

Web Service Development
Oracle FLEXCUBE Investor Servicing
Release 14.1.0.0.0
[May] [2019]

Table of Contents

1. PREFACE	1-1
1.1 AUDIENCE	1-1
1.2 RELATED DOCUMENTS.....	1-1
1.3 CONVENTIONS	1-1
1.4 HYPOTHETICAL EXAMPLE USED IN THE DOCUMENT	1-2
2. INTRODUCTION	2-1
2.1 HOW TO USE THIS GUIDE	2-1
3. WEB SERVICE - INTRODUCTION	3-1
3.1 COMPONENTS OF WEB SERVICE	3-1
3.2 FLEXCUBE SOAP FORMAT.....	3-2
3.3 FLEXCUBE WSDL FORMAT.....	3-5
3.3.1 <i>WSDL parts</i>	3-5
3.3.2 <i>FCUBS WSDL example</i>	3-6
3.4 FLEXCUBE WEB SERVICE DATA FLOW	3-9
4. PRE REQUISITES FOR WEB SERVICE DEVELOPMENT	4-1
5. WEB SERVICE DEVELOPMENT	5-1
5.1 WEB SERVICE SPECIFICATION.....	5-1
5.2 GENERATE / DEVELOP XSDs.....	5-2
5.2.1 <i>Open Development generated</i>	5-2
5.2.2 <i>Hand coded</i>	5-2
5.3 GENERATE/DEVELOP WSDL.....	5-6
5.3.1 <i>Generate WSDL using TrAX</i>	5-7
5.4 BUILD EAR	5-12
5.4.1 <i>Directory Creation</i>	5-12
5.4.2 <i>File Copy</i>	5-13
5.4.3 <i>Creation of Gateway EJB property file</i>	5-13
5.4.4 <i>Creation of Gateway EJB EAR file</i>	5-16
5.4.5 <i>Creation of Web Service property file</i>	5-20
5.4.6 <i>Creation of Web Service EAR file</i>	5-23
5.4.7 <i>Adding New Service to the List</i>	5-25
5.5 DEPLOYING OF EAR FILE	5-27
5.5.1 <i>Deploying of Gateway EJB EAR file</i>	5-27
5.5.2 <i>Deploying of Web Service EAR file</i>	5-33
5.6 TESTING THE WEB SERVICE	5-36
6. ANNEXURE A – FCMOBILESERVICE – SAMPLE FILES	6-1
6.1 XSD FILES	6-1
6.1.1 <i>CS-Mobil-Types.xsd</i>	6-1
6.1.2 <i>CS-CreateMobil-Req-Full-MSG.xsd</i>	6-12
6.1.3 <i>CS-CreateMobil-Req-IO-MSG.xsd</i>	6-13
6.1.4 <i>CS-CreateMobil-Res-Full-MSG.xsd</i>	6-14
6.1.5 <i>CS-CreateMobil-Res-PK-MSG.xsd</i>	6-15
6.2 WSDL FILE	6-16
6.2.1 <i>FCMobileService.wsdl</i>	6-16
6.3 IMPLEMENTATION JAVA FILES	6-19
6.3.1 <i>FCMobileServiceImpl.java</i>	6-19
6.4 GATEWAY STATIC DATA FROM OPEN DEVELOPMENT.....	6-29

6.4.1	<i>GWTB_AMEND_FIELDS__JKDMOBIL.INC</i>	6-29
6.4.2	<i>GWTB_AMEND_NODES__JKDMOBIL.INC</i>	6-29
6.4.3	<i>GWTM_AMEND_FIELDS__JKDMOBIL.INC</i>	6-30
6.4.4	<i>GWTM_AMEND_MASTER__JKDMOBIL.INC</i>	6-30
6.4.5	<i>GWTM_AMEND_NODES__JKDMOBIL.INC</i>	6-31

1. Preface

This document describes the concepts and helps reader to develop Web service for FLEXCUBE IS function IDs. Web Services developed for FLEXCUBE IS are deployed on Gateway framework.

1.1 Audience

This Web service Development book is intended for FLEXCUBE Application Developers/Users who perform the following tasks:

- Develop the new web service for existing FLEXCUBE Function IDs
- Modify the existing web service to add/remove fields

1.2 Related documents

For more information on FLEXCUBE framework, refer the below documents:

- Development Overview Guide
- Getting Started
- FCUBS-FD05-04-01-TrAX-Reference

To Use this manual, you need conceptual and working knowledge of the below:

Proficiency	Resources
FLEXCUBE IS Development overview	Development Overview Guide
OPEN DEVELOPMENT function ID development getting started	Getting Started
Open Development screen development	Function ID Development

1.3 Conventions

The following text conventions are used in this document:

Convention Meaning

boldface	Boldface type indicates graphical user interface elements (for example, menus and menu items, buttons, tabs, dialog controls), including options that you select.
<i>italic</i>	italic type indicates book titles, emphasis, or placeholder variables for which you supply particular values.
monospace	Monospace type indicates language and syntax elements, directory

	and File name, URLs, text that appears on the screen, or text that you enter.
	Indicates important information

1.4 Hypothetical Example used in the document

FLEXCUBE IS has the function ID JKDMOBILE. This is a maintenance function ID. This function ID is used map the customer number with mobile number. This document covers the web service development for this function ID.

2. Introduction

2.1 How to use this Guide

The information in this guide includes:

- [Chapter 2, “Introduction”](#)
This is an introduction section.
- [Chapter 3, “Web Service - Introduction”](#)
This section discuss the Web service introduction and FLEXCUBE IS web service concepts
- [Chapter 4, “Pre requisites for Web service development”](#)
This section discuss the pre-request check list for web service development
- [Chapter 5, “Web services Development”](#)
This section discusses steps for web service development and testing.
- [Chapter 6, “Annexure A – FCMobileService sample files”](#)
This section discuss the sample files

3. Web Service - Introduction

Web Services are self-contained, self-describing, modular applications that can be published, located and invoked across the web. A Web Service is an interface that describes a collection of operations that are network accessible through standardized XML messaging. The technology is called “Web service” because it integrates services(applications) using web technologies(the internet and its standards). Web service plays vital role in creating Service Oriented Architecture based software applications.

Web services use the following technologies

- XML
XML is used to describe the web service specifications
- SOAP
Simple Object Access Protocol is a network, transport, and programming language, platform independent protocol that allows client to call a remote service. The message format is XML
- WSDL
Web Service Description Language is an XML based interface and implementation description language. The service provider uses WSDL document in order to specify the operations of web service and parameters and data types of these operations

3.1 Components of web service

Following are the components of FLEXCUBE IS Web service:

- XSD files
 - Message XSDs
This represents the “Message” portion on WSDL file that used to define the message communicated in web service. A message can have one or more data types.
 - Type XSDs
This represents the “Types” portion on WSDL file that used to define the data types that are part of messages.
- WSDL file
- Implementation Java files
- Gateway static data

Example:

JKDMOBILE function ID – web service development results in following files. Refer the annexure A for these file contents

- XSD files
 - CS-Mobil-Types.xsd
 - CS-CreateMobil-Req-Full-MSG.xsd
 - CS-CreateMobil-Req-IO-MSG.xsd
 - CS-CreateMobil-Res-Full-MSG.xsd
 - CS-CreateMobil-Res-PK-MSG.xsd
- WSDL file
 - FCMobileService.wsdl
- Implementation Java files
 - FCMobileServiceImpl.java
- Gateway static data
 - GWTB_AMEND_FIELDS_JKDMOBIL.INC
 - GWTB_AMEND_NODES_JKDMOBIL.INC
 - GWTM_AMEND_FIELDS_JKDMOBIL.INC
 - GWTM_AMEND_MASTER_JKDMOBIL.INC
 - GWTM_AMEND_NODES_JKDMOBIL.INC

3.2 FLEXCUBE SOAP format

FLEXCUBE IS uses the following SOAP format

SOAP component	FCUBS component	Example
SOAP Envelope	OPERATION.FUNCTIONID_PATTER N_REQ/RESP	CREATEMOBILE_FSFS_R EQ
SOAP Header	<FCUBS_HEADER>	<FCUBS_HEADER>
SOAP Body	<FCUBS_BODY>	<FCUBS_BODY>

Example:

```

<CREATEMOBILE_FSFS_REQ xmlns="http://fcubs.ofss.com/service/FCMobileService">

<FCUBS_HEADER>

  <SOURCE>FLEXCUBE </SOURCE>

  <UBSCOMP>FCUBS</UBSCOMP>

  <MSGID></MSGID>

  <CORRELIID></CORRELIID>

  <USERID>PIYUSHB</USERID>

  <BRANCH>000</BRANCH>

  <MODULEID>CS</MODULEID>

  <SERVICE>FCMobileService</SERVICE>

