This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates is not responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

CAUTION: Use only the Upgrade procedure included in the Upgrade Kit.

Before upgrading any system, please access My Oracle Support (MOS) (<https://support.oracle.com>) and review any Technical Service Bulletins (TSBs) that relate to this upgrade.

My Oracle Support (MOS) (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at 1-800-223-1711 (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>.

See more information My Oracle Support (MOS).

List of Procedures

Procedure 1. Configure BIOS Settings	19
Procedure 2. Upgrade Rack Mount Server Firmware.....	21
Procedure 3. Install and Configure TVOE on First RMS (PMAC Host)	22
Procedure 4. Configure First Rack Mount Server	26
Procedure 5. PMAC Deployment.....	39
Procedure 6. Initialize PMAC	44

Procedure 7. Configure netConfig Repository (HP DL380 Gen 8 Servers Only)	48
Procedure 8. Configure Cisco 4948E-F Aggregation Switches-netConfig (HP DL380 Servers Only)	56
Procedure 9. Configure the PMAC Server (NetBackup Only)	61
Procedure 10. Add RMS to the PMAC System Inventory	66
Procedure 11. Restore an Archive That Does Not Contain a Current User	70
Procedure 12. Configure TVOE on Additional Rack Mount Servers	75
Procedure 13. Install a Redundant PMAC	88
Procedure 14. Load DSR, SDS, and TPD ISOs onto the PMAC Server	95
Procedure 15. Execute VM/Network Fast Deployment	98
Procedure 16. Load DSR, SDS, and TPD ISOs onto the PMAC Server	103
Procedure 17. Configure First DSR NOAM NE and Server	107
Procedure 18. Configure the DSR NOAM Server Group	113
Procedure 19. Configure Second DSR NOAM Server	117
Procedure 20. Complete DSR NOAM Server Group Configuration	120
Procedure 21. Install NetBackup Client (Optional)	122
Procedure 22. Configure DSR NOAM for DR Site (Optional)	123
Procedure 23. Pairing for DSR DR NOAM Site (Optional)	127
Procedure 24. Configure DSR SOAM NE	131
Procedure 25. Configure DSR SOAM Server	133
Procedure 26. Configure the DSR SOAM Server Group	138
Procedure 27. Configure RMS-Specific B-Level Resources (HP DL380 Gen 8 Servers Only)	143
Procedure 28. Activate PCA	144
Procedure 29. Activate DCA	144
Procedure 30. Configure Places and Assign MP Servers to Places (PCA and DCA Only)	145
Procedure 31. Configure DAMP Server Groups and Profiles	148
Procedure 32. Configure IPFE Server Groups	152
Procedure 33. Configure SS7-MP Server Groups and Profiles	156
Procedure 34. Configure Session SBR Server Groups	162
Procedure 35. Configure Binding SBR Server Groups	166
Procedure 36. Configure DSCP Values for Outgoing Traffic (Optional)	170
Procedure 37. Configure SNMP Trap Receivers	174
Procedure 38. Configure IPFE (Optional)	180
Procedure 39. Configure First SDS NOAM NE and Server	185
Procedure 40. Configure the SDS NOAM Server Group	190
Procedure 41. Configure Second SDS NOAM Server	193
Procedure 42. Complete SDS NOAM Server Group Configuration	196
Procedure 43. Install NetBackup Client (Optional)	199

Procedure 44. Configure SDS NOAM for DR Site (Optional)	200
Procedure 45. Pairing for SDS DR NOAM Site (Optional)	204
Procedure 46. Configure SDS Query Server	207
Procedure 47. Pair SDS Query Server with SDS NOAMs.....	212
Procedure 48. Configure SDS DP SOAM NE	215
Procedure 49. Configure SDS DP SOAM Server	217
Procedure 50. Configure the SDS DP SOAM Server Group	222
Procedure 51. Configure the SDS DP Server Group.....	225
Procedure 52. Configure DSCP Values for Outgoing Traffic (Optional)	227
Procedure 53. Configure SNMP Trap Receivers (Optional)	230
Procedure 54. IDIH Installation	233
Procedure 55. Configure DSR Reference Data Synchronization for IDIH.....	237
Procedure 56. Configure the SSO Domain.....	241
Procedure 57. Configure in DSR	247
Procedure 58. Configure Mail Server (Optional).....	250
Procedure 59. Change SNMP Management Server (Optional).....	251
Procedure 60. Change Network Interface (Optional).....	252
Procedure 61. Back Up the Upgrade and Disaster Recovery FDC File (Optional)	253
Procedure 62. Optimization Procedure	255
Procedure 63. Configure ComAgent Connections.....	256
Procedure 64. Activate Optional Features	261
Procedure 65. Shared Secret Encryption Key Revocation (RADIUS Only)	261
Procedure 66. Enable/Disable DTLS (SCTP Diameter Connections Only).....	262
Procedure 67. Back Up TVOE Configuration.....	262
Procedure 68. Back Up PMAC Application.....	264
Procedure 69. Back Up NOAM Database.....	266
Procedure 70. Back Up SOAM Database	269
Procedure 71. Configure HP Gen 8 Server BIOS Settings.....	272
Procedure 72. Configure HP Gen 8 Server BIOS Settings.....	274
Procedure 73. Configure Oracle X5-2/Netra X5-2/X6-2/X7-2 Server BIOS Settings	277
Procedure 74. Enable Oracle Netra X5-2 CPU Power Limit for NEBS (Optional).....	280
Procedure 75. Disable Oracle Netra X5-2/X6-2/X7-2 CPU Power Limit for NEBS (Optional)	280
Procedure 76. Upgrade HP DL380 Server Firmware	282
Procedure 77. Change SNMP Configuration Settings for HP DL380.....	287
Procedure 78. Access the TVOE iLO4 GUI	289
Procedure 79. Access the iLOM GUI	290
Procedure 80. Change the TVOE iLO Address	293

Procedure 81. Change the TVOE Oracle X5-2/Netra X5-2/X6-2iLOM Address.....	296
Procedure 82. Change the TVOE Oracle X5-2/Netra X5-2/X6-2iLOM Address.....	300
Procedure 83. Mount HP DL380 Servers with ISO Image using iLO4	302
Procedure 84. Mount Oracle X5-2/Netra X5-2/X6-2/X7-2 Servers with ISO Image using iLOM.....	304
Procedure 85. Connect to the TVOE iLO.....	308
Procedure 86. Configure SNMP	310
Procedure 87. Install NetBackup Client Using platcfg	313
Procedure 88. Install NetBackup Client Using NBAutoInstall	320
Procedure 89. Create NetBackup Client Configuration File	321
Procedure 90. Configure PMAC Application NetBackup Virtual Disk.....	322
Procedure 91. Configure PMAC Application NetBackup Virtual Disk.....	328
Procedure 92. Configure PMAC Application NetBackup Virtual Disk.....	342
Procedure 93. Remove the IDIH External Drive	343
Procedure 94. Perform Backups.....	347
Procedure 95. Perform Health Check	347
Procedure 96. Add a New TVOE Server/VMs	349
Procedure 97. Growth: DR NOAM.....	350
Procedure 98. Growth: SOAM Spare (DSR/PCA Only).....	351
Procedure 99. Growth: MP/DP	352
Procedure 100. Growth: MP (For 7.x to 8.x Upgraded System)	353
Procedure 101. Growth: Query Server (SDS Only)	362
Procedure 102. Post Growth Health Check	362
Procedure 103. Post Growth Backups.....	364
Procedure 104. Perform Backups.....	364
Procedure 105. Perform Health Check	365
Procedure 106. Remove Server from Server Group	368
Procedure 107. Delete Server/Server Group.....	377
Procedure 108. Delete Server VM	380
Procedure 109. Post De-Growth Health Check	382
Procedure 110. Post De-Growth Backups.....	384
Procedure 111. Perform Backups.....	385
Procedure 112. Perform Health Check	385
Procedure 113. Add a New TVOE Server	387
Procedure 114. Place Server in OOS	388
Procedure 115. Delete Server VM	390
Procedure 116. Move/Re-Shuffle: Create/Configure VMs.....	392
Procedure 117. Move/Re-Shuffle: NOAM/DR NOAM.....	393

Procedure 118. Move/Re-Shuffle: SOAM	395
Procedure 119. Move/Re-Shuffle: MP/DP	397
Procedure 120. Move/Re-Shuffle: Query Server (SDS Only)	402
Procedure 121. Move/Re-Shuffle: iDIH	404
Procedure 122. Move/Re-Shuffle: PMAC	406
Procedure 123. Move/Re-Shuffle: Redundant PMAC	409
Procedure 124. Post Moving/Re-Shuffling Health Check	410
Procedure 125. Post Move/Re-Shuffle Backups	412
Procedure 126. RAID10 Logical Volume Creation Spanning Multiple HDDs (Oracle X5-2/Netra X5-2) ..	412
Procedure 127. RAID10 Logical Volume Creation Spanning Multiple HDDs (Oracle X6-2)	417
Procedure 128. RAID10 Logical Volume Creation Spanning Multiple HDDs (HP DL380)	422
Procedure 129. PMAC Deployment: Deviation	429
Procedure 130. iDIH Installation: Deviation	434
Procedure 131. Restore SNMP Configuration to SNMP v3	441
Procedure 132. Turn Off Cipher List Before backupConfiguration/restoreConfiguration/upgradeFirmware Command	443
Procedure 133. Resume Cipher List After backupConfiguration/restoreConfiguration/upgradeFirmware Command	444

1. Introduction

This document is a guide to describe procedures used to configure HP DL380 Gen 8/9 or Oracle Rack Mount Servers (RMS) to use with Oracle Communication Diameter Signaling Router. It is assumed that the hardware installation and network cabling were already executed. The audience for this document includes Oracle customers and these groups: Software system, product verification, documentation, and customer service including software operations and first office application. Throughout the remainder of this document, the term RMS refers to either HP DL380 Gen 8/9 or Oracle rack mount servers.

Oracle X5-2/Netra X5-2/X6-2/X7-2/HP DL380 Gen 9 (10Gbps) only: In scenarios where the DSR installation has already been executed, and system **growth, de-growth, or re-shuffle** is necessary, refer to Appendix P Growth/De-Growth/Re-Shuffle (Oracle X5-2/Netra X5-2/X6-2/X7-2/HP DL380 Gen 9 (10Gbps) Only).

FIPS integrity verification test failed: Throughout this procedure, an error message of **FIPS integrity verification test failed** displays while performing various procedures on the command line (SSH, feature activations, etc.). This error message is harmless and should be ignored.

Disclaimer: To understand the capacity/performance impact of this software release, refer to [DSR 8.4 bechmarking document](#).

1.1 References

Software-centric customers do not receive firmware upgrades through Oracle. Instead, refer to the HP Solutions Firmware Upgrade Pack, Software Centric Release Notes on <https://docs.oracle.com> under Platform documentation. The latest version is recommended if an upgrade is performed; otherwise, version 2.2.9 is the minimum.

1.2 Acronyms

An alphabetized list of acronyms used in the document.

Table 1. Acronyms

Acronym	Definition
BIOS	Basic Input Output System
DCA	Diameter Custom Applications
DSR	Diameter Signaling Router
DVD	Digital Versatile Disc
EBIPA	Enclosure Bay IP Addressing
FABR	Full Address Based Resolution
FRU	Field Replaceable Unit
GLA	Gateway Location Application
HIDS	Host Intrusion Detection System
IDIH	Integrated Diameter Intelligence Hub
iLO	Integrated Lights Out manager
IPFE	IP Front End
IPM	Initial Product Manufacture – the process of installing TPD on a hardware platform
MAP-IWF	Map-Diameter Interworking
MSA	Modular Smart Array
NB	NetBackup
OA	HP Onboard Administrator
OS	Operating System (for example, TPD)
PCA	Policy and Charging Application
PMAC	Platform Management & Configuration
RBAR	Range Based Address Resolution
RMS	Rack Mounted Server
SAN	Storage Area Network
SBR	Session Binding Repository
SDS	Subscriber Database Server
SFTP	Secure File Transfer Protocol

Acronym	Definition
SNMP	Simple Network Management Protocol
TPD	Tekelec Platform Distribution
TVOE	Tekelec Virtual Operating Environment
VM	Virtual Machine
VSP	Virtual Serial Port

1.3 Terminology

An alphabetized list of terms used in the document.

Table 2. Terminology

Term	Definition
Enablement	The business practice of providing support services (hardware, software, documentation, etc.) that enable a 3rd party entity to install, configuration, and maintain Oracle products for Oracle customers.
Management Server	HP ProLiant DL380 or Oracle X5-2/ Netra X5-2/X6-2/X7-2 deployed to run TVOE and host a virtualized PMAC application.
Place Association	Applicable for various applications, a Place Association is a configured object that allows places to be grouped together. A place can be a member of more than one place association. The Policy and Charging DRA application defines two place association types: policy binding region and Policy and Charging mated sites.
PMAC Application	PMAC is an application that provides platform-level management functionality, such as the capability to manage and provision platform components of the system so it can host applications, for HP DL380 and the Oracle X5-2/Netra X5-2/X6-2/X7-2 system.
Server Group Primary Site	A server group primary site is a term used to represent the principle location within a SOAM or SBR server group. SOAM and SBR server groups are intended to span several sites (places). For the Policy and Charging DRA application, these sites (places) are all configured within a single Policy and Charging Mated Sites place association. For the Diameter custom application, these sites (places) are configured in Applications Region place association. The primary site may be in a different site (place) for each configured SOAM or SBR server group. A primary site is described as the location in which the active and standby servers to reside; however, there cannot be any preferred spare servers within this location. All SOAM and SBR server groups have a primary site.

Term	Definition
Server Group Secondary Site	<p>A server group secondary site is a term used to represent location in addition to the Primary Site within a SOAM or SBR Server Group. SOAM and SBR server groups are intended to span several sites (places). For the Policy and Charging DRA application, these sites (places) are all configured within a single Policy and Charging Mated Sites place association.</p> <p>For the Diameter custom application, these sites (places) are configured in Applications Region place association.</p> <p>The secondary site may be in a different sites (places) for each configured SOAM or SBR server group.</p> <p>A secondary site is described as the location in which only preferred spare servers reside. The active and standby servers cannot reside within this location. If two site redundancy is wanted, a secondary site is required for all SOAM and SBR server groups.</p>
Session Binding Repository (SBR) Server Group Redundancy	<p>The DCA and Policy and Charging applications may use SBR server groups to store application session data. The SBR server groups support both two and three site redundancy. The server group function name is Session and Binding Repository.</p>
Site	<p>Applicable for various applications, a site is type of place. A place is configured object that allows servers to be associated with a physical location.</p> <p>A site place allows servers to be associated with a physical site. For example, sites may be configured for Atlanta, Charlotte, and Chicago. Every server is associated with exactly one site when the server is configured.</p> <p>For the Policy and Charging DRA application, when configuring a site, only put DA-MPs and SBR MP servers in the site. Do not add NOAM, SOAM, or IPFE MPs to a site.</p>
Software Centric	<p>The business practice of delivering an Oracle software product while relying upon the customer to procure the requisite hardware components. Oracle provides the hardware specifications, but does not provide the hardware, and is not responsible for hardware installation, configuration, or maintenance.</p>
Two Site Redundancy	<p>Two site redundancy is a data durability configuration in which Policy and Charging data is unaffected by the loss of one site in a Policy and Charging Mated Sites Place Association containing two sites.</p> <p>Two site redundancy is a feature provided by server group configuration. This feature provides geographic redundancy. Some server groups can be configured with servers located in two geographically separate sites (locations). This feature ensures there is always a functioning active server in a server group even if all the servers in a single site fail.</p>

1.4 How to Use this Document

When executing the procedures in this document, there are a few key points to ensure you understand procedure convention. These points are:

1. Before beginning a procedure, completely read the instructional text (it displays immediately after the **Section heading for each procedure**) and all associated procedural **WARNINGS** or **NOTES**.
2. Before execution of a **STEP** within a procedure, completely read the left and right columns including any **STEP** specific **WARNINGS** or **NOTES**.

3. **If a** procedural STEP fails to execute successfully or fails to receive the desired output, STOP the procedure. It is recommended to contact My Oracle Support (MOS) for assistance, as described in Appendix W before attempting to continue.

Figure 1 shows an example of a procedural step used in this document.

- Each step has a checkbox that the user should check-off to keep track of the progress of the procedure.
- Any sub-steps within a step are referred to as step X.Y. The example in Figure 1 shows steps 1 and step 2 and substep 2.1.
- The title box describes the operations to be performed during that step.
- GUI menu items, action links, and buttons to be clicked on are in bold Arial font.
- GUI fields and values to take note of during a step are in bold Arial font.
- Each command that the user enters, as well as any response output, is formatted in 10-point Courier font.

Title/Instructions		Directive/Result Steps
1. <input type="checkbox"/>	Change directory	Change to the backout directory. <div>\$ cd /var/TKLC/backout</div>
2. <input type="checkbox"/>	Verify network element data	1. View the Network Elements configuration data; verify the data; save and print report. 2. Select Configuration > Network Elements to view Network Elements Configuration screen.

Figure 1. Example Procedure Steps Used in This Document

1.5 Optional Features

Further configuration and/or installation steps are needed for optional features that may be present in this deployment. Please refer to these documents for disaster recovery steps needed for their components.

Table 3. Optional Features

Feature	Document
Diameter Custom Applications (DCA)	DCA Framework and Application Activation and Deactivation Guide
Diameter Mediation	DSR Mediation Feature Activation Procedure
Full Address Based Resolution (FABR)	DSR FABR Feature Activation Procedure
Gateway Location Application (GLA)	DSR GLA Feature Activation Procedure
Host Intrusion Detection System (HIDS)	DSR Security Guide (Section 3.2)
Map-Diameter Interworking (MAP-IWF)	DSR MAP-Diameter IWF Feature Activation Procedure
Policy and Charging Application (PCA)	DSR PCA Activation Guide
Range Based Address Resolution (RBAR)	DSR RBAR Feature Activation Procedure

2. General Description

This document defines the steps to execute the initial installation of the Diameter Signaling Router application.

DSR installation paths are shown in the figures below. The general timeline for all processes to perform a software installation/configuration and upgrade is also included below.

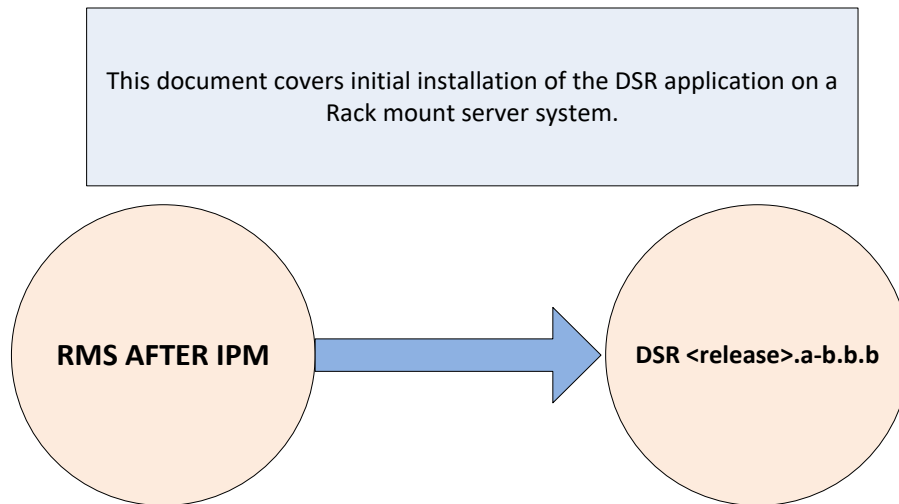

Figure 2. Initial Application Installation Path-Example Shown

2.1 Acquiring Firmware

Several procedures in this document pertain to the upgrading of firmware on various servers and hardware devices.

DSR rack mount servers and devices requiring possible firmware updates are:

- HP Rack Mount Servers (DL380)
- Oracle Rack Mount Server
- Cisco 4948/4948E/4948E-F Rack Mount Network Switches

2.1.1 HP DL380

Software-centric customers do not receive firmware upgrades through Oracle. Instead, refer to the HP Solutions Firmware Upgrade Pack, Software Centric Release Notes on <https://docs.oracle.com> under Platform documentation. The latest release is recommended if an upgrade is performed; otherwise, release 2.2.9 is the minimum.

The required firmware and documentation for upgrading the firmware on HP hardware systems and related components are distributed as the HP Solutions Firmware Upgrade Pack 2.x.x. The minimum firmware release required is HP Solutions Firmware Upgrade Pack 2.2.12; however, if a firmware upgrade is needed, use the current GA release of the HP Solutions Firmware Upgrade Pack 2.x.x.

Each version of the HP Solutions Firmware Upgrade Pack contains multiple items including media and documentation. This document provides its own upgrade procedures for firmware.

The two pieces of required firmware media provided in the HP Solutions Firmware Upgrade Pack 2.x.x releases are:

- HP Service Pack for ProLiant (SPP) firmware ISO image
- HP Solutions Firmware Upgrade Pack Release Notes [1] of the HP Firmware Upgrade Pack (FUP) release to determine specific firmware versions provided

Contact My Oracle Support (MOS) for more information on obtaining the HP firmware upgrade pack.

2.1.2 Oracle X5-2/Netra X5-2/X6-2/X7-2

The Oracle Firmware Upgrade Pack (FUP) consists of documentation to upgrade the Oracle rack mount servers. The pack consists of an upgrade guide and release notes. The current minimum supported release is 3.1.8; however, if a firmware update is required, use the latest available release. Firmware components can be downloaded from My Oracle Support (MOS) at <https://support.oracle.com>. Refer to the appropriate FUP release notes for directions on how to acquire the firmware.

2.2 Hardware Requirements

This section provides the required materials needed to install DSR on a rack mount system and provides the Ethernet interfaces depending on hardware type.

2.2.1 Required Materials

1. One (1) target release DSR Media ISO
2. One (1) target release SDS Media ISO (If equipped)
3. One (1) target release PMAC Media ISO
4. Three (3) target release IDIH Media ISOs
5. One (1) ISO of TPD release, or later shipping baseline as per Oracle ECO
6. One (1) ISO of TVOE release, or later shipping baseline as per Oracle ECO
7. One (1) TVOE release bootable USB, or later shipping baseline as per Oracle ECO
8. To obtain the default passwords refer to document cgbu_eng_24_2229.
9. HP Solutions Firmware Upgrade Pack Release Notes[2]
10. Oracle Firmware Upgrade Pack Release Notes[3]
11. At least (1) Console cable and required software to connect to X7-2 blade

Other installation requirements to consider when installing DSR include:

- The total number of sites
- The number of servers at each site and their role(s)
- Does DSR's networking interface terminate on a Layer 2 or Layer 3 boundary?
- Number of enclosures at each site -- if any at all.
- Will NOAMs use rack-mount servers or server blades?
- (Per Site) Will MP's be in N+ 0 configurations?
- What time zone should be used across the entire collection of DSR sites?
- Will SNMP traps be viewed at the NOAM, or an external NMS be used? (Or both?)

2.2.2 Rack Mount Server Network Interface Reference

Throughout the installation procedure, configuration steps reference Ethernet interfaces. Depending on the hardware type, these Ethernet interfaces can vary. Refer to [22] for more details on network interconnect.

Table 4 describes the Ethernet interface to <Ethernet_interface_x> variables:

Note: For HP DL380 Gen 9 servers with 10Gbps, one 2pt 10 Gigabit FlexibleLOM cards is required. One 2 pt 10 Gigabit PCIe card is required while running the segregated signaling network topology.

Table 4. RMS Network Interfaces

Network Interface	HP DL380 (with 4pt Gigabit in PCI Slot 1) (Gen 8/Gen 9 Onboard)	HP DL380 (with FlexibleLOM and 2pt 10 Gigabit in PCI slot 3) (Gen 9 10Gbps)	Oracle X5-2/Netra X5-2/X6-2 (without 10GigE card)	Oracle X7-2
<ethernet_interface_1>	eth01	eth05	eth01	eth02
<ethernet_interface_2>	eth02	eth06	eth03	eth03
<ethernet_interface_3>	eth11	eth31	eth02	
<ethernet_interface_4>	eth12	eth32	eth04	

Note: When VE-DSR is deployed, in order for the PM&C to manage all Rack Mount Servers (RMS), the Customer's switch ports connected to bond0 NICs must be configured with the control VLAN as the native VLAN.

3. Software Installation Procedure

As mentioned earlier, the hardware installation and network cabling should be done before executing the procedures in this document.

SUDO

As a non-root user (**admusr**), many commands (when run as admusr) now require the use of **sudo**.

IPv6

Standard IPv6 formats for IPv6 and prefix can be used in all IP configuration screens, which enable DSR to be run in an IPv6 only environment. When using IPv6 for XMI and management, place the IPv6 address in brackets (highlighted in red below) as shown.

```
https://[<IPv6 address>]
```

If a dual-stack (IPv4 and IPv6) network is required, configure the topology with IPv4 and then migrate to IPv6. Refer to [13] for instructions on how to accomplish this IPv6 migration.

3.1 Prepare Servers for IPM

This section explains the steps needed to configure the BIOS settings and update the firmware (if needed) for the HP and Oracle rack mount servers.

3.1.1 Configure BIOS Settings

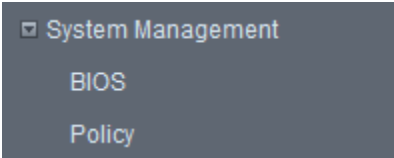

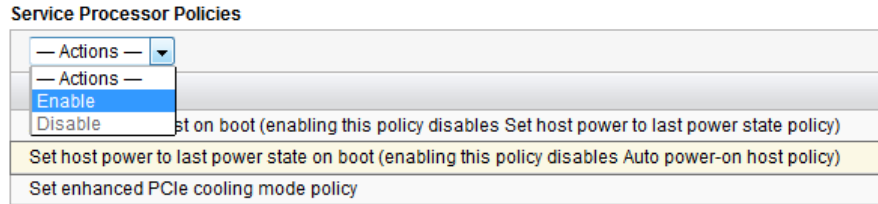

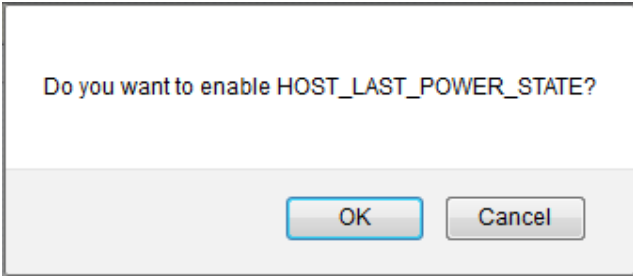

Procedure 1. Configure BIOS Settings

This procedure Configures HP DL380, Oracle/Netra servers, and Oracle server BIOS settings. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	RMS Server: Configure the BIOS settings	<p>Follow the appropriate appendix procedure for the corresponding hardware type:</p> <ul style="list-style-type: none"> • HP DL380 Gen 8 RMS: Appendix A.2.1 Configure HP Gen 8 Servers • HP DL380 Gen 9 RMS: Appendix A.2.2 Configure HP Gen 9 Servers • Oracle X5-2/Netra X5-2/X6-2/X7-2: Appendix A.2.3 Configure Oracle X5-2/Netra X5-2/X6-2/X7-2 Server
2. <input type="checkbox"/>	Oracle X5-2/Netra X5-2/X6-2 Server: Login HP DL380 skip this step	<p>Log into the Oracle X5-2/Netra X5-2/X6-2/X7-2 iLOM.</p> <p>Please Log In</p> <div data-bbox="511 808 1372 1291"> <p>SP Hostname: DSR10307Loc37TVOE</p> <p>User Name: <input type="text"/></p> <p>Password: <input type="password"/></p> <p><input type="button" value="Log In"/></p> </div> <div data-bbox="1209 1480 1372 1564">  </div> <p>Copyright © 2015, Oracle and/or its affiliates. Click OK to confirm.</div> <div></div>
--	---

3.1.2 Upgrade Rack Mount Server Firmware

Procedure 2. Upgrade Rack Mount Server Firmware

This procedure updates firmware, if needed.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

3.2 Install and Configure TVOE on First RMS (PMAC Host)

Throughout this section, the first RMS server refers to the server hosting the PMAC VM.

Note: Non-HA Lab Node Installations Only-Oracle X5-2/Netra X5-2/X6-2/X7-2/HP DL380 GEN 9:
Before starting Procedure 3, execute Appendix Q.1 Non-HA Lab Node Pre-IPM Procedures to create vgguests logical volume with RAID10 spanning across multiple HDDs:

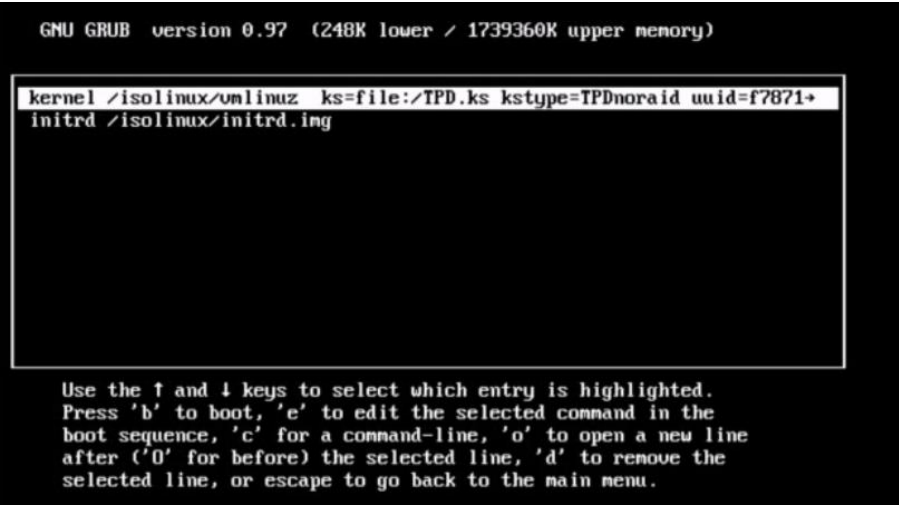

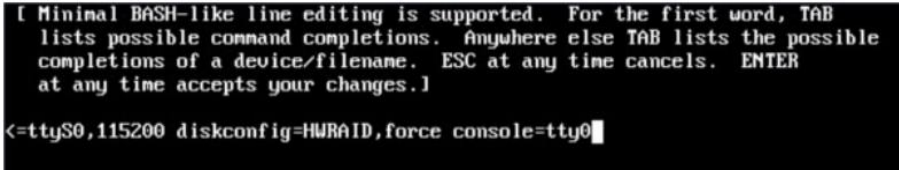

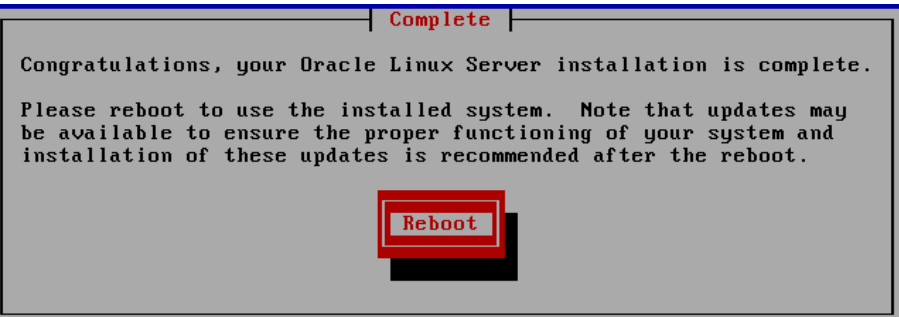

Procedure 3. Install and Configure TVOE on First RMS (PMAC Host)

<p>This procedure installs TVOE on the first rack mount server.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.</p>		
1. <input type="checkbox"/>	Connect to the 1 st RMS server	<p>Connect to the server using a VGA display and USB keyboard, or using the iLO interface on a browser.</p> <p>Note: Appendix D TVOE iLO/iLOM GUI Access and Appendix E Change the TVOE iLO/iLOM Address explain how to access the rack mount server iLO and change the address, if necessary.</p>
2. <input type="checkbox"/>	RMS Server: Insert TVOE media into server	<p>Insert the OS IPM media (CD/DVD or USB) into the CD/DVD tray/USB slot of the rack mount server. Refer to Appendix N Create a Bootable USB Drive on Linux for creating a bootable USB</p> <p>Alternatively, ISO can be mounted using virtual media. Refer to Appendix F Attach an ISO Image to a Server using the iLO or iLOM.</p> <p>Note: If using Appendix F, skip to step 5. in this procedure.</p>
3. <input type="checkbox"/>	Power cycle server	<p>For HP rack mount servers, hold the power button in until the button turns amber, then release. Wait 5 seconds, then press the power button and release it again to power on the system.</p> <p>For Oracle rack mount servers, hold the power button in until the OK LED turns off, and starts a slow blink. Wait 5 seconds, press the power button, and release it again to power on the system. In a second or 2 the OK LED starts to blink faster as the system powers up.</p>
4. <input type="checkbox"/>	Select boot method	<p>For some servers, you must select a boot method so the server does not boot directly from the hard drive.</p> <p>For HP rack mount servers, press F11 when asked to bring up the boot menu and select the appropriate boot method.</p> <p>For Oracle rack mount servers, press F8 when asked to bring up the boot menu and select the appropriate boot method.</p>

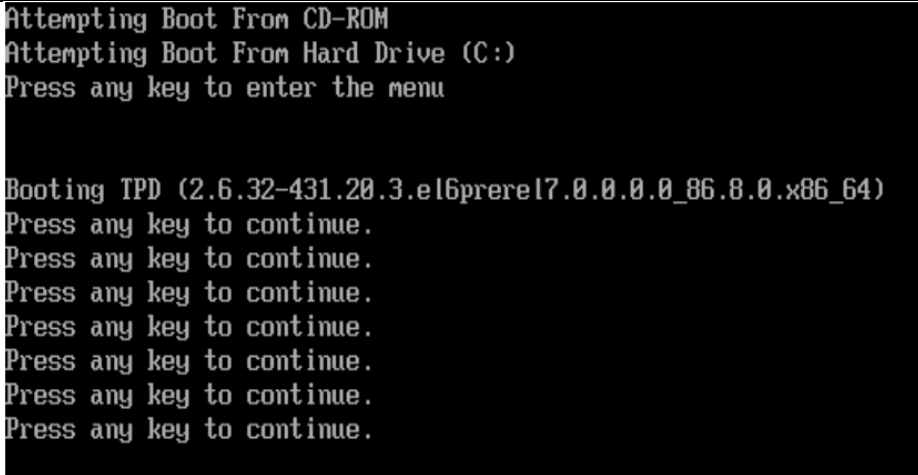

Procedure 3. Install and Configure TVOE on First RMS (PMAC Host)

<p>5. <input type="checkbox"/></p>	<p>RMS Server: Begin IPM process For X7-2 hardware, skip to step 6.</p>	<pre>Copyright (C) 2003, 2014, Oracle and/or its affiliates. All rights reserved. Welcome to Tekelec Platform Distribution! Release: 7.0.0.0_06.11.0 Arch: x86_64 For a detailed description of all the supported commands and their options, please refer to the Initial Platform Manufacture document for this release. In addition to linux & rescue TPD provides the following kickstart profiles: [TPD : TPDnoraaid : TPDblade : TPDcompact : HDD] Commonly used options are: [console=<console_option>[,<console_option>]] [primaryConsole=<console_option>] [rdate=<server_ip>] [scrub] [reserved=<size1>[,<sizeN>]] [diskconfig=HWRAID[,force]] [drives=<device>[,<device>]] [guestArchive] To install using a monitor and a local keyboard, add console=tty0 boot: _</pre> <p>IPM the server.</p> <pre>TPDnoraaid diskconfig=HWRAID,force console=tty0</pre> <p>HP DL380 Gen 9 only (equipped with 10GB FlexLOM).</p> <pre>TPDnoraaid diskconfig=HWRAID,force console=tty0 control_if=eth05,eth06</pre> <p>For non-HA lab node (Oracle X5-2/Netra X5-2/X6-2).</p> <pre>TPDnoraaid drives=<Volume ID recorded in procedure Q.1.1-Q.1.3> console=tty0</pre> <p>For non-HA lab node (HP DL380 Gen 9 equipped with 10GB FlexLOM).</p> <pre>TPDnoraaid drives=<Volume ID recorded in procedure S.1/S.2> console=tty0 control_if=eth05,eth06</pre>
<p>6. <input type="checkbox"/></p>	<p>RMS Server(X7-2): Begin IPM process</p>	<p>For UEFI BIOS servers (Unified Extensible Firmware Interface-compatible BIOS) such as X7-2:</p> <p>Below is a sample of the output screen indicating initial boot from the installation media was successful. The information in this screen is representative of the X7-2 support start in TPD 7.5.0.0.0.</p> <ol style="list-style-type: none"> 1. Use the up and down arrow keys to select TPDnoraaid. 

Procedure 3. Install and Configure TVOE on First RMS (PMAC Host)

		<p>2. Type e to edit.</p>  <p>GNU GRUB version 0.97 (248K lower / 1739360K upper memory)</p> <pre>kernel /isolinux/mlinuz ks=file://TPD.ks kstype=TPDnoraaid uuid=f7871+ initrd /isolinux/initrd.img</pre> <p>Use the ↑ and ↓ keys to select which entry is highlighted. Press 'b' to boot, 'e' to edit the selected command in the boot sequence, 'c' for a command-line, 'o' to open a new line after ('O' for before) the selected line, 'd' to remove the selected line, or escape to go back to the main menu.</p> <p>3. Append additional inputs to the TPDnoraaid command as shown (example additional arguments).</p>  <pre>[Minimal BASH-like line editing is supported. For the first word, TAB lists possible command completions. Anywhere else TAB lists the possible completions of a device/filename. ESC at any time cancels. ENTER at any time accepts your changes.] <=ttyS0,115200 diskconfig=HWRRAID,force console=tty0</pre> <p>4. Press Enter to continue IPM and monitor progress.</p> <p>5. Wait 30-60 seconds for the the terminal to respond and echo to the terminal. For any additional commands or custom IPM options, refer to [21]. Some topics of interest may be OS IPM Install, IPM Command Options, Time Estimates for IPM in Minutes, and Possible Errors During IPM Installation Processing, and other useful information.</p> <p>6. Monitor the IPM installation.</p> <p>The IPM process takes about 30 minutes. Several messages and screens display in the process.</p>
<p>7.</p> <p><input type="checkbox"/></p>	<p>RMS Server: Reboot</p>	<p>1. Once the IPM is complete, remove the disk from the drive or unmount the TPD image from the iLO and press Enter to reboot the server.</p>  <p>Complete</p> <p>Congratulations, your Oracle Linux Server installation is complete.</p> <p>Please reboot to use the installed system. Note that updates may be available to ensure the proper functioning of your system and installation of these updates is recommended after the reboot.</p> <p>Reboot</p> <p>After a few minutes and multiple reboots, the server boot sequence starts and eventually displays that it is booting the new IPM load.</p>

Procedure 3. Install and Configure TVOE on First RMS (PMAC Host)

		 <p>Note: A successful IPM platform installation process results in a user login prompt.</p>
8.	<input type="checkbox"/> For NEBS and non NEBS deployment (Oracle Netra X5-2/X6-2 server only)	<p>For NEBS and non NEBS deployment, execute these steps (Oracle Netra X5-2/X6-2 server only):</p> <ul style="list-style-type: none"> • NEBS deployment configuration, execute Procedure 74. • Non-NEBS deployment configuration, execute Procedure 75.

