Contributor:

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, delivered to U.S. Government end users are "commercial computer software" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the programs, including any operating system, integrated software, any programs installed on the hardware, and/or documentation, shall be subject to license terms and license restrictions applicable to the programs. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Xeon are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Opteron, the AMD logo, and the AMD Opteron logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

Value-Added Reseller (VAR) Language

Oracle Retail VAR Applications

The following restrictions and provisions only apply to the programs referred to in this section and licensed to you. You acknowledge that the programs may contain third party software (VAR applications) licensed to Oracle. Depending upon your product and its version number, the VAR applications may include:

(i) the **MicroStrategy** Components developed and licensed by MicroStrategy Services Corporation (MicroStrategy) of McLean, Virginia to Oracle and imbedded in the MicroStrategy for Oracle Retail Data Warehouse and MicroStrategy for Oracle Retail Planning & Optimization applications.

(ii) the **Wavelink** component developed and licensed by Wavelink Corporation (Wavelink) of Kirkland, Washington, to Oracle and imbedded in Oracle Retail Mobile Store Inventory Management.

(iii) the software component known as Access Via[™] licensed by Access Via of Seattle, Washington, and imbedded in Oracle Retail Signs and Oracle Retail Labels and Tags.

(iv) the software component known as **Adobe Flex™** licensed by Adobe Systems Incorporated of San Jose, California, and imbedded in Oracle Retail Promotion Planning & Optimization application.

You acknowledge and confirm that Oracle grants you use of only the object code of the VAR Applications.

Oracle will not deliver source code to the VAR Applications to you. Notwithstanding any other term or condition of the agreement and this ordering document, you shall not cause or permit alteration of any VAR Applications. For purposes of this section, "alteration" refers to all alterations, translations, upgrades, enhancements, customizations or modifications of all or any portion of the VAR Applications including all reconfigurations, reassembly or reverse assembly, re-engineering or reverse engineering and recompilations or reverse compilations of the VAR Applications or any derivatives of the VAR Applications. You acknowledge that it shall be a breach of the agreement to utilize the relationship, and/or confidential information of the VAR Applications for purposes of competitive discovery.

The VAR Applications contain trade secrets of Oracle and Oracle's licensors and Customer shall not attempt, cause, or permit the alteration, decompilation, reverse engineering, disassembly or other reduction of the VAR Applications to a human perceivable form. Oracle reserves the right to replace, with functional equivalent software, any of the VAR Applications in future releases of the applicable program.

Glossary

Send Us Your Comments

Oracle® Retail Xstore Office Cloud Service User Guide, Release 19.5

Oracle welcomes customers' comments and suggestions on the quality and usefulness of this document.

Your feedback is important, and helps us to best meet your needs as a user of our products. For example:

- Are the implementation steps correct and complete?
- Did you understand the context of the procedures?
- Did you find any errors in the information?
- Does the structure of the information help you with your tasks?
- Do you need different information or graphics? If so, where, and in what format?
- Are the examples correct? Do you need more examples?

If you find any errors or have any other suggestions for improvement, then please tell us your name, the name of the company who has licensed our products, the title and part number of the documentation and the chapter, section, and page number (if available).

Note: Before sending us your comments, you might like to check that you have the latest version of the document and if any concerns are already addressed. To do this, access the Online Documentation available on the Oracle Help Center (docs.oracle.com) Web site. It contains the most current Documentation Library plus all documents revised or released recently.

Send your comments to us using the electronic mail address: retail-doc_us@oracle.com

Please give your name, address, electronic mail address, and telephone number (optional).

If you need assistance with Oracle software, then please contact your support representative or Oracle Support Services.

If you require training or instruction in using Oracle software, then please contact your Oracle local office and inquire about our Oracle University offerings. A list of Oracle offices is available on our Web site at http://www.oracle.com.

Preface

The Oracle® Retail Xstore Office Cloud Service User Guide describes all available functions of Release 19.5.

Audience

This guide is for technical personnel who configure, maintain and support, or use Oracle Retail Xstore Office Cloud Service.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at http://www.oracle.com/pls/topic/lookup?ctx=acc&id=docacc.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Related Documents

For more information, see the following documents in the Oracle Retail Xstore Pointof-Service Release Notes.

See the Oracle Retail Xstore Office Cloud Service documentation library at the following URL:

https://docs.oracle.com/en/industries/retail/index.html

Customer Support

To contact Oracle Customer Support, access My Oracle Support at the following URL:

https://support.oracle.com

When contacting Customer Support, please provide the following:

- Product version and program/module name
- Functional and technical description of the problem (include business impact)
- Detailed step-by-step instructions to re-create

- Exact error message received
- Screen shots of each step you take

Review Patch Documentation

When you install the application for the first time, you install either a base release (for example, 19.5) or a later patch release (for example, 19.5.1). If you are installing the base release or additional patches, read the documentation for all releases that have occurred since the base release before you begin installation. Documentation for patch releases can contain critical information related to the base release, as well as information about code changes since the base release.

Improved Process for Oracle Retail Documentation Corrections

To more quickly address critical corrections to Oracle Retail documentation content, Oracle Retail documentation may be republished whenever a critical correction is needed. For critical corrections, the republication of an Oracle Retail document may at times not be attached to a numbered software release; instead, the Oracle Retail document will simply be replaced on the Oracle Help Center (docs.oracle.com) Web site, or, in the case of Data Models, to the applicable My Oracle Support Documentation container where they reside.

This process will prevent delays in making critical corrections available to customers. For the customer, it means that before you begin installation, you must verify that you have the most recent version of the Oracle Retail documentation set. Oracle Retail documentation is available on the Oracle Help Center (docs.oracle.com) at the following URL:

https://docs.oracle.com/en/industries/retail/index.html

An updated version of the applicable Oracle Retail document is indicated by Oracle part number, as well as print date (month and year). An updated version uses the same part number, with a higher-numbered suffix. For example, part number E123456-02 is an updated version of a document with part number E123456-01.

If a more recent version of a document is available, that version supersedes all previous versions.

Oracle Retail Documentation on the Oracle Help Center (docs.oracle.com)

Oracle Retail product documentation is available on the following Web site:

https://docs.oracle.com/en/industries/retail/index.html

(Data Model documents can be obtained through My Oracle Support.)

Conventions

The following text conventions are used in this document:

| Convention | Meaning |
|------------|--|
| boldface | Boldface type indicates graphical user interface elements associated with an action, or terms defined in text or the glossary. |
| italic | Italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values. |
| monospace | Monospace type indicates commands within a paragraph, URLs, code in examples, text that appears on the screen, or text that you enter. |

Getting Started

Oracle Retail Xstore Office Cloud Service (XOCS) is the central component for the Xstore Suite available as a SaaS offering. It includes the web-based Xadmin and the Xcenter Database. The Xadmin UI allows users to administer corporate-based functions such as Oracle Retail Xstore Point-of-Service configuration setup and maintenance, file management, viewing the electronic journal, viewing store reports, and monitoring alerts for the Oracle Retail Xstore Point-of-Service in use at the store. Xcenter provides the database, administration and services necessary to operate across the enterprise.

This guide is intended for technical personnel working with Oracle Retail Xstore Office Cloud Service and requires a working knowledge of Oracle Retail Xstore Point-of-Service POS, XML, SQL Server database, the Windows operating system, and the network system being used.

Note: Because Oracle Retail Xstore Office Cloud Service UI color schemes and menu options are configurable, the page layouts and functions on your system may appear in a different order or have different text than examples shown in this manual. Since different browsers use different rendering engines, the browser you are using may also affect the way the screens are depicted on your system.

Prerequisites

This guide assumes:

- You have the privilege-permission level to use Oracle Retail Xstore Office Cloud Service.
- Oracle Retail Xstore Point of Service is used.
- Xcenter Database (a part of Oracle Retail Xstore Office Cloud Service) is used.
- You have purchased Oracle Retail Xstore Office Cloud Service.

Web Browser Support

Oracle Retail Xstore Office Cloud Service supports Internet Explorer web browser version 11.0 and Firefox running on the Windows 8 or Windows 10 operating systems. Oracle Retail Xstore Office Cloud Service also supports Google Chrome web browser. Other web browser/ operating system combinations may work, but have not been tested.

Note: Oracle Retail Xstore Office Cloud Service must be set to 100% zoom. To verify the zoom level, click **View** and then **Zoom** on the browser menu and verify the zoom is set to 100%. In IE, make sure the zoom is 100%. In Firefox, choose **Zoom**, then **Reset**.

Accessing Oracle Retail Xstore Office Cloud Service

Oracle Retail Xstore Office Cloud Service is a web-based application that you can access through an internet browser.

If you use Xstore Office Cloud Service, you login through the Identity Cloud Service (IDCS) or Oracle Cloud Infrastructure Identity and Access Management (OCI IAM), see Figure 1–1. The system validates if you hold the Xadmin AppRole in IDCS or OCI IAM and if your user name exists in Xadmin. If your user cannot be found in Xadmin, an error message is displayed and you are redirected to the IDCS or OCI IAM login screen.

- 1. Open an internet browser.
- 2. Enter the server address in the Address field and press [Enter].
- **3.** The login page opens.

Figure 1–1 Oracle Retail Xstore Office Cloud Service Login Page - IDCS

Figure 1–2 Oracle Retail Xstore Office Cloud Service Login Page - OCI IAM

- 4. Type your user name in the User ID field.
- 5. Type your password in the Password field.
- 6. Click the Sign In button.

Note: Once a user is created, the user receives an email to activate the user account. That activation link takes user to create password page of Identity Cloud Service (IDCS) or Oracle Cloud Infrastructure Identity and Access Management (OCI IAM).

7. You are prompted for an organization. Select an organization from the list and click **OK**.

Note: If only one organization is assigned to your user account, the organization selection is not available.

If you select **Cancel** you are logged out of Xstore Office.

8. The Oracle Retail Xstore Office Cloud Service Home page displays. Select a menu option from the menu bar, or click a link in one of the Oracle Retail Xstore Office Cloud Service Panels to continue.

Figure 1–3 Oracle Retail Xstore Office Cloud Service Home Page

Home Page Layout:

1. Menu Bar

The top of the page contains the menu bar.

2. Breadcrumbs Bar

The breadcrumbs bar is right below the menu bar.

3. Organization ID, Organization Name (if available) and Logged In User ID

The selected organization ID and organization name (if available) as well as the logged in user ID are displayed in the top right corner of the page.

4. Panels

In the center of the page the available panels are displayed. Possible available panels are:

- Configuration Manager
- Data Manager
- Deployment Management
- Support Tools
- Reports
- System
- 5. More Arrow (when applicable)
- 6. User Options Drop-down menu

Select the logged in profile name in top right section of the page. A drop down menu is displayed. The following options are available:

- Log Out
 - Select the Log Out option.
 - Confirm that you want to log out. The system returns to the login page.
- Change Organization

- Use the **Change Organization** option to switch between organizations.
- In the Change Organization window, select an organization from the list.
- Confirm with **OK**.

Note: If the user has only access to one organization, the Change Organization option is not displayed.

About Xadmin

Use this feature to view the Oracle Retail Xstore Office version the system is currently running on. This is a view-only window.

Note: To view the versions of Oracle Retail Xstore Point of Service running in the field, see Chapter 10, "Support Tools".

The following information is shown:

- The application version number
- Copyright information
- Oracle license information

To close the window, click the Close icon.

Navigation:

- To log out, click the logged in user ID located in top right section of the page. You are prompted to log out and you are informed that you will be logged out of all IDCS or OCI IAM Cloud Applications in the session. Select Yes to confirm the prompt. Select No to stay logged in.
- To return to the Oracle Retail Xstore Office Cloud Service Home page at any time, click the Home bread crumb.
- To display more panels (when applicable), click the **More** arrow.

Important: Initial Access Setup Instructions

A default administrator security role account has been set up in the database to allow first-time access to Oracle Retail Xstore Office Cloud Service.

Using this default user account to log in, click the Xadmin Users link in the System panel or select Xadmin Users in the System menu to set up additional Oracle Retail Xstore Office Cloud Service user accounts.

Oracle recommends that you set up at least one ADMINISTRATOR security user account.

Once this Administrator security user has been set up, delete the initial (default) administrator user account for security purposes.

See Chapter 2, "Roles, Users, and Security Access" for detailed instructions.

About this Guide

Refer to the following chapters for the information you need to use the Oracle Retail Xstore Office Cloud Service components:

- Chapter 2, "Roles, Users, and Security Access" This chapter provides information about creating user security roles and managing user access to Oracle Retail Xstore Office Cloud Service.
- Chapter 3, "System Management" This chapter provides information about the features used to manage the Oracle Retail Xstore Office Cloud Service application, including setting up the system configuration rules and paths for Oracle Retail Xstore Office Cloud Service itself.
- Chapter 4, "Profile Management" This chapter provides information about creating and maintaining profile groups and elements for stores, creating and maintaining the personalities that determine the prioritized profile elements for configuration overrides, and creating and maintaining the store landscapes used for machine (register) configurations. After setting up the groups/elements and personalities/landscapes, this chapter explains how to use the information to create Store Personalities for your stores which allows you to easily maintain portions of your configuration paths.
- Chapter 5, "Configurator" This chapter provides information about creating, maintaining, and deploying Oracle Retail Xstore Point-of-Service configuration changes selectively, or globally across the entire organization.
- Chapter 6, "Data Management" This chapter provides information about creating, maintaining, and deploying Oracle Retail Xstore Point-of-Service data changes selectively, or globally across the entire organization.
- Chapter 7, "Deployment Management" This chapter provides information about using Deployment Manager to upload files for deployment and to track the status of all configuration, data, and file deployments.
- Chapter 9, "Reports" This chapter provides information about running and viewing any of the Oracle Retail Xstore Point-of-Service reports against the Xcenter (central) database.
- Chapter 10, "Support Tools" This chapter provides information about using the Support Tools component to view issues taking place at the store level, to set up email alerts to be sent to the appropriate personnel when any issues occur, and to compile the PosLog data from within Oracle Retail Xstore Office Cloud Service and save it as a file to a specified location or to rebroadcast the PosLog data.
- Appendix A, "Appendix: About Deployments" This appendix explains how deployments are created by Oracle Retail Xstore Office Cloud Service and applied by Oracle Retail Xstore Point of Service and Oracle Retail Xenvironment.
- Appendix B, "Appendix: Personality Maintenance and Config Paths" This appendix explains how the store personalities set up in Oracle Retail Xstore Office Cloud Service are used to create the config path properties.
- Appendix C, "Appendix: User Interface Configurations" This appendix explains how Oracle Retail Xstore Office Cloud Service can be "personalized" by adding a background image, changing the color scheme, and configuring the panel display order and content.
- Appendix , "Glossary" This glossary lists and defines many terms and their definitions used in this guide.

Roles, Users, and Security Access

This chapter provides information about creating user security roles and managing user access to Oracle Retail Xstore Office Cloud Service. The User Roles and Users and Security Access features provide the ability to create security roles and to grant privileges to users for one or more areas of Oracle Retail Xstore Office Cloud Service based on these roles.

Note: Security

Any users in an Org Node higher than the logged-on user will not be displayed in the Admin Users list. In addition, the logged-on user cannot add Org Nodes that are higher than the org nodes he/she is assigned to. Security privileges are associated with Oracle Retail Xstore Office Cloud Service actions.

Oracle Retail Xstore Office Cloud Service Areas Controlled by Security

- Administration
- Configurator
- Data Manager
- Deployment Manager
- Home Page
- Reports
- Support

About this Chapter

This chapter contains the following sections:

- See User Roles for information about creating the roles used to determine user privileges in Oracle Retail Xstore Office Cloud Service. Access to different areas of Oracle Retail Xstore Office Cloud Service is controlled by assigning security Roles to the users.
- See Admin Users Using Roles to Grant Access to Oracle Retail Xstore Office Cloud Service for instructions on creating new Oracle Retail Xstore Office Cloud Service User Accounts and controlling user access to Oracle Retail Xstore Office Cloud Service.

Note: Refer to the *Oracle Retail Xstore Suite Implementation and Security Guide* for information about using DataLoader to load Oracle Retail Xstore Office Cloud Service user accounts.

 See Editing Oracle Retail Xstore Office Cloud Service User Accounts for instructions on changing an existing user's account privileges.

User Roles

Note: The Role of ADMINISTRATOR is required. This role defaults to access for every privilege and has a rank of 150.

Oracle recommends that you set up at least one ADMINISTRATOR user. Once this administrator user has been set up, delete the initial (default) administrator user account for security purposes.

Access to different areas of Oracle Retail Xstore Office Cloud Service is controlled by assigning security Roles to the users. This section provides information about defining the user roles that will then be used to grant specific privileges to a user.

Creating/Editing User Roles

- 1. From the Oracle Retail Xstore Office Cloud Service menu, select **System**, then **Xadmin Users**, or click the Xadmin Users link in the System panel.
- 2. At the Xadmin Users page, click User Roles.

Figure 2–1 Xadmin Users Page

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management | |
|------------|--------------------------------------|------------------|-------------------|--------------|---------------|-------------------|--|

Figure 2–2 User Roles Window - Add New Role Example

- Organization Displays the Organization ID and its corresponding name the user selected during login.
- Role ID Type the role identifier. Spaces and special characters are not allowed in this field. When editing an existing role, this field cannot be changed.
- **Description** Type a description for the role.
- Xadmin Rank Type a numeric rank number for Oracle Retail Xstore Office Cloud Service. This rank is evaluated when creating a new Oracle Retail Xstore Office Cloud Service user in User and Security Access. An Oracle Retail Xstore Office Cloud Service user cannot assign a role to a new user that has a greater numeric rank than his/her Xadmin rank. For example, a logged-in user with a rank role of 50 cannot edit or create a rank role of 51 and above.
- Xstore Rank Type a numeric rank number for Oracle Retail Xstore Point of Service. This value is the rank associated to the user within the Oracle Retail Xstore Point-of-Service application and corresponds to the role the user holds within Oracle Retail Xstore Point of Service. This rank is evaluated when creating or editing an Oracle Retail Xstore Point-of-Service employee in Data Manager - Employees. An Oracle Retail Xstore Office Cloud Service user cannot assign Oracle

Retail Xstore Point-of-Service security groups to an employee that is ranked higher than his/her Oracle Retail Xstore Point-of-Service rank.

- **Privileges** Select each role privilege from the list of Available options and click the arrow button to move the role or roles to the Selected window:
 - Double right arrows Add all privileges to the Selected window.
 - Single right arrow Add selected privilege to the Selected window.
 - Single left arrow Remove selected privilege from the Selected window.

- Double left arrows - Remove all privileges from the Selected window.

- To select several privileges at the same time, hold down the [Ctrl] key on the keyboard while selecting each privilege you want to assign to the role you are creating or editing. Click the single right arrow button to move the privileges from the Available window to the Selected window.
- You can also hold down the [Shift] key in the same manner to select all the privileges between the first privilege you select and the last privilege you select. Click the single right arrow button to move the privileges from the Available window to the Selected window.
- 5. Click **Save** to create or update the role.

Note: A Delete icon (X) is available for roles you create. However, if a role has been assigned to a user it cannot be deleted.

About Privileges

The available privileges for Oracle Retail Xstore Office Cloud Service are grouped by category: Administration, Configurator, DataManager, DeploymentManager, Home Page, Reports, and Support.

Make sure you set up Oracle Retail Xstore Office Cloud Service privileges properly.

- For example, in Deployment Manager, the Deployment Plan privileges for View Deployment Plans and Create/Edit Deployment Plans technically work together. If you just have View privilege, you can only view deployment plans (as expected). However, you must have both privileges (view and create) in order to Create or Edit.
- The same is true for the Configurator privileges. If you just have Discounts or Menus and so on., you cannot do anything. You must also have the Configurator privilege and the Global Configurations or Configuration Overrides privilege to be able to get to the Discounts/Menus/Receipts selection page.
- If a user does not have the privilege for a specific home page panel, then it will not be displayed when the user logs into Oracle Retail Xstore Office Cloud Service. There are six panels in the Oracle Retail Xstore Office Cloud Service base configuration, so there are six privileges available. Also, if the user has access to the home page panel itself, but not to any of the options contained within it, then the panel will not be displayed.

Administration

Administration Security Privileges:

- Available Locales
- Broadcasters
- Customizations
- Integrations
- Job Management
- Lock/Reset Account
- Organizations
- System Manager
- User Roles

- Users and Security Access
- Xadmin Settings
- Xadmin Users

Configurator

Configurator Security Privileges:

- Code Value
- Configuration Overrides
- Configurator
- Copy Store Configurations
- Customer Displays
- Delete Profile Element Configurations
- Discounts
- Global Configurations
- Landscape Maintenance
- Menu Configuration
- Menus
- Personality Maintenance
- Profile Maintenance
- Profile Management
- Reason Codes
- Receipts
- Schedule Deployment
- Security
- Security Groups
- Security Privileges
- Store Personality Maintenance
- Store Specific Overrides
- System Config
- Tab Configuration
- Tender Maintenance
- Tender Options Maintenance
- Tender Security Settings
- Tenders

Customization

Customization Privileges:

Delete Customizations

- Export Customizations
- Upload Customizations

DataManager

DataManager Security Privileges:

- Attached Items
- Currency Exchange
- Data Manager
- Data Publisher
- Employee
- Employee Tasks
- Item Matrix Manager
- Item Message Maintenance
- Item Pricing
- Item Restriction Types
- Item Restrictions
- Items
- Legal Entity (Country Pack ONLY)
- Merchandise Hierarchy
- Merchandise Items
- Non Merchandise Items
- OCDS Data Refresh
- Organization Hierarchy
- Organization Hierarchy Levels
- Organization Hierarchy Maintenance
- Store Collections
- Store Communications
- Store Messages
- Stores
- Tax Authority
- Tax Brackets
- Tax Elements
- Tax Group
- Tax Location
- Tax Rates
- Taxes
- Vendor

DeploymentManager

DeploymentManager Security Privileges:

- Approve Deployment Wave
- Cancel Deployment
- Create/Edit Deployment Plans
- File Deploy
- File Upload
- Purge Deployment Files
- Schedule Planned Deployment
- Schedule Single Deployment
- Unapprove Deployment Wave
- Upload File to Deploy
- View Deployment Plans
- View Deployments

Note: The File Deploy privilege should not be assigned to the same role as either the File Upload or Upload File to Deploy privilege.

Home Page

Home Page Panel Security Privileges:

- Home Page
- Home Page Config Management Panel
- Home Page Data Management Panel
- Home Page Deployment Panel
- Home Page Reports Panel
- Home Page Support Panel
- Home Page System Panel

Reports

Reports Security Privileges:

- Airport Authority Report
- Best Sellers Reports
- Credit Card Report
- Customer Account Activity Summary Report
- Customer List Report
- Daily Sales Report
- Daily Sales Total Report
- Daily Sales and Cash Report

- Dashboard Report for Sale
- Electronic Journal
- Employee Performance Report
- Employee Tasks Report
- Flash Sales Report
- Gift Certificate Report
- Inventory Stock Cost Report
- Item List Report
- Journal Report
- Layaway Account Activity Report
- Layaway Aging Report
- Line Void Report
- No Sale Report
- Post Void Report
- Price Change Report
- Price Override Report
- Receiving Exception Report
- Receiving Report
- Returned Merchandise Report
- Roll-up Stock Valuation Report
- Sales By Department Report
- Sales By Department Employee Report
- Sales By Hour Analysis Report
- Sales By Hour Report
- Shipping Exception Report
- Special Orders Report
- Stock Valuation Reports
- Store Locations Report
- Suspended Transaction Summary Report
- Tax Exemption Report
- Transaction Cancel Detail Report
- View Reports

Support

Support Security Privileges:

- Alert Console
- Alert Settings

- Deployed Oracle Retail Xstore Point-of-Service Versions
- PosLog Publisher
- Replication Status

Admin Users - Using Roles to Grant Access to Oracle Retail Xstore Office Cloud Service

Once you have created Roles, you can grant user access to Oracle Retail Xstore Office Cloud Service by assigning a Role, and its associated privileges, to the user.

For Xstore Office Cloud Service applications, a customer admin user is created in the Identity Cloud Service (IDCS) or the Oracle Cloud Infrastructure Identity and Access Management (OCI IAM) as part of the provisioning process.

Note: The Identity Cloud Service (IDCS) is an Identity Management Service and Authorization Server. For more information on IDCS, see the Oracle Identity Cloud Service documentation set, Get Started portal for IDCS.

https://docs.oracle.com/en/cloud/paas/identity-cloud/index.h
tml

Oracle Cloud Infrastructure Identity and Access Management (IAM) provides identity and access management features such as authentication, single sign-on (SSO), and identity lifecycle management for Oracle Cloud as well as Oracle and non-Oracle applications, whether SaaS, cloud-hosted, or on-premises.

For more information, see the Oracle Cloud Infrastructure Documentation.

https://docs.oracle.com/en-us/iaas/Content/Identity/home.htm

The customer admin user has the privileges to assign organizations, roles and org nodes to each user.

Note: All users in Xadmin are synced with the users created in IDCS or OCI IAM.

Creating a User for Xstore Office Cloud Service

Users for the Xstore Office Cloud service application can be created in the Identity Cloud Service (IDCS) or the Oracle Cloud Infrastructure Identity and Access Management (OCI IAM), either manually or imported into IDCS or OCI IAM, then that user will be pulled down to Xstore Office Cloud Service (Xadmin) by using the IDP sync job. See the Synchronizing New Users section below.

Note: For more information on how to create users for Xstore Office Cloud Service, see the *Oracle Retail Xstore Office Cloud Service Cloud Service Security Guide*.

Synchronizing New Users

If a user is created in IDCS or OCI IAM, the following steps should occur:

- 1. The IDP sync job process, will pull users down from IDCS or OCI IAM. This job is configurable and runs every hour by default.
- **2.** Once your user ID is pulled from IDCS or OCI IAM, the user ID will be visible on the User and Security Access Page. At this point, no organization and role will be assigned to your user ID. The user status is NEW.
- **3.** The Admin user needs to assign minimum values to your user account, like organization, roles, org nodes and so on.
- **4.** Once the Admin user assigned minimum values to your user account the status changes from NEW to PROVISIONED. You can login to the Xstore Office Cloud Service UI now.

Editing Oracle Retail Xstore Office Cloud Service User Accounts

Perform the following steps to change locales, and add organizations, roles and org nodes for an existing user.

- 1. From the Oracle Retail Xstore Office Cloud Service menu, select **System Manager**, then **Xadmin Users**, or click the Xadmin Users link in the System panel.
- 2. At the Xadmin Users page, click Users and Security Access.

| Journal II Reports | 🖌 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management |
|---------------------------------------|------------------|-------------------|--------------|---------------|-------------------|
| Home 🕨 Xadmin Users | | | | | |
| Select one of the followin | g options. | | | | |
| Vsers and Secu Manage Users and Se | | | | | |
| Vser Roles Manage User Roles. | | | | | |

Figure 2–3 Xadmin Users Page

- 3. At the Users and Security Access page, double-click on a user in the list.
 - Locale This list contains the locales defined for your organization; defaults to English United States.

User ID, first/last name, credentials and email address can not be changed.

Note: If there are more than 200 Oracle Retail Xstore Office Cloud Service users in your organization, a Search page displays rather than the employee list as shown in Figure 2-5 above.

Important: For cloud applications, delete users in the Identity Cloud Service (IDCS) or Oracle Cloud Infrastructure Identity and Access Management (OCI IAM).

Note: Xstore will not be deleting any users in Xadmin as part of the Right to Erasure and/or the Right to be Forgotten. Xadmin users will need to be deleted in a separate process triggered by you, the retailer.

- **4.** Click **Add New**, to assign an organization, role and org nodes to the user. The system displays the Add users organization, role and org nodes window. Select the following.
 - **a. Organization** Select the organization ID the user has access to from the list.
 - **b.** Role Select a role for the user.
 - c. Organization Nodes Specify which stores the user has access to:
 - Select the globe icon. The system displays a list of organization nodes defined for your organization.
 - Select which nodes/stores the user will have access to, and click Add. The system displays the selected organization nodes.
 - The nodes you selected are shown, along with a **Delete** option you can use if you need to remove access to an Organization Node for the user.

Note: You can add and delete multiple organization nodes.

d. Enable dashboard as home page check box - Select the check box to enable the Dashboard as your home page.

Note: The Dashboard can only be enabled as home page, when a single store node is assigned to the user.

e. Click **OK** to save your entries. The system displays the User screen and updates the list of assigned organizations for the user.

Note: Multiple organizations and roles can be added to the same user by clicking **Add**.

5. Click the **Save** button to apply the changes to the user's account.

Resetting Passwords User Accounts

In Xstore Office Cloud Service applications, only the customer admin user can reset user password.

For more information on how the admin user can reset passwords of user accounts, see the *Oracle Cloud Administering Oracle Identity Cloud Service Guide*.

System Management

The System component has many features used to manage the Oracle Retail Xstore Office Cloud Service application itself, including setting up the system configuration rules and paths, setting up the available locales within Oracle Retail Xstore Office Cloud Service, viewing Oracle Retail Xstore Office Cloud Service version information, and setting up Oracle Retail Xstore Office Cloud Service users and user roles.

About this Chapter

- For information about the Oracle Retail Xstore Office Cloud Service system configuration feature, see Oracle Retail Xstore Office Cloud Service Configuration. This section provides detailed information about setting configuration parameters for the Oracle Retail Xstore Office Cloud Service application itself.
- For information about controlling the available locales within the Oracle Retail Xstore Office Cloud Service application itself, see Available Locales. These changes are not sent down to Oracle Retail Xstore Point of Service.

Where To Look For User Settings Information

- For information about the Users and Security Access component, see Chapter 2, "Roles, Users, and Security Access". This component provides the ability to grant privileges to users for one or more areas of Oracle Retail Xstore Office Cloud Service as needed based on security Roles.
- For information about the User Roles component, see Chapter 2, "Roles, Users, and Security Access". This component provides the ability to create the security roles that are used to control access to the various areas of Oracle Retail Xstore Office Cloud Service.

Oracle Retail Xstore Office Cloud Service Configuration

Oracle Retail Xstore Office Cloud Service Configuration provides the ability to set up the configuration options that govern how Oracle Retail Xstore Office Cloud Service works. You cannot add or delete Oracle Retail Xstore Office Cloud Service configuration options.

1. From the Oracle Retail Xstore Office Cloud Service menu, select **System**, then **Xadmin Settings**, or click the Xadmin Settings link in the System panel.

Figure 3–1 Xadmin Settings Page

| ORACLE [®] Xadm | nin | | | | |

| Buser Account | | | | | |
| | | | | | |

2. The Settings page displays, showing the configuration options available for Oracle Retail Xstore Office Cloud Service. The configuration options are arranged by category, in a tree view. Edit the values as needed, then click the **Save** button to save the changes.

To find configurations containing specific text, enter the Xstore Office Cloud text in the input box, then press [Enter]. The text typed here can be found anywhere within the configuration label or description. The results are shown in the left panel (folder tree). Only those configurations containing the specified text within the label and/or description are displayed. If needed, click Clear to remove the search criteria and return to the Oracle Retail Xstore Office Cloud Service Configuration page.

See Oracle Retail Xstore Office Cloud Service Configuration below for detailed information about the Oracle Retail Xstore Office Cloud Service configuration options.

Oracle Retail Xstore Office Cloud Service Configuration Options

This section describes the Oracle Retail Xstore Office Cloud Service Configuration Options.

Country Pack - Brazil

Enable NFe

When this setting is set to "Yes", jobs are scheduled as specified in the Xadmin Settings - Interval for Pushing.

When this setting is set to "No", Brazil Country Pack jobs are not scheduled and will never be triggered.

Push Data Job Execution Time

The time of the day to start the Push Data Job to run. This configuration establishes the UTC time at which the job will occur. Enter this value in HH:MM format.

Days Back for SPED Export

The SPED (Sistema Público de Escrituração Digital) export process creates the Brazilian SPED report for a single day. To allow for any delays in replication, the report is generated on a delay. This configuration specifies the number of days to wait before generating the report for a specific date. The task creates a daily XML file for each shop. Each XML file is made available for download through the File ReSTful resource. For more details on the File resource, see Xstore Office Services in the *Oracle Retail Xstore Suite Services Guide*.

Country Pack - Italy

Enable Italy Electronic Invoice

When this setting is set to "Yes", jobs are scheduled as specified in the Xadmin Settings - Generate Invoice Interval.

When this setting is set to "No", Italy Country Pack Jobs are not scheduled and will never be triggered.

Generate Invoice Job Execution Time

The time of the day to start the Generate Invoice Job to run. This configuration establishes the UTC time at which the job will occur. Enter this value in HH:MM format.

Deployment Category

Automatically Deploy Data Manager Changes?

If set to true, Oracle Retail Xstore Office Cloud Service automatically deploys pending Data Manager changes at a specified time each day. The time of day is determined by the Data Manager Automatic Deployment Time setting.

Data Manager Automatic Deployment Time

The time of the day to start the auto deployment of undeployed Data Manager changes. The UTC time should be in the format of HH:MM using the 24 hr clock. This setting is only relevant when the Automatically Deploy Data Manager Changes? setting is enabled.

Deployment Download Connection Timeout

The amount of time, in seconds, that Oracle Retail Xenvironment will spend attempting to connect to Xcenter (part of Oracle Retail Xstore Office Cloud Service) to download a deployment. Once the time has elapsed with no connection detected, the attempt will be considered a failure. This setting is used by Oracle Retail Xenvironment at the store.

Deployment Download Retries

The number of times Oracle Retail Xenvironment will attempt to download updates from Oracle Retail Xstore Office Cloud Service before failing. The default value is 10 attempts. A setting of zero (0) means never retry, which is not recommended. This setting is used by Oracle Retail Xenvironment at the store.

Deployment Download Retry Interval

The time interval, in seconds, that Oracle Retail Xenvironment will wait after a failed deployment download attempt before it tries to download the deployment again.

This setting is used by Oracle Retail Xenvironment at the store.

Detection Interval for Automatically Deployed Data Files

The interval, in minutes, between times that Xadmin checks the Directory for Automatically Deployed Data Files for files to deploy.

Interval for Checking for Deployment Waves That Require Approval

The time interval, in minutes, for running the Wave Approval email service. The default value is 60 minutes. For example, if set to 60 minutes, the service will run every hour to scan for new waves and send emails. An email will be sent for waves that meet the Number of Days Before Deployment Wave to Send Notification requirement.

Number of Days Before Deployment Wave to Send Notification

The number of days prior to the projected launch date of a wave with a launch type of Approval Required that an email notification goes out. Valid values are from 1 to 365. The default value is 3 days.

Number of Records in Deployment Viewer

The maximum number of Deployment records to display per page in the Deployment Viewer.

General Category

Beginning Time of the Business Day

To support alert reporting, this is the time-in hours from 00:00 UTC, that denotes the corporate start time of the business day. (For example, 5 is 05:00 UTC.)

Default Country Code

The default country code for use in Xadmin.

Default Currency Code

The default currency code for use in Xadmin. All monetary values entered and displayed across Xadmin are assumed to be of the default currency.

Default Deposit Bank Account Number

When creating a new store, this is the default deposit bank account number.

Default Deposit Bank Name

When creating a new store, this is the default deposit bank name.

Enable the Option to Create Store-Specific Configurations?

When enabled (true), users have the ability to create or override configurations for a specific store in Configurator. See Chapter 5, "Configurator", section Managing Configurations.

Enable the Option to Delete Configurations?

When enabled (true), configurations for profile or store-specific overrides can be deleted in Configurator. If set to false, all access to this functionality is disabled within Oracle Retail Xstore Office Cloud Service, regardless of the privileges.

Interval for Checking for Missing Registers

How frequently Xcenter checks for missing registers, in minutes. The default value is 15 minutes. The value of this setting should be less than the Time Before Register Is Considered Missing setting.

Number of Records in POSLog Publisher Result Page

The maximum number of POSLog records displayed per page on the POSLog publisher result page. The minimum value allowed is 1.

POSLog Publish Max Search Results

The maximum number of POSLog records returned from the database for republishing.

Time Before Missing Register Is Ignored

Once a device has been missing for the amount of time specified here (in hours), it is no longer reported as a problem. The default value is 72 hours.

Time Before Register Is Considered Missing

The amount of time-in minutes- that must elapse since a register's last check-in before it is considered missing. The default value is 61 minutes.

Use Till Based Accountability?

When creating a new store, this option determines whether Till Accountability mode or Register Accountability mode is used as the default setting.

Purge

Enable Data Purge?

Enable to purge old data and files per the additional settings in this category.

Data Purge Execution Time

The time of day to start the automatic purge of data. Sets UTC time at which the job will occur. Enter this value in HH:MM format.

Number of Days to Keep Transactions

The age in days that all transaction data (including line items, tenders, and so on), Order Broker order data, and inventory control documents that are part of end of year processing is kept in the Xcenter database when the purge process runs.

The number of days specified here should be greater than the number of days to keep customers and customer accounts.

This setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

The purge setting for transactions must not be more aggressive than the possible period for customer accounts like layaways and special orders to be completed. If one of the transactions related to a customer account is purged before the customer account is closed AND the in-store database is replaced (for example, as part of a hardware refresh) the customer account will not be serviceable. Specifically, the items on the account cannot be picked up, nor can the payments be refunded.

Number of Days to Keep Customers and Customer Accounts

The age in days that all identifying customer data, loyalty data, and customer relationship data is kept in the Xcenter database when the purge process runs. This setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Event Logs

The age in days that all sourcing and targeting information for application updates to be delivered to/installed on clients is kept in the Xcenter database when the purge process runs. This setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Cycle Questions

The age in days that location data involving open/close process questions and answers, business date, workstation status, and retail location status are kept in the Xcenter database when the purge process runs. This setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Discounts and Deals

The age in days that discount and deal data, including concurrent discount compatibility data, customer group discount mapping data, item exclusion/inclusion data, eligibility data, deal definition data, customer group deal mapping data, item-based deal rules, matching rules, deal triggers, and time-based deal rules is kept in the Xcenter database when the purge process runs. This setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Email

The age in days that all emails associated with transactions is kept in the Xcenter database when the purge process runs. This purge setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Employee Hours and Payroll

The age in days that all employee data in the Xcenter database concerning employment dates, pay, vacation, tasks, schedule, and timeclock entries is kept in the Xcenter database when the purge process runs. This setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Inventory

The age in days that all inventory data in the Xcenter database concerning inventory buckets, cartons, counts, count sheets, and count snapshots is kept in the Xcenter database when the purge process runs. This setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Invoices and Documents

The age in days that all invoice and document data, including country pack related invoices and documents, is kept in the Xcenter database when the purge process runs. This setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Items

The age in days that all item data in the Xcenter database such as attached items, item messages, prices, deal properties, restrictions, refund schedule, and warranty information is kept in the Xcenter database when the purge process runs. This purge setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Orders

The age in days that all cancelled and completed order data, including customer data associated with the order, fulfillment details, sourcing details, payment information, and balance data is kept in the Xcenter database when the purge process runs. This purge setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Report and Receipt Output

The age in days that all report data, including country pack related, and common data such as receipt text, work order service locations, vendor addresses, airport zones, and reason codes is kept in the Xcenter database when the purge process runs. This purge setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Tax

The age in days that all tax data in the Xcenter database including exemptions, rules, and rule overrides is kept in the Xcenter database, when the purge process runs. This purge setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Tender, Voucher and Session Info

The age in days that all tender, voucher, and session data from the Xcenter database including denominations, availability, user settings, and options is kept in the Xcenter database when the purge process runs. This purge setting does not affect data, kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Flight Info

The age in days that all flight data is kept in the Xcenter database when the purge process runs. This purge setting does not affect data kept in stores. If set to 0 all of this data is deleted. If set to -1 the data is kept indefinitely.

Number of Days to Keep Completed Deployments

The age in days that completed or canceled deployment files, transferred to the file server, will be kept when the purge process runs. If set to 0 all of these files are deleted. If set to -1 the files are kept indefinitely.

Number of Days to Keep File Transfer Archives

The age in days that archive folders from the AutoFileTransferDirectory will be kept when the purge process runs. If set to 0 all of these files are deleted. If set to -1 the files are kept indefinitely.

Number of Days to Keep File Uploads

The age in days that files uploaded via Xadmin will be kept when the purge process runs. If set to 0 all of these files are deleted. If set to -1 the files are kept indefinitely.

Number of Days to Keep POSPoll Files

The age in days that old files from Xcenter's POSPoll File Directory will be kept when the purge process runs. If set to 0 all of these files are deleted. If set to -1 the files are kept indefinitely.

Number of Days to Keep Republished POSLogs

The age in days that old POSLogs from the POSLog Publisher Remote File Directory will be kept when the purge process runs. If set to 0 all of these files are deleted. If set to -1 the files are kept indefinitely.

Reports Category

Default Report Output Format.

The report output format to be used as the default type when running reports. Valid values include:

- PDF (Portable Document Format)
- HTML (Hyper Text Markup Language)
- XLS (Spreadsheet file format created by Microsoft for use with MS Excel)
- XLSX (MS Excel 2007 or newer)
- PPTX (MS PowerPoint)
- RTF (Rich Text Format)
- DOCX (Microsoft Office Open XML Format Document)
- Enable DOCX (MS Word) as a Report Output Format?

