persons to be put on hold.

**Note:** This zone appears only when hold request is for **Person** and its status is **Draft**.

- **Log** – Lists the complete trail of actions performed on the hold request. This tab contains the following zone:
  - **Hold Request Log** – Displays the trail of actions performed on the particular hold request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Hold Request Log** zone.

The **Add Hold Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Hold Request Information	Displays information about the hold request.	Not applicable
Log Details	Used to specify additional comments on the hold request.	Yes

5. Enter the comments in the **Log Details** field.

6. Click **Save**.

The log entry is added in the **Hold Request Log** zone.

# Chapter

# 20

---

## Delinquency Central

---

### Topics:

- [Prerequisites](#)
- [Delinquency Central \(Used for Viewing\)](#)
- [Overdue Process Information for Account: {Account ID}](#)

Oracle Revenue Management and Billing provides a complete overview of the overdue bills belonging to the delinquent accounts of a particular person using the **Delinquency Central**. User can review the overdue bills and perform following actions from the delinquency central:

- Initiate customer contact
- Initiate hold on overdue process
- Create payment arrangement for an account
- Create promise to pay for person's account

The Delinquency Central assists you in identifying all the overdue processes, overdue bills & delinquent accounts using an overdue monitoring process.

For more information on how to setup the delinquency central, see [Prerequisites](#) on page 1304.

## Prerequisites

---

To setup delinquency central, you need to do the following:

- Define the required characteristic types where the characteristic entity is set to overdue event.
- Define the overdue event type and overdue process template in the system.
- Promise To Pay type defined in the application.
- Customer contact type defined in the application.
- Hold request type defined in the application.

## Delinquency Central (Used for Viewing)

---

The **Delinquency Central** screen allows you to:

- Search for an overdue process
- View the details of an overdue process
- View the details of an overdue event
- Create customer contact
- Create a hold request for an overdue process
- Create a payment arrangement for an account
- Create a promise to pay for a person’s account
- Create a payment agreement request for an account

This screen consists of the following zones:

- [Search Overdue Process](#)
- [Overdue Events](#)

### Search Overdue Process

The **Search Overdue Process** zone allows you to search for overdue processes using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for overdue processes using person, account, bill or overdue process. The valid values are: <ul style="list-style-type: none"><li>• Person</li><li>• Account</li><li>• Bill</li><li>• Overdue Process</li></ul>	No
	<b>Note:</b> By default, the <b>Person</b> option is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Person ID	Used to search for overdue processes which belong to a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Person Identifier Type	Used to search for overdue processes with a particular person identifier type.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Person Identifier	Used to search for overdue processes with a specific value of the person identifier type.	Yes
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.	
Account ID	Used to search for overdue processes created for a particular account.	No
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to search for overdue processes with a particular account identifier type.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Account Identifier	Used to search for overdue processes with a particular account identifier.	Yes
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.	
Bill ID	Used to search for overdue processes with a particular bill.	No
	<b>Note:</b> This field appears only when you select the <b>Bill</b> option from the <b>Search By</b> list.	
Alternate Bill ID	Used to search for overdue processes using an alternate bill ID.	No
	<b>Note:</b> This field appears only when you select the <b>Bill</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and its value.	No
	<b>Note:</b> This field appears only when you select the <b>Bill</b> option from the <b>Search By</b> list.	
Overdue Process Template	Used to search for overdue processes with a particular overdue process template.	No
	<b>Note:</b> This field appears only when you select the <b>Overdue Process</b> option from the <b>Search By</b> list.	
Start Date	Used to search for overdue processes with a particular start date.	Yes
	<b>Note:</b> This field appears only when you select the <b>Overdue Process</b> option from the <b>Search By</b> list.	
End Date	Used to search overdue process with a particular end date.	Yes
	<b>Note:</b> This field appears only when you select the <b>Overdue Process</b> option from the <b>Search By</b> list.	
Status	Used to search for overdue processes with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Overdue Process</b> option from the <b>Search By</b> list.	
On Hold	Used to search for overdue processes that are on hold.	No
	<b>Note:</b> This field appears only when you select the <b>Overdue Process</b> option from the <b>Search By</b> list.	
Overdue Amount From	Used to search for overdue processes with a particular lower limit of the overdue amount.	No
	<b>Note:</b> This field appears only when you select the <b>Overdue Process</b> option from the <b>Search By</b> list.	
To	Used to search for overdue processes with a particular higher limit of the overdue amount.	No
	<b>Note:</b> This field appears only when you select the <b>Overdue Process</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type / Value	Used to search for overdue processes with a particular characteristic type and value.	No
	<b>Note:</b> This field appears only when you select the <b>Overdue Process</b> option from the <b>Search By</b> list.	

- In addition to above search parameters, the screen consists of following fields in the **Person Details** or **Account Details** section:

Column Name	Column Description
Main Customer	Displays the name of the main customer to whom the account belongs.
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Person Name	Displays the name of the person to whom the account belongs.
	<b>Note:</b> This field appears only when you select the <b>Person</b> option from the <b>Search By</b> list.
Person Identifier Type	Displays the person identifier type.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.
Person Identifier	Displays the value of the person identifier type.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.
Account Identifier Type	Displays the account identifier type.
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Account Identifier	Displays the value of the account identifier type.
	<b>Note:</b> This field appears only when you select the <b>Account</b> option from the <b>Search By</b> list.
Overdue	Displays whether the person account(s)/bill(s) are overdue. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.
Number of Active Overdue processes	Displays the number of overdue processes linked to the person's account that are in active status.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.

Column Name	Column Description
Number of Hold(s) on Account(s)	Displays the number of hold requests on the particular account.
Number of Overdue Bills	Displays the total number of bills that are overdue.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.
Total Overdue Amount	Displays the total overdue amount for an account.
Last Payment Date	Displays date of the last payment made by the person.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.
Last Payment Amount	Displays the amount last paid by the person.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.
Number Of Payment Arrangements	Displays the number of payment arrangements for the person's account.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.
Total Number of Overdue Process on Hold	Displays the total number of overdue process that are on hold.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.
Number of Promise To Pay	Displays the number of promise to pay belonging to the person.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.
Number of Broken Promise To Pay	Displays the total number of promise to pay that are broken.
	<b>Note:</b> This field appears only when you select the <b>Person</b> or <b>Account</b> option from the <b>Search By</b> list.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Overdue Process	Display additional information about the overdue process.
	<b>Note:</b> It has a link. On clicking the link, the <b>Overdue Process</b> screen appears where you can view the details of the overdue process.
Overdue Process Template	Displays the template that was used to create overdue process's events.

Column Name	Column Description
Account Information	Display additional information about the account. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the account.
Person Information	Display additional information about the person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears with the details of the person.
Overdue Amount	Displays the overdue amount under that overdue process.
On Hold	Displays whether the overdue process is on hold.
Overdue Process Details	On clicking the <b>View</b>  icon, the <b>Overdue Process Details</b> screen appears where you can view details of the overdue process.

On clicking the **Broadcast**  icon corresponding to the overdue process, the **Overdue Events** zone appears with the details of the respective overdue process.

## Overdue Events

The **Overdue Events** zone displays the details of the events of the overdue process on the **Delinquency Central** screen.

Column Name	Column Description
Event	Displays information about the event of the overdue process.
Event Status	Displays the status of the event.
Dependency on Other Events	Displays whether the event is dependent on other events. The valid values are: <ul style="list-style-type: none"> <li>No</li> <li>Yes</li> </ul>
Trigger Date	Displays the trigger date of the event.

Searching for an Overdue Process

Prerequisites

To search for an overdue process, you should have:

- Overdue process defined in the application.

Procedure

To search for an overdue process:

- Click the **Menu** link in the **Application** toolbar
- From the **Main** menu, select **Credits & Collection** and then click **Delinquency Central**.

The **Delinquency Central** screen appears.

- Enter the search criteria in the **Search Overdue Process** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of overdue processes that meet the search criteria appear in the **Search Results** section.

Viewing Events of an Overdue Process

Procedure

To view events of an overdue process:

- Search for the overdue process in the **Delinquency Central** screen.
- In the **Search Results** section, click the **Broadcast**  icon corresponding to the overdue process whose event details you want to view.

The **Overdue Events** zone appears.

- View the overdue event details of the overdue process in the **Overdue Events** zone.

## Viewing the Overdue Process Details

### Procedure

To view the details of an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, click the link in the **Overdue Process Information** column corresponding to the overdue process whose details you want to view.

The **Overdue Process** screen appears. It consists of the following tabs:

- **Main** – Displays the basic details of the overdue process.
  - **Events** – Displays the events details of the overdue process.
  - **Log** – Displays a complete trail of actions performed on the overdue process.
  - **Characteristics** – Displays the characteristics of the overdue process.
3. View the event details of the overdue process in the **Overdue Process** screen.

## Overdue Process Information for Account: {Account ID}

The **Overdue Process Information for Account: {Account ID}** screen allows you to view detail information of the account which is linked to the overdue process.

This screen consists of the following zones:

- [Person Information](#) on page 1311
- [Overdue Bills](#) on page 1313
- << insert Payment Agreement page here ... >>
- [Hold Details](#) on page 1313
- [Payment Arrangement](#) on page 1313
- [Promise To Pay](#) on page 1312
- [Account Information](#) on page 1312
- [Customer Contact Details](#) on page 1312

### Person Information

The **Person Information** zone displays details of the person whose account is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Person Name	Displays the name of the person whose account is linked to the overdue process.
Phone Number	Displays the phone number of the person.
Address	Displays the address of the person.

## Account Information

The **Account Information** zone displays the details of the account that is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Account ID	Displays the account ID.
Account Identifier Type	Displays the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Last Payment Date	Displays the date of the last payment made from the account that is linked with the overdue process.
Last Payment Amount	Displays the amount last paid from the account.

## Customer Contact Details

The **Customer Contact Details** zone displays the contact details of the customer whose account is linked with the overdue process. This zone contains following columns:

Column Name	Column Description
Contact Date/Time	Displays the date and time when the customer was contacted.
Customer Contact Information	Displays additional information about the customer contact.
	<b>Note:</b> It has a link. On clicking the link, the <b>Customer Contact</b> screen appears where you can view the details of the respective customer contact.
Preferred Contact Method	Displays the preferred method of contacting the customer.
Comments	Displays the comments that are placed against each customer.

## Promise To Pay

The **Promise To Pay** zone displays promise to pay created for an account which is linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Promise To Pay Information	Displays additional information of promise to pay.
	<b>Note:</b> It has a link. On clicking the link, the <b>Promise To Pay</b> screen appears where you can view the details of promise to pay.
Scheduled Amount	Displays the amount to be paid on the <b>Scheduled Date</b> .
Scheduled Date	Displays the date when the payment is expected as per promise to pay.

Column Name	Column Description
Status	Displays the status of promise to pay.
Created By	Displays the user ID who has created the promise to pay.

## Hold Details

The **Hold Details** zone displays the details of the person whose account is linked to the overdue process. This zone contains the following columns:

Column Name	Column Description
Hold Request Information	Displays additional information about the hold request.
	<b>Note:</b> It has a link. On clicking the link, the <b>Hold Request</b> screen appears where you can view the details of the hold request.
Status	Displays the status of the hold request.
Entity	Displays the hold request entity.
Entity Information	Displays the information about the entity on hold.
	<b>Note:</b> It has a link. On clicking the link, the <b>Account</b> , <b>Bill</b> or <b>Person</b> screen appears, where you can view details of the respective account, bill or person.
Start Date	Displays the date when the hold request is created.
End Date	Displays the end date of the hold request.

## Overdue Bills

The **Overdue Bills** zone displays details of the overdue bills. This zone contains following columns:

Column Name	Column Description
Bill Information	Displays additional information about the bill.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears where you can view the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Due Date	Displays the due date of the bill.
Overdue Amount	Displays the amount that is overdue in the bill.
Days Past Due	Displays the number of days past after the bill date.

## Payment Arrangement

The **Payment Arrangement** zone displays the details of the payment arrangement that is created for an account linked to the overdue process. This zone contains following columns:

Column Name	Column Description
Contract Information	Displays the payment arrangement contract information . In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Payoff Balance	Displays the total amount that is paid against the payment arrangement contract.
Arrange Amount	Displays the amount that is paid in installments as per the payment arrangement contract.
Number of Installments	Displays the number of installments used to calculate the <b>Arrange Amount</b> .

## Search Bill

The **Search Bill** zone allows you to search for a bill. This zone contains the following fields:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Person Name	Used to specify the name of the person for whom the bill is generated.	No
Person ID	Used to specify the person ID.	No
Bills of Persons in Hierarchy	Used to indicate whether you want to search for a bills generated against a person's hierarchy.	No
Bill Cycle	Used to indicate bills where a particular bill cycle is defined.	No
Bill Currency	Used to indicate the bill currency.	No
Billing Method	Used to indicate the billing method. The valid values are: <ul style="list-style-type: none"> <li>• Ad-Hoc Billing</li> <li>• Regular Billing</li> </ul>	No
Bill ID	Used to specify the bill ID.	No
Alternate Bill ID	Used to search a particular bill using the alternate bill ID.	No
Account ID	Used to indicate the account against which the bill is generated.	No
On or After Bill Date	Used to specify the date when the bill was completed.	No
Account Identifier Type	Used to search for bills where the account against which it is generated, a particular account identifier type is defined.	No
Account Identifier	Used to search for a bill generated against an account with a particular account identifier.	No

**Note:** You must specify at least one search criterion while searching for the bill.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Person Name	Displays the name of the person against whom the bill is generated.
Bill ID	Displays the bill ID.
Bill Status	Displays the status of the bill. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Complete</li> </ul>
Bill Date	Displays the date when the bill was completed.
Due Date	Displays the due date of the bill.
Current Charges	Displays the bill amount.
Bill Information	Displays additional information about the bill.

## Searching for a Bill

### Procedure

To search for a bill:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Credits & Collections** and then click **Delinquency Central**.  
The **Delinquency Central** screen appears.
3. Select the **Bill** option from the **Search By** list.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of bills that meet the search criteria appear in the **Search Results** section.

## Adding the Customer Contact Details

### Procedure

To add customer contact details:

1. Search for an overdue process in the **Delinquency Central** screen.

- In the **Search Results** section , select the check box corresponding to the overdue process linked to the account for which you want to add the customer contact.
- Click **Contact Customer**.  
The **Customer Contact** screen appears.
- Enter the required details.  
The fields **Person ID**, **Contact Date/Time** and **User ID** are auto-populated.
- Click **Save**.  
The customer is contacted based on the value set for **Preferred Contact Method** field on the **Customer Contact** screen.

**Creating a Hold Request for an Overdue Process**

**Procedure**

To create a hold request for an overdue process:

- Search for an overdue process in the **Delinquency Central** screen.
- In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a hold request for an overdue process.
- Click **Create Hold Request** button.

The **Add Hold Request** screen appears. It contains the following field:

Field Name	Field Description	Mandatory
Hold Request Type	Used to indicate the hold request type that is used for creating a hold request.	Yes

- Select the required hold request type from the **Hold Request Type** field.
- Click **OK**.

The **Hold Request** screen appears.

- Enter the required details for an overdue process.
- Click **Save**.

A hold request is defined for an overdue process where the status of the hold request is set as **Draft**.

**Note:**

The **Hold Request** screen appears where you can view the details of the hold request.

## Creating a Payment Arrangement for an Overdue Process

### Procedure

To create a payment arrangement for an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to create a payment arrangement for an overdue process.
3. Click the **Create Payment Arrangement** button.

The **Payment Arrangement** screen appears. It contains the following tabs:

- **Main**
- **History**

4. Enter the required details in the **Payment Arrangement** screen.
5. Click the **Save** button in the **Page Title** area of the **Payment Arrangement** screen.

A payment arrangement is created with the respective payment arrangement contract.

**Note:** The **Payment Arrangement** screen appears with the details of the payment arrangement.

## Defining a Promise To Pay for an Overdue Process

### Procedure

To create a promise to pay for an overdue process:

1. Search for the overdue process in the **Delinquency Central** screen.
2. In the **Search Results** section, select the check box corresponding to the **Overdue Process Information** column for whom you want to define a promise to pay for an overdue process.
3. Click the **Create Promise To Pay** button.

A message appears confirming that the promise to pay will be created for the account for which the overdue process is initiated.

4. Click **OK**.

The **Promise To Pay** screen appears.

5. Enter the required details in the **Promise To Pay** screen.
6. Click the **Save** button in the **Page Title** area of the **Promise To Pay** screen.

A promise to pay is created with the scheduled payment details.

# Chapter 21

---

## Upload Request

---

### Topics:

- [Upload Request \(Without Approval\) Status Transition](#)
- [Upload Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-BillCycleUpdateUplReq](#)
- [Algorithms Used in C1-ContractRiderUpdateUplReq](#)
- [Algorithms Used in C1-HoldUploadRequest](#)
- [Algorithms Used in C1-RefundUploadRequest](#)
- [Algorithms Used in C1-WriteOffUploadRequest](#)
- [Algorithms Used in C1-BillableChargeUploadRequest](#)
- [Algorithms Used in C1-ReinstatementUploadRequest](#)
- [Algorithms Used in C1-BillGrpSortUploadRequest](#)
- [Algorithms Used in C1-BillLevelUploadRequest](#)
- [CSV File Format for Account Bill Cycle Upload Request](#)
- [CSV File Format for Contract Rider Upload Request](#)
- [CSV File Format for Billable Charge Upload](#)
- [CSV File Format for Hold Upload Request](#)
- [CSV File Format for Refund Request Upload](#)

Oracle Revenue Management and Billing provides a generic upload feature which enables you to upload various types of data. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement
- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

While uploading data for the above supported entities, you need to specify the upload request type using which you want to upload the file. It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can upload a data file in the CSV format. You cannot upload data for more than one entity type through the same CSV file. For example, you cannot upload data for billable charges and hold requests using a single CSV file. An upload request of the specified upload request type is created when the file is successfully uploaded in the system. You can track a file through an upload request.

Once an upload request is created, the status of the upload request is set to **Draft**. The status of each record uploaded through an upload request is set to **Pending**. However, if the mandatory data is not available or data required for deriving

- [CSV File Format for Write Off Request Upload](#)
- [CSV File Format for Reinstatement Upload Request](#)
- [CSV File Format for Bill Group Sorting Upload Request](#)
- [CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request](#)
- [Upload Request Type](#)
- [Upload Request \(Used for Searching\)](#)
- [Upload Request \(Used for Viewing\)](#)

mandatory data is incorrect in the record, the status of record is set to **Invalid**. You can then edit, delete, or validate the upload request. During the validation process, the system and custom validations (if any) are executed. The status of each record is changed to **Valid** or **Invalid** depending on whether the record was validated successfully or not.

Once the upload request is validated, you can either cancel or submit the upload request for further processing. On submitting an upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked).

You can optionally configure the system to use the approval workflow process for an upload request. If the **Approval Required** flag is set to **Yes** in an upload request type, then on submitting the respective upload request, the approval workflow process creates a To Do for the approver to review the upload request. Once the approver approves the upload request, the system checks whether the number of valid records in the uploaded file exceed the online record process limit defined in the Defer Upload Request algorithm. If the number of valid records in the uploaded file does not exceed the online record process limit, the system creates or updates the entities in the real time (i.e. immediately). However, if the number of valid records in the uploaded file exceeds the online record process limit, the system creates or updates the entities in the deferred mode (i.e. when the **Upload Request Periodic Monitor (C1-UPLRQ)** batch is invoked. However, if the approver rejects the upload request, the status of the upload request is set to **Rejected**.

During the upload process, an upload request goes through various statuses in its lifecycle. Note that the lifecycle of an upload request is driven by the business object using which the upload request is created. In this release, we have shipped the following upload request business objects:

- Update Bill Cycle Upload Request (C1-BillCycleUpdateUpReq)
- Billable Charge Upload Request (C1-BillableChargeUploadRequest)
- Update Contract Rider Upload Request (C1-ContractRiderUpdateUpReq)
- Hold Request Upload Request (C1-HoldUploadRequest)
- Refund Request Upload Request (C1-RefundUploadRequest)
- Write Off Request Upload Request (C1-WriteOffUploadRequest)
- Reinstatement Upload Request (C1-ReinstatementUploadRequest)
- Bill Group Sorting Upload Request (C1-BillGrpSortUploadRequest)
- Bill Group Derivation and Pricing Parameters Upload Request (C1-BillLevelUploadRequest)

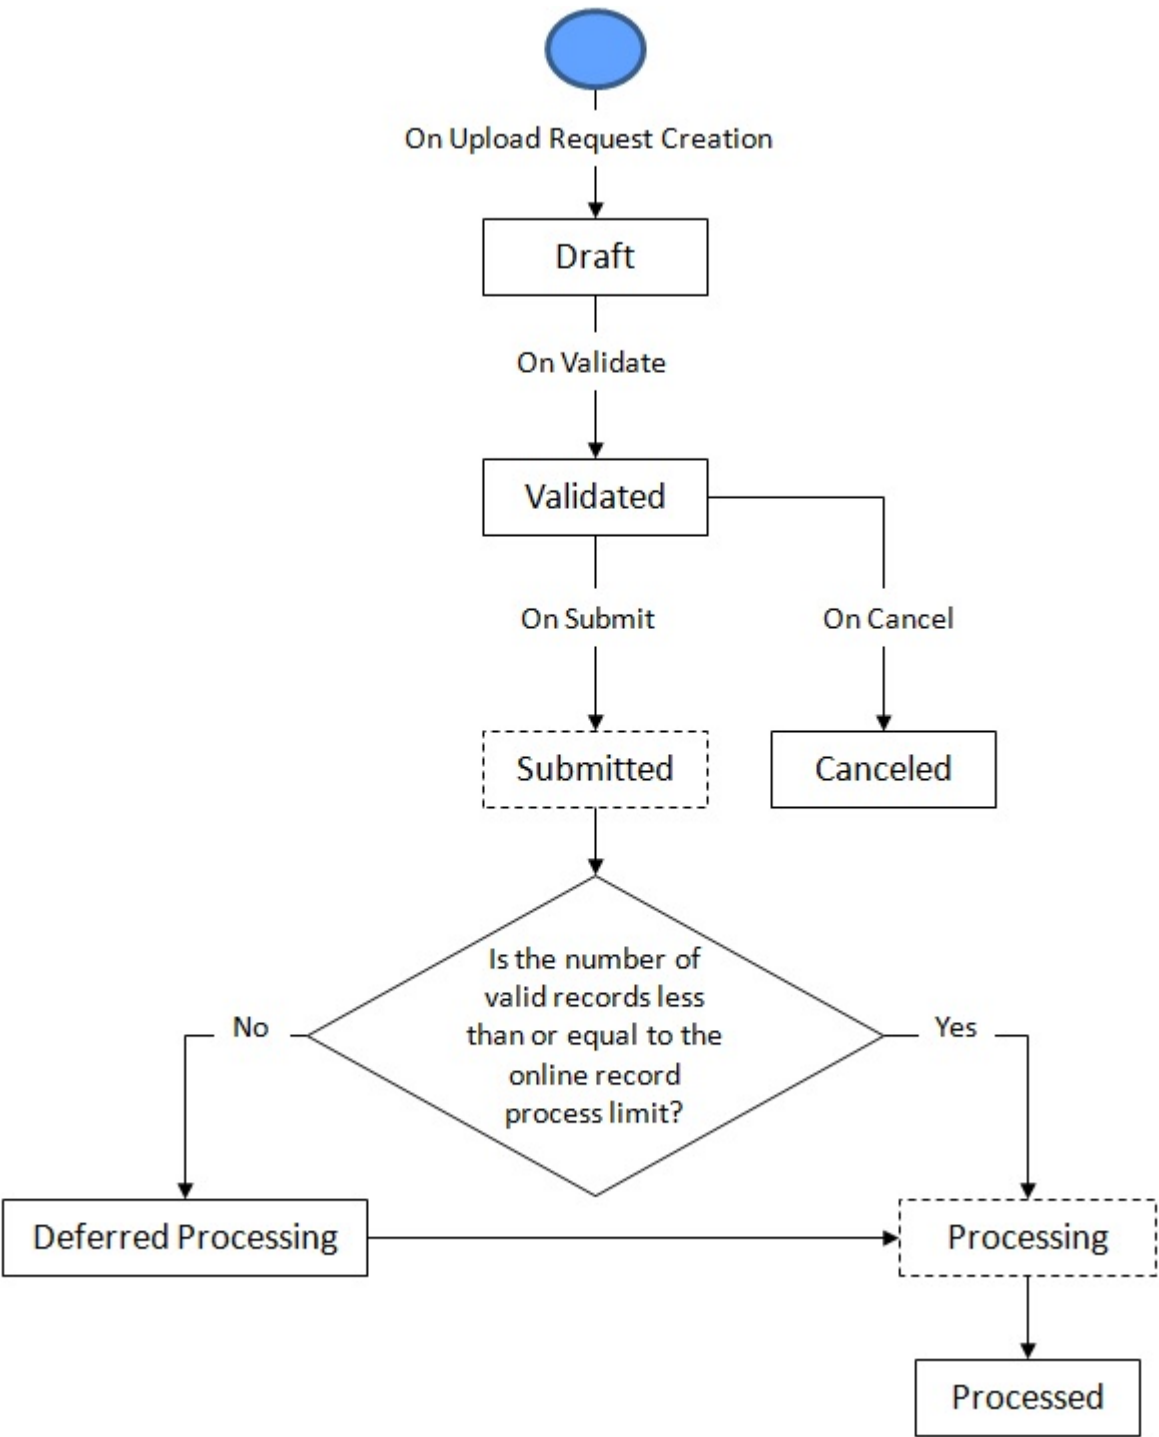

During the upload request process, an upload request creation goes through various statuses in its lifecycle. For more information about the upload request statuses, see [Upload Request \(Without Approval\) Status Transition](#) on page 1322 and [Upload Request \(With Approval\) Status Transition](#) on page 1323.

**Note:** The lifecycle of an upload request creation is driven by the respective business object using which the request is created. The upload request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the upload request process, see [Prerequisites](#) on page 1324.

### Upload Request (Without Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is off:

## Upload Request (With Approval) Status Transition

The following figure graphically indicates how an upload request moves from one status to another when the approval workflow is on:

## Prerequisites

---

To setup the upload request process, you need to do the following:

- Define the required upload request types in the system.
- Define the required characteristic types where the characteristic entity is set to **Upload Request Type**.
- Define the required characteristic types where the characteristic entity is set to **Upload Request**.
- Define the values for the following parameters in the **C1-REN-VALID** algorithm:
  - Policy Status after Processing Reinstatement Upload Request
  - Policy Reinstatement Status for Reason Verification
- Define the value for the **Online Record Process Limit** parameter in the **C1-DEFERUPLD** algorithm.
- Define the value for the **Policy Status after Processing Reinstatement Upload Request** parameter in the **C1-REN-PROC** algorithm.
- Assign the **C1-BCUUR** To Do type to a To Do role whose users must receive the To Do for approving a bill cycle update upload request.
- Assign the **C1-CRUUR** To Do type to a To Do role whose users must receive the To Do for approving a contract rider update upload request.
- Assign the **C1-HLDUR** To Do type to a To Do role whose users must receive the To Do for approving a hold upload request.
- Assign the **C1-REFUR** To Do type to a To Do role whose users must receive the To Do for approving a refund upload request.
- Assign the **C1-WOUR** To Do type to a To Do role whose users must receive the To Do for approving a write off upload request.
- Assign the **C1-BCUR** To Do type to a To Do role whose users must receive the To Do for approving a billable charge upload request.
- Assign the **C1-RPUR** To Do type to a To Do role whose users must receive the To Do for approving a reinstatement upload request.
- Create a To Do type named **C1-BGSRT** using the following information:
  - **Navigation Option** - c1upldrqTabMenu
  - **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGSRT** To Do type to a To Do role whose users must receive the To Do for approving a bill group sorting upload request.
- Create a To Do type named **C1-BGDVP** using the following information:
  - **Navigation Option** - c1upldrqTabMenu

- **Sort Keys** - Define the following sort keys for the To Do type:

Sort Key	Use as Default	Sort Order
Upload Request ID	Yes	Descending

- **Drill Keys** - Define the following drill keys for the To Do type:

Table Name	Field Name
C1_UPLOAD_REQ	Upload Request ID

- Assign the **C1-BGDVP** To Do type to a To Do role whose users must receive the To Do for approving a bill group derivation and pricing parameters upload request.
- Set the batch control type of the **Upload Request Periodic Monitor (C1-UPLRQ)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## Algorithms Used in C1-BillCycleUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-BillCycleUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BCU-DERIV	C1-BCU-DERIV	<p>This algorithm reads the data in the <b>BO_DATA_AREA</b> column of the <b>C1_UPL_REQUEST</b> table and accordingly inserts the records in the <b>C1_UPLOAD_REQ_DTLS</b> table. In addition, the status of each record in the <b>C1_UPLOAD_REQ_DTLS</b> table is set to <b>Pending</b>.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the <b>C1_UPLOAD_REQ_DTLS</b> table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table is changed to <b>Invalid</b>.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-BCU-VALID	C1-BCU-VALID	<p>This algorithm is invoked when the user clicks the <b>Validate</b> button. It validates the records which are in the <b>Pending</b> status. It checks whether the account ID and bill cycle specified in the record are valid. If the account ID and bill cycle are valid and if the bill cycle is associated with the division to which the account belongs, the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table is changed to <b>Valid</b>.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table to <b>Valid</b>. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill cycle is invalid, or if the bill cycle is not associated with the division to which the account belongs, the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table is changed to <b>Invalid</b>.</p> <p>It also checks whether there are two or more records with the same account ID. If so, it validates and changes the status of one record to <b>Valid</b> and the status of the remaining records is changed to <b>Invalid</b>.</p>
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> <li>• Next Status</li> <li>• Next Transition Condition</li> </ul> <p>At a time, you can specify value for either the <b>Next Status</b> or <b>Next Transition Condition</b> parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	This algorithm is invoked when the user clicks the <b>Submit</b> button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to <b>Approval In Progress</b> . However, if the approval is not required for an upload request, the status of the upload request remains in the <b>Submitted</b> status.
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to <b>Submitted</b> or <b>Approved</b>. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to <b>Processing</b>. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to <b>Deferred Processing</b>.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• <b>Online Record Process Limit</b> <ul style="list-style-type: none"> <li>– Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).</li> </ul> </li> </ul>
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the <b>Exclude To Do Entries From Auto Completion</b> characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to <b>Submitted</b> or <b>Approved</b>. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to <b>Processing</b>. ## Algorithms Used in C1-ContractRiderUpdateUplReq

The following table lists the algorithms which are used in the lifecycle of the **C1-ContractRiderUpdateUplReq** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-CR-DERIV	C1-CR-DERIV	<p>This algorithm reads the data in the <b>BO_DATA_AREA</b> column of the <b>C1_UPL_REQUEST</b> table and accordingly inserts the records in the <b>C1_UPLOAD_REQ_DTLS</b> table. In addition, the status of each record in the <b>C1_UPLOAD_REQ_DTLS</b> table is set to <b>Pending</b>.</p> <p>It derives the account ID using the account identifier type and account identifier combination whenever the account ID is not specified in the record. Once the account ID is derived, the corresponding record is updated in the <b>C1_UPLOAD_REQ_DTLS</b> table. If the system could not derive the account ID using the account identifier type and account identifier combination, the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table is changed to <b>Invalid</b>.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-CR-VALID	C1-CR-VALID	<p>This algorithm is invoked when the user clicks the <b>Validate</b> button. It validates the records which are in the <b>Pending</b> status. It checks whether the account ID, contract ID, contract type, and bill factor specified in the record are valid. If the account ID, contract ID, contract type, and bill factor are valid, if the specified contract belongs to the account, and if the <b>Contract Rider Applicability</b> flag on the bill factor is set to <b>Y</b>, the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table is changed to <b>Valid</b>.</p> <p>If the account ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. In addition, it changes the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table to <b>Valid</b>. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the bill factor is invalid, or if the specified contract does not belong to the account, or if the <b>Contract Rider Applicability</b> flag on the bill factor is set to <b>N</b>, the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table is changed to <b>Invalid</b>.</p> <p>It also checks whether there are two or more records with the same account ID and contract type combination. If so, it validates and changes the status of one record to <b>Valid</b> and the status of the remaining records is changed to <b>Invalid</b>.</p>
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the <b>Submit</b> button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to <b>Approval In Progress</b>. However, if the approval is not required for an upload request, the status of the upload request remains in the <b>Submitted</b> status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to <b>Submitted</b> or <b>Approved</b>. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to <b>Processing</b>. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to <b>Deferred Processing</b>.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• <b>Online Record Process Limit</b> <ul style="list-style-type: none"> <li>– Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).</li> </ul> </li> </ul>
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> <li>• Next Status</li> <li>• Next Transition Condition</li> </ul> <p>At a time, you can specify value for either the <b>Next Status</b> or <b>Next Transition Condition</b> parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	<p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the <b>Exclude To Do Entries From Auto Completion</b> characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to <b>Submitted</b> or <b>Approved</b>. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>

## Algorithms Used in C1-HoldUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-HoldUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-HLD-DERIV	C1-HLD-DERIV	<p>This algorithm reads the data in the <b>BO_DATA_AREA</b> column of the <b>C1_UPL_REQUEST</b> table and accordingly inserts the records in the <b>C1_UPLOAD_REQ_DTLS</b> table. In addition, the status of each record in the <b>C1_UPLOAD_REQ_DTLS</b> table is set to <b>Pending</b>.</p> <p>If the hold entity is <b>ACCT</b> and the entity ID is not specified in the record, it derives the account ID using the account identifier type and account identifier combination. Similarly, if the hold entity is <b>PERS</b> and the entity ID is not specified in the record, it derives the person ID using the person identifier type and person identifier combination. Once the account ID or person ID is derived, the corresponding record is updated in the <b>C1_UPLOAD_REQ_DTLS</b> table. If the system could not derive the account ID using the account identifier type and account identifier combination or if the system could not derive the person ID using the person identifier type and person identifier combination, the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table is changed to <b>Invalid</b>.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-HLD-VALID	C1-HLD-VALID	<p>This algorithm is invoked when the user clicks the <b>Validate</b> button. It validates the records which are in the <b>Pending</b> status. It checks whether the data provided for creating a hold request is valid. If the entity ID and hold data are valid, the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table is changed to <b>Valid</b>.</p> <p>If the hold entity is <b>ACCT</b> and the entity ID is invalid, it derives the account ID using the account identifier type and account identifier combination and updates the record accordingly. Similarly, if the hold entity is <b>PERS</b> and the entity ID is invalid, it derives the person ID using the person identifier type and person identifier combination and updates the record accordingly. In addition, it changes the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table to <b>Valid</b>. However, if the system could not derive the account ID using the account identifier type and account identifier combination, or if the system could not derive the person ID using the person identifier type and person identifier combination, or if the hold data is invalid, the status of the record in the <b>C1_UPLOAD_REQ_DTLS</b> table is changed to <b>Invalid</b>.</p>
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	<p>This algorithm is invoked when the user clicks the <b>Submit</b> button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to <b>Approval In Progress</b>. However, if the approval is not required for an upload request, the status of the upload request remains in the <b>Submitted</b> status.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to <b>Submitted</b> or <b>Approved</b>. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to <b>Processing</b>. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to <b>Deferred Processing</b>.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• <b>Online Record Process Limit</b> <ul style="list-style-type: none"> <li>– Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).</li> </ul> </li> </ul>
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. ## Algorithms Used in C1-RefundUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-RefundUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Validated	Enter	C1-RF-VALID	C1-RF-VALID	This algorithm validates the data uploaded in an upload request for creating refund requests before the request is submitted for processing.
Draft	Enter	C1-RF-DERIV	C1-RF-DERIV	This algorithm reads the <b>BO_DATA_AREA</b> in the request's primary table, derives additional data that is required for creating refund requests and inserts the records in <b>C1_UPLOAD_REQ_DTLS</b> table.
Submitted	Enter	C1-UPLSUBENT	C1-UPLSUBENT	This algorithm is invoked when the user clicks the <b>Submit</b> button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to <b>Approval In Progress</b> . However, if the approval is not required for an upload request, the status of the upload request remains in the <b>Submitted</b> status.

Status	System Event	Algorithm	Algorithm Type	Description
Submitted	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to <b>Submitted</b> or <b>Approved</b>. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to <b>Processing</b>. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to <b>Deferred Processing</b>.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• <b>Online Record Process Limit</b> <ul style="list-style-type: none"> <li>– Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).</li> </ul> </li> </ul>
Submitted	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> <li>• Next Status</li> <li>• Next Transition Condition</li> </ul> <p>At a time, you can specify value for either the <b>Next Status</b> or <b>Next Transition Condition</b> parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.</p>
Approval In Progress	Enter	C1-UPLAPPENT	C1-UPLAPPENT	<p>This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Approval In Progress	Exit	C1-UPLAPPEXT	C1-UPLAPPEXT	This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.
Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the <b>Exclude To Do Entries From Auto Completion</b> characteristic is defined for the business object, then the system does not automatically complete the respective To Do entry.
Approved	Enter	C1-DEFERUPLD	C1-DEFERUPLD	<p>This algorithm is invoked when the status of the upload request is changed to <b>Submitted</b> or <b>Approved</b>. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to <b>Processing</b>. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to <b>Deferred Processing</b>.</p> <p>It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• <b>Online Record Process Limit</b> <ul style="list-style-type: none"> <li>– Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).</li> </ul> </li> </ul>

## C1-BLSRTUPLD

This algorithm reads the data in the **BO\_DATA\_AREA** column of the **C1\_UPL\_REQUEST** table and accordingly inserts the records in the **C1\_UPLOAD\_REQ\_DTLS** table. In addition, the status of each record in the **C1\_UPLOAD\_REQ\_DTLS** table is set to **Pending**.

## C1-BLSRTDERV

This algorithm reads the data in the **BO\_DATA\_AREA** column of the **C1\_UPLOAD\_REQ\_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1\_UPLOAD\_REQ\_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1\_UPLOAD\_REQ\_DTLS** table is changed to **Invalid**.

## C1-BLSRTVALD

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group sort record.
- The end date is not earlier than the start date and the start date is not later than the end date.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group sort record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using a relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLNG** feature configuration.
- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1\_BILL\_LVL** table.

- A duplicate record with the bill group ID and sort ID combination does not exist in the **C1\_UPLOAD\_REQ\_DTLS** table.

If the above mentioned validations are successful, the status of the record in the **C1\_UPLOAD\_REQ\_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1\_UPLOAD\_REQ\_DTLS** table is changed to **Invalid**.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

## C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

## C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

## C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## C1-BLSRTPROC

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the bill group (person) ID and sort ID, it creates one bill group sort record using the entity business object defined in the upload request type. If the record is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

## Algorithms Used in C1-BillLevelUploadRequest

The following table lists the algorithms which are used in the lifecycle of the **C1-BillLevelUploadRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Enter	C1-BLVUPLDTL	C1-BLVUPLDTL	Refer to <a href="#">C1-BLVUPLDTL</a> on page 1364.
Draft	Enter	C1-BLVLDERIV	C1-BLVLDERIV	Refer to <a href="#">C1-BLVLDERIV</a> on page 1364.
Validated	Enter	C1-BLVLVALID	C1-BLVLVALID	Refer to <a href="#">C1-BLVLVALID</a> on page 1364.

Processed	—	—	—	—

## C1-BLVUPLDTL

This algorithm reads the data in the **BO\_DATA\_AREA** column of the **C1\_UPL\_REQUEST** table and accordingly inserts the records in the **C1\_UPLOAD\_REQ\_DTLS** table. In addition, the status of each record in the **C1\_UPLOAD\_REQ\_DTLS** table is set to **Pending**.

## C1-BLVLDERIV

This algorithm reads the data in the **BO\_DATA\_AREA** column of the **C1\_UPLOAD\_REQ\_DTLS** table and then derives the bill group (person) ID using the bill group (person) identifier type and bill group (person) identifier combination whenever the bill group ID is not specified in the record. Once the bill group ID is derived, the corresponding record is updated in the **C1\_UPLOAD\_REQ\_DTLS** table. If the system could not derive the bill group ID using the bill group identifier type and bill group identifier combination, the status of the record in the **C1\_UPLOAD\_REQ\_DTLS** table is changed to **Invalid**.

## C1-BLVLVALID

This algorithm is invoked when the user clicks the **Validate** button. It validates the records which are in the **Pending** status. It checks the following:

- The parent customer's person type is set to **Parent Customer** in the system.
- All mandatory information is available in the bill group derivation and pricing parameters record.
- Either the bill group (person) identifier type and bill group (person) identifier or the bill group (person) ID is available in the bill group derivation and pricing parameters record.
- The bill group identifier type is available when the bill group identifier is specified and vice versa.
- The number of characters specified in each field does not exceed the maximum field length.
- A bill group with the specified bill group ID exists in the system.
- The bill group is the child person of the parent customer.
- The bill group's person type is set to **Bill Group** in the system.
- The relationship between the bill group and parent customer is effective on the system date.
- The bill group is related to the parent customer using the relationship type which is specified in the **Person Relationship Type** option type of the **C1-ASOBLLNG** feature configuration.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1\_BILL\_LVL** table.
- A duplicate record with the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date combination does not exist in the **C1\_UPLOAD\_REQ\_DTLS** table.
- The source system exists in the extendable lookup which is specified in the **Source System Extendable Lookup** parameter.
- The bill group sort record with the bill group ID and sort ID combination already exists in the system.
- The effective date specified in the record is within the date range of the effective bill group sort record.

If the above mentioned validations are successful, the status of the record in the **C1\_UPLOAD\_REQ\_DTLS** table is changed to **Valid**. However, if any of the above validation fails, the status of the record in the **C1\_UPLOAD\_REQ\_DTLS** table is changed to **Invalid**.

It contains the following parameter:

- **Source System Extendable Lookup** – Used to specify the source system extendable lookup business object. The bill group derivation and pricing parameters records should contain the source system which is already defined in this extendable lookup.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## C1-UPLSUBENT

This algorithm is invoked when the user clicks the **Submit** button. It checks whether the approval is required for the upload request. If the approval is required for an upload request, the status of the upload request is changed to **Approval In Progress**. However, if the approval is not required for an upload request, the status of the upload request remains in the **Submitted** status.

## C1-DEFERUPLD

This algorithm is invoked when the status of the upload request is changed to **Submitted** or **Approved**. It checks whether the upload request must be processed in the real time (i.e. immediately) or in the deferred mode (i.e. in the background). If the number of valid records in the upload request does not exceed the online record process limit, the system changes the status of the upload request to **Processing**. However, if the number of valid records in the upload request exceeds the online record process limit, the system changes the status of the upload request to **Deferred Processing**.

It contains the following parameter:

- **Online Record Process Limit** – Used to indicate the maximum number of valid records you can process in the real time (i.e. immediately).

## C1-UPLAPPENT

This algorithm creates a To Do using the To Do type specified in the upload request type. The To Do is sent to the appropriate users with the To Do role which is specified in the upload request type. In addition, a log entry is added when a To Do is created using the To Do type.

## C1-UPLAPPEXT

This algorithm checks whether the approver is associated with the approval To Do role specified in the upload request type. If not, it does not allow the approver to approve or reject the upload request. In addition, it does not allow the submitter to approve or reject the upload request.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## C1-BLVVLVPRO

This algorithm fetches a list of records which are in the **Valid** status. For each valid record with a unique combination of the source system, parameter 1, parameter 2, parameter 3, parameter 4, and effective date, it creates one bill group derivation and pricing parameters record using the entity business object defined in the upload request type. If the record

is successfully processed, the status of the record is changed to **Processed**. However, if the record could not be processed successfully due to any reason, the status of the record is changed to **Error**. Finally, the status of the upload request is changed to **Processed**.

### CSV File Format for Account Bill Cycle Upload Request

Before uploading the account bill cycle file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		<b>Note:</b> This data is required when the account ID is not specified.
Account Identifier	Used to specify the identifier of the account whose bill cycle you want to update.	Yes (Conditional)
		<b>Note:</b> This data is required when the account ID is not specified.
Account ID	Used to indicate the account whose bill cycle you want to update.	No
	<b>Note:</b> If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination.	
Bill Cycle	Used to specify the bill cycle.	Yes
	<b>Note:</b> You must specify a valid bill cycle which is associated with the division to which the account belongs.	

### CSV File Format for Contract Rider Upload Request

Before uploading a contract rider file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		<b>Note:</b> This data is required when the account ID and contract ID are not specified.
Account Identifier	Used to specify the identifier of the account whose contract you want to update.	Yes (Conditional)
		<b>Note:</b> This data is required when the account ID and contract ID are not specified.

Column Name	Description	Mandatory (Yes or No)
Account ID	Used to indicate the account whose contract you want to update.	Yes (Conditional)
		<b>Note:</b> This data is required when the account identifier type, account identifier, and contract ID are not specified.
Contract Type	Used to indicate the type of the contract whose details you want to update.	Yes (Conditional)
	<b>Note:</b> You must specify a contract type which already exists in the system.	<b>Note:</b> This data is required when the contract ID is not specified.
Contract ID	Used to indicate the contract whose contract rider information you want to update.	No
	<b>Note:</b> If you do not specify the contract ID, the system derives the active contract using the account ID and contract type combination.	
Start Date	Used to specify the date from when the bill factor is effective for the contract.	Yes
	<b>Note:</b> The start date cannot be later than the end date.	
End Date	Used to specify the date till when the bill factor is effective for the contract.	No
	<b>Note:</b> The end date cannot be earlier than the start date.	
Bill Factor	Used to specify the bill factor.	Yes
	<b>Note:</b> You must specify a valid bill factor where the <b>Contract Rider Applicability</b> flag is set to <b>Y</b> .	

## CSV File Format for Billable Charge Upload

Before uploading a billable charge file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional)
		<b>Note:</b> This data is required when the <b>Account ID</b> is not specified.

Column Name	Description	Mandatory (Yes or No)
Account Identifier	Used to specify the account identifier of the account for which you want to create the billable charge.	Yes (Conditional)
		<b>Note:</b> This data is required when the <b>Account ID</b> is not specified.
Account ID	Used to specify the account for which you want to create the billable charge.	Yes (Conditional)
		<b>Note:</b> This data is required when the <b>Account Identifier Type</b> and <b>Account Identifier</b> is not specified.
Contract ID	Used to specify the contract against which you want to create the billable charge.	Yes (Conditional)
		<b>Note:</b> This data is required when you want to create the billable charge against a specific contract on the account. If this data is not specified then billable charge is created against a contract with highest priority.
Start Date	Used to specify the start date of billable charge.	Yes
End Date	Used to specify the end date of billable charge.	Yes
Charge Type	Used to specify the charge type for which you want to create a billable charge.	No
Description On Bill	Used to specify description for a billable charge.	Yes
Recurring Flag	Used to indicate whether recurring bill segments must be created at the intervals defined in the bill period or at the set policy invoice frequency. The valid values are: <ul style="list-style-type: none"> <li>BP</li> <li>FR</li> </ul>	Yes (Conditional)
		<b>Note:</b> This data is required if <b>Frequency</b> or <b>Bill Period</b> is specified.
Frequency	Used to specify the invoice frequency at which the recurring bill segments must be created.	Yes (Conditional)
		<b>Note:</b> This data is required if <b>Recurring Flag</b> is FR.
Bill Period	Used to specify the bill period that you want to use for specifying the intervals at which the recurring bill segments must be created.	Yes (Conditional)
		<b>Note:</b> This data is required if <b>Recurring Flag</b> is BP.
Bill After	Used to specify the date after which the bill must be generated for the billable charge.	No
Adhoc Bill	Used to indicate whether the billable charge should be considered during adhoc or regular billing.	No

Column Name	Description	Mandatory (Yes or No)
Description on Bill1, Description on Bill2, ....., Description on Bill5	Used to specify description for the billable charge lines.	Yes (Conditional)
		<b>Note:</b> This data is required when the charge amount is specified.
Currency1, Currency2, ....., Currency5	Used to specify the currency in which the amount is charged.  <b>Note:</b> If you specify a currency other than the account's invoice currency, the system will do the currency conversion if the appropriate exchange rate is available in the system.	Yes (Conditional)
		<b>Note:</b> This data is required when the charge amount is specified.
Amount1, Amount2, ....., Amount5	Used to specify the charge amount.	Yes (Conditional)
		<b>Note:</b> This data is required when the description on bill or currency is specified.
Show On Bill1, Show on Bill2, ....., Show On Bill5	Used to indicate whether the charge should appear on the person's printed bill or not. The valid values are:  <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	No
Summary1, Summary2, ....., Summary5	Used to indicate whether the charge should be included in the summary line or not. The valid value are:  <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>true</b> if the column does not contain any value.	No
Memo Only1, Memo Only2, ....., Memo Only5	Used to indicate whether the charge should be included in the bill amount or not. The valid values are:  <ul style="list-style-type: none"> <li>true</li> <li>false</li> </ul> <b>Note:</b> By default, the value will be set to <b>false</b> if the column does not contain any value.	No

Column Name	Description	Mandatory (Yes or No)
GL Distribution Code1, GL Distribution Code2, ....., GL distribution Code5	Used to specify the distribution code which indicates the GL account associated with the charge.	Yes (Conditional)
		<b>Note:</b> This data is required when <b>false</b> is specified in the <b>Memo Only</b> column corresponding to the bill line description.
Price Item	Used to specify the price item code.	Yes (Conditional)
		<b>Note:</b> This data is required when <b>Variance Parameter</b> or, <b>Price Item Parameter</b> and <b>Price Item Parameter Value</b> is specified.
Variance Parameter	Used to indicate the variance that must be used along with the price item for determining the price item pricing.	Yes (Conditional)
		<b>Note:</b> This data is required when <b>Price Item</b> is specified and <b>Price Item Parameter</b> and <b>Price Item Parameter Value</b> are not specified.
Price Item Parameter1, Price Item Parameter2, ....., Price Item Parameter15	Used to indicate the price item parameter that must be used along with the price item for determining the price item pricing.	Yes (Conditional)
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	<b>Note:</b> This data is required when <b>Price Item</b> is specified and <b>Variance Parameter</b> is not specified.
Price Item Parameter Value1, Price Item Parameter Value2, ....., Price Item Parameter Value15	Used to specify the parameter value.	Yes (Conditional)
	<b>Note:</b> If the data in these columns will be used for price item parameter mapping, you must not use the equal to (=) and tilde (~) symbols in these columns.	<b>Note:</b> This data is required when <b>Price Item</b> is specified and <b>Variance Parameter</b> is not specified.
SQI1, SQI2, ....., SQI5	Used to indicate the service quantity identifier that must be used for calculating the price item charges.	Yes (Conditional)
		<b>Note:</b> This data is required when the service quantity is specified.
SQI Value1, SQI Value2, ....., SQI Value5	Used to specify the number of units of the service quantity.	Yes (Conditional)
		<b>Note:</b> This data is required when the SQI is specified.

Column Name	Description	Mandatory (Yes or No)
Effective Date1, Effective Date2, ....., Effective Date20	Used to indicate the effective date of the characteristics.	Yes (Conditional)  <b>Note:</b> This data is required when <b>Char Type</b> or <b>Char Val</b> is specified.
Char Type1, Char Type2, ....., Char Type20	Used to indicate the characteristic that must be defined for the billable charge.	Yes (Conditional)  <b>Note:</b> This data is required when <b>Effective Date</b> or <b>Char Val</b> is specified.
Char Value1, Char Value2, ....., Char Value20	Used to specify the value of the characteristic type.	Yes (Conditional)  <b>Note:</b> This data is required when <b>Effective Date</b> or <b>Char Type</b> is specified.

## CSV File Format for Hold Upload Request

Before uploading a hold request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Hold Request Type	Used to specify the hold request type.  <b>Note:</b> You must specify a valid hold request type which is in the <b>Active</b> status.	Yes
Start Date	Used to specify the date from when the hold request is effective.  <b>Note:</b> The hold request start date cannot be later than the hold request end date.	Yes
End Date	Used to specify the date till when the hold request is effective.  <b>Note:</b> The hold request end date cannot be earlier than the hold request start date.	Yes
Hold Reason	Used to indicate the reason why you want to hold the entity.  <b>Note:</b> The hold reason must exist in the <b>HOLD_REASON_FLG</b> lookup field and its status must be <b>Active</b> .	Yes

Column Name	Description	Mandatory (Yes or No)
Hold Entity	Used to indicate the type of the entity for which you want to create the hold request. The valid values are: <ul style="list-style-type: none"> <li>• ACCT</li> <li>• BILL</li> <li>• PERS</li> </ul>	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) <b>Note:</b> This data is required when the hold entity is <b>ACCT</b> and the entity ID is not specified.
Account Identifier	Used to specify the identifier of the account for which you want to create the hold request.	Yes (Conditional) <b>Note:</b> This data is required when the hold entity is <b>ACCT</b> and the entity ID is not specified.
Person Identifier Type	Used to specify the person identifier type.	Yes (Conditional) <b>Note:</b> This data is required when the hold entity is <b>PERS</b> and the entity ID is not specified.
Person Identifier	Used to specify the identifier of the person for which you want to create the hold request.	Yes (Conditional) <b>Note:</b> This data is required when the hold entity is <b>PERS</b> and the entity ID is not specified.
Hold Entity ID	Used to specify the entity ID. <b>Note:</b> If the hold entity is <b>ACCT</b> , you must specify the account ID in this field. If the hold entity is <b>PERS</b> , you must specify the person ID in this field. And, if the hold entity is <b>BILL</b> , you must specify the bill ID in this field.  If you do not specify the account ID, the system derives the account ID using the account identifier type and account identifier combination. Similarly, if you do not specify the person ID, the system derives the person ID using the person identifier type and person identifier combination.	Yes (Conditional) <b>Note:</b> This data is required when the hold entity is <b>BILL</b> .
Comments	Used to specify additional information about the hold request.	No

Column Name	Description	Mandatory (Yes or No)
Hold Entity Start Date	Used to specify the date from when you want to hold the entity.	Yes
	<b>Note:</b> The hold entity start date must be between the hold request start and end dates and between at least one process's start and end dates.  The hold entity start date cannot be later than the hold entity end date.	
Hold Entity End Date	Used to specify the date till when you want to hold the entity.	No
	<b>Note:</b> The hold entity end date must be between hold request start and end dates and between the process's start and end dates.  The hold entity end date cannot be earlier than the hold entity start date.	
Hold Funding	Used to indicate whether you want to hold the funding process for the entity. The valid values are:	No
	<ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul> <b>Note:</b> You can hold the funding process only when the hold entity is <b>PERS</b> or <b>BILL</b> .	
Hold Funding Start Date	Used to specify the date from when you want to hold the funding process.	Yes (Conditional)
	<b>Note:</b> The hold funding start date must be between the hold request start and end dates.  The hold funding start date cannot be later than the hold funding end date.	<b>Note:</b> This data is required when the funding process must be kept on hold.
Hold Funding End Date	Used to specify the date till when you want to hold the funding process.	No
	<b>Note:</b> The hold funding end date must be between the hold request start and end dates.  The hold funding end date cannot be earlier than the hold funding start date.	

Column Name	Description	Mandatory (Yes or No)
Hold Overdue	Used to indicate whether you want to hold the overdue process for the entity. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
Hold Overdue Start Date	Used to specify the date from when you want to hold the overdue process.	Yes (Conditional)
	<b>Note:</b> The hold overdue start date must be between the hold request start and end dates. The hold overdue start date cannot be later than the hold overdue end date.	<b>Note:</b> This data is required when the overdue process must be kept on hold.
Hold Overdue End Date	Used to specify the date till when you want to hold the overdue process.	No
	<b>Note:</b> The hold overdue end date must be between the hold request start and end dates. The hold overdue end date cannot be earlier than the hold overdue start date.	
Hold Bill Generation	Used to indicate whether you want to hold the bill generation process for the entity. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
Hold Bill Generation Start Date	Used to specify the date from when you want to hold the bill generation process.	Yes (Conditional)
	<b>Note:</b> The hold bill generation start date must be between the hold request start and end dates. The hold bill generation start date cannot be later than the hold bill generation end date.	<b>Note:</b> This data is required when the bill generation process must be kept on hold.
Hold Bill Generation End Date	Used to specify the date till when you want to hold the bill generation process.	No
	<b>Note:</b> The hold bill generation end date must be between the hold request start and end dates. The hold bill generation end date cannot be earlier than the hold bill generation start date.	

Column Name	Description	Mandatory (Yes or No)
Hold Auto Pay	Used to indicate whether you want to hold the automatic payment process for the entity. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	No
Hold Autopay Start Date	Used to specify the date from when you want to hold the automatic payment process. <div> <b>Note:</b>  The hold autopay start date must be between the hold request start and end dates.  The hold autopay start date cannot be later than the hold autopay end date. </div>	Yes (Conditional) <div> <b>Note:</b> This data is required when the automatic payment process must be kept on hold. </div>
Hold Autopay End Date	Used to specify the date till when you want to hold the automatic payment process. <div> <b>Note:</b>  The hold autopay end date must be between the hold request start and end dates.  The hold autopay end date cannot be earlier than the hold autopay start date. </div>	No
Effective Date1, Effective Date2, ....., Effective Date5	Used to specify the date from when the characteristic is effective for the hold request.	Yes (Conditional) <div> <b>Note:</b> This data is required when the characteristic type or characteristic value is specified. </div>
Char Type1, Char Type2, ....., Char Type5	Used to indicate the characteristic that must be defined for the hold request. <div> <b>Note:</b> You must specify a characteristic type where the characteristic entity is set to <b>Hold Request</b>. </div>	Yes (Conditional) <div> <b>Note:</b> This data is required when the effective date or characteristic value is specified. </div>
Char Val1, Char Val2, ....., Char Val5	Used to specify the value for the characteristic type.	Yes (Conditional) <div> <b>Note:</b> This data is required when the effective date or characteristic type is specified. </div>

## CSV File Format for Refund Request Upload

Before uploading a refund request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Refund Request Type	Used to specify the refund request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) <b>Note:</b> This data is required when the <b>Account ID</b> is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the refund request.	Yes (Conditional) <b>Note:</b> This data is required when the <b>Account ID</b> is not specified.
Account ID	Used to specify the account for which you want to create the refund request.	Yes (Conditional) <b>Note:</b> This data is required when the <b>Account Identifier Type</b> and <b>Account Identifier</b> are not specified.
Entity Type	Used to specify the entity type.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the refund adjustments are created.	No
Refund Amount	Used to specify the amount that you want to refund.	Yes
Comments	Used to specify the comments which are added on the refund request.	No
Effective Date1, Effective Date2, ....., Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) <b>Note:</b> This data is required when <b>Char Type</b> or <b>Char Val</b> is specified.
Char Type1, Char Type2, ....., Char Type5	Used to indicate the characteristic that must be defined for the refund request.	Yes (Conditional) <b>Note:</b> This data is required when <b>Effective Date</b> or <b>Char Val</b> is specified.
Char Val1, Char Val2, ....., Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) <b>Note:</b> This data is required when <b>Effective Date</b> or <b>Char Type</b> is specified.

## CSV File Format for Write Off Request Upload

Before uploading a write off request file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Write Off Request Type	Used to specify the write off request type.	Yes
Account Identifier Type	Used to specify the account identifier type.	Yes (Conditional) <b>Note:</b> This data is required when the <b>Account ID</b> is not specified.
Account Identifier	Used to specify the account identifier of the account for which you want to create the write off request.	Yes (Conditional) <b>Note:</b> This data is required when the <b>Account ID</b> is not specified.
Account ID	Used to specify the account for which you want to create the write off request.	Yes (Conditional) <b>Note:</b> This data is required when the <b>Account Identifier Type</b> and <b>Account Identifier</b> are not specified.
Entity Type	Used to specify the entity type.	Yes
Entity ID	Used to specify the entity ID.	Yes
Adjustment Type	Used to specify the adjustment type using which the write off adjustments are created.	No
Write Off Amount	Used to specify the amount that you want to write off.	Yes
Comments	Used to specify the comments which are added on the write off request.	No
Effective Date1, Effective Date2, ....., Effective Date5	Used to indicate the effective date of the characteristics.	Yes (Conditional) <b>Note:</b> This data is required when <b>Char Type</b> or <b>Char Val</b> is specified.
Char Type1, Char Type2, ....., Char Type5	Used to indicate the characteristic that must be defined for the write off request.	Yes (Conditional) <b>Note:</b> This data is required when <b>Effective Date</b> or <b>Char Val</b> is specified.
Char Val1, Char Val2, ....., Char Val5	Used to specify the value of the characteristic type.	Yes (Conditional) <b>Note:</b> This data is required when <b>Effective Date</b> or <b>Char Type</b> is specified.

## CSV File Format for Reinstatement Upload Request

Before uploading a policy reinstatement file, you need to ensure that the CSV file contains the following columns:

Column Name	Description	Mandatory (Yes or No)
Policy ID	Used to indicate the policy which you want to reinstate.	No
	<b>Note:</b> If you do not specify the policy ID, the system derives the policy ID using the source system and policy number combination.	
Source System	Used to indicate the external system from where the policy is originated.	Yes (Conditional)
		<b>Note:</b> This data is required when the policy ID is not specified.
Policy Number	Used to indicate the policy number.	Yes (Conditional)
		<b>Note:</b> This data is required when the policy ID is not specified.
Reinstatement Reason	Used to indicate the reason why you want to reinstate the policy.	Yes
	<b>Note:</b> You must specify a reason which is defined for the status specified in the <b>Policy Reinstatement Status for Reason Verification</b> parameter of the <b>C1-REN-VALID</b> algorithm.	

## CSV File Format for Bill Group Sorting Upload Request

Before uploading a bill group sorting file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional)
		<b>Note:</b> You must specify an effective child person of the parent customer for whom you are creating the bill group sorting upload request. In addition, note that you must specify a child person whose person type is set to <b>Bill Group</b> and who is related to the parent customer using a relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.	<b>Note:</b> This data is required when the bill group (i.e. person) identifier type and bill group (i.e. person) identifier are not specified.
2	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional)
			<b>Note:</b> This data is required when the bill group (i.e. person) ID is not specified.

Sr. No.	Value	Description	Mandatory (Yes or No)
3	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the sort ID.	Yes (Conditional)
		<b>Note:</b> This data is required when the bill group (i.e. person) ID is not specified.	
4	Sort ID	Used to specify the sort ID.	Yes
5	Description	Used to specify the description for the sort ID.	Yes
6	Start Date	Used to specify the date from when the sort ID is effective for the bill group.	Yes
		<b>Note:</b> The start date cannot be later than the end date.	
7	End Date	Used to specify the date till when the sort ID is effective for the bill group.	No
		<b>Note:</b> The end date cannot be earlier than the start date.

## CSV File Format for Bill Group Derivation and Pricing Parameters Upload Request

Before uploading a bill group derivation and pricing parameters file, you need to ensure that the CSV file contains the following values in the specified order separated by a comma:

Sr. No.	Value	Description	Mandatory (Yes or No)
1	Source System	Used to indicate the source system from where the claim and enrollment transactions are received.	Yes
		<b>Note:</b> You must specify a source system which already exists in the extendable lookup which is specified in the <b>Source System Extendable Lookup</b> parameter of the <b>C1-BLVLVALID</b> algorithm.	
2	Parameter 1	Used to specify the employee attribute based on which you want to derive the bill group.	Yes
		<b>Note:</b> You must not specify the ampersand (&) character in the parameter 1.	

Sr. No.	Value	Description	Mandatory (Yes or No)
3	Parameter 2	Used to specify the employee attribute based on which you want to derive the bill group.	No
		<b>Note:</b> You must not specify the ampersand (&) character in the parameter 2.	
4	Parameter 3	Used to specify the employee attribute based on which you want to derive the bill group.	No
		<b>Note:</b> You must not specify the ampersand (&) character in the parameter 3.	
5	Parameter 4	Used to specify the employee attribute based on which you want to derive the bill group.	No
		<b>Note:</b> You must not specify the ampersand (&) character in the parameter 4.	
6	Effective Date	Used to specify the date from when the derivation and pricing parameters are effective for the bill group and sort ID combination.	Yes
		<b>Note:</b> The effective date must be within the date range of the sort ID defined for the bill group.	
7	Bill Group ID	Used to indicate the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)
		<b>Note:</b> You must specify an effective child person of the parent customer for whom you are creating the bill group derivation and pricing parameters upload request. In addition, note that you must specify a child person whose person type is set to <b>Bill Group</b> and who is related to the parent customer using a relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.	
8	Bill Group Identifier Type	Used to specify the bill group (i.e. person) identifier type.	Yes (Conditional)
			<b>Note:</b> This data is required when the bill group (i.e. person) ID is not specified.
9	Bill Group Identifier	Used to specify identifier of the bill group (i.e. person) for whom you want to define the derivation and pricing parameters.	Yes (Conditional)
			<b>Note:</b> This data is required when the bill group (i.e. person) ID is not specified.

Sr. No.	Value	Description	Mandatory (Yes or No)
10	Sort ID	Used to indicate the sort ID of the bill group for which you want to define the derivation and pricing parameters.	Yes

## Upload Request Type

Oracle Revenue Management and Billing allows you to define an upload request type using which you can upload a file. An upload request of the specified upload request type is created on uploading the file. It is the upload request type which helps the system to understand how to process the file. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.

The **Adjustment Upload Request Type (C1-AdjRequestType)** business object is used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. If you are going to upload adjustment data files using an upload request type, you need to specify the match types (using which the adjustments must be created) in the upload request type. At present, the following two match types are shipped with the product:

- Contract
- Contract Type

You can also define custom match types, if required. You must use the **ADJ\_MATCH\_TYPE** lookup field to add a new match type. You need to attach an algorithm to each match type to determine the contract against which the adjustment must be created. At present, the following algorithm types and sample algorithms are shipped with the product:

Match Type	Algorithm Type	Sample Algorithm	Algorithm Description
Contract	C1-MTCIALG	C1-MTCIALG	This algorithm fetches contract ID for each adjustment record where the match type is set to <b>Contract (CONT)</b> .
Contract Type	C1-MTCTALG	C1-MTCTALG	This algorithm fetches contract ID based on the contract type and account ID for each adjustment record where the match type is set to <b>Contract Type (CNTY)</b> . If there are multiple active contracts of the specified contract type on the account, the contract ID with the latest start date will be fetched.

The **Upload Request Type (C1-UplRequestType)** business object will be used for the maintenance of upload request types for uploading CSV data. Configurations like upload file size, approval workflow can be configured using this object. The system enables you to upload data for the following using the **Upload Request** feature:

- Billable Charge (Adhoc and Regular)
- Hold Request
- Refund Request
- Write Off Request
- Policy Reinstatement

- Bill Group Sort ID
- Derivation and Pricing Parameters for a Bill Group and Sort ID Combination

It also enables you to update the following information:

- Contract rider of a contract
- Bill cycle of an account

It is the upload request type which helps the system to determine:

- Whether the file must be approved by the approver before creating or updating the entities
- Which business object must be used for creating the upload request
- Which business object must be used for creating or updating entities through an upload request
- Which foreign key reference must be used for generating information string for the entity
- A set of fields using which you can search records uploaded through an upload request

You can also define custom algorithm types and algorithms, if required. The **Upload Request Type** screen allows you to define, edit, copy, and delete an upload request type. This screen consists of the following zones:

- [Upload Request Type List](#) on page 1382
- [Upload Request Type](#) on page 1383

**Parent topic:** [Upload Request](#) on page 1319

### Upload Request Type List

The **Upload Request Type List** zone lists upload request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Upload Request Type	Displays the upload request type.
Description	Displays the description of the upload request type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Upload Request Type</b> screen appears where you can edit the details of the upload request type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Upload Request Type</b> screen appears where you can define an upload request type using an existing upload request type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the upload request type. <b>Note:</b> You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.
Mapping	On clicking the <b>Mapping</b> (  ) icon, the mapping screen appears where you can map the columns of CSV file with the upload request type.

On clicking the **Broadcast** () icon corresponding to an upload request type, the **Upload Request Type** zone appears with the details of the respective upload request type.

## Upload Request Type

The **Upload Request Type** zone displays the details of the upload request type. This zone contains the following sections:

- **Main** – This section provides basic information about the upload request type. It contains the following fields:

Field Name	Field Description
Upload Request Type	Displays the upload request type.
Upload Request Business Object	<p>Indicates the business object that will be used to create the upload request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Description	Displays the description of the upload request type.
Detailed Description	Displays additional information about the upload request type.
Status	<p>Indicates the status of the upload request type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
File Size (KB)	<p>Displays the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.</p> <p><b>Note:</b> This field appears only when you create upload request type using <b>Adjustment Upload Request Type</b> business object.</p>

Field Name	Field Description
Defer Algorithm	<p>Indicates the algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit. If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p><b>Note:</b></p> <p>This field appears only when you create upload request type using <b>Adjustment Upload Request Type</b> business object.</p> <p>It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.</p> <p>In <b>Upload Request Type</b>, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from <b>Validated</b> to <b>Deferred Processing</b> else the status is changed to <b>Processed</b>.</p>
Approval Required	Indicates whether approval is required for a file which is uploaded using the upload request type.
Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve or reject the upload request submitted for approval.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>On selecting the <b>To Do Type</b>, the <b>To Do Roles</b> configured on the <b>To Do Type</b> is populated.</p> <p>It has a link. On clicking the link, the <b>To Do Role</b> screen appears with the details of the respective To Do role.</p>

Field Name	Field Description
FK Reference	<p>Indicates the foreign key reference which specifies the created upload request type.</p> <p><b>Note:</b></p> <p>This field appears only when you create upload request type using <b>Upload Request Type</b> business object.</p> <p>It has a link. On clicking the link, the <b>Foreign Key Reference</b> screen appears with the details of the respective foreign key.</p>

In addition, this section has the following columns:

Column Name	Column Description
Match Type	<p>Indicates the match type using which the adjustments must be created when you upload a file using the upload request type. The valid values are:</p> <ul style="list-style-type: none"> <li>Contract</li> <li>Contract Type</li> </ul> <p><b>Note:</b> The <b>Match Type</b> column is displayed for <b>Adjustment Upload Request</b> Business Object.</p>
Algorithm	<p>Indicates the algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears with the details of the respective algorithm. The <b>Algorithm</b> column is displayed for <b>Adjustment Upload Request</b> Business Object.</p>

- **Characteristics** – This section lists the characteristics defined for the upload request type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the upload request type.
Delete	<p>Used to delete the upload request type.</p> <p><b>Note:</b> You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.</p>
Duplicate	Used to create a new upload request type using an existing upload request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Upload Request Type** zone does not appear in the **Upload Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to an upload request type in the **Upload Request Type List** zone.

## Defining an Upload Request Type

### Prerequisites

To define an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the **Contract** match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do while submitting an adjustment upload request for approval
- **C1-BCUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill cycle update upload request for approval
- **C1-CRUUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a contract rider update upload request for approval
- **C1-HLDUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a hold upload request for approval
- **C1-REFUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a refund upload request for approval
- **C1-WOUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a write off upload request for approval

- **C1-BCUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a billable charge upload request for approval
- **C1-RPUR** To Do type assigned to a To Do role whose users must receive To Do while submitting a reinstatement upload request for approval
- **C1-BGSRT** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group sorting upload request for approval
- **C1-BGDVP** To Do type assigned to a To Do role whose users must receive To Do while submitting a bill group derivation and pricing parameters upload request for approval

### **Procedure**

To define an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Upload Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type Business Object	Used to indicate the business object that you want to use to create the upload request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Upload Request Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple upload request type business objects defined in the application. If there is only one upload request type business object defined in the application, the **Upload Request Type** screen appears.