Procedure 4. Configure First Rack Mount Server

This procedure configures the first TVOE/Management server.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Determine bridge names and interfaces	<p>Determine the bridge interfaces to use on the TVOE server and fill in the appropriate values this table. Procedure 4. Configure First Rack Mount Server

3. <input type="checkbox"/>	1st RMS iLO/iLOM: Create the management network	<p>Note: This output is for illustrative purposes only. The site information for this system determines the network interfaces (network devices, bonds, and bond enslaved devices) to configure.</p> <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add --device=<TVOE_Management_Bridge_Interface> -- onboot=yes Interface bond0.2 added</pre> <pre>\$sudo /usr/TKLC/plat/bin/netAdm add --type=Bridge --name=management --bootProto=none --onboot=yes --address=<Management_Server_TVOE_IP> --netmask=<Management_Server_TVOE_Netmask/prefix> --bridgeInterfaces=<TVOE_Management_Bridge_Interface> Bridge management added!</pre>
4. <input type="checkbox"/>	1st RMS iLO/iLOM: Configure default route	<pre>\$ sudo /usr/TKLC/plat/bin/netAdm add --route=default --device=management --gateway=<Management_Gateway_IP_Address> Route to management added</pre>

Procedure 4. Configure First Rack Mount Server

5. ☐ **1st RMS iLO/iLOM: TVOE bond1 configuration (segregated signaling)**

If the rack mount server solution is designed where the signaling traffic is segregated from the rest of the DSR OAM related networks and located on separate NICs, execute this step.

If the OAM related networks share the same physical NICs (non-segregated), skip this step.

Create Bond1 interface:

Note: Refer to section 2.2.2 for network interface server reference table.

```
$ sudo /usr/TKLC/plat/bin/netAdm add --device=bond1 --onboot=yes
$ sudo /usr/TKLC/plat/bin/netAdm set --device=<ethernet_interface_3> --type=Ethernet --master=bond1 --slave=yes --onboot=yes
```

Expected output:

```
/sys/class/net/bond1/bonding/primary has 0 lines, nothing to do.
```

Interface <ethernet_interface_3> updated

```
$ sudo /usr/TKLC/plat/bin/netAdm set --device=<ethernet_interface_4> --type=Ethernet --master=bond1 --slave=yes --onboot=yes
```

Expected output:

```
/sys/class/net/bond1/bonding/primary has 0 lines, nothing to do.
```

Interface <ethernet_interface_4> updated

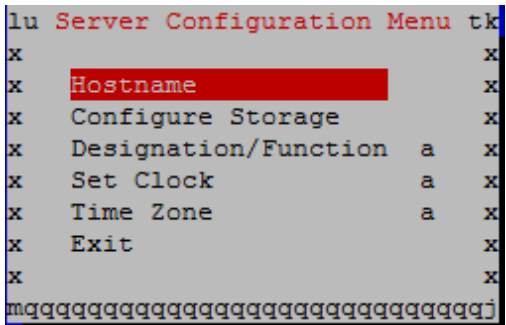

Procedure 4. Configure First Rack Mount Server

6.	1st RMS iLO/iLOM: Set Ethernet interface ring buffer sizes	<p>Note: Refer to section 2.2.2 for network interface server reference table.</p> <pre>\$ sudo netAdm set --device=<ethernet_interface_1> --ringBufferRx=4096 --ringBufferTx=4096 \$ sudo netAdm set --device=<ethernet_interface_2> --ringBufferRx=4096 --ringBufferTx=4096</pre> <p>If step 5. was executed, execute these commands:</p> <pre>\$ sudo netAdm set --device=<ethernet_interface_3> --ringBufferRx=4096 --ringBufferTx=4096 \$ sudo netAdm set --device=<ethernet_interface_4> --ringBufferRx=4096 --ringBufferTx=4096</pre> <p>Ring Buffer Sizes For X7-2</p> <pre>\$ sudo netAdm set --device=<ethernet_interface_1> --ringBufferRx=2047 --ringBufferTx=2047 \$ sudo netAdm set --device=<ethernet_interface_2> --ringBufferRx=2047 --ringBufferTx=2047</pre> <p>If step 5. was executed, execute these commands:</p> <pre>\$ sudo netAdm set --device=<ethernet_interface_3> --ringBufferRx=2047 --ringBufferTx=2047 \$ sudo netAdm set --device=<ethernet_interface_4> --ringBufferRx=2047 --ringBufferTx=2047</pre>
----	---	---

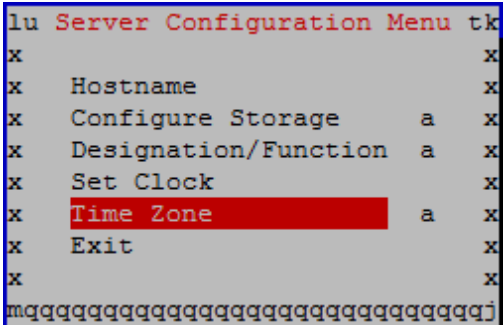

Procedure 4. Configure First Rack Mount Server

<p>7. <input type="checkbox"/></p>	<p>1st RMS iLO/iLOM: Add the NetBackup network — Option 1 (optional)</p> <p>If NetBackup is used, execute this step; otherwise, skip to step 12.</p>	<p>Before selecting the configuration option, first read the description in each step to determine which configuration is applicable to your installation and network.</p> <p>Select only this option or one of the options listed in steps 8. or 9.</p> <p>NetBackup is a tool that allows the customer to take remote backups of the system.</p> <p>Notes:</p> <ul style="list-style-type: none"> • This output is for illustrative purposes only and shows the control bridge configured. • This example shows a TVOE management server configuration with the NetBackup feature enabled and the NetBackup network configured with a non-default MTU size. • The MTU size must be consistent between a network bridge, device, or bond and associated VLANs. <p>Create NetBackup bridge using a bond containing an untagged interface.</p> <pre> \$ sudo /usr/TKLC/plat/bin/netAdm add --device=<TVOE_NetBackup_Bridge_Interface> --onboot=yes --type=Bonding --mode=active-backup -- miimon=100 --MTU=<NetBackup_MTU_size> Interface <TVOE_NetBackup_Bridge_Interface> added \$ sudo /usr/TKLC/plat/bin/netAdm set --device=<ethernet_interface_4> --type=Ethernet --master=<TVOE_NetBackup_Bridge_Interface> --slave=yes --onboot=yes Interface <ethernet_interface_4> updated \$ sudo /usr/TKLC/plat/bin/netAdm add --type=Bridge --name=<TVOE_NetBackup_Bridge> --onboot=yes -- bootProto=none --MTU=<NetBackup_MTU_size> --bridgeInterfaces=<TVOE_NetBackup_Bridge_Interface> --address=<TVOE_NetBackup_IP> --netmask=<TVOE_NetBackup_Netmask/Prefix> </pre>
<p>8. <input type="checkbox"/></p>	<p>1st RMS iLO/iLOM: Add the NetBackup network — Option 2 (optional)</p>	<p>If NetBackup is used, select only this option or one of the options listed in steps 7. or 9.</p> <p>Create NetBackup bridge using an untagged native interface.</p> <pre> \$ sudo /usr/TKLC/plat/bin/netAdm add --type=Bridge --name=<TVOE_NetBackup_Bridge> --onboot=yes -- bootProto=none --MTU=<NetBackup_MTU_size> --bridgeInterfaces=<Ethernet_Interface_4> --address=<TVOE_NetBackup_IP> --netmask=<TVOE_NetBackup_Netmask/Prefix> </pre>

Procedure 4. Configure First Rack Mount Server

9. <input type="checkbox"/>	1st RMS iLO/iLOM: Add the NetBackup network — Option 3 (optional)	<p>If NetBackup is used, select only this option or one of the options listed in steps 7. or 8.</p> <p>Create NetBackup bridge using a tagged device.</p> <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add --device=<TVOE_NetBackup_Bridge_Interface> --onboot=yes Interface <TVOE_NetBackup_Bridge_Interface> added \$ sudo /usr/TKLC/plat/bin/netAdm add --type=Bridge --name=<TVOE_NetBackup_Bridge> --onboot=yes --MTU=<NetBackup_MTU_size> --bridgeInterfaces=<TVOE_NetBackup_Bridge_Interface> --address=<TVOE_NetBackup_IP> --netmask=<TVOE_NetBackup_Netmask/Prefix></pre>
10. <input type="checkbox"/>	1st RMS iLO/iLOM: Configure networking for NetBackup interface (optional)	<pre>\$ sudo /usr/TKLC/plat/bin/netAdm add --route=net --device=NetBackup -- address=<TVOE_NetBackup_Network_ID> --netmask=<TVOE_NetBackup_NetMask/Prefix> --gateway=<TVOE_NetBackup_Gateway_IP_Address></pre>
11. <input type="checkbox"/>	1st RMS iLO/iLOM: Restart network interfaces	<pre>\$ sudo service network restart</pre>

Creating lv NetBackup_lv. Volume NetBackup_lv will be created. Success: Volume NetBackup_lv was created. Creating filesystem, this may take a while. Updating fstab for lv NetBackup_lv. Configuring existing lv NetBackup_lv. The LV for NetBackup has been created!</pre>
------------------------------	--	--

Procedure 4. Configure First Rack Mount Server

19. <input type="checkbox"/>	1st RMS iLO/iLOM: Install/Configure NetBackup client software — Part 2 (optional)	<p>Refer to Appendix I Install NetBackup Client for instructions how to install the NetBackup client.</p> <p>Note: Skip any steps relating to copying NetBackup notify scripts to the /usr/opensv/NetBackup/bin. The TVOE NetBackup notify scripts are created in the next step.</p> <p>Create soft links for TVOE specific NetBackup notify scripts.</p> <pre>\$sudo ln -s /usr/TKLC/plat/sbin/bpstart_notify /usr/opensv/NetBackup/bin/bpstart_notify \$sudo ln -s /usr/TKLC/plat/sbin/bpend_notify /usr/opensv/NetBackup/bin/bpend_notify</pre> <p>Note: Once the NetBackup client is installed on TVOE, the NetBackup master should be configured to back up the /var/TKLC/bkp/*.iso file from the TVOE host.</p>
20. <input type="checkbox"/>	1st RMS iLO/iLOM: Set up syscheck	<p>syscheck must be configured to monitor bonded interfaces.</p> <p>Replace bondedInterfaces with bond0, or bond0,bond1, if segregated networks are used:</p> <pre>\$ sudo /usr/TKLC/plat/bin/syscheckAdm net ipbond --set --var=DEVICES --val=<bondedInterfaces> \$ sudo /usr/TKLC/plat/bin/syscheckAdm net ipbond -- enable</pre>
21. <input type="checkbox"/>	1st RMS iLO/iLOM: Verify syscheck	<p>Verify syscheck:</p> <pre>\$ sudo /usr/TKLC/plat/bin/syscheck net ipbond -v</pre> <p>Expected output should look similar to below:</p> <pre>Running modules in class net... ipbond: Bonded interface bond0 is OK OK LOG LOCATION: /var/TKLC/log/syscheck/fail_log</pre>
22. <input type="checkbox"/>	1st RMS iLO/iLOM: Verify server health	<pre>\$ alarmMgr -alarmStatus</pre> <p>This command should return no output on a healthy system. If any alarms are reported, contact My Oracle Support (MOS).</p>

Procedure 4. Configure First Rack Mount Server

23.	1st RMS iLO/iLOM: Back up TVOE using TPD platcfg utility	<ol style="list-style-type: none"> 1. Enter the platcfg menu from the TVOE server. <div data-bbox="565 289 1445 340" style="border: 1px solid black; padding: 2px;"> <pre>\$ sudo su - platcfg</pre> </div> 2. Navigate to Maintenance > Backup and Restore > Backup Platform (CD/DVD). Note: If no cdrom device is found by TPD, a No disk device available. This is normal on systems without a cdrom device error displays. Press Enter. 3. Navigate to Build ISO file only and press Enter.  <p>The screenshot shows a terminal window with the title 'Backup TekServer Menu'. It lists several options: 'Select Backup Type (plat-app)', 'View Index Table of Contents', 'Select Backup Device ()', 'Select Backup Media (CD-R)', 'Build ISO file only' (which is highlighted in red), 'Test Backup', 'Backup', and 'Exit'. The user has pressed 'Enter' to select 'Build ISO file only'.</p> 4. Exit platcfg by selecting Exit. Note: Creating the ISO image may happen so quickly that this screen may only display for an instant. 5. Move the TVOE backup to a customer provided backup server for safe keeping.
-----	--	--

3.3 Install PMAC

Note: **Non-HA Lab Node Installations Only-Oracle X5-2/Netra X5-2/X6-2/HP DL380 GEN 9 (10Gbps) Only:** Follow Appendix Q.2 Non-HA Lab Node PMAC Deployment instead of this Procedure 5 for PMAC Deployment.

Procedure 5. PMAC Deployment

This procedure deploys PMAC on the TVO host.

Prerequisite: Complete RMS network configuration (PMAC) host) first.

Needed Material: PMAC media on USB drive or ISO

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	PMAC TVOE iLO/iLOM: Login and start the integrated remote console	Log into iLO/iLOM and follow Appendix D TVOE iLO/iLOM GUI Access to access the iLO/iLOM GUI. <div>https://<management_server_iLO_ip></div>
--------------------------------	--	---

Procedure 5. PMAC Deployment

2.	TVOE iLO/iLOM: Mount the PMAC media to the TVOE server	<p>Use one of the following two options to mount the PMAC media:</p> <p>Option 1:</p> <ol style="list-style-type: none"> 1. If using a USB media, insert the PMAC USB into a USB port and execute this command to mount the ISO. <pre>\$ ls /media/*/*.iso /media/sddl/872-2586-101-5.7.0_57.3.0-PM&C-x86_64.iso</pre> <ol style="list-style-type: none"> 2. Use the output of the previous command to populate the next command. <pre>\$ sudo mount -o loop /media/sddl/872-2586-101-5.7.0_57.3.0-PM&C-x86_64.iso /mnt/upgrade</pre> <p>Option 2:</p> <ol style="list-style-type: none"> 1. If using an ISO image, run this to mount it. <pre>\$ sudo mount -o loop ISO_FILENAME.iso /mnt/upgrade</pre> <ol style="list-style-type: none"> 2. Validate the PMAC media. <pre>\$ cd /mnt/upgrade/upgrade \$.validate/validate_cd Validating cdrom... UMVT Validate Utility v2.2.2, (c)Tekelec, June 2012 Validating <device or ISO> Date&Time: 2012-10-25 10:07:01 Volume ID: tklc_872-2441-106_Rev_A_50.11.0 Part Number: 872-2441-106_Rev_A Version: 50.11.0 Disc Label: PM&C Disc description: PM&C The media validation is complete, the result is: PASS CDROM is Valid</pre> <p>Note: If the media validation fails, the media is not valid and should not be used.</p>
----	--	---

Procedure 5. PMAC Deployment

3. <input type="checkbox"/>	TVOE iLO/iLOM: Deploy PMAC	<ol style="list-style-type: none"> Using the PMAC-deploy script, deploy the PMAC instance using the configuration captured during the site survey. <pre>\$ cd /mnt/upgrade/upgrade</pre> If deploying PMAC without the NetBackup feature, run this command: <pre>\$ sudo ./pmac-deploy --guest=<PMAC_Name> --hostname=<PMAC_Name> --controlBridge=control --controlIP=<PMAC_Control_ip_address> --controlNM=<PMAC_Control_netmask> --managementBridge=management --managementIP=<PMAC_Management_ip_address> --managementNM=<PMAC_Management_netmask/prefix> --routeGW=<PMAC_Management_gateway_address> --ntpserver=<TVOE_Management_server_ip_address> --imageSizeGB=20 --isoimagesVolSize=20</pre> <p>If deploying PMAC with NetBackup feature, run the following command:</p> <pre>\$ sudo ./pmac-deploy --guest=<PMAC_Name> --hostname=<PMAC_Name> -- controlBridge=<TVOE_Control_Bridge> --controlIP=<PMAC_Control_ip_address> --controlNM=<PMAC_Control_netmask> --managementBridge=<PMAC_Management_Bridge> --managementIP=<PMAC_Management_ip_address> --managementNM=<PMAC_Management_netmask/prefix> --routeGW=<PMAC_Management_gateway_address> --ntpserver=<TVOE_Management_server_ip_address> --NetBackupVol --bridge=<TVOE_NetBackup_Bridge> --nic=NetBackup --isoimagesVolSizeGB=20</pre> <p>The PMAC deploys and boots. The management and control network displays based on the settings provided to the PMAC-deploy script.</p> <p>Note: This step takes between 5 and 10 minutes.</p>
4. <input type="checkbox"/>	TVOE iLO/iLOM: Unmount the media	<ol style="list-style-type: none"> The media should auto-unmount, if it does not, unmount the media. <pre>\$ cd / \$ sudo /bin/umount /mnt/upgrade</pre> Remove the media from the drive.

Procedure 5. PMAC Deployment

5. <input type="checkbox"/>	TVOE iLO/iLOM: SSH into the management server	<ol style="list-style-type: none"> Using an SSH client such as putty, ssh to the TVOE host as admusr. Procedure 6. Initialize PMAC

5. <input type="checkbox"/>	Virtual PMAC: Verify the PMAC application product release	<p>Note: If the PMAC application product release is not as expected, STOP and contact My Oracle Support (MOS).</p> <pre>\$ sudo /usr/TKLC/plat/bin/appRev Install Time: Fri Sep 28 15:54:04 2012 Product Name: PM&C Product Release: 5.0.0_50.10.0 Part Number ISO: 872-2441-905 Part Number USB: 872-2441-105 Base Distro Product: TPD Base Distro Release: 6.0.0_80.22.0 Base Distro ISO: TPD.install-</pre>
6. <input type="checkbox"/>	Virtual PMAC: Log out of the PMAC	Log out of the virsh console. Press Ctrl] to log out of the PMAC.
7. <input type="checkbox"/>	Note	If configuring a system with aggregation switches (HP DL380 Gen 8 only), continue to Procedure 7. If configuring a system without aggregation switches (Oracle X5-2/Netra X5-2/X6-2/HP DL380 Gen 9), skip to Procedure 9.

3.5 Configure Cisco 4948E-F Aggregation Switches (HP DL380 Gen 8 Servers Only)**3.5.1 Configure netConfig Repository (HP DL380 Gen 8 Servers Only)**

This procedure configures the netConfig repository for all required services and for each switch that needs to be configured. At any time, you can view the contents of the netConfig repository by using one of the following commands:

For switches, use this command:

```
$ sudo /usr/TKLC/plat/bin/netConfig --repo listDevices
```

For services, use this command:

```
$ sudo /usr/TKLC/plat/bin/netConfig --repo listServices
```

Users returning to this procedure after initial installation should run these commands and note any devices and/or services that have already been configured. Duplicate entries cannot be added. If changes to a device repository entry are required, use the editDevice command. If changes to a services repository entry are necessary, delete the original entry first and then add the service again.

IPv4 and IPv6

Configuration supports using IPv4 or IPv6 addresses through netConfig. Wherever IP addresses are required for networking procedures in section Note., IPv4 or IPv6 may be used. Commands such as ping or ssh may also be used in these procedures where for IPv6 cases may need to be **ping6** or **ssh -6**, as needed.

Terminology

The term **netConfig server** refers to the entity where netConfig is executed. This may be a virtualized or physical environment. **Management server** may also accurately describe this location, but it has been historically used to describe the physical environment while **Virtual PMAC** was used to describe the

virtualized netConfig server. Use of the term **netConfig server** to describe dual scenarios of physical and virtualized environments allows for future simplification of network configuration procedures.

Procedure Reference Tables

Steps within this procedure and subsequent procedures that require this procedure may refer to variable data indicated by text within <. Fill in these worksheets based on NAPD and refer back to these tables for the proper value to insert depending on your system type.

Variable	Value
<management_server_iLO_ip>	
<management_server_mgmt_ip_address>	
<netConfig_server_mgmt_ip_address>	
<switch_backup_user>	admusr
<switch_backup_user_password>	
<serial console type>	u=USB, c=PCIe

For the first aggregation switch (4948, 4948E, or 4948E-F): Fill in the appropriate value for this site.

Variable	Value
<switch_hostname>	
<device_model>	
<console_name>	
<switch_console_password>	
<switch_platform_username>	
<switch_platform_password>	
<switch_enable_password>	
<switch_mgmt_ip_address>	
<switch_mgmt_netmask>	
<mgmt_vlanID>	
<control_vlanID>	
<IOS_filename>	
<ip_version>	

For the second aggregation switch (4948, 4948E, or 4948E-F): Fill in the appropriate value for this site.

Variable	Value
<switch_hostname>	
<device_model>	
<console_name>	
<switch_console_password>	
<switch_platform_username>	
<switch_platform_password>	

Variable	Value
<switch_enable_password>	
<switch_mgmt_ip_address>	
<switch_mgmt_netmask>	
<mgmt_vlanID>	
<control_vlanID>	
<IOS_filename>	
<ip_version>	

Procedure 7. Configure netConfig Repository (HP DL380 Gen 8 Servers Only)

This procedure configures 4948E-4948E-F switches with an appropriate IOS and configuration specified by platform engineering and application requirements.

Prerequisite: This procedure assumes a recently IPMed TVOE server with a VM hosting PMAC.

Needed Materials:

- HP Misc. Firmware USB
- [1] HP Solutions Firmware Upgrade Pack, Software Centric Release Notes (Min 2.2.12)
- DSR USB or ISO

Notes:

- Disconnect uplinks from the customer network before executing this procedure. One of the steps in this procedure instructs when to reconnect these uplink cables.
- The generic XML configuration file referenced in this procedure needs to be updated to match the customer's network.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	1st RMS iLO/iLOM: Login and start the integrated remote console	1. Log into iLO/iLOM and follow Appendix D TVOE iLO/iLOM GUI Access to access the iLO/iLOM GUI. <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">https://<management_server_iLO_ip></div> 2. Login as admusr .
--------------------------------	--	--

Procedure 7. Configure netConfig Repository (HP DL380 Gen 8 Servers Only)

2. <input type="checkbox"/>	1st RMS iLO/iLOM: Mount firmware image	<ol style="list-style-type: none"> 1. Insert the Misc. Firmware USB media into the USB drive. 2. Copy each ISO image as determined by the release notes. Determine the correct IOS version in the HP Solutions Firmware Upgrade Pack, Software Centric Release Notes (Min 2.2.12) [1]. 3. SSH to the TVOE host server as admusr using the vsp/host console on the TVOE management server iLO/iLOM. Make the upgrade media available to the server. 4. Mount the media on the TVOE Host using one of these commands: <ul style="list-style-type: none"> • If using a USB drive, mount it. <pre>\$ sudo /bin/ls /media/*//*.iso</pre> Use the output of the previous command to populate the next command. <pre>\$ sudo /bin/mount -o loop /media/sdb1/<MISC file name> /mnt/upgrade</pre> • If the DSR is in on an ISO, mount it. <pre>\$ sudo /bin/mount -o loop <path to DSR ISO> /mnt/upgrade</pre>
3. <input type="checkbox"/>	TVOE iLO/iLO: SSH into the management server	<ol style="list-style-type: none"> 1. Using an SSH client such as putty, ssh to the TVOE host as admusr. 2. Login using virsh, and wait until you see the login prompt : <pre>\$ sudo /usr/bin/virsh list</pre> <pre>Id Name State ----- 1 PM&C running</pre> <pre>\$ sudo /usr/bin/virsh console <PM&C></pre> <p>[Output Removed]</p> <pre>Starting ntdMgr: [OK] Starting atd: [OK] 'TPD Up' notification(s) already sent: [OK] upstart: Starting tpdProvd... upstart: tpdProvd started. PM&Cdev7 login:</pre>

Procedure 7. Configure netConfig Repository (HP DL380 Gen 8 Servers Only)

4. <input type="checkbox"/>	Virtual PMAC: Copy ISO images into place (this copies both the 4948E IOS images into place)	<pre>\$ sudo /usr/bin/scp -r admusr@<TVOE_management_ip_address>:/mnt/upgrade/<4948E_ISO_image_filename> /var/TKLC/smac/image/</pre> <ol style="list-style-type: none"> 1. Log out of PMAC. 2. Login again to TVOE Host and unmount the ISO. 3. Press Ctrl] to logout of the PMAC. <pre>\$ sudo umount /mnt/upgrade</pre> <ol style="list-style-type: none"> 4. Remove the Misc. Firmware media from the drive.
5. <input type="checkbox"/>	Virtual PMAC: Setup netConfig repository	<ol style="list-style-type: none"> 1. Use netConfig to create a repository entry that uses the ssh service. 16. <input type="checkbox"/>	Virtual PMAC: Verify access to customer network	Verify connectivity to the customer network. <pre>\$ /bin/ping <customer_supplied_ntp_server_address></pre>
17. <input type="checkbox"/>	Cabinet: Connect uplinks of switch1B	Attach switch1B customer uplink cables and detach switch1A customer uplink cables. Refer to the NAPD for which ports are uplink ports. Note: If you are using standard 802.1D spanning-tree, the links may take up to 50 seconds to become active.
18. <input type="checkbox"/>	Virtual PMAC: Verify access to customer network	Verify connectivity to the customer network. <pre>\$ /bin/ping <customer_supplied_ntp_server_address></pre>
19. <input type="checkbox"/>	Virtual PMAC: Re-attach uplinks of switch1A	Re-attach switch1A customer uplink cables. Refer to the NAPD for which ports are uplink ports. Note: If you are using standard 802.1D spanning-tree, the links may take up to 50 seconds to become active.
20. <input type="checkbox"/>	TVOE Management Server: Restore the TVOE host to its original state	<ol style="list-style-type: none"> Exit from the virtual PMAC console, by pressing Ctrl-] to return to the server prompt. Restore the server networking to its original state. <pre>\$ sudo /sbin/service network restart</pre>

3.6 Configure PMAC Server (NetBackup Only)**Procedure 9. Configure the PMAC Server (NetBackup Only)**

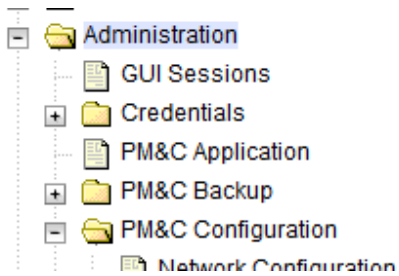

This procedure provides PMAC configuration for NetBackup using the web interface.

Note: The installer must be knowledgeable of the network. If you make a mistake, click **Cancel** and try again. The last step may take a while because it reconfigures the network and attempts to connect may fail.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

Procedure 9. Configure the PMAC Server (NetBackup Only)

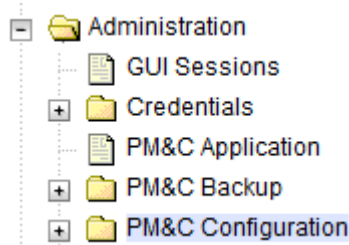

1. <input type="checkbox"/>	PMAC GUI: Login	<ol style="list-style-type: none"> 1. Open the web browser and navigate to the PMAC GUI: <div data-bbox="565 289 1369 342" style="border: 1px solid black; padding: 2px; margin: 5px 0;"> http://<PMAC_network_IP> </div> 2. Login as the guiadmin user: <div data-bbox="524 405 1276 867" style="text-align: center;">  <p>The screenshot shows the Oracle System Login page. At the top is the Oracle logo. Below it, the text 'Oracle System Login' is on the left and 'Tue Jun 7 13:49:06 2016 EDT' is on the right. In the center is a 'Log In' box with the text 'Enter your username and password to log in'. Inside this box are fields for 'Username:' and 'Password:', a checkbox for 'Change password', and a 'Log In' button.</p> </div>
2. <input type="checkbox"/>	PMAC GUI: Configure optional features	<ol style="list-style-type: none"> 1. Navigate to Administration > PM&C Configuration > Feature Configuration. <div data-bbox="540 961 935 1234" style="margin-left: 20px;">  <p>The screenshot shows a navigation tree with the following items: Administration (selected), GUI Sessions, Credentials, PM&C Application, PM&C Backup, PM&C Configuration, and Network Configuration.</p> </div> <ol style="list-style-type: none"> 2. If NetBackup is used, mark the checkbox to enable the NetBackup feature; otherwise, use the selected features as is. 3. Make sure the roles for all the features are set to management. 4. Also mark the checkbox to enable the following: <ul style="list-style-type: none"> • DEVICE.NETWORK.NETBOOT • DEVICE.NTP • PM&C.REMOTE.BACKUP • PM&C.NETBACK (only if NetBackup is used) <p>Example output:</p>

Procedure 9. Configure the PMAC Server (NetBackup Only)

Feature	Description	Role	Enabled
DEVICE.NETWORK.NETBOOT	Network device PXE initialization	management	<input checked="" type="checkbox"/>
DEVICE.NTP	PM&C as a time server	management	<input checked="" type="checkbox"/>
PMAC.MANAGED	Remote management of PM&C server	management	<input type="checkbox"/>
PMAC.REMOTE.BACKUP	Remote server for backup	management	<input checked="" type="checkbox"/>
PMAC.NETBACKUP	NetBackup client	management	<input type="checkbox"/>
PMAC.IPV6.NOAUTOCONFIG	PMAC IPv6 interface disable autoconfiguration	NULL	<input type="checkbox"/>

Add Role

5. Click **Apply**.
6. This foreground task takes a few moments. Refresh the view with an Info or Error notice to verify the action. To discard changes, just navigate away from the view.
7. Navigate to **Administration > PM&C Configuration**.

8. Make sure the summary is what you want.

Example output with IPv4:

Main Menu: Administration -> PM&C Configuration -> PM&C Network Configuration

▼ Network Description

Network Address	Network Mask/Prefix
192.168.1.0	255.255.255.0
10.240.214.0	255.255.255.0

▼ Network and Roles Description

Network Address	Network Mask/Prefix	Role
192.168.1.0	255.255.255.0	control
10.240.214.0	255.255.255.0	management

▼ Network Interface Description

Device	IP Address	Description
control	192.168.1.1	Control network for managed servers
management	10.240.214.3	Management of system devices

▼ Route Configuration

Device	Destination Address	Network Mask/Prefix	Gateway Address
There are no provisioned routes found.			

▼ IPv4 DHCP Configuration

Start DHCP	End DHCP
192.168.1.1	192.168.1.254

Procedure 9. Configure the PMAC Server (NetBackup Only)

3. <input type="checkbox"/>	PMAC Command Line: Perform a system healthcheck	<pre>\$ alarmMgr --alarmStatus</pre> <p>This command should return no output on a healthy system.</p> <pre>\$ sudo sentry status</pre> <p>All processes should be running. ---	--	--

Procedure 10. Add RMS to the PMAC System Inventory

<p>3. <input type="checkbox"/></p>	<p>PMAC GUI: Add RMS</p>	<ol style="list-style-type: none"> 1. Navigate to Hardware > System Configuration > Configure RMS.  2. Click Add RMS.  3. Enter the IP Address of the rack mount server management port (iLO/iLOM) and username/password of the iLO/iLOM. All the other fields are optional. 4. Click Add RMS.  <p>Note: The PMAC contains default credentials for the rack mount server management port (not to be confused with OS or application credentials); however, if you know the default credentials do not work, then enter the valid credentials for the rack mount server management port.</p> 5. Repeat this step for additional rack mount servers.
------------------------------------	---------------------------------	---

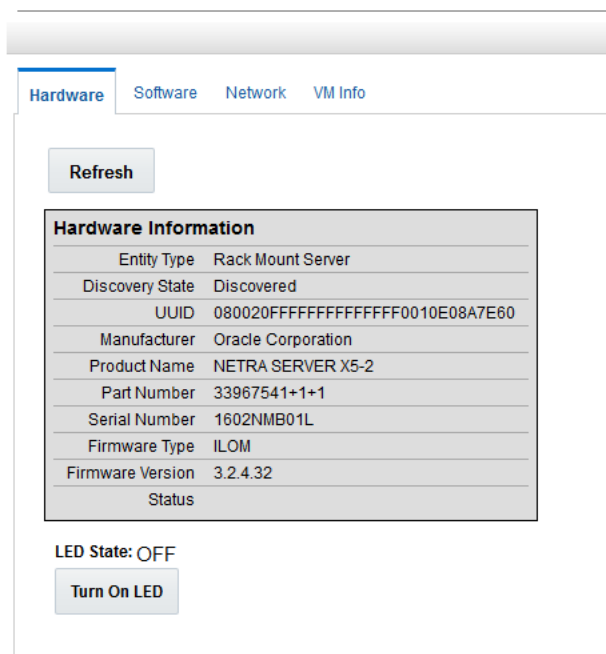

Procedure 10. Add RMS to the PMAC System Inventory

4. **PMAC GUI:** Verify RMS discovered

1. Navigate to **Hardware > System Inventory > Cabinet xxx > RMS yyy**.
Where xxx is the cabinet ID selected when adding RMS (or **Undesignated**) and yyy is the name of the RMS.

2. Periodically refresh the hardware information using the double arrow to the right of the **Hardware Information** title until the Discovery State changes from **Undiscovered** to **Discovered**.

Main Menu: Hardware -> System Inventory -> Cabinet

Note: If Status displays an error, contact My Oracle Support (MOS).

3.8 Install TVOE on Additional Rack Mount Servers

Procedure 11. Restore an Archive That Does Not Contain a Current User

This procedure installs the TVOE operating system on additional mounted servers.

Prerequisite: PMAC (virtualized) has been installed on the first RMS.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	PMAC GUI: Login	<div> 1. Open the web browser and navigate to the PMAC GUI: <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">http://<PMAC_network_IP></div> 2. Login as the guiadmin user: </div> <div style="text-align: center; margin-top: 20px;">  </div> <div style="margin-top: 10px;"> <p>Oracle System Login Tue Jun 7 13:49:06 2016 EDT</p> <hr/> <div style="border: 1px solid black; padding: 10px; margin: 10px auto; width: 350px;"> <p style="text-align: center;">Log In</p> <p style="text-align: center;">Enter your username and password to log in</p> <p>Username: <input style="width: 100px;" type="text"/></p> <p>Password: <input style="width: 100px;" type="password"/></p> <p style="text-align: center;"> <input type="checkbox"/> Change password </p> <p style="text-align: center; margin-top: 10px;"> <input type="button" value="Log In"/> </p> </div> <p style="font-size: small; margin-top: 10px;">Unauthorized access is prohibited. This Oracle system requires the use of Microsoft Internet Explorer 9.0, 10.0, or 11.0 with support for JavaScript and cookies.</p> <hr/> <p style="font-size: x-small; margin-top: 10px;">Oracle and Java are registered trademarks of Oracle Corporation and/or its affiliates. -----------------------------	------------------------	--

Procedure 11. Restore an Archive That Does Not Contain a Current User

2.

PMAC's TVOE:

Load TVOE ISO

Use one of the following two options to add the TVOE ISO image to the PMAC:

Option 1 — Attach the USB device containing the ISO image to a USB port.

1. From the PMAC GUI, navigate to **VM Management > PMAC guest > View VM Guest > Media tab**.

2. Locate the ISO image in the **Available Media** list and click its **Attach** button.

After a pause, the image displays in the Attached Media list.

View guest 5010441PMAC

Clone Guest

Regenerate Device Mapping ISO

Install OS

Upgrade

Accept Upgrade

Reject Upgrade

Option 2 — Use a TVOE 64 bit ISO file.

1. Use sftp to transfer the ISO image to the PMAC server in the **/var/TKLC/smac/image/isoimages/home/smacftpusr/** directory as **pmacftpusr** user:

2. cd to the directory where your ISO image is located on the TVOE host (not on the PMAC server).

3. Using sftp, connect to the PMAC management server.

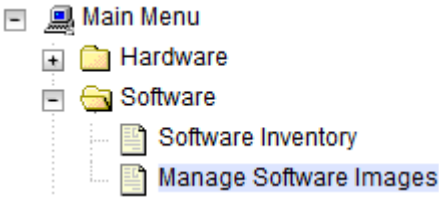

> sftp pmacftpusr@<PM&C_management_network_ip>

> put <image>.iso

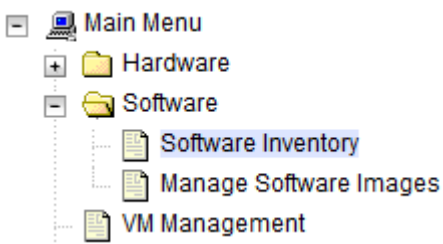

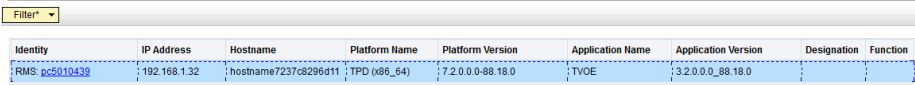

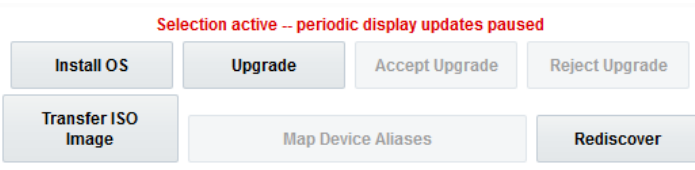

4. After the image transfer is 100% complete, close the connection.

> quit

Procedure 11. Restore an Archive That Does Not Contain a Current User

3. <input type="checkbox"/>	PMAC GUI: Add TVOE image	<ol style="list-style-type: none"> 1. Navigate to Software > Manage Software Images.  2. Click Add Image. 3. Select the image from the options. <div data-bbox="532 611 967 663"> Add Image Edit Image Delete Selected </div> <p>If the image was supplied on a CD or a USB drive, it displays as a virtual device (device://...). These devices are assigned in numerical order as CD and USB images become available on the TVOE management server. The first virtual device is reserved for internal use by TVOE and PMAC; therefore, the ISO image of interest is normally on the second device, device://dev/sr1. If one or more CD or USB-based images was already on the TVOE management server before you started this procedure, select a correspondingly higher device number.</p> <p>If the image was transferred to PMAC using sftp, it displays in the list as a local file /var/TKLC/...</p> <p>Main Menu: Software -> Manage Software Images [Add Image]</p> <hr/> <p>Images may be added from any of these sources:</p> <ul style="list-style-type: none"> • Oracle-provided media in the PM&C host's CD/DVD drive (Refer to Note) • USB media attached to the PM&C's host (Refer to Note) • External mounts. Prefix the directory with "extfile://". • These local search paths: <ul style="list-style-type: none"> ◦ /var/TKLC/upgrade/*.iso ◦ /var/TKLC/smac/image/isoimages/home/smacftpusr/*.iso <p>Note: CD and USB images mounted on PM&C's VM host must first be made accessible to the PM&C VM gu</p> <div data-bbox="540 1413 1292 1556"> Path: <input type="text"/> Description: <input type="text"/> </div> <div data-bbox="540 1612 813 1665"> Add New Image Cancel </div> 4. Select the appropriate path and click Add New Image. 5. Check the progress by clicking the Task Monitoring link. Observe the green bar indicating success. 6. Once complete, remove the TVOE media from the optical drive of the TVOE management server.

622	Install OS	RMS: pc5010439	Done: TVOE-3.2.0.0.0_88.18.0-x86_64	COMPLETE	N/A	0:28:42	2016-06-07 14:10:05	100%

3.9 Configure TVOE on Additional Rack Mount Servers**Procedure 12. Configure TVOE on Additional Rack Mount Servers**

This procedure configures TVOE on all remaining rack mount servers.

Prerequisite: RMS has been IPMed with TVOE operating system.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Determine bridge names and interfaces	Use the network bridge names determined in Procedure 4, step 1.
2. <input type="checkbox"/>	RMS iLO/iLOM: Login and start the integrated remote console	<ol style="list-style-type: none"> 1. Log into iLO/iLOM and follow Appendix D TVOE iLO/iLOM GUI Access to access the iLO/iLOM GUI. <div data-bbox="565 1549 1446 1591" style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <code>https://<management_server_iLO_ip></code> </div> 2. Login as admusr.