If true, reports can be produced in DOCX format.

- Enable HTML (Hyper Text Markup Language) as a Report Output Format? If true, reports can be produced in HTML format.
- Enable PDF (Portable Document Format) as a Report Output Format? If true, reports can be produced in PDF format.
- Enable PPTX (MS PowerPoint) as a Report Output Format? If true, reports can be produced in PPTX format.
- Enable RTF (Rich Text Format) as a Report Output Format? If true, reports can be produced in RTF format.
- Enable XLS (MS Excel) as a Report Output Format? If true, reports can be produced in XLS format.
- Enable XLSX (MS Excel 2007 or Newer) as a Report Output Format? If true, reports can be produced in XLSX format.

User Account

User Sync Interval

The amount of time, in minutes, that passes between Xadmin checks to Identity Cloud Services (IDCS) for user synchronization.

Broadcaster Management

The Broadcaster Management function allows you to transmit PosLog data to other systems.

- From the Oracle Retail Xstore Office Cloud Service menu, select System Management, then System Manager, and Broadcasters or click the System Manager link in the System panel, and then select Broadcasters.
- **2.** The Broadcaster Management page displays list of broadcasters, once broadcasters have been saved to the database.

Note: You can sort the list by selecting each column.

| ORACL | E Xadmin | | _ | * | ~ | |

| 2000 | broadcaser_1 | Generic Object v18 | HTTP Basic | http://example/endpoint True | | |

Figure 3–2 Broadcaster Management Page

Adding A Broadcaster

To add a broadcaster, follow the steps below:

- 1. At the Broadcaster Management page, click **Add New**. The Edit Broadcaster page opens.
- **2.** In the Define tab, add the following:
 - Organization Select the organization from the drop-down list.
 - Service ID The Service ID must be unique for all other broadcasters.
 - Broadcaster Type Select a broadcaster type from the drop-down list.
 - Enable check box Select the Enable check box to enable the broadcaster.
- 3. Click Next to navigate to the Connect tab.

Note: If you selected REST Service as Broadcaster Type the Connect tab is not available.

- 4. In the Connect tab, set the connection configuration for the broadcaster:
 - Endpoint URL

This field is a required field.

Authentication Mode

This field is a required field.

Note: If you select None or OAuth no username and password credentials are collected. If you select any other type username and password credentials are required.

Username

Not displayed, if you selected None or OAuth as Broadcaster Type.

Password

Not displayed, if you selected None or OAuth as Broadcaster Type.

Confirm Password

Not displayed, if you selected None or OAuth as Broadcaster Type.

ORCE Org Code

Only available, if the Broadcaster Type is Oracle Retail Customer Engagement.

Connect Timeout (ms)

Displays 30000 (30 seconds) as suggested value.

Request Timeout (ms)

Displays 30000 (30 seconds) as suggested value.

5. Click **Next** to navigate to the Configure tab.

Note: If you selected REST Service as Broadcaster Type on the Define tab, the Configure tab is not available.

- **6.** In the Configure tab, edit the following fields as necessary:
 - Retry Sleep (ms)

Displays the default value 5000 (5 seconds). This field is optional.

Batch Size

Displays the default value 100. This field is optional

Polling interval (ms)

Displays the default value 10000 (100 seconds). This field is optional.

Thread Count

Displays the default value 1. This field is optional.

- Server Requires Gzip? check box
- **7.** Click **Next** to navigate to the Filter tab.

Note: If you selected Oracle Retail Customer Engagement (ORCE), Oracle Retail XBR Loss Prevention, or Oracle Retail Sales Audit (ReSA) as Broadcaster Type on the Define tab, the Filter tab is not available.

- **8.** In the Filter tab, choose any transaction type of the PosLogs that should be excluded from this broadcaster. Use the arrows to exclude or include the selected transaction type. At least one transaction type must be included to continue.
- 9. Click Next to navigate to the Modify tab.
- **10.** In the Modify tab, you can choose any elements that should be removed from the PosLog. By default Xstore Office Cloud Service UI only displays three options for removal but more can be added through the BROADCASTER_OTPION dataloader record. To remove an option, select the check box of the corresponding element.
- **11.** Click **Next** to navigate to the Review tab.
- **12.** In the Review tab, review your entries.
- 13. Click Save. Xcenter's BroadcasterManager detects the new configuration and updates itself and the Xcenter cluster. The system returns to the Broadcaster Management screen, with the newly configured Broadcaster displayed on the list.

Editing A Broadcaster

To edit a broadcaster, follow the steps below:

- **1.** At the Broadcaster Management page, select an entry. The Broadcast Summary window opens.
- 2. Click Edit. The Edit Broadcaster page opens.
- **3.** Edit the fields as desired in the corresponding tabs. For more information on each tab, see the Adding A Broadcaster section.
- **4.** Click **Save** to save your changes. The Broadcaster Management screen with the newly updated Broadcaster is displayed.

Customization Management

The Customization Management page allows you to make customizations, for example, to the Xadmin menu structure, or the Xcenter data model.

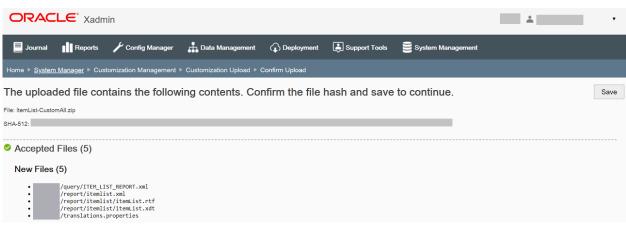

- From the Oracle Retail Xstore Office Cloud Service menu, select System Management, then System Manager, and Customizations or click the System Manager link in the System panel, and then select Customizations.
- **2.** The Customization Managementpage displays, showing a list of uploaded configuration files.

Uploading Configuration Files

To upload a configuration file:

- 1. Click Upload New. The window appears.
- 2. Click Choose File.
- 3. Select a file and click OK.
- 4. Click Upload to upload the selected file.
- 5. The system displays the Confirm Upload page.

Figure 3–3 Confirm Upload Page

The Confirm Upload page shows the following sections:

SHA Signature

The SHA signature is a hash of the file that was uploaded so the user can confirm that the server received what the user uploaded.

Failed Validations

This section shows files with validation errors.

The total number of failed files, the file name and a short description of the error are displayed. The files must be updated and re-uploaded to be accepted.

Accepted Files

This section shows the accepted uploaded files. The total number of accepted files, the file name, along with the information that this file will replace the existing one, are displayed.

Unchanged Files

This section identifies unchanged files. The system will recognize the file contents as unchanged and do not need to be uploaded again, and therefore will bypass them during the upload process.

Unacceptable Files

This section shows files containing an unsupported file type or location. The total number of unacceptable files and the file name are displayed.

- 6. Click Save.
- 7. Your are prompted to confirm the upload. Click **Yes**.
- **8.** The system saves the configurations to the database. On the Customization Management page the accepted files are listed.

Figure 3–4 Customization Management

Exporting Active Configuration Files from the Configuration List

To export all active configuration files:

Note: You can only export all active customizations, if you hold the required security privilege. If you do not hold the required privilege the Export button is disabled.

- 1. On the Customization Management page, select Export.
- 2. All active customizations are downloaded in a zip file through the browser.

Deleting Configuration Files from the Configuration List

To delete a configuration file:

- **1.** On the Customization Management page, select a file from the list of configuration files.
- 2. Select the Delete icon next to the file.

Note: Only properties files can be deleted from the list of configurations.

3. When prompted, click Yes to confirm the deletion. The file is deleted from the list.

Job Management

The Job Management screen enables you to view scheduled quartz jobs and their status.

- From the Oracle Retail Xstore Office Cloud Service menu, select System Management, then System Manager, and Jobs or click the System Manager link in the System panel, and then select Jobs.
- **2.** The Job Management page is displayed, detailing jobs currently scheduled. The jobs displayed in the Job Summary table are only for the organizations the user has access to. By default the jobs are sorted by last run time. If the last run time is null for both comparing jobs, then the jobs are sorted by job name.

Figure 3–5 Job Management

- **3.** You can filter the jobs by:
 - Job Name

The Job Name column displays the defined job description for the scheduled job.

Job Category

This column displays the job category.

Organization

The organization column displays the organization ID and organization name in which the job is impacting.

Only jobs for the organization(s) the user has access to are displayed, all other jobs are hidden.

If the job spans across the entire implementation, this field is left blank.

Status

This column displays the status of the job. Possible statuses include:

- None
- Normal
- Complete
- Paused
- Error
- Blocked
- Last Run Time

This column displays the UTC date-time stamp of the last run time of the job.

Next Run

This column displays the UTC date-time stamp of the next run time of the job.

- 4. Select **Search**. The data that matches the filter criteria is displayed in the table.
 - Select **Reset** to reset the filter criteria and update the search result in the table with the latest data.

Organization Management

The Organization Management screen enables you to create an organization without restarting the application.

- From the Oracle Retail Xstore Office Cloud Service menu, select System Management, then System Manager, and Organizations or click the System Manager link in the System panel, and then select Organizations.
- **2.** The Organization Management page displays, showing a list of organizations.

| ORACLE Xadmin | | | | | ÷ | ~ |
|---|-------------------|-------------|---------------|-------------------|---|---------|

| | | | | | | Add New |
| Organization ID | Organi | zation Name | | | | |
| | Chain_ | 1 | | | | |

Figure 3–6 Organization Management

Adding an Organization

- 1. To add an organization, select Add New.
- 2. The Organization Details window is displayed.
- 3. In the Organization ID field, enter the organization ID.
- 4. In the Organization Name field, enter the organization name.
- 5. Select **Save**, to save your entries.

Editing an Organization

To edit an existing organization:

- 1. On the Organization Management page, select an organization.
- 2. Click on the organization, the Edit Organization window is displayed.
- **3.** Update the Organization Name.

Note: When editing an organization, the organization ID cannot be changed.

- Select **Save** to save your updates.
- Select Previous or Next to update previous/next organizations.

Note: The **Next** and **Previous** options are only available if more than one organization has been defined.

Integration Management

The Integration Management screen allows you to integrate Xstore Office Cloud Service with the following applications.

- Omni Channel Data Service (OCDS) REST
- Order Broker REST/SFTP
- Customer Engagement REST/SFTP
- From the Oracle Retail Xstore Office Cloud Service menu, select System Management, then System Manager, and Integrations or click the System Manager link in the System panel, and then select Integrations.

2. The Integration Management page displays list of integrations, once the integrations have been completed.

Note: You can sort the list by selecting each column.

Figure 3–7 Integration Management Page

| | | | | | | | Add New |
| Organization | Integration System | Implementation | Connection Type | Endpoint | | Status | |
| | Omni Channel Data Service | Cloud | REST | | | Paused | × |

Adding An Integration

To add a new integration, follow the steps below:

- 1. At the Integration Management page, click **Add New**. The Edit Integration page opens.
- **2.** In the Define tab, add the following:
 - Organization Select the organization from the drop-down list.
 - Integration System Select one of the following integration systems:
 - Customer Engagement (CE)
 - Order Broker (OB)
 - Omni Channel Data Service (OCDS)
 - Implementation Select if you want to integrate an on-premises or a cloud system.
 - Connection Type Select the connect type.
- 3. Click Next to navigate to the Connect tab.
- 4. In the Connect tab, set the connection configuration for the integration:

Note: Depending on your selected integration system in the Define tab, the fields and options may vary.

- Endpoint URL or Hostname (for Customer Engagement)
 This field is a required field.
- Service Path Prefix only available for OCDS REST integration This is a required field.
- Working Directory available for OROB SFTP and CE SFTP integrations This field is a required field.

 Customer Engagement/Order Broker Organization ID or the Omni Channel Data Service (OCDS) Chain ID

Note: For Omni Channel Data Service integrations multiple chain IDs can be identified by using a comma separated list.

Authentication Mode

This field is a required field.

- Username
- Password
- Confirm Password
- SFTP File Poll Delay (ms) Only available for Customer Engagement SFTP integration. The suggested value is 900000 (15 minutes).

For Omni Channel Data Service REST integrations, continue with the next step.

For Order Broker integrations REST/SFTP integrations, continue with the Configure tab in step 7.

For Customer Engagement SFTP integrations, click **Next** and continue with the Generate tab in step 11.

For Customer Engagement REST integrations, click **Next** and continue with the Review tab in step 12.

- 5. Click Next to navigate to the Scope tab.
- **6.** [OCDS integrations ONLY] In the Scope tab, define whether or not you want to publish data to a selected collection of stores.
 - Creating an OCDS integration:

When you are creating an OCDS integration you can enable the Only Publish to Specific Stores checkbox to limit the data published to a selected collection of stores. If you do not enabled this checkbox, the system will publish data across the entire organization hierarchy.

Note: For more information about how to create and manage Store Collections, see the Creating and Maintaining Store Collections section.

- 7. Click Next to navigate to the Configure tab.
- **8**. In the Configure tab, follow the steps below:

Depending on your integration, the available options in this tab vary:

Order Broker REST and Order Broker SFTP integrations:

- **a.** For Order Broker REST integrations only, enter the Timeout for reading in seconds. The suggested value is 30 seconds.
- **b.** For Order Broker REST integrations only, enter the Timeout for the connection in seconds. The suggested value is 30 seconds.
- c. For Order Broker REST integrations, the Compress checkbox is selected.

- **d.** Enable Push Items checkbox as necessary Select the checkbox to enable the Push Items job.
- **e.** Enable Push Inventory checkbox as necessary Select the checkbox to enable the Push Inventory job.

Note: At least one job is required to proceed.

- **f.** Then select the desired schedule for each enabled job. In the Push Items Schedule Type or Push Inventory Schedule Type field, select one of the following options:
 - Start Time (HH:MM)
 - Repeat Interval (minutes)

Depending on the selected option, you must enter the following values:

- Start time option: If you select the Start Time option, enter the desired start time.
- Repeat Interval option: If you select the Repeat Interval option, enter the desired number of minutes for the interval to run.
- Numbers of Days Back field: This field is only visible if at least one job is enabled. This field is a required field.

Omni Channel Cloud Data Service REST integrations:

- Request Parameters:
 - Orphan Data Protection Offset Seconds

Minimum amount of time the data must age in OCDS before it can be visible to Xcenter. The offset helps to prevent related-data from orphaned due to system latency. The value should be greater than or equal to 30 seconds.

- Records Per Request Limit

Specifies the number of records to request in calls to OCDS. If no limit is defined then OCDS will determine the maximum number of records.

- Scheduling:
 - OCDS Job History Data Retention Days
 - Scheduled Job Interval in Minutes

Frequency with which Xadmin requests data from OCDS, value should be greater than or equal 30 minutes.

- On Demand Job Interval Minutes

Maximum amount of time that will elapse between the time when an On-Demand job is created and when it is executed. The value should be greater than or equal to 5 minutes.

- Retail Location:
 - Till Accountability checkbox

Specifies, if the Retail Locations created from OCDS data use Till Accountability or not.

- Default Locale

Specifies the Locale to use in Retail Locations created from OCDS data when LANG_ISO_CODE is not defined for a location.

For Order Broker REST integrations, click **Next** and continue with the Review tab in step 13.

For Order Broker SFTP and Customer Engagement SFTP integrations, click Next and continue with the Generate tab in step 10.

For Omni Channel Data Service integrations continue with the next step.

9. In the VAT tab, configure the following:

Note: The VAT tab is only available for Omni Channel Data Service integrations.

- In the Item section:
 - Tax-Group ID for Non-Taxable Items

Specifies the Tax-Group ID assigned to non-taxable items created from OCDS.

- Enable the Include VAT Code Selection Criteria? checkbox.
- In the VAT Calculation section:
 - Default Rounding Code Select one of the following options from the list:

Always round down

Round to the previous digit; toward zero

Always round up

Round to the next digit; away from zero. For positive numbers, CEILING and UP result in the same outcome. For negative numbers, CEILING and DOWN result in the same outcome.

Round Ceiling

Round toward positive infinity. This is the opposite of FLOOR and never decreases the calculated value.

Round Floor

Round down toward negative infinity. This is the opposite of CEILING and never increases the calculated value.

Round Half Down

Round to the nearest neighbor unless equidistant, then round down.

Round Half Even:

Round to the nearest neighbor unless equidistant, then round to even neighbor. Example; 2.5 rounds to 2 while 3.5 rounds to 4.

This rounding method results in the least number of rounding errors during repeat computations.

Round Half Up:

Round to the nearest neighbor unless equidistant, then round up.

Default Number of Decimal Digits:

This setting specifies how many decimal places to round to when calculating tax. The required minimum value is 0 and the required maximum value is 10. If the value is below or above the minimum/maximum value, an error message is displayed.

- Calculate Tax at Transaction Level checkbox:

This setting allows you to round at transaction level when calculating tax. If the checkbox is enabled, the calculated tax will be rounded at the transaction level. If the checkbox is disabled, the calculated tax is rounded at the line item level.

For Omni Channel Data Service REST integrations, click **Next** and continue with the Review tab in step 13.

- **10.** Click **Next** to navigate to the Generate tab.
- 11. In the Generate tab, you can generate and download the public key.

Note: The Generate tab is only available when you selected the connection type SFTP. Depending on the integration, on-premises or Cloud, the tab varies.

- If you integrate an on-premises system, follow the steps below:
 - Select Generate to create the private and public key.
 - After generating the key, select **Download** to download the file.
 - Then load the key pair to the SFTP server.

Note: The SFTP server is not within the Xstore Office Cloud Service application.

- If you integrate a cloud service, follow the steps below:
 - Alternatively, if you integrate a cloud service, the screen will instruct you to file a service request (SR) for AMS to load and store the public key on the service SFTP server. This step is required to complete the integration set up.
- 12. Click Next to navigate to the Review tab.
- **13.** In the Review tab, review your entries.
- **14.** Click **Save**. The integration, the integration status, the user, as well as the time and date stamp is logged in the audit log. The system returns to the Integration Management screen, with the newly configured integration displayed on the list.

Editing An Integration

To edit an integration, follow the steps below:

- **1.** At the Integration Management page, select an entry. The Integration Summary window opens.
- 2. Click Edit. The Edit Integration page opens.
- **3.** Edit the fields as desired in the corresponding tabs. For more information on each tab, see the Adding An Integration section.

In Edit mode the Define tab displays the Pause Integration checkbox.

- Enable the Pause Integration checkbox to pause an integration that has been
 previously created. A confirmation message is displayed. The status of the
 integration is set to Paused on the Integration Management screen.
- To resume an integration again, uncheck the Pause Integration checkbox. A confirmation message is displayed. The integration resumes its previous status. You are returned to the Integration Management screen.

[OCDS integrations ONLY] In Edit mode the Scope tab displays the Store Collection section. When the OCDS integration is created and enabled but does not have a Store Collection assigned, the integration is in Action Required status. To run the OCDS jobs, add a Store Collection to the OCDS integration:

Select a Store Collection to the current OCDS integration. The system will
publish the data to the selected Store Collection only.

Note: The displayed Store Collections are defined in Data Management - Organization Hierarchy - Store Collections. For more information about Store Collections, see the Creating and Maintaining Store Collections section.

4. Click **Save** to save your changes. The Integration Management screen with the newly updated integrations is displayed.

Enabling An Integration

Note: Before enabling an integration, see the Integrating XOCS with OCDS, OROB, ORCE, XBRi section in the Setup Xstore Office Cloud Service chapter in the *Oracle Retail Xstore Office Cloud Service Administration Guide* for preliminary steps.

To enable an integration, follow the steps below:

- **1.** At the Integration Management page, select the **Enable** button in the respective row. You can enable integrations with the status New.
 - [ONLY for OCDS integrations with a Store Collection] When enabling an OCDS integration, the system makes a call to OCDS to retrieve the Organization Hierarchy. Once the Organization Hierarchy is received, the integration is put into the Action Required status until a Store Collection is assigned. To assign a Store Collection to an OCDS integration, see the Editing An Integration section.
- **2.** The applications tests the connection with the integrated system. If the test is successful, the integration status changes to Active. If the test fails, an error message is displayed.

Available Locales

Note: This feature is only available from the Oracle Retail Xstore Office Cloud Service System menu, not from the Home Page panel.

This feature controls the available locales within the Oracle Retail Xstore Office Cloud Service application itself.

- 1. From the Oracle Retail Xstore Office Cloud Service menu, select **System**, then select **Available Locales**.
- **2.** The Available Locales page displays. Add a new locale, make changes to an existing locale, or delete a locale:

Figure 3–8 Available Locales Page

| Journal | Reports | 🖋 Config Manager | Data Management | Deployment | Support Tools | System Management | |
|----------------|------------|------------------|---------------------|------------|---------------|-------------------|---------|
| Home 🕨 Availab | le Locales | | | | | | |
| | | | | | | | Add New |
| Locale | | | Description | | | Display Order | |
| en_US | | | US English | | | 10 | × |
| en_AU | | | English (Australia) | | | 100 | × |

- To add a new locale, click the Add New button.
- To make changes to an existing locale, click on an existing locale from the list.
- To delete a locale, click the Delete icon associated with the locale. If selected, you will be prompted to confirm the locale should be deleted. Any locale currently assigned to a user record cannot be deleted.

Note: A sorting component is available for columns, when applicable.

- **3.** Complete the fields as required when adding or editing a locale:
 - Locale Select a locale from the drop-down list. The locale cannot be changed in edit mode.
 - Display Order Enter the display order for the locale.
- 4. Click the **Save** button.

Where Locale Is Used

If more than one available locale has been defined in Oracle Retail Xstore Office Cloud Service, certain fields in Configuration Manager and Data Management will allow the user to enter a translation for any language. This action creates com_translations records that will be sent down to stores, along with the configuration data.

Profile Management

The goal of the Profile Management component of Configuration Manager is to define Store Personalities for your organization. The Store Personalities allow you to easily maintain portions of your configuration paths using a GUI format in Oracle Retail Xstore Office Cloud Service. Behind the scenes, these Store Personalities are translated into the various configuration paths specified in configPath.properties. For more information on Personality Maintenance and configUration paths, see Appendix B, "Appendix: Personality Maintenance and Config Paths."

Note: The Configurator component of Configuration Manager is used to create, maintain, and deploy Oracle Retail Xstore Point-of-Service configuration changes selectively, or globally across the entire organization. Refer to Chapter 5, "Configurator" for more information about making configuration changes and deploying the information to your stores.

About this Chapter

Profile Management includes functions for creating and maintaining profile groups and elements for stores and registers, creating and maintaining the personalities that determine the prioritized profile elements for configuration overrides, and creating and maintaining the store landscapes used for machine (register) configurations. After setting up this information, you can assign Store Personalities to your stores.

🕂 Data N Support Tools Rep Deplo System M 🖌 Confic Select one of the following options. > Profile Maintenance Create or maintain profile groups and elements for stores. Personality Maintenance Enable and disable base features as well as build and maintain a collection of prioritized profile elements for configuration overrides. When assigned to a store, the personality determines the configurations that are applicable for the entire store Landscape Maintenance Build and maintain a collection of prioritized profile groups and elements for register-specific configuration overrides. When assigned to a store, the landscape determines the configurations that are applicable to individual or ranges of register numbers. Store Personality Maintenance Assign to stores the landscapes and personalities that were created using the other respective options

Figure 4–1 Profile Management Page

Setup Overview

- 1. First, create Profile Groups and their associated Elements. Follow the steps outlined in Profile Maintenance to set up and maintain the Profile Groups.
- **2.** Next, after creating the Profile Group and Element combinations, set up your Personalities and Landscapes.
 - A Personality is a grouping of at least one or many Profile Group and Element combinations in an ordered list that work together to define a store. For example, using the Profile Groups and Elements you set up previously (step 1 above), you can identify a personality as being Canadian, Banner, Outlet, in addition to another personality defined as US, Banner, Flagship, Retail, and so on.
 - A Landscape is a collection of prioritized profile groups and elements for register-specific configuration overrides. When assigned to a store, the landscape determines the configurations that are applicable to individual register numbers or ranges of register numbers (for example, "22-Managers Terminal", "44-Lead Register", and so on).

Follow the steps outlined in Personality Maintenance and Landscape Maintenance to create Personalities and Landscapes.

3. Finally, set up each Store Personality by assigning the Personalities and Landscapes you created (step 2 above) to your stores. Follow the steps outlined in Store Personality Maintenance to create Store Personalities.

Summary

- The Profile Groups/Elements you create (step 1) will be used to set up Personalities and Landscapes.
- The Personality/Landscape pairs (step 2) will then be used to create a Store Personality (step 3).

Profile Maintenance

This section describes the profile maintenance functionality.

Setting Up Profile Groups & Elements

The profiles you set up here will be available as configuration scope overrides for Personality and Landscape group types in the Configurator component, providing the ability to deploy configurations that will override the global layer for specific locations as defined by the Store Personality. Refer to Chapter 5, "Configurator" for more information about the Configurator component.

Profile Groups are used to associate configuration overrides with specific Profile Elements.

- A Profile Group is simply a collection of configuration elements by type; for example Location, Register Type, Store Type, and so on.
- A Profile Element is the child property associated with the Profile Group; for example, Location= Ohio, California, Iowa, and so on.
- 1. From the Oracle Retail Xstore Office Cloud Service menu, select **Configuration Manager**, then **Profile Management**, or click the Profile Management link in the Configuration Manager panel.

- 2. From the Profile Management page (Figure 4–1), select **Profile Maintenance**.
- 3. The Profile Maintenance page displays. Click Add to create a new Profile Group.

Figure 4–2 Profile Maintenance Page

Figure 4–6 Profile Group and Elements - Before Saving Example

The Profile Group created here will now be available in the Overrides feature in the Personality Maintenance and Landscape Maintenance sections of Profile Maintenance where applicable for the group type. (See Figure 4–1)

Delete Options:

- If you need to delete the Profile Group and all the associated Elements, click the Delete button.
- If you need to delete an Element, click the Delete icon.
- You will be prompted to confirm your selection.
- If a Profile Group (and its Elements) is being used by a Personality or Landscape, it cannot be deleted.

Profile Group and Element Versioning

The version number is shown on the Profile Maintenance page for the Profile Group and Element. This value will be increased by one each time the Profile Group/ Element is deployed, or scheduled for deployment, with a new set of configurations.

About Profile Group and Element Versioning

- The version number is not increased until the configuration is deployed (or scheduled for deployment). Editing an existing profile element does not increment the version number.
- Rollback is not available at this time.
- Audit logging includes who, when, and in which version the change was made.
- See also Chapter 5, "Configurator".

Personality Maintenance

Use Personality Maintenance to group one or many Profile Group and Element combinations that will be used to define a store.

- From the Oracle Retail Xstore Office Cloud Service menu, select Config Manager -Profile Management, or click the Profile Management link in the Configuration Manager panel.
- 2. From the Profile Management page (Figure 4–1), select Personality Maintenance.
- **3.** At the Personality Maintenance page, add a new Personality or edit an existing one:

Figure 4–7 Personality Maintenance Page

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | Deployment | Support Tools | System Management | | |
|------------------|----------------|------------------------|-------------------|-----------------------|-----------------------------|-------------------|---------------|---------|

| Description | | | | | | | | Add New |
| Description | | Comments | | | | | # of Profiles | |
| | | | No record | s were found that mat | tch the specified criteria. | | | |

Note: To quickly find a Personality, enter text in the Description field. The list will be filtered to show the Personalities with the text in their descriptions.

If adding a new Personality:

- a. Click Add New.
- **b.** At the Edit Personality page, use the wizard to complete the information on each tab, then click **Next**. See Personality Setup Options for a list of Personality options.
- c. Skip to step 4 to review your selections.

If editing an existing Personality:

- **a.** Select the Personality in the list.
- **b.** At the Personality Detail window, click **Edit**.
- **c.** Complete the fields as required, then click **Next**. See Personality Setup Options for a list of Personality options.
- **d.** Continue with step 4 to review your selections.
- 4. Review the Personality options you selected:

Figure 4–8 Personality Options Review

- To save the Personality, click Save. The Personality is added to the list on the Personality Maintenance page.
- To edit the Personality:
 - Click **Previous** to go back one page, or select a configuration option in the Edit Personality section in the left panel of the window.
 - After making your changes, click **Save**. The new Personality is added to the list on the Personality Maintenance page.
- To discard the Personality, click **Cancel**. When prompted, click **Yes** to confirm you want to cancel Personality setup.
- **5.** After completing Personality setup, Oracle Retail Xstore Office Cloud Service returns to the Personality Maintenance page.
 - To delete a Personality that has been created or updated, click the Delete icon associated with the Personality on the Personality Maintenance page.
 - When prompted, click **Yes** to confirm the deletion.
 - If a Personality has been assigned to a Store, it cannot be deleted.

Personality Setup Options

This section describes the personality setup options.

General Information

Define the basic information for the Personality, then click Next.

- 1. Description Enter the Personality identifier.
- **2.** Comments [OPTIONAL] Enter additional identifying information for the Personality.

Base Features

Enable and disable the Oracle Retail Xstore Point-of-Service base features that are active for this Personality, then click **Next**.

For more information on the available base features, see the xstore.config.path.base.features section in Appendix B, "Appendix: Personality Maintenance and Config Paths".

Overrides

About the Profile Group and Element combinations:

- The Profile Groups and Elements available here are created in Profile Maintenance. See Profile Maintenance for more information.
- Only the Profile Groups with the type "Personality" are available in the drop-down list. (Profile Groups with the type "Landscape" are not available in Personality Maintenance.)
- A <Store Specific> override entry is available by default in the drop-down list.

Select and prioritize the Profile Group and Element combinations:

- 1. Select the Profile Group for this Personality.
- 2. Select the Profile Element for this Personality.
- 3. Click Add Element.

- **4.** Repeat steps a through c as needed to add all the Profile Group and Element combinations to this Personality.
- **5.** If needed, select a Profile Group and Element combination row and use the up/ down arrows to change the priority. Elements at the top of the list have higher priority.
- **6.** If needed, click the icon to remove the Profile Group and Element combination from the Personality.
- 7. Click Next.

Review

Review the options you selected. Go to step 4 on page 7.

Landscape Maintenance

Use Landscape Maintenance to create and edit the register layout portion of configuration paths.

- From the Oracle Retail Xstore Office Cloud Service menu, select Config Manager -Profile Management, or click the Profile Management link in the Configuration Manager panel.
- 2. From the Profile Management page (Figure 4–1), select Landscape Maintenance.
- **3.** At the Landscape Maintenance page, add a new Landscape or edit an existing one.

Figure 4–9 Landscape Maintenance Page

- To change the Description or Comment, enter the information in the appropriate field.
- To add a new profile group perform step 3 on page 8 through step 7 on page 10.
- To edit the register ranges, select the row to open the Add Register Range window and make changes as needed.
- To change the priority, click the Selector Control icon [†] to select the row and activate the up and down arrows.

With the row selected, use the arrows to move the row up or down in the list. Profile Groups at the top of the list have higher priority.

3. Click **Save** when the edits are complete to return to the Landscape Maintenance page.

Store Personality Maintenance

Store Personalities are used to create the configuration paths specified in configPath.properties.

Store Personality Maintenance is where you assign the Personalities (created in Personality Maintenance) and Landscapes (created in Landscape Maintenance) to stores.

- From the Oracle Retail Xstore Office Cloud Service menu, select Config Manager -Profile Management, or click the Profile Management link in the Configuration Manager panel.
- **2.** From the Profile Management page (Figure 4–1), select **Store Personality Maintenance**.
- **3.** [OPTIONAL] At the Store Personality Maintenance page, use the Filter Criteria and Find a Node search options to quickly find a store:

| 🗐 Journal 📲 Reports 🖌 Config I | tanagor 🕂 D |)ata Management (| | | System Management |

| Location Personality | Find a Node | | | | |
| Landscape | ▶ ⊕ *:* | | | | |
| Edit | | | | | |
| | | | | | |

Figure 4–15 Store Personality Maintenance Page

To quickly find a store you can:

- Select an option from the Filter Criteria drop-down list to filter the nodes displayed in the org hierarchy tree based on assigned personalities and landscapes. The following filter options are available:
 - No Filter (default): Select this option to remove any filters.
 - No Store Personality Select this option to display only the stores that do not have store personalities assigned to them.
 - Personalities or Landscapes: All the personalities created on the Personalities Maintenance page are listed under the heading Personalities, and all the landscapes created on the Landscapes Maintenance page are listed under the heading Landscapes. Select a personality or landscape to display only the stores that have the selected personality or landscape assigned to them.

<OR>

- In the Find a Node field, begin typing the node description to search for a specific node in the org hierarchy tree.
- 4. From the hierarchy tree, select a node to assign a Personality/Landscape pair.

Figure 4–16 Store Personality Maintenance Page - Store Node Selected

Note: If you select a non-store node (for example District), all stores contained in that node will be affected by any change made to the personality and landscape. This will remove and replace any personality/landscapes that were previously assigned to stores within that node.

- 5. Click Edit to modify the personality/landscape assignments for the selected store.
- **6.** At the Edit Store Personality window, select a Personality and a Landscape from the drop-down lists. Both a Personality and a Landscape are required.

Configurator

The Configurator component of Configuration Manager is used to create, maintain, and deploy configuration changes selectively, or globally across the entire organization. See About this Chapter below for a list of the configuration areas described in this chapter.

Note: The Profile Management component of Configuration Manager is used to define "store personalities" in order to create configuration paths. Refer to Chapter 4, "Profile Management" for more information about managing profiles and config paths.

The logged-in user is assumed to represent some tier of the organization. For this reason, the user's assigned org node hierarchy will determine the information he/she has access to. See Chapter 2, "Roles, Users, and Security Access" for more information about users and security access.

About this Chapter

The following areas can be configured in Configurator:

- Codes Add, edit, and delete configurable codes. See Configuring Codes.
- Discounts Configure different types of discounts that may be manually applied during a sale transaction. See Configuring Discounts.
- Reason Codes Configure common reason codes. See Configuring Reason Codes.
- Menu Configuration Add, remove and edit options on Oracle Retail Xstore Pointof-Service menus and tabs. See Configuring Menus and Tabs.
- Receipt Configuration Configure common text, such as headers and footers, and change the logo for your sales receipts. See Configuring Receipts.
- System Configuration Configure behaviors/business rules for Oracle Retail Xstore Point of Service. See Configuring Xstore Point-of-Service System Config Options.
- Security Configure Oracle Retail Xstore Point-of-Service security groups and the privileges that are associated with those groups. This option applies to Global configurations only. See Configuring Oracle Retail Xstore Point-of-Service Security.
- Tenders Configure the settings and data related to tenders. See Configuring Tenders.

 Customer Displays - Manage the text used on customer-facing displays. See Configuring Customer Displays.

Configuration Options and Availability Matrix

Configurator is used to create, maintain, and deploy Oracle Retail Xstore Point-of. Service configuration changes selectively, or globally across the entire organization. Not all configuration options are available for all scopes. The following configuration scopes are available:

- Global Configurations Change or deploy the global configuration layer which is the foundation for all locations.
- Configuration Overrides Change or deploy configurations that will override the global layer for specific locations (Profile Groups).
- Store Specific Overrides Change or deploy configurations that will override the global layer for specific stores.

| |

Table 5–1 Configuration Options

Configuration Versioning

Oracle Retail Xstore Office Cloud Service creates and tracks version numbers for each set of configurations deployed via a profile group and element, globally, or a store specific group.

When you create a new configuration set, it is given a version number of 1 (one) to start. The next version number will be increased by one for that specific profile group to be used on the next set of configurations.

When a deployment is scheduled for a profile group and element, the ProfileGroupId, ProfileElementId and ConfigVersion are recorded in the manifest of the jar file that is produced. This manifest is then used by Oracle Retail Xstore Point of Service to log the version information.

When Oracle Retail Xstore Point of Service starts up, it reads the ProfileGroupId, ProfileElementId and ConfigVersion from the manifest of the jar file, and logs it in the ctl_event_log table with the following information:

| Table | 5–2 | ctl_event_log Table | |
|-------|-----|---------------------|--|
|-------|-----|---------------------|--|

| Column | Information logged | | |
|-----------------|--|--|--|
| logger_category | dtv.xstore.configversion | | |
| log_message | ProfileGroupId/ProfileElementId /ConfigVersion | | |

Managing Configurations

- 1. From the Oracle Retail Xstore Office Cloud Service menu, select **Config Manager - Configurator**, or click the Configurator link in the Configuration Manager panel.
- **2.** Select the Configuration Scope:

Figure 5–1 Configuration Scope Options Page

| _ J | ournal | Reports | 🖌 Config Manager | 🔒 Data Management | Deployment | Support Tools | System Management |
|------------|----------|---|------------------|---------------------------------|------------|---------------|-------------------|
| Home | Configu | irator | | | | | |
| Selec | t one of | the following opti | ons. | | | | |
| > | | I Configurations or deploy the global | | the foundation for all location | 15. | | |
| > | - | guration Overric or deploy configurati | | bal layer for specific location | IS. | | |
| > | | Specific Overrie or deploy configurati | | bal layer for specific stores. | | | |
| | | | | | | | |

• Select **Global Configurations** to change the global configuration layer which affects all locations. Continue with step 3 on page 4.

<OR>

- Select Configuration Overrides to change configurations that will override the global layer for specific locations. The Profile Groups available here are defined in the Profile Maintenance component of Profile Management. See Chapter 4, "Profile Management" for more information about setting up Profile Groups.
 - **a.** Select a Profile Group from the list.

- **b.** Select an Element from the list.
- c. Click Next.
- **d.** Continue with step 3 on page 4.

<OR>

 Select Store Specific Overrides to change configurations that will override the global layer for a specific store based on the user's scope.

Note: Store Specific Overrides scope is only available, if Oracle Retail Xstore Office Cloud Service configuration "Enable the Option to Create Store-Specific Configurations?" is set to **Yes**.

- **a.** Type the store number or begin typing a store number or name in the Store # field.
- **b.** Select the store from the store list.
- c. Click Next.
- d. Continue with step 3 below.
- **3.** At the Configuration Action page, select the **Configure** option.

3. Add a new code or edit an existing code:

If adding a new code:

- a. Click Add New.
- **b.** Complete the fields as required, then click Save. See Code Configuration Options.

If editing an existing code:

Note: You can only edit global records if you are in a global configuration.

- **a.** Select the code in the list.
- b. Edit the fields as required, then click Save. See Code Configuration Options.
- 4. After completing code setup, you have the following options:
 - To deploy your changes, see Deploying Configuration Changes
 - To view a summary list of a profile element's configuration changes to identify how it differs from the global configuration, see Viewing Configuration Changes.

- [CONFIGURATION OVERRIDES & STORE SPECIFIC OVERRIDES ONLY] -To delete the current profile element configuration changes, see Delete Profile Configuration Overrides.
- [STORE SPECIFIC OVERRIDES ONLY] To copy store configurations from another store, see Copy Store Configurations.

Code Configuration Options

Configuring Discounts

1. Maintain discounts or set up system configuration options:

- To maintain discounts, select **Discount Maintenance** and continue with step 2.
- To set up system configuration options, select **Discount System Configuration** and skip to Discounts System Configuration.
- **2.** Select the type of discount to configure or set up system configuration options:
 - Line Item Discounts Discounts that apply to an individual line item in a sale transaction.
 - Transaction Discounts Discounts that apply to all line items in a sale transaction.
 - Group Discounts Discounts that apply to a selected group of line items in a sale transaction.
- 3. Add a new discount or edit an existing discount:

If adding a new discount:

- a. Click Add New.
- **b.** Complete the fields as required, then click **Next**. See Discount Configuration Options for a list of discount configuration options.
- **c.** If editing an existing discount:

Skip to step 4 on page 9 to review your selections.

Note: You can only edit global records if you are in a global configuration.

If you are editing configurations in a specific location (Profile Group or Store), the Edit button in the Discount Detail window will only be available if you have the proper privileges.

- **a.** Select the discount in the list.
- **b.** At the Discount Detail window, click **Edit**.
- **c.** Complete the fields as required, then click **Next**. See Discount Configuration Options for a list of discount configuration options.
- d. Continue with step 4 on page 9 to review your selections.
- **4.** Review the discount options you selected:

| Journal 🔢 Reports 🖌 C | Config Manager 🏥 Data Management 🎧 Deployment 🜲 Support Tools 🥃 System Management |

Figure 5–8 Discount Options Review

- To save the discount, click **Save**. The discount is added to the Discount list.
- To edit the discount:
 - Click **Previous** to go back one page.

<OR>

• Select a configuration option in the Edit Discount section in the left panel of the window.

After making your changes, click **Save**. The new discount is added to the Discount list.

- To discard the discount, click **Cancel**. When prompted, click **Yes** to confirm you want to cancel discount setup.
- **5.** After completing discount setup, Oracle Retail Xstore Office Cloud Service returns to the Discount list page.
 - To deploy your changes, see Deploying Configuration Changes.
 - To view a summary list of a profile element's configuration changes to identify how it differs from the global configuration, see Viewing Configuration Changes.
 - [CONFIGURATION OVERRIDES & STORE SPECIFIC OVERRIDES ONLY] -To delete the current profile element configuration changes, see Delete Profile Configuration Overrides.
 - [STORE SPECIFIC OVERRIDES ONLY] To copy store configurations from another store, see Copy Store Configurations.