4. Select the required upload request type business object from the respective field.
5. Click **OK**.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable
Upload Request Business Object	Used to indicate the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"><li>Active</li><li>Inactive</li></ul>	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	<b>Note:</b> This field appears when <b>Adjustment Upload Request Type</b> business object is selected.	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p><b>Note:</b></p> <p>Deferred mode means in the background when the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked. You can configure the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch such that it is executed at regular intervals. When the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked, the system checks whether there are any upload requests in the <b>Deferred</b> status. If there is an upload request in the <b>Deferred</b> status, the system creates the entities (for example, adjustments).</p> <p>This field appears when <b>Adjustment Upload Request Type</b> business object is selected.</p> <p>In <b>Upload Request Type</b>, online and deferred mode is used for processing the file if approval is not required. The defer algorithm is invoked if the number of records to be processed on the respective business object is more than the count specified on the algorithm then the status for number of records is changed from <b>Validated</b> to <b>Deferred Processing</b> else the status is changed to <b>Processed</b>.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)																					
Entity Business Object	Used to indicate for creating Business Object of the entity using the upload request type.	No																					
	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.  This field appears when <b>Upload Request Type</b> business object is selected.																						
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No																					
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)																					
	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.  The following table lists the To Do type using which the To Do must be generated for the different upload requests:	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.																					
	<table><tr><th>Upload Request</th><th>To Do Type</th></tr><tr><td>Adjustment</td><td>C1-ADJUP</td></tr><tr><td>Bill Cycle Update</td><td>C1-BCUUR</td></tr><tr><td>Billable Charge</td><td>C1-BCUR</td></tr><tr><td>Contract Rider Update</td><td>C1-CRUUR</td></tr><tr><td>Hold Request</td><td>C1-HLDUR</td></tr><tr><td>Refund Request</td><td>C1-REFUR</td></tr><tr><td>Write Off Request</td><td>C1-WOUR</td></tr><tr><td>Policy Reinstatement</td><td>C1-RPUR</td></tr><tr><td>Bill Group Sorting</td><td>C1-BGSRT</td></tr><tr><td>Bill Group Derivation and Pricing Parameters</td><td>C1-BGDVP</td></tr></table>		Upload Request	To Do Type	Adjustment	C1-ADJUP	Bill Cycle Update	C1-BCUUR	Billable Charge	C1-BCUR	Contract Rider Update	C1-CRUUR	Hold Request	C1-HLDUR	Refund Request	C1-REFUR	Write Off Request	C1-WOUR	Policy Reinstatement	C1-RPUR	Bill Group Sorting	C1-BGSRT	Bill Group Derivation and Pricing Parameters
Upload Request	To Do Type																						
Adjustment	C1-ADJUP																						
Bill Cycle Update	C1-BCUUR																						
Billable Charge	C1-BCUR																						
Contract Rider Update	C1-CRUUR																						
Hold Request	C1-HLDUR																						
Refund Request	C1-REFUR																						
Write Off Request	C1-WOUR																						
Policy Reinstatement	C1-RPUR																						
Bill Group Sorting	C1-BGSRT																						
Bill Group Derivation and Pricing Parameters	C1-BGDVP																						

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional) <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information. <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Foreign Key Search</b> window appears. This field appears when <b>Upload Request Type</b> business object is selected.	No

In addition, this section contains the following fields in the grid:

**Note:** This field appears when **Adjustment Upload Request Type** business object is selected.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> <li>Contract</li> <li>Contract Type</li> </ul>	Yes (Conditional) <b>Note:</b> This field is required when you select the <b>Adjustment Upload Request</b> option from the <b>Upload Request Business Object</b> list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created. <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	Yes (Conditional) <b>Note:</b> This field is required when you select the match type from the respective field.

6. Enter the required details.

<p><b>Note:</b></p> <p>You can search for an algorithm by clicking the <b>Search</b>  icon corresponding to the respective field.</p> <p>If you want to associate more than one match type with the upload request type, click the <b>Add</b>  icon and then specify the details. However, if you want to remove a match type from the upload request type, click the <b>Delete</b>  icon corresponding to the match type.</p>
---

7. Define characteristics for the upload request type, if required.

8. Click **Save**.

The upload request type is defined.

**Defining Characteristics for an Upload Request Type**

**Prerequisites**

To define characteristics for an upload request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Upload Request Type)

**Procedure**

To define characteristics for an upload request type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an upload request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Upload Request Type.	<b>Note:</b> This field is required when you are defining a characteristic for the upload request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the upload request type.

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the upload request type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the upload request type, click the **Delete** () icon corresponding to the characteristic.

## Editing an Upload Request Type

### Prerequisites

To edit an upload request type, you should have:

- Upload request business objects defined in the application
- Defer algorithm for adjustment is defined using the **C1-UPLDEFEVL** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an adjustment upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

### Procedure

To edit an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the upload request type whose details you want to edit.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type.	Not applicable
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file.	Yes
	<b>Note:</b> This field appears when the business object is <b>Adjustment Upload Request Type</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Defer Algorithm	<p>Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode.</p> <p><b>Note:</b></p> <p>Deferred mode means in the background when the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked. You can configure the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch such that it is executed at regular intervals. When the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked, the system checks whether there are any upload requests in the <b>Deferred</b> status. If there is an upload request in the <b>Deferred</b> status, the system creates the entities (for example, adjustments).</p> <p>This field appears when the business object is <b>Adjustment Upload Request Type</b>.</p>	Yes
Entity Business Object	<p>Used to indicate for creating Business Object of the entity using the upload request type.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears.</p>	No
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	<p>Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.</p> <p><b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p>	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.</p>

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional) <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information. <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Foreign Key Search</b> window appears. This field appears when the business object is <b>Upload Request Type</b> .	No

In addition, this section contains the following fields in the grid:

**Note:** The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> <li>Contract</li> <li>Contract Type</li> </ul>	Yes (Conditional) <b>Note:</b> This field is required when you select the <b>Adjustment Upload Request</b> option from the <b>Upload Request Business Object</b> list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional) <b>Note:</b> This field is required when you select the match type from the respective field.

**Tip:** Alternatively, you can click the **Edit** button in the **Upload Request Type** zone to edit the details of the upload request type.

#### 4. Modify the required details.

<p><b>Note:</b></p> <p>You can search for an algorithm by clicking the <b>Search</b>  icon corresponding to the respective field.</p> <p>If you want to associate more than one match type with the upload request type, click the <b>Add</b>  icon and then specify the details. However, if you want to remove a match type from the upload request type, click the <b>Delete</b>  icon corresponding to the match type.</p>
---

#### 5. Define, edit, or remove characteristics from the upload request type, if required.

6. Click **Save**.

The changes made to the upload request type are saved.

## Deleting an Upload Request Type

### Procedure

To delete an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the upload request type that you want to delete.

A message appears confirming whether you want to delete the upload request type.

**Note:** You can delete an upload request type only when you have not uploaded a file (i.e. created an upload request) using the upload request type.

**Tip:** Alternatively, you can click the **Delete** button in the **Upload Request Type** zone to delete the upload request type.

4. Click **OK**.

The upload request type is deleted.

## Copying an Upload Request Type

Instead of creating an upload request type from scratch, you can create a new upload request type using an existing upload request type. This is possible through copying an upload request type. On copying an upload request type, the details including the match types (only for adjustments) and characteristics are copied to the new upload request type. You can then edit the details, if required.

### Prerequisites

To copy an upload request type, you should have:

- Upload request type (whose copy you want to create) defined in the application
- Upload request business objects defined in the application
- Defer algorithm defined using the **C1-UPLDEFEV** algorithm type
- Defer algorithm for upload is defined using the **C1-DEFERUPLD** algorithm type
- Algorithm defined using the **C1-MTCIALG** algorithm type when you want to create adjustment using the Contract match type
- Algorithm defined using the **C1-MTCTALG** algorithm type when you want to create adjustment using the Contract Type match type
- **C1-ADJUP** To Do type assigned to a To Do role whose users must receive To Do entries generated while submitting an upload request for approval
- **C1-UPLAPPENT** To Do type assigned to a To Do role whose users must receive To Do generated while submitting an upload request for approval

### Procedure

To copy an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. In the **Upload Request Type List** zone, click the **Duplicate**  icon in the **Duplicate** column corresponding to the upload request type whose copy you want to create.

The **Upload Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request type.
- **Characteristics** – Used to define characteristics for the upload request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Used to specify the upload request type.	Yes
Upload Request Type Business Object	Indicates the upload request type business object used while defining the upload request type (whose copy you want to create).	Not applicable
Upload Request Business Object	Used to specify the business object that you want to use while creating the upload request.	Yes
Description	Used to specify the description for the upload request type.	Yes
Detailed Description	Used to specify additional information about the upload request type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the upload request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
File Size (KB)	Used to specify the maximum size of file (in kilobytes) that you can upload using the upload request type. If you upload a file which exceeds the maximum file size, the system will not allow you to upload the file. <div> <b>Note:</b> This field appears when the business object is <b>Adjustment Upload Request Type</b>. </div>	Yes
Defer Algorithm	Used to attach an algorithm that will be triggered when you create entities (for example, adjustments) or approve the uploaded file (for example, adjustment data file). This algorithm checks whether the number of records in the uploaded file exceeds the online record process limit (defined in the Defer algorithm). If the number of records in the uploaded file does not exceed the online record process limit, the system creates the entities (for example, adjustments) in the real time (i.e. immediately). However, if the number of records in the uploaded file exceeds the online record process limit, the system creates the entities (for example, adjustments) in the deferred mode. <div> <b>Note:</b>  Deferred mode means in the background when the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked. You can configure the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch such that it is executed at regular intervals. When the <b>Upload Request Periodic Monitor (C1-UPLRQ)</b> batch is invoked, the system checks whether there are any upload requests in the <b>Deferred</b> status. If there is an upload request in the <b>Deferred</b> status, the system creates the entities (for example, adjustments).  This field appears when the business object is <b>Adjustment Upload Request Type</b>. </div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Entity Business Object	Used to indicate to create the copy of Business Object of the entity using the upload request type.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Business Object Search</b> window appears. This field appears when the business object is <b>Upload Request Type</b> .	
Approval Required	Used to indicate whether approval is required for a file which is uploaded using the upload request type.	No
Approval To Do Type	Used to indicate that To Do entry of the specified To Do type must be created when you submit the upload request for approval.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
		<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
FK Reference	Used to indicate the FK Reference code to display the entity information.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Foreign Key Search</b> window appears. This field appears when the business object is <b>Upload Request Type</b> .	

In addition, this section contains the following fields in the grid:

**Note:** The below section appears when the business object is **Adjustment Upload Request Type**.

Field Name	Field Description	Mandatory (Yes or No)
Match Type	Used to indicate the match type using which you want to create adjustments when you upload a file using the upload request type. The valid values are: <ul style="list-style-type: none"> <li>Contract</li> <li>Contract Type</li> </ul>	Yes (Conditional)  <b>Note:</b> This field is required when you select the <b>Adjustment Upload Request</b> option from the <b>Upload Request Business Object</b> list.
Algorithm	Used to attach an algorithm that will be triggered when you upload an adjustment data file. This algorithm determines the contract against which the adjustment must be created.	Yes (Conditional)  <b>Note:</b> This field is required when you select the match type from the respective field.

**Tip:** Alternatively, you can click the **Duplicate** button in the **Upload Request Type** zone to create a copy of the upload request type.

4. Enter the required details.

**Note:**

You can search for an algorithm by clicking the **Search**  icon corresponding to the respective field.

If you want to associate more than one match type with the upload request type, click the **Add**  icon and then specify the details. However, if you want to remove a match type from the upload request type, click the **Delete**  icon corresponding to the match type.

5. Define, edit, or remove characteristics from the upload request type, if required.

6. Click **Save**.

The new upload request type is defined.

## Mapping an Upload Request Type

### Prerequisites

To map an upload request type, you should have:

- Upload request type (whose columns you want to map with the CSV file) defined in the application
- Upload request business objects defined in the application

**Note:** Once an upload request type is used for creating an upload request, then mapping for the same cannot be edited. Duplicating the upload request type will not duplicate the mapping data. You have to add the mapping details manually after duplicating an upload request type.

**Procedure**

To map an upload request type:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
- 3. In the **Upload Request Type List** zone, click the **Mapping** icon in the **Mapping** column corresponding to the upload request type whose columns you want to map with the CSV file.

The **Upload Request Type Mapping** screen appears. It contains the following field:

**Note:** The **Mapping** icon is applicable only for upload request type created using **Upload Request Type (C1-UplRequestType)** business object, and it is not applicable for upload request type created using **Adjustment Upload Request Type (C1-AdjRequestType)** business object.

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type.	Not applicable

The **Upload Request Type Mapping** screen also contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
CSV Column Header	Used to specify the rows correspond to the columns in CSV file.	Yes (Conditional)
		<b>Note:</b> This column is required when you search the <b>Data Records</b> zone in the <b>Upload Request</b> screen.
Use for Searching	Used to indicate whether the defined <b>CSV Column Header</b> is searchable or not.	Yes (Conditional)
	<b>Note:</b> Upto 10 rows can be selected as searchable rows.	<b>Note:</b> This column is required to be selected to be shown in the <b>Data Records</b> zone in the <b>Upload Request</b> screen
Sequence Number	Used to specify the sequence of the searchable fields.	Yes (Conditional)
	<b>Note:</b> Searchable rows should have sequence less than or equal to 10.	<b>Note:</b> This column is required to be selected to be shown sequentially in the <b>Data Records</b> zone in the <b>Upload Request</b> screen

- 4. Enter the required details.

**Note:** If you want to add more than one column names mapped to the upload request type, click the **Add** (+) icon and then specify the details. However, if you want to remove a column name mapped to the upload request type, click the **Delete** (🗑️) icon corresponding to the column header.

5. Click **Save**.

The columns are mapped to the CSV files for upload request type.

## Viewing the Upload Request Type Details

### Procedure

To view the details of an upload request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **U** and then click **Upload Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Upload Request Type** sub-menu.  
The **Upload Request Type** screen appears.
4. In the **Upload Request Type List** zone, click the **Broadcast** (📡) icon corresponding to the upload request type whose details you want to view.  
The **Upload Request Type** zone appears.
5. View the details of the upload request type in the **Upload Request Type** zone.

#### Related Topics

## Upload Request (Used for Searching)

The **Upload Request** screen allows you to upload, validate and process the transaction data. Through this screen, you can navigate to the following screen:

- [Upload Request \(Used for Viewing\)](#) on page 1410

This screen consists of the following zone:

- [Search Upload Request](#) on page 1404

Search Upload Request

The **Search Upload Request** zone allows you to search for a upload request using various search criteria. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an upload request using <b>Request Details</b> .	Yes
Upload Date From	Used to search upload requests which are created from a particular date.	No
To	Used to search upload requests which are created till a particular date.	No
Status	Used to search upload requests with a particular status. The valid values are: <ul style="list-style-type: none"><li>• Approval In Progress</li><li>• Canceled</li><li>• Deferred Processing</li><li>• Draft</li><li>• Processed</li><li>• Rejected</li><li>• Validated</li></ul>	No
Upload Request Type	Used to search upload requests which are created using a particular upload request type.	No
User ID	Used to search upload requests which are created by a particular user.	No
Upload Request ID	Used to search a particular upload request.	No
File Name	Used to search a particular file name.	No

**Note:** You must specify at least one search criterion while searching for an upload request.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Upload Date	Displays the date and time when the upload request was created in the system.
Payment Request Information	Displays information about the upload request. <div><b>Note:</b> It has a link. On clicking the link, the <b>Upload Request</b> screen appears where you can view the details of the respective upload request.</div>

Column Name	Column Description
Status	Indicates the status of the upload request. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Canceled</li> <li>• Deferred Processing</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> <li>• Validated</li> </ul>
Upload Request Type	Displays the upload request type using which the upload request is created.
Entity Business Object	Displays the business object code of the entity.
File Name	Displays the uploaded file name.
Total Records	Displays the total number of records in the uploaded csv file.
Created By	Indicates the user who has created the upload request.

## **Searching for an Upload Request**

### **Prerequisites**

To search for an upload request, you should have:

- Upload request types defined in the application

### **Procedure**

To search for an upload request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.  
A sub-menu appears.
3. Click the **Search** option from the **Upload Request** sub-menu.  
The **Upload Request** screen appears.
4. Enter the search criteria in the **Search Upload Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of upload requests that meet the search criteria appears in the **Search Results** section.

**Related Topics**

<b>Upload Request</b> screen	<a href="#">Upload Request (Used for Searching)</a> on page 1403
<b>Search Upload Request</b> zone	<a href="#">Search Upload Request</a> on page 1404

**Viewing the Upload Request Details**

**Procedure**

To view the details of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following two zones:
    - **Upload Request** – Displays the details of the upload request.
    - **Data Records** – Lists the details of data records uploaded in the csv file.
  - **Log** – This tab lists the complete trail of actions performed on the upload request.
3. View the details of the upload request in the **Upload Request** zone.
  4. View the data records in the csv file of the upload request in the **Data Records** zone.

**Creating an Upload Request**

**Prerequisites**

To create an upload request, you should have:

- Upload request types defined in the application

### **Procedure**

To create an upload request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Tools** and then click **Upload Request**.  
A sub-menu appears.
3. Click the **Add** option from the **Upload Request** sub-menu.

The **Select Upload Request Type** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	<p>Used to indicate the upload request type using which you want to create the upload request.</p> <p><b>Note:</b> The following upload request types are shipped with the product:</p> <ul style="list-style-type: none"> <li>• ADJ_UPL_REQ_TYPE_APVL</li> <li>• ADJ_UPL_REQ_TYPE_WO_APVL</li> <li>• BC_UPL_REQ_TYPE</li> <li>• BILL_CYCLE_UPD_UPL_REQ_TYPE</li> <li>• BILL_LVL_UPL_REQ_TYPE</li> <li>• BILL_SRT_UPL_REQ_TYPE</li> <li>• HOLD_UPL_REQ_TYPE</li> <li>• REFUND_UPL_REQ_TYPE</li> <li>• REIN_UPL_REQ_TYPE</li> <li>• SA_RIDER_UPD_UPL_REQ_TYPE</li> <li>• WO_UPL_REQ_TYPE</li> </ul>	Yes

**Tip:** Alternatively, you can access the **Select Upload Request Type** screen by clicking the **Upload** button in the **Page Title** area of the **Upload Request** screen.

**Note:** The **Select Upload Request Type** screen appears only when there are multiple upload request types defined in the application. If there is only one upload request type defined in the application, the **{XXX} Upload Request** screen appears.

4. Select the required upload request type from the respective field.
5. Click **OK**.

The **{XXX} Upload Request** screen appears. Here, {XXX} changes depending on the upload request type that you have selected. It contains the following sections:

- **Main** – Used to specify basic details about the upload request.
- **Characteristics** – Used to define characteristics for the upload request.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Indicates the upload request type using which the upload request will be created.	Not applicable
Parent Customer	<p>Used to indicate the person for whom you want to create the bill group sorting or bill group derivation and pricing parameters upload request.</p> <p><b>Note:</b></p> <p>This field appears only when you are creating an upload request using an upload request type where the upload request business object is set to <b>C1-BillGrpSortUploadRequest</b> or <b>C1-BillLevelUploadRequest</b>.</p> <p>The system allows you to create a bill group sorting or bill group derivation and pricing parameters upload request for a person whose person type is set to <b>Parent Customer</b>.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.</p>	Yes
File Name	<p>Used to specify the name and path of the file that you want to upload.</p> <p><b>Note:</b> You can also click the <b>Browse</b> button corresponding to this field to browse to the location where the file is available in the system.</p>	Yes
Replace Existing File	Used to indicate whether you want to replace any existing file in the system. You must select this check box when you want to upload the same file once again.	No
Comments	Used to specify additional information about the upload request.	No

- Click the **Browse** button corresponding to the **File Name** field.

The **Choose File to Upload** dialog box appears.

- Browse to the location where the file that you want to upload is available in the system.
- Click **Open**.

The file name along with the path appears in the **File Name** field.

- Select the **Replace Existing File** check box depending on whether you want to upload the same file once again in the system.
- Define characteristics for the upload request, if required.

**11. Click Save.**

A message appears indicating the number of records which are successfully uploaded. Then, an upload request is created in the **Draft** status. If the required identifier (such as account ID, person ID, policy ID, or bill group ID) is available in the record, the status of the record is set to **Pending**. However, if the required identifier could not be derived from the system, the status of the record is set to **Invalid**.

How to define characteristics for an upload request	<a href="#">Defining Characteristics for an Upload Request</a> on page 1409

**Defining Characteristics for an Upload Request****Prerequisites**

To define characteristics for an upload request, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Upload Request**)

**Procedure**

To define characteristics for an upload request:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing an upload request.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Upload Request</b> .	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the upload request.
Characteristic Value	Used to specify the value for the characteristic type.  <b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the upload request.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the upload request, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the upload request, click the **Delete**  icon corresponding to the characteristic.

**Upload Request (Used for Viewing)**

Once you create an upload request, the **Upload Request** screen allows you to:

- Edit the details of an upload request
- Delete an upload request
- View the details of an upload request
- Validate an upload request
- Cancel an upload request
- Submit an upload request
- Approve or reject an upload request
- View the data uploaded to a request
- View the log of an upload request
- Add a log entry for an upload request

This screen consists of the following tabs:

- Main** – This tab contains the following two zones:
  - Upload Request** – Displays the details of the upload request.
  - Data Records** – Lists the data records of the upload request.
- Log** – This tab lists the complete trail of actions performed on the upload request.

**Upload Request - Main**

The **Main** tab contains the following zones:

- [Upload Request](#) on page 1410
- [Data Records](#) on page 1413

**Upload Request**

The **Upload Request** zone displays the details of the upload request. This zone contains the following sections:

- Main** – This section provides basic information about the upload request. It contains the following fields:

Field Name	Field Description
Upload Request Information	Displays information about the upload request.
Upload Request Type	Indicates the upload request type using which the upload request is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Upload Request Type</b> screen appears where you can view the details of the upload request type.
Status	Indicates the status of the payment request. The valid values are: <ul style="list-style-type: none"> <li>• Approval In Progress</li> <li>• Approved</li> <li>• Cancelled</li> <li>• Deferred Processing</li> <li>• Draft</li> <li>• Processed</li> <li>• Rejected</li> <li>• Submitted</li> <li>• Validated</li> </ul>
File Name	Displays name of the uploaded file.

- **Statistics** – This section lists the statistics of records in the upload request. It contains the following fields:

Field Name	Field Description
Total Records	Displays total number of records in CSV file.
Valid Records	Displays the count of valid data records.
Error Records	Displays the count of data records in error status.
Pending Records	Displays the count of data records pending after successful derivation.
Invalid Records	Displays the count of data records after unsuccessful derivation.
Processed Records	Displays the count of data records after processing.

- **Characteristics** – This section lists the characteristics defined for the upload request. It contains the following columns:

Column Name	Column Description
Effective Date	Indicates the date from when the characteristic is effective for the upload request.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Column Name	Column Description
Edit	Used to edit the details of the upload request.
	<b>Note:</b> The <b>Edit</b> button appears when the upload request is in the <b>Draft</b> or <b>Validated</b> status.
Delete	Used to delete the upload request.
	<b>Note:</b> The <b>Delete</b> button appears only when the upload request is in the <b>Draft</b> status.
Validate	Used to validate the upload request.
	<b>Note:</b> The <b>Validate</b> button appears only when the upload request is in the <b>Draft</b> status.
Cancel	Used to cancel the upload request.
	<b>Note:</b> The <b>Cancel</b> button appears only when the upload request is in the <b>Validated</b> status.
Submit	Used to submit the upload request for approval.
	<b>Note:</b> The <b>Submit</b> button appears only when: <ul style="list-style-type: none"> <li>The upload request is in the <b>Validated</b> status.</li> <li>The <b>Approval Required</b> check box is selected in the upload request type using which the upload request is created.</li> </ul>
Approve	Used to approve the upload request.
	<b>Note:</b> The <b>Approve</b> button appears only when: <ul style="list-style-type: none"> <li>The upload request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the upload request.</li> </ul>
Reject	Used to reject the upload request.
	<b>Note:</b> The <b>Reject</b> button appears only when: <ul style="list-style-type: none"> <li>The upload request is in the <b>Approval In Progress</b> status.</li> <li>A user with the approval To Do role is reviewing the upload request.</li> </ul>

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the upload request is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

Field Name	Field Description
Status Date/Time	Displays the date and time when the upload request status is updated
Create Date/Time	Displays the date and time when the upload request is created.

### Data Records

The **Data Records** zone lists the data records of the upload request. This zone contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search Criteria 1, Search Criteria 2, ....., Search Criteria 10	Used to search for data from the CSV file with respect to the field.	No
<b>Note:</b> We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.		
Record Status	Used to indicate whether you want to search data records for an upload request. The valid values are: <ul style="list-style-type: none"> <li>• Error</li> <li>• Invalid</li> <li>• Pending</li> <li>• Processed</li> <li>• Valid</li> </ul>	No

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
View	On clicking the <b>View</b>  icon, the <b>Data Record Details</b> window appears where you can view the details of the data records.
Search Result 1, Search Result 2, ....., Search Result 10	Displays data from the CSV file.
<b>Note:</b> We have used generic field labels here. However, these labels will change depending on the mapping defined in the respective upload request type.	

Column Name	Column Description
Record Status	Indicates the status of the data record. The valid values are: <ul style="list-style-type: none"> <li>Error</li> <li>Invalid</li> <li>Pending</li> <li>Processed</li> <li>Valid</li> </ul>
Message(s)	Displays message for the data record respective to it's status.
Entity ID	Displays entity ID of the upload request. <b>Note:</b> The entity ID is displayed only for data records with <b>Processed</b> status.
Entity Information	Displays entity information for the <b>FK Reference</b> selected in <b>Upload Request Type</b> screen. <b>Note:</b> The entity information is displayed only for data records with <b>Processed</b> status.

**Note:** By default the **Search Results** section displays data records for all the statuses though data is not added or selected to any of the fields and are searched through the **Search Criteria** section.

## Upload Request - Log

The **Log** tab contains the following zone:

- [Upload Request Log](#) on page 1414

### Upload Request Log

The **Upload Request Log** zone on the **Upload Request** screen lists the complete trail of actions performed on the upload request. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Displays the status reason of action performed on the upload request.

**Note:** You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. Enter **Log Details** and click **Save**. The upload request log is added.

## Editing an Upload Request

### Procedure

To edit an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose details you want to edit.

The **Upload Request** screen appears.

3. Click the **Edit** button in the **Upload Request** zone.

**Note:** The **Edit** button appears only when the upload request is in the **Draft** or **Validated** status.

The entity **Upload Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Type	Displays the upload request type using which the upload request is created.	Not applicable
File Name	Displays name of the uploaded CSV file.	Not applicable
Comments	Used to indicate the comments for upload request.	No

- **Characteristics** – Used to define characteristics for the upload request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the upload request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the upload request.
Characteristic Type	Used to indicate the characteristic type.  <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Upload Request</b> .	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the Upload request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the Upload request.

4. Modify the details of the upload request, if required.
5. Define, edit, or remove characteristics from the upload request, if required.
6. Click **Save**.

The changes made to the upload request are saved.

## Deleting an Upload Request

### Procedure

To delete an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to delete.

The **Upload Request** screen appears.

3. Click the **Delete** button in the **Upload Request** zone.

A message appears confirming whether you want to delete the upload request.

**Note:** The **Delete** button appears only when the upload request is in the **Draft** status.

4. Click **OK**.

The upload request is deleted.

## Validating an Upload Request

### Prerequisites

To validate an upload request, you should have:

- Upload Request Types defined in the request.

### Procedure

To validate an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to validate.

The **Upload Request** screen appears.

3. Click the **Validate** button in the **Upload Request** zone.

**Note:** The **Validate** button appears only when the upload request is in the **Draft** status.

For more information about the **Upload Request Periodic Monitor (C1-UPLRQ)** batch, refer to Oracle Revenue Management and Billing Batch Guide.

The status of the upload request is changed to **Validated**.

## Cancelling an Upload Request

### Prerequisites

To cancel an upload request, you should have:

- Cancellation reasons defined in the application

**Note:** While cancelling an upload request, you need to specify the reason why you want to cancel the upload request. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

### Procedure

To cancel an upload request:

1. Search for the upload request in the **Upload Request** screen.

- 2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to cancel.

The **Upload Request** screen appears.

- 3. Click the **Cancel** button in the **Upload Request** zone.

The **Cancel Reason** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Cancel Reason	Used to indicate the reason why you want to cancel the upload request.	Yes
Comments	Used to specify additional information while cancelling the upload request.	No

**Note:** The **Cancel** button appears only when the upload request is in the **Validated** status.

- 4. Select the cancellation reason from the **Cancel Reason** list.
- 5. Click **Save**.

The status of the upload request is changed to **Canceled**.

**Submitting an Upload Request**

**Procedure**

To submit an upload request:

- 1. Search for the upload request in the **Upload Request** screen.
- 2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request that you want to submit.

The **Upload Request** screen appears.

- 3. Click the **Submit** button in the **Upload Request** zone.

The system behaves in the following manner:

If...	Then...

## Approving an Upload Request

You can view the number of upload requests which are pending for approval in the **Upload Request** screen. The approver can review, and accordingly approve or reject the upload request based on the observations.

**Note:** The system will not allow you to approve or reject an upload request submitted by you.

### Procedure

To approve an upload request:

1. Do either of the following:

If you want to...	Then...
Approve a upload request through the <b>Upload Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the upload request in the <b>Upload Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Upload Request Information</b> column corresponding to the upload request which you want to review.</li> </ol>
Approve a upload request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter the required To Do type in the respective field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the upload request that you want to review.</li> </ol>

The **Upload Request** screen appears.

2. Review the upload request details.
3. Click the **Approve** button in the **Upload Request** zone.

The system behaves in the following manner:

If...	Then...																				
The number of valid records in the upload request does not exceed the online record process limit defined in the <b>C1-DEFERUPLD</b> algorithm	<p>The following table lists the behavior for the different upload requests:</p> <table> <tr> <th>Upload Request</th><th>Behavior</th></tr> <tr> <td>Bill Cycle Update</td><td>The bill cycle information is updated for the accounts.</td></tr> <tr> <td>Billable Charge</td><td>The billable charges are created.</td></tr> <tr> <td>Contract Rider Update</td><td>The contract rider information is updated for the contracts.</td></tr> <tr> <td>Hold Request</td><td>The hold requests are created.</td></tr> <tr> <td>Refund Request</td><td>The refund requests are created.</td></tr> <tr> <td>Write Off Request</td><td>The write off requests are created.</td></tr> <tr> <td>Policy Reinstatement</td><td>The policies are reinstated and the status of the policies is changed to the one defined in the <b>Policy Status after Processing Reinstatement Upload Request</b> parameter of the <b>C1-REN-VALID</b> algorithm.</td></tr> <tr> <td>Bill Group Sorting</td><td>The sort ID is defined for the respective bill group.</td></tr> <tr> <td>Bill Group Derivation and Pricing Parameters</td><td>The derivation and pricing parameters are defined for the respective bill group and sort ID combination.</td></tr> </table> <p>In addition, the status of the upload request is changed to <b>Processed</b>.</p>	Upload Request	Behavior	Bill Cycle Update	The bill cycle information is updated for the accounts. ## Rejecting an Upload Request

### Prerequisites

To reject an upload request, you should have:

- Rejection reasons defined in the application

### **Note:**

While rejecting an upload request, you need to specify the reason why you want to reject the upload request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-UplRequestType** business object in the **Status Reason** screen.

The system will not allow you to approve or reject an upload request submitted by you.

### Procedure

To reject an upload request:

1. Do either of the following:

If you want to	Then
Reject an upload request through the <b>Upload Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the upload request in the <b>Upload Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Upload Request Information</b> column corresponding to the upload request which you want to review.</li> </ol>
Reject an upload request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter the required To Do type in the respective field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> </ol>

If you want to	Then
	6. Click the link in the <b>Message</b> column corresponding to the To Do of the upload request that you want to review.

The **Upload Request** screen appears.

- 2. Review the upload request details.
- 3. Click the **Reject** button in the **Upload Request** zone.

The **Reject Upload Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the upload request.	Yes
Comments	Used to specify additional information while rejecting the upload request.	No

**Note:** The **Reject** button appears only when:

- The upload request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the upload request.

- 4. Select the rejection reason from the **Status Reason** list.
- 5. Click **Save**.

The status of the upload request is changed to **Rejected**.

**Viewing the Data Record Details**

**Procedure**

To view the details of a data record:

- 1. Search for the data record in the **Data Records** zone in the **Upload Request** screen.
- 2. In the **Search Results** section, click the **View**  icon in the **View** column corresponding to the data record whose details you want to view.

The **Data Record Details** window appears. It contains the following fields:

Field Name	Field Description
Sr. No.	Displays the sequential number of data.

Field Name	Field Description
CSV Column Header	Displays name of the column in uploaded CSV file.
CSV Column Value	Displays value in the column in uploaded CSV file.

3. View the details of the data record in the **Data Record Details** window.

## Viewing the Log of an Upload Request

### Procedure

To view the log of an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to view.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the upload request. It contains the following zones:
  - **Upload Request** – Displays the details of the upload request.
  - **Data Records** – Lists the data records of the upload request.
- **Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
  - **Upload Request Log** – Displays the trail of actions performed on the particular upload request.

3. Click the **Log** tab.

The **Upload Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the upload request.
Details	Displays the details about the action performed on the upload request.
User	Indicates the user who has performed the action on the upload request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the upload request.
Status Reason	Indicates the reason why the upload request was rejected.

**Note:** You can manually add a log entry for the upload request by clicking the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

How to add a log entry for an Upload request	<a href="#">Adding a Log Entry for an Upload Request</a> on page 1428

## Adding a Log Entry for an Upload Request

### Procedure

To add a log entry for an upload request:

1. Search for the upload request in the **Upload Request** screen.
2. In the **Search Results** section, click the link in the **Upload Request Information** column corresponding to the upload request whose log you want to edit.

The **Upload Request** screen appears. It consists of the following tabs:

- **Main** – Displays information about the upload request. It contains the following zones:
  - **Upload Request** – Displays the details of the upload request.
  - **Data Records** – Lists the data records of the upload request.
- **Log** – Lists the complete trail of actions performed on the upload request. This tab contains the following zone:
  - **Upload Request Log** – Displays the trail of actions performed on the particular upload request.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Upload Request Log** zone.

The **Add Upload Request Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Upload Request Information	Displays information about the upload request.	Not applicable
Log Details	Used to specify additional comments on the upload request.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Upload Request Log** zone.

## General Ledger (GL) Accounting Template

---

### Topics:

- [GL Accounting Template \(Without Approval\) Status Transition](#)
- [GL Accounting Template \(With Approval\) Status Transition](#)
- [Algorithms Used in C1- GLAT](#)
- [Prerequisites](#)
- [GL Accounting Template \(Used for Searching\)](#)
- [GL Accounting Template \(Used for Viewing\)](#)

Oracle Revenue Management and Billing until now created FT GL entries while generating the financial transactions for adjustments, payments, and bill segments. The FT GL entries were created using the distribution codes from the adjustment type, rate component, billable charge pass through line, or contract type depending on the type of financial transaction. Now, the system enables you to override the distribution code used for creating FT GL entries using the GL Accounting Template feature.

The system allows you to define a GL Accounting template for each process and sub processes combination for a date range. Based on the parameters defined in the **FT Generation** algorithms, the system either uses the standard process or GL Accounting Template for FT GL creation. The GL Accounting template for the specified process and sub processes combination which is effective on the accounting date is used for FT GL creation.

There should be at least one debit and credit lines in the GL Accounting template. You can define maximum 10 lines in the GL Accounting template. Each line should contain the following information:

- Whether the line should be used to create a debit FT GL entry or credit FT GL entry
- Conditional algorithm (created using the **C1-GLATLC** algorithm type) to indicate whether the line should be used to create the FT GL entry or not
- Distribution code to indicate the GL Account against which the FT GL entry should be created
- User defined amount, such as Amount 01, Amount 02, or Amount 03

The line with the Amount 01 user defined amount is used to create balancing FT GL entry against the contract type. The line with the Amount 02, Amount 03, ..., and Amount 10 user defined amount is used to create FT GL entries for bill segment calculation lines, non-calculated adjustments, adjustment calculation lines, or payments. In case of bill segments and calculated adjustments, the lines with the Amount 02, Amount 03, ..., Amount 10 user defined amount are mapped to calculation line amounts based on the rate component sequence.

You can optionally configure the system to use the approval workflow process while activating or deactivating the GL Accounting templates. If you want to enable the approval workflow process, you need to define algorithms using the following algorithm types:

- C1-GLATAPPEN
- C1-GLATSUB

If the **Approval Required (Y or N)** parameter in an algorithm created using the **C1-GLATSUB** algorithm type is set to **Y**, then on submitting or deactivating the GL Accounting template, the approval workflow process creates a To Do

for the approver to review the GL Accounting template. Once the approver approves a GL Accounting template, the status of the GL Accounting template is set to **Active** or **Inactive**.

We are supporting the following process and sub processes combinations while creating the GL Accounting template:

Process	BS	AD	PS
Sub Process 1	Contract Type	Adjustment Type	Bank Account
Sub Process 2	Division	Contract Type	Contract Type
Sub Process 3	Rate Schedule	Division	Division
Sub Process 4	-	-	-
Sub Process 5	-	-	-

For example, you can define the following the GL Accounting templates using the above supported process and sub processes combinations:

GL Accounting Template	Process	Sub Process 1	Sub Process 2	Sub Process 3
GLAT1	BS	CT1	D1	RS1
GLAT2	BS	CT2	D1	RS1
GLAT3	BS	CT3	D2	RS2
GLAT4	PS	BA1	CT1	D1
GLAT5	PS	BA2	CT2	D2
GLAT6	AD	AT1	CT1	D1
GLAT7	AD	AT1	CT2	D2

While creating the GL Accounting template for BS and AD processes, you need to ensure that the line with the Amount 1 user defined amount is a debit line. However, while creating the GL Accounting template for PS process, you need to ensure that the line with the Amount 1 user defined amount is a credit line.

Based on the customer requirements, you can define GL Accounting template for various custom process and sub processes combinations.

The **Create Additional FT GL Entries** parameter is added in the **Assign GL Account to Financial Transaction (C1-GLASN)** and **Assign GL Account to Financial Transaction (GLASSGN2)** batches. If you set this parameter to **Y**, the **C1-GLCE** algorithm is invoked. Based on the parameters defined in the algorithm, the system checks whether there is a GL Accounting template which is effective on the accounting date for the specified process and sub processes combination. If the effective GL Accounting template is available, the system creates additional FT GL entries for the financial transactions. If the financial transaction's currency is different from the division's base currency, the algorithm will create FT GL extension for the respective financial transaction.

Two new parameters are added in the **ADJT-NM**, **ADJT-AC**, **ADJT-TA**, **ADJT-TC**, **ADJT-AD**, **ADJT-GL**, **PSEG-NM**, **PSEG-AC**, **PSEG-CA**, **BSBF-BA**, **BSBF-LO** algorithm types:

- **Use GL Accounting Template (Y or N)** - Indicates whether the FT GL entries should be created using the lines in the GL Accounting template. The valid values are **Y** and **N**.
- **Show the GL Accounting Template Error When Header Record Not Found (Y or N)** - Indicates whether you want to show error message when the effective GL Accounting template is not available for the process and sub processes combination. If you set the value of this parameter to **N**, the algorithm uses the standard process for FT GL creation when the effective GL Accounting template is not available.

The following table explains how the algorithms created using the following algorithm types create FT GL entries:

Algorithm Type	Use GL Accounting Template (Y or N)	Calculated Adjustment Distribution Code Source (AT - Adjustment Type, CL - Calc Lines)	Algorithm Behaviour
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	CL	Creates FT GL for the adjustment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	CL	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	N	AT	Creates FT GL for the adjustment using the distribution code on the respective adjustment type and the balancing FT GL using the distribution code on contract type.
ADJT-NM, ADJT-AC, ADJT-TA, ADJT-TC, ADJT-AD, and ADJT-GL	Y	AT	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **PSEG-NM**, **PSEG-AC**, and **PSEG-CA** algorithm types, the system creates FT GL for the payment segment using the distribution code on the respective payment segment type and the balancing FT GL using the distribution code on contract type. However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y**, the system creates debit and credit FT GL entries using the lines in the GL Accounting template.

If the **Use GL Accounting Template (Y or N)** parameter is set to **N** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates FT GL for the bill segment calculation line using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.
Created from a pass through billable charge	Creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.
Created from a billable charge with pass through charges, SQI, and price item details	Creates... <ul style="list-style-type: none"> <li>• FT GL for the bill segment calculation line using the distribution code on the respective rate component</li> <li>• FT GL for the pass through line using the distribution code on the respective pass through line</li> <li>• Balancing FT GL using the distribution code on contract type</li> </ul>
A post processing bill segment	Creates FT GL for the post processing FT using the distribution code on the respective rate component and the balancing FT GL using the distribution code on contract type.

However, if the **Use GL Accounting Template (Y or N)** parameter is set to **Y** in the algorithms created using the **BSBF-BA** and **BSBF-LO** algorithm types, the system behaves in the following manner:

If the bill segment is...	Then, the system...
Created from a billable charge with SQI and/or price item details	Creates debit and credit FT GL entries using the lines in the GL Accounting template.
Created from a pass through billable charge	Does not use the GL Accounting template. It creates FT GL for the pass through line using the distribution code on the respective pass through line and the balancing FT GL using the distribution code on contract type.

If the bill segment is...	Then, the system...
Created from a billable charge with pass through charges, SQL, and price item details	<p>Creates...</p> <ul style="list-style-type: none"> <li>• FT GL for bill segment calculation line using the lines in the GL Accounting template.</li> <li>• FT GL for the pass through line using the distribution code on the respective pass through line.</li> <li>• Balancing FT GL using the line in the GL Accounting template.</li> </ul>
A post processing bill segment	Creates debit and credit FT GL entries using the lines in the GL Accounting template.

## GL Accounting Template (Without Approval) Status Transition

---

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is off:

## GL Accounting Template (With Approval) Status Transition

---

The following figure graphically indicates how a GL Accounting Template moves from one status to another when approval workflow is on:

## Algorithms Used in C1- GLAT

The following table lists the algorithms which are attached to the **C1-GLAT** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-GLAT-INF	C1-GLAT-INF	This algorithm generates the GLAT information string which appears throughout the application. This algorithm concatenates the following fields: <ul style="list-style-type: none"> <li>GLAT Description</li> <li>GLAT Status Description</li> <li>GLAT ID</li> </ul>

The following table lists the algorithms which are used in the lifecycle of the **C1-GLAT** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> <li>If soft parameter value is set to Y then approval workflow will be triggered.</li> </ul>
Approval in Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.
Approval in Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the <b>C1-GLATAAPEN</b> Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Approval in Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Active	-	-	-	-
Deactivation Submitted	Enter	C1-GLATSUB	C1-GLATSUB	This algorithm checks the following: <ul style="list-style-type: none"> <li>If soft parameter value is set to Y then approval workflow will be triggered.</li> </ul>
Deactivation Approval In Progress	Enter	C1-GLATAPPEN	C1-GLATAPPEN	This algorithm creates the To Do based on the Approval To Do Type configured in algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Deactivation Approval In Progress	Exit	C1-GLATAPPEX	C1-GLATAPPEX	This algorithm checks whether an approver is associated with the approval To Do Role specified in the <b>C1-GLATAAPEN</b> Algorithm. It does not allow the submitter to approve or reject the GLAT request.
Deactivation Approval In Progress	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Rejected	Exit	F1-TODOCOMPL	F1-TODOCOMPL	This algorithm type completes To Do entries that are linked to an object when the object exits a given state. The system finds all open To Do entries with drill keys for the current business object's primary key, and completes them, unless the To Do entry's type has been configured with an Exclude To Do Type Characteristic Type indicating that it should not be automatically completed.
Inactive	-	-	-	-

## Prerequisites

To setup the GL Accounting Template, you need to do the following:

- Define rejected status reasons for the **C1-GLAT** business object
- Define deactivated status reasons for the **C1-GLAT** business object
- Assign the **C1-GLAT** To Do type to a To Do role whose users must receive To Do generated while submitting a template for approval
- Define the required algorithms, for approval and To Do type role and configurations

## GL Accounting Template (Used for Searching)

The **GL Accounting Template** screen allows you to search for a template using various search criteria. It also allows you to create template. Through this screen, you can navigate to the following screen:

- [GL Accounting Template \(Used for Viewing\)](#) on page 1443

This screen consists of the following zones:

- [Search GL Accounting Template](#) on page 1438
- [GL Accounting Template Lines](#) on page 1439

Search GL Accounting Template

The **Search GL Accounting Template** zone allows you to search for GL accounting templates using various search criteria. This zone contains the following two sections:

- **Search Criteria** — The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Template ID	Used to search a particular template.	No
Description	Used to specify the description of a template.	No
Status	Used to indicate the status of the template. The valid values are: <ul style="list-style-type: none"><li>• Draft</li><li>• Approval In Progress</li><li>• Deactivation Approval In Progress</li><li>• Active</li><li>• Inactive</li><li>• Rejected</li></ul>	No
Process	Used to search a particular process.	No
Sub Process 1	Used to search a particular Sub Process 1.	No
Sub Process 2	Used to search a particular Sub Process 2.	No
Sub Process 3	Used to search a particular Sub Process 3.	No
Sub Process 4	Used to search a particular Sub Process 4.	No
Sub Process 5	Used to search a particular Sub Process 5.	No
Effective Start Date	Used to search templates which are effective from a particular date.	No
Effective End Date	Used to search templates which are effective till a particular date.	No

**Note:** You must specify at least one search criterion while searching for a template.

- **Search Results** — On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Process	Displays the process.
GL Accounting Template Request Information	Displays information about the template. <div><b>Note:</b> It has a link. On clicking the link, the <b>GL Accounting Template</b> screen appears where you can view the details of the respective template.</div>
Description	Displays the description of process.

Column Name	Column Description
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.
Status	Displays the status of template.

## GL Accounting Template Lines

The **GL Accounting Template Lines** zone displays the details of the template lines. This zone contains the following columns:

Column Name	Column Description
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

**Note:** By default, the **GL Accounting Template Lines** zone does not appear in the **GL Accounting Template** screen. It appears only when you click the **Broadcast**  icon corresponding to the template in the **Search Results** section.

## Searching for a GL Accounting Template

### Procedure

To search for a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.  
The **GL Accounting Template** screen appears.
3. Enter the search criteria in the **Search GL Accounting Template** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.  
A list of templates that meet the search criteria appears in the **Search Results** section.

## Viewing the GL Accounting Template Details

### Procedure

To view the details of a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
  - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. View the details of the template in the **GL Accounting Template** zone.

## Creating a GL Accounting Template

### Prerequisites

To create a GL Accounting template, you should have:

- Conditional Algorithms and Distribution codes defined in the application.

### Procedure

To create a GL Accounting template:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **G** and then click **GL Accounting Template**.  
The **GL Accounting Template** screen appears.
3. Click the **Add** button in the **Page Title** area of the **GL Accounting Template** screen.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) <b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments</b>
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) <b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments</b>
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) <b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments.</b>
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** —Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

#### 4. Enter the required details

**Note:**

You can search for a conditional algorithm and distribution code by clicking the **search**  icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

System will not allow to add a template having same set of process, sub processes and effective date. If there is a template already created and its status is Inactive, then only template can be created with same set of process, sub processes and effective date.

Each conditional line must have unique User Defined Amount Field value.

5. Add template lines for a template defined.

6. Click **Save**.

The GL Accounting template is created and the status of the template is set to **Draft**. The **GL Accounting Template** screen appears with the details of template.

## GL Accounting Template (Used for Viewing)

---

Once you create a template, the **GL Accounting Template** screen allows you to:

- View the details of a template
- Edit the details of a template
- Delete a template
- Submit a template for approval
- Approve or reject a template
- Deactivate a template

This screen consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
  - **GL Accounting Template** – Displays the details of the template.
- **Log** — Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

### GL Accounting Template - Main

The **Main** tab on the **GL Accounting Template** contains the following zone:

[GL Accounting Template](#) on page 1444

**GL Accounting Template**

The **GL Accounting Template** zone displays the details of the template. This zone contains the following sections:

- Main** — This section provides basic information about the GL Accounting template. It contains the following fields:

Field Name	Field Description
GL Accounting Template Information	Displays information about the template
Status	Indicates the status of the template.
Process	Displays the process.
Description	Displays the description of the process.
Sub Process 1	Displays the Sub Process 1.
Sub Process 2	Displays the Sub Process 2.
Sub Process 3	Displays the Sub Process 3.
Sub Process 4	Displays the Sub Process 4.
Sub Process 5	Displays the Sub Process 5.
Effective Start Date	Displays the date from when the template is effective.
Effective End Date	Displays the date till when the template is effective.

- GL Accounting Template Lines** — Lists the GL Accounting template lines. It contains the following columns:

Column Name	Column Description
Sequence No	Displays the sequence number.
Credit/Debit	Displays whether the template lines are of credit or debit.
Conditional Algorithm	Displays the algorithm that specified that template line is valid or not.
Distribution Code	Displays the distribution code which indicates the template associated with the charge.
User Defined Amount Field	Displays the amount to be used in a template line.

- Record Actions** — This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the template.
	<b>Note:</b> The <b>Edit</b> button appears only when the template is in the <b>Draft</b> or <b>Rejected</b> status.
Delete	Used to delete the template.
	<b>Note:</b> The <b>Delete</b> button appears only when the template is in the <b>Draft</b> or <b>Rejected</b> status.

Button Name	Button Description
Submit	Used to activate the template.
	<b>Note:</b> The <b>Submit</b> button appears only when the template is in the <b>Draft</b> or <b>Rejected</b> status.
Approve	Used to approve the template.
	<b>Note:</b> the <b>Approve</b> button appears only when the template is in the <b>Approval In Progress</b> or <b>Deactivation Approval In Progress</b> status.
Reject	Used to reject the template.
	<b>Note:</b> the <b>Reject</b> button appears only when the template is in the <b>Approval In Progress</b> or <b>Deactivation Approval In Progress</b> status.
Deactivate	Used to deactivate the active template.
	<b>Note:</b> The <b>Deactivate</b> button appears only when the template is in the <b>Active</b> status.

- **Record Information** — This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## GL Accounting Template - Log

The **Log** tab on the **GL Accounting Template** screen contains the following zone:

[GL Accounting Template Log](#) on page 1445

### GL Accounting Template Log

The **GL Accounting Template Log** zone on the **GL Accounting Template** screen lists the complete trail of actions performed on the GL Accounting template. This zone contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Displays the status reason of action performed on the template.

**Note:** You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. Enter **Log Details** and click **Save**. The GL Accounting Template log is added.

**Related Topics**

**Editing a GL Accounting Template**

**Procedure**

To edit a GL Accounting Template:

- 1. Search for the template in the **GL Accounting Template** screen.
- 2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose details you want to edit.

The **GL Accounting Template** screen for editing appears.

- 3. Click the **Edit** button in the **GL Accounting Template** zone.

**Note:** The **Edit** button appears only when the template is in the **Draft** or **Rejected** status.

The **GL Accounting Template** screen appears. It contains the following sections:

- **Main** — Used to specify basic details about the template. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Process	Used to specify a particular process.	Yes
Description	Used to indicate the description of a process.	Yes
Sub Process 1	Used to specify a Sub Process 1.	Yes (Conditional) <b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments</b>
Sub Process 2	Used to specify a Sub Process 2.	Yes (Conditional) <b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments</b>
Sub Process 3	Used to specify a Sub Process 3.	Yes (Conditional) <b>Note:</b> This field is required if <b>Process</b> is <b>Bill Segment or Payment Segment or Adjustments.</b>

Field Name	Field Description	Mandatory (Yes or No)
Sub Process 4	Used to specify a Sub Process 4.	No
Sub Process 5	Used to specify a Sub Process 5.	No
Effective Start Date	Used to specify date for a template which is effective from a particular date.	Yes
Effective End Date	Used to specify date for a template which is effective till a particular date.	No

- **GL Accounting Template Lines** — Used to specify the template lines in a GL accounting template. This section contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Sequence No	Used to specify the sequence number.	Yes
Credit/Debit	Used to indicate whether template lines are of credit or debit.	Yes
Conditional Algorithm	Used to specify the algorithm which specifies that template line is valid or not.	No
Distribution Code	Used to indicate the distribution code which indicates the template associated with the charge.	Yes
User Defined Amount Field	Used to indicate the amount to be used in a template line.	Yes

**Note:**

If you want to specify more than one template lines, click the **Add** (+) icon corresponding to the sequence No and then specify the details.

However, if you want to remove a template line from the template, click the **Delete** (🗑️) icon corresponding to the sequence No.

You can search for a conditional algorithm and distribution code by clicking the **search** (🔍) icon corresponding to the respective field.

At least one credit and one debit line is required while defining a template.

4. Modify the details of the template, if required.

5. Click **Save**.

The changes made to the GL Accounting template are saved.

Deleting a GL Accounting Template

**Procedure**

To delete a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to delete.

The **GL Accounting Template** screen appears.

3. Click the **Delete** button in the **GL Accounting Template** zone.

A message appears confirming whether you want to delete the template.

**Note:** The **Delete** button appears only when the template is in the **Draft** or **Rejected** status.

4. Click **OK**.

The GL Accounting template is deleted.

**Note:**  
 You can delete a template only when its status is **Draft**.

Submitting a GL Accounting Template

**Prerequisites**

To submit a GL Accounting Template, you should have:

- Process and GL Accounting template lines defined in the template.

**Procedure**

To submit a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to submit.

The **GL Accounting Template** screen appears.

3. Click the **Submit** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If...	Then...
Approval Required Flag is set to Yes in the <b>C1-GLATSUB</b> algorithm.	A To Do of the <b>C1-GLAT</b> To Do type is created and sent to the approver and the status of the template is changed to <b>Approval In Progress</b> .
Approval Required Flag is set to No in the <b>C1-GLATSUB</b> algorithm.	The template is created using the specified process and the status of the template is changed to <b>Active</b> .

**Note:**

The **Submit** button appears only when the template is in the **Draft** or **Rejected** status.

**Approving a GL Accounting Template**

You can view the number of GL Accounting templates which are pending for approval in the **GL Accounting Template** screen. The approver can review, and accordingly approve or reject the template based on the observations.

**Note:** The system will not allow you to approve or reject a template submitted by you.

**Procedure**

To approve a template:

1. Do either of the following:

If you want to...	Then...
Approve a GL Accounting Template through the <b>GL Accounting template</b> screen	<ol style="list-style-type: none"> <li>1. Search for the template in the <b>GL Accounting template</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>GL Accounting Template Information</b> column corresponding to the template which you want to review.</li> </ol>
Approve a GL Accounting Template from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.</li> </ol>

If you want to...	Then...
	<p>The <b>To Do Type for User Search</b> window appears.</p> <p>3. Enter <b>C1-GLAT</b> in the <b>To Do Type</b> field.</p> <p>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.</p> <p>The <b>To Do List</b> screen appears.</p> <p>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</p> <p>6. Click the link in the <b>Message</b> column corresponding to the To Do of the GL Accounting template that you want to review.</p>

The **GL Accounting Template** screen appears.

- 2. Review the template details.
- 3. Click the **Approve** button in the **GL Accounting Template** zone.

The system behaves in the following manner:

If you are...	Then...
Approving a GL Accounting template	The status of the template is changed to <b>Active</b> as specified in the GL Accounting template.

**Note:** The **Approve** button appears only when the template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.

**Related Topics**

**Rejecting a GL Accounting Template**

**Prerequisites**

To reject a GL Accounting template, you should have:

- Rejection reasons defined in the application

**Note:**

While rejecting a GL Accounting template, you need to specify the reason why you want to reject the template. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-GLAT** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a template submitted by you.

**Procedure**

To reject a GL Accounting template

1. Do either of the following:

If you want to	Then
Reject a GL Accounting template through the <b>GL Accounting Template</b> screen	<ol style="list-style-type: none"> <li>1. Search for the template in the <b>GL Accounting Template</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>GL Accounting Template Information</b> column corresponding to the template which you want to review.</li> </ol>
Reject a GL Accounting template from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>.  The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter <b>C1-GLAT</b> in the <b>To Do Type</b> field.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field.  The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> <li>6. Click the link in the <b>Message</b> column corresponding to the To Do of the template that you want to review.</li> </ol>

The **GL Accounting Template** screen appears.

2. Review the template details.
3. Click the **Reject** button in the **GL Accounting Template** zone.

The **Reject GLAT Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the template	Yes

Field Name	Field Description	Mandatory (Yes or No)
Comments	Used to specify additional information while rejecting the template.	No

**Note:** The **Reject** button appears only when:

- The template is in the **Approval In Progress** or **Deactivation Approval In Progress** status.
- A user with the approval To Do role is reviewing the template.

4. Select the rejection reason from the **Status Reason** list.

5. Click **Save**.

The status of the template is changed to **Rejected**.

## Deactivating a GL Accounting Template

### Prerequisites

To deactivate a GL Accounting template, you should have:

- Deactivation reasons defined in the application.

### **Note:**

While deactivating a GL Accounting template, you need to specify the reason why you want to deactivate the template. You can select the appropriate deactivation reason only when you have defined the reasons for the deactivation status of the **C1-GLAT** business object in the **Status Reason** screen.

### Procedure

To deactivate a GL Accounting template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template that you want to deactivate.

The **GL Accounting Template** screen appears.

3. Click the **Deactivate** button in the **GL Accounting Template** zone.

**Note:** The **Deactivate** button appears only when the template is in the **Active** status.

The **Deactivate GLAT Request** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason for deactivating a template	Yes
Comments	Used to specify the additional comments on the deactivation of template.	No

4. Click **OK**.

The GL Accounting template status is changed to **Deactivation Approval In Progress**.

## Viewing the Log of a GL Accounting Template

**Procedure**

To view the log of a GL Accounting template:

1. Search for the template in the **GL Accounting template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose log you want to view.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
  - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. Click the **Log** tab.

The **GL Accounting Template Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the template.
Details	Displays the details about the action performed on the template.
User	Indicates the user who has performed the action on the template.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the template.
Status Reason	Indicates the reason why the template was rejected or voided.

**Note:** You can manually add a log entry for the template by clicking the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

**Adding a Log Entry for a GL Accounting Template**

**Procedure**

To add a log entry for a GL Accounting Template:

1. Search for the template in the **GL Accounting Template** screen.
2. In the **Search Results** section, click the link in the **GL Accounting Template Information** column corresponding to the template whose log you want to edit.

The **GL Accounting Template** screen appears. It consists of the following tabs:

- **Main** – Displays information about the template. It contains the following zone:
  - **GL Accounting Template** – Displays the details of the template.
- **Log** – Lists the complete trail of actions performed on the template. This tab contains the following zone:
  - **GL Accounting Template Log** – Displays the trail of actions performed on the particular template.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **GL Accounting Template Log** zone.

The **Add GL Accounting Template Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
GL Accounting Template Information	Displays information about the template.	Not applicable
Log Details	Used to specify additional comments on the template.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **GL Accounting Template Log** zone.

## Payment Agreement Request

---

### Topics:

- [Payment Agreement Request \(Without Approval\) Status Transition](#)
- [Payment Agreement Request \(With Approval\) Status Transition](#)
- [Prerequisites](#)
- [Algorithms Used in C1-PaymentAgreementRequest](#)
- [Payment Agreement Request Type](#)
- [Payment Agreement Request \(Used for Searching\)](#)
- [Payment Agreement Request \(Used for Viewing\)](#)

Oracle Revenue Management and Billing provides the ability to schedule payments in installments for a set of unpaid bills of an account through a payment agreement request. Let us understand this with the help of an example. The following bills of the account A1 are unpaid:

- B1 (Bill Amount – 100\$, Unpaid Amount - 75\$)
- B2 (Bill Amount – 250\$, Unpaid Amount – 125\$)
- B3 (Bill Amount – 150\$, Unpaid Amount – 150\$)

Through a payment agreement request, you can schedule payments for these three bills in various installments. For example, you can schedule the following payments for the account A1:

Schedule Date	Schedule Amount
01-Jan-2017	100
15-Jan-2017	100
01-Feb-2017	100
15-Feb-2017	50

While creating a payment agreement request, you need to specify the payment agreement request type using which you want to create the payment agreement request. It is the payment agreement request type which helps the system to determine:

- The business object using which the payment agreement request should be created
- Whether the approval is required for the payment agreement request

You can only add completed bills of the account which are unpaid in a payment agreement request. Once a payment agreement request is created for an account, the status of the payment agreement request is set to **Draft**. You can then edit or delete the payment agreement request, if required. Once you add the unpaid bills of the account, you can submit the payment agreement request. On submitting a payment agreement request, the status of the payment agreement request is set to **Active**.

You can optionally configure the system to use the approval workflow process for a payment agreement request. If the **Approval Required** flag is set to **Yes** in a payment agreement request type, then on submitting the respective payment agreement request, the approval workflow process creates a To Do for the approver to review the payment agreement request. Once the approver approves the payment agreement request, the status of the payment agreement request is set to **Active**. The approver can approve, reject, or resubmit the payment

agreement request. When the payment agreement request is resubmitted to the submitter, the status of the payment agreement request is set to **Draft**.

Even if the approval workflow is configured for a payment agreement request type, you can skip the approval workflow for a payment agreement request. The system enables you to skip the approval workflow for a payment agreement request until you exceed the maximum limit defined in the **C1-PASUBMIT** algorithm. You can define the following parameters in the **C1-PA-SUBMIT** algorithm:

- Number of days to consider in past to check whether any payment agreement request with a particular status exist in the specified duration (for example, 365)
- Maximum number of payment agreement requests which can be activated without approval (for example, 1)
- Status in which payment agreement request should exist in the specified duration (for example, Broken Promise)

In the above example, on clicking the **Submit** button, the system will check how many payment agreement requests for the account in the last 365 days exist in the **Broken Promise** status. If the system finds one or more than one payment agreement requests in the **Broken Promise** status in the last 365 days, the approval workflow process creates a To Do for the approver to review the payment agreement request. However, if the system does not find any payment agreement request in the **Broken Promise** status in the last 365 days, the payment agreement request is not sent for approval and the status of the payment agreement request is directly changed to **Active**.

When the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If there is a payment agreement request in the **Active** status, the system checks whether the total unpaid amount of the bills is equal to zero and whether each bill is fully matched. If so, the status of the payment agreement request is changed to **Kept Promise**. However, if the total unpaid amount of the bills is not equal to zero, the system checks whether the current date is later than the schedule date and does not fall within the grace period. If so, the system checks whether total unpaid amount is greater than the total future schedule amount. If so, the status of the payment agreement request is changed to **Broken Promise**. However, if the current date is earlier than the schedule date or falls within the grace period, or the total unpaid amount is less than the total future schedule amount, the status of payment agreement request remains in **Active**. The system enables you to edit a payment agreement request which is in the **Active** status.

While defining a payment agreement request, you need to specify the payment method through which the payment will be done and whether the payment will be done through the payor or third party payor account. If the **Auto Pay** flag is set to **Yes** for a payment method, you need to also specify the automatic payment option using which the automatic payment should be created on the schedule date. One more batch named **Generate Auto Pay for Payment Agreement (C1-APPAB)** is introduced in this release. When the **Generate Auto Pay for Payment Agreement (C1-APPAB)** batch is invoked, the system checks whether there are any payment agreement requests in the **Active** status. If so, whether the account for which the payment agreement request is created is eligible for automatic payment and the defer auto pay date (if any) defined for the account is earlier than the batch business date. If so, the system checks whether the extract date of the unpaid bill (with the earliest due date) is earlier than the schedule date.

If so, the system creates the automatic payment for the unpaid bill on the schedule date. However, if the account is not eligible for automatic payment, or the defer auto pay date is equal to or later than batch business date, or the extract date is equal to or later than the schedule date, the automatic payment is not generated for the account.

During the payment agreement request process, a payment agreement request creation goes through various statuses in its lifecycle. For more information about the payment agreement request statuses, see [Payment Agreement Request \(Without Approval\) Status Transition](#) on page 1458 and [Payment Agreement Request \(With Approval\) Status Transition](#) on page 1459. If the payment agreement request type is without approval then payment agreement status will automatically move from draft to active. The approval configuration algorithm **C1-PA-APPEXT** decides whether the request will be sent for approval or not. If the payment agreement request type is with approval then payment agreement will be sent for approval depending on:

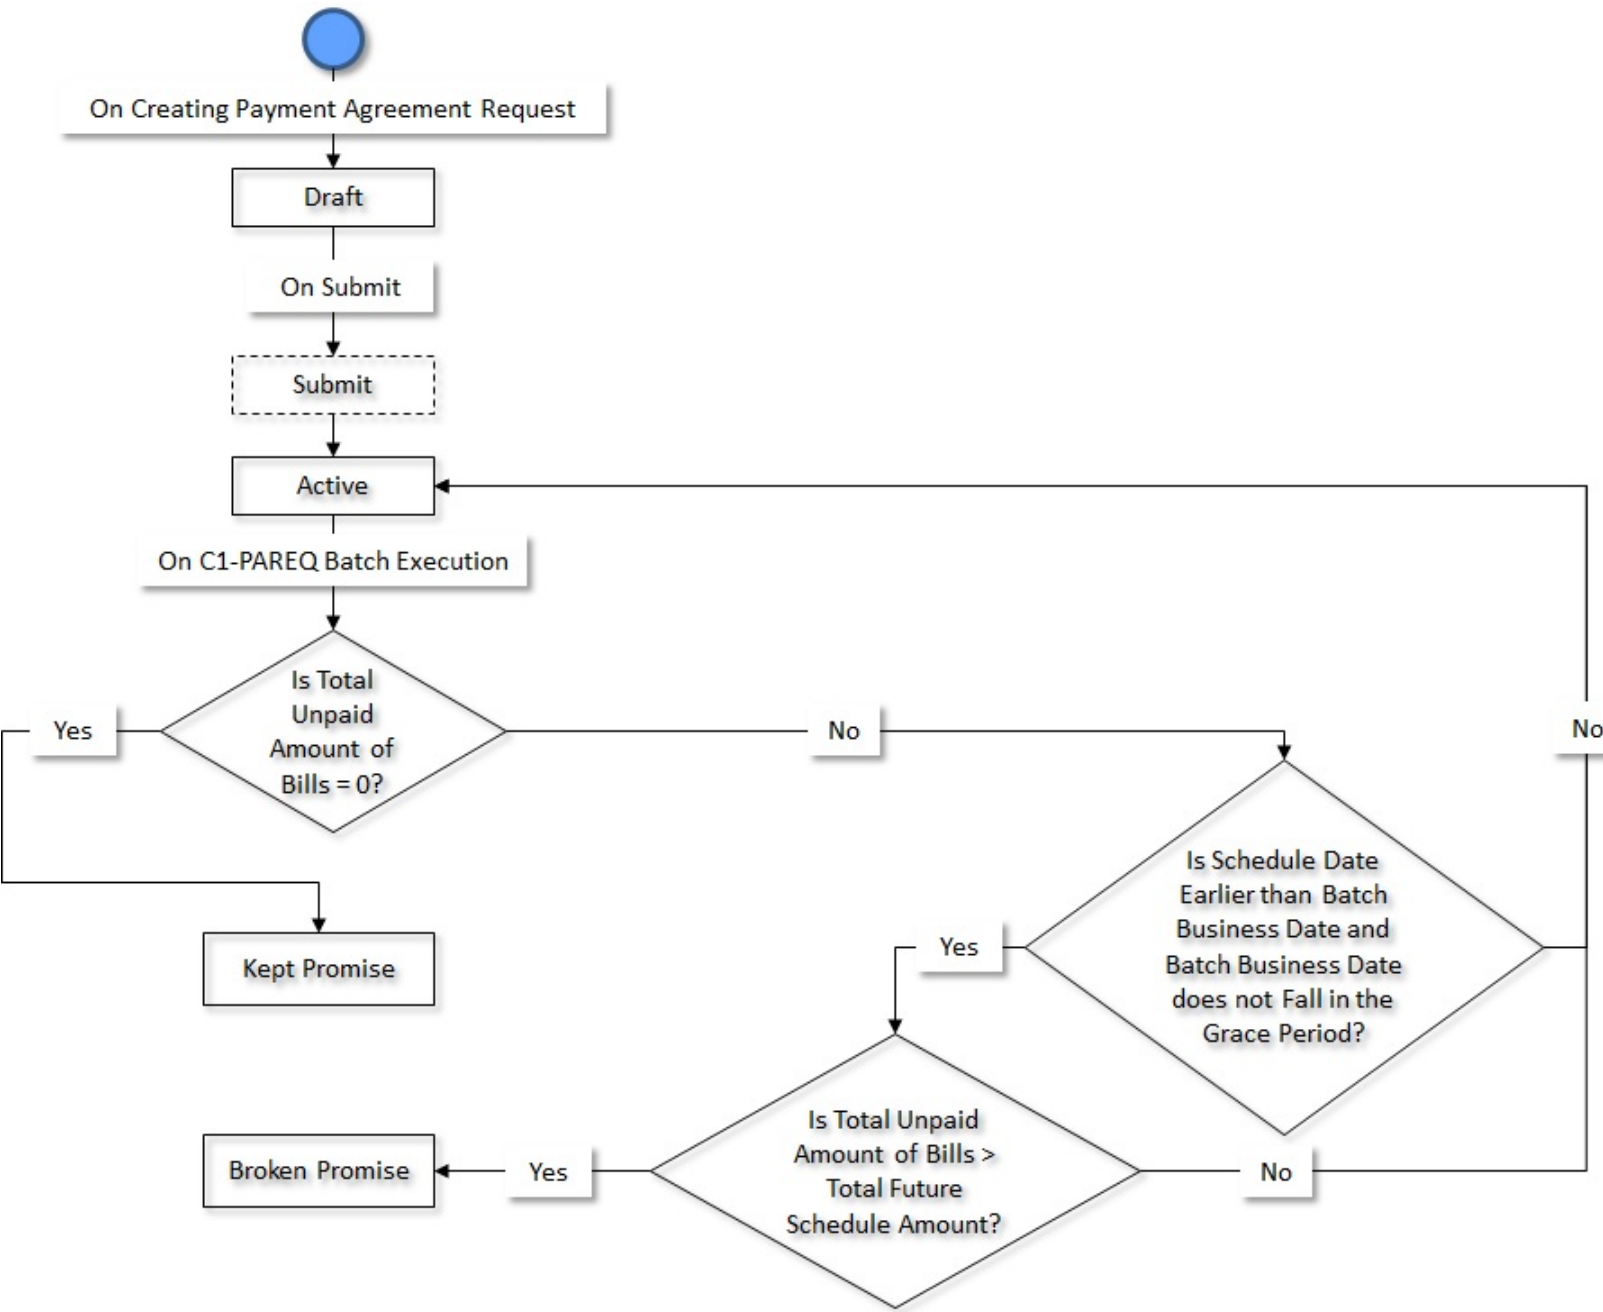

- The number of days checked for approval workflow
- Payment agreement statuses (active, broken, kept) to be considered
- The maximum number of payment agreements allowed

**Note:** The lifecycle of a payment agreement request creation is driven by the respective business object using which the request is created. The payment agreement request feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the payment agreement request process, see [Prerequisites](#) on page 1460.