Procedure 12. Configure TVOE on Additional Rack Mount Servers

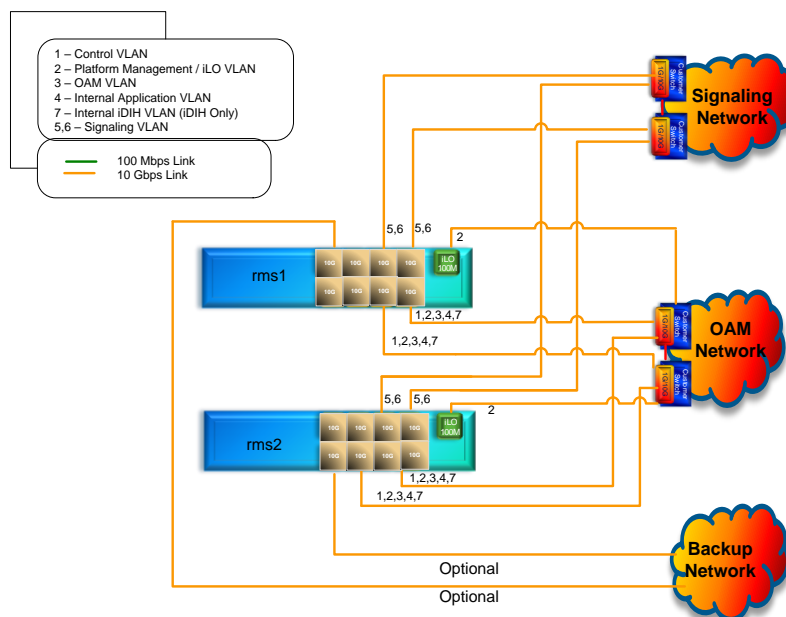

3. <input type="checkbox"/>	RMS iLO/iLOM: Create the management network	<p>Note: This output is for illustrative purposes only. The site information for this system determines the network interfaces (network devices, bonds, and bond enslaved devices) to configure.</p> <p>Note: bond0 should be used, and the Customer must configure the control VLAN as the native VLAN on ports connecting to the OAM NICs of each server.</p> <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add --device=<TVOE_Management_Bridge_Interface> -- onboot=yes Interface bond0.2 added</pre> <pre>\$sudo /usr/TKLC/plat/bin/netAdm add --type=Bridge --name=management --bootProto=none --onboot=yes --address=<Management_Server_TVOE_IP> --netmask=<Management_Server_TVOE_Netmask/prefix> --bridgeInterfaces=<TVOE_Management_Bridge_Interface> Bridge management added!</pre>
4. <input type="checkbox"/>	RMS iLO/iLOM: Configure default route	<pre>\$ sudo /usr/TKLC/plat/bin/netAdm add --route=default --device=management --gateway=<Management_Gateway_IP_Address> Route to management added</pre>

Procedure 12. Configure TVOE on Additional Rack Mount Servers

5. **RMS iLO/iLOM:** TVOE bond1 configuration (segreated signaling)

If the rack mount server solution is designed where the signaling traffic is segregated from the rest of the DSR OAM related networks and located on separate NICs, execute this step.

If the OAM related networks share the same physical NICs (non-segregated), skip this step.

Create Bond1 interface:

Note: Refer to section 2.2.2 for network interface server reference table.

```
$ sudo /usr/TKLC/plat/bin/netAdm add --device=bond1 --
onboot=yes
$ sudo /usr/TKLC/plat/bin/netAdm set --
device=<ethernet_interface_3> --type=Ethernet --
master=bond1 --slave=yes --onboot=yes
$ sudo /usr/TKLC/plat/bin/netAdm set --
device=<ethernet_interface_4> --type=Ethernet --
master=bond1 --slave=yes --onboot=yes
```

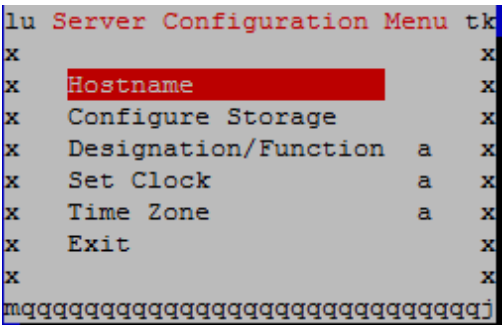

Procedure 12. Configure TVOE on Additional Rack Mount Servers

6. <input type="checkbox"/>	RMS iLO/iLOM: Set Ethernet interface ring buffer sizes	<p>Note: Refer to section 2.2.2 for network interface server reference table.</p> <pre>\$ sudo netAdm set --device=<ethernet_interface_1> -- ringBufferRx=4096 --ringBufferTx=4096 \$ sudo netAdm set --device=<ethernet_interface_2> -- ringBufferRx=4096 --ringBufferTx=4096</pre> <p>If step 5. was executed, execute these commands:</p> <pre>\$ sudo netAdm set --device=<ethernet_interface_3> -- ringBufferRx=4096 --ringBufferTx=4096 \$ sudo netAdm set --device=<ethernet_interface_4> -- ringBufferRx=4096 --ringBufferTx=4096</pre> <p>Ring Buffer Sizes For X7-2</p> <pre>\$ sudo netAdm set --device=<ethernet_interface_1> -- ringBufferRx=2047 --ringBufferTx=2047 \$ sudo netAdm set --device=<ethernet_interface_2> -- ringBufferRx=2047 --ringBufferTx=2047</pre> <p>If step 5. was executed, execute these commands:</p> <pre>\$ sudo netAdm set --device=<ethernet_interface_3> -- ringBufferRx=2047 --ringBufferTx=2047 \$ sudo netAdm set --device=<ethernet_interface_4> -- ringBufferRx=2047 --ringBufferTx=2047</pre>
--------------------------------	--	---

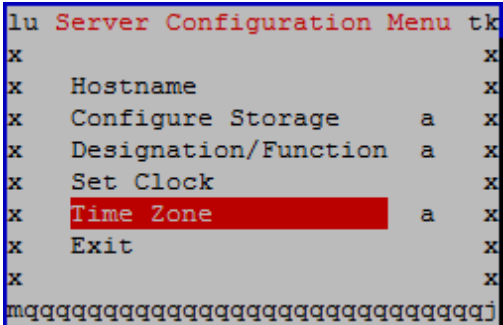

Procedure 12. Configure TVOE on Additional Rack Mount Servers

<p>7. <input type="checkbox"/></p>	<p>RMS iLO/iLOM: Add the NetBackup network — Option 1 (optional) If NetBackup is used, execute this step; otherwise, skip to step 12.</p>	<p>Before selecting the configuration option, first read the description in each step to determine which configuration is applicable to your installation and network.</p> <p>Select only this option or one of the options listed in steps 8. or 9.</p> <p>NetBackup is a tool that allows the customer to take remote backups of the system.</p> <p>Notes:</p> <ul style="list-style-type: none"> • This output is for illustrative purposes only and shows the control bridge configured. • This example shows a TVOE management server configuration with the NetBackup feature enabled and the NetBackup network configured with a non-default MTU size. • The MTU size must be consistent between a network bridge, device, or bond and associated VLANs. <p>Create NetBackup bridge using a bond containing an untagged interface.</p> <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add --device=<TVOE_NetBackup_Bridge_Interface> --onboot=yes --type=Bonding --mode=active-backup -- miimon=100 --MTU=<NetBackup_MTU_size> Interface <TVOE_NetBackup_Bridge_Interface> added \$ sudo /usr/TKLC/plat/bin/netAdm set --device=<ethernet_interface_4> --type=Ethernet --master=<TVOE_NetBackup_Bridge_Interface> --slave=yes --onboot=yes Interface <ethernet_interface_4> updated \$ sudo /usr/TKLC/plat/bin/netAdm add --type=Bridge --name=<TVOE_NetBackup_Bridge> --onboot=yes -- bootProto=none --MTU=<NetBackup_MTU_size> --bridgeInterfaces=<TVOE_NetBackup_Bridge_Interface> --address=<TVOE_NetBackup_IP> --netmask=<TVOE_NetBackup_Netmask></pre>

Procedure 12. Configure TVOE on Additional Rack Mount Servers

22. <input type="checkbox"/>	RMS iLO/iLOM: Back up TVOE using TPD platcfg utility	<ol style="list-style-type: none"> 1. Enter the platcfg menu from the TVOE server. <pre>\$ sudo su - platcfg</pre> 2. Navigate to Maintenance > Backup and Restore > Backup Platform (CD/DVD). Note: If no cdrom device is found by TPD, a No disk device available. This is normal on systems without a cdrom device error displays. Press Enter. 3. Navigate to Build ISO file only and press Enter.  Note: Creating the ISO image may happen so quickly that this screen may only display for an instant. 4. Exit platcfg by selecting Exit. After the ISO is created, platcfg returns to the Backup TekServer menu. The ISO has been created and is located in the /var/TKLC/bkp/ directory. An example filename of a backup file that was created is RMS503u14-plat-app-201210301505.iso. 5. Move the TVOE backup to a customer provided backup server for safe keeping.
23. <input type="checkbox"/>	Repeat	Repeat this procedure for additional rack mount servers.

3.10 Determine VM Placement

Note: Skip this section if deploying a non-HA lab node of DL380 Gen system.

To maximize performance efficiency, customers who are deploying DSR on **Oracle X5-2/Netra X5-2/X6-2/X7-2/HP DL380 Gen 9 (10Gbps)** servers may obtain the DSR VM placement information document. This recommended document can be obtained from an Oracle representative for implementation. If the DSR VM placement information is NOT available, the customer may use [16] DSR VM Placement and CPU Socket Pinning Tool.

Notes:

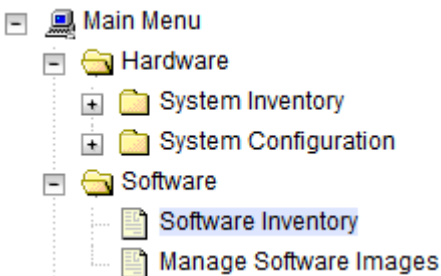

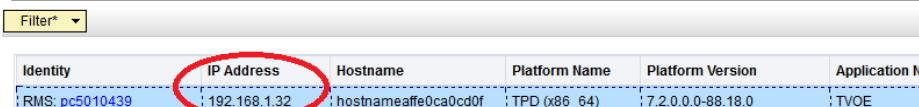

- Determine the need for VM placement for all components of the DSR installation (PMAC, IDIH, DSR, and SDS).
- HP DL380 Gen 9 equipped with onboard 1Gbps NICs should follow Appendix S VM Placement in HP DL380 Gen 8/Gen 9 (Onboard 1Gbps NICs).

3.11 Deploy Redundant PMAC (Optional)

Note: **Non-HA Lab Node Installations Only (Oracle X5-2/Netra X5-2/X6-2/HP DL380 Gen 9):** Skip this section.

Procedure 13. Install a Redundant PMAC

This procedure is optional and required only if the redundant PMAC server feature is to be deployed. This procedure deploys a redundant PMAC and creates the first backup from the primary PMAC. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1.	Primary PMAC: Login	Establish an SSH session to the primary PMAC and login as admusr .
2.	PMAC: Exchange SSH keys between primary PMAC and redundant PMAC's TVOE host	<p>Use the PMAC GUI to determine the control network IP address of the redundant PMAC's TVOE host server.</p> <ol style="list-style-type: none"> From the PMAC GUI, navigate to Software > Software Inventory.  <ol style="list-style-type: none"> Note the IP address for the PMAC's TVOE host server. <p>Main Menu: Software -> Software Inventory</p>  <ol style="list-style-type: none"> Obtain a terminal session to PMAC and login as admusr. Exchange SSH keys for admusr between the primary PMAC and the PMAC's TVOE host server using the keyexchange utility and the control network IP address for the MP blade server. <pre>\$ keyexchange admusr@<MP_Control_Blade_IP Address></pre> <ol style="list-style-type: none"> When asked for the password, type the password for the admusr of the PMAC's TVOE host server.
3.	Primary PMAC: Export the PMAC ISO image to the redundant PMAC's TVOE host	<pre>\$ sudo /usr/sbin/exportfs <redundant PMAC TVOE Host Control IP>:/usr/TKLC/smac/html/TPD/<PMAC_Image_Name></pre>

Procedure 13. Install a Redundant PMAC

4. <input type="checkbox"/>	Primary PMAC: SSH to the redundant PMAC's TVOE host	Establish an SSH session to the redundant PMAC's TVOE host server and login as admusr . <pre>\$ sudo ssh admusr@<redundant PMAC's TVOE Host server control IP></pre>
5. <input type="checkbox"/>	Redundant PMAC's TVOE Host: Mount the PMAC upgrade media from the primary PMAC server	<pre>\$ sudo /bin/mount <primary_pmac_control_IP>:/usr/TKLC/smac/html/TPD/<PMAC_Image_Name> /mnt/upgrade</pre>
6. <input type="checkbox"/>	Redundant PMAC's TVOE Host: Deploy PMAC	Using the pmac-deploy script, deploy the PMAC instance using the configuration detailed by the completed NAPD. All configuration options (NetBackup or isoimagesVolSizeGB) should match the configuration of the primary PMAC. Reference Procedure 5, step 3. For this example, deploy a PMAC without the NetBackup feature. <pre>\$ cd /mnt/upgrade/upgrade \$ sudo ./pmac-deploy -guest=<Redundant_PMAC_Name> --hostname=<Redundant_PMAC_Name> --controlBridge=<TVOE_Control_Bridge> --controlIP=<Redundant_PMAC_Control_ip_address> --controlNM=<PMAC_Control_netmask> --managementBridge=<PMAC_Management_Bridge> --managementIP=<Redundant_PMAC_Management_ip_address> --managementNM=<PMAC_Management_netmask_or_prefix> --routeGW=<PMAC_Management_gateway_address> --ntpserver=<Redundant_TVOE_Management_server_ip_address></pre> The PMAC deploys and boots. The management and control network displays based on the settings provided to the pmac-deploy script.
7. <input type="checkbox"/>	Redundant PMAC's TVOE Host: Unmount media	<pre>\$ cd / \$ sudo /bin/umount /mnt/upgrade</pre>

Procedure 13. Install a Redundant PMAC

8. <input type="checkbox"/>	Redundant PMAC's TVOE Host: SSH into the redundant PMAC server	<p>Using an SSH client such as putty, ssh to the TVOE host as admusr. Login using virsh, and wait until you see the login prompt :</p> <pre>\$ sudo /usr/bin/virsh list</pre> <table border="1"> <thead> <tr> <th>Id</th> <th>Name</th> <th>State</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>myTPD</td> <td>running</td> </tr> <tr> <td>2</td> <td>PM&C</td> <td>running</td> </tr> <tr> <td>3</td> <td>Redundant PM&C</td> <td>running</td> </tr> </tbody> </table> <pre>\$ sudo /usr/bin/virsh console <Redundant PM&C></pre> <p>[Output Removed]</p> <pre>Starting ntdMgr: [OK] Starting atd: [OK] 'TPD Up' notification(s) already sent: [OK] upstart: Starting tpdProvd... upstart: tpdProvd started. 3. <input type="checkbox"/>	PMAC GUI: Attach the software Image to the PMAC guest	<p>If the ISO image was transferred directly to the PMAC guest using sftp, skip this step and continue with the next step.</p> <ol style="list-style-type: none"> 1. From the PMAC GUI, navigate to VM Management > PMAC guest > View VM Guest > Media tab. 2. Locate the ISO image in the Available Media list and click its Attach button. <div data-bbox="526 1388 1432 1749">  <p>The screenshot shows the 'Main Menu: VM Management' interface. On the left is a 'VM Entities' tree with a 'Refresh' button. The main area is titled 'View guest 5010441PMAC' and has tabs for 'VM Info', 'Software', 'Network', and 'Media'. The 'Media' tab is active, showing 'Attached Media' and 'Available Media' sections. The 'Available Media' section contains a table with columns 'Attach', 'Label', and 'Image Path'. One entry is visible with the label '3.2.0.0.0_88.18.0' and image path '/var/TKLC/upgrade/TVOE-3.2.0.0.0_88.18.0-x86_64.iso'. An 'Attach' button is next to the entry.</p> </div>

Procedure 14. Load DSR, SDS, and TPD ISOs onto the PMAC Server

<p>4. PMAC GUI: Add TPD image</p>	<ol style="list-style-type: none"> 1. Navigate to Software > Manage Software Images.  <ol style="list-style-type: none"> 2. Click Add Image. 3. Select the image from the options.  <p>If the image was supplied on a CD or a USB drive, it displays as a virtual device (device://...). These devices are assigned in numerical order as CD and USB images become available on the TVOE management server. The first virtual device is reserved for internal use by TVOE and PMAC; therefore, the ISO image of interest is normally on the second device, device://dev/sr1. If one or more CD or USB-based images was already on the management server before you started this procedure, select a correspondingly higher device number.</p> <p>If the image was transferred to PMAC using sftp, it displays in the list as a local file /var/TKLC/...</p> <div data-bbox="548 1024 1373 1056"> <p>Main Menu: Software -> Manage Software Images [Add Image]</p> </div>  <p>Images may be added from any of these sources:</p> <ul style="list-style-type: none"> • Oracle-provided media in the PM&C host's CD/DVD drive (Refer to Note) • USB media attached to the PM&C's host (Refer to Note) • External mounts. Prefix the directory with "extfile://". • These local search paths: <ul style="list-style-type: none"> ◦ /var/TKLC/upgrade/* ◦ /var/TKLC/smac/image/isoimages/home/smacftpusr/* <p>Note: CD and USB images mounted on PM&C's VM host must first be made accessible to the PM&C VM</p> <p>Path: /var/TKLC/upgrade/DSR-8.0.0.0.0_80.4.0-x86_64.iso</p> <p>Description:</p> <p>Add New Image Cancel</p> <ol style="list-style-type: none"> 4. Select the appropriate path and click Add New Image. 5. Check the progress clicking the Task Monitoring link. Observe the green bar indicating success. 6. Once complete, remove the TPD Media from the optical drive of the management server.
--	---

Procedure 14. Load DSR, SDS, and TPD ISOs onto the PMAC Server

5. <input type="checkbox"/>	PMAC GUI: Load DSR ISO	If the DSR ISO has not been loaded onto the PMAC already, repeat steps 1. through 4. to load it using the DSR media or ISO.
6. <input type="checkbox"/>	PMAC GUI: Load SDS ISO	If the SDS ISO has not been loaded onto the PMAC already, repeat steps 1. through 4. to load it using the SDS media or ISO.

Procedure 15. Execute VM/Network Fast Deployment

This procedure creates network bond interfaces and bridges, sets TVOE host NTP servers, and creates virtual machines.

Note: Refer to section 3.10 for VM placement.

Prerequisites:

- TVOE has been installed and configured on the target RMS
- DSR ISO has been loaded onto PMAC

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	PMAC: Login	Establish an SSH session to the PMAC server and login as admusr .
2. <input type="checkbox"/>	PMAC: Transfer script and supporting files	<ol style="list-style-type: none"> 1. Copy script and supporting files from the DSR iso. <pre>\$ sudo rsync -avz --exclude cpuset.py --exclude irqtune.sh --exclude tuned_tvov.tar /usr/TKLC/smac/html/TPD/<DSR ISO loaded previous procedure>/upgrade/overlay/RMS/ /usr/TKLC/smac/etc/RMS/</pre> 2. Change permissions. <pre>\$ sudo chmod 777 /usr/TKLC/smac/etc/RMS/*</pre>
3. <input type="checkbox"/>	PMAC: Edit/Update configuration file	<ol style="list-style-type: none"> 1. Change directory. <pre>\$ cd /usr/TKLC/smac/etc/RMS/</pre> 2. Edit/Update the configuration file (rms.cfg). Read all notes shown here before editing the file. Notes: <ul style="list-style-type: none"> • Comment out configuration items that are not needed. • Create a separate configuration file for each rack mount server being deployed. • The cabinet ID in the configuration file needs to match the cabinet added in Procedure 10. The following items are mandatory: <ul style="list-style-type: none"> • siteName • tpdIso

Procedure 15. Execute VM/Network Fast Deployment

		<ul style="list-style-type: none"> • dsrIso (if DSR VMs are being configured) • sdsIso (if SDS VMs are being configured) • NETWORK_xmi (if DSR/SDS NOAM/DRNOAMs are being configured) • XMIGATEWAY (if DSR/SDS NOAM/DRNOAMs are being configured) • XMISUBNETMASK (if DSR/SDS NOAM/DRNOAMs are being configured) • DSRNOAM1XMIIPADDRESS (if DSRNOAM1 is being configured) • DSRNOAM2XMIIPADDRESS (if DSRNOAM2 is being configured) • DSRDRNOAM1XMIIPADDRESS (if DSRDRNOAM1 is being configured) • DSRDRNOAM2XMIIPADDRESS (if DSRDRNOAM2 is being configured) • SDSNOAM1XMIIPADDRESS (if SDSNOAM1 is being configured) • SDSNOAM2XMIIPADDRESS (if SDSNOAM2 is being configured) • SDSDRNOAM1XMIIPADDRESS (if SDSDRNOAM1 is being configured) • SDSDRNOAM2XMIIPADDRESS (if SDSDRNOAM2 is being configured) <p>Notes:</p> <ul style="list-style-type: none"> • Refer to Appendix R VM Automation Profile Values for DSR and SDS profile values with the configuration file. • Comment out SDS and DSR profile items if cooresponding products are not used. • Non-HA Lab Node Installations Only-Oracle X5-2/Netra X5-2/X6-2/HP DL380 Gen 9: Refer to Appendix Q.3 Non-HA Lab Node VM Automation Profile Values for DSR and SDS profile values with the configuration file. • The VM names should not be modified in the .cfg file. The names are fixed and are prefixed in the siteName. • The VM locations should not be changed from their RMSx format. Each RMS should correspond with a separate rack mount server. • Do not change the network bond interfaces from their bondx.x format. If bond1 was previously created for segregated signaling, update the bond interface to reflect the base bond interface (for example, bond0.x or bond1.x). <p>3. To receive the iso names for tpdIso, dsrIso, and sdsIso, execute this command:</p> <pre>\$ ls /var/TKLC/smac/image/repository</pre> <p>Note: DO NOT append .iso to the image name.</p>
4.	<input type="checkbox"/> PMAC: Rename/Transfer configuration file	Rename/Copy each of the above created configuration files to <hostname>.cfg and transferred to an external server for disaster recovery purposes.

Procedure 15. Execute VM/Network Fast Deployment

5. **PMAC:** Execute the config.sh script with the config file

Note: If this command is executed on multiple cfg files, it overwrites the existing xml file. Rename the xml file before running this command again.

```
$ sudo ./config.sh <config file>
```

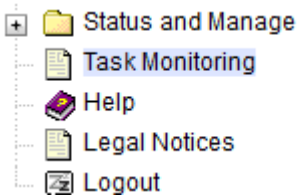

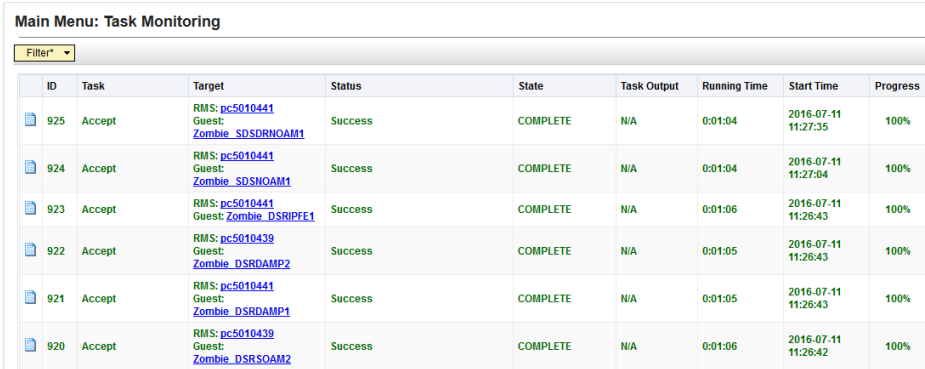

Sample output:

```
[admusr@5010441PMAC RMS]$ sudo ./config.sh rms.cfg

3.13 CPU Pinning**Notes:**

- Skip this section if deploying a non-HA lab node of DL380 Gen system.
- **HP DL380 Gen 8:** Skip this procedure.

Procedure 16. Load DSR, SDS, and TPD ISOs onto the PMAC Server

<p>This procedure configures VM CPU socket pinning on each TVOE host to optimize performance.</p> <p>Prerequisite: Have already created VM guests</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.</p>		
1. <input type="checkbox"/>	Obtain CPU socket pinning information	<p>Obtain CPU socket pinning information by referring to the data gathered in section 3.10.</p> <p>Note: For HP DL380 Gen 9 equipped with 1Gbps NICs, obtain the CPU socket pinning information from Appendix U CPU Pinning in HP DL380 Gen 9 (Onboard 1Gbps NICs).</p>
2. <input type="checkbox"/>	TVOE Host: Login	Establish an SSH session to the TVOE host and login as admusr .
3. <input type="checkbox"/>	TVOE Host: Execute the CPU pinning script	<ol style="list-style-type: none"> 1. Allocate CPU sets for each (including the PMACs) configured VM. <pre>\$ cd /var/TKLC/upgrade</pre> 2. Print the current CPU pinning allocations.

Procedure 16. Load DSR, SDS, and TPD ISOs onto the PMAC Server

```
$ sudo ./cpuset.py --show
```

Expected output:

```
[admusr@Discovery-TVOE-4 ~]$ sudo ./cpuset.py --show
VM Domain Name      vcpus  cpuset  numa  state
-----
Discovery-IPFEA2    4      None    None  running
Discovery-DAMP9     12     None    None  running
Discovery-DAMP8     12     None    None  running
Discovery-DAMP12    12     None    None  running
Discovery-DAMP11    12     None    None  running
NUMA node 0 Free CPUs: count = 32 [2, 3, 4, 5, 6, 7, 8, 9,
10, 11, 12, 13, 14, 15, 16, 17, 38, 39, 40, 41, 42, 43,
44, 45, 46, 47, 48, 49, 50, 51, 52, 53]
NUMA node 1 Free CPUs: count = 36 [18, 19, 20, 21, 22, 23,
24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 54, 55,
56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69,
70, 71]
```

Notes:

There is known issue with PMAC in this release. PMAC uses all CPUs in the NUMA 0. PMAC will fix this issue in next release.

If this is the case, the command output displays NUMA Node 0 free CPUs count as 0.

```
NUMA node 0 Free CPUs: count = 0 []
```

- Clear the NUMA 0 and pin the CPU again.

```
$ sudo ./cpuset.py --clear=<PMAC Name>
```

For example:

```
$ sudo ./cpuset.py --clear=Sterling-PMAC
```

- Set the CPU again for PMAC instance.

```
$ sudo ./cpuset.py --set=<PMAC Name> --numa=0
```

For example:

```
$ sudo ./cpuset.py --set= Sterling-PMAC --numa=0
Successful. Domain Sterling-PMAC must be restarted
for changes to take affect.
```

3. Allocate CPU pinning on each VM.

```
$ sudo ./cpuset.py --set=<VM Name> --numa=<0/1>
```

Example:

```
[admusr@Discovery-TVOE-4 ~]$ sudo ./cpuset.py -
set=Discovery-IPFEA2 -numa=0
```

Successful. Domain Discovery-IPFEA2 must be restarted for changes to take affect