```

```

<OPERATION>CreateMobile</OPERATION>

<SOURCE_OPERATION></SOURCE_OPERATION>

<SOURCE_USERID></SOURCE_USERID>

<!--Optional:-->

<DESTINATION></DESTINATION>

<!--Optional:-->

<MULTITRIPID></MULTITRIPID>

<!--Optional:-->

<FUNCTIONID></FUNCTIONID>

<!--Optional:-->

<ACTION></ACTION>

<!--Optional:-->

<MSGSTAT>SUCCESS</MSGSTAT>

<!--Optional:-->

<ADDL>

    <!--Zero or more repetitions:-->

    <PARAM>

        <NAME>abc</NAME>

        <VALUE>123</VALUE>

    </PARAM>

</ADDL>

</FCUBS_HEADER>

<FCUBS_BODY>

    <Jktm-Junk-Mobile-Full>

        <CUSTOMER_NO>00000001</CUSTOMER_NO>

        <CELL_NO>1234567890</CELL_NO>

        <!--Optional:-->

        <MAKER></MAKER>

        <!--Optional:-->

        <MAKERSTAMP></MAKERSTAMP>

```

```

<!--Optional:-->

<CHECKER></CHECKER>

<!--Optional:-->

<CHECKERSTAMP></CHECKERSTAMP>

<!--Optional:-->

<MODNO></MODNO>

<!--Optional:-->

<TXNSTAT></TXNSTAT>

<!--Optional:-->

<AUTHSTAT></AUTHSTAT>

<!--Zero or more repetitions:-->

<Jktm-Junk-Mobil-Dtl>

    <CUSTOMER_NO>010101</CUSTOMER_NO>

    <!--Optional:-->

    <ACCOUNT_NO></ACCOUNT_NO>

    <!--Optional:-->

    <NAME></NAME>

    <!--Optional:-->

    <TXNDETL></TXNDETL>

    <!--Optional:-->

    <STATUS></STATUS>

    <!--Optional:-->

    <CELL_NO></CELL_NO>

</Jktm-Junk-Mobil-Dtl>

<!--Optional:-->

<Jktm-Junk-Mobile-Dtl2>

    <CUSTOMER_NO></CUSTOMER_NO>

    <!--Optional:-->

    <CUSTOMER_NAME></CUSTOMER_NAME>

    <!--Optional:-->

```

```

<CUSTOMER_CATEGORY></CUSTOMER_CATEGORY>
<!--Optional:-->
<ADDRESS></ADDRESS>
<!--Optional:-->
<CITY></CITY>
<!--Optional:-->
<COUNTRY></COUNTRY>
</Jktm-Junk-Mobile-Dtl2>
</Jktm-Junk-Mobile-Full>
</FCUBS_BODY>
</CREATEMOBILE_FSFS_REQ>

```

 In FCUBS BODY, the data blocks are referred as nodes. Example, *Jktm-Junk-Mobile-Full* in above XML represents the data block that sources from *JKT_M_JUNK_MOBILE_FULL* table. Replace “-”(hyphen) with “_”(underscore) to get the table name and data block.

3.3 FLEXCUBE WSDL format

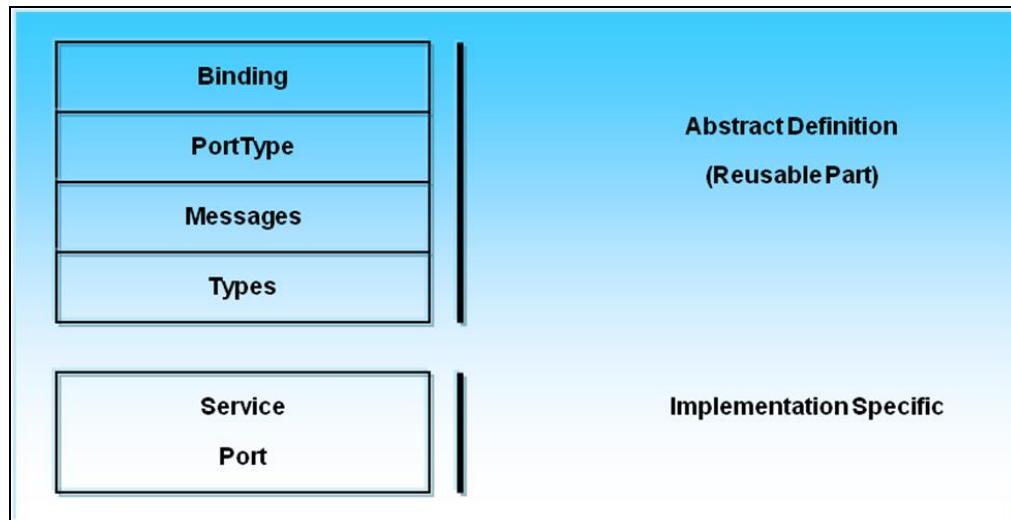

FLEXCUBE has the concept of Function ID that has multiple actions. This is translated to Web service pattern as below:

FUNCTION ID + ACTIONS = WEB SERVICE + OPERATIONS

Example

JKDMOBILE + NEW = FCMobileService + CreateMobile

3.3.1 WSDL parts

3.3.2 FCUBS WSDL example

```
<?xml version= "1.0" encoding="UTF-8"?>

<wsdl:definitions name="FCMobileService"

targetNamespace = "http://types.ws.gw.fcubs.ofss.com"

xmlns:tns = "http://types.ws.gw.fcubs.ofss.com"

xmlns:wsdlsoap = "http://schemas.xmlsoap.org/wsdl/soap/"

xmlns:wsdl = "http://schemas.xmlsoap.org/wsdl/"

xmlns:xs = "http://www.w3.org/2001/XMLSchema"

xmlns="http://schemas.xmlsoap.org/wsdl/"

xmlns:ns="http://fcubs.ofss.com/service/FCMobileService">

</wsdl:definitions>

<wsdl:types>

<xs:schema>

<xs:import namespace="http://fcubs.ofss.com/service/FCMobileService"

schemaLocation="../XSD/CS-CreateMobil-Req-Full-MSG.xsd"/>

</xs:schema>

<xs:schema>

<xs:import namespace="http://fcubs.ofss.com/service/FCMobileService"

schemaLocation="../XSD/CS-CreateMobil-Res-Full-MSG.xsd"/>

</xs:schema>

<xs:schema>

<xs:import namespace="http://fcubs.ofss.com/service/FCMobileService"

schemaLocation="../XSD/CS-CreateMobil-Req-IO-MSG.xsd"/>

</xs:schema>

<xs:schema>

<xs:import namespace="http://fcubs.ofss.com/service/FCMobileService"

schemaLocation="../XSD/CS-CreateMobil-Res-PK-MSG.xsd"/>

</xs:schema>

</wsdl:types>
```

```

<wsdl:message name="CreateMobileFSReq">

    <wsdl:part name="RequestMsg" element="ns:CREATMOBILE_FSFS_REQ"/>

</wsdl:message>

<wsdl:message name="CreateMobileFSRes">

    <wsdl:part name="ResponseMsg" element="ns:CREATMOBILE_FSFS_RES"/>

</wsdl:message>

<wsdl:message name="CreateMobileIOReq">

    <wsdl:part name="RequestMsg" element="ns:CREATMOBILE_IOPK_REQ"/>

</wsdl:message>

<wsdl:message name="CreateMobilePKRes">

    <wsdl:part name="ResponseMsg" element="ns:CREATMOBILE_IOPK_RES"/>

</wsdl:message>

<wsdl:portType name="FCMobileServiceSEI" >

    <wsdl:operation name="CreateMobileIO">

        <wsdl:input message="tns:CreateMobileIOReq"/>

        <wsdl:output message="tns:CreateMobilePKRes"/>

    </wsdl:operation>

    <wsdl:operation name="CreateMobileFS">

        <wsdl:input message="tns:CreateMobileFSReq"/>

        <wsdl:output message="tns:CreateMobileFSRes"/>

    </wsdl:operation>

</wsdl:portType>

```

```

<wsdl:binding name="FCMobileService" type="tns:FCMobileServiceSEI">

    <wsdlsoap:binding style="document"
        transport="http://schemas.xmlsoap.org/soap/http"/>

        <wsdl:operation name="CreateMobileFS">

            <wsdlsoap:operation soapAction="" />

            <wsdl:input>
                <wsdlsoap:body use="literal" />
            </wsdl:input>

            <wsdl:output>
                <wsdlsoap:body use="literal" />
            </wsdl:output>
        </wsdl:operation>

        <wsdl:operation name="CreateMobileIO">

            <wsdlsoap:operation soapAction="" />

            <wsdl:input>
                <wsdlsoap:body use="literal" />
            </wsdl:input>

            <wsdl:output>
                <wsdlsoap:body use="literal" />
            </wsdl:output>
        </wsdl:operation>

    </wsdl:binding>

    <wsdl:service name="FCMobileService">

        <wsdl:port name="FCMobileServiceSEI" binding="tns:FCMobileService">

            <wsdlsoap:address
                location="http://localhost:9080/FCMobileService/services/FCMobileService" />

        </wsdl:port>
    </wsdl:service></wsdl:definitions>

```

3.4 FLEXCUBE Web Service data flow

The below diagram explains the web service message flow in FLEXCUBE IS.