Discount Configuration Options

This section describes the available discount configuration options.

Basic Information

1. Define the basic information for the discount, then click **Next**.

- Discount Code The code must be unique, and cannot be changed when editing an existing discount.
- Description Enter a text description for the discount.
- Locale for translation If needed, select a translation locale and enter the description for the locale.
- Start Date Enter or select a starting date.
- End Date If needed, enter or select an ending date.
- Discount enabled status check box (enabled by default).

Note: Discounts cannot be deleted. Disable any discounts you do not want to use.

Calculation Information

- **1.** Specify how the discount is calculated, then click **Next**.
 - Method Select a calculation method from the drop-down list.
 - Amount/Percent If applicable, enter the amount off or percent off. (This field is not active for discounts without a defined amount or percent off).
 - For Prompt Amount discounts, select the "Is there a maximum allowed input amount" option if there is a limit on the free-format discount amount that can be entered in Oracle Retail Xstore Point of Service and enter the amount when prompted.
 - For Prompt Percent discounts, select the "Is there a maximum allowed input percentage" option if there is a limit on the free-format discount percentage that can be entered in Oracle Retail Xstore Point of Service and enter the percent when prompted.
 - Is there a maximum allowed amount? Select this option if true, and enter the amount when prompted.
 - Is there a minimum amount to make this discount eligible? Select this option if true, and enter the amount when prompted.

Customize Configuration Options

- 1. Customize the discount features, then click Next.
 - Is there a custom message for this discount? Select this option if true, and enter the custom message when prompted. If needed, select a translation locale and enter the custom message for the locale.
 - Is it serialized? Select this option if the discount has an associated serial number. For example, it may be used with coupon discounts.
 - Is there a maximum number of times it can be applied in a transaction? Select this option if true, and enter the maximum number of times it can be applied in a transaction when prompted.
 - Is it exclusive? Select this option if the discount cannot be used with any other discounts.
 - Can it be modified once it has been applied? Select this option if the discount can be changed. This option is selected by default (true).

Discount Accessibility Configuration

- 1. Configure discount accessibility, then click Next.
 - Is manager clearance required to apply this discount? Select this option if manager override is required to use this discount.
 - Eligible Customer Groups Select all options that apply. For example:
 - Elite Program Member
 - Employee
 - Employee Family
 - Normal Level
 - Eligible Item Types Select all options that apply. For example:
 - Layaway
 - Order
 - Sale
 - Send Sale
 - Special Order
 - Work Order

Discounts System Configuration

Note: The system configuration options for discounts in this feature are simply a subset of the system configuration options available from Oracle Retail Xstore Point-of-Service System Config Options. See Configuring Xstore Point-of-Service System Config Options for more information.

The following configurations apply specifically to discounts. The categories have been set up as follows:

- Discount Options
- Returns

Discount Options

• Enable Discount Threshold Validation? - Determines whether the system validates the total discount amount or percentage against a configured threshold.

Note: The thresholds establish maximum allowable amounts or percentages used for discounting; beyond these thresholds, the DISCOUNT_EXCEED_MAX_THRESHOLD privilege is activated.

- How Should Price Be Rounded After Discount Applied? The local currency amount rounding method used for determining the price after a discount is applied:
 - Half Up Round to the nearest neighbor unless equidistant, then round up.

- Half Down Round to the nearest neighbor unless equidistant, then round down.
- Half Even Round to the nearest neighbor unless equidistant, then round to even neighbor. Example: 2.5 rounds to 2 while 3.5 rounds to 4.
- Ceiling Round toward positive infinity. Note: This is the opposite of FLOOR and never decreases the calculated value.
- Down Round to the next digit; closer to zero.
- Floor Round down toward negative infinity. Note: This is the opposite of CEILING and never increases the calculated value.
- Up Round to the next digit; away from zero.
- Unnecessary Rounding is not necessary.
- Minimum # of Items That Can Participate In Group Discount The minimum number of items required in order to allow application of a group discount.
- Minimum Threshold For You Saved Amount? The minimum amount of customer savings required for the system to print the customer savings information on the sales receipt.
- Precision Decimal Places For Calculating Line Item Discounts If LineDiscountUseConfiguredScale is true, the system uses this scale instead of the local currency scale to round the line item discount amount.
- Print You Saved Amount On Receipts? Determines whether the system prints customer savings information on the sales receipt.
- Prompt Confirmation On Item Deletion Participating In Group Discount? -Determines whether the system prompts for confirmation if the associate wants to remove an item with a group discount. The group discount will be removed from other items as well.
- Threshold Amount To Measure Line Item Discounts Against If DiscountThreshold Enabled is true, the system validates the total line item discount amount against the threshold amount specified here.
- Threshold Percent To Measure Line Item Discounts Against If DiscountThreshold Enabled is true, the system validates the total line item discount percent against the threshold percent specified here.
- Use Special Precision For Calculating Line Item Discount Amounts? Determines whether the system uses LineDiscountPrecision scale instead of the local currency scale to round the line item discount amount.

Returns

- Allow Return Items To Be Discounted On Blind Returns? Determines whether the system allows applying a discount on a blind return (Customer does not present the original sales receipt.) This configuration applies only to line item and group discounts. This configuration does not apply to transaction discounts.
- Allow Return Items To Be Discounted On Unverified Returns? Determines whether the system allows applying a discount on an unverified return. (Customer presents the original sales receipt but the system is not able to retrieve the original sales transaction.) This configuration applies only to line item and group discounts. This configuration does not apply to transaction discounts.
- Allow Return Items To Be Discounted On Verified Returns? Determines whether the system allows applying a discount on a verified return. (Customer presents the

original sales receipt and the system is able to retrieve the original sales transaction.) This configuration applies only to line item and group discounts. This configuration does not apply to transaction discounts.

 Disable Pro-rated Discounts On Returns? - When this setting is enabled, Oracle Retail Xstore Point of Service will turn off the proration of discounts for returns.

Configuring Reason Codes

...continued from step 4 on page 5-4

- 1. At the Reason Code Search page, select the Reason Code Type from the list, then click **Next**.
- **2.** The configuration page for the selected reason code type displays. Add a new reason code or edit an existing reason code.

If adding a new reason code:

- a. Click Add New.
- **b.** Complete the fields as required, then click **Next**. See Reason Code Configuration Options for a list of reason code fields.
- c. Skip to step 3 on page 14.

If editing an existing reason code:

Note: You can only edit global records if you are editing records in a global configuration.

If you are editing configurations in a specific location (Profile Group or Store), the Edit button in the Reason Code Detail window will only be available if you have the proper privileges.

- **a.** Select the reason code in the list.
- b. At the Reason Code Detail window, select Edit.
- **c.** Complete the fields as required, then click **Next**. See Reason Code Configuration Options for a list of reason code fields.
- **d.** Continue with step 3 below.
- **3.** Review the reason code options you selected:

Figure 5–9 Reason Code Options Review

| 📕 Journal 📲 Reports 🖌 C | Config Manager 🕂 Data Management | 🗘 Deployment | Support Tools | System Management | |
|---|---|------------------|---------------|-------------------|-----------------------------|

- To save the new reason code, click **save**. The reason code is added to the Reason Codes list.
- To edit the reason code:
 - Click **previous** to go back one screen.

<OR>

- Select a configuration option in the Edit Reason Code section in the left panel of the window.
- After making your changes, click **save**. The new reason code is added to the Reason Codes list.
- To discard the reason code, click **cancel**. Click **Yes** to confirm you want to cancel reason code setup.
- **4.** After completing reason code setup, Oracle Retail Xstore Office Cloud Service returns to the Reason Codes list page.
 - To deploy your changes, see Deploying Configuration Changes.
 - To view a summary list of a profile element's configuration changes to identify how it differs from the global configuration, see Viewing Configuration Changes
 - [CONFIGURATION OVERRIDES & STORE SPECIFIC OVERRIDES ONLY] -To delete the current profile element configuration changes, see Delete Profile Configuration Overrides.
 - [STORE SPECIFIC OVERRIDES ONLY] To copy store configurations from another store, see Copy Store Configurations.

Reason Code Configuration Options

The set of configuration options will vary with the Reason Code Type. This section defines the basic options available for setting up reason codes.

General Options

- Enabled? Reason Code enabled status check box. This option is enabled by default. Remove the check mark to disable the reason code.
- Reason Code The reason code value associated with the reason type code. This
 value must be unique, and cannot be changed when editing an existing reason
 code.
- Description Text description for the reason code.
- Locale for translation If needed, select a translation locale and enter the description for the locale.
- Does this reason code have a parent code? If true, select the parent reason code (hierarchy level) upon which the nested reason code is based.
- Does this reason code require that a comment be added? If true, the POS user will be prompted to add a comment. Specify whether the comment is optional (Prompt to add comment), or if the comment is required (Comment is required).
- Does this reason code need to display a customer message? If true, enter the customer message to be displayed when the reason code is selected in the POS system. If needed, select a translation locale and enter the customer message for the locale.

 Should this reason code be excluded from reason code lists displayed in Xstore? -Select this option if this reason code will not be available to the Oracle Retail Xstore Point-of-Service POS user.

Inventory Adjustment Options

What is the inventory action code for this reason code? - If this reason code has an
inventory action code, select the code from the list to specify the inventory action
(add or subtract from inventory) to be taken based on the reason code.

Paid In/Paid Out Options

- Does the reason code have a General Ledger Account Number? If this reason code is associated with a General Ledger account, enter the General Ledger account number to be recorded when the reason code is selected in Oracle Retail Xstore Point of Service.
- Does the reason code require a minimum amount? If true, enter the minimum monetary amount allowed for this reason code.
- Does the reason code require a maximum amount? If true, enter the maximum monetary amount allowed for this reason code.

Return Reason Code Options

- What inventory location ID is affected by this reason code? Select the inventory location ID to which the item will be returned.
- What inventory bucket ID is affected by this reason code? Select the inventory bucket ID within the location to which the item will be returned.

Properties [Country Pack ONLY]

For the country pack Italy you can associate the Tax Exemption reason code to the country specific exemption code in the Properties tab.

Note: This feature is only available for country packs. For more information on country packs, see the *Xstore Suite Configuration Accelerator Guide*.

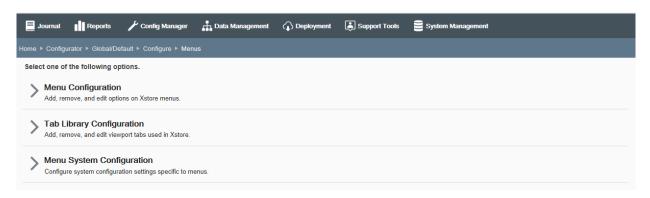

Configuring Menus and Tabs

Important: Use of the Menu Configuration and Tab Configuration tools assumes some knowledge of the Oracle Retail Xstore Point-of-Service menus and tabs and how they are used in the Oracle Retail Xstore Point-of-Service application.

...continued from step 4 on page 5-4

Select a menu option:

Figure 5–10 Menu Options

- Select Menu Configuration to add, remove, and edit options on Oracle Retail Xstore Point-of-Service menus. Continue with Oracle Retail Xstore Point-of-Service Menu Configuration below.
- Select Tab Library Configuration to add or remove message area tabs used in Oracle Retail Xstore Point of Service. Skip to Oracle Retail Xstore Point-of- Service Ta b Configuration.
- Select Menu System Configuration to configure the system configuration settings that are specific to menus. Skip to Menu System Configuration.

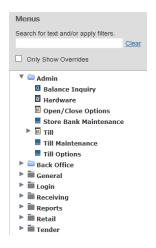

Oracle Retail Xstore Point-of-Service Menu Configuration

This section describes the Xstore POS Menu configuration.

About menu categories

The Oracle Retail Xstore Point-of-Service menus have been organized by categories. For example, all menus with a category of Back Office will be grouped together under the Back Office category name and all menus with the category Tender will be grouped together under the Tender category name.

Figure 5–11 Menu Categories

Tender This is a Menu Category folder. All menus belonging to this category are located in this folder.

- A blue Menu Category folder indicates a menu within the folder has been modified.
- This icon indicates there are additional menus nested below this list menu type.
- This icon indicates there are additional menus nested below this button menu type.
- This icon indicates this is the lowest level for this list menu type. There are no menus nested below this menu.
- This icon indicates this is the lowest level for this button menu type. There are no menus nested below this menu.
- This icon indicates this list menu type has been modified.
- This icon indicates this button menu type has been modified.
- This icon indicates that this menu also appears in other Categories. Any changes
 made to this menu in one category will also be applied to the menu in all the
 categories where it appears.
- To find menus containing specific text, enter the search text in the input box, then press [Enter]. The results are shown in the left panel (folder tree). Only those menus containing the specified text are displayed. If needed, click **Clear** to remove the search criteria and return to the default Menu Configuration page.

Figure 5–12 Menus Search Area

| Menus | |
|---------------------------------------|-------|
| Search for text and/or apply filters. | |
| | Clear |
| Only Show Overrides | |

 Click the Only Show Overrides check box to view only the Menu Categories and menus that have been changed.

Perform the following steps to configure Oracle Retail Xstore Point-of-Service menus.

1. After selecting Menu Configuration at the Menu Options page (Figure 5-10), click the menu category from the Menus tree that you want to configure.

Note: If needed, click **Cancel** if you want to discard your changes before saving.

2. Click Save.

Changing a Menu Option Location

For Menu Buttons:

1. Select the menu button to be moved and click the Left and Right arrows to change the menu button location within the menu. The other menu buttons will be shifted accordingly.

Note: The Locked icon i associated with a menu button indicates this button is "locked" in this location and cannot be moved. The Left and Right arrows will be disabled since the menu button cannot be moved.

Note: Click **Cancel**, if you want to discard your changes before saving.

2. Click Save.

For Menu Lists:

1. Select the menu option to be moved and click the Up and Down arrows to change the menu option location within the menu. The other menus will be shifted accordingly.

Note: Click **Cancel**, if you want to discard your changes before saving.

2. Click Save.

Adding a New Menu Option

Note: Adding new options to menus assumes you have a working knowledge of how and where the menus are used in the Oracle Retail Xstore Point-of-Service application.

1. With the menu displayed, click Add.

Note: In the menu button example shown above, the **More** button was added automatically to accommodate the new menu option.

4. Click Save.

Oracle Retail Xstore Point-of-Service Tab Configuration

The Oracle Retail Xstore Point-of-Service Tab Library contains a set of ready-toimplement tabs and widgets that can be easily incorporated into Oracle Retail Xstore Point of Service to enhance the user experience. The Tab Library provides multiple options for information tabs and web widgets, beyond the five standard tabs traditionally provided in the Information area with base Oracle Retail Xstore Point of Service. You can select from an array of pre-defined widgets and tabs in the library to be displayed in Oracle Retail Xstore Point of Service.

In addition, these tabs can be configured to work in different contexts. For example, tabs that display login mode may not be the same tabs that are available during transaction mode.

Important: Additional configuration may be required to set up the information found on the various tabs. The tab configuration feature described here is used to manage which pre-defined tabs are used in Oracle Retail Xstore Point of Service and where they will appear.

Security privileges are required to use this feature:

| Security Privilege | Description |
|--------------------|--|
| Configurator | This privilege allows the user to access the menu config option form the configurator lading page. |
| Menu Configuration | This privilege allows the user to access the actual menu config feature |
| Tab Configuration | This privilege allows the user to access the tab library config feature. |

| Table 5–3 | Security Privileges | |
|-----------|---------------------|--|
|-----------|---------------------|--|

The base implementation of Oracle Retail Xstore Point of Service displays five information tabs: Info, Tasks, (Sales) Goals, Messages, and Keypad. The tabs and widgets in the library can be used in place of-or in addition to-the tabs provided with base Oracle Retail Xstore Point of Service.

Note: It is possible to add more or less than the standard five tabs delivered in base Oracle Retail Xstore Point of Service; however, for best results a limit of five tabs per context is recommended.

Perform the following steps to configure which tabs will be in use, and where they will be displayed.

1. After selecting Tab Library Configuration at the Menu Options page (Figure 5-10), the Tab Library Configuration page displays.

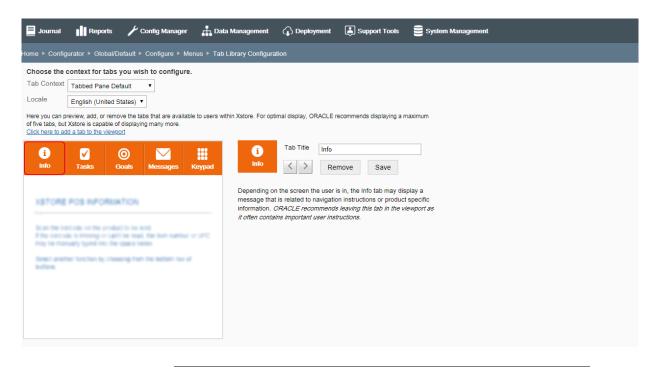

Figure 5–28 Tab Library Configuration Page

Note: This page shows the current tab layout for the selected context (Default or Transaction). Any text located within the tab area will appear blurred and is simply shown to illustrate the tab's content.

- **2.** At the Tab Library Configuration page, choose the tab context from the drop-down list:
 - Tabbed Pane Default The tabs that are available when not in a transaction.
 - Tabbed Pane Transaction The tabs that are available during a transaction.
- **3.** [OPTIONAL] Select a locale to view the tab as it will be displayed in a different locale. This option will only show the locales set up for you organization.
- 4. Choose from the following options for the selected tab context:
 - To add a new tab, see Adding a New Tab.
 - To remove a tab, see Adding a New Tab.
 - To move a tab, see Moving a Tab Position.
 - To change the tab name, see Changing a Tab Name.
- 5. After saving the tab configuration, you can perform the following options:
 - To deploy your changes, see Deploying Configuration Changes.
 - To view a summary list of a profile element's configuration changes to identify how it differs from the global configuration, see Viewing Configuration Changes.
 - [CONFIGURATION OVERRIDES & STORE SPECIFIC OVERRIDES ONLY] -To delete the current profile element configuration changes, see Delete Profile Configuration Overrides.
 - [STORE SPECIFIC OVERRIDES ONLY] To copy store configurations from another store, see Copy Store Configurations.

Adding a New Tab

- 1. At the Tab Library Configuration page, click the Click here to add a tab to the viewport link.
- **2.** Select a tab from the list and click the **Add** button. The tab is added to the information area image.

Note: To close the Add Tab window without making any changes, click the Close button.

3. If needed, override the default field(s).

Note: For the URL tab, the POS Terminal must have rights to view the URL website through security and fire wall settings maintained by the corporate office.

4. Click **Save** to save your changes.

Removing a Tab

- 1. At the Tab Library Configuration page, click the tab you want to remove.
- 2. With the tab selected, click the **Remove** button.
- **3.** When prompted, click **Yes** to confirm you want to remove the selected tab. The tab is removed from the information area image.

4. Click Save to save your changes.

Moving a Tab Position

- 1. At the Tab Library Configuration page, click the tab you want to move.
- **2.** With the tab selected, click the navigation buttons to move the selected tab's position left or right.
- 3. Click Save to save your changes.

Changing a Tab Name

- 1. At the Tab Library Configuration page, click the tab you want to rename.
- **2.** With the tab selected, type a new name for the tab.
- 3. Click Save to save your changes.

Note: Although the tab name is not a required field in Oracle Retail Xstore Office Cloud Service, Oracle Retail Xstore Point of Service expects a name and will display a translation error if the name is not specified here.

Menu System Configuration

Note: The system configuration options for menus in this feature are simply a subset of the system configuration options available from Oracle Retail Xstore Point-of-Service System Config Options. See Configuring Xstore Point-of-Service System Config Optionsfor more information.

The following configurations apply specifically to menus. The categories have been set up as follows:

- Help
- Register Configuration
- Store Specific

Help

Name Of Help Menu - The menu to be displayed when the Help button is selected. The set of actions to be run for the menu are defined in MenuConfig.xml.

Register Configuration

The Number Of Buttons On A Menu - This determines the number of buttons on a menu. Users are required to make a corresponding change to UIConfig.xml. These settings will not impact the menu layout of the Oracle Retail Xstore Point-of-Service Software Mobile which will remain fixed at a 3 x 2 grid.

Store Specific

Hide Menu Options From Users That Lack Access - This is used to hide menu options the user does not have security privileges to use. Answer yes to hide the menu option completely. Answer no to display the option as disabled.

Configuring Receipts

Important: Receipt configuration is limited to certain receipts, and to specific areas within those receipts.

...continued from step 4 on page 5-4

- **1.** Select a receipt option:
 - Find Receipt By Transaction Select this option if you want to make your edits based on a specific receipt from a known transaction. See Finding the Receipt by Transaction.
 - Find Receipt By Type Select this option if you want to make your edits based on a specific type of receipt. See Finding the Receipt by Type.
 - Change Receipt Logo Select this option to change the logo that displays on your sales receipts. See Changing the Receipt Logo.
 - Receipt System Configuration Select this option to configure system configuration settings specific to receipts. See Receipt Configuration: System Configuration Options.
- **2.** After completing receipt setup, you can perform the following options:
 - To deploy your changes, see Deploying Configuration Changes.
 - To view a summary list of a profile element's configuration changes to identify how it differs from the global configuration, see Viewing Configuration Changes.
 - [CONFIGURATION OVERRIDES & STORE SPECIFIC OVERRIDES ONLY] -To delete the current profile element configuration changes, see Delete Profile Configuration Overrides.
 - [STORE SPECIFIC OVERRIDES ONLY] To copy store configurations from another store, see Copy Store Configurations.

Finding the Receipt by Type

Note: For a receipt type to be available here, an actual transaction must exist that uses the receipt type.

1. Select a receipt type (and a locale if applicable) from the list and click Search.

| | I Receipt By Type eceipts by selecting a specific type of receipt. |
|--------|--|
| Locale | English (United States) V |
| Туре | Sale Credit Card Tax Exemption Account Receivable Bounce Back Coupon Gift Certificate Layaway Special Order Send Sale Work Order Order Rain Check Warranty |
| | Search |

Figure 5–29 Receipt Search by Type

Note: Searching For Receipts By Type

The Locale drop-down field defaults to the locale of the current user. Locale is used to find the selected receipt types that match to the selected locale. For example, if Espanol is selected from the Locale list, only those receipts that are assigned to the Espanol locale will be displayed.

If the search yields no results, a message is shown below the receipt list.

- **2.** At the Receipt Configuration page, select a receipt from the Receipt Options dropdown list. The Receipt Options drop-down list contains the various receipts available for the selected receipt type.
- **3.** The Edit Receipts page displays.

_

Note: The initial view of the Edit Receipts page automatically displays the first receipt type in the drop-down list.

Figure 5–30 Edit Receipts Page - Bounce Back Coupon Receipt Example

About the Edit Receipts Page

- The calendar date and receipt view default to the current day. If applicable, use the calendar to select another date to view the receipt with the text entries for that specific date. Click the Refresh button to update the receipt for the new date.
- If the receipt you selected cannot be edited, you will see this message and the receipt will appear as a gray image. You can select another receipt from the list, or use the navigation breadcrumbs to return to the previous screen.

- Only receipt sections highlighted in red can be edited.
- If a receipt section is not enabled for the current receipt, the section is shown as a watermark with a white background and gray text, but can be edited.

| waitanty fiame | |
|----------------|--|

- **4.** Click on an area of a receipt that is highlighted in red to change it. The selected section will be highlighted in green to indicate it is the active section. The text area on the Edit Receipts page shows all existing entries for the selected section and the effective dates if applicable.
- 5. At the Edit Receipts page, add new text or edit existing text:

- To edit an existing line of text, click the text line to open the Edit Receipt Text window and make your receipt changes as needed.
- To add new text, click the **Add New** button to open the Edit Receipt Text window and add new text as needed.

Edit Receipt Text Window

- **a.** Receipt Text Type the text as it should appear on the selected section of the receipt.
- **b.** Dates [OPTIONAL] Date fields are not required. If there are no dates for a row, the text will always be displayed for the selected section. To create date-defined text for the selected section of the receipt, enter a Start Date and End Date for the length of time the text will be printed on the receipt. This provides the ability to set up future text for each section in a receipt without affecting the current receipt. Leave the End Date field blank if there is no ending date. Leave both date fields blank if there are no date restrictions. To view the receipt changes for a specific date, select the date and click **Refresh**.
- **c.** Locale [OPTIONAL] To add or edit receipt text for a different locale, select a locale from the locale drop-down list and enter translated text. This option is only available if multiple locales have been set up for your organization.
- **d.** Text Format [OPTIONAL] Use the following icons to format the text on the receipt. When an icon is selected, the format will be applied to all of the text in the box, even if only part of the text was selected at the time. When a format option is selected, the icon changes to a blue background. If you need to remove a format from the text, click the blue icon to remove the formatting. The icon will now be white, indicating the format is not applied.

| Up to two coupons per transaction will be honored this week. | Е | | | | | |
| Coupon cannot be applied to employee purchases or for the purchase of gift cards. | | | | | | |

Note: If there are multiple entries with the same or overlapping dates, the entries will all display on the receipt. Order will be determined by when the row was added. The order on the receipt will match the order in the text area of the Edit Receipts page.

Finding the Receipt by Transaction

1. Complete all the fields to locate the receipts from a specific transaction: Store number, Date the transaction was completed, Register identifier where the transaction was rung, and the Transaction number.

Figure 5–33 Receipt Search by Transaction - Input Fields

| Find Receipt By Transaction Find receipts using the identifying information from a specific transaction. | | | | | | |
|---|---------------------------------|--|--|--|--|--|
| Store | Register # Trans # Search | | | | | |

- 2. Click Search to return a list of the receipts for the transaction.
- **3.** Continue with step 3 on page 31. The process for modifying receipts either by transaction receipt or by receipt type is the same from this point forward.

Changing the Receipt Logo

About the logo file format

- Only black and white images may be used.
- Only bitmap (.bmp) format is supported.
- File size cannot exceed 100KB.
- Image width cannot exceed 400 pixels.

To change the current logo follow the steps below:

- 1. With your current logo displayed, click the **Change** button.
- 2. Click Browse to browse for the new logo file for the receipt.
- 3. After locating the correct file, click Upload to import the file.
 - If this is not the logo you want to use, click Browse to find a different logo.
 - If the file format for the new logo you selected is not supported, you will received a corresponding message. Click **Browse** to find a different logo.
- 4. With the new logo displayed, click **Save**.
- 5. The new logo is now shown in the Current Logo section of the page.

Receipt Configuration: System Configuration Options

The following configurations apply specifically to receipts. The categories have been set up as follows:

- Charity
- Comission Options

- Discount Options
- Email Settings
- Gift Receipts
- Gift Registry
- Inventory Location Based
- Item Options
- Kit Options
- Layaway
- Loyalty Options
- Send Sale
- Till Accountability
- Training Mode
- Transaction Behavior

Note: The system configuration options for receipts in this feature are simply a subset of the system configuration options available from Oracle Retail Xstore Point-of-Service System Config Options. See Configuring Xstore Point-of-Service System Config Options for more information.

Charity

- Enable Printing Charitable Contribution Line Item On The Receipts? Enable/ Disable the donation line item being printed on the receipts.
- Enable Printing Charity Footer Message On The Receipts? Enable/Disable the charity footer message being printed on the receipts.

Comission Options

- Print Sales Associate First Name On Receipts? Determines whether the system
 prints the first name of the current transaction's commissioned associates on the
 sales receipts.
- Print Sales Associate Last Name On Receipts? Determines whether the system
 prints the last name of the current transaction's commissioned associates on the
 sales receipts.
- Print Sales Associates Using Multiple Lines On Receipt? Determines whether the system prints each commissioned associate on a new line (Yes) or all commissioned associates on one line (No) on the sales receipts.

Discount Options

- Minimum Threshold For You Saved Amount. Enter the minimum amount of customer savings required for the system to print the customer savings information on the sales receipt.
- Print You Saved Amount On Receipts? Determines whether the system prints customer savings information on the sales receipt.

Email Settings

- **Default Email Host?** Specify the default email host name used for emailing customer receipts.
- **Default Receipt Email Subject.** Specify the default subject for an emailed receipt. The value is specified in translations_en.properties.
- Font Settings For The Email Text Used When Sending Receipts. Specify the font family and size for email receipt text.
- **Prompt To Email Receipts?** Determines whether users are always prompted with the option to email receipts to customers.
 - Select **Yes** to always prompt to ask the customer if they want receipts emailed.
 - Select **No** and the system will check the email permissions for the customer and will only email if the permission is set to yes.
- Save Updated Email Address To Customer Record? Determines whether customer email addresses are updated and saved to the customer record during the process of emailing a transaction receipt.
- Send Receipts Via Email? This is the global on/off switch for sending email receipts. Select Yes to enable the functionality. Receipts are emailed to customers if the receipt is configured as an email receipt.
- **Translation Key For The Sender Name Of Emailed Receipts.** Specify the translation key for the sender name of receipt emails. The value is specified in translations_en.properties.

Gift Receipts

- Allow User To Choose Gift Receipt Print Method? Determines whether the system allows the user to choose to print a gift receipt for each item or one gift receipt for all items.
 - Select **Yes** to allow the user to choose whether to print a gift receipt for each item or one gift receipt for all items.
 - Select **No** to not allow the user to choose a gift receipt type option.
- Maximum Gift Receipts That Can Be Printed. Enter the maximum number of gift receipts allowed to be printed by the system before a manager override is required.
- **Print One Receipt Per Gift Item?** Used when the quantity of a line item is greater than one. Determines whether the system prints a separate gift receipt for each item (Yes), or prints one gift receipt for the total quantity (No).
- Prompt User To Group Gift Receipts? Determines if the associate is prompted to group items onto one or many gift receipts at the customer's discretion.

Gift Registry

Automatically print gift receipts for items purchased from a gift registry? Determines whether the system automatically adds a gift receipt to an item
purchased from a gift registry. Select Yes to have the gift receipt automatically
added to an item purchased from a gift registry.

Inventory Location Based

 Print Inventory Location Sold From On Receipt? - Determines whether the system prints the inventory location from which an item was sold on the receipt.

Item Options

• A List Of Non-Merchandise Item Types That Are Included In Item Count. -Select the non-merchandise item types that will be included in the total item sold count on the sales receipt. Valid Values: Voucher, Loyalty Card.

Kit Options

- Link The Component Quantity Of A Kit To The Kit Quantity For Receipts? Determines whether the quantity of the kit component rows on the virtual and real
 receipts are linked to the quantity of the kit item.
 - If Yes, the component item quantity displayed will be multiplied by the quantity of the parent kit line item.
 - If No, the component item quantity will not change, regardless of the parent kit line item's quantity.
- Maximum Number Of Kit Components To Display On A Receipt. Enter the maximum number of kit components to display on the virtual receipt for a kit item. If there are more kit components than rows available for display, the last row will be used to display a continuation string, such as an ellipsis (...).

Layaway

- Print Layaway Merchandise Ticket Per Item? Determines whether the system
 prints a separate merchandise ticket for each layaway item at setup.
- Print Layaway Merchandise Ticket With All Items? Determines whether the system prints a merchandise ticket for a layaway account.
- Print Layaway Specific Receipt? Determines whether the system prints a layaway receipt that contains only layaway account and item information. Line items belonging to other sale types (that is, sales or returns) will not be included on this receipt.

Loyalty Options

• Show Loyalty Card Expiration Date? - Determines whether to show the loyalty card expiration date in the display and on the receipt.

Send Sale

Print Merchandise Ticket For Send Sale Items? - Determines whether the system
prints a merchandise ticket for each send sale item sold.

Till Account

 Print Total Cash Pickup Amounts On Closing Till Receipts? - Determines whether the system prints the total cash pickup amount on closing till count receipts.

Training Mode

- Restrict Printing Of Receipt Confirming Training Mode Enter And Exit? Determines whether the system prints receipts for entering and exiting training
 mode. (Training mode must be enabled on the register for this option to be valid.)
- Restrict Receipt Printing In Training Mode? Determines whether the system
 prints receipts in training mode. (Training mode must be enabled on the register
 for this option to be valid.)

Transaction Behavior

- Print Store Copy Of Receipt When Sigcap Used? Determines whether the system prints a store copy sales receipt if the customer signature is captured by a signature capture device.
- **Print Suspended Transaction Receipt?** Determines whether the system prints a receipt when suspending a retail transaction.

Configuring Xstore Point-of-Service System Config Options

Important: This option replaces the standard process of manually managing the SysConfig.xml file. If you use this Oracle Retail Xstore Office Cloud Service configuration tool, SysConfig.xml files should not be created manually and installed in any store/register (via config path).

If any SysConfig.xml files are manually created and installed in any store/register (via config path), the changes they contain will work in Oracle Retail Xstore Point of Service as they always have; however, these configurations will be totally unknown to this System Config option and may possibly impair its ability to work properly.

... continued from step 4 on page 5-4

Using the System Config Search Feature

1. At the System Configuration page Search box, do one of the following:

| Figure 5–34 | System Configuration | Page - System | Config Search Box |
|-------------|----------------------|---------------|--------------------------|
|-------------|----------------------|---------------|--------------------------|

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management |
|--------------------|----------------------|-----------------------------|-----------------------------|---------------|---------------|-------------------|
| Home ► Configu | urator ▶ Global/De | efault ▶ Configure ▶ Rece | ipt Configuration ► System | Configuration | | |
| Use the tree | to locate the des | sired configuration setting | ng, then click Edit to chai | nge it. | | |
| Search for text an | nd/or apply filters. | | Clear | | | |
| Only Show O | verrides | | | | | |

- To find system configurations containing specific text, enter the search text in the input box, then press [Enter]. The text typed here can be found anywhere within the configuration: the label, the description, the module, or the config path itself. The results are shown in the left panel (folder tree). Only those configurations containing the specified text within the label, description, module, or config path are displayed. If needed, click Clear to remove the search criteria and return to the default System Configuration page.
- To view only system configuration categories and configuration options with overrides, select the Only Show Overrides check box.

About Configuration Overrides

A configuration marked as an override differs between scopes:

• Within the Global scope, an override means that the state of the configuration varies from Oracle Retail Xstore Point of Service base configuration.

- Within a Profile Group/Profile Element combination, an override means that the configuration varies from the Global configuration.
 - To return to the default System Configuration page, deselect the check box.
 - To display additional filtering options, click **Show** more filters.

Additional filter options display:

Figure 5–35 Additional Filter Options

| Search for text and/or ap | ply fi | Iters. | |
|-------------------------------|--------------|------------------------|-------------|
| | | | Clear |
| Only Show Override | s | | |
| Hide filters | | | |
| Include configurations by | / tag. | | |
| ✓ Admin | ✓ | Loyalty | Include all |
| ✓ Airport | ✓ | Menu | Exclude all |
| Associate Tasks | \checkmark | Receipts | |
| CRM | ✓ | Register | |
| Commission | ✓ | Return | |
| Country Pack | ✓ | Sale | |
| Discounts | ✓ | Scan Item or UPC | |
| Fiscal | ✓ | Security | |
| Human Resource | s 🗹 | Serial Number Exchange | |
| Interface | ✓ | Store Specific | |
| Inventory | ✓ | Taxes | |
| Invoice | ✓ | Tender | |
| ✓ Items | \checkmark | Xenvironment | |
| | | | |

This option provides an extra level of organization for the various configuration options, and also provides the ability to filter on just one or many tags. By default, all tags are selected. Select one or more tags to view only the related category folders. To select all tags at once, click Include all. To clear all selected tags, click **Exclude** all. When finished with the filter options, click **Hide filters**.

 Continue with Viewing/Editing System Configurations.ntinue with Viewing/Editing System Configurations.ontinue with Viewing/Editing System Configurations.

Viewing/Editing System Configurations

1. On the left side of the System Configuration page, click the arrow associated with a system configuration category to open the folder and show the configuration options within the selected category.

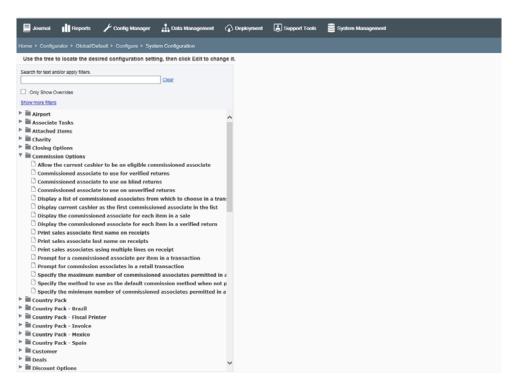

Figure 5–36 System Configuration Page - Expanded Category Folder

- If a category contains at least one configuration option that has been overridden, the color of the folder is blue.
- The overridden configuration option within the category is indicated by an override icon.
- See About Configuration Overrides for more information about configuration overrides.
- **2.** Select a configuration option within the selected category to view the configuration details in the right side of the System Configuration page.

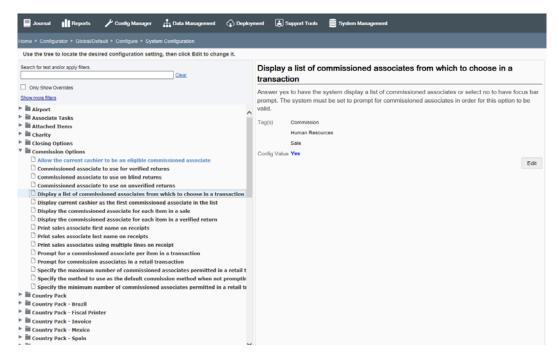

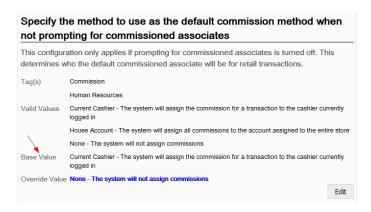

Figure 5–37 System Configuration Page - Configuration Option Detail

The following detailed information displays:

- The configuration name (label).
- The configuration description.
- The tag or tags associated with the selected configuration. This information can be used to filter or search for configurations.
- Valid values when applicable.
- Base Value or Global Value if the Configuration has been overridden. See Figure 5-38 below.
- The current value setting of the configuration.

Note: If this setting is different than its original value (Base for Global scope as shown here, and Global for configuration overrides) the original value is also shown in this section. See About Configuration Overrides.

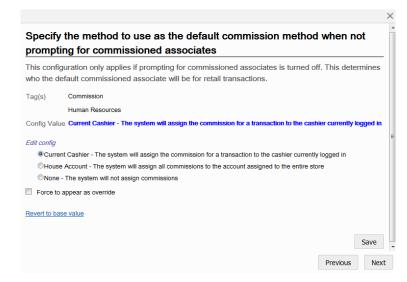

The path in SysConfig.xml (at the bottom of the page).

Figure 5–39 Path SysConfig.xml

CommissionedAssociates---DefaultCommissionMethod

- **3.** Click **Edit** to make any changes.
- **4.** At the editing window you have the following options:

Figure 5–40 System Configuration - Edit Window

- Edit Config Select an option or enter information as needed for the configuration.
- Force to appear as override check box Select this option to label the configuration as an override.

Overrides differ between scopes. Within the Global scope, an override means that the state of the configuration varies from Oracle Retail Xstore Point-of-Service base configuration. Within the Profile Group/Profile Element combination scope, an override means that the configuration varies from the Global configuration. This setting is more than an arbitrary flag. For example, if a Profile Group/ Profile Element is using the same config values as the global configuration, that means that when you change the config values for the global configuration, you are also effectively changing the config values for the profile group/profile element. Using this check box, config values marked as overrides for a Profile Group/Profile Element will not change.

 Revert to base value1 or Revert to global value link - Click this link to revert the configuration back to the base value (or global value for Profile Group/Profile Element combination scope).

Edit Form Navigation Options:

- To close the form without saving your changes, click the Close icon.
- To view the previous/next configurations in the category, click Previous/Next button.
- 5. Click Save to save your changes and return to the System Configuration Page.
- **6.** After completing System Configuration setup, you can perform the following options:
 - To deploy your changes, see Deploying Configuration Changes.
 - To view a summary list of a profile element's configuration changes to identify how it differs from the global configuration, see Viewing Configuration Changes.
 - [CONFIGURATION OVERRIDES & STORE SPECIFIC OVERRIDES ONLY] -To delete the current profile element configuration changes, see Delete Profile Configuration Overrides.
 - [STORE SPECIFIC OVERRIDES ONLY] To copy store configurations from another store, see Copy Store Configurations.

Configuring Oracle Retail Xstore Point-of-Service Security

...continued from step 4 on page 5-4

This option is only available for the Global scope.

1. Select an option from the Security Configuration page:

| | Journal | Reports | 🖌 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management |
|------|-----------|---|----------------------------|-------------------|--------------|---------------|-------------------|
| Home | ▶ Configu | urator ▶ Global/Defa | ault ▶ Configure ▶ Secu | rity | | | |
| Sele | ct one of | f the following opt | ions. | | | | |
| > | | rity Privileges are security privileges | that are used throughout | Xstore. | | | |
| > | | rity Groups are security groups the | at are used within Xstore. | | | | |
| > | | rity System Cor are system configuration | ifiguration | curity. | | | |
| | | | | | | | |

 Select Security Privileges to set up Oracle Retail Xstore Point-of-Service security privileges. Continue with step 2 below. • Select Security Groups to add or edit existing Oracle Retail Xstore Point-of-Service security groups. Skip to Security Groups Setup.

