1. Setting up Gateway for Oracle FLEXCUBE

1.1 Introduction

This chapter explains the steps for setting up the Gateway Application for Oracle FLEXCUBE.

1.2 Setting up Gateway EJB Application

This section explains the methods of setting up Gateway EJB Application.

1.2.1 Prerequisites

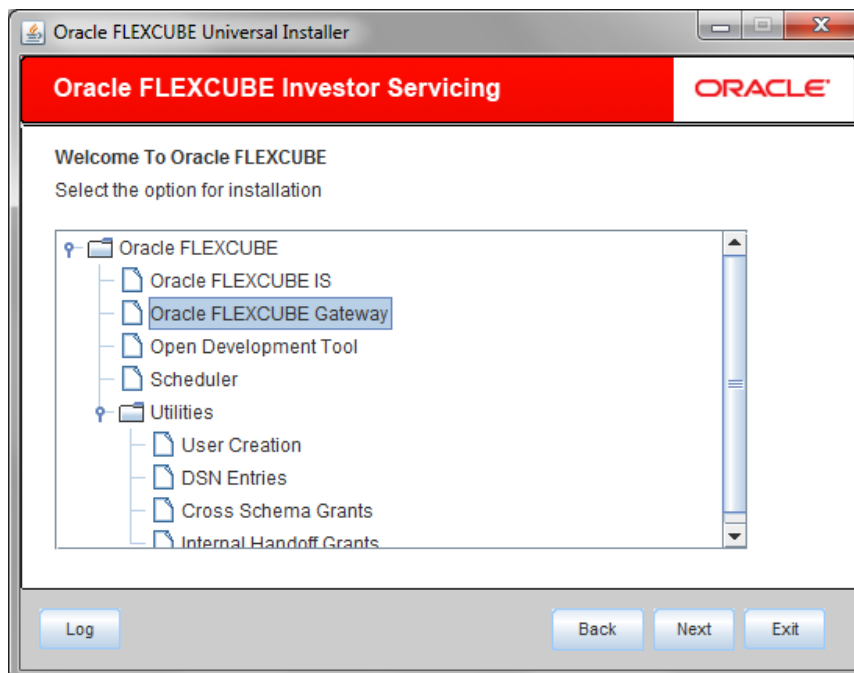

You need to create the following gateway EJB property files before building the application:

- gw_ejb_logger.properties
- GW_EJB_Prop.properties

1.2.2 Building EAR File

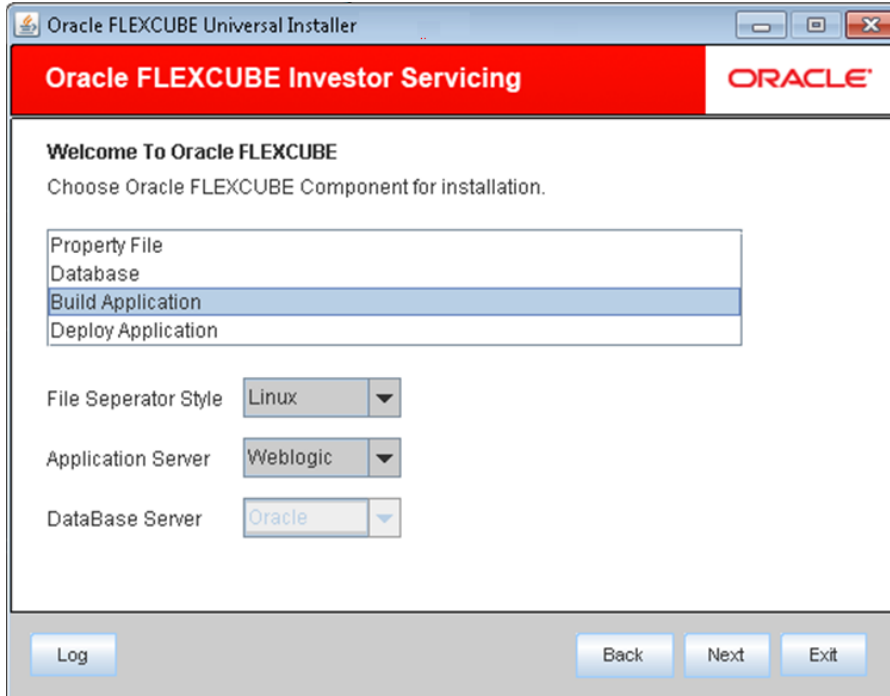

In order to build EAR file for Gateway EJB Application, you need to follow the steps given below:

1. Launch Oracle FLEXCUBE Universal Installer. The welcome screen is displayed.
2. Click 'Next' the following screen will be displayed.