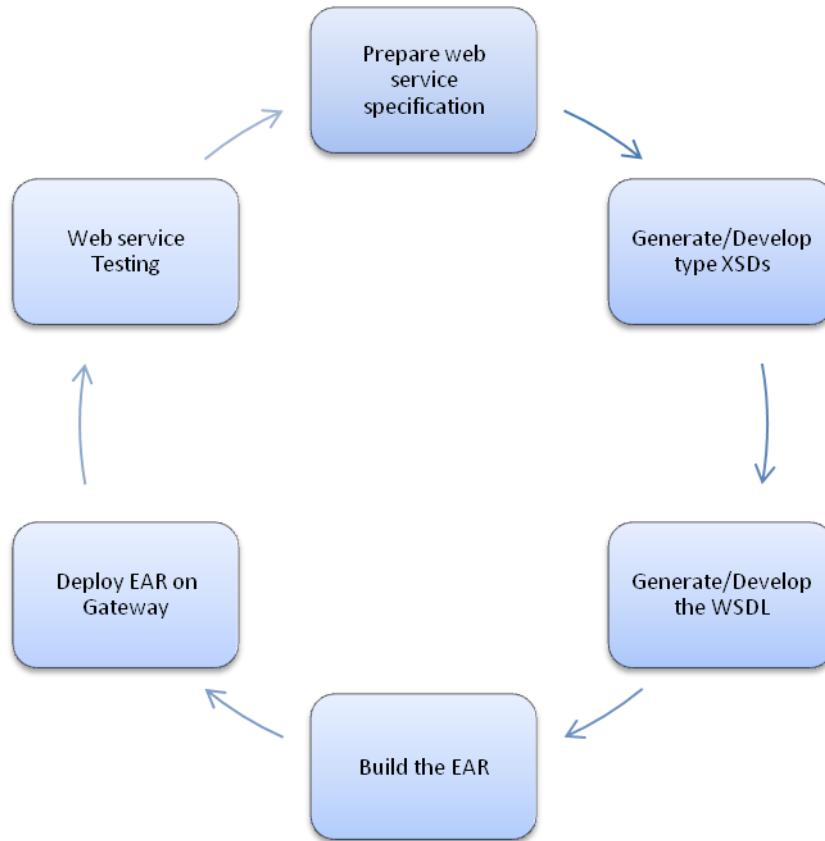

4. Pre requisites for Web service development

- Web service development Specification (explained in further sections)
- OPEN DEVELOPMENT tool -to generate the type XSDs and Gateway static data
- Target FLEXCUBE IS environment with Gateway framework implemented.
- TrAX tool (to generate the WSDL and Java Implementation files)

5. Web service Development

The below diagram represents the web service development cycle

5.1 Web Service specification

Specification	Example Data
What is the function ID web service required?	JKDMOBILE
What is the action of the function ID web service required?	NEW
What is the Web service name?	FCMobileService
What is the operation name?	CreateMobile
Open Development generated XSD available in the xsd folder, specified at Open Development?(Yes/No) <i>XSD files generated for the screen should be available for maintenance function IDs. For online function IDs, these type XSDs may be hand coded</i>	Yes
Created a Web Service and operation using TrAX tool?	Yes

Specification	Example Data
<i>Specify the name of the service and operation created for a function id, to be used in FLEXCUBE</i>	
WSDL, Config file created using TrAX tool? (Yes/No) <i>WSDL files are needed to create a service, this contains the information for the service being created for a function id (using the XSD's)</i>	Yes
Property and EAR file generated from the installer? (Yes/No) <i>The property and EAR file are created using installer. Location for these files is specified during creation.</i>	Yes

5.2 Generate / Develop XSDs

There are two ways to develop XSDs

- Use Open Development Tool
- Manually create XSD and maintain Gateway static data

5.2.1 Open Development generated

As a part of Function ID development, Open Development is used to generate the following web service artifacts:

- XSD folder with type XSDs
- INC folder that has following Gateway static data needed at runtime for web service.
 - GWTB_AMEND_FIELDS__JKDMOBIL.INC
 - GWTB_AMEND_NODES__JKDMOBIL.INC
 - GWTM_AMEND_FIELDS__JKDMOBIL.INC
 - GWTM_AMEND_MASTER__JKDMOBIL.INC
 - GWTM_AMEND_NODES__JKDMOBIL.INC

Refer Open Development documents for steps to get type XSDs and following INC files to populate Gateway maintenance tables.

5.2.2 Hand coded

If Open Development is not used for XSDs generation, these XSDs need to be created manually using existing samples available.

Developer expected to have proficiency in understanding complete FLEXCUBE IS web service framework and patterns to hand code the XSDs. Refer Section 6 for sample files. User can also refer existing contract online web service files for reference/samples.

If Open Development is not used, the Gateway static data need to maintain manually as follows:

1. Make the entry in GWTM_OPERATIONS_MASTER for every operation code for a given web service.

Example:

SERVICE_NAME	FCUBSCustomerService
OPERATION_CODE	ModifyMobile
SERVICE_DESC	Customer Service
OPERATION_DESCRIPTION	Modification of Mobile Number
MODULE_CODE	ST
REPLY_REQD	N
FC_FUNCTION_ID	STDCIF
FC_ACTION	MODIFY
DEFAULT_FUNCTION	Y
SMS_FUNCTION_ID	STGCIF
SMS_ACTION	UNLOCK
FS_REQ_XSD	ST- ModifyMobile -Req-Full-MSG.xsd
PK_RES_XSD	ST- ModifyMobile -Res-PK-MSG.xsd
FS_RES_XSD	ST- ModifyMobile -Res-Full-MSG.xsd
IO_REQ_XSD	ST- ModifyMobile -Req-IO-MSG.xsd

2. Make the entry in GWTM_GATEWAY_FUNCTIONS

SERVICE_NAME	OPERATION_CODE	FUNCTION_ID	ACTION
FCUBSCustomerService	ModifyMobile	STGCIF	UNLOCK

3. Maintain external system details using function id GWDEXSYS

Example: STMOB

The screenshot shows the 'External System - Detailed' configuration window. It includes sections for 'External System' (with fields for 'External System' set to 'STMOB' and 'Description' as 'External system for Mobile Update'), 'Correlation Pattern' (Request set to 'Message ID'), 'Message Exchange Pattern' (Request Message set to 'Input Only' and Response Message to 'Full Screen'), 'Queue' (Default Response Queue and Dead Letter Queue both empty), and 'Fields' (checkboxes for 'XSD Validation Required' and 'Register Response Queue Message Id'). Below these are tabs for 'Fields' and 'FTP Parameters'. At the bottom, status information includes 'Input By SAN1', 'Date Time 2007-12-31 18:27:48', 'Modification Number 1', checkboxes for 'Authorized' and 'Open', and an 'Exit' button.

4. Maintain external system function using function id GWDEXFUN

The screenshot shows the 'External System Functions - Detailed' configuration window. It includes fields for 'External System' (set to 'STMOB'), 'Function' (set to 'STGOIF'), 'Action' (set to 'UNLOCK'), 'Service Name' (set to 'FCUBSCustomerService'), and 'Operation Code' (set to 'ModifyCustomer'). To the right, there is a 'Description' field with the value 'External system for Mobile Update'. At the bottom, status information includes 'Input By SAN1', 'Date Time 2007-12-31 18:47:00', 'Modification Number 1', checkboxes for 'Authorized' and 'Open', and an 'Exit' button.

5. Make the entry in GTWB_AMEND_NODES for new operation code

NODE_NAME	STTMS_CUST_PERSONAL
NEW_ALLOWED	N
DELETE_ALLOWED	N

NODE_NAME	STTMS_CUST_PERSONAL
ALL_RECORDS	Y
SERVICE_NAME	FCUBSCustomerService
OPERATION_CODE	ModifyMobile

6. Make the entry in GWTB_AMEND_FIELDS for new operation code

NODE_NAME	STTMS_CUST_PERSONAL
FIELD_NAME	MOBILE_NUMBER
SERVICE_NAME	FCUBSCustomerService
OPERATION_CODE	ModifyMobile

7. Make Mobile number fields as Amendable for External system using function id STDAMDMT

The screenshot shows the 'Amendment Maintenance - Detailed' window. At the top, it displays the external system as STIMOB, operation as ModifyMobile, service name as FCUBSCustomerService, and operation code as ModifyMobile. Below this, there are two main sections: 'Amend Nodes' and 'Amend Fields'. The 'Amend Nodes' section lists a single node named STTMS_CUST_PERSONAL with checkboxes for New Allowed, Deleted Allowed, and All Records, all of which are checked. The 'Amend Fields' section lists a single field named MOBILE_NUMBER with a checked checkbox for Field Name. At the bottom of the window, there is a 'Fields' tab, input fields for Input By ABH1 and Authorized By ABH2 with their respective dates and times, and checkboxes for Authorized and Open, both of which are checked. There is also an 'Exit' button.