Select Security System Configuration to configure system configuration settings specific to security. Skip to Security System Configuration.

2. At the Security Privileges page, select a privilege to edit.

Note: To find a security privilege in the list, type any text that may be part of the privilege in the "Find a Privilege" text box at the top of the page.

3. Edit the Security Privilege as needed:

Figure 5–42 Edit Security Privilege Window

| | | \times |
|-----------------------------------|--|----------|
| Edit Privilege Add Coupon | | |
| Is authentication required? | Is a second set of credentials required? | |
| Can this privilege be overridden? | | |
| Security Groups | | |
| Everyone | | |
| Trainee | | |
| Cashier | | |
| Keyholder | | |
| Manager | | |
| | | |
| | | |
| | | Save |
| | Previous | Next |

Edit Form Navigation Options:

- To close the form without saving your changes, click the close icon.
- To view the previous/next configurations in the category, click the Previous/Next button.
- Is authentication required? Determines if the POS system should either always prompt for authentication, or authenticate against the current POS user. If selected, indicates that authentication is required for this privilege type.
- **Can this privilege be overridden?** If selected, the privilege can be overridden.
- Security Groups Select all groups that apply. For example:
 - Everyone
 - Trainee
 - Cashier
 - Keyholder
 - Manager
- Is a second set of credentials required? Determines whether a second authorization is required.

If selected, complete additional information as needed:

- Do they have to be different than the first set? If selected, then the same Employee ID cannot be used in both prompts.
- Second Security Groups Select all groups that apply. _
- Click Save to return to the Security Configuration page. 4.
- 5. After completing Security Privilege setup, you can perform the following options:
 - To deploy your changes, see Deploying Configuration Changes.
 - To view a summary list of a profile element's configuration changes to identify how it differs from the global configuration, see Viewing Configuration Changes.

Security System Configuration

Note: The system configuration options for security in this feature are simply a subset of the system configuration options available from Oracle Retail Xstore Point-of-Service System Config Options. See Configuring Xstore Point-of-Service System Config Options for more information.

The following configurations apply specifically to security. The categories have been set up as follows:

- House Accounts
- Sales
- Security
- Store Specific
- Tender Options

- Till Accountability
- Warranty

House Accounts

Manager override when tender amount exceeds house account balance? - Determines whether the system prompts for manager override if the tender amount exceeds the remaining balance of the house account. If Yes, and a manager-level user is logged in, the system displays the credit limit and prompts the user to proceed. If a user lower than the manager privilege is logged in, and the user chooses to proceed with exceeding the credit limit, the manager security login displays for approval.

Sales

Allow user to ring his/her own sale? - Determines whether the system allows employees to ring retail transactions for themselves.

Security

- Account lockout allowable retry attempts. If Account Lockout functionality is enabled, the system locks out the associate's account after this number of failed login retries. Default: Enabled, set to 3 attempts.
- Allowable retry attempts per challenge question. If Account Lockout functionality is enabled, the system locks out the associate's account after this number of failed challenge question retries.
- Enable Lockout Feature For Failed Login Attempts? Turns on/off the Account Lockout functionality where the system locks out the associate's account after a configured number of failed login retries. Default: Enabled
- Enable password expiration? Turns on/off Password Expiration functionality to expire an employee login password after a specified number of days. Default: Enabled
- Identify the ID to use for employee logon Determines the type of identification the associates will use to log into the system; Employee ID or Login ID.
- Login with employee card does not require password entry If enabled, the login to Xstore POS with an MSR-based employee card does not require entering a password. If disabled, the employee card will be used to provide the user ID, but password entry will be required to complete login.
- Password expiration days. If Password Expiration functionality is enabled, the system expires an employee login password after this number of days. Default: 90 days
- **Password re-use restriction count.** Associates are not allowed to reuse the same password within this number of password resets.
- Specify the number of minutes to wait before unlocking the previously locked users. The system automatically unlocks the previously locked users after this number of minutes from their locked out time stamp.
- The interval between attempts to unlock previously locked users. The interval, in seconds, between attempts to unlock previously locked users.
- The number of challenge questions required for employee identification. This setting provides the ability to dictate how many challenge questions employees must answer before being allowed to reset their password.

Note: There are ten challenge questions stored within the database, therefore no more than ten questions can be asked.

- Relate default user ID. The default user ID that has access to Oracle Retail Customer Engagement Cloud Services. This user ID must be set up in both Oracle Retail Xstore Point of Service and Oracle Retail Customer Engagement Cloud Services for WSDL version 2.
- **Relate user security type.** Determines how user data security should be pulled from Oracle Retail Customer Engagement Cloud Services. This will tell whether the security is based on the individual user, the user's role, or a default user.
- Treat security groups as 'Greater-Than' or 'Greater-Than Or Equal-To'. When creating/editing employees, this determines whether higher-ranked in sec_groups.group_rank means greater than or greater than or equal.
 - Answer **Yes** to allow a logged in user to edit associates with a rank that is equal to or lower than the logged in associate.
 - Answer No if the logged in user can only edit associates with a lower rank than themselves. If set to No, the highest ranking employee in the store will be unable to create or edit an employee of equal rank. In this scenario, the information must be downloaded from the home office rather than created in the store. (For example, if Manager is the highest rank in the store, new managers must be downloaded from the home office rather than created in the store).
- Use challenge questions for employee password reset? Turning this setting on will enable the use of challenge questions to identify an employee for the purpose of resetting the employee's password.

Note: Once this is turned on, any employee that has yet to select and answer challenge questions will be forced to do so upon successfully logging into back office or register mode.

Store Specific

- Default the type of ID required for tenders requiring customer identification. The default identification type used for certain tenders that require customer
 identification information. Valid Values: Drivers License, Social Security, Military
 Id, Credit Card, Employee Id, Customer Card, Any identification type
- Hide menu options from users that do not have appropriate security levels? This is used to hide menu options the user does not have security privileges to use. Answer yes to hide the menu option completely. Answer no to display the option as disabled.

Tender Options

- Authorization method code for BinSmart lookups for Merchant Warehouse. -This is the authorization method code used to perform the lookup. Valid only for Merchant Warehouse.
- Display rounded cash total? Only applicable for currency rounding, this
 indicates whether the rounded cash total is displayed below the transaction total
 in the viewport.

- Enable merchant Warehouse's BinSmart lookups? This determines whether Merchant Warehouse's BinSmart lookups are used for Credit/Debit authorizations.
- **Export hashed account number?** Determines whether or not to include the hashed account number in PosLog.xml.
- Inform users with a message that no signature is required? This option controls turning off/on the information message displayed when processing a transaction below a configured value.
- Preferred payment recommendation when errors occur. This is the preferred payment recommendation when an error occurs or a failed response is returned; credit or debit.
- **Require pin pad entry for debit tender?** Determines whether a pin pad device is required for tendering with a debit card.
- **Specify the rounding method to use for local currency.** The local currency amount rounding method.
 - Half Up Round to the nearest neighbor unless equidistant, then round up.
 - Half Down Round to the nearest neighbor unless equidistant, then round down.
 - Half Even Round to the nearest neighbor unless equidistant, then round to even neighbor. Example: 2.5 rounds to 2 while 3.5 rounds to 4.
 - Ceiling Round toward positive infinity. This is the opposite of FLOOR and never decreases the calculated value.
 - Down Round to the next digit; closer to zero.
 - Floor Round down toward negative infinity. This is the opposite of CEILING and never increases the calculated value
 - Up Round to the next digit; away from zero.
 - Unnecessary Rounding is not necessary.

Till Accountability

- Adjust store bank balance by deposit discrepancies? Determines whether the system automatically adjusts the store bank balance based on the bank deposit discrepancy.
- **Count method used for cash pickup** The cash count entry method for a cash pickup.
- **Count method used for opening store bank** The cash count entry method used for counting the store bank.
- **Count method used for store bank deposit** The store bank deposit till count method. This configuration is only valid if the store requires an end count of the store bank at store close.
- **Count method used for opening a till** The cash count entry method for a till opening count.
- **Count method used for store bank** The cash count entry method for a store bank deposit.

- Display count balance info on till close count? Determines whether the system displays the till count balance and discrepancy information after the associate completes the till close count.
- Display options for cash pickup summary. The cash pickup count summary screen display type.
 - Minimum Declared amount
 - Simple Declared amount, system amount
 - Detailed Declared amount, system amount, over/under amount
 - Full Currently, same as Detailed
- Display options for mid-day deposit till count summary. The mid-day deposit till count summary screen display type.
 - Minimum Declared amount
 - Simple Declared amount, system amount
 - Detailed Declared amount, system amount, over/under amount
 - Full Currently, same as Detailed
- Display options for till end count summary. The till end count summary screen display type.
 - Minimum Declared amount
 - Simple Declared amount, system amount
 - Detailed Declared amount, system amount, over/under amount
 - Full Currently, same as Detailed
- **Display options for till reconciliation summary.** The till reconcile count summary screen display type.
 - Minimum Declared amount
 - Simple Declared amount, system amount
 - Detailed Declared amount, system amount, over/under amount
 - Full Currently, same as Detailed
- **Display options for till start count.** The cash count entry method used for the start count.
 - Minimum Declared amount
 - Simple Declared amount, system amount
 - Detailed Declared amount, system amount, over/under amount
 - Full Currently, same as Detailed
- Force re-count of till with discrepancies over threshold? Determines whether the system forces a till recount if the till close count discrepancy exceeds the threshold.
- Method Of Counting Cash Deposit. The cash count entry method for a store bank deposit.
 - Total Short User enters total cash amount only.
 - Denomination User enters denominated cash amounts.

- Method Of Counting For Start Till. The cash count entry method for a till opening count.
 - Total Short User enters total cash amount only.
 - Denomination User enters denominated cash amounts.
- Method Of Counting For Store Bank Opening. The cash count entry method used for counting the store bank.
 - Total Short User enters total cash amount only.
 - Denomination User enters denominated cash amounts.
- Method Of Counting For Till Cash Transfer. The cash count entry method for a cash transfer.
 - Total Short User enters total cash amount only.
 - Denomination User enters denominated cash amounts.
- Method Of Counting For Till Pickup. The cash count entry method for a cash pickup.
 - Total Short User enters total cash amount only.
 - Denomination User enters denominated cash amounts.
- Method To Count Store Bank Deposit. The store bank deposit till count method. This configuration is only valid if the store requires an end count of the store bank at store close.
 - Storebank Complete Brings up the entire store bank end count screen for all tenders.
 - Remaining Cash Prompt the user to enter the total cash NOT to be deposited to the bank institution.
 - Complete Deposit Deposit all tenders from the store bank to the bank institution.
- Notify at end of a transaction when cash in drawer is below this threshold. -When the cash amount in the drawer drops below this amount after a retail transaction is completed, an acknowledge-only prompt will appear and notify the user.
- Print total cash pickup amounts on closing till receipts? Determines whether the system prints the total cash pickup amount on closing till count receipts.
- **Prompt user to open store bank during store open?** Determines whether the system automatically prompts the user asking if they wish to open the store bank when the store is opened.
- **Require store bank deposit count at close?** Determines whether the system requires a store bank deposit count at store close.
- Skip initial count summary When initiating a count, determines whether the system displays the tender summary list or the first tender to be counted.
- Threshold amount used for suggested cash pickup. When the cash amount exceeds this configured maximum amount, the system will prompt the associate to perform a cash pickup with the amount that is the current cash total minus this amount. This is a positive floating point number indicating the minimum amount of cash that should be left in the till following a pickup.

- Validate cash refund amounts against the current till count? Determines whether the system validates refund cash amounts to ensure the current till cash amount is greater than the refund cash amount.
- Validate store bank deposit amount against system? Determines whether the system validates the store bank deposit amount and prompts the associate to accept or recount if there is any discrepancy.

Warranty

 Allow warranties not on file? - Per each context (return or work order), when enabled, the system will allow the user to apply existing warranties that cannot be verified (given appropriate security clearance). When disabled, the application of unverifiable warranties will always be prohibited. Valid Values: Return, Work Order

Configuring Tenders

Note: Only tenders of type Miscellaneous, Currency, and Credit Card can be created through Oracle Retail Xstore Office Cloud Service. Tender type codes (tnd_tndr_typcode) must be pre-defined in the Xcenter (part of Oracle Retail Xstore Office Cloud Service) database to create tenders.

Base Oracle Retail Xstore Point of Service only supports USD (US Dollar), CAD (Canadian Dollar), EUR (Euro), GBP (British Pound), and JPY (Japanese Yen) without additional Oracle Retail Xstore Point of Service changes. If support for other currencies is required, contact your Oracle representative for more information.

...continued from step 4 on page 5-4

1. Select an option from the Tender Configuration page:

Figure 5–47 Tender Configuration Page Options

| Je 📃 | ournal | Reports | 🖌 Config Manager | 🕂 Data Management | Deployment | Support Tools | System Management |
|--------|------------|-------------------------------------|--|-------------------|------------|---------------|-------------------|
| Home ▶ | Configur | ator ▶ Global/Def | ault 🕨 Configure 🕨 Tenc | Jers | | | |
| Select | t one of t | he following opt | tions. | | | | |
| | | Maintenance edit data for tende | ers that are used in Xstore | | | | |

If adding a new tender:

a. Click Add New.

Important: Only tenders of type Miscellaneous, Currency, and Credit Card can be created through Oracle Retail Xstore Office Cloud Service.

- **b.** Complete the fields as required, then click **Next**. See Tender Configurations for a list of tender configuration options.
- **c.** Skip to step 4 on page 54 to review your selections.

If editing an existing tender:

- **a.** Select the tender in the list.
- **b.** At the Tender Detail window, click **Edit**.
- **c.** Complete the fields as required, then click **Next**. See Tender Configurations for a list of tender configuration options.
- d. Continue with step 4 below to review your selections.
- 4. Review the tender information you selected:

Figure 5–49 Tender Information Review

- To save the tender, click **Save**. The tender is added to the Tender list.
- To edit the tender:
 - Click **Previous** to go back one page, or select a configuration option in the Edit Tender section in the left panel of the window.

After making your changes, click **Save**. The new tender is added to the Tender list.

- To discard the tender changes, click cancel. When prompted, click **Yes** to confirm you want to cancel tender setup.
- **5.** After completing tender setup, Oracle Retail Xstore Office Cloud Service returns to the Tender Maintenance page.
 - To deploy your changes, see Deploying Configuration Changes.
 - To view a summary list of a profile element's configuration changes to identify how it differs from the global configuration, see Viewing Configuration Changes.
 - [CONFIGURATION OVERRIDES & STORE SPECIFIC OVERRIDES ONLY] -To delete the current profile element configuration changes, see Delete Profile Configuration Overrides.
 - [STORE SPECIFIC OVERRIDES ONLY] To copy store configurations from another store, see Copy Store Configurations

Tender Configurations

This section describes the available tender configurations.

Basic Information

Define the basic information for the tender, then click Next.

- **Tender ID** Enter the tender identifier. This value can only be edited in Add mode.
- Description Enter a text description of the tender.
- Locale If needed, select a translation locale and enter the description for the locale.
- **Currency** Set up the Currency ID:

Note: This option allows you to set the Currency ID on any tender to a keyword "*" that represents the local currency. For any tenders that have this keyword "*" set as the currency ID, Oracle Retail Xstore Point of Service will retrieve the local currency ID from SysConfig.xml.

This makes it easier to set up tender types to always use the local currency of the store rather than needing to explicitly define each tender with a specific currency ID.

For example, rather than setting up Visa/USD, Visa/CAD, Visa/AUD, and so on., it is possible to simply use the "*" keyword for the Visa tender to instruct Oracle Retail Xstore Point of Service to retrieve the store's local currency ID automatically for Visa.

- To set the Currency ID to Xstore's local currency, disable the "Does this tender use a specific Currency?" check box. This automatically sets the currency ID to "*". In Oracle Retail Xstore Point of Service, this "*" value is recognized as a directive to use the local currency for the tender.
- To set the Currency ID to a specific value, enable the "Does this tender use a specific Currency?" check box. When prompted, select a Currency ID from the list of available currencies. Oracle Retail Xstore Point of Service will use the selected Currency ID for the tender.
- Include in Flash Sales Report? If selected, the tender will be included on the Flash Sales Report. When prompted enter the order in which it should appear on the report in the Flash Sales Report Display Order field.
- Display Order Determines the order in which tenders display on the count page during closing.
- Enabled check box When selected, the tender is available for use.

Denominations Information [DENOMINATION Tender Types Only]

Configure denominations for the tender.

| Define | Denominations | | |

Figure 5–50 Denomination Information Tab

- To add a new denomination, enter the following denomination detail, then click **Add Denomination**:
 - Denomination ID The denomination identifier.
 - Description The denomination description
 - Value The denomination value

Note: A Delete option is available after adding a denomination.

Availability Information

Select the transaction types this tender is available for. To quickly choose all transaction types at once, click **Select All**.

Tender Options Maintenance

- 1. Select Tender Options Maintenance from the Tender Configuration page (Figure 5–47).
- 2. Select a Tender Type from the list, then click Next.
- 3. At the Tender Options Maintenance page, select a tender from the list.

- **6.** Review your selections and skip to step 4 on page 54 to complete tender options setup.

Tender Options Configuration

This section describes the tender options.

Usage Information

Define how the tender will be used.

• Effective Date - [OPTIONAL] Enter the effective date. Allows entry using the calendar component.

- **Expiration Date** [OPTIONAL] Enter the expiration date. Allows entry using the calendar component.
- Does this tender default the tender amount to the amount due? If selected, the amount due from the customer is shown as a default value in the focus bar at tendering.
- Is a failed over tendering attempt allowed to be overridden for this tender? If selected, the over tender limit can be overridden.
- Is there a limit to the amount of cash change? If selected, enter the maximum
 amount of cash that can be given as change when this tender is used as payment.
 - Is there a required tender to give as change when the cash change limit has been exceeded? If selected, choose the tender to be used as change after the cash change limit has been reached.
- Are split tenders allowed? When selected (default), this tender can be used if there are tenders in the current transaction. If this option is not selected, the tender amount entered cannot be less than what is due on the transaction.
- **Is a serial number required?** If selected, the serial number of the tender type must be captured as part of the tender process.
- **Open cash drawer?** If selected, the cash drawer opens when the tender type is offered by the customer.
- **Open cash drawer on Post Void?** If selected, open the cash drawer each time a post void is performed using this tender.
- Assign cash drawer? (Networked cash drawers only)
- Assign cash drawer on Post Void? (Networked cash drawers only)
- **Is endorsement/franking required?** If selected, an endorsement or franking is required before this tender can be accepted.
- Is this tender able to be voided? If selected, this tender can be voided.
- Is there a minimum denomination amount used for currency rounding for this tender? If selected, enter the minimum denomination value when prompted.
- When used as foreign currency, is change allowed back on this tender? If selected, giving change in foreign cash currency is allowed. If not selected, any change due is given in the local currency.
- Is there a required fiscal tender ID?

Customer Information

Define how the customer will use the tender.

- Is customer identification required? If selected, choose the type of customer identification required.
- **Is customer association required?** If selected, a customer must be associated with this tender.
- **Is customer signature required?** If selected, a customer signature is required before this tender can be accepted.
- Are there a minimum and maximum days for a return with this tender? If selected, enter the minimum number of days and maximum number of days allowed for return of an item to use this tender for refund.

Authorization Information [AUTH tender types only]

Configure authorization rules for the tender.

- Is a swipe on a magnetic stripe reader (MSR) required? If selected, the tender must be inserted into the magnetic card reader.
- **Is authorization required?** If selected, authorization is required before the tender can be accepted.

Enter/select authorization information when prompted:

- Authorization Method Select the authorization method from the list.
- Is postal code entry required? If selected, a postal code must be associated with this tender.
- Is expiration date entry required? If selected, this type of tender requires an authorization expiration date and it must be recorded at the time of settlement. (Used to enable expiration date prompting for a major credit tender.)
- Is CID entry required when swiped? If selected, the card ID is required when this card is swiped.
- Is CID entry required when keyed? If selected, the card ID is required when this card is keyed into the system manually.
- Is PIN entry required? If selected, the customer must enter a personal identification number (PIN) to validate the method of payment.

Count Information [COUNT Tender Types Only]

Specify the options used to configure counting and reporting rules for the tender.

 Is this tender counted independently from tender type? - If selected, the tender will be counted separately. When prompted, choose the Till Count Method to be used from the list. If not selected, the tender will be counted as part of its tender category grouping.

Note: This option is automatically selected for cash currency and cannot be deselected.

- Is a recount required if tender does not balance? If selected, enter the Close Count Discrepancy Threshold value when prompted.
- **Reporting Group** Select the reporting group for the tender:
 - Tender Summary group
 - Foreign Currency group
- Is a suggested deposit amount required? If selected, enter the Suggested Deposit Threshold value when prompted.
- Are the counts and amounts pre-populated? If selected, the system counts the tender automatically to populate the system tender.

Tender Security Settings

Note: The combination of Tender ID, Security Group, Usage Code, and Entry Method must be unique.

- **1.** Select **Tender Security Settings** from the Tender Configuration page (see Figure 5-42).
- **2.** At the Tender Security Settings page, you can add a new security setting or edit an existing one.

Figure 5–53 Tender Security Settings Page

Note: Use the Tender ID and Security Group filters to locate a tender/ security group in the list.

If adding a new tender security setting:

- a. Click Add New.
- **b.** At the Security Setting Detail window, complete the fields as required, then click **Save**. See Tender Security Settings Configuration Options for a list of configuration options.

If editing an existing tender security setting:

- **a.** Select the tender security setting in the list.
- **b.** At the Security Setting Detail window, complete the fields as required, then click Save. See Tender Security Settings Configuration Options for a list of tender configuration options.

- **3.** After completing tender security setting setup, Oracle Retail Xstore Office Cloud Service returns to the Tender Security Settings list page.
 - To deploy your changes, see Deploying Configuration Changes.
 - To view a summary list of a profile element's configuration changes to identify how it differs from the global configuration, see Viewing Configuration Changes.
 - [CONFIGURATION OVERRIDES & STORE SPECIFIC OVERRIDES ONLY] -To delete the current profile element configuration changes, see Delete Profile Configuration Overrides.
 - [STORE SPECIFIC OVERRIDES ONLY] To copy store configurations from another store, see Copy Store Configurations.

Tender Security Settings Configuration Options

The available configuration options depend upon the selected Tender and Usage Code.

General Information

Note: The following fields cannot be changed in edit mode.

- **Tender ID** Select the tender identifier from the list.
- Security Group Select the security group from the list.
- Usage Code Select the usage code from the list.
- Entry Method Code Select the entry method code from the list.

Limits

- Maximum amount allowed to over tender Enter the maximum amount allowed to over tender.
- Minimum amount Accepted Enter the minimum amount that can be accepted.
- Maximum amount Accepted Enter the maximum amount that can be accepted.

Online Authorization Rules

[only shown for tenders that require authorization]

- Authorization needed when amount is above Enter the maximum value that can be accepted without authorization.
- Maximum amount allowed to authorize Enter the maximum value of an individual tender type that can be authorized either in-house or by a third party. This especially applies to checks where the check authorization company sets a ceiling by retailer.

Offline Authorization Rules

[only shown for tenders that require authorization]

• Authorization needed when amount is above - Enter the maximum value that can be accepted without authorization when in offline mode.

• **Maximum amount allowed to authorize** - Enter the maximum value of an individual tender that the system accepts without authorization when in offline mode.

Refund

- Maximum refund allowed with a receipt Enter the maximum refund allowed with a receipt.
- **Maximum refund allowed without a receipt -** Enter the maximum refund allowed without a receipt.

Tender Configuration: System Configuration Options

Note: The system configuration options for tenders in this feature are simply a subset of the system configuration options available from Oracle Retail Xstore Point-of-Service System Config Options. See Configuring Xstore Point-of-Service System Config Options for more information.

The following configurations apply specifically to tenders. The categories have been set up as follows:

- Charity
- Closing Options
- Discount Options
- House Accounts
- Opening Options
- PayPal
- Returns
- Store Specific
- Tender
- Tender Options
- Till Accountability

Charity

 Enable Prompting User When Voiding Charity Line Item? - Determines whether the system displays the notification message when a charity item is voided if tendering is canceled.

Closing Options

• **Perform Till Count During Close?** - Determines whether the system prompts the associates to perform a till closing count at register close.

Discount Options

 How Should Price Be Rounded After Discount Applied? - Select the local currency amount rounding method used for determining the price after a discount is applied. Valid Values:

- Half Up Round to the nearest neighbor unless equidistant, then round up.
- Half Down Round to the nearest neighbor unless equidistant, then round down.
- Half Even Round to the nearest neighbor unless equidistant, then round to even neighbor. Example: 2.5 rounds to 2 while 3.5 rounds to 4.
- Ceiling Round toward positive infinity. Note: This is the opposite of FLOOR and never decreases the calculated value.
- Down Round to the next digit; closer to zero.
- Floor Round down toward negative infinity. Note: This is the opposite of CEILING and never increases the calculated value.
- Up Round to the next digit; away from zero.
- Unnecessary Rounding is not necessary.

House Accounts

- **AR Manual Auth Phone Number.** Enter the phone number for the associates to call for authorization when the accounts receivable tender amount exceeds the account credit limit and the exceeded amount is below the threshold amount.
- AR Over Tender Amount Allowed Over Credit Limit. Enter the threshold amount the system allows when the accounts receivable tender amount exceeds the account credit limit.
- Manager Override When Tender Amount Exceeds House Account Balance? -Determines whether the system prompts for manager override if the tender amount exceeds the remaining balance of the house account.
 - If set to Yes, and a manager-level user is logged in, the system displays the credit limit and prompts the user to proceed.
 - If set to Yes, and a user lower than the manager privilege is logged in, and the user chooses to proceed with exceeding the credit limit, the manager security login displays for approval.
 - If set to **No**, the system does not prompt for manager override.
- Prompt For User Information On AR Transaction? Determines whether the system prompts for the AR account user information when performing tender/ refund/payment on an accounts receivable account.
- Require Customer To Be AR Account Owner To Use AR Functions? Determines whether the system requires the associated customer of the retail transaction to be the AR account owner in order to access the accounts receivable retail functionality (tender, payment).

Opening Options

 Skip Till Count Since Workstation Doesn't Have Cash Drawer? - This applies to Register Accountability Only. Used for registers that do not have a cash drawer or do not handle cash. Select Yes to prevent the system from prompting for begin or end count during the register open or close. The system automatically moves all tender amounts from the register/handheld to the store bank.

PayPal

 Enable PayPal Mobile Payments Polling Service? - Used to enable/disable PayPal Mobile Payments polling service. When enabled, Oracle Retail Xstore Point of Service will automatically update the list of currently checked-in customers based on a configurable interval.

- PayPal Point Of Sale Service API Version. Enter the current version of the PayPal POS service API.
- **PayPal Polling Interval (in Seconds).** Enter the interval for the PayPal Mobile Payments polling service in seconds.
- PayPal Preferred Image Size. Select the size of the photo image that Oracle Retail Xstore Point of Service will use on the confirmation page for the PayPal Mobile Payments.
- **PayPal Tab Height.** Enter the number of rows for the PayPal tab.
- **PayPal Tab Width.** Enter the number of columns for the PayPal tab.

Returns

- Prompt For Tender On Credit Card Returns? Determines whether the system
 prompts for refund tender amount to be credited back to the original sale credit
 card.
 - If **Yes**, the system prompts for the amount to credit back to the original card.
 - If **No**, the entire refund amount will be credited back to the selected original credit card.

Store Specific

 Default Id Type For Tenders Requiring Customer Identification. - Select the default identification type used for certain tenders that require customer identification information. Valid Values: Drivers License, Social Security, Military ID, Credit Card, Employee ID, Customer Card, Any identification type.

Tender

- Allow Multiple Incoming Tenders In One Transaction? Determines whether the system allows multiple incoming (exchange from) tenders in a tender exchange transaction.
- Allow Multiple Outgoing Tenders In One Transaction? Determines whether the system allows multiple outgoing (exchange to) tenders in a tender exchange transaction.
- Default Tender Id To Use For Change If Not Specifically Configured. Select the change tender ID the system will use by default if the system cannot find the valid change tender based on the sale tenders. Valid Values: Issue Store Credit, Issue Gift Card.
- **Prompt User To Imprint Credit Card For Manual Cards?** Determines whether the system prompts the associate to imprint the credit card when there is a manually entered credit card tender in the completed sale transaction.
- **Quick Cash Button Increment Display.** The Quick Cash Buttons will display in increments based on this entry for the minimum denomination factor.
- Use Quick Cash Buttons? Determines whether the Quick Cash Button functionality is enabled.

Tender Options

- Authorization Method Code For BinSmart Lookups. Enter the authorization method code used to perform the lookup. Valid only for Merchant Warehouse.
- Cash Payment Threshold To Invoke Additional Info Collection For IRS. If the amount of cash paid by a customer exceeds this threshold amount, the system will display the IRS form to gather additional customer information.
- Display Cash Total? Only applicable for currency rounding; indicates whether the rounded cash total is displayed below the transaction total in the viewport.
- Enable Merchant Warehouse's BinSmart Lookups? Determines whether Merchant Warehouse's BinSmart lookups are used for Credit/Debit authorizations.
- Inform Users With A Message That No Signature Is Required? This option controls turning off/on the information message displayed when processing a transaction below a configured value.
- Local Currency Id. Select the currency for the current locale.
- Method To Mask Vouchers/Gift Cards. Enter the voucher number masking method.
 - **CREDITCARD** Mask all but the last 4-digits of the Account Number.
 - MASK_LAST_4 Mask (****) the last 4-digits of the Account Number.
- **Minimum Check Number.** Enter the lowest check number the system will accept when the customer pays with a check.
- Preferred Payment Recommendation When Errors Occur. Select the preferred payment recommendation when an error occurs or a failed response is returned. Valid Values: Credit, Debit.
- Prompt For Birth Date On Check Tender? Determines whether the system
 prompts for the customer's birthdate when the customer pays with a check.
- Require Pin Pad Entry For Debit Tender? Determines whether a pin pad device is required for tendering with a debit card.
- Rounding Method To Use For Local Currency. Select the local currency amount rounding method.
 - Half Up Round to the nearest neighbor unless equidistant, then round up.
 - Half Down Round to the nearest neighbor unless equidistant, then round down.
 - Half Even Round to the nearest neighbor unless equidistant, then round to even neighbor. Example: 2.5 rounds to 2 while 3.5 rounds to 4.
 - **Ceiling** Round toward positive infinity. Note: This is the opposite of FLOOR and never decreases the calculated value.
 - Down Round to the next digit; closer to zero.
 - **Floor** Round down toward negative infinity. Note: This is the opposite of CEILING and never increases the calculated value.
 - Up Round to the next digit; away from zero.
 - Unnecessary Rounding is not necessary.

Till Accountability

- Method To Count Store Bank Deposit. The store bank deposit till count method. This configuration is only valid if the store requires an end count of the store bank at store close. Valid Values:
 - **Storebank Complete** Brings up the entire store bank end count screen for all tenders.
 - Remaining Cash Prompt the user to enter the total cash NOT to be deposited to the bank institution.
 - **Complete Deposit** Deposit all tenders from the store bank to the bank institution.
- Skip Initial Count Summary? When initiating a count, determines whether the system displays the tender summary list or the first tender to be counted.
- Validate Cash Refund Amounts Against The Current Till Count? Determines whether the system validates refund cash amounts to ensure the current till cash amount is greater than the refund cash amount.

Configuring Customer Displays

...continued from step 4 on page 5-4

Note: Pole Display is the only Customer Display type supported at this time.

1. At the Customer Display page, click Pole Display.

| J. | ournal | Reports | 🌈 Config Manager | 🕂 Data Management | 🗘 Deployment | Support Tools | System Management | |
|--------|--|-----------------------------------|------------------|-------------------|--------------|---------------|-------------------|--|

| Selec | Select one of the following options. | | | | | | | |
| > | Pole Di Change p | i splay ole display mes | sage. | | | | | |

2. The current pole display message is shown in the Pole Message field. Edit the pole display message as needed:

Figure 5–55 Edit Pole Display Page

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | (Deployment | Support Tools | System Management | |
|--|--------------------------------------|------------------|-------------------------|--------------|---------------|-------------------|--|
| Home Configurator Global/Default Configure Customer Displays | | | | | | | |
| Select one of | the following op | tions. | | | | | |
| |)isplay pole display messa | ge. | | | | | |
| Pole Mes | Welcome to | our store | English (United States) | | | | |

- **Pole Message** To edit the message text, type the new message. The maximum length is 40 characters.
- Locale If needed, select a translation locale and enter the message text for the locale.

Note: A pole message is required for the default locale. A pole message is not required for other locales you may have set up.

3. Click Save.

Deploying Configuration Changes

Note: See Appendix A, "Appendix: About Deployments" for more information about deployments.

- 1. To begin the deployment process, from the Oracle Retail Xstore Office Cloud Service menu, select **Config Manager - Configurator**, or click the Configurator link in the Configuration Manager panel.
- **2**. Select the configuration scope for the deployment:

| Journ | al Reports | 🖌 Config Manager | Data Management | C Deployment | Support Tools | System Management |
|--|--|------------------|----------------------------------|--------------|---------------|-------------------|
| Home ▶ Co | nfigurator | | | | | |
| Select or | e of the following op | tions. | | | | |
| Change or deploy the global configuration layer which is the foundation for all locations. | | | | | | |
| | nfiguration Overning or deploy configuration | | lobal layer for specific locatio | ns. | | |
| ∖ St | ore Specific Oven | ides | | | | |

Change or deploy configurations that will override the global layer for specific stores.

 Select Global Configurations to deploy the global configuration layer which affects all locations. Continue with step 3 below.

 $\langle OR \rangle$

- Select Configuration Overrides to deploy configurations that will override the global layer for specific locations.
 - **a.** Select a Profile Group from the list.
 - **b.** Select an Element from the list.
 - c. Click Next.
 - d. Continue with step 3 below.

<OR>

 Select Store Specific Overrides to change configurations that will override the global layer for a specific store based on the user's scope.

- **a.** Type the store number or begin typing a store number or name in the Store # field.
- **b.** Select the store from the store list.
- **c.** Click Next.
- d. Continue with step 3 below.
- **3.** At the Configuration Action page, select the **Deploy** option.
 - If you try to schedule a deployment for a profile element that has no changes, you will see the following message:

There are no changes to deploy for this profile element.

- If you see this message, return to the Configure screen and make your changes before scheduling a deployment.
- 4. At the Schedule Deployment page, select a deployment type:

Figure 5–57 Schedule Deployment Page - Global Scope Example

| Je 📃 | ournal | Reports | 🖌 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management | | |
|--------|--|----------------------------------|-------------------------------|------------------------|--------------|---------------|-------------------|--|--|
| Home 🕨 | Configu | rator 🕨 Global/De | efault 🕨 Schedule Deploy | ment | | | | | |
| Select | t the par | ameters for dep | ployment. | | | | | | |
| > | Schedule a Planned Deployment Select a deployment Plan to rollout the updates in pre-defined waves. | | | | | | | | |
| | Schedule a Single Deployment Select a single organization node and date for a one-time rollout. | | | | | | | | |
| | View a summary of current configuration deployments for this profile element and organization node. | | | | | | | | |
| > | | yed Versions deployed configu | iration versions for this pro | file element by store. | | | | | |

 Select Schedule a Planned Deployment to roll out the updates in pre-defined waves. Continue with Scheduling a Planned Deployment.

Note: The Planned Deployment option is not available for Store Specific Overrides.

<OR>

- Select Schedule a Single Deployment to set up a one-time rollout. Continue with Scheduling a Single Deployment.
 - To view deployment history for this profile element and organization node, select Deployment History. See Deployment History for more information about this option.
 - To view the deployed configuration versions for this profile element by store, select Deployed Versions. See Deployed Versions.

Scheduling a Planned Deployment

Note: You must create deployment plans before using this option. Refer to Chapter 7, "Deployment Management", Creating a Deployment Plan for more information about setting up deployment plans.

- 1. Complete the following fields to roll out the updates in pre-defined waves:
 - Deployment Name -Accept the default name or enter a name for this deployment.
 - **Deployment Plan** Select a deployment plan from the list.
 - **Target Date** Select the date the changes will be sent to the store.
- 2. Click Next.
- **3.** Review the deployment schedule.

- **4.** Verify the Email Notification List is correct. If needed, click the View List link to see more detail about the email recipients.
- 5. Review the deployment information:
 - The "v.x" value in the Deployment Name is the configuration version for this deployment.

Figure 5–59 Example Deployment Name

| Deployment Name | Various Updates Global Config v.32 2018-09-14 | 09:16:55 |
|-------------------|---|----------|
| Deployment Plan | Plan 300 | |
| Total # of Stores | 14 | |

- 6. If the deployment information is correct, click **Deploy**.
 - If a deployment has already been scheduled with an earlier version of configurations, you will be prompted to change the deployment date. Use the breadcrumbs to return to the Schedule Deployment page and change the date for deployment.

- If the deployment information is not correct, use the breadcrumbs to navigate back to the previous page where you can make changes, and go to step 1 on page 67.
- 7. When prompted, click Yes to confirm you want to schedule deployment.
- **8.** Click **OK** to close the Deployment was scheduled successfully window. The configuration version is now "locked" for this set of configurations.

Scheduling a Single Deployment

- 1. Complete the following fields for a one-time rollout:
 - **Deployment Name** Accept the default name or enter a name for this deployment.
 - **Organization Node** Select the organization target for the configuration changes.
 - **Target Date -** Select the date the changes will be sent to the store.
 - Download Priority Select the download priority:
 - Immediate Download the configuration changes now.
 - Store Close Download the configuration changes at end-of-day.
- 2. Click Next.
- **3.** Review the deployment schedule.

Figure 5–60 Review Deployment Schedule Page

- 4. Review the deployment information:
 - The "v.x" value in the Deployment Name is the configuration version for this deployment.
- **5.** If the deployment information is correct, click **Deploy**.
 - If a deployment has already been scheduled with an earlier version of configurations, you will be prompted to change the deployment date. Use the breadcrumbs to return to the Schedule Deployment page and change the date for deployment.
 - If the deployment information is not correct, use the breadcrumbs to navigate back to the previous page where you can make changes, and go to step 1 on page 67.
- 6. When prompted, click Yes to confirm you want to schedule the deployment.
- **7.** Click **OK** to close the Deployment was scheduled successfully window. The configuration version is now "locked" for this set of configurations.

Viewing Configuration Changes

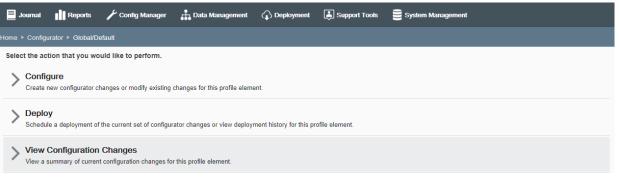

A Configuration Change is recorded when a configurable object has been altered. Multiple alterations of a configurable object does not equate to multiple changes being recorded.

For example, if you change the same reason code three separate times, it counts as one change for the time period that it differs from the global configuration. If you change three different reason codes, that would count as three changes.

This feature provides a summary list of configuration changes, who made them, and when they were made. This list is only a "snapshot" of time in which it is called up. When viewing configuration changes, you can delete configuration changes that have not been deployed. See Delete Configuration Changes for more information.

- 1. From the Oracle Retail Xstore Office Cloud Service menu, select **Config Manager - Configurator**, or click the Configurator link in the Configuration Manager panel.
- **2.** Select the configuration scope for the deployment. The process varies with the scope selected on the Configuration Scope Options page (Figure 5-36):
 - **Global Configurations** continue with step 3 below.
 - Configuration Overrides:
 - Select a Profile Group from the list.
 - Select an Element from the list.
 - Click Next.
 - Continue with step 3 below.
 - Store Specific Overrides:
 - Type the store number or begin typing a store number or name in the Store # field.
 - Select the store from the store list.
 - Click Next.
 - Continue with step 3 below.
- 3. At the Configuration Scope Actions page, select View Configuration Changes.

Figure 5–61 Configuration Scope Actions Page - Global Example

4. View the configuration changes by Category or by Version:

| | | | | | | |

Figure 5–62 Configuration Changes Page: by Category or Version

Note: Click the sort component to sort the columns as needed.

- Group By Category:
 - **Category** The configuration category. Select the Category row to view more information: Version Number, Change Description, Date of Last Change, and User.
 - # of Changes The number of changes per category.
 - **Date of Last Change** The date the last configuration change was made for this category.
- Group By Version:
 - Version # The configuration version number. Select the Version # row to view the configuration changes made to that version: Category, Change Description, Date of Last Change, and User.
 - **# of Changes** The number of changes in this version.
 - **Date Created** The date the version was created.

Delete Configuration Changes

When viewing configuration changes, you can remove a configuration change (or several changes if applicable) from a configuration update as long as that configuration update has not been deployed.

- 1. From the Oracle Retail Xstore Office Cloud Service menu, select **Config Manager - Configurator**, or click the Configurator link in the Configuration Manager panel.
- 2. Select the configuration scope for the deployment.
- 3. At the Configuration Scope Actions page, select View Configuration Changes.
- 4. View the configuration changes by Category or by Version.
- **5.** Click the Delete icon associated with the configuration change you want to remove.