```
[admusr@Discovery-TVOE-4 ~]$ sudo ./cpuset.py --show
```

Procedure 16. Load DSR, SDS, and TPD ISOs onto the PMAC Server

		<pre> VM Domain Name vcpus cpuset numa state ----- Discovery-IPFEA2 4 2-3,38-39 0 running Discovery-DAMP9 12 None None running Discovery-DAMP8 12 None None running Discovery-DAMP12 12 None None running Discovery-DAMP11 12 None None running NUMA node 0 Free CPUs: count = 28 [4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53] NUMA node 1 Free CPUs: count = 36 [18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71] Notes: <ul style="list-style-type: none"> • If deploying IDIH, note the CPU pinning allocations since CPU pinning will be done as part of IDIH configuration (section 3.16). • To clear pinning, execute this command on each VM, as necessary. <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> \$ sudo ./cpuset.py --clear=<VM NAME> </div> Example: <pre> [admusr@Sterling-TVOE-4 admusr]# sudo ./cpuset.py - clear=Sterling2So-DA-MP4 </pre> </pre>

-----------------------------	-------------------------------	--

Procedure 17. Configure First DSR NOAM NE and Server

<p>3. <input type="checkbox"/></p>	<p>Create the NOAM network element using the XML file</p>	<ol style="list-style-type: none"> 1. Navigate to Configuration > Networking > Networks.  <ol style="list-style-type: none"> 2. Click Browse and type the pathname to the NOAM network XML file. <p>To create a new Network Element, upload a valid configuration file:</p> <p><input type="button" value="Browse..."/> zombie.xml <input type="button" value="Upload File"/></p> <p>Copyright © 2010, 2016, Oracle and/or its affiliates. All rights reserved.</p> <ol style="list-style-type: none"> 3. Click Upload File to upload the XML file and configure the NOAM network element. 4. Once the data has been uploaded, a tab displays with the name of your network element. Click this tab to display a screen with the individual networks that are now configured. 						
<p>4. <input type="checkbox"/></p>	<p>Map services to networks</p>	<ol style="list-style-type: none"> 1. Navigate to Configuration > Services.  <ol style="list-style-type: none"> 2. Click Edit and set the services as shown in the table. <table border="1"> <thead> <tr> <th>Name</th><th>Intra-NE Network</th><th>Inter-NE Network</th></tr> </thead> <tbody> <tr> <td>OAM</td><td><IMI Network></td><td><XMI Network></td></tr> </tbody> </table>	Name	Intra-NE Network	Inter-NE Network	OAM	<IMI Network>	<XMI Network>
Name	Intra-NE Network	Inter-NE Network						
OAM	<IMI Network>	<XMI Network>						

Procedure 17. Configure First DSR NOAM NE and Server

Replication	<IMI Network>	<XMI Network>
Signaling	Unspecified	Unspecified
HA_Secondary	Unspecified	Unspecified
HA_MP_Secondary	Unspecified	Unspecified
Replication_MP	<IMI Network>	Unspecified
ComAgent	<IMI Network>	Unspecified

For example, if your IMI network is named **IMI** and your XMI network is named **XMI**, then your services config should look like the following:

Name	Intra-NE Network	Inter-NE Network
OAM	INTERNALIMI	INTERNALXMI
Replication	INTERNALIMI	INTERNALXMI
Signaling	Unspecified	Unspecified
HA_Secondary	Unspecified	Unspecified
HA_MP_Secondary	Unspecified	Unspecified
Replication_MP	INTERNALIMI	Unspecified
ComAgent	INTERNALIMI	Unspecified

Ok Apply Cancel

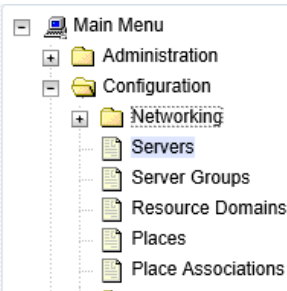

3. Click **OK** to apply the Service-to-Network selections.
4. Click **OK** when asked to restart all servers.

Procedure 17. Configure First DSR NOAM NE and Server

5. ☐ Insert the 1st NOAM server

1. Navigate to **Configuration > Servers**.

2. Click **Insert** to insert the new NOAM server into servers table.

3. Enter these values:

Hostname: <Hostname>
Role: Network OAM
System ID: <Site System ID>
Hardware Profile: DSR TVOE Guest
Network Element Name: [Select NE]
Location: <Enter an optional location description>

Role *	NETWORK OAM&P ▼
System ID	<input type="text"/>
Hardware Profile	DSR TVOE Guest ▼
Network Element Name *	ZombieNOAM ▼
Location	pc5010441

4. For the **XMI** network, type the server XMI IP address. Select the **xmi** interface. Leave the **VLAN** checkbox unmarked.
5. For the **IMI** network, type the server IMI IP address. Select the **xmi** interface. Leave the **VLAN** checkbox unmarked.

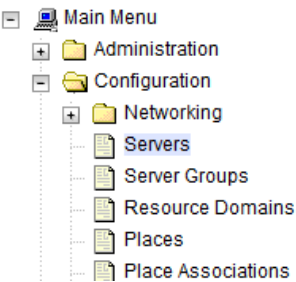

XMI (10.240.213.0/24)	<input type="text" value="10.240.213.2"/>	xmi ▼ <input type="checkbox"/> VLAN (4)
IMI (169.254.1.0/24)	<input type="text" value="169.254.1.2"/>	imi ▼ <input type="checkbox"/> VLAN (3)

6. Add this NTP server:

NTP Server	Preferred?
First-NOAM-TVOE-IP-Address>	Yes

7. Click **OK**.

Procedure 17. Configure First DSR NOAM NE and Server

6.	Export the initial configuration	<ol style="list-style-type: none"> 1. Navigate to Configuration > Servers.  2. From the GUI screen, select the NOAM server and click Export to generate the initial configuration data for that server. 
7.	NOAM: Copy configuration file to 1 st NOAM server	<ol style="list-style-type: none"> 1. Using the xmi IP address defined and configured in the DSR fast deployment configuration file (rms.cfg), establish an SSH session to the 1st NOAM server and login as admusr. 2. Copy the configuration file created in the previous step from the /var/TKLC/db/filemgmt directory on the 1st NOAM to the /var/tmp directory. The configuration file has a filename like TKLCConfigData.<hostname>.sh. The following is an example: <pre>\$ sudo cp /var/TKLC/db/filemgmt/TKLCConfigData.blade01.sh /var/tmp/TKLCConfigData.sh</pre> <p>Note: The file in /var/tmp/ directory MUST be TKLCConfigData.sh.</p> <p>The automatic configuration daemon looks for the TKLCConfigData.sh file in the /var/tmp directory, implements the configuration in the file, and asks the user to reboot the server.</p>
8.	NOAM: Wait for configuration to complete	<p>Wait to be prompted to reboot the server, but DO NOT reboot the server, it is rebooted later in this procedure.</p> <p>Note: Ignore the warning about removing the USB key, since no USB key is present.</p>
9.	SDS NOAM iLO: Set the time zone and reboot the server	<p>Note: Valid time zones can be found in Appendix J List of Frequently Used Time Zones.</p> <ol style="list-style-type: none"> 1. Run: <pre>\$ sudo set_pmac_tz.pl <time zone></pre> Example: <pre>\$ sudo set_pmac_tz.pl America/New_York</pre> 2. Reboot the server. <pre>\$ sudo init 6</pre>

Procedure 17. Configure First DSR NOAM NE and Server

10. <input type="checkbox"/>	MP Server: Verify server health	<p>Login as admusr to the first SDS NOAM server and make sure no errors are returned.</p> <pre> \$ sudo syscheck Running modules in class hardware...OK Running modules in class disk...OK Running modules in class net...OK Running modules in class system...OK Running modules in class proc...OK LOG LOCATION: /var/TKLC/log/syscheck/fail_log </pre>
---------------------------------	--	--

Procedure 18. Configure the DSR NOAM Server Group

This procedure configures the DSR NOAM server group.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

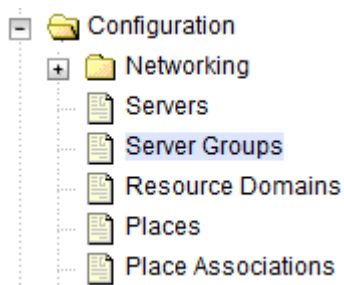

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	NOAM VIP GUI: Login	<ol style="list-style-type: none"> Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of: <div data-bbox="565 934 1406 984" style="border: 1px solid black; padding: 2px; margin: 5px 0;"> https://<Primary_NOAM_XMI_VIP_IP_Address> </div> Login as the guiadmin user. <div data-bbox="548 1050 1390 1843" style="text-align: center; margin-top: 20px;">  <p>Oracle and Java are registered trademarks of Oracle Corporation and/or its affiliates. Procedure 20. Complete DSR NOAM Server Group Configuration

4. <input type="checkbox"/>	SDS NOAM VIP GUI: Restart the 2 nd NOAM server	<ol style="list-style-type: none"> From the NOAM GUI, navigate to Status & Manage > Server.  Select the second NOAM server and click Restart.  Click OK to confirm. 
-----------------------------	--	--

3.14.2 NetBackup Client Installation (Optional)**Procedure 21. Install NetBackup Client (Optional)**

This procedure downloads and installs the NetBackup client software on the server. Location of the bpstart_notify and bpend_notify scripts is required for the execution of this procedure. For Appworks-based applications, the scripts are located as follows:

- /usr/TKLC/appworks/sbin/bpstart_notify
- /usr/TKLC/appworks/sbin/bpend_notify

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Install NetBackup Client Software	<p>If a customer has a way of transferring and installing the NetBackup client without using TPD tools (push configuration), then use Appendix I.2 Install NetBackup Client Using NBAutoInstall.</p> <p>Note: This is not common. If the answer to the previous question is not known, then use Appendix I.1 Install NetBackup Client Using platcfg.</p>
2. <input type="checkbox"/>	Install NetBackup Client Software	Choose the same method used in step 1. to install NetBackup on the 2 nd NOAM.

3.14.3 Disaster Recovery NOAM (Optional)

Procedure 22. Configure DSR NOAM for DR Site (Optional)

This procedure configures the first DR NOAM server.

Prerequisites:

- TVOE is configured (section 3.2)
- Site OMAC is installed and deployed (sections 3.3, 3.4, and 3.6)
- Additional rack mount servers are installed and configured (sections 3.7, 3.8, and 3.9)
- VM have been placed and deployed; and network has been configured (sections 3.10, 3.12, and 3.13)

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

Procedure 23. Pairing for DSR DR NOAM Site (Optional)

<p>5. <input type="checkbox"/></p>	<p>Primary NOAM VIP GUI: Restart the DR NOAM servers</p>	<ol style="list-style-type: none"> From the NOAM GUI, navigate to Status & Manage > Server.  Select the first DR NOAM server and click Restart.  Click OK to confirm. <p>Are you sure you wish to restart application software on the following server(s)? ZombieSDSDRNOAM2</p>  Repeat this step selecting the second DR NOAM server.
<p>6. <input type="checkbox"/></p>	<p>Primary NOAM: Modify DSR OAM process</p>	<ol style="list-style-type: none"> Establish an SSH session to the primary NOAM, login as admusr. Retrieve the cluster ID of the DR NOAM.  Start the DSR OAM process on the DR NOAM. 

3.14.4 SOAM Configuration

Procedure 24. Configure DSR SOAM NE

This procedure configures the first DSR SOAM network element.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. **Primary NOAM
VIP GUI: Login**

☐

1. Establish a GUI session on the NOAM server by using the XMI VIP IP address. Open the web browser and enter a URL of:

`https://<NOAM_XMI_VIP_IP_Address>`

2. Login as the **guiadmin** user.

Procedure 24. Configure DSR SOAM NE

2. **NOAM SDS VIP GUI:** Create the SOAM network element using an XML file

Note: The SOAM network element file that describes the networking of the target install environment of the SOAM server should already be created. Refer Procedure 17, step 1. to create the xml file, if necessary.

1. Navigate to **Configuration > Networking > Networks**.

2. Click **Browse** and enter the **Pathname** of the SOAM network XML file.
3. Click **Upload File**.

To create a new Network Element, upload a valid configuration file:

Copyright © 2010, 2016, Oracle and/or its affiliates. All rights reserved.

4. Click on the tab to display the configured network.

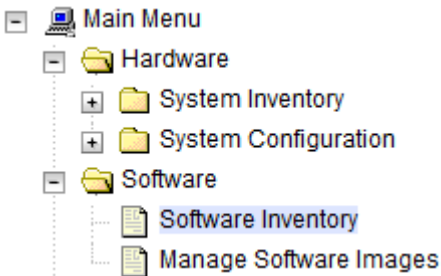

Global ZombieNOAM ZombieDRNOAM ZombieSOAM							
Network Name	Network Type	Default	Locked	Routed	VLAN	Configured Interfaces	Net
XMI	OAM	Yes	Yes	Yes	4	0	10.0.0.0/24
IMI	OAM	No	Yes	No	3	0	168.1.1.0/24

Procedure 25. Configure DSR SOAM Server

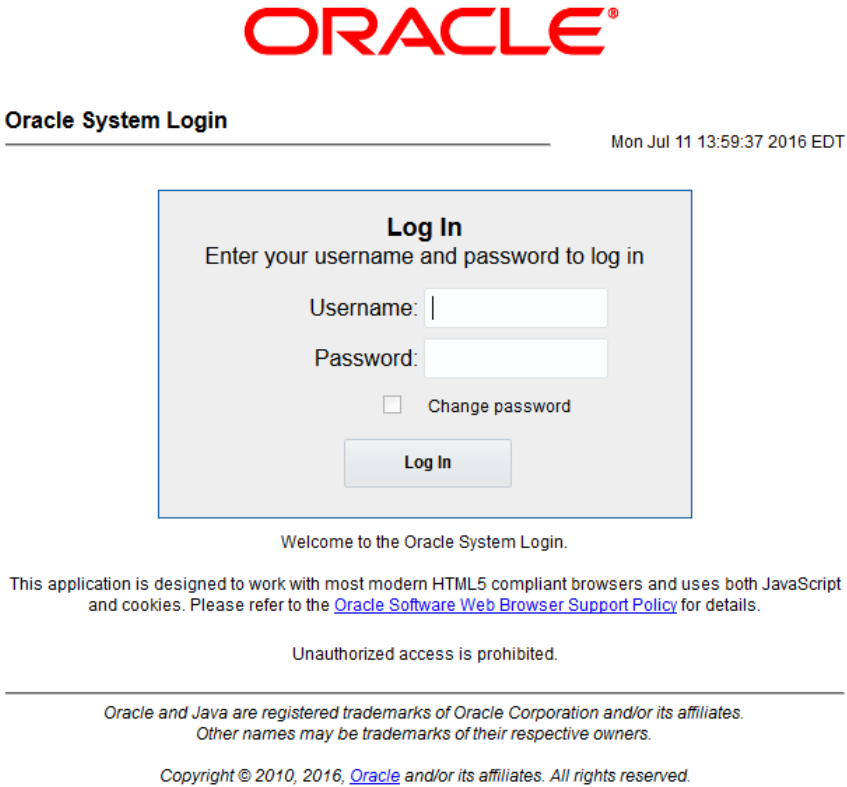

This procedure configures the DSR SOAM server.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

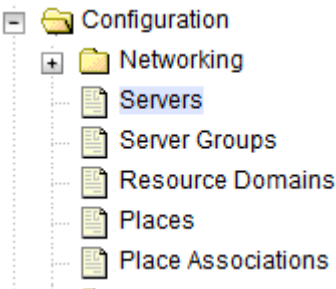

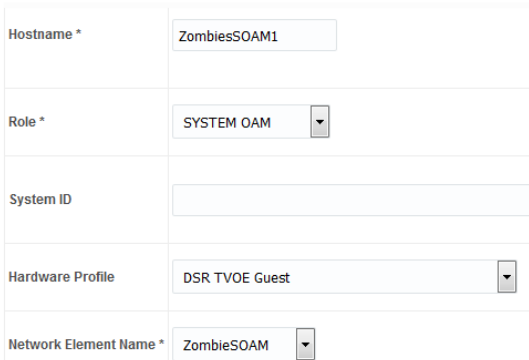

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

<p>1. <input type="checkbox"/></p>	<p>PMAC: Exchange SSH keys between the SOAM site's local PMAC and the SOAM server</p>	<p>Use the PMAC GUI to determine the control network IP address of the blade server that is to be the SOAM server.</p> <ol style="list-style-type: none"> From the PMAC GUI, navigate to Software > Software Inventory.  <ol style="list-style-type: none"> Note the IP address for the SOAM server.  <ol style="list-style-type: none"> Obtain a terminal session to PMAC and login as admusr. NOAM VIP GUI:
Edit the MP server groups to include MPs

1.

Navigate to **Configuration > Server Groups**.

Configuration

Networking

Servers

Server Groups

Resource Domains

Places

Place Associations

2.

Select the server group you just created and click **Edit**.

Insert

Edit

Delete

Report

3.

Select the network element that represents the MP server group.

4.

Mark the **Include in SG** checkbox for the MP server.

5.

Leave other checkboxes blank.

Server	SG Inclusion	Preferred HA Role
ZombieDAMP1	<input checked="" type="checkbox"/> Include in SG	<input type="checkbox"/> Prefer server as spare
ZombieDAMP2	<input checked="" type="checkbox"/> Include in SG	<input type="checkbox"/> Prefer server as spare

Each MP server should be included in the server group one at a time. Do not include multiple MPs at a time in the server group.

6.

Click **OK**.

4.

NOAM VIP GUI:
Wait for remote database alarm to clear

Wait for the **Remote Database re-initialization in progress** alarm to clear before proceeding.

Monitor progress by navigating to **Alarms & Events > View Active**.

Alarms & Events

View Active

Procedure 31. Configure DAMP Server Groups and Profiles

<div>5.</div> <div><input type="checkbox"/></div>	SOAM VIP GUI: Login	<ol style="list-style-type: none">1. Establish a GUI session on the SOAM server by using the VIP IP address of the SOAM server. Open the web browser and enter a URL of:<div data-bbox="565 321 1406 369"><code>https://<Primary_SOAM_VIP_IP_Address></code></div>2. Login as the guiadmin user. <div data-bbox="548 449 1390 1230"></div>
---	-------------------------------	---

Procedure 31. Configure DAMP Server Groups and Profiles

6. **SOAM VIP GUI:**
Assign profiles to
DA-MPs from
SOAM GUI

1. Navigate to **Diameter Common > MPs > Profiles Assignments**.

If the site has both DSR and MAP-IWF server groups, both DA-MP and SS7-MP sections display.

Main Menu: Diameter Common -> MPs -> Profile Assignments

DA-MP	MP Profile	current value
ZombieDAMP1	VM:10K_MPS	The current MP Profile for ZombieDAMP1 is VM:10K_MPS . Virtualized DA-MP rated at 10K MPS for all configurations [A value is required.]
ZombieDAMP2	VM:10K_MPS	The current MP Profile for ZombieDAMP2 is VM:10K_MPS . Virtualized DA-MP rated at 10K MPS for all configurations [A value is required.]
SS7-MP	MP Profile	current value
ZombieSS7MP1	VM:MD-IWF	The current MP Profile for ZombieSS7MP1 is VM:MD-IWF . Virtualized SS7-MP running MD-IWF application [A value is required.]
ZombieSS7MP2	VM:MD-IWF	The current MP Profile for ZombieSS7MP2 is VM:MD-IWF . Virtualized SS7-MP running MD-IWF application [A value is required.]

Assign Cancel

2. For each MP, select the proper profile assignment based on the function of each MP.

Profile Name	Description
VM:10K_MPS	Virtualized DA-MP rated at 10K MPS for all configurations
VM:Relay	Virtualized DA-MP Guest running the relay application
VM:Database	Virtualized DA-MP Guest running relay and database applications

DA-MP	MP Profile	current value
MultiApp3-DA-MP1	VM:10K_MPS	The current MP Profile for MultiApp3-DA-MP1 is VM:10K_MPS . Virtualized DA-MP rated at 10K MPS for all configurations [A value is r

3. Click **Assign**.

Procedure 31. Configure DAMP Server Groups and Profiles

<p>7. <input type="checkbox"/></p>	<p>NOAM VIP GUI: Login</p>	<ol style="list-style-type: none"> 1. Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of: <div style="border: 1px solid black; padding: 2px; margin: 5px 0;">https://<Primary_NOAM_VIP_IP_Address></div> 2. Login as the guiadmin user. 
<p>8. <input type="checkbox"/></p>	<p>NOAM VIP GUI: Restart all MP servers</p>	<ol style="list-style-type: none"> 1. Navigate to Status & Manage > Server.  2. For each MP server, select the MP server and click Restart.  3. Click OK to confirm. Wait for the restart successful message. <p>Note: Policy and Charging DRA Installations/DCA Installations: You may see alarms related to ComAgent until the PCA/DCA installation is complete.</p>

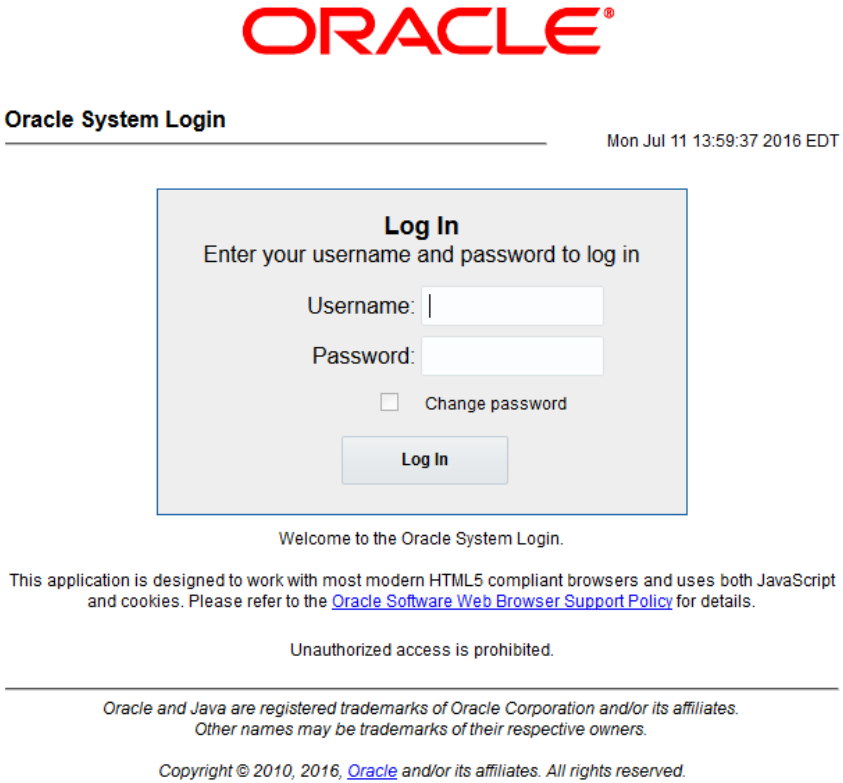

Procedure 32. Configure IPFE Server Groups

This procedure configures MP server groups as IPFEs.

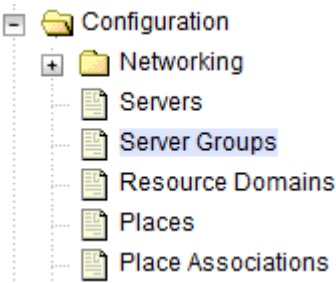

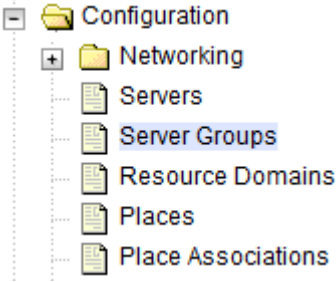

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

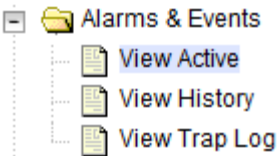

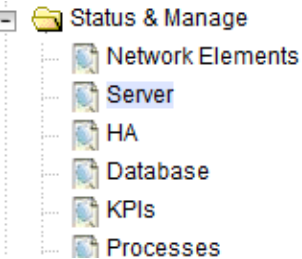

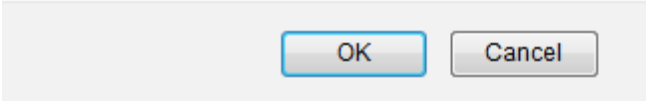

Procedure 32. Configure IPFE Server Groups

1. <input type="checkbox"/>	NOAM VIP GUI: Login	<ol style="list-style-type: none"> Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. 3.14.8 Signaling Network Configuration

To configure signaling network routes on MP-type servers (DA-MP, IPFE, and so on), refer to the procedure Configure the Signaling Network Routes in the C-Class Software Installation and Configuration Procedure 2/2.

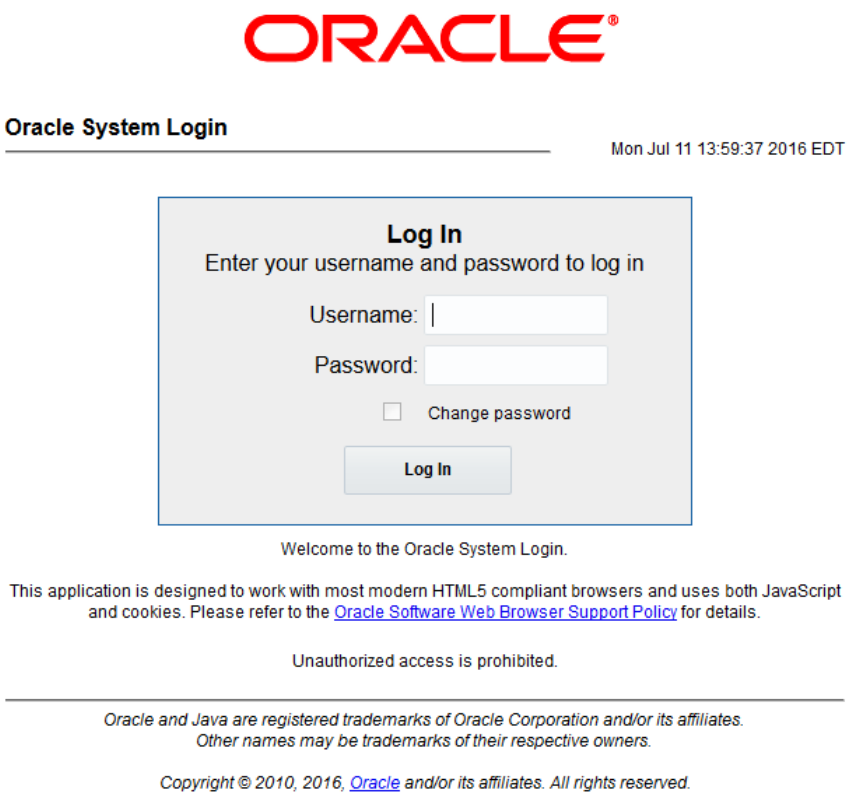

3.14.9 DSCP Configuration (Optional)

Procedure 36. Configure DSCP Values for Outgoing Traffic (Optional)

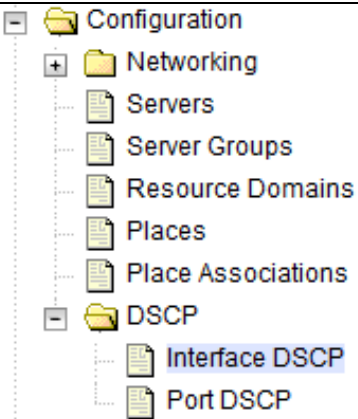

This procedure configures the DSCP values for outgoing packets on servers. DSCP values can be applied to an outbound interface as a whole, or to all outbound traffic using a specific TCP or SCTP source port. This step is optional and should only be executed if your network uses packet DSCP markings for quality-of-service.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

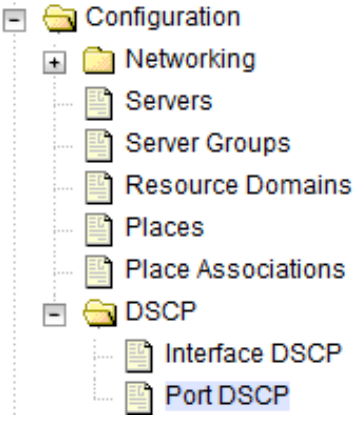

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

Procedure 48. Configure SDS DP SOAM NE

2. **NOAM SDS VIP**
☐ **GUI:** Create the SOAM network element using an XML file

1. Navigate to **Configuration > Networking > Networks**.

2. Click **Browse** and enter the **Pathname** of the SOAM network XML file.
 3. Click **Upload File**.

To create a new Network Element, upload a valid configuration file:

4. Click on the tab to display the configured network.

Main Menu: Configuration -> Networking -> Networks

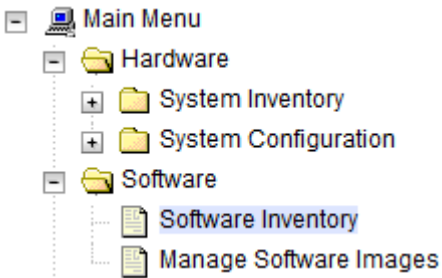

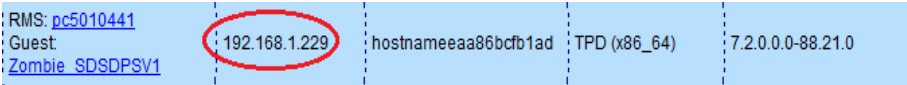

Info* ▼		
Global ZombieSDSNOAM × ZombieSDSDRNOAM × ZombieSDSSOAM ×		
Network Name	Network Type	Default
XMI	OAM	Yes
IMI	OAM	No

Procedure 49. Configure SDS DP SOAM Server

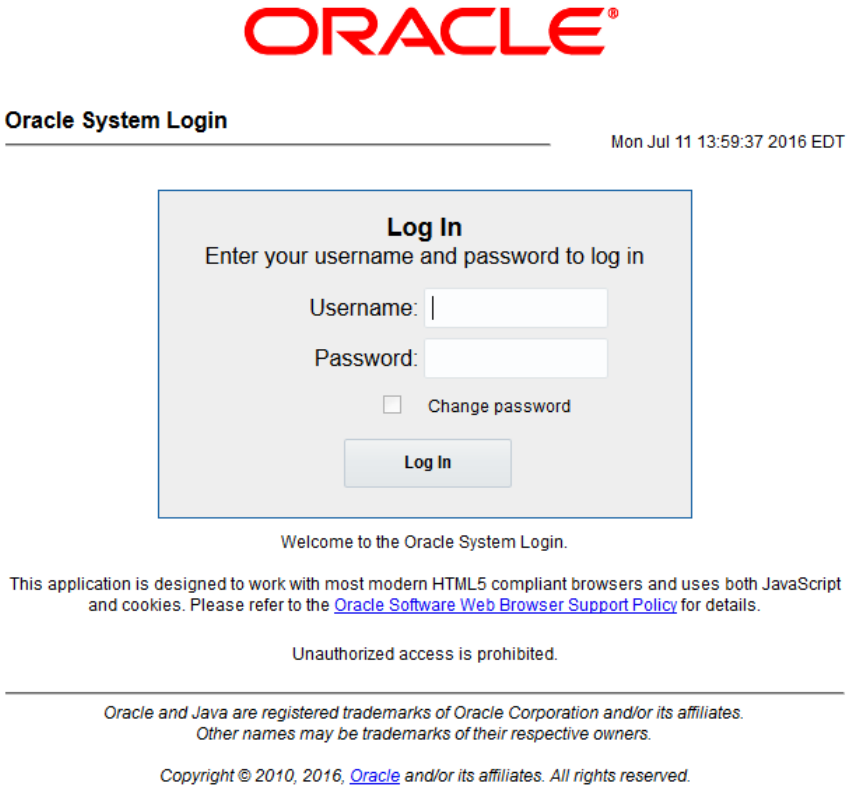

This procedure configures the SDS DP SOAM server.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	PMAC: Exchange SSH keys between SDS DP SOAM site's local PMAC and the SOAM server	<ol style="list-style-type: none"> 1. Use the PMAC GUI to determine the control network IP address of the server that is to be a SDS DP SOAM server. From the PMAC GUI, navigate to Software > Software Inventory.  2. Note the IP address for a SDS DP SOAM server.  3. Obtain a terminal session to PMAC and login as admusr. 4. Exchange SSH keys for admusr between the PMAC and SDS DP SOAM server using the keyexchange utility and control network IP address for the SDS DP server. <pre>\$ keyexchange admusr@<SO1_Control_IP Address></pre> 5. Enter the password for the admusr user of the SDS DP SOAM server.
2. <input type="checkbox"/>	Exchange SSH keys between SDS NOAM and PMAC at the SDS DP SOAM site, if necessary	<p>Note: If this SDS DP SOAM shares the same PMAC as the SDS NOAM, then skip this step.</p> <ol style="list-style-type: none"> 1. Obtain a terminal session to the SDS NOAM VIP and login as admusr. 2. Exchange SSH keys for admusr between the PMAC and the SDS NOAM for this SDS DP SOAM site using the keyexchange utility. <pre>\$ keyexchange admusr@<SO1_Site_PMAC_Mgmt_IP_Address></pre> 3. Enter the password for the admusr user of the PMAC server. 4. Repeat this step for the standby SDS DP SOAM server.

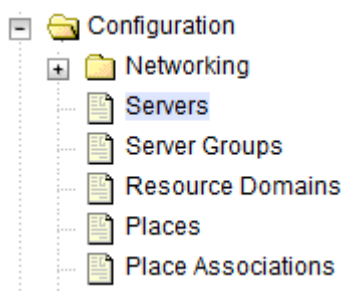

Procedure 49. Configure SDS DP SOAM Server

3. <input type="checkbox"/>	SDS NOAM VIP GUI: Login	<ol style="list-style-type: none">1. Establish a GUI session on the first SDS NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of: <div data-bbox="565 323 1406 369" style="border: 1px solid black; padding: 2px; margin: 5px 0;"><code>https://<Primary_SDS_NOAM_VIP_IP_Address></code></div>2. <p>4. <input type="checkbox"/></p>	<p>SDS NOAM VIP GUI: Wait for remote database alarm to clear</p>	<p>Wait for the Remote Database re-initialization in progress alarm to clear before proceeding. Monitor progress by navigating to Alarms & Events > View Active. </p>						
<p>5. <input type="checkbox"/></p>	<p>SDS NOAM VIP GUI: Restart SDS DP servers</p>	<ol style="list-style-type: none"> 1. Navigate to Status & Manage > Server.  2. For each SDS DP server, select the SDS DP server and click Restart.  3. Click OK to confirm. Wait for the restart successful message. 						

3.15.7 DSCP Configuration (Optional)

Procedure 52. Configure DSCP Values for Outgoing Traffic (Optional)

This procedure configures the DSCP values for outgoing packets on servers. DSCP values can be applied to an outbound interface as a whole, or to all outbound traffic using a specific TCP or SCTP source port. This step is optional and should only be executed if your network uses packet DSCP markings for quality-of-service.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

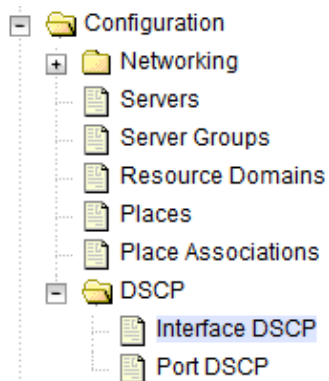

1. <input type="checkbox"/>	SDS NOAM VIP GUI: Login	<ol style="list-style-type: none"> 1. Establish a GUI session on the first SDS NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of: <div data-bbox="565 632 1406 680" style="border: 1px solid black; padding: 2px; margin: 5px 0;"> https://<Primary_SDS_NOAM_VIP_IP_Address> </div> 2. Login as the guiadmin user. <div data-bbox="548 751 1386 1533" style="text-align: center;">  <p>The screenshot shows the Oracle System Login page. At the top is the Oracle logo. Below it is the title 'Oracle System Login' and a timestamp 'Mon Jul 11 13:59:37 2016 EDT'. A central box contains a 'Log In' form with fields for 'Username' and 'Password', a 'Change password' checkbox, and a 'Log In' button. Below the form, it says 'Welcome to the Oracle System Login.' and 'This application is designed to work with most modern HTML5 compliant browsers and uses both JavaScript and cookies. Please refer to the Oracle Software Web Browser Support Policy for details.' At the bottom, it states 'Unauthorized access is prohibited.' and includes copyright information: 'Oracle and Java are registered trademarks of Oracle Corporation and/or its affiliates. -----------------------------	--	--

Procedure 52. Configure DSCP Values for Outgoing Traffic (Optional)

2. **NOAM VIP GUI:**
☐ Option 1 —
 Configure Interface
 DSCP

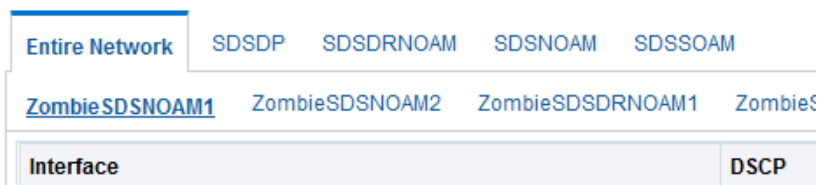

Note: The values displayed in the screenshots are for demonstration purposes only. The exact DSCP values for your site will vary.

1. Navigate to **Configuration > DSCP > Interface DSCP**.

2. Select the server to configure on the 2nd line.

You can view all servers with **Entire Network** selected or limit it to a specific server group by clicking on that server group name's tab.

3. Click **Insert**.

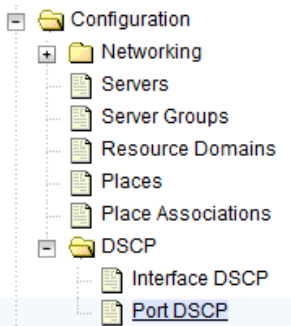

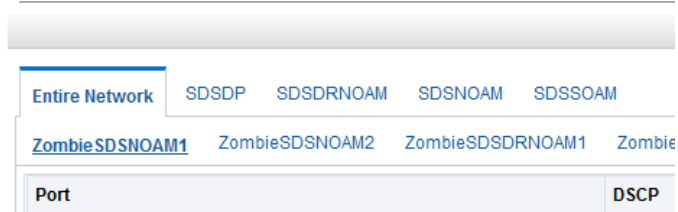

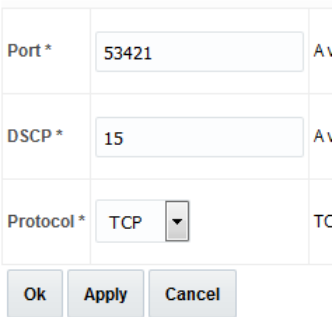

4. Select the network **Interface** option and type the **DSCP** value to apply to packets leaving this interface.

Insert DSCP by Interface on ZombieSDSNOA

Interface *	xmi	The server interface. [I
DSCP *	34	A valid DSCP value. [D
Protocol *	TCP	TCP or SCTP protocol
<input type="button" value="Ok"/> <input type="button" value="Apply"/> <input type="button" value="Cancel"/>		

5. Click **OK** if there are no more interfaces on this server to configure, or click **Apply** to finish this interface and continue entering more interfaces.

Procedure 52. Configure DSCP Values for Outgoing Traffic (Optional)

3. <input type="checkbox"/>	NOAM VIP GUI: Option 2 — Configure Port DSCP	<p>Note: The values displayed in the screenshots are for demonstration purposes only. The exact DSCP values for your site will vary.</p> <ol style="list-style-type: none"> 1. Navigate to Configuration > DSCP > Port DSCP.  <ol style="list-style-type: none"> 2. Select the server to configure on the 2nd line. <p>You can view all servers with Entire Network selected or limit it to a specific server group by clicking on that server group name's tab.</p> <p>Main Menu: Configuration -> DSCP -> Port DSCP</p>  <ol style="list-style-type: none"> 3. Click Insert.  <ol style="list-style-type: none"> 4. Enter the source Port, DSCP value, and select the transport Protocol. <p>Insert DSCP by Port on Zombi</p>  <ol style="list-style-type: none"> 5. Click OK if there are no more port DSCPs on this server to configure, or click Apply to finish this port entry and continue entering more port DSCP mappings.
4. <input type="checkbox"/>	NOAM VIP GUI: Repeat for additional servers	Repeat steps 2. through 3. for all remaining servers.

3.15.8 SNMP Configuration (Optional)

Procedure 53. Configure SNMP Trap Receivers (Optional)

This procedure configures forwarding of SNMP traps from each individual server.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. **SDS NOAM VIP**
☐ **GUI: Login**

1. Establish a GUI session on the first SDS NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of:

`https://<Primary_SDS_NOAM_VIP_IP_Address>`

2. Login as the **guiadmin** user.

------------------------------	---	--

3.16.2 IDIH Configuration**3.16.2.1 Configure DSR Reference Data Synchronization**

After an IDIH fresh installation, reference data synchronization is initially disabled. Reference data synchronization requires some initial configuration before it is enabled.

The Trace Ref Data Adapter application must retrieve data from web services hosted by the DSR SOAM web server, and this requires the DSR SOAM virtual IP address (VIP) to be configured.

The DSR SOAM VIP is unique at each customer site because it is defined based on the customer's network configuration; therefore, there is no standard default value for the DSR SOAM VIP.

Procedure 55. Configure DSR Reference Data Synchronization for IDIH

This procedure configures DSR reference data synchronization for IDIH. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.		
1. <input type="checkbox"/>	IDIH Application Server: Login	<ol style="list-style-type: none"> 1. Establish an SSH session to the IDIH application server login as admusr. 2. 6. **IDIH Application Server GUI:**
Configure the SSO domain

1. Navigate to **System > Single Sign On**.

2. From the **SSO Parameters** tab, select the **Edit Value** icon

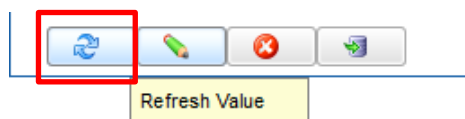

3. Type a value for the **Domain Name**.

Note: This should be the same domain name assigned in the DSR NOAM DNS Configuration (step 2.).

4. Select the **Save** icon.

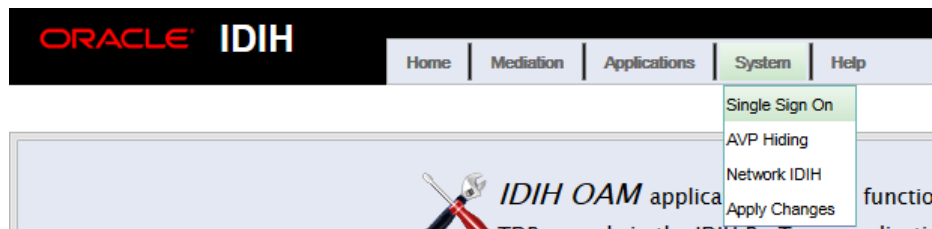

5. Select the **Refresh** icon to display data saved for the remote zone.

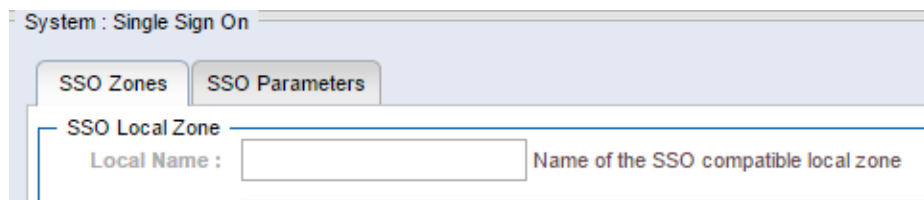

Procedure 56. Configure the SSO Domain

7. **IDIH Application Server GUI:**
Configure the SSO remote zone

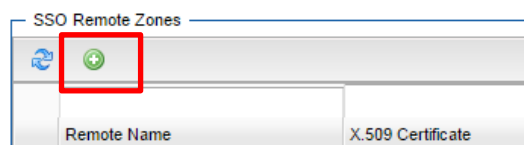

1. Navigate to **System > Single Sign On**.

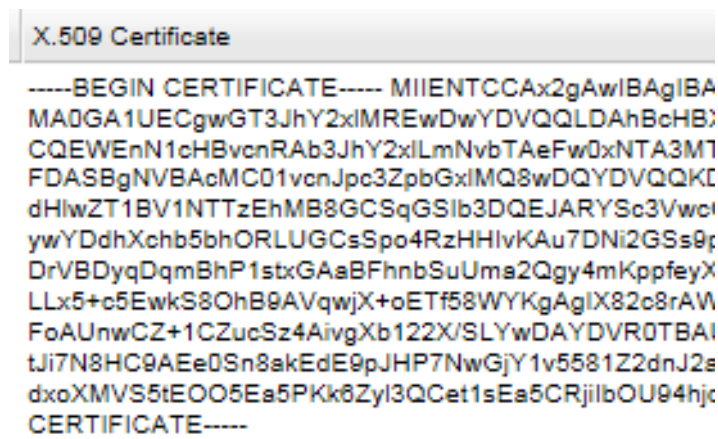

2. From the **SSO Zones** tab.

3. Select the **Add** icon and type a value for field **Remote Name**.

4. For field X.509 Certificate, paste the encoded certificate text from the clipboard.

5. Select the **Save** icon.

6. Select the **Refresh** icon to display the data saved for remote zone.

3.16.2.3 Configure IDIH in DSR

Procedure 57. Configure in DSR

This procedure completes IDIH integration on DSR.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. **NOAM VIP GUI:**
☐ Login

1. Establish a GUI session on the NOAM server by using the VIP IP address of the SOAM server. Open the web browser and enter a URL of:

`https://<Primary_NOAM_VIP_IP_Address>`

2. Login as the **guiadmin** user.

Oracle System Login

Mon Jul 11 13:59:37 2016 EDT

Log In

Enter your username and password to log in

2. **NOAM VIP GUI:**

Configure
ComAgent
connection

1. Navigate to **Communication Agent > Configuration > Remote Servers**.2. Click **Insert**.3. Add the **IDIH Mediation Server**.4. For the **Remote Server IP Address**, type the IMI IP address of the IDIH Mediation Server.5. For the **IP address Preference**, type the IP protocol preference (if IPv6 and IPv4 are configured).6. Select the **Remote Server Mode** to server.

Inserting Remote Servers

Field	Value
Remote Server Name *	<input type="text"/>
Remote Server IPv4 IP Address	<input type="text"/>
Remote Server IPv6 IP Address	<input type="text"/>
Remote Server Mode *	-- Select --
IP Address Preference	ComAgent Network Preference

7. Select the **DA-MP Server Group** from the **Available Local Server Groups** column and click **Add** to assign.

Available Local Server Groups	
ZombieS57SG1	
ZombieS57SG2	
ZombieIpteSG1	
ZombieIpteSG2	

Assigned Local Server Groups *

Add Remove

Assigned Local Server Groups	
ZombieDAMP	

8. Click **OK**.

Procedure 57. Configure in DSR

3. <input type="checkbox"/>	SOAM VIP GUI: Login	<ol style="list-style-type: none"> 1. Establish a GUI session on the SOAM server by using the VIP IP address of the SOAM server. Open the web browser and enter a URL of: <div style="border: 1px solid black; padding: 5px; margin: 10px 0;">https://<Primary_SOAM_VIP_IP_Address></div> 2. -----------------------------	-------------------------------	--

Procedure 57. Configure in DSR

4.

SOAM VIP GUI:
Configure IDIH
hostname

1.

Navigate to **Diameter > Troubleshooting with IDIH > Configuration > Options.**

2.

From the IDIH Host Name options, select the **mediation** server.

3.

Enter the fully qualified domain name (or IP address) of the App server as the **IDIH Visualization Address.**

4.

Click **Apply.**

IDIH Configuration

Field	Value
Max bandwidth *	25
IDIH Host Name	- Select -
IDIH Visualization address	

Apply

Cancel

3.16.2.4 Configure the Mail Server (Optional)

This procedure is optional; however, this option is required for security (password initialization set to AUTOMATIC) and forwarding (forwarding by mail filter defined) and is available only on the application server.

Procedure 58. Configure Mail Server (Optional)

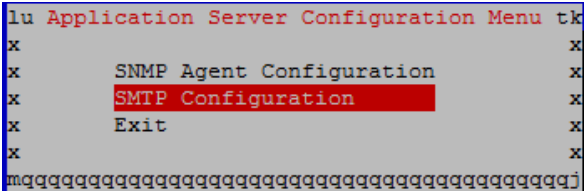

This procedure configures the SMTP mail server.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	IDIH Application Server: Login	Establish an SSH session to the IDIH Application Server and login as admusr .
-----------------------------	---------------------------------------	--

Procedure 58. Configure Mail Server (Optional)

2. <input type="checkbox"/>	IDIH Application Server: Configure the authenticated mail server	<ol style="list-style-type: none"> 1. Enter the platcfg menu. <pre>\$ sudo su - platcfg</pre> 2. Navigate to Application Server Configuration > SMTP Configuration.  3. Select Edit. 4. Enter these parameters: <ul style="list-style-type: none"> • Mail Server IP Address • User • Password • Email Address (From) • Mail smtp timeout • Mail smtp connectiontimeout • SNMP over SSL used? 5. Select OK. 6. Exit out of platcfg by selecting Exit.
-----------------------------	---	---

3.16.2.5 Configure the SNMP Management Server (Optional)

This procedure is optional; however, this option is required for forwarding (forwarding by SNMP filter defined) and is available only on the application server.

Procedure 59. Change SNMP Management Server (Optional)

This procedure configures the SNMP management server.

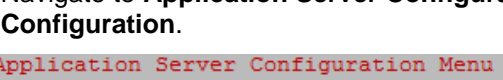

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	IDIH Application Server: Login	Establish an SSH session to the IDIH application server and login as admusr .
-----------------------------	---------------------------------------	--

Procedure 59. Change SNMP Management Server (Optional)

2. **IDIH Application Server:** Configure SNMP management server

1. Enter the platcfg menu.

2. Navigate to **Application Server Configuration > SNMP Agent Configuration**.

3. Select **Edit**.
4. Enter the **IP address** of the SNMP management server.
Note: The SNMP agent configuration is updated and the SNMP management server is automatically restarted.
5. Select **OK**.
6. Exit out of platcfg by selecting **Exit**.

3.16.2.6 Change Network Interface (Optional)

Notes:

- Initially the default network interface used to transport TTRs from DSR to DIH uses the internal imi network; however, this can be changed, if required. Changing this interface could degrade performance of the TTR transmission.
- A script is provided to manage the settings so the operator does not need to know the details required to apply the settings. There are two settings **interface.name** and **interface.enabled**.

When **interface.enabled=True**, then communications over the **interface.name=value**, where **value** is the name of the network interface as defined on the platform and is the only specified interface used for communications.

When **interface.enabled=False**, then communications over the named interface is not enforced, that is, all interfaces configured on the platform are allowed to be used for communications.

For example, if it is required to use the `xmi` interface for communication, instead of the default internal `imi` interface, then the operator would supply **xmi** when prompted for the interface name and **True** when prompted if interface filtering should be applied.

Procedure 60. Change Network Interface (Optional)

<p>This procedure changes the default network interface.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.</p>		
1.	IDIH Mediation Server: Login	<ol style="list-style-type: none"> 1. Establish an SSH session to the IDIH mediation server login as admusr. 2. Login as tekelec user. <pre>\$ sudo su - tekelec</pre>

Procedure 60. Change Network Interface (Optional)

2.	IDIH Mediation Server: Execute the change interface script	<div style="border: 1px solid black; padding: 2px; margin-bottom: 10px;">\$ chgIntf.sh</div> <p>Answer the following questions during execution of the script:</p> <p>This script is used to change the interface name (default = imi) used for mediation communications and whether to enable network interface filtering or not. Please answer the following questions or enter CTRL-C to exit out of the script.</p> <p>Current setting are: interface.name=imi interface.enabled=True</p> <p>Enter new network interface name, return to keep current [imi]: xmi</p> <p>Do you want to enable network interface filtering [True False], return to keep current [True]:</p> <p>Updating configuration properties file with 'interface.name=xmi' and 'interface.enable=True', and restarting mediation configuration bundle...</p>
----	---	--

3.16.2.7 CPU Pinning

Follow section 3.13 for CPU pinning on servers that host IDIH VMs.

3.16.2.8 Generate Disaster Recovery FDC File (Optional)**Procedure 61. Back Up the Upgrade and Disaster Recovery FDC File (Optional)**

<p>This procedure generates a disaster recovery FDC file.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.</p>		
1.	Identify backup server	<p>Identify an external server to use as a backup server for this procedure. The server should not be co-located with any of these systems:</p> <ul style="list-style-type: none"> • TVOE • PMAC • DSR NOAM • DSR SOAM
2.	PMAC Server: Login	Establish an SSH session to the PMAC server and login as admusr.

Procedure 61. Back Up the Upgrade and Disaster Recovery FDC File (Optional)

3. <input type="checkbox"/>	PMAC: Verify upgrade fdc file exists	<p>Execute these commands to verify the upgrade FDC file for IDIH exists.</p> <pre>\$ cd /var/TKLC/smac/guest-dropin \$ ls -l *.xml</pre> <p>This output is expected:</p> <pre>-rw-r----- 1 root smac 9542 May 11 09:43 <idih_install>.xml -rw-r----- 1 root smac 5107 May 11 09:43 <idih_upgrade>.xml</pre> <p>Note: The <idih_upgrade>.xml file is the same file used for upgrade and disaster recovery procedures.</p>
4. <input type="checkbox"/>	PMAC: Transfer the FDC file to a remote server	<ol style="list-style-type: none"> 1. Log into the backup server identified in step 1. and copy the backup image to the customer server where it can be safely stored. 2. If the customer system is a Linux system, copy the backup image to the customer system. <pre>\$ sudo scp <idih_upgrade.xml> /path/to/destination/ \$ sudo scp <idih_install.xml> /path/to/destination/</pre> 3. Enter the admusr user password and press Enter. <p>If the customer system is a Windows system, refer to [14], the Using WinSCP procedure, to copy the backup image to the customer system.</p>
5. <input type="checkbox"/>	PMAC Server: Back up FDC file	<ol style="list-style-type: none"> 1. Transfer the fdc file to the fdc directory so the file can be backed up with PMAC backups. 2. Ensure the directory where the backups will be stored exists. <pre>\$ sudo /bin/ls -i -l /usr/TKLC/smac/etc/fdc</pre> <p>If you receive an error such as this:</p> <pre>-bash: ls: /usr/TKLC/smac/etc/fdc: No such file or directory</pre> <p>Create the directory by issuing this command.</p> <pre>\$ sudo /bin/mkdir -p /usr/TKLC/smac/etc/fdc</pre> 3. 3.17 Post Installation Procedures