8. Maintain external Source using function id CODSORCE

Upload Source Maintenance

Source Code *	STMOB
Description	External Source for Mobile
<input type="checkbox"/> Base Data From Flexcube	
Fields Input By ABH2 Date Time 2007-12-31 19:41:11 Modification Number 1 <input checked="" type="checkbox"/> Authorized Authorized By ABH1 Date Time 2008-03-31 19:42:09 <input checked="" type="checkbox"/> Open	

9. Maintain external Source parameters preference using function id CODUPLDM

Upload Source Preferences Maintenance

Source Code *	STMOB	Module Code *	ST
Error Handling On Override * <input style="width: 100px; height: 20px; border: none; background-color: #f0f0f0; border-radius: 5px; padding: 2px 10px;" type="button" value="Ignore"/>		On Exception * <input style="width: 100px; height: 20px; border: none; background-color: #f0f0f0; border-radius: 5px; padding: 2px 10px;" type="button" value="Reject"/>	
Post Upload Status * <input style="width: 100px; height: 20px; border: none; background-color: #f0f0f0; border-radius: 5px; padding: 2px 10px;" type="button" value="Authorized"/> Purge Days(Calendar)			
<input type="checkbox"/> Allow Deferred Processing <input type="checkbox"/> Allow EOD with Deferred <input checked="" type="checkbox"/> Allow Delete			
Fields Input By OFSSPAYMAK6 Date Time 2008-03-31 14:59:36 Authorized By OFSSPAYMAK6 Date Time 2007-12-31 15:12:43		<input checked="" type="checkbox"/> Authorized <input checked="" type="checkbox"/> Open	

5.3 Generate/Develop WSDL

Having type and Message XSDs, WSDL file development can be done in two ways:

- Using TrAX tool

Refer the document FCUBS-FD05-04-01-TrAX-Reference for more information

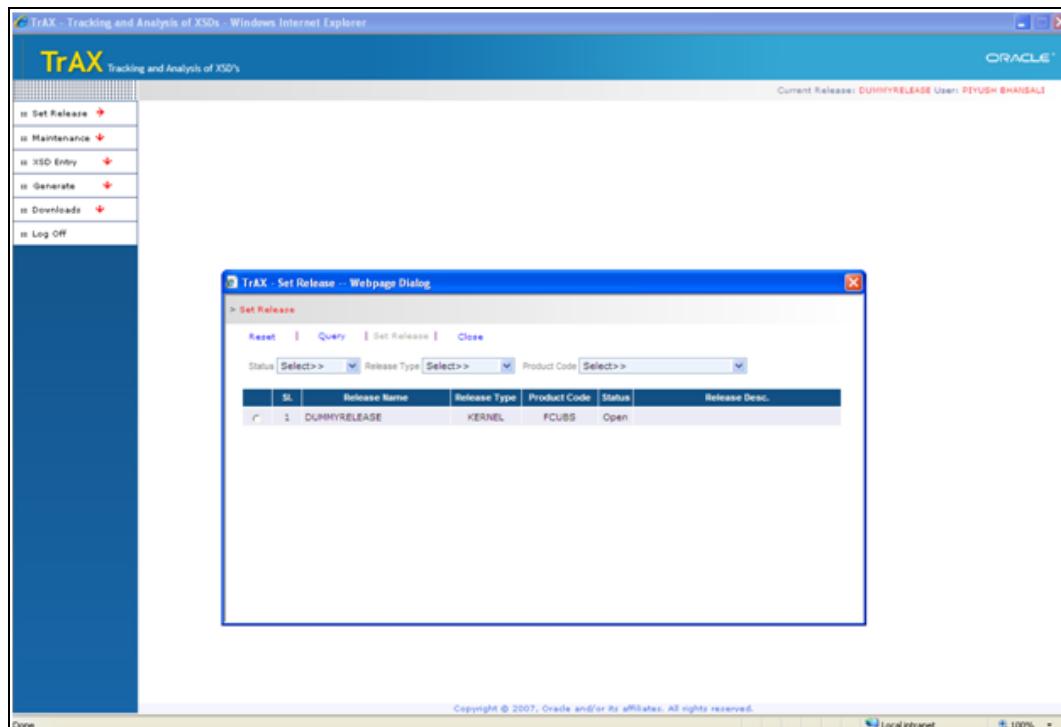

- Hand coding

Developer expected to have proficiency in understanding complete FLEXCUBE IS web service framework and patterns to hand code the WSDL file. Refer annexure A for sample files. User can also refer existing contract online web service files for reference/samples.

5.3.1 Generate WSDL using TrAX

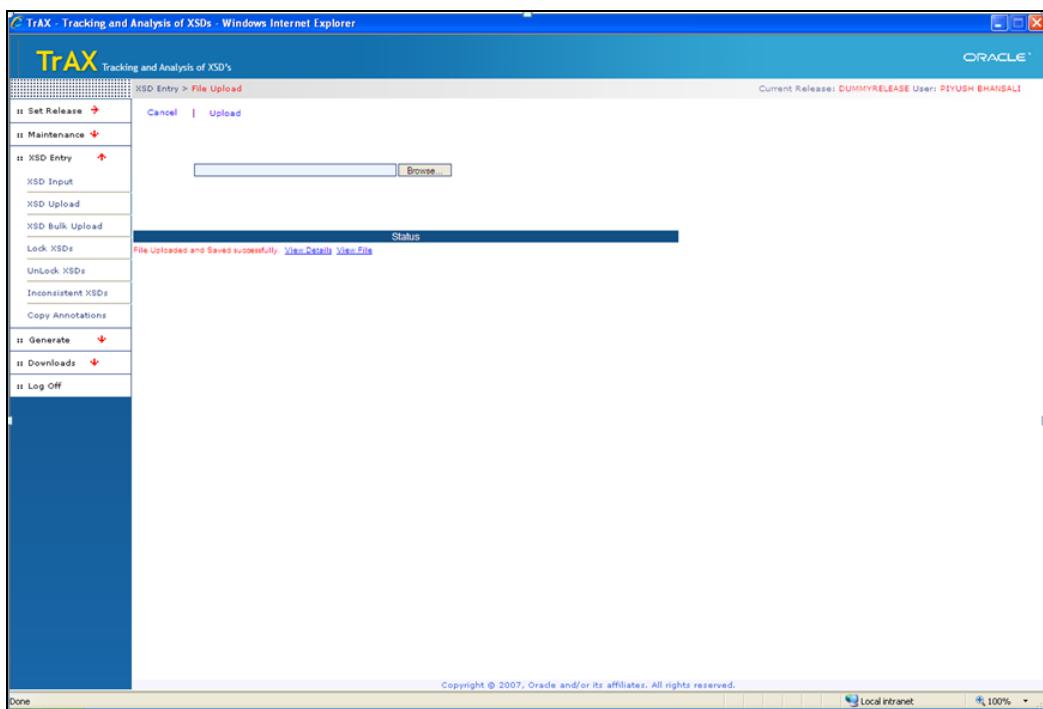

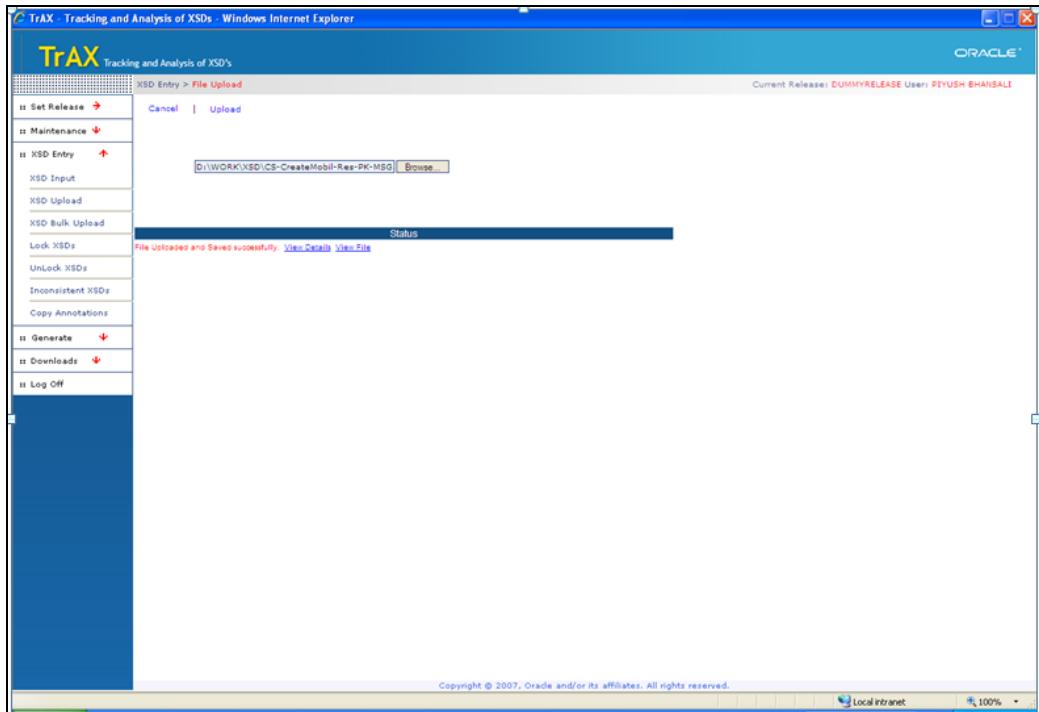

TrAX tool used for the creation of new module,service,operation and generation of WSDL files, which is used in deployment for WebServices