Figure 5–63 Configuration Changes Page - Delete Option

6. When prompted to confirm you want to delete this change, click **Yes** to remove the configuration change from the configuration update.

Delete Profile Configuration Overrides

Use this option to delete group/element level configuration overrides for a specified group/element configurations.

Note: To use this feature, "Enable the Option to Delete Configurations?" must be set to true in Oracle Retail Xstore Office Cloud Service Settings.

Note: When you delete store level or profile group/element level configurations, a deployment is scheduled for those locations to be sent immediately.

If there are any pending configuration deployments for the same location at a future date, the location will receive this delete deployment immediately, and then at a later time the scheduled configurations will be deployed. If this scenario occurs, Oracle Retail Xstore Point of Service and Oracle Retail Xstore Office Cloud Service will have different configurations for that location.

1. At the Configuration Scope Options page, select Configuration Overrides.

Figure 5–64 Configuration Scope Options Page

Figure 5–65 Configuration Action Page - Configuration Overrides Scope Example

- **4.** When prompted, click **Yes** to confirm the deletion.
- **5.** After the deployment has been scheduled successfully, click **OK** to close the Schedule Delete Configurations Deployment prompt.
- 6. When prompted, click **OK** to acknowledge all the changes have been removed.

Delete Store Specific Overrides

Use this option to delete store-specific configuration overrides. Oracle Retail Xstore Office Cloud Service deletes configurations that have not been deployed and marks the deployed profile configuration changes as inactive in the Oracle Retail Xstore Office Cloud Service database. This action retains the history of completed deployments for auditing purposes.

Important: To use this feature, "Enable the Option to Delete Configurations?" must be set to true in Xadmin Settings.

Note: When you delete store level or profile group/element level configurations, a deployment is scheduled for those locations to be sent immediately.

If a scheduled deployment for configuration changes is found, you will not be able to delete a profile configuration change.

- 1. At the Configuration Scope Options page (Figure 5-58), select **Store Specific Overrides**.
- 2. Select the store number, then click Next.
- 3. At the Configuration Action page, click Delete Profile Configuration Changes.

| Journal | Reports | 🖋 Config Manager | 🕂 Data Management | $\langle \mathbf{J} \rangle$ Deployment | Support Tools | System Management |

Figure 5–66 Configuration Action Page - Store Specific Overrides Scope Example

- 4. When prompted, click **Yes** to confirm the deletion.
- **5.** After the deployment has been scheduled successfully, click **OK** to close the Schedule Delete Configurations Deployment prompt.
- 6. When prompted, click OK to acknowledge all the changes have been removed.

Copy Store Configurations

Important: To use this feature, "Enable the Option to Create Store? Specific Configurations?" must be set to true in Xadmin Settings.

Use this option to copy configuration information from one store to another. You must have access privileges to both the copy-from store and the copy-to (destination) store in order to use this process. Only stores are valid for the copy-from and destination locations, no other hierarchy or Store Collections are supported. The target store's previous configurations are retained (but tagged as inactive) for auditing purposes.

Note: This option is not allowed when a scheduled deployment is pending.

- 1. At the Configuration Scope Options page (Figure 5-58), select **Store Specific Overrides**.
- 2. Enter the target store number in the Store # field and click Next.
- **3.** At the Configuration Action page, click **Copy Store Configurations** (Figure 5?62) and enter the store number you want to copy configurations from in the Copy From Store # field.
- **4.** Click **Next**. This action tags any previously implemented changes as inactive in the database.
- 5. When prompted, click **Yes** to confirm the copy instructions.

Figure 5–67 Configuration Copy Prompt

| Configuration changes copied to Store/9902. Changes must be deployed to complete t process. Press OK to view your changes. | he |
|---|----|
| | ок |

The configurations are copied to the destination store:

- If the destination store is new, then all the configurations from the copy-from store are now available.
- If the destination store previously existed, then the system will overwrite the previous data with the new data from the copy-from store.
- 6. When prompted, click **OK** to view the configuration changes.

Figure 5–68 Configuration Copy Confirm Prompt

- 7. Review configuration changes by Category or by Version.
- 8. Continue with Deploying Configuration Changes to deploy the changes.

6. Select a deployment to view additional detail. If needed, a deployment can be edited. See Chapter 7, "Deployment Management", section Viewing Deployments for more information about Deployment History and editing deployments.

Deployed Versions

Use Deployed Versions to view the number of stores, and the version numbers deployed to those stores, in a pie chart format. This version information is reported to Oracle Retail Xstore Office Cloud Service by the primary register at the store.

- 1. From the Oracle Retail Xstore Office Cloud Service menu, select **Config Manager - Configurator**, or click the Configurator link in the Configuration Manager panel.
- **2.** Select the configuration scope for the deployment. The process varies with the scope selected on the Configuration Scope Options page (Figure 5-36):
 - **Global Configurations** continue with step 3 below.
 - Configuration Overrides:
 - Select a Profile Group from the list.
 - Select an Element from the list.
 - Click Next.
 - Continue with step 3 below.
 - Store Specific Overrides:
 - Type the store number or begin typing a store number or name in the Store # field.
 - Select the store from the store list.
 - Click Next.
 - Continue with step 3 below.
- **3.** At the Configuration Scope Actions page, select **Deploy**.

Figure 5–73 Configuration Scope Actions Page - Global Example

4. At the Schedule Deployment Page, select Deployed Versions:

| Figure 5–74 | Schedule Deployment Page - Global Scope Example |
|-------------|---|
|-------------|---|

| Journal | Reports | 🖋 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management |
|----------------|--|--|--------------------------------|--------------------|---------------|-------------------|
| Home ► Configu | ırator ▶ Global/De | fault 🕨 Schedule Deployr | nent | | | |
| Select the pa | rameters for dep | loyment. | | | | |
| | | I Deployment o rollout the updates in pre | -defined waves. | | | |
| | lule a Single E single organizatior | Deployment node and date for a one- | ime rollout. | | | |
| · · · | yment History summary of current | | s for this profile element and | organization node. | | |
| · | yed Versions deployed configur | ation versions for this prof | le element by store. | | | |

5. With the pie chart displayed, click on a section to display a list of the stores to which the version number was deployed.

The pie chart represents the number of stores, and the version numbers deployed to those stores, based on the version reported from the primary register in the store.

The list includes the Store Name, Store ID, Phone Number, and Address.

Data Management

Data Management is used to create, maintain, and deploy Oracle Retail Xstore Office Cloud Service data selectively, or globally across the entire organization. Data Management is also used to set up and maintain your organization hierarchy and Store Collections, and to initiate the end-of-year process to post the required roll-up data for stock valuation for all items and stores.

The logged-in user is assumed to represent some tier of the organization. For this reason, the user's assigned org node hierarchy will determine the data he/she has access to. See Chapter 2, "Roles, Users, and Security Access" for more information about users and security access.

The following data can be configured in Data Management:

In Data Manager

- Merchandise & Non Merchandise Items
- Vendors
- Employee Records
- Exchange Rates
- Store Information
- Taxes
- Store Messages
- Employee Tasks

In Organization Hierarchy

- Organization Hierarchy Maintenance
- Organization Hierarchy Levels
- Store Collections

In Roll-up Stock Valuation

Stock Valuation Year End Roll-up

About this Chapter

Data Management allows you to:

- Change or create data for your organization. See Managing Data.
- View or deploy pending data changes for your organization. See Viewing and Deploying the Data Changes.

- Redeploy data from one org node to another. See Data Publisher Redeploying Data.
- Set up or edit your organization hierarchy, including Store Collections. See Managing the Organization Hierarchy.
- Initiate the end-of-year process to post the required roll-up data for stock valuation for all items and stores. See Stock Valuation Year End Roll-Up.

Where To Look For Additional Information

- Oracle Retail Xstore Point of Service Database Dictionary The Oracle Retail Xstore Point of Service Database Dictionary Guide provides Oracle Retail Xstore Point of Service database detail and schema information. This dictionary provides a description of each table as well as a listing of all of the columns in each table.
- Oracle Retail Xstore Office Cloud Service Database Dictionary The Oracle Retail Xstore Office Cloud Service Database Dictionary Guide provides Xcenter (a part of Oracle Retail Xstore Office Cloud Service) database detail and schema information. This dictionary provides a description of each table as well as a listing of all of the columns in each table.
- Oracle Retail Xstore Point-of-Service Host Interface Guide The Oracle Retail Xstore Point-of-Service Host Interface guide provides information about the files accepted for processing updates to Oracle Retail Xstore Point of Service operating tables. In addition, this guide also provides information about the DataLoader application that is responsible for translating flat data files into database data that can be used by Oracle Retail Xstore Point of Service.

About Data Management

Data Manager changes are collected into "data bundles" containing all of the changes made within a particular org level during a given day. The changes collected in the data bundle will be deployed to their targeted stores automatically at the end of the day, or can be deployed immediately if needed. When you make changes in Data Manager and deploy them, they automatically update the Xcenter database; there is no DataLoader file created and no DataLoader processing necessary. If anything fails, it can be found in the Xcenter or Oracle Retail Xstore Office Cloud Service log file.

Use the **Pending Modifications** feature of Data Manager to delete or view the details of the data bundles before they are deployed.

Use the **Data Publisher** feature to deploy data from Xcenter to an org node. Deployed data will include all the data available to the targeted org node (within the categories selected by the user) and comes from Xcenter.

Managing Data

- From the Oracle Retail Xstore Office Cloud Service menu, select Data Management - Data Manager, or click the Data Manager link in the Data Management panel.
- 2. At the Data Manager page, you have the following options:

Journal Image Contig Manager Image: Data Management Contig Manager For the following options. Select one of the following options. Change or create data for your organization. Pending Modifications View, deploy, or delete pending data changes for your organization. Data Publisher Publish data to an organizational node.

Figure 6–1 Data Manager Page

• To change or create data for your organization, click **Data Management**.

Continue with step 3 below.

- To view or deploy pending data changes for your organization, click **Pending Modifications** and skip to Viewing and Deploying the Data Changes.
- To transfer data from one org node to another, click Data Publisher and skip to Data Publisher Redeploying Data, step 3.
- 3. Select the Organization Node for the Data change, then click Next.

Note: Only the Organization Nodes the logged-in user has privileges to use will be listed here.

4. Select a Data option.

Figure 6–2 Data Manager Options Page

When adding a new record to a Data option, all fields will be blank.

- To edit an existing record for the Data option, click the record to open the editing window. When editing a Data option record, some fields cannot be changed.
- **6.** Follow the prompts to manage the data for the selected option:
 - After completing a page, click Next when applicable to navigate to the next page until setup is complete.
 - You can click **Previous** to return to the previous page when applicable.
 - The breadcrumbs displayed at the top of each page can be used to navigate through the various pages of the activity.
 - In addition to the breadcrumbs at the top of each page, the side panel on each page shows where you are in the process and can also be used to navigate the various steps of the process as needed.
 - To exit without saving any changes, click **Cancel**. When prompted, click **Yes** to confirm you do not want to save any changes.
- 7. When setup is complete, and you have reviewed your changes, click **Save**.

Data Manager Options

- Communications Use this feature to create and modify store messages and employee tasks.
- Employees Use this feature to create and modify employee records for your organization.
- Stores Use this feature to search for and modify store information.

Note: This Data Manager Stores option allows you to search for and modify store information for an existing store only. To set up a new store, see Managing the Organization Hierarchy.

Vendors - Use this feature to create and modify vendors for your organization.

- Exchange Rates Use this feature to create and modify currency exchange rates for your organization.
- Items Use this feature to manage different types of items, non-merchandise items, and item matrix features for your organization and to manage the merchandise hierarchy.
- Taxes Use this feature to manage tax configurations for your organization.
- Legal Entities [Country Pack ONLY] Use this feature to create and modify legal entities for your organization.

Items

Use this feature to manage different types of items and item features for your organization.

If adding a new item:

At the Item Maintenance page, click Add New to create a new item.

If editing an existing item:

At the Item Maintenance page, enter search criteria and click Search to find/edit an existing item in your organization. If you do not enter any criteria before selecting Search, all items in your organization will be returned in the search. To edit information for an existing item, select the row from the search results list and click Edit at the Item Information window (Figure 6-5).

Note: To view and/or edit item prices, refer to Item Prices for procedural information.

See step 6 on page 6-4 for additional procedural information.

The following Item Maintenance fields are available:

 Table 6–1
 Basic Merchandise Information

| Field | Description |
|------------------------|--|
| Item ID [REQUIRED] | Enter the item identifier. This field cannot be edited for existing items. |
| Description [REQUIRED] | Enter the item description. |

| Field | Description | | | |
|-------------------------------------|---|--|--|--|
| Prompt for Description check box | Select this check box if the item description must be manually entered when this item is sold. | | | |
| Tax Group [REQUIRED] | Select the item's tax group from the drop-down list. Possible values are from the Tax Group table (tax_tax_group). | | | |
| Availability | Select the product availability to determine whether or not an item is available for sale: Available, Not Sellable at POS, or Recalled. | | | |
| Stock Status check box | If applicable, select this option and type the item's status based on its stock availability when prompted for a value. For example, RESTRICTED_QTY, DISCONTINUED, CLEARANCE, and so on. | | | |
| Commission check box | If applicable, select this option if the item qualifies for commission. | | | |
| Attached Items check box | Select this option if the item has attached items. (See Attached Items for more information about setting up attached items.) | | | |
| Serial Number check box | Select this option if a serial number is required. | | | |
| Selling Group ID | If you assign an item to a selling group, the item can not be sold in any transaction containing items from a different selling group. | | | |

 Table 6–1 (Cont.) Basic Merchandise Information

Table 6–2 Merchandise Attributes

| Field | Description | |
|------------------|---|--|
| Department | Select the item's department from the drop-down list. Possible values are from the itm_merch_hierarchy table where level code is DEPARTMENT. | |
| Subdepartment | Select the item's subdepartment from the drop-down list. Possible values are from the itm_merch_hierarchy table where level code is SUBDEPARTMENT. | |
| Class | Select the item's class from the drop-down list. Possible values are from the itm_merch_hierarchy table where level code is CLASS. | |
| Subclass | Select the item's subclass from the drop-down list. Possible values are from the itm_merch_hierarchy table where level coc is SUBCLASS. | |
| Style check box | Select this option if the item is associated with a style, then enter the style ID when prompted. | |
| Season check box | Select this option if the item is associated with a season, then enter the season code when prompted. | |
| Vendor check box | Select this option if the item is associated with a vendor, then select the vendor from the drop-down list when prompted. | |
| Item UPCs | Enter the UPC for the item and click Add. You can enter as many UPCs as needed. After adding at least one UPC, a Delete option will be available to remove a UPC if needed. | |

| Field | Description | | | |
|------------------------------------|---|--|--|--|
| Sale Quantity check box | Select this option if the item quantity cannot be changed from 1. | | | |
| | Note: This option will disable all other item quantity options listed here. | | | |
| Quantity Prompt check box | Select this option if the item quantity must be manually entered when this item is sold. | | | |
| Weight Prompt check box | Select this option if the item weight must be manually entered when this item is sold. | | | |
| Initial Sale Quantity check box | Select this option if the item is sold in a quantity other than one. If selected, enter the initial quantity at which this item must be sold. | | | |
| Minimum Sale Quantity check box | Select this option if the item has a minimum sale quantity. If selected, enter the minimum quantity of this item that may be sold in a single transaction. | | | |
| Maximum Sale Quantity check box | Select this option if the item has a maximum sale quantity. If selected, enter the maximum quantity of this item that may be sold in a single transaction. | | | |
| | If a value is not specified, the system configuration for maximum quantity per sale item is used. If a value is specified here and it is greater than the system configuration value, the maximum sale quantity is used. | | | |

 Table 6–3
 Quantity Attributes

Table 6–4 Customer Related Attributes

| Field | Description | | | | |

| Initial List Price | Enter the retail price per sale unit of the item. |
| Prompt for Price check box | Select this option if the retail price must be manually entered when this item is sold. |

Item Prices

When viewing item information, and if the selected item record is within your targeted org node, there is an option available to view and edit item pricing information. You can edit prices for your org node level only. However, you can view prices set above your org node level.

- 1. At the Item Maintenance page (Figure 6-4), enter search criteria and select Search to find/edit an existing item in your organization.
- 2. At the Item search results list, select the item row from the list.
- 3. Click Prices at the Item Information window.

\times Item 514000 Prices Edit General Information Item ID 514000 Description Summer Cotton Shorts Initial List Price None Style ID N/A Serialized Item Yes Measurement Required No Inventory Levels Tracked Yes Department 510 Subdepartment 510300 Class 510300300 Subclass N/A Item UPCs None Selling Details Prompt for Description No Prompt for Price No Tax Group State/County Tax Selling Group ID N/A Availability N/A Commission Eligible Yes Attached Items No Fiscal Item ID N/A Fiscal Item Description N/A Previous Next

4. At the Item Prices page you can calculate the price of an item based on specified parameters, add a new price, or edit an existing price as needed.

Calculating the Price of an Item

Use this procedure to identify the exact price that exists for an item based on the type of price (regular price or a customer group), the pricing quantity, and date.

Figure 6–5 Item Information Window

- 1. At the Item Prices page, enter the required information:
 - Price Type [REQUIRED] What type of price should be used?
 - Regular Price
 - Customer Group Price Select from the list of available price types for the organization. For example, Employee Family, Employee, Elite Program Member, Normal Level
 - Pricing Quantity [REQUIRED] Enter the quantity of the item you are pricing.
 - Start Date [REQUIRED] when the price is in effect Use the calendar to select the date for the item you are pricing.
- 2. Click Calculate. The system retrieves the pricing information:
 - If pricing information is found, the price for the item-based on the criteria you entered-is displayed.
 - If no pricing information is found, the "No Price Found" message displays. If you want to add pricing information, click the "No Price Found" link to open the Add Item Price window.

At the Add Item Price window, the parameters you

entered in the pricing search (Price Type, Pricing Qty, and Start Date) are populated automatically. See Adding or Editing a Price below for more information about adding/editing prices.

Adding or Editing a Price

- 1. At the Item Prices page, do one of the following:
 - To add a new price, click **Add New** and complete the fields as required.
 - To edit an existing price, click a row in list and edit the fields as needed.

Figure 6–7 Item Price Window - Add New Price Example

| Add Item 514001 Price | |

| Org Node *:* | |
| Price Type (Please select) | |
| Pricing Qty | |
| Start Date | |
| End Date | |
| Price | |

Table 6–7 Add Item Price Fields

| Field | Description |
|------------------------|--|
| Ord Node | This value cannot be changed. |
| Price Type [REQUIRED] | Select a price type from the drop-down list of available price types. This value cannot be changed in Edit mode. |
| Pricing Qty [REQUIRED] | Enter the pricing quantity for this item. This value cannot be changed in Edit mode. |
| Start Date [REQUIRED] | Enter/select the starting date for this price to be in effect. This value cannot be changed in Edit mode. |

| Field | Description |
|------------------|--|
| End Date | Enter/select the ending date when this price is no longer in effect. |
| Price [REQUIRED] | Enter the item price. |

Table 6–7 (Cont.) Add Item Price Fields

2. Click Save.

Attached Items

When viewing item information, if the selected item record is within your targeted org node and enabled for attached items, there is an option available to view and edit attached item information. You can edit attached items for your org node level only. See Basic Merchandise Information for attached item setup information.

- **1.** At the Item Maintenance page (Figure 6-4), enter search criteria and select Search to find/edit an existing item in your organization.
- 2. At the Item search results list, select the item row from the list.

| | 810 - Pet Services |

The following information is shown on this page:

Merchandise Level Information - This area shows information about the selected level of the merchandise hierarchy, including the Parent Level and Value and the Item Level and Value.

If a level is inactive, it will be indicated as "Hidden".

Use the merchandise hierarchy tree to navigate and understand the hierarchy itself. (By default, the tree displays the Department level). When you select a merchandise hierarchy level in the tree view, the details of the level are displayed in the Merchandise Level Information panel.

Click **Edit** to update the merchandise level information displayed in the panel. See Editing a Merchandise Hierarchy Level below.

Action Panel - This area contains the link to add to an organization's organization hierarchy. The color legend shown here corresponds to the colors in the tree view for the merchandise hierarchy levels. To add new areas of a merchandise hierarchy, see Adding to a Merchandise Hierarchy Level.

Note: You cannot add a new merchandise hierarchy level. Levels are restricted to what currently exists in your organization: Department, Subdepartment, Class, and so on.

Editing a Merchandise Hierarchy Level

1. In the tree view, select the parent hierarchy level for the planned edit to the merchandise hierarchy.

Note: Use the "Find a Node" search box to quickly locate a node in the merchandise hierarchy tree.

- 2. With the node selected, click Edit.
- **3.** Edit the information as needed:

| | | | × |
|---------------|-------------------------|---|------|
| Edit Mercha | andise Level | | |
| Parent Level | Root | | |
| Parent Value | N/A | | |
| Level | Department | | |
| Hierarchy ID | 300 | | |
| Description | Footwear |] | |
| Display Order | 60 |] | |
| Is this mer | chandise level visible? | | |
| | | | |
| | | | Save |

- Parent Level The parent merchandise hierarchy level. [CANNOT BE CHANGED]
- Parent Value The parent merchandise hierarchy value. [CANNOT BE CHANGED]
- Level The level type. (For example, if the parent level is a Department, then this level is Subdepartment based on the Merchandise Hierarchy setup shown here). [CANNOT BE CHANGED]
- Hierarchy ID The identifier for the merchandise hierarchy level. [CANNOT BE CHANGED]
- Description The description for the merchandise hierarchy level.

- Display Order The display order for the merchandise hierarchy level.
- Is this merchandise level visible? check box When selected, the merchandise level is active and visible. To deactivate the merchandise hierarchy level, remove the check mark from the check box. The deactivated level and all sublevels are grayed out on the page and a message displays in the Merchandise Level Information panel indicating that the level is hidden.

Note: If needed, click the Close icon to close the window without saving your changes. If prompted, click **Yes** to confirm you do not want to save any changes.

4. Click **Save** to close the window. The merchandise hierarchy level is updated as specified.

Adding to a Merchandise Hierarchy Level

1. In the tree view, select the parent hierarchy level for the planned addition to the merchandise hierarchy.

Note: Use the "Find a Node" search box to quickly locate a node in the merchandise hierarchy tree.

2. With the node selected, click the link - add a level to the currently selected node.

Figure 6–15 Add a Level Link

3. Enter the information for the new level:

Figure 6–16 Add Merchandise Level

| Parent Level | Department | |
|---------------|---------------|--|
| Parent Value | 300 Footwear | |
| evel | Subdepartment | |
| lierarchy ID | | |
| Description | | |
| Display Order | r | |

- Parent Level The parent merchandise hierarchy level. [CANNOT BE CHANGED]
- Parent Value The parent merchandise hierarchy value. [CANNOT BE CHANGED]

- Level The level type to be created. (For example, if the parent level is a Department, then this level is Subdepartment based on the Merchandise Hierarchy setup shown here). [CANNOT BE CHANGED]
- Hierarchy ID The identifier for the new merchandise hierarchy level. [REQUIRED]
- Description The description for the new merchandise hierarchy level. [REQUIRED]
- Display Order The display order for the new merchandise hierarchy level.
- Is this merchandise level visible? check box When selected, the merchandise level is active and visible. To deactivate the merchandise hierarchy level, remove the check mark from the check box. The deactivated level and all sublevels are grayed out on the page and a message displays in the Merchandise Level Information panel indicating that the level is hidden.

Note: If needed, click the Close icon to close the window without saving your changes. When prompted, click Yes to confirm you do not want to save any changes.

4. Click **Save** to close the window. The new merchandise hierarchy level is added to the tree.

Non-Merchandise Items

...continued from Items

Select the **Non-Merchandise Items** option (Figure 6–3) to view and configure the merchandise hierarchy for your organization. The Non-Merchandise Items Maintenance page displays all non-merchandise items available to the targeted org node.

Figure 6–17 Non-Merchandise Items Maintenance Page

Note: Use the Subtype Code filter to find non-merchandise items within the list of non-merchandise items.

If adding a new non-merchandise item:

At the Non-Merchandise Items Maintenance page, click **Add New** to create a new item.

If editing an existing item:

At the Non-Merchandise Items Maintenance page, select the row from the nonmerchandise items list and click **Edit** at the item information window.

Note: To view and/or edit item prices, refer to Item Prices, step 2, for procedural information.

See step 6 on page 6-4 for additional procedural information.

The following Non-Merchandise Item Maintenance fields are available:

Table 6–8 Basic Non-Merchandise Information

| Field | Description |
|--------------------|--|
| Item ID [REQUIRED] | Enter the item identifier. This field cannot be edited for existing items. |

| Field | Description |
|-------------------------------------|---|
| Description [REQUIRED] | Enter the item description. |
| Prompt for Description check box | Select this check box if the item description must be manually entered when this item is sold. |
| Tax Group [REQUIRED] | Select the item's tax group from the drop- down list. Possible values are from the Tax Group table (tax_tax_group). |
| Availability | Select the product availability to determine whether or not an item is available for sale: Available, Not Sellable at POS, or Recalled. |
| Commission check box | If applicable, select this option if the item qualifies for commission. |
| Serial Number check box | Select this option if a serial number is required. |

Table 6–12Fields on the Item Matrix Screen

| Field | Description |
|-------------|---|
| Color Area | Shows the color currently associated with the merchandise hierarchy or item and is used to drag and drop the selection to another location in the list. |
| ID | The merchandise hierarchy or item identifier. |
| Description | The merchandise hierarchy or item description. |
| Color | The color associated with the merchandise hierarchy or item for display in the item matrix in Oracle Retail Xstore Point of Service. |
| Hidden | If the check box is selected, the merchandise hierarchy or item will not show in the item matrix in Oracle Retail Xstore Point of Service. |

Table 6–13 Links and Buttons the Item Matrix Screen

| Link | Description |
|--|---|
| Color Legend | Opens a window showing the available color palette. |
| | The link is not available for screen readers. |
| Next Level | Opens a new page showing the items in next merchandise hierarchy level. |
| Move Up and Move Down Arrow buttons | Change the sort order of the displayed list. |

Assigning Matrix Colors To Merchandise Hierarchy And/Or Item Records

1. Select a color from the Color drop-down list for the merchandise hierarchy or item record you want to change.

The color in the Color Area associated with the item is changed to the selected color.

Note: To view the available colors, click the Color Legend link.

The color Gray shown in the legend is not available from the drop-down list of available colors. Gray is used to denote "Hidden" buttons only.

| Aqua | Blue | Bronze | Brown |
|--------|-------|--------|--------|
| Gray | Green | Maroon | Orange |
| Purple | Red | Teal | Yellow |

2. Click Save to save your changes.

Changing the Sort Order

There are two ways to change the sort order of the items:

Drag and Drop:

- 1. Hover over the shaded area of the row you want to move.
- **2.** With the move icon showing for the selected item row, drag and drop the item to a new location in the list to change the sort order.
- 3. Click Save to save your changes.

Move Up and Down Arrow buttons:

- **1.** Select the row you want to move.
- **2.** Use the **Move Up** and **Move Down** Arrow buttons of the selected row to change the sort order in the list.
- **3.** Click **Save** to save your changes.

Specifying Merchandise Hierarchy And/Or Item Records As Hidden

1. Click the Hidden check box for the merchandise hierarchy or item record.

Figure 6–19 Hidden Check Box Selected

When the Hidden check box is selected, the color drop-down list and the Next Level link are no longer available for selection. In addition, the color in the shaded area associated with the item is changed to gray.

2. Click Save to save your changes.

Item Message Maintenance

...continued from Items

The **Item Message Maintenance** option (Figure 6–3) allows you to add, edit or delete a message to/from a number of items. The message is then displayed in the Info tab in the Xstore POS during a sale transaction.

Important: Only one message per item is displayed in the Info tab int the Xstore POS. If you want to display multiple messages per item you need to enable the DisplayMessageAsNotify configuration in the database.

To add messages for a large number of items, use the DataLoader. For more information about the DataLoader, see the *Oracle Retail Xstore Point of Service Host Interface Guide*.

There are four message types that can be displayed the Xstore POS Info tab:

- Text messages
- HTML messages HTML messages may include graphics and text.
- Titled image messages Titled image messages contain an image along with a title.
- Composite messages Composite messages include graphics and text. The image and text message are displayed together in the Info tab.

Adding an Item Restriction

To add an item restriction:

- 1. Click Add New. The Edit Restriction page appears.
- **2.** In the Define tab, enter the following information:
 - Restriction ID [REQUIRED]- Enter the ID for the item restriction.

- Description [REQUIRED] Enter a short description for the item restriction.
- 3. Then click Next to open the Associate tab.
- **4.** In the Associate tab, select or enter the merchandise hierarchy information for the item restriction.
 - Select the desired merchandise level from the list:

Table 6–15 Merchandise Level Fields - Associate Tab

| Field | Description |
|---------------|--|
| Department | Select the item's department from the drop-down list. |
| Subdepartment | Select the item's subdepartment from the drop-down list. |
| Class | Select the item's class from the drop-down list. |
| Subclass | Select the item's subclass from the drop-down list. |

- Then click the **Add** link, to add the merchandise hierarchy level to the list below the entry fields.
- and/or go to the Item ID field and enter the item ID for the restriction.
 - Then select the Add link, to add the item to the list.

Note: To delete a merchandise hierarchy or item from the restriction, click the Delete (X) icon associated with the record at the list. When prompted, click **Yes** to confirm the deletion.

- 5. Click Next to open the Review tab.
- 6. Review your entries and click **Save** to save the item restriction.

Editing an Item Restriction

To edit an item restriction:

- Enter search criteria and click Search to find/edit an item restriction. If you do not enter any criteria before selecting Search, all item restrictions will be displayed in the Search Results page.
- **2.** To edit information for an existing restriction, select the row from the search results list. The Item Restriction window appears.

Note: You can also create a new item restriction by clicking **Add New** at the Search Results page.

- 3. Click Edit. The Edit Item Restriction page opens.
- 4. Complete the fields in the tabs as required, then click **Save**.

Note: To delete an existing restriction, click the Delete (X) icon associated with the record at the search results list. When prompted, click **Yes** to confirm the deletion.

See step 6 on page 6-4 for additional procedural information.

Item Restriction Types

...continued from Items

Note: You need to create at least one item restriction, before you can define item restrictions types. For more information on item restriction types, see the Item Restriction Types section.

Select the Item Restrictions Types option (Figure 6–3) to create item restrictions for the days and time frame in which certain items are sold. You can also configure the minimum required customer age to purchase an item, and the minimum required cashier age to sell an item.

Figure 6–25 Vendor Maintenance Page

If adding a new vendor:

At the Vendor Maintenance page, click **Add New** to create a new vendor.

If editing an existing vendor:

Enter search criteria and click **Search** to find/edit a vendor in your organization. If you do not enter any criteria before selecting **Search**, all vendors in your organization will be returned in the search. To edit information for an existing vendor, select the row from the search results list and click **Edit** at the vendor information screen.

Note: To delete an existing vendor, click the **Delete** icon associated with the record at the search results list.

See step 6 on page 6-4 for additional procedural information.

Complete the following Vendor Maintenance fields, then click **Save**.

Table 6–17 Basic Vendor Attributes

| Field | Description |
|------------------------|--|
| Vendor ID [REQUIRED] | Enter a unique identifier assigned to a vendor. This value cannot be changed in Edit mode. |
| Vendor Name [REQUIRED] | Enter the name of the vendor. |
| Contact Name | Enter the primary contact person for the vendor. |
| Contact Telephone | Enter the primary telephone number of the primary contact. |
| Buyer Name | Enter the name of the buyer associated with the vendor. |

Table 6–18 Vendor Address Attributes

| Field | Description |
|-----------|--|
| Address 1 | Enter the first line of the mailing address. |
| Address 2 | Enter the second line of the mailing address. |
| City | Enter the city component of the mailing address. |

| Field | Description | | |
|------------------|--|--|--|
| State | Enter the State/Province component of the mailing address. | | |
| Postal Code | Enter the Postal or ZIP code component of the mailing address. | | |
| Country | Enter the country component of the address. | | |
| Vendor Telephone | Enter the primary telephone number. | | |

Figure 6–28 Tax Elements Page

- Tax Authorities Identifies the name of the authority that imposes the tax, and also supplies the rounding rules that are used in the calculation. See Tax Authorities.
- **Tax Locations** Defines the tax locations that can be assigned to individual stores. See Tax Locations
- Tax Groups Defines tax groups for items that are taxed according to the same rules. For example, certain food products may belong to the same tax group. After defining the tax groups, they may be assigned to individual items. See Tax Groups.
- **Tax Brackets** Defines the tax brackets used to calculate the sales tax for an item or transaction. See Tax Brackets.

Tax Authorities

If adding a new tax authority:

- **1.** At the Tax Authorities Maintenance page, click **Add New** to create a new tax authority.
- 2. Complete the fields as required, then click **Save**.

If editing an existing tax authority:

- 1. At the Tax Authorities Maintenance page, select a tax authority from the list of tax authorities that are currently available for the targeted org node.
- **2.** Edit the fields as required, then click **Save**. The following Tax Authority fields are available:

| Field | Description |
|--|--|
| ID [REQUIRED] | Enter a unique identifier of a tax authority. The ID cannot be changed in edit mode. |
| Name [REQUIRED] | Enter the name of the tax authority. |
| Rounding Code Select from the drop-down list of rounding codes. Codes indicate how tax is to be rounded when calculated. The list i populated using TaxAuthorityUiContainer. | |
| | Values: |
| | Always round down |
| | Always round up |
| | Round ceiling |
| | Round floor |
| | Round half down |
| | Round half even |
| | Round half up |
| Rounding Digits Enter the number of digits to which rounding is to be call | |

Table 6–24 Tax Authorities Fields

Tax Locations

If adding a new tax location:

- **1.** At the Tax Locations Maintenance page, click **Add New** to create a new tax location.
- 2. Complete the fields as required, then click **Save**.

If editing an existing tax location:

- 1. At the Tax Locations Maintenance page, select a tax location from the list.
- 2. Edit the fields as required, then click **Save**.

Note: To search for a specific tax location, begin typing the tax location description in the Find a Tax Location field.

| Find a Tax Location t × | |
|----------------------------------|--------|
| TL-1000 - Ohio Tax Location | ~ |
| TL-2000 - Illinois Tax Location | |
| TL-1000 TL-AT - AT Tax Location | |

| TL-2000 TL-DE - DE Tax Location | |
| TL-ES - ES Tax Location | |
| TL-FR - FR Tax Location | |
| TL-BR_SP TL-GB - GB Tax Location | |
| TL-IT - IT Tax Location | |
| TL-DE TL-MX - MX Tax Location | \sim |
| TI 50 | |

The following Tax Location fields are available:

Table 6–25 Tax Location Fields

| Field | Description | |
|---------------|---|--|
| ID [REQUIRED] | Enter a unique identifier of a tax location. The ID cannot be changed in edit mode. | |

| Field | Description | | |
|-----------------|---|--|--|
| Name [REQUIRED] | Enter the name of the tax location. | | |
| Description | Enter a text description of the tax location. | | |

Table 6–25 (Cont.) Tax Location Fields

Note: Any Tax Locations created here will be "pending deployment"; however, these locations will be available for use within the other areas of the Taxes feature.

Tax Groups

If adding a new tax group:

- 1. At the Tax Groups Maintenance page, click **Add New** to create a new tax group.
- **2.** Complete the fields as required, then click **Save**.

If editing an existing tax group:

- 1. At the Tax Groups Maintenance page, select a tax group from the list.
- **2.** Edit the fields as required, then click **Save**. The following Tax Group fields are available:

Table 6–26 Tax Group Fields

| Field | Description |
|-----------------|--|
| ID [REQUIRED] | Enter a unique identifier of a tax group. The ID cannot be changed in edit mode. |
| Name [REQUIRED] | Enter the name of the tax group. |
| Description | Enter a text description of the tax group. |

Note: Any Tax Groups created here will be "pending deployment"; however, these groups will be available for use within the other areas of the Taxes feature.

Tax Brackets

If adding a new tax bracket:

- 1. At the Tax Brackets Maintenance page, click Add to create a new tax bracket.
- 2. Complete the fields as required in step 3 below.

If editing an existing tax bracket:

- 1. At the Tax Brackets Maintenance page, select a tax bracket from the list.
- 2. Edit the fields as required in step 3 below.
- **3.** Complete the following Tax Bracket fields:

Table 6–27 Tax Bracket Fields

| Field | Description | | |
|-----------------------|--|--|--|
| Bracket ID [REQUIRED] | Enter a unique identifier of a tax bracket. The ID cannot be changed in edit mode. | | |

Table 6–27 (Cont.) Tax Bracket Fields

[REQUIRED]

4. Click Add to add the tax breakpoint and tax amount to the Tax Bracket.

Continue adding all tax breakpoints and tax amounts for the Tax Bracket, and click Add after each addition to add the values to the Tax Bracket. The entered values are sorted in ascending order based on the breakpoint as they are added.

5. Click Save to save the Tax Bracket.

Note: Any Tax Brackets created here will be "pending deployment"; however, these brackets will be available for use within the other areas of the Taxes feature.

Deleting a Tax Breakpoint and Tax Amount from the Tax Bracket:

Click the Delete link associated with the tax breakpoint and tax amount.

Figure 6–29 Delete Link - Tax Breakpoint And Tax Amount

| Bracket ID 1 | | |
|----------------|------------|--------|
| Tax Breakpoint | Tax Amount | Add |
| 1.00 | 0.050000 | Delete |
| 1.50 | 0.060000 | Delete |
| 2.00 | 0.070000 | Delete |

Deleting a Tax Bracket:

In the Tax Bracket displayed, click **Delete**.

Figure 6–30 Delete Tax Bracket

| racket ID 1 | | | | De | lete | |
|-------------|------------|--------|--|----|------|--|
| | Tax Amount | | | | | |
| | | Add | | | | |
| | 0.050000 | Delete | | | | |
| | 0.060000 | Delete | | | | |
| | 0.070000 | Delete | | | | |

When prompted, click Yes to confirm the deletion

Tax Rates

After setting up the basic tax elements (see Tax Elements), perform the following steps to set up and manage tax rate rules and group rules.

- 1. Select **Tax Rates** at the Taxes page (Figure 6–27), then enter/select a Tax Location and click **Next**.
- 2. Add a new tax rate, or edit an existing tax rate for the selected tax location:

If adding a new Tax Group Rule:

- **a.** At the Tax Location Group Rules page, click **Add New** to create a new Tax Group Rule for the selected tax location.
- **b.** Complete the fields as required, then click **Save**.

If editing an existing Tax Group Rule:

- **a.** At the Tax Location Group Rules page, select a Tax Location Group Rule from the list.
- **b.** Edit the fields as required, then click **Save**. The following Tax Group Rule fields are available:

| Field | Description | | |
|-----------------------------|---|--|--|
| Tax Group [REQUIRED] | Select the ID assigned to the tax group. The ID cannot be changed in edit mode. | | |
| Name [REQUIRED] | Enter the name assigned to the tax group. | | |
| Tax Authority [REQUIRED] | Select the Tax Authority. | | |
| Tax Type [REQUIRED] | Select the Tax Type. | | |
| Transaction Level check box | Select this check box to use this group rule at the transaction level. | | |
| Compound Tax check box | Select this check box to compound this group rule. | | |
| | A compound tax is a special kind of tax that is calculated by applying it to a previously taxed item. The value of the compound tax is based on the sum of an item's price plus the tax that was previously applied to it. | | |
| Fiscal Tax ID | Add the tax authority specific fiscal tax ID to the selected tax | | |
| [Country Pack ONLY] | group rule. | | |
| - , . | Note: This field is only available for country packs. For more information on country packs, see the <i>Xstore Suite Configuration Accelerator Guide</i> . | | |

 Table 6–28
 Tax Group Rule Fields

If adding or editing a Tax Rate Rule:

- **a.** At the Tax Location Group Rules page, click **Edit Rates**.
- **b.** Do one of the following:
 - To create a new Tax Rate Rule, click Add New.
 - To edit an existing Tax Rate Rule, select it in the list.
- 3. Complete the following Tax Rate Rules fields:

Table 6–29 Tax Rate Rules Fields

| Field | Description |
|---------------------|--|
| Minimum Taxable Amt | Specify the starting value amount at which the tax rate rule is first applied if the tax rate rule is applied at different thresholds. |

| Description |
|--|
| Specify the highest value amount at which the tax rate rule is applied if the tax rate rule is applied at different thresholds. |
| Select the tax rate and enter the amount, percent, or select a tax bracket. |
| Enter the date on which the tax rate rule becomes operative. |
| Enter the date on which the tax rate rule is no longer operative. |
| Select the breakpoint from the list. |
| This value determines if the tax rate rule is applied to the entire value of the transaction or only to a portion of it, if the rule has threshold values defined. |
| |

Table 6–29 (Cont.) Tax Rate Rules Fields

Note: The Seq. Number determines the order in which a tax is applied in a transaction. The rule with sequence number "1" is first, "2" is second, and so on.