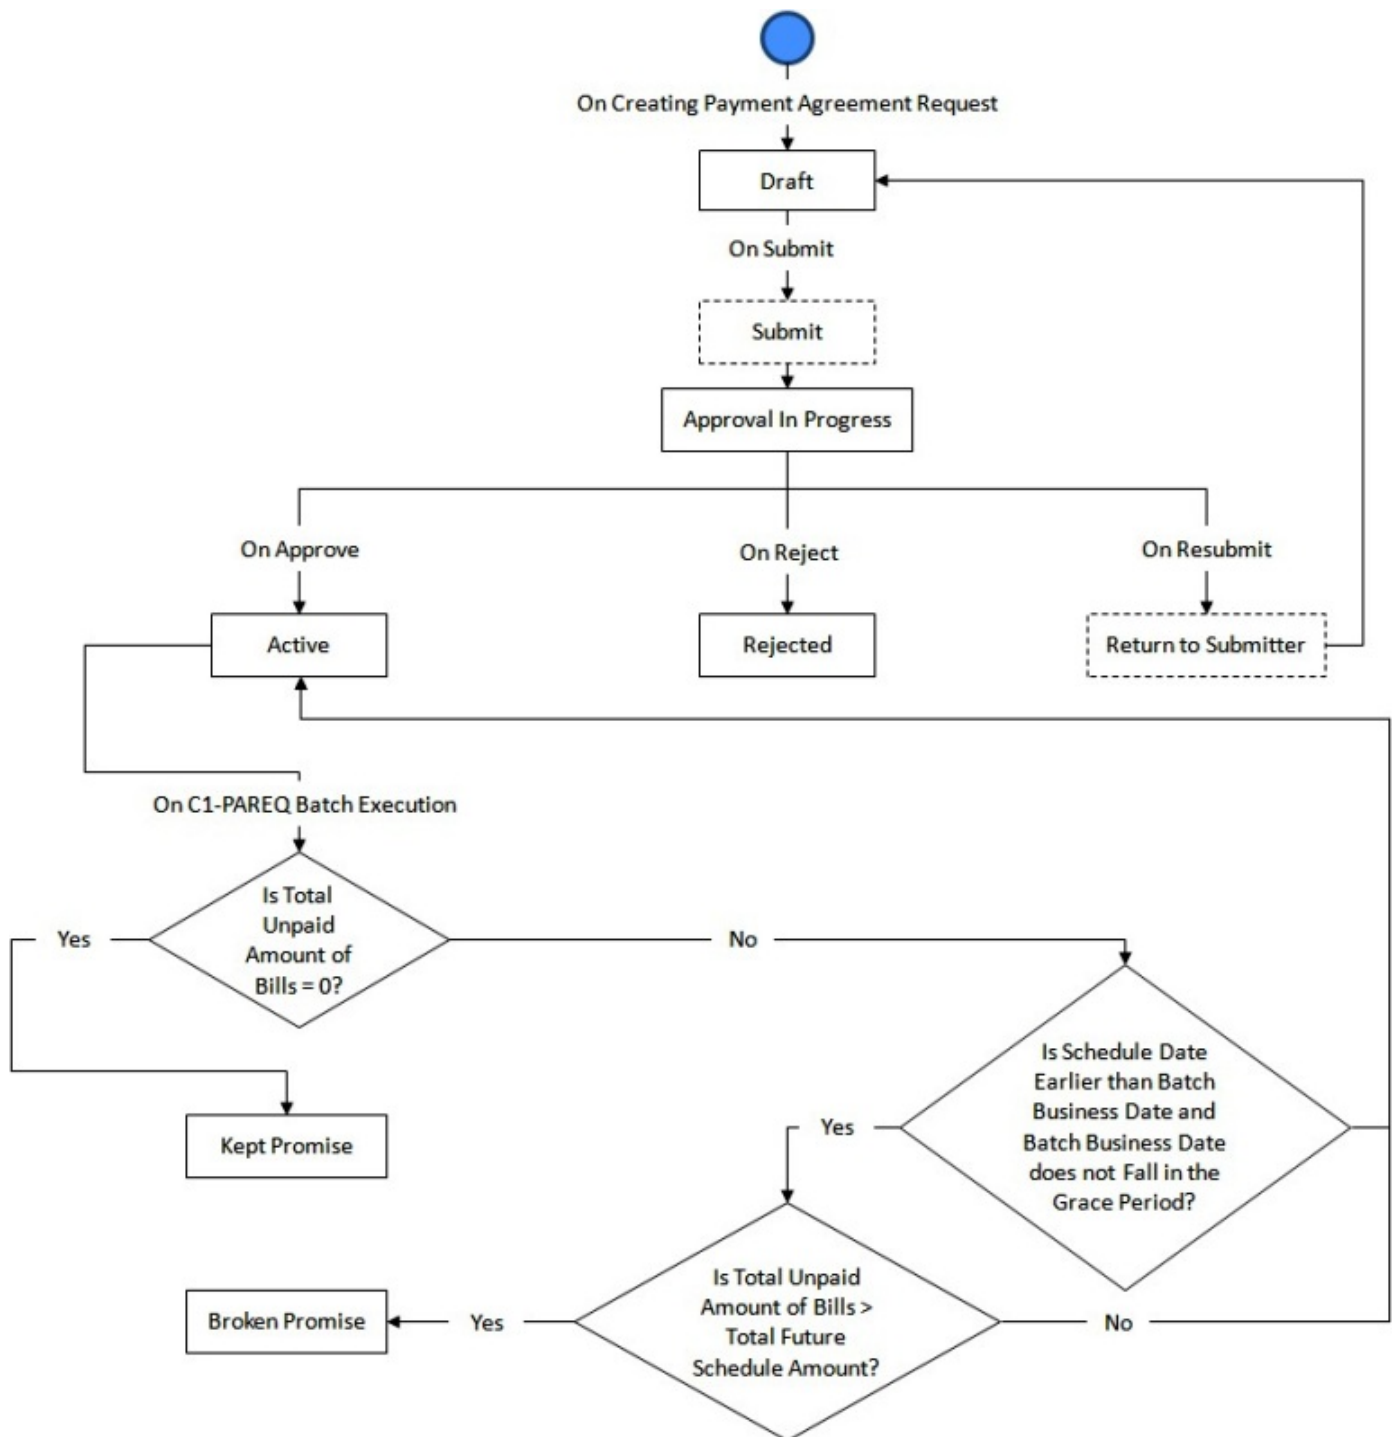

## Payment Agreement Request (Without Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is off:

## Payment Agreement Request (With Approval) Status Transition

The following figure graphically indicates how a payment agreement request moves from one status to another when approval workflow is on:

## Prerequisites

To setup the payment agreement request process, you need to do the following:

- Define the required payment agreement request types in the system
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request**
- Define the required characteristic types where the characteristic entity is set to **Payment Agreement Request Type**
- Define the required pay methods for **Payment Agreement Request**
- Define the required third party payors for **Payment Agreement Request**
- Create an algorithm using the **C1-PA-INFO** algorithm type if you want to create Payment Agreement Requests using the payment agreement request information.
- Define the kept promise status reason for the **C1-PaymentAgreementRequest** business object
- Define the broken promise status reason for the **C1-PaymentAgreementRequest** business object
- Defined rejected status reason for the **C1-PaymentAgreementRequest** business object
- Assign the **C1-PAREQ** To Do type to a To Do role whose users must receive To Do generated while submitting or resubmitting a payment agreement request for approval
- The **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch process to monitor the payment agreement request and move the request to next stage

## Algorithms Used in C1-PaymentAgreementRequest

The following table lists the algorithms which are attached to the **C1-PaymentAgreementRequest** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-PA-INFO	C1-PA-INFO	Refer to <a href="#">C1-PA-INFO</a>
Pre-Processing	C1-PA-PRE	C1-PA-PRE	<a href="#">C1-PA-PRE</a>
Validation	C1-PA-VAL	C1-PA-VAL	<a href="#">C1-PA-PRE</a>

The following table lists the algorithms which are used in the lifecycle of the **C1-PaymentAgreementRequest** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Submit	Enter	C1-PA-SUBMIT	C1-PA-SUBMIT	<a href="#">C1-PA-SUBMIT</a>
Approval In Progress	Enter	C1-PA-APPENT	C1-PA-APPENT	<a href="#">C1-PA-APPENT</a>
Approval In Progress	Exit	C1-PA-APPEXT	C1-PA-APPEXT	<a href="#">C1-PA-APPEXT</a>
Return to Submitter	Enter	C1-PA-RESUB	C1-PA-RESUB	<a href="#">C1-PA-RESUB</a>
Active	Monitor	C1-PA-MONTR	C1-PA-MONTR	<a href="#">C1-MONTR</a>
Active	Enter	C1-PA-ACTENT	C1-PA-ACTENT	<a href="#">C1-ACTENT</a>

## Payment Agreement Request Type

Oracle Revenue Management and Billing allows you to define, edit, copy and delete a payment agreement request type using which you can pay current unpaid debt bills in multiple installments whose payment amount is greater than zero. A payment agreement provide flexibility in payment of installment amount and schedule of payment.

The **C1-PaymentAgreementRequest** business object is created for payment agreement maintenance.

The **Payment Agreement Request Type** screen consists of the following zones:

- [Payment Agreement Request Type List](#) on page 1461
- [Payment Agreement Request Type](#) on page 1462

### Payment Agreement Request Type List

The **Payment Agreement Request Type List** zone lists payment agreement request types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Payment Agreement Request Type</b> screen appears where you can edit the details of the payment agreement request type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Payment Agreement Request Type</b> screen appears where you can define a payment agreement request type using an existing payment agreement request type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the payment agreement request type.  <b>Note:</b> You can delete a payment agreement request type only when you have not created a payment agreement request using the payment agreement request type.

On clicking the **Broadcast** () icon corresponding to a payment agreement request type, the **Payment Agreement Request Type** zone appears with the details of the respective payment agreement request type.

### Payment Agreement Request Type

The **Payment Agreement Request Type** zone displays the details of the payment agreement request type. This zone contains the following sections:

- **Main** – This section provides basic information about the payment agreement request type. It contains the following fields:

Field Name	Field Description
Payment Agreement Request Type	Displays the payment agreement request type.
Description	Displays the description of the payment agreement request type.
Payment Agreement Request Business Object	Indicates the business object that will be used to create the payment agreement request. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <div><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</div>
Detailed Description	Displays additional information about the payment agreement request type.
Status	Indicates the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>
Status Change Notification Type	Indicates the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"><li>• Alert</li><li>• To Do</li><li>• Both</li></ul>
Approval Required	Indicates whether approval is required while creating payment agreement request using the payment agreement request type.

Field Name	Field Description
Approval To Do Type	<p>Indicates that the To Do entry of the specified To Do type must be created when you submit the payment agreement request for approval.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p>
Approval To Do Role	<p>Indicates that users with the specified To Do role can only approve or reject the payment agreement request submitted for approval.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Role</b> screen appears with the details of the respective To Do role.</p>
Submitter To Do Type	<p>Indicates the To Do type for the submitter when the payment agreement request type is resubmitted by the approver.</p> <p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Type</b> screen appears with the details of the respective To Do type.</p> <p>The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.</p>

Field Name	Field Description
Submitter To Do Role	Indicates the To Do role of the submitter when the payment agreement request type is resubmitted by the approver.
	<p><b>Note:</b></p> <p>This field appears only when the <b>Approval Required</b> check box is selected.</p> <p>It has a link. On clicking the link, the <b>To Do Role</b> screen appears with the details of the respective To Do role.</p>

- **Characteristics** – This section lists the characteristics defined for the payment agreement request type. It contains the following columns:

Column Name	Column Description	Mandatory (Yes Or No)
Characteristic Type	Indicates the characteristic type.	No
Characteristic Value	Displays the value of the characteristic type.	No

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the payment agreement request type.
Delete	Used to delete the payment agreement request type.
	<p><b>Note:</b> You can delete a payment agreement request type only when you have not created a payment agreement request using the payment agreement request type.</p>
Duplicate	Used to create a new payment agreement request type using an existing payment agreement request type.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the payment agreement request type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>

By default, the **Payment Agreement Request Type** zone does not appear in the **Payment Agreement Request Type** screen. It appears only when you click the **Broadcast**  icon corresponding to a payment agreement request type in the **Payment Agreement Request Type List** zone.

## Defining a Payment Agreement Request Type

### Prerequisites

To define a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

### Procedure

To define a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Payment Agreement Request Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type Business Object	Used to indicate the business object that you want to use to create the payment agreement request type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Payment Agreement Request Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple payment agreement request type business objects defined in the application. If there is only one payment agreement request type business object defined in the application, the **Payment Agreement Request Type** screen appears.

4. Select the required payment agreement request type business object from the respective field.
5. Click **OK**.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to indicate the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>Alert</li> <li>To Do</li> <li>Both</li> </ul>	No
Approval Required	Used to indicate whether approval is required for creating payment agreement request using the payment agreement request type.	No
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required only when the <b>Approval Required</b> option is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required only when the <b>Approval Required</b> option is selected.
		The list will include only those To Do roles which are associated with the To Do type specified in the <b>Approval To Do Type</b> field.

Field Name	Field Description	Mandatory (Yes or No)
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required only when the <b>Approval Required</b> option is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required only when the <b>Approval Required</b> option is selected. The list will include only those To Do roles which are associated with the To Do type specified in the <b>Submitter To Do</b> field.

- Enter the required details.
- Define characteristics for the payment agreement request type, if required.
- Click **Save**.

The payment agreement request type is defined.

<b>Payment Agreement Request Type List</b> zone	<a href="#">Payment Agreement Request Type List</a> on page 1461
How to define characteristics for a payment agreement request type	<a href="#">Defining Characteristics for a Payment Agreement Request Type</a> on page 1467

## Defining Characteristics for a Payment Agreement Request Type

### Prerequisites

To define characteristics for a payment agreement request type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to Payment Agreement Request Type)

### Procedure

To define characteristics for a payment agreement request type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a payment agreement request type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Payment Agreement Request Type.	<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request type.

- Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the payment agreement request type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the payment agreement request type, click the **Delete**  icon corresponding to the characteristic.

How to edit a payment agreement request type	<a href="#">Editing a Payment Agreement Request Type</a> on page 1468
How to copy a payment agreement request type	<a href="#">Copying a Payment Agreement Request Type</a> on page 1471

## Editing a Payment Agreement Request Type

### Prerequisites

To edit a payment agreement request type, you should have:

- Payment agreement request business objects defined in the application
- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval.

### Procedure

To edit a payment agreement request type:

- Click the **Admin** link in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.

A sub-menu appears.

- Click the **Search** option from the **Payment Agreement Request Type** sub-menu.

The **Payment Agreement Request Type** screen appears.

- In the **Payment Agreement Request Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the payment agreement request type whose details you want to edit.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Displays the payment agreement request type.	Not applicable
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type.	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Upload Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>• Alert</li> <li>• To Do</li> <li>• Both</li> </ul>	No
Approval Required	Used to indicate whether approval is required for editing payment agreement request using the payment agreement request type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.	Yes (Conditional)
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the upload request submitted for approval.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	<b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.

**Tip:** Alternatively, you can click the **Edit** button in the **Payment Agreement Request Type** zone to edit the details of the payment agreement request type.

5. Modify the required details.

**Note:** You can search for a **Approval To Do Type** and **Submitter To Do Type** by clicking the **Search**  icon corresponding to the respective field.

6. Define, edit, or remove characteristics from the payment agreement request type, if required.

7. Click **Save**.

The changes made to the payment agreement request type are saved.

## Deleting a Payment Agreement Request Type

### Procedure

To delete a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.  
The **Payment Agreement Request Type** screen appears.
4. In the **Payment Agreement Request Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the payment agreement request type that you want to delete.  
A message appears confirming whether you want to delete the payment agreement request type.

**Note:** You can delete a payment agreement request type only when you have not created a payment agreement request using the payment agreement request type.

**Tip:** Alternatively, you can click the **Delete** button in the **Payment Agreement Request Type** zone to delete the payment agreement request type.

5. Click **OK**.  
The payment agreement request type is deleted.

### Related Topics

## Copying a Payment Agreement Request Type

Instead of creating a payment agreement request type from scratch, you can create a new payment agreement request type using an existing payment agreement request type. This is possible through copying a payment agreement request type. On copying a payment agreement request type, the details including the characteristics are copied to the new payment agreement request type. You can then edit the details, if required.

### Prerequisites

To copy a payment agreement request type, you should have:

- Payment agreement request type (whose copy you want to create) defined in the application
- Payment agreement request business objects defined in the application

- The Payment Agreement Request Information algorithm is defined using the **C1-PA-INFO** algorithm type
- **C1-PAREQ** To Do Type assigned to a To Do role whose users must receive To Do generated while submitting a payment agreement request for approval

### **Procedure**

To copy a payment agreement request type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **P** and then click **Payment Agreement Request Type**.

A sub-menu appears.

3. Click the **Search** option from the **Payment Agreement Request Type** sub-menu.

The **Payment Agreement Request Type** screen appears.

4. In the **Payment Agreement Request Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the payment agreement request type whose copy you want to create.

The **Payment Agreement Request Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request type.
- **Characteristics** – Used to define characteristics for the payment agreement request type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Type	Used to specify the payment agreement request type.	Yes
Business Object	Indicates the payment agreement request type business object used while defining the payment agreement request type (whose copy you want to create).	Not applicable
Description	Used to specify the description for the payment agreement request type.	Yes
Payment Agreement Request Business Object	Used to specify the business object that you want to use while creating the payment agreement request.	Yes
Detailed Description	Used to specify additional information about the payment agreement request type.	No
Status	Used to indicate the status of the payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status Change Notification Type	Used to indicate the notification type on the status change of payment agreement request type. The valid values are: <ul style="list-style-type: none"> <li>Alert</li> <li>To Do</li> <li>Both</li> </ul>	No
Approval Required	Used to indicate whether approval is required while creating payment agreement request using the payment agreement request type.	Yes
Approval To Do Type	Used to indicate that To Do of the specified To Do type must be created when you submit the payment agreement request for approval.  <b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Approval To Do Role	Used to indicate that users with the specified To Do role can only approve the payment agreement request submitted for approval.  <b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Type	Used to indicate the To Do type for the submitter when the payment agreement request is resubmitted by the approver.  <b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>To Do Type Search</b> window appears.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.
Submitter To Do Role	Used to indicate the To Do role for the submitter when the payment agreement request is resubmitted by the approver.  <b>Note:</b> This field appears only when the <b>Approval Required</b> check box is selected.	Yes (Conditional)  <b>Note:</b> This field is required when the <b>Approval Required</b> check box is selected.

## Bill Details

The **Bill Details** zone lists unpaid debt bill details. You will not find any records in this zone if the payment agreement request list does not have any unpaid bills assigned to it. This zone contains the following columns:

Column Name	Column Description
Bill Information	Indicates the bill against which the payment agreement request is created. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Original Bill Amount	Displays the bill amount when the bill was generated.
Current Bill Balance	Displays the outstanding amount.
Due Date	Displays the due date of the bill.

By default, the **Bill Details** zone does not appear in the **Payment Agreement Request** screen. It appears only when you click the **Broadcast**  icon corresponding to the payment agreement request in the **Search Payment Agreement Request** zone.

You can change the layout of this zone. For more information on how to change the layout, see [Changing the Layout](#) on page 2342.

## Searching for a Payment Agreement Request

### Prerequisites

To search for a payment agreement request, you should have:

- Payment agreement request types defined in the application

### Procedure

To search for a payment agreement request:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Credit & Collection** and then click **Payment Agreement Request**.  
A sub-menu appears.
3. Click the **Search** option from the **Payment Agreement Request** sub-menu.  
The **Payment Agreement Request** screen appears.
4. Enter the search criteria in the **Search Payment Agreement Request** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of payment agreement requests that meet the search criteria appears in the **Search Results** section.

The **Payment Agreement Request** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the payment agreement request. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Payment Agreement Request Information	Displays information about the payment agreement request.	Not applicable
Payment Agreement Request Type	Indicates the payment agreement request type using which the payment agreement request is created.	Not applicable
Account Information	Used to indicate the account for which you want to create the payment agreement request.	Yes
Third Party Payor	Used to specify the third party payor.	No
	<b>Note:</b> The values appears for selection only if the third party payor check box is selected.	
Payor Account ID	Displays the account ID of selected <b>Third Party Payor</b> .	Not applicable
Pay Method	Used to indicate the payment method.	Yes
	<b>Note:</b> The valid values differ with respect to the description added for respective pay method in the <b>Pay Method</b> screen.	
Comments	Used to specify additional details about the payment agreement request.	No
Total Unpaid Amount	Displays the sum of unpaid amount of the bills.	Not applicable
Total Future Schedule Amount	Displays the sum of future schedule amount.	Not applicable

- **Bill Details** – Used to specify the bill details in the payment agreement request. This section contains the following column:

Column Name	Column Description	Mandatory (Yes or No)
Bill ID	Used to search a particular bill.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to the field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears. Bill details are displayed corresponding to the searched bill id.	

If you want to define more than one bill details for the payment agreement request, click the **Add** (+) icon.

**Note:** However, if you want to remove a bill detail from the payment agreement request, click the **Delete** (🗑) icon corresponding to the bill ID.

- **Payment Schedule** – Used to specify the payment schedule details in the payment agreement request. This screen contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
Schedule Date	Used to specify the schedule date for payment of schedule amount in the form of installments.	Yes
Schedule Amount	Used to specify the schedule amount to be paid in terms of installments.	Yes
Auto Pay ID	Used to search for auto pay ID.	Yes (Conditional)
	<b>Note:</b> This field can be edited only when the <b>Pay Method</b> is selected for electronic payment of schedule amount. The <b>Search</b> (🔍) icon appears corresponding to the field. Auto pay details are displayed corresponding to the searched auto pay id.	<b>Note:</b> This field is required when you are defining an electronic payment for <b>Pay Method</b> .

If you want to define more than one payment schedules for the payment agreement request, click the **Add** (+) icon.

**Note:** However, if you want to remove a payment schedule from the payment agreement request, click the **Delete** (🗑) icon corresponding to the schedule date.

- **Characteristics** – Used to define characteristics for the payment tender. This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the payment agreement request.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Payment Agreement Request</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the payment agreement request.

4. Add or modify the details of the payment agreement request, if required.
5. Define, edit, or remove characteristics from the payment agreement request, if required.
6. Click **Save**.

The changes made to the payment agreement request are saved.

**Note:** Approval is not required for modifications done on an active payment agreement request.

## Submitting a Payment Agreement Request

### Prerequisites

To submit a payment agreement request, you should have:

- Payment Agreement Request Types defined in the request.

### Procedure

To submit a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to submit.

The **Payment Agreement Request** screen appears.

3. Click the **Submit** button in the **Payment Agreement Request** zone.

The system behaves in the following manner:

If...	Then
The <b>Approval Required</b> check box is selected in the payment agreement request type using which the payment agreement request is created.	A To Do of the <b>To Do Type</b> is created for the payment agreement request entity and sent to the approver. Status of the payment agreement request is changed to <b>Approval In Progress</b> . <b>C1-PAREQ</b> is the to do type for Payment Agreement Request.
The <b>Approval Required</b> check box is not selected in the payment agreement request type using which the payment agreement request is created.	The payment agreement request is created using the specified payment agreement request types and the status of the payment agreement request is changed to as specified in the payment agreement request type.

### **Note:**

The **Submit** button appears only when the payment agreement request is in the **Draft** status.

For more information about the **Payment Agreement Request Periodic Monitor (C1-PAREQ)** batch, refer to Oracle Revenue Management and Billing Batch Guide.

## Rejecting a Payment Agreement Request

### Prerequisites

To reject a payment agreement request, you should have:

- Rejection reasons defined in the application

### **Note:**

While rejecting a payment agreement request, you need to specify the reason why you want to reject the payment agreement request. You can select the appropriate rejection reason only when you have defined the reasons for the **Rejected** status of the **C1-PaymentAgreementRequest** business object in the **Status Reason** screen.

The system will not allow you to approve or reject a payment agreement request submitted by you.

### Procedure

To reject a payment agreement request:

1. Do either of the following:

If you want to	Then
Reject a payment agreement request through the <b>Payment Agreement Request</b> screen	<ol style="list-style-type: none"> <li>1. Search for the payment agreement request in the <b>Payment Agreement Request</b> screen.</li> <li>2. In the <b>Search Results</b> section, click the link in the <b>Payment Agreement Request Information</b> column corresponding to the payment request which you want to review.</li> </ol>
Reject a payment agreement request from the <b>To Do List</b> screen	<ol style="list-style-type: none"> <li>1. Click the <b>Menu</b> link in the <b>Application</b> toolbar. A list appears.</li> <li>2. From the <b>Main</b> menu, select <b>To Do</b> and then click <b>To Do List</b>. The <b>To Do Type for User Search</b> window appears.</li> <li>3. Enter the to do type <b>C1-PAREQ</b> in the <b>To Do Type</b> field for the entity payment agreement request.</li> <li>4. Click the <b>Search</b> button corresponding to the <b>To Do Type</b> field. The <b>To Do List</b> screen appears.</li> <li>5. Select the <b>Open</b> option from the <b>Filter by</b> list to view all unassigned To Dos.</li> </ol>

If you want to	Then
	6. Click the link in the <b>Message</b> column corresponding to the To Do of the payment agreement request that you want to review.

The **Payment Agreement Request** screen appears.

- Review the payment agreement request details.
- Click the **Reject** button in the **Payment Agreement Request** zone.

The **Reject Payment Request** window appears. It contains following fields:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to reject the payment agreement request.	Yes
Comments	Used to specify additional information while rejecting the payment agreement request.	No

**Note:** The **Reject** button appears only when:

- The payment agreement request is in the **Approval In Progress** status.
- A user with the approval To Do role is reviewing the payment agreement request.

- Select the rejection reason from the **Status Reason** list.
- Click **Save**.

The status of the payment agreement request is changed to **Rejected**.

## Resubmitting a Payment Agreement Request

### Prerequisites

To resubmit a payment agreement request, you should have:

- Entities added in the payment agreement request which is submitted for approval.

### Procedure

To resubmit a payment agreement request:

- Search for the payment agreement request in the **Payment Agreement Request** screen.
- In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request that you want to resubmit.

The **Payment Agreement Request** screen appears.

- Click the **Resubmit** button in the **Payment Agreement Request** zone.

The **Resubmit Payment Agreement Request** screen appears.

**Note:** The **Resubmit** button appears only when the payment agreement request is in the **Approval In Progress** status.

A To Do of the **C1-PAREQ** To Do type is created and sent to the request submitter using the submitter TO DO Role and the status of the payment agreement request is changed to **Draft**.

4. Enter the comments in the respective field and click **Save**.

**Note:** While resubmitting, To Do will be sent to the submitter of the request using the submitter To Do Role mapped on the payment agreement request type and the request will be moved to Draft status. The submitter can do necessary changes and re submit the request. Log will be maintained when the approver sends the request back to submitter.

**Filtering Overdue Bills of an Account**

The **Search Bills** zone lists bills that are overdue for an account. You will not find any records in this zone if the payment agreement request does not have overdue bills in the account. This zone contains the following fields as search criteria:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a payment agreement request using bill details.	Yes
	<b>Note:</b> By default, the <b>Bill Details</b> option is selected.	
Bill ID	Used to search for a particular bill.	No
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to the field. On clicking the <b>Search</b> icon, the <b>Bill Search</b> window appears.	
Bill Date From	Used to search bills which are created from a particular date onwards.	No
To	Used to search bills which are created till a particular date.	No

By default, the **Search Bills** zone appears in the **Bills** tab of **Payment Agreement Request** screen. By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

By default, the search results section displays the following columns:

Column Name	Column Description
Bill ID	Displays the bill ID.

Column Name	Column Description
Bill Information	Displays additional information about the bill. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Bill</b> screen appears with the details of the respective bill.
Unpaid Amount	Displays the amount which is eligible for payment agreement request against the bill.
Overdue Process Information	Displays the overdue process information for the bill.

Viewing the Log of a Payment Agreement Request

Procedure

To view the log of a payment agreement request:

1. Search for the payment agreement request in the **Payment Agreement Request** screen.
2. In the **Search Results** section, click the link in the **Payment Agreement Request Information** column corresponding to the payment agreement request whose log you want to view.

The **Payment Agreement Request** screen appears. It consists of the following tabs:

- **Main** – This tab contains the following three zones:
  - **Payment Agreement Request** – Displays the details of the payment agreement request.
  - **Bill Details** – Lists the bill details of the payment agreement request.
  - **Payment Schedule** – Lists the payment schedule details of the bills for the payment agreement request.
- **Bills** – This tab lists the unpaid bill amount details for the same account.

**Note:** This tab will be displayed only when the payment agreement is in **Draft** status.

- **Log** – This tab lists the complete trail of actions performed on the payment agreement request.
3. Click the **Log** tab.

The **Payment Agreement Request Log** zone in the **Log** tab contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the payment agreement request.
Details	Displays the details about the action performed on the payment agreement request.
User	Indicates the user who has performed the action on the payment agreement request.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the payment agreement request.
Status Reason	Indicates the reason why the payment agreement request was rejected.
Old Payment Schedule	Displays the details of old payment schedule.

**Note:** You can manually add a log entry for the payment agreement request by clicking the **Add Log Entry** link in the upper right corner of the **Payment Agreement Request Log** zone.

## Inbound Message

---

**Topics:**

- [Customer Inbound Message](#)
- [Membership Inbound Message](#)
- [ASO Customer Inbound Message](#)
- [Inbound Message Type](#)
- [Inbound Message \(Used for Searching\)](#)
- [Inbound Message \(Used for Viewing\)](#)

Oracle Revenue Management and Billing enables you to create the following inbound messages through the respective inbound web services:

Inbound Message	Inbound Web Service
<a href="#">Customer Inbound Message</a> on page 1504	<a href="#">CI-CustomerStructureInboundMessage</a> on page 1632
<a href="#">Membership Inbound Message</a> on page 1542	<a href="#">CI-MembershipInboundMessage</a> on page 1633
<a href="#">ASO Customer Inbound Message</a> on page 1572	<a href="#">CI-ASOCustomerInboundMessage</a> on page 1633

## Customer Inbound Message

---

On calling the **C1-CustomerStructureInboundMessage** web service, a customer inbound message is created in the **Pending** status. When the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch is invoked, the system checks whether there are any customer inbound messages in the **Pending** status. If there is a customer inbound message in the **Pending** status, the system validates the customer inbound message. If a customer inbound message is successfully validated, it is processed further and the following entities are created or updated in the system based on the available information:

- Person
- Account
- Contract
- Policy
- Policy Plan
- Packaged Savings
- Billable Charges (for packaged savings and/or non-eligibility based fees)

In addition, the system enables you to submit the customer inbound messages for validation and processing from the user interface. On submitting a customer inbound message, the system validates the customer inbound message. If a customer inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Once all required entities are created or updated in the system, the status of the customer inbound message is changed to **Processed**. If any error occurs while validating or processing a customer inbound message, the status of the customer inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected customer inbound message. The system can reprocess a customer inbound message only when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the customer inbound message from **Rejected** to **Pending**. The **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch will then reconsider the customer inbound message for validation and processing.

You can also configure the system such that the batch can automatically retry to process the rejected customer inbound messages. However, it will attempt to retry only when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a customer inbound message depends on the value defined in the **Maximum Retry** parameter.

### Prerequisites

To use the customer inbound message feature, you need to do the following:

- Define the required customer inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define values for the required parameters in the **C1-CINMSGVAL**, **C1-CINMSGPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the **Policy Plan BO (C1PPLNBO)** characteristics for the policy type which is specified in the **C1-CINMSGPRC** algorithm.
- Define predefined values for the **C1PRBASE**, **C1PRSRSN**, **C1INVHLD**, **C1STISSE**, **C1PRTNRL**, **C1PRDCAT**, **C1RATCOV**, and **C1PSNINT** characteristic types.
- Define values for the **C1-SourceSystemLookup** extendable lookup.

- Define values for the **PER\_OR\_BUS\_FLG**, **ADDRESS\_TYPE\_FLG**, **EXT\_TYPE\_FLG**, **BILL\_ADDR\_SRCE\_FLG**, and **RATE\_COVRG\_CNTRACT\_TYPE** lookup fields.
- Define the required person identifier types, account identifier types, characteristic types, person relationship types, phone types, customer classes, bill cycles, divisions, bill route types, hold request types, service quantity identifiers, contract types, and policy person roles in the application.
- Define values for the **C1BC\_OPT\_TYP\_FLG** lookup field.

**Note:** You can then set the value for the option type (defined in the **C1BC\_OPT\_TYP\_FLG** lookup field) in the **C1-BILLCYCLE** feature configuration.

- Define values for the option types in the **C1-BILLCYCLE** feature configuration.
- Define values for the **C1\_INVOICE\_DAY\_BILL\_PERIOD\_FLG** lookup field.

**Note:** Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

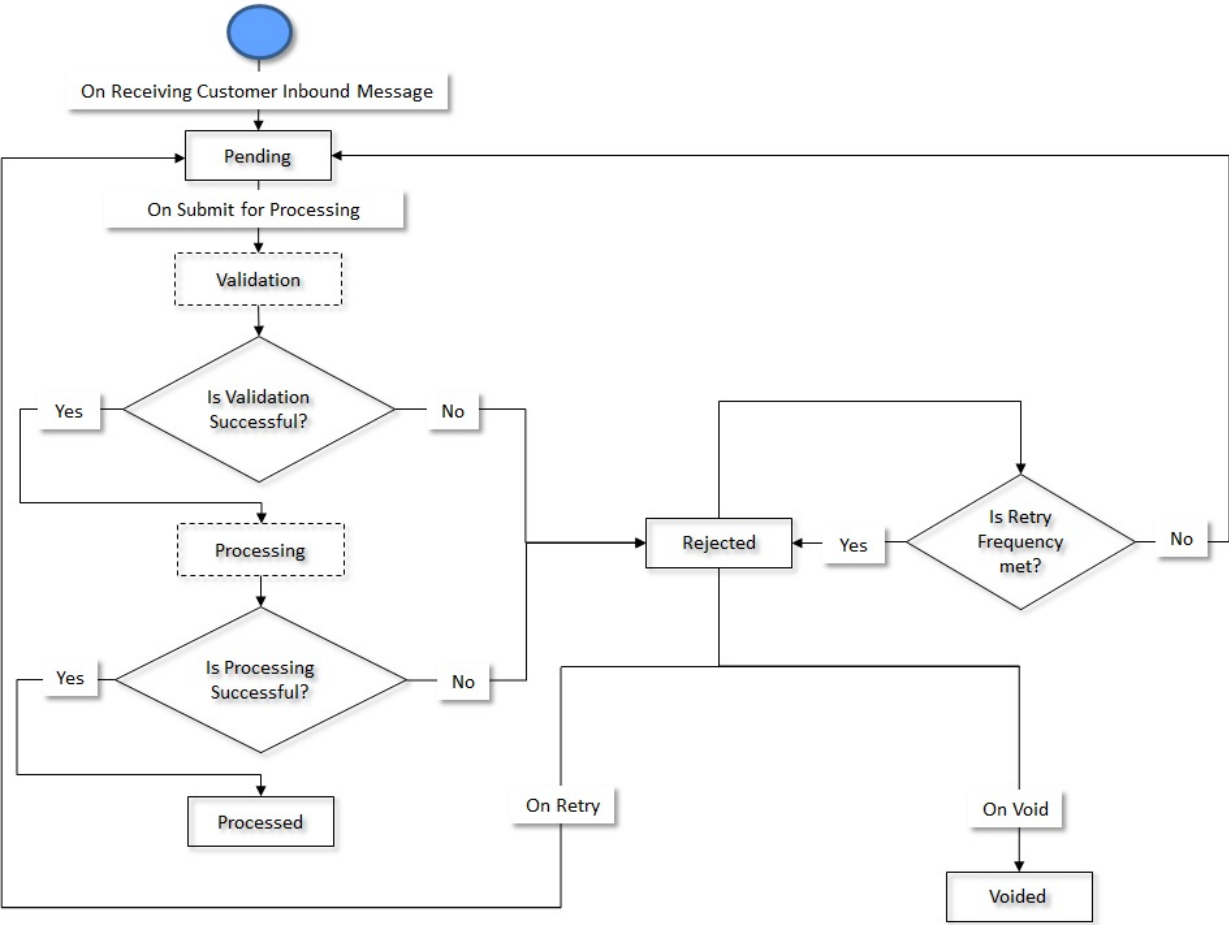

- Define predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address
- Define the required status reasons for the status to which a policy must be transitioned on policy termination and map each status reason to a prime source reason (which is a predefined value in the **C1PRSRSN** characteristic type).
- Define the required status reasons for the status to which a policy must be transitioned on policy reinstatement and map each status reason to a prime source reason (which is a predefined value in the **C1PRSRSN** characteristic type).
- Define bill cancel reasons which you want to use on packaged savings and premium bill segment cancelation during the policy or membership termination.

### C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-CINMSGVAL

This algorithm is invoked when the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch is executed and when you click the **Submit for Processing** button. It validates the customer inbound message which is in the **Pending** status. It checks the following:

- Whether the primary identifier is specified for the person.
- Whether the bill group information exist when the policy information is specified in the customer inbound message.
- Whether the bill cycle is specified in the bill group information.
- Whether the **Invoice Day** characteristic type (as mentioned in the **Invoice Day Characteristic Type** parameter) exists in the bill group information and a valid value is specified for this characteristic type.

If any of the above validation fails, the status of the customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
Invoice Day Characteristic Type	Used to specify the characteristic type which you want to use to store the invoice day for the account. This type of characteristic is defined on the account. The system then fetches the bill period mapped to the invoice day in the <b>C1_INVOICE_DAY_BILL_PERIOD_FLG</b> lookup field.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1OFFRST</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b> .	

### C1-CINMSGPRC

This algorithm is invoked once a customer inbound message is successfully validated. It processes the customer inbound message and accordingly creates or updates a person, account, contract, policy, policy plan, packaged savings, and billable charges for packaged savings. If requested, it also terminates, reinstates, or renews a fully-insured policy.

If the processing fails due to any reason, the status of the customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
	<b>Note:</b> By default, the parameter value is set to <b>F1OK</b> .	
Hold Reason Characteristic Type	Used to specify the characteristic type which you want to use to store the reason why the account must be kept on hold. This type of characteristic is defined on the account.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1INVHLD</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b> .	

Parameter	Description	Mandatory (Yes or No)
Franchise Person Relationship Type	Used to specify the person relationship type. If the parent person's relationship type in the customer inbound message matches to this parameter value, the system will add the person's account and contract details in the parent person's statement construct.	No
	<b>Note:</b> By default, the parameter value is set to <b>BILLING</b> . You can change the parameter value, if required. However, you must specify a person relationship type which is already defined in the system.	
Packaged Savings Contract Type	Used to specify the contract type using which you want to create the packaged savings contract for accounts. This contract is then used to create packaged savings billable charges.	No
	<b>Note:</b> By default, the parameter value is set to <b>PACKSAV</b> . You can change the parameter value, if required. However, you must specify a contract type which is already defined in the system.	
Policy Characteristic Type	Used to specify the characteristic type which you want to use to store the policy ID. This type of characteristic is defined on the billable charge. The system then uses this characteristic to derive the packaged savings billable charge which you want to update.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1POLICY</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b> .	
Policy Plan Characteristic Type	Used to specify the characteristic type which you want to use to store the policy plan ID. This type of characteristic is defined on the contract. The system then uses this characteristic to derive the contract which you want to update.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1POLPLN</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Contract</b> .	

Parameter	Description	Mandatory (Yes or No)
Plan Code Characteristic Type	Used to specify the characteristic type which you want to use to store the policy plan number. This type of characteristic is defined on the price item. The system then uses this characteristic to derive the price item which you want to update.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1HPLNID</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	
Coverage Type Characteristic Type	Used to specify the characteristic type which you want to use to store the coverage type. This type of characteristic is defined on the price item.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PRDCAT</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	
Rate Coverage Type Characteristic Type	Used to specify the characteristic type which you want to use to store the rate coverage type. This type of characteristic is defined on the price item. The system then uses this characteristic to derive the price item which you want to update.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1RATCOV</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	
Policy Person Role	Used to specify the policy person role which you want to use while adding main customer in a policy.	No
	<b>Note:</b> By default, the parameter value is set to <b>DEP</b> . You can change the parameter value, if required. However, you must specify a policy person role which is already defined in the system.	
Description on Bill	Used to specify the description that you want to display on the packaged savings billable charge.	No
	<b>Note:</b> By default, the parameter value is set to <b>Package Savings BC</b> .	

Parameter	Description	Mandatory (Yes or No)
Policy Start Date Characteristic Type	Used to specify the characteristic type which you want to use to store the date from when the policy is effective. This type of characteristic is defined on the policy.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PPSTDT</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b> .	
Policy End Date Characteristic Type	Used to specify the characteristic type which you want to use to store the date till when the policy is effective. This type of characteristic is defined on the policy. The system uses this characteristic while reinstating the policy.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PPENDT</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b> .	
Base Policy Indicator Characteristic Type	Used to specify the characteristic type which you want to use to indicate whether the policy is a base policy. This type of characteristic is defined on the policy.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PRBASE</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b> .	
Invoice Day Characteristic Type	Used to specify the characteristic type which you want to use to store the invoice day for the account. This type of characteristic is defined on the account. The system fetches the bill period mapped to the invoice day in the <b>C1_INVOICE_DAY_BILL_PERIOD_FLG</b> lookup field while creating packaged savings billable charges for accounts.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1OFFRST</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b> .	

Parameter	Description	Mandatory (Yes or No)
State of Issue Characteristic Type	Used to specify the characteristic type which you want to use to indicate whether the members are eligible for the state assessment fee. This type of characteristic is defined on the policy.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1STISSE</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b> .	
Days to Calculate Hold Request End Date	Used to specify the number of days. It is used to calculate the hold request end date (which is hold request start date + specified number of days).	No
	<b>Note:</b> By default, the parameter value is set to <b>5</b> .	
Proration Rule Characteristic Type	Used to specify the characteristic type which you want to use to indicate how premium must be prorated. This type of characteristic is defined on the policy.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PRTNRL</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy</b> .	
Policy Plan Business Object Characteristic Type	Used to specify the characteristic type which you want to use to store the business object using which the policy plan must be created. This type of characteristic is defined on the policy type.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PPLNBO</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy Type</b> .	
External Source System Status Reason Characteristic Type	Used to specify the characteristic type which you want to use to store the external source system status reason. Each status reason configured for a policy status is mapped to an external source system status reason. The system uses this characteristic to derive the status reason configured in ORMB while reinstating or terminating the policy.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PRSRSN</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Status Reason</b> .	

Parameter	Description	Mandatory (Yes or No)
Plan Effective Date Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the date from when the policy plan is effective. This type of characteristic is defined on the policy plan.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1PLEFDT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy Plan</b>.</p>	Yes
Policy Type	<p>Used to indicate the policy type. The system derives the policy business object (using which the policy must be created) from the policy type.</p> <p><b>Note:</b> By default, the parameter value is set to <b>INDIVIDUAL</b>. You can change the parameter value, if required. However, you must specify a policy type which is already defined in the system.</p>	No
Account Identifier Type	<p>Used to indicate the account identifier type against which you want to store the account number.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1_F_ANO</b>. You can change the parameter value, if required. However, you must specify an account identifier type which is already defined in the system.</p>	No
Membership Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the membership ID. This type of characteristic is defined on the billable charge. The system uses this characteristic to derive the packaged savings billable charges whose corresponding bill segments must be canceled on the policy termination.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1MMBRSH</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b>.</p>	Yes
Add Days to Billable Charge End Date	Used to specify the number of days. It is used to calculate the billable charge end date (which is billable charge existing end date + specified number of days).	No

Parameter	Description	Mandatory (Yes or No)
Bill Segment Cancel Reason	Used to indicate the cancel reason which you want to use during packaged savings bill segment cancelation on the policy termination.	No
	<b>Note:</b> By default, the parameter value is set to <b>MASS</b> . You can change the parameter value, if required. However, you must specify a bill cancel reason which is already defined in the system.	
Member Count Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) against which you want to store the number of members in the policy plan. The system uses this SQI while creating the premium billable charges.	No
	<b>Note:</b> By default, the parameter value is set to <b>MEMCOUNT</b> . You can change the parameter value, if required. However, you must specify a service quantity identifier which is already defined in the system.	
Non-Eligibility Based Contract Type	Used to specify the contract type using which you want to create the non-eligibility based contract. The system then uses this contract to create non-eligibility based billable charges.	No
	<b>Note:</b> By default, the parameter value is set to <b>NEBFEEES</b> . You can change the parameter value, if required. However, you must specify a contract type which is already defined in the system.	
Franchise Indicator Characteristic Type	Used to specify the characteristic type which you want to use to indicate whether the parent person is a franchise. This type of characteristic is defined on the person.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1FRANCD</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b> .	

Parameter	Description	Mandatory (Yes or No)
Product Characteristic Type	Used to specify the characteristic type which you want to use to indicate the product to which the price item is mapped. This type of characteristic is defined on the price item.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PRODUC</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	
Plan Activity Date Characteristic Type	Used to specify the characteristic type which you want to use to store the plan activity date. This type of characteristic is defined on the policy plan.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PLACDT</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy Plan</b> .	
Non Integrated Packaged Savings Indicator Characteristic Type	Used to specify the characteristic type which you want to use to indicate whether the packaged savings is non-integrated. This type of characteristic is defined on the billable charge.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PSNINT</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b> .	
Override Collection Class Characteristic Type	Used to specify the characteristic type which you want to use to store the collection class. This type of characteristic is defined on the person. The system then uses this characteristic to override the collection class of all accounts where the person is the main customer.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1OVCOLL</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b> .	

Parameter	Description	Mandatory (Yes or No)
Override Postpone Credit Review Date Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the postpone credit review date. This type of characteristic is defined on the person. The system then uses this characteristic to override the postpone credit review date of all accounts where the person is the main customer.</p> <p><b>Note:</b> By default, the parameter value is set to <b>CIOVRWDT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b>.</p>	Yes
Lock Box Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the person ID. This type of characteristic is defined on the account.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1LCKBX</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p>	Yes
Auto Pay Route Type Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the auto pay route type. This type of characteristic is defined on the person. The system then uses this characteristic of a person to update auto pay route type for all accounts where the person is linked to the accounts through the <b>C1LCKBX</b> characteristic.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1APAYRT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b>.</p>	Yes
Hold Request Type	<p>Used to specify the hold request type using which you want to create the hold request for an account.</p> <p><b>Note:</b> By default, the parameter value is set to <b>DIASTER</b>. You can change the parameter value, if required. However, you must specify a hold request type which is already defined in the system.</p>	No

Parameter	Description	Mandatory (Yes or No)
Price Item Business Object	Used to specify the business object using which you want to create a price item.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1_PRICEITEM_BO</b> . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	
Address Business Object	Used to specify the business object using which you want to create an address.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1-Address</b> . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	

### C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

**Note:** This algorithm is invoked only when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

### C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## Customer Inbound Message XML Format

**Note:** We recommend you to refer the Customer Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-CustomerStructureInboundMessage** inbound web service, you need to ensure that the customer inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)												
schema	Used to specify the tags of a customer inbound message.	Yes												
characteristics	You can use this tag within the following tags:	No												
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the characteristics tag is...</th></tr><tr><td>schema</td><td>Used to specify a list of characteristics for the customer inbound message.</td></tr><tr><td>customerData</td><td>Used to specify a list of characteristics for the person.</td></tr><tr><td>billGroup</td><td>Used to specify a list of characteristics for the bill group (i.e. account).</td></tr><tr><td>policyData</td><td>Used to specify a list of characteristics for the policy.</td></tr><tr><td>plan</td><td>Used to specify a list of characteristics for the policy plan.</td></tr></table>		If this tag is used within...	Then the purpose of the characteristics tag is...	schema	Used to specify a list of characteristics for the customer inbound message.	customerData	Used to specify a list of characteristics for the person.	billGroup	Used to specify a list of characteristics for the bill group (i.e. account).	policyData	Used to specify a list of characteristics for the policy.	plan	Used to specify a list of characteristics for the policy plan.
	If this tag is used within...		Then the purpose of the characteristics tag is...											
	schema		Used to specify a list of characteristics for the customer inbound message.											
	customerData		Used to specify a list of characteristics for the person.											
	billGroup		Used to specify a list of characteristics for the bill group (i.e. account).											
	policyData		Used to specify a list of characteristics for the policy.											
	plan		Used to specify a list of characteristics for the policy plan.											
inboundMessageCharacteristic	Used to specify a characteristic for the customer inbound message.	No												
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional)												
		<b>Note:</b> This data is required while defining or editing an adhoc characteristic of the customer inbound message.												

Tag Name	Tag Description		Mandatory (Yes or No)
characteristicType	You can use this tag within the following tags:		Yes (Conditional)
	If this tag is used within...	Then the purpose of the characteristicType tag is...	<div>Note: This data is required while defining or editing a characteristic of the respective entity.</div>
	inboundMessageCharacteristic	Used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to <b>Inbound Message</b> .	
	characteristicsList	Used to specify the characteristic type. If you are defining a characteristic for a: <ul style="list-style-type: none"> <li> <b>Customer</b> - You must specify a characteristic type where the characteristic entity is set to <b>Person</b>.               </li> <li> <b>Bill Group</b> - You must specify a characteristic type where the characteristic entity is set to <b>Account</b>.               </li> <li> <b>Policy</b> - You must specify a characteristic type where the characteristic entity is set to <b>Policy</b>.               </li> <li> <b>Policy Plan</b> - You must specify a characteristic type where the characteristic entity is set to <b>Policy Plan</b>.               </li> </ul>	

Tag Name	Tag Description	Mandatory (Yes or No)										
effectiveDate	You can use this tag within the following tags:	No										
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the effectiveDate tag is...</th></tr><tr><td>inboundMessageCharacteristic</td><td>Used to specify the date from when the characteristic is effective for the customer inbound message.</td></tr><tr><td>characteristicsList</td><td>Used to specify the date from when the characteristic is effective for the respective entity (i.e. customer, bill group (i.e. account), policy, or policy plan).</td></tr></table>		If this tag is used within...	Then the purpose of the effectiveDate tag is...	inboundMessageCharacteristic	Used to specify the date from when the characteristic is effective for the customer inbound message.	characteristicsList	Used to specify the date from when the characteristic is effective for the respective entity (i.e. customer, bill group (i.e. account), policy, or policy plan).				
	If this tag is used within...		Then the purpose of the effectiveDate tag is...									
	inboundMessageCharacteristic		Used to specify the date from when the characteristic is effective for the customer inbound message.									
	characteristicsList		Used to specify the date from when the characteristic is effective for the respective entity (i.e. customer, bill group (i.e. account), policy, or policy plan).									
<b>Note:</b> You must specify the date in the YYYY-MM-DD format. If you do not specify the effective date, the system uses the below mentioned date while defining a characteristic for the following:												
<table><tr><th>Entity</th><th>Effective Date</th><th>Description</th></tr><tr><td>Person</td><td>Earliest Policy Effective Date</td><td>A person might have multiple policies. For example, P1 effective from 01-01-2016 and P2 effective from 01-01-2017. In such case, the system uses the effective date of the policy which is the earliest (i.e. P1) while defining characteristic for the person.</td></tr><tr><td>Policy</td><td>Policy Effective Date</td><td>The system uses the date from when the policy is effective while defining characteristic for the policy.</td></tr><tr><td>Plan</td><td>Plan Effective Date</td><td>The system uses the date from when the policy plan is effective in the policy while defining characteristic for the policy plan.</td></tr></table>	Entity	Effective Date	Description	Person	Earliest Policy Effective Date	A person might have multiple policies. For example, P1 effective from 01-01-2016 and P2 effective from 01-01-2017. In such case, the system uses the effective date of the policy which is the earliest (i.e. P1) while defining characteristic for the person.	Policy	Policy Effective Date	The system uses the date from when the policy is effective while defining characteristic for the policy.	Plan	Plan Effective Date	The system uses the date from when the policy plan is effective in the policy while defining characteristic for the policy plan.
Entity	Effective Date	Description										
Person	Earliest Policy Effective Date	A person might have multiple policies. For example, P1 effective from 01-01-2016 and P2 effective from 01-01-2017. In such case, the system uses the effective date of the policy which is the earliest (i.e. P1) while defining characteristic for the person.										
Policy	Policy Effective Date	The system uses the date from when the policy is effective while defining characteristic for the policy.										
Plan	Plan Effective Date	The system uses the date from when the policy plan is effective in the policy while defining characteristic for the policy plan.										

Tag Name	Tag Description	Mandatory (Yes or No)						
characteristicValue	You can use this tag within the following tags:	Yes (Conditional)						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the characteristicValue tag is...</th></tr><tr><td>inboundMessageCharacteristic</td><td>Used to specify the value for the predefined characteristic type.</td></tr><tr><td>characteristicsList</td><td>Used to specify the value for the characteristic type.</td></tr></table>	If this tag is used within...	Then the purpose of the characteristicValue tag is...	inboundMessageCharacteristic	Used to specify the value for the predefined characteristic type.	characteristicsList	Used to specify the value for the characteristic type.	<b>Note:</b> This data is required while defining or editing a characteristic of the respective entity.
	If this tag is used within...	Then the purpose of the characteristicValue tag is...						
	inboundMessageCharacteristic	Used to specify the value for the predefined characteristic type.						
characteristicsList	Used to specify the value for the characteristic type.							
characteristicValueForeignKey1	Used to specify the first value for the foreign key characteristic type.	Yes (Conditional)						
		<b>Note:</b> This data is required while defining or editing a foreign key characteristic of the customer inbound message.						
characteristicValueFK2	Used to specify the second value for the foreign key characteristic type.	No						
characteristicValueFK3	Used to specify the third value for the foreign key characteristic type.	No						
characteristicValueFK4	Used to specify the fourth value for the foreign key characteristic type.	No						
characteristicValueFK5	Used to specify the fifth value for the foreign key characteristic type.	No						
customerStructureMessage	Used to specify the details of the customer including the header information for the customer inbound message.	Yes						
headerData	Used to specify the header information for the customer inbound message.	Yes						

Tag Name	Tag Description	Mandatory (Yes or No)								
messageType	You can use this tag within the following tags:	Yes								
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the messageType tag is...</th></tr><tr><td>schema</td><td>Indicates the inbound message type using which the customer inbound message is created in the system.<div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div></td></tr><tr><td>headerData</td><td>Used to specify the inbound message type using which the customer inbound message should be created in the system.</td></tr></table>		If this tag is used within...	Then the purpose of the messageType tag is...	schema	Indicates the inbound message type using which the customer inbound message is created in the system. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>	headerData	Used to specify the inbound message type using which the customer inbound message should be created in the system.		
	If this tag is used within...		Then the purpose of the messageType tag is...							
	schema		Indicates the inbound message type using which the customer inbound message is created in the system. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>							
	headerData		Used to specify the inbound message type using which the customer inbound message should be created in the system.							
<b>Note:</b> You must specify a valid customer inbound message type which is in the <b>Active</b> status.										
messageBatchID	Used to indicate the external batch job or batch run number through which the customer inbound message is created.	Yes								
sourceSystem	You can use this tag within the following tags:	Yes								
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the sourceSystem tag is...</th></tr><tr><td>schema</td><td>Indicates the external system from where the customer inbound message is received.<div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div></td></tr><tr><td>headerData</td><td>Used to indicate the external system from where the customer inbound message is received.</td></tr><tr><td>policyData</td><td>Used to indicate the source system from where the policy is originated.</td></tr></table>		If this tag is used within...	Then the purpose of the sourceSystem tag is...	schema	Indicates the external system from where the customer inbound message is received. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>	headerData	Used to indicate the external system from where the customer inbound message is received.	policyData	Used to indicate the source system from where the policy is originated.
	If this tag is used within...		Then the purpose of the sourceSystem tag is...							
	schema		Indicates the external system from where the customer inbound message is received. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>							
	headerData		Used to indicate the external system from where the customer inbound message is received.							
	policyData		Used to indicate the source system from where the policy is originated.							
<b>Note:</b> You must specify a source system which is already defined in the <b>C1-SourceSystemLookup</b> extendable lookup. It must be in the <b>Active</b> status.										

Tag Name	Tag Description	Mandatory (Yes or No)						
sourceSystemTransID	Used to indicate the transaction in the external source system which resulted in the customer inbound message.	No						
sourceSystemSourceID	Used to specify the external source system ID.	Yes						
bo	<div>You can use this tag within the following tags:</div> <table><tr><th>If this tag is used within...</th><th>Then the purpose of the bo tag is...</th></tr><tr><td>schema</td><td><div>Indicates the business object using which the customer inbound message is created in the system.</div><div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div></td></tr><tr><td>headerData</td><td><div>Used to indicate the business object using which the customer inbound message should be created in the system. The valid value is:</div><ul style="list-style-type: none"><li>C1- CustomerInboundMessage</li></ul></td></tr></table>	If this tag is used within...	Then the purpose of the bo tag is...	schema	<div>Indicates the business object using which the customer inbound message is created in the system.</div> <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>	headerData	<div>Used to indicate the business object using which the customer inbound message should be created in the system. The valid value is:</div> <ul style="list-style-type: none"><li>C1- CustomerInboundMessage</li></ul>	Yes
If this tag is used within...	Then the purpose of the bo tag is...							
schema	<div>Indicates the business object using which the customer inbound message is created in the system.</div> <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>							
headerData	<div>Used to indicate the business object using which the customer inbound message should be created in the system. The valid value is:</div> <ul style="list-style-type: none"><li>C1- CustomerInboundMessage</li></ul>							
transactionType	<div>Used to indicate the type of the transaction. The valid values are:</div> <ul style="list-style-type: none"><li><b>CHNG</b> - Used when you want to update the details of a person, account, contract, fully-insured policy, policy plan, packaged savings, and billable charge.</li><li><b>NEW</b> - Used when you want to create a person, account, contract, fully-insured policy, policy plan, packaged savings, and billable charge.</li><li><b>REIN</b> - Used when you want to reinstate a fully-insured policy.</li><li><b>TERM</b> - Used when you want to terminate a fully-insured policy.</li></ul>	Yes						
externalTransactionType	Used to specify the corresponding transaction type used in the external source system.	No						
customerStructureData	Used to specify the customer information, such as details of the person, bill group (i.e. account), fully-insured policy, and policy plan.	Yes						

Tag Name	Tag Description	Mandatory (Yes or No)						
customerData	Used to specify the details of the person.	Yes (Conditional)						
		<b>Note:</b> This data is required while defining or editing a person.						
customerName	Used to specify the name of the person.	Yes (Conditional)						
		<b>Note:</b> This data is required while defining a person.						
customerType	Used to indicate the type of the person.	Yes (Conditional)						
	<b>Note:</b> You must specify a value which is already defined in the <b>PER_OR_BUS_FLG</b> lookup field. It must be in the <b>Active</b> status.	<b>Note:</b> This data is required while defining a person.						
Id	You can use this tag within the following tags:	Yes (Conditional)						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the Id tag is...</th></tr><tr><td>customerData</td><td>Used to specify the identification details of the person.</td></tr><tr><td>billGroup</td><td>Used to specify the identification details of the bill group (i.e. account).</td></tr></table>	If this tag is used within...	Then the purpose of the Id tag is...	customerData	Used to specify the identification details of the person.	billGroup	Used to specify the identification details of the bill group (i.e. account).	<b>Note:</b> This data is required while defining or editing the respective information.
	If this tag is used within...	Then the purpose of the Id tag is...						
	customerData	Used to specify the identification details of the person.						
	billGroup	Used to specify the identification details of the bill group (i.e. account).						
<b>Note:</b> You must specify one primary identifier for a person and account.								
IDType	You can use this tag within the following tags:	Yes (Conditional)						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the IDType tag is...</th></tr><tr><td>Id</td><td>Used to specify the person or account identifier type.</td></tr><tr><td>parentSection</td><td>Used to specify the person identifier type.</td></tr></table>	If this tag is used within...	Then the purpose of the IDType tag is...	Id	Used to specify the person or account identifier type.	parentSection	Used to specify the person identifier type.	<b>Note:</b> This data is required in the following scenarios: <ul style="list-style-type: none"><li>While defining or editing the identification details of a person and account.</li><li>While defining or editing a person to person relationship.</li></ul>
	If this tag is used within...	Then the purpose of the IDType tag is...						
	Id	Used to specify the person or account identifier type.						
	parentSection	Used to specify the person identifier type.						
<b>Note:</b> You must specify a person or account identifier type which is already defined in the system.								

Tag Name	Tag Description	Mandatory (Yes or No)						
IDValue	You can use this tag within the following tags:	Yes (Conditional)						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the IDValue tag is...</th></tr><tr><td>Id</td><td>Used to specify the person or account identifier.</td></tr><tr><td>parentSection</td><td>Used to indicate the person with whom you want to establish the person to person relationship.</td></tr></table>	If this tag is used within...	Then the purpose of the IDValue tag is...	Id	Used to specify the person or account identifier.	parentSection	Used to indicate the person with whom you want to establish the person to person relationship.	<b>Note:</b> This data is required in the following scenarios: <ul style="list-style-type: none"><li>While defining or editing the identification details of a person and account.</li><li>While defining or editing a person to person relationship.</li></ul>
	If this tag is used within...	Then the purpose of the IDValue tag is...						
	Id	Used to specify the person or account identifier.						
	parentSection	Used to indicate the person with whom you want to establish the person to person relationship.						
isPrimary	Used to indicate whether the person or account identifier is a primary identifier. The valid values are: <ul style="list-style-type: none"><li>Y</li><li>N</li></ul>	No						
	<b>Note:</b> If you do not specify the value, by default, it is set to N.							
parentSection	Used to specify the details of the parent person with whom you want to establish the person’s relationship.	No						
relationshipType	Used to indicate how the parent person is related to the person.	Yes (Conditional)Yes (Conditional)						
	<b>Note:</b> You must specify a person relationship type which is already defined in the system.	<b>Note:</b> This data is required while defining or editing a person to person relationship.						
isFranchiseBillingIndicator	Used to indicate whether the parent person is the franchise. The valid values are: <ul style="list-style-type: none"><li>Y - If you specify the value as Y, the system will create the parent-child relationship and add the person’s account or contract details in the parent person’s existing statement construct.</li><li>N - If you specify the value as N, the system will end the parent-child relationship and the person’s account or contract details in the parent person’s existing statement construct.</li></ul>	No						
characteristicsList	Used to specify a characteristic for the respective entity (such as person, bill group (i.e. account), policy, or policy plan).	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a characteristic of the respective entity.						

Tag Name	Tag Description	Mandatory (Yes or No)						
address	You can use this tag within the following tags:	Yes (Conditional)						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the address tag is...</th></tr><tr><td>customerData</td><td>Used to specify the address of the person.</td></tr><tr><td>billGroup</td><td>Used to specify the address of the account.</td></tr></table>	If this tag is used within...	Then the purpose of the address tag is...	customerData	Used to specify the address of the person.	billGroup	Used to specify the address of the account.	<b>Note:</b> This data is required while defining or editing the address of the respective entity.
	If this tag is used within...	Then the purpose of the address tag is...						
	customerData	Used to specify the address of the person.						
billGroup	Used to specify the address of the account.							
addressEffDate	Used to specify the date from when the address is effective.	Yes (Conditional)						
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.  If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the customer inbound message.	<b>Note:</b> This data is required while editing the address of the respective entity.						
addressType	Used to indicate the type of address. The valid values are: <ul style="list-style-type: none"><li><b>MAIN</b> - Indicates that the address is the person’s mailing address. You can use this address type while specifying the address for the person and account.</li><li><b>SEAS</b> - Indicates that the address is the person’s seasonal address. You can use this address type while specifying the address for the person.</li><li><b>OVRD</b> - Indicates that the address is the account’s override address. You can use this address type while specifying the address for the account.</li></ul>	Yes (Conditional)						
	<b>Note:</b> If you do not specify the address type, by default, it is set to <b>MAIN</b> .  You must specify an address type which is already defined in the <b>ADDRESS_TYPE_FLG</b> lookup field. It must be in the <b>Active</b> status.	<b>Note:</b> This data is required while editing the address of the respective entity.						
MailingName	Used to specify the name using which the person should be addressed in the mail communication. The system also uses the mailing name in the bills, letters, quotes, and statements.	No						

Tag Name	Tag Description	Mandatory (Yes or No)
address1	Used to specify the first line of the address. It may contain details, such as the house number.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the address of the respective entity.
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
city	Used to specify the city name.	No
state	Used to indicate the state where the city is located.	No
zip	Used to specify the zip code of the address.	No
country	Used to indicate the country where the person or account is located.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the address of the respective entity.
attentionName	Used to specify the fourth line of the address. It may contain the landmark details.	No
email	You can use this tag within the following tags:	
	<b>If this tag is used within...</b>	<b>Then the purpose of the email tag is...</b>
	customerData	Used to specify the email ID of the person.
	billGroup	Used to specify the email ID of the account’s main customer.
phones	You can use this tag within the following tags:	
	<b>If this tag is used within...</b>	<b>Then the purpose of the phones tag is...</b>
	customerData	Used to specify the phone details of the person.
	billGroup	Used to specify the phone details of the account’s main customer.
		<b>Note:</b> This data is required while defining or editing the phone details of the respective entity.

Tag Name	Tag Description	Mandatory (Yes or No)
phoneType	Used to indicate the type of phone.	Yes (Conditional)
	<b>Note:</b> You must specify a phone type which is already defined in the system.	<b>Note:</b> This data is required while defining or editing the phone details of the respective entity.
phoneValue	Used to specify the phone number of the person or account's main customer.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the phone details of the respective entity.
billGroup	Used to specify the account details of a person.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a bill group (i.e. account).
customerClass	Used to indicate the customer class to which the account belongs.	Yes (Conditional)
	<b>Note:</b> You must specify a customer class which is already defined in the system.	<b>Note:</b> This data is required while defining a bill group (i.e. account).
billCycle	Used to indicate the bill cycle for the account.	Yes (Conditional)
	<b>Note:</b> You must specify a bill cycle which is already defined in the system and added in the <b>C1-BILLCYCLE</b> feature configuration.	<b>Note:</b> This data is required while defining a bill group (i.e. account).
division	Used to indicate the division to which the account belongs.	Yes (Conditional)
	<b>Note:</b> You must specify a division which is already defined in the system.	<b>Note:</b> This data is required while defining a bill group (i.e. account).
billRouteType	Used to indicate how the account's bill must be sent to the main customer.	Yes (Conditional)
	<b>Note:</b> You must specify a bill route type which is already defined in the system.	<b>Note:</b> This data is required while defining a bill group (i.e. account).
billGroupID	Used to specify the account number. It is stored as the primary account identifier in the system.	Yes (Conditional)
	<b>Note:</b> The system stores the value against the account identifier type which is specified in the <b>Account Identifier Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.	<b>Note:</b> This data is required while defining or editing a bill group (i.e. account).
bankNumber	Used to indicate the bank account number through which the automatic payment must be done.	No

Tag Name	Tag Description	Mandatory (Yes or No)
depositoryFinancialInstitution	Used to indicate the depository financial institution.	No
accountType	Used to indicate the type of the account.	No
	<b>Note:</b> You must specify an account type which is already defined in the <b>EXT_TYPE_FLG</b> lookup field. It must be in the <b>Active</b> status.	
billAddressSource	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are: <ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul>	Yes (Conditional)
	<b>Note:</b> This data is required while defining a bill group (i.e. account).	
	<b>Note:</b> You must specify a value which is already defined in the <b>BILL_ADDR_SRCE_FLG</b> lookup field. It must be in the <b>Active</b> status.	
billToName	Used to specify the name using which you want to override the main customer's mailing name.	No
policyData	Used to specify the details of the fully-insured policy.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a fully-insured policy.
policyNumber	Used to specify the policy number.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a fully-insured policy.

Tag Name	Tag Description	Mandatory (Yes or No)						
endDate	You can use this tag within the following tags:	Yes (Conditional)						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the endDate tag is...</th></tr><tr><td>policyData</td><td>Used to specify the date till when the policy is effective.</td></tr><tr><td>packageSavings</td><td>Used to specify the date till when the packaged savings is effective on the policy. This date is then used as the end date of the billable charge.</td></tr></table>	If this tag is used within...	Then the purpose of the endDate tag is...	policyData	Used to specify the date till when the policy is effective.	packageSavings	Used to specify the date till when the packaged savings is effective on the policy. This date is then used as the end date of the billable charge.	<b>Note:</b> This data is required while defining a fully-insured policy.
	If this tag is used within...	Then the purpose of the endDate tag is...						
	policyData	Used to specify the date till when the policy is effective.						
	packageSavings	Used to specify the date till when the packaged savings is effective on the policy. This date is then used as the end date of the billable charge.						
<b>Note:</b> The end date cannot be earlier than the start date. You must specify the date in the YYYY-MM-DD format.								
renewalDate	Used to specify the date when you want to renew the fully-insured policy.	Yes (Conditional)						
	<b>Note:</b> On renewing a fully-insured policy, the status of the policy is changed to the status which is specified in the <b>Status on Policy Renewal</b> field of the respective inbound message type.	<b>Note:</b> This data is required while renewing a fully-insured policy.						
policyName	Used to specify the description for the fully-insured policy.	Yes (Conditional)						
		<b>Note:</b> This data is required while defining a fully-insured policy.						
terminateDate	Used to specify the date when you want to terminate the fully-insured policy.	Yes (Conditional)						
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format. The termination date cannot be earlier than the policy start date. On terminating a fully-insured policy, the status of the policy is changed to the status which is specified in the <b>Status on Policy Termination</b> field of the respective inbound message type.	<b>Note:</b> This data is required while terminating a fully-insured policy.						

Tag Name	Tag Description	Mandatory (Yes or No)
statusReason	Used to indicate the reason why you want to terminate or reinstate the fully-insured policy.	Yes (Conditional)
	<b>Note:</b> You must specify a reason which is defined for the respective status specified in the inbound message type.	<b>Note:</b> This data is required while terminating or reinstating a fully-insured policy.
policyEffectiveDate	Used to specify the date from when the policy is effective.	Yes (Conditional)
	<b>Note:</b> The policy start date cannot be later than the policy end date.	<b>Note:</b> This data is required while defining a fully-insured policy.
packageSavings	Used to specify a list of packaged savings offered on the policy.	No
packageSavings	Used to specify the packaged savings offered on the policy.	Yes (Conditional)
	<b>Note:</b> The packaged savings is configured as a price item in the system. You must specify a price item which is already defined in the system.  On processing the customer inbound message, one billable charge is created for each packaged savings offered on the policy. The policy ID is stored as a characteristic on such billable charge.	<b>Note:</b> This data is required while defining or editing the packaged savings offered on the fully-insured policy.
startDate	Used to specify the date from when the packaged savings is offered on the policy. This date is then used as the start date of the billable charge.	Yes (Conditional)
	<b>Note:</b> The start date cannot be later than the end date.  You must specify the date in the YYYY-MM-DD format.	<b>Note:</b> This data is required while defining or editing the packaged savings offered on the fully-insured policy.

Tag Name	Tag Description	Mandatory (Yes or No)
nonintegratedInd	Used to indicate whether the packaged savings is non-integrated. The valid values are: <ul style="list-style-type: none"> <li>Y</li> <li>N</li> </ul>	Yes (Conditional)
	<b>Note:</b> The value is stored as a characteristic on the billable charge. The system stores the value against the characteristic type which is specified in the <b>Non Integrated Packaged Savings Indicator Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.  If you do not specify the value, by default, it is set to N.	<b>Note:</b> This data is required while editing the packaged savings offered on the fully-insured policy.
plan	Used to specify the details of the policy plan.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a policy plan.
planCode	Used to specify the plan number.	Yes (Conditional)
	<b>Note:</b> The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Plan Code Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.	<b>Note:</b> This data is required while defining or editing a policy plan.
coverageType	Used to specify the coverage type.	No
	<b>Note:</b> The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Coverage Type Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.	
productCode	Used to indicate the product to which the price item is mapped.	No
	<b>Note:</b> The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Product Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.	

Tag Name	Tag Description	Mandatory (Yes or No)
rateCoverageType	Used to specify the contract type using which the contract should be created for the policy plan. The system checks whether a price item already exists where the specified rate coverage type, coverage type, and plan code are defined on the price item as characteristics. If a price item exists with these characteristics, the system maps the price item to the policy plan. However, if a price item does not exist with these characteristics, the system create a new price item, concatenates the rate coverage type and plan code to generate the price item code, and then maps the price item to the policy plan.	Yes (Conditional)
	<p><b>Note:</b></p> <p>You must specify a value which is already defined in the <b>RATE_COVRG_CNTRACT_TYPE</b> lookup field. It must be in the <b>Active</b> status.</p> <p>The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Rate Coverage Type Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p> <p>A new price item is created using the business object which is specified in the <b>Price Item Business Object</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p>	<p><b>Note:</b> This data is required while defining or editing a policy plan.</p>
planEffectiveDate	Used to specify the date from when the policy plan is effective.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The value is also stored as a characteristic on the policy plan. The system stores the value against the characteristic type which is specified in the <b>Plan Effective Date Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.</p> <p>The policy plan start date cannot be later than the policy plan end date.</p> <p>The policy plan start date cannot be earlier than the policy start date or later than the policy end date.</p>	<p><b>Note:</b> This data is required while defining a policy plan.</p>
planEndDate	Used to specify the date till when the policy plan is effective.	Yes (Conditional)
	<p><b>Note:</b></p> <p>The policy plan end date cannot be earlier than the policy plan start date.</p> <p>The policy plan end date cannot be earlier than the policy start date or later than the policy end date.</p>	<p><b>Note:</b> This data is required while defining a policy plan.</p>

Tag Name	Tag Description	Mandatory (Yes or No)
planActivityDate	Used to specify the date when the activity is scheduled for the policy plan.	No
	<b>Note:</b> The value is stored as a characteristic on the policy plan. The system stores the value against the characteristic type which is specified in the <b>Plan Activity Date Characteristic Type</b> parameter of the <b>C1-CINMSGPRC</b> algorithm.	