- Step – 1 - Set Release

- Step 2 - Upload XSD's:

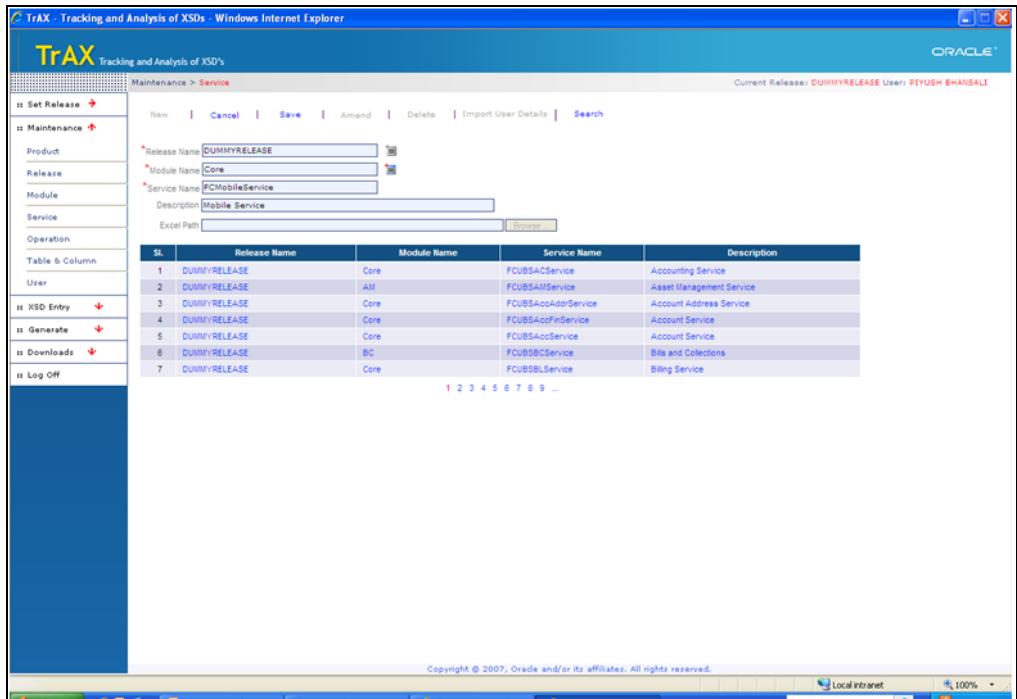

The XSD's generated from the Open Development are uploaded in the TrAX tool so that it can be used to develop a new service.

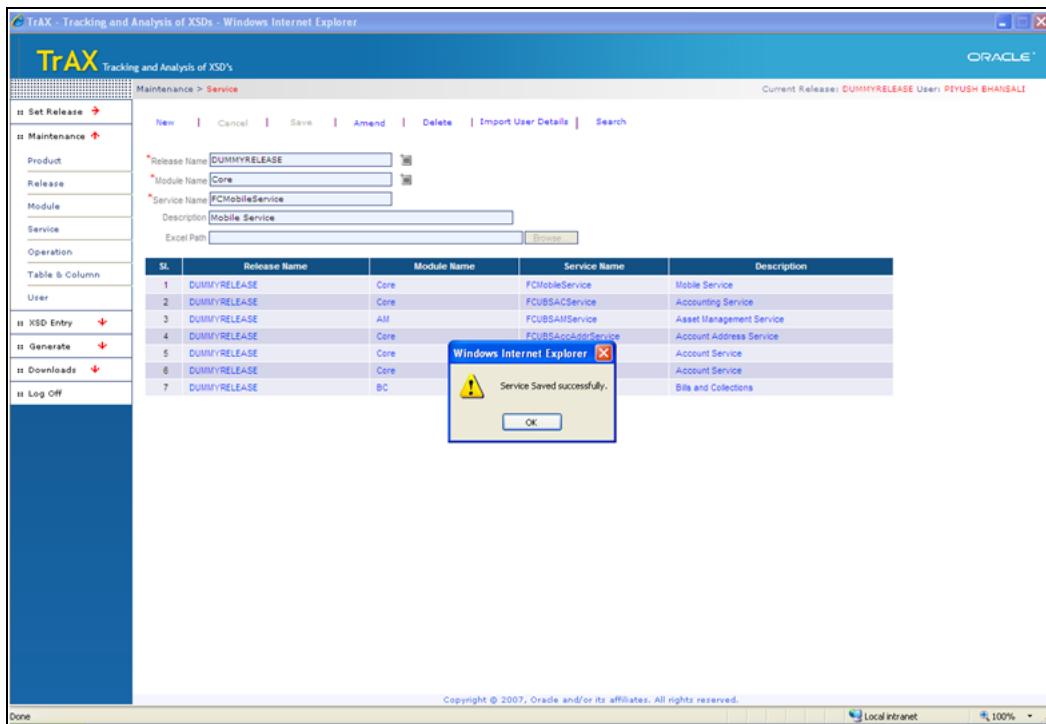

- Step 3 - Creation of Service

For creation of new services, under Maintenance → Service → New

- Release name will be the release of FLEXCUBE for which the Service is created.
- Module name will contain the module for which the service is enabled.
- Service name is the WSDL name given to the web service created.
- Description has the details for which the service is created.

After successful creation of Service, it displays the message “Service Saved Successfully”.

The new service name can be checked in the list after successful creation.

The screenshot shows the TrAX application running in Internet Explorer. The main title bar reads "TrAX - Tracking and Analysis of XSDs - Windows Internet Explorer". The top menu bar has an "ORACLE" logo. The main content area is titled "Maintenance > Service". Below this, there are buttons for "New", "Cancel", "Save", "Amend", "Delete", "Import User Details", and "Search". A message at the top right says "Current Release: DUMMYRELEASE User: PIYUSH BHANDARI". On the left, a vertical sidebar lists navigation items: "Set Release", "Maintenance", "Product", "Release", "Module", "Service", "Operation", "Table & Column", "User", "XSD Entry", "Generate", "Downloads", and "Log Off". The main table displays the following data:

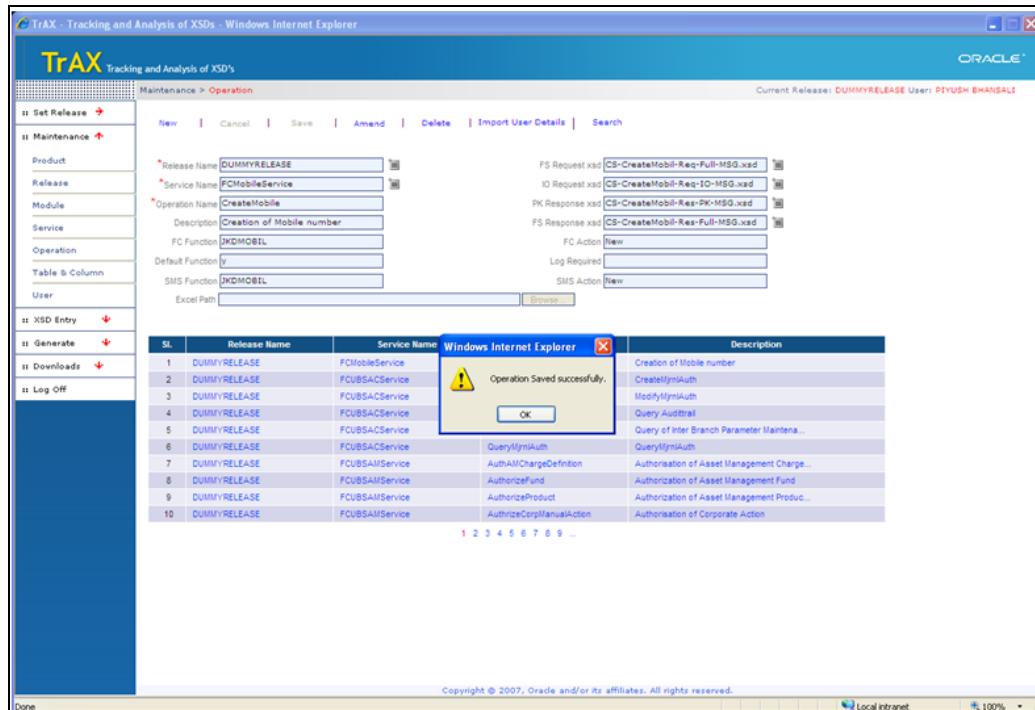

Sl.	Release Name	Module Name	Service Name	Description
1	DUMMYRELEASE	Core	FCMobileService	Mobile Service
2	DUMMYRELEASE	Core	FCUBACService	Accounting Service
3	DUMMYRELEASE	All	FCUBASALService	Asset Management Service
4	DUMMYRELEASE	Core	FCUBSAccAddrService	Account Address Service
5	DUMMYRELEASE	Core	FCUBSAccInService	Account Service
6	DUMMYRELEASE	Core	FCUBSAccService	Account Service
7	DUMMYRELEASE	BC	FCUBSSCService	Bills and Collections

At the bottom of the table, there are links for "1", "2", "3", "4", "5", "6", "7", "8", "9", and "...". The status bar at the bottom of the browser window shows "Copyright © 2007, Oracle and/or its affiliates. All rights reserved.", "Local Intranet", and "100%".