4. Click Save.

To delete a Tax Rate Rule:

- **a.** Click the Delete icon associated with the Tax Rate Rule.
- **b.** When prompted, click **Yes** to confirm the deletion.

If adding or editing a Tax Rate Rule Override:

See If adding or editing a Tax Rate Rule. The process for Tax Rate Rule Overrides is the same as the process for Tax Rate Rules.

Legal Entities [Country Pack ONLY]

Use this feature to search, create and modify legal entities.

Note: This feature is only available for country packs. For more information on country packs, see the *Xstore Suite Configuration Accelerator Guide*.

Communications

Use this feature to create and modify store messages and employee tasks.

Figure 6–32 Communications Options Page

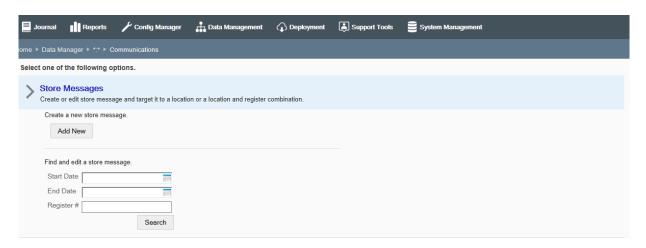

- To create or edit a store message and target it to a location, or a location and register combination, click Store Messages. See Store Messages below.
- To create or modify tasks for a store or for specific employees within a store, click Employee Tasks. See Employee Tasks.

Store Messages

Use this feature to create or edit a store message and target it to a location, or a location and register combination.

Figure 6–33 Store Messages Page

If adding a new message:

- 1. At the Store Messages page, click **Add New** to create a new message.
- 2. Complete the fields as required, then click **Save**.

If editing an existing message:

- 1. Enter search criteria and click **Search** to find/edit a store message in your organization. If you do not enter any criteria before selecting **Search**, all messages in your organization will be returned in the search.
- **2.** To edit information for an existing message, select the row from the search results list and edit the information as needed. You also have the option here to create a new message by clicking **Add New** at the search results page.
- **3.** Complete the fields as required, then click **Save**.

Note: To delete an existing message, click the Delete icon associated with the record at the search results list. When prompted, click **Yes** to confirm the deletion.

See step 6 on page 6-4 for additional procedural information.

The following Store Messages fields are available:

| Field | Description |
|-----------------------------|--|
| Message Scope | Identifies the scope and number of stores that will be receiving this message. The message scope is the node selected for the Data Manager session and cannot be changed here. |
| Register Specific check box | Select this option if the message is targeted to a specific register and enter the register number in the Register # field when prompted. |
| | Note: If you select this option, the message displays on only the specified workstation. If you do not select this option, the message displays on all workstations. |
| URL check box | Select this option if there is a URL associated with this message and enter the URL when prompted. |
| | The hyperlink will display with the message in Oracle Retail Xstore Point of Service. |
| Priority [REQUIRED] | Select the message priority: High, Medium, Low. |
| Start Date [REQUIRED] | Enter the date the message is to be displayed. |
| End Date [REQUIRED] | Enter the date the message is no longer displayed. |
| Message [REQUIRED] | Enter the message text. |

Table 6–31 Store Messages Attributes

Employee Tasks

Use this feature to create or modify tasks for a store, or for specific employees within a store.

Note: If the store is integrated with Customer Engagement, it becomes the system of record for Employee Tasks. Therefore, Employee Tasks should be assigned from Customer Engagement, not using Xstore Office Employee Tasks functionality. If changes are completed in Xstore Office, they will be disregarded.

3. Click Save.

If editing an existing currency exchange rate record:

- 1. Select the record from the list to open the Edit window.
- 2. Make your changes, then click Save.

Note: To delete a currency exchange rate record, click the Delete icon associated with the record. When prompted, click **Yes** to confirm the deletion.

The following Currency Exchange Rates fields are available:

Table 6–33 Currency Exchange Rate Attributes

| Field | Description |
|-------------------|--|
| Base Currency | Select the local/home currency. This value can only be edited in Add mode. |
| Exchange Currency | Select the non-local currency used in the exchange of tenders. This value can only be edited in Add mode. |
| Exchange Rate | Enter the quantitative conversion factor between the base currency and the exchange currency. |

Stores

Note: This Data Manager Stores option allows you to search for and modify store information for an existing store only. To set up a new store, see Managing the Organization Hierarchy.

Use this feature to search for and modify store information.

Figure 6–36 Stores Maintenance Page

To edit an existing store:

- **1.** Find the store to be edited:
 - If you know the store ID, enter the store ID in the Edit a Store Location field at the Stores Maintenance page.
 - To search for a store, enter search criteria and click **Search** to find/edit an existing store in your organization. If you do not enter any criteria before selecting Search, all stores in your organization will be returned in the search. To edit information for an existing store, select the row from the search results list.
- 2. Click Edit at the Store Information screen.
- **3.** Complete the fields as required, then click **Save**.

See step 6 on page 4 for additional procedural information. The following Stores fields are available:

| Field | Description | | |
|-----------------------|---|--|--|
| Store # | The store identifier. This value cannot be changed. | | |
| Store Name [Required] | Edit the store name. | | |
| Alternate Store # | Enter the Shop ID (alternate store number) assigned to a store number as a reference to an outside/downstream integration. | | |
| Airport code | Select the airport code (IATA) assigned to a store number as a reference to calculate the TAX_FREE, TAX_NORMAL, and PRICE_SPECIAL amounts for transactions in an Airside location. Valid values are derived from data from the com_airport table in the Xcenter database. | | |

 Table 6–34
 Store Location Attributes

| Field | Description |
|---------------------------------|--|
| Store Description check box | Select this option to enter a text description for the store. Type the description in the description field when prompted. |

|---|
| Enter the Nota Fiscal Eletrônica regime code. |
| Note: Only available for country pack Brazil. For more information on country packs, see the <i>Xstore Suite Configuration Accelerator Guide</i> . |
| Enter the SIRET number. The SIRET number identifies the store and must be used in the invoices. |
| Note: Only available for country pack France. For more information on country packs, see the <i>Xstore Suite Configuration Accelerator Guide</i> |
| |

Table 6–36 (Cont.) Store Detail Attributes [Country Pack ONLY]

Table 6–37 Registers/Tills Attributes

| Field | Description | | |
|-----------------------------------|--|--|--|
| Deposit Bank Name | Enter the deposit bank name to be printed when franking. The default value here is from Xadmin Settings. | | |
| Deposit Bank Account Number | Enter the deposit bank account number to be printed when franking. The default value here is from Xadmin Settings. | | |
| Number of Registers in the Store | Enter the number of registers in the store. | | |
| Use Till Accountability check box | IMPORTANT] If this setting is changed, you must deploy the changes at the end of the day, during the store close. | | |
| | Downloading this change during the day, while the store is open, will cause problems in Oracle Retail Xstore Point of Service. | | |
| | This setting determines whether the store uses Till Accountability mode or Register mode. Select the check box to use Till Accountability mode. The default value here is from Oracle Retail Xstore Office Cloud Service System Settings. | | |

| Field | Description | | | |
|----------------------------|--|--|--|--|
| Default Float Amount check | In Register Mode: | | | |
| box | If the default float amount is the same for every register/till (check box selected), enter the default float amount that applies to all registers/tills. | | | |
| | • If the default float amount is not the same for every register/till (check box not selected), enter an amount for the till and click Add . Repeat this step for all registers/tills in the store. | | | |
| | A Delete option is available if you need to make a change. | | | |
| | Note: In Register Mode, the number of tills cannot be greater than the number of registers. | | | |
| | In Till Accountability Mode: | | | |
| | How many registers are in the store? 4 x | | | |
| | Does this store use till accountability? | | | |
| | Is the default float amount the same for every till? | | | |
| | What is the amount? 100 How many tills does the store use? 4 | | | |
| | If the default float amount is the same for every till (check box selected), enter the default float amount that applies to all tills, then enter the number of tills used in the store. | | | |
| | If the default float amount is not the same for every till (check box not selected), enter an amount for the till and click Add. Repeat this step for all registers/tills in the store | | | |
| | A Delete option is available if you need to make a change. | | | |
| | Note: The store bank float amount is auto-calculated as the sum of all till float amounts. | | | |
| Store Manager | Enter the store manager's name. | | | |
| Telephone 1 through 4 | Enter the telephone numbers for the store. | | | |
| | Telephone 1 is the primary telephone number for the store. | | | |
| Store Email | Enter the store's email address. | | | |

Table 6–37 (Cont.) Registers/Tills Attributes

Viewing and Deploying the Data Changes

Data Manager changes are collected into "data bundles" containing all of the changes made within a particular org level during a given day. The changes collected in the data bundle will be deployed to their targeted stores automatically at the end of the day (as configured), or can be deployed immediately using the Pending Modifications option described here if needed.

Note: Any changes made after the configured time of day will collect and deploy during the next day (and the next configured time) unless the change(s) are deployed manually.

1. Click **Pending Modifications** at the Data Manager page to view and/or deploy data changes.

| Journ | al Reports | 🖌 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management |
|-----------|--|------------------------------------|-------------------|--------------|---------------|-------------------|
| Home ► Da | a Manager | | | | | |

Figure 6–37 Data Manager Page

2. The Pending Modifications page shows the data bundles within the logged on user's org hierarchy level that have not been deployed. There is one row per target.

Figure 6–38 Pending Modifications Page

| Journal | Reports | 🖌 Config Manager | rth Data Management | Deployment | Support Tools | System Management | | |
|----------------|------------------|------------------|---------------------|------------|---------------|-------------------|--------|---|
| Home ► Data Ma | anager 🕨 Pending | Modifications | | | | | | |
| | | | | | | | | |
| Target | | Last E | dited | Las | t Edited User | # of Changes | Deploy | |
| *;* | | Jul 19, | 2018, 6:00:00 AM | 1 | | 2 | Ģ | × |

Options at the Pending Modifications page include the ability to view, deploy, or delete the changes as a whole (data bundle) including all the individual data changes that they contain.

Note: To delete only an individual data change or changes within a data bundle, see Viewing the Individual Changes in the Data Bundle in the Data Bundle.

Important: If you choose to deploy the changes here, the deployment will happen immediately. Once deployed, it is no longer possible to view or edit the data changes, (that is the group of changes will not be available to be deployed again). If an error was deployed, you must create a new data change and deploy it to fix the error.

Any deployments manually initiated from the Pending Modifications page will be shown on the Deployments page. See Chapter 7, "Deployment Management" for more information.

The following information is shown on the Pending Modifications page:

Table 6–38 Pending Modifications Page Fields

| Field | Description |
|-------------|--|
| Target | The org node targeted for the data bundle. |
| Last Edited | The date the data bundle was most recently edited. |

| Field | Description | | |
|------------------|--|--|--|
| Last Edited User | The user who last edited the data bundle. | | |
| # of Changes | The number of individual changes in this data bundle for the targeted org node. | | |
| Deploy Icon | To deploy the Data changes as a whole (data bundle), click the Deploy icon associated with the row in the search results list. | | |
| | When prompted, click Yes to confirm you want to deploy the selected Data change. | | |
| | Click OK at the deployment scheduled successfully prompt and the row is removed from the pending modification list. | | |
| Delete Icon | To delete the Data changes as a whole (data bundle), click the Delete icon associated with the row in the search results list. | | |
| | When prompted, click Yes to confirm you want to delete the selected Data change and the row is removed from the pending modification list. | | |

 Table 6–38 (Cont.) Pending Modifications Page Fields

Viewing the Individual Changes in the Data Bundle

To view the individual changes in the data bundle, click the row in the search results list at the Pending Modifications page (Figure 6–38). The Pending Modifications Detail page lists the individual data changes that have been made within the selected group of undeployed data changes. Options here include the ability to view or delete the individual changes.

Table 6–39 (Cont.) Pending Modifications Details Fields

Data Publisher - Redeploying Data

This feature provides the ability to deploy data from Xcenter (a part of Oracle Retail Xstore Office Cloud Service) to an org node so that all data within the selected org node's scope is transferred to the selected org node.

For example, when opening a new store, use this feature to send Xcenter data to the new store.

Note: The intended use of this feature is for franchise retailers that have a need to republish small amounts of data to the store. Retailers with thousands of items will likely use a merchandising system to republish items. Using this feature for a large number of items could perform slowly and could encounter out-of-memory errors.

Valid data for redeployment includes: Items, Exchange Rates, Store Messages, Taxes, Employees, and Vendors.

Note: Tasks and Stores data cannot be redeployed.

Data intended for the selected node will be deployed as follows:

- A transfer to a single store may require data from a store-level, district-level, and corporate-level. In this example, all of this data will be included in the deployment.
- A transfer to a region or district may result in multiple deployments to accommodate the multiple stores within the node. For example, if transferring to a district, the district may contain a total of 10 stores, and the stores may all receive different data which will result in 10 deployments.

Depending on your security privileges, this feature also allows you to create an Omni Channel Data Service (OCDS) on demand job. On demand jobs generate .mnt files, containing instructions and data, necessary to refresh the Xstore and Xcenter database tables. On demand jobs are for one-time-only execution.

Note: OCDS on demand jobs are only available, if the OCDS is integrated with Xstore Office, for more information see Integration Management.

Transferring Data

- From the Oracle Retail Xstore Office Cloud Service menu, select Data Management, then Data Manager, or click the Data Manager link in the Data Management panel.
- 2. Click Data Publisher.

3. Select the Target Organization Node.

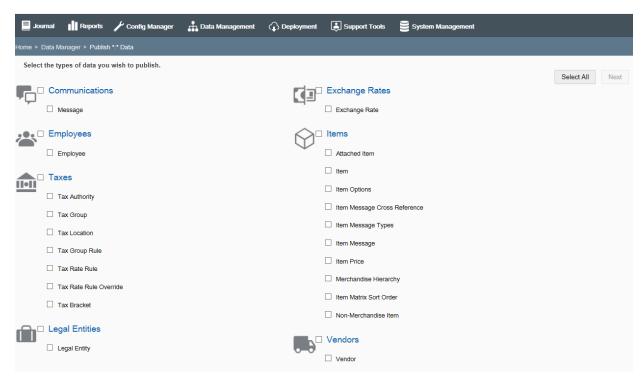

Note: Only the Organization Nodes the logged-in user has privileges to use will be listed here.

4. Select the **Data Source** option. Available options are Xstore Office or OCDS.

Note: The **Data Source** option is only available, if you hold the necessary security privileges and if OCDS is integrated with Xstore Office, for more information see Integration Management.

- **5.** Then click **Next**.
- **6.** At the Publish Data page, select the types of data to be transferred from Xcenter (a part of Oracle Retail Xstore Office Cloud Service) to the targeted org node:

Figure 6–40 Publish Data Page

• To transfer all data listed here to the targeted org node, click the **Select All** button.

Note: When all categories are selected, the button toggles to "Select None". If selected, all check marks will be removed.

- To transfer all data in a category, select the check box next to the category name.
- To transfer specific data within a category, select the check box next to the data item.

- 7. Click Next.
- **8.** At the Target Node Information window, review your changes and select a download priority option Immediate or Store Close from the drop-down list.

Figure 6–41 Target Node Information Window

| | | × |
|---|-------------|--------|
| Target Organization Node REGION:2 | | Deploy |
| Review sections and choose a deployment option. | | |
| Download Priority Immediate | | |
| Items | Taxes | |
| Item Message | Tax Bracket | |
| Item Restriction Type | | |
| Item Restriction Calendar | | |
| Item Matrix Sort Order | | |

- 9. Click Deploy.
- **10.** When prompted that the deployment was scheduled successfully, click **OK** to close the window.

Note: bout Deployment If the deployment of data should fail for one (or more) nodes within the target, the entire deployment will not fail. In this case, the progress bar turns red, indicating an error. At the end of the transfer, a failure count is shown above the progress bar (that is 5/250), and you can click a provided link to see more information at the "View Deployments" page.

Managing the Organization Hierarchy

Organization Hierarchy management includes both defining the hierarchy levels in your organization, as well as organizing and maintaining the nodes in the hierarchy.

- From the Oracle Retail Xstore Office Cloud Service menu, select Data Management, then Organization Hierarchy, or click the Organization Hierarchy link in the Data Management panel.
- 2. At the Organization Hierarchy page, you have the following options:.

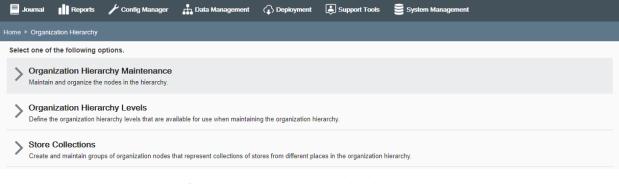

Figure 6–42 Organization Hierarchy Page

To define organization hierarchy levels, click Organization Hierarchy Levels.

Refer to Defining Organization Hierarchy Levels below for procedural information.

- To maintain and organize the nodes in the hierarchy, click Organization Hierarchy Maintenance. Refer to Managing the Organization Hierarchy for procedural information.
- To create and maintain Store Collections, click Store Collections. Refer to Creating and Maintaining Store Collections.

Defining Organization Hierarchy Levels

Use this feature to define the Organization Hierarchy levels in your organization. Once set up, these levels will be available for use in Organization Hierarchy Maintenance.

The Parent (root) Level field cannot be edited, and only one root level (*) is allowed.

Note: STORE is a reserved word within organization hierarchy maintenance and cannot be added as an organization level.

Figure 6–43 Organization Hierarchy Levels Page

| Journal | Reports | 🖌 Config Manager | Data Management | C Deployment | Support Tools | System Management |
|---|--------------------|------------------------|-----------------------------|--------------|---------------|-------------------|
| Home 🕨 Organiz | zation Hierarchy 🕨 | Organization Hierarchy | y Levels | | | |

Adding an Organization Hierarchy Level

- 1. Select an org node within the org hierarchy tree.
- 2. With the node selected, click Add Level to add an org level to the selected node.
- 3. Complete the fields as required and click Save.

Table 6–40 Organization Hierarchy Levels Fields

| Field | Description |
|----------------------|--|
| Parent Level | Defaults to the currently selected node and cannot be changed. |
| Org Level [Required] | Enter the name of the new org level. |
| Description | Enter a description for the new org level. |

Editing the Description of an Organization Hierarchy Level

- 1. Select an org node within the org hierarchy tree.
- 2. With the node selected, enter the description in the Description field.
- 3. Click Save. The tree view description is updated with the new description.

Deleting an Organization Hierarchy Level

- 1. Select an org node within the org hierarchy tree.
- 2. With the node selected, click **Delete**.

Note: Levels that are currently being used, that is, levels with children, cannot be deleted.

3. When prompted, click **Yes** to confirm you want to delete the selected hierarchy level.

Maintaining the Organization Hierarchy

The Organization Hierarchy Maintenance feature provides the ability to add an organization hierarchy level to a node, create a new store and add it to an org node, add an existing, unassigned store to an org node, temporarily deactivate an org node, and deploy the changes.

| Journal 🔢 Reports 🖌 Config Man | ager 📫 Data Management 🕠 Dep | loyment 👗 Support Tools | System Management |

| If an organization hierarchy level needs to be added, you can add a level to the currently selected node. | | | |
| If there are stores that exist within your organization that are not represented within the hierarchy, you can add the stores to the currently selected node. | | | |
| If there is no record for a store within your organization, you can create a new store record. | | | |
| If the organization hierarchy needs to be sent to the stores, you can deploy the data. | | | |
| stores, you can deploy the data. | | | |

Figure 6–44 Organization Hierarchy Maintenance Page

Note: To search for a specific node, begin typing the node description in the Find a Node field.

Adding an Organization Hierarchy Level to a Node

Note: Organization Hierarchy levels must be defined before they can be used in Organization Hierarchy Maintenance. See Defining Organization Hierarchy Levels for more information about setting up Organization Hierarchy levels for your organization.

Perform the following steps to add an organization hierarchy level to a node.

- **1.** From the Organization Hierarchy Maintenance page, select an org node within the org hierarchy tree.
- 2. With the node selected, click the add a level to the currently selected node link.
- 3. In the Add Hierarchy Level Node window, complete the fields as required:

| Field | Description | |
|-----------------------|---|--|
| Parent Node | Defaults to the currently selected node. | |
| Level [Required] | Select the new level from the drop-down list. | |
| | Organization Hierarchy levels must be defined before they can be used in Organization Hierarchy Maintenance. See Defining Organization Hierarchy Levels for more information about setting up Organization Hierarchy levels for your organization. | |
| Value [Required] | Enter a value for the new level. | |
| Manager | Enter the manager for the new level. This is a level manager or an org node manager (for example, district manager). The value is stored in the org hierarchy table along with the node info. | |
| Active Node check box | Selected by default, indicating the organization hierarchy level is active and available. To deactivate the org node, deselect the Is this node active? check box. Refer to Deactivating an Org Node for more information. | |

Table 6–41 Add Hierarchy Level Node Window

4. Click Save.

Editing the Value and Manager Information

Perform the following steps to edit an organization hierarchy level value and/or manager.

- 1. Select an org node within the org hierarchy tree.
- 2. With the node selected, click Edit.
- **3.** Make changes to the level Value and/or Manager as needed.
- 4. Click Save.

Note: To deactivate the org node, deselect the Is this node active? check box. Refer to Deactivating an Org Node for more information.

Adding Unassigned Stores to an Org Node

Perform the following steps to add any unassigned stores to the organization hierarchy. This process does not create new stores, it is used to add existing stores to the Organization Hierarchy tree.

- 1. Select an org node within the org hierarchy tree.
- **2.** With the node selected, click the **Add** the stores to the currently selected node link to display a list of all unassigned stores.
- **3.** Select the check box for one (or more) stores from the list, then click **Add** to add the selected stores to the selected org node.
- **4.** The stores are added to the selected org node and the system returns to the Organization Hierarchy Maintenance page.

Creating a New Store and Add It to an Org Node

Perform the following steps to create a new store and place it within the organization hierarchy. This process is not used to add existing stores to an org hierarchy node.

1. Select the node where the new store will be placed.

- 2. With the node selected, click the Create a new store record link.
- 3. Complete the required fields in the Store wizard, then click Save.

This is the same wizard used to edit stores within Data Manager; see Stores for detailed information about the fields.

- **4.** When prompted, click **OK** to close the "Store created successfully" prompt. A deployment of this record to all stores will now be scheduled.
- When prompted, click OK to close the "Deployment was scheduled successfully" prompt.
- **6.** The system returns to the Organization Hierarchy Maintenance page. The new store is added to the selected org node.

Deactivating an Org Node

Perform the following steps to deactivate an org node. Deactivated org nodes will not appear in drop-down pick lists throughout Oracle Retail Xstore Office Cloud Service. Making an org node inactive does not stop the stores within that node from functioning. This inactive setting simply prevents users from making data changes and deployments to the node. For example, this feature may be used when creating new districts or reorganizing the hierarchy. Deactivating an org node ensures that other users cannot make data changes or deployments to the stores that fall within that node.

Perform the following steps to deactivate an org node.

- 1. Select an org node within the org hierarchy tree.
- 2. With the node selected, click Edit.
- **3.** Deselect the Is this node active? check box.
- 4. Click Save.
- **5.** The org node information shows the node is Inactive and the org node is grayed-out in the tree view.

Figure 6–45 Inactive Org Node Example

| Home FOrganization Hierarchy FOrganization Hierarchy Maintenance | | | | | |
|--|---|--|--|--|--|
| Select one of the nodes from the tree and then choose one of the options below. | | | | | |
| Organization Node Information Parent Node GROCERY:AT Level STORE Value 9902 Manager Store 9902 Manager Inactive Edit If an organization hierarchy level needs to be added, you can add a level to the currently selected node. | Find a Node Find | | | | |

Note: To activate an inactive org node, select the Is this node active? check box.

Moving an Org Node

Perform the following steps to move org nodes throughout the org hierarchy. For example, this feature can be used if redistricting actions are needed within the

organization. This type of movement may be as simple as: Move STORE:101 from DISTRICT:2 to DISTRICT:3, or it may be more complicated and involve multiple moves. In either case, the process is the same.

- 1. Select an org node (other than the root node) within the org hierarchy tree.
- 2. With the node selected, click Edit.
- **3.** To change the selected node's parent level, begin typing the node identifier in the Parent Node field. The suggested parent nodes are displayed in a list.

Figure 6–46 Parent Node Suggestion List

| | | | | \times | |
|---------------------------|------------|--|--|----------|--|
| Edit Hierarchy Level Node | | | | | |
| Parent Node | d | | | | |
| Level | DISTRICT:1 | | | | |
| Value | DISTRICT:2 | | | | |
| Manager | DISTRICT:3 | | | | |
| Is this not | DISTRICT:4 | | | | |
| | | | | Save | |
| | | | | | |

4. Select the new parent level, then click **Save**.

The previously selected node is now shown under its new parent level.

Deploying the Organization Hierarchy Changes

Perform the following steps to deploy the organization hierarchy data to the stores.

- **1.** Click the deploy the data link.
- 2. When prompted, click Yes to deploy the organization hierarchy to all stores.
- 3. Click **OK** to close the deployment successful window.

Creating and Maintaining Store Collections

Use Store Collections to create and maintain groups of organization nodes that represent collections of stores from different places in the organization hierarchy.

Store Collections are user-defined store groups. Once defined and set up, these Store Collections are made available to be used as target areas for configuration and data changes.

The Store Collections page shows your current Store Collections and the number of stores in each collection. In the example below, two Store Collections have been defined. If no collections have been defined this page will be blank. Click a column header to sort the column as needed.

Figure 6–47 Store Collections Page

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management | | |
|--|---|------------------|-------------------|--------------|---------------|-------------------|-------------|---------|

| | | | | | | | | Add New |
| ID | | Description | | | | | # of Stores | |
| No records were found that match the specified criteria. | | | | | | | | |

Adding a Store Collection

- 1. At the Store Collections page, click Add New to create a new store collection.
- **2.** Complete the fields as required:
 - ID Enter the collection identifier. This field can only be edited when adding a new Store Collection. A store collection ID must be letters or numbers only and cannot include a colon (:), underscore (_), or comma (,) in the name.
 - Description Enter the collection description. This field can be changed when adding a new Store Collection, and when editing an existing Store Collection.
 - Organization Nodes Specify the node belonging to this store collection, then click Add. Repeat this step for each node that is part of this collection.
- 3. Click Save.
- 4. Oracle Retail Xstore Office Cloud Service returns to the Store Collections page.

Editing a Store Collection

1. At the Store Collections page, select a Store Collection from the list.

Note: To delete a store collection, at the Store Collections page, select the Delete icon associated with the Store collection. When prompted, click **Yes** to confirm the deletion

- **2.** Complete the fields as required:
 - ID This field cannot be changed.
 - Description Edit the collection description.
 - Organization Nodes
 - To add a node, specify the node belonging to this store collection, then click **Add**. Repeat this step for each node to be added to this collection.
 - To remove a node from the collection, click the Delete link associated with the node.
- 3. Click Save.
- 4. Oracle Retail Xstore Office Cloud Service returns to the Store Collections page.

Stock Valuation Year End Roll-Up

The end-of-year process is used to post the required rollup data for stock valuation for all items and stores. This closes the item's quantity and value for the specified fiscal year. The consolidated inventory totals are used for the stock valuation (PWAC) reports.

Note: The inv_cst_item_yearend table must be populated with data for the previous year. For new retailers with no previous years' data, a record must be added for the previous year with quantity zero (0).

Overview

Stock Valuation is a process that allows you to track the item stock value for receivables at the store for both corporate-created receiving documents and store-created receiving documents. This inventory valuation allows you to determine a monetary value for items that make up your inventory, and is dependent on a year-end process for the company. Stock valuation is based on the fiscal calendar.

All receiving documents must contain the items' cost to be used to calculate the stock valuation. The cost is the amount charged to the franchisee/store. When merchandise is received from the warehouse, the cost on the ASN/receiving document must be accepted or adjusted by the store in order to receive merchandise into inventory.

End-Of-Year Processing

To access Stock Valuation Year End Roll-up, select **Roll-up Stock Valuation** from the Data Management menu.

Perform the following steps to post the required rollup data for stock valuation for all items and stores.

- 1. Enter the Fiscal year that is being closed.
- 2. Click Roll-up Data.

The system will perform the following validation checks on the Fiscal Year entered:

- Must be less than the current fiscal year.
- Cannot be greater than the last consolidated year + 1. (The sequence must be respected; if 2011 has been consolidated, you can only consolidate 2012.)
- Cannot be less than the last consolidated year. (If 2012 has been consolidated you cannot select 2010, but you can select 2012.)
- If there are no previous consolidations, the system can accept any value less than the current year. (In this case, if there are any documents in the database for the year before the selected year, all documents will be consolidated in the selected year.)

Example:

Current year=2014

Documents exist in the database for 2009, 2010, 2011, 2012, and 2013

No consolidations have been done to date

If 2012 is selected as the closing year, the system will prompt to close previous years (2009, 2010, 2011) first before continuing.

7

Deployment Management

Deployment Manager is used to upload files for deployment, create deployment plans for scheduling updates, and track the status of configuration and file deployments.

For additional technical information about Deployments, see Appendix A, "Appendix: About Deployments".

The Deployment Process at a Glance

- 1. Oracle Retail Xenvironment contacts Xcenter (a part of Oracle Retail Xstore Office Cloud Service) at a pre-defined interval, asking for any updates.
- **2.** If updates are available, Oracle Retail Xstore Office Cloud Service downloads the files specified by the manifest either immediately or at the daily maintenance.
- **3.** Oracle Retail Xenvironment then applies the files per the instructions in the manifest either immediately or at the daily maintenance.

About this Chapter

The File Upload feature provides the ability to upload files from your local PC into Oracle Retail Xstore Office Cloud Service so the files can be deployed to stores. A deployment is automatically scheduled based on the targeting information in the file header. Oracle Retail Xstore Point-of-Service software updates, standard DataLoader files (.dat, .mnt,

.reo, .rep), Oracle Retail Xstore Point-of-Service .cip files, .zip files for JRE/JCE, .tar.gz files, and Oracle Retail Xstore Point-of-Service debit.txt files are supported for upload. See Uploading Files below.

The View Deployments feature provides both the ability to view detailed information about a deployment and the ability to cancel a deployment before it has been deployed if it meets the eligibility criteria. The current status of all deployments made from Oracle Retail Xstore Office Cloud Service can be tracked down to the store level. You can view summary level data for each deployment, down to the status of delivering and loading each update at each target store. See Viewing Deployments.

The Deployment Plans feature provides the ability to define phased Deployment Plans (such as templates) that can be used to schedule Configurator updates or File Uploads to save time when scheduling roll-outs. See Deployment: Using a Deployment Plan.

The Automatic External File Delivery feature provides the ability to have any standard DataLoader files (.dat, .mnt, .reo, .rep) left by any external system in a file drop directory so the files can be deployed to stores. See Automatic External File Delivery.

Uploading Files

Note: Only the uploaded files that fall within the current user's org node are shown on the File Upload page. Files must have been uploaded by a user with the same, or lower, org node as the current user.

Note: In Oracle Retail Xstore Office Cloud Service certain privileges are available which control the users who have the ability to access the file upload feature and who can upload files which are to be deployed.

Additionally, it is possible to control the ability to deploy one or more of the uploaded files.

The 'File Deploy' privilege should not be assigned to a user who has either the 'File Upload' or the 'Upload File to Deploy' privilege. One user should be restricted to have only the right to upload files for deployment, while another user is required to deploy the uploaded files. As a result critical deployments need to be independently approved, before they are made available to other systems.

- From the Oracle Retail Xstore Office Cloud Service menu, select Deployment -File Upload, or click the File Upload link in the Deployment Manager panel.
- 2. At the File Upload page, click Add File to browse for the file you want to upload.

| ot 📃 | ournal Reports | 🖌 Config Manager | 🕂 Data Management | Deployment | 👗 Support Tools | System M | anagement | | |

| | item_test.mnt | | test item | | | 57.5KB | Jul 26, 2018 | 1 | × |

Figure 7–1 File Upload Page

Note: Only files with the following valid extensions can be uploaded: .cip, .jar, .mnt, .rep, .reo, .dat, debit.txt (bin file), .tar.gz, and .zip. All uploaded files are compressed when a deployment is scheduled and are decompresses once they are deployed. Limit the number of files to a maximum of 25 for a single deployment.

3. When prompted, click **Browse** to search for the file.

Figure 7–2 Select File to Upload Window

| | × |
|-----------------------|------------------|
| Select file to upload | |
| File Description | Browse Upload |

- **4.** [OPTIONAL] Type a description for the file.
- 5. Click Upload. Uploaded file records are stored in the cfg_upload_record table.

Note: If you try to upload a file that has been previously uploaded, you are prompted that this new upload will overwrite the previous one. Click **Overwrite** to overwrite the previous file or **Cancel** to return to the File Upload page without uploading the file.

6. At the Upload Successful progress bar, choose whether to deploy the file now or deploy the file later:

| Select file | to upload | | |
|------------------|------------------|----------------|------|

| | | | 100% |

Figure 7–3 Upload Successful Progress Bar

- Click Yes to deploy the file now. Skip to File Upload: Deploying a File or Files, step 3.
- Click No to return to the File Upload page without deploying the file.
- **7.** Perform actions as needed:
 - To upload additional files, repeat steps 2 through 6.
 - To deploy an uploaded file, see File Upload: Deploying a File or Files.
 - To remove a file from the Upload File list, see File Upload: Removing an Uploaded File From the List.

File Upload: Removing an Uploaded File From the List

Follow the instructions in this section if you need to remove an uploaded file from the list.

- 1. At the File Upload page, click the Delete icon to remove the selected file from the list.
- 2. At the confirmation prompt, click Yes to remove the selected file.

File Upload: Deploying a File or Files

Follow the instructions in this section to deploy a file or multiple files.

1. At the File Upload page, select the file, or files, you want to deploy.

Figure 7–4 File Upload Page - File Selected

| Deployment Name Deployment Plan Total # of Stores Waves | item_test Upload 2018-09-13 1 Single Wave 1 | 5:12:17 | | | | Deploy |
| Wave # | Name | Date | Launch Ty | oe Org | anization Nodes | # of Stores |
| 1 | Default Wave | Mon, Sep 24, 20 | 18 Automatic | End of Day STO | ORE:9901 | 1 |

Note: Waves Section - For Single Deployments, the Wave Name defaults to Default Wave and the Launch Type defaults to Automatic. These values cannot be changed.

The following Wave information is shown on the Review Deployment Schedule page:

| Field | Description | | | |
|--|---|--|--|--|
| Wave # | The wave identifier. | | | |
| Name | For Single Deployments, the Wave Name defaults to Default Wave and cannot be changed. | | | |
| Date | The date the changes will be sent to the store. | | | |
| Launch Type | The launch type, defaults to Automatic. | | | |
| Organization Nodes The targeted org node or nodes. | | | | |
| # of Stores | The number of stores affected by this single deployment. | | | |

Table 7–2 Review Deployment Schedule Fields

- If all information is correct, go to step 6 below.
- If you need to change the launch date, select the wave and enter the new date at the Edit Wave window, then click **OK**.
- If you need to make any other changes, click the Schedule Deployment breadcrumb to return to the previous page where you can edit the information. Go to step 4 on page 5.
- 3. Click Deploy.
- 4. When prompted, click Yes to confirm you want to schedule the deployment.
- 5. Click OK to close the Deployment Scheduler status bar window.

The deployment file is placed in Xstore Office Cloud Service with a file name of

{org}_{deployment id}_!!_{filename} and a record is written to the dpl_
deployment table.

See Viewing Deployments for more information about the deployed file.

Deployment: Using a Deployment Plan

Templates, known as Deployment Plans, can be set up in advance and then reused whenever needed. These Deployment Plans are used to distribute changes to stores for configuration and file uploads. See Creating a Deployment Plan.

If you selected Schedule a Planned Deployment in File Upload: Deploying a File or Files, the Deployment Plan section of the screen expands to show the required fields.

Note: If you are not ready to deploy, use the breadcrumbs at the top of the page to navigate to a previous page.

- 4. When prompted, click Yes to confirm you want to schedule the deployment.
- 5. Click OK to close the Deployment Scheduler status bar window.

See also Viewing Deployments for more information about tracking the current status of all deployments.

Creating a Deployment Plan

Use a Deployment Plan to roll out updates on a pre-defined schedule when setting up a Configurator or File Upload deployment. Scheduled roll-outs are created by defining phased plans (that is templates) containing Waves. The plans created here will be available when you schedule a deployment. See Deployment: Using a Deployment Plan.

- From the Oracle Retail Xstore Office Cloud Service menu, select Deployment -Deployment Plans, or click the Deployment Plans link in the Deployment Manager panel.
- 2. At the Deployment Plans page, click Add New to create a new Deployment Plan.

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management | |

4. Click Add New to define the Waves for this plan at the Create Wave page:

Figure 7–12 Create Wave Page

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | Deployment | Support Tools | System Management | |
|--|--------------------------------------|-------------------------|-------------------|------------|---------------|-------------------|--|
| Home ► Deployr | ment Plans ▶ Crea | ate Deployment Plan 🕨 C | reate Wave | | | | |
| Wave Name Launch Launch Type Total # of Stores | Wave 1 N/A Approval Requires 0 | day(s) after previous | x swave | | | | |
| Specify which stores/nodes this wave should deploy to: Organization Nodes Add All Remaining Stores Save Wave | | | | | | | |

Note: To be valid, a Deployment Plan must have a minimum of one Wave. You can add any number of Waves to the Deployment Plan. For global scope only, you can select the All Remaining Stores check box to quickly add all stores in the node that have not been included in any previous waves. This can be used to make sure there are no missing stores in the Deployment Plan.

| Field | Description | | | | |
|------------------------------|--|--|--|--|--|
| Wave Name | Enter the Wave name or accept the default name. | | | | |
| | By default, each Wave is numbered automatically to track the number of waves in the plan. You can append additional text to the wave number (for example, Wave 1: Reg1) or change the text (for example, First Wave - Reg1), up to 60 characters. | | | | |
| Launch | For Wave 1, this will default to NA since the first wave is the | | | | |
| (day(s) after previous wave) | baseline date used to calculate all subsequent days. | | | | |
| | For Waves 2 and above, enter the interval between waves, up to 4 digits maximum. | | | | |
| | Note: Zero (0) is a valid entry for the number of days after the previous wave. This allows multiple waves to start on the same day, possibly with different launch types. | | | | |
| Launch Type | Approval Required [DEFAULT] - User approval is needed before the Wave launches. | | | | |
| | Automatic - The Wave launches automatically on the set number of days after the previous wave completes. | | | | |

Table 7–5 Create Waves Fields

5. To specify which stores/nodes this Wave should deploy to:

a. Click Add Organization Nodes.

b. Expand the org hierarchy node tree as needed to select the stores/nodes for this Wave.

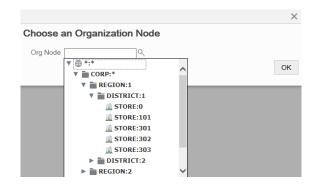

Figure 7–13 Org Hierarchy Node Tree

Note: The nodes returned in this list are filtered based on the Scope you selected for the Plan. Store Collections are not included in this list.

c. Click OK.

The selected store/node is listed on the Create Wave page along with a Delete link. If needed, you can click **Delete** to remove the store/node from the Wave.

Figure 7–14 Wave 1 - First Store/Node Added Example

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | | Support Tools | System Management | |

| Wave Name | Wave 1 | | | | | | |
| Launch | N/A | day(s) after previous | wave | | | | |
| Launch Type | Approval Require | d 🗸 | | | | | |
| Total # of Stores | 12 | | | | | | |
| Specify which stores | /nodes this wave sho | uld deploy to: | | | | | |
| Organization Nod | Organization Nodes Add All Remaining Stores | | | | | | |
| | REGION | :1 <u>Delete</u> | | | | | |
| | | | | | | | Save Wave |

- 6. [OPTIONAL] Repeat step 5 to add additional stores/nodes to this Wave.
- **7.** After adding all stores/nodes to this Wave, click **Save Wave**. The Wave is added to the Deployment Plan and you are returned to the Create Deployment Plan page.

About Wave Validation:

The same node cannot be selected in multiple Waves (for example, District 1 in Wave 1 and District 1 in Wave 2). If you try to add an org node in multiple Waves, a message displays. Click **OK** to close the message box and then click **Delete** to remove the duplicate Organization Node from the Wave.

Overlap within a Wave or between Waves is not allowed. If you try to add overlapping stores/nodes between two waves, a message displays. Click **Yes** to continue. Click **No** to return to the Create Wave page and then click **Delete** to remove the duplicate store from the Wave.

- **8.** [OPTIONAL] To create additional Waves for the Deployment Plan, return to step 4 on page 10. Repeat as often as needed.
 - The next wave defaults to the next higher number, for example, Wave 2 follows Wave 1.
 - Enter the number of days this wave should be launched after the previous wave. For example, schedule Wave 2 to launch 7 days after Wave 1 is launched, and schedule Wave 3 to launch 5 days after Wave 2 is launched, and so on.
 - Select the launch type, Approval Required or Automatic.
- **9.** When all Waves have been added to the Deployment Plan, click **Save Plan** to save all plan changes and return to the Deployment Plans page.