3. Choose the Application 'Gateway'. Click 'Next'.

The following screen is displayed:

4. Specify the following details:

File Separator Style

Specify the style of file separator (e.g Linux or Windows). Choose the appropriate one from the drop-down list.

Application Server

Specify the application server in which you are creating the property file. Choose the appropriate one from the drop-down list.

5. Choose 'Build Application'. Click 'Next'. The following screen is displayed:
6. This is the FC HOME folder that needs to be set. Also, it should point to SMS schema. Those versions less than or equal to the current environment are allowed.

Click Next.

Oracle FLEXCUBE Investor Servicing

Gateway Property File Creation

Choose the Gateway Application Type

- Gateway Application Type
 - Gateway EJB
 - Gateway MDB
 - Gateway Http Servlet
 - Gateway WebServices

Log Back Next Exit

7. Choose 'Gateway EJB'. Click 'Next'.
8. Once you have specified the details, click 'Next' to continue.

The EJB reference name will be '{APPLICATIONNAME}_GW_EJB_Bean' and the JNDI name will be '{APPLICATIONNAME}/ejb/GW_EJB_Bean'.

For example, consider that the application name is GWEJB. In that case EJB and JNDI names will be as follows:

- EJB reference name: GWEJB_GW_EJB_Bean
- JNDI name: GWEJB/ejb/GW_EJB_Bean

9. Click 'Next'. The following screen is displayed.

16. Click 'Copy' button. The installer copies the files.
17. Click 'Next'. The following screen is displayed.

18. Click 'Build' button to start the build process. The installer builds the source files.
- This completes the EAR file generation process. The EAR file will be saved to the destination directory.

2. Setting up Gateway MDB Application

This section explains the methods of setting up Gateway MDB Application.

2.1.1 Prerequisites

You need to create the following gateway MDB property files before building the application:

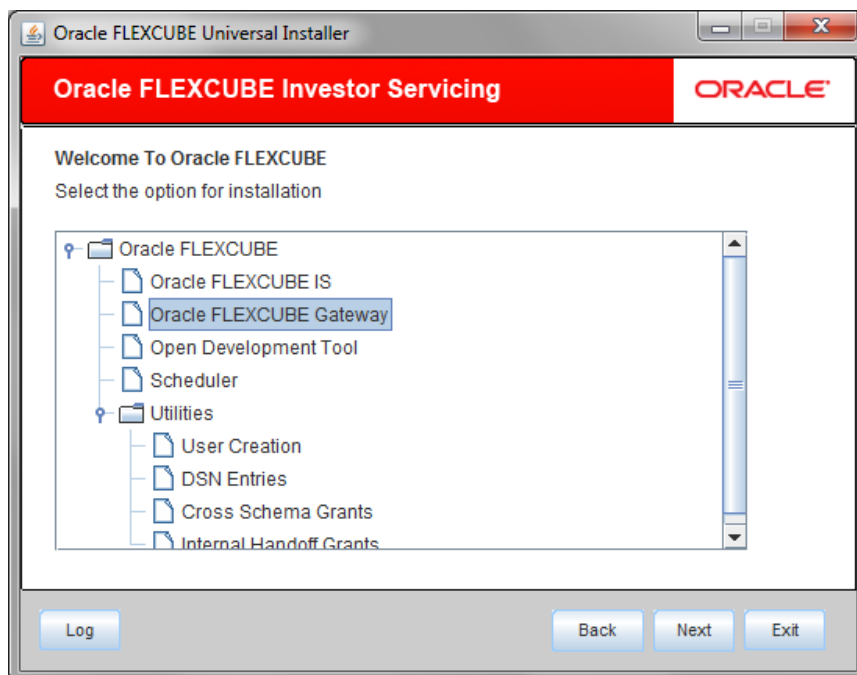

- gw_mdb_logger.properties
- GW_MDB_Prop.properties

For details, refer to the section 'Gateway MDB Application' in chapter 'Setting up Property Files' (04-PropertyFile_Setup).