The following table lists and describes the tags which are available in the customer inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description						
c1InboundMessage	Displays the inbound message ID.						
boStatus	Displays the status of the customer inbound message.						
statusReason	Indicates the reason why the status of the customer inbound message is changed.						
c1ExternalTransactionId	Indicates the transaction in the external source system which resulted in the customer inbound message.						
c1ExternalBatchId	Indicates the external batch job or batch run number through which the customer inbound message is created.						
c1ExternalSourceId	Displays the external source system ID.						
person	At present, this tag is not supported in a customer inbound message.						
statusDateTime	Displays the date and time when the status of the customer inbound message is changed in the system.						
creationDateTime	Displays the date and time when the customer inbound message is created in the system.						
version	<p>This tag appears within the following parent tags:</p> <table> <tr> <th>Parent Tag</th><th>Then the purpose of the version tag is...</th></tr> <tr> <td>schema</td><td>Displays the version of the customer inbound message.</td></tr> <tr> <td>inboundMessageCharacteristic</td><td>Displays the version of the characteristic defined for the customer inbound message.</td></tr> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the customer inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the customer inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the customer inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the customer inbound message.						
searchCharacteristicValue	At present, this tag is not supported in a customer inbound message.						
messageID	Displays the inbound message ID.						
status	Displays the status of the customer inbound message.						
createDateTime	Displays the date and time when the customer inbound message is created in the system.						
ORMBcreateDateTime	Displays the date and time when the customer inbound message is created in the system.						

Tag Name	Tag Description
policyStatus	Indicates the status of the policy. The valid values are: <ul style="list-style-type: none"><li>• In Force/Active</li><li>• Pending Cancellation</li><li>• Canceled</li><li>• Pending Reinstatement</li><li>• Reinstated</li><li>• Pending Termination</li><li>• Terminated</li></ul>
toDoRetry	Displays the information about the retry option used for the customer inbound message. <div><b>Note:</b> This information appears at the bottom of the inbound message in the <b>Inbound Message Content</b> zone once the customer inbound message is validated and processed either through the user interface or batch process.</div>
retryDateTime	Displays the date and time when the retry option is used to change the status of the customer inbound message from <b>Rejected</b> to <b>Pending</b> .
numberOfRetries	Indicates the number of times the retry option is used for the customer inbound message.
currentErrorState	Indicates the status to which the customer inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"><li>• REJECTED</li></ul>
isRetried	Indicates whether the retry option is used to change the status of the customer inbound message. The valid values are: <ul style="list-style-type: none"><li>• true</li><li>• false</li></ul>

## Sample Customer Inbound Message

Using the below example, you can do the following:

- Create the customer and bill groups (i.e. accounts) for a fully-insured health care business
- Create a fully-insured policy along with package savings and policy plan

Customer	Bill Group (i.e. Account)	Policy	Policy Plan
Williams, Tom	126535	WT1256678	HCBILLING1

```

<schema>

## Membership Inbound Message

On calling the **C1-MembershipInboundMessage** web service, a membership inbound message is created in the **Pending** status. When the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch is invoked, the system checks whether there are any membership inbound messages in the **Pending** status. If there is a membership inbound message in the **Pending** status, the system validates the membership inbound message. If a membership inbound message is successfully validated, it is processed further and the following entities are created or updated in the system based on the available information in the membership inbound message:

- Membership
- Main Subscriber
- Dependent Person
- Billable Charge (for membership premium)

In addition, the system enables you to submit the membership inbound messages for validation and processing from the user interface. On submitting a membership inbound message, the system validates the membership inbound message. If a membership inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Once all required entities are created or updated in the system, the status of the membership inbound message is changed to **Processed**. If any error occurs while validating or processing a membership inbound message, the status of the membership inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected membership inbound message. The system can reprocess a membership inbound message only when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the membership inbound message from **Rejected** to **Pending**. The **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch will then reconsider the membership inbound message for validation and processing.

You can also configure the system such that the batch can automatically retry to process the rejected membership inbound messages. However, it will attempt to retry only when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess a membership inbound message depends on the value defined in the **Maximum Retry** parameter.

## Prerequisites

To use the membership inbound message feature, you need to do the following:

- Define the required membership inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define values for the required parameters in the **C1-INMEMEVAL**, **C1-INMEMEPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the **Membership BO (C1MEMBRO)** characteristic for the policy type which is specified in the **C1-CINMSGPRC** algorithm.
- Define predefined values for the **C1RATCOV**, **C1TRNCAT**, **C1INAPPC**, **C1CVTIER**, and **C1PRODTY** characteristic types.

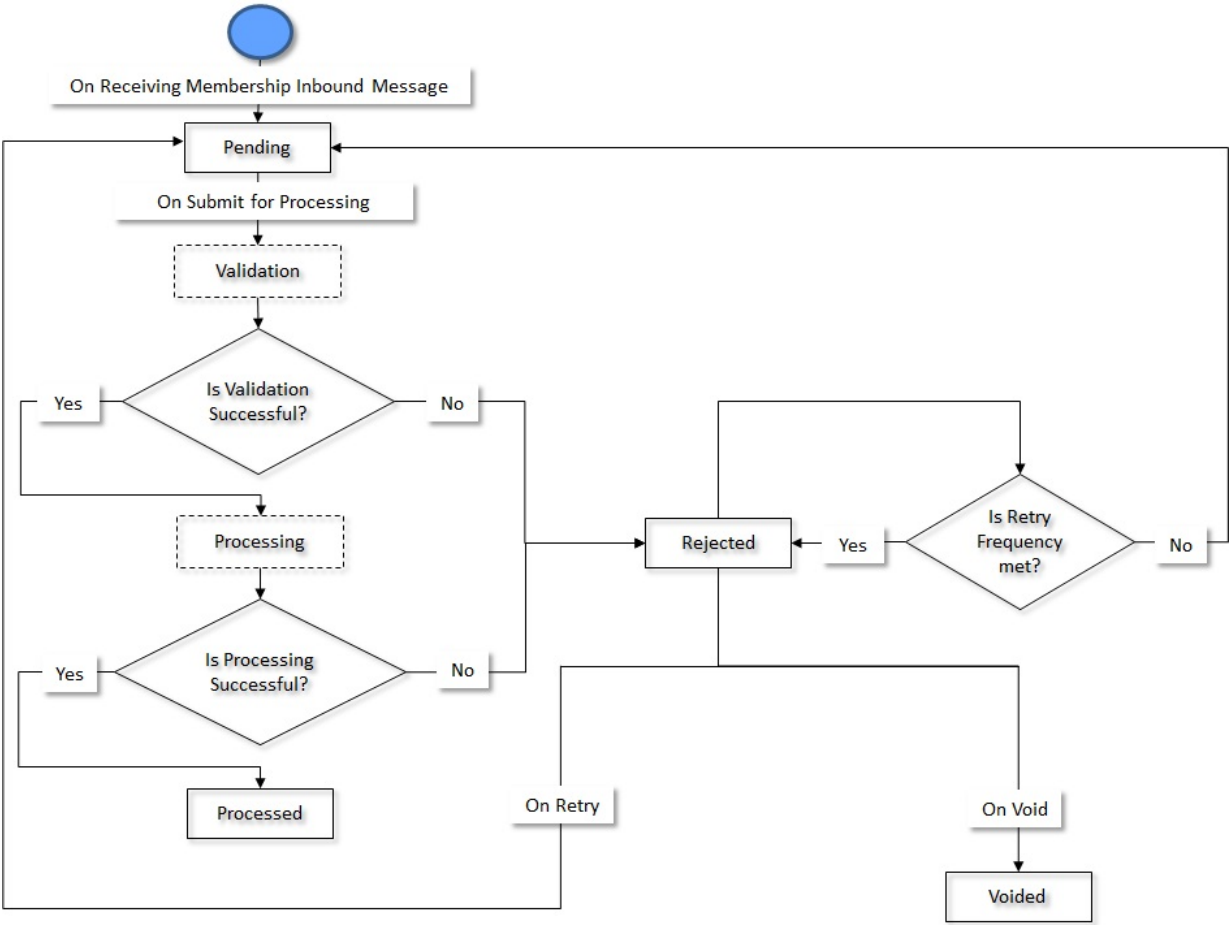

- Define values for the **C1-SourceSystemLookup** extendable lookup.
- Define values for the **PER\_OR\_BUS\_FLG**, **ADDRESS\_TYPE\_FLG**, and **RATE\_COVRG\_CNTRACT\_TYPE** lookup fields.
- Define the required person identifier types, account identifier types, characteristic types, phone types, service quantity identifiers, and contract relationship types in the application.
- Define values for the **C1\_INVOICE\_DAY\_BILL\_PERIOD\_FLG** lookup field.

**Note:** Each lookup field value should be mapped to a valid bill period which exists in the system. You must then define this lookup field value as a predefined value for the **C1OFFRST** characteristic type. The system will then use the bill period configured for the respective invoice day when the **C1OFFRST** characteristic is defined for the account.

- Define predefined values for the **C1OFFRST** characteristic type.
- Set the batch control type of the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address
- Define bill cancel reasons which you want to use on premium bill segment cancelation during the membership termination.

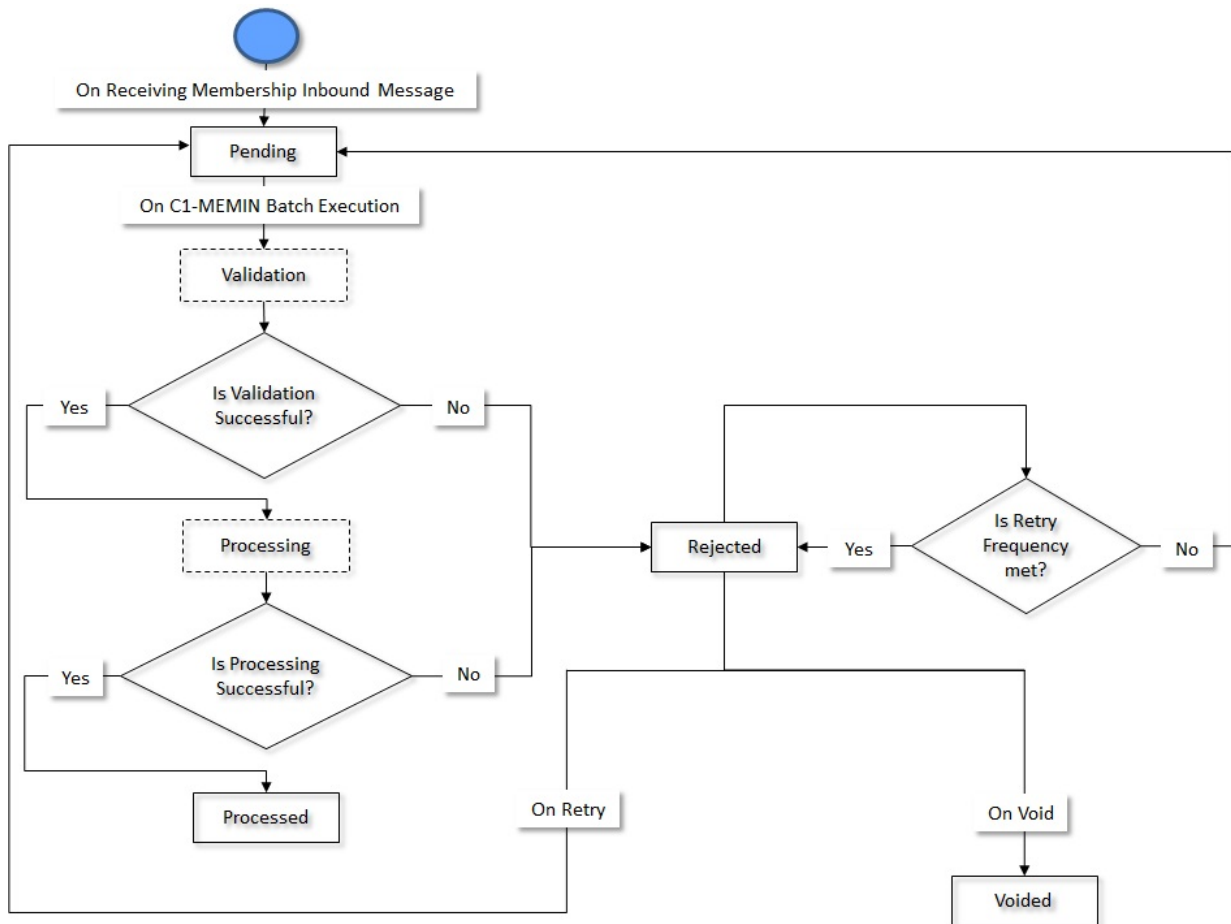

## Membership Inbound Message Status Transition through User Interface

The following figure graphically indicates how a membership inbound message moves from one status to another when it is validated and processed through the user interface:

**Membership Inbound Message Status Transition through a Batch Process**

The following figure graphically indicates how a membership inbound message moves from one status to another when it is validated and processed through the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch:

## Algorithms Used in C1-MemberInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-MemberInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to <a href="#">C1-AT-RQJ</a> on page 1508.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1068.
	Enter	C1-INMEMEVAL	C1-INMEMEVAL	Refer to <a href="#">C1-INMEMEVAL</a> on page 1546.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1068.
	Enter	C1-INMEMEPRC	C1-INMEMEPRC	Refer to <a href="#">C1-INMEMEPRC</a> on page 1547.
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to <a href="#">C1-TODORETRY</a> on page 1518.

Status	System Event	Algorithm	Algorithm Type	Description
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to <a href="#">C1-TDCRINMSG</a> on page 1518.
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1068.
Processed	-	-	-	-
Voided	-	-	-	-

### C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-INMEMEVAL

This algorithm is invoked when the **Membership Inbound Message Periodic Monitor (C1-MEMIN)** batch is executed and when you click the **Submit for Processing** button. It validates the membership inbound message which is in the **Pending** status. It checks the following:

- Whether the primary identifier is specified for the person.
- Whether the policy with the specified policy number and source system combination exists in the system.
- Whether the policy plan exists in the policy.
- Whether the bill group ID (i.e. account identifier) is specified in the member plan coverage information.
- Whether the **Plan Code** characteristic type (as mentioned in the **Plan Code Characteristic Type** parameter) exists in the member plan coverage information.
- Whether the **Rate Coverage Type** characteristic type (as mentioned in the **Rate Coverage Type Characteristic Type** parameter) exists in the member plan coverage information and a valid value is specified for this characteristic type.

If any of the above validation fails, the status of the membership inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
Plan Code Characteristic Type	Used to specify the characteristic type which you want to use to store the policy plan number. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.  <b>Note:</b> By default, the parameter value is set to <b>C1HPLNID</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	Yes
Rate Coverage Type Characteristic Type	Used to specify the characteristic type which you want to use to store the rate coverage type. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.  <b>Note:</b> By default, the parameter value is set to <b>C1RATCOV</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	Yes
Account Identifier Type	Used to indicate the account identifier type. The system derives the account using the account identifier type and account identifier combination.  <b>Note:</b> By default, the parameter value is set to <b>C1_F_ANO</b> . You can change the parameter value, if required. However, you must specify an account identifier type which is already defined in the system.	No

### C1-INMEMEPRC

This algorithm is invoked once a membership inbound message is successfully validated. It processes the membership inbound message and accordingly does the following:

- Adds or updates a membership in a policy plan
- Adds a dependent in a membership
- Updates the details of the main subscriber or dependent person
- Creates main subscriber or dependent person

- Associates a contract with a membership
- Creates a membership premium billable charge for a coverage period

If the processing fails due to any reason, the status of the membership inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

This algorithm contains the following parameters:

Parameter	Description	Mandatory (Yes or No)
Next Status	Used when you want to override the default next status specified in the lifecycle.	No
Next Transition Condition	Used when you want to override the default next transition condition specified in the lifecycle.	No
Subscriber Member Business Object	Used to specify the business object using which you want to create the main subscriber or dependent person in the system.	No
	<b>Note:</b> By default, the parameter value is set to <b>C1-HCCustomer</b> . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	
Description on Bill	Used to specify the description that you want to display on the premium billable charge.	No
	<b>Note:</b> By default, the parameter value is set to <b>Premium</b> .	
Premium Amount Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) against which you want to store the premium amount. The system uses this SQI while creating the premium billable charges.	No
	<b>Note:</b> By default, the parameter value is set to <b>PREMAMT</b> . You can change the parameter value, if required. However, you must specify a service quantity identifier which is already defined in the system.	
Recurring Flag	Used to indicate that you want to create recurring bill segments at the intervals defined in the bill period.	No
	<b>Note:</b> By default, the parameter value is set to <b>BP</b> .	

Parameter	Description	Mandatory (Yes or No)
Plan Code Characteristic Type	Used to specify the characteristic type which you want to use to store the policy plan number. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1HPLNID</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	
Rate Coverage Type Characteristic Type	Used to specify the characteristic type which you want to use to store the rate coverage type. This type of characteristic is defined on the price item. The system uses this characteristic to derive the price item.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1RATCOV</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	
Policy Plan Characteristic Type	Used to specify the characteristic type which you want to use to store the policy plan ID. This type of characteristic is defined on the contract. The system uses this characteristic to derive the active contract associated with the memberships of the policy plan.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1POLPLN</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Contract</b> .	

Parameter	Description	Mandatory (Yes or No)
Main Subscriber Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the person is the main subscriber in a membership. This type of characteristic is defined on the person. The system checks whether the value for this characteristic (specified in the membership inbound message) matches the value specified in the <b>Main Subscriber Characteristic Value</b> parameter. If so, it considers the person as the main subscriber. Otherwise, the person is considered as a dependent person.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1DEPCD</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Person</b>.</p>	Yes
Main Subscriber Characteristic Value	<p>Used to specify the value for the characteristic type which is specified in the <b>Main Subscriber Characteristic Type</b> parameter.</p> <p><b>Note:</b> By default, the parameter value is set to <b>MEM</b>.</p>	No
Account Identifier Type	<p>Used to indicate the account identifier type. The system derives the account using the account identifier type and account identifier combination.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1_F_ANO</b>. You can change the parameter value, if required. However, you must specify an account identifier type which is already defined in the system.</p>	No
Bill Segment Cancel Reason	<p>Used to indicate the cancel reason which you want to use during premium bill segment cancelation on the membership termination.</p> <p><b>Note:</b> By default, the parameter value is set to <b>MASS</b>. You can change the parameter value, if required. However, you must specify a bill cancel reason which is already defined in the system.</p>	No

Parameter	Description	Mandatory (Yes or No)
Invoice Day Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the invoice day for the account. This type of characteristic is defined on the account. The system fetches the bill period mapped to the invoice day in the <b>C1_INVOICE_DAY_BILL_PERIOD_FLG</b> lookup field while creating premium billable charges for accounts.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1OFFRST</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Account</b>.</p>	Yes
Membership Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the membership ID. This type of characteristic is defined on the billable charge. The system uses this characteristic to derive premium billable charges whose corresponding bill segments must be canceled due to change in membership coverage period.</p> <p><b>Note:</b> By default, the parameter value is set to <b>CIMMBRSH</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b>.</p>	Yes
Membership Business Object Characteristic Type	<p>Used to specify the characteristic type which you want to use to store the business object using which the membership must be created. This type of characteristic is defined on the policy type.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1MEMBRO</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Policy Type</b>.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Transaction Type Category Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the type of the transaction (i.e. whether the transaction is related to premium, fee, and so on). This type of characteristic is defined on the billable charge. The system uses this characteristic to derive premium billable charges.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1TRNCAT</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b>.</p>	Yes
Transaction Type Category Characteristic Value	<p>Used to specify the value for the characteristic type which is specified in the <b>Transaction Type Category Characteristic Type</b> parameter.</p> <p><b>Note:</b> By default, the parameter value is set to <b>CMPREM</b>.</p>	No
Inactive Policy Plan Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate whether the policy plan is inactive. This type of characteristic is defined on the contract. The system uses this characteristic to derive contracts associated with the memberships of policy plan .</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1INAPPC</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Contract</b>.</p>	Yes
Coverage Tier Characteristic Type	<p>Used to specify the characteristic type which you want to use to indicate the coverage tier to which the membership belongs. This type of characteristic is defined on the membership.</p> <p><b>Note:</b> By default, the parameter value is set to <b>C1CVTIER</b>. You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Membership</b>.</p>	Yes

Parameter	Description	Mandatory (Yes or No)
Membership Termination Status	Used to indicate the status to which you want to transition the membership when the membership is terminated.	No
	<b>Note:</b> By default, the parameter value is set to <b>TERMINATE</b> . You can change the parameter value, if required. However, you must specify a status which is already defined in the lifecycle of the <b>C1-Membership</b> business object.	
Medical Rate Coverage Type	Used to specify a medical contract type. The system evaluates whether the rate coverage type specified in the membership inbound message is a medical contract type using this parameter value.	No
	<b>Note:</b> By default, the parameter value is set to <b>M</b> . You can change the parameter value, if required. However, you must specify a value which is already defined in the <b>RATE_COVRG_CNTRACT_TYPE</b> lookup field.	
Policy Characteristic Type	Used to specify the characteristic type which you want to use to store the policy ID. This type of characteristic is defined on the billable charge. The system uses this characteristic to derive the packaged savings billable charge when the membership coverage period is changed.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1POLICY</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Billable Charge</b> .	
Product Type Characteristic Type	Used to specify the characteristic type which you want to use to indicate the type of the product. This type of characteristic is defined on the price item. The system uses this characteristic to derive packaged savings billable charges whose corresponding bill segments must be canceled due to change in membership coverage period.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1PRODTY</b> . You can change the characteristic type, if required. However, you must specify a characteristic type where the characteristic entity is set to <b>Price Item</b> .	

Parameter	Description	Mandatory (Yes or No)
Product Type Characteristic Value	Used to specify the value for the characteristic type which is specified in the <b>Product Type Characteristic Type</b> parameter.	No
	<b>Note:</b> By default, the parameter value is set to <b>PACKSAV</b> .	
Policy Status	Used to specify the status of the policy. If the parameter value is specified and if the parameter value matches the policy status, the system validates whether the membership start and end dates fall within the policy plan start and end dates.	No
	<b>Note:</b> You must specify a status which is already defined in the lifecycle of the <b>C1-Policy</b> business object.	
Address Business Object	Used to specify the business object using which you want to create an address.	Yes
	<b>Note:</b> By default, the parameter value is set to <b>C1-Address</b> . You can change the parameter value, if required. However, you must specify a business object which is already defined in the system.	

### C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

**Note:** This algorithm is invoked only when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

### C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## Membership Inbound Message XML Format

### Note:

We recommend you to refer the Membership Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

If a characteristic is defined for a person using the characteristic type specified in the **Main Subscriber Characteristic Type** parameter of the **C1-INMEMEPRC** algorithm and its value is set to the one specified in the **Main Subscriber Characteristic Value** parameter of the **C1-INMEMEPRC** algorithm, then the person is added as the main subscriber in the membership. Otherwise, the person is added as a dependent person in the membership.

Before calling the **C1-MembershipInboundMessage** inbound web service, you need to ensure that the membership inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)								
schema	Used to specify the tags of a membership inbound message.	Yes								
characteristics	<div>You can use this tag within the following tags:</div> <table><tr><th>If this tag is used within...</th><th>Then the purpose of the characteristics tag is...</th></tr><tr><td>schema</td><td>Used to specify a list of characteristics for the membership inbound message.</td></tr><tr><td>memberData</td><td>Used to specify a list of characteristics for the person.</td></tr><tr><td>memberPlanCoverages</td><td>Used to specify a list of characteristics for the membership.</td></tr></table>	If this tag is used within...	Then the purpose of the characteristics tag is...	schema	Used to specify a list of characteristics for the membership inbound message.	memberData	Used to specify a list of characteristics for the person.	memberPlanCoverages	Used to specify a list of characteristics for the membership.	No
If this tag is used within...	Then the purpose of the characteristics tag is...									
schema	Used to specify a list of characteristics for the membership inbound message.									
memberData	Used to specify a list of characteristics for the person.									
memberPlanCoverages	Used to specify a list of characteristics for the membership.									
inboundMessageCharacteristic	Used to specify a characteristic for the membership inbound message.	No								

Tag Name	Tag Description		Mandatory (Yes or No)
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.		Yes (Conditional)
			<b>Note:</b> This data is required while defining or editing an adhoc characteristic of the membership inbound message.
characteristicType	You can use this tag within the following tags:		Yes (Conditional)
	If this tag is used within...	Then the purpose of the characteristicType tag is...	<b>Note:</b> This data is required while defining or editing a characteristic of the respective entity.
	inboundMessageCharacteristic	Used to specify the characteristic type. Here, you must specify a characteristic type where the characteristic entity is set to <b>Inbound Message</b> .	
	characteristicsList	Used to specify the characteristic type. If you are defining a characteristic for a: <ul style="list-style-type: none"> <li><b>Person</b> - You must specify a characteristic type where the characteristic entity is set to <b>Person</b>.</li> <li><b>Membership</b> - You must specify a characteristic type where the characteristic entity is set to <b>Membership</b>.</li> </ul>	

Tag Name	Tag Description	Mandatory (Yes or No)							
effectiveDate	You can use this tag within the following tags:	No							
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the effectiveDate tag is...</th></tr><tr><td>inboundMessageCharacteristic</td><td>Used to specify the date from when the characteristic is effective for the membership inbound message.</td></tr><tr><td>characteristicsList</td><td>Used to specify the date from when the characteristic is effective for the respective entity (i.e person or membership).</td></tr></table>		If this tag is used within...	Then the purpose of the effectiveDate tag is...	inboundMessageCharacteristic	Used to specify the date from when the characteristic is effective for the membership inbound message.	characteristicsList	Used to specify the date from when the characteristic is effective for the respective entity (i.e person or membership).	
	If this tag is used within...		Then the purpose of the effectiveDate tag is...						
	inboundMessageCharacteristic		Used to specify the date from when the characteristic is effective for the membership inbound message.						
	characteristicsList		Used to specify the date from when the characteristic is effective for the respective entity (i.e person or membership).						
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format. If you do not specify the effective date, the system uses the below mentioned date while defining a characteristic for the following:								
<table><tr><th>Entity</th><th>Effective Date</th><th>Description</th></tr><tr><td>Person</td><td>Earliest Policy Effective Date</td><td>A person might have multiple policies. For example, P1 effective from 01-01-2016 and P2 effective from 01-01-2017. In such case, the system uses the effective date of the policy which is the earliest (i.e. P1) while defining characteristic for the person.</td></tr><tr><td>Membership</td><td>Membership Start Date</td><td>The system uses the date from when the membership is effective in the policy plan while defining characteristic for the membership.</td></tr></table>	Entity	Effective Date	Description	Person	Earliest Policy Effective Date	A person might have multiple policies. For example, P1 effective from 01-01-2016 and P2 effective from 01-01-2017. In such case, the system uses the effective date of the policy which is the earliest (i.e. P1) while defining characteristic for the person.	Membership	Membership Start Date	The system uses the date from when the membership is effective in the policy plan while defining characteristic for the membership.
Entity	Effective Date	Description							
Person	Earliest Policy Effective Date	A person might have multiple policies. For example, P1 effective from 01-01-2016 and P2 effective from 01-01-2017. In such case, the system uses the effective date of the policy which is the earliest (i.e. P1) while defining characteristic for the person.							
Membership	Membership Start Date	The system uses the date from when the membership is effective in the policy plan while defining characteristic for the membership.							

Tag Name	Tag Description	Mandatory (Yes or No)						
characteristicValue	You can use this tag within the following tags:	Yes (Conditional)						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the characteristicValue tag is...</th></tr><tr><td>inboundMessageCharacteristic</td><td>Used to specify the value for the predefined characteristic type.</td></tr><tr><td>characteristicsList</td><td>Used to specify the value for the characteristic type.</td></tr></table>	If this tag is used within...	Then the purpose of the characteristicValue tag is...	inboundMessageCharacteristic	Used to specify the value for the predefined characteristic type.	characteristicsList	Used to specify the value for the characteristic type.	<b>Note:</b> This data is required while defining or editing a characteristic of the respective entity.
	If this tag is used within...	Then the purpose of the characteristicValue tag is...						
	inboundMessageCharacteristic	Used to specify the value for the predefined characteristic type.						
characteristicsList	Used to specify the value for the characteristic type.							
characteristicValueForeignKey	Used to specify the first value for the foreign key characteristic type.	Yes (Conditional)						
		<b>Note:</b> This data is required while defining or editing a foreign key characteristic of the membership inbound message.						
characteristicValueFK2	Used to specify the second value for the foreign key characteristic type.	No						
characteristicValueFK3	Used to specify the third value for the foreign key characteristic type.	No						
characteristicValueFK4	Used to specify the fourth value for the foreign key characteristic type.	No						
characteristicValueFK5	Used to specify the fifth value for the foreign key characteristic type.	No						
eligibilityStructureMessage	Used to specify the details of the membership including the header information for the membership inbound message.	Yes						
headerData	Used to specify the header information for the membership inbound message.	Yes						
messageType	Used to specify the inbound message type using which the membership inbound message should be created in the system.	Yes						
	<b>Note:</b> You must specify a valid membership inbound message type which is in the <b>Active</b> status.							
messageBatchID	Used to indicate the external batch job or batch run number through which the membership inbound message is created.	Yes						

Tag Name	Tag Description	Mandatory (Yes or No)						
sourceSystem	<div>You can use this tag within the following tags:</div> <table><tr><th>If this tag is used within...</th><th>Then the purpose of the sourceSystem tag is...</th></tr><tr><td>headerData</td><td>Used to indicate the external system from where the membership inbound message is received.</td></tr><tr><td>policyData</td><td>Used to indicate the source system from where the policy is originated.</td></tr></table> <div><b>Note:</b> You must specify a source system which is already defined in the <b>C1-SourceSystemLookup</b> extendable lookup. It must be in the <b>Active</b> status.</div>	If this tag is used within...	Then the purpose of the sourceSystem tag is...	headerData	Used to indicate the external system from where the membership inbound message is received.	policyData	Used to indicate the source system from where the policy is originated.	Yes
If this tag is used within...	Then the purpose of the sourceSystem tag is...							
headerData	Used to indicate the external system from where the membership inbound message is received.							
policyData	Used to indicate the source system from where the policy is originated.							
sourceSystemTransID	Used to indicate the transaction in the external source system which resulted in the customer inbound message.	No						
sourceSystemSourceID	Used to specify the external source system ID.	Yes						
bo	<div>You can use this tag within the following tags:</div> <table><tr><th>If this tag is used within...</th><th>Then the purpose of the bo tag is...</th></tr><tr><td>schema</td><td><div>Indicates the business object using which the membership inbound message is created in the system.</div><div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div></td></tr><tr><td>headerData</td><td><div>Used to indicate the business object using which the membership inbound message should be created in the system. The valid value is:</div><div><ul style="list-style-type: none"><li>C1-MemberInboundMessage</li></ul></div></td></tr></table>	If this tag is used within...	Then the purpose of the bo tag is...	schema	<div>Indicates the business object using which the membership inbound message is created in the system.</div> <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>	headerData	<div>Used to indicate the business object using which the membership inbound message should be created in the system. The valid value is:</div> <div><ul style="list-style-type: none"><li>C1-MemberInboundMessage</li></ul></div>	Yes
If this tag is used within...	Then the purpose of the bo tag is...							
schema	<div>Indicates the business object using which the membership inbound message is created in the system.</div> <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>							
headerData	<div>Used to indicate the business object using which the membership inbound message should be created in the system. The valid value is:</div> <div><ul style="list-style-type: none"><li>C1-MemberInboundMessage</li></ul></div>							
eligibilityStructureData	Used to specify the details of a membership, such as the membership period, main subscriber, dependents, membership contracts, and membership premium for a coverage period.	Yes						

Tag Name	Tag Description	Mandatory (Yes or No)
memberData	Used to specify the details of the main subscriber or dependent person.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a main subscriber or dependent person.
customerName	Used to specify the name of the main subscriber or dependent person.	Yes (Conditional)
		<b>Note:</b> This data is required while defining a main subscriber or dependent person.
customerType	Used to indicate the type of the person.	Yes (Conditional)
	<b>Note:</b> You must specify a value which is already defined in the <b>PER_OR_BUS_FLG</b> lookup field. It must be in the <b>Active</b> status.	<b>Note:</b> This data is required while defining a main subscriber or dependent person.
memberId	Used to specify the external membership ID.	No
relationship	If you are specifying the details of a main subscriber, then this tag is used to indicate how the main subscriber is related to the membership. However, if you are specifying the details of a dependent person, then this tag is used to indicate how the dependent person is related to the main subscriber.	Yes (Conditional)
	<b>Note:</b> You must specify a contract relationship type which is already defined in the system.	<b>Note:</b> This data is required while defining a main subscriber or dependent person.
Id	Used to specify the identification details of the person.	Yes (Conditional)
	<b>Note:</b> You must specify one primary identifier for a person.	<b>Note:</b> This data is required while defining or editing the respective information.

Tag Name	Tag Description	Mandatory (Yes or No)								
IDType	You can use this tag within the following tags:	Yes (Conditional)								
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the IDType tag is...</th></tr><tr><td>Id</td><td>Used to specify the person identifier type.</td></tr><tr><td>newPrimaryID</td><td>Used to specify the primary person identifier type.</td></tr><tr><td>mainSubscriber</td><td>Used to specify the person identifier type.</td></tr></table>	If this tag is used within...	Then the purpose of the IDType tag is...	Id	Used to specify the person identifier type.	newPrimaryID	Used to specify the primary person identifier type.	mainSubscriber	Used to specify the person identifier type.	<b>Note:</b> This data is required while defining or editing the respective information.
	If this tag is used within...	Then the purpose of the IDType tag is...								
	Id	Used to specify the person identifier type.								
	newPrimaryID	Used to specify the primary person identifier type.								
	mainSubscriber	Used to specify the person identifier type.								
<b>Note:</b> You must specify a person identifier type which is already defined in the system.										
IDValue	You can use this tag within the following tags:	Yes (Conditional)								
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the IDValue tag is...</th></tr><tr><td>Id</td><td>Used to specify the person identifier.</td></tr><tr><td>newPrimaryID</td><td>Used to specify the primary person identifier.</td></tr><tr><td>mainSubscriber</td><td>Used to indicate the main subscriber who is related to the dependent person.</td></tr></table>	If this tag is used within...	Then the purpose of the IDValue tag is...	Id	Used to specify the person identifier.	newPrimaryID	Used to specify the primary person identifier.	mainSubscriber	Used to indicate the main subscriber who is related to the dependent person.	<b>Note:</b> This data is required while defining or editing the respective information.
	If this tag is used within...	Then the purpose of the IDValue tag is...								
	Id	Used to specify the person identifier.								
	newPrimaryID	Used to specify the primary person identifier.								
	mainSubscriber	Used to indicate the main subscriber who is related to the dependent person.								
isPrimary	Used to indicate whether the person identifier is a primary identifier. The valid values are: <ul style="list-style-type: none"><li>Y</li><li>N</li></ul>	No								
	<b>Note:</b> If you do not specify the value, by default, it is set to N.									
newPrimaryID	Used when you want to change the primary identifier of the main subscriber or dependent person.	No								
mainSubscriber	Used to specify the primary identifier of the main subscriber.	Yes (Conditional)								
		<b>Note:</b> This data is required when you are adding dependent person in a membership.								

Tag Name	Tag Description	Mandatory (Yes or No)
characteristicsList	Used to specify a characteristic for the respective entity (i.e. person or membership)	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a characteristic of the respective entity.
address	Used to specify the address details of the main subscriber or dependent person.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the address of a main subscriber or dependent person.
addressEffDate	Used to specify the date from when the address is effective for the main subscriber or dependent person.	Yes (Conditional)
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.  If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the membership inbound message.	<b>Note:</b> This data is required while editing the address of a main subscriber or dependent person.
addressType	Used to indicate whether the address is the person's mailing or seasonal address. The valid values are: <ul style="list-style-type: none"> <li><b>MAIN</b> - Indicates that the address is the person's mailing address.</li> <li><b>SEAS</b> - Indicates that the address is the person's seasonal address.</li> </ul>	Yes (Conditional)
	<b>Note:</b> If you do not specify the address type, by default, it is set to <b>MAIN</b> .  You must specify an address type which is already defined in the <b>ADDRESS_TYPE_FLG</b> lookup field. It must be in the <b>Active</b> status.	<b>Note:</b> This data is required while editing the address of a main subscriber or dependent person.
MailingName	Used to specify the override mailing name for the main subscriber or dependent person.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the address of a main subscriber or dependent person.

Tag Name	Tag Description	Mandatory (Yes or No)
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
city	Used to specify the city name.	No
state	Used to indicate the state where the city is located.	No
zip	Used to specify the zip code of the address.	No
country	Used to indicate the country where the main subscriber or dependent person is located.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the address of a main subscriber or dependent person.
attentionName	Used to specify the fourth line of the address. It may contain the landmark details.	No
phones	Used to specify the phone details of the main subscriber or dependent person.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the phone details of a main subscriber or dependent person.
phoneType	Used to indicate the type of the phone.	Yes (Conditional)
	<b>Note:</b> You must specify a phone type which is already defined in the system.	<b>Note:</b> This data is required while defining or editing the phone details of a main subscriber or dependent person.
phoneValue	Used to specify the phone number of the main subscriber or dependent person.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the phone details of a main subscriber or dependent person.
policyData	Used to specify information about the policy and its plan for which you want to define or edit the membership.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a membership.

Tag Name	Tag Description	Mandatory (Yes or No)
policyNumber	Used to specify the policy number.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a membership.
memberPlanCoverages	Used to specify the details of the membership.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing a membership.
billGroup	Used to indicate the account on which you want to create the membership premium billable charges.	No
planCode	Used to specify the plan number.	Yes (Conditional)
	<b>Note:</b> The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Plan Code Characteristic Type</b> parameter of the <b>C1-INMEMEPRC</b> algorithm.	<b>Note:</b> This data is required while defining or editing a membership.
coverageType	Used to specify the coverage type.	No
rateCoverageType	Used to specify the contract type. The system finds the contract of the specified contract type on the account and associates it with the membership.	Yes (Conditional)
	<b>Note:</b> You must specify a contract type which is already defined in the <b>RATE_COVRG_CNTRACT_TYPE</b> lookup field. It must be in the <b>Active</b> status.  The value is stored as a characteristic on the price item. The system stores the value against the characteristic type which is specified in the <b>Rate Coverage Type Characteristic Type</b> parameter of the <b>C1-INMEMEPRC</b> algorithm.  The system derives the price item where the specified rate coverage type and plan code are defined as characteristics. The system then derives the policy plan using the derived policy ID and price item. It also checks whether the start date of the policy plan is earlier than or equal to the membership start date and the policy plan end date is later than or equal to the membership end date.	<b>Note:</b> This data is required while defining or editing a membership.

Tag Name	Tag Description	Mandatory (Yes or No)									
startDate	You can use this tag within the following tags:	Yes (Conditional)									
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the startDate tag is...</th></tr><tr><td rowspan="2">memberPlanCoverages</td><td>Used to specify the date from when the membership is effective.</td></tr><tr><td><div><b>Note:</b> The membership start date cannot be later than the membership end date.  The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.</div></td></tr><tr><td>premiumRateList</td><td>Used to specify the start date of the coverage period.</td></tr><tr><td></td><td><div><b>Note:</b> The coverage period start date cannot be earlier than the membership start date and later than the coverage period end date.</div></td></tr></table>	If this tag is used within...	Then the purpose of the startDate tag is...	memberPlanCoverages	Used to specify the date from when the membership is effective.	<div><b>Note:</b> The membership start date cannot be later than the membership end date.  The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.</div>	premiumRateList	Used to specify the start date of the coverage period.		<div><b>Note:</b> The coverage period start date cannot be earlier than the membership start date and later than the coverage period end date.</div>	<div><b>Note:</b> This data is required in the following scenarios:<ul style="list-style-type: none"><li>• While defining or editing a membership</li><li>• While creating or editing a membership premium billable charge</li></ul></div>
	If this tag is used within...	Then the purpose of the startDate tag is...									
	memberPlanCoverages	Used to specify the date from when the membership is effective.									
<div><b>Note:</b> The membership start date cannot be later than the membership end date.  The membership start date cannot be earlier than the policy plan start date or later than policy plan end date.</div>											
premiumRateList	Used to specify the start date of the coverage period.										
	<div><b>Note:</b> The coverage period start date cannot be earlier than the membership start date and later than the coverage period end date.</div>										

Tag Name	Tag Description	Mandatory (Yes or No)						
endDate	You can use this tag within the following tags:	Yes (Conditional)						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the endDate tag is...</th></tr><tr><td rowspan="2">memberPlanCoverages</td><td>Used to specify the date till when the membership is effective.  <b>Note:</b> The membership end date cannot be earlier than the membership start date.  The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.</td></tr><tr><td>premiumRateList</td><td>Used to specify the end date of the coverage period.  <b>Note:</b> The coverage period end date cannot be later than the membership end date and earlier than the coverage period start date.</td></tr></table>	If this tag is used within...	Then the purpose of the endDate tag is...	memberPlanCoverages	Used to specify the date till when the membership is effective.  <b>Note:</b> The membership end date cannot be earlier than the membership start date.  The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.	premiumRateList	Used to specify the end date of the coverage period.  <b>Note:</b> The coverage period end date cannot be later than the membership end date and earlier than the coverage period start date.	<b>Note:</b> This data is required in the following scenarios: <ul style="list-style-type: none"><li>While defining or editing a membership</li><li>While creating or editing a membership premium billable charge</li></ul>
	If this tag is used within...	Then the purpose of the endDate tag is...						
	memberPlanCoverages	Used to specify the date till when the membership is effective.  <b>Note:</b> The membership end date cannot be earlier than the membership start date.  The membership end date cannot be earlier than the policy plan start date or later than policy plan end date.						
premiumRateList		Used to specify the end date of the coverage period.  <b>Note:</b> The coverage period end date cannot be later than the membership end date and earlier than the coverage period start date.						
productCode	Used to indicate the product to which the price item is mapped.	No						
premiumRates	Used to specify the premium details of the membership.	Yes (Conditional)  <b>Note:</b> This data is required while creating or editing a membership premium billable charge.						
premiumRateList	Used to specify the premium for a coverage period.	Yes (Conditional)  <b>Note:</b> This data is required while creating or editing a membership premium billable charge.						
premiumAmount	Used to specify the premium amount for the coverage period.	Yes (Conditional)  <b>Note:</b> This data is required while creating or editing a membership premium billable charge.						

The following table lists and describes the tags which are available in the membership inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description						
c1InboundMessage	Displays the inbound message ID.						
c1InboundMessageType	Indicates the inbound message type using which the membership inbound message is created in the system.						
boStatus	Displays the status of the membership inbound message.						
statusReason	Indicates the reason why the status of the membership inbound message is changed.						
c1SourceSystem	Indicates the external system from where the membership inbound message is received.						
c1ExternalTransactionId	Indicates the transaction in the external source system which resulted in the membership inbound message.						
c1ExternalBatchId	Indicates the external batch job or batch run number through which the membership inbound message is created.						
c1ExternalSourceId	Displays the external source system ID.						
person	At present, this tag is not supported in a membership inbound message.						
statusDateTime	Displays the date and time when the status of the membership inbound message is changed in the system.						
creationDateTime	Displays the date and time when the membership inbound message is created in the system.						
version	<p>This tag appears within the following parent tags:</p> <table> <tr> <th>Parent Tag</th><th>Then the purpose of the version tag is...</th></tr> <tr> <td>schema</td><td>Displays the version of the membership inbound message.</td></tr> <tr> <td>inboundMessageCharacteristic</td><td>Displays the version of the characteristic defined for the membership inbound message.</td></tr> </table>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the membership inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the membership inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the membership inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the membership inbound message.						
searchCharacteristicValue	At present, this tag is not supported in the membership inbound message.						
messageID	Displays the inbound message ID.						
status	Displays the status of the membership inbound message.						
createDateTime	Displays the date and time when the membership inbound message is created in the system.						
ORMBcreateDateTime	Displays the date and time when the membership inbound message is created in the system.						

Tag Name	Tag Description
toDoRetry	Displays the information about the retry option used for the membership inbound message.
	<b>Note:</b> This information appears at the bottom of the inbound message in the <b>Inbound Message Content</b> zone once the membership inbound message is validated and processed either through the user interface or batch process.
retryDateTime	Displays the date and time when the retry option is used to change the status of the membership inbound message from <b>Rejected</b> to <b>Pending</b> .
numberOfRetries	Indicates the number of times the retry option is used for the membership inbound message.
currentErrorState	Indicates the status to which the membership inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"><li>REJECTED</li></ul>
isRetried	Indicates whether the retry option is used to change the status of the membership inbound message. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>

## ASO Customer Inbound Message

On calling the **C1-ASOCustomerInboundMessage** web service, you can create an ASO customer inbound message using an ASO customer inbound message type. You can create an ASO customer inbound message type using the **ASO Customer Inbound Message Type (C1-ASOCustomerInboundMsgType)** business object. The ASO customer inbound message type helps the system to determine:

- **Inbound Message Business Object** - The business object using which the ASO customer inbound message should be created in the system. You must specify the **ASO Customer Inbound Message (C1-ASOCustomerInboundMessage)** business object in the ASO customer inbound message type.
- **Person Business Object** - The business object using which the person should be created in the system. You must specify the **Health Care Customer (C1-HCCustomer)** business object in the ASO customer inbound message type.
- **Account Business Object** - The business object using which the account should be created in the system. You must specify the **Health Care Account (C1-HCAccount)** business object in the ASO customer inbound message type.
- **Policy Type** - The policy type indicates the policy business object using which the policy should be created in the system. You must specify the **ASO Policy (C1-ASOPolicy)** business object in the policy type.
- **Policy Plan Business Object** - The business object using which the policy plan should be created in the system. You must specify the **Policy Plan (C1-PolicyPlan)** business object in the ASO customer inbound message type.

The **C1-ASOCustomerInboundMessage** web service enables you to do the following:

- Create or edit a parent customer
- Create or edit the bill groups of the parent customer
- Create or edit the accounts of a bill group
- Create or edit auto pay instructions of an account
- Create or edit the self-funded policies of a bill group
- Create or edit the plans of a self-funded policy

The following table describes how the system behaves when the respective entity information is given in an ASO customer inbound message:

Entity	System Behavior
Parent Customer	The system creates the person whose person type is set to <b>PG</b> .
Bill Group	The system creates the person whose person type is set to <b>BG</b> . The bill group is related to the parent customer using the person relationship type which is specified in the <b>Person Relationship Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.

Entity	System Behavior
Account	While creating an account, the system defines the <b>Invoice Type</b> characteristic for the account. It stores the account type given in the account information in the characteristic type which is specified in the <b>Invoice Type Characteristic Type</b> option type of the <b>C1-ASOBLLNG</b> feature configuration.
Policy	<p>If the policy information is given for a bill group, the system creates the self-funded policy using the policy type which is specified in the ASO customer inbound message type. In addition, it does the following:</p> <ul style="list-style-type: none"> <li>Associates the bill group with the policy using the policy person role which is specified in the <b>Bill Group Policy Person Role</b> option type of the <b>C1-ASOBLLNG</b> feature configuration</li> <li>Associates the parent customer with the policy using the policy person role which is specified in the <b>Parent Customer Policy Person Role</b> option type of the <b>C1-ASOBLLNG</b> feature configuration</li> </ul>
Policy Plan	The system creates the plan for the self-funded policy.

On calling the **C1-ASOCustomerInboundMessage** web service, an ASO customer inbound message is created in the **Pending** status. When the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch is executed, the system checks whether there are any ASO customer inbound messages in the **Pending** status. If there is an ASO customer inbound message in the **Pending** status, the system validates the ASO customer inbound message. If an ASO customer inbound message is successfully validated, it is processed further and the entities are either created or updated in the system based on the available information.

Alternatively, the system enables you to submit the ASO customer inbound messages for validation and processing from the user interface. On submitting an ASO customer inbound message, the system validates the ASO customer inbound message. If an ASO customer inbound message is successfully validated, it is processed further and the required entities are created or updated in the system based on the available information.

Once all required entities are created or updated in the system, the status of the ASO customer inbound message is changed to **Processed**. If any error occurs while validating or processing an ASO customer inbound message, the status of the ASO customer inbound message is changed to **Rejected**. The system enables you to either reprocess or void a rejected ASO customer inbound message. The system can reprocess an ASO customer inbound message only when its status is changed to **Pending**. Using the **Retry** option, you can change the status of the ASO customer inbound message from **Rejected** to **Pending**. The **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch will then reconsider and reprocess the ASO customer inbound message.

You can also configure the system such that the batch can automatically retry to process the rejected ASO customer inbound messages. However, it will attempt to retry only when the **Maximum Retry** parameter in the **Retry for To Dos (C1-TODORETRY)** algorithm is set to a value greater than zero. Also, the maximum number of times the batch can attempt to retry and reprocess an ASO customer inbound message depends on the value defined in the **Maximum Retry** parameter.

#### Related Topics

For more information on...	See...
How to setup the <b>C1-ASOBLLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLLNG Feature Configuration</a> on page 2349

## Prerequisites

To use the ASO customer inbound message feature, you need to do the following:

- Define the required ASO customer inbound message types in the system.
- Define the required characteristic types where the characteristic entity is set to **Inbound Message Type**.

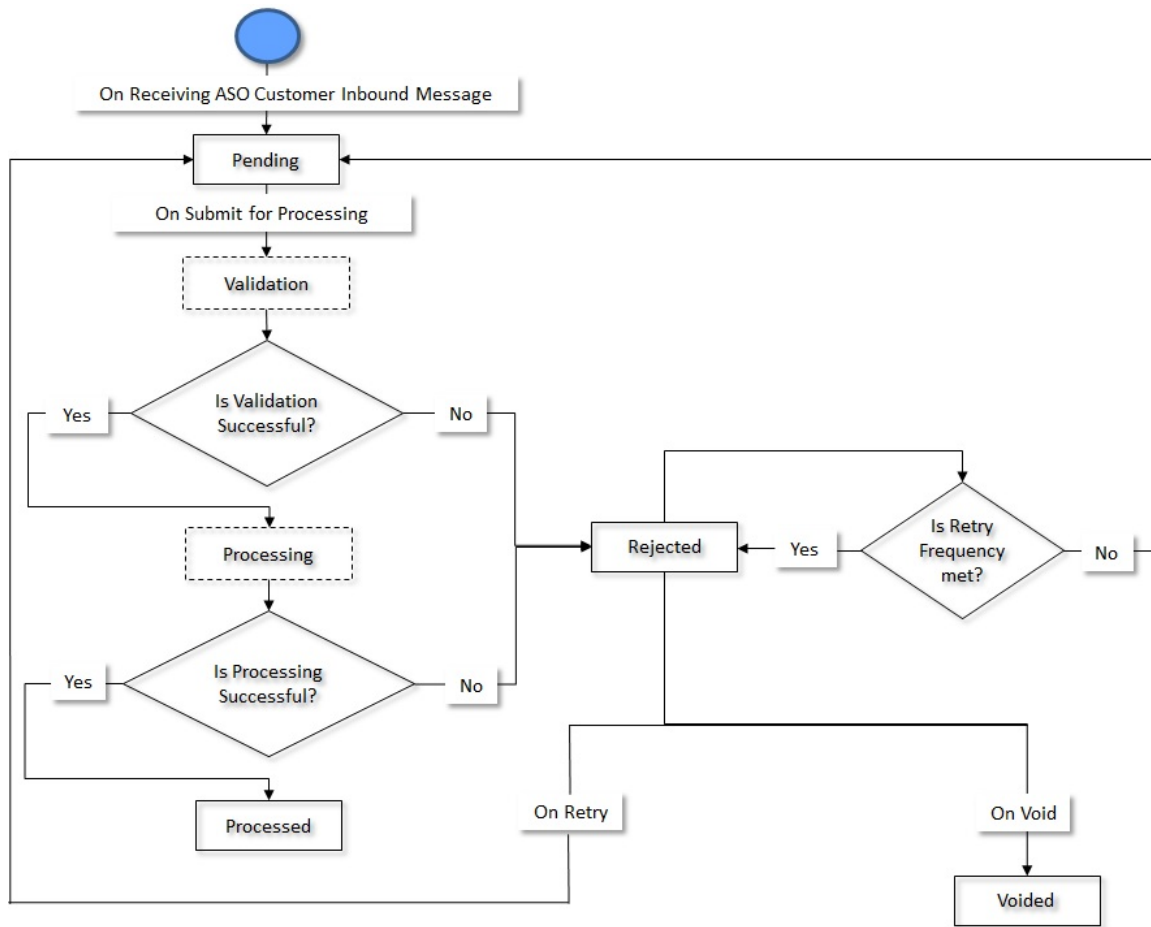

- Define the required characteristic types where the characteristic entity is set to **Inbound Message**.
- Define the values for the required parameters in the **C1-ASOCINVAL**, **C1-ASOCINPRC**, **C1-TODORETRY**, and **C1-TDCRINMSG** algorithms.
- Define the values for the **C1-SourceSystemLookup** extendable lookup.
- Define the values for the **ADDRESS\_TYPE\_FLG** and **RUNOUT\_ADM\_OPT\_FLG** lookup fields.
- Set the values for the following option types in the **C1-ASOBLNG** feature configuration:
  - Person Relationship Type
  - Bill Group Policy Person Role
  - Parent Customer Policy Person Role
  - Invoice Type Characteristic Type
- Define the required divisions, person identifier types, account identifier types, phone types, person relationship types, customer classes, bill cycles, bill route types, auto pay route types, auto pay sources, policy person roles, price items, and characteristic types in the application.
- Set the batch control type of the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

**ASO Customer Inbound Message Status Transition through User Interface**

The following figure graphically indicates how an ASO customer inbound message moves from one status to another when it is validated and processed through the user interface:

### ASO Customer Inbound Message Status Transition through a Batch Process

The following figure graphically indicates how an ASO customer inbound message moves from one status to another when it is validated and processed through the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch:

## Algorithms Used in C1-ASOCustomerInboundMessage

The following table lists the algorithms which are used in the lifecycle of the **C1-ASOCustomerInboundMessage** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-AT-RQJ	C1-GEN-BOMNJ	Refer to <a href="#">C1-AT-RQJ</a> on page 1508.
Validation	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1068.
	Enter	C1-ASOCINVAL	C1-ASOCINVAL	Refer to <a href="#">C1-ASOCINVAL</a> on page 1577.
Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1068.
	Enter	C1-ASOCINPRC	C1-ASOCINPRC	Refer to <a href="#">C1-ASOCINPRC</a> on page 1578.
Rejected	Monitor	C1-TODORETRY	C1-TODORETRY	Refer to <a href="#">C1-TODORETRY</a> on page 1518.

Status	System Event	Algorithm	Algorithm Type	Description
	Enter	C1-TDCRINMSG	F1-TDCREATE	Refer to <a href="#">C1-TDCRINMSG</a> on page 1518.
Processed	-	-	-	-
Voided	-	-	-	-

### C1-AT-RQJ

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Pending**. If the **isRetried** flag in the inbound message is set to **true**, it resets the flag to **false**.

It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-ASOCINVAL

This algorithm is invoked when you execute the **Customer Inbound Message Periodic Monitor (C1-CUSIN)** batch or click the **Submit for Processing** button in the **Inbound Message** screen. It validates the ASO customer inbound message which is in the **Pending** status. It checks the following:

- Whether the parent customer information exists in the ASO customer inbound message.
- Whether the primary identifier is specified for the parent customer and bill group.
- Whether multiple primary identifiers are not specified for the parent customer and bill group.
- Whether the expiration year and month are specified in the account's auto pay details when the **Expiration Date Required** option is selected for the tender type which is specified in the auto pay source.
- Whether the expiration year is not earlier than 1755.
- Whether the expiration month lies between 1 and 12.

If the validation fails due to any reason, the status of the ASO customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.

- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-ASOCINPRC

This algorithm is invoked once an ASO customer inbound message is successfully validated. It processes the ASO customer inbound message and accordingly creates or updates a person (parent customer and bill group), account (including automatic payment options), policy and policy plan.

If the processing fails due to any reason, the status of the ASO customer inbound message is changed to **Rejected**. In addition, the appropriate log entry is added which you can view in the **Inbound Message Log** zone.

It contains the following parameters:

- **Next Status** - Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** - Used when you want to override the default next transition condition specified in the lifecycle.

**Note:** At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

### C1-TODORETRY

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It checks whether the maximum retry attempts are met. If the retry attempt is less than or equal to the value defined in the **Maximum Retry** parameter, the status of the inbound message is changed to **Pending**. However, if the retry attempt is greater than the value defined in the **Maximum Retry** parameter, the status of the inbound message remains as **Rejected**.

**Note:** This algorithm is invoked only when the customer or membership inbound message is validated and processed through the batch process.

It contains the following parameters:

- **Maximum Retry** – Used to specify the maximum number of times the inbound message can be revalidated and reprocessed on failure.
- **Maximum Retry Element Name** – This parameter is not used at the moment.

If you do not specify any value for the **Maximum Retry** parameter, the system uses the value defined in the **To Do Maximum Retries** status option (which is defined in the lifecycle of the **C1-CustomerInboundMessage** and **C1-MemberInboundMessage** business object) to check whether the maximum retry attempts are met. If the value is not specified for the **To Do Maximum Retries** status option, the system does not allow revalidating and reprocessing an inbound message, and the status of the inbound message remains as **Rejected**.

### C1-TDCRINMSG

This algorithm is invoked when the status of the customer or membership inbound message is changed to **Rejected**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** - Used to specify the type of notification that you want to generate when the inbound message validation or processing fails.
- **To Do Role** - Used to specify the To Do role to indicate the users to whom you want to send the notification when the inbound message validation or processing fails.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## ASO Customer Inbound Message XML Format

**Note:** We recommend you to refer the ASO Customer Inbound Message schema in parallel while understanding the below mentioned tags. This will help you to understand how the tags are nested in the schema.

Before calling the **C1-ASOCustomerInboundMessage** inbound web service, you need to ensure that the ASO customer inbound message contains the following tags:

Tag Name	Tag Description	Mandatory (Yes or No)						
schema	Used to specify the tags of an ASO customer inbound message.	Yes						
bo	Used to indicate the business object using which the ASO customer inbound message should be created in the system. The valid value is: <ul style="list-style-type: none"><li>C1-ASOCustomerInboundMessage</li></ul>	Yes						
messageType	<div>You can use this tag within the following tags:</div> <table><tr><th>If this tag is used within...</th><th>Then the purpose of the messageType tag is...</th></tr><tr><td>schema</td><td>Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system.<div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div></td></tr><tr><td>headerData</td><td>Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.</td></tr></table> <div><b>Note:</b> You must specify a valid ASO customer inbound message type which is in the <b>Active</b> status.</div>	If this tag is used within...	Then the purpose of the messageType tag is...	schema	Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>	headerData	Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.	Yes
If this tag is used within...	Then the purpose of the messageType tag is...							
schema	Indicates the ASO customer inbound message type using which the ASO customer inbound message is created in the system. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>							
headerData	Used to specify the ASO customer inbound message type using which the ASO customer inbound message should be created in the system.							

Tag Name	Tag Description	Mandatory (Yes or No)									
sourceSystem	You can use this tag within the following tags:	Yes									
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the sourceSystem tag is...</th></tr><tr><td rowspan="2">schema</td><td>Indicates the external system from where the ASO customer inbound message is received.</td></tr><tr><td><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</td></tr><tr><td>headerData</td><td>Used to indicate the external system from where the ASO customer inbound message is received.</td></tr><tr><td>policyData</td><td>Used to indicate the source system from where the policy is originated.</td></tr></table>		If this tag is used within...	Then the purpose of the sourceSystem tag is...	schema	Indicates the external system from where the ASO customer inbound message is received.	<b>Note:</b> The system refers the value from within the <b>headerData</b> tag.	headerData	Used to indicate the external system from where the ASO customer inbound message is received.	policyData	Used to indicate the source system from where the policy is originated.
	If this tag is used within...		Then the purpose of the sourceSystem tag is...								
	schema		Indicates the external system from where the ASO customer inbound message is received.								
			<b>Note:</b> The system refers the value from within the <b>headerData</b> tag.								
	headerData		Used to indicate the external system from where the ASO customer inbound message is received.								
	policyData		Used to indicate the source system from where the policy is originated.								
<b>Note:</b> You must specify a source system which is already defined in the <b>C1-SourceSystemLookup</b> extendable lookup. It must be in the <b>Active</b> status.											
externalTransactionId	You can use this tag within the following tags:	No									
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the externalTransactionId tag is...</th></tr><tr><td rowspan="2">schema</td><td>Indicates the transaction in the external source system which resulted in the ASO customer inbound message.</td></tr><tr><td><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</td></tr><tr><td>headerData</td><td>Used to indicate the transaction in the external source system which resulted in the ASO customer inbound message.</td></tr></table>		If this tag is used within...	Then the purpose of the externalTransactionId tag is...	schema	Indicates the transaction in the external source system which resulted in the ASO customer inbound message.	<b>Note:</b> The system refers the value from within the <b>headerData</b> tag.	headerData	Used to indicate the transaction in the external source system which resulted in the ASO customer inbound message.		
	If this tag is used within...		Then the purpose of the externalTransactionId tag is...								
	schema		Indicates the transaction in the external source system which resulted in the ASO customer inbound message.								
			<b>Note:</b> The system refers the value from within the <b>headerData</b> tag.								
headerData	Used to indicate the transaction in the external source system which resulted in the ASO customer inbound message.										

Tag Name	Tag Description	Mandatory (Yes or No)						
externalBatchId	You can use this tag within the following tags:	Yes						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the externalBatchId tag is...</th></tr><tr><td>schema</td><td>Indicates the external batch job or batch run number through which the ASO customer inbound message is created.<div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div></td></tr><tr><td>headerData</td><td>Used to indicate the external batch job or batch run number through which the ASO customer inbound message is created.</td></tr></table>		If this tag is used within...	Then the purpose of the externalBatchId tag is...	schema	Indicates the external batch job or batch run number through which the ASO customer inbound message is created. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>	headerData	Used to indicate the external batch job or batch run number through which the ASO customer inbound message is created.
	If this tag is used within...		Then the purpose of the externalBatchId tag is...					
	schema		Indicates the external batch job or batch run number through which the ASO customer inbound message is created. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>					
headerData	Used to indicate the external batch job or batch run number through which the ASO customer inbound message is created.							
externalSourceId	You can use this tag within the following tags:	Yes						
<table><tr><th>If this tag is used within...</th><th>Then the purpose of the externalSourceId tag is...</th></tr><tr><td>schema</td><td>Displays the external source system ID.<div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div></td></tr><tr><td>headerData</td><td>Used to specify the external source system ID.</td></tr></table>	If this tag is used within...		Then the purpose of the externalSourceId tag is...	schema	Displays the external source system ID. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>	headerData	Used to specify the external source system ID.	
If this tag is used within...	Then the purpose of the externalSourceId tag is...							
schema	Displays the external source system ID. <div><b>Note:</b> The system refers the value from within the <b>headerData</b> tag.</div>							
headerData	Used to specify the external source system ID.							

Tag Name	Tag Description	Mandatory (Yes or No)														
characteristics	You can use this tag within the following tags:	No														
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the characteristics tag is...</th></tr><tr><td>schema</td><td>Used to specify a list of characteristics for the ASO customer inbound message.</td></tr><tr><td>parentCustomerData</td><td>Used to specify a list of characteristics for the parent customer.</td></tr><tr><td>billGroupData</td><td>Used to specify a list of characteristics for the bill group.</td></tr><tr><td>accountData</td><td>Used to specify a list of characteristics for the account.</td></tr><tr><td>policyData</td><td>Used to specify a list of characteristics for the policy.</td></tr><tr><td>planData</td><td>Used to specify a list of characteristics for the policy plan.</td></tr></table>		If this tag is used within...	Then the purpose of the characteristics tag is...	schema	Used to specify a list of characteristics for the ASO customer inbound message.	parentCustomerData	Used to specify a list of characteristics for the parent customer.	billGroupData	Used to specify a list of characteristics for the bill group.	accountData	Used to specify a list of characteristics for the account.	policyData	Used to specify a list of characteristics for the policy.	planData	Used to specify a list of characteristics for the policy plan.
	If this tag is used within...		Then the purpose of the characteristics tag is...													
	schema		Used to specify a list of characteristics for the ASO customer inbound message.													
	parentCustomerData		Used to specify a list of characteristics for the parent customer.													
	billGroupData		Used to specify a list of characteristics for the bill group.													
	accountData		Used to specify a list of characteristics for the account.													
	policyData		Used to specify a list of characteristics for the policy.													
planData	Used to specify a list of characteristics for the policy plan.															
inboundMessageCharacteristic	Used to specify a characteristic for the ASO customer inbound message.	No														
adhocCharacteristicValue	Used to specify the value for the adhoc characteristic type.	Yes (Conditional)														
		<b>Note:</b> This data is required while defining or editing an adhoc characteristic of the health care inbound message.														

Tag Name	Tag Description	Mandatory (Yes or No)						
characteristicType	You can use this tag within the following tags:	Yes (Conditional)						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the characteristicType tag is...</th></tr><tr><td>inboundMessageCharacteristic</td><td>Used to specify the characteristic type. 	parentCustomerData	Used to specify the identification details for the parent customer.								
	billGroupData	Used to specify the identification details for the bill group.								
	accountData	Used to specify the identification details for the account.								
	<b>Note:</b> You must specify one primary identifier for a person and account.									
idType	You can use this tag within the following tags:	Yes (Conditional)								
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the idType tag is...</th></tr><tr><td>identifiers</td><td>Used to specify the person or account identifier type.</td></tr><tr><td>relatedPersons</td><td>Used to specify the person identifier type.</td></tr><tr><td>policyPersons</td><td>Used to specify the person identifier type.</td></tr></table>	If this tag is used within...	Then the purpose of the idType tag is...	identifiers	Used to specify the person or account identifier type.	relatedPersons	Used to specify the person identifier type.	policyPersons	Used to specify the person identifier type.	<b>Note:</b> This data is required in the following scenarios: <ul style="list-style-type: none"><li>While defining or editing the identification details of a parent customer, bill group, and account.</li><li>While defining or editing a person to person relationship.</li><li>While associating a person with a policy.</li></ul>
	If this tag is used within...	Then the purpose of the idType tag is...								
	identifiers	Used to specify the person or account identifier type.								
	relatedPersons	Used to specify the person identifier type.								
	policyPersons	Used to specify the person identifier type.								
	<b>Note:</b> You must specify an identifier type which is already defined in the system.									

Tag Name	Tag Description	Mandatory (Yes or No)								
idValue	You can use this tag within the following tags:	Yes (Conditional)								
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the idValue tag is...</th></tr><tr><td>identifiers</td><td>Used to specify the person or account identifier.</td></tr><tr><td>relatedPersons</td><td>Used to indicate the person who is related to the parent customer.</td></tr><tr><td>policyPersons</td><td>Used to indicate the person to whom you want to associate the policy.</td></tr></table>	If this tag is used within...	Then the purpose of the idValue tag is...	identifiers	Used to specify the person or account identifier.	relatedPersons	Used to indicate the person who is related to the parent customer.	policyPersons	Used to indicate the person to whom you want to associate the policy.	<b>Note:</b> This data is required while defining or editing the respective information.
	If this tag is used within...	Then the purpose of the idValue tag is...								
	identifiers	Used to specify the person or account identifier.								
	relatedPersons	Used to indicate the person who is related to the parent customer.								
policyPersons	Used to indicate the person to whom you want to associate the policy.									
isPrimary	Used to indicate whether the person or account identifier is a primary identifier. The valid values are: <ul style="list-style-type: none"><li>• Y</li><li>• N</li></ul> <b>Note:</b> If you do not specify the value, by default, it is set to N.	No								
address	You can use this tag within the following tags:	Yes (Conditional)								
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the address tag is...</th></tr><tr><td>parentCustomerData</td><td>Used to specify the address of the parent customer.</td></tr><tr><td>billGroupData</td><td>Used to specify the address of the bill group.</td></tr><tr><td>accountData</td><td>Used to specify the address of the account.</td></tr></table>	If this tag is used within...	Then the purpose of the address tag is...	parentCustomerData	Used to specify the address of the parent customer.	billGroupData	Used to specify the address of the bill group.	accountData	Used to specify the address of the account.	<b>Note:</b> This data is required while defining or editing the address of the respective entity.
	If this tag is used within...	Then the purpose of the address tag is...								
	parentCustomerData	Used to specify the address of the parent customer.								
	billGroupData	Used to specify the address of the bill group.								
accountData	Used to specify the address of the account.									
addressEffDate	Used to specify the date from when the address is effective.	Yes (Conditional)								
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format. If you do not specify the date, by default, the system sets the effective date to the date when the address is created in the system through the ASO customer inbound message.	<b>Note:</b> This data is required while editing the address of a person or account.								

Tag Name	Tag Description	Mandatory (Yes or No)
addressType	Used to indicate the type of address. The valid values are: <ul style="list-style-type: none"> <li><b>MAIN</b> - Indicates that the address is the person's mailing address. You can use this address type while specifying the address for the person and account.</li> <li><b>SEAS</b> - Indicates that the address is the person's seasonal address. You can use this address type while specifying the address for the person.</li> <li><b>OVRD</b> - Indicates that the address is the account's override address. You can use this address type while specifying the address for the account.</li> </ul>	Yes (Conditional)
	<b>Note:</b> If you do not specify the address type, by default, it is set to <b>MAIN</b> .  You must specify an address type which is already defined in the <b>ADDRESS_TYPE_FLG</b> lookup field. It must be in the <b>Active</b> status.	<b>Note:</b> This data is required while editing the address of a person or account.
mailingName	Used to specify the name using which the parent customer or bill group should be addressed in the mail communication. The system also uses the mailing name in the bills, letters, quotes, and statements.	No
address1	Used to specify the first line of the address. It may contain details, such as the house number.	Yes (Conditional)
		<b>Note:</b> This data is required while defining and editing the address of a person and account.
address2	Used to specify the second line of the address. It may contain details, such as the apartment name.	No
address3	Used to specify the third line of the address. It may contain details, such as the street name.	No
attentionName	Used to specify the fourth line of the address. It may contain the landmark details.	No
city	Used to specify the city name.	No
state	Used to indicate the state where the city is located.	No
zip	Used to specify the zip code of the address.	No
country	Used to indicate the country where the parent customer, bill group, or account is located.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the address of a person or account.

Tag Name	Tag Description	Mandatory (Yes or No)						
email	You can use this tag within the following tags:	No						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the email tag is...</th></tr><tr><td>parentCustomerData</td><td>Used to specify the e-mail ID of the parent customer.</td></tr><tr><td>billGroupData</td><td>Used to specify the e-mail ID of the bill group.</td></tr></table>		If this tag is used within...	Then the purpose of the email tag is...	parentCustomerData	Used to specify the e-mail ID of the parent customer.	billGroupData	Used to specify the e-mail ID of the bill group.
	If this tag is used within...		Then the purpose of the email tag is...					
	parentCustomerData		Used to specify the e-mail ID of the parent customer.					
billGroupData	Used to specify the e-mail ID of the bill group.

	policyPersons		Used to specify the date till when the person is associated with the policy.													
	planData		Used to specify the date till when the policy plan is effective.													
	<b>Note:</b> You must specify the date in the YYYY-MM-DD format.															

Tag Name	Tag Description	Mandatory (Yes or No)						
financialRelationshipSw	You can use this tag within the following tags:	No						
	<table><tr><th>If this tag is used within...</th><th>Then the purpose of the financialRelationshipSw tag is...</th></tr><tr><td>relatedPersons</td><td>Used to indicate whether the related person is financially responsible for the parent customer. The valid values are:<ul style="list-style-type: none"><li>true</li><li>false</li></ul></td></tr><tr><td>billGroupData</td><td>Used to indicate whether the bill group is financially responsible for the parent customer. The valid values are:<ul style="list-style-type: none"><li>true</li><li>false</li></ul></td></tr></table>		If this tag is used within...	Then the purpose of the financialRelationshipSw tag is...	relatedPersons	Used to indicate whether the related person is financially responsible for the parent customer. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>	billGroupData	Used to indicate whether the bill group is financially responsible for the parent customer. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>
	If this tag is used within...		Then the purpose of the financialRelationshipSw tag is...					
	relatedPersons		Used to indicate whether the related person is financially responsible for the parent customer. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>					
	billGroupData		Used to indicate whether the bill group is financially responsible for the parent customer. The valid values are: <ul style="list-style-type: none"><li>true</li><li>false</li></ul>					
<b>Note:</b> If you do not specify the value, by default, it is set to <b>false</b> .								
characteristicsList	Used to specify a characteristic for the respective entity (i.e. parent customer, bill group, account, policy, or policy plan).	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a characteristic of the respective entity.						
billGroupData	Used to specify the details of the bill group.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a bill group.						
seqNo	Used to indicate the order in which the bill group should be created in the system.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a bill group.						

Tag Name	Tag Description	Mandatory (Yes or No)														
billGroupName	Used to specify the name of the bill group.	Yes (Conditional)														
		<b>Note:</b> This data is required while defining a bill group.														
accountData	Used to specify the account details of the bill group.	Yes (Conditional)														
	<b>Note:</b> The system, by default, adds the bill group (for whom the account information is given in the ASO customer inbound message) as the main customer of the account. While linking the bill group as main customer of the account, the system sets the following attributes:	<b>Note:</b> This data is required while defining or editing an account.														
	<table><tr><th>Attribute Name</th><th>Attribute Value</th></tr><tr><td>Financially Responsible</td><td>Y</td></tr><tr><td>Account Relationship Type</td><td>Main Customer</td></tr><tr><td>Receive Copy of Bill</td><td>Y</td></tr><tr><td>Bill Format</td><td>Detailed</td></tr><tr><td>Receives Notification</td><td>Y</td></tr><tr><td>Number of Bill Copies</td><td>1</td></tr></table>	Attribute Name	Attribute Value	Financially Responsible	Y	Account Relationship Type	Main Customer	Receive Copy of Bill	Y	Bill Format	Detailed	Receives Notification	Y	Number of Bill Copies	1	
	Attribute Name	Attribute Value														
	Financially Responsible	Y														
	Account Relationship Type	Main Customer														
	Receive Copy of Bill	Y														
	Bill Format	Detailed														
	Receives Notification	Y														
	Number of Bill Copies	1														
accountType	Used to indicate the type of account. This information is stored as a characteristic for the account.	Yes (Conditional)														
	<b>Note:</b> The value is stored in the characteristic type which is specified in the <b>Invoice Type Characteristic Type</b> option type of the <b>C1-ASOBLNG</b> feature configuration.  You must specify a value which is already defined in the predefined characteristic type.	<b>Note:</b> This data is required while defining or editing an account.														
customerClass	Used to indicate the customer class to which the account belongs.	Yes (Conditional)														
	<b>Note:</b> You must specify a customer class which is already defined in the system.	<b>Note:</b> This data is required while defining an account.														
billCycle	Used to indicate the bill cycle for the account.	No														
	<b>Note:</b> You must specify a bill cycle which is already defined in the system.															

Tag Name	Tag Description	Mandatory (Yes or No)
billRouteType	Used to indicate how the account's bill must be sent to the main customer.	Yes (Conditional)
	<b>Note:</b> You must specify a bill route type which is already defined in the system.	<b>Note:</b> This data is required while defining the bill routing information for the main customer.
billAddressSource	Used to indicate whether the account's bill must be sent to the main customer's mailing address or to the main customer's account override address. The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>• PER</li> <li>• ACOV</li> </ul>	<b>Note:</b> This data is required while defining the bill routing information for the main customer.
autoPayDetails	Used to specify the auto pay instruction for the account.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
priority	Used to indicate the priority in which the auto pay instruction should be considered when multiple auto pay instructions are effective on the bill's due date.	Yes (Conditional)
	<b>Note:</b> The priority cannot be less than or equal to zero.	<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
percentage	Used to indicate the percentage in which the payment must be split between two or more auto pay sources having the same priority.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing the split auto pay instruction for an account.
autoPayMethod	Used to indicate how you want to process the automatic payment request. The valid values are: <ul style="list-style-type: none"> <li>• <b>C1DD</b> - Indicates that you want to directly debit the main customer's bank account.</li> <li>• <b>C1PA</b> - Indicates that you want to send a payment advice to the main customer.</li> </ul>	No

Tag Name	Tag Description	Mandatory (Yes or No)
autoPayRouteType	Used to indicate when and how automatic payment request of the account is routed to a financial institution.	Yes (Conditional)
	<b>Note:</b> You must specify an auto pay route type which is already defined in the system.	<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
autoPaySourceCode	Used to indicate the financial institution that receives the automatic payment request.	Yes (Conditional)
	<b>Note:</b> You must specify an auto pay source which is already defined in the system.	<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
accountNumber	Used to indicate the bank account number through which the automatic payment must be done.	Yes (Conditional)
		<b>Note:</b> This data is required while defining or editing an auto pay instruction of an account.
expiryMonth	Used to specify the month when the tender type of the auto pay source will expire.	Yes (Conditional)
	<b>Note:</b> You must specify the month in the MM format.	<b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.
expiryYear	Used to specify the year when the tender type of the auto pay source will expire.	Yes (Conditional)
	<b>Note:</b> You must specify the year in the YYYY format.	<b>Note:</b> This data is required when the <b>Expiration Date Required</b> option is selected for the tender type which is specified in the auto pay source.
name	Used to specify the name of the person as it appears in the financial institution's system.	No
maxWithdrawalAmount	Used to specify the maximum amount that can be automatically debited from the bank account. It is used to set the limit on the withdrawal amount.	No
	<b>Note:</b> The maximum withdrawal amount cannot be less than zero.	

Tag Name	Tag Description	Mandatory (Yes or No)
comments	Used to specify additional information about the auto pay instruction.	No
policyData	Used to specify the details of the self-funded policy.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a self-funded policy.
policyNumber	Used to specify the policy number.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a self-funded policy.
policyDescription	Used to specify the description for the self-funded policy	Yes (Conditional) <b>Note:</b> This data is required while defining a self-funded policy.
runOutEndDate	Used to specify the date when the runout period of the self-funded policy ends. <b>Note:</b> The runout end date cannot be earlier than the policy end date. You must specify the date in the YYYY-MM-DD format.	No
runOutAdminOption	Used to indicate whether the administration fees must be charged when the claim transaction for the self-funded policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"><li>NROA</li><li>PERC</li></ul> <b>Note:</b> At present, this data is used only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy. You must specify a value which is already defined in the <b>RUNOUT_ADM_OPT_FLG</b> lookup field. It must be in the <b>Active</b> status.	No

Tag Name	Tag Description	Mandatory (Yes or No)
policyPersons	Used to associate a person with the policy.	Yes (Conditional) <b>Note:</b> This data is required while associating a person with the policy.
policyPerRole	Used to indicate the role of the person in the policy. <b>Note:</b> You must specify a policy person role which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while associating a person with the policy.
planData	Used to specify the details of the policy plan.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a policy plan.
planNumber	Used to specify the plan number.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a policy plan.
planCode	Used to specify the price item which you want to associate with the policy plan. <b>Note:</b> You must specify a price item which is already defined in the system.	Yes (Conditional) <b>Note:</b> This data is required while defining or editing a policy plan.

The following table lists and describes the tags which are available in the ASO customer inbound message schema, but should not be included in the XML file:

Tag Name	Tag Description
InboundMessage	Displays the inbound message ID.
boStatus	Displays the status of the ASO customer inbound message.
statusReason	Indicates the reason why the status of the ASO customer inbound message is changed.
person	At present, this tag is not supported in an ASO customer inbound message.
statusDateTime	Displays the date and time when the status of the ASO customer inbound message is changed in the system.
creationDateTime	Displays the date and time when the ASO customer inbound message is created in the system.
searchCharacteristicValue	At present, this tag is not supported in an ASO customer inbound message.

Tag Name	Tag Description						
version	<div>This tag appears within the following parent tags:<table><tr><th>Parent Tag</th><th>Then the purpose of the version tag is...</th></tr><tr><td>schema</td><td>Displays the version of the ASO customer inbound message.</td></tr><tr><td>inboundMessageCharacteristic</td><td>Displays the version of the characteristic defined for the ASO customer inbound message.</td></tr></table></div>	Parent Tag	Then the purpose of the version tag is...	schema	Displays the version of the ASO customer inbound message.	inboundMessageCharacteristic	Displays the version of the characteristic defined for the ASO customer inbound message.
Parent Tag	Then the purpose of the version tag is...						
schema	Displays the version of the ASO customer inbound message.						
inboundMessageCharacteristic	Displays the version of the characteristic defined for the ASO customer inbound message.						
toDoRetry	<div>Displays the information about the retry option used for the ASO customer inbound message.<div><b>Note:</b> This information appears at the bottom of the inbound message in the <b>Inbound Message Content</b> zone once the ASO customer inbound message is validated and processed either through the user interface or batch process.</div></div>						
retryDateTime	Displays the date and time when the retry option is used to change the status of the ASO customer inbound message from <b>Rejected</b> to <b>Pending</b> .						
numberOfRetries	Indicates the number of times the retry option is used for the ASO customer inbound message.						
currentErrorState	<div>Indicates the status to which the ASO customer inbound message is transitioned when its validation or processing fails. The valid value is:<ul style="list-style-type: none"><li>REJECTED</li></ul></div>						
isRetried	<div>Indicates whether the retry option is used to change the status of the ASO customer inbound message. The valid values are:<ul style="list-style-type: none"><li>true</li><li>false</li></ul></div>

Sample ASO Customer Inbound Message

Using the below example, you can do the following:

- Create the parent customer and bill groups for the self-funded health care business
- Create the accounts for the bill groups
- Create the self-funded policies for the bill groups

Parent Customer	Bill Group	Account	Policy
UK OIL AND GAS CORP	UK OIL AND GAS ACRE	Standard	Active Employee Health Care Policy
		Retention	Retiree Employee Health Care Policy
	UK OIL AND GAS COBRA	Standard	Active COBRA Employee Health Care Policy
		Retention	Retiree COBRA Employee Health Care Policy