About Deployment Plan Validation:

If the Deployment Plan does not cover all stores within the selected scope, a message displays. Click **Yes** to save the plan even though not all stores in the selected scope are included. Click **No** to return to the Create Deployment Plan where you can make changes as needed.

10. The Deployment Plans page displays information about each plan.

Figure 7–15 Deployment Plans Page

| Plan ID | The auto-generated plan Identifier. |
| Plan Name | The name of the plan. |
| Security Scope | The target level (store or org node) for this plan. |
| # of Waves | The number of waves in the Deployment Plan. |
| Created On | The date the plan was created. |
| Description | The plan description. |
| Delete Icon | See Deleting an Deployment Plan and Waves below. |

Deleting an Deployment Plan and Waves

- From the Oracle Retail Xstore Office Cloud Service menu, select Deployment -Deployment Plans, or click the Deployment Plans link in the Deployment Manager panel.
- 2. At the Deployment Plans page, click the Delete icon to delete a plan.
- 3. When prompted, click Yes to delete the selected plan and all of its waves.

Deleting a Wave from a Plan

- From the Oracle Retail Xstore Office Cloud Service menu, select Deployment -Deployment Plans, or click the Deployment Plans link in the Deployment Manager panel.
- 2. At the Deployment Plans page, select a Deployment Plan from the list of plans.
- **3.** With the Waves page displayed, click the Delete icon to delete a selected Wave.
- 4. When prompted, click Yes to delete the selected wave.

Editing a Deployment Wave and Plan

Editing a Deployment Wave and Plan is similar to the process used to create a new Deployment Wave and Plan.

See Creating a Deployment Plan for more information about the fields on the Create Deployment Plan and Create Wave page.

- From the Oracle Retail Xstore Office Cloud Service menu, select Deployment -Deployment Plans, or click the Deployment Plans link in the Deployment Manager panel.
- 2. At the Deployment Plans page, select a plan from the list.
- 3. Edit the Wave information as needed:
 - **a.** Select a Wave from the list and edit the fields as needed.
 - **b.** To add a Wave, select **Add New** to add a new Wave to the Plan.

Note: If all stores are covered in this plan, the **Add New** option will not be available.

- c. Click Save Wave to save your changes.
- 4. If needed, edit the Plan information.
- 5. Click Save Plan to save all plan changes and return to the Deployment Plans page.

Email Notifications

Set up an email notification list for emails to be sent for Wave Approval reminders and Wave Approval waiting notifications. The Approval Needed email notification will be sent out a configurable number of days before the projected launch date of a wave that is launch type Approval Required

The number of days is set up in Oracle Retail Xstore Office Cloud Service Configuration (Number of Days Before Deployment Wave to Send Notification). See Chapter 3, "System Management", Oracle Retail Xstore Office Cloud Service Configuration Options.

A Wave On Hold email notification will be sent out when the projected launch date has passed and a wave is still waiting to be approved.

The email includes a link that will direct the recipient to the Deployment Summary page for the deployment that needs approval. See Approval Needed Email Notification Example for a sample email message.

Perform the following steps to add and remove users from the Email Notification list of a Deployment Plan.

- From the Oracle Retail Xstore Office Cloud Service menu, select Deployment -Deployment Plans, or click the Deployment Plans link in the Deployment Manager panel.
- **2.** At the Deployment Plans page, click **Add New** to create a new Deployment Plan or select a Deployment Plan from the list.
- **3.** At the Create Deployment Plan page (Figure 7-11), click the Email Notifications Edit link.
- 4. At the Email Notifications page, add or remove email information as needed:

Figure 7–16 Email Notifications Page

| Journal | Reports | Config Manager | 🕂 Data Management | Deployment | Support Tools | System Management | |
|--------------------|-------------------------|---------------------|-------------------|------------|---------------|-------------------|------|
| Home ► Deployn | nent Plans 🕨 Create Dep | oloyment Plan ▶ Err | ail Notifications | | | | |
| Search (ID, Name o | or Email) | Add | | | | | Save |
| User ID | | First Name | L | ast Name | Ema | il | |
| 1 | | Default | ι | lser | | | × |

Note: Email addresses listed in the search results are set up in System - Xadmin Users - Users and Security Access. See Chapter 2, "Roles, Users, and Security Access", Admin Users - Using Roles to Grant Access to Oracle Retail Xstore Office Cloud Service for more information.

To add a new user email to the Deployment Plan:

- **a.** Enter search information (ID, Name or Email) in the Search field to find the user's email.
- **b.** Select the email from the list, then click **Add**.

To remove a user email from the Deployment Plan, click the Delete icon associated with the email you want to remove.

- 5. Click Save.
- 6. Click Save Plan to save changes to the plan.

Viewing Deployments

The current status of all deployments made from Oracle Retail Xstore Office Cloud Service can be tracked down to the store level. A drill-down style interface is provided to view summary level data for each deployment, down to the status of delivering and loading each update at each target store.

- From the Oracle Retail Xstore Office Cloud Service menu, select Deployment -View Deployments, or click the View Deployments link in the Deployment Manager panel.
- **2.** At the Deployments page, enter criteria for the Deployment you are searching for and then click **Search**.

Note: To return a list of all deployments, leave the fields blank and click **Search**. To view additional deployments, select a date range from the View More Deployments drop-down list.

The Deployments page shows the summary list of deployments. By default, this list is sorted with the latest deployment shown at the top. Click on a field heading () to re-sort the list as needed.

Figure 7–18 Deployments Page - Search Results

Note: Deployment information is stored in the dpl_deployment database table.

The "v.x" designation in the deployment name indicates the config version for this set of configurations.

- Deployment ID The auto-assigned deployment identifier.
- Name The deployment name.
- Type The deployment type; Configurator, Data Manager, File Upload, or Auto Deploy.
- Plan The deployment plan name.
- Create Date The deployment create date.

- Launch Date Launch date of immediate means that the deployment will be downloaded by Xenvironment with the next update request.
- Waves Complete The number of waves completed compared to the total number scheduled.
- Status The deployment status; Approval Required, Complete, In Process, Cancelled, Scheduled, Error
- Create Date The date the deployment has been created.
- **3.** Select a row in the Deployments page summary list (Figure 7-17) to view additional information about the selected deployment.
- **4.** The Deployment Summary page displays and shows the current status of the selected deployment as reported by all of the stores via Oracle Retail Xenvironment.

Figure 7–19 Deployment Summary Page

The information shown here is a collection of aggregate counts for all of the possible deployment statuses; such as the number of stores that have downloaded the manifest, the number of stores that have downloaded the deployment's files (successfully or in error), and the number of stores that have applied the deployment's files (successfully or in error). If needed, click **Refresh** at any time to update the page and see current changes.

Perform the following functions as needed:

- Approve Waves If approval is required before a Wave can begin, an authorized user must review and approve the Wave. See Approving a Wave.
- View store details This page also provides a link to a per-store list of status data (View Details By Store). See Viewing Detail By Store for more information.
- Stop or cancel a deployment

A Stop Deployment button on this page is available once the deployment is under way or as soon as the first wave's date is today. Stop Deployment will cancel the deployment before the next wave begins. See To Stop a Deployment.

A **Cancel Deployment** button on this page is only available if you are viewing a deployment before the deployment has started. Once the deployment is under way it cannot be cancelled. See **Cancelling Deployments** for more information about cancelling a deployment.

 Purge Files - If applicable, a Purge Files link is available to delete the files. See Purging Files.

| Field | Description | | |
|----------------------------|---|--|--|
| Deployment Plan | The name of the plan that used in this deployment, It will contain Single Wave if the Single Wave option was selected. | | |
| Status | The deployment status: Error, Complete, In process, Approval Required, Scheduled, Cancelled | | |
| Stores Targeted | The total number of stores targeted in all waves. | | |
| Manifests Downloaded | The number of stores that have downloaded the manifest. There will be one manifest per store. | | |
| Security Scope | The hierarchy node level of the deployment. | | |
| Create Date | The date the deployment was created. | | |
| Create User ID | The user who created this deployment. | | |
| Cancel Date | The date the deployment was cancelled. | | |
| | This field is only displayed if the deployment was stopped or cancelled. See Cancelling Deployments and To Stop a Deployment. | | |
| Cancel User ID | The user who cancelled the deployment. | | |
| | This field is only displayed if the deployment was stopped or cancelled. SeeCancelling Deployments and To Stop a Deployment. | | |
| View Details By Store link | Opens a window showing a per-store list of status data. See Viewing Detail By Store. | | |

| Wave # | The Wave number. | |
| Name | The Wave name. | |
| Date The launch date. | | |
| Launch TypeThe launch type; Approval Required or Automatic. | | |
| Approved? | For Automatic launch type, this does not apply. For Approval Required launch type, indicates whether or not the wave has been approved. See Approving a Wave for more information about approving a wave. | |
| # Stores Complete | The number of complete stores. | |
| Show Stores icon | Click the Show Stores icon to view detailed information about the files downloaded and files applied to the targeted stores for the Wave. | |

Viewing Detail By Store

The Detail by Store page is accessed from the Deployment Summary page and displays a per-store list of status data.

1. To view store details, click the View Details By Store link in the Deployment Summary page.

Important: By default, the initial page filter is set to show any errors. Use the filter selections to filter the records based on the status code values. If a value of 0 (zero) is associated with a status, the option to enable or disable it is not available since there are no records to filter.

Figure 7–20 Detail by Store Page - Targeted Store Detail - Success Filters

These status codes show each individual store's deployment statuses and are an aggregation of all the statuses across all the files defined in the deployment.

- Manifest Downloaded If the manifest was downloaded, the date and time will be shown in this column. If the manifest has not been downloaded, this column will show Not Reported.
- Files Downloaded If the file(s) were downloaded successfully, Success will be shown in this column. If the file(s) were downloaded with an error, Error will be shown in this column. If the file(s) have not been downloaded, Not Reported will be shown in this column. If multiple files are currently being downloaded and the files have different statuses at this moment, Incomplete will be shown in this column.
- Files Applied If the file(s) were applied successfully, Success will be shown in this column. If the file(s) were applied with an error, Error will be shown in this column. If the file(s) have not been applied, Not Reported will be shown in this column. If multiple files are currently being applied and the files have different statuses at this moment, Incomplete will be shown in this column.
- 2. Use the filters to view data as needed.
- 3. Select a row in the list to view additional information about a specific store.

Figure 7–21 Store Detail Window

Note: If an error is reported, detailed information about the error is provided in the Details section of the Store Detail window.

- **4.** If needed, use the **Previous** and **Next** buttons to view detail for other stores in the list.
- 5. Click the Close icon to close the window and return to the Detail by Store page.

Approving a Wave

For Approval Required waves, perform the following steps to approve a wave.

- **1.** At the Deployment Summary page (Figure 7–19), select the row of the Wave that needs to be approved.
- **2.** At the Wave Approval window, click the Approve link to change the approval status to approved.

Figure 7–22 Wave Approval Window - Approve Wave

| Wave 1 | |
|------------------------------|----------|
| Target Date 2018-07-25 | |
| Permission Approval Required | |
| Approved? No Approve? | |
| # Stores Complete 0 out of 1 | |
| | |
| | |
| | Previous |

3. Click **Save**. The Wave Approval Window closes and the system returns to the Deployment Summary page where the Wave now shows it has been approved.

Unapproving a Wave

Note: You cannot unapprove a Wave if the wave has started, for example, if the target date is today's date. Only a wave that has not started yet can be unapproved.

- **1.** At the Deployment Summary page (Figure 7–19), select the row of the Wave that needs to be unapproved.
- **2.** At the Wave Approval window, click the Unapprove link to change the approval status to unapproved.

Figure 7–23 Wave Approval Window - Unapprove Wave

| | | × |
|---|------------|------|
| Wave 1 | | |
| Target Date 2018-09-17 | | |
| Permission Approval Required | | |
| Approved? Yes Approved Default User 9/17/18, 10:52 AM | Unapprove? | |
| # Stores Complete 0 out of 1 | | |
| | | Save |
| | Previous | Next |

3. Click **Save**. The Wave Approval Window closes and the system returns to the Deployment Summary page where the Wave now shows it has not been approved.

Once a wave has been unapproved, the date can be changed and then the wave can be approved again.

Purging Files

Use this option to purge old deployment files from Xstore Office Cloud Service. This option is only available for Deployments that have a status of Complete or Cancelled.

1. At the Deployment Summary page, click the Purge Files link.

Figure 7–24 Deployment Summary Page

- **2.** When prompted, click **Yes** to confirm you want to delete the files from Xstore Office Cloud Service.
- **3.** Click **OK** to close the Successful Purge window and the Purge Status is updated to Success.

At the Deployments page, the status indicates the deployment file has been purged.

To Stop a Deployment

Follow the instructions in this section if you need to stop a deployment that is under way. The Stop Deployment process will cancel the deployment before the next wave begins.

Note: There is no way to determine where within a wave (for example, which store it is on) the deployment will be stopped. Once the **Stop Deployment** button is selected, the wave is stopped immediately and the remaining stores will not be updated.

Once a deployment has been stopped it cannot be restarted. It must be re-created to run again.

- From the Oracle Retail Xstore Office Cloud Service menu, select Deployment -View Deployments or click the View Deployments link in the Deployment Manager panel.
- **2.** At the Deployments page select the deployment you want to stop from the summary list of deployments.
- 3. At the Deployment Summary page, click **Stop Deployment**.

4. When prompted, select **Yes** to stop the deployment, and click **OK** when prompted to acknowledge the deployment has been stopped.

If you decide not to stop the deployment by clicking **No**, you are returned to the Deployment Summary page without making any changes.

Cancelling Deployments

Note: Once a deployment has been cancelled it cannot be restarted. It must be re-created to run again.

Follow the instructions in this section if you need to cancel a deployment(s). You can only cancel a deployment if no manifests have been downloaded, and all statuses are unreported.

- From the Oracle Retail Xstore Office Cloud Service menu, select Deployment -View Deployments or click the View Deployments link in the Deployment Manager panel.
- 2. At the Deployment Summary page, click Cancel Deployment(s).

Note: The **Cancel Deployment(s)** button will only be available if no manifests have been downloaded and all statuses are unreported for the deployment. Once the Deployment is under way, the **Stop Deployment** button will be available here. The Stop Deployment option cancels the deployment before the next wave begins.

- **3.** At the Deployments page select the deployment(s) you want to cancel from the summary list of deployments.
- 4. Select **Confirm Deployment(s)**. The selected deployments to cancel are displayed.
- 5. Review the list of selected deployments and select Submit.
- **6.** The date the deployment was cancelled and the user who cancelled the deployment are shown on the Deployment Summary page.

Automatic External File Delivery

The Automatic External File Delivery feature provides the ability to have any standard DataLoader files (.dat, .mnt, .reo, .rep) left by any external system in a file drop directory so the files can be deployed to stores.

Oracle Retail Xstore Office Cloud Service monitors a specific directory for files. This directory is configured in **[ON-PREMISES ONLY] System - Xadmin Settings - Directory for Automatically Deployed Data Files** (AutoFileTransferDirectory).

The interval at which the directory is checked is also configured in **System - Oracle Retail Xstore Office Cloud Service Settings - Detection Interval for Automatically Deployed Data Files** (AutoFileTransferSchedulerInterval). See Chapter 3, "System Management", Oracle Retail Xstore Office Cloud Service Configuration Options.

Any files placed in the auto directory, in the appropriate **org** directory, (/ filetransfer/auto/org\${organizationId}/) will be picked up and a deployment will be created for that file. No user intervention is required to move the files to the stores.

The order in which files are consumed by Oracle Retail Xstore Office Cloud Service is not guaranteed. If a specific ordering of records across multiple files is required, Oracle

recommends that those files be combined in a single file, in the appropriate order, before dropping them off in this directory.

Setting File Delivery Details

Each file must contain an XML header line that will dictate when and where the file is delivered.

```
<Header line_count="3" download_id="configurator::7::72::0" application_
date="2013-05-26" target_org_node="STORE:102" deployment_name="specified_name"
download_time="IMMEDIATE" apply_immediately="true" />
```

Line Count [optional]

The line_count attribute is used to indicate how many lines of data are in the file (not including the header). If it is not present, the DataLoader will not validate total line count when loading the file, but will still load the file.

Download ID

The download_id attribute is used to identify the download.

Application Date

The application_date attribute is used to determine the date on which the file will be deployed. If the application date attribute is not present, the date that the file is picked up will be used which means the file will be deployed on the same day.

Target Org Node

The target_org_node attribute is used to determine to what org node or store collection the file will be deployed. Its format is <org code>:<org value> (for example, STORE:102) or <CollectionName> (for example, My Collection). If the target org node attribute is not present, *:* will be used which means the file will be delivered to all stores in the organization.

Deployment Name

If the deployment_name field is populated, the value will be used as the name for the deployment, otherwise the auto-suggestion name will be used.

Download Time

The download_time attribute is used to indicate when the file will be downloaded. Possible values are IMMEDIATE and STORE_CLOSE.

If a deployment is scheduled for immediate download, Oracle Retail Xenvironment will begin to download the file immediately. If a deployment is scheduled for download during the daily maintenance, Oracle Retail Xenvironment will wait until the nightly closing process is initiated to begin downloading the file.

If download_time is not present, the deployment will be scheduled with STORE_CLOSE.

Apply Immediately

The apply_immediately attribute is used to indicate when the file will be applied. Possible values are true and false. If set to true, the file is loaded immediately. If set to false, the file is scheduled to be applied during the closing process.

If apply_immediately is not present, the deployment will be scheduled with false. See Appendix A, "Appendix: About Deployments" for more information.

Electronic Journal

The Electronic Journal component is used to view transactional data from the Xcenter (a part of Oracle Retail Xstore Office Cloud Service) database in a receipt format. The Oracle Retail Xstore Office Cloud Service Electronic Journal is similar to the Oracle Retail Xstore Point-of-Service POS Electronic Journal, and provides the ability to search for and review transactional activity within your store hierarchy. This application runs against the Xcenter database and provides visibility for transactions across all stores.

The search capabilities allow you to quickly locate any transaction across the chain. You can view the detail in a receipt format that mirrors the receipt generated at the store, including the customer's signature (if captured). This feature is commonly used for credit dispute (chargeback) resolution, as well as loss prevention investigation.

Additionally, you can reprint the invoices and reports that are associated to the current transaction through the Electronic Journal function.

About this Chapter

This chapter contains instructions on starting the Electronic Journal function and searching for transaction data.

Using the Xcenter Electronic Journal

 From the Oracle Retail Xstore Office Cloud Service menu, select Journal -Electronic Journal, or click the Electronic Journal link in the Reports panel.

The Electronic Journal page displays, showing the search parameters.

- **2.** Enter your search criteria to limit the amount of data returned. The following search parameters are available:
 - Org Node Enter a node ID or click the Globe icon to select a node from the hierarchy tree to restrict the search to a store (or stores) in the organization. [REQUIRED]
 - Register # Enter the identifier for a specific register or leave blank for all registers.
 - Customer Number Enter a customer's ID number to view information about a specific customer, or leave blank for all customers.
 - Customer Last Name Enter a customer's last name to search for and view information about a specific customer, or leave blank for all customers.
 - Credit Card Last 4 # Enter the last 4 digits of the credit card.

Note: Entry is restricted to only 4 digits.

- Tender Type Select a tender from the list to search for a specific type of tender, or accept the default value <ALL> to view information for all tenders.
- Transaction Type Select the type of transaction from the drop-down list; the default is Retail Sale. The value <ALL> allows you to search for all transaction types.
- Business Date Enter a start date and end date, accept the default, or click the calendar icon to choose the dates. The default is the previous 30 days.
- Transaction ID Enter a transaction identifier for a specific transaction, a range
 of transactions, or leave these fields blank to view information for all
 transactions. Enter the same transaction number in both fields to locate a
 specific transaction number.
- Cashier ID Enter the identifier for the ringing associate's ID, a range of ringing associate IDs, or leave blank for all associates.
- 3. Click the Search button to execute the search:
 - The information returned from the search shows the store ID, register ID, transaction ID, transaction type, transaction status, cashier ID, business date, customer name, and transaction total.
 - The first 200 results are displayed on the page. If the desired result is not listed, click Electronic Journal in the breadcrumb at the top of the page to return to the search parameters. Refine the search criteria and search again.
 - A sorting component is available for a column, when applicable.
 - If a single transaction matches the search criteria, only one row is returned.
- 4. Click a transaction in the list to view additional information.

Figure 8–1 Electronic Journal Viewer Page - Transaction List

5. If multiple receipt and report types exist for this transaction, select a receipt/report type from the list:

For example, if you selected a Store Close transaction and a Daily Report is attached to it, select Daily Report to view and reprint it.

Figure 8–2 Receipts and Report Type List

- 6. The selected receipt or report displays. Choose one of the following options.
 - Click the **Print** button to print a copy of this receipt or report.
 - Select a different receipt or report type from the list (Figure 8-2) to view a different receipt or report from this transaction.
 - Click the breadcrumbs to navigate to a previous page:
 - To return to the transaction list for this location, click the location breadcrumb (for example, STORE:101).
 - To return to the Ejournal search parameters, click the Electronic Journal breadcrumb.
 - To return to the Home page, click the Home breadcrumb.

Reports

The Reports component is used to run and view Oracle Retail Xstore Point-of-Service reports against the Xcenter (central) database.

Oracle Retail Xstore Office Cloud Service Reports provides a wide variety of reports to help you monitor and analyze a store's operations and sales. The reports are grouped by functionality, similar to their configuration in base Oracle Retail Xstore Point-of-Service POS reporting.

About this Chapter

This chapter contains the following sections:

- For information on starting the Reports function, see Accessing and Running Oracle Retail Xstore Office Cloud Service Reports.
- For a list of reports, see Available Reports By Category

Where To Look For More Information

A system configuration allows you to turn off and on any of the valid file format types available to be used when viewing/saving reports. You can also select the default format to be selected from the list of enabled file formats.

For instructions on specifying the report formats to be available to the user, see Chapter 3, "System Management", section Reports Category.

Accessing and Running Oracle Retail Xstore Office Cloud Service Reports

Note: Only reports the user has privileges to access (based on the user's role) will be available.

- 1. From the Oracle Retail Xstore Office Cloud Service menu select Reports -Reporting category option (Flash Sales Summary or All Reports), or from the Reports panel, click the Flash Sales Summary link or the Daily Sales & Cash Report link.
 - If you selected the All Reports link, use the report tree structure to select the specific report, then continue with step 2 below.
 - If you selected the Flash Sales Summary link or the Daily Sales & Cash Report link, the specific report parameters page displays. Continue with step 2 below.

- If you selected the Electronic Journal link in the Reports panel, refer to Chapter 8, "Electronic Journal" for more information.
- 2. Enter the report parameters to be used to run the report.

Note: The report parameters are the same options that are available when running the identical report within Oracle Retail Xstore Point-of-Service POS, and are specific to each report.

Refer to the *Oracle Retail Xstore Point-of-Service Reports Guide* for detailed information about the standard reports available in Oracle Retail Xstore Office Cloud Service.

3. In addition to the reporting parameters, specify an output type:

Note: The output types available here are configured in Oracle Retail Xstore Office Cloud Service Settings. See Chapter 3, "System Management", Reports Category.

- PDF Portable Document Format
- HTML HyperText Markup Language (The predominant markup language for web pages.)
- XLS MS Excel
- XLSX MS Excel 2007 or newer
- PPTX MS PowerPoint
- RTF Rich Text Format
- DOCX MS Word

Note: Known Firefox Limitations

XLSX, PPTX, and DOCX output types may not open properly in FireFox. The work-around for this is as follows:

- Right-click on the Click To Download Report link.
- Select **save as...** and save the report to the local file system.
- Open the report outside of the browser.
- **4.** Click **Run Report** to create the report. The report will be displayed in the format you selected, or you may need to click the Download link () when applicable.

Dashboard

Use the dashboard report to view sale data for individual stores. The dashboard shows enterprise data for a single store, as a static page. If you want to refresh the data, you need to re-run the report.

The header displays the store number, the store name as well as the current business date.

The following data is displayed for the selected store:

- Total Sales (Gross Sales, Net Sales, Returns, Discounts, Total Tax)
- Sales by Department (top 10)
- Sales by Hour
- Number of Items (by hour)
- Number of Transactions (by hour)

To create the Dashboard report follow the steps below:

1. In the Oracle Retail Xstore Office Cloud Service, select **Reports** and then select **Dashboard**.

10 Support Tools

The Support Tools component allows you to view issues taking place at the store level, and to set up email alerts to be sent to the appropriate personnel when any issues occur.

The Alert Console shows logged events for replication errors, connectivity errors, application errors, hardware errors, update errors, and version errors. Using Alert Settings it is also possible to customize the alert severity threshold level values for your organization, providing the ability to set your organization's tolerance levels for the various alert events.

The Deployed Xstore Versions support tool allows you to view the Oracle Retail Xstore Point of Service versions deployed throughout your organization, in a pie chart view.

You can quickly see the number of stores running each version of Oracle Retail Xstore Point-of-Service, and to get additional store-level information.

The Publish PosLog Data support tool provides the ability to compile the PosLog data from within Xcenter (a part of Oracle Retail Xstore Office Cloud Service) and save it as a file to a specified location, or to rebroadcast the PosLog data to specified broadcasters in order to post to a 3rd party system (Oracle Retail Customer Engagement Cloud Services, Oracle Retail Order Management System Cloud Service, and so on) through platform independent technologies such as Web services.

This allows you to manage this information centrally, without having to connect remotely to stores.

The Replication Status support tool provides the ability to view and act on replication errors. Replication is the process used to copy and distribute data from one database to another, and to synchronize between the databases to maintain consistency.

About this Chapter

- The Alert Console feature allows corporate users to view an Alerts console showing logged events for replication errors, connectivity errors, application errors, hardware errors, update errors, and version errors. See About Alerts.
 - Replication describes the logged events for replication errors.
 - Connectivity describes the logged events for connectivity errors.
 - Application describes the logged events for application errors.
 - Hardware describes the logged events for hardware errors.
 - Updates describes the logged events for update errors.
 - Versioning describes the logged events for version errors

- The Alert Settings feature provides the ability to set up an email notification list to be used when critical alerts occur, and provides the ability to modify and customize the alert severity threshold values for your organization. For information about the Alert Settings feature, see Alert Settings.
- The Deployed Xstore Versions feature shows Oracle Retail Xstore Point-of-Service version information by store in a pie chart format. For information about the Deployed Oracle Retail Xstore Point-of-Service Versions, see Deployed Oracle Retail Xstore Point-of-Service Versions.
- The Publish PosLog Data feature provides the ability to publish transaction and related files from Xcenter as an alternative to polling existing files from the store. For information about publishing a PosLog, see PosLog Publisher
- The Replication Status feature provides the ability to view and act on replication errors reported here. For information about the Replication Status feature, see Replication Status.

Alert Console

The Alert Console feature allows corporate users to view an Alert page showing logged events for replication errors, connectivity errors, application errors, hardware errors, update errors, and version errors.

If you set up email alerts (see To Set Up Critical Alert Email Recipient Addresses), an email with critical alerts details will be sent to the designated recipients. To define severity-level thresholds, see Alert Threshold Settings.

You must have the Alert Console privilege to use this feature.

- 1. From the Oracle Retail Xstore Office Cloud Service menu, select **Support Tools - Alert Console**, or click the Alert Console link in the Support Tools panel.
- **2.** The initial Alert Console page provides summary-level information at a glance about any issues at the stores in your organization requiring your attention.

The system defaults to the current date and shows the date and time the Alerts Console was last updated.

Figure 10–1 Alert Console Page - Business Date Field

To review alerts from previous dates:

- enter the date in the Date field, or select a date from the calendar,
- or use the **Previous Day** and **Next** option.

About Alerts

A background process is responsible for reviewing events published to Xcenter (a part of Oracle Retail Xstore Office Cloud Service) and determining whether to create a new alert, or update an existing alert based on currently configured severity thresholds and rules.

If there are any alerts, the console window will show the following information:

- The severity of the event: Critical, High, Medium, Low.
- The time the event was logged.
- The store where the event occurred.
- The type of event.
- The number (#) of times the event occurred.

Replication Logged Events

- Xcenter persistence failure: A replication request was delivered to Xcenter but could not be persisted to the Xcenter DB. As a result, a record was written to the rpl_replication_data table. Information returned includes replication payload and meta data. (Xcenter)
- Xcenter replication crash: These errors are event Log error codes reported by the replication system. (Repl Crash)
- Xstore replication queue errors: An error failure occurred during replication. As a result, records are still in the register's replication queue. Information returned includes replication payload and meta data. (RepQ Process)
- Xstore replication backlog: There are more than "X" records in the replication queue that have not been tried, indicating a backlog or potential mis-configuration. Information returned includes replication payload and meta data. (RepQ Block)
- Xstore replication queue read errors: An error occurred when pulling data from the local replication queue. (RepQ Read)

Connectivity

Click a logged event in the list to view additional details.

Figure 10–4 Connectivity Logged Events Detail

Connectivity Logged Events

 Data source offline: A ping failure or data access error occurred. As a result the data source will not be used. Information returned includes datasource name, scope (WAN/LAN), and cause. (DB Offline)

- Payment system offline: A payment systems host (Xpay) could not be reached. Information returned includes the message, stack trace, and destination IP/Host. (Xpay Offline)
- Order broker service offline: The order broker host (Oracle Retail Order Broker Cloud Service) could not be reached. Information returned includes the message, stack trace, and destination IP/Host. (Oracle Retail Order Broker Cloud Service Offline)
- Order broker service error: An error occurred during the order update process. Information returned includes message and stack trace. (Oracle Retail Order Broker Cloud Service Error)
- Service error: An error occurred while calling a web service. Information returned includes message, stack trace, and destination IP/Host. (Service Offline)
- Event log reporting error: An error occurred with the end-point Oracle Retail Xenvironment uses to report event log errors to Xcenter/Oracle Retail Xstore Office. (Evtlog Error)

Note: Oracle Retail Xenvironment uses this end-point to communicate any problems directly to Xcenter.

 Xstore register offline: A register (Xcenter client) has not sent a status update in "X" minutes. Information returned includes Store # and Reg #.

About Xcenter Register Offline Alert Data

Xcenter register offline alert data is sourced from the ctl_event_log table as noted above, and also has a technical relationship to the ctl_device_registration table.

There is a process that runs in Oracle Retail Xstore Office Cloud Service which periodically observes the ctl_device_registration table. It notices when registers stop checking-in within certain configurable time limits. When the process notices a register has failed to check in, it adds a record to Xcenter's ctl_event_log (which then gets reported as an alert just like all the other alerts).

The process that observes ctl_device_registration can be configured as follows:

- Interval for Checking for Missing Registers controls how frequently the process inspects ctl_device_registration for missing registers. Default is 15 (minutes).
- Time Before Register Is Considered Missing- how much time must elapse since a device last checked in before it is considered missing. Default is 61 (minutes).
- Time Before Missing Register Is Ignored once a device has been missing for the amount of time specified here, it is no longer reported as a problem. Default is 72 (hours, aka 3 days).
- See also Chapter 3, "System Management" for more information about Oracle Retail Xstore Office Cloud Service Configuration.

Application

Click a logged event in the list to view additional details.

Application Logged Events

Da

- Pre-flight error: (Data, ciphers, SSL, and so on) A pre-flight error or errors occurred during application startup. All errors are included in this single message. Information returned includes pre-flight error names and descriptions. (Pre-Flight)
- SSL expiration check: An SSL certification used for communication with Xcenter or Xpay is nearing, or has reached, its expiration date. Information returned includes a message. (SSL Cert)
- Out of memory error: The JVM ran out of memory, terminating the application. Information returned includes stack trace. (Crash)
- Helpdesk error: An unexpected error (helpdesk error) occurred. Information returned includes stack trace. (Helpdesk)
- Missed Close: A store close was missed. (Missed Closing)
- Restart: A mid-day restart was performed. (Restart)
- Xenvironment Task: Error message from Oracle Retail Xenvironment related to atoms and chains. (Xenv Task)
- Xenvironment Database: Error message from Oracle Retail Xenvironment related to database backups/restores. (Xenv DB)
- Xenvironment IPC: Error message from Oracle Retail Xenvironment for IPC errors with the IPC server. For example, when the SSL certificate is nearing expiration. (Xenv IPC)

Figure 10–8 Versioning Logged Events Details

Versioning Logged Events

- In store version conflict for Xstore: A single retail location has multiple versions of the Oracle Retail Xstore Point-of-Service application running at the same time. Information returned includes versions by register. (Xstore Conflict)
- In store version conflict for Xenvironment: A single retail location has multiple versions of Oracle Retail Xenvironment running at the same time. Information returned includes versions by register. (Xenv Conflict)
- In store version conflict for Oracle Retail Xstore Office Cloud Service configs: A single retail location has multiple versions of configs running at the same time. Information returned includes versions by register. (Config Conflict)

Alert Settings

The Alert Settings feature provides the ability to set up an email notification list to be used when critical alerts occur. Email recipients will receive an email that lists each active alert in which an event has occurred since the last email, without logging into Oracle Retail Xstore Office Cloud Service.

This feature also provides the ability to modify and customize the alert severity threshold level values for your organization. This provides the ability to set your organization's tolerance levels for the various alert events.

- **1.** From the Oracle Retail Xstore Office Cloud Service menu, select **Support Tools** and then **Alert Settings**.
- **2.** The Alert Settings page has two options, Critical Alert Email Settings and Threshold Settings

Figure 10–9 Alert Settings Page

| Journal | Reports | 🖌 Config Manager | r Data Management | C Deployment | Support Tools | System Management |
|-----------------|---------------------------------------|---|-----------------------|--------------|---------------|-------------------|
| Home ► Alert Se | ttings | | | | | |
| Select one of | the following op | otions. | | | | |
| | I Alert Email | Settings asses to be notified when o | ritical alerts occur. | | | |
| | nold Settings ou to modify alert s | severity threshold values. | | | | |

- To set up recipients for critical alert emails, see Critical Alert Email Settings below.
- To set up alert threshold settings, see Alert Threshold Settings.

Critical Alert Email Settings

Use this feature to define a list of email addresses to be notified when critical alerts occur. When set up, an email will automatically be sent to the specified recipients, without requiring logging in to Oracle Retail Xstore Office Cloud Service. The critical alert email will include all alerts that have gone critical since the previous polling interval. (The polling interval is once per minute).

Note: A unique alert (alertable event type/store) will be reported no more than one time in a single business day.

The email content includes the alert, alert type, store #, timestamp, and detail for the last critical alert. A critical alert email can contain one or more alerts.

Figure 10–10 Critical Alert Email Example

- 1. Subject Email subject line
- **2.** Event Timestamp Timestamp of when the precipitating event occurred Alert Name Name of the alertable event type
- **3.** Event Count Number of events that have occurred

Rtl Loc Id - Retail Location Id of the event

4. Event Details - A description of the event

To Set Up Critical Alert Email Recipient Addresses

Perform the following steps to set up critical email alerts.

- From the Oracle Retail Xstore Office Cloud Service menu, select Support Tools -Alert Settings.
- 2. At the Alert Settings page, click Critical Alert Email Settings.
- 3. Click the Add New link to define a new email address.

| | hold Settings | severity threshold values. | | | | |

4. When prompted, enter the recipient's email address and click Save.

The email address is displayed on the screen and persisted to the database.

Note: To delete an email address, click the Delete link next to the email address you want to remove.

See Alert Console for more information about critical alerts.

Alert Threshold Settings

Use the Thresholds Settings feature to manage system-wide alert threshold settings in your organization.

To Define Alert Threshold Settings

Perform the following steps to define the threshold settings for alerts.

- From the Oracle Retail Xstore Office Cloud Service menu, select Support Tools -Alert Settings.
- 2. At the Alert Settings page, click Thresholds Settings.

Figure 10–12 Alert Preferences Screen

3. The alert preferences screen shows all alert types and their current thresholds. Edit the values as needed and click **Save**.

About Alert Severity Threshold Levels

Alert type severity threshold levels include Medium, High, and Critical options.
 See Alert Console for more information about the alert types.

Note: There is no column for LOW threshold because Low is always considered to be 0. If there is even one alertable event, the severity must at least be considered Low.

- When setting the alert severity threshold values, the relative magnitude values between alert levels must be respected, (that is Critical level cannot be lower than High level).
- To see the alert type description, use the mouse to hover over the alert type label.
- When an alert type value is changed, a web service call sends the alert value to the cfg_alert_severity_threshold table.
- Changes to a critical alert threshold are not retroactive.

For example, consider the scenario where there have been 10 "register offline" events, and the critical alert threshold for "register offline" is 20. If the critical alert threshold is changed to 5, a critical alert email will not be sent until the next "register offline" event occurs (#11). So in this scenario, when the 11th "register offline" event occurs, a critical email will be sent.

• A system-wide configuration parameter defines the start of a business day in hours past GMT 00:00. See Chapter 3, "System Management", Oracle Retail Xstore

Office Cloud Service Configuration Options for more information about this configuration option.

Support Settings: Technical Information

This section deals with support settings.

xcenter.properties

| Setting | Valid Values | Description |
|--|--------------|--|
| dtv.xadmin.smtp.h ost | String | The email host name. |
| dtv.xadmin.smtp.p ort | Integer | The email port name. |
| dtv.xadmin.smtp.a uth | Boolean | If true,Oracle Retail Xstore Point of Service will make secure SMTP connections (smtps) for email operations. This usually requires a user name and password (DefaultMailUser & DefaultMailPassword). If false, Oracle Retail Xstore Point of Service will use unsecured SMTP connections (smtp) for email operations, and username and password will be ignored. |
| dtv.xadmin.smtp.u ser | String | Username to use if making secure SMTP connections. |
| dtv.xadmin.smtp.p assword | String | Password to use if making secure SMTP connections. |
| dtv.xadmin.smtp.se nder | String | The email sender. |
| dtv.xadmin.suppor t.criticalAl ertEmails.enabled | Boolean | True or false. |

Deployed Oracle Retail Xstore Point-of-Service Versions

The Deployed Xstore Versions feature shows Oracle Retail Xstore Point of Service version information by store in a pie chart format. The store's primary register is responsible for reporting the version of the store to Oracle Retail Xstore Office Cloud Service (ctl_device_registration. primary_register_flag = True). The size of each section of the chart is proportional to the corresponding number of stores running the Oracle Retail Xstore Point-of-Service version.

Note: Due to rounding, the totals shown on the Version Information charts may not add up to 100%.

You must have the Deployed Xstore Versions privilege to use this feature.

- From the Oracle Retail Xstore Office Cloud Service menu, select Support Tools -Deployed Xstore Versions, or click the Deployed Xstore Versions link in the Support Tools panel.
- **2.** The Deployed Xstore Versions by Store page displays.

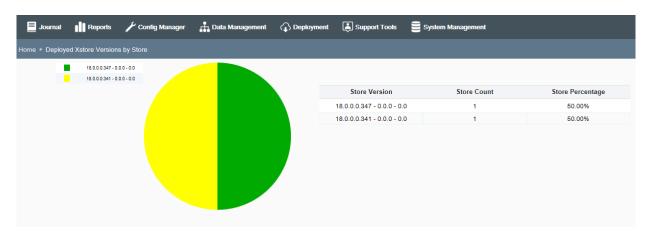

Figure 10–13 Deployed Oracle Retail Xstore Point of Service Versions by Store Page

This chart shows the Oracle Retail Xstore Point-of-Service versions currently running in the stores in your organization.

- Each Oracle Retail Xstore Point-of-Service version is shown as a color-coded section of the chart.
- The key to the right of the chart indicates the Oracle Retail Xstore Point-of-Service versions included on the chart, and which color represents each version.
- The percentage of stores in your organization running each version of Oracle Retail Xstore Point of Service is shown below the version number.
- The most-recent Oracle Retail Xstore Point-of-Service version is shown in the green section of chart, located on the right side of the chart. (Version 7.0.0.296 -0.0.0 0.0 in this example).
- Using the mouse, hover over a section of the chart to display the Oracle Retail Xstore Point-of-Service version and percentage of stores running the version compared to all stores.
- To view additional detail, select a section of the chart and click on it. See Oracle Retail Xstore Point-of-Service Version by Store Detail below.

Oracle Retail Xstore Point-of-Service Version by Store Detail

The detailed information available by clicking on a section of the chart shows the Store Name, Retail Location ID, Phone Number, and Address.

Figure 10–14 Oracle Retail Xstore Point-of-Service Version by Store Detail

- Use the Up and Down arrows to view detail about the chart section above and below the currently selected section.
- To close the Detail window, click the **Close** button.
- If needed, a scroll bar is provided on the right side of the window.

PosLog Publisher

The PosLog Publisher feature provides the ability to compile the PosLog data from within Oracle Retail Xstore Office Cloud Service and save it as a file to a specified location. This allows you to manage this information centrally, without having to connect remotely to stores. Xcenter data can be generated for an org node, store, or only specific registers within a store, for a specific date range.

- From the Oracle Retail Xstore Office Cloud Service menu, select Support Tools -Publish PosLog Data, or click the Publish PosLog Data link in the Support Tools panel.
- **2.** At the PosLog Search page, enter search criteria to find the PosLog data, then click **Search**.