- Step 4 -Creation of Operation

To create a new operation, under Maintenance → Operation. Click New.

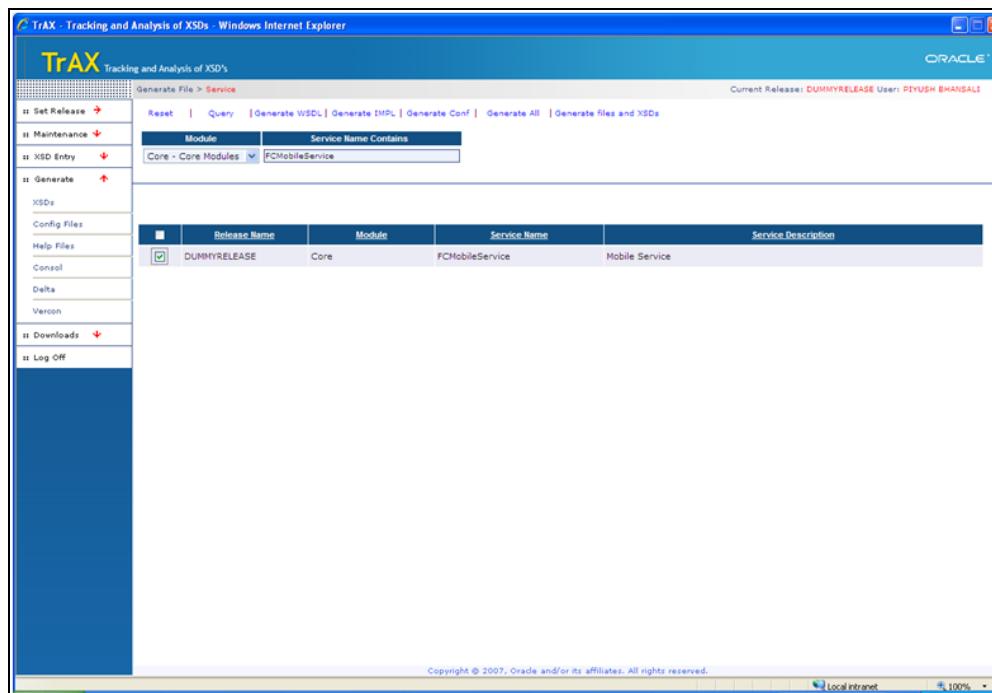

- Operation name is the name given to the Operation created.
- Description has the details for which the Operation is created.
- FS request XSD is the full request message XSD file generated from Open Development tool for a function id.
- IO request XSD is the Input/output request message XSD file generated from Open Development tool for a function id.
- PK response XSD is the Primary Key response message XSD file generated from Open Development tool for a function id.
- FS response XSD is the full response message XSD file generated from Open Development tool for a function id.
- FC Action refers to the FLEXCUBE action available for the Operation. Here it is New.

- Step 5 - Generation of WSDL files

Select Generate →Config files

- Click on Query, Enter the Module Name and Service name for which the WSDL is to be generated.
- After checking the Release, module and service name, Options are enabled.
- Click on Generate All to get WSDL, IMPL, CONF files. It will ask for the location where all these files will be generated

- Ensure the message “All Files has successfully downloaded”
- Go to the location mentioned and check the WSDL file generation. In this example, the file name is “FCMobileService.wsdl”

The screenshot shows the TrAX interface with the following details:

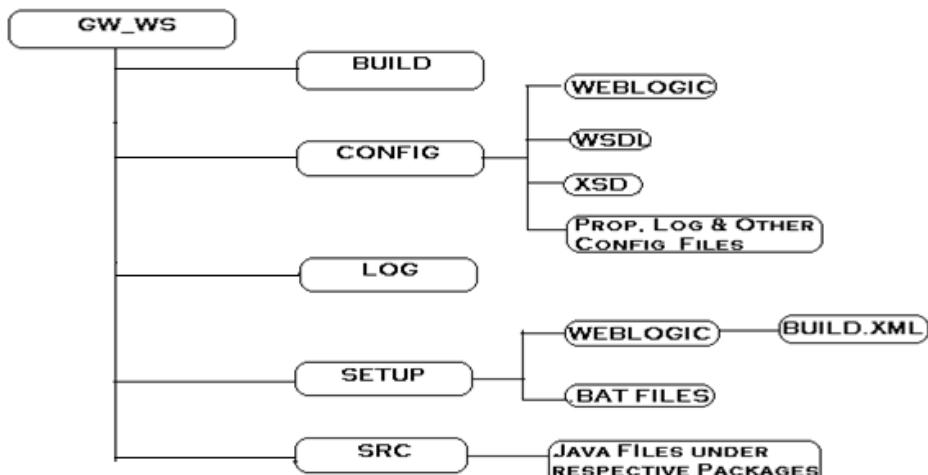

- Header:** TrAX - Tracking and Analysis of XSD's - Windows Internet Explorer, ORACLE
- Toolbar:** Generate File > Service, Reset, Query, Generate WSDL, Generate IMPL, Generate Conf, Generate All, Generate Files and XSDs.
- Search Bar:** Module: Core - Core Modules, Service Name Contains: FCMobileService
- Table:** A table showing a single row: Release Name: DUMMYRELEASE, Module: Core, Service Name: FCMobileService, Service Description: Mobile Service.
- Message Box:** A modal dialog box displays the message "All files has successfully downloaded." with an "OK" button.
- Footer:** Copyright © 2007, Oracle and/or its affiliates. All rights reserved.

5.4 Build EAR

This section explains how to build EAR file using XSDs and WSDL created

5.4.1 Directory Creation

- Identify & Copy GW_WS.zip into your local machine. Unzip the file
This file contains factory shipped directory structure and pre-configured properties file for Gateway framework.
- The following folder structure can be seen after unzip.

5.4.2 File Copy

- Copy the WSDL generated into **GW_WS\CONFIG\WSDL** folder.
- Copy all the relevant XSD's into **GW_WS\CONFIG\XSD** folder.
- Copy the Java Implementation file into **GW_WS\src\com\ofss\fcubs\gw\ws** folder

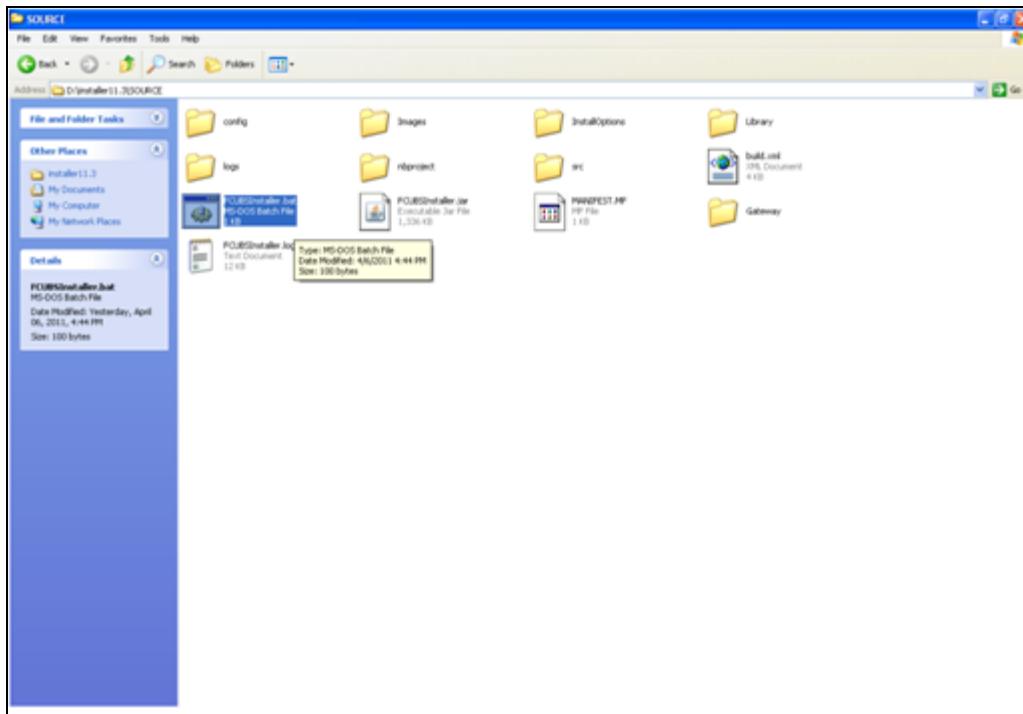

5.4.3 Creation of Gateway EJB property file

This section describes the steps to create Gateway EJB property file.