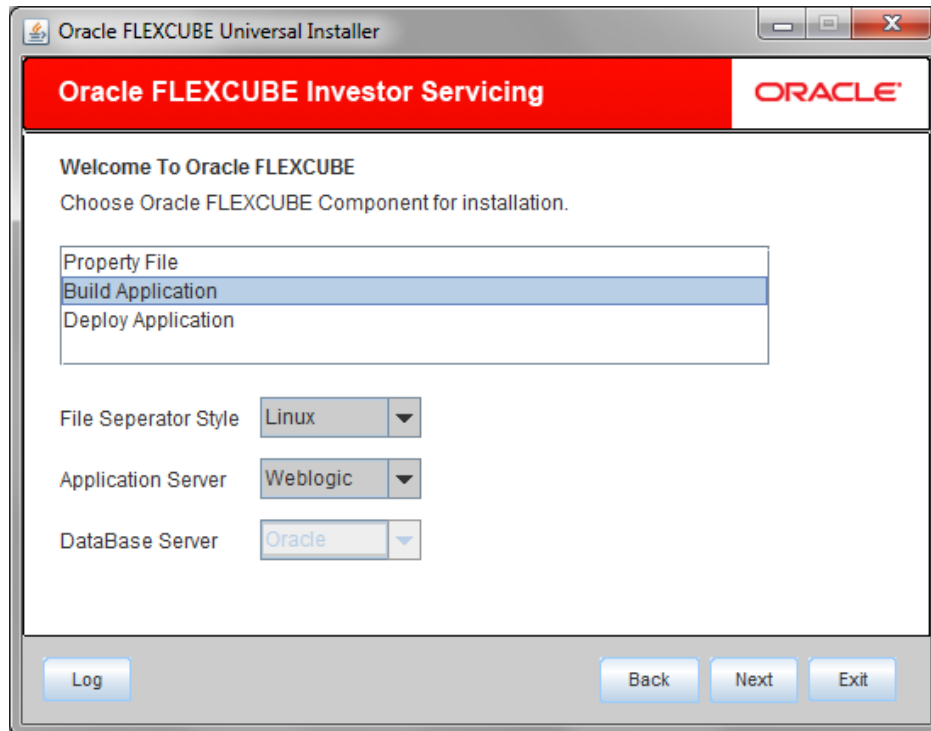

2.1.2 Building EAR File

In order to build EAR file for Gateway MDB Application, you need to follow the steps given below:

1. Launch Oracle FLEXCUBE Universal Installer. The welcome screen is displayed.

Choose the Application 'Oracle FLEXCUBE Gateway'. Click 'Next'. The following screen is displayed:

2. Specify the following details:

File Separator Style

Specify the type of file separator (e.g: Linux or Windows). Choose the appropriate one from the drop-down list. You also need to specify the version of the selected operating system.

Application Server

Specify the application server in which you are creating the property file. Choose the appropriate one from the drop-down list.

Choose 'Build Application'. Click 'Next'. The following screen is displayed

Click 'Test Connection'. On Successful connection the below message will be displayed.

Click OK. Click 'Next' to navigate to next page

The screenshot shows the 'Valid Patch List' window in the Oracle FLEXCUBE Investor Servicing application. The window has a red header bar with the text 'Oracle FLEXCUBE Investor Servicing' and the 'ORACLE' logo. Below the header, the title 'Valid Patch List' is displayed. A table with four columns: 'No', 'Version', 'Type', and 'Select' is shown. The first row contains the values '1', '14.1.0.0', 'CONSOLE', and a checked checkbox. Below the table is a large empty rectangular area. At the bottom of the window, there are four buttons: 'Log', 'Back', 'Next', and 'Exit'.

No	Version	Type	Select
1	14.1.0.0	CONSOLE	<input checked="" type="checkbox"/>

Choose patches from list and click 'Next'

The following screen is displayed:

The screenshot shows the 'Gateway Property File Creation' window in the Oracle FLEXCUBE Universal Installer. The window has a title bar that says 'Oracle FLEXCUBE Universal Installer'. Below the title bar is a red header bar with the text 'Oracle FLEXCUBE Investor Servicing' and the 'ORACLE' logo. The main content area is titled 'Gateway Property File Creation' and contains the instruction 'Choose the Gateway Application Type'. Below this instruction is a tree view showing a folder 'Gateway Application Type' with four sub-items: 'Gateway EJB', 'Gateway MDB' (which is selected and highlighted), 'Gateway Http Servlet', and 'Gateway WebServices'. At the bottom of the window, there are four buttons: 'Log', 'Back', 'Next', and 'Exit'.