```

## Inbound Message Type

Oracle Revenue Management and Billing allows you to define an inbound message type using which you can create an inbound message through an inbound web service. The following table describes the significance of the respective inbound message type:

Inbound Message Type	Helps the system to determine...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> <li>• <b>Person Business Object</b> - The business object using which a person should be created when the customer inbound message is processed.</li> <li>• <b>Account Business Object</b> - The business object using which an account should be created when the customer inbound message is processed.</li> <li>• <b>Hold Request Business Object</b> - The business object using which the hold request should be created when the <b>Invoice Hold Reason</b> characteristic is defined for an account in the customer inbound message.</li> <li>• <b>Status on Policy Termination</b> - The status to which the policy should be transitioned when the policy termination request is processed through the customer inbound message.</li> <li>• <b>Status on Policy Reinstatement</b> - The status to which the policy should be transitioned when the policy reinstatement request is processed through the customer inbound message.</li> <li>• <b>Status on Policy Renewal</b> - The status to which the policy should be transitioned when the policy renewal request is processed through the customer inbound message.</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> </ul>

Inbound Message Type	Helps the system to determine...
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• <b>Inbound Message Business Object</b> - The business object using which the inbound message should be created in the system.</li> <li>• <b>Person Business Object</b> - The business object using which a person should be created when the ASO customer inbound message is processed.</li> <li>• <b>Account Business Object</b> - The business object using which an account should be created when the ASO customer inbound message is processed.</li> <li>• <b>Policy Type</b> - The policy type using which a policy should be created when the ASO customer inbound message is processed.</li> <li>• <b>Policy Plan Business Object</b> - The business object using which a policy plan should be created when the ASO customer inbound message is processed.</li> </ul>

The **Inbound Message Type** screen allows you to define, edit, copy, and delete an inbound message type. It contains the following zones:

- [Inbound Message Type List](#) on page 1610
- [Inbound Message Type](#) on page 1611

## Inbound Message Type List

The **Inbound Message Type List** zone lists the inbound message types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Inbound Message Type	Displays the inbound message type.
Description	Displays the description of the inbound message type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Inbound Message Type</b> screen appears where you can edit the details of the inbound message type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Inbound Message Type</b> screen appears where you can define a new inbound message type using an existing inbound message type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the inbound message type.
	<b>Note:</b> You can delete an inbound message type only when an inbound message is not created using the inbound message type.

On clicking the **Broadcast** () icon corresponding to an inbound message type, the **Inbound Message Type** zone appears with the details of the respective inbound message type.

## Inbound Message Type

The **Inbound Message Type** zone displays the details of the inbound message type. It contains the following sections:

- **Main** – Displays basic information about the inbound message type. It contains the following fields:

Field Name	Field Description
Inbound Message Type	Displays the inbound message type.
Person Business Object	<p>Indicates the business object using which a person is created when the customer or ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>
Account Business Object	<p>Indicates the business object using which an account is created when the customer or ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>
Policy Type	<p>Indicates the policy type using which a policy is created when the ASO customer inbound message is processed.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Policy Type</b> screen appears where you can view the details of the respective policy type.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>

Field Name	Field Description
Policy Plan Business Object	<p>Indicates the business object using which a policy plan is created when the ASO customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>
Hold Request Business Object	<p>Indicates the business object using which a hold request is created for an account when the customer inbound message is processed. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p> <p>This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>
Status on Policy Termination	<p>Indicates the status to which the policy is transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>
Status on Policy Reinstatement	<p>Indicates the status to which the policy is transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>
Status on Policy Renewal	<p>Indicates the status to which the policy is transitioned when the policy renewal request is processed through the customer inbound message.</p> <p><b>Note:</b> This field appears only when you are viewing the details of an inbound message type which is created using the <b>C1-CustomerInboundMessageType</b> business object.</p>

Field Name	Field Description
Inbound Message Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the inbound message type.
Status	Indicates the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Detailed Description	Displays additional information about the inbound message type.

- **Characteristics** – Lists the characteristics defined for the inbound message type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the inbound message type.
Delete	Used to delete the inbound message type.  <b>Note:</b> You can delete an inbound message type only when an inbound message is not created using the inbound message type.
Duplicate	Used to create a new inbound message type using an existing inbound message type.

- **Record Information** – This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Inbound Message Type** zone does not appear in the **Inbound Message Type** screen. It appears only when you click the **Broadcast**  icon corresponding to an inbound message type in the **Inbound Message Type List** zone.

## Viewing the Inbound Message Type Details

### Procedure

To view the details of an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Broadcast**  icon corresponding to the inbound message type whose details you want to view.  
The **Inbound Message Type** zone appears.
5. View the details of the inbound message type in the **Inbound Message Type** zone.

## Defining an Inbound Message Type

### Prerequisites

The following table lists the prerequisites for defining various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• Customer inbound message type business objects defined in the application</li> <li>• Customer inbound message business objects defined in the application</li> <li>• Person, account, and hold request business objects defined in the application</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy termination</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy renewal</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy reinstatement</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• Membership inbound message type business objects defined in the application</li> <li>• Membership inbound message business objects defined in the application</li> </ul>
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• ASO customer inbound message type business objects defined in the application</li> <li>• ASO customer inbound message business objects defined in the application</li> <li>• Person, account, and policy plan business objects defined in the application</li> <li>• Policy types defined in the application</li> </ul>

### **Procedure**

To define an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Inbound Message Type** sub-menu.  
The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)								
Inbound Message Type Business Object	Used to indicate the business object using which you want to create the inbound message type. The following table lists the business objects using which you can create the respective inbound message type:	Yes								
	<table><tr><th>Inbound Message Type</th><th>Business Object</th></tr><tr><td>Customer Inbound Message Type</td><td>C1-CustomerInboundMessageType</td></tr><tr><td>Membership Inbound Message Type</td><td>C1-MemberInboundMessageType</td></tr><tr><td>ASO Customer Inbound Message Type</td><td>C1-ASOCustomerInboundMsgType</td></tr></table>		Inbound Message Type	Business Object	Customer Inbound Message Type	C1-CustomerInboundMessageType	Membership Inbound Message Type	C1-MemberInboundMessageType	ASO Customer Inbound Message Type	C1-ASOCustomerInboundMsgType
	Inbound Message Type		Business Object							
	Customer Inbound Message Type		C1-CustomerInboundMessageType							
	Membership Inbound Message Type		C1-MemberInboundMessageType							
ASO Customer Inbound Message Type	C1-ASOCustomerInboundMsgType									

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Inbound Message Type** screen.

- 4. Select the **ASO Customer Inbound Message Type**, **Customer Inbound Message Type**, or **Membership Inbound Message Type** business object to create the respective inbound message type.
- 5. Click **OK**.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object using which you are defining the inbound message type.	Not applicable
Person Business Object	Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed. <div><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</div>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Account Business Object	Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.	Yes
	<b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.	
Policy Type	Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.	Yes
	<b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.	
Policy Plan Business Object	Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.	Yes
	<b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.	
Hold Request Business Object	Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.	Yes
	<b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.	
Status on Policy Termination	Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.	Yes
	<b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.  You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.	

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Reinstatement	<p>Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p><b>Note:</b></p> <p>This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p> <p>You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Status on Policy Renewal	<p>Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.</p> <p><b>Note:</b></p> <p>This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p> <p>You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes
Status	<p>Used to indicate the status of the inbound message type. The valid values are:</p> <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

6. Enter the required details in the **Main** section.
7. Define characteristics for the inbound message type, if required.
8. Click **Save**.

The inbound message type is defined.

How to define a characteristic for an inbound message type	<a href="#">Defining a Characteristic for an Inbound Message Type</a> on page 1619

## Defining a Characteristic for an Inbound Message Type

### Prerequisites

To define a characteristic for an inbound message type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message Type**)

### Procedure

To define a characteristic for an inbound message type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying an inbound message type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Inbound Message Type</b> .	<b>Note:</b> This field is required while defining a characteristic for the inbound message type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required while defining a characteristic for the inbound message type.

2. Enter the required details in the **Characteristics** section.
3. If you want to define more than one characteristic for the inbound message type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the inbound message type, click the **Delete**  icon corresponding to the characteristic.

## Editing an Inbound Message Type

### Prerequisites

The following table lists the prerequisites for editing various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>Customer inbound message business objects defined in the application</li> <li>Person, account, and hold request business objects defined in the application</li> <li>Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy termination</li> <li>Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy renewal</li> <li>Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy reinstatement</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>Membership inbound message business objects defined in the application</li> </ul>
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>ASO customer inbound message business objects defined in the application</li> <li>Person, account, and policy plan business objects defined in the application</li> <li>Policy types defined in the application</li> </ul>

### Procedure

To edit an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Edit**  icon in the **Edit** column corresponding to the Inbound message type whose details you want to edit.

The **Inbound Message Type** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the inbound message type.
- **Characteristics** – Used to define characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Displays the inbound message type.	Not applicable
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Person Business Object	Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.  <b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.	Yes
Account Business Object	Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.  <b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.	Yes
Policy Type	Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.  <b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.	Yes
Policy Plan Business Object	Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.  <b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.	Yes
Hold Request Business Object	Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.  <b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Termination	<p>Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b></p> <p>This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p> <p>You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Status on Policy Reinstatement	<p>Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p><b>Note:</b></p> <p>This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p> <p>You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Status on Policy Renewal	<p>Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.</p> <p><b>Note:</b></p> <p>This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p> <p>You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

**Tip:** Alternatively, you can edit the details of an inbound message type by clicking the **Edit** button in the **Inbound Message Type** zone.

5. Modify the required details in the **Main** section.
6. Define, edit, or remove characteristics from the inbound message type, if required.
7. Click **Save**.

The changes made to the inbound message type are saved.

## **Copying an Inbound Message Type**

Instead of creating an inbound message type from scratch, you can create a new inbound message type using an existing inbound message type. This is possible through copying an inbound message type. On copying an inbound message type, the details including the characteristics are copied to the new inbound message type. You can then edit the details, if required.

#### **Prerequisites**

The following table lists the prerequisites for copying various inbound message types:

If you want to define a..	Then, you should have...
Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• Customer inbound message type (whose copy you want to create) defined in the application</li> <li>• Customer inbound message business objects defined in the application</li> <li>• Person, account, and hold request business objects defined in the application</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy termination</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy renewal</li> <li>• Status defined for the <b>C1-POLICY</b> business object to which a policy must be transitioned on policy reinstatement</li> </ul>
Membership Inbound Message Type	<ul style="list-style-type: none"> <li>• Membership inbound message type (whose copy you want to create) defined in the application</li> <li>• Membership inbound message business objects defined in the application</li> </ul>
ASO Customer Inbound Message Type	<ul style="list-style-type: none"> <li>• ASO customer inbound message type (whose copy you want to create) defined in the application</li> <li>• ASO customer inbound message business objects defined in the application</li> <li>• Person, account, and policy plan business objects defined in the application</li> <li>• Policy types defined in the application</li> </ul>

### **Procedure**

To copy an inbound message type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
4. In the **Inbound Message Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the inbound message type whose copy you want to create.  
The **Inbound Message Type** screen appears. It contains the following sections:
  - **Main** – Used to specify basic details about the inbound message type.
  - **Characteristics** – Used to define characteristics for the inbound message type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Type	Used to specify the inbound message type.	Yes
Business Object	Indicates the business object which is used while defining the inbound message type.	Not applicable
Person Business Object	<p>Used to indicate the business object using which you want to create a person when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Account Business Object	<p>Used to indicate the business object using which you want to create an account when the customer or ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> or <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Policy Type	<p>Used to indicate the policy type using which you want to create a policy when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Policy Plan Business Object	<p>Used to indicate the business object using which you want to create a policy plan when the ASO customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-ASOCustomerInboundMsgType</b> business object.</p>	Yes
Hold Request Business Object	<p>Used to indicate the business object using which you want to create a hold request for an account when the customer inbound message is processed.</p> <p><b>Note:</b> This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p>	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status on Policy Termination	<p>Used to indicate the status to which the policy must be transitioned when the policy termination request is processed through the customer inbound message.</p> <p><b>Note:</b></p> <p>This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p> <p>You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Status on Policy Reinstatement	<p>Used to indicate the status to which the policy must be transitioned when the policy reinstatement request is processed through the customer inbound message.</p> <p><b>Note:</b></p> <p>This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p> <p>You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Status on Policy Renewal	<p>Used to indicate the status to which the policy must be transitioned when the policy renewal request is processed through the customer inbound message.</p> <p><b>Note:</b></p> <p>This field appears only when you are defining an inbound message type using the <b>C1-CustomerInboundMessageType</b> business object.</p> <p>You must specify a status which is already defined in the lifecycle of the <b>C1-POLICY</b> business object.</p>	Yes
Inbound Message Business Object	Used to indicate the business object using which you want to create the respective inbound message.	Yes
Description	Used to specify the description for the inbound message type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the inbound message type.	No

**Tip:** Alternatively, you can copy an inbound message type by clicking the **Duplicate** button in the **Inbound Message Type** zone.

- Enter the required details in the **Main** section.
- Define, edit, or remove characteristics from the inbound message type, if required.
- Click **Save**.

The new inbound message type is defined.

## Deleting an Inbound Message Type

### Procedure

To delete an inbound message type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **I** and then click **Inbound Message Type**.  
A sub-menu appears.
- Click the **Search** option from the **Inbound Message Type** sub-menu.  
The **Inbound Message Type** screen appears.
- In the **Inbound Message Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the Inbound message type that you want to delete.  
A message appears confirming whether you want to delete the inbound message type.

**Note:** You can delete an inbound message type only when an inbound message is not created using the inbound message type.

**Tip:** Alternatively, you can delete an inbound message type by clicking the **Delete** button in the **Inbound Message Type** zone.

5. Click **OK**.

The inbound message type is deleted.

**Inbound Message (Used for Searching)**

The **Inbound Message** screen allows you to search for an inbound message using various search criteria. It contains the following zone:

- [Search Inbound Message](#) on page 1628

Through this screen, you can navigate to the following screen:

- [Inbound Message \(Used for Viewing\)](#) on page 1634

**Search Inbound Message**

The **Search Inbound Message** zone allows you to search for an inbound message using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for an inbound message using the inbound message or person details. The valid values are: <ul style="list-style-type: none"><li>• Message Details</li><li>• Person Details</li></ul>	Yes
	<b>Note:</b> By default, the <b>Message Details</b> option is selected.	
Inbound Message ID	Used to search a particular inbound message.	No
	<b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to search inbound messages with a particular status. The valid values are:</p> <ul style="list-style-type: none"> <li>• Pending</li> <li>• Processed</li> <li>• Rejected</li> <li>• Voided</li> </ul> <p><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</p>	No
Source System	<p>Used to search inbound messages which are received from a particular external system.</p> <p><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</p>	No
Created From	<p>Used to search inbound messages which are created from a particular date onwards.</p> <p><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</p>	No
External Source ID	<p>Used to search inbound messages which are received from a particular external source system.</p> <p><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</p>	No
Created To	<p>Used to search inbound messages which are created till a particular date.</p> <p><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</p>	No
External Transaction ID	<p>Used to search the inbound message which was a result of a particular transaction in the external source system.</p> <p><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</p>	No
User ID	<p>Used to search inbound messages which are created by a particular user.</p> <p><b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
External Batch ID	Used to search inbound messages which are created through a particular batch job.	No
	<b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
Inbound Message Type	Used to search inbound messages which are created using a particular inbound message type.	No
	<b>Note:</b> This field appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.	
Person Name	Used to search inbound messages through which a particular person and its related entities are created or updated in the system.	No
	<b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	
Person Identifier Type	Used to indicate the person identifier type.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	<b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to search inbound messages through which a particular person and its related entities are created or updated in the system.	Yes (Conditional)
	<b>Note:</b> This field appears only when the <b>Person Details</b> option is selected from the <b>Search By</b> list.	<b>Note:</b> If you specify the person identifier type as a search criteria, you have to specify the person identifier.

**Note:** You must specify at least one search criterion while searching for an inbound message.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Inbound Message Information	Displays information about the inbound message.
	<b>Note:</b> It has a link. On clicking the link, the <b>Inbound Message</b> screen appears where you can view the details of the respective inbound message.
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Processed</li> <li>• Rejected</li> <li>• Voided</li> </ul>

Column Name	Column Description
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Source ID	Displays the external source system ID.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
Person Information	Indicates the person whose record is created or updated in the system through the inbound message. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.
Created By	Indicates the user who has created the inbound message.  <b>Note:</b> This column appears only when the <b>Message Details</b> option is selected from the <b>Search By</b> list.
Creation Date	Displays the date when the inbound message is created in the system.

**Note:** Pagination is used to display limited number of records in the **Search Results** section. You can use the navigation links, such as **Previous** and **Next** to navigate between pages.

### Related Topics

How to search for an inbound message	<a href="#">Searching for an Inbound Message</a> on page 1631
How to view the details of an inbound message	<a href="#">Viewing the Inbound Message Details</a> on page 1633

## Searching for an Inbound Message

### Prerequisites

To search for an inbound message, you should have:

- Inbound message types defined in the application
- Values defined for the **C1-SourceSystemLookup** extendable lookup
- Person identifier types defined in the application

### Procedure

To search for an inbound message:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Integration** and then click **Inbound Message**.  
The **Inbound Message** screen appears.

- Enter the search criteria in the **Search Inbound Message** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

- Click **Search**.

A list of inbound messages that meet the search criteria appears in the **Search Results** section.

#### **Related Topics**

For more information on...	See...

<b>Search Inbound Message</b> zone	<a href="#">Search Inbound Message</a> on page 1628

## **Creating an Inbound Message**

Oracle Revenue Management and Billing allows you to create the following inbound messages by calling the respective inbound web service:

Inbound Message	Inbound Web Service
<a href="#">Customer Inbound Message</a> on page 1504	<a href="#">C1-CustomerStructureInboundMessage</a> on page 1632
<a href="#">Membership Inbound Message</a> on page 1542	<a href="#">C1-MembershipInboundMessage</a> on page 1633
<a href="#">ASO Customer Inbound Message</a> on page 1572	<a href="#">C1-ASOCustomerInboundMessage</a> on page 1633

You cannot create the above inbound messages from the user interface. However, you can define, edit, and remove a characteristic from the above inbound messages from the user interface. You can delete and submit the above inbound messages for validation and processing from the user interface and through a batch process.

### **C1-CustomerStructureInboundMessage**

The **C1-CustomerStructureInboundMessage** inbound web service enables you to create or update a person, account, contract, policy, policy plan, packaged savings, and billable charge for packaged savings. It also allows you to terminate, reinstate, or renew a policy. In addition, it allows you to hold an account for a given time period. However, only the bill generation process is kept on hold when the hold request is created for an account through a customer inbound message.

On calling the **C1-CustomerStructureInboundMessage** inbound web service, a customer inbound message is created in the **Pending** status. A customer inbound message goes through various statuses in its lifecycle. You can search for a customer inbound message through the **Inbound Message** screen.

Before calling the **C1-CustomerStructureInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1504.

## C1-MembershipInboundMessage

The **C1-MembershipInboundMessage** inbound web service enables you to create or update a membership in a policy plan, add or remove dependents from a membership, create or update the main subscriber or dependent person, associate a contract with a membership, add membership premium for a coverage period, or create billable charges for membership premium.

On calling the **C1-MembershipInboundMessage** inbound web service, a membership inbound message is created in the **Pending** status. A membership inbound message goes through various statuses in its lifecycle. You can search for a membership inbound message through the **Inbound Message** screen.

Before calling the **C1-MembershipInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1542.

## C1-ASOCustomerInboundMessage

The **C1-ASOCustomerInboundMessage** inbound web service enables you to create or update a parent customer and its bill groups. In addition, it allows you to create or update an account and self-funded policy for a bill group.

On calling the **C1-ASOCustomerInboundMessage** inbound web service, an ASO customer inbound message is created in the **Pending** status. An ASO customer inbound message goes through various statuses in its lifecycle. You can search for an ASO customer inbound message through the **Inbound Message** screen.

Before calling the **C1-ASOCustomerInboundMessage** inbound web service, you need to ensure that the prerequisites are setup as mentioned in [Prerequisites](#) on page 1573

## Viewing the Inbound Message Details

### Procedure

To view the details of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.

4. View the details of the inbound message in the **Inbound Message** zone.

**Related Topics**

For more information on...	See...
How to search for an inbound message	<a href="#">Searching for an Inbound Message</a> on page 1631
<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 1634
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 1634

## Inbound Message (Used for Viewing)

Once an inbound message is created, the **Inbound Message** screen allows you to:

- View the details of the inbound message
- Edit the details of the inbound message
- Delete the inbound message
- Submit the inbound message for validation and processing
- Resubmit the inbound message for validation and processing on failure
- Void the inbound message
- View the content of the inbound message
- View the log of the inbound message
- Add a log entry for the inbound message

The **Inbound Message** screen contains the following tabs:

- [Inbound Message - Main](#) on page 1634
- [Inbound Message - Message](#) on page 1636
- [Inbound Message - Log](#) on page 1637

### Inbound Message - Main

The **Main** tab displays information about the inbound message. It contains the following zone:

- [Inbound Message](#) on page 1634

#### Inbound Message

The **Inbound Message** zone displays the details of the inbound message. It contains the following sections:

- **Main** – Displays basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Status	Indicates the status of the inbound message. The valid values are: <ul style="list-style-type: none"><li>• Pending</li><li>• Processed</li><li>• Rejected</li><li>• Voided</li></ul>

Field Name	Field Description
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Inbound Message Type</b> screen appears where you can view the details of the respective inbound message type.
Source System	Indicates the external source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the external batch job through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** – Lists the characteristics defined for the inbound message. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the inbound message.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, or remove characteristics from the inbound message.
	<b>Note:</b> The <b>Edit</b> button appears only when the inbound message is in the <b>Pending</b> or <b>Rejected</b> status.
Delete	Used to delete the inbound message.
	<b>Note:</b> The <b>Delete</b> button appears only when the inbound message is in the <b>Pending</b> status.
Submit for Processing	Used to submit the inbound message for validation and processing.
	<b>Note:</b> The <b>Submit for Processing</b> button appears only when the inbound message is in the <b>Pending</b> status.
Retry	Used when you want to change the status of the inbound message from <b>Rejected</b> to <b>Pending</b> so that the inbound message can be considered once again for validation and processing.
	<b>Note:</b> The <b>Retry</b> button appears only when the inbound message is in the <b>Rejected</b> status.
Void	Used to cancel the inbound message.
	<b>Note:</b> The <b>Void</b> button appears only when the inbound message is in the <b>Rejected</b> status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the inbound message is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the status of the inbound message is updated.
Create Date/Time	Displays the date and time when the inbound message is created.

## Inbound Message - Message

The **Message** tab displays the content of the inbound message in the XML format. It contains the following zone:

- [Inbound Message Content](#) on page 1636

### Inbound Message Content

The **Inbound Message Content** zone displays the content of the inbound message in the XML format. By default, each tag in the inbound message is expanded. You can collapse the tag whenever required.

For more information about the tags, refer to the respective XML format section:

Inbound Message	XML Format
Customer Inbound Message	<a href="#">Customer Inbound Message XML Format</a> on page 1519
Membership Inbound Message	<a href="#">Membership Inbound Message XML Format</a> on page 1555
ASO Customer Inbound Message	<a href="#">ASO Customer Inbound Message XML Format</a> on page 1579

Once the inbound message is validated and processed either from the user interface or through a batch process, the following tags appear at the bottom of the inbound message in the **Inbound Message Content** zone:

Tag Name	Tag Description
toDoRetry	Displays the information about the retry option used for the inbound message.
retryDateTime	Displays the date and time when the retry option is used to change the status of the inbound message from <b>Rejected</b> to <b>Pending</b> .
numberOfRetries	Indicates the number of times the retry option is used for the inbound message.
currentErrorState	Indicates the status to which the inbound message is transitioned when its validation or processing fails. The valid value is: <ul style="list-style-type: none"> <li>• REJECTED</li> </ul>
isRetried	Indicates whether the retry option is used to change the status of the inbound message. The valid values are: <ul style="list-style-type: none"> <li>• true</li> <li>• false</li> </ul>

### Related Topics

For more information on...	See...
How to view the content of an inbound message	<a href="#">Viewing the Content of an Inbound Message</a> on page 1643

## Inbound Message - Log

The **Log** tab contains the following zone:

- [Inbound Message Log](#) on page 1637

### Inbound Message Log

The **Inbound Message Log** zone lists the complete trail of actions performed on the inbound message. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the inbound message.
Details	Displays the details about the action performed on the inbound message.
User	Indicates the user who has performed the action on the inbound message.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity which is created when the action is performed on the inbound message.
Status Reason	Indicates the reason why the status of the inbound message is changed.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

**Note:** You can manually add a log entry for the inbound message by clicking the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

## Editing an Inbound Message

### Procedure

To edit an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to edit.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Edit** button in the **Inbound Message** zone.

The **Inbound Message** screen appears. It contains the following sections:

- **Main** - Displays the basic information about the inbound message. It contains the following fields:

Field Name	Field Description
Inbound Message Information	Displays information about the inbound message.
Inbound Message Type	Indicates the inbound message type using which the inbound message is created.
Source System	Indicates the source system from where the inbound message is received.
External Transaction ID	Indicates the transaction in the external source system which resulted in the inbound message.
External Batch ID	Indicates the batch job in the external source system through which the inbound message is created.
External Source ID	Displays the external source system ID.

- **Characteristics** - Used to define, edit, or remove characteristics from the inbound message.

**Note:** The **Edit** button appears only when the inbound message is in the **Pending** or **Rejected** status.

5. Define, edit, or remove characteristics from the inbound message, if required.
6. Click **Save**.

The changes made to the inbound message are saved.

<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 1634
How to define a characteristic for an inbound message	<a href="#">Defining a Characteristic for an Inbound Message</a> on page 1638

## **Defining a Characteristic for an Inbound Message**

### **Prerequisites**

To define a characteristic for an inbound message, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Inbound Message**)

### **Procedure**

To define a characteristic for an inbound message:

1. Ensure that the **Characteristics** section is expanded when you are editing an inbound message.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the inbound message.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the inbound message.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Inbound Message</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the inbound message.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> If you select a predefined characteristic type, the <b>Search</b>  icon appears corresponding to the <b>Characteristic Value</b> field. On clicking the <b>Search</b> icon, the <b>Predefined Characteristic Search</b> window appears.  On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the inbound message.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the inbound message, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the inbound message, click the **Delete**  icon corresponding to the characteristic.

- Click **Save**.

The characteristics are defined for the inbound message.

For more information on...	See...
How to edit an inbound message	<a href="#">Editing an Inbound Message</a> on page 1637

## Deleting an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to delete the inbound message when it is not yet validated or processed. Note that you can delete an inbound message only when the inbound message is in the **Pending** status.

### Procedure

To delete an inbound message:

- 1. Search for the inbound message in the **Inbound Message** screen.
- 2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to delete.

The **Inbound Message** screen appears.

- 3. Ensure that the **Main** tab is selected.
- 4. Click the **Delete** button in the **Inbound Message** zone.

A message appears confirming whether you want to delete the inbound message.

**Note:** The **Delete** button appears only when the inbound message is in the **Pending** status.

- 5. Click **OK**.

The inbound message is deleted.

**Related Topics**

For more information on...	See...
How to search for an inbound message	<a href="#">Searching for an Inbound Message</a> on page 1631
<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 1634
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 1634

**Processing an Inbound Message**

**Prerequisites**

The following table lists the prerequisites which you should setup before processing the respective inbound message:

Inbound Message	Refer to...
Customer Inbound Message	<a href="#">Prerequisites</a> on page 1504
Membership Inbound Message	<a href="#">Prerequisites</a> on page 1542
ASO Customer Inbound Message	<a href="#">Prerequisites</a> on page 1573

**Procedure**

To process an inbound message:

- 1. Search for the inbound message in the **Inbound Message** screen.
- 2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to submit for validation and processing.

The **Inbound Message** screen appears.

- 3. Ensure that the **Main** tab is selected.
- 4. Click the **Submit for Processing** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Validation** and the algorithms attached to the **Validation** status are invoked in the specified sequence. If the validation is successful, the status of the inbound message is changed to **Processing** and the algorithms attached to the **Processing** status are invoked in the specified sequence. The following table lists how the system behaves when the respective inbound message is processed:

If the inbound message is a...	Then...
Customer inbound message	<p>Creates or updates a person, account, contract, policy, policy plan, packaged savings, and billable charge for packaged savings. If requested, it terminates, reinstates, or renews a policy. In addition, if requested, it holds an account for a given time period. However, only the bill generation process is kept on hold when the hold request is created for an account through a customer inbound message. Finally, status of the inbound message is changed to <b>Processed</b>.</p> <p>It creates a person and account using the person and account business objects, respectively, as specified in the inbound message type. It creates a policy using the policy type specified in the <b>C1-CINMSGPRC</b> algorithm. It creates a policy plan using the <b>Policy Plan BO (C1PPLNBO)</b> characteristic defined on the policy type.</p>
Membership inbound message	<p>Creates or updates a membership in a policy plan, adds or removes dependents from a membership, creates or updates the main subscriber or dependent person, associates a contract with a membership, adds membership premium for a coverage period, or creates billable charges for membership premium. Finally, the status of the inbound message is changed to <b>Processed</b>.</p> <p>It creates a membership using the <b>Membership BO (C1MEMBRO)</b> characteristic defined on the policy type. If the person who is the main subscriber or dependent in a membership does not exist, the system creates main subscriber or dependent person using the person business object specified in the inbound message type.</p>
ASO Customer Inbound Message	<p>Creates or updates a parent customer and its bill groups. In addition, it creates or updates an account and self-funded policy of a bill group. Finally, the status of the inbound message is changed to <b>Processed</b>.</p> <p>It creates a parent customer and bill group using the person business object specified in the inbound message type. It creates an account using the account business object specified in the inbound message type. It creates a self-funded policy using the policy type specified in the inbound message type.</p>

However, if the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected** and the algorithms attached to the **Rejected** status are invoked in the specified sequence. A To Do is created using the To Do type specified in the **C1-TDCRINMSG** algorithm and assigned to the users with the To Do role specified in the **C1-TDCRINMSG** algorithm.

**Note:** The **Submit for Processing** button appears only when the inbound message is in the **Pending** status.

### Related Topics

For more information on...	See...
How to search for an inbound message	<a href="#">Searching for an Inbound Message</a> on page 1631
<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 1634
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 1634

## Using the Retry Option for an Inbound Message

If the validation or processing fails due to any reason, the status of the inbound message is changed to **Rejected**. The system enables you to resubmit the inbound messages for validation and processing on failure. However, to resubmit the inbound message for validation and processing, you need to change the status of the inbound message from **Rejected** to **Pending**. This is possible through using the **Retry** option.

### Procedure

To use the retry option for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to use the retry option.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Ensure that the To Dos created for the inbound message are in the **Complete** status.
5. Click the **Retry** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Pending**.

**Note:** The **Retry** button appears only when the inbound message is in the **Rejected** status.

### Related Topics

For more information on...	See...

<b>Inbound Message</b> screen	<a href="#">Inbound Message (Used for Viewing)</a> on page 1634
<b>Inbound Message</b> zone	<a href="#">Inbound Message</a> on page 1634

## Voiding an Inbound Message

There might be situations when incorrect inbound messages are received in the system. In such case, the system provides you with an ability to void or cancel the inbound message after the validation or processing fails. Note that you can void or cancel an inbound message only when the inbound message is in the **Rejected** status.

### Procedure

To void an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message that you want to void.

The **Inbound Message** screen appears.

3. Ensure that the **Main** tab is selected.
4. Click the **Void** button in the **Inbound Message** zone.

The status of the inbound message is changed to **Voided**.

**Note:** The **Void** button appears only when the inbound message is in the **Rejected** status.

### Related Topics

## Viewing the Content of an Inbound Message

### Procedure

To view the content of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose details you want to view.

The **Inbound Message** screen appears.

3. Click the **Message** tab.

The **Message** tab appears.

4. View the content of the inbound message in the XML format in the **Inbound Message Content** zone.

### Related Topics

For more information on...	See...

## Viewing the Log of an Inbound Message

### Procedure

To view the log of an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message whose log you want to view.

The **Inbound Message** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the inbound message in the **Inbound Message Log** zone.

### Related Topics

## Adding a Log Entry for an Inbound Message

### Procedure

To add a log entry for an inbound message:

1. Search for the inbound message in the **Inbound Message** screen.
2. In the **Search Results** section, click the link in the **Inbound Message Information** column corresponding to the inbound message for which you want to add a log entry.

The **Inbound Message** screen appears.

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Inbound Message Log** zone.

The **Add Inbound Message Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Inbound Message Information	Displays information about the inbound message.	Not applicable
Log Details	Used to specify additional comments on the inbound message.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Inbound Message Log** zone.

## Policy-Membership Overview

---

### Topics:

- [Policy Status Transition](#)
- [Algorithms Used in C1-Policy](#)
- [Algorithms Used in C1-Membership](#)
- [Prerequisites](#)
- [Policy Type](#)
- [Policy Person Role](#)
- [Policy \(Used for Searching\)](#)
- [Policy \(Used for Viewing\)](#)
- [Membership](#)
- [Membership Information](#)

The policy is a contract between the insurer and the insured, known as the policy holder, which determines the claims which the insurer is legally required to pay. In exchange for an initial payment, known as the premium, the insurer promises to pay for loss caused by perils covered under the policy statement.

Oracle Revenue Management and Billing allows you to create policy. While creating a policy, you need to specify the policy type using which you want to create the policy. It is the policy type which helps the system to determine:

- Policy belongs to which group of customers.

Under policy, you will have multiple plans; one plan is associated with one product. So, once you create a policy, you can associate it with a plan represented by the membership entity. Each plan has a coverage period and corresponding to it, contract is created which is having a premium. Every policy has main subscriber (holder of the policy).

The membership person is billed with the billable charge (called as premium) which is linked to the membership as eligibility based premium or fees contract through a membership contract.

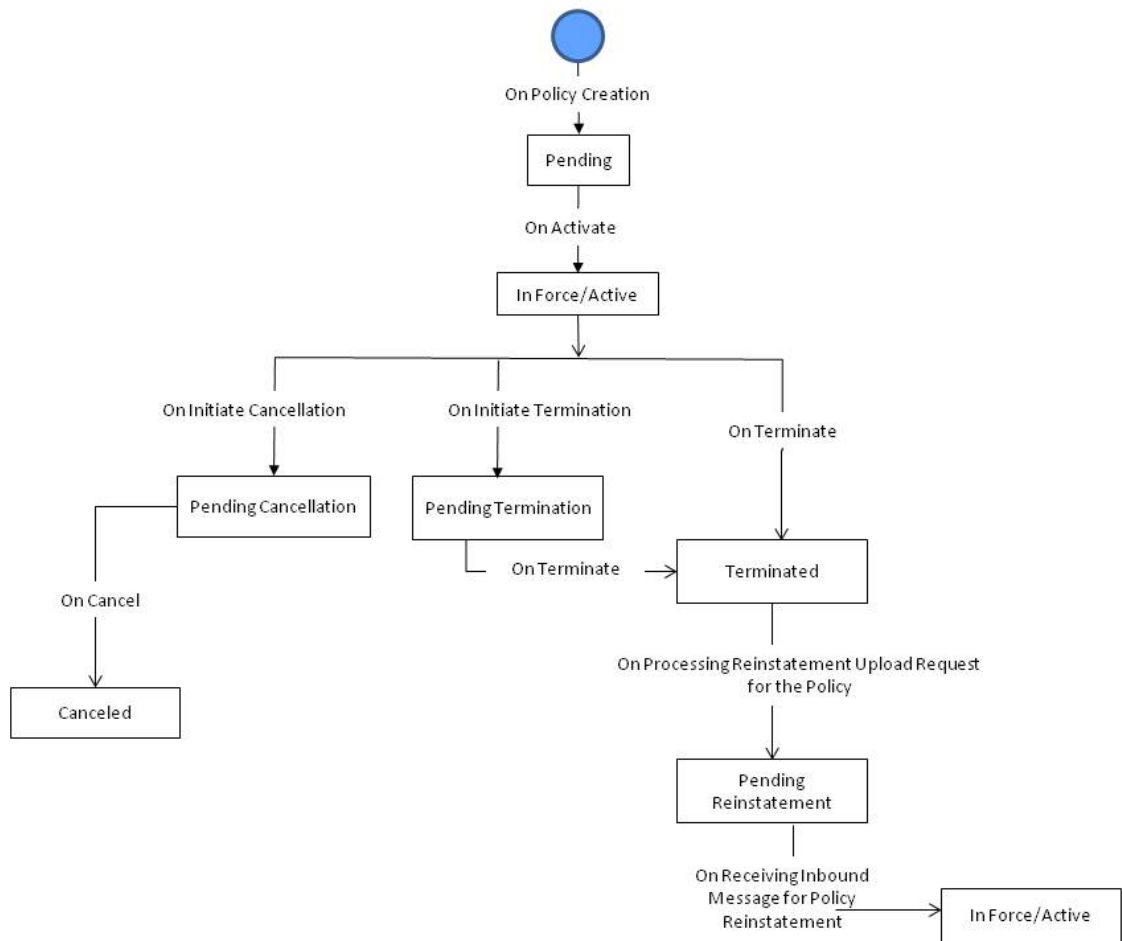

During the policy creation process, a policy goes through various statuses in its lifecycle. For more information about the policy statuses, see [Policy Status Transition](#) on page 1646

Note that the lifecycle of a policy is driven by the business object using which the policy is created. A policy and membership business object named **C1-Policy** and **C1-Membership** respectively are shipped with the product. The policy feature explained in this document is articulated based on the lifecycle and logic defined in the **C1-Policy**

For more information on how to setup the policy processes, see prerequisites [Prerequisites](#) on page 1657

## Policy Status Transition

The following figure graphically indicates how a policy moves from one status to another:

**Note:** A policy will be set to **Pending Reinstatement** only through the upload request and cannot be done manually from the screen. Then, through an inbound message, a policy status will be changed from the **Pending Reinstatement** to **Reinstatement**.

## Algorithms Used in C1-Policy

The following table lists the algorithms which are attached to the **C1-Policy** business object:

System Event	Algorithm	Algorithm Type	Description
Validation	C1-POLBOVAL	C1-POLBOVAL	<p>This algorithm validates the below conditions:</p> <ul style="list-style-type: none"> <li>• End date of policy must be later than its start date</li> <li>• Following are the policy person validations: <ul style="list-style-type: none"> <li>• Policy person start and end dates should be within the start and end dates of policy.</li> <li>• Person end date must be later than its start date.</li> <li>• There must be one main customer for a policy.</li> <li>• Policy person role is mandatory.</li> </ul> </li> <li>• If Algorithm parameter is provided and if Policy Status is within the list of statuses provided on Algorithm Parameter then Policy Person End Date Validation will be skipped.</li> <li>• Parameter 'State Of Issue' and 'Base Policy Indicator' Characteristic Types are not mandatory. If provided in the parameter value, then the same characteristics should exists on Policy.</li> </ul>
Post-Processing	C1-POLPRDCHR	C1-POLPRDCHR	<p>This algorithm creates following policy period characteristics during creation of a new policy:</p> <ul style="list-style-type: none"> <li>• Policy period start date</li> <li>• Policy period end date</li> </ul> <p>An optional parameter, which is calculated as policy period add days - if the policy period end days have an offset days.</p>

The following table lists the algorithms which are used in the lifecycle of the **C1-Policy** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	Monitor	C1-TRNDFLSYS	C1-TRNDFLSYS	This Algorithm verifies if the request is created online or manually.
Activate	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input next status or to the status related to the input next transition condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
In Force/ Active	Enter	C1-EVCSTSTAT	C1-EVCSTSTAT	This algorithm evaluates if the customer status is Active or Inactive. If all the policies of the customer are terminated, it is deemed that the customer is Inactive. If the customer owns at least one active policy, the customer is deemed as Active.
In Force/ Active	Enter	C1-ADDRFAGCH	C1-ADDRFAGCH	<p>This algorithm is responsible for adding account aging refresh characteristic for set of accounts while activating or terminating the policy. This algorithm has following parameters:</p> <ul style="list-style-type: none"> <li>Account Aging Refresh Characteristic Type to add at Account level</li> <li>Account Aging Refresh Characteristic Type value to add at Account level</li> <li>Policy Plan Characteristic Type to determine policy plan at Contract</li> <li>Previous Main Customer Characteristic Type to determine previous main customer</li> </ul>
Pending Termination	Monitor	C1-PTRMCRTTD	C1-PTRMCRTTD	<p>This algorithm creates To Do entry if object is waiting in the specific status for the given number of days. Input parameters are:</p> <ul style="list-style-type: none"> <li>Maximum Wait Days - After Maximum Wait Days To Do gets generated for specified To Do Type.</li> <li>To Do Type Role - Optional. If provided then used to create To Do for this Role else the default one on To Do Type will be used.</li> <li>To Do Type - To Do Type to create a TO Do If Maximum Wait Days are reached for the BO status.</li> <li>Transition To Previous Status - Optional. If provided then used to check if policy should be transitioned to previous status or not.</li> <li>Next Status - Optional. If provided then used to set the next status value.</li> <li>Next Transition Condition (Optional)- If provided then used to set next status condition.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
Pending Termination	Enter	C1-PLCYTRMRQ	C1-PLCYTRMRQ	<p>This algorithm creates an outbound message for a termination request. It also creates policy log to store outbound message ID details. Parameters are:</p> <ul style="list-style-type: none"> <li>• External System - Holds other external system configuration.</li> <li>• Outbound Message Type - Holds the Outbound Message BO.</li> <li>• Bill Group Identifier Type - Identifier type of the bill group.</li> <li>• Previous Main Customer Characteristic Type -To get the characteristic type of previous customer while deriving account id in building termination request XML.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
Terminated	Enter	C1-POLCYTERM	C1-POLCYTERM	<p>This algorithm performs the necessary logic to terminate a policy. End date would be updated and the original end date would be stored. The end date can also cascade to relate objects. Triggers auto transition for related membership parameters are as follows:</p> <ul style="list-style-type: none"> <li>• Cascade End Date to Policy Person: Policy person's end date will be ended with terminate date if applicable.</li> <li>• Cascade End Date to Membership: Policy members' end date will be ended with terminate date if applicable.</li> <li>• Original End Date Characteristic Type: The Characteristic Type of the end date before new end date got stamped.</li> <li>• Membership BO Old Status: The old status of the membership BO.</li> <li>• Membership BO New Status: Member BO will be auto transitioned to this status if applicable</li> <li>• Cascade End Date to Billable Charge: Policy membership billable charges will be ended with terminate date if applicable.</li> <li>• Billable Charge Add Days: Used to process terminate proration rule.</li> <li>• Policy Characteristic Type: The characteristic type of the policy.</li> <li>• Billable Charge Previous End Date Char Type: The char type of the billable charge with a previous end date.</li> <li>• Use of Termination Proration Rule: Reinstate Policy Algorithm will start on giving the proration rule and proration rule characteristic type is validated.</li> <li>• Enrollment/Termination Proration Rule Characteristic Type: The characteristic type of the termination proration rule.</li> <li>• Policy Plan Characteristic Type: The characteristic type of the policy plans fetches policy plan char type label.</li> <li>• Proration Rule Characteristic Type: The characteristic type of the proration rule and fetches proration rule char type label.</li> <li>• Invoice Day Characteristic Type: The characteristic type of the invoice day and fetches invoice day char type label.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
Terminated	Enter	C1-DELTRMLTR	C1-CRTCUSCNT	<p>This algorithm creates a customer contact depending on the following conditions:</p> <ul style="list-style-type: none"> <li>When the Check Policy Status Reason parameter is set to Y and the provided status reason is specified in the policy status reason code list parameter.</li> <li>When the Check Policy Status Reason parameter is blank or N.</li> </ul> <p>It also provides the option to consolidate policies into one customer contact for the same customer.</p>
Terminated	Enter	C1-EVCSTSTAT	C1-EVCSTSTAT	<p>This algorithm evaluates if the customer status is Active or Inactive. If all the policies of the customer are terminated, it is deemed that the Customer is Inactive. If the Customer owns at least one active policy, the customer is deemed as Active.</p>
Terminated	Enter	C1-MBRTMCC	C1-POLCCMBR	<p>This algorithm creates a customer contact for each active main subscriber associated with the policy being transitioned if the following conditions are met:</p> <ul style="list-style-type: none"> <li>If the Check Policy Status Reason is set to No.</li> <li>If the Check Policy Status Reason is set to Yes and the status reason is specified in the configured Policy Status Reason Code List parameter.</li> <li>If the State of Issue and Letter Template Characteristic Types are provided and the Policy's State of Issue has a matching Letter Template Characteristic configured on the Division.</li> </ul> <p>The algorithm adds a log entry to the policy to indicate the number of customer contacts created for the policy. The policy id is stamped on the created customer contacts as a characteristic.</p>

Status	System Event	Algorithm	Algorithm Type	Description
Terminated	Enter	C1-ADDRFAGCH	C1-ADDRFAGCH	<p>This algorithm adds Account Aging Refresh Characteristic for set of accounts while activating or terminating the Policy. This algorithm has following parameters:</p> <ul style="list-style-type: none"> <li>Account Aging Refresh Characteristic Type to add at account level</li> <li>Account Aging Refresh Characteristic Type value to add at account level</li> <li>Policy Plan Characteristic Type to determine policy plan at contract</li> <li>Previous Main Customer Characteristic Type to determine previous main customer</li> </ul>
Pending Reinstatement	Monitor	C1-PREICRTTD	C1-MONCRTETD	<p>This algorithm creates To Do Entry if object is waiting in the specific status for the given number of days. Input Parameters are:</p> <ul style="list-style-type: none"> <li>Maximum Wait Days - After Maximum Wait Days, To Do gets generated for specified To Do Type.</li> <li>To Do Type Role (Optional) - If provided then used to create To Do for this Role else the default one on To Do Type will be used.</li> <li>To Do Type - To Do Type to create a TO Do If Maximum Wait Days are reached for the BO status.</li> <li>Transition To Previous Status (Optional) - If provided then used to check if policy should be transitioned to previous status or not.</li> <li>Next Status (Optional) - If provided then used to set the next status value.</li> <li>Next Transition Condition (Optional) - If provided then used to set next status condition.</li> </ul>
Pending Reinstatement	Enter	C1-PLCYREIRQ	C1-PLCYREIRQ	<p>This algorithm creates an outbound message for reinstate request. It also creates policy log to store outbound message ID details. Parameters are:</p> <ul style="list-style-type: none"> <li>External System - Holds other external system configuration.</li> <li>Outbound Message Type - Holds the Outbound Message business object.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
Reinstate	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	This algorithm type transitions business object current state to the input Next Status or to the status related to the input Next Transition Condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.

Status	System Event	Algorithm	Algorithm Type	Description
Reinstate	Enter	C1-POLCYREIN	C1-POLCYREIN	<p>This algorithm performs the necessary logic to reinstate a policy. End date would be updated and the original end date would be restored. The end date can also cascade to relate Objects. The persons related to the policy, membership status and the billable charges related to the person are also updated. Policy Period End Date will be restored. Triggers Auto Transition for related membership parameters are:</p> <ul style="list-style-type: none"> <li>• Cascade End Date to Persons - Policy persons end date will be restored to Policy Period End Date if applicable.</li> <li>• Cascade End Date to Plans - Policy plans' end date will be restored to Policy Period End Date if applicable.</li> <li>• Cascade End Date to Membership - Policy membership end date will be restored to Policy Period End Date if applicable.</li> <li>• Policy Period End Date Characteristic Type - The Characteristic Type of the end date before new end date got stamped.</li> <li>• Membership Old Status - The old status of the membership BO Membership New Status: Membership BO will be auto transitioned to this status if applicable.</li> <li>• Cascade End Date to Billable Charge - Policy plan memberships' billable charges will be restored to Policy Period End Date if applicable.</li> <li>• Policy Characteristic Type - The characteristic type of the policy.</li> <li>• Billable Charge Previous End Date Char Type - The char type of the billable charge with a previous end date.</li> <li>• Use of Termination Proration Rule - Reinstate Policy Algorithm will start on giving the proration rule and proration rule characteristic type is validated.</li> <li>• Contract Plan Characteristic Type - The characteristic type of the policy plans fetches policy plan char type label.</li> <li>• Proration Rule Characteristic Type - The characteristic type of the proration rule and fetches proration rule char type label.</li> <li>• Invoice Day Characteristic Type - The characteristic type of the invoice day and fetches invoice day char type label.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
Reinstate	Enter	C1-CCPOLRE1	C1-CRTCUSCNT	<p>This algorithm creates a customer contact depending on the following conditions:</p> <ul style="list-style-type: none"> <li>When the Check Policy Status Reason parameter is set to Y and the provided status reason is specified in the policy status reason code list parameter.</li> <li>When the Check Policy Status Reason parameter is blank or N.</li> </ul> <p>It also provides the option to consolidate policies into one customer contact for the same customer.</p>
Renewal	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	<p>This algorithm type transitions business object current state to the input next status or to the status related to the input next transition condition. Either one but not both soft parameters may be specified. If both soft parameters are not specified, the business object will be transitioned to the default next status specified on lifecycle. Algorithms of this algorithm type may be defined for any business object status as its monitor algorithm.</p>
Pending Cancellation	-	-	-	-
Cancelled	-	-	-	-

Parameters are:</p> <ul style="list-style-type: none"> <li>External System - Holds other external system configuration.</li> <li>Outbound Message Type - Holds the Outbound Message BO.</li> <li>Bill Group Identifier Type - Identifier type of the bill group.</li> <li>Previous Main Customer Characteristic Type -To get the characteristic type of previous customer while deriving account id in building termination request XML.</li> </ul>

## Algorithms Used in C1-Membership

The following table lists the algorithms which are attached to the **C1-Membership** business object:

System Event	Algorithm	Algorithm Type	Description
Validation	C1-VALMEMBO	C1-VALMEMBO	This algorithm validates the membership business object. The core fields are validated (Date Fields). An optional parameter policy status is provided if membership needs to be within related Policy's Dates.

## Prerequisites

To setup the policy-membership process, you need to do the following:

- Define the termination reasons for the **C1-Policy** business object
- Define the required status reasons for the **C1-Policy** business object.
- Define the required policy types in the system.
- Define the required source systems in the system.
- Define the required policy person roles in the system.
- Define the required characteristic types where the characteristic entity is set to **Policy**.
- Define the required characteristic types where the characteristic entity is set to **Policy Type**.

## Policy Type

Oracle Revenue Management and Billing allows you to define a policy type using which you can define a policy. The **Policy Type** screen allows you to define, edit, copy, and delete a policy type. It contains the following zones:

- [Policy Type List](#)
- [Policy Type](#)

### Policy Type List

The **Policy Type List** zone lists policy types that are already defined in the system. You can add, edit, copy, and delete a policy type through this zone. It contains the following columns:

Column Name	Column Description
Policy Type	Displays the policy type.
Description	Displays the description of the policy type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Policy Type</b> screen appears where you can edit the details of the policy type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Policy Type</b> screen appears where you can define a policy type using an existing policy type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the policy type.  <b>Note:</b> You can delete a policy type only when you have not created a policy using the policy type.

You can define a policy type by clicking the **Add** button in the upper right corner of this zone. On clicking the **Broadcast**  icon corresponding to the policy type column, **Policy Type** zone appears with the details of the respective policy type.

How to delete a policy type	<a href="#">Deleting a Policy Type</a> on page 1661

**Policy Type**

The **Policy Type** zone displays the details of the policy type. It contains the following sections:

- **Main** - Displays basic information about the policy type. It contains the following fields:

Field Name	Field Description
Policy Type	Displays the policy type.
Related Transaction BO	Indicates the business object that will be used to create the policy. <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the policy type.
Status	Indicates the status of the policy type. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Inactive</li></ul>
Detailed Description	Displays additional information about the policy type.

- **Characteristics** - Lists the characteristics defined for the policy type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the policy type.
Delete	Used to delete the policy type. <b>Note:</b> You can delete a policy type only when you have not created a policy using the policy type.
Duplicate	Used to create a new policy type using an existing policy type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the policy type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Policy Type** zone does not appear in the **Policy Type** screen. It appears only when you click the **Broadcast**  icon corresponding to the policy type in the **Policy Type List** zone.

## Defining a Policy Type

### Prerequisites

To define a policy type, you should have:

- **C1-ASOPolicy** business object for the policy.
- **C1-POLICY** maintenance object for the policy.
- **C1-INS-POLICY** application service for the policy.

### Procedure

To define a policy type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **P** and then click **Policy Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Policy Type** sub-menu.

The **Policy Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the policy type.
- **Characteristics** - Used to define characteristics for the policy type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Indicates the policy type business object used while defining the policy type.	Not applicable
Related Transaction BO	Used to indicate the business object that you want to use while defining the policy.	Yes
Description	Used to specify the description for the policy type.	No
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	No
Detailed Description	Used to specify additional information about the policy type.	No

- Enter the required details in the **Main** section.
- Define the characteristics for the policy type, if required.
- Click **Save**.

The policy type is defined.

## Editing a Policy Type

### Procedure

To edit a policy type:

- Click the **Menu** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **P** and then click **Policy Type**.  
A sub-menu appears.
- Click the **Search** option from the **Policy Type** sub-menu.  
The **Policy Type** screen appears.
- In the **Policy Type List** zone, click the **Edit** () icon in the **Edit** column corresponding to the policy type whose details you want to edit.

The **Policy Type** screen appears. It contains the following sections:

- Main** - Used to specify basic details about the policy type.
- Characteristics** - Used to define characteristics for the policy type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Displays the policy type.	Not applicable
Business Object	Displays the business object used while defining the policy type.	Not applicable
Related Transaction BO	Used to indicate the business object that you want to use while defining the policy.	Yes
Description	Used to specify the description for the policy type.	No
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	No
Detailed Description	Used to specify the additional information about the policy type.	No

**Tip:** Alternatively, you can click the **Edit** button in the **Policy Type** zone to edit the details of the policy type.

5. Modify the required details.
6. Define, edit, or remove characteristics from the policy type, if required.
7. Click **Save**.

The changes made to the policy type are saved.

## **Deleting a Policy Type**

### **Procedure**

To delete a policy type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin Menu**, select **P** and then click **Policy Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.  
The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Delete** () icon in the **Delete** column corresponding to the policy type that you want to delete.

A message appears confirming whether you want to delete the policy type.

**Note:** You can delete a policy type only when you have not created a policy using the policy type.

**Tip:** Alternatively, you can click the **Delete** button in the **Policy Type** zone to delete the policy type.

5. Click **OK**.

The policy type is deleted.

**Related Topics**

<b>Policy Type</b> zone	<a href="#">Policy Type</a>

**Copying a Policy Type**

Instead of creating a policy type from scratch, you can create a new policy type using an existing policy type. This is possible through copying a policy type. On copying a policy type, the details including the characteristics are copied to the new policy type. You can then edit the details, if required.

**Prerequisites**

To copy a policy type, you should have:

- Policy type (whose copy you want to create) defined in the application
- Policy business objects defined in the application

**Procedure**

To copy a policy type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin Menu**, select **P** and then click **Policy Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Policy Type** sub-menu.  
The **Policy Type** screen appears.
4. In the **Policy Type List** zone, click the **Duplicate**( icon in the **Duplicate** column corresponding to the policy type whose copy you want to create.  
The **Policy Type** screen appears. It contains the following sections:
  - **Main** - Used to specify basic details about the policy type.
  - **Characteristics** - Used to define characteristics for the policy type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Used to specify the policy type.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Displays the policy type business object used while defining the policy type.	Not applicable
Related Transaction BO	Used to indicate the business object that you want to use while defining the policy.	Yes
Description	Used to specify the description for the policy type.	Yes
Status	Used to indicate the status of the policy type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Detailed Description	Used to specify additional information about the policy type.	No

**Tip:** Alternatively, you can click the **Duplicate** button in the **Policy Type** zone to create a copy of the policy type.

5. Modify the required details.
6. Define, edit, or remove characteristics from the policy type, if required.
7. Click **Save**.

A new policy type is defined.

## Policy Person Role

The **Policy Person Role** screen allows you to define a role that you can assign to a person while creating a policy. It also allows you to edit and delete a policy person role. It contains the following zone:

- [Policy Person Role List](#) on page 1663

### Policy Person Role List

The **Policy Person Role List** zone lists the roles that you can assign to a person while creating a policy. It contains the following columns:

Column Name	Column Description
Policy Person Role	Displays the policy person role.
Description	Displays the description of the policy person role.

Column Name	Column Description
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Policy Person Role</b> screen appears where you can edit the details of the policy person role.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the policy person role.
	<b>Note:</b> You cannot delete a role if it is assigned to a person.

You can define a new policy person role by clicking the **Add** link in the upper-right corner of this zone.

**Defining a Policy Person Role**

**Procedure**

To define a policy person role:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin Menu**, select **P** and then click **Policy Person Role**.  
The **Policy Person Role** screen appears.
3. Click the **Add** link in the upper right corner of the **Policy Person Role List** zone.  
The **Policy Person Role** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Person Role	Used to specify the policy person role.	Yes
Description	Used to specify the description for the policy person role.	Yes

4. Enter the required details.
5. Click **Save**.  
The policy person role is defined.

## Editing a Policy Person Role

### Procedure

To edit a policy person role:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin Menu**, select **P** and then click **Policy Person Role**.  
The **Policy Person Role** screen appears.
3. Click the **Edit** () icon in the **Edit** column corresponding to the policy person role whose details you want to edit.

The **Policy Person Role** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Person Role	Displays the policy person role.	Not applicable
Description	Used to modify the description of the policy person role.	Yes

4. Modify the description, if required.
5. Click **Save**.  
The changes made to the policy person role are saved.

## Policy (Used for Searching)

The **Policy** screen allows you to search for a policy using various search criteria. It also allows you to create a policy. Through this screen, you can navigate to the following screen:

- [Policy \(Used for Viewing\)](#) on page 1675

This screen contains the following zone:

- [Search Policy](#) on page 1666

## Search Policy

The **Search Policy** zone allows you to search for a policy using various search criteria. It contains the following two sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a policy using various policy options. The valid values are: <ul style="list-style-type: none"> <li>• Policy Date / Policy Type / Status</li> <li>• Source System / Policy Number / Description</li> <li>• Person Name / Person Identifier</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Policy Date / Policy Type / Status</b> option is selected.	
Policy Type	Used to search a policy using various policy types.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Date / Policy Type / Status</b> option from the <b>Search By</b> list.	
Start Date	Used to specify the date from when the policy is effective.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Date / Policy Type / Status</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Status	<p>Used to search a policy by using various statuses of the policy. The valid values are:</p> <ul style="list-style-type: none"> <li>• In Force / Active</li> <li>• Cancelled</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Resinstatement</li> <li>• Pending Termination</li> <li>• Pending Termination Overriden</li> <li>• Reinstated</li> <li>• Run Out</li> <li>• Terminated</li> </ul> <p><b>Note:</b> This field appears only when you select the <b>Policy Date / Policy Type / Status</b> option from the <b>Search By</b> list.</p>	No
End Date	<p>Used to specify the date till when the policy is effective.</p> <p><b>Note:</b> This field appears only when you select the <b>Policy Date / Policy Type / Status</b> option from the <b>Search By</b> list.</p>	No
Source System	<p>Used to indicate a policy by providing the name of the external system from where the policy is originated.</p> <p><b>Note:</b> This field appears only when you select the <b>Source System / Policy Number / Description</b> option from the <b>Search By</b> list.</p>	No
Policy Number	<p>Used to search a policy by specifying the policy number.</p> <p><b>Note:</b> This field appears only when you select the <b>Source System / Policy Number / Description</b> option from the <b>Search By</b> list.</p>	No
Description	<p>Used to search a policy by providing the description of the policy.</p> <p><b>Note:</b> This field appears only when you select the <b>Source System / Policy Number / Description</b> option from the <b>Search By</b> list.</p>	No
Person Name	<p>Used to search a policy by providing the stakeholder of the policy.</p> <p><b>Note:</b> This field appears only when you select the <b>Person Name / Person Identifier</b> option from the <b>Search By</b> list.</p>	No

Field Name	Field Description	Mandatory (Yes or No)
Person Identifier Type	Used to search a policy by specifying the person identifier type.	No
	<b>Note:</b> This field appears only when you select the <b>Person Name / Person Identifier</b> option from the <b>Search By</b> list.	
Person Identifier	Used to search a policy by specifying the person identifier.	No
	<b>Note:</b> This field appears only when you select the <b>Person Name / Person Identifier</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a policy.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Policy Number	Displays the policy number.
Information	Displays additional information of the policy.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy Information</b> screen appears where you can view the details of the respective person.
Source System	Displays the name of the external system from where the policy is originated.
Description	Displays the description of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Status	Indicates the status of the policy.
Main Customer	Displays information about a person. In addition, this column has a context menu which helps in navigating to other screens within the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person. If you select <b>Person Name / Person Identifier</b> option from the <b>Search By</b> list, this column displays whether the person is the main customer. The valid values are: <ul style="list-style-type: none"><li>• Yes</li><li>• No</li></ul>

Column Name	Column Description
Person Information	Displays information about person. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Person</b> screen appears where you can view the details of the respective person.</p> <p>This column appears only when you select the <b>Person Name / Person Identifier</b> option from the <b>Search By</b> list.</p>
Policy Person Role	<p>Displays the role of a person in the policy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Policy Holder</li> <li>• Subscriber</li> <li>• Dependant</li> <li>• Underwriting Co.</li> </ul>
	<p><b>Note:</b></p> <p>This column appears only when you select the <b>Person Name / Person Identifier</b> option from the <b>Search By</b> list.</p>
Main Customer	<p>Displays whether the person is the main customer of the policy. The valid values are:</p> <ul style="list-style-type: none"> <li>• Y</li> <li>• N</li> </ul>
	<p><b>Note:</b> This column appears only when you select the <b>Person Name / Person Identifier</b> option from the <b>Search By</b> list.</p>

You can create a new policy by clicking the **Add** button in the page title area of the screen.

