Table of Contents

- 1. Preface5
 - 1.1 Introduction 5
 - 1.2 Audience 5
- 2. Deployments.....6
 - 2.1 Steps to Deploy UI Application Shell 6

1. Preface

1.1 Introduction

This guide would help you to install the Application Shell on designated environment. It is assumed that all the prior setup is already done related with WebLogic managed server creation. It is Recommended to use dedicated managed server for Deploying Application Shell for UI.

1.2 Audience

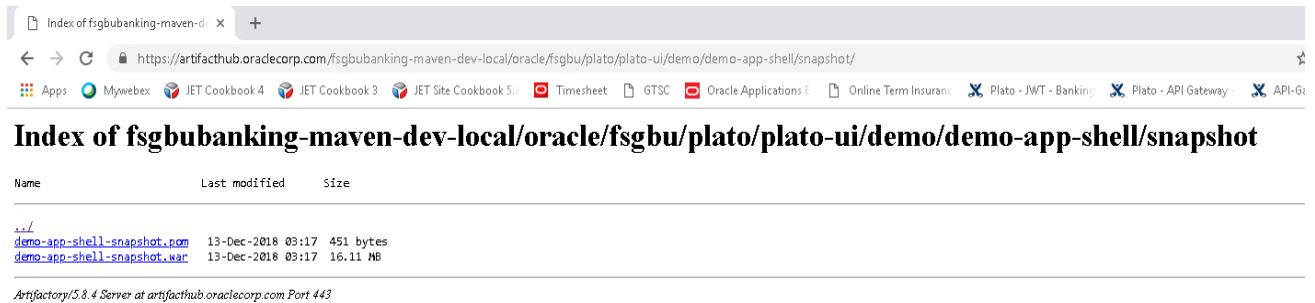

This document is intended for WebLogic admin or ops-web team who are responsible for installing the OFSS banking products.

2. Deployments

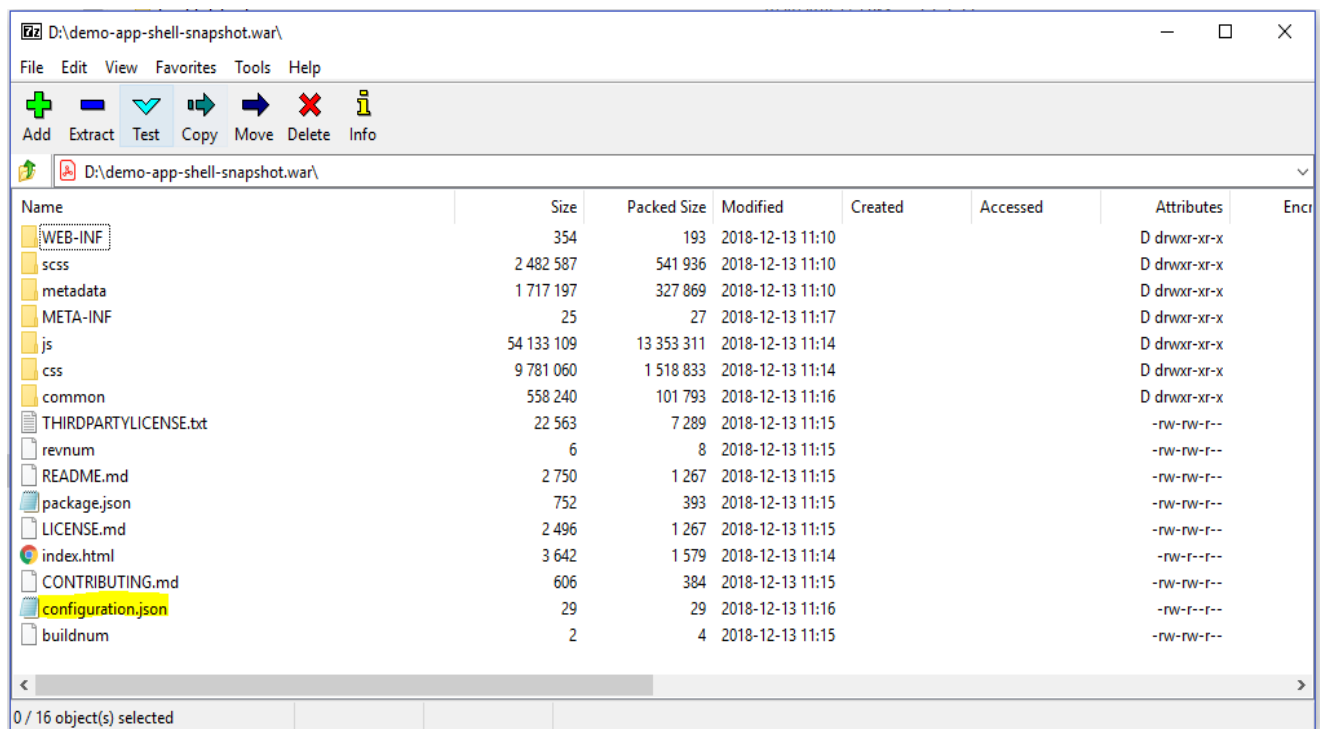

2.1 Steps to Deploy UI Application Shell

Steps to Deploy UI Application-Shell war as an application on weblogic is similar to any other deployment except for managed server and domain. Find the screenshots to see how deployment of an application-shell is done on weblogic.