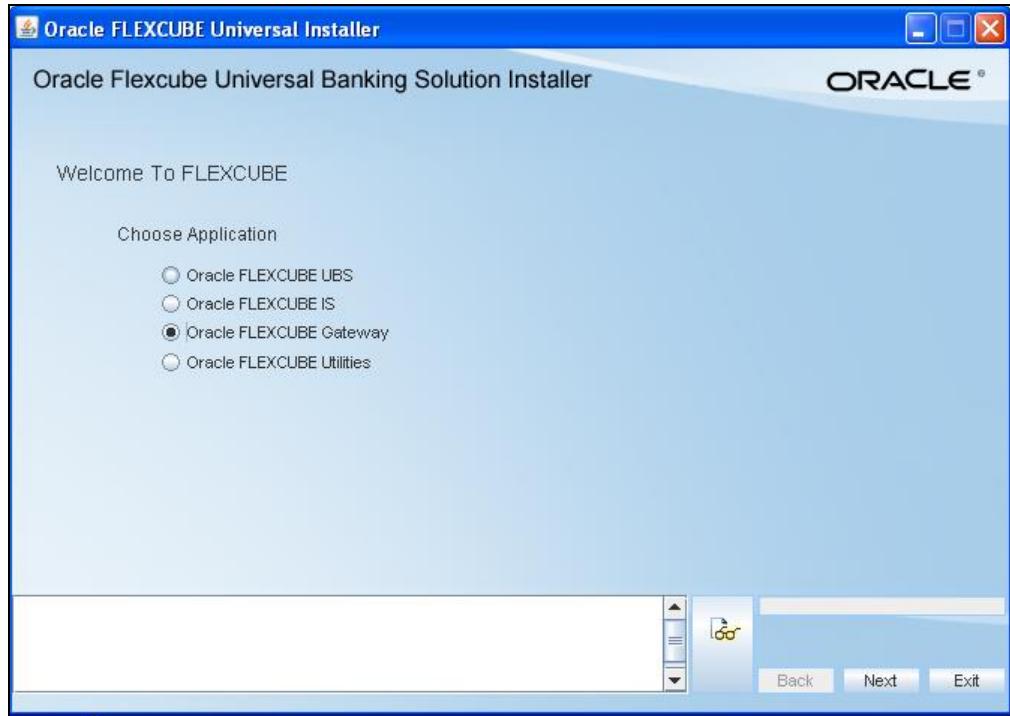

Skip this section(steps 1 to 4) if Gateway EJB is already deployed in Target FLEXCUBE IS environment.

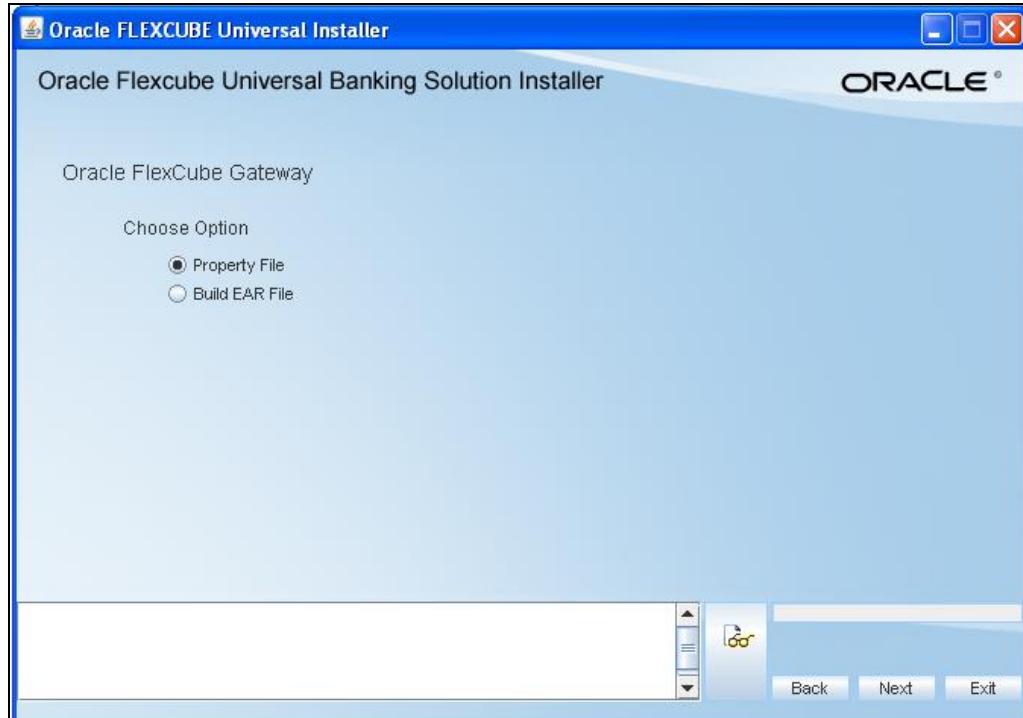

- Step 1 – Copy installer source to your local windows machine and run the FCUBSInstaller