## Searching a Policy

### Prerequisites

To search a policy, you should have:

- Policy types defined in the application
- Person created in the system
- Source systems defined in the system

### Procedure

To search a policy:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Policy**.  
A sub-menu appears.
3. Click the **Search** option from the **Policy** sub-menu.  
The **Policy** screen appears.
4. Enter the search criteria in the **Search Policy** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of policies that meet the search criteria appear in the **Search Results** section.

**Viewing the Details of a Policy**

**Procedure**

To view the details of a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Information** column corresponding to the policy whose details you want to view.

The **Policy Information** screen appears. It consists of the following tabs:

- [Policy - Main](#) on page 1676
- [Policy - Plan](#) on page 1680
- [Policy - Log](#) on page 1681

3. Ensure that the **Main** tab is selected.
4. View the details of the policy in the **Policy** zone.

**Related Topics**

## Defining a Policy

### Prerequisites

To create a policy, you should have:

- Policy types defined in the application.

### Procedure

To create a policy:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Person Information** and then click **Policy**.  
A sub-menu appears.
3. Click the **Add** option from the **Policy** sub-menu.  
The **Select Policy Type** screen appears.
4. Select the **Policy Type** from the list.
5. Click **OK**.

The **Policy** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the policy.
- **Persons** - Used to specify the basic detail of persons associated with a policy.
- **Characteristics** - Used to define characteristics for the policy.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Policy Type	Displays the type of policy.	Not applicable
Policy Number	Used to specify the policy number.	Yes
Description	Used to specify the description of the policy.	No
Source System	Used to specify the name of the external system from where the policy originated.	Yes
Start Date	Used to specify the date from when the policy is effective.	Yes
End Date	Used to specify the date till when the policy is effective.	No
Runout End Date	Used to specify the date when the runout period of the policy ends.  <b>Note:</b> The runout end date cannot be earlier than the policy's end date. You must specify the runout end date when you are defining a self-funded policy.	

Field Name	Field Description	Mandatory (Yes or No)
Runout Administration Fees	Used to indicate whether the administration fees must be charged when the claim transaction for the policy is processed in the runout period. The valid values are: <ul style="list-style-type: none"> <li>None</li> <li>Percentage of Claim</li> </ul>	No
	<b>Note:</b> At present, this field is used only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.  You must specify the runout administration fees when you are defining a self-funded policy.	

The **Persons** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Person Information	Used to indicate the person ID.	Yes
Sequence	Used to specify the sequence number.	Yes
Policy Person Role	Used to indicate the role that can be assigned to a person while creating a policy.	Yes
Main Customer	Used to assign the person as a main customer for the policy.	Yes (Conditional)
		<b>Note:</b> At least one person should be selected as <b>Main Customer</b> for a policy
Start Date	Used to specify the date from when the policy is effective.	Yes
End Date	Used to specify the date till when the policy is effective.	No

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the policy.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Policy</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the policy.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the policy.

6. Click **Save**.

The policy is created with the status as **Pending**.

**Tip:** Alternatively, you can access the **Select Policy Type** screen by clicking the **Add** button in the page title area of the **Policy** screen.

## Associating a Person with a Policy

### Procedure

To associate person with a policy:

1. Search for the policy in the **Policy** screen.
2. In the **Search Results** section, click the link in the **Information** column corresponding to the policy with which you want to associate a person.

The **Policy Information** screen appears.

3. Click the **Edit** button.

The **Policy** screen appears.

4. In the **Persons** section, enter the required person details.

**Note:** On clicking the **Search** (🔍) icon, you can search for a specific person ID.

5. If you want to associate more than one person with the policy, click the **Add** (+) icon and then repeat step 4.

**Note:** However, if you want to dissociate a person from the policy, click the **Delete** () icon corresponding to the person ID.

6. Click **Save**.

The selected person is associated with the policy.

How to define the characteristics for the policy	<a href="#">Defining Characteristics for a Policy</a> on page 1674

**Defining Characteristics for a Policy**

Following characteristics types are mandatory for to define a policy:

- While adding policy, there are five characteristics that are mandatory, which is defined on the **C1-Policy** business object.
- Proration Rule characteristic type should be defined with a pre-defined characteristic value.
- Base Policy Indicator characteristic type should be defined with a pre-defined characteristic value.
- State of Issue characteristic type should be defined with a pre-defined characteristic value.
- Rating Zip Code should be defined with a characteristic value.
- Policy Suffix Value should be defined with a characteristic value.

**Procedure**

To define characteristics for a policy:

1. Ensure that the **Characteristics** section is expanded when you are defining or editing a policy.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the policy.	Yes (Conditional)
	<b>Note:</b> The date should be on or before the policy start date.	<b>Note:</b> This field is required when you are defining a characteristic for the policy.
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to policy.	<b>Note:</b> This field is required when you are defining a characteristic for the policy.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the policy.

**Note:** Proration Rule, Policy Suffix Value, Base Policy Indicator, State of Issue, and Rating Zip Code characteristic type are mandatory characteristic type for defining a policy.

2. Enter the required details.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the policy, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the policy, click the **Delete**  icon corresponding to the characteristic.

4. Click **Save**.

The characteristics are defined for the policy.

## Policy (Used for Viewing)

Once you create a policy, the **Policy** screen allows you to:

- Create a policy
- Associate a policy with a plan
- Edit the details of a policy
- Delete a policy
- View the details of a policy
- Activate or terminate a policy
- Renew a policy
- Associate a membership to the policy plan
- Edit the details of a policy plan
- View the log for a policy

- Add the log entry for a policy

This screen consists of the following tabs:

- [Policy - Main](#) on page 1676
- [Policy - Plan](#) on page 1680
- [Policy - Log](#) on page 1681

**Policy - Main**

The **Main** tab on the **Policy Information** screen contains the following zone:

- [Policy](#) on page 1676

**Policy**

The **Policy** zone displays the details of the policy. It contains the following sections:

- **Main** - Displays the basic information about the policy. It contains the following fields:

Field Name	Field Description
Information	Displays additional information of the policy.
Policy Type	Indicates the type of the policy.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy Type</b> screen appears with the details of the respective policy type.
Status	Displays the status of the policy.
Policy Number	Displays the number of the policy.
Description	Displays the description of the policy.
Source System	Displays the name of the external system from where the policy is originated.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

Field Name	Field Description																													
Paid Through Date	Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.																													
	<b>Note:</b> This field appears only when the paid through date is calculated at the policy level. The paid through date is calculated while freezing or cancelling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:																													
	<table><tr><th>Entity</th><th>System Event</th><th>Algorithm</th></tr><tr><td>Customer Class</td><td>Payment Freeze</td><td>C1-PSPTDCAL</td></tr><tr><td>Customer Class</td><td>Payment Cancellation</td><td>C1-PXPTDCAL</td></tr><tr><td>Adjustment Type</td><td>Adjustment Freeze</td><td>C1-ADPTDCAL</td></tr><tr><td>Adjustment Type</td><td>Adjustment Cancellation</td><td>C1-AXPTDCAL</td></tr></table>	Entity	System Event	Algorithm	Customer Class	Payment Freeze	C1-PSPTDCAL	Customer Class	Payment Cancellation	C1-PXPTDCAL	Adjustment Type	Adjustment Freeze	C1-ADPTDCAL	Adjustment Type	Adjustment Cancellation	C1-AXPTDCAL														
	Entity	System Event	Algorithm																											
	Customer Class	Payment Freeze	C1-PSPTDCAL																											
	Customer Class	Payment Cancellation	C1-PXPTDCAL																											
	Adjustment Type	Adjustment Freeze	C1-ADPTDCAL																											
	Adjustment Type	Adjustment Cancellation	C1-AXPTDCAL																											
	The following table indicates when the paid through date is calculated at the policy and/or membership level:																													
	<table><tr><th>If the Paid Through Date Calculation Level parameter is set to...</th><th>If the following characteristics are defined for the bill charge or adjustment...</th><th>Then...</th></tr><tr><td>P</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr><tr><td>P</td><td>C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr><tr><td>P</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr><tr><td>M</td><td>C1-POLID</td><td>Paid through date is not calculated at the membership level</td></tr><tr><td>M</td><td>C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr><tr><td>M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr><tr><td>P, M</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr><tr><td>P, M</td><td>C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr><tr><td>P, M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr></table>	If the Paid Through Date Calculation Level parameter is set to... Field Name	Field Description
Runout End Date	Displays the date when the runout period of the policy ends.
Runout Administration Fees	<p>Displays the administration fees charged when the claim transaction for the policy is processed in the runout period. The valid values are:</p> <ul style="list-style-type: none"> <li>• None</li> <li>• Percentage of Claim</li> </ul> <p><b>Note:</b> At present, this field is displayed only for the information purposes and is not considered during the billable charge creation for the claim transactions which are received in the runout period of the policy.</p>

- **Persons** - Lists the persons associated with a policy. It contains the following columns:

Column Name	Column Description
Person Information	<p>Displays the basic information of the person. In addition, this column has a context menu which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Person</b> screen appears with the details of the respective person.</p>
Sequence	Displays the sequence number.
Policy Person Role	Displays the role that was assigned to a person while creating a policy.
Main Customer	Displays the main customer of the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.

- **Characteristics** - Lists the characteristics defined for the policy. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the policy.
Characteristic Type	<p>Displays the characteristic type.</p> <p><b>Note:</b></p> <p>The list includes only those characteristic types where the characteristic entity is set to policy.</p> <p>It has a link. On clicking the link, the <b>Characteristic Type</b> screen appears with the details of the respective characteristic type.</p>
Characteristic Value	<p>Displays the value of the characteristic type.</p> <p><b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.</p>
Description	Displays the description of a characteristic.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Activate	Used to activate the policy.
	<b>Note:</b> This button appears only when the policy is in the <b>Pending</b> or <b>Pending Termination</b> status.
Edit	Used to edit the details of the policy.
Delete	Used to delete the policy.
Cancel	Used to cancel the policy.
	<b>Note:</b> This button appears only when the policy is in the <b>Pending Cancellation</b> status.
Initiate Cancellation	Used to cancel the policy.
	<b>Note:</b> This button appears only when the policy is in the <b>In Force/Active</b> status.
Initiate Termination	Used to initiate the termination request.
	<b>Note:</b> This button appears only when the policy is in the <b>In Force/Active</b> status.
Terminate	Used to terminate the policy.
	<b>Note:</b> This button appears only when the policy is in the <b>In Force/Active</b> or <b>Pending Termination</b> status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the policy is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the policy status is updated.
Create Date/Time	Displays the date and time when the policy is created.

- **Termination Information** - This section contains the following fields:

Field Name	Field Description
Terminate Date	Displays the date when the policy will be terminated.
Terminate Reason	Displays the reason of terminating the policy.
	<b>Note:</b> It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the respective termination reason.

**Note:** This section appears only when the policy is in **Pending Termination** status.

- **Reinstate Information** - This section contains the following fields:

Field Name	Field Description
Reinstate Reason	Displays the reason of reinstating the policy.
	<b>Note:</b> It has a link. On clicking the link, the <b>Status Reason</b> screen appears where you can view the details of the respective termination reason.

**Note:** This section appears only when the policy is in **Pending Reinstatement** status.

Policy - Plan

The **Plan** tab on the **Policy** screen contains the following zones:

- [Plans](#) on page 1680
- [Memberships](#) on page 1681

Plans

The **Plans** zone displays the plan details of a policy. It contains the following fields:

Column Name	Column Description
Information	Displays additional information of the policy. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy Plan</b> screen appears where you can view the details of the respective policy plan.
Price Item Information	Displays additional information of the product associated with the policy plan.
	<b>Note:</b> It has a link. On clicking the link, the <b>Price Item</b> screen appears where you can view the details of the respective price item.
Plan Number	Displays the plan number for the policy.
Start Date	Displays the date from when the policy is effective.
End Date	Displays the date till when the policy is effective.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Policy Type</b> screen appears where you can edit the details of the policy type.

You can filter the list using various search criteria (such as, **Price Item**, **Plan Number**, **Effective From**, and so on) available in the **Filter** area. By default, the **Filter** area is visible. You can hide the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can create a new policy plan by clicking the **Add** link in the upper right corner of this zone.

## Memberships

The **Memberships** zone displays the details of policy plan membership. It contains the following fields:

Column Name	Column Description
Start Date	Displays the date from when the policy plan is effective.
End Date	Displays the date till when the policy plan is effective.
Information	Displays additional information of the policy plan. <b>Note:</b> It has a link. On clicking the link, the <b>Membership Information</b> screen appears where you can view the details of the policy plan membership.
Enrolled Members	Displays the number of enrolled person to the policy plan.
Last Billed Coverage	Displays the information of the last bill coverage. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application. <b>Note:</b> It has a link. On clicking the link, the <b>Bill Segment</b> screen appears where you can view the billing details of policy plan.

You can filter the list using various search criteria (such as, **External Membership ID**, **Plan Number**, **Effective From**, **Effective To**, and so on) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

You can create a new policy plan membership by clicking the **Add** link in the upper right corner of this zone.

By default, the **Memberships** zone does not appear in the **Policy** screen. It appears only when you click the **Broadcast** () icon corresponding to the policy plan of the **Plans** zone.

## Policy - Log

The **Log** tab on the **Policy** screen contains the following zone: [Policy Log](#) on page 1681

### Policy Log

The **Policy Log** zone on the **Policy** screen lists the complete trail of actions performed on the policy. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the policy.

Column Name	Column Description
Details	Displays the details about the action performed on the policy.
User	Indicates the user who has performed the action on the policy.
Log Type	Indicates the type of log.
Related Object	Displays the object or entity which is generated when the action is performed on the policy.
	<b>Note:</b> It contains a link. On clicking the link, the <b>To Do Entry</b> screen appears where you can view the details of the related object.
Status Reason	Displays the status reason of action performed on the policy.

**Note:** You can manually add a log entry for the policy by clicking the **Add Log Entry** link in the upper right corner of the **Policy Log** zone.

The **Add Request Log** window appears. Enter **Log Details** and click **Save**. The policy log is added.

## Searching for a Membership

### Prerequisites

To search for a membership, you should have:

- Policy associated with a membership
- Product defined in the application
- Person created in the system

**Procedure**

To search for a policy:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. Select **Person Information** and then click **Membership**.  
A sub-menu appears.
3. Click the **Search** option from the **Membership** sub-menu  
The **Membership** screen appears.
4. Enter the search criteria in the **Search Membership** zone depending on whether you want to search for a membership.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of memberships that meet the search criteria appears in the **Search Results** section.

**Related Topics**

## Defining a Membership for a Policy Plan

### Procedure

To define a membership for a policy plan:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main Menu**, select **Person Information** and then click **Policy**.  
A sub menu appears.
3. Click the **Search** option from the **Policy** sub-menu.  
The **Policy** screen appears.
4. Enter the search criteria in the **Search Policy** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. In the **Search Results** section, click the link in the **Information** column corresponding to the policy number whose plan details you want to view.  
The Policy screen appears. It consists of the following tabs:
  - [Policy - Main](#) on page 1676
  - [Policy - Plan](#) on page 1680
  - [Policy - Log](#) on page 1681
6. Ensure that **Plan** tab is selected.
7. Enter the search parameters to search a policy plan in the **Plans** zone.
8. A list of policy plans that meet the search criteria appear in the **Search Results** section.
9. In the **Plans** zone, click the **Broadcast**  icon corresponding to the membership of a policy plan that you want to view.  
The **Memberships** zone appears.
10. Click the Add link in the **Memberships** zone.  
The **Membership** screen is displayed.

- **Main** - Used to specify basic details about the membership.
- **Characteristics** - Used to define characteristics for the membership.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Plan	Used to specify the policy plan.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Policy Plan Search</b> screen appears.	
Start Date	Used to specify the date from when the membership policy plan will begin.	Yes
End Date	Used to specify the date till when the membership policy plan will end.	Yes
Main Subscriber	Used to specify the main subscriber name and policy ID.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Person Search</b> window appears.	
Relationship Type	Used to indicate the relationship type of <b>Main Subscriber</b> for the policy plan. The valid values are: <ul style="list-style-type: none"> <li>• Dependent</li> <li>• Error</li> </ul>	Yes
External Membership ID	Used to specify the external membership ID.	No

11. Enter the required details in the main section.

12. Define characteristics for the membership, if required.

**Note:**

You can search for a characteristic value by clicking **Search**  icon corresponding to the respective field.

13. If you want to associate more than one characteristic type from effective date with the membership, click the **Add**  icon and then specify the details.

**Note:** However, if you want to remove a characteristic type from effective date for the membership, click the **Delete**  icon corresponding to the field.

14. Click **Save**.

The membership is defined.

## Membership Information

Once you create a membership, the **Membership Information** screen allows you to:

- Add, edit, and delete a membership
- Add persons to a membership
- View the details of a membership
- Add, edit, and delete the membership contract
- View the membership contracts details
- View premium details for a membership
- View and add a log entry for a membership

This screen consists of the following tabs:

- **Main** – Displays the information about membership. It contains the following zones:
  - **Membership** – Displays the details of the membership.
  - **Persons Included in Membership** – Displays information about the persons included in a membership
  - **Other Plans of Main Subscriber**
    - Displays information about other policy plans in the membership.
- **Contracts & Premiums** – Displays the details of the different contracts and premiums in membership
- **Log** – Lists the complete trail of actions performed on the membership.

### Membership - Main

The **Main** tab on the **Membership Information** screen contains the following zones:

- [Membership](#) on page 1700
- [Persons Included in Membership](#) on page 1703
- [Other Plans of Main Subscriber](#) on page 1704

### Membership

The **Membership** zone displays the details of the memberships. It contains the following sections:

- **Main** - This section provides basic information about the membership. It contains the following fields:

Field Name	Field Description
Information	Displays information about the membership.
Plan	Displays the policy plan for the membership.
	<b>Note:</b> It has a link. On clicking the link, the <b>Policy Plan</b> screen appears where you can view the details of the respective membership.
Status	Indicates the status of the membership. The valid values are: <ul style="list-style-type: none"><li>• Active</li><li>• Cancelled</li><li>• Terminated</li></ul>

Field Name	Field Description
Start Date	Displays the date when membership is created.
End Date	Displays the date when membership is ended.
External Membership ID	Displays the membership ID of external system.

Field Name	Field Description																													
Paid Through Date	Indicates the term end date of the last fully or partially paid term. The system considers the term to be fully paid when the threshold limit is met.																													
	<b>Note:</b>  This field appears only when the paid through date is calculated at the membership level.  The paid through date is calculated while freezing or cancelling a payment or adjustment depending on whether the required algorithm is attached to the respective system event:																													
	<table><tr><th>Entity</th><th>System Event</th><th>Algorithm</th></tr><tr><td>Customer Class</td><td>Payment Freeze</td><td>C1-PSPTDCAL</td></tr><tr><td>Customer Class</td><td>Payment Cancellation</td><td>C1-PXPTDCAL</td></tr><tr><td>Adjustment Type</td><td>Adjustment Freeze</td><td>C1-ADPTDCAL</td></tr><tr><td>Adjustment Type</td><td>Adjustment Cancellation</td><td>C1-AXPTDCAL</td></tr></table>	Entity	System Event	Algorithm	Customer Class	Payment Freeze	C1-PSPTDCAL	Customer Class	Payment Cancellation	C1-PXPTDCAL	Adjustment Type	Adjustment Freeze	C1-ADPTDCAL	Adjustment Type	Adjustment Cancellation	C1-AXPTDCAL														
	Entity	System Event	Algorithm																											
	Customer Class	Payment Freeze	C1-PSPTDCAL																											
	Customer Class	Payment Cancellation	C1-PXPTDCAL																											
	Adjustment Type	Adjustment Freeze	C1-ADPTDCAL																											
	Adjustment Type	Adjustment Cancellation	C1-AXPTDCAL																											
	The following table indicates when the paid through date is calculated at the policy and/or membership level:																													
	<table><tr><th>If the Paid Through Date Calculation Level parameter is set to...</th><th>If the following characteristics are defined for the bill charge or adjustment...</th><th>Then...</th></tr><tr><td>P</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr><tr><td>P</td><td>C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr><tr><td>P</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the policy level</td></tr><tr><td>M</td><td>C1-POLID</td><td>Paid through date is not calculated at the membership level</td></tr><tr><td>M</td><td>C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr><tr><td>M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at the membership level</td></tr><tr><td>P, M</td><td>C1-POLID</td><td>Paid through date is calculated at the policy level</td></tr><tr><td>P, M</td><td>C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr><tr><td>P, M</td><td>C1-POLID and C1-MPID</td><td>Paid through date is calculated at both the policy and membership levels</td></tr></table>	If the Paid Through Date Calculation Level parameter is set to...	If the following characteristics are defined for the bill charge or adjustment...	Then...	P	C1-POLID	Paid through date is calculated at the policy level	P	C1-MPID	Paid through date is calculated at the policy level	P	C1-POLID and C1-MPID	Paid through date is calculated at the policy level	M	C1-POLID	Paid through date is not calculated at the membership level	M	C1-MPID	Paid through date is calculated at the membership level	M	C1-POLID and C1-MPID	Paid through date is calculated at the membership level	P, M	C1-POLID	Paid through date is calculated at the policy level	P, M	C1-MPID	Paid through date is calculated at both the policy and membership levels	P, M	C1-POLID and C1-MPID
If the Paid Through Date Calculation Level parameter is set to...	If the following characteristics are defined for the bill charge or adjustment...	Then...																												
P	C1-POLID	Paid through date is calculated at the policy level																												
P	C1-MPID	Paid through date is calculated at the policy level																												
P	C1-POLID and C1-MPID	Paid through date is calculated at the policy level																												
M	C1-POLID	Paid through date is not calculated at the membership level																												
M	C1-MPID	Paid through date is calculated at the membership level																												
M	C1-POLID and C1-MPID	Paid through date is calculated at the membership level																												
P, M	C1-POLID	Paid through date is calculated at the policy level																												
P, M	C1-MPID	Paid through date is calculated at both the policy and membership levels																												
P, M	C1-POLID and C1-MPID	Paid through date is calculated at both the policy and membership levels																												

- **Characteristics** - This section lists the characteristics defined for the membership. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when membership is effective.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the membership.
Delete	Used to delete the membership.  <b>Note:</b> You can delete a membership only when you have not associated the membership with a policy plan.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the membership is created. In addition, this column has a context menu which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date/Time	Displays the date and time when the membership status is updated
Create Date/Time	Displays the date and time when the membership is created.

You can define a membership by clicking the **Add** button in the page title area of the **Membership Information** screen.

How to edit the details of the membership	<a href="#">Editing Membership Details of a Person</a> on page 1714
How to define the characteristics for a person associated with the membership	<a href="#">Defining Characteristics for a Membership - Person</a> on page 1713

## **Viewing the Log of a Membership**

### **Procedure**

To view the log of a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Information** column corresponding to the membership whose details you want to view.

The **Membership Information** screen appears.

3. Click **Log** tab.
4. View the log entries in the **Membership Log** zone.

How to add an entry in a membership log	<a href="#">Adding a Log Entry for the Membership</a> on page 1716

## **Adding a Log Entry for the Membership**

### **Procedure**

To add a log entry for a membership:

1. Search for the membership in the **Membership** screen.
2. In the **Search Results** section, click the link in the **Information** column corresponding to the membership to which you want to add a log.

The **Membership Information** screen appears.

3. Click **Log** tab.
4. Click the **Add Log Entry** link in the upper right corner of the **Membership Log** zone.

The **Add Membership Log** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Membership Information	Displays the details of the membership.	Not applicable
Log Details	Used to specify the details of the log.	Yes

5. Click **Save**.

The log entry is added in the **Membership Log** zone.

## Upload Lockbox Payment and Remittance Advices Overview

---

### Topics:

- [Prerequisites](#)
- [EDI 820 Flat File Description](#)
- [Sample EDI 820 Flat File](#)
- [Upload EDI 820 Files in ORMB](#)

Oracle Revenue Management and Billing enables you to upload lockbox payment and remittance advices received in the **Electronic Data Exchange (EDI) 820** format. Under this feature, the payments made by customers are directed to a special post office box instead of going to the company directly. The bank goes to this post office box, retrieves the payments, processes them and deposits the funds directly into the company's bank account.

An EDI 820 payment order or remittance advice is an electronic document that can be used to initiate payments and send remittance information. EDI 820 sends information to vendor furnishing details of payment for his supplies. A remittance advice is a note sent from a customer to their supplier, informing the supplier that they have paid their invoice. The advice may contain elements such as a text note, the invoice number and the invoice amount, among others. Remittance advice is not required, but they are seen as a courtesy since they make it easier for the supplier to match invoices with payments.

To enable this feature, lockbox payment files are required to be uploaded on ORMB and these files has to be allocated to the appropriate accounts. To support multiple lines of business, the lockbox upload needs to:

- Consider the primary identifier when looking for a source customer number match. For customers having multiple source system identifiers, the lockbox process only matches against the one identified as primary customer.
- Incorporate the payment allocation logic in the system on the basis of which the lockbox uploads the payments for the identified customer.

To support remittances which can split a tender across multiple customers:

- Allow source customer number or tax id to be provided as remittance (RMR) values. In case of multiple source customer number or tax id, remittance values are provided for a single tender, the account associated with the first remittance value is set as the payor account. If there is at least one remittance value where a single customer account cannot be determined, the entire tender is placed into general suspense.
- A new payment upload batch **C1-PUPSG** is developed to read lockbox payment files from the bank and load the payment details into the ORMB payment upload staging tables for processing.
- Once the text file is uploaded, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders,

payments, and payment segments using payment records in the staging area.

**Note:** For more information about the batches, refer to the *Oracle Revenue Management and Billing Batch Guide*.

## Prerequisites

---

To setup the upload lockbox payment process, you need to do the following:

- Define the values in the parameters of the **C1-CCPYTSADS** and **C1-MATSATYP** algorithms.
- Lockbox tender types defined in the **C1\_LBX\_TENDER\_TYPE** lookup field.
- Lockbox record type, lockbox reference identification qualifier, and lockbox remittance identification types defined in the **C1\_LBX\_820\_RECORD\_TYPE**, **C1\_LBX\_REF\_IDQ\_LKP**, and **C1\_LBX\_RMR\_ID\_TYPE** lookup fields respectively.

## EDI 820 Flat File Description

---

Following is the description of the key field segments in the EDI 820 flat file format:

Field Name	Description
External Source ID	Uniquely identifies the lockbox.
External Transmission ID	Uniquely identifies the transmission. To ensure this transmission, the date component (such as, 20150813) should match the deposit date and there should only be one file per deposit date.
External Batch ID	Uniquely identifies the batch of payments in a transmission. To ensure these payments, if there are multiple ST records in a file, the transaction set control number (such as, 0101, 0202, ..) should be unique.

Field Name	Description																										
Payment Transaction	The following table describes the fields that are included in the payment transaction:																										
	<table><tr><th>Field</th><th>Description</th></tr><tr><td>Attributes</td><td>Following are the attributes of payment transaction:<ul style="list-style-type: none"><li>• Payment Amount</li><li>• Payment Method</li><li>• Payment Date</li><li>• Payor Name</li></ul></td></tr><tr><td>Reference Records</td><td>Uniquely identifies the transaction. This is retrieved from different reference records based on the payment method. The following table indicates the external reference ID based on the payment methods used in the transaction:<table><tr><th>External Reference ID Value</th><th>Description</th></tr><tr><td>ACH</td><td>Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).</td></tr><tr><td>CHK</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr><tr><td>FWT</td><td>Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).</td></tr><tr><td>CAS</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr><tr><td>OBP</td><td>Use the online payment trace number. (Reference Identifier Code 8G).</td></tr></table></td></tr><tr><td>Source Customer Number</td><td>Uniquely identifies the customer. This is retrieved from the internal customer number reference record. (Reference Identifier Code is IT).</td></tr><tr><td>MICR</td><td>Uniquely identifies the MICR. (Reference Identifier Code is MICR)</td></tr><tr><td>Check Number</td><td>Uniquely identifies the check number. (Reference Identifier Code is CK)</td></tr><tr><td>Taxpayer Identification Number</td><td>Uniquely Identifies the taxpayer. (Reference Identifier Code is EI)</td></tr></table>	Field	Description	Attributes	Following are the attributes of payment transaction: <ul style="list-style-type: none"><li>• Payment Amount</li><li>• Payment Method</li><li>• Payment Date</li><li>• Payor Name</li></ul>	Reference Records	Uniquely identifies the transaction. This is retrieved from different reference records based on the payment method. The following table indicates the external reference ID based on the payment methods used in the transaction: <table><tr><th>External Reference ID Value</th><th>Description</th></tr><tr><td>ACH</td><td>Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).</td></tr><tr><td>CHK</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr><tr><td>FWT</td><td>Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).</td></tr><tr><td>CAS</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr><tr><td>OBP</td><td>Use the online payment trace number. (Reference Identifier Code 8G).</td></tr></table>	External Reference ID Value	Description	ACH	Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).	CHK	Use the transaction reference number. (Reference Identifier Code TN).	FWT	Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).	CAS	Use the transaction reference number. (Reference Identifier Code TN).	OBP	Use the online payment trace number. (Reference Identifier Code 8G).	Source Customer Number	Uniquely identifies the customer. This is retrieved from the internal customer number reference record. (Reference Identifier Code is IT).	MICR	Uniquely identifies the MICR. (Reference Identifier Code is MICR)	Check Number	Uniquely identifies the check number. (Reference Identifier Code is CK)	Taxpayer Identification Number	Uniquely Identifies the taxpayer. (Reference Identifier Code is EI)
	Field	Description																									
	Attributes	Following are the attributes of payment transaction: <ul style="list-style-type: none"><li>• Payment Amount</li><li>• Payment Method</li><li>• Payment Date</li><li>• Payor Name</li></ul>																									
	Reference Records	Uniquely identifies the transaction. This is retrieved from different reference records based on the payment method. The following table indicates the external reference ID based on the payment methods used in the transaction: <table><tr><th>External Reference ID Value</th><th>Description</th></tr><tr><td>ACH</td><td>Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).</td></tr><tr><td>CHK</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr><tr><td>FWT</td><td>Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).</td></tr><tr><td>CAS</td><td>Use the transaction reference number. (Reference Identifier Code TN).</td></tr><tr><td>OBP</td><td>Use the online payment trace number. (Reference Identifier Code 8G).</td></tr></table>	External Reference ID Value	Description	ACH	Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).	CHK	Use the transaction reference number. (Reference Identifier Code TN).	FWT	Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).	CAS	Use the transaction reference number. (Reference Identifier Code TN).	OBP	Use the online payment trace number. (Reference Identifier Code 8G).													
	External Reference ID Value	Description																									
	ACH	Use the automated clearinghouse trace number. (Reference Identifier Code is 8G).																									
	CHK	Use the transaction reference number. (Reference Identifier Code TN).																									
	FWT	Use the FEDWIRE confirmation number. (Reference Identifier Code 8I).																									
	CAS	Use the transaction reference number. (Reference Identifier Code TN).																									
OBP	Use the online payment trace number. (Reference Identifier Code 8G).																										
Source Customer Number	Uniquely identifies the customer. This is retrieved from the internal customer number reference record. (Reference Identifier Code is IT).																										
MICR	Uniquely identifies the MICR. (Reference Identifier Code is MICR)																										
Check Number	Uniquely identifies the check number. (Reference Identifier Code is CK)																										
Taxpayer Identification Number	Uniquely Identifies the taxpayer. (Reference Identifier Code is EI)																										

Field Name	Description												
Remittance Advice	<p>he following table describes the fields that are involved in the remittance advice:</p> <table> <tr> <th>Field</th><th>Description</th></tr> <tr> <td>Attributes</td><td> <p>Following are the attributes:</p> <ul style="list-style-type: none"> <li>• Invoice Number</li> <li>• Payment Amount</li> </ul> </td></tr> <tr> <td>Reference Records</td><td> <p>Uniquely identifies the remittance advice. EDI 820 flat file format description	<a href="#">EDI 820 Flat File Description</a> on page 1721

## Upload EDI 820 Files in ORMB

A new batch named **Lockbox Payment Upload - Small Group (C1-PUPSG)** is introduced in this release. This batch is used to read the EDI 820 lockbox file received from the bank containing payment details for accounts and uploads the payment details into the ORMB payment upload staging tables. The batch uses the reference ID available in the payment and remittance record (in the specified order) to identify the account in the system:

- Source System Customer Number
- Invoice ID (if the source system customer number is not available)
- MICR (if the source system customer number and invoice ID are not available)

If all three reference IDs are available in the payment and remittance record, the system uses the source system customer number to identify the customer in ORMB. If the customer is found in ORMB, the system then checks whether the identified customer has an account. If the identified customer has one account, the system checks the following:

- If the **Check Binder Payment** parameter in the **Pay Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to Y, the system checks whether the payment is the first payment for

the account and the tender used for the payment is not automatic payment. If so, the payment is applied to the **Binder Payment** contract.

- If the **Check Promise To Pay** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active promise to pay for the account. If so, the payment is applied to the **On Account** contract.
- If the **Check Payment Agreement** parameter in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm is set to **Y**, the system checks whether there is an active payment agreement request for the account. If so, the payment is applied to the **On Account** contract.

However, if the **Check Binder Payment**, **Check Promise To Pay**, and **Check Payment Agreement** parameters are set to **N**, the payment is applied to the account's open bills in the order of the due date (i.e. oldest bill first). If the payment amount is greater than the account's billed balance plus overpayment threshold amount (defined in the **Tender Staging Account Distribution - Pay Oldest Bill First (C1-CCPYTSADS)** algorithm), the entire amount is applied on the On Account contract. However, if the payment amount is greater than the account's billed balance, but less than account's billed balance plus overpayment threshold amount, the overpayment amount is applied on the On Account contract.

Let us understand this with the help of an example:

Payment Amount	Bill 1 (Due Date 01-Feb-2017)	Bill 2 (Due Date 01-April-2016)	Overpayment Threshold Amount	System Behavior
100	50	50	50	One payment (50\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.
150	50	100	120	One payment (100\$) is created for Bill 2 (oldest due date); One payment (50\$) is created for Bill 1.
175	60	75	50	One payment (75\$) is created for Bill 2 (oldest due date); One payment (60\$) is created for Bill 1; The remaining amount (40\$) is applied on the On Account contract.
200	50	50	50	The entire amount (200\$) is applied on the On Account contract. This is because the payment amount is greater than the account's billed balance plus overpayment threshold amount.

If the identified customer has multiple accounts, then the payment is applied to the On Account contract. If there are no accounts for the identified customer, or account could not be found in ORMB, or the customer could not be found in ORMB, the payment is applied to the suspense contract defined on the tender source associated with the external source (lockbox) ID.

If the source system customer number is not available, but the invoice ID and MICR are available in the payment and remittance record, then batch uses the invoice ID to find the account for which the invoice is created. Once the account is identified, the system behaves in the similar manner (listed above) when the identified customer has one account.

If the source system customer number and invoice ID are not available, but the MICR is available in the payment and remittance record, then system finds the payment where the same MICR is stamped as a characteristic and then finds the account for which the respective payment is created. In this way, the system derives the account for which the payment must be applied. However, the MICR is used to derive the account only when the **Search Customer Using MICR (Y/**

**N**) parameter in the batch is set to **Y**. Once the account is derived, the system behaves in the similar manner (listed above) when the identified customer has one account.

You can upload payment and remittance advice in the TXT format. You need to ensure that the text file is in the required format; otherwise the file will not be uploaded.

Once the text file is uploaded through the **Lockbox Payment Upload - Small Group (C1-PUPSG)** batch, the deposit control staging, tender control staging, and payment upload staging records are created in the respective tables. You can then execute the **Payment Upload (PUPL)** batch to create the deposit control, tender controls, payment events, tenders, payments, and payment segments using payment records in the staging area.

<b>Note:</b> For more information about the batches, refer to the <i>Oracle Revenue Management and Billing Batch Guide</i> .

- [Algorithms Used in Deferred Revenue Recognition](#)
- [Deferred Revenue Recognition Template \(Used for Searching\)](#)
- [Deferred Revenue Recognition Template \(Used for Viewing\)](#)
- [Deferred Revenue Recognition \(Used for Searching\)](#)
- [Deferred Revenue Recognition \(Used for Viewing\)](#)

Most often, insurance company bill policies in installments, but Accounts Receivable (AR) and revenue for the total premium are booked as new business in the beginning of the policy term. Regulations, restrictions, or company policies may require that revenue for the total premium must be initially booked to the general ledger as deferred revenue. As time passes, the deferred revenue is realized as earned revenue. For example, the total premium for six months auto-policy (July 1 to Dec 31) is \$1200. When this new business is booked, the revenue of \$1200 is initially booked as deferred revenue. However, on July 31, August 31, September 30, October 31, November 30, and December 31, \$200 must be transferred from deferred revenue GL to earned revenue GL. In order to manage this process, adjustments are created that transfer amount from deferred revenue GL to earned revenue GL.

A deferred revenue recognition schedule determines when these deferred revenue recognition adjustments must be created and posted. On the recognition date, the deferred revenue recognition adjustment is created to transfer a portion of deferred revenue to earned revenue. The corresponding financial transaction does not impact customer's account balance.

You need to create a deferred revenue recognition template for each distribution code and contract type combination for which you want to create a deferred revenue recognition (when the bill segment and adjustment financial transactions created against the respective contracts are frozen). It is the deferred revenue recognition template which helps the system to determine:

- Adjustment type using which the adjustment should be created when the deferred revenue is recognized
- Whether the recognition amount and date in the deferred revenue recognition schedule are editable until recognized
- Whether the deferred revenue recognition schedule must be generated automatically or manually
- Whether the deferred revenue must be recognized daily, weekly, or monthly
- Whether the deferred revenue amount must be prorated when the recognition schedule is set to Monthly
- Algorithm using which the recognition lines in the deferred revenue recognition schedule should be created
- Algorithm using which the adjustment must be generated when the deferred revenue is recognized

During the deferred revenue recognition process, a deferred revenue recognition creation goes through various statuses in its lifecycle. For more information

about the deferred revenue recognition statuses, see [Deferred Revenue Recognition Status Transition](#) on page 1731.

**Note:** The lifecycle of a deferred revenue recognition creation is driven by the respective business object using which the deferred revenue recognition is generated. The deferred revenue recognition feature explained in this document is articulated based on the lifecycle and logic defined in the business objects.

For more information on how to setup the deferred revenue recognition process, see [Prerequisites](#) on page 1731.

## Prerequisites

---

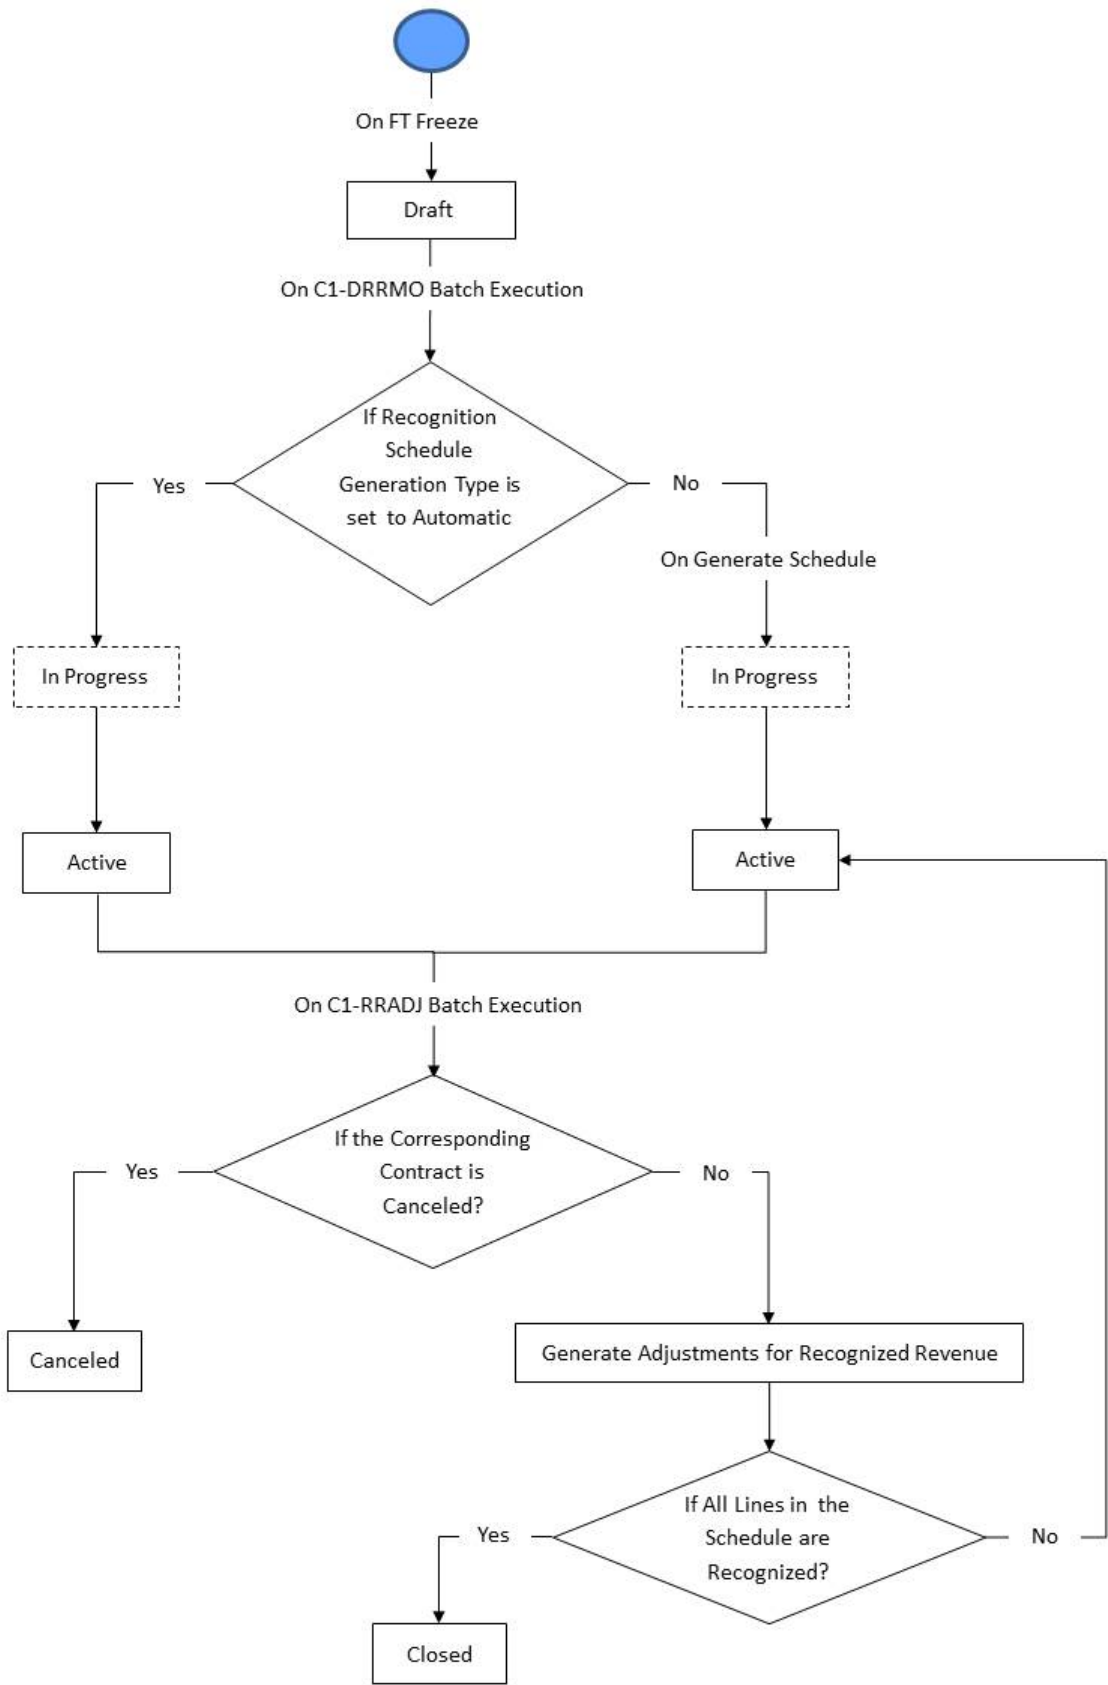

To setup the deferred revenue recognition feature, you need to do the following:

- Define the required deferred revenue recognition templates in the system.
- Define the required characteristic types where the characteristic entity is set to **Deferred Revenue Recognition**.
- Define the values for the following parameters in the **C1-REVRECITM** algorithm:
  - Use Calendar or Business Days (C or B)
  - Override Default Recognition Date (Y or N)
  - Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)
  - Override Default Monthly Recognition Date (1-31)
- Define the value for the **Use Contract Expiration Date (Y or N)** parameter in the **C1-REVRECSCH** algorithm.
- Define the value for the **Create Adjustments (Y or N)** parameter in the **C1-REVITMREC** algorithm.
- Set the batch control type of the **Deferred Revenue Recognition Periodic Monitor (C1-RRSMO)** batch to **Timed** and define the following attributes:
  - Time Interval
  - Timer Active
  - User ID
  - Batch Language
  - Email Address

## Deferred Revenue Recognition Status Transition

---

The following figure graphically indicates how a deferred revenue recognition status transition moves from one status to another:

## Algorithms Used in Deferred Revenue Recognition

The following table lists the algorithms which are used in the lifecycle of the business object:

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECSCH	C1-REVRECSCH	<p>This algorithm is invoked when the status of the bill segment and adjustment financial transactions created against the contracts (of the contract type to which the algorithm is attached) is set to Frozen. It checks whether an active deferred revenue recognition template exists for the distribution code and contract type combination. If so, it creates a deferred revenue recognition using the template and sets the status of the deferred revenue recognition to Draft. It then checks whether the type of the corresponding financial transaction is Bill Segment or Adjustment. If the type of the corresponding financial transaction is Bill Segment, it sets the valid until date of the deferred revenue recognition to the bill segment end date. However, if the type of the corresponding financial transaction is Adjustment, it checks whether the Use Contract Expiration Date (Y or N) parameter is set to Y or N. If the Use Contract Expiration Date (Y or N) parameter is set to Y, it sets the valid until date of the deferred revenue recognition to the contract expiration date. However, if the Use Contract Expiration Date (Y or N) parameter is set to N, it sets the valid until date of the deferred revenue recognition to the financial transaction arrears date. In addition, on creating the deferred revenue recognition, an appropriate log entry is added which you can view in the Deferred Revenue Recognition Log zone. It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• Use Contract Expiration Date (Y or N) – Used to indicate whether the valid until date must be set to the contract expiration date when the type of the corresponding financial transaction is Adjustment. The valid values are Y and N. This parameter is mandatory.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECITM	C1-REVRECITM	<p>This algorithm creates schedule for the deferred revenue recognition. It considers the valid until date and accordingly creates the recognition lines within the schedule. If the recognition schedule is Weekly, by default, the recognition day is set to Mon (which means Monday of each week). However, if the recognition schedule is Monthly, by default, the recognition date is set to the last day of the month (i.e. 28, 29, 30, or 31) It contains the following parameters:</p> <ul style="list-style-type: none"> <li>• <b>Use Calendar or Business Days (C or B)</b> - Used to indicate whether you want to use the calendar or business days while generating the recognition schedule. The business days are derived using the work calendar defined on the financial transaction. If you do not specify any value for this parameter, by default, it is set to C. This parameter is mandatory.</li> <li>• <b>Override Default Recognition Date (Y or N)</b> – Used to indicate whether you want to override the default weekly or monthly recognition date. The valid values are Y and N. This parameter is mandatory.</li> <li>• <b>Override Default Weekly Recognition Day (Mon, Tue, Wed, Thu, Fri, Sat, Sun)</b> – Used to indicate the day of the week when you want to recognize the deferred revenue. The valid values are Mon, Tue, Wed, Thu, Fri, Sat, and Sun. This parameter is required when you want to override the default weekly recognition day.</li> <li>• <b>Override Default Monthly Recognition Date (1-31)</b> - Used to indicate the day of the month when you want to recognize the deferred revenue. The valid values are 1, 2, 3, ..., 31. This parameter is required when you want to override the default monthly recognition date.</li> </ul>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECADJ	C1-REVRECADJ	This algorithm creates deferred revenue recognition adjustment using the adjustment type defined on the respective deferred revenue recognition template. Before creating the deferred revenue recognition adjustment, it checks whether the contract for which the deferred revenue recognition is created is cancelled. If so, the status of the deferred revenue recognition is set to Canceled. If all lines in the recognition schedule are recognized, the status of the deferred revenue recognition is set to Closed.
		C1-REVITMREC	C1-REVITMREC	<p>If this algorithm is attached in the deferred revenue recognition template, it is invoked while executing the C1-RRADJ batch. It contains the following parameter:</p> <ul style="list-style-type: none"> <li>• <b>Create Adjustments (Y or N)</b> – Used to indicate whether the deferred revenue recognition adjustment must be created or not when the recognition date is earlier than or equal to the batch business date. The valid values are Y and N. This parameter is mandatory.</li> </ul>
		C1-DRRTM-INF	C1-DRRTM-INF	<p>This algorithm generates the deferred revenue recognition template information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> <li>1. Deferred Revenue Recognition Template</li> <li>2. Description</li> </ol>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRTMPVAL	C1-DRRTMPVAL	<p>This algorithm validates the deferred revenue recognition template. It checks the following:</p> <ul style="list-style-type: none"> <li>Whether the data is specified in the mandatory fields, such as Deferred Revenue Recognition Template, Description, Status, Distribution Code, Contract Type, Adjustment Type, Recognition Schedule Generation Type, and Recognition Schedule.</li> <li>Whether an algorithm is attached to the Create Deferred Revenue Recognition Schedule and Generate Deferred Revenue Recognition Adjustment system events.</li> <li>Whether a deferred revenue recognition template already exists for the specified distribution code and contract type combination.</li> <li>Whether special characters except underscore are specified in the Deferred Revenue Recognition Template field.</li> <li>Whether the high proration limit is between 0 to 31 and is greater than the low proration limit.&gt;&gt; Whether the low proration limit is between 0 to 31 and is less than the high proration limit.</li> </ul> <p>In addition, it does not allow you to:</p> <ul style="list-style-type: none"> <li>Delete a deferred revenue recognition template when it is used to create a deferred revenue recognition.</li> <li>Edit a deferred revenue recognition template when the corresponding deferred revenue recognition is in the Draft status.</li> <li>Inactivate a deferred revenue recognition template when the corresponding deferred revenue recognition is not in the Closed status.</li> </ul> <p>You must attach this validation algorithm to the custom business object which is used to create a deferred revenue recognition template. Otherwise, erroneous results might occur.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-DRRSC-INF	C1-DRRSC-INF	<p>This algorithm generates the deferred revenue recognition information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:</p> <ol style="list-style-type: none"> <li>1. Deferred Revenue Recognition Template</li> <li>2. Deferred Revenue Recognition Status</li> <li>3. Distribution Code</li> <li>4. Deferred Revenue Recognition ID</li> </ol>
		C1-REVMON	C1-REVMON	<p>This algorithm is invoked when the C1-DRRMO batch is executed. It checks whether there are any deferred revenue recognitions in the Draft status. If there is any deferred revenue recognition in the Draft status, it checks whether the recognition schedule generation type in the respective deferred revenue recognition template is set to Automatic or Manual. If the recognition schedule generation type is set to Automatic, the status of the deferred revenue recognition is changed to In Progress. However, if the recognition schedule generation type is set to Manual, the status of the deferred revenue recognition remains as Draft.</p>
		C1-REVRECINP	C1-REVRECINP	<p>This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to In Progress. It invokes the algorithm attached to the Create Deferred Revenue Recognition Schedule system event of the respective deferred revenue recognition template. Once the recognition schedule is successfully created, the status of the deferred revenue recognition is changed to Active.</p>

Status	System Event	Algorithm	Algorithm Type	Description
		C1-REVRECACT	C1-REVRECACT	<p>This algorithm transitions the current status to the specified status. You can specify the status to which you want the business object to transition in the following parameters:</p> <ul style="list-style-type: none"> <li>• Next Status</li> <li>• Next Transition Condition</li> </ul> <p>At a time, you can specify value for either the <b>Next Status</b> or <b>Next Transition Condition</b> parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle. This algorithm creates an appropriate log entry when the status of the deferred revenue recognition is changed to Active.</p>

## Deferred Revenue Recognition Template (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition template using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition Template \(Used for Viewing\)](#) on page 1746

This screen consists of the following zone:

- [Search Deferred Revenue Recognition Template](#) on page 1738

## Search Deferred Revenue Recognition Template

The **Search Deferred Revenue Recognition Template** zone allows you to search for a deferred revenue recognition template using various search criteria. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to search the basic information about the deferred revenue recognition template.	Yes
Description	Used to search the description of the deferred revenue recognition template.	No
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Monthly</li> <li>• Weekly</li> </ul>	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the deferred revenue recognition template with a particular status. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	No

**Note:** You must specify at least one search criterion while searching for a deferred revenue recognition template.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition.  <b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition Template</b> screen appears where you can view the details of the respective deferred revenue recognition template.
Distribution Code	Indicates the distribution code associated with the rate component.
Contract Type	Displays the contract which is generated against a particular type of contract.
Recognition Schedule	Displays the schedule when the deferred revenue is recognized.

### Related Topics

For more information on...	See...
How to view the details of a deferred revenue recognition template	<a href="#">Viewing the Deferred Revenue Recognition Template Details</a> on page 1745
How to search for a deferred revenue recognition template	<a href="#">Searching for a Deferred Revenue Recognition Template</a> on page 1739

## Searching for a Deferred Revenue Recognition Template

### Prerequisites

To search for a deferred revenue recognition template, you should have:

- Deferred revenue recognition template defined in the system.
- Deferred Revenue Recognition Schedule defined in the system.

### Procedure

To search for a deferred revenue recognition template:

1. Click the **Admin** menu in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.  
The **Deferred Revenue Recognition Template** screen appears.
3. Enter the search criteria in the **Search Deferred Revenue Recognition Template** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of deferred revenue recognition templates that meet the search criteria appears in the **Search Results** section.

**Defining a Deferred Revenue Recognition Template**

**Prerequisites**

To define a deferred revenue recognition template, you should have:

- Contract types defined in the system

**Procedure**

To define a deferred revenue recognition template:

- Click the **Admin** menu in the **Application** toolbar.

A list appears.

- From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.

The **Deferred Revenue Recognition Template** screen appears.

- Click the **Add** button in the **Page Title** area of the **Deferred Revenue Recognition Template** screen.

The **Deferred Revenue Recognition Template** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the deferred revenue recognition template.
- Parameters** – Used to specify the various parameters for the deferred revenue recognition template.
- Algorithms** – Used to associate algorithms with the deferred revenue recognition template.
- Divisions** – Used to associate a deferred revenue recognition template with a division.
- Characteristics** – Used to define characteristics for the deferred revenue recognition template.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition Template	Used to specify the deferred revenue recognition template.	Yes
Description	Used to specify the description of the deferred revenue recognition template.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

The **Parameters** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Distribution Code	Used to indicate the distribution code associated with the deferred revenue recognition.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Distribution Code Search</b> window appears.	Yes
Contract Type	Used to indicate a particular type of contract.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Contract Type Search</b> window appears.	Yes
Adjustment Type	Used to indicate the adjustment type using which the adjustment must be created.  <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Adjustment Type Search</b> window appears.	No
Allow Editing	Used to allow editing of recognition schedule.	No
Generation Type	Used to indicate the type of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> <li>Automatic</li> <li>Manual</li> </ul>	Yes (Conditional)
Recognition Schedule	Used to indicate the schedule of deferred revenue recognition generation. The valid values are: <ul style="list-style-type: none"> <li>Daily</li> <li>Monthly</li> <li>Weekly</li> </ul>	Yes
Allow Proration	Used to allow proration.  <b>Note:</b> The <b>Allow Proration</b> field appears only when you select <b>Recognition Schedule</b> as <b>Monthly</b> .	Yes

Field Name	Field Description	Mandatory (Yes or No)
High Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.	Yes (Conditional)
	<b>Note:</b> This field appears only when you check the tick-box for <b>Allow Proration</b> .	<b>Note:</b> This field is required only when the recognition schedule is selected as monthly and when the <b>Allow Proration</b> check box is selected.
Low Proration Limit (Days)	Used to specify whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.	Yes (Conditional)
	<b>Note:</b> This field appears only when you check the tick-box for <b>Allow Proration</b> .	<b>Note:</b> This field is required only when the recognition schedule is selected as monthly and when the <b>Allow Proration</b> check box is selected.

- Enter the required details.
- Associate algorithms with the deferred revenue recognition template, if required.
- View the division to which the deferred revenue recognition template is associated in the **Divisions** section.
- Define the characteristics specific to division to which the deferred revenue recognition template is associated in the **Characteristics** section.
- Click **Save**.

The deferred revenue recognition template is created.

<b>Deferred Revenue Recognition Template</b> screen	<a href="#">Deferred Revenue Recognition Template (Used for Searching)</a> on page 1738
How to associate algorithms with the deferred revenue recognition template	<a href="#">Associating Algorithms with a Deferred Revenue Recognition Template</a> on page 1742

## Associating Algorithms with a Deferred Revenue Recognition Template

### Procedure

To associate algorithms with a deferred revenue recognition template:

- Ensure that the **Algorithms** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
System Event	Used to indicate the system event for an algorithm.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to specify the sequence number.	Yes
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	
Algorithm	Used to associate an algorithm to the system event that you have selected.	Yes
	<b>Note:</b>  The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.  On specifying the algorithm for a system event, the description of the algorithm appears corresponding to the <b>Algorithm</b> field.	

- Enter the required details in the **Algorithms** section.
- If you want to define more than one algorithm for the deferred revenue recognition template, click the **Add**  icon, and then repeat 2.

**Note:** However, if you want to remove an algorithm from the deferred revenue recognition template, click the **Delete**  icon corresponding to the algorithm.

How to define a deferred revenue recognition template	<a href="#">Defining a Deferred Revenue Recognition Template</a> on page 1740
How to edit a deferred revenue recognition template	<a href="#">Editing a Deferred Revenue Recognition Template</a> on page 1748

## Associating Deferred Revenue Recognition Template With A Division

### Prerequisites

To associate deferred revenue recognition template with a division, you should have:

- Divisions defined in the application

### Procedure

To associate deferred revenue recognition template with a division:

- Ensure that the **Divisions** section is expanded when you are creating or editing a deferred revenue recognition template.

The **Divisions** section appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Division	Used to indicate the division to which you want to associate the deferred revenue recognition template.	No
	<b>Note:</b> You can only view those divisions to which you have access in the <b>Division</b> list.	

- Select the required division from the list.
- If you want to associate the deferred revenue recognition template with more than one division, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove the deferred revenue recognition template from a division, click the **Delete** (🗑️) icon corresponding to the division.

- Click **Save**.

The deferred revenue recognition template is associated with the divisions.

**Defining Characteristics for a Deferred Revenue Recognition Template**

**Prerequisites**

To define characteristics for a deferred revenue recognition template, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition Template**)

**Procedure**

To define characteristics for a deferred revenue recognition template:

- Ensure that the **Characteristics** section is expanded when you are defining or editing a deferred revenue recognition template.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
		<b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition template.

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Valued</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition template.

- Enter the required details in the **Characteristics** section.
- If you want to define more than one characteristic for the deferred revenue recognition template, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the deferred revenue recognition template, click the **Delete** (🗑️) icon corresponding to the characteristic.

## Viewing the Deferred Revenue Recognition Template Details

### Procedure

To view the details of a deferred revenue recognition template:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **D** and then click **Deferred Revenue Recognition Template**.  
The **Deferred Revenue Recognition Template** screen appears.
- Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to view.  
The **Deferred Revenue Recognition Template** screen appears.
- View the details of the deferred revenue recognition template in the **Deferred Revenue Recognition Template** zone.

## Deferred Revenue Recognition Template (Used for Viewing)

Once the deferred revenue recognition templates are created, the **Deferred Revenue Recognition Template** screen allows you to:

- Generate the deferred revenue recognition schedule
- View the details of a deferred revenue recognition template
- Edit a deferred revenue recognition template
- Delete a deferred revenue recognition template

This screen consists of the following zone:

- [Deferred Revenue Recognition Template](#) on page 1746

## Deferred Revenue Recognition Template

The **Deferred Revenue Recognition Template** zone displays the details of the deferred revenue recognition template. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition template. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Template	Displays the deferred revenue recognition template
Description	Used to specify the description of the deferred revenue recognition template
Status	Used to indicate the status of the deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Parameters** – Displays the parameters used in the deferred revenue recognition template.

Field Name	Field Description
Distribution Code	Indicates the distribution code.
	<b>Note:</b> It has a link. On clicking the link, the <b>Distribution Code</b> screen appears where you can view the details of the respective distribution code.
Contract Type	Displays the <b>Deferred Revenue Recognition Template</b> which are generated against a particular type of contract.
Adjustment Type	Indicates the adjustment type using which the adjustment must be created.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment Type</b> screen appears where you can view the details of the respective adjustment type.

Field Name	Field Description
Generation Type	Displays the type of deferred revenue recognition template. The valid values are: <ul style="list-style-type: none"> <li>Manual</li> <li>Automatic</li> </ul>
Allow Editing	Indicates the editing of recognition schedule.
Recognition Schedule	Indicates the schedule when the deferred revenue is recognized. The valid values are: <ul style="list-style-type: none"> <li>Daily</li> <li>Monthly</li> <li>Weekly</li> </ul>
Allow Proration	Used to allow proration.  <b>Note:</b> The <b>Allow Proration</b> field appears only when you select <b>Recognition Schedule</b> as <b>Monthly</b> .
High Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is greater than the specified limit, then the amount is prorated.  <b>Note:</b> This field appears only when you check the tick-box for <b>Allow Proration</b> .
Low Proration Limit (Days)	Displays whether deferred revenue amount must be prorated while revenue recognition. If the number of days from when the policy is enrolled to the end of the month (in which it is enrolled) is less than the specified limit, then the amount is prorated.  <b>Note:</b> This field appears only when you check the tick-box for <b>Allow Proration</b> .

- **Divisions** – Displays the associated deferred revenue recognition template with one or more divisions. It contains the following column:

Column Name	Column Description
Division	Displays the division to which you want to associate the deferred revenue recognition template.

- **Algorithms** – Lists the algorithms associated with the deferred revenue recognition template. It contains the following columns:

Column Name	Column Description	Mandatory (Yes or No)
System Event	Indicates the system event on which the algorithm must be executed	No
Sequence	Displays the sequence number.	No

Column Name	Column Description	Mandatory (Yes or No)
Algorithm	Displays an algorithm that needs to be attached to the selected system event.	No
	<b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.	

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition template. It contains the following fields:

Column Name	Column Description
Characteristic Type	Displays the characteristic type.
Characteristic Type	Displays the value of the characteristic type.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit, and remove algorithms of the deferred revenue recognition template.
	<b>Note:</b> The <b>Edit</b> button appears only when the deferred revenue recognition template is in the <b>Active</b> status.
Delete	Used to delete the deferred revenue recognition template.

- 
- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

## Editing a Deferred Revenue Recognition Template

### Procedure

To edit a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template whose details you want to edit.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Edit** button in the **Deferred Revenue Recognition Template** zone.

The **Deferred Revenue Recognition Template** screen appears.

**Note:** The **Edit** button appears only when the deferred revenue recognition template is in the **Active** status.

4. Associate, edit, or remove algorithms from the deferred revenue recognition template, if required.
5. Define, edit, or remove characteristics from the deferred revenue recognition template, if required.
6. Associate deferred revenue recognition template with a division, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition template are saved.

## Deleting a Deferred Revenue Recognition Template

### Procedure

To delete a deferred revenue recognition template:

1. Search for the deferred revenue recognition template in the **Deferred Revenue Recognition Template** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Template** column corresponding to the deferred revenue recognition template that you want to delete.

The **Deferred Revenue Recognition Template** screen appears.

3. Click the **Delete** button in the **Deferred Revenue Recognition Template** zone.

A message appears confirming whether you want to delete the deferred revenue recognition template.

4. Click **OK**.

The deferred revenue recognition template is deleted.

## Deferred Revenue Recognition (Used for Searching)

The **Deferred Revenue Recognition** screen allows you to search for a deferred revenue recognition using various search criteria. Through this screen, you can navigate to the following screen:

- [Deferred Revenue Recognition \(Used for Viewing\)](#) on page 1755

This screen consists of the following zone:

- [Search Deferred Revenue Recognition](#) on page 1750

## Search Deferred Revenue Recognition

The **Search Deferred Revenue Recognition** zone allows you to search for a deferred revenue recognition using various search criteria. It contains the following two sections:

- **Search Criteria** – This section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a deferred revenue recognition using the deferred revenue recognition, person, account, or policy details. The valid values are: <ul style="list-style-type: none"> <li>• Account Details</li> <li>• Person Details</li> <li>• Deferred Revenue Recognition Details</li> <li>• Financial Transaction Details</li> <li>• Policy Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Account Details</b> option is selected.	
Person ID	Used to search deferred revenue recognition which are assigned to a particular person.	No
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list.	
Account ID	Used to search the account ID.	No
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Person Identifier Type	Used to select the identifier type based on which you want to search deferred revenue recognition through which the person's record is created or updated in the system.	Yes (Conditional)
		<b>Note:</b> If you specify the person identifier as a search criteria, you have to select the person identifier type.
Person Identifier	Used to specify the value for the person identifier type.	Yes (Conditional)
		<b>Note:</b> If you specify the person identifier type as a search criteria, you have to specify the person identifier.

Field Name	Field Description	Mandatory (Yes or No)
Account Identifier Type	Used to specify the account identifier type of the account whose details you want to search.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier as a search criteria, you have to select the account identifier type.
Account Identifier	Used to specify the value of the account identifier.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	<b>Note:</b> If you specify the account identifier type as a search criteria, you have to specify the account identifier.
Contract ID	Used to specify the contract ID linked to the account.	No
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Person Hierarchy	Used to indicate whether to display hierarchy of the person linked to a particular bill.	No
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> option from the <b>Search By</b> list.	
Status	Used to search deferred revenue recognition with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Closed</li> <li>• Canceled</li> <li>• Draft</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> , <b>Account Details</b> , or <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	
Deferred Revenue Recognition Template	Used to indicate the template used for deferred revenue recognition.	No
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> , <b>Account Details</b> , or <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Valid Until Date	Used to specify the date till which the deferred revenue recognition is valid.	No
	<b>Note:</b> This field appears only when you select the <b>Person Details</b> or <b>Account Details</b> option from the <b>Search By</b> list.	
Deferred Revenue Recognition ID	Used to search a particular deferred revenue recognition	No
	<b>Note:</b> This field appears only when you select the <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	
Description	Used to specify the description of the deferred revenue recognition.	No
	<b>Note:</b> This field appears only when you select the <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	
Recognition Schedule	Used to search deferred revenue recognition with a particular schedule. The valid values are: <ul style="list-style-type: none"> <li>• Daily</li> <li>• Monthly</li> <li>• Weekly</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Deferred Revenue Recognition Details</b> option from the <b>Search By</b> list.	
Financial Transaction ID	Used to search deferred revenue recognition which are assigned to a particular financial transaction.	
	<b>Note:</b> This field appears only when you select the <b>Financial Transaction Details</b> option from the <b>Search By</b> list.	
Policy Type	Used to indicate the type of policy.	Yes
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Policy Number	Used to indicate the policy number.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Plan Number	Used to indicate the plan number of the policy.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Source System	Used to indicate the name of the external system from where the policy originated.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
Start Date	Used to indicate the date from when the policy is effective.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	
End Date	Used to indicate the date till when the policy is effective.	No
	<b>Note:</b> This field appears only when you select the <b>Policy Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a deferred revenue recognition.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	<b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition</b> screen appears where you can view the details of the respective deferred revenue recognition.
Contract Information	Displays the basic information about the contract corresponding to the deferred revenue recognition. In addition, this column has a context menu which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Contract</b> screen appears where you can view the details of the respective contract.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	<b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the respective financial transaction.

### Related Topics

For more information on...	See...
How to view the details of a deferred revenue recognition	<a href="#">Viewing the Deferred Revenue Recognition Details</a> on page 1754
How to search for a deferred revenue recognition	<a href="#">Searching for a Deferred Revenue Recognition</a> on page 1754

## Searching for a Deferred Revenue Recognition

### Prerequisites

To search for a deferred revenue recognition, you should have:

- Deferred Revenue Recognition Template defined in the application.
- Person identifier types defined in the application
- Account identifier types defined in the application
- Recognition Schedules defined in the application
- Source Systems defined in the application

### Procedure

To search for a deferred revenue recognition:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Deferred Revenue Recognition**.  
A sub-menu appears.
3. Click the **Search** option from the **Deferred Revenue Recognition** sub-menu.  
The **Deferred Revenue Recognition** screen appears.
4. Enter the search criteria in the **Search Deferred Revenue Recognition** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.  
A list of deferred revenue recognition that meet the search criteria appears in the **Search Results** section.

## Viewing the Deferred Revenue Recognition Details

### Procedure

To view the details of a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose details you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 1755

- [Deferred Revenue Recognition - Log](#) on page 1758
3. Ensure that the **Main** tab is selected.
  4. View the details of the deferred revenue recognition in the **Deferred Revenue Recognition** zone.

## Deferred Revenue Recognition (Used for Viewing)

The **Deferred Revenue Recognition** screen allows you to:

- View the details of a deferred revenue recognition
- Edit a deferred revenue recognition
- Generate the deferred revenue recognition schedule
- Add related deferred revenue recognitions
- Edit the details of a deferred revenue recognition schedule
- View the log of a deferred revenue recognition
- Add a log entry for a deferred revenue recognition

This screen consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 1755
- [Deferred Revenue Recognition - Log](#) on page 1758

### Deferred Revenue Recognition - Main

The **Main** tab displays information about the deferred revenue recognition. It contains the following zones:

- [Deferred Revenue Recognition](#) on page 1755
- [Associated Deferred Revenue Recognitions](#) on page 1757
- [Recognition Schedule](#) on page 1758
- [Revenue Recognition Items](#) on page 1758

#### Deferred Revenue Recognition

The **Deferred Revenue Recognition** zone displays the details of the deferred revenue recognition. It contains the following sections:

- **Main** – Displays basic information about the deferred revenue recognition. It contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.

Field Name	Field Description
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	<b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition Template</b> screen appears where you can view the details of the deferred revenue recognition template.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	<b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction Information</b> screen appears where you can view the details of the financial transaction.
Total Revenue Deferred	Displays the total revenue deferred.
Total Revenue Recognized	Displays the total revenue recognized.
Status	Indicates the status of the deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Closed</li> <li>• Canceled</li> <li>• Draft</li> </ul>

- **Related Deferred Revenue Recognitions** - Lists the related deferred revenue recognitions. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays the basic information of the related Deferred Revenue Recognition Schedules (i.e. DRR Schedule of the BS/AD, corresponding to the BX/AX)
Create Date Time	Displays the date and time when the deferred revenue recognition is created.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to define, edit and remove characteristics, related deferred revenue recognitions of the deferred revenue recognition.
	<b>Note:</b> The <b>Edit</b> button appears only when the deferred revenue recognition is in the <b>Active</b> status.