1. Download the war file from the maven location (This is specific to each product and version number).

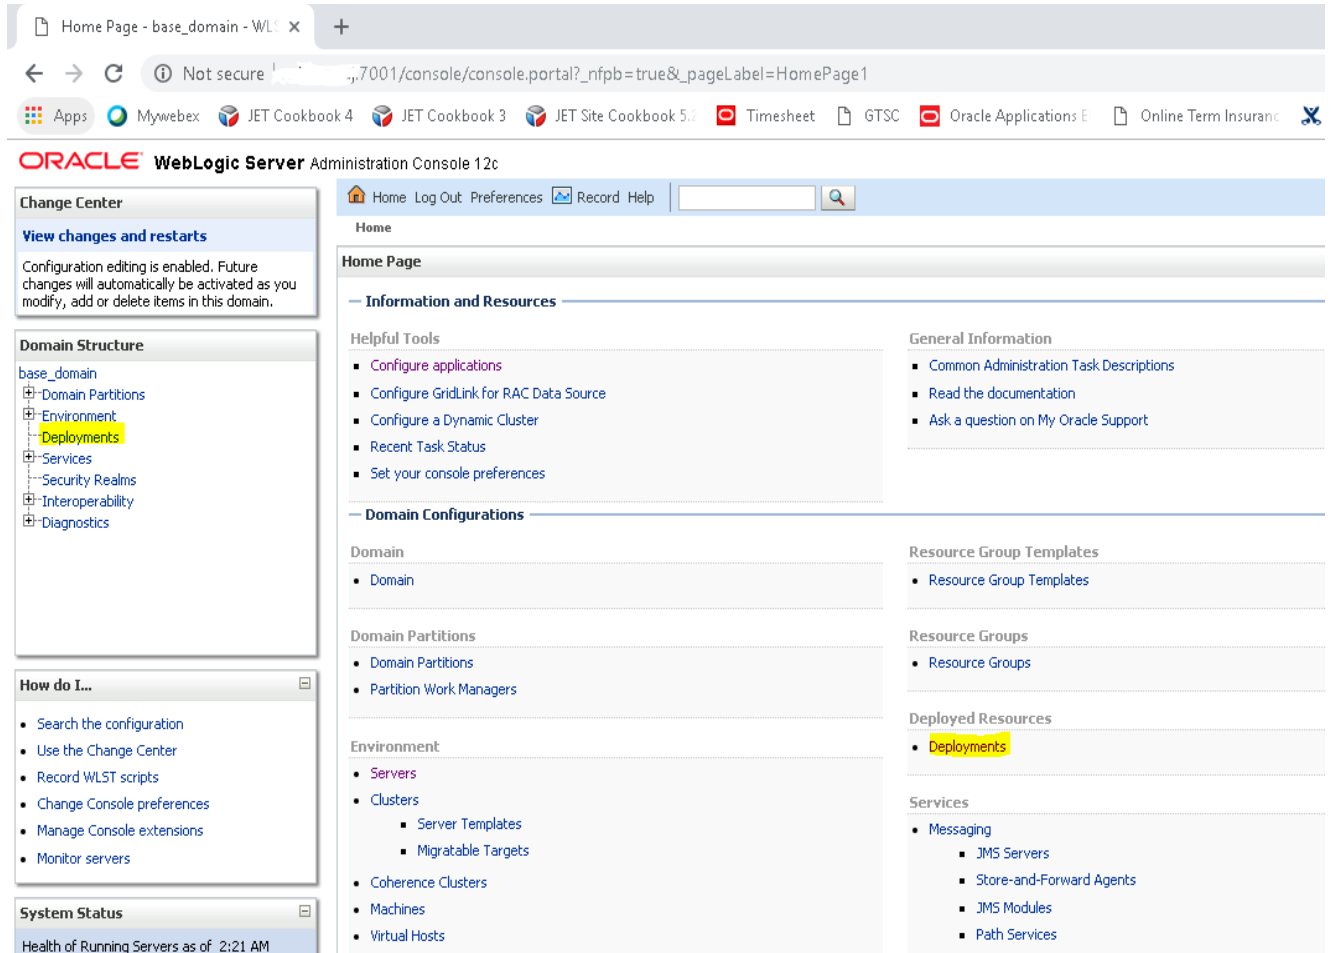

2. Use 7-zip or any other similar tool to open archive and modify the Configuration.json file found under the root folder.

3. Edit the configuration.json file with the API-Gateway host and port. Remember not to provide backslash after port. Save the file.

4. Open Weblogic console and navigate to the Deployments.

5. Click on install and click on Upload your files, locate the war file and select it, click on next.

Locate deployment to install and prepare for deployment

Select the file path that represents the application root directory, archive file, exploded archive directory, or application module descriptor that you want to install.

Note: Only valid file paths are displayed below. If you cannot find your deployment files, [Upload your file\(s\)](#) and/or confirm that your application contains the required files.

| | |
|-----------------------------|--|
| Path: | /scratch/deployed/weblogic/Oracle_Home/user_projects/domains/base_domain/servers/AdminServer/upload/ |
| Recently Used Paths: | /scratch/deployed/weblogic/Oracle_Home/user_projects/domains/base_domain/servers/AdminServer/upload/ /scratch/deployed/weblogic/Oracle_Home/user_projects/domains/base_domain/servers/AdminServer/upload/ /scratch/deployed/weblogic/Oracle_Home/user_projects/domains/base_domain/servers/AdminServer/upload/ /scratch/deployed/weblogic/Oracle_Home/user_projects/domains/base_domain/servers/AdminServer/upload/ |
| Current Location: | whf00agj / scratch / deployed / weblogic / Oracle_Home / user_projects / domains / base_domain / servers / AdminServer / upload / |

- Check the option install this deployment as an application option and click next.
- Name the deployment and click next.
- Check the option "No I will review the configuration later" and click Finish.
- Navigate to the control tab click on start and select the option "servicing all requests".