3. Choose 'Gateway MDB'. Click 'Next'.

4. The following screen is displayed: Click 'Next' the following screen will be displayed.

5. Specify the following details:

Destination Directory

Specify the location of the destination directory. The source files from the software will be copied to this location.

Eg: D:\Testing\source\dest

Application Name

Specify the EAR name of the application.

The application name should not contain special characters and space. However, you may use '_' (Underscore).

Eg: GWMDB

6. Once you have specified the details, click 'Next' to continue.

7. Specify the following details:

Centralized Property File

To modify an existing property file, you need to select the exact property file by clicking on the folder icon.

Note: Do not load the Logger.properties file. The installer will load that file automatically based on the property file.

8. Click 'Next'. The following screen is displayed.

9. Specify the following details:

Distributed Schema

Select Distributed Schema as 'Yes'.

Data Source

Specify the data source of the schema.

10. Click 'Next'. In case you have selected 'Yes' against Distributed Schema, the following screen is displayed.

11. Specify the Datasource Names.

12. Click 'Next'. The following screen is displayed.

13. Click 'Copy' button. The installer copies the files.

14. Click 'Next'. The following screen is displayed.

15. Click 'Build' button to start the build process. The installer builds the source files.

This completes the EAR file generation process. The EAR file will be saved to the destination directory.

3. Setting up Gateway HTTP Application

This section explains the methods of setting up Gateway HTTP Application. This is not applicable in EXEC mode of installation.

3.1.1 Prerequisites

You need to create the following gateway HTTP property files before building the application:

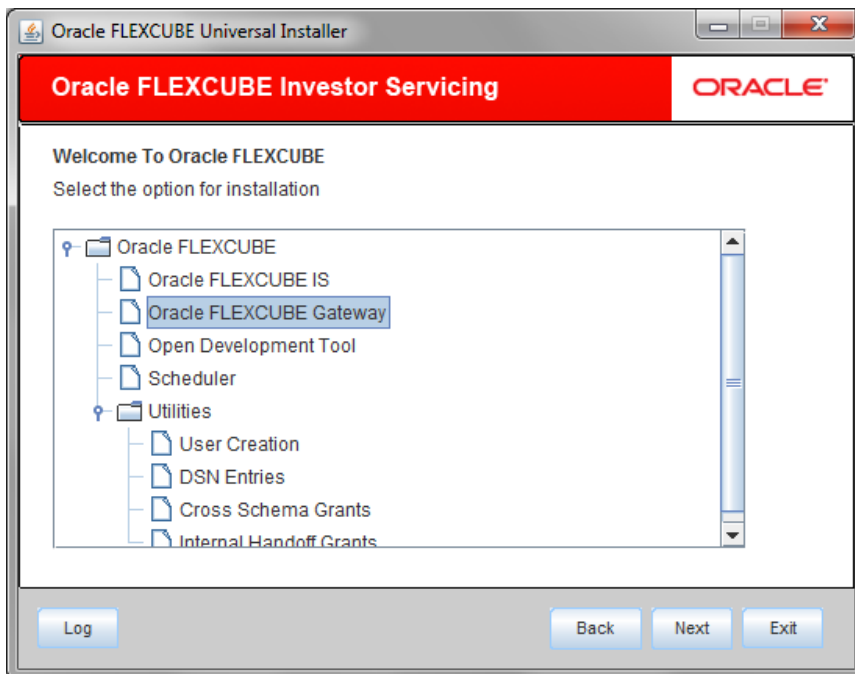

- gw_http_logger.properties
- GW_HTTP_Prop.properties

For details, refer to the section 'Gateway HTTP Application' in chapter 'Setting up Property Files' (04-PropertyFile_Setup).