Button Name	Button Description
Generate Schedule	Used to generate the deferred revenue recognition schedule.
	<b>Note:</b> The <b>Generate Schedule</b> button appears only when the deferred revenue recognition is in the <b>Draft</b> status.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the deferred revenue recognition is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Create Date/Time	Displays the date and time when the deferred revenue recognition schedule is created.
Status Date/Time	Displays the date and time when the deferred revenue recognition status is updated.

- **Characteristics** – Lists the characteristics defined for the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the deferred revenue recognition.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.

### Associated Deferred Revenue Recognitions

The **Associated Deferred Revenue Recognitions** zone Displays the basic information of the other schedules linked to the same **FT** having a separate **Schedule** due to the different **Distribution Code**. Purpose of this section is to show all the associated **Schedules** generated for a single **FT**. It contains the following columns:

Column Name	Column Description
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.
	<b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition</b> screen appears where you can view the details of the deferred revenue recognition.
Financial Transaction Information	Displays the basic information about the financial transaction corresponding to the deferred revenue recognition.
	<b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the respective deferred revenue recognition.
Distribution Code	Displays the distribution code which indicates the template associated with the deferred revenue recognitions.

Column Name	Column Description
Deferred Revenue Recognition Template Information	Displays information about the deferred revenue recognition template.
	<b>Note:</b> It has a link. On clicking the link, the <b>Deferred Revenue Recognition Template</b> screen appears where you can view the details of the deferred revenue recognition template.
Status	Indicates the status of the associated deferred revenue recognition. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Closed</li> <li>• Canceled</li> </ul>

### Recognition Schedule

The **Recognition Schedule** zone lists the adjustment information and the recognition amount of the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule.

This zone contains the **Edit** button. It is used to edit the details of recognition schedule

**Note:** This zone appears when the deferred revenue recognition is in the **Active** status.

### Revenue Recognition Items

The **Revenue Recognition Items** zone displays the adjustment information about the recognition items. It contains the following columns:

Column Name	Column Description
Recognition Date	Displays the date on which the recognition is scheduled.
Recognition Amount	Displays the amount of the recognition scheduled.
Adjustment Information	Displays information about the adjustments in recognition schedule. “
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the deferred revenue recognition.

## Deferred Revenue Recognition - Log

The **Log** tab contains the following zone:

- [Deferred Revenue Recognition Log](#) on page 1758

### Deferred Revenue Recognition Log

The **Deferred Revenue Recognition Log** zone lists the complete trail of actions performed on the deferred revenue recognition. It contains the following columns:

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the deferred revenue recognition
Details	Displays the details about the action performed on the deferred revenue recognition
User	Indicates the user who has performed the action on the deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is created when the action is performed on the deferred revenue recognition.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.
Status Reason	Indicates the reason why the status of the deferred revenue recognition is changed.
	<b>Note:</b> At present, no data appears in this column. The implementation team can build the custom logic to meet the business requirements.

**Note:** You can manually add a log entry for the deferred revenue recognition by clicking the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

## Editing a Deferred Revenue Recognition

### Procedure

To edit a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column \orresponding to the deferred revenue recognition whose details you want to edit.  
The **Deferred Revenue Recognition** screen appears.
3. Click the **Edit** button in the **Deferred Revenue Recognition** zone.  
The **Deferred Revenue Recognition** screen appears.

**Note:** The **Edit** button appears only when the deferred revenue recognition is in the **Active** status.

4. Modify the required details in the **Main** section.
5. Define, edit, or remove related deferred revenue recognitions from the deferred revenue recognition, if required.
6. Define, edit, or remove characteristics from the deferred revenue recognition, if required.
7. Click **Save**.

The changes made to the deferred revenue recognition are saved.

**Related Topics**

How to define the characteristics for a deferred revenue recognition	<a href="#">Defining Characteristics for a Deferred Revenue Recognition</a> on page 1760

**Creating the Deferred Revenue Recognition Schedule****Prerequisites**

To create the deferred revenue recognition schedule, you should have:

- Should have **Revenue Recognition Schedule Creation Algorithm** attached in the **DRR Template**

**Procedure**

To create the deferred revenue recognition schedule:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose recognition schedule you want to generate.

The **Deferred Revenue Recognition** screen appears.

3. Click the **Generate Schedule** button in the **Deferred Revenue Recognition** zone.

**Note:** The **Generate Schedule** button appears only when the deferred revenue recognition is in the **Draft** status.

The status of the deferred revenue recognition is changed to **Active**.

**Related Topics**

For more information on...	See...
<b>Deferred Revenue Recognition</b> screen	<a href="#">Deferred Revenue Recognition (Used for Viewing)</a> on page 1755

**Defining Characteristics for a Deferred Revenue Recognition****Prerequisites**

To define characteristics for a deferred revenue recognition, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Deferred Revenue Recognition**)

**Procedure**

To define characteristics for a deferred revenue recognition:

1. Ensure that the **Characteristics** section is expanded when you are editing a deferred revenue recognition.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the deferred revenue recognition.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Type	Used to indicate the characteristic type. <b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Deferred Revenue Recognition</b> .	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition.
Characteristic Value	Used to specify the value for the characteristic type. <b>Note:</b> On specifying the value for a characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	Yes (Conditional) <b>Note:</b> This field is required when you are defining a characteristic for the deferred revenue recognition.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a characteristic value.

- If you want to define more than one characteristic for the deferred revenue recognition, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the deferred revenue recognition, click the **Delete**  icon corresponding to the characteristic.

## Adding Related Deferred Revenue Recognitions

### Prerequisites

To add related deferred revenue recognitions, you should have:

- Deferred revenue recognition template defined in the system.

### Procedure

To add related deferred revenue recognitions:

- Ensure that the **Related Deferred Revenue Recognitions** section is expanded when you are editing a deferred revenue recognition.

The **Related Deferred Revenue Recognitions** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Deferred Revenue Recognition ID	Used to specify the ID of the deferred revenue recognition.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Deferred Revenue Recognition Search</b> window appears.	
Create Date Time	Used to indicate the creation date and time of the deferred revenue recognition.	Yes
Financial Transaction ID	Used to specify the ID of the financial transaction corresponding to the deferred revenue recognition.	Yes
	<b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Financial Transactions Search</b> window appears.	

- Enter the required details in the **Related Deferred Revenue Recognitions** section.
- If you want to add more than one related deferred revenue recognition for the deferred revenue recognition, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a related deferred revenue recognition from the deferred revenue recognition, click the **Delete**  icon corresponding to the related deferred revenue recognition.

### Related Topics

## Editing the Deferred Revenue Recognition Schedule Details

### Prerequisites

To edit the details of the deferred revenue recognition schedule, you should have:

- Should have **Allow Editing Switch** as **Yes** on deferred revenue recognition template.

### Procedure

To edit the details of the deferred revenue recognition schedule:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose deferred revenue recognition schedule details you want to edit.

The **Deferred Revenue Recognition** screen appears.

- Select the recognition whose details you want to edit in the **Recognition Schedule** zone and click the **Edit** button available in the upper left corner above the table in this zone.

The **Edit Recognition Schedule** screen appears.

**Note:** A recognition schedule from the deferred revenue recognition can be edited only when the deferred revenue recognition is in the **Active** status.

The **Edit Recognition Schedule** screen contains the following fields:

Field Name	Field Description
Deferred Revenue Recognition Information	Displays the information about the deferred revenue recognition.
Financial Transaction Information	Displays the information of the financial transaction corresponding to the deferred revenue recognition.

In addition to these fields, this screen contains following columns:

Column Name	Column Description	Mandatory (Yes or No)
Recognition Date	Used to display the date on which the deferred revenue is recognized.	Yes
Recognition Amount	Used to display the amount of the deferred revenue.	Yes
Adjustment ID	Used to display the adjustment id.	Not applicable

- Modify the details of the recognition schedule.
- If you want to define more than one recognition schedule for the deferred revenue recognition, click the **Add** (+) icon and then repeat step 4.

**Note:** However, if you want to remove a recognition schedule from the deferred revenue recognition, click the **Delete** (🗑️) icon corresponding to the recognition schedule.

- Click **Save**.

The changes made to the recognition schedule are saved.

## Viewing the Log of a Deferred Revenue Recognition

### Procedure

To view the log of a deferred revenue recognition:

- Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
- In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to view.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:

- [Deferred Revenue Recognition - Main](#) on page 1755
- [Deferred Revenue Recognition - Log](#) on page 1758

- Click the **Log** tab.

The **Log** tab appears.

4. View the complete trail of actions performed on the deferred revenue recognition in the **Deferred Revenue Recognition Log** zone.

Column Name	Column Description
Date/Time	Displays the date and time when the action was performed on the dispute request.
Details	Displays the details about the deferred revenue recognition log
User	Indicates the user who has performed deferred revenue recognition
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the deferred revenue recognition
Status Reason	Displays the status reason of action performed on the deferred revenue recognition

**Adding a Log Entry for a Deferred Revenue Recognition**

**Procedure**

To add a log entry for a deferred revenue recognition:

1. Search for the deferred revenue recognition in the **Deferred Revenue Recognition** screen.
2. In the **Search Results** section, click the link in the **Deferred Revenue Recognition Information** column corresponding to the deferred revenue recognition whose log you want to edit.

The **Deferred Revenue Recognition** screen appears. It consists of the following tabs:.

- [Deferred Revenue Recognition - Main](#) on page 1755
- [Deferred Revenue Recognition - Log](#) on page 1758

3. Click the **Log** tab.

The **Log** tab appears.

4. Click on the **Add Log Entry** link in the upper right corner of the **Deferred Revenue Recognition Log** zone.

The **Add Deferred Revenue Recognition Schedule Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes Or No)
Deferred Revenue Recognition Information	Displays information about the deferred revenue recognition.	Not applicable
Log Details	Used to specify additional comments on the deferred revenue recognition.	Yes

5. Enter the comments in the **Log Details** field.

**6. Click Save.**

The log entry is added in the **Deferred Revenue Recognition Log** zone.

Oracle Revenue Management and Billing enables you to reconcile pay instructions received from the external system against the bill segments based on the account identifier, policy number, plan number, member identifier, and coverage period combination. The system enables you to upload a pay instruction file in the following formats:

- **CSV File Format** – You can upload pay instruction files in the CSV format from the specified location on the server using the **Pay Instruction CSV File Upload (C1-RECUP)** batch.
- **EDI 820 File Format** – You can upload pay instruction files in the EDI 820 file format from the specified location on the server using the **Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)** batch.

**Note:** The **BPR** tag in the EDI 820 file must be set to **I** to indicate that the file contains pay instructions for reconciliation.

While uploading pay instruction files, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

Once a file is successfully validated, the reconciliation is created for the file in the **Draft** status. The reconciliation is immediately transitioned to the **Send Notification** status and the algorithms attached to the Send Notification status are executed. Once the To Do is created, the status of the reconciliation is changed to **Pending**. A pay instruction is created for each record in the file and its status is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

You need to then specify the payment ID against which you want to reconcile the billed items for which you have received the pay instructions. Once you specify the payment information and submit the pay instructions for reconciliation, the payment amount is distributed against the reconciliation contract of the accounts for which you have received the pay instruction. The status of the reconciliation is changed to **Pending Reconciliation**.

On reconciling the pay instructions, the system finds the bill segment against which the pay instruction must be reconciled using the account identifier, policy

number, plan number, member identifier, and coverage period combination. Once the bill segment is identified, the transfer adjustment is created against the bill segment and offset adjustment is created against the respective reconciliation contract. If all pay instructions in the file are successfully reconciled, the status of the reconciliation is changed to **Completed**. However, if one or more pay instruction in the file could not be successfully reconciled, the status of the reconciliation is changed to **Open**. If a file contains a pay instruction for previous coverage period, then system checks whether there is any open pay instruction for that coverage period in the system and accordingly tries to reconcile the pay instruction. However, if an open pay instruction for that coverage period does not exist in the system, the system tries to reconcile the pay instruction against the billed item.

You may manually reconcile the pay instructions which are in the **Pending Reconciliation** status. Alternatively, you can execute the **Reconciliation Periodic Monitor (C1-RCNM)** batch at regular interval to reconcile the pay instructions.

During reconciliation, a pay instruction also goes through various statuses in its lifecycle. You may configure the following two batches to execute at the regular intervals:

- **Pay Instruction Periodic Monitor (for Pending Status) (C1-PIPMO)** – It monitors whether there are any pay instructions in the **Pending** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.
- **Pay Instruction Periodic Monitor (for Open Status) (C1-PIMDF)** – It monitors whether there are any pay instructions in the **Open** status. If so, it tries to reconcile the pay instruction against a billed item. If the pay instruction is successfully reconciled, the status of the pay instruction is changed to **Completed**. However, if the pay instruction could not be reconciled, the status of the pay instruction is changed to **Open**.

If you cancel the payment tender, the payment and reconciliation associated with the payment are automatically canceled. The status of the reconciliation is changed to **Pending Cancellation**. And, the status of all pay instructions in the reconciliation is changed to **Canceled**. If required, you can manually cancel a reconciliation. However, you can cancel a reconciliation only when it is in the **Open** or **Completed** status. On canceling a reconciliation, the status of the reconciliation is changed to **Pending Cancellation** and the status of all pay instructions in the reconciliation is changed to **Canceled**.

You need to configure the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch to execute at the regular intervals. It monitors whether there are reconciliations in the **Pending Cancellation** status. If there is a reconciliation in the **Pending Cancellation** status, the status of the reconciliation is changed to **Canceled**.

The system enables you to create a copy of reconciliation when it is in the **Canceled** status. If the number of pay instructions in the reconciliation does not exceed the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a copy of the reconciliation and pay instructions is created in the real time (i.e. immediately). The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

However, if the number of pay instructions in the reconciliation exceeds the value specified in the **Defer Processing Count** option type of the **C1-RECDUPBH** feature configuration, a batch job is automatically created using the **Duplicate Reconciliation (C1-RECDU)** batch. A message appears indicating the batch job ID. This batch job creates a copy of the reconciliation and pay instructions. The status of the reconciliation is set to **Pending**. And, the status of the pay instruction is set to either **Pending** or **Error** depending on whether it is successfully validated or not.

If the policy number, plan number, and member identifier are specified in a pay instruction, then the pay instruction is reconciled at the main subscriber level. If the policy number and plan number are specified in a pay instruction, then the pay instruction is reconciled at the plan level. However, if the policy number is only specified in a pay instruction, then the pay instruction is reconciled at the policy level.

On reconciling, some pay instructions are fully reconciled against the bill segments, some pay instructions are partially reconciled against the bill segments, and some pay instructions are not reconciled against any bill segments. The system enables you to capture such discrepancies for the reporting purposes. If required, you can generate the discrepancy report at the file or account level. If you generate the discrepancy report at the file level, the system lists the following:

- All pay instructions in the file which were partially reconciled due to rate variance
- All pay instructions in the file which could not be reconciled as the amount was paid, but not yet billed

However, if you generate the discrepancy report at the account level, the system lists the following:

- All billed items which were partially reconciled against pay instructions due to rate variance
- All billed items which could not be reconciled as the amount was billed, but not yet paid
- All pay instructions for the account which could not be reconciled as the amount was paid, but not yet billed

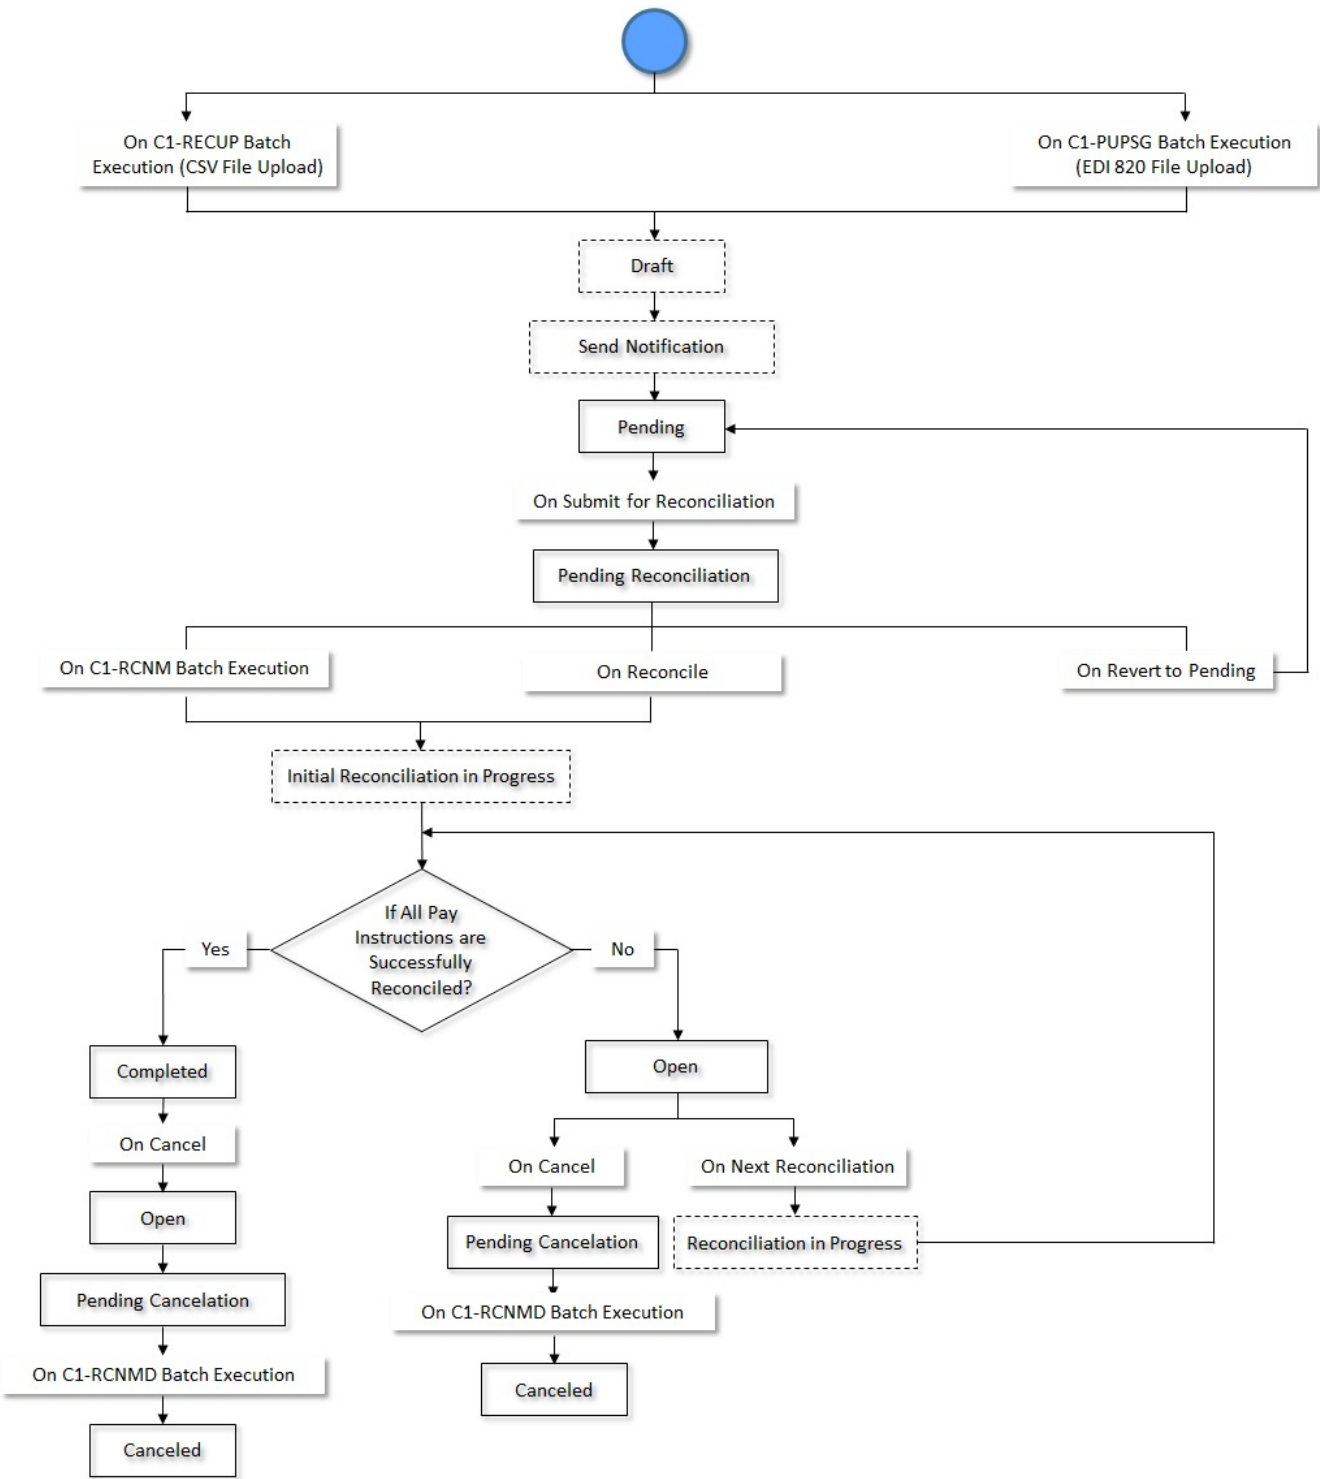

While generating a discrepancy report, you need to specify the discrepancy report type using which you want to create the discrepancy report. Once you review and finalize the discrepancy report, its status is changed to **Completed**. At a time, you can only have one discrepancy report for the file or account in the **Pending** status. Until, you finalize a discrepancy report, you cannot create another discrepancy report for the file or account. Also, note that you can create a discrepancy report for a file only when its corresponding reconciliation is in the **Open** status.

The reconciliation process goes through various statuses in its entire lifecycle. For more information about the reconciliation statuses, see...

- [Reconciliation Status Transition](#) on page 1770
- [Pay Instruction Status Transition](#) on page 1771
- [Discrepancy Report Status Transition](#) on page 1773

## Reconciliation Status Transition

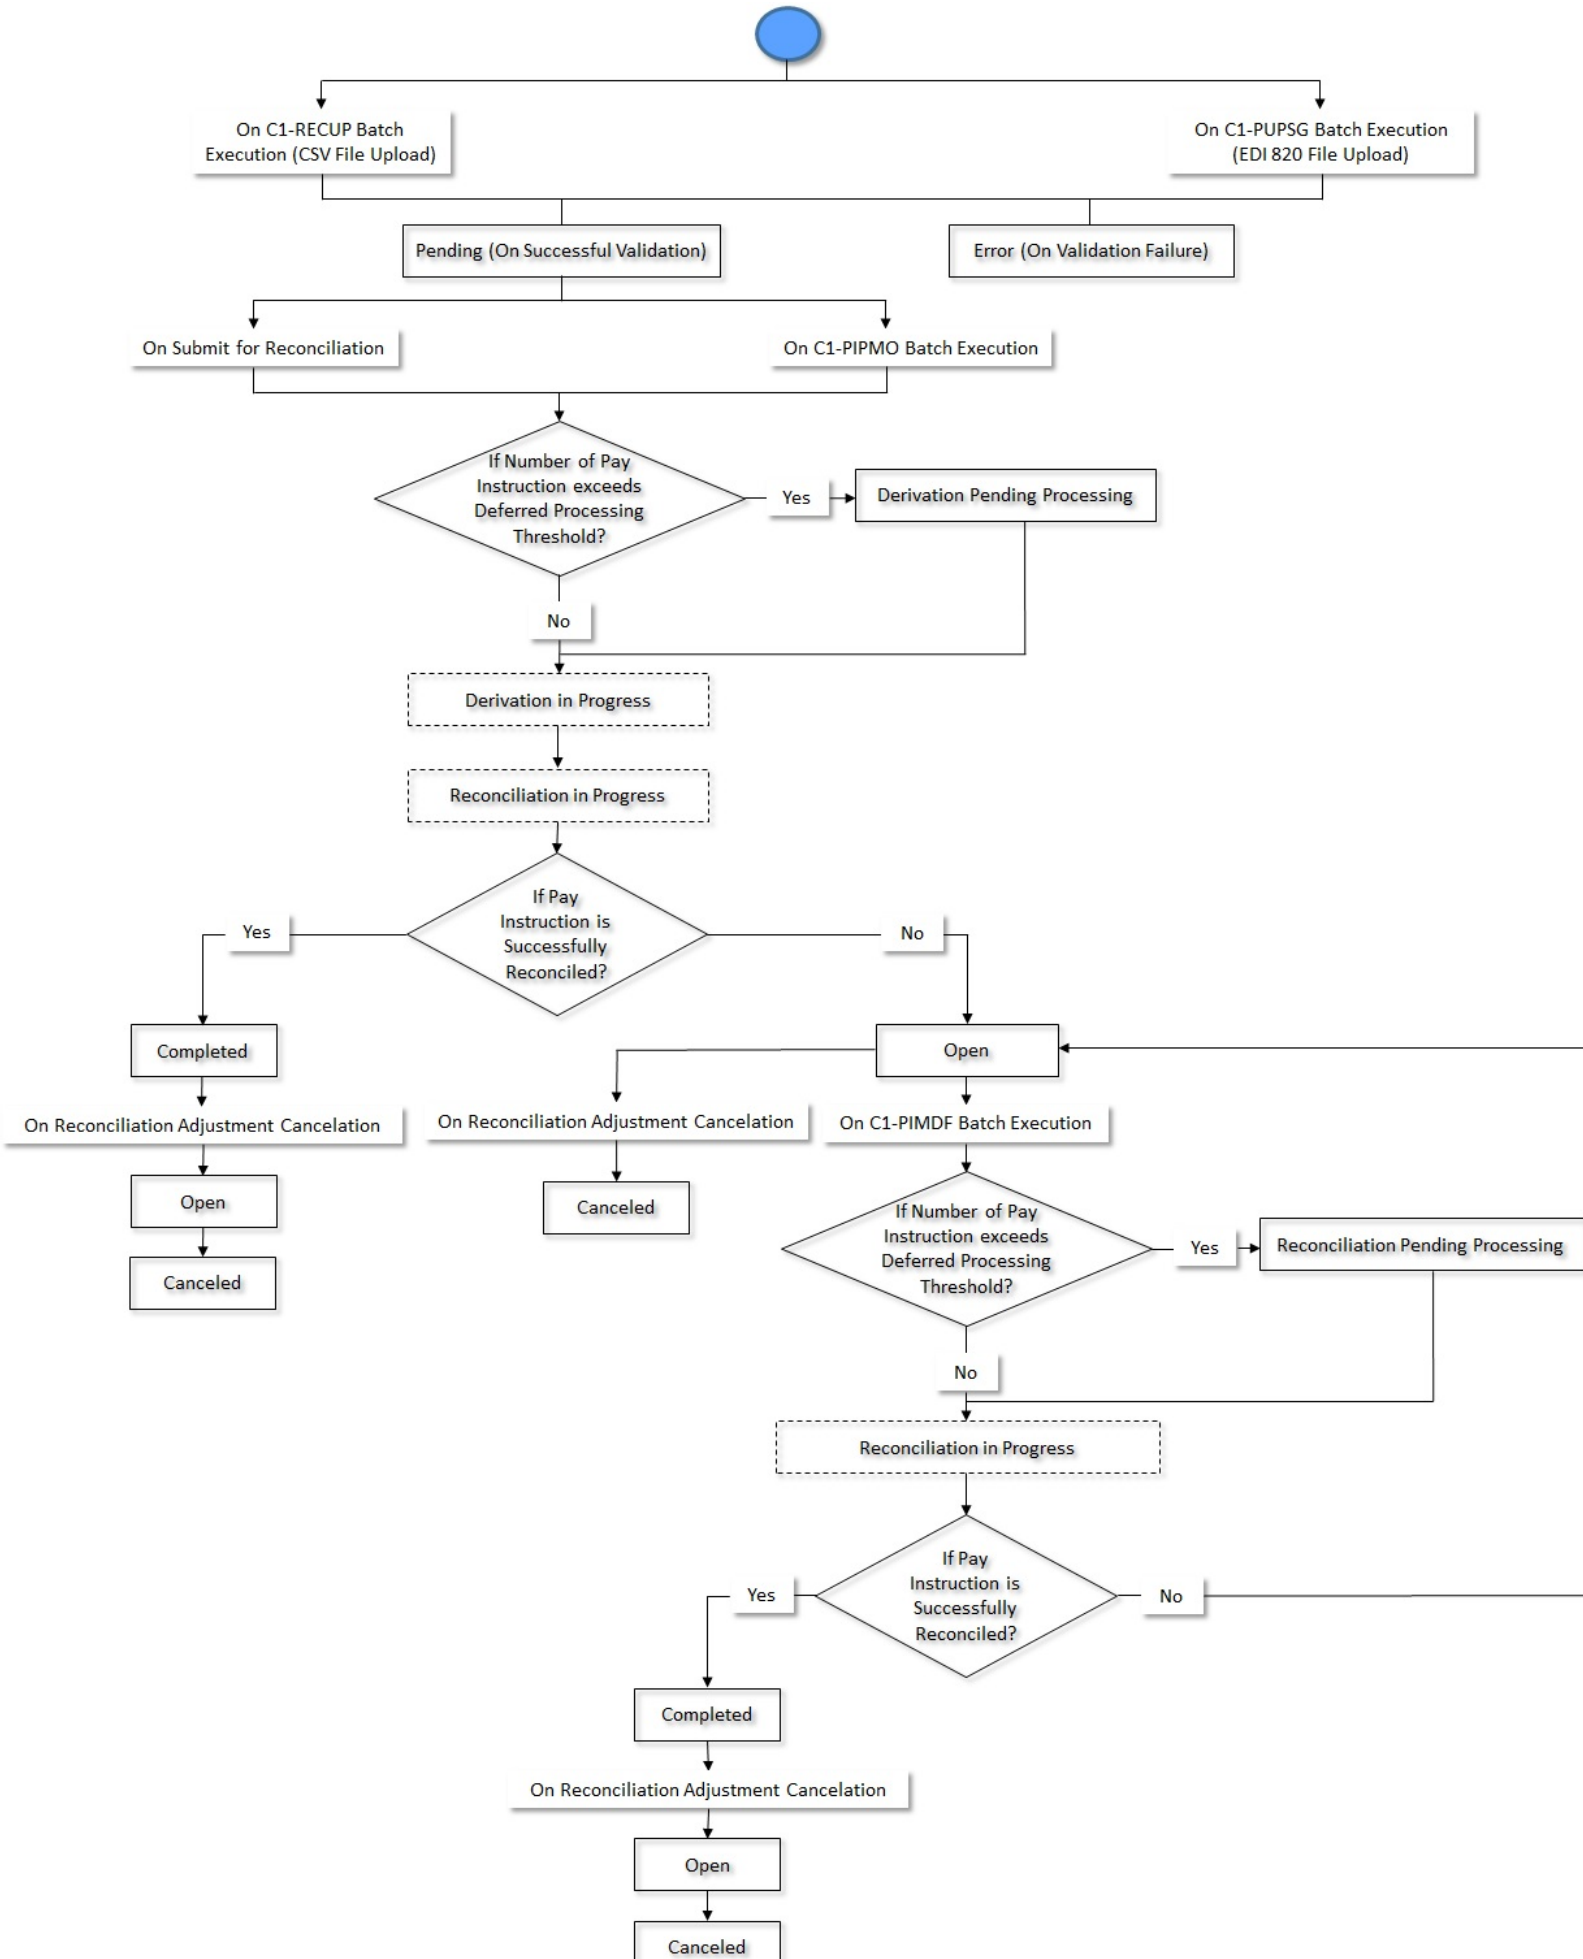

The following figure graphically indicates how a reconciliation goes through various statuses in its lifecycle:

## Pay Instruction Status Transition

The following figure graphically indicates how a Discrepancy Report goes through various statuses in its lifecycle:

## EDI 820 File Format For Reconciliation

Before uploading an EDI 820 file, you need to ensure that the EDI 820 file contains the following columns:

Tag	Attribute	Description	Mandatory (Yes or No)
Algo Param	Account Identifier Type	Used to specify the account identifier type. The valid values are: <ul style="list-style-type: none"> <li>Account Name</li> <li>Base Global Account ID</li> <li>Bill Group Identifier</li> <li>Demo Bank Account Number</li> <li>External Account Identifier</li> <li>Flexcube Account ID</li> <li>International Bank Account Number</li> </ul>	Yes (Conditional)
			<b>Note:</b> This data is required when Account Identifier is provided.

Tag	Attribute	Description	Mandatory (Yes or No)
N1[3]	Account Identifier value	Used to specify the value of the account identifier type.	Yes (Conditional)
			<b>Note:</b> This data is required when Account Identifier Type is provided.
Batch Param	Member Identifier type	Used to specify the member identifier type.	Yes
RMR[2]	Policy Number	Used to specify the policy number of the member.	Yes
Algo Param	Plan Number	Used to specify the plan number of the member.	No
ENT[4]	Member Identifier Value	Used to specify the value of the member identifier type.	Yes
RMR[4]	Amount	Used to specify the amount that has to be paid to the member.	Yes
			<b>Note:</b> The data value of this column must be 0, if no amount is provided.
DTM[6]	Coverage Start Date	Used to specify the date of the policy from where the coverage starts.	Yes
		<b>Note:</b> The Coverage Start Date cannot be later than the coverage end date.	
DTM[6]	Coverage End Date	Used to specify the date of the policy till when the coverage ends.	Yes
		<b>Note:</b> The coverage end date cannot be earlier than the coverage start date.	
NM1[4] [5]	Member Name	Used to specify the name of the member.	Yes
REF[2]	Plan Number	Used to specify the plan number of the member.	Yes (Conditional)
			<b>Note:</b> This data is required when Algo Param tag does not have a value.
Batch Param	Reconciliation Type	Used to specify the type of reconciliation.	Yes
Batch Param	Reconciliation Cancel Status	Used to specify the Reconciliation Cancellation status.	Yes

## Sample EDI 820 File Format

Here the tags ISA and IEA resemble Bank Details, whereas LBTEST01 indicates Tender Source information.

Tags like GS and GE, ST and SE are known as Start and End Tags. All of the other tags are embedded inside these Start and End tags.

For more information about the EDI 820 file format, see topic [EDI 820 File Format For Reconciliation](#) on page 1773

## Algorithms Used in C1-MemberReconType

The following table lists the algorithms which are attached to the **C1-MemberReconType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-REOCNPEP	C1-REOCNPEP	Refer to <a href="#">C1-REOCNPEP</a> on page 1775

### C1-REOCNPEP

This algorithm validates a reconciliation type.

It checks the following:

- A duplicate algorithm is not added.
- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a reconciliation type when the corresponding reconciliation is in a status other than **Completed** or **Canceled**.

## Algorithms Used in C1-MemberReconciliation

The following table lists the algorithms which are attached to the **C1-MemberReconciliation** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-RECONINFO	C1-RECONINFO	Refer to <a href="#">C1-RECONINFO</a> on page 1777
Validation	C1-MRECONVAL	C1-MRECONVAL	Refer to <a href="#">C1-MRECONVAL</a> on page 1777

The following table lists the algorithms which are used in the lifecycle of the **C1-MemberReconciliation** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	-	-	-	-
Send Notification	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1068

## C1-RECONINFO

This algorithm generates the reconciliation information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Reconciliation Type Description
- Reconciliation Status
- Reconciliation ID

## C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.
- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** – Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## F1-TDCREATE

This algorithm is invoked when the status of the reconciliation is changed to **Send Notification**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** – Used to specify the type of notification that you want to generate when the reconciliation is created for a pay instruction file.
- **To Do Role** – Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is created for a pay instruction file.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## C1-VALPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Pending**. Once a pay instruction is created, this algorithm validates the following:

- The coverage end date is not earlier than the coverage start date.
- Either the account identifier type and account identifier or the account ID is available in the pay instruction record.
- The member identifier type is available when the member identifier is specified and vice versa.
- A person with the given member identifier type and member identifier combination exists in the system.
- An account with the specified account ID exists in the system.
- The account ID is derived using the account identifier type and account identifier combination when the account ID is not available in the pay instruction record.
- The account is eligible for reconciliation.

If the above mentioned validations are successful, the status of the pay instruction is set to **Pending**. However, if any of the above validation fails, the status of the pay instruction is set to **Error**.

This algorithm contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** – Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. This type of characteristic is defined on the account. You must specify a characteristic type where the characteristic entity is set to Account.
- **Maintenance Object for Generating Pay Instruction Logs** – Used to specify the maintenance object using which you want to generate logs for the pay instruction.
- **Pay Instruction Error Status** – Used to specify the status code to which you want to transition the pay instruction when the validation fails.
- **Pay Instruction Pending Status** – Used to specify the status code to which you want to transition the pay instruction when the validation is successful.

All these parameters are mandatory.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## C1-MRECONVAL

This algorithm is invoked when you submit the pay instruction file for reconciliation. It checks the following:

- The payment is not associated with any other reconciliation which is in the status other than **Pending Cancellation** or **Canceled**.

- The payment ID and payor account ID are both available for further processing.

It contains the following parameters:

- **Reconciliation Canceled Status** – Used to specify the status code to which the reconciliation in the **Pending Cancellation** status is transitioned when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed.
- **Reconciliation Pending Cancellation Status** - Used to specify the status code to which the reconciliation is transitioned when you click the **Cancel** button.

Both these parameters are mandatory.

## C1-MONPAYINS

This algorithm is invoked when the status of the reconciliation is changed to **Initial Reconciliation in Progress** or **Reconciliation in Progress**. It monitors or checks whether there are any pay instructions in the following statuses:

- Reconciliation Pending Processing
- Derivation Pending Processing
- Completed

If all pay instructions in the reconciliation are in the **Completed** status, then the status of the reconciliation is changed to **Completed**. However, if there are any pay instructions in the **Reconciliation Pending Processing** or **Derivation Pending Processing** status, then the status of reconciliation is changed to **Open**.

This algorithm contains the following parameters:

- **Pay Instruction Derivation Pending Processing Status** - Used to specify the status code to which the pending pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Reconciliation Pending Processing Status** - Used to specify the status code to which the open pay instruction is transitioned when the number of pay instructions in the reconciliation exceeds the deferred processing threshold (specified in an algorithm which is created using the **C1-RCOPNPYIN** algorithm type).
- **Pay Instruction Completed Status** - Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Reconciliation Open Status** - Used to specify the status code to which you want to transition the reconciliation when there is a pay instruction in the status which is specified in the **Pay Instruction Derivation Pending Processing Status** or **Pay Instruction Reconciliation Pending Processing Status** parameter.
- **Reconciliation Completed Status** - Used to specify the status code to which you want to transition the reconciliation when all its pay instructions are in the status which is specified in the **Pay Instruction Completed Status** parameter.

All these parameters are mandatory.

## C1-TRNPAYRCN

This algorithm transfers the payment amount from the payor account's contract to the reconciliation contract of the accounts for which you have received the pay instruction. In this process, the payment against the payor account's contract is canceled and the payment against the payee account's reconciliation contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** – Used to indicate the reason that you want to use when the payment on the payor account's contract is canceled.
- **Reconciliation Contract Match Type** – Used to specify the match type using which you want to apply payment against the reconciliation contract.

Both these parameters are mandatory.

## C1-RCOPNPYIN

This algorithm checks whether the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter. If the status of the pay instruction is **Pending** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Derivation Pending Processing Status** parameter.

However, if the status of the pay instruction is **Open** and the number of pay instructions in the reconciliation exceeds the limit defined in the **Deferred Processing Threshold** parameter, then the status of the pay instruction is changed to the value defined in the **Pay Instruction Reconciliation Pending Processing Status** parameter.

It contains the following parameters:

- **Pay Instruction Pending Status** – Used to specify the status code to which a pay instruction is transitioned when its validation is successful.
- **Pay Instruction Open Status** – Used to specify the status code to which a pay instruction is transitioned when it is not fully reconciled.
- **Pay Instruction Derivation Pending Processing Status** – Used to specify the status code to which you want to transition the pending pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Pay Instruction Reconciliation Pending Processing Status** – Used to specify the status code to which you want to transition the open pay instruction when the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit.
- **Deferred Processing Threshold** – Used to specify the maximum number of pay instructions that can be reconciled in the real time (i.e. immediately). If the number of pay instructions in the reconciliation exceeds the deferred processing threshold limit, the pay instruction is reconciled in the deferred mode.

All these parameters are mandatory.

## C1-RCNOPNMR

This algorithm initiates the reconciliation process for the past open reconciliation records of the account. It contains the following parameters:

- **Reconciliation Open Status** – Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.
- **Reconciliation In Progress Status** – Used to specify the status code to which you want to transition the past open reconciliation record when the current reconciliation record of the account is reconciled.

Both these parameters are mandatory.

## C1-RCMONPNCN

This algorithm is invoked when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed. It checks whether the reason is specified while canceling the reconciliation. If the cancel reason is specified, the status of the reconciliation is changed to **Canceled**. However, if the cancel reason is not specified, an error occurs while executing the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch.

It contains the following parameters:

- **Reconciliation Cancel Status Reason** -  
Used to specify the cancel reason. If you specify the value for this parameter, the system will validate whether the cancel reason specified while canceling the reconciliation matches the cancel reason specified in this parameter. If the cancel reason does not match, an error occurs while executing the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch. You must specify a reason which is defined for the **Pending Cancellation** status of the **C1-MemberReconciliation** business object.

## C1-CANPAYINS

This algorithm is invoked when the **Reconciliation Cancellation Periodic Monitor (C1-RCNMD)** batch is executed. It changes the status of all pay instructions in the reconciliation.

It contains the following parameter:

- **Pay Instruction Canceled Status** – Used to specify the status code to which you want to transition a pay instruction when the reconciliation is canceled. This parameter is mandatory.

## C1-CANRCNPAY

This algorithm transfers the payment amount from the payee account's reconciliation contract to the payor account's contract. In this process, the payment against the reconciliation contract is canceled and the payment against the payor account's contract is created in the **Frozen** status.

It contains the following parameters:

- **Payment Cancel Reason** – Used to indicate the reason that you want to use when the payment against the payee account's reconciliation contract is canceled.
- **On Account Match Type** – Used to specify the match type using which you want to apply the payment against the contract of the payor account.

Both these parameters are mandatory.

## C1-RCNCANLTD

This algorithm is invoked when the status of the reconciliation is changed to **Canceled**. It creates a To Do using the specified To Do type and assigns it to users with the specified To Do role.

It contains the following parameters:

- **To Do Type** – Used to specify the type of notification that you want to generate when the reconciliation is canceled.
- **To Do Role** – Used to specify the To Do role to indicate the users to whom you want to send the notification when the reconciliation is canceled.

The rest of the parameters, such as **To Do Type Element Name**, **To Do Role Element Name**, **Message Category**, **Message Number**, **Characteristic Type For Log Entry**, **To Do Sort Keys Retriever Script**, **Discard Cancel Terminate Reason Element**, **Discard Cancel Terminate Reason**, **Retry Frequency**, and **Retry Frequency Element Name**, are not used at the moment.

## Algorithms Used in C1-PayInstruction

The following table lists the algorithms which are attached to the **C1-PayInstruction** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-MPAYININF	C1-MPAYININF	Refer to <a href="#">C1-MPAYININF</a> on page 1782

The following table lists the algorithms which are used in the lifecycle of the **C1-PayInstruction** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Pending	-	-	-	-

Status	System Event	Algorithm	Algorithm Type	Description
Derivation In Progress	Enter	C1-PYINDRVAN	C1-PYINDRVAN	Refer to <a href="#">C1-PYINDRVAN</a> on page 1782
Reconciliation In Progress	Enter	C1-PIRECOCIL	C1-PIRECOCIL	Refer to <a href="#">C1-PIRECOCIL</a> on page 1783
Open	-	-	-	-
Complete	-	-	-	-
Cancelled	Enter	C1-PYICNADJ	C1-PYICNADJ	Refer to <a href="#">C1-PYICNADJ</a> on page 1784
Derivation Pending Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1068
Reconciliation Pending Processing	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1068
Error	-	-	-	-

## C1-MPAYININF

This algorithm generates the pay instruction information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- “Period:” Start Date - End Date
- Pay Instruction Amount
- Pay Instruction Status
- Payor Name
- Pay Instruction ID

## C1-PYINDRVAN

This algorithm is invoked when the status of the pay instruction is changed to **Derivation in Progress**. It derives the following:

- Policy using the policy number
- Plan using the plan number
- Member using the member identifier type and member identifier
- Payee account using the account identifier type and account identifier

If the policy, plan, and member information is available, it validates whether the member is covered under the specified plan of the policy. However, if the policy and plan information is available, it validates whether the plan is included in the specified policy. If the derivation and validation process is successful, the related object information is derived for policy, plan, and/or member from the system.

However, if the derivation and validation process fails, the related object information is not derived for policy, plan, and/or member and the status of the pay instruction remains as **Pending**.

In addition, the system determines whether the pay instruction must be reconciled at the member, plan, or policy level depending on the information available in the pay instruction. If the policy, plan, and member information is available, the pay instruction is reconciled at the member level. If the policy and plan information is available, the pay instruction is reconciled at the policy plan level. However, if the policy information is available, the pay instruction is reconciled at the policy level.

It contains the following parameters:

- **Unsuccessful Processing Status** – Used to specify the status code to which you want to transition the pay instruction when the derivation and validation process fails.
- **Pay Instruction Matching Level Characteristic Type** – Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** – Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** - Used to specify the value that you want to define for the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter when the pay instruction must be reconciled at the policy level.

All these parameters are mandatory.

## C1-PIRECOCIL

This algorithm is invoked when the status of the pay instruction is changed to **Reconciliation in Progress**. It searches whether there is an open bill segment with the policy, plan, member, and coverage period combination for the payee account. If such bill segment exists in the system, this algorithm reconciles the pay instruction against the open bill segment. It creates two reconciliation adjustments – one against the payee account's reconciliation contract and another against the bill segment's contract.

If the amount on the pay instruction is fully reconciled, then the status of the pay instruction is changed to **Completed**. However, if the amount on the pay instruction is not fully reconciled, then the status of the pay instruction is changed to **Open**.

It contains the following parameters:

- **Pay Instruction Matching Level Characteristic Type** – Used to specify the characteristic type which indicates whether the pay instruction must be reconciled at the member, plan, or policy level. This type of characteristic is defined on the pay instruction. Here, you must specify a characteristic type where the characteristic entity is set to **Payment Instruction**.
- **Member Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the member level.
- **Plan Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the policy plan level.
- **Policy Matching Level Characteristic Value** – Used to specify the value of the characteristic type specified in the **Pay Instruction Matching Level Characteristic Type** parameter which indicates that the pay instruction must be reconciled at the policy level.
- **Adjustment Type for Bill Segment Contract** – Used to specify the adjustment type using which you want to create the adjustment on the bill segment's contract when the pay instruction is reconciled.
- **Adjustment Type for Reconciliation Contract** – Used to specify the adjustment type using which you want to create the adjustment on the reconciliation contract when the pay instruction is reconciled.
- **Reconciliation Open Status** – Used to specify the status code to which you want to transition the reconciliation when the status of the pay instruction is changed to **Open**.

- **Pay Instruction Open Status** – Used to specify the status code to which you want to transition the pay instruction when it is not fully reconciled.
- **Pay Instruction Completed Status** – Used to specify the status code to which you want to transition the pay instruction when it is fully reconciled.
- **Reconciliation Characteristic Type** – Used to specify the characteristic type which you want to use to store the reconciliation ID. This type of characteristic is defined on the adjustments which are created on reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Adjustment Type**.
- **Payment Event Characteristic Type** – Used to specify the characteristic type which you want to use to store the payment event ID. This type of characteristic is defined on the reconciliation adjustments to indicate the payment event whose payment is distributed against the bill segment.
- **Adjustment Type for Offsetting Debits against Billed Credits** – Used to specify the adjustment type using which you want to create the adjustments when offsetting billed debit verses billed credits.

All these parameters are mandatory.

## C1-PYICNADJ

This algorithm is invoked when the status of the pay instruction is changed to **Canceled**. It cancels the reconciliation adjustments which are created while reconciling the pay instruction. It cancels the reconciliation adjustment irrespective of whether the status of the pay instruction is **Open** or **Completed**.

It contains the following parameters:

- **Adjustment Cancel Reason** – Used to indicate the reason that you want to use when the reconciliation adjustments are canceled.
- **Pay Instruction Completed Status** – Used to specify the status code to which the pay instruction is transitioned when it is fully reconciled.
- **Pay Instruction Open Status** – Used to specify the status code to which the pay instruction is transitioned when it is not fully reconciled.
- **Reconciliation Completed Status** – Used to specify the status code to which the reconciliation is transitioned when all its pay instructions are fully reconciled.
- **Reconciliation Open Status** – Used to specify the status code to which the reconciliation is transitioned when its pay instruction is not fully reconciled.

All these parameters are mandatory.

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## Algorithms Used in C1-MemberDiscReportType

---

The following table lists the algorithms which are attached to the **C1-MemberDiscReportType** business object:

System Event	Algorithm	Algorithm Type	Description
Pre-Processing	C1-DISCPEP	C1-DISCPEP	Refer to <a href="#">C1-DISCPEP</a> on page 1785

## C1-DISCPEP

This algorithm validates a discrepancy report type. It checks the following:

- A duplicate characteristic type is not added.

In addition, it does not allow you to:

- Delete a discrepancy report type when the corresponding discrepancy report is in a status other than **Completed**.

## Algorithms Used in C1-DiscrepancyReport

The following table lists the algorithms which are attached to the **C1-DiscrepancyReport** business object:

System Event	Algorithm	Algorithm Type	Description
Information	C1-DISRINFO	C1-DISRINFO	Refer to <a href="#">C1-DISRINFO</a> on page 1785

The following table lists the algorithms which are used in the lifecycle of the **C1-DiscrepancyReport** business object:

Status	System Event	Algorithm	Algorithm Type	Description
Draft	Monitor	F1-AT-RQJ	F1-GEN-BOMNJ	Refer to <a href="#">F1-AT-RQJ</a> on page 1068
	Enter	C1-VALNEWDIS	C1-VALNEWDIS	Refer to <a href="#">C1-VALNEWDIS</a> on page 1786
Pending	Enter	C1-CRDSLNTM	C1-CRDSLNTM	Refer to <a href="#">C1-CRDSLNTM</a> on page 1786
	Exit	F1-TODOCOMPL	F1-TODOCOMPL	Refer to <a href="#">F1-TODOCOMPL</a> on page 1068
Completed	Enter	C1-VALCMPDIS	C1-VALCMPDIS	Refer to <a href="#">C1-VALCMPDIS</a> on page 1786

## F1-AT-RQJ

This algorithm transitions the current status of the business object to the specified status. It contains the following parameters:

- **Next Status** – Used when you want to override the default next status specified in the lifecycle.
- **Next Transition Condition** – Used when you want to override the default next transition condition specified in the lifecycle.

At a time, you can specify value for either the **Next Status** or **Next Transition Condition** parameter. If you don't specify any value for these parameters, the system will transition the business object to the default next status specified in its lifecycle.

## C1-DISRINFO

This algorithm generates the discrepancy report information string which appears throughout the application. It concatenates the following fields separated by a comma in the specified order:

- Discrepancy Report Type Description
- Discrepancy Report Status

- Discrepancy Report ID

## C1-VALNEWDIS

This algorithm allows you to create a discrepancy report only when the following conditions are met:

- The account for which discrepancy report is created is eligible for reconciliation.
- A discrepancy report in the **Pending** status does not exist for the account or file.
- A reconciliation record in the **Open** status exists for the account or file.

It contains the following parameters:

- **Eligible for Reconciliation Characteristic Type** – Used to specify the characteristic type which indicates whether the account is eligible for reconciliation. Here, you must specify a characteristic type where the characteristic entity is set to **Account**.
- **Eligible for Reconciliation Characteristic Value** – Used to specify the value of the characteristic type specified in the **Eligible for Reconciliation Characteristic Type** parameter which indicates that the account is eligible for reconciliation.

Both these parameters are mandatory.

## C1-CRDSLNTM

This algorithm is invoked when the status of the discrepancy report is changed to **Pending**. If the discrepancy report is created at the account level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there is an open bill segment for the account and for which there are open and pending pay instructions in the open reconciliation.

However, if the discrepancy report is created at the file level, this algorithm creates a discrepancy line item for each policy, plan, member, and coverage period combination for which there are open and pending pay instructions in the open reconciliation. Note that the discrepancy line items are created for each account whose pay instructions are received in the pay instruction file.

It contains the following parameters:

- **Consumer Status Characteristic Type** – Used to specify the characteristic type which stores the consumer status of the member. The system retrieves the consumer status of the member and stores it against the respective discrepancy line item. Here, you must specify a characteristic type where the characteristic entity is set to **Person**. This parameter is mandatory.

## F1-TODOCOMPL

This algorithm completes To Do entries that are created for the business object when the business object exits the given status. It finds and completes all open To Do entries where the business object's primary key is defined as a drill key. However, if the **Exclude To Do Entries From Auto Completion** characteristic is set to **Y** for the business object, the system does not automatically complete the respective To Do entry.

## C1-VALCMPDIS

This algorithm is invoked when you click the **Finalize** button. It changes the status of the discrepancy report to **Completed** only when the discrepancy category is specified for each discrepancy line item in the report.

## Reconciliation Type

---

Oracle Revenue Management and Billing allows you to define a reconciliation type using which you can create the reconciliation. It is the reconciliation type which helps the system to determine:

- The business object using which the reconciliation should be created.

- The file format through which the pay instruction records can be uploaded in the system.

In addition, a reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

The **Reconciliation Type** screen allows you to define, edit, copy, and delete a reconciliation type. It contains the following zones:

- [Reconciliation Type List](#) on page 1787
- [Reconciliation Type](#) on page 1787

## Reconciliation Type List

The **Reconciliation Type List** zone lists the reconciliation types that are already defined in the system. It contains the following columns:

Column Name	Column Description
Reconciliation Type	Displays the reconciliation type.
Description	Displays the description of the reconciliation type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Reconciliation Type</b> screen appears where you can edit the details of the reconciliation type.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Reconciliation Type</b> screen appears where you can define a new reconciliation type using an existing reconciliation type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the reconciliation type.  <b>Note:</b> You can delete a reconciliation type only when you have not created a reconciliation using the reconciliation type.

On clicking the **Broadcast** () icon corresponding to a reconciliation type, the **Reconciliation Type** zone appears with the details of the respective reconciliation type.

How to view the details of a reconciliation type	<a href="#">Viewing the Reconciliation Type Details</a> on page 1796

## Reconciliation Type

The **Reconciliation Type** zone displays the details of the reconciliation type. It contains the following sections:

- **Main** - Displays basic information about the reconciliation type. It contains the following fields:

Field Name	Field Description
Reconciliation Type	Displays the reconciliation type.
Reconciliation Business Object	Indicates the business object using which the reconciliation will be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the reconciliation type.
Detailed Description	Indicates the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>
Status	Displays additional information about the reconciliation type.

- **Algorithms** - Lists the algorithms which are associated with the reconciliation type. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the algorithms with the same system event should be executed.
System Event	Indicates the system event when the algorithm should be executed. The valid value is: <ul style="list-style-type: none"> <li>Upload Pay Instructions</li> </ul>
Algorithm	Indicates the algorithm attached to the system event.  <b>Note:</b> It has a link. On clicking the link, the <b>Algorithm</b> screen appears where you can view the details of the respective algorithm.

- **Characteristics** - Lists the characteristics defined for the reconciliation type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	Displays the description of the characteristic value.  <b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b> .

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the reconciliation type.

Button Name	Button Description
Delete	Used to delete the reconciliation type.
	<b>Note:</b> You can delete a reconciliation type only when you have not created a reconciliation using the reconciliation type.
Duplicate	Used to create a new reconciliation type using an existing reconciliation type.

- **Record Information** - This section contains the following field:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Reconciliation Type** zone does not appear in the **Reconciliation Type** screen. It appears only when you click the **Broadcast**  icon corresponding to a reconciliation type in the **Reconciliation Type List** zone.

## Defining a Reconciliation Type

### Prerequisites

To define a reconciliation type, you should have:

- Reconciliation business objects defined in the application

### Procedure

To define a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
3. Click the **Add** option from the **Reconciliation Type** sub-menu.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type Business Object	Used to indicate the business object using which you want to create the reconciliation type.	Yes

**Tip:** Alternatively, you can access this screen by clicking the **Add** button in the **Page Title** area of the **Reconciliation Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple reconciliation type business objects defined in the application. If there is only one reconciliation type business object defined in the application, the **Reconciliation Type** screen appears.

4. Select the required reconciliation type business object from the respective field.
5. Click **OK**.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

6. Enter the required details in the **Main** section.
7. Associate algorithms with the reconciliation type, if required.
8. Define characteristics for the reconciliation type, if required.
9. Click **Save**.

The reconciliation type is defined.

How to define characteristics for a reconciliation type	<a href="#">Defining Characteristics for a Reconciliation Type</a> on page 1791

## Defining Characteristics for a Reconciliation Type

### Prerequisites

To define characteristics for a reconciliation type, you should have:

- Characteristic types defined in the application (where the characteristic entity is set to **Reconciliation Type**).

### Procedure

To define characteristics for a reconciliation type:

1. Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a reconciliation type.

The **Characteristics** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Reconciliation Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the reconciliation type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the reconciliation type.

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

3. If you want to define more than one characteristic for the reconciliation type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the reconciliation type, click the **Delete**  icon corresponding to the characteristic.

How to copy a reconciliation type	<a href="#">Copying a Reconciliation Type</a> on page 1795

## Associating an Algorithm with a Reconciliation Type

You can upload a pay instruction file in the CSV and EDI 820 file formats. While uploading a pay instruction file, you need to specify the reconciliation type using which you want to create the reconciliation. A reconciliation type indicates the algorithm which validates the pay instruction file and creates a pay instruction for each record in the file. Two

algorithm types named **C1-PAYINSUPL** and **C1-RECONPROC** are shipped with the product. You need to maintain separate reconciliation types for different file formats. If you want to use a reconciliation type while uploading a pay instruction file in the CSV format, you need to create an algorithm using the **C1-PAYINSUPL** algorithm type and attach it to the reconciliation type. However, if you want to use a reconciliation type while uploading a pay instruction file in the EDI 820 format, you need to create an algorithm using the **C1-RECONPROC** algorithm type and attach it to the reconciliation type.

### Prerequisites

To associate an algorithm with a reconciliation type, you should have:

- Algorithm defined using the **C1-PAYINSUPL** or **C1-RECONPROC** algorithm type depending on whether you want to use the reconciliation type while uploading a pay instruction file in the CSV or EDI 820 file format

### Procedure

To associate an algorithm with a reconciliation type:

1. Ensure that the **Algorithms** section is expanded when you are defining, editing, or copying a reconciliation type.

The **Algorithms** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the algorithms with the same system event should be executed.	Yes (Conditional) <b>Note:</b> This field is required when you are associating an algorithm with the reconciliation type.
System Event	Used to indicate the system event when the algorithm should be executed. The valid value is: <ul style="list-style-type: none"> <li><b>Upload Pay Instructions</b> - Used when you want to execute the attached algorithm while uploading a pay instruction file using the <b>Pay Instruction CSV File Upload (C1-RECUP)</b> or <b>Upload Lockbox Payment and Pay Instruction Files (C1-PUPSG)</b> batch.</li> </ul>	Yes (Conditional) <b>Note:</b> This field is required when you are associating an algorithm with the reconciliation type.
Algorithm	Used to indicate the algorithm that you want to attach to the system event. <b>Note:</b> The <b>Search</b>  icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Algorithm Search</b> window appears.	Yes (Conditional) <b>Note:</b> This field is required when you are associating an algorithm with the reconciliation type.

2. Enter the required details in the **Algorithms** section.
3. If you want to associate more than one algorithm with the reconciliation type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove an algorithm from the reconciliation type, click the **Delete**  icon corresponding to the algorithm.

4. Click **Save**.

The algorithms are associated with the reconciliation type.

**Related Topics**

How to edit a reconciliation type	<a href="#">Editing a Reconciliation Type</a> on page 1793
How to copy a reconciliation type	<a href="#">Copying a Reconciliation Type</a> on page 1795

**Editing a Reconciliation Type****Prerequisites**

To edit a reconciliation type, you should have:

- Reconciliation business objects defined in the application

**Procedure**

To edit a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the reconciliation type whose details you want to edit.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Displays the reconciliation type.	Not applicable
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can edit the details of a reconciliation type by clicking the **Edit** button in the **Reconciliation Type** zone.

5. Modify the required details in the **Main** section.
6. Associate or remove an algorithm from the reconciliation type, if required.
7. Define, edit, or remove characteristics from the reconciliation type, if required.
8. Click **Save**.

The changes made to the reconciliation type are saved.

## Deleting a Reconciliation Type

### Procedure

To delete a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.
4. In the **Reconciliation Type List** zone, click the **Delete** (🗑) icon in the **Delete** column corresponding to the reconciliation type that you want to delete.  
A message appears confirming whether you want to delete the reconciliation type.

**Note:** You can delete a reconciliation type only when you have not created a reconciliation using the reconciliation type.

**Tip:** Alternatively, you can delete a reconciliation type by clicking the **Delete** button in the **Reconciliation Type** zone.

5. Click **OK**.

The reconciliation type is deleted.

## Copying a Reconciliation Type

Instead of creating a reconciliation type from scratch, you can create a new reconciliation type using an existing reconciliation type. This is possible through copying a reconciliation type. On copying a reconciliation type, the details including the algorithms and characteristics are copied to the new reconciliation type. You can then edit the details, if required.

### Prerequisites

To copy a reconciliation type, you should have:

- Reconciliation type (whose copy you want to create) defined in the application
- Reconciliation business objects defined in the application

### Procedure

To copy a reconciliation type:

1. Click the **Admin** link in the **Application** toolbar.

A list appears.

2. From the **Admin** menu, select **R** and then click **Reconciliation Type**.

A sub-menu appears.

3. Click the **Search** option from the **Reconciliation Type** sub-menu.

The **Reconciliation Type** screen appears.

4. In the **Reconciliation Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the reconciliation type whose copy you want to create.

The **Reconciliation Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the reconciliation type.
- **Algorithms** - Used to associate algorithms with the reconciliation type.
- **Characteristics** - Used to define characteristics for the reconciliation type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Type	Used to specify the reconciliation type.	Yes
Business Object	Indicates the reconciliation type business object using which you are defining the reconciliation type.	Not applicable

Field Name	Field Description	Mandatory (Yes or No)
Reconciliation Business Object	Used to indicate the business object using which you want to create the reconciliation.	Yes
Description	Used to specify the description for the reconciliation type.	Yes
Detailed Description	Used to specify additional information about the reconciliation type.	No
Status	Used to indicate the status of the reconciliation type. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can copy a reconciliation type by clicking the **Duplicate** button in the **Reconciliation Type** zone.

- Enter the required details in the **Main** section.
- Associate or remove an algorithm from the reconciliation type, if required.
- Define, edit, or remove characteristics from the reconciliation type, if required.
- Click **Save**.

The new reconciliation type is defined.

## Viewing the Reconciliation Type Details

### Procedure

To view the details of a reconciliation type:

- Click the **Admin** link in the **Application** toolbar.  
A list appears.
- From the **Admin** menu, select **R** and then click **Reconciliation Type**.  
A sub-menu appears.
- Click the **Search** option from the **Reconciliation Type** sub-menu.  
The **Reconciliation Type** screen appears.

4. In the **Reconciliation Type List** zone, click the **Broadcast**  icon corresponding to the reconciliation type whose details you want to view.  
The **Reconciliation Type** zone appears.
5. View the details of the reconciliation type in the **Reconciliation Type** zone.

## Reconciliation (Used for Searching)

The **Reconciliation** screen allows you to search for a reconciliation using various search criteria. It contains the following zone:

- [Search Reconciliation](#) on page 1797

Through this screen, you can navigate to the following screen:

- [Reconciliation \(Used for Viewing\)](#) on page 1801

## Search Reconciliation

The **Search Reconciliation** zone allows you to search for a reconciliation using various search criteria. This zone contains the following sections:

- **Search Criteria** - The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Search By	Used to indicate whether you want to search for a reconciliation using the reconciliation, payee account, or payment tender details. The valid values are: <ul style="list-style-type: none"> <li>• Reconciliation Details</li> <li>• Account Details</li> <li>• Payment Tender Details</li> </ul>	Yes
	<b>Note:</b> By default, the <b>Reconciliation Details</b> option is selected.	
Reconciliation ID	Used to search a particular reconciliation.	No
	<b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
Reconciliation Type	Used to search reconciliations which are created using a particular reconciliation type.	No
	<b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Created From	Used to search reconciliations which are created from a particular date onwards.	No
	<b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
Status	Used to search reconciliations with a particular status. The valid values are: <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Draft</li> <li>• Initial Reconciliation in Progress</li> <li>• Open</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reconciliation</li> <li>• Reconciliation in Progress</li> </ul>	No
	<b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
Created Until	Used to search reconciliations which are created till a particular date.	No
	<b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
File Name	Used to search a reconciliation which is created for a particular pay instruction file.	No
	<b>Note:</b> This field appears only when you select the <b>Reconciliation Details</b> option from the <b>Search By</b> list.	
Person Name	Used to search reconciliations which contain a particular member's pay instructions.	No
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Account Identifier Type	Used to select the identifier type based on which you want to search reconciliations which contain pay instructions for a particular payee account.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Account ID	Used to search reconciliations which contain pay instructions for a particular payee account.	No
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Account Identifier	Used to specify the value for the account identifier type.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Account Details</b> option from the <b>Search By</b> list.	
Check Number	Used to search a reconciliation associated with a payment tender which is received through a particular check.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	
Payor Account ID	Used to search reconciliations which are associated with a particular payor account.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	
MICR ID	Used to search a reconciliation associated with a payment tender which contains a particular MICR code.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	
Tender Amount	Used to search reconciliations associated with payment tenders with a particular amount.	No
	<b>Note:</b> This field appears only when you select the <b>Payment Tender Details</b> option from the <b>Search By</b> list.	

**Note:** You must specify at least one search criterion while searching for a reconciliation.

- **Search Results** - On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the reconciliation is created in the system.
Reconciliation Information	Displays information about the reconciliation.
	<b>Note:</b> It has a link. On clicking the link, the <b>Reconciliation</b> screen appears where you can view the details of the respective reconciliation.

Column Name	Column Description
Status	<p>Indicates the status of the reconciliation. The valid values are:</p> <ul style="list-style-type: none"> <li>• Canceled</li> <li>• Completed</li> <li>• Draft</li> <li>• Initial Reconciliation in Progress</li> <li>• Open</li> <li>• Pending Cancellation</li> <li>• Pending</li> <li>• Pending Reconciliation</li> <li>• Reconciliation in Progress</li> </ul>
Payor Account ID	<p>Indicates the payor account to which the reconciliation is associated.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears where you can view the details of the respective payor account.</p>
Payment ID	<p>Indicates the payment to which the reconciliation is associated.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the respective payment.</p>
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Duplicate	<p>Used to create a new reconciliation using an existing reconciliation.</p> <p><b>Note:</b> The <b>Duplicate</b> button appears only when the reconciliation is in the <b>Canceled</b> status.</p>

## Searching for a Reconciliation

### Prerequisite

To search for a reconciliation, you should have:

- Reconciliation types and account identifier types defined in the application.

### Procedure

To search for a reconciliation:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Reconciliation**.

The **Reconciliation** screen appears.

3. Enter the search criteria in the **Search Reconciliation** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of reconciliations that meet the search criteria appears in the **Search Results** section.

#### Related Topics

<b>Search Reconciliation</b> zone	<a href="#">Search Reconciliation</a> on page 1797

## Viewing the Reconciliation Details

### Procedure

To view the details of a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to view.  
The **Reconciliation** screen appears.
3. Ensure that the **Main** tab is selected.
4. View the details of the reconciliation in the **Reconciliation** zone.
5. View the list of pay instructions uploaded through the file in the **Pay Instructions** zone.

### Related Topics

## Reconciliation (Used for Viewing)

The **Reconciliation** screen allows you to:

- View the details and characteristics of the reconciliation
- Edit and delete the details of the reconciliation
- Submit the file for reconciliation
- View the pay instructions for reconciliation

- Cancel the pending reconciliation

This screen contains the following tabs:

- [Reconciliation - Main](#) on page 1802
- [Reconciliation - Log](#) on page 1805

For more information on...	See...
How to view the details of reconciliation	<a href="#">Viewing the Reconciliation Details</a> on page 1801

<b>Reconciliation - Main</b> zone	<a href="#">Reconciliation</a> on page 1802

Reconciliation - Main

The **Main** tab displays information about the reconciliation. It contains the following zones:

- [Reconciliation](#) on page 1802
- [Pay Instructions](#) on page 1804

Reconciliation

The **Reconciliation** zone displays the details of the reconciliation. It contains the following sections:

- **Main** - Displays basic information about the reconciliation. It contains the following fields:

Field Name	Field Description
Reconciliation Information	Displays information about the reconciliation.
Reconciliation Type	Indicates the reconciliation type using which the reconciliation is created.  <b>Note:</b> It has a link. On clicking the link, the <b>Reconciliation Type</b> screen appears where you can view the details of the reconciliation type.
Status	Indicates the status of the reconciliation. The valid values are: <ul style="list-style-type: none"><li>• Canceled</li><li>• Completed</li><li>• Draft</li><li>• Initial Reconciliation in Progress</li><li>• Open</li><li>• Pending Cancellation</li><li>• Pending</li><li>• Pending Reconciliation</li><li>• Reconciliation in Progress</li></ul>
Status Reason	Indicates the reason why the status of the reconciliation is changed.  <b>Note:</b> This field appears only when the reconciliation is in the <b>Pending Cancellation</b> or <b>Canceled</b> status.

Field Name	Field Description
File Name	Indicates the pay instruction file for which the reconciliation is created in the system.
Payment Information	<p>Indicates the payment to which the reconciliation is associated. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b></p> <p>It has a link. On clicking the link, the <b>Payment</b> screen appears where you can view the details of the respective payment.</p> <p>This field does not appear when the reconciliation is in the <b>Draft</b> or <b>Pending</b> status.</p>
Account Information	<p>Indicates the payor account to which the reconciliation is associated.</p> <p><b>Note:</b> This field does not appear when the reconciliation is in the <b>Draft</b> or <b>Pending</b> status.</p>

- **Characteristics** - Lists the characteristics defined for the reconciliation. It contains the following columns:

Column Name	Column Description
Effective Date	Displays the date from when the characteristic is effective for the reconciliation.
Characteristic Type	Indicates the characteristic type.
Characteristic Value	Displays the value of the characteristic type.
Description	<p>Displays the description of the characteristic value.</p> <p><b>Note:</b> The data appears in this column only when the type of characteristic value is set to <b>Predefined Value</b> or <b>Foreign Key Value</b>.</p>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	<p>Used to edit the details of the reconciliation.</p> <p><b>Note:</b> The <b>Edit</b> button appears only when the reconciliation is in the <b>Pending</b> or <b>Draft</b> status.</p>
Delete	<p>Used to delete the reconciliation.</p> <p><b>Note:</b> The <b>Delete</b> button appears only when the reconciliation is in the <b>Pending</b> or <b>Draft</b> status.</p>
Submit for Reconciliation	<p>Used to submit the pay instructions for reconciliation.</p> <p><b>Note:</b> The <b>Submit for Reconciliation</b> button appears only when the reconciliation is in the <b>Pending</b> status.</p>

Button Name	Button Description
Cancel	Used to cancel the reconciliation.  <b>Note:</b> The <b>Cancel</b> button appears only when the reconciliation is in the <b>Completed</b> or <b>Open</b> status.
Reconcile	Used to reconcile the pay instructions in the reconciliation.  <b>Note:</b> The <b>Reconcile</b> button appears only when the reconciliation is in the <b>Pending Reconciliation</b> status.
Revert to Pending	Used to revert the status of the reconciliation to <b>Pending</b> .  <b>Note:</b> The <b>Revert to Pending</b> button appears only when the reconciliation is in the <b>Pending Reconciliation</b> status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the reconciliation is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the reconciliation status is updated.
Creation Date Time	Displays the date and time when the reconciliation is created.