3.17.1 Optimization (DSR and Oracle X5-2/Netra X5-2/X6-2/X7-2/HP DL380 Gen 9 (10Gbps) Only)

Procedure 62. Optimization Procedure

This procedure runs optimization scripts for Oracle X5-2/Netra X5-2/X6-2/HP DL380 Gen 9 (10Gbps) only.

Prerequisite: Completed all previous DSR installation procedures.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	DSR NOAM VIP: Login	Establish an SSH to the NOAM VIP address and login as admusr .
2. <input type="checkbox"/>	DSR NOAM VIP: Execute the performance optimization script on the active NOAM	<div style="border: 1px solid black; padding: 5px; margin-bottom: 5px;"> <pre>\$ cd /usr/TKLC/dsr/bin/ \$ sudo ./rmsNoamConfig.sh</pre> </div> Configuration Successful output should display.

3.17.2 Configure ComAgent Connections (DSR and SDS Only)

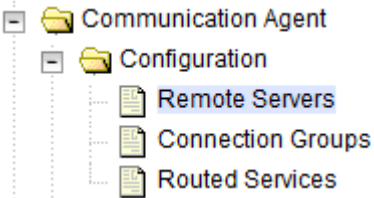

Procedure 63. Configure ComAgent Connections

This procedure configures ComAgent connections on DSR/SDS for use in the FABR application.

Prerequisite: Activated FABR application.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

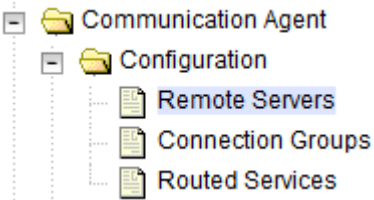

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	SDS NOAM VIP GUI: Login	<ol style="list-style-type: none"> Establish a GUI session on the SDS NOAM server by using the VIP IP address of the NOAM server. 3.17.3 Activate Optional Features

Procedure 64. Activate Optional Features

This procedure installs DSR optional components once regular installation is complete.

Prerequisite: Completed all previous DSR installation procedures.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Refer to Installation Guides for optional features to complete installation	Refer to section 1.5 for a list of feature install documents whose procedures are to be executed at this moment.
2. <input type="checkbox"/>	DR NOAM: Feature activation	<ol style="list-style-type: none"> 1. If the DR NOAM was configured in section 3.15.3, and MAPIWF has been activated in step 1. ; ssh to the active DR NOAM and login as admusr. 2. Execute these commands. <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre>\$ cd /usr/TKLC/dsr/prod/maint/loaders/activate \$ sudo ./load.mapinterworkingActivateAsourced</pre> </div> 3. Repeat this step for the standby DR NOAM.

3.17.4 Shared Secret Encryption Key Revocation (RADIUS Only)

Procedure 65. Shared Secret Encryption Key Revocation (RADIUS Only)

This procedure changes the shared secret encryption key on DSR RADIUS setup.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Revoke RADIUS shared secret encryption key	<p>Refer to RADIUS shared secret key revocation MOP to change the encryption key on the DSR installed setup. Refer to [17] DSR RADIUS Shared Secret Encryption Key Revocation.</p> <p>Note: It is highly recommended to change the key after installation due to security reasons.</p>
--------------------------------	--	---

3.17.5 Enable/Disable DTLS (SCTP Diameter Connections Only)

Procedure 66. Enable/Disable DTLS (SCTP Diameter Connections Only)

This procedure prepared clients before configuring SCTP diameter connections.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Enable/Disable DTLS (SCTP Diameter Connections Only)	<p>Oracle's SCTP Datagram Transport Layer Security (DTLS) has SCTP AUTH extensions by default. SCTP AUTH extensions are required for SCTP DTLS; however, there are known impacts with SCTP AUTH extensions as covered by the CVEs referenced below. Customers should prepare clients before the DSR connections are established after installation. This ensures the DSR-to-client SCTP connection establishes with SCTP AUTH extensions enabled. See RFC 6083. If customers DO NOT prepare clients to accommodate the DTLS changes, then the SCTP connections to client devices MAY NOT establish after the DSR is installed.</p> <p>https://access.redhat.com/security/cve/CVE-2015-1421 https://access.redhat.com/security/cve/CVE-2014-5077</p> <p>Execute procedures in [15] to disable/enable the DTLS feature.</p>
--------------------------------	--	--

3.17.6 Back Up TVOE Configuration

Procedure 67. Back Up TVOE Configuration

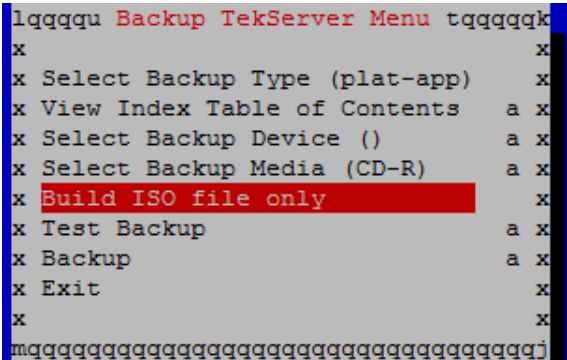

This procedure backs up each TVOE rack mounter server after a successful installation.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Identify backup server	<p>Identify an external server to use as a backup server for this procedure. The server should not be co-located with any of these systems:</p> <ul style="list-style-type: none"> • TVOE • PMAC • DSR NOAM • DSR SOAM • SDS NOAM • SDS DP SOAM
2. <input type="checkbox"/>	TVOE Server: Login	Establish an SSH session to the TVOE host server and login as admusr .

Procedure 67. Back Up TVOE Configuration

3. <input type="checkbox"/> TVOE Server: Back up the ISO file		<ol style="list-style-type: none"> Enter the platcfg menu from the TVOE server. <pre>\$ sudo su - platcfg</pre> Navigate to Maintenance > Backup and Restore > Backup Platform (CD/DVD). Note: If no cdrom device is found by TPD, a No disk device available. This is normal on systems without a cdrom device error displays. Press Enter. Navigate to Build ISO file only and press Enter.  Note: Creating the ISO image may happen so quickly that this screen may only display for an instant. Exit out of platcfg by selecting Exit. After the ISO is created, platcfg returns to the Backup TekServer menu. The ISO has been created and is located in the /var/TKLC/bkp/ directory. An example filename of a backup file that was created is hostname1307466752-plat-app-201104171705.iso. Move the TVOE backup to a customer provided backup server for safe keeping.
4. <input type="checkbox"/> Backup Server: Transfer TVOE files to backup server		<ol style="list-style-type: none"> Login to the backup server identified in step 1. and copy the backup image to the customer server where it can be safely stored. If the customer system is a Linux system, copy the backup image to the customer system. <pre>\$ sudo scp tvoexfer@<TVOE IP Address>:/var/TKLC/bkp/* /path/to/destination/</pre> Move the TVOE backup to a customer-provided backup server for safe keeping. Enter the tvoexfer user password and press Enter. If the customer system is a Windows system, refer to [14], the Using WinSCP procedure, to copy the backup image to the customer system.
5. <input type="checkbox"/> Repeat for additional TVOE servers		Repeat steps 2. through 4. for additional TVOE servers

3.17.7 Back Up PMAC Application

Procedure 68. Back Up PMAC Application

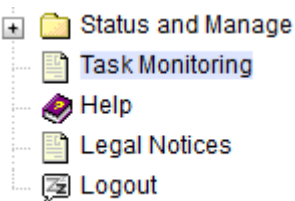

This procedure backs up each PMAC application.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Identify backup server	Identify an external server to use as a backup server for this procedure. The server should not be co-located with any of these systems: <ul style="list-style-type: none"> • TVOE • PMAC • DSR NOAM • DSR SOAM • SDS NOAM • SDS DP SOAM
2. <input type="checkbox"/>	PMAC Server: Login	Establish an SSH session to the PMAC server and login as admusr .
3. <input type="checkbox"/>	PMAC Server: Build backup file	<p>Execute this command from the PMAC server:</p> <pre>\$ sudo /usr/TKLC/smac/bin/pmacadm backup</pre> <pre>PM&C backup been successfully initiated as task ID 7</pre> <p>Note: The backup runs as a background task. To check the status of the background task use the PMAC GUI Task Monitor page or issue the command sudo pmaccli getBgTasks. The result should eventually be PMAC Backup successful and the background task should indicate COMPLETE.</p>

Procedure 68. Back Up PMAC Application

<div>4.</div> <div>PMAC GUI: Login</div>	<div>1. Open the web browser and navigate to the PMAC GUI:</div> <div>http://<PMAC_network_IP></div> <div>2. Login as the guiadmin user.</div> <div></div>

Enter the admusr user password and press Enter. If the customer system is a Windows system, refer to [14], the Using WinSCP procedure, to copy the backup image to the customer system.
5. <input type="checkbox"/>	Repeat for additional TVOE servers	Repeat steps 2. through 4. for additional DSR SOAM sites.

Appendix A. Pre-IPM Procedures**Appendix A.1 Set the Server's CMOS Clock**

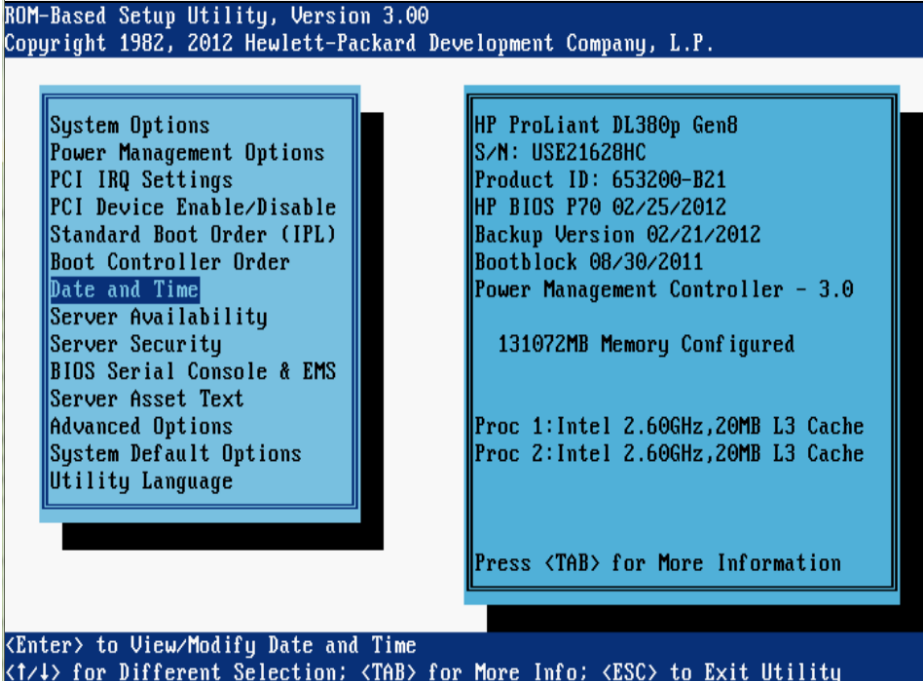

Set the date and time in the server's CMOS clock accurately before running the IPM procedures.

Note: The IPM installation process managed by PMAC for blade servers automatically sets the server's CMOS clock, so there is no need to set the server CMOS clock when using PMAC.

Appendix A.2 Configure the RMS Server BIOS Settings**Appendix A.2.1 Configure HP Gen 8 Servers****Procedure 71. Configure HP Gen 8 Server BIOS Settings**

This procedure configures HP DL380 server BIOS settings. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.		
1. <input type="checkbox"/>	HP DL380 Server: Connect VGA monitor and USB keyboard	Connect using a VGA monitor and USB keyboard.

Procedure 71. Configure HP Gen 8 Server BIOS Settings

2. <input type="checkbox"/>	HP DL380 Server: Reboot	<p>Reboot the server and after the server is powered on, press F9 when asked to access the ROM-Based Setup Utility.</p> 
3. <input type="checkbox"/>	HP DL380 Server: Set the date and time	<ol style="list-style-type: none"> 1. Select Date and Time to set the date and time to GMT (Greenwich Mean Time). 2. Press Esc to navigate to the main menu.
4. <input type="checkbox"/>	HP DL380 Server: Set the server availability	<ol style="list-style-type: none"> 1. Select Server Availability. 2. Change Automatic Power-On to Enabled. 3. Change Power-On Delay to No Delay. 4. Press Esc to navigate to the main menu.
5. <input type="checkbox"/>	HP DL380 Server: System options	<ol style="list-style-type: none"> 1. Select System Options. 2. Select Power Management Options. 3. Select HP Power Regulator. 4. Select HP Status High Performance Mode. 5. Press Esc to navigate to the main menu.
6. <input type="checkbox"/>	HP DL380 Server: Power management options	<ol style="list-style-type: none"> 1. Select System Options. 2. Select Processor Options. 3. Change Intel Virtualization Technology to Enabled. 4. Select Serial Port Options. 5. Press Esc to return to System Options.

Procedure 71. Configure HP Gen 8 Server BIOS Settings

7. <input type="checkbox"/>	HP DL380 Server: Exit ROM-based utility	Press Esc to Save & Exit from the ROM-Based Setup Utility.
--------------------------------	---	--

Appendix A.2.2 Configure HP Gen 9 Servers

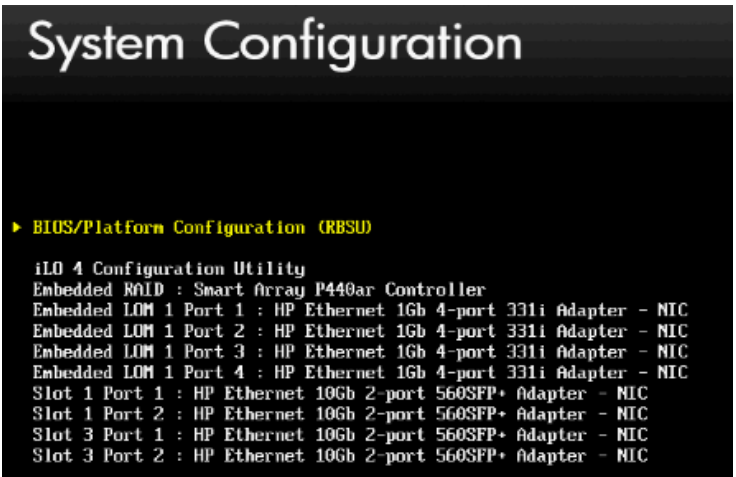

The HP Gen 9 systems can have UEFI boot enabled. Since TPD is configured to use the legacy BIOS option, rack mount Gen 9 servers should have their BIOS settings checked before IPM. Rack mount servers should also have the iLO serial port configured at this time. Directions for both settings are provided in this procedure.

Procedure 72. Configure HP Gen 8 Server BIOS Settings

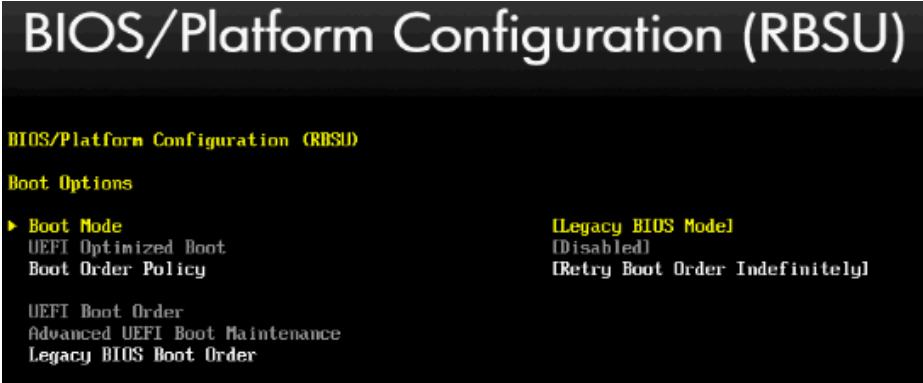

This procedure configures HP Gen 9 server BIOS settings.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

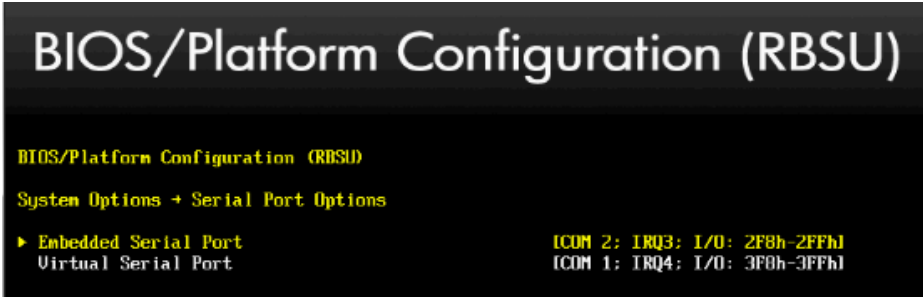

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	HP Gen 9 Server: Connect VGA Monitor and USB Keyboard	Connect via a VGA monitor and USB keyboard.
2. <input type="checkbox"/>	HP Gen 9 Server: Reboot	<p>Reboot the server. After the server is powered on, press F9 when prompted to access the System Utilities menu.</p> <p>Navigate to System Configuration > BIOS/Platform Configuration (RBSU).</p> 

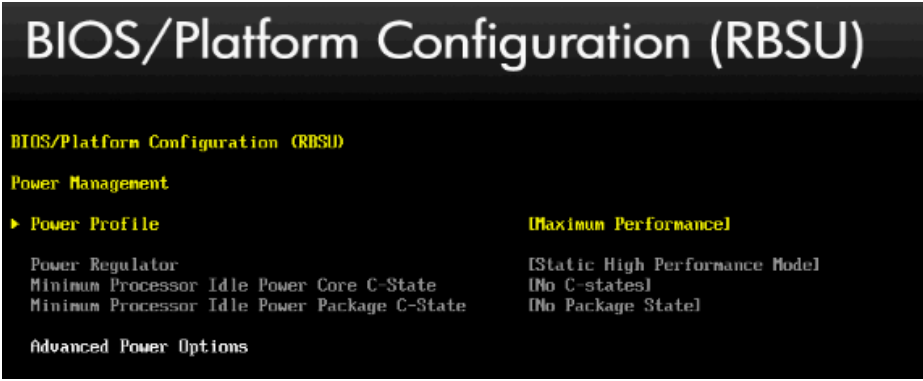

Procedure 72. Configure HP Gen 8 Server BIOS Settings

3. <input type="checkbox"/>	HP Gen 9 Server: Set the date and time	<ol style="list-style-type: none"> 1. Navigate to Date and Time. 2. Set the data and time, and time format.  <ol style="list-style-type: none"> 3. Press Esc to navigate to the main menu.
4. <input type="checkbox"/>	HP Gen 9 Server: System configuration	<ol style="list-style-type: none"> 1. Select the Boot Options menu. If the Boot Mode is NOT Legacy BIOS mode, press Enter to open the BIOS mode menu; otherwise, skip to the next step.  <ol style="list-style-type: none"> 2. Select Legacy BIOS Mode. 3. Press Esc once to back out to the BIOS/Platform Configuration (RBSU) menu.

Procedure 72. Configure HP Gen 8 Server BIOS Settings

5. <input type="checkbox"/>	HP Gen 9 Server: System Configuration	<ol style="list-style-type: none"> 1. Select the System Options menu 2. Select the Serial Port Options menu. 3. Change Embedded Serial Port to COM2. 4. Change Virtual Serial Port to COM1.  <ol style="list-style-type: none"> 5. Press Esc twice to back out to the BIOS/Platform Configuration (RBSU) menu.
6. <input type="checkbox"/>	HP Gen 9 Server: Server Availability	<ol style="list-style-type: none"> 1. Select the Server Availability menu. 2. Set the Automatic Power-On to Restore Last Power State. 3. Set Power-On Delay to No Delay.  <ol style="list-style-type: none"> 4. Press Esc twice to back out to the BIOS/Platform Configuration (RBSU) menu.

Procedure 72. Configure HP Gen 8 Server BIOS Settings

7. <input type="checkbox"/>	HP Gen 9 Server: Power Management	<ol style="list-style-type: none"> 1. Select the Power Management menu. 2. Set HP Power Profile to Maximum Performance.  <ol style="list-style-type: none"> 3. Press Esc once to back out to the BIOS/Platform Configuration (RBSU) menu.
8. <input type="checkbox"/>	HP Gen 9 Server: Save settings and exit	<ol style="list-style-type: none"> 1. Press F10 to save the updated settings, then y to confirm the settings change. 2. Press Esc twice to back out to the System Utilities menu.
9. <input type="checkbox"/>	HP Gen 9 Server: Reboot	Select Reboot the System and press Enter to confirm.

Appendix A.2.3 Configure Oracle X5-2/Netra X5-2/X6-2/X7-2 Server**Procedure 73. Configure Oracle X5-2/Netra X5-2/X6-2/X7-2 Server BIOS Settings**

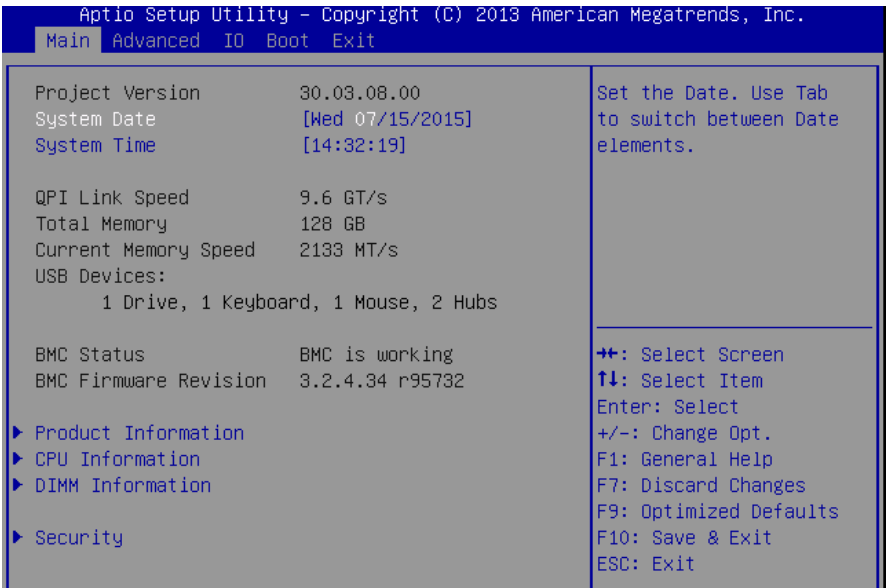

This procedure configures Oracle rack mount server BIOS settings.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

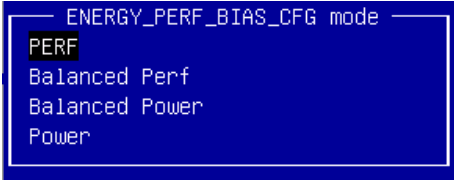

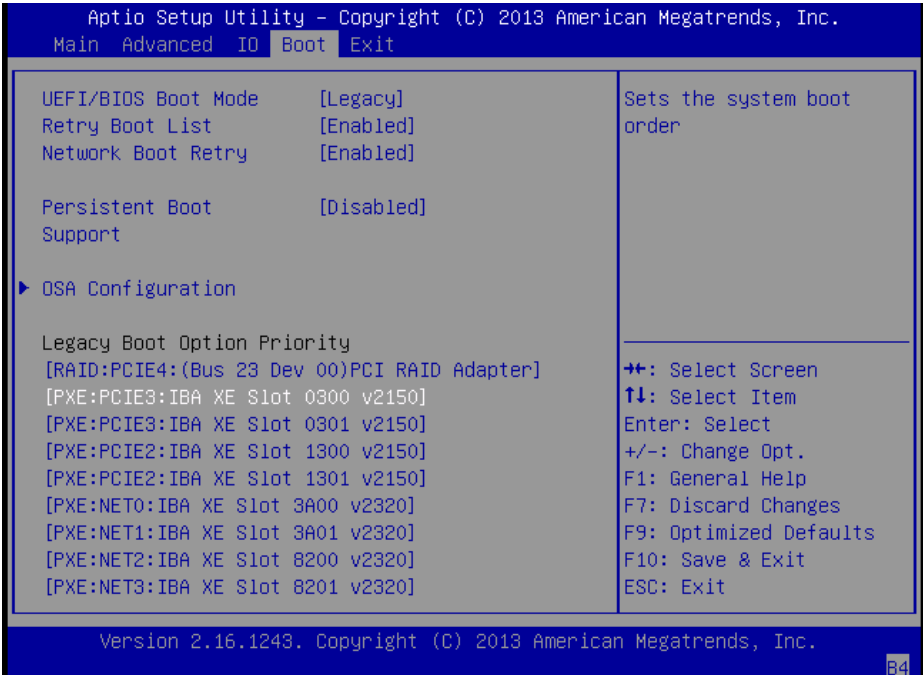

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Oracle X5-2/Netra X5-2/X6-2/X7-2: Access iLO GUI	Obtain access to the Oracle X5-2/Netra X5-2/X6-2/X7-2 iLOM by following Appendix D.2 Access the iLOM GUI (Oracle X5-2/Netra X5-2/X6-2/X7-2).
--------------------------------	--	--

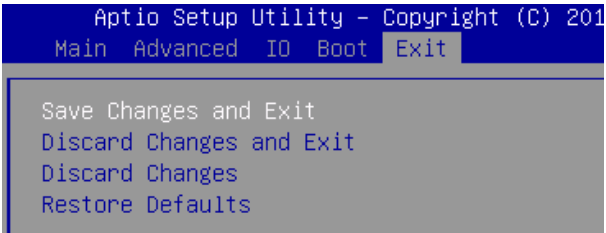

Procedure 73. Configure Oracle X5-2/Netra X5-2/X6-2/X7-2 Server BIOS Settings

2. <input type="checkbox"/>	Oracle X5-2/Netra X5-2/X6-2/X7-2: Reboot	<ol style="list-style-type: none"> 1. Reboot the server. 2. After the server is powered on, press F2 when prompted to access the Setup Utility.  <p>This action takes you to the Main Menu.</p> 
3. <input type="checkbox"/>	Oracle X5-2/Netra X5-2/X6-2: Set the server date and time	Set the System Date and System Time .

Procedure 73. Configure Oracle X5-2/Netra X5-2/X6-2/X7-2 Server BIOS Settings

<p>4. <input type="checkbox"/> Oracle X5-2/Netra X5-2/X6-2: Advanced menu</p>	<ol style="list-style-type: none"> 1. Select the Advanced menu.  <ol style="list-style-type: none"> 2. Select the CPU Power Management Configuration option. 3. Make sure the ENERGY_PERF_BIAS_CFG mode is set to PERF and press Enter.  <ol style="list-style-type: none"> 4. Press Esc to return to the advanced menu. 
<p>5. <input type="checkbox"/> Oracle X5-2/Netra X5-2/X6-2: Advanced menu</p>	<ol style="list-style-type: none"> 1. Select the Boot menu. 2. Under Legacy Boot Option, verify the RAID Adapter is listed first. If not, highlight it and use the + key to move it to the top of the list. 

Procedure 73. Configure Oracle X5-2/Netra X5-2/X6-2/X7-2 Server BIOS Settings

6. <input type="checkbox"/>	Oracle X5-2/Netra X5-2/X6-2: Save changes and exit	<ol style="list-style-type: none"> 1. Select the Exit menu.  <ol style="list-style-type: none"> 2. Select Save Changes and Exit. 3. Click Yes to confirm.
7. <input type="checkbox"/>	Oracle X7-2 server BIOS settings	Refer to [21] Oracle TPD Initial Product Manufacture Software Installation Procedure for BIOS configuration parameters and BIOS setup utility menu sections for details on executing the above required procedures for X7-2 BIOS settings.

Procedure 74. Enable Oracle Netra X5-2 CPU Power Limit for NEBS (Optional)

This procedure configures Oracle rack mount server NEBS settings

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Oracle Netra X5-2: Enable CPU power limit after IPM	Log into the TVOE as admusr . <pre>\$ sudo /usr/TKLC/plat/sbin/cpuPowerLimit --enable</pre>
2. <input type="checkbox"/>	Oracle Netra X5-2: Reboot server	Reboot the server. <pre>\$ sudo init 6</pre>
3. <input type="checkbox"/>	Oracle Netra X5-2: Check current setting	Check the current CPU power limit setting. <pre>\$ sudo /usr/TKLC/plat/sbin/cpuPowerLimit --status</pre>

Procedure 75. Disable Oracle Netra X5-2/X6-2/X7-2 CPU Power Limit for NEBS (Optional)

This procedure disables Oracle rack mount server NEBS settings

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Oracle Netra X5-2: Disable CPU power limit after IPM	Log into the TVOE as admusr . <pre>\$ sudo /usr/TKLC/plat/sbin/cpuPowerLimit --disable</pre>
2. <input type="checkbox"/>	Oracle Netra X5-2: Reboot server	Reboot the server. <pre>\$ sudo init 6</pre>
3. <input type="checkbox"/>	Oracle Netra X5-2: Check current setting	Check the current CPU power limit setting. <pre>\$ sudo /usr/TKLC/plat/sbin/cpuPowerLimit --status</pre>

Appendix B. Upgrade Server Firmware

Appendix B.1 HP DL380 Server

This procedure upgrade the DL380 server firmware. All HP servers should have SNMP disabled. Refer to Appendix C Change the SNMP Configuration Settings.

The Service Pack for ProLiant (SPP) installer automatically detects the firmware components available on the target server and only upgrades those components with firmware older than what is provided by the SPP in the HP FUP version being used.

Variable	Value
<iLO_IP>	Fill in the IP address of the iLO for the server being upgraded _____
<iLO_admin_user>	Fill in the username of the iLO's administrator user _____
<iLO_admin_password>	Fill in the password for the iLO's administrator user _____
<local_HPSPS_image_path>	Fill in the filename for the HP support pack for ProLiant ISO _____
<admusr_password>	Fill in the password for the admusr user for the server being upgraded _____

Needed Materials:

- HP service pack for ProLiant (SPP) firmware ISO image (minimum version 2.2.9)
- HP MISC firmware ISO image (for errata updates if applicable)
- HP Solutions Firmware Upgrade Pack Release Notes [1]
- 4GB or larger USB stick is needed if upgrading firmware with USB media

Note: For the **Update Firmware Errata** step, check the HP Solutions Firmware Upgrade Pack Release notes [1] to see if there are any firmware errata items that apply to the server being upgraded. If there is, there is a directory matching the errata's ID in the **/errata** directory of the HP MISC firmware ISO image. The errata directories contain the errata firmware and a README file detailing the installation steps.

Procedure 76. Upgrade HP DL380 Server Firmware

This procedure upgrades the DL380 server firmware.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. Local Work☐

Station: Log into the iLO web GUI

Access the iLO web GUI.

`https://<iLO_IP>/`

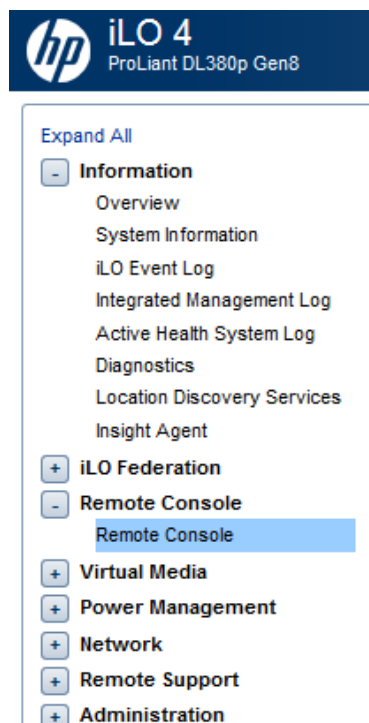

Username: <iLO_admin_user>

Password: <iLO_admin_password>

Procedure 76. Upgrade HP DL380 Server Firmware

2. **iLO4 Web GUI:**
Launch remote console

1. Launch the Java Integrated Remote Console applet.
2. Navigate to the **Remote Console** page. Under Java Integrated Remote Console (Java IRC), click **Launch**.

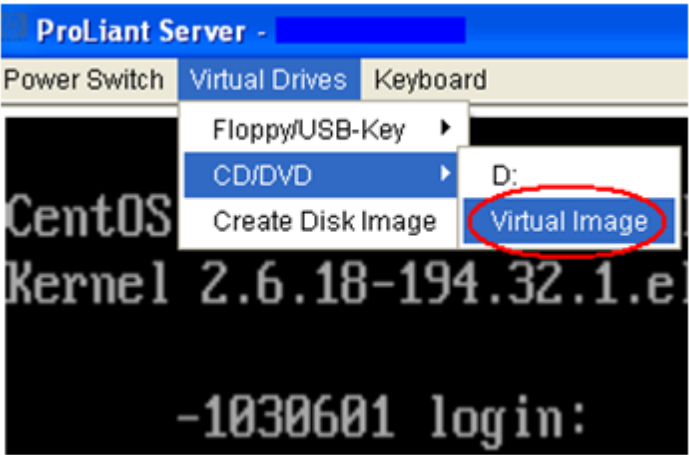

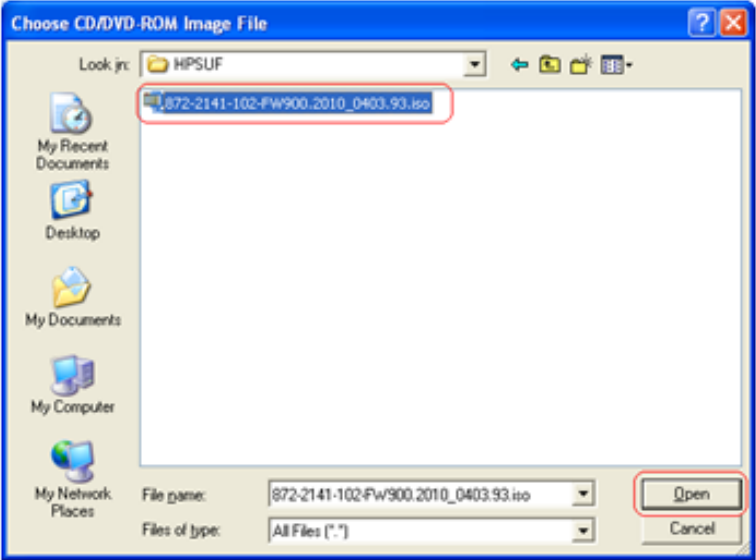

**Java Integrated Remote Console (Java IRC)**

The Java IRC provides remote access to the system KVM and control of Virtual Power and Media from a Java applet-based console. Java IRC requires the availability of Java.

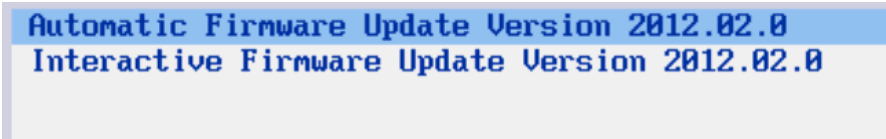

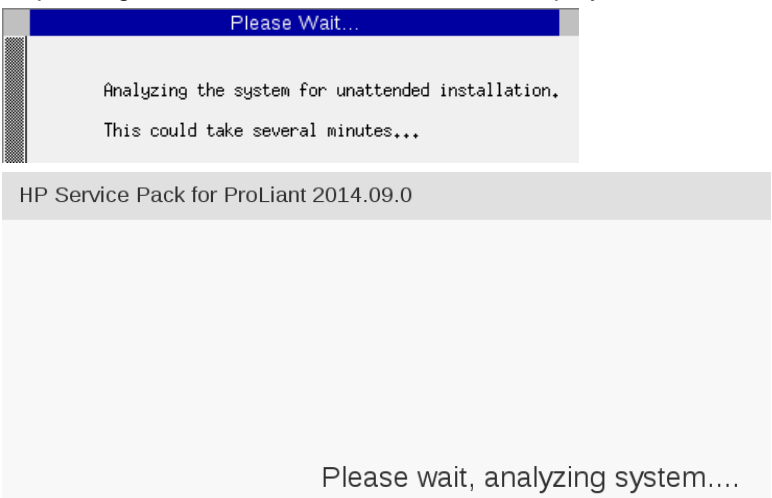

3. Click **Yes** to acknowledge the security warning, if presented.

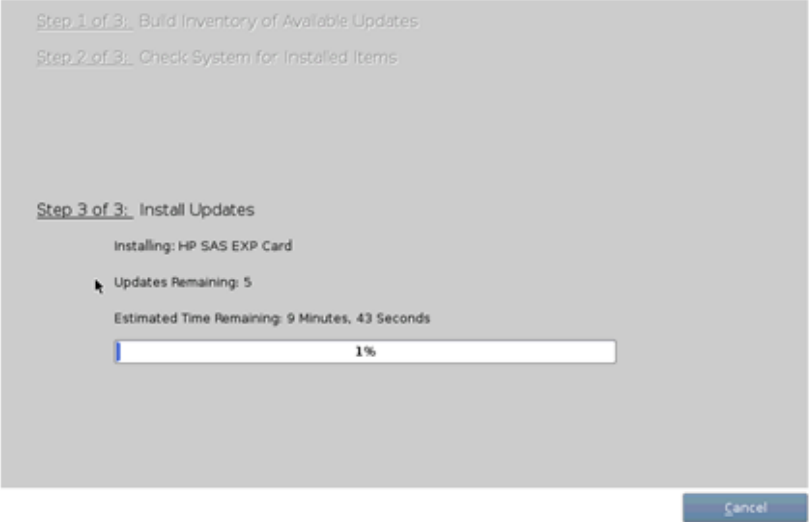

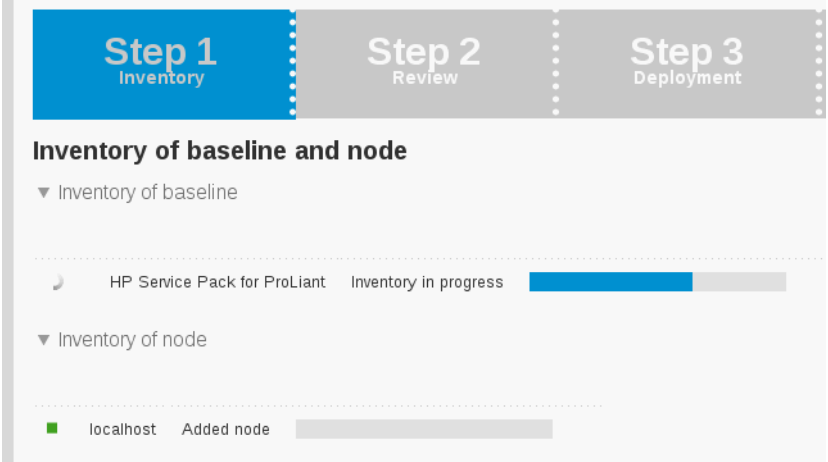

Procedure 76. Upgrade HP DL380 Server Firmware

<p>3. <input type="checkbox"/> iLO4 Remote Console: Create virtual drive connection</p>	<div data-bbox="548 247 1416 310">  If using SPP USB media plugged into the server, skip this step  </div> <p>1. Navigate to Virtual Drives > CD/DVD > Virtual Image.</p> <div data-bbox="521 363 1205 814">  </div> <p>2. Browse to the HP Support Pack for ProLiant ISO file copied to the workstation and click Open.</p> <div data-bbox="521 909 1271 1465">  </div> <p>At the bottom of the remote console screen, the VirtualIM green highlighted drive icon displays.</p> <div data-bbox="521 1549 899 1696">  </div>
<p>4. <input type="checkbox"/> iLO4 Remote Console: Login</p>	<p>Log into the server as admusr.</p>
<p>5. <input type="checkbox"/> iLO4 Remote Console: Reboot the server</p>	<pre>\$ sudo init 6</pre>

Procedure 76. Upgrade HP DL380 Server Firmware

6. <input type="checkbox"/>	iLO4 Remote Console: Perform an unattended firmware upgrade	<p>Press Enter to select the Automatic Firmware Update procedure.</p>  <p>Note: If no key is pressed in 30 seconds, the system automatically performs an automatic firmware update.</p>
7. <input type="checkbox"/>	iLO4 Remote Console: Monitor installation	<p>Important: Do not click inside the remote console during the rest of the firmware upgrade process.</p> <p>The firmware install stays at the EULA acceptance screen for a short period. The time it takes to complete this process varies by server and network connection speed and takes several minutes.</p> <p>Depending on the hardware, these screens display.</p>  <p>Note: No progress indication displays. The installation proceeds automatically to the next step.</p>

Procedure 76. Upgrade HP DL380 Server Firmware

8. <input type="checkbox"/>	iLO4 Remote Console: Monitor installation	<p>Once analysis is complete, the installer begins to upgrade inventory and deploy the eligible firmware components.</p> <p>A progress indicator displays. If iLO firmware is applied, the remote console disconnects, but continues upgrading.</p> <p>If the remote console closes due to the iLO upgrading, wait 3-5 minutes and log back into the iLO Web GUI and re-connect to the remote console. The server might already be done upgrading and might have rebooted.</p> <p>Depending on the hardware, these screens display.</p>   <p>Note: If the iLO firmware is to be upgraded, it is upgraded last. At this point the iLO 2 session is terminated and you lose the remote console, virtual media, and web GUI connections to the server. This is expected and does not impact the firmware upgrade process.</p>
9. <input type="checkbox"/>	Local Work Station: Clean up	<p>Once the firmware updates have been completed, the server automatically reboots.</p> <p>Closing the remote console window disconnects the virtual image and you can close the iLO3/iLO4 web GUI browser session.</p> <p>If you are using SPP USB media plugged into the server, you can now remove it.</p>

Procedure 76. Upgrade HP DL380 Server Firmware

10. <input type="checkbox"/>	Local Work Station: Verify server availability	Wait 3 to 5 minutes and verify the server has rebooted and is available by gaining access to the login prompt.
11. <input type="checkbox"/>	Local Work Station: Update firmware errata	Refer to the ProLiant Server Firmware Errata section of [1] to determine if this HP Solutions Firmware Update Pack contains additional firmware errata updates that should be applied to the server.
12. <input type="checkbox"/>	Repeat for additional RMS servers	Repeat this procedure for additional HP DL380 rack mount servers.

Appendix B.2 Oracle X5-2/Netra X5-2/X6-2/X7-2**Needed Materials:**

- Oracle Firmware Upgrade Pack 3.x.x
- Oracle Firmware Upgrade Pack 3.x.x Upgrade Guide

Note: The minimum supported Oracle Firmware Upgrade Pack is release 3.1.7 (X7-2: 3.1.8). However, when upgrading firmware, it is recommended that the latest release is used. Refer to the Oracle Firmware Upgrade Pack Release Notes for procedures on how to obtain the firmware, and follow the procedures in the Oracle Firmware Upgrade Pack Upgrade Guide to upgrade the firmware.

Appendix C. Change the SNMP Configuration Settings**Procedure 77. Change SNMP Configuration Settings for HP DL380**

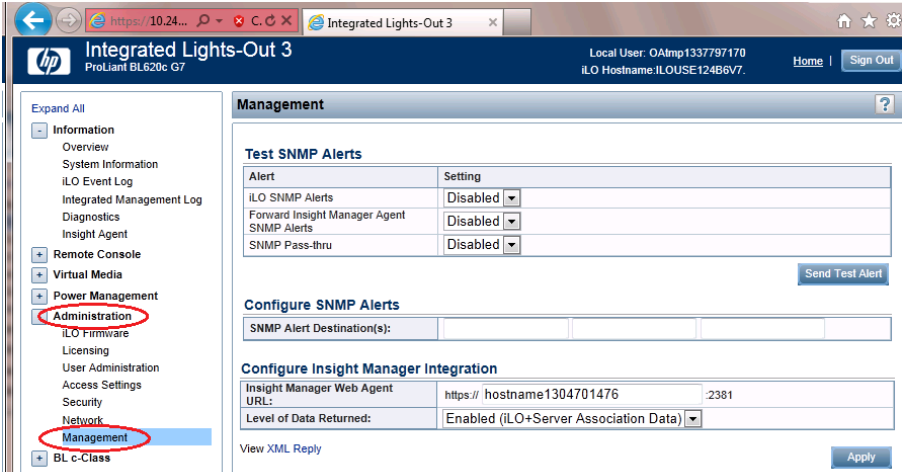

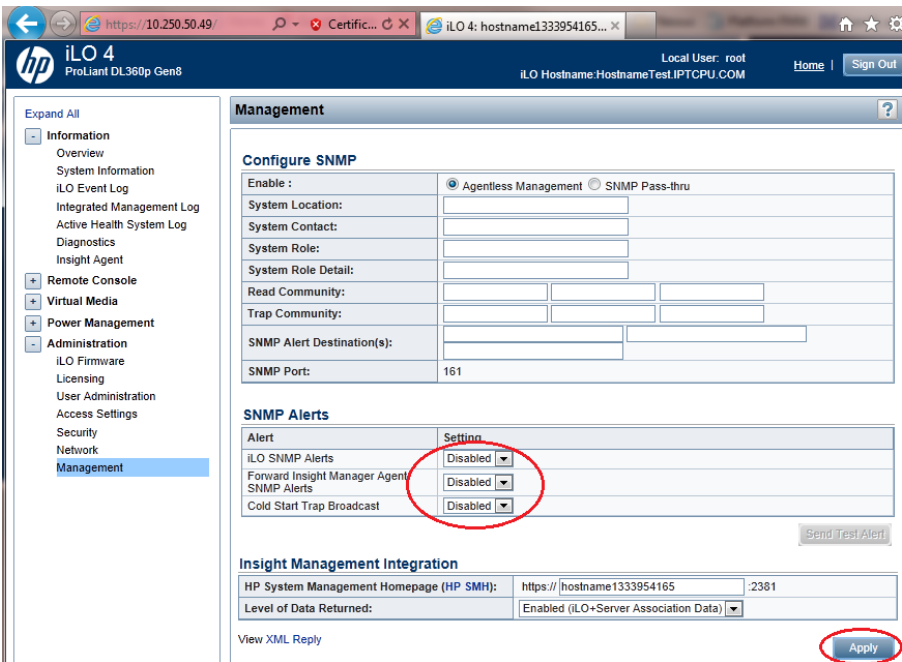

This procedure upgrades the HP DL380 server firmware.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Local Work Station: Log into the iLO web GUI	<p>Access the iLO web GUI.</p> <p><code>https://<iLO_IP>/</code></p>

Appendix E.3 Oracle X5-2/Netra X5-2/X6-2/X7-2 Servers (Change iLOM IP Address using Serial Console)

Procedure 82. Change the TVOE Oracle X5-2/Netra X5-2/X6-2iLOM Address

This procedure sets the IP address of the TVOE iLOM on Oracle X5-2/Netra X5-2/X6-2/X7-2 servers to the customer's network so it can be accessed by Oracle support.

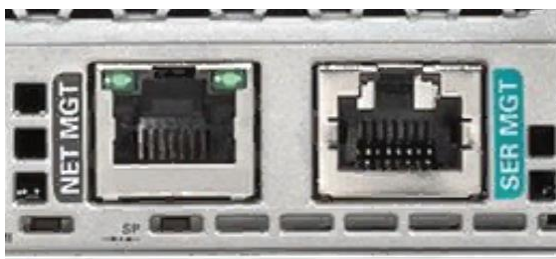

Note: By default the iLOM is configured to get its IP address dynamically through DHCP. This procedure describes how to statically set the IP address of the iLOM using a keyboard and monitor.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. ☐ Oracle X5-2/Netra X5-2/X6-2/X7-2 Server

1. Connect to the serial management port.

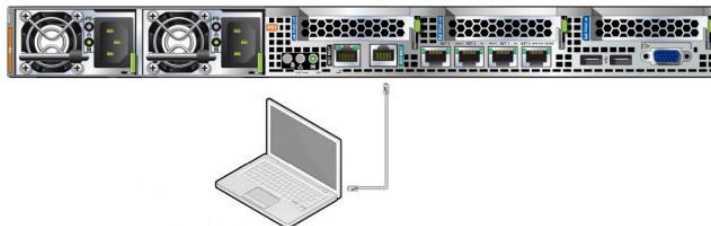

Serial Management Port

The serial management connector (labeled SER MGT) is an RJ-45 connector that can be accessed from the rear panel. This port is the default connection to the server. Use this port *only* for server management.

TABLE 19 Default Serial Connections for Serial Port

Parameter	Setting
Connector	SER MGT
Rate	9600 baud
Parity	None
Stop bits	1
Data bits	8

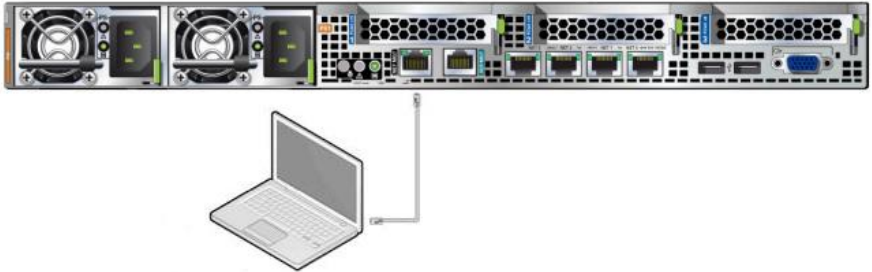

2. Connect a laptop to the serial management (SER MGT) port on the server.

2. ☐ Log into the serial console

1. Press **Enter** on the terminal.
 2. Type your Oracle iLOM user name (default user: root) and press **Enter**.
 3. Type the password associated with your user name and press **Enter**.
- Oracle iLOM displays the default command prompt (->), indicating that you have successfully logged in.

Procedure 82. Change the TVOE Oracle X5-2/Netra X5-2/X6-2iLOM Address

3. <input type="checkbox"/>	Configure NET_MGT network interface	<ol style="list-style-type: none"> 1. Navigate to the /SP/network target. <div data-bbox="565 296 1446 342"> <pre>> cd /SP/network</pre> </div> 2. Ensure the SP network interface is enabled. <div data-bbox="565 401 1446 447"> <pre>> set state=enabled</pre> </div> 3. Configure a static IPv4 address for the SP. <div data-bbox="565 506 1446 638"> <pre>> set pendingipdiscovery=static pendingipaddress=<ip_address> pendingipnetmask=<netmask> pendingipgateway=<gateway> commitpending=true</pre> </div> 4. Verify settings. <div data-bbox="565 697 1446 737"> <pre>> show</pre> </div>
4. <input type="checkbox"/>	Connect to the NET_MGT port	<p>Connect a laptop to the network management (NET MGT) port on the server:</p>  <p>The diagram illustrates a server rack with multiple units. A laptop is connected to the server via a cable plugged into a port labeled 'NET MGT' on the front panel of the server unit.</p>

Appendix F. Attach an ISO Image to a Server using the iLO or iLOM

As an alternative to mounting the ISO image using USB, you may also mount the ISO using the iLO or iLOM for HP and Oracle rack mount servers.

Appendix F.1 HP DL380 Servers (iLO4)

Procedure 83. Mount HP DL380 Servers with ISO Image using iLO4

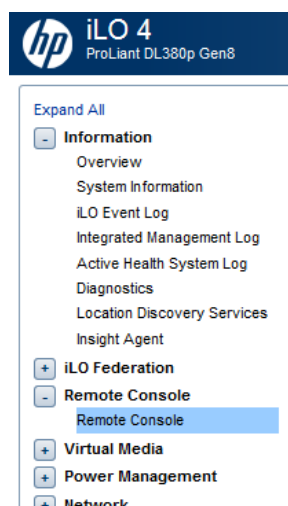

This procedure attaches an ISO image to HP DL380 servers using the iLO4.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. **iLO4 Web GUI:**
Launch remote console

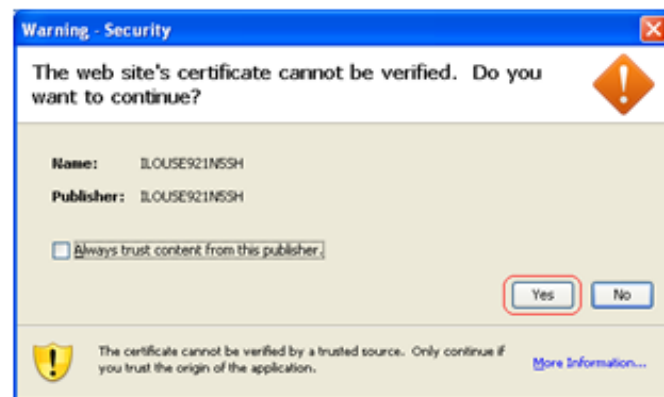

1. Launch the Java Integrated Remote Console applet.
2. Navigate to the **Remote Console** page. Under Java Integrated Remote Console (Java IRC), click **Launch**.

Java Integrated Remote Console (Java IRC)

The Java IRC provides remote access to the system KVM and control of Virtual Power and Media from a Java applet-based console. Java IRC requires the availability of Java.

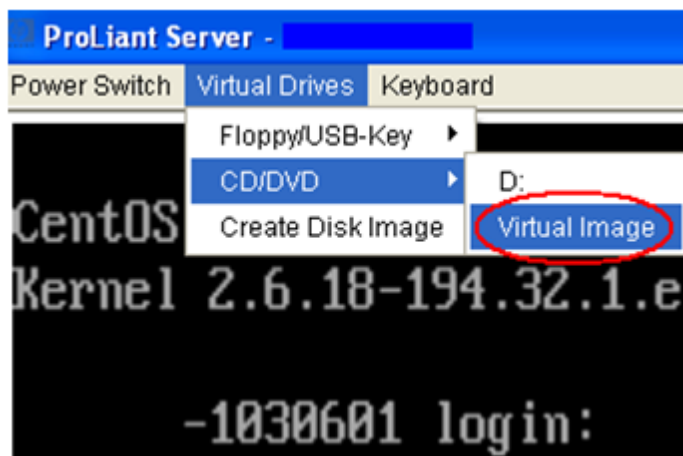

3. Click **Yes** to acknowledge the security warning, if presented.

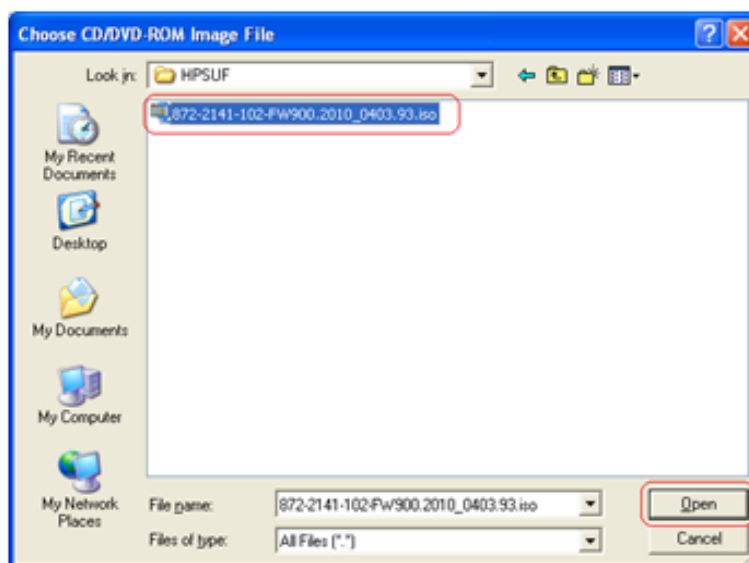

Procedure 83. Mount HP DL380 Servers with ISO Image using iLO4

2. **iLO4 Remote Console:** Create virtual drive connection

1. Navigate to **Virtual Drives > CD/DVD > Virtual Image**.

2. Browse to the **HP Support Pack for ProLiant ISO** file copied to the workstation and click **Open**.

At the bottom of the remote console screen, the VirtualIM green highlighted drive icon displays.

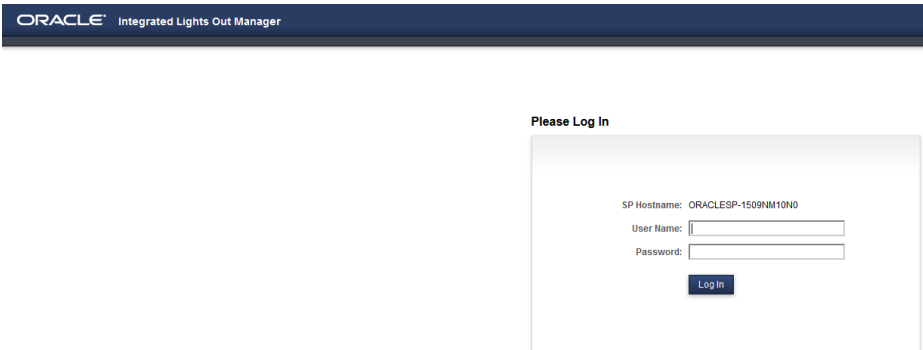

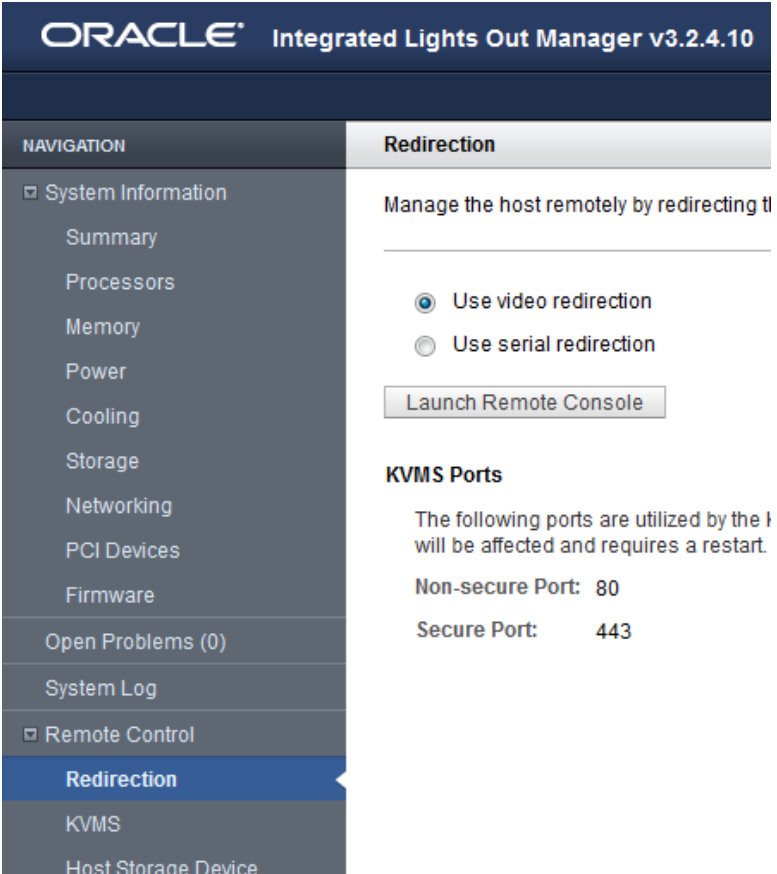

Appendix F.2 Oracle X5-2/Netra X5-2/X6-2/X7-2 Servers (iLOM)

Procedure 84. Mount Oracle X5-2/Netra X5-2/X6-2/X7-2 Servers with ISO Image using iLOM

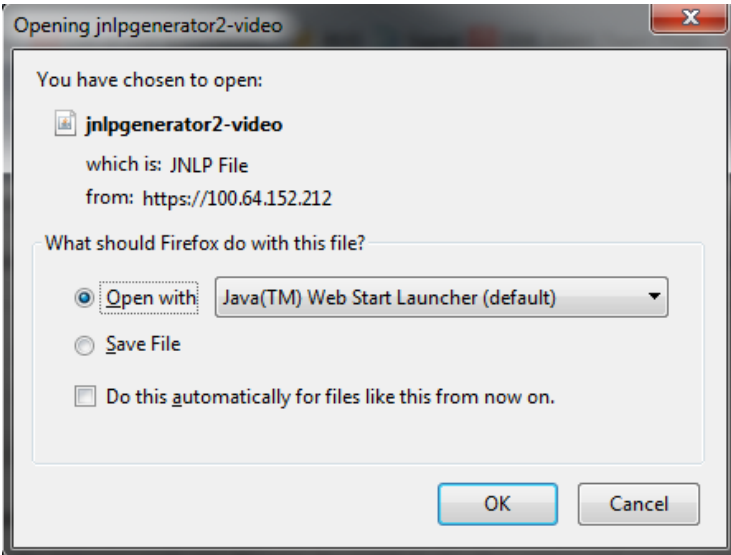

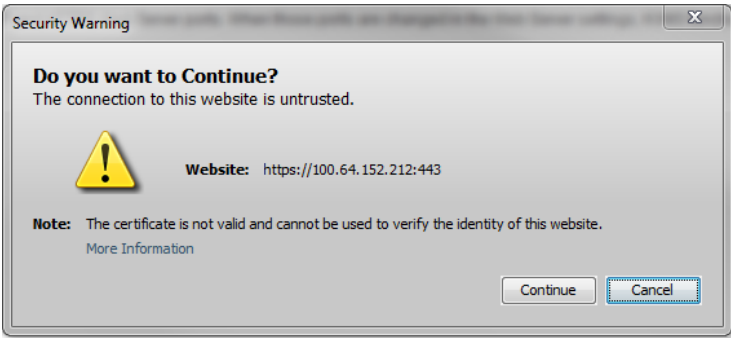

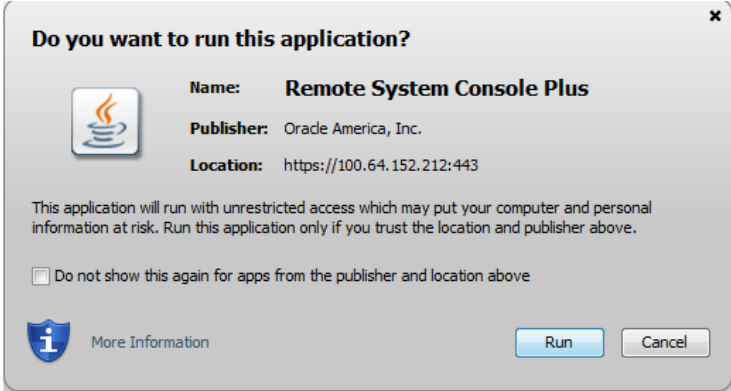

This procedure attaches an ISO image to Oracle rack mount servers using the iLOM.

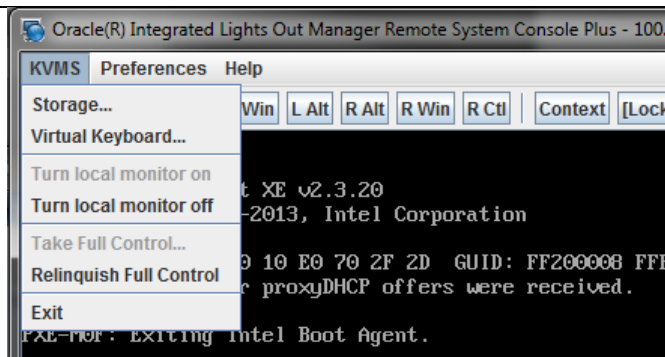

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

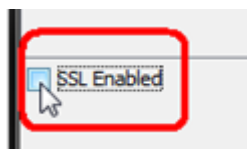

1. <input type="checkbox"/>	Oracle X5-2/Netra X5-2/X6-2: Login	<p>Log into the Oracle rack mount server iLOM.</p>

All those servers that match the existing Site Specific Community String are not updated again until the string name is changed.</p>
-----------------------------	--	---

Appendix I. Install NetBackup Client

NetBackup is a utility that manages backups and recovery of remote systems. The NetBackup suite is used to support disaster recovery at the customer site. These procedures install and configure the NetBackup client software on an application server using two methods: first, using platcfg; and second, using nbAutoInstall (push Configuration). The supported versions of NetBackup are 7.6, and 7.7.

Prerequisites:

- Application server platform installation has been completed.
- Site survey has been performed to determine the network requirements for the application server, and interfaces have been configured.
- NetBackup server is available to copy, sftp, the appropriate NetBackup Client software to the application server.

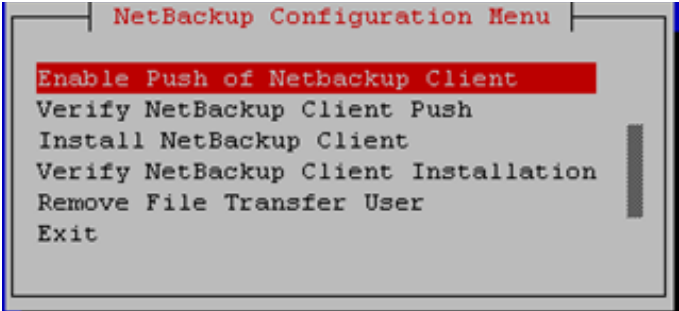

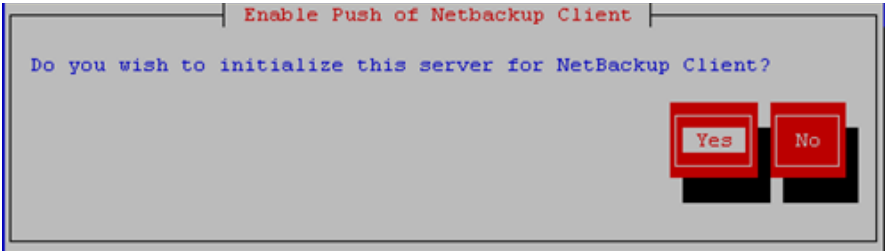

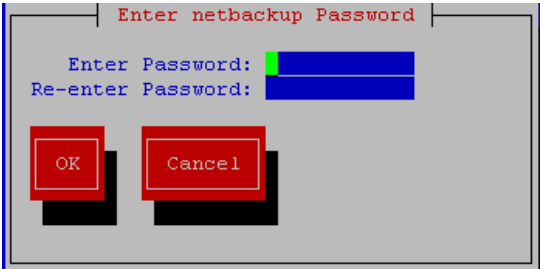

Appendix I.1 Install NetBackup Client Using platcfg

Execute this procedure to switch/migrate NetBackup installation using platcfg, instead of using NBAutoInstall (push configuration).

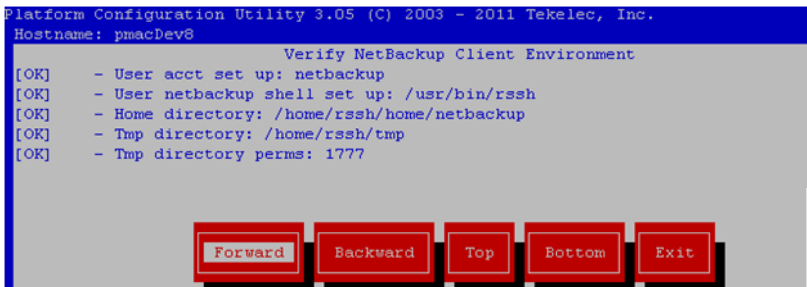

Procedure 87. Install NetBackup Client Using platcfg

S T E P #	This procedure installs NetBackup using platcfg. Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number. If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.	
1. <input type="checkbox"/>	Application Server: Login	<ol style="list-style-type: none"> 1. Login and launch the integrated remote console. 2. SSH to the application server (PMAC or NOAM) as admusr using the management network for the PMAC or XMI network for the NOAM.

Procedure 87. Install NetBackup Client Using platcfg

2. <input type="checkbox"/>	Application Server iLO: Navigate to NetBackup configuration	<ol style="list-style-type: none"> 1. Enter the platcfg menu. <pre>\$ sudo su - platcfg</pre> 2. Navigate to NetBackup > Configuration. 
3. <input type="checkbox"/>	Application Server iLO: Enable push of NetBackup client	Navigate to NetBackup Configuration > Enable Push of NetBackup Client . 
4. <input type="checkbox"/>	Application Server iLO: Enter NetBackup password	<ol style="list-style-type: none"> 1. Enter the NetBackup password.  2. Select OK. 3. If the version of NetBackup is 7.6.0.0 or greater, follow the instructions provided by the OSDC download for the version of NetBackup being pushed.

Procedure 87. Install NetBackup Client Using platcfg

<p>5.</p> <p><input type="checkbox"/></p>	<p>Application Server iLO: Verify NetBackup client software push is enabled</p>	<p>1. Navigate to NetBackup Configuration > Verify NetBackup Client Push.</p>  <p>2. Verify list entries indicate OK for NetBackup client software environment.</p> <p>3. Select Exit to return to NetBackup Configuration menu.</p>
<p>6.</p> <p><input type="checkbox"/></p>	<p>NetBackup Server: Push appropriate NetBackup client software to application server</p>	<p>Notes:</p> <ul style="list-style-type: none"> The NetBackup server is not an application asset. Access to the NetBackup server and location path of the NetBackup Client software is under the control of the customer. These steps are required on the NetBackup server to push the NetBackup client software to the application server. These example steps assume the NetBackup server is executing in a Linux environment. The backup server is supported by the customer, and the backup utility software provider. If this procedural STEP, executed at the backup utility server, fails to execute successfully, STOP and contact the Customer Care Center of the backup and restore utility software provider being used at this site. <p>1. Log into the NetBackup server using password provided by customer.</p> <p>2. Navigate to the appropriate NetBackup Client software path.</p> <p>Example input:</p> <pre>\$ cd /usr/opensv/netbackup/client/Linux/RedHat2.6.18/</pre> <p>3. Execute the sftp_to_client netbackup utility using the application IP address and application NetBackup user:</p> <p>Note: If the sftp fails, try to login to the DSR server using "netbackup" user and provide the password which was set in step 4 above. It will ask to change the password so change the password once.</p>

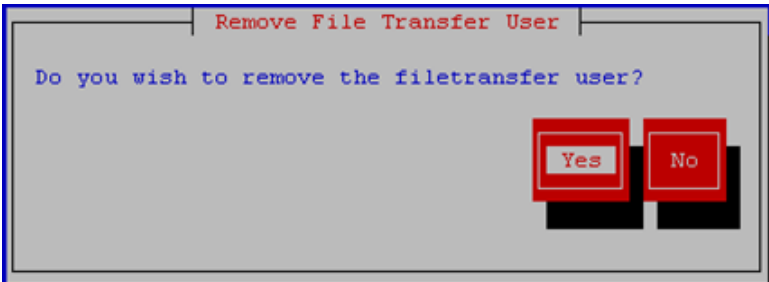

Procedure 87. Install NetBackup Client Using platcfg

		<pre> \$./sftp_to_client <application IP> netbackup Connecting to 192.168.176.31 NetBackup@192.168.176.31's password: Enter application server NetBackup user password; the following NetBackup software output is expected, observe the sftp completed successfully: File "/usr/opensv/NetBackup/client/Linux/6.5/.sizes" not found. Couldn't rename file "/tmp/bp.6211/sizes" to "/tmp/bp.6211/.sizes": No such file or directory File "/usr/opensv/NB-Java.tar.Z" not found. ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected ./sftp_to_client: line 793: [: : integer expression expected sftp completed successfully. </pre> <p>Notes:</p> <ul style="list-style-type: none"> Although the command executed above instructs you to execute the client_config command, DO NOT execute that command since it is executed by platcfg in the next step. The optional argument, -L, is used to avoid modification of the client's current bp.conf file.
7.	Set exec Permission	<ol style="list-style-type: none"> Change the group ownership of init.d directory using below command: <pre>sudo chgrp sys /etc/rc.d/init.d/</pre> Change the permissions of /tmp using below commands: <pre>sudo mount -o remount,exec /tmp</pre> To verify that the "exec" permission is allotted to /tmp execute below command: <pre>mount grep "/tmp"</pre> <p>Above command should display, /tmp with exec permissions</p>

Procedure 87. Install NetBackup Client Using platcfg

8. <input type="checkbox"/>	Application server iLO: Install NetBackup client software on application server	<ol style="list-style-type: none"> Execute the command. <div data-bbox="565 296 1446 369" style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre>\$ sudo chmod 555 /var/TKLC/home/rssh/tmp/bp.6211/client_config</pre> </div> <p>where NETBACKUP_BIN is the temporary directory where the NetBackup client install programs were copied in step 5. Modify the /tmp permissions back to "no exec" using below command: <pre>sudo mount -o remount,noexec /tmp</pre> Verify the permission using below command and check, /tmp has no exec permissions: <pre>mount grep "/tmp"</pre>

Procedure 87. Install NetBackup Client Using platcfg

10. <input type="checkbox"/>	Application Server iLO: Disable NetBackup client software transfer to the application server	<ol style="list-style-type: none"> 1. Navigate to NetBackup Configuration > Remove File Transfer User.  2. Click Yes to remove the NetBackup file transfer user from the application server.
11. <input type="checkbox"/>	Application Server iLO: Exit platform configuration utility (platcfg)	Exit out of platcfg by selecting Exit .
12. <input type="checkbox"/>	Application Server iLO: Verify server bp.conf file	Verify the server has been added to the /usr/opensv/netbackup/bp.conf file. <pre>\$ sudo cat /usr/opensv/netbackup/bp.conf SERVER = NB71server CLIENT_NAME = 10.240.34.10 CONNECT_OPTIONS = localhost 1 0 2</pre>

13.

**Application**

Server iLO: Use platform configuration utility (platcfg) to modify hosts file with NetBackup server alias

Note: After the successful transfer and installation of the NetBackup client software the NetBackup servers hostname can be found in the NetBackup **/usr/openv/netbackup/bp.conf** file, identified by the SERVER configuration parameter.

1. The NetBackup server hostname and IP address must be added to the application server's host's file. List the NetBackup server's hostname.

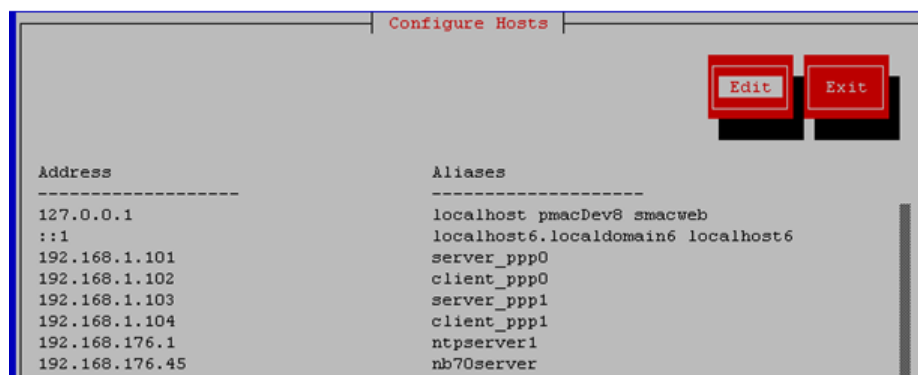