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | C Deployment | Support Tools | System Management | |

PosLog Publisher Search Results Page Layout Examples

The PosLog Publisher Search Results Page page layout will vary depending on the Oracle Retail Xstore Office Cloud Service configuration setup for PosLog Publisher. The following examples show the different page layouts based on the following configuration settings:

- Number of Records in POSLog Publisher Result Page = 100
- POSLog Publish Max Search Results =5000

Example 1: Trans Count < 100, Search Results < 5000

You will see these results since the transaction count of 89 is less than 100. In this example, both the number of records shown per page (up to 100) and the maximum search results limit (up to 5000) have not been reached.

Figure 10–23 Example 1 - Trans Count < 100, Search Results < 5000

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | Deployment | Support Tools | System Management | |
|--------------------------------|------------------|------------------|-------------------|------------|---------------|-------------------|---------------------|
| Home ► POSLC | og Search ► Sear | ch Results | | | | | |
| Org Node Date Trans Coun | Sep 14, 2018 | Го Sep 14, 2018 | | | | | Publish All Publish |

Example 2: Trans Count > 100, Search Results < 5000

In this scenario you will have the option to View More Poslogs since the transaction count exceeds the limit of 100 records shown per page, but is less than the maximum search results limit of 5000.

| Journal | Reports | 🖌 Config Manager | 🕂 Data Management | Deployment | Support Tools | System Management |
|---------------------------------|------------------|------------------|-------------------|------------|---------------|---|
| Home ▶ POSLo | g Search ▶ Searc | ch Results | | | | |
| Org Node Date Trans Count | Sep 14, 2018 | Го Sep 17, 2018 | | | | View More POSLogs: Store 7, Reg 1, Trans 4482 (Sep 13, 2018) V Publish All Publish |

Example 3: Trans Count > 100, Search Results > 5000

In this scenario you will have the option to View More Poslogs since the transaction count exceeds the limit of 100 records shown per page. Also, a message displays

indicating the maximum search results limit of 5000 has been exceeded. If the desired result is not listed in the View More PosLogs drop-down list, you must refine your search criteria and search again.

- **3.** To search for replication failures based store IDs and/or last update date, complete the following fields as needed:
 - Store # Enter/select the store number.

If specified, the application only accepts valid store number inputs. A validation error will display if the specified store number is invalid.

 Update Date - From the drop-down list, select Before, After, or Equal to, then select or enter a date. The update date criterion will be ignored if the input is not valid. Future dates are considered invalid.

4. Click Refresh.

The records in the data table are sorted by update date (the last modified date) by default. To reorder the list, click on a column header.

- 5. With a record displayed you have the following options:
 - **Delete** Select the check box associated with the record (or records) and click the **Delete** button to delete the selected replication error. When prompted, click **Yes** to confirm you want to delete the record. Click **OK** to close the confirmation box.
 - Reprocess Select the check box associated with the record (or records) and click the Reprocess button to reprocess the replication error record(s). When prompted, click Yes to confirm you want to reprocess the record(s). Click OK to close the confirmation box.

Note: To select all records at once, click the check box in the table header.

View - Click a record to view the detail information about the selected record.

The following information is shown in the Record Detail window:

 Reprocess Information - (Populated when applicable) This section shows the ID of the user who reprocessed the record, the last reprocess date and time, and the total number of reprocess attempts.

- Payload This section shows the entire contents of the replication data sent by an Oracle Retail Xstore Point-of-Service register.
- Error Detail This section shows the technical details (like a java stack trace) of the error.

Note: See the *Oracle Retail Xstore Suite Implementation and Security Guide* for more information about replication.

_

A

Appendix: About Deployments

This chapter explains how deployments are created and tracked by Oracle Retail Xstore Office Cloud Service and applied by Oracle Retail Xstore Point of Service and Oracle Retail Xenvironment.

To allow corporate users to easily maintain store systems, Oracle Retail Xstore Office Cloud Service provides the ability to deploy changes directly to retail locations or sets of retail locations. A deployment consists of a file, or set of files, and information dictating how and when it will be processed. Deployments may include Dataloader download files, configuration jar files, debit bin files, encryption cipher files, or update jar files. See Chapter, "Glossary" for additional details about these types of files.

In this appendix, the file, or files, that will be deployed are referred to as deployment files. In addition to these deployment files, a deployment includes information that allows for precise distribution to the desired target group. This information includes the locations within the hierarchy that will receive the deployment, the date upon which they will be notified of its availability, when they should begin to download it, and when they should apply it.

Application Roles

This section describes application roles.

Oracle Retail Xstore Office Cloud Service

Oracle Retail Xstore Office Cloud Service provides an interface for creating deployments. The Configuration Manager and Data Management features are used to create configuration and data changes, and can also be used to upload files of supported types to be included in deployments. Functionality for automatically creating deployments for files that are placed in a location on the file system using header information to determine the target group and target application date is also provided.

Whenever a deployment is created, Oracle Retail Xstore Office Cloud Service is responsible for saving the deployment details in the form of a manifest and making the deployment files available to be downloaded by the registers. Once a deployment is created, its status can be monitored in real-time using Oracle Retail Xstore Office Cloud Service's Deployment Viewer feature.

Xcenter (a part of Oracle Retail Xstore Office Cloud Service)

Xcenter assumes two critical roles in the deployment process: responsibility for communicating deployments to stores, and responsibility for accepting status-related feedback pertaining to those deployments.

When a store queries for any available deployments, Xcenter assembles a package that includes deployment manifests for deployments that have not yet been acknowledged as having been received.

It also receives and stores status feedback from the store systems when the manifest for a deployment has been received successfully, when a deployment has been downloaded, and when a deployment has been applied.

Oracle Retail Xstore Point of Service

The downloaded deployments from Oracle Retail Xenvironment are applied to Oracle Retail Xstore Point of Service.

Oracle Retail Xenvironment

Oracle Retail Xenvironment is responsible for querying Xcenter for new deployments and then downloading and applying deployments. It is responsible for forwarding the details of the deployment to the Oracle Retail Xenvironment lead, retaining the details pertaining to it, downloading any necessary deployment files, and properly applying those files. It also reports the status of each of those steps back to Xcenter so that the status of each deployment can be tracked in real-time from Oracle Retail Xstore Office Cloud Service.

DataLoader

DataLoader is responsible for applying any Configuration Manager changes that impact the database, and any other DataLoader download files that have been deployed to stores. It translates data changes from delimited text to database table data.

Note: When you make changes in Data Manager and deploy them, they automatically update the Xcenter database. There is no DataLoader file created and no DataLoader processing necessary. The Xcenter database is updated directly. If anything fails, it can be found in the Xcenter or Oracle Retail Xstore Office Cloud Service log file.

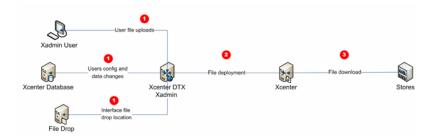

Overview: How Files Are Managed

Oracle Retail Xstore Office Cloud Service's file management capabilities can be used to transfer files to and from the store and corporate environments. Xcenter file management transfers only files required by the Oracle Retail Xstore Suite.

The file management capabilities in Xcenter leverage the REST APIs for file downloading and posting.

File Download to Stores

Figure A–1 File Download to Stores

- Multiple incoming channels are used to target file deliveries to stores: file uploads and configuration changes made through the Oracle Retail Xstore Office Cloud Service UI and files dropped by external systems.
- Oracle Retail Xenvironment retrieves deployments during closing and on a scheduled interval throughout the day. A back office menu option within Oracle Retail Xstore Point of Service can also be used to check for updates.
- Feedback on deployments is published to Xcenter and can be reviewed in Oracle Retail Xstore Office Cloud Service.

File Upload from Stores

Figure A–2 File Upload from Stores

- Oracle Retail Xenvironment collects logs from in-store systems (pospoll.zip) and uploads to Xcenter.
- The files are left in a configurable directory location.
- A customer-specific script can be written to retrieve files from Xcenter in order to move files to their next destination. That process is not provided as part of the Oracle Retail Xstore Suite.

Overview: About The Deployment Manifest

The deployment manifest is an XML-encoded representation of the deployment file and contains instructions Oracle Retail Xenvironment uses for handling the deployment files. The manifest contains no configuration information itself, and is simply a set of instructions to be used by Oracle Retail Xenvironment.

Sample Deployment Manifest

```
<?xml version="1.0" encoding="UTF-8"?>
<deploymentManifest xmlns:xsi="http://www.w3.org/2001/ XMLSchema-instance"
xsi:noNamespaceSchemaLocation="DeploymentManifest.xsd">
<deployment-id>12345</deployment-id>
```

```
<deployment-manifest-version>1</deployment-manifest- version>
<updates>
<update>
<relative-url>/path-to-file</relative-url>
<type>APPUPD</type>
<download-priority>IMMEDIATE</download-priority>
<apply-priority>STORE_CLOSE</apply-priority>
<file-hash>asdadadasdasd</file-hash>
</update>
<update>
<relative-url>/path2</relative-url>
<type>DEBITBIN</type>
<download-priority>IMMEDIATE</download-priority>
<apply-priority>IMMEDIATE</apply-priority>
<file-hash>hashhash</file-hash>
</update>
</updates>
</deploymentManifest>
```

deployment-id - The numeric deployment ID from Xcenter. May be included twice:

- Once on the manifest (generated by Oracle Retail Xstore Office Cloud Service)
- And once [OPTIONAL] on each update

deployment-manifest-version - The version of the deployment manifest.

updates

- relative-url The relative path to download the update from. The path is relative to the URL specified in configuration.
- type Enumeration values include: CONFIG, APPUPD, DATA, COMPRESSED_ DATA, CIP, and DEBITBIN.
- download-priority STORE_CLOSE = Download during the close, IMMEDIATE
 = Download immediately.
- apply-priority STORE_CLOSE = Wait until the store close to apply, IMMEDIATE = apply immediately
- file-hash The MD5 hash of the file being downloaded.
- If Oracle Retail Xenvironment receives configs/manifests on a nonlead, they will be forwarded to the lead.
- If Oracle Retail Xenvironment receives a manifest during the close.
- Oracle Retail Xenvironment will not attempt to process IMMEDIATE deployments while a close is in progress. They will be processed after the close has completed.
- The manifest data will be saved to disk.
- The IMMEDIATE deployments will be processed sometime after the close has completed.
- The STORE_CLOSE deployments will be processed during that close if the manifest is sent before that point in the close, otherwise they will wait until the next close.
- A RSS feed named immediate is used for the immediate deployments.

Examples: Deployment Scenarios

This section describes different deployment scenarios.

Deploying an Uploaded File

- **1.** A file of a supported type is uploaded via the Oracle Retail Xstore Office Cloud Service File Upload feature.
 - Supported files include Dataloader download files, configuration jar files, debit bin files, encryption cipher files, and update jar files.
 - The file is stored on the Oracle Retail Xstore Office Cloud Service server so that it can be deployed.
- 2. A file is deployed using the deployment functionality in the File Upload feature.
 - A deployment manifest is created and stored.
 - The file is made available for download.
- **3.** The deployment is downloaded and applied at each applicable store. See How a Deployment is Downloaded and Appliedfor more details.

Deploying a Data Manager Change

- **1.** A data change, or set of data changes, is made within Oracle Retail Xstore Office Cloud Service's Data Manager feature.
- **2.** The deployment function within the Data Manager feature is used to schedule a deployment of the session.
 - A deployment manifest is created and stored.
 - An update zip file containing a Dataloader download file with the changes made in the Data Manager session is created and made available for download.
- **3.** The deployment is downloaded and applied at each applicable store. See How a Deployment is Downloaded and Applied for more details.

Deploying a Configuration Manager Change

- **1.** A configuration change is made in Oracle Retail Xstore Office Cloud Service's Configuration Manager feature.
 - Changes can be made at a Global Profile level, at a more granular Profile Group/Profile Element level, or at a Store-Specific level.
- **2.** A deployment of the configurations is scheduled via the Configuration Manager.
 - The configuration change is versioned. See Version Tracking of Deployments.
 - A deployment manifest is created and stored.
 - If XML configuration changes are included, they will be transmitted in the form of a jar file containing all XML configuration changes for all profiles.

If data configuration changes are included, they will be transmitted in the form of a DataLoader download file including data changes for the target profile.

3. The deployment is downloaded and applied at each applicable store. See How a Deployment is Downloaded and Applied for more details.

4. The Master Profile (Global) and any assigned Profile Group/Profile Element details are represented on the store system as configuration path entries (for example, Profile Group: COUNTRY/Profile Element: CANADA would be represented as :COUNTRY/CANADA), and determine which of the configurations in the configuration jar apply to the location.

Deploying a File Automatically

- 1. A Dataloader download file, including header details that describe the deployment target area and deployment date, is placed in an automatic deployment location on the Oracle Retail Xstore Office Cloud Service server.
- **2.** Oracle Retail Xstore Office Cloud Service automatically detects the presence of the file and creates a deployment for it, using the provided target details to target the appropriate systems on the appropriate date.
 - A deployment manifest is created and stored.
- **3.** The deployment is downloaded and applied at each applicable store. See How a Deployment is Downloaded and Applied for more details.

Version Tracking of Deployments

Oracle Retail Xstore Office Cloud Service creates and tracks version numbers for each set of configurations that are deployed at the Master Profile (Global) level, at a more granular Profile Group/Profile Element level, or at a Store-Specific level.

- 1. When a configuration change is saved to a profile (this could be Master/Default, a specific profile element, or a store-specific profile), a version number is assigned to the change.
 - **a.** Version numbers start at 1 and increment by 1. 1 is the first version for a profile element, 2 is the second version, and so on.
 - **b.** Additional changes made to the same profile will continue to accumulate with the same version number until deployment for the profile is scheduled.
- **2.** When deployment for a profile is scheduled, the current profile version is "locked" to ensure that no new changes can be made to the version.
- **3.** After a profile version is locked, new changes made to the profile will use a new version number. If version 3 of a profile was locked, new changes will be assigned to version 4 up until the point where deployment for profile version 4 is scheduled.

How a Deployment is Downloaded and Applied

- **1.** Oracle Retail Xenvironment queries Xcenter for any open deployments at a fixed interval.
- **2.** When Oracle Retail Xenvironment receives deployment details, it processes them in an appropriate manner.
 - An update message is sent to Xcenter to indicate that each manifest has been successfully received.
 - Connectivity details are stored so they can be used to download deployed files.
- **3.** Oracle Retail Xenvironment stores each deployment either for immediate download or download during the closing process.

- If a deployment is scheduled for immediate download, Oracle Retail Xenvironment will begin to download the file immediately.
- If a deployment is scheduled for download during the close, Oracle Retail Xenvironment will wait until the nightly closing process is initiated to begin downloading the file.
- **4.** Oracle Retail Xenvironment applies each downloaded deployment at the appropriate time.
 - If a deployment is scheduled to be applied immediately (applies to MNT files, DAT files, and application updates only), Oracle Retail Xenvironment executes the jar. (DataLoader is not used to apply immediate application updates).

Note: Oracle Retail Xenvironment will stop Oracle Retail Xstore Point of Service before applying an immediate application update, but it the responsibility of the code within the jar file to restart Oracle Retail Xstore Point of Service, not Oracle Retail Xenvironment.

- If a deployment is scheduled to be applied during the closing process, it will be handled properly during that process.
 - Dataloader download files are applied via the Dataloader on the lead Oracle Retail Xenvironment register.

If the download data was provided by any feature other than the Configuration Manager, it is loaded into the DB.

If the download data was provided by the Configuration Manager, it is loaded into the DB only if the system's configuration path includes the associated profile.

- Update jar files are applied by distributing them to each system and executing them.
- Encryption cipher files are applied by distributing them to each system.
- Debit bin files are applied by distributing them to each system.
- Configuration Manager jar files are applied by distributing them to each system.

Deployment: Basic Troubleshooting

This section describes basic deployment troubleshooting scenarios.

Deployments downloaded and applied by xenvironment, no status information appears in xstore office

When Oracle Retail Xenvironment is unable to transmit status information to Xcenter, the cause is typically related to the DataSourceConfig file's Xcenter DataSource not including a GetUpdates context path. Confirm that this path is present and accurate, and add it if it is missing.

Appendix: Personality Maintenance and Config Paths

This appendix explains how the store personalities set up in Oracle Retail Xstore Office Cloud Service are used to create the config path properties. See Chapter 4, "Profile Management" for more information about setting up store personalities.

Config Path Retrieval Process

An empty configPath.properties file is part of the POS overlay and can be found in xstore/configPath.properties after the installation. When Xenvironment is started for the first time after Xstore Point of Service is installed, the configPath.properties file is copied to environment/res/data/configPath.properties.

When Xenvironment is used to start Xstore POS or Xstore Mobile (including during Xenvironment startup), Xenvironment will contact Xcenter to check for any updates to the config path settings. If any changes are found, the file in environment/res/data will be updated. Xenvironment will update copies of the file in xstore/configPath.properties and xstore-mobile/configPath.properties. Before retrieving updates, Xenvironment will read the values of xstore.location.mobile.workstationId.range.start and xstore-mobile/system_mobile.properties. This range will be forwarded to Xcenter to retrieve settings for mobile registers in addition to the current register.

Retrieving updates to configPath.properties from Xcenter is enabled by default. To disable the feature, the following setting can be added to the Xenvironment overlay in version1/actions.properties:

chain.RETRIEVE_CONFIG_PATH.disabled=true

If set to true, Oracle Retail Xstore Point of Service will use its current values, for more information, see the If Not Using Xcenter to Get the Config Path section.

Retrieving config path properties from Xcenter will overwrite any of the same-named properties that already were present in the configPath.properties file.

- For the desktop application, the global config path properties and the workstation overrides property for the specific workstation the system represents are retrieved from Xcenter and written to the configPath.properties file.
- For the Xstore Mobile server, the global config path properties and the workstation overrides properties for the entire range of mobile device workstations is retrieved from Xcenter and written to the configPath.properties file. The range of mobile device workstation IDs is defined in the system.properties file using the

properties xstore.location.mobile.workstationId.range.start and xstore.location.mobile.workstationId.range.end.

At Oracle Retail Xstore Point-of-Service Startup

When Oracle Retail Xstore Point of Service starts, it sends a request to the URL that contains parameters indicating the organization ID, store number, and workstation ID of the machine that is sending the request. (See Config Path Retrieval Process.)

In Xcenter, the config path lookup end-point looks up the store personality based on those parameters and assembles the config path properties from the assigned personality and landscape. The response from Xcenter contains a serialized Java Properties object that contains the appropriate values.

Note: If no personality and landscape are assigned to the store, then the specific properties will not be present. Note that in this case, blank values will be used for the xstore.config.path.base.features and xstore.config.path.overrides.workstation.# properties.

Once the property values from Xcenter are obtained, they are compared to the existing values from the configPath.properties files. If either of the property values from Xcenter are different than the property values from the file, the values from Xcenter will be written to the configPath.properties file, the last.updated.date property will be set to the current date and time, and Oracle Retail Xstore Point of Service will shut itself down and be restarted by the wrapper.

Till/Register Data

Also during the startup process, till/register data from Xcenter is synchronized with Oracle Retail Xstore Point-of-Service's lead register. Any till/register data that was updated on the store primary is also updated on other workstation databases when the nightly backup and restore process occurs (in an off-line scenario). With this process, it is no longer necessary to manually run till/register setup scripts before starting up the lead register.

Processing Overview

- 1. Oracle Retail Xstore Point of Service starts up on the lead register or store primary.
- **2.** During the startup process Oracle Retail Xstore Point of Service compares the till/ register data from Xcenter and synchronizes the data on the store primary.

The following data objects are synchronized:

- Store record
- Tax location mapping record
- Corresponding org hierarchy records
- Workstation records
- Tender repository records (till and register records)
- Inventory buckets
- Inventory location buckets

Xcenter Config Path Properties Assembly

This section describes the assembly of the config path properties.

Global Configuration Path Properties

Global config path elements are configurations that are loaded once for the entire application and do not differ from workstation to workstation. They define the standard features and functionality for instances of the application.

The global config path is made up by the elements of the GlobalConfigPathElement enumeration. This enumeration contains both, the individual global config element definitions as well as the ability to build the currently applicable global config path.

The enum instances BASE_FEATURES and GLOBAL_CONFIG_PATH_EXTENSIONS point to properties in the configPath.properties file. The instances substitute their values with the properties xstore.config.path.base.features and xstore.config.path.global.extensions when building the global config path.

For more information about the properties <code>xstore.config.path.base.features</code> and <code>xstore.config.path.global.extensions</code>, see the <code>xstore.config.path.global.extensions</code> section and the <code>xstore.config.path.base.features</code> section below.

For more information about all available base global config path elements, see the *Oracle Retail Xstore Point of Service Technical Guide*.

xstore.config.path.global.extensions

Config path global extensions indicate non-standard config directories that are applied globally and are included in the config path between static retailer global overrides (version1) and Xstore Office-controlled global overrides (MASTER/DEFAULT). The config path global extensions are controlled by the

xstore.config.path.global.extensions property in the configPath.properties file. Since the global extensions property is more of a hidden feature, the property is not maintainable through Xstore Office and must be set manually on any workstation that uses it.

xstore.config.path.base.features

Base features represent config path elements that are used to enable a certain functionality or feature within the application such as loyalty, a payment processor or integration with external applications such as Customer Engagement, Order Broker, and others.

The base features can be enabled and disabled through the Personality Maintenance feature in Xstore Office. For more information on Personality Maintenance, see the Personality Maintenance section.

The table below lists all Xstore Point of Service base features that can be enabled and disabled as well as their corresponding config path entries. The enabled base features are represented in the xstore.config.path.base.features property in the configPath.properties file.

| Feature | Sub-Feature | Config Path Entries |
|---------|----------------|---------------------|
| Loyalty | NA | :cust/loyalty |
| | Loyalty Awards | :cust/loyalty/award |

Table B–1 Base Features and Config Path Entries

| Feature | Sub-Feature | Config Path Entries |
|--|--|-------------------------------------|
| Customer Engagement | NA | :relate |
| | Gift Registry | :cust/registry |
| | Use IDCS (Identity Cloud Service) for Authorization | :idcs/relate |
| Order Broker (Cloud) | NA | :order:locate |
| | Use IDCS (Identity Cloud Service) for Authorization | :idcs/locate |
| Order Management System | NA | :crosschannelreturn:serenad e |
| | Use IDCS (Identity Cloud Service) for Authorization | :idcs/serenade |
| | | : |
| Enterprise Inventory Cloud Service(EICS) | | :sim:sim/\$FORM_ FACTOR\$ |
| | Use IDCS (Identity Cloud Service) for Authorization | :idcs/sim |
| Retail Extension Module (RXM) | NA | :rxm:rxm/\$FORM_ FACTOR\$ |
| Experian Address Verification | NA | :avs:qas |
| Xcommerce | NA | :xcommerce |
| Opera Guest Services | NA | :opera |
| Microsoft SQL Server Support | NA | :dtv/sql/mssql |
| EFTLink Authorizations | NA | :authprocessor/eftlink |
| | EFT Link Gift Cards | :authprocessor/eftlink/giftc ard |
| 24 x 7 (No Store Closing) Functionality | NA | :24x7 |
| Item Selection Grid (cannot be used with Self Checkout) | NA | :buttonmatrix |
| Financial Daily Report | NA | :dailyreport |
| Invoice | NA | :invoice |
| | Global Blue Tax Free (cannot be combined with Planet Tax Free) | :invoice/globalblue |
| | Panet Tax Free (cannot be combined with Global Blue Tax Free) | :invoice/fintrax |
| Luxury receipts | NA | :luxuryreceipt |
| | | |

 Table B-1 (Cont.) Base Features and Config Path Entries

Workstation Overrides Config Path Properties

The elements for workstation-level configuration overrides are controlled by another property, or a set of properties for mobile servers in the configPath.properties file. Since one of these properties indicates all of the override elements for a particular workstation, each override path property name contains the workstation ID to which it applies. The primary purpose of workstation overrides is to support profile group/element pairs that are defined in Xstore Office as part of the profile maintenance. Profile groups and elements are defined and associated with personalities, landscapes, and store personalities in Xstore Office and then each register (or mobile server) in a store downloads its own workstation override config path properties from Xcenter just prior to startup.

xstore.config.path.workstation.overrides.X

The properties containing the workstation overrides config path are xstore.config.path.workstation.overrides.X where X is the workstation ID to which the property applies.

The following configuration files support workstation-level overrides. All other configurations will load files only from global config path elements.

- SysConfig.xml
- ActionConfig.xml
- OpChainConfig.xml
- MenuConfig.xml
- PromptConfig.xml
- DataFieldConfig.xml
- forms" directory-based configurations
- FieldLayoutConfig.xml
- FieldDefinitionConfig.xml
- FontConfig.xml
- ListViewConfig.xml
- ContextConfig.xml
- "componentPropertySet" directory-based configurations
- translations.properties

Oracle Retail Xstore Point-of-Service Config Path Assembly

The default file Xstore Point of Service uses for its config path properties is called configPath.properties. The file is located in the root directory on an installed register. As mentioned in the section above, the following three properties form the config path for a given register:

- xstore.config.path.base.feature
- xstore.config.path.global.extensions
- xstore.config.path.overrides.workstation.[workstation ID]

If Not Using Xcenter to Get the Config Path

If retrieval of the config path from Xcenter is not being used the config path is still assembled in the same manner outlined above. The difference is that the properties <code>xstore.config.path.base.features and</code>

xstore.config.path.overrides.workstation.# (where # is a workstation ID) are not retrieved from Xcenter.

Important: If Oracle Retail Xstore Point of Service ever used Xcenter to obtain the config path, and the configPath.properties file contains properties those properties will continue to be used even if updating from Xcenter is turned off. They will no longer be updated from Xcenter.

Oracle Retail Xstore Office Cloud Service Security Settings

| Privilege | Description |
|----------------------------------|--|
| CFG_PERSONALITY_ MAINT ENANCE | Personality maintenance privilege. |
| CFG_PROFILE_ MANAGEMEN T | Top Level profile management menu privilege. |
| CFG_LANDSCAPE_ MAINTENANCE | Landscape maintenance privilege. |
| CFG_PROFILE_GROUPS | This privilege was renamed from ADMIN_PROFILE_GROUPS in previous versions. |
| CFG_STORE_ PERSONALITI ES | Controls access to the store personality maintenance page. |

 Table B-2
 Oracle Retail Xstore Office Cloud Service Security Settings

Resource Bundle Path Consolidation

Resource bundles are loaded based on the config path instead of separate bundle-specific paths. When upgrading to a new Oracle Retail Xstore Point-of-Service version, move any resource bundle files to a config path location or adjust the config path accordingly.

- Translations (was dtv.pos.i18n.translation)
- Phone numbers (was dtv.pos.i18n.phone)
- Hardware (was dtv.pos.i18n.hardware)
- Help (was dtv.pos.i18n.help)
- Email (was dtv.pos.i18n.email)
- Format display (was dtv.i18n.formatDisplay)

Database Tables

Refer to the *Oracle Retail Xstore Office Cloud Service Database Dictionary Guide* for a complete list of the Oracle Retail Xstore Office Cloud Service database tables.

| Column | Valid Values | Description |
|-----------------|--------------|--|
| organization_id | int (PK) | Store's organization identifier. |
| landscape_id | int (PK) | A unique identifier for a landscape. |
| description | string | A description of the store landscape that is assigned by the user. |
| comments | string | A comment field for more details. |

 Table B–3
 cfg_landscape

Table B-4cfg_landscape_group

| Column | Valid Values | Description | |
|---------------------|--------------|---|--|
| organization_id | int(PK) | Store's organization identifier | |
| landscape_id | int(PK) | The unique ID of the landscape that this register range belongs to. | |
| profile_group_id | string(PK) | The profile group ID that this range is assigned to. | |
| profile_group_order | int | Designates the sort order of the groups (profile_group_ id) within this landscape. The order affects how the config path is later generated | |

| Table B–5 | cfg_l | andscape <u></u> | _range |
|-----------|-------|------------------|--------|
|-----------|-------|------------------|--------|

| Column | Valid Values | Description |
|--------------------|--------------|---|
| organization_id | int (PK) | Store's organization identifier. |
| landscape_id | int (PK) | The unique ID of the landscape that this register range belongs to. |
| profile_group_id | string (PK) | The profile group ID that this range is assigned to. |
| range_seq | int (PK) | The sequence number of the range for the landscape. |
| profile_element_id | string | The profile element ID that this range is assigned to. |
| range_start | int | The start of the register range. |
| range_end | int | The end of the register range (if only one register is in the range, then this will be the same as range_start). |

Table B–6cfg_personality

| Column | Valid Values | Description |
|-----------------|--------------|----------------------------------|
| organization_id | int | Store's organization identifier. |

| Column | Valid Values | Description |
|----------------|--------------|--|
| personality_id | int | A unique identifier for a store's personality. |
| description | string | A description of the personality that is assigned by the user. |
| comments | string | A comment field for more details. |

 Table B–6 (Cont.) cfg_personality

Table B-7cfg_personality_element

| Column | Valid Values | Description |
|-----------------|--------------|---|
| organization_id | int | Store's organization identifier. |
| personality_id | int | The unique ID of the personality that this personality profile belongs to. |
| element_id | varchar(60) | The profile element ID with which this personality is associated. |
| group_id | varchar(60) | The profile group ID with which this personality is associated. |
| sort_order | int | The order of elements in the list that will be followed when generating the new configuration path for the store that is assigned to this personality. |

Table B-8cfg_store_personality

| Column | Valid Values | Description |
|-----------------|--------------|--|
| organization_id | int | Store's organization identifier. |
| personality_id | int | The unique ID of the personality that this personality profile belongs to. |
| landscape_id | int (PK) | The unique ID of the landscape that this register range belongs to. |

Table B-9 cfg_personality_base_feature

| Column | Valid Values | Description |
|----------------------|--------------|---|
| organization_id (PK) | int | Store's organization identifier. |
| personality_id (PK) | int | A unique identifier for a store's personality. An alphanumeric field used to enter the short name of the personality. |
| feature_id (PK) | varchar(200) | A unique identifier for a feature. |

| Column | Valid Values | Description |
|------------|--------------|---|
| sort_order | int | Sort order when displaying code values. |

Table B–9 (Cont.) cfg_personality_base_feature

Appendix: User Interface Configurations

The JSF (JavaServer Faces) technology has been removed from the Oracle Retail Xstore Office Cloud Service application. With the conversion from JSF to GWT (Google Web Toolkit), no new user-modifiable Oracle Retail Xstore Office Cloud Service settings were added to the application.

However, Oracle Retail Xstore Office Cloud Service can be "personalized" by adding a background image, changing the color scheme, and configuring the panel display order and content.

All menu changes are to data in the cfg_menu_config table in the Oracle Retail Xstore Office Cloud Service database. See Table C–2.

The following changes are documented in this appendix:

- Reports Menu
- Home Page Menu
- Defining Ta b Library Properties
- Security Settings

Reports Menu

The Reports menu (main menu) was restructured as follows:

Figure C–1 Reports Menu Expanded

Each report is no longer individually listed under the Reports menu. This was replaced by an All Reports option since the reports are now indexed and searchable within the reports feature. However, it is possible to place a reference to a specific report on the Reports menu. To do this, concatenate the report ID with the standard reports menu name inside of the value of the cfg_menu_config.menu_name column for the specific report option. Selecting that specific option will then open the reports feature with the specified report pre-selected and the parameter tab for that report displayed.

To Reference a Specific Report on the Reports Menu

Any report that is available within the reports feature can be configured as a specific menu option.

- In the cfg_menu_config table, find the report ID for any report by looking for the record in the "REPORT_VIEWER_MENU" category with a menu_type of "ACTION". The menu_name for any record meeting those criteria is the report ID.
- **2.** Concatenate the standard reports menu name with the desired report ID and separate the two with the vertical pipe symbol (|).

Example:

In the following example, assume you want to add the Daily Cash and Sales Report option to the Reports menu.

- The menu_name for the "All Reports" option is "REPORT_VIEWER". This opens the reports feature with nothing selected.
- The report ID for the Daily Cash and Sales Report is

"DAILY_SALES_CASH_REPORT".

To create the menu option that opens the Daily Cash and Sales Report, concatenate the standard reports menu name (REPORT_VIEWER) with the desired report ID (DAILY_SALES_CASH_REPORT) and separate the two with the vertical pipe symbol (

).

The value of the menu_name column for the menu option is:

REPORT_VIEWER | DAILY_SALES_CASH_REPORT

Home Page Menu

With the removal of JSF, the Oracle Retail Xstore Office Cloud Service user interface was updated throughout to have a new look and feel to enhance the user's experience. With this update, the options available on the Home page are completely configurable. Like the main menu, the contents of the Home page are configurable via the cfg_menu_config table in the Oracle Retail Xstore Office Cloud Service database.

Home Page/Main Menu Options

The grouping and availability of options on the Home page are completely unrelated to the options on the main menu, and are not meant to be the same. The main menu contains all possible options, while the Home page is designed to contain the options that should be readily available to the user upon login.

From a technical perspective, the options that can be configured on the Home page and the main menu each share a value for menu_name and, at least in the base, a security_privilege.

Note: Sharing a menu name is required. Sharing a privilege, while recommended, is technically optional.

To Configure the Options on the Home Page

The category for the home page options is "HOME_PAGE_MENU". Any record in the cfg_menu_config table that has a category of "HOME_PAGE_MENU" and a parent_

menu_name of "ROOT" constitutes a "Home page panel" on the home page. However, simply configuring a root record is not sufficient to make it display.

Following are the requirements to make a panel display on the home page:

- The record for the panel must have either no privilege or a privilege that is part of the current user's role. Each of the six panels in base data have a privilege associated with them. Those privileges are defined in Security Settings below.
- At least one option must be configured as a child of the root option.
- Of the child options that are configured, the user must have access (privilege) to at least one of them. Every individual menu option has a privilege associated with it.

If any of the above conditions are not met, the panel will not be displayed on the home page.

Panel Information

- The menu_small_icon column on the root record controls the image on top of the panel. The value of this column is a relative path to an image that follows the port number in the URL of the application.
- The title column on the root record controls the name of the panel.
- The title column of each child menu option controls the text that shows for each option on a panel.

Defining Tab Library Properties

The cfg_tab_property table defines all configurable tab properties. If the tab property is not defined in this table, then it is not configurable and not displayed on the Oracle Retail Xstore Office Cloud Service Tab Library Configuration page.

Note: To set the default URL, use the URL_NAVIGATOR property set in the Oracle Retail Xstore Point of Service TabConfig.xml. The default title on the tab is Oracle and the default URL is http://www.oracle.com.

| Column | Valid Values | Description |
|-------------------|--------------|---|
| tab_id | VARCHAR | Tab ID. |
| property_id | VARCHAR | Property ID (tab or tabTitle). |
| display_component | VARCHAR | Widget used to display configurable tab property (TextBox,CompoBox and so on). |
| value_type | VARCHAR | Determines whether the configurable value is defined in Value or ComplexValue XML tag. |
| label | VARCHAR | Translation key for label that describes what configurable value is. The label is placed on the left of each display component. |

Table C–1 cfg_tab_property

| Column | Valid Values | Description |
|----------------|--------------|------------------|
| create_date | DATE | Created Date. |
| create_user_id | VARCHAR | Created User ID. |
| update_date | DATE | Updated Date. |
| update_user_id | VARCHAR | Updated User ID. |

Table C–1 (Cont.) cfg_tab_property

Security Settings

The following privileges apply to the home page panels.

| Table C–2 Privileges | | | |
|----------------------|--|--|--|
| Privilege | Description | | |
| HOME_PAGE_CONFIG | The privilege that controls access to the Configuration Manager home page panel. | | |
| HOME_PAGE_DATA | The privilege that controls access to the Data Management home page panel. | | |
| HOME_PAGE_DEPLOY | The privilege that controls access to the Deployment Manager home page panel. | | |
| HOME_PAGE_SUPPORT | The privilege that controls access to the Support Tools home page panel. | | |
| HOME_PAGE_REPORTS | The privilege that controls access to the Reports home page panel. | | |
| HOME_PAGE_SYSTEM | The privilege that controls access to the System home page panel. | | |
| RPT_GENERAL_ACCESS | The privilege that controls access to the All Reports menu option. | | |

Table C–3 cfg_menu_config

| | Attribute/ | | | | |
|----|----------------------|--------------|-------|--|--|
| | Logical | | | | |
| РК | Rolename | Datatyp | NULL? | Definition | |
| x | category | VARCHAR(60) | NO | Menu category. | |
| X | menu_name | VARCHAR(100) | NO | Name of menu. | |
| NA | parent_menu_n ame | VARCHAR(100) | YES | Name of parent menu. | |
| NA | config_type | VARCHAR(120) | YES | Configuration type for menu (if applicable). | |
| NA | title | VARCHAR(60) | YES | Translation key for display title of menu. | |
| NA | menu_type | VARCHAR(30) | YES | Specifies the type of menu (REDIRECT_ACTI ON, LINK, ACTION, or LINK_GROUP). | |

| | Attribute/ | | | | |
|----|----------------------------------|---------------|-------|---|--|
| | Logical | | | | |
| PK | Rolename | Datatyp | NULL? | Definition | |
| NA | sort_order | INTEGER | YES | Sort order for menu display. | |
| NA | view_id | VARCHAR(200) | YES | Relative path to view file associated with menu (only applicable to menus with menu_ type of REDIRECT_ACTI ON and LINK). | |
| NA | action_expression | VARCHAR(200) | YES | EL or method chain to execute when menu is selected. | |
| NA | active_flag | BIT | YES | Determines whether menu is active or not. | |
| NA | propagation | VARCHAR(30) | YES | Seam conversation propagation strategy to use when linking to another view. | |
| NA | security_privilege | VARCHAR(30) | YES | Security privilege required to access menu. | |
| NA | custom_ datasource_class | VARCHAR(200) | YES | Custom data source to use with report associated with menu (if applicable). | |
| NA | custom_ datasource_ method | VARCHAR (30) | YES | Custom data source to use with report associated with menu (if applicable). | |
| NA | menu_small_icon | VARCHAR (254) | YES | Relative path to image file to use as an icon for menu. | |
| NA | menu_separator | BIT | YES | Unused | |
| NA | description | VARCHAR (MAX) | YES | Text description of Menu Item. | |
| NA | create_date | DATETIME | YES | Date the table row was created. | |
| NA | create_user_id | VARCHAR (30) | YES | User responsible for creating the table row. | |
| NA | update_date | DATETIME | YES | Date the table row was most recently updated. | |

 Table C-3 (Cont.) cfg_menu_config

| | Attribute/ Logical | | | |
|----|-----------------------|--------------|-------|--|
| РК | Rolename | Datatyp | NULL? | Definition |
| NA | update_user_id | VARCHAR (30) | YES | User responsible for updating the table row. |

Appendix: Accessibility

For more information about the accessibility features available in Oracle Retail Xstore Office Cloud Service, see the *Oracle Retail Xstore Suite Implementation and Security Guide* 18.0.

Glossary

airside locations

Retail locations inside the secured area of the airport.

configuration jar file

A Java jar file containing a set of Oracle Retail Xstore Point-of-Service configuration files.

dataloader download file

A file containing data in delimited text format, which will be loaded into database tables using the DataLoader application.

debit bin file

A text file containing a set of range and format data for accepted debit cards.

deployment manifest

An XML document containing details for a deployment. These details include the location of the deployed file, a type distinction for the file, and instructions to indicate when the file should be downloaded and when it should be applied.

encryption cipher file

An encryption key file.

landscape

Defines the registers used within a store and specifies the register numbers and functions.

personality

A grouping of at least one or many Profile Group and Profile Element combinations in an ordered list that work together to define a store.

profile

A target group for configurations. A profile may either be the Master profile, which represents the default set of configurations for all store systems, or a Profile Group/Profile element combination that includes configurations for a specific group of store systems.

profile element

The child property associated with the Profile Group; for example, Location= Ohio, California, Iowa, and so on.

profile group

A collection of configuration elements by type; for example Location, Register Type, Store Type, and so on.

store personality

A personality/landscape pairing to define a store; used to create the configuration paths specified in configPath.properties.

target group

The location, or set of locations, that will receive a deployment.

update jar file

An executable application update.

Oracle Retail Xenvironment lead register

The Oracle Retail Xenvironment lead register system controls the store closing process and is responsible for querying Xcenter (a part of Oracle Retail Xstore Office Cloud Service) for new deployments, downloading deployments and distributing them to other registers in the store, and for sending feedback pertaining to the status of deployments to Xcenter.

Oracle Retail Xstore Point-of-Service primary register

The Oracle Retail Xstore Point-of-Service lead register system is used to open and close the retail location.

Xcenter (a part of Oracle Retail Xstore Office Cloud Service)

The Xcenter application (a part of Oracle Retail Xstore Office Cloud Service) is a Java and XML/SOAPbased messaging framework that runs on the Jetty application server, available to Oracle Retail Xstore Point of Service for reading and writing of data. Xcenter provides Xcenter data access through Jetty. The Xcenter server interfaces to Xcenter (Home Office server) and to the point-of-sale client module (Store).

The Xcenter Database is a central data repository containing consolidated data from specified database tables in every store.