3.1.2 Building EAR file

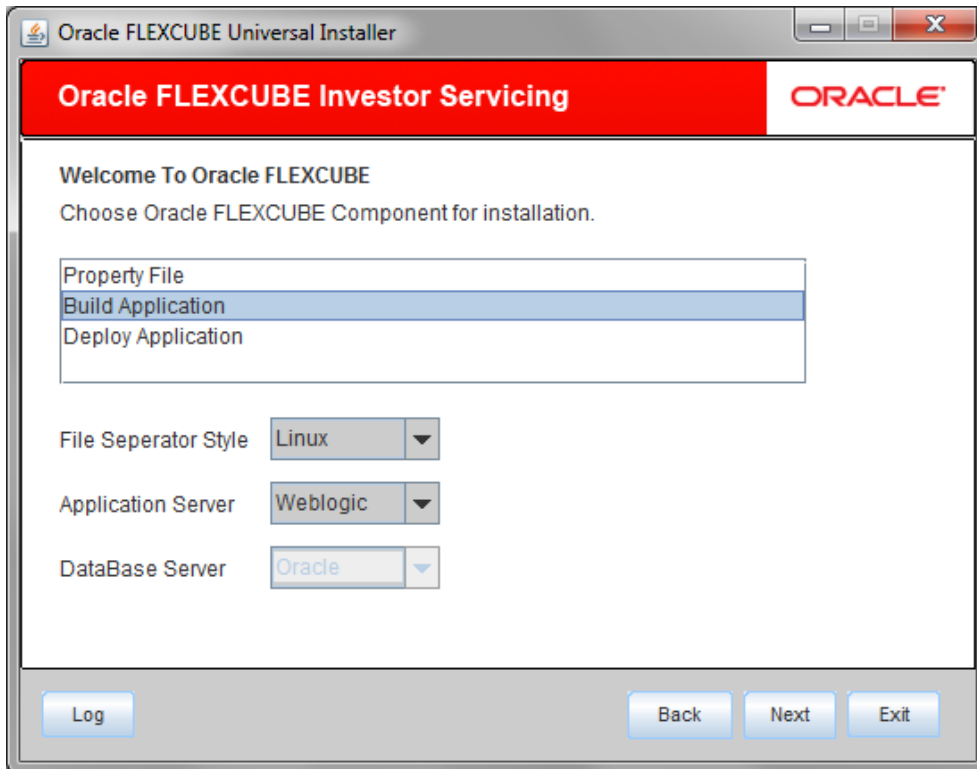

In order to build EAR file for Gateway HTTP Application, you need to follow the steps given below:

1. Launch Oracle FLEXCUBE Universal Installer. The welcome screen is displayed.

2. Choose the Application 'Oracle FLEXCUBE Gateway'. Click 'Next'.

The following screen is displayed:

3. Specify the following details:

File Separator Style

Specify the operating system in which you are creating the property file. Choose the appropriate one from the drop-down list.

Application Server

Specify the application server in which you are creating the property file. Choose the appropriate one from the drop-down list.

Choose 'Build Application'. Click 'Next'. The following screen is displayed:

Choose FC home and specify the SMS schema details. Click 'Test Connection'. On Successful connection the below message will be displayed.

Click OK. Click 'Next' to navigate to next page

The screenshot shows a window titled "Oracle FLEXCUBE Investor Servicing" with the Oracle logo in the top right corner. Below the title bar, the text "Valid Patch List" is displayed. A table with four columns: "No", "Version", "Type", and "Select" is shown. The first row contains the values "1", "14.1.0.0", "CONSOLE", and a checked checkbox. Below the table is a large empty rectangular area. At the bottom of the window, there are four buttons: "Log", "Back", "Next", and "Exit".

No	Version	Type	Select
1	14.1.0.0	CONSOLE	<input checked="" type="checkbox"/>

4. Choose Patches. Click 'Next'. The following screen is displayed:

The screenshot shows a window titled "Oracle FLEXCUBE Universal Installer" with the Oracle logo in the top right corner. Below the title bar, the text "Gateway Property File Creation" is displayed, followed by the instruction "Choose the Gateway Application Type". A tree view is shown with the following structure:

- Gateway Application Type
 - Gateway EJB
 - Gateway MDB
 - Gateway Http Servlet
 - Gateway WebServices

The "Gateway Http Servlet" option is selected. At the bottom of the window, there are four buttons: "Log", "Back", "Next", and "Exit".

5. Choose 'Gateway Http Servlet'. Click 'Next'.

6. Specify the following details:

Destination Directory

Specify the location of the destination directory. The source files from the software will be copied to this location.

Eg: D:\Testing\source\dest

Application Name

Specify the EAR name of the application.

The application name should not contain special characters and space. However, you may use '_' (underscore).

Eg: GWHTTP

Application Context

Based on the Application type selected, the Installer displays the application context. However, you may modify the default value.

Once you have specified the details, click 'Next' to continue.