```
$ sudo cat /usr/openv/netbackup/bp.conf
SERVER = NB70server
CLIENT_NAME = pmacDev8
CONNECT_OPTIONS = localhost 1 0 2
```

2. Enter the platcfg menu to update application hosts file with the NetBackup Server alias.

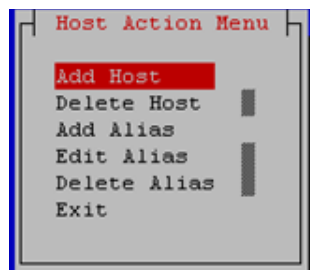

```
$ sudo su - platcfg
```

3. Navigate to **Network Configuration > Modify Hosts File**.

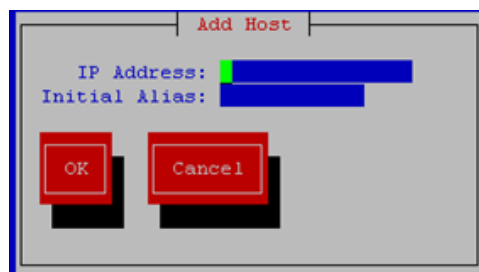

4. Click **Edit**.

5. Click **Add Host**.

6. Enter the appropriate data and click **OK**.

7. Confirm the host alias addition and exit the Platform Configuration Utility.

Procedure 87. Install NetBackup Client Using platcfg

14. <input type="checkbox"/>	Application Server iLO: Create links to NetBackup client notify scripts on application server where NetBackup expects to find them	<p>Copy the notify scripts from appropriate path on application server for given application.</p> <pre>\$ sudo ln -s <path>/bpstart_notify /usr/opensv/netbackup/bin/bpstart_notify \$ sudo ln -s <path>/bpend_notify /usr/opensv/netbackup/bin/bpend_notify</pre> <p>An example of <path> is /usr/TKLC/appworks/sbin.</p>
---------------------------------	--	--

Appendix I.2 Install NetBackup Client Using NBAutoInstall

Execute this procedure to switch/migrate NetBackup installation using NBAutoInstall (push configuration), instead of manual installation using platcfg.

Notes:

- Skip this procedure for DSR 8.4 VE DSR Deployment on X7-2.
- This procedure enables TPD to automatically detect when a NetBackup Client is installed and then completes TPD related tasks needed for an effective NetBackup Client operation. With this procedure, the NetBackup Client installation (pushing the client and performing the installation) is the responsibility of the customer and is not covered in this procedure

Procedure 88. Install NetBackup Client Using NBAutoInstall

STEP #	<p>This procedure installs NetBackup using NBAutoInstall.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.</p>	
1. <input type="checkbox"/>	Application Server iLO: Login	<ol style="list-style-type: none"> 1. Login and launch the integrated remote console. 2. SSH to the application server (PMAC or NOAM) as admusr using the management network for the PMAC or XMI network for the NOAM.
2. <input type="checkbox"/>	Application Server iLO: Enable nbAutoInstall	<pre>\$ sudo /usr/TKLC/plat/bin/nbAutoInstall --enable</pre>
3. <input type="checkbox"/>	Application Server iLO: Create links to NetBackup client notify scripts on the application server where NetBackup expects to find them	<pre>\$ sudo mkdir -p /usr/opensv/netbackup/bin/ \$ sudo ln -s <path>/bpstart_notify /usr/opensv/netbackup/bin/bpstart_notify \$ sudo ln -s <path>/bpend_notify /usr/opensv/netbackup/bin/bpend_notify</pre> <p>An example of <path> is /usr/TKLC/appworks/sbin.</p>

Procedure 88. Install NetBackup Client Using NBAutoInstall

4. <input type="checkbox"/>	Application Server iLO: Verify NetBackup configuration file	<ol style="list-style-type: none"> 1. Open /usr/opensv/netbackup/bp.conf and make sure it points to the NetBackup server. <pre>\$ sudo vi /usr/opensv/netbackup/bp.conf SERVER = nb75server CLIENT_NAME = 10.240.10.185 CONNECT_OPTIONS = localhost 1 0 2</pre> <p>Note: Verify the server name matches the NetBackup server, and verify the CLIENT_NAME matches the hostname or IP of the local client machine. If they do not, update them as necessary.</p> 2. Edit /etc/hosts and add the NetBackup server. <pre>\$ sudo vi /etc/hosts e.g.: 192.168.176.45 nb75server</pre> <p>Note: The server now periodically checks for a new version of the NetBackup client and performs necessary TPD configuration accordingly.</p> 3. At any time, you can push and install a new version of the NetBackup client.
-----------------------------	---	--

Appendix I.3 Create NetBackup Client Configuration File**Procedure 89. Create NetBackup Client Configuration File**

S T E P #	Application Server iLO: Create NetBackup config File	<p>This procedure copies a NetBackup Client config file into the appropriate location on the TPD based application server. This config file installs previously unsupported versions of NetBackup Client by providing necessary information to TPD.</p> <p>Note: Skip this procedure for DSR 8.4 VE deployments.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.</p>
		<ol style="list-style-type: none"> 1. <input type="checkbox"/> Create the NetBackup client config file on the server using the contents that were previously determined. The config file should be placed in the /usr/TKLC/plat/etc/netbackup/profiles directory and should follow this naming convention: NB\$ver.conf where \$ver is the client version number with the periods removed. For the 7.5 client, the value of \$ver would be 75 and the full path to the file would be: /usr/TKLC/plat/etc/netbackup/profiles/NB75.conf <p>Note: The config files must start with NB and must have a suffix of .conf. The server is now capable of installing the corresponding NetBackup Client.</p>

Procedure 89. Create NetBackup Client Configuration File

2. <input type="checkbox"/>	Application Server iLO: Create NetBackup config script	<p>Create the NetBackup client config script file on the server using the contents that were previously determined. The config script file should be placed in the /usr/TKLC/plat/etc/NetBackup/scripts directory. The name of the NetBackup Client config script file should be determined from the contents of the NetBackup Client config file.</p> <p>As an example for the NetBackup 7.5 client:</p> <p>NetBackup Client config: /usr/TKLC/plat/etc/netbackup/profiles/NB75.conf</p> <p>NetBackup Client config script: /usr/TKLC/plat/etc/netbackup/scripts/NB75</p>
--------------------------------	--	---

Appendix I.4 Configure PMAC Application NetBackup Virtual Disk**Procedure 90. Configure PMAC Application NetBackup Virtual Disk**

This procedure configures the PMAC application guest NetBackup virtual disk.

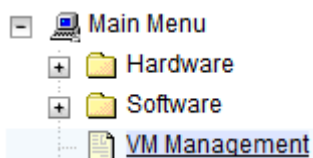

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	PMAC GUI: Login	<p>1. Open the web browser and navigate to the PMAC GUI:</p> <div data-bbox="565 951 1369 999" style="border: 1px solid black; padding: 2px;">http://<PMAC_network_IP></div> <p>2. Login as the guiadmin user.</p> <div data-bbox="527 1066 1437 1791">  </div>
--------------------------------	------------------------	--

Procedure 90. Configure PMAC Application NetBackup Virtual Disk**2. PMAC GUI:**

Create NetBackup virtual disk

1. Navigate to VM Management.**2. Click **Edit** and enter this data for the new NetBackup virtual disk.**

Appendix J. List of Frequently Used Time Zones

This table lists several valid time zone strings that can be used for the time zone setting in a CSV file, or as the time zone parameter when manually setting a DSR blade time zone. For an exhaustive list of **ALL** time zones, log into the PMAC server console and view the **/usr/share/zoneinfo/zone.tab** text file.

Table 5. List of Selected Time Zone Values

Time Zone Value	Description	Universal Time Code (UTC) Offset
UTC	Universal Time Coordinated	UTC-00
America/New_York	Eastern Time	UTC-05
America/Chicago	Central Time	UTC-06
America/Denver	Mountain Time	UTC-07
America/Phoenix	Mountain Standard Time — Arizona	UTC-07
America/Los Angeles	Pacific Time	UTC-08
America/Anchorage	Alaska Time	UTC-09
Pacific/Honolulu	Hawaii	UTC-10
Africa/Johannesburg		UTC+02
America/Mexico City	Central Time — most locations	UTC-06
Africa/Monrovia		UTC+00
Asia/Tokyo		UTC+09
America/Jamaica		UTC-05
Europe/Rome		UTC+01
Asia/Hong Kong		UTC+08
Pacific/Guam		UTC+10
Europe/Athens		UTC+02

Time Zone Value	Description	Universal Time Code (UTC) Offset
Europe/London		UTC+00
Europe/Paris		UTC+01
Europe/Madrid	mainland	UTC+01
Africa/Cairo		UTC+02
Europe/Copenhagen		UTC+01
Europe/Berlin		UTC+01
Europe/Prague		UTC+01
America/Vancouver	Pacific Time — west British Columbia	UTC-08
America/Edmonton	Mountain Time — Alberta, east British Columbia & west Saskatchewan	UTC-07
America/Toronto	Eastern Time — Ontario — most locations	UTC-05
America/Montreal	Eastern Time — Quebec — most locations	UTC-05
America/Sao Paulo	South & Southeast Brazil	UTC-03
Europe/Brussels		UTC+01
Australia/Perth	Western Australia — most locations	UTC+08
Australia/Sydney	New South Wales — most locations	UTC+10
Asia/Seoul		UTC+09
Africa/Lagos		UTC+01
Europe/Warsaw		UTC+01
America/Puerto Rico		UTC-04
Europe/Moscow	Moscow+00 — west Russia	UTC+04

Appendix K. Upgrade Cisco 4948 PROM

Procedure 91. Configure PMAC Application NetBackup Virtual Disk

This procedure upgrades the Cisco 4948 PROM.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Virtual PMAC: Verify PROM image is on the system	Determine if the PROM image for the 4948E-F is on the system. Execute this command. <div data-bbox="516 541 1437 590" style="border: 1px solid black; padding: 5px;"> <pre>\$ ls /var/TKLC/smac/image/<PROM_image_file></pre> </div> <p>Note: If the file exists, continue with the next step. If the file does not exist, copy the file from the firmware media and ensure the file is specified by the [1] HP Solutions Firmware Upgrade Pack, Software Centric Release Notes (Min 2.2.12).</p>
2. <input type="checkbox"/>	Virtual PMAC: Attach to switch console	<ol style="list-style-type: none"> 1. Connect serially to the switch by issuing this command as admusr on the server. <div data-bbox="565 829 1445 1087" style="border: 1px solid black; padding: 5px;"> <pre>\$ sudo /usr/bin/console -M <management_server_mgmt_ip_address> -l platcfg switch1A_console Enter platcfg@pmac5000101's password: <platcfg_password> [Enter '^Ec?' for help] Press Enter</pre> </div> 2. If the switch is not already in enable mode (switch# prompt), then issue the enable command; otherwise, continue with the next step. <div data-bbox="565 1176 1445 1257" style="border: 1px solid black; padding: 5px;"> <pre>Switch> enable Switch#</pre> </div>

Procedure 91. Configure PMAC Application NetBackup Virtual Disk

3. <input type="checkbox"/>	4948E-F: Configure ports on the switch on the 4948E-F switch	<ol style="list-style-type: none"> 1. To ensure connectivity, ping the management server's management VLAN IP <pmac_mgmt_ip_address> address from the switch. 2. Execute these commands. <div data-bbox="565 369 1445 569" style="border: 1px solid black; padding: 5px;"> <pre>Switch# conf t Switch(config-if)# switchport mode trunk Switch(config-if)# spanning-tree portfast trunk Switch(config-if)# end Switch# write memory</pre> </div> 3. Issue ping command. <div data-bbox="565 625 1445 884" style="border: 1px solid black; padding: 5px;"> <pre>Switch# ping <pmac_mgmtVLAN_ip_address> Type escape sequence to abort. Sending 5, 100-byte ICMP Echos to <pmac_mgmt_ip_address>, timeout is 2 seconds: !!!!!! Success rate is 100 percent (5/5), round trip min/avg/max = 1/1/4 ms</pre> </div> <p>If ping is not successful, double check that the procedure was completed correctly by repeating all steps up to this point. If after repeating those steps, ping is still unsuccessful, contact My Oracle Support (MOS).</p>
4. <input type="checkbox"/>	4948E-F: Upgrade PROM	<pre>Switch# copy tftp: bootflash: Address or name of remote host []? <pmac_mgmt_ip_address> Source filename []? <PROM_image_file> Destination filename [<PROM_image_file>]? [Enter] Accessing tftp://<pmac_mgmt__ip_address>/<PROM_image_file>... Loading <PROM_image_file> from <pmac_mgmt__ip_address> (via Vlan2): !!!!!!! [OK- 45606 bytes] 45606 bytes copied in 3.240 secs (140759 bytes/sec) Switch#</pre>
5. <input type="checkbox"/>	4948E-F: Reload the switch	<pre>Switch# reload System configuration has been modified. Save? [yes/no]: no Proceed with reload? [confirm] [Enter] === Boot messages removed ===</pre> <p>Note: Press Ctrl+C when the Type control-C to prevent autobooting message displays.</p>

Procedure 91. Configure PMAC Application NetBackup Virtual Disk

6. <input type="checkbox"/>	4948E-F: Initiate the PROM upgrade	<pre>rommon 1 > boot bootflash:<PROM_image_file> === PROM upgrade messages removed === System will reset itself and reboot within few seconds....</pre> <p>The switch reboots when the firmware upgrade completes.</p> <ol style="list-style-type: none"> 1. Allow it to boot up. 2. Wait for this line to display. <pre>Press RETURN to get started! Would you like to terminate autoinstall? [yes]: [Enter] Switch> show version include ROM ROM: 12.2(31r)SGA1 System returned to ROM by reload</pre> <ol style="list-style-type: none"> 3. Review the output and look for the ROM version. 4. Verify the version is the desired new version. <p>If the switch does not boot properly or has the wrong ROM version, contact My Oracle Support (MOS).</p>
7. <input type="checkbox"/>	4948E-F: Reset switch factory defaults	<pre>Switch# write erase Switch# reload</pre> <p>Notes:</p> <ul style="list-style-type: none"> • Wait until the switch reloads, then exit from console, press <ctrl-e><c><. > to return to the server prompt. • If asked to confirm, press Enter. If asked yes or no, type no and press Enter.

Appendix L. Sample Network Element

To enter all the network information for a network element, a specially formatted XML file needs to be filled out with the required network information. The network information is needed to configure both the NOAM and any SOAM network elements.

It is expected that the maintainer/creator of this file has networking knowledge of this product and the customer site at which it is being installed. The following is an example of a network element XML file.

The SOAM network element XML file needs to have same network names for the networks as the NOAMP network element XML file has. It is easy to create different network names accidentally for the NOAMP and SOAM network elements and then the mapping of services to networks is not possible.

Note: In Figure 3. Example Network Element XML File, IP values are network ID IPs and not host IPs.