### Pay Instructions

The **Pay Instructions** zone lists the pay instructions that are received from an external system against the bill segment based on the account identifier, policy number, plan number, member identifier, and coverage period combination. It contains the following columns:

Column Name	Column Description
Sequence No.	Displays a sequential number against each record.
View Payment Instruction	On clicking the <b>View Payment Instruction</b> (  ) icon, <b>Pay Instruction</b> screen appears where entire pay instruction details are displayed.
Account Identifier Type	Indicates the account identifier type.
Account Identifier	Displays the value of the account identifier type.
Account ID	Displays the account ID.  <b>Note:</b> It has a link. On clicking the link, the <b>Account</b> screen appears with the details of the respective account.
Policy Number	Displays the policy number of the member.
Plan Number	Displays the plan number of the member.
Member Identifier Type	Indicates the member identifier type.

Column Name	Column Description
Member Identifier	Displays the value of the member identifier type.
Member Name	Displays the name of the member.
Coverage Start Date	Displays the date from when the coverage is effective.
Coverage End Date	Displays the date till when the coverage is effective.
Amount	Indicates the amount that has to be paid to the member.
Open Amount	Indicates the amount which has not been paid to the member and is still in the open state.
Status	Indicates the status of the pay instruction. The valid values are: <ul style="list-style-type: none"> <li>Cancelled</li> <li>Completed</li> <li>Draft</li> <li>Initial Reconciliation In Progress</li> <li>Open</li> <li>Pending Cancellation</li> <li>Pending</li> <li>Pending Reconciliation</li> <li>Reconciliation In Progress</li> </ul>
Pay Instruction ID	Displays the pay instruction ID.

**Note:** You can use the **Previous** and **Next** links to scroll through the pay instructions item list.

## Reconciliation - Log

The **Log** tab contains the following zone:

- [Reconciliation Log](#) on page 1805

### Reconciliation Log

The **Reconciliation Log** zone lists the complete trail of actions performed on the reconciliation. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the reconciliation.
Details	Displays the details about the action performed on the reconciliation.
User	Indicates the user who has performed the action on the reconciliation.
Log Type	Indicates the type of the log.
Related Object	Indicates the object or entity that is created when the action is performed on the reconciliation.

Column Name	Column Description
Status Reason	Indicates the reason why the status of the reconciliation is changed.
	<b>Note:</b> The data appears in this column only when the status of the reconciliation is changed to <b>Pending Cancellation</b> or <b>Canceled</b> .

**Note:** You can manually add a log entry for the reconciliation by clicking the **Add Log Entry** link in the upper right corner of the **Reconciliation Log** zone.

**Related Topics**

**Editing a Reconciliation**

**Procedure**

To edit a reconciliation:

1. Search for the reconciliation in **Reconciliation** screen.  
A list appears.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation whose details you want to edit.  
The **Reconciliation** screen appears.
3. Click the **Edit** button in the **Reconciliation** zone.  
The **Member Reconciliation** screen appears.

**Note:** The **Edit** button appears only when the reconciliation is in the **Pending** status.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Define, edit, or remove characteristics from the reconciliation, if required.
5. Click **Save**.  
The changes made to the reconciliation are saved.

**Related Topics**

**Defining Characteristics for a Reconciliation**

**Prerequisites**

To define characteristics for a reconciliation, you should have:

- Characteristic Type defined in the application (where the characteristic entity is set to **Reconciliation**)

### **Procedure**

To define characteristics for a reconciliation:

1. Ensure that the **Characteristics** section is expanded when you are editing a reconciliation.

The **Characteristics** section contains the following fields:

2. Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

The **Reconciliation** screen appears.

3. If you want to define more than one characteristic for the reconciliation, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the reconciliation, click the **Delete**  icon corresponding to the characteristic.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

A list of reconciliation files that meet the search criteria appear in the **Search Results** section.

5. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the status column.

The **Reconciliation** screen appears.

6. Click **Edit** button from **Record Actions** section.

The **Member Reconciliation** screen appears. It contains the following sections:

- **Main** - Used to specify the basic details of the reconciliation.
- **Characteristics** - Used to specify the characteristics for the reconciliation. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Effective Date	Used to specify the date from when the characteristic is effective for the reconciliation.	Yes
Characteristic Type	Used to indicate the characteristic type.	Yes
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Reconciliation</b> .	

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Value	Used to specify the value for the characteristic type.	Yes
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	

#### Related Topics

How to edit an reconciliation	<a href="#">Editing a Reconciliation</a> on page 1806

## Deleting a Reconciliation

### Procedure

To delete a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to delete.

The **Reconciliation** screen appears.

3. Click the **Delete** button in the **Reconciliation** zone.

A message appears confirming whether you want to delete the reconciliation.

**Note:** The **Delete** button appears only when the reconciliation is in the **Pending** or **Draft** status.

4. Click **OK**.

The reconciliation object is deleted.

## Submitting Pay Instructions for a Reconciliation

### Prerequisites

To submit pay instructions for reconciliation, you should have:

- Account ID defined in the application.
- Reconciliation BO status as Pending.

**Procedure**

To submit pay instructions for a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to submit.

The **Reconciliation** screen appears.

3. Click the **Submit for Reconciliation** button in the **Reconciliation** zone.

The pay instruction is submitted for reconciliation and the reconciliation status gets changed to **Pending Reconciliation**.

**Note:**

The **Submit for Reconciliation** button appears only when the reconciliation is in the **Pending** status.

**Related Topics**

**Reconciling Pay Instructions****Prerequisites**

To reconcile pay instructions, you should have:

- Account ID defined in the application.
- Reconciliation BO Status must be in Pending Reconciliation.

**Procedure**

To reconcile pay instructions:

1. Search for the reconciliation in the **Reconciliation** screen.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to reconcile.

The **Reconciliation** screen appears.

3. Click the **Reconcile** button in the **Reconciliation** zone.

The pay instructions gets reconciled and the reconciliation BO status gets changed to **Completed**.

Note:  
The **Reconcile** button appears only when the reconciliation is in the **Pending Reconciliation** status.

## Canceling a Reconciliation

### Prerequisites

To cancel a reconciliation, you should have:

- Cancellation reasons defined in the application.

**Note:** While cancelling a reconciliation, you need to specify the reason why you want to cancel the reconciliation. You can select the appropriate cancellation reason only when you have defined the reasons for the **Canceled** status of the **C1-MemberReconciliation** business object in the **Status Reason** screen.

### Procedure

To cancel a reconciliation:

1. Search for the reconciliation in the **Reconciliation** screen.
2. In the **Search Results** section, click the link in the **Reconciliation Information** column corresponding to the reconciliation that you want to cancel.

The **Reconciliation** screen appears.

- [Reconciliation - Main](#) on page 1802
- [Reconciliation - Log](#) on page 1805

3. Click the **Cancel** button in the **Reconciliation** zone.

The **Status Reason** window appears. It contains following field:

:

Field Name	Field Description	Mandatory (Yes or No)
Status Reason	Used to indicate the reason why you want to cancel the reconciliation.	Yes

**Note:** The **Cancel** button appears only when the reconciliation is in the **Open** or **Completed** status.

4. Select the cancellation status reason from the **Status Reason** list.
5. Click **Save**.

The status of the reconciliation is changed to **Cancelled**.

<b>Reconciliation Adjustments</b> zone	<a href="#">Reconciliation Adjustments</a> on page 1813
<b>Related Objects</b> zone	<a href="#">Related Objects</a> on page 1814

### Reconciliation Adjustments

The **Reconciliation Adjustments** zone displays the adjustment information for each pay instruction. It contains the following fields:

Column Name	Column Description
Transfer Adjustment	Indicates the amount to be transferred from a reconciliation contract against a pay instruction.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the details of the transferred adjustment.
Transfer Type	Displays the type of transfer transaction made against a pay instruction or an internal offsetting.
Transfer Financial Transaction ID	Displays the transfer financial transaction ID.
Offset Adjustment	Indicates a reciprocal adjustment that is associated with a transfer adjustment.
	<b>Note:</b> It has a link. On clicking the link, the <b>Adjustment</b> screen appears where you can view the offset adjustment details.
Related Object Type	Displays the related object type whether it is pay instruction / financial transaction.

Column Name	Column Description
Related Object ID	Indicates the ID of the related pay instruction / financial transaction created in reconciliation process..
	<b>Note:</b> It has a link. On clicking the link, the <b>Financial Transaction</b> screen appears where you can view the details of the financial transaction of reconciliation adjustments.

**Note:** Pagination is used to display limited number of records in the **Reconciliation Adjustments** zone. By default, 10 records are displayed in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.

You can filter the adjustments using **Show All Adjustments** available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** (  ) icon in the upper right corner of the **Reconciliation Adjustments** zone.

### Related Objects

The **Related Objects** zone displays all those business objects based on which reconciliation process takes place. It contains the following fields:

Column Name	Column Description
Related Object Type	Displays the related object type that was used in pay instruction process.
Related Object Information	Displays the details of related object in brief.

**Note:** Pagination is used to display limited number of records in the **Related Topics** zone. By default, 10 records are displayed in this zone. You can use the navigation links, such as Previous and Next to navigate between pages.

## Pay Instruction - Log

The **Pay Instruction - Log** tab contains the following zone:

- [Pay Instruction Log](#) on page 1814

### Pay Instruction Log

The **Pay Instruction Log** zone lists the complete trail of actions performed on the pay instructions. It contains the following columns:

Column Name	Column Description
Creation Date Time	Displays the date and time when the action was performed on the pay instruction.
Details	Displays the details about the action performed on the pay instruction.
User	Indicates the user who has performed the action on the pay instruction.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the pay instruction.
Status Reason	Displays the status reason of action performed on the pay instruction.

**Note:** You can manually add a log entry for the pay instruction by clicking the **Add Log Entry** link in the upper right corner of the **Pay Instruction Log** zone.

**Related Topics**

**Discrepancy Report Type**

Oracle Revenue Management and Billing allows you to define a discrepancy report type using which you can create a discrepancy report. The Discrepancy Report Type uses the following business object.

- **C1-DiscrepancyReport**

The **Discrepancy Report Type** screen allows you to define, edit, copy, and delete a discrepancy report type. It consists of the following zones:

- [Discrepancy Report Type List](#) on page 1816
- [Discrepancy Report Type](#) on page 1817

For more information on...	See...
How to define a discrepancy report type	<a href="#">Defining a Discrepancy Report Type</a> on page 1818

**Discrepancy Report Type List**

The **Discrepancy Report Type List** zone lists the various types of discrepancy report types. It contains the following columns:

Column Name	Column Description
Discrepancy Report Type	Displays the discrepancy report type.
Description	Displays the description of the discrepancy report type.
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Discrepancy Report Type</b> screen appears where you can edit the details of the discrepancy report type.

Column Name	Column Description
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Discrepancy Report Type</b> screen appears where you can define a discrepancy report type using an existing discrepancy report type.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the discrepancy report type.  <b>Note:</b> You can delete a discrepancy report type only when you have not created a discrepancy report using the discrepancy report type.

On clicking the **Broadcast** () icon corresponding to a discrepancy report type, the **Discrepancy Report Type** zone appears with the details of the respective discrepancy report type.

## Discrepancy Report Type

The **Discrepancy Report Type** zone displays the details of the discrepancy report type. It consists of the following sections:

- **Main** - This section provides basic information about the discrepancy report type. It contains the following fields:

Field Name	Field Description
Discrepancy Report Type	Displays the discrepancy report type.
Discrepancy Report Business Object	Indicates the business object using which the discrepancy report will be created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.  <b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Description	Displays the description of the discrepancy report type.
Detailed Description	Displays additional information about the discrepancy report type.
Status	Indicates the status of the inbound message type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Characteristics** - This section lists the characteristics defined for the discrepancy report type. It contains the following columns:

Column Name	Column Description
Characteristic Type	Indicates the characteristic type.
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to Discrepancy Report Type.
Characteristic Value	Displays the value of the characteristic type.
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the Characteristic Value field.
Description	Displays detailed description of the characteristic type.

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the discrepancy report type.
Delete	Used to delete the discrepancy report type.
	<b>Note:</b> You can delete a discrepancy report type only when you have not created a discrepancy report using the discrepancy report type.
Duplicate	Used to create a new discrepancy report type using an existing discrepancy report type.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report type is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.

By default, the **Discrepancy Report Type** zone does not appear in the **Discrepancy Report Type** screen. It appears only when you click the **Broadcast**  icon corresponding to a discrepancy report type in the **Discrepancy Report Type List** zone.

## Defining a Discrepancy Report Type

### Prerequisites

To define a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.

- Characteristic Type defined for the discrepancy report.

### **Procedure**

To define a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D**, and then click **Discrepancy Report Type**.  
The sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report Type**.

The **Select Business Object** screen appears. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type Business Object	Indicates the discrepancy report type business object used to create a discrepancy report type.	Yes

**Tip:** Alternatively, you can access the **Select Business Object** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report Type** screen.

**Note:** The **Select Business Object** screen appears only when there are multiple discrepancy report type business objects defined in the application. If there is only one discrepancy report type business object defined in the application, the **Discrepancy Report Type** screen appears.

4. Select the business object depending on whether you want to create a discrepancy report type.
5. Click **OK**.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the discrepancy report type.
- **Characteristics** - Used to define characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type.	Yes
Business Object	Indicates the discrepancy report type business object using which you are defining the discrepancy report type	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

- Enter the required details in the **Main** section.
- Define characteristics for the discrepancy report type, if required.
- Click **Save**.

The discrepancy report type is defined.

**Defining Characteristics for a Discrepancy Report Type**

**Prerequisites**

To define characteristics for a discrepancy report type, you should have:

- Characteristic Types defined in the application (where the characteristic entity is set to **Discrepancy Report Type**).

**Procedure**

To define characteristics for a discrepancy report type:

- Ensure that the **Characteristics** section is expanded when you are defining, editing, or copying a discrepancy report type.

The **Characteristics** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Characteristic Type	Used to indicate the characteristic type.	Yes (Conditional)
	<b>Note:</b> The list includes only those characteristic types where the characteristic entity is set to <b>Discrepancy Report Type</b> .	<b>Note:</b> This field is required when you are defining a characteristic for the discrepancy report type.
Characteristic Value	Used to specify the value for the characteristic type.	Yes (Conditional)
	<b>Note:</b> On specifying the value for a predefined characteristic type, the description of the characteristic value appears corresponding to the <b>Characteristic Value</b> field.	<b>Note:</b> This field is required when you are defining a characteristic for the discrepancy report type.

- Enter the required details in the **Characteristics** section.

**Note:** If you select a predefined characteristic type, the **Search**  icon appears corresponding to the **Characteristic Value** field. On clicking the **Search** icon, you can search for a predefined characteristic value.

- If you want to define more than one characteristic for the discrepancy report type, click the **Add**  icon and then repeat step 2.

**Note:** However, if you want to remove a characteristic from the discrepancy report type, click the **Delete**  icon corresponding to the characteristic.

## Editing a Discrepancy Report Type

### Prerequisites

To edit a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Characteristic Type defined for the discrepancy report.

### Procedure

To edit a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.  
A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.  
The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the discrepancy report type whose details you want to edit.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - Used to specify basic details about the discrepancy report type.
- **Characteristics** - Used to define characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Displays the discrepancy report type.	Not applicable
Business Object	Indicates the discrepancy report type business object used while defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Used to indicate the status of the discrepancy report type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	No

**Tip:** Alternatively, you can click the **Edit** button in the **Discrepancy Report Type** zone to edit the details of the discrepancy report type.

- 5. Modify the required details in the **Main** section.
- 6. Define, edit, or remove characteristics from the discrepancy report type, if required.
- 7. Click **Save**.

The changes made to the discrepancy report type are saved.

**Deleting a Discrepancy Report Type**

**Procedure**

To delete a discrepancy report type:

- 1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
- 2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.  
The sub-menu screen appears.
- 3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.  
The **Discrepancy Report Type** screen appears.
- 4. In the **Discrepancy Report Type List** zone, click the **Delete** (🗑️) icon corresponding to the discrepancy report type that you want to delete.  
A message appears confirming whether you want to delete the discrepancy report type.

**Note:** You can delete a discrepancy report type only when you have not created a discrepancy report using the discrepancy report type.

**Tip:** Alternatively, you can click the **Delete** button in the **Discrepancy Report Type** zone to delete the discrepancy report type

- 5. Click **OK** .  
The discrepancy report type is deleted.

**Related Topics**

<b>Discrepancy Report Type List</b> zone	<a href="#">Discrepancy Report Type List</a> on page 1816

**Copying a Discrepancy Report Type**

**Prerequisites**

To copy a discrepancy report type, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.

- Characteristic Type defined for the discrepancy report.

Instead of creating a discrepancy report type from scratch, you can create a new discrepancy report type using an existing discrepancy report type. This is possible through copying a discrepancy report type. On copying a discrepancy report type, the details including the characteristics are copied to the new discrepancy report type. You can then edit the details, if required.

### **Procedure**

To copy a discrepancy report type:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **D** and then click **Discrepancy Report Type**.  
The sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report Type** sub-menu.  
The **Discrepancy Report Type** screen appears.
4. In the **Discrepancy Report Type List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the discrepancy report type whose copy you want to create.

The **Discrepancy Report Type** screen appears. It contains the following sections:

- **Main** - The main section contains the following fields:
- **Characteristics** - Used to define characteristics for the discrepancy report type.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to specify the discrepancy report type	Not applicable
Business Object	Indicates the discrepancy report type business object using which you are defining the discrepancy report type.	Not applicable
Discrepancy Report Business Object	Used to indicate the business object using which you want to create the discrepancy report.	Yes
Description	Used to specify the description for the discrepancy report type.	Yes
Detailed Description	Used to specify additional information about the discrepancy report type.	No
Status	Indicates the status of discrepancy report type. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

**Tip:** Alternatively, you can create a copy of the **Discrepancy Report Type** zone to create a copy of the discrepancy report type.

5. Enter the required details in the **Main** section.
6. Define, edit, or remove characteristics from the discrepancy report type, if required.
7. Click **Save**.

The new discrepancy report type is defined.

## Searching for a Discrepancy Report

### Prerequisites

To search for a discrepancy report, you should have:

- **C1-DiscrepancyReport** Business object defined for discrepancy report.
- Discrepancy Report Type defined for discrepancy report.
- Status defined for discrepancy report.

### Procedure

To search for a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Menu** menu, select **Financial** and then click **Discrepancy Report**.  
A sub-menu appears.
3. Click the **Search** option from the **Discrepancy Report** sub-menu.  
The **Discrepancy Report** screen appears.
4. Enter the search criteria in the **Search Discrepancy Report** zone.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

5. Click **Search**.

A list of discrepancy reports that meet the search criteria appear in the **Search Results** section.

Creating a Discrepancy Report

Prerequisites

To create a discrepancy report, you should have:

- Discrepancy Report Type defined in the application.
- Report Level defined in the application.

Procedure

To create a discrepancy report:

1. Click the **Menu** link in the **Application** toolbar.  
A list appears.
2. From the **Main** menu, select **Financial** and then click **Discrepancy Report**.  
A sub-menu appears.
3. Click the **Add** option from the **Discrepancy Report** sub-menu.

The **Discrepancy Report** screen appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Type	Used to indicate the discrepancy report type that you want to use to create the discrepancy report. The valid values are: <ul style="list-style-type: none"><li>• Discrepancy Report Type</li><li>• File Discrepancy Report Type</li></ul>	Yes
Report Level	Used to specify the level at which the discrepancy report is created. The valid values are: <ul style="list-style-type: none"><li>• At Account Level</li><li>• At File Level</li></ul>	Yes
File Name	Used to specify a name for the file when report level is selected as <b>At File Level</b> .	Yes (Conditional) <div><b>Note:</b> This field is required when the report level is selected as <b>At File Level</b> while creating a discrepancy report.</div>
Account ID	Used to specify an account ID when report level is selected as <b>At Account Level</b> .	Yes (Conditional) <div><b>Note:</b> This field is required when the report level is selected as <b>At Account Level</b> while creating a discrepancy report.</div>

**Tip:** Alternatively, you can access the **Select Discrepancy Report Type** screen by clicking the **Add** button in the **Page Title** area of the **Discrepancy Report** screen.

4. Enter the required details.
5. Click **Save**.

The **Discrepancy Report** is created.

## Viewing the Discrepancy Report Details

### Procedure

To view the details of a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report whose details you want to view.

The **Discrepancy Report** screen appears. It contains the following tabs:

- [Discrepancy Report - Main](#) on page 1830
- [Discrepancy Report - Log](#) on page 1833

3. Ensure that the **Main** tab is selected.
4. View the details of the discrepancy report in the **Discrepancy Report** zone.

## Discrepancy Report (Used for Viewing)

Once the discrepancy reports are created, the **Discrepancy Report** screen allows you to:

- View the details of discrepancy report.
- Delete a discrepancy report
- Edit a discrepancy line item
- Finalize a discrepancy report
- View the log of a discrepancy report

- Add a log entry for a discrepancy report
- View the discrepancy line item related objects

This screen consists of the following tabs:

- [Discrepancy Report - Main](#) on page 1830
- [Discrepancy Report - Log](#) on page 1833

For more information on...	See...
How to view the details of discrepancy report	<a href="#">Viewing the Discrepancy Report Details</a> on page 1829

<b>Discrepancy Line Item Related Objects</b> zone	<a href="#">Discrepancy Line Item Related Objects</a> on page 1832

**Discrepancy Report - Main**

The **Discrepancy Report - Main** tab displays information about the discrepancy report. It contains the following zones:

- [Discrepancy Report](#) on page 1830
- [Discrepancy Line Items](#) on page 1831
- [Discrepancy Line Item Related Objects](#) on page 1832
- [Discrepancy Line Items Characteristics Zone](#) on page 1833

**Discrepancy Report**

The **Discrepancy Report** zone displays the details of the discrepancy report. It contains the following sections:

- **Main** - Displays basic information about the discrepancy report. It contains the following fields:

Field Name	Field Description
Discrepancy Report Information	Displays information about the discrepancy report.
Discrepancy Report Type	Indicates the discrepancy report type using which the discrepancy report is created. <b>Note:</b> It has a link. On clicking the link, the <b>Discrepancy Report Type</b> screen appears where you can view the details of the discrepancy report type.
File Name	Displays the filename for which the discrepancy report is generated.
Account Information	Displays the details of the account for which discrepancy report is generated.
Status	Indicates the status of the discrepancy report. The valid values are: <ul style="list-style-type: none"> <li>• Pending</li> <li>• Draft</li> <li>• Completed</li> </ul>

- **Record Actions** - This section contains the following buttons:

Button Name	Button Description
Delete	Used to delete the discrepancy report.
	<b>Note:</b> The <b>Delete</b> button appears only when the discrepancy report is in the <b>Pending</b> status.
Finalize	Used to finalize all the changes and process the discrepancy report.
	<b>Note:</b> Finalize button appears only when the discrepancy report is in the <b>Pending</b> status.

- **Record Information** - This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the business object using which the discrepancy report is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Status Date Time	Displays the date and time when the status of the discrepancy report was defined.
Creation Date Time	Displays the date and time when the discrepancy report was created.

### Discrepancy Line Items

The **Discrepancy Line Items** zone displays the details of the discrepancy report. It contains the following columns:

Column Name	Column Description
Account ID	Indicates the account for which the discrepancy line item is created.
	<b>Note:</b> This column appears only when you select the discrepancy report information where the filename is provided.
Policy Number	Indicates the policy number.
Plan Number	Indicates the plan number of the policy.
Member Identifier Type	Displays the member identifier type.
Member Identifier	Displays the value of the member identifier type.
Member Name	Displays the name of the member to whom the discrepancy report belongs.
Coverage Start Date	Displays the date from when the coverage starts.
Coverage End Date	Displays the date till when the coverage ends.
Billed Amount	Displays the bill segment amount.
Paid Amount	Displays the paid amount of the bill.
Discrepancy Amount	Displays the discrepancy amount.
Discrepancy Category	Displays the discrepancy category.

Column Name	Column Description
Consumer Status	Displays the status of the consumer for its existence in the application.
Comments	Displays the comments, added for the discrepancy line items.
Edit	<p>On clicking the <b>Edit</b> () icon, the <b>Discrepancy Line Item</b> screen appears where you can edit the details of the discrepancy line item.</p> <p><b>Note:</b> The <b>Edit</b> icon appears only when the discrepancy report is in <b>Pending</b> or <b>Draft</b> status.</p>

**Note:**

On clicking the Broadcast () icon corresponding to the discrepancy line item, the Discrepancy Line Item Related Objects and Discrepancy Line Item Characteristics zones appear.

You can filter the discrepancy line items using Discrepancy Category search criteria available in the Filter area. By default, the Filter area is hidden. You can view the Filter area by clicking the Filters () icon in the upper right corner of the Discrepancy Line Items zone.

Pagination is used to display limited number of records in the Search Results section. You can change the number of records displayed per page, if required. You can use the navigation links, such as Previous and Next to navigate between pages.

**Discrepancy Line Item Related Objects**

The **Discrepancy Line Item Related Objects** zone lists the related objects for the discrepancy line item. It contains the following columns:

Column Name	Column Description
Related Object Type	Displays <b>Financial Transaction</b> or <b>Member Pay Instruction</b> as the related object type.
Related Object Information	<p>Displays brief information about the related object type.</p> <p><b>Note:</b> It has a link. On clicking the link, the Pay Instruction screen appears with the details of the respective related object.</p>

By default, the Discrepancy Line Item Related Objects zone does not appear in the Discrepancy Report screen. It appears only when you click the Broadcast () icon corresponding to the discrepancy line item in the Discrepancy Line Items zone.

Pagination is used to display limited number of records in the Search Results section. You can change the number of records displayed per page, if required. You can use the navigation links, such as Previous and Next to navigate between pages.

## Discrepancy Report - Log

The **Discrepancy Report - Log** tab contains the following zone:

- [Discrepancy Report Log](#) on page 1833

### Discrepancy Report Log

The **Discrepancy Report Log** zone lists the complete trail of actions performed on the Discrepancy Report. It contains the following columns:

Column Name	Column Description
Creation Date/Time	Displays the date and time when the action was performed on the discrepancy report.
Details	Displays the details about the action performed on the discrepancy report.
User	Indicates the user who has performed the action on the discrepancy report.
Log Type	Indicates the type of log.
Related Object	Indicates the object or entity which is generated when the action is performed on the discrepancy report.
Status Reason	Displays the status reason of the action performed on the discrepancy report object.

**Note:** You can manually add a log entry for the discrepancy report by clicking the **Add Log Entry** link in the upper right corner of the **Discrepancy Report Log** zone.

## Editing a Discrepancy Line Item

### Prerequisites

To edit a discrepancy line item, you should have:

- Discrepancy Line Item status as Pending or Draft.

**Procedure**

To edit a discrepancy line item:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report, whose details you want to edit.

The **Discrepancy Report Information** screen appears.

3. In the **Discrepancy Line Items** zone, click the **Edit**  icon in the **Edit** corresponding to the discrepancy line item whose details you want to edit.

The **Discrepancy Line Item** screen appears.

**Note:** The **Edit** icon appears only when the discrepancy line item is in the **Pending** or **Draft** status.

The **Discrepancy Line Item** screen contains the following fields:

Field Name	Field Description
Discrepancy Report ID	Displays the discrepancy report ID.
Account ID	Indicates the account for which the discrepancy line item is created.
Policy Number	Indicates the policy number.
Plan Number	Indicates the plan number of the policy.
Member Identifier Type	Displays the member identifier type.
Member Identifier	Displays the value of the member identifier.
Member Name	Displays the name of the member to whom the discrepancy report belongs.
Coverage Start Date	Displays the start date of the coverage cycle.
Coverage End Date	Displays the end date of the coverage cycle.
Billed Amount	Displays the bill segment amount.
Paid Amount	Displays the paid amount of the bill amount.
Discrepancy Amount	Displays the amount that highlights the discrepancy value.
Discrepancy Category	Used to specify the discrepancy category. The valid values are: <ul style="list-style-type: none"><li>• Billed Not Paid</li><li>• Paid Not Billed</li><li>• Rate Variance</li></ul>
Comments	Used to specify additional details about the Discrepancy Line Item.

4. Modify the required details for the discrepancy line item.
5. Click **Save**.

The changes made to the discrepancy line item are saved.

## Deleting a Discrepancy Report

### Procedure

To delete a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report that you want to delete.

The **Discrepancy Report** screen appears.

3. Click the **Delete** button in the **Discrepancy Report** zone.

A message appears confirming whether you want to delete the discrepancy report.

**Note:** The **Delete** button appears only when the discrepancy report is in the **Pending** or **Draft** status.

4. Click **OK**.

The discrepancy report is deleted.

## Finalizing a Discrepancy Report

### Prerequisites

To finalize a discrepancy report, you should have:

- Discrepancy Report status as Pending or Draft.

### Procedure

To finalize a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report that you want to finalize.

The **Discrepancy Report** screen appears.

3. Click the **Finalize** button in the **Discrepancy Report** zone.

The status of the discrepancy report is changed to **Completed**.

**Note:** The **Finalize** button appears only when the discrepancy report is in the **Pending** status.

Adding a Log Entry for a Discrepancy Report

**Procedure**

To add a log entry for a discrepancy report:

1. Search for the discrepancy report in the **Discrepancy Report** screen.
2. In the **Search Results** section, click the link in the **Discrepancy Report Information** column corresponding to the discrepancy report whose log you want to edit.

The **Discrepancy Report** screen is displayed. It consists of following tabs.

- [Discrepancy Report - Main](#) on page 1830
- [Discrepancy Report - Log](#) on page 1833

3. Click the **Log** tab.

The **Log** tab appears.

4. Click the **Add Log Entry** link in the upper right corner of the **Discrepancy Report Log** zone.

The **Add Discrepancy Report Log** window appears. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Discrepancy Report Information	Displays information about the discrepancy report.	Not applicable
Log Details	Used to specify additional comments on the discrepancy report.	Yes

5. Enter the comments in the **Log Details** field.
6. Click **Save**.

The log entry is added in the **Discrepancy Report Log** zone.

## Self-Funded Pricing

---

### Topics:

- [Prerequisites](#)
- [Approval Workflow for the Self-Funded Pricing Rules](#)
- [Line Item Extendable Lookup](#)
- [Extendable Lookup \(Line Item\)](#)
- [Claim Template Extendable Lookup](#)
- [Extendable Lookup \(Claim Template\)](#)
- [Rate Option Extendable Lookup](#)
- [Extendable Lookup \(Rate Option\)](#)
- [Pricing Group](#)
- [Pricing Rule Type](#)
- [Claim Pricing](#)
- [Specific Stop-Loss \(SSL\) Pricing](#)
- [Aggregate Stop-Loss \(ASL\) Pricing](#)
- [Retention Type Claim Based Pricing](#)
- [Retention Type Enrollment Based Pricing](#)
- [Flat Fee Pricing](#)
- [Ancillary Pricing](#)
- [Discount Pricing](#)
- [Level Funding Pricing](#)
- [Pricing Rule \(Used for Viewing\)](#)

Oracle Revenue Management and Billing introduces a new pricing model for the self-funded health care business. In this pricing model, you can define pricing rules using a pricing rule type. You can define the following pricing rule types in ORMB:

- Claim
- Aggregate Stop-Loss
- Specific Stop-Loss
- Retention Type Claim Based
- Retention Type Enrollment

## Prerequisites

To setup the self-funded pricing feature, you need to do the following:

- Define values for claim template extendable lookup
- Define values for rate option extendable lookup
- Define values for line item extendable lookup
- Setup the **C1-ASOBLNG** feature configuration
- Define price items for the pricing rules
- Define parameters for the pricing rules
- Associate parameters to the price items for the pricing rules

### Related Topics

For more information on...	See...
How to setup the <b>C1-ASOBLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLNG Feature Configuration</a> on page 2349

## Approval Workflow for the Self-Funded Pricing Rules

Oracle Revenue Management and Billing enables you to configure the approval workflow process for the claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, flat fees, ancillary, discount, or level funded pricing rules. The following approval workflow groups are shipped with the product:

Approval Workflow Group	Description
C1PRCRLCLM	Claim Pricing Rule
C1PRCSSL	Specific Stop-Loss Pricing Rule
C1PRCASL	Aggregate Stop-Loss Pricing Rule
C1PRETCLM	Retention Type Claim Based Pricing Rule
C1PRRETENR	Retention Type Enrollment Based Pricing Rule
C1PRFLTTEE	Flat Fees Pricing Rule
C1PRCANC	Ancillary Pricing Rule
C1PRCDA	Discount Arrangement Pricing Rule
C1PRCLVLFN	Level Funded Pricing Rule

To enable the approval workflow process for the pricing rules, you need to do the following:

1. Create the required approval workflow chains, approval workflow criterion types, approval workflow group chain linkages, and approval workflow reasons.

**Note:** The **Field Level Approval** feature is not supported for the self-funded pricing rules. Therefore, you should not define field approval rule criteria while creating the approval workflow group chain linkage for the above listed approval workflow groups.

2. Define the approval workflow settings for the respective approval workflow group and set the **Active** field to **Yes**.

3. Ensure that the following value is set in the respective option type of the **C1-ASOBLLNG** feature configuration:

Option Type	Value
Approval Workflow Group for Claim	C1PRCRLCLM
Approval Workflow Group for SSL	C1PRCSSL
Approval Workflow Group for ASL	C1PRCASL
Approval Workflow Group for Retention Type Claim Based	C1PRETCLM
Approval Workflow Group for Retention Type Enrollment Based	C1PRRETENR
Approval Workflow Group for Flat Fees	C1PRFLTTEE
Approval Workflow Group for Ancillary	C1PRCANC
Approval Workflow Group for Discount Arrangement	C1PRCDA
Approval Workflow Group for Level Funded	C1PRCLVLFN

Once the approval workflow process is enabled for the pricing rules of a particular category (for example, Claim), the system creates an approval transaction whenever you define, edit, or delete a pricing rule of the respective category (i.e. whenever you define, edit, or delete a claim pricing rule). You can view the approval transactions which are created while defining, editing, and deleting the parent customer's and bill groups' pricing rules in the **Pricing Rule Approval Transactions** zone of the **Customer 360° Information** screen. On clicking the link in the **Approval Transaction ID** column corresponding to an approval transaction, the **Comparison: New versus Existing** screen appears. It allows the approver to review the pricing rule and accordingly approve, reject, or cancel the approval transaction.

**Tip:** Alternatively, you can review the approval transaction and take appropriate action from the **Approval Transaction** screen.

#### **Related Topics**

For more information on...	See...
How to setup the <b>C1-ASOBLLNG</b> feature configuration	<a href="#">Setting the C1-ASOBLLNG Feature Configuration</a> on page 2349

## **Line Item Extendable Lookup**

Different charges, such as consumer-driven amount, traditional healthcare amount, network access fees, and so on are received as part of the claim transaction. These charges which contribute to the total claim amount are defined as the line items in the system. Each line item must be defined in the system using the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. A line item encapsulates the following information:

- Service Quantity Identifier (SQI) which indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the charge.
- Billable charge line type using which you want to create the calculation line for the charge.
- Whether the system should write off the charge when it is not eligible for billing.
- Billable charge line type using which you want to create the write off calculation line for the charge.
- Whether the charge should be considered while calculating the percentage based retention type claim based fee.
- The pricing rule type categories to which the charge is associated.

For example, you can create a line item for the following charges:

Charge	Line Item	Write Off, If Not Eligible for Billing	Pricing Rule Type Category
Consumer-Driven Amount	CDH	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
			Ancillary
Traditional Healthcare Amount	THC	Yes	Claim
			Specific Stop-Loss
			Aggregate Stop-Loss
Preventive Care Charges	PCC	No	Ancillary

The CDH and THC line items can be included in a claim template. They can also be considered while calculating specific and aggregate stop-loss. The CDH and PCC line items can be considered while defining pricing arrangements in an ancillary pricing rule type. In addition, any charge received for the CDH and THC line items in a claim transaction will be written off when these line items are not eligible for billing.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 1842

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	<b>Note:</b> It has a link. On clicking the link, the <b>Extendable Lookup</b> screen appears where you can view the details of the respective extendable lookup.

Related Topics

## Searching for the Line Item Extendable Lookup

### Procedure

To search for the **Line Item** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookPricingRuleLineItem** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Line Item** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Line Item Extendable Lookup

### Procedure

To view the values of the **Line Item** extendable lookup:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. View the values of the **Line Item** extendable lookup in the **Extendable Lookup Value List** zone.

## Extendable Lookup (Line Item)

The **Extendable Lookup** screen allows you to view the values of the **Line Item (C1-ExtLookPricingRuleLineItem)** extendable lookup. It also allows you to define, edit, copy, and delete a line item. It contains the following zones:

- [Extendable Lookup Value List](#) on page 1844
- [Extendable Lookup Value](#) on page 1845

## Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Line Item** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the line item.
Description	Displays the description of the line item.
Owner	Indicates who has created the line item. The valid values are: <ul style="list-style-type: none"><li>• Framework</li><li>• Base</li><li>• Customer Modification</li></ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Line Item</b> screen appears where you can edit the details of the line item.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Line Item</b> screen appears where you can define a new line item using an existing line item.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the line item. <div><b>Note:</b> You can delete a line item only when it is not yet used in the claim template or while defining the self-funded pricing.</div>
Detailed Description	Displays additional information about the line item.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a line item, the **Extendable Lookup Value** zone appears with the details of the respective line item.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the line item. It contains the following sections:

- **Main** – Displays basic information about the line item. It contains the following fields:

Field Name	Field Description
Line Item	Indicates the charge for which the line item is created.
Description	Displays the description of the line item.
Override Description	Displays the overridden description of the line item.
Detailed Description	Displays additional information about the line item.
Status	Indicates the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>
Service Quantity Identifier	Indicates the service quantity identifier associated with the line item.
Billable Charge Line Type	Indicates the billable charge line type using which the calculation line is created for the charge (i.e. line item).
Write Off Billable Charge Line Type	Indicates the billable charge line type using which the write off calculation line is created for the charge (i.e. line item).
Write Off, if Not Eligible for Billing	Indicates whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Retention Claim Based Percentage Calculation	Indicates whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>

- **Line Item Usage** – Lists the pricing rule type categories to which the line item is associated. It contains the following field in a grid:

Field Name	Field Description
Pricing Rule Type Category	<p>Indicates the pricing rule type category which is associated with the charge (i.e. line item). The valid values are:</p> <ul style="list-style-type: none"> <li>Aggregate Stop-Loss</li> <li>Ancillary</li> <li>Claim</li> <li>Retention Type Claim Based</li> <li>Specific Stop-Loss</li> </ul>

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the line item.
Delete	<p>Used to delete the line item.</p> <p><b>Note:</b> You can delete a line item only when it is not yet used in the claim template or while defining the self-funded pricing.</p>
Duplicate	Used to create a new line item using an existing line item.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	<p>Indicates the extendable lookup business object using which the line item is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.</p> <p><b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.</p>
Owner	<p>Indicates who has created the line item. The valid values are:</p> <ul style="list-style-type: none"> <li>Framework</li> <li>Base</li> <li>Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the line item in the **Extendable Lookup Value List** zone.

## Defining a Line Item

### Prerequisites

To define a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

### Procedure

To define a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional healthcare amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes
	<b>Note:</b> By default, the value is set to <b>Active</b> .	
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item).	Yes
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.	
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item).	Yes (Conditional)
	<b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears.	
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
	<b>Note:</b> By default, the value is set to <b>No</b> .	
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>	No
	<b>Note:</b> By default, the value is set to <b>No</b> .	

4. Enter the required details in the **Main** section.
5. Associate the line item with one or more pricing rule type categories.
6. Click **Save**.

The line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

How to associate a line item with a pricing rule type category	<a href="#">Associating a Line Item with a Pricing Rule Type Category</a> on page 1848

## Associating a Line Item with a Pricing Rule Type Category

**Procedure**

To associate a line item with a pricing rule type category:

1. Ensure that the **Line Item Usage** section is expanded when you are defining, editing, or copying a line item.

The **Line Item Usage** section contains the following field in a grid:

Field Name	Field Description	Mandatory (Yes or No)												
Pricing Rule Type Category	<p>Used to indicate the pricing rule type category which you want to associate with the charge (i.e. line item). The valid values are:</p> <ul style="list-style-type: none"><li>Aggregate Stop-Loss</li><li>Ancillary</li><li>Claim</li><li>Retention Type Claim Based</li><li>Specific Stop-Loss</li></ul> <p>The following table describes the significance of each category that can be associated with the line item:</p> <table><tr><th>Pricing Rule Type Category</th><th>Significance</th></tr><tr><td>Claim</td><td>Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.</td></tr><tr><td>Specific Stop-Loss</td><td>Whether the line item can be considered while calculating specific stop-loss.</td></tr><tr><td>Aggregate Stop-Loss</td><td>Whether the line item can be considered while calculating aggregate stop-loss.</td></tr><tr><td>Retention Type Claim Based</td><td>Whether the line item can be used while calculating the percentage based retention type claim based fee.</td></tr><tr><td>Ancillary</td><td>Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.</td></tr></table> <p><b>Note:</b> At present, the line items are not used in the pricing rule types where the pricing rule type category is set to <b>Retention Type Enrollment Based</b> and <b>Flat Fees</b>.</p>	Pricing Rule Type Category	Significance	Claim	Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.	Specific Stop-Loss	Whether the line item can be considered while calculating specific stop-loss.	Aggregate Stop-Loss	Whether the line item can be considered while calculating aggregate stop-loss.	Retention Type Claim Based	Whether the line item can be used while calculating the percentage based retention type claim based fee.	Ancillary	Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.	<p>Yes (Conditional)</p> <p><b>Note:</b> This field is required when you are associating the line item with a pricing rule type category.</p>
Pricing Rule Type Category	Significance													
Claim	Whether the line item can be included in a claim template and thereby while defining a claim pricing rule for a parent customer and bill group.													
Specific Stop-Loss	Whether the line item can be considered while calculating specific stop-loss.													
Aggregate Stop-Loss	Whether the line item can be considered while calculating aggregate stop-loss.													
Retention Type Claim Based	Whether the line item can be used while calculating the percentage based retention type claim based fee.													
Ancillary	Whether the line item can be considered while defining pricing arrangements in an ancillary pricing rule type.													

2. Enter the required details in the **Line Item Usage** section.

3. If you want to associate the line item with more than one pricing rule type category, click the **Add** (+) icon and then repeat step 3.

**Note:** However, if you want to remove a pricing rule type category from the line item, click the **Delete** (🗑️) icon corresponding to the pricing rule type category.

4. Click **Save**.
- The line item is associated with the pricing rule type category.

**Related Topics**

**Editing a Line Item**

**Prerequisites**

To edit a line item, you should have:

- Service quantity identifiers and billable charge line types defined in the application

**Procedure**

To edit a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the line item whose details you want to edit.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Indicates the charge for which the line item is created.	Not applicable
Description	Used to specify the description for the line item.	Yes
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No

Field Name	Field Description	Mandatory (Yes or No)
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> <li>Framework</li> <li>Base</li> <li>Customer Modification</li> </ul>	Not applicable
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <div> <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears. </div>	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). <div> <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears. </div>	Yes (Conditional) <div> <b>Note:</b> This field is required when the <b>Write Off, if Not Eligible for Billing</b> field is set to <b>Yes</b>. </div>
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No

**Tip:** Alternatively, you can edit the details of a line item by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.

- 5. Associate or remove a pricing rule type category from the line item, if required.
- 6. Click **Save**.

The changes made to the line item are saved.

**Copying a Line Item**

Instead of creating a line item from scratch, you can create a new line item using an existing line item. This is possible through copying a line item. On copying a line item, the details including the pricing rule type categories to which the line item is associated are copied to the new line item. You can then edit the details, if required.

**Prerequisites**

To copy a line item, you should have:

- Line item (whose copy you want to create) defined in the application
- Service quantity identifiers and billable charge line types defined in the application

**Procedure**

To copy a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the line item whose copy you want to create.

The **Line Item** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the line item.
- **Line Item Usage** – Used to associate the line item with one or more pricing rule type categories.

The **Main** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Line Item	Used to specify the charge (for example, consumer-driven amount, traditional healthcare amount, and so on) for which the line item is created.	Yes
Description	Used to specify the description for the line item.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Override Description	Used when you want to override the description of the line item.	No
Detailed Description	Used to specify additional information about the line item.	No
Status	Used to indicate the status of the line item. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Service Quantity Identifier	Used to indicate the service quantity identifier (SQI) for the line item. The SQI indicates the transaction field in which the charge amount is stored. It is also used while calculating the percentage based markup or markdown for the line item.	Yes
Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the calculation line for the charge (i.e. line item). <div> <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears. </div>	Yes
Write Off Billable Charge Line Type	Used to indicate the billable charge line type using which you want to create the write off calculation line for the charge (i.e. line item). <div> <b>Note:</b> The <b>Search</b> (🔍) icon appears corresponding to this field. On clicking the <b>Search</b> icon, the <b>Billable Charge Line Type Search</b> window appears. </div>	Yes (Conditional) <div> <b>Note:</b> This field is required when the <b>Write Off, if Not Eligible for Billing</b> field is set to <b>Yes</b>. </div>
Write Off, if Not Eligible for Billing	Used to indicate whether the system should write off the charge (i.e. line item) when it is not eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No
Retention Claim Based Percentage Calculation	Used to indicate whether the charge (i.e. line item) should be considered while calculating the percentage based retention type claim based fee. The valid values are: <ul style="list-style-type: none"> <li>Yes</li> <li>No</li> </ul>	No

**Tip:** Alternatively, you can copy a line item by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

- Enter the required details in the **Main** section.
- Associate or remove a pricing rule type category from the line item, if required.

6. Click **Save**.

The new line item is added in the **C1-ExtLookPricingRuleLineItem** extendable lookup.

**Deleting a Line Item**

**Procedure**

To delete a line item:

1. Search for the **Line Item** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete**  icon in the **Delete** column corresponding to the line item that you want to delete.

A message appears confirming whether you want to delete the line item.

**Note:** You can delete a line item only when it is not yet used in the claim template or while defining the Administrative Services Only (ASO) pricing.

**Tip:** Alternatively, you can delete a line item by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The line item is deleted from the **C1-ExtLookPricingRuleLineItem** extendable lookup.

## **Claim Template Extendable Lookup**

The ASO service provider may bill different charges for a claim transaction to different employers. The system enables you to create different claim templates for different employers. A claim template contains a set of charges (i.e. line items) which can be billed to a parent customer or bill group. You can define multiple claim templates in the system. Each claim template must be defined in the system using the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. A claim template encapsulates the following information:

- Whether the claim template can be used while defining a claim pricing rule for a policy which is in the **In Force/Active, Post Runout**, or **Runout** status.
- Line items which can be billed to a parent customer or bill group.
- Whether you want to calculate the markup or markdown on the line items which are included in the claim template.
- Whether you want to specify a flat markup or markdown amount for the line items or the markup or markdown percentage for the line items which are eligible for percentage based markup or markdown
- Whether a line item is eligible for billing or not.
- Whether you want to define rule based billing eligibility for a line item.
- Whether you want to define billing eligibility for a line item while defining a claim pricing rule.
- Rule type which indicates the rules that should be executed to determine whether the line item is eligible for billing.
- Whether the line item is eligible for percentage based markup or markdown when the markup or markdown type is set to **Percentage**.

Once a claim template is defined in the extendable lookup, you can associate the claim template with a claim pricing rule type. You can associate multiple claim templates with a claim pricing rule type. Then, while defining a claim pricing rule for a parent customer, you can use any one of the claim template associated with the respective claim pricing rule type. The system then inherits the line items and the default markup and markdown values in the claim pricing rule from the claim template.

However, while defining a claim pricing rule for a policy of a bill group, you can only use the claim templates which are defined for the respective policy status and associated with the respective claim pricing rule type.

For example, you can create the claim templates with the following line items:

Claim Template	Policy Status	Line Item	Billing Eligibility	Pricing Strategy	Markup or Markdown Type	Markup or Markdown Amount	Markdown or Markdown Percentage
CT1	In Force/ Active	CDH	Yes	Markup	Flat Amount	\$2	-
		THC	Yes				
		PCC	No				
CT2	Runout	CDH	Yes	Markdown	Percentage	-	2.00
		THC	Yes				
CT3	Post Runout	PCC	Yes	None	-	-	-
		NAF	No				

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 1856

Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	<b>Note:</b> It has a link. On clicking the link, the <b>Extendable Lookup</b> screen appears where you can view the details of the respective extendable lookup.

## Searching for the Claim Template Extendable Lookup

### Procedure

To search for the **Claim Template** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookClaimTemplate** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Claim Template** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Claim Template Extendable Lookup

### Procedure

To view the values of the **Claim Template** extendable lookup:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. View the values of the **Claim Template** extendable lookup in the **Extendable Lookup Value List** zone.

### Related Topics

## Extendable Lookup (Claim Template)

The **Extendable Lookup** screen allows you to view the values of the **Claim Template (C1-ExtLookClaimTemplate)** extendable lookup. It also allows you to define, edit, copy, and delete a claim template. It contains the following zones:

- [Extendable Lookup Value List](#) on page 1858
- [Extendable Lookup Value](#) on page 1859

### Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Claim Template** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the claim template.
Description	Displays the description of the claim template.
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"><li>• Framework</li><li>• Base</li><li>• Customer Modification</li></ul>
Edit	On clicking the <b>Edit</b> (  ) icon, the <b>Claim Template</b> screen appears where you can edit the details of the claim template.
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Claim Template</b> screen appears where you can define a new claim template using an existing claim template.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the claim template.
	<b>Note:</b> You can delete a claim template only when it is not yet used in a claim pricing rule type.
Detailed Description	Displays additional information about the claim template.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a claim template, the **Extendable Lookup Value** zone appears with the details of the respective claim template.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the claim template. It contains the following sections:

- **Main** – Displays basic information about the claim template. It contains the following fields:

Field Name	Field Description
Claim Template	Displays the claim template.
Description	Displays the description of the claim template.
Override Description	Displays the overridden description of the claim template.
Detailed Description	Displays additional information about the claim template.
Status	Indicates the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

- **Claim Template Usage** – Indicates when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description
Policy Status	Indicates whether the claim template should be used while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>• In Force/Active</li> <li>• Post Runout</li> <li>• Runout</li> </ul>

- **Default Markup or Markdown Values** – Indicates the default markup or markdown values defined for the line items in the claim template. It contains the following fields:

Field Name	Field Description
Pricing Strategy	Indicates whether you want to markup or markdown the line items. The valid values are: <ul style="list-style-type: none"> <li>• None</li> <li>• Markup</li> <li>• Markdown</li> </ul>

Field Name	Field Description
Markup or Markdown Type	Indicates whether you want a flat or percentage based markup or markdown on the line items. The valid values are: <ul style="list-style-type: none"> <li>Flat Amount</li> <li>Percentage</li> </ul>
	<b>Note:</b> This field appears only when the <b>Markup</b> or <b>Markdown</b> option is selected from the <b>Pricing Strategy</b> list.
Markup or Markdown Amount	Displays the default flat markup or markdown amount for the line items.
	<b>Note:</b> This field appears only when the <b>Flat Amount</b> option is selected from the <b>Markup or Markdown Type</b> list.
Markup or Markdown Percentage	Displays the default percentage of markup or markdown for all line items.
	<b>Note:</b> This field appears only when the <b>Percentage</b> option is selected from the <b>Markup or Markdown Type</b> list.

- **Line Items** – Lists the line items which are added in the claim template. It contains the following columns:

Column Name	Column Description
Sequence	Indicates the order in which the calculation line should be generated for the line item.
Line Item	Indicate the line item which is added in the claim template.
Billing Eligibility	Indicates whether the line item is eligible for billing. The valid values are: <ul style="list-style-type: none"> <li>Eligible</li> <li>Not Eligible</li> <li>Rule Based</li> <li>Used Defined (Default No)</li> <li>User Defined (Default Yes)</li> </ul>
Rule Type	Indicates that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.
	<b>Note:</b> The data appears in this column only when the <b>Rule Based</b> option is selected from the <b>Billing Eligibility</b> list.
Markup or Markdown Percentage Eligibility	Indicates whether the line item is eligible for percentage based markup or markdown when the <b>Markup or Markdown Type</b> field is set to <b>Percentage</b> . The valid values are: <ul style="list-style-type: none"> <li>Eligible</li> <li>Not Eligible</li> </ul>

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the claim template.

Button Name	Button Description
Delete	Used to delete the claim template.
	<b>Note:</b> You can delete a claim template only when it is not yet used in a claim pricing rule type.
Duplicate	Used to create a new claim template using an existing claim template.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the claim template is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the claim template in the **Extendable Lookup Value List** zone.

## Defining a Claim Template

### Procedure

To define a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

3. Click the **Add** button in the **Page Title** area of the **Extendable Lookup** screen.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
	<b>Note:</b> By default, the value is set to <b>Active</b> .	

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes

- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown values for the line items which are added in the claim template.
  - **Line Items** – Used to add the line items in the claim template.
4. Enter the required details in the **Main** section.
  5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** list depending on whether you want to use the claim template while defining a claim pricing rule for a policy in
  6. Add the required line items in the claim template.
  7. Define the default markup or markdown values for the line items, if required.
  8. Click **Save**.

The claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

## Adding a Line Item in a Claim Template

### Prerequisites

To add a line item in a claim template, you should have:

- The line item defined in the **C1-ExtLookPricingRuleLineItem** extendable lookup.
- Rule types defined in the application (where the rule type usage is set to **ASO Billing Line Item Eligibility**) when you want to define rule based billing eligibility for a line item.

### Procedure

To add a line item in a claim template:

1. Ensure that the **Line Items** section is expanded when you are defining, editing, or copying a claim template.

The **Line Items** section contains the following fields in a grid:

Field Name	Field Description	Mandatory (Yes or No)
Sequence	Used to indicate the order in which the calculation line should be generated for the line item.	Yes (Conditional)
		<b>Note:</b> This field is required while adding a line item in the claim template.
Line Item	Used to indicate the line item that you want to include in the claim template.	Yes (Conditional)
	<b>Note:</b> The list includes only those line items which are associated to the <b>Claim</b> pricing rule type category.	<b>Note:</b> This field is required while adding a line item in the claim template.

Field Name	Field Description	Mandatory (Yes or No)
Billing Eligibility	<p>Used to indicate whether the line item is eligible for billing. If line item is not eligible for billing, the system does not create the calculation line for the line item. The valid values are:</p> <ul style="list-style-type: none"> <li>• <b>Eligible</b> - Used when the line item is eligible for billing.</li> <li>• <b>Not Eligible</b> - Used when the line item is not eligible for billing.</li> <li>• <b>Rule Based</b> - Used when you want to determine whether the line item is eligible for billing using certain business rules while executing the <b>Update Status (C1-TXNEX)</b> batch.</li> <li>• <b>Used Defined (Default No)</b> - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the <b>User Defined Billing Option</b> option is not selected for the line item in the claim pricing rule.</li> <li>• <b>User Defined (Default Yes)</b> - Used when you want to define billing eligibility for the line item while defining a claim pricing rule using the claim template. If you select this option, by default, the <b>User Defined Billing Option</b> option is selected for the line item in the claim pricing rule.</li> </ul>	Yes (Conditional)
		<b>Note:</b> This field is required while adding a line item in the claim template.

Field Name	Field Description	Mandatory (Yes or No)
Rule Type	Used to indicate that rules of the specified rule type should be executed to determine whether the line item is eligible for billing.	Yes (Conditional)
	<b>Note:</b> The list includes only those rule types where the rule type usage is set to <b>ASO Billing Line Item Eligibility</b> . The values appear in this list only when you select the <b>Rule Based</b> option from the <b>Billing Eligibility</b> list.	<b>Note:</b> This field is required when you select the <b>Rule Based</b> option from the <b>Billing Eligibility</b> list.
Markup or Markdown Percentage Eligibility	Used to indicate whether the line item is eligible for percentage based markup or markdown when the <b>Markup or Markdown Type</b> field is set to <b>Percentage</b> . The valid values are:	Yes (Conditional)
	<ul style="list-style-type: none"> <li>Eligible</li> <li>Not Eligible</li> </ul>	<b>Note:</b> This field is required while adding a line item in the claim template.

- Enter the required details in the **Line Items** section.
- If you want to add more than one line item in the claim template, click the **Add** (+) icon and then repeat step 2.

**Note:** However, if you want to remove a line item from the claim template, click the **Delete** (🗑️) icon corresponding to the line item.

- Click **Save**.

The line item is added in the claim template.

## Defining the Default Markup or Markdown Values for the Line Items

### Procedure

To define the default markup or markdown values for the line items:

- Ensure that the **Default Markup or Markdown Values** section is expanded when you are defining, editing, or copying a claim template.

The **Default Markup or Markdown Values** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Pricing Strategy	Used to indicate whether you want to markup or markdown the line items. The valid values are: <ul style="list-style-type: none"> <li>• None</li> <li>• Markup</li> <li>• Markdown</li> </ul>	Yes (Conditional)
	<b>Note:</b> This field is required when you are defining the default markup or markdown values for the line items.	
	<b>Note:</b> By default, the value is set to <b>Markup</b> .	
Markup or Markdown Type	Used to indicate whether you want a flat or percentage based markup or markdown. The valid values are: <ul style="list-style-type: none"> <li>• Flat Amount</li> <li>• Percentage</li> </ul>	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Markup</b> or <b>Markdown</b> option from the <b>Pricing Strategy</b> list.	
Markup or Markdown Amount	Used to specify the default flat markup or markdown amount for the line items. The specified flat amount appears, by default, when you define a claim pricing rule using the claim template. You can change the flat markup or markdown amount for the line items while defining a claim pricing rule using the claim template. In this case, the system will create only one markup or markdown calculation line for all line items.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Flat Amount</b> option from the <b>Markup or Markdown Type</b> list.	

Field Name	Field Description	Mandatory (Yes or No)
Markup or Markdown Percentage	Used to specify the default percentage of markup or markdown for all line items. The specified percentage appears, by default, for all line items when you define a claim pricing rule using the claim template. You can change the percentage of markup or markdown for each line item while defining a claim pricing rule using the claim template. In this case, the system will create a markup or markdown calculation line for each line item which is eligible for percentage based markup or markdown.	Yes (Conditional)
	<b>Note:</b> This field appears only when you select the <b>Percentage</b> option from the <b>Markup or Markdown Type</b> list.	

- Enter the required details in the **Default Markup or Markdown Values** section.
- Click **Save**.

The default markup or markdown values are defined in the claim template.

How to edit a claim template	<a href="#">Editing a Claim Template</a> on page 1867
How to copy a claim template	<a href="#">Copying a Claim Template</a> on page 1869

## Editing a Claim Template

### Procedure

To edit a claim template:

- Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
- In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.

The **Extendable Lookup** screen appears.

- In the **Extendable Lookup Value List** zone, click the **Edit** (✎) icon in the **Edit** column corresponding to the claim template whose details you want to edit.

The **Claim Template** screen appears. It contains the following sections:

- Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Displays the claim template.	Not applicable
Description	Used to specify the description for the claim template.	Yes

Field Name	Field Description	Mandatory (Yes or No)
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>Active</li> <li>Inactive</li> </ul>	Yes
Owner	Indicates who has created the claim template. The valid values are: <ul style="list-style-type: none"> <li>Framework</li> <li>Base</li> <li>Customer Modification</li> </ul>	Not applicable

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes

- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown value for the line items which are added in the claim template.
- **Line Items** – Used to add the line items in the claim template.

**Tip:** Alternatively, you can edit the details of a claim template by clicking the **Edit** button in the **Extendable Lookup Value** zone.

4. Modify the required details in the **Main** section.
5. Modify the policy status in the **Claim Template Usage** section, if required.
6. Add, edit, or remove line items from the claim template, if required.
7. Edit the default markup or markdown values for the line items, if required.
8. Click **Save**.

The changes made to the claim template are saved.

## Copying a Claim Template

Instead of creating a claim template from scratch, you can create a new claim template using an existing claim template. This is possible through copying a claim template. On copying a claim template, the details including the line items and default markup or markdown values are copied to the new claim template. You can then edit the details, if required.

### Prerequisites

To copy a claim template, you should have:

- Claim template (whose copy you want to create) defined in the application

### Procedure

To copy a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. In the **Extendable Lookup Value List** zone, click the **Duplicate** () icon in the **Duplicate** column corresponding to the claim template whose copy you want to create.

The **Claim Template** screen appears. It contains the following sections:

- **Main** – Used to specify basic details about the claim template. It contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Claim Template	Used to specify the claim template.	Yes
Description	Used to specify the description for the claim template.	Yes
Override Description	Used when you want to override the description of the claim template.	No
Detailed Description	Used to specify additional information about the claim template.	No
Status	Used to indicate the status of the claim template. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>	Yes

- **Claim Template Usage** – Used to indicate when the claim template can be used while defining a claim pricing rule for a policy of a bill group. It contains the following field:

Field Name	Field Description	Mandatory (Yes or No)
Policy Status	Used to indicate whether you want to use the claim template while defining a claim pricing rule for a policy which is in the <b>In Force/Active</b> , <b>Post Runout</b> , or <b>Runout</b> status. The valid values are: <ul style="list-style-type: none"> <li>In Force/Active</li> <li>Post Runout</li> <li>Runout</li> </ul>	Yes

- **Default Markup or Markdown Values** – Used to indicate the default markup or markdown value for the line items which are added in the claim template.
- **Line Items** – Used to add the line items in the claim template.

**Tip:** Alternatively, you can copy a claim template by clicking the **Duplicate** button in the **Extendable Lookup Value** zone.

4. Enter the required details in the **Main** section.
5. Select the **In Force/Active**, **Post Runout**, or **Runout** option from the **Policy Status** list depending on whether you want to use the claim template while defining a claim pricing rule for a policy in
6. Add, edit, or remove line items from the claim template, if required.
7. Edit the default markup or markdown values for the line items, if required.
8. Click **Save**.

The new claim template is added in the **C1-ExtLookClaimTemplate** extendable lookup.

## Deleting a Claim Template

### Procedure

To delete a claim template:

1. Search for the **Claim Template** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.

3. In the **Extendable Lookup Value List** zone, click the **Delete** (🗑️) icon in the **Delete** column corresponding to the claim template that you want to delete.

A message appears confirming whether you want to delete the claim template.

**Note:** You can delete a claim template only when it is not yet used in a claim pricing rule type.

**Tip:** Alternatively, you can delete a claim template by clicking the **Delete** button in the **Extendable Lookup Value** zone.

4. Click **OK**.

The claim template is deleted from the **C1-ExtLookClaimTemplate** extendable lookup.

## Rate Option Extendable Lookup

The basic pricing details (such as rate schedule, pricing currency) and the transaction aggregation details may vary from one bill group or parent customer to another and from one price item to another. The basic pricing and transaction aggregation details are defined in the rate option. Each rate option must be defined in the system using the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. A rate option encapsulates the following information:

- The rate schedule that you want to use while defining the price item pricing.
- Currency in which you want to define the price item pricing.
- Whether zero pricing should be displayed in the bill.
- Whether the transactions mapped to the price item should be ignored for billing.
- Whether the transactions mapped to the price item should be aggregated for billing.
- The aggregation schedule using which the transactions should be aggregated for billing.
- How and when you want to rate the transaction legs which are mapped to the price item.
- Whether you want the price item pricing to be applied to all customers or only to the new customers.

Once the rate options are defined in the extendable lookup, you can associate one or more rate options with a price item while adding the price item in a claim, specific stop-loss, aggregate stop-loss, retention type claim based, retention type enrollment based, or ancillary pricing rule type. You can then use the rate option while defining pricing rule for the respective price item using the respective pricing rule type. The rate option specified in a pricing rule is used while creating the price item pricing or price assignment for the pricing rule. For example,

Claim Pricing Rule Type	Price Item	Rate Option	Claim Pricing Rule	Price Item Pricing
CPRT1	P1	R1	CPR1 (Price Item: P1, Rate Option: R1)	PA1 is created for P1 using the details specified in R1.
		R2	-	-
		R3	CPR2 (Price Item: P1, Rate Option: R3)	PA2 is created for P1 using the details specified in R3.
	P2	R1	-	-
		R4	CPR3 (Price Item: P2, Rate Option: R4)	PA3 is created for P2 using the details specified in R4.
CPRT2	P1	R1	CPR4 (Price Item: P1, Rate Option: R1)	PA4 is created for P1 using the details specified in R1.

The **Extendable Lookup Query** screen allows you to search for an extendable lookup. It contains the following zone:

- [Extendable Lookup Search](#) on page 1872

### Extendable Lookup Search

The **Extendable Lookup Search** zone allows you to search for an extendable lookup. It contains the following two sections:

- **Search Criteria** – The **Search Criteria** section contains the following fields:

Field Name	Field Description	Mandatory (Yes or No)
Business Object	Used to search a particular extendable lookup business object.	No
Description	Used to search extendable lookups with a particular description.	No

**Note:** You must specify at least one search criterion while searching for an extendable lookup.

- **Search Results** – On clicking the **Search** button, the search results appear based on the specified search criteria. The **Search Results** section contains the following columns:

Column Name	Column Description
Business Object	Displays the extendable lookup business object.
Description	Displays the description of the extendable lookup business object.
	<b>Note:</b> It has a link. On clicking the link, the <b>Extendable Lookup</b> screen appears where you can view the details of the respective extendable lookup.

### **Related Topics**

For more information on...	See...
How to search for the <b>Rate Option</b> extendable lookup	<a href="#">Searching for the Rate Option Extendable Lookup</a> on page 1873
How to view the values of the <b>Rate Option</b> extendable lookup	<a href="#">Viewing the Values of the Rate Option Extendable Lookup</a> on page 1874

## **Searching for the Rate Option Extendable Lookup**

### **Procedure**

To search for the **Rate Option** extendable lookup:

1. Click the **Admin** link in the **Application** toolbar.  
A list appears.
2. From the **Admin** menu, select **E** and then click **Extendable Lookup**.  
The **Extendable Lookup Query** screen appears.
3. In the **Extendable Lookup Search** zone, enter **C1-ExtLookRetTypeRateOpt** in the **Business Object** field.

**Note:** ORMB search engine supports wildcard search, where you can substitute the percentage (%) symbol as a stand in for any word or letter in a search criteria. You can use the ‘%’ wildcard character in all input fields except the date and ID fields. The ‘%’ wildcard character is suffixed automatically at the end of the partial search criteria. Therefore, you may or may not specify the wildcard character at the end of the partial search criteria. However, you have to prefix the wildcard character manually wherever required.

4. Click **Search**.

The **Rate Option** extendable lookup business object appears in the **Search Results** section.

## Viewing the Values of the Rate Option Extendable Lookup

### Procedure

To view the values of the **Rate Option** extendable lookup:

1. Search for the **Rate Option** extendable lookup in the **Extendable Lookup Query** screen.
2. In the **Search Results** section, click the link in the **Description** column corresponding to the extendable lookup business object whose details you want to view.  
The **Extendable Lookup** screen appears.
3. View the values of the **Rate Option** extendable lookup in the **Extendable Lookup Value List** zone.

### Related Topics

For more information on...	See...
How to search for the <b>Rate Option</b> extendable lookup	<a href="#">Searching for the Rate Option Extendable Lookup</a> on page 1873
<b>Extendable Lookup</b> screen	<a href="#">Extendable Lookup (Rate Option)</a> on page 1874
<b>Extendable Lookup Value List</b> zone	<a href="#">Extendable Lookup Value List</a> on page 1874

## Extendable Lookup (Rate Option)

The **Extendable Lookup** screen allows you to view the values of the **Rate Option (C1-ExtLookRetTypeRateOpt)** extendable lookup. It also allows you to define, edit, copy, and delete a rate option. It contains the following zones:

- [Extendable Lookup Value List](#) on page 1874
- [Extendable Lookup Value](#) on page 1875

### Extendable Lookup Value List

The **Extendable Lookup Value List** zone lists the values which are already defined for the **Rate Option** extendable lookup. It contains the following columns:

Column Name	Column Description
Value	Displays the rate option.
Description	Displays the description of the rate option.
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"><li>• Framework</li><li>• Base</li><li>• Customer Modification</li></ul>
Edit	On clicking the <b>Edit</b>  icon, the <b>Rate Option</b> screen appears where you can edit the details of the rate option.

Column Name	Column Description
Duplicate	On clicking the <b>Duplicate</b> (  ) icon, the <b>Rate Option</b> screen appears where you can define a new rate option using an existing rate option.
Delete	On clicking the <b>Delete</b> (  ) icon, you can delete the rate option.
	<b>Note:</b> You can delete a rate option only when it is not yet used in a pricing rule type.
Detailed Description	Displays additional information about the rate option.

**Note:** Pagination is used to display limited number of records in this zone. You can use the navigation buttons, such as **Previous** and **Next** to navigate between pages.

On clicking the **Broadcast** () icon corresponding to a rate option, the **Extendable Lookup Value** zone appears with the details of the respective rate option.

You can filter the list using various search criteria (such as, **Value** and **Description**) available in the **Filter** area. By default, the **Filter** area is hidden. You can view the **Filter** area by clicking the **Filters** () icon in the upper right corner of this zone.

## Extendable Lookup Value

The **Extendable Lookup Value** zone displays the details of the rate option. It contains the following sections:

- **Main** – Displays basic information about the rate option. It contains the following fields:

Field Name	Field Description
Rate Option	Displays the rate option.
Description	Displays the description of the rate option.
Override Description	Displays the overridden description of the rate option.
Detailed Description	Displays additional information about the rate option.
Status	Indicates the status of the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Active</li> <li>• Inactive</li> </ul>

Field Name	Field Description
Rate Schedule	Indicates the rate schedule that will be used while defining the price item pricing. It is the rate schedule which helps the system to create calculation lines for a transaction leg.
	<b>Note:</b> It has a link. On clicking the link, the <b>Rate Schedule</b> screen appears where you can view the details of the respective rate schedule.
Pricing Currency	Indicates the currency in which the price item pricing will be defined.
Print Zero	Indicates whether zero pricing will be displayed in the bill. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Ignore Transaction	Indicates whether the transactions mapped to the price item will be ignored for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Aggregate Transaction	Indicates whether the transactions mapped to the price item will be aggregated for billing. The valid values are: <ul style="list-style-type: none"> <li>• Yes</li> <li>• No</li> </ul>
Aggregation Schedule	Indicates the aggregation schedule using which the transactions will be aggregated for billing.
Transaction Rating Criteria	Indicates how and when the transaction legs which are mapped to the price item are rated. The valid values are: <ul style="list-style-type: none"> <li>• Aggregate Transactions and Then Rate SQs</li> <li>• Do Not Rate Transactions</li> <li>• Rate Transaction and Aggregate Calc Lines</li> <li>• Rate Transactions</li> </ul>
Apply To	Indicates whether the price item pricing will be applied to all customers or only to the new customers. The valid values are: <ul style="list-style-type: none"> <li>• All Customers</li> <li>• New Customers</li> </ul>

- **Record Actions** – This section contains the following buttons:

Button Name	Button Description
Edit	Used to edit the details of the rate option.
Delete	Used to delete the rate option.
	<b>Note:</b> You can delete a rate option only when it is not yet used in a pricing rule type.

Button Name	Button Description
Duplicate	Used to create a new rate option using an existing rate option.

- **Record Information** – This section contains the following fields:

Field Name	Field Description
Business Object	Indicates the extendable lookup business object using which the rate option is created. In addition, a context menu appears corresponding to this field which helps in navigating to other screens in the application.
	<b>Note:</b> It has a link. On clicking the link, the <b>Business Object</b> screen appears where you can view the details of the respective business object.
Owner	Indicates who has created the rate option. The valid values are: <ul style="list-style-type: none"> <li>• Framework</li> <li>• Base</li> <li>• Customer Modification</li> </ul>

By default, the **Extendable Lookup Value** zone does not appear in the **Extendable Lookup** screen. It appears only when you click the **Broadcast**  icon corresponding to the rate option in the **Extendable Lookup Value List** zone.