7. The following screen is displayed.

The screenshot shows a window titled 'Oracle FLEXCUBE Investor Servicing' with the Oracle logo in the top right. The main area is labeled 'Build Process' and contains the instruction 'Specify the Property File path.' Below this, there is a 'Load Property File' label followed by a text input field containing 'D:\' and a folder icon to its right. Underneath is a 'Symmetric key' label followed by an empty text input field. At the bottom of the main area is a large text area with the placeholder text 'Provide the property file path to be included.' and a vertical scrollbar. The bottom of the window features a 'Log' button on the left and 'Back', 'Next', and 'Exit' buttons on the right.

8. Specify the following details:

Centralized Property File

To modify an existing property file, you need to select the exact property file by clicking on the folder icon.

Note: Do not load the Logger.properties file. The installer will load that file automatically based on the property file.

9. Click 'Next'. The following screen is displayed.

The screenshot shows a window titled 'Oracle FLEXCUBE Universal Installer' with the Oracle logo in the top right. The main area is labeled 'Build Process' and contains the instruction 'Current screen displays the status of sources being copied to destination folder.' Below this is a progress bar showing '0%'. Underneath the progress bar is a large empty text area with a vertical scrollbar. At the bottom of the main area is a 'Copy...' button. The bottom of the window features a 'Log' button on the left and 'Back', 'Next', and 'Exit' buttons on the right.

10. Click 'Copy' button. The installer copies the files.
11. Click 'Next'. The following screen is displayed.

12. Click 'Build' button to start the build process. The installer builds the source files.

This completes the EAR file generation process. The EAR file will be saved to the destination directory.

4. Setting up Gateway Web Service Application

This section explains the methods of setting up Gateway Web Service Application.

4.1.1 Prerequisites

You need to create the following gateway Web Service property files before building the application:

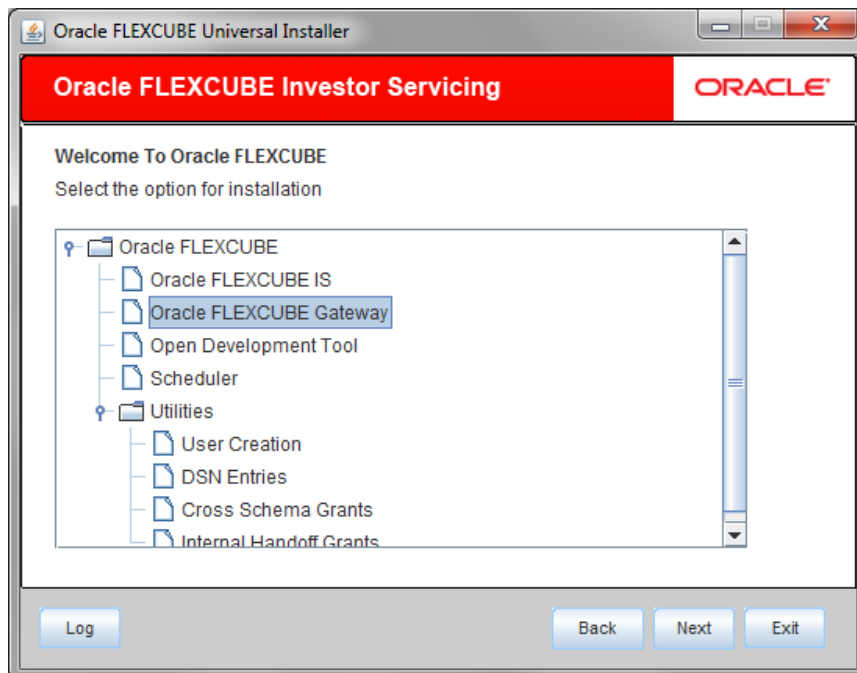

- gw_ws_logger.properties
- GW_WS_Prop.properties

For details, refer [Gateway Property File Creation](#) document

4.1.2 Building EAR File

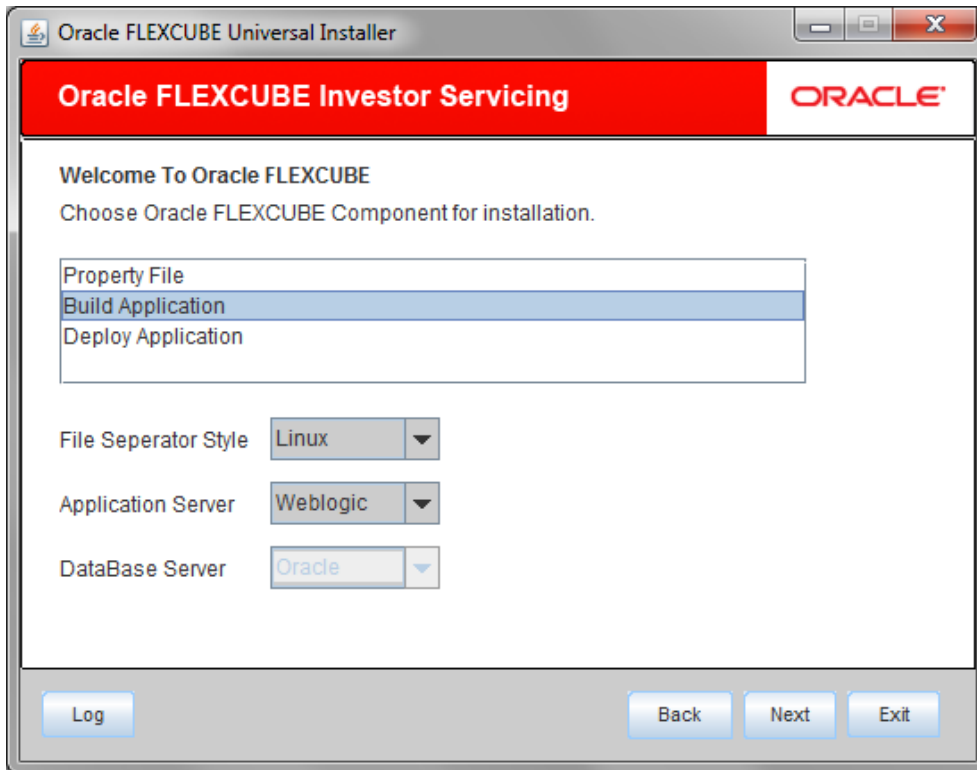

In order to build EAR file for Gateway Web Service Application, you need to follow the steps given below:

1. Launch Oracle FLEXCUBE Universal Installer. The welcome screen is displayed.

2. Choose the Application 'Oracle FLEXCUBE Gateway'. Click 'Next'.

The following screen is displayed:

Specify the following details:

Operating System

Specify the operating system in which you are creating the property file. Choose the appropriate one from the drop-down list. You

Application Server

Specify the application server in which you are creating the property file. Choose the appropriate one from the drop-down list.

14. Click 'Copy' button. The installer copies the files.

15. Click 'Next'. The following screen is displayed.

16. Click 'Build' button to start the build process. The installer builds the source files.

This completes the EAR file generation process. The EAR file will be saved to the destination directory.

5. Post Building Activity

5.1 Introduction

This section introduces you to the activities to be carried out after setting up the gateway applications.

5.1.1 Gateway Configuration

Gateway application looks for the required files inside the 'XSD Path' and 'Logger File' provided at the time of Gateway Property creation.

Refer [Gateway Property File Creation](#) document for details.

You need to maintain the following files in XSD Path and Logger Path:

Path	Files
Logger Path	Logger path should contain the gateway property files generated by the Installer. For example, for Gateway EJB application, the installer generates the files 'gw_ejb_logger.properties' and 'GW_EJB_Prop.properties'. While creating the property file if you specify the 'Logger Path' as 'D:/GW_EJB/config/ gw_ejb_logger.properties', then you need to place both the files 'gw_ejb_logger.properties' and 'GW_EJB_Prop.properties' inside the folder 'D:/GW_EJB/config/'.
XSD Path	XSD Path should contain the common XSD files as well as the gateway module specific XSD files which are related to gateway operation. Copy the common XSD files from 'MAIN\Core\Gateway\COMMON' to the XSD Path. Copy the module specific XSD files from 'MAIN/<module>/ Gateway/XSD' to the XSD Path.

ServerState.xml should be copied in the XSD Directory from
Gateway\Utilities\POSS\ServerState.xml

5.1.2 Deployment Using Oracle WebLogic Application Server

For details on the manual deployment using Oracle WebLogic Application Server, refer to the chapter [Gateway Application Deployment Weblogic](#)

5.1.3 Deployment Using IBM WebSphere Application Server

For details on the manual deployment using IBM WebSphere Application Server, refer to the chapter [Gateway Application Deployment Websphere](#).