```
<?xml version="1.0"?>
<networkelement>
  <name>NE</name>
  <networks>
    <network>
      <name>INTERNALXMI</name>
      <vlanId>3</vlanId>
      <ip>10.2.0.0</ip>
      <mask>255.255.255.0</mask>
      <gateway>10.2.0.1</gateway>
      <isDefault>true</isDefault>
    </network>
    <network>
      <name>INTERNALIMI</name>
      <vlanId>4</vlanId>
      <ip>10.3.0.0</ip>
      <mask>255.255.255.0</mask>
      <nonRoutable>true</nonRoutable>
    </network>
  </networks>
</networkelement>
```

Figure 3. Example Network Element XML File

nonRoutable Field: By defining a network as **nonRoutable** as seen above for INTERNALIMI, this means that the network shall not be routable outside the layer 3 boundary. This allows the user to define the same IP range in each SOAM site, and no duplicate IP check is performed during server creation.

Appendix M. Configure IDIH Fast Deployment

The `fdc.cfg` file contains sections. This table lists those sections with a short description.

Section	Description
Software Images	A list of the TVOE, TPD, and iDIH application versions.
TVOE RMS	Includes Hardware Type and ILO address of the Rack Mount Server.
TVOE Configuration (Up to 3)	Contains all IP addresses, hostname, and network devices for the TVOE host.
Guest Configurations (3)	The guest sections contain network and hostname configuration for the Oracle, Mediation, and Application guests.

Software Images

Update the software images section based on software versions you intend to install. The following table outlines typical installation failures caused by incorrect software versions. Use the **`fdconfig dumpsteps -file=`** command to produce output of a fast deployment session.

Software Image	Element	Command Text
TVOE ISO	mgmtsrvrtvoe	IPM Server
TPD ISO	Oracle,tpd Mediation,tpd Application,tpd	IPM Server
iDIH Mediation ISO	Mgmtsrvrtvoe,configExt	Transfer File
iDIH Oracle ISO iDIH Mediation ISO iDIH Application ISO	Oracle,ora Mediation,med Application,app	Upgrade Server

Note: For installation, **`oracleGuest-8.2.1.0.0-82.23.0-x86_64.iso`** is to be used.

TVOE RMS

The TVOE RMS section contains the ILO IP address and hardware profile. If the ILO IP address is incorrect, the PMAC cannot discover the rack mount server. Server discovery must occur before the installation can begin.

TVOE Configuration

This section defines the hostname, network IP addresses for the TVOE bridges and it defines the network devices. You can define the devices you intend to use for bonded interfaces and the tagged bonded interfaces you intend to associate with a bridge.

Guest Configuration

These sections contain the hostname, IPv4 addresses, IPv4 netmask, IPv4 gateway, and IPv6 addresses. If you do not intend to configure IPv6 addresses, then leave those IP addresses commented out. The IPv6 netmask is included in the IPv6 address.

Note: Although the network for the iDIH **int** network can be changed to a unique value, the IP scheme must follow these rules:

- db-guest int ip = x.y.z.**n**
- Mediation-guest int ip = x.y.z.**n+1**
- Appserver-guest int ip = x.y.z.**n+2**

Note: This network is a non-routable network, so if the IP range of this network is not required; it is recommended that these values are left unchanged from the fast deployment template.

Below is FDC configuration template included on the mediation ISO:

IPv4 configuration shown:

Notes:

- IPv6 addresses should be entered into the <address> field in the FDC template. IPv6 prefix should be configured in the '<netmask>' field in the FDC template as only the number of the prefix (for example, 64).
- The template below is just an example. It may not always synchronize with the actual template. Please always refer to the actual template file in the delivered iso file.

Appendix N. Create a Bootable USB Drive on Linux

Procedure 92. Configure PMAC Application NetBackup Virtual Disk

This procedure upgrades the Cisco 4948 PROM.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Insert USB Media	<p>1. Insert the USB media into the USB port.</p> <p>It should automatically be mounted under /media</p> <p>2. Obtain the path of the USB drive by running.</p> <pre>\$ ls /media</pre> <p>The output should be similar to this:</p> <p>sdb1</p> <p>3. Note the path without the partition number (in this case, it would be /dev/sdb).</p>
2. <input type="checkbox"/>	Linux Machine	Obtain the TVOE .iso file and copy it onto the local Linux computer (for example, under /var/TKLC/upgrade).
3. <input type="checkbox"/>	Copy the .USB file onto the USB drive	<p>Use the dd command to copy the .usb file onto the USB drive.</p> <p>Note: Make sure you do not use the partition number when copying the file.</p> <pre>\$ sudo dd if=<path_to_iso> of=/dev/sdb bs=4M oflag=direct</pre>

Appendix O. Remove IDIH External Drive

Run this procedure only if you intend to do a fresh installation on an existing IDIH.

Procedure 93. Remove the IDIH External Drive

This procedure destroys all data in the Oracle database.

Warning

Do not perform this procedure on an IDIH system unless your intent is to do a fresh TVO installation.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, it is recommended to contact My Oracle Support (MOS) and ask for assistance.

1. **PMAC GUI:** Login

☐

1. Open the web browser and navigate to the PMAC GUI:

`http://<PMAC_network_IP>`

2. Login as the **guiadmin** user.

Appendix P. Growth/De-Growth/Re-Shuffle (Oracle X5-2/Netra X5-2/X6-2/X7-2/HP DL380 Gen 9 (10Gbps) Only)

For scenarios where growth or de-growth is required, it may be necessary to delete or re-shuffle VM guests, SDS, and DSR servers. For more information, refer to the following sections in the C-Class Software Installation and Configuration Procedure 2/2:

- Appendix L.1 explains how to add individual VMs and add various DSR/SDS servers.
- Appendix L.2 explains how to delete individual VMs and move or remove various DSR/SDS servers.

Appendix P.1 Growth (Oracle X5-2/Netra X5-2/X6-2/X7-2/HP DL380 Gen 9 (10Gbps) Only)

For growth scenarios where it is necessary to add DSR servers, follow these procedures.

Step	Procedure(s)
Perform backups	Procedure 94 Perform Backups
Perform system health check	Procedure 95 Perform Health Check
Identify servers affected by growth: <ul style="list-style-type: none"> • DR NOAM • SOAM Spares • MP (IPFE, SBR, SS7-MP)/SDS DP • Query Server 	
Add new servers Create and configure the VMs on new servers (SOAM spare and DR NOAMs only)	Procedure 96 Add a New TVOE Server/VMs
Configure servers in new VM locations	NOAM/DR NOAM (DSR/SDS): Procedure 97 Growth: DR NOAM SOAM (DSR/SDS): Procedure 98 Growth: SOAM Spare (DSR/PCA Only) MP/DP (DSR/SDS): Procedure 99 Growth: MP or Procedure 100 Growth: MP (For 7.x to 8.x Upgraded System) Query Server: Procedure 101 Growth: Query Server (SDS Only)
Post growth health check	Procedure 102 Post Growth Health Check
Post growth backups	Procedure 103 Post Growth Backups

Procedure 94. Perform Backups

This procedure backs up all necessary items before a growth scenario.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Backup TVOE	Back up all TVOE host configurations by executing section 3.17.6 Back Up TVOE Configuration.
2. <input type="checkbox"/>	Backup PMAC	Back up the PMAC application by executing section 3.17.7 Back Up PMAC Application.
3. <input type="checkbox"/>	Backup NOAM/SOAM databases	Back up the NOAM and SOAM databases by executing sections 3.17.8 Back Up NOAM Database and 3.17.9 Back Up SOAM Database. Note: Database backup on SDS SOAMs is not required.

Procedure 95. Perform Health Check

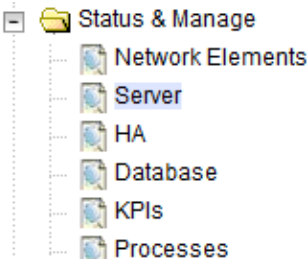

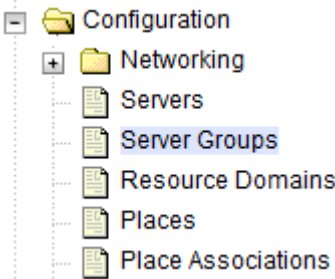

This procedure verifies system status and logs all alarms.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

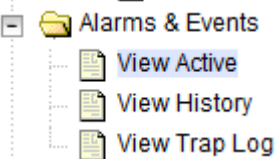

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	NOAM VIP GUI: Login	<p>1. Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of:</p> <div style="border: 1px solid black; padding: 2px; margin: 5px 0;"> <code>https://<Primary_NOAM_VIP_IP_Address></code> </div> <p>2. <div>3.</div> <div><input type="checkbox"/></div>	<div>NOAM VIP GUI:</div> <div>Verify server configuration</div>	<div>1. Navigate to Configuration > Server Groups.</div> <div></div> <div>2. Verify the configuration data is correct for your network.</div>																									

Procedure 95. Perform Health Check

4. <input type="checkbox"/>	NOAM VIP GUI: Log current alarms	<ol style="list-style-type: none"> 1. Navigate to Alarms & Events > View Active.  2. Click Report.  3. Save or Print this report, keep copies for future reference. 
5. <input type="checkbox"/>	SOAM VIP GUI: Repeat for SOAM	Repeat this procedure for the SOAM.

Procedure 96. Add a New TVOE Server/VMs

This procedure adds a new rack mount server.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	Add/Configure additional servers	Follow these sections to install and configure TVOE on additional rack mount servers: <ol style="list-style-type: none"> 1. Section 3.7 Add a Rack Mount Server to PMAC 2. Section 3.8 Install TVOE on Additional Rack Mount Servers 3. Section 3.9 Configure TVOE on Additional Rack Mount Servers
2. <input type="checkbox"/>	Add/Configure new VMs	<ol style="list-style-type: none"> 1. Determine CPU placement and pinning information by referring to section 3.10 Determine VM Placement. 2. Create new virtual machines by following section 3.12 Virtual Machine/Network Fast Deployment. 3. Perform CPU pinning by following section 3.13 CPU Pinning.

Procedure 97. Growth: DR NOAM

This procedure configures a DR NOAM on the new virtual machine for VM growth scenarios.

Prerequisites:

- New virtual machine created
- TPD/DSR software installed

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	NOAM VIP GUI: Configure the DR NOAM	Configure the DR NOAM by executing the steps referenced in these procedures: DSR DR NOAM: Section 3.14.3 Disaster Recovery NOAM (Optional) SDS DR NOAM: Section 3.15.3 Disaster Recovery NOAM (Optional)
2. <input type="checkbox"/>	DR NOAM: Activate optional features. DSR only. If SDS DR NOAM, then skip this step.	If there are any optional features currently activated, the feature activation procedures need to be run again. Refer to section 1.5 Optional Features.
3. <input type="checkbox"/>	DR NOAM VIP: Login	Establish an SSH to the DR NOAM VIP address and login as admusr .
4. <input type="checkbox"/>	DR NOAM VIP: Transfer optimization script from the primary NOAM	Execute these commands to transfer and set permissions of the optimization script from the primary NOAM. <pre>\$ sudo scp -r admusr@<Primary NOAM XMI VIP>:/usr/TKLC/dsr/bin/rmsNoamConfig.sh /usr/TKLC/dsr/bin \$ sudo chmod 777 /usr/TKLC/dsr/bin/rmsNoamConfig.sh</pre>
5. <input type="checkbox"/>	NOAM VIP: Execute the optimization script on the active NOAM	Execute these commands for the performance optimization script on the active NOAM server. <pre>\$ cd /usr/TKLC/dsr/bin/ \$ sudo ./rmsNoamConfig.sh</pre> Note: Configuration successful output should display.
6. <input type="checkbox"/>	NOAM VIP: Execute the key revocation script on the active NOAM server (RADIUS only) to copy key file to new NOAM server created	If the RADIUS key has never been revoked, skip this step (If RADIUS was never configured on any site in the network, the RADIUS key would have most likely never been revoked. Check with your system administrator). <pre>\$ cd /usr/TKLC/dsr/bin/ \$./sharedKrevo -synchronize -server <new_NOAM_hostname></pre> Note: Key transfer successful output should display.

Procedure 98. Growth: SOAM Spare (DSR/PCA Only)

This procedure configures an SOAM spare on the new virtual machine for VM growth scenarios.

Prerequisites:

- New virtual machine created
- TPD/DSR software installed

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	NOAM VIP GUI: Configure the SOAM spare	Configure the SOAM spare by executing these procedures: <ul style="list-style-type: none"> • Procedure 24 Configure DSR SOAM NE • Procedure 25 Configure DSR SOAM Server • Procedure 26 Configure the DSR SOAM Server Group (steps 1. , 4. , 6. , and 9.)
2. <input type="checkbox"/>	NOAM GUI: Activate optional features	If there are any optional features currently activated, the feature activation procedures need to be run again. Refer to section 1.5 Optional Features.
3. <input type="checkbox"/>	NOAM VIP: Execute the key revocation script on the active NOAM server (RADIUS) to copy key file to new SOAM server created	<p>If the RADIUS key has never been revoked, skip this step (If RADIUS was never configured on any site in the network, the RADIUS key would have most likely never been revoked. Check with your system administrator).</p> <pre>\$ cd /usr/TKLC/dsr/bin/ \$./sharedKrevo -synchronize -server <new_SOAM_hostname></pre> <p>Note: Key transfer successful output should be given.</p>

Procedure 99. Growth: MP/DP

This procedure configures an MP/DP on the new virtual machine for growth scenarios.

Prerequisites:

- New virtual machine created
- TPD/DSR software installed

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	NOAM VIP GUI: Configure the MP	Configure the MP/DP by executing the steps referenced in these procedures: DSR MP <ul style="list-style-type: none"> • To configure MP blade servers (IPFE, SBR, DA-MP), refer to the procedure Configure MP Blade Servers in the C-Class Software Installation and Configuration Procedure 2/2. • To configure Places and Assign MP servers to Places (PCA and DCA), refer to the procedure Configure Places and Assign MP Servers to Places (PCA/DCA Only) in the C-Class Software Installation and Configuration Procedure 2/2. • To configure DAMP Server Groups and Profiles, refer to the procedure Configure the MP Server Group(s) and Profile(s) in the C-Class Software Installation and Configuration Procedure 2/2. • Procedure 61 Back Up the Upgrade and Disaster Recovery FDC File (Optional) SDS DP <ul style="list-style-type: none"> • Procedure 47 Pair SDS Query Server with SDS NOAMs • Procedure 48 Configure SDS DP SOAM NE • Procedure 61 Back Up the Upgrade and Disaster Recovery FDC File (Optional)
2. <input type="checkbox"/>	NOAM VIP: Execute the key revocation script on the active NOAM server (RADIUS) to copy key file to new MP server created	<p>If the RADIUS key has never been revoked, skip this step (If RADIUS was never configured on any site in the network, the RADIUS key would have most likely never been revoked. Check with your system administrator.</p> <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> <pre>\$ cd /usr/TKLC/dsr/bin/ \$./sharedKrevo -synchronize -server <new_MP_hostname></pre> </div> <p>Note: Key transfer successful output should be given.</p>

Procedure 100. Growth: MP (For 7.x to 8.x Upgraded System)

This procedure should be executed **ONLY** to configure an MP on the new virtual machine for growth scenarios for **7.x to 8.x upgraded system**.

Prerequisites:

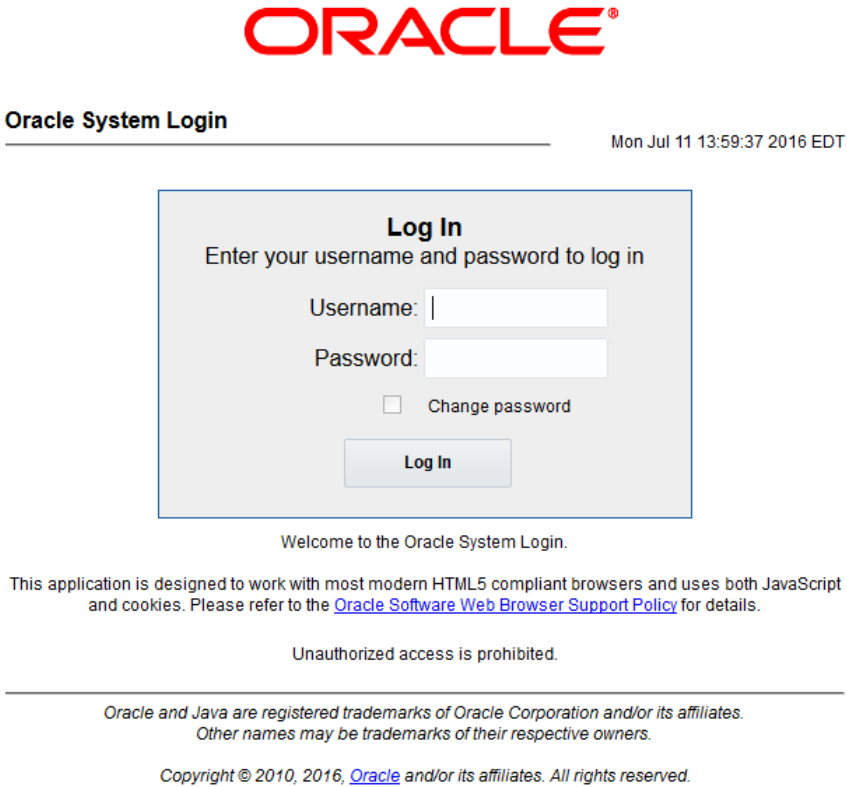

- New virtual machine created
- TPD/DSR software installed

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

<div>1. <div></div></div>	<p>PMAC: Exchange SSH keys between MP site's local PMAC and the MP server</p>	<p>Use the MP site's PMAC GUI to determine the control network IP address of the server that is to be an MP server.</p> <div><div>1. ----	-------------------------------	---

Procedure 100. Growth: MP (For 7.x to 8.x Upgraded System)

3. **NOAM VIP GUI:**
Insert the MP server

1. Navigate to **Configuration > Servers**.

2. Click **Insert** to insert the new MP server into servers table.

3. Enter these values:

Hostname: <Hostname>
Role: MP
Network Element: [Choose Network Element]
Hardware Profile: DSR TVOE Guest
Location: <Enter an optional location description>

4. For the **XMI** network, type the MP's XMI IP address and select the **xmi** interface.
 5. For the **IMI** network, type the MP's IMI IP address and select the **imi** interface.

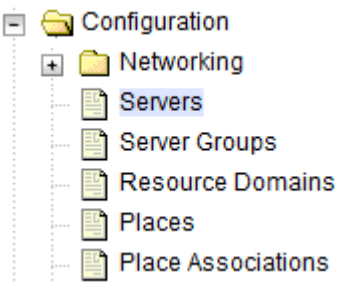

OAM Interfaces [At least one interface is required:]		
Network	IP Address	Interface
XMI (10.240.213.0/24)	10.240.213.44	bond0 <input checked="" type="checkbox"/> VLAN (4)
IMI (169.254.1.0/24)	169.254.1.6	bond0 <input checked="" type="checkbox"/> VLAN (3)
xsi1 (10.196.227.0/24)	10.196.227.44	bond1 <input checked="" type="checkbox"/> VLAN (6)

6. Add the NTP server.

NTP Server	Preferred?
<MP_RMS_TVOE_IP_Address>	Yes

7. Click **OK** when all fields are entered to finish MP server insertion.

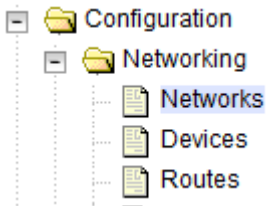

Procedure 100. Growth: MP (For 7.x to 8.x Upgraded System)

4. <input type="checkbox"/>	NOAM VIP GUI: Export the configuration	<ol style="list-style-type: none"> 1. Navigate to Configuration > Servers.  2. From the GUI screen, select the MP server and click Export to generate the initial configuration data for that server. 
5. <input type="checkbox"/>	NOAM VIP: Copy the configuration file to MP server	<ol style="list-style-type: none"> 1. Obtain a terminal session to the NOAM VIP as the admusr user. 2. Use the awpushcfg utility to copy the configuration file, created in the previous step, from the /var/TKLC/db/filemgmt directory on the NOAM to the MP server, using the control network IP address for the MP server. The configuration file has a filename like TKLCConfigData.<hostname>.sh. <pre>\$ sudo awpushcfg</pre> <p>The awpushcfg utility is interactive, so the user is asked for the following:</p> <ul style="list-style-type: none"> • IP address of the local PMAC server: Use the management network address from the PMAC. • Username: Use admusr • Control network IP address for the target server: In this case, enter the control IP for the MP server). • Hostname of the target server: Enter the server name configured in step 3.

Procedure 100. Growth: MP (For 7.x to 8.x Upgraded System)

6. <input type="checkbox"/>	MP Server: Verify awpushcfg was called and reboot the configured server	<ol style="list-style-type: none"> Obtain a terminal session to the MP server console by establishing an ssh session from the NOAM VIP terminal console. <pre>\$ ssh admusr@<MP_Control_IP></pre> Login as admusr. Verify awpushcfg was called by checking the log file. <pre>\$ sudo cat /var/TKLC/appw/logs/Process/install.log</pre> <p>Verify this message displays: [SUCCESS] script completed successfully!</p> <p>Note: The script may return success even when errors are reported in the log file. Go through the entire install.log file to verify no errors are present.</p> Reboot the server. <pre>\$ sudo init 6</pre> Proceed to the next step once the server finishes rebooting. The server is done rebooting once the login prompt is displayed.
7. <input type="checkbox"/>	MP Server: Verify server health	<p>Login as admusr to the MP server and make sure no errors are returned.</p> <pre>\$ sudo syscheck Running modules in class hardware...OK Running modules in class disk...OK Running modules in class net...OK Running modules in class system...OK Running modules in class proc...OK LOG LOCATION: /var/TKLC/log/syscheck/fail_log</pre>

Procedure 100. Growth: MP (For 7.x to 8.x Upgraded System)

<p>8. <input type="checkbox"/></p>	<p>MP Server: Delete auto-configured default route on MP and replace it with a network route via the XMI network — Part 1 (optional)</p>	<p>Note: This step is optional and should only be executed if you plan to configure a default route on your MP that uses a signaling (XSI) network instead of the XMI network.</p> <p>Not executing this step means a default route is not configurable on this MP and you have to create separate network routes for each signaling network destination.</p> <ol style="list-style-type: none"> 1. Log into the site's PMAC and SSH to the MP's control address. Alternatively, log into the TVOE host and access the MP using the virsh console <MP VM>. 2. Determine <XMI_Gateway_IP> from your SO site network element information. 3. Gather this information: <ul style="list-style-type: none"> • <NO_XMI_Network_Address> • <NO_XMI_Network_Netmask> • <DR_NO_XMI_Network_Address> • <DR_NO_XMI_Network_Netmask> • <TVOE_Mgmt_XMI_Network_Address> • <TVOE_Mgmt_XMI_Network_Netmask> <p>Note: You can either consult the XML files you imported earlier, or go to the NO GUI and view these values from the Configuration > Networking > Networks screen.</p> 
------------------------------------	---	---

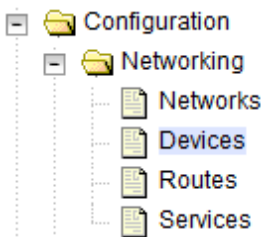

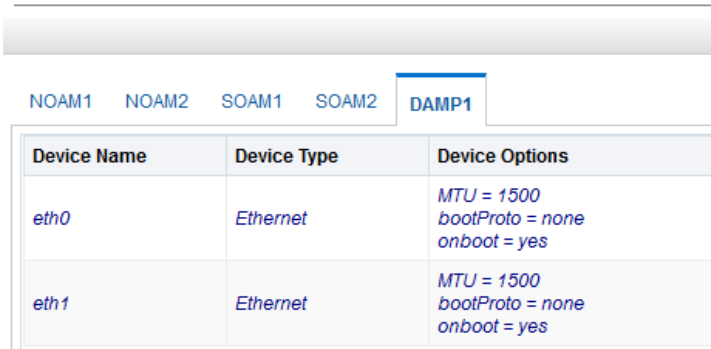

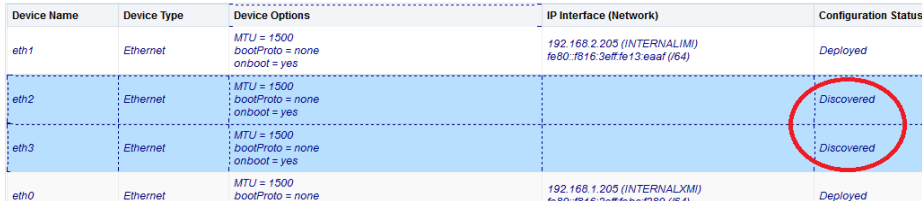

Procedure 100. Growth: MP (For 7.x to 8.x Upgraded System)

<p>9. <input type="checkbox"/></p>	<p>MP Server: Delete auto-configured default route on MP and replace it with a network route via the XMI network — Part 2 (optional)</p>	<ol style="list-style-type: none"> Establish a connection to the MP server and login as admusr. Create network routes to the NO's XMI (OAM) network. Note: If your NOAM XMI network is exactly the same as your MP XMI network, then you should skip this command and only configure the DR NO route. <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add -route=net --address=<NO_Site_Network_ID> -- netmask=<NO_Site_Network_Netmask> --gateway=<MP_XMI_Gateway_IP_Address> -- device=<MP_XMI_Interface></pre> Create network routes to the DR NO's XMI (OAM) network. <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add -route=net --address=<DR-NO_Site_Network_ID> --netmask=<<DR-NO_Site_Network_Netmask> --gateway=<MP_XMI_Gateway_IP_Address> -- device=<MP_XMI_Interface></pre> Create network routes to the management server TVOE XMI (OAM) network for NTP. <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add -route=net --address=<TVOE_Mgmt_Network_Address> --netmask=<TVOE_Mgmt_Network_Netmask> --gateway=<MP_XMI_Gateway_IP_Address> -- device=<MP_XMI_Interface></pre> (Optional) If sending SNMP traps from individual servers, create host routes to customer SNMP trap destinations on the XMI network. <pre>\$ sudo /usr/TKLC/plat/bin/netAdm add -route=host --address=<Customer_NMS_IP> -- gateway=<MP_XMI_Gateway_IP_Address> --device=<MP_XMI_Interface></pre> Repeat for any existing customer NMS stations. Delete the existing default route: <ol style="list-style-type: none"> Log into primary NOAM VIP GUI. Navigate to Configuration > Networking > Networks. Select the respective SOAM tab. Select the XMI network and click Unlock. Click OK to confirm. Navigate to Configuration > Networking > Routes. Select the XMI route and click Delete. Click OK to confirm. Repeat steps 1 through 7 for all required MPs to delete the XMI routes. Navigate to Configuration > Networking > Networks. Select the respective SOAM tab. Select the XMI network and click Lock. Click OK to confirm.
------------------------------------	---	--

Procedure 100. Growth: MP (For 7.x to 8.x Upgraded System)

10. <input type="checkbox"/>	MP Server: Verify connectivity	<ol style="list-style-type: none"> 1. Establish a connection to the MP server and login as admusr. 2. Procedure 106. Remove Server from Server Group

2. ☐ **SOAM VIP GUI:**
Disable SS7-MP links

Execute this step if removing SS7-MP, otherwise skip to step 10.

1. Navigate to **SS7/Sigtran > Maintenance > Links**.

A screenshot of the SOAM VIP GUI showing a tree view. The path is SS7/Sigtran > Configuration > Maintenance > Links. The 'Links' folder is highlighted in blue. Other folders visible are Configuration and Maintenance. Under Maintenance, there are sub-items: Local SCCP Users, Remote Signaling Points, Remote MTP3 Users, Linksets, and Links.

2. Disable the associated links of the identified SS7-MP.

Signaling Network Element Name	Link Name	Link Set	MP Server Hostname	Admin State	Operational		MP Server H Status
					Status	Reason	
ZombieSOAM	L1	LS1	ZombieSS7MP 1	Disabled	Down	Disabled	Active
ZombieSOAM	L10	LS10	ZombieSS7MP 2	Disabled	Down	Disabled	Active
ZombieSOAM	L11	LS11	ZombieSS7MP 1	Disabled	Down	Disabled	Active
ZombieSOAM	L12	LS12	ZombieSS7MP 2	Disabled	Down	Disabled	Active
ZombieSOAM	L13	LS13	ZombieSS7MP 1	Disabled	Down	Disabled	Active

3. ☐ **SOAM VIP GUI:**
Disable SS7-MP SCCP users

Execute this step if removing SS7-MP, otherwise skip to step 10.

1. Navigate to **SS7/Sigtran > Maintenance > Local SCCP Users**.

A screenshot of the SOAM VIP GUI showing a tree view. The path is SS7/Sigtran > Configuration > Maintenance > Local SCCP Users. The 'Local SCCP Users' folder is highlighted in blue. Other folders visible are Configuration and Maintenance. Under Maintenance, there are sub-items: Local SCCP Users, Remote Signaling Points, Remote MTP3 Users, Linksets, and Links.

2. Disable the associated local SCCP users of the identified SS7-MP.

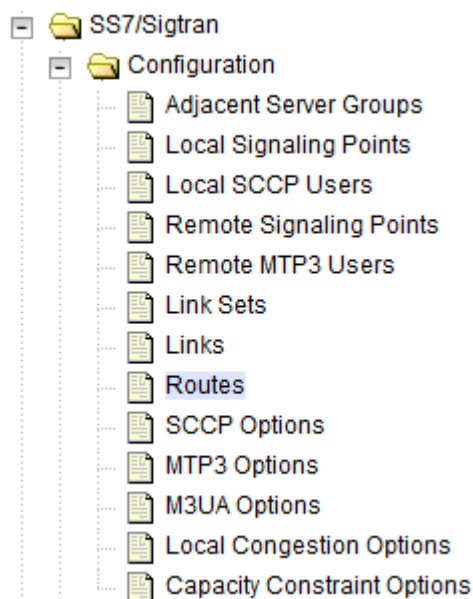

Signaling Network Element Name	SSN	Local Signaling Point		Application Name	SSN Status	Up/Down Since
		Point Code	SS7 Domain			
ZombieSOAM	248	100-100-100	ANSI	MAPIWF	Disabled	2016-08-10 13:06:31 EDT

Procedure 106. Remove Server from Server Group

10. <input type="checkbox"/>	NOAM VIP GUI: Login	<ol style="list-style-type: none"> Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of: <div data-bbox="565 323 1421 369" style="border: 1px solid black; padding: 2px; margin: 5px 0;"> https://<Primary_NOAM_VIP_IP_Address> </div> Login as the guiadmin user. <div data-bbox="548 449 1386 1058" style="text-align: center;">  <p>The screenshot shows the Oracle System Login page. At the top is the Oracle logo. Below it is the title 'Oracle System Login' and a timestamp 'Mon Jul 11 13:59:37 2016 EDT'. A central box contains a 'Log In' form with fields for 'Username' and 'Password', a 'Change password' checkbox, and a 'Log In' button. Below the box is a welcome message and a note about browser compatibility.</p> </div>
11. <input type="checkbox"/>	NOAM VIP GUI: Set server to OOS	<ol style="list-style-type: none"> Navigate to Status & Manage > HA. <div data-bbox="532 1129 854 1407" style="text-align: center;">  <p>The screenshot shows a navigation tree with 'Status & Manage' expanded, listing 'Network Elements', 'Server', 'HA', 'Database', 'KPIs', and 'Processes'.</p> </div> Click Edit. Set the server's Max Allowed HA Role to OOS. <div data-bbox="539 1507 971 1780" style="text-align: center;">  <p>The screenshot shows a dropdown menu for 'ZombieSS7MP1' and 'ZombieSS7MP2'. The dropdown is open, showing options: 'Active', 'Standby', 'Spare', 'Observer', and 'OOS' (which is highlighted).</p> </div> Click OK.

Procedure 106. Remove Server from Server Group

12.

**NOAM VIP GUI:**
Delete server from
server group1. Navigate to **Configuration > Server Groups**.

2. Select the server group for which the server from step 2 that was placed OOS.

3. Click **Edit**.4. Unmark the **Include in SG** checkbox next to the server from step 2.

Server Group Name *	ZombieSS7SG1	Unique identifier used to label a with a digit.] [A value is required.]
Level *	C	Select one of the Levels support
Parent *	ZombieSOAM	Select an existing Server Group [
Function *	SS7-IWF	Select one of the Functions supp
WAN Replication Connection Count	1	Specify the number of TCP conn
ZombieSOAM <input type="checkbox"/> Prefer Network Element as spare		
Server	SG Inclusion	Preferred HA Role
ZombieSS7MP1	<input type="checkbox"/> Include in SG	<input type="checkbox"/> Prefer server as spare
VIP Assignment		

5. Click **OK**.

Procedure 107. Delete Server/Server Group

Once the server has been removed from the server group, it is safe to delete the server. The server group can also be deleted, if there are no more servers associated with it.

This procedure deletes a server and a server group.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. **NOAM VIP GUI:**
☐ Login

1. Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of:

`https://<Primary_NOAM_VIP_IP_Address>`

2. Login as the **guiadmin** user.

Procedure 107. Delete Server/Server Group

2. **NOAM VIP GUI:**
Delete the server

1. Navigate to **Configuration > Servers**.

2. Select the server that has been previously removed from the server group and click **Delete**.

ZombieSOAM2	System OAM	
ZombieDAMP1	MP	
ZombieDAMP2	MP	
ZombieSS7MP1	MP	
ZombieSS7MP2	MP	
ZombieIPFE1	MP	
ZombieIPFE2	MP	

Insert Edit Delete Export Report

3. Click **OK** to confirm.

Delete Server(s) : ZombieSS7MP1?

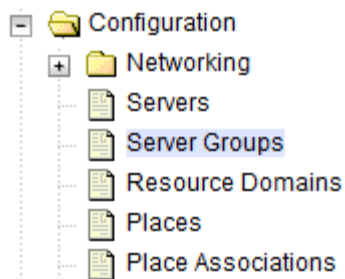

OK Cancel

Procedure 107. Delete Server/Server Group

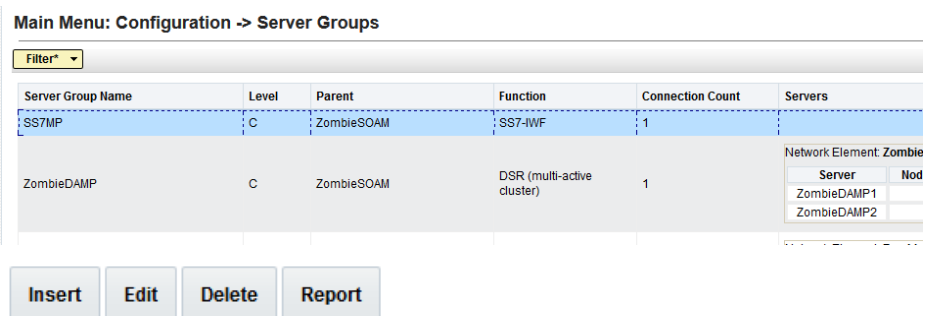

3. **NOAM VIP GUI:**
Delete server group

If all servers have been removed from a server group, it is now safe to delete the server group.

1. Navigate to **Configuration > Server Groups**.

2. Select the empty server group and click **Delete**.

3. Click **OK** to confirm.

Delete Server Group : SS7MP?

Procedure 108. Delete Server VM

Once the servers being deleted have been identified, placed in OOS, and removed the from the server group, it is safe to shut down and delete the VM for the server.

This procedure removes a VM from a TVOE host.

WARNING

Confirm the server to VM mapping before proceeding.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

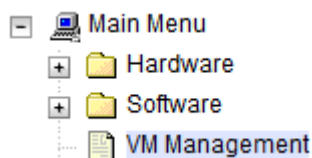

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

<p>1. PMAC GUI: Login</p> <p><input type="checkbox"/></p>	<p>1. Open the web browser and navigate to the PMAC GUI:</p> <div data-bbox="537 632 1343 682" style="border: 1px solid black; padding: 2px;"> <p>http://<PMAC_network_IP></p> </div> <p>2. Login as the guiadmin user.</p> <div data-bbox="500 751 1401 1470">  </div>
--	---

Procedure 108. Delete Server VM

2. **NOAM VIP GUI:**
Shut down the VM

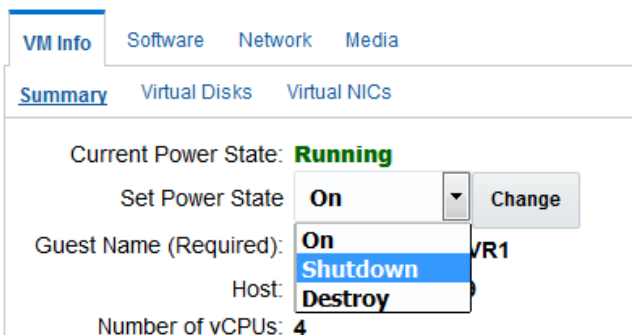

1. Navigate to **VM Management**.

2. Expand the view of the rack mount server, if needed.

3. Shut down the VM by setting the Current Power State to **Shutdown**.

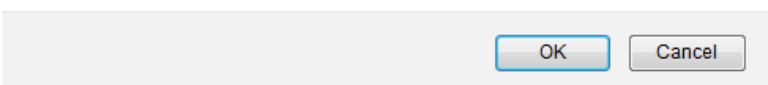

View guest **Zombie_SDSQSVR1**

4. Click **Change**.

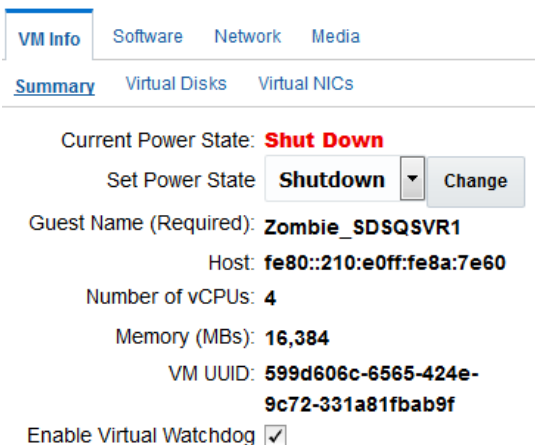

5. Click **OK**.

It may not always be possible to shutdown a guest or to do so in a timely manner. You may monitor the power state and opt to destroy the guest rather than shut it down. Are you sure you want to attempt to shutdown this guest?

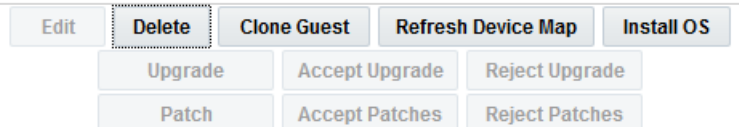

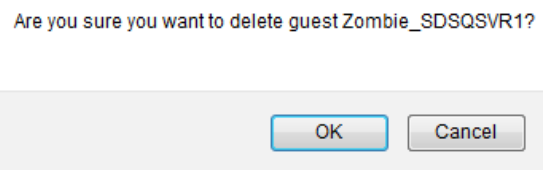

The Current Power State displays as **Shutdown**.

View guest **Zombie_SDSQSVR1**

Procedure 108. Delete Server VM

3.	PMAC GUI: Delete the VM	<ol style="list-style-type: none"> Once the server has been shut down, select the VM. Verify the current power state is Shutdown and click Delete. <div data-bbox="506 344 1240 470">  </div> Click OK to confirm. <div data-bbox="506 533 1045 701">  </div>

3.	PMAC GUI: Delete the VM	<ol style="list-style-type: none"> Once the server has been shut down, select the VM. Verify the current power state is Shutdown and click Delete. <div data-bbox="487 346 1242 472">  </div> Click OK to confirm. <div data-bbox="487 535 1055 693">  </div>
----	-----------------------------------	---

Procedure 116. Move/Re-Shuffle: Create/Configure VMs

This procedure creates the new VM, loads the software, and configures the server.

Prerequisites:

- Server has been identified and placed in OOS, and its corresponding VM has been deleted.
- Proper VM mapping has been determined to maintain performance efficiency. See section 3.10 Determine VM Placement.
- PMAC contains TPD, DSR, and SDS ISO software. See Procedure 14 Load DSR, SDS, and TPD ISOs onto the PMAC Server.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1.	PMAC GUI: Create virtual machine	To create a virtual machine for all applicable servers, follow section 3.12 Virtual Machine/Network Fast Deployment.
2.	TVOE Host: Execute CPU pinning	Execute section 3.13 CPU Pinning to allocate CPU resources on each new VM.

Procedure 117. Move/Re-Shuffle: NOAM/DR NOAM

This procedure configures the NOAM/DR NOAM on the new VM for VM re-shuffling scenarios.

Prerequisites:

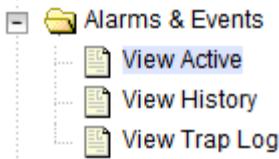

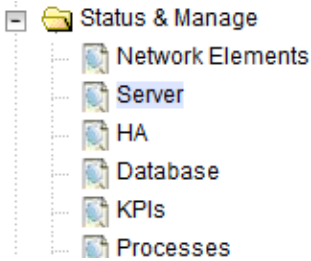

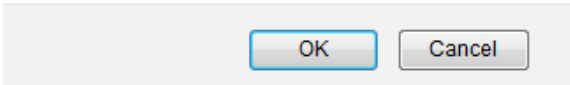

- NOAM/DR NOAM has been Identified
- Placed in OOS
- Old VM deleted
- New VM created
- TPD/DSR software installed

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1.	NOAM VIP GUI: Configure the 2nd NOAM/DR NOAM	<p>Configure the second NOAM/DR NOAM by following these sections:</p> <ul style="list-style-type: none"> • DSR NOAM: Procedure 17 Configure First DSR NOAM NE and Server, steps 1. through 2. , 4. through 7. , 8. (optional for NetBackup), and 9. • DSR DR NOAM: Procedure 22 Configure DSR NOAM for DR Site (Optional), steps • SDS NOAM: Procedure 39 Configure First SDS NOAM NE and Server, steps 1. through 2. , 4. through 5. , 6. 5. <input type="checkbox"/>	NOAM GUI: Activate optional features	<p>If there are any optional features currently activated, the feature activation procedures need to be run again. Refer to section 1.5 Optional Features.</p>

Procedure 119. Move/Re-Shuffle: MP/DP

This procedure configures MP/DP on the new VM for VM re-shuffling scenarios.

Prerequisites:

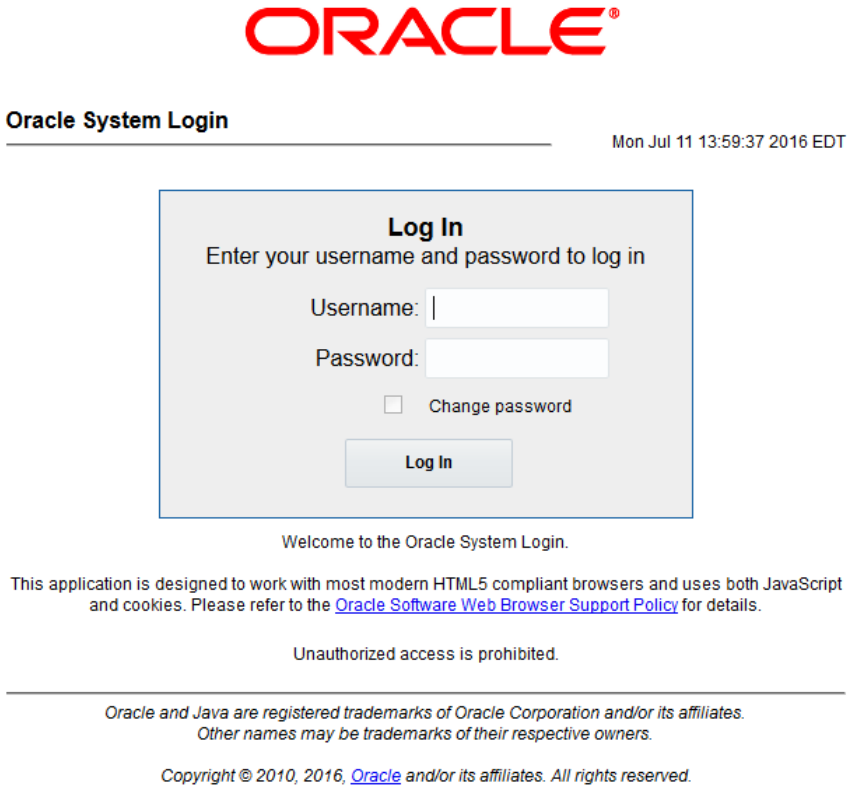

- MP/DP has been Identified
- Placed in OOS
- Old VM deleted
- New VM created
- TPD/DSR software installed

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

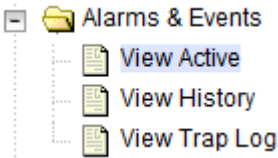

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	NOAM VIP GUI: Configure the MP/DP	Configure the MP/DP by following these sections: <ul style="list-style-type: none"> • DSR MP: To configure MP blade servers (IPFE, SBR, DA-MP), refer to the procedure Configure MP Blade Servers in the C-Class Software Installation and Configuration Procedure 2/2. • SDS DP: To install the Data Processor (DP) blade, refer to the procedure DP Installation (All SOAM sites) in the DSR Initial Installation and Configuration Guide.

--------------------------------	-------------------------------	--

Procedure 119. Move/Re-Shuffle: MP/DP

6. **SOAM VIP GUI:**
Assign profiles to
DA-MPs from
SOAM GUI

1. Navigate to **Diameter Common > MPs > Profiles Assignments**.

If the site has both DSR and MAP-IWF server groups, both DA-MP and SS7-MP sections display.

Main Menu: Diameter Common -> MPs -> Profile Assignments

DA-MP	MP Profile	current value
ZombieDAMP1	VM:10K_MPS	The current MP Profile for ZombieDAMP1 is VM:10K_MPS . <i>Virtualized DA-MP rated at 10K MPS for all configurations [A value is required.]</i>
ZombieDAMP2	VM:10K_MPS	The current MP Profile for ZombieDAMP2 is VM:10K_MPS . <i>Virtualized DA-MP rated at 10K MPS for all configurations [A value is required.]</i>

SS7-MP	MP Profile	current value
ZombieSS7MP1	VM:MD-IWF	The current MP Profile for ZombieSS7MP1 is VM:MD-IWF . <i>Virtualized SS7-MP running MD-IWF application [A value is required.]</i>
ZombieSS7MP2	VM:MD-IWF	The current MP Profile for ZombieSS7MP2 is VM:MD-IWF . <i>Virtualized SS7-MP running MD-IWF application [A value is required.]</i>

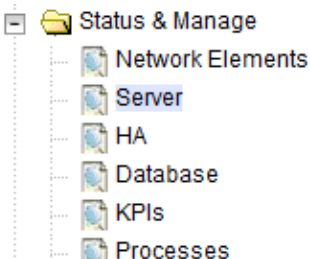

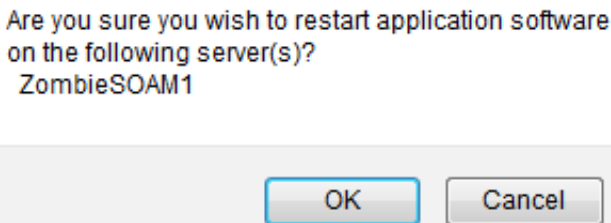

Assign Cancel

2. For each MP, select the proper profile assignment based on the function of each MP.

Profile Name	Description
VM:10K_MPS (Oracle X5-2/Netra X5-2/X6-2/HP DL380 Gen 9 (10Gbps) Only)	Virtualized DA-MP on TVOE guest running relay, session, and database applications
VM:MD-IWF	Virtualized SS7-MP on TVOE guest running MD-IWF applications

3. Click **Assign**.

Procedure 119. Move/Re-Shuffle: MP/DP

7. <input type="checkbox"/>	NOAM GUI: Restart MP/DP server	<ol style="list-style-type: none"> Navigate to Status & Manage > Server.  Select the MP/DP server and click Restart.  Click OK to confirm. 
-----------------------------	--	--

Procedure 120. Move/Re-Shuffle: Query Server (SDS Only)

This procedure configures the query server on the new VM for VM re-shuffling scenarios.

Prerequisites:

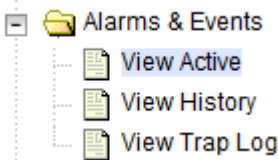

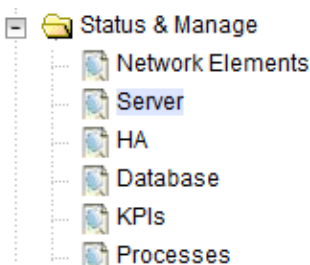

- Query server has been Identified
- Placed in OOS
- Old VM deleted
- New VM created
- TPD/DSR software installed

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. <input type="checkbox"/>	NOAM VIP GUI: Configure the query server	Configure the query server by following Procedure 46 Configure SDS Query Server.
-----------------------------	--	--

Procedure 120. Move/Re-Shuffle: Query Server (SDS Only)

2. <input type="checkbox"/>	NOAM VIP GUI: Login	<ol style="list-style-type: none"> Establish a GUI session on the NOAM server by using the VIP IP address of the NOAM server. Open the web browser and enter a URL of: <div style="border: 1px solid black; padding: 5px; margin: 10px 0;"> https://<Primary_NOAM_VIP_IP_Address> </div> Login as the guiadmin user. <div style="text-align: center; margin: 20px 0;">  </div> <div style="text-align: center;"> Oracle System Login Mon Jul 11 13:59:37 2016 EDT </div> <div style="text-align: center; margin-top: 20px;"> <div style="border: 1px solid #ccc; padding: 10px; background-color: #f0f0f0;"> <p>Log In</p> <p>Enter your username and password to log in</p> <p>Username: <input style="width: 150px;" type="text"/></p> <p>Password: <input style="width: 150px;" type="password"/></p> <p><input type="checkbox"/> Change password</p> <p style="text-align: center;"><input type="button" value="Log In"/></p> </div> </div>

Procedure 121. Move/Re-Shuffle: iDIH

2.

**NOAM VIP GUI:**
Shut down the VM1. Navigate to **VM Management**.

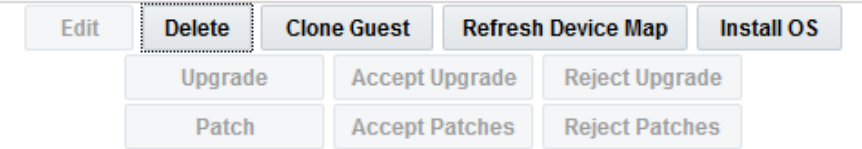

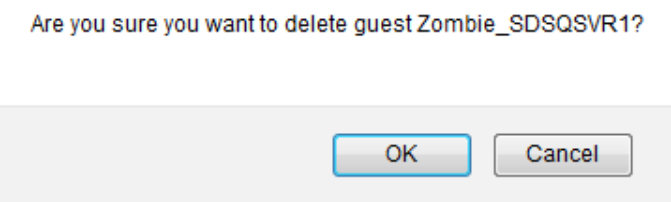

2. Expand the view of the rack mount server, if needed.

3. Shut down the VM by setting the Current Power State to **Shutdown**.**View guest Zombie_SDSQSVR1**4. Click **Change**.5. Click **OK**.

It may not always be possible to shutdown a guest or to do so in a timely manner. You may monitor the power state and opt to destroy the guest rather than shut it down. Are you sure you want to attempt to shutdown this guest?

The Current Power State displays as **Shutdown**.**View guest Zombie_SDSQSVR1**

Procedure 121. Move/Re-Shuffle: iDIH

3.	PMAC GUI: Delete the VM	<ol style="list-style-type: none"> Once the server has been shut down, select the VM. Verify the current power state is Shutdown and click Delete. <div data-bbox="521 348 1377 495">  </div> Click OK to confirm. <div data-bbox="521 558 1187 758">  </div>
4.	PMAC Server: Navigate to guest-dropin directory	<pre>\$ cd /var/TKLC/smac/guest-dropin/</pre>
5.	PMAC Server: Edit the IDIH fdc file	<p>Edit the existing idih_fdc_file_name.xml (or create a new) file configured in Procedure 54 IDIH Installation, step 7.</p> <p>Changing the rack mount server to the VM being moved/re-shuffled is done by changing the <tvoehost> item for the applicable VM (<tvoeguest id>).</p> <p>Note: It may also be necessary to change the XMI, IMI, and default route IP addresses depending on the location of the rack mount server.</p>

Procedure 122. Move/Re-Shuffle: PMAC

This procedure configures PMAC on the new VM for VM re-shuffling scenarios.

Prerequisite: Database backup of PMAC server is available.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

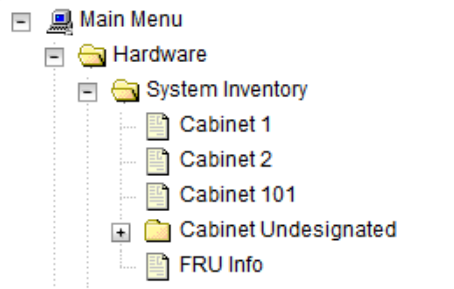

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1.	PMAC: Back up the PMAC database	Back up the PMAC database by following section 3.17.7 Back Up PMAC Application.
2.	PMAC TVOE Host: Login	Establish an SSH session to the PMAC's TVOE host and login as admusr .
3.	PMAC TVOE Host: Verify PMAC location	<p>Verify the location of the redundant PMAC VM using virsh.</p> <div data-bbox="508 1650 1365 1810"> <pre>\$ sudo /usr/bin/virsh list Id Name State ----- 2 Redundant-PM&C running</pre> </div>

Procedure 122. Move/Re-Shuffle: PMAC

Appendix S. VM Placement in HP DL380 Gen 8/Gen 9 (Onboard 1Gbps NICs)

HP DL380 Gen 8 and HP DL380 Gen 9 rack mount server solutions should place VMs in one of these deployment scenarios:

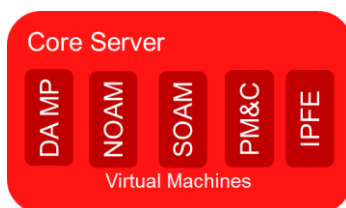

Figure 4. HP DL380 Gen 8/Gen 9 (1Gbps) VM Placement Non-HA LAB Deployment

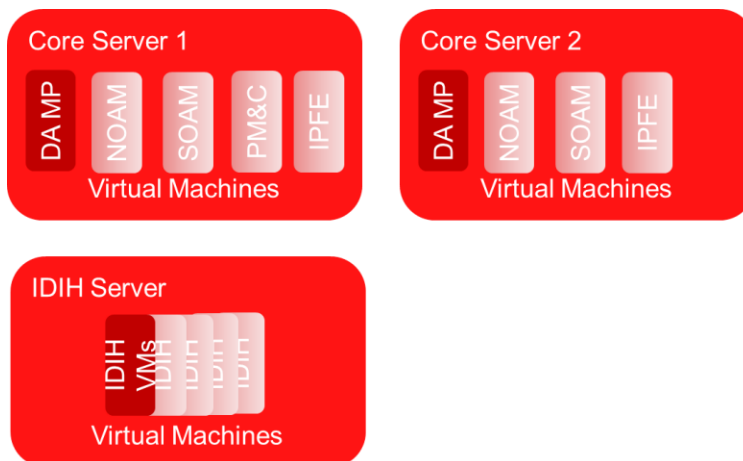

Figure 5. HP DL380 Gen 8/Gen 9 (1Gbps) VM Placement Small Production DSR with IDIH

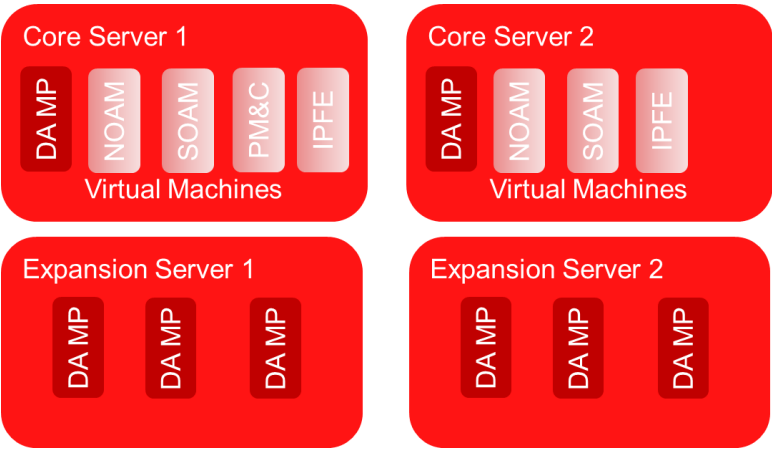

Figure 6. HP DL380 Gen 8/Gen 9 (1Gbps) VM Placement Scaled DSR

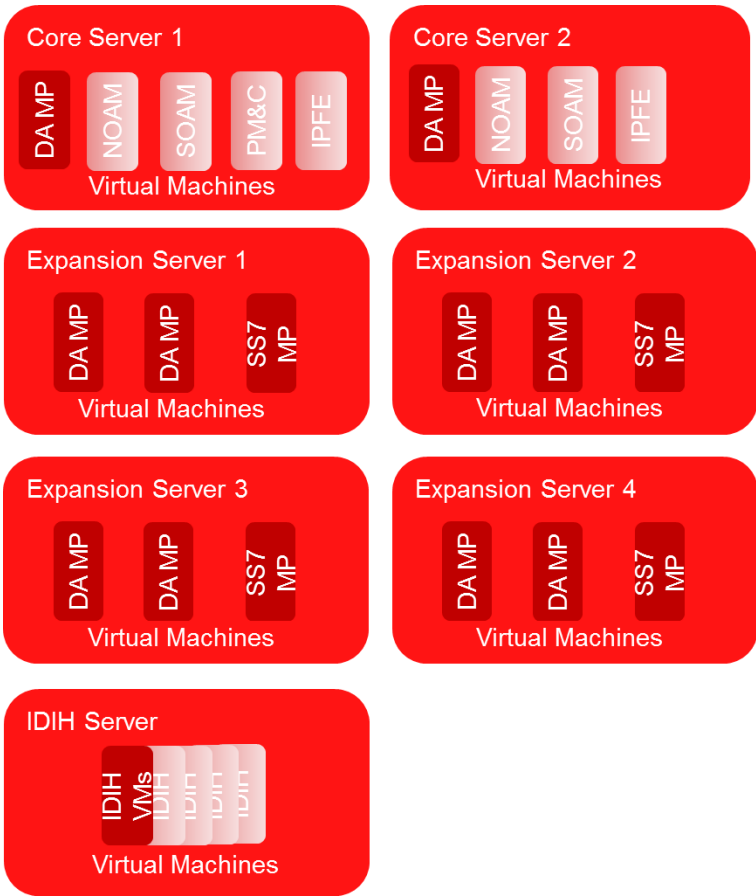

Figure 7. HP DL380 Gen 9 (1Gbps) VM Placement Scaled DSR with SS7 MPs and IDIH

Appendix T. Restore SNMP Configuration to SNMPv3 (Optional)

Procedure 131. Restore SNMP Configuration to SNMP v3

This procedure restores SNMP configuration to SNMPv3 for forwarding of SNMP traps from each individual server.

Note: If SNMP is configured with SNMPv2c and SNMPv3 as enabled versions as a workaround step (Procedure 37 Configure SNMP Trap Receivers, steps 4. through 8.) and the SNMPv3 is required to be configured.

Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.

If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.

1. (Workaround)
☐ **Primary NOAM
VIP GUI: Login**

Note: This workaround should be performed only if SNMP is configured with SNMPv2c and SNMPv3 as enabled versions as a workaround (Procedure 37 Configure SNMP Trap Receivers, steps 4. through 8.) and the SNMPv3 is required to be configured.

1. Establish a GUI session on the NOAM server by using the XMI VIP IP address. Open the web browser and enter a URL of:

`https://<NOAM_XMI_VIP_IP_Address>`

2. Login as the **guiadmin** user.

Appendix U. CPU Pinning in HP DL380 Gen 9 (Onboard 1Gbps NICs)

The following tables contain information about HP DL380 Gen 9 (1Gbps) CPU Pinning with and without SS7MPs:

Table 7. HP DL380 Gen 9 (1Gbps) CPU Pinning without SS7MPs

Core Server 1		Core Server 2		Expansion Server 1		Expansion Server 2		IDIH Server	
Numa 0	Numa 1	Numa 0	Numa 1	Numa 0	Numa 1	Numa 0	Numa 1	Numa 0	Numa 1
NOAM	DAMP	NOAM	DAMP	DAMP	DAMP	DAMP	DAMP	IDIH-A	
SOAM		SOAM			DAMP		DAMP	IDIH-M	
IPFE		IPFE						IDIH-DB	
PMAC									

Table 8. HP DL380 Gen 9 (1Gbps) CPU Pinning with SS7MPs

Core Server 1		Core Server 2		Expansion Server 1		Expansion Server 2		Expansion Server 3		Expansion Server 4		IDIH Server	
Numa 0	Numa 1	Numa 0	Numa 1	Numa 0	Numa 1	Numa 0	Numa 1	Numa 0	Numa 1	Numa 0	Numa 1	Numa 0	Numa 1
NOAM	DAMP	NOAM	DAMP	DAMP	DAMP	DAMP	DAMP	DAMP	DAMP	DAMP	DAMP	IDIH-A	
SOAM		SOAM			SS7MP		SS7MP		SS7MP		SS7MP	IDIH-M	
IPFE		IPFE										IDIH-DB	
PMAC													

Refer 3.13 CPU Pinning to perform the pinning.

Appendix V. netConfig

backupConfiguration/restoreConfiguration/upgradeFirmware with TPD Cipher Change

Beginning with TPD 7.6.0.0.0_88.50.0, the cipher list is restricted to allow only a limited number of ciphers for ssh access to the servers. As a result, netConfig backup and restore operations are not functional with Cisco switches (3020, 4948s) since these switches use other ciphers. Executing these commands with the restricted ciphers would fail as shown here:

```
[admusr@p5-pmac ~]$ sudo netConfig --device=3020_ip backupConfiguration
service=ssh_ip filename=backup
```

```
Command failed: backupConfiguration
```

```
Error saving to SSH service
```

```
[admusr@p5-pmac ~]$
```

To avoid this issue while maintaining a focus on improved security, the Procedure 132 must be executed before and after netConfig backup and restore operations.

Procedure 132. Turn Off Cipher List Before

backupConfiguration/restoreConfiguration/upgradeFirmware Command

Step #	Procedure	Description
<p>This procedure prepares the PMAC to avoid the cipher mismatch issue with Cisco switches. This is performed before the netConfig backup or restore operations.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
1. <input type="checkbox"/>	Turn off cipher list	<p>1. From the PMAC shell enter:</p> <pre>sudo vi /etc/ssh/sshd_config</pre> <p>2. Add # in the beginning of the following three lines to comment them out, the result is:</p> <pre>#Ciphers aes256-ctr,aes192-ctr,aes128-ctr #MaxAuthTries 4 #LoginGraceTime 1m</pre>

Step #	Procedure	Description
2. <input type="checkbox"/>	Restart sshd	<code>sudo service sshd restart</code>
3. <input type="checkbox"/>	Run the netConfig backupConfiguration/restoreConfiguration/upgradeFirmware command	<p>For a backup operation:</p> <pre>[admusr@pmac ~]\$ sudo /usr/TKLC/plat/bin/netConfig backupConfiguration --device=<switch_name> service=<ssh_service> filename=<switch_name>-backup</pre> <p>For a restore operation:</p> <pre>[admusr@pmac ~]\$ sudo /usr/TKLC/plat/bin/netConfig restoreConfiguration --device=<switch_name> service=<ssh_service> filename=<switch_name>-backup</pre> <p>For a upgrade operation:</p> <pre>[admusr@pmac ~]\$ sudo /usr/TKLC/plat/bin/netConfig upgradeFirmware --device=<switch_name> service=<ssh_service> filename=<Cisco IOS></pre>

Procedure 133. Resume Cipher List After backupConfiguration/restoreConfiguration/upgradeFirmware Command

Step #	Procedure	Description
<p>This procedure restores the PMAC restricted cipher list after perform the netConfig backup and restore operations.</p> <p>Check off (✓) each step as it is completed. Boxes have been provided for this purpose under each step number.</p> <p>If this procedure fails, contact My Oracle Support (MOS) and ask for assistance.</p>		
1. <input type="checkbox"/>	Resume the cipher list	<ol style="list-style-type: none"> From the PMAC shell enter: <code>sudo vi /etc/ssh/sshd_config</code> Uncomment the three lines: <code>Ciphers aes256-ctr,aes192-ctr,aes128-ctr</code> <code>MaxAuthTries 4</code> <code>LoginGraceTime 1m</code>
2. <input type="checkbox"/>	Restart sshd	<code>sudo service sshd restart</code>

Appendix W. My Oracle Support (MOS)

MOS (<https://support.oracle.com>) is your initial point of contact for all product support and training needs. A representative at Customer Access Support (CAS) can assist you with MOS registration.

Call the CAS main number at **1-800-223-1711** (toll-free in the US), or call the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. When calling, make the selections in the sequence shown on the Support telephone menu:

- Select **2** for **New Service Request**.

2. Select **3** for **Hardware, Networking, and Solaris Operating System Support**.

3. Select one of these options:

- For technical issues such as creating a new Service Request (SR), select **1**.
- For non-technical issues such as registration or assistance with MOS, select **2**.

You are connected to a live agent who can assist you with MOS registration and opening a support ticket. MOS is available 24 hours a day, 7 days a week, 365 days a year.

Emergency Response

In the event of a critical service situation, emergency response is offered by the CAS main number at 1-800-223-1711 (toll-free in the US), or by calling the Oracle Support hotline for your local country from the list at <http://www.oracle.com/us/support/contact/index.html>. The emergency response provides immediate coverage, automatic escalation, and other features to ensure that the critical situation is resolved as rapidly as possible.

A critical situation is defined as a problem with the installed equipment that severely affects service, traffic, or maintenance capabilities, and requires immediate corrective action. Critical situations affect service and/or system operation resulting in one or several of these situations:

- A total system failure that results in loss of all transaction processing capability
- Significant reduction in system capacity or traffic handling capability
- Loss of the system's ability to perform automatic system reconfiguration
- Inability to restart a processor or the system
- Corruption of system databases that requires service affecting corrective actions
- Loss of access for maintenance or recovery operations
- Loss of the system ability to provide any required critical or major trouble notification

Any other problem severely affecting service, capacity/traffic, billing, and maintenance capabilities may be defined as critical by prior discussion and agreement with Oracle.

Locate Product Documentation on the Oracle Help Center

Oracle Communications customer documentation is available on the web at the Oracle Help Center (OHC) site, <http://docs.oracle.com>. You do not have to register to access these documents. Viewing these files requires Adobe Acrobat Reader, which can be downloaded at <http://www.adobe.com>.

1. Access the Oracle Help Center site at <http://docs.oracle.com>.
2. Click **Industries**.
3. Under the **Oracle Communications** subheading, click the **Oracle Communications documentation** link. The Communications Documentation page appears. Most products covered by these documentation sets display under the headings **Network Session Delivery and Control Infrastructure** or **Platforms**.
4. Click on your Product and then the Release Number. A list of the entire documentation set for the selected product and release displays. To download a file to your location, right-click the PDF link, select **Save target as** (or similar command based on your browser), and save to a local folder.