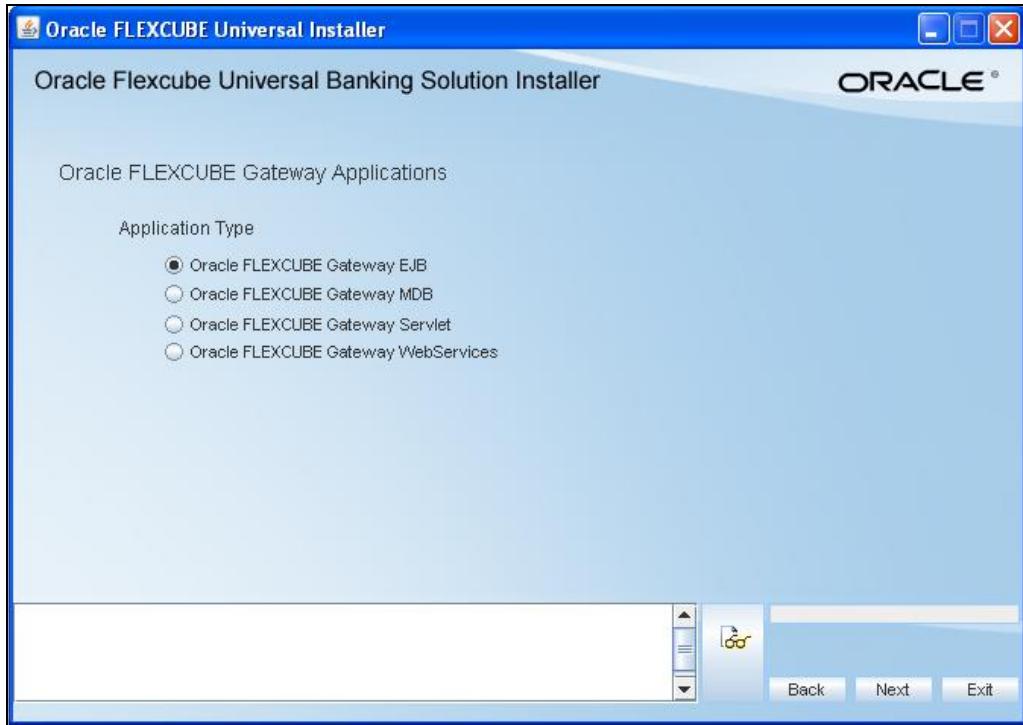

- Step 2 – Select Oracle FLEXCUBE Gateway

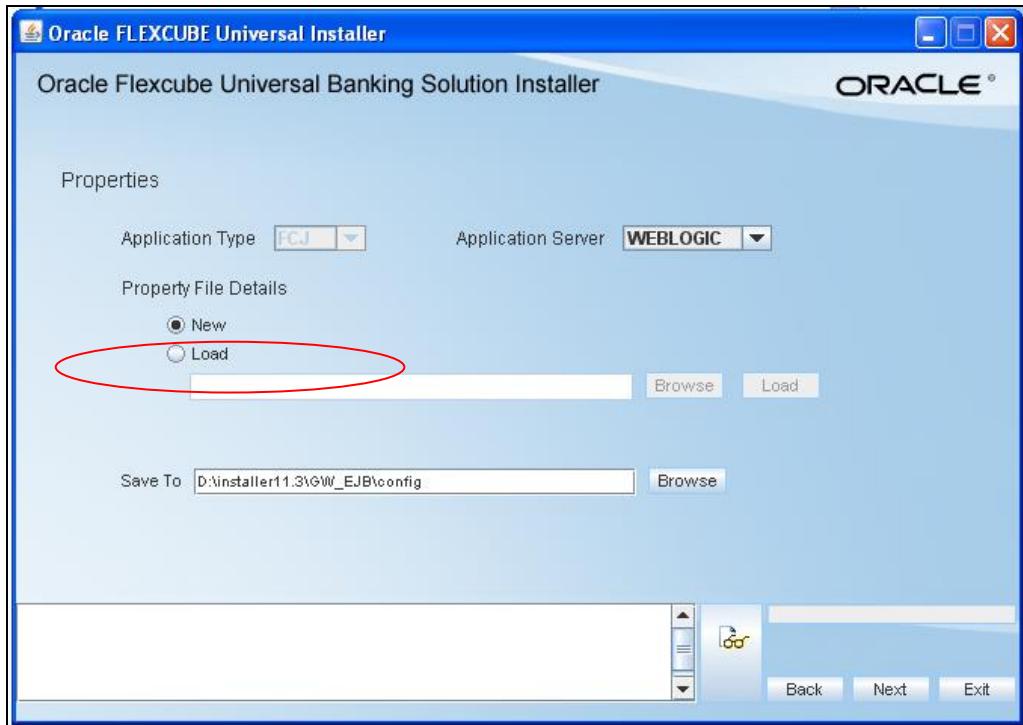

- Step-3 – Select Property File

- Step-4.a – Select Oracle FLEXCUBE Gateway EJB

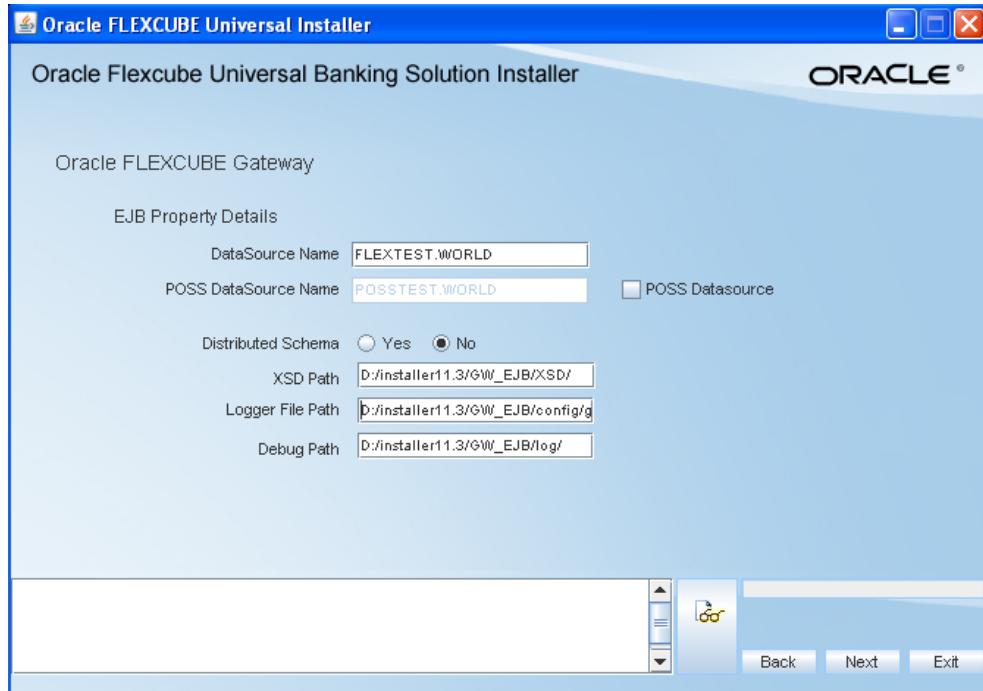

- Step-4.b – Select New

Specify the location in which new Property file for EJB application will be created.

Click Next

- Step-4.c – provide details

Details of the Property file for EJB.

Path location is mentioned where the specific files will be available. Here it is in local machine.

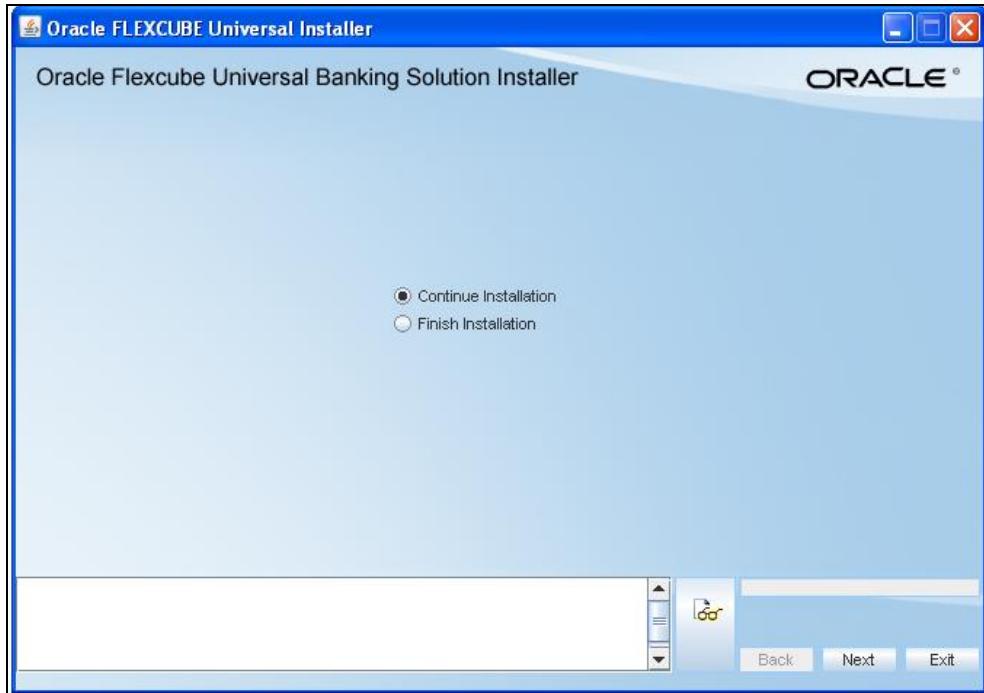

5.4.4 Creation of Gateway EJB EAR file

This section describes the steps to create the Gateway EJB EAR file

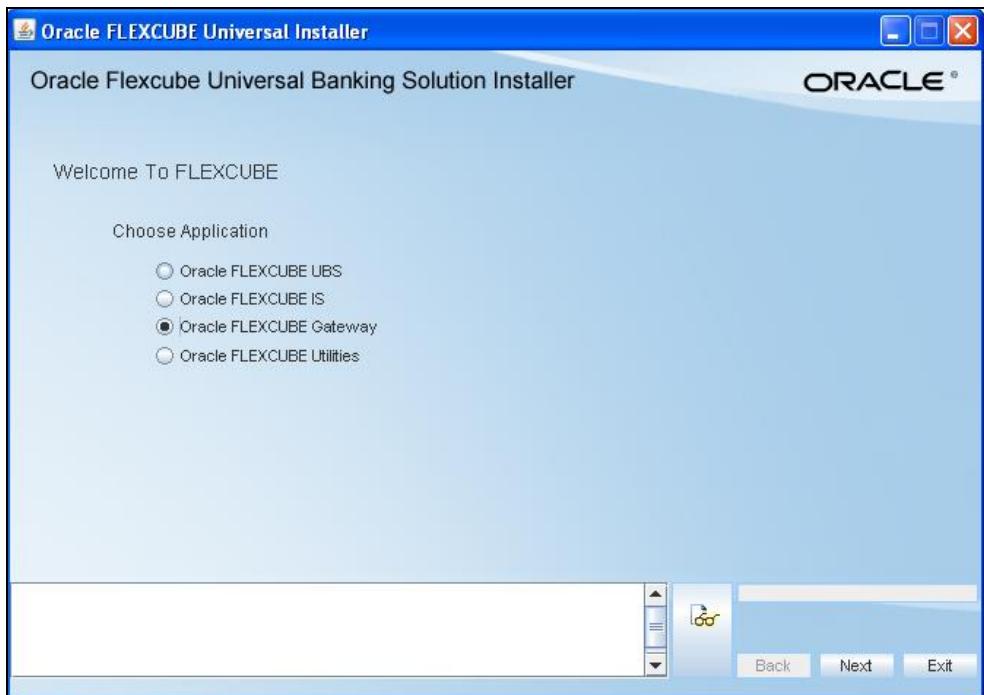

Skip this section(steps 5 to 10) if Gateway EJB is already deployed in Target FLEXCUBE IS environment.

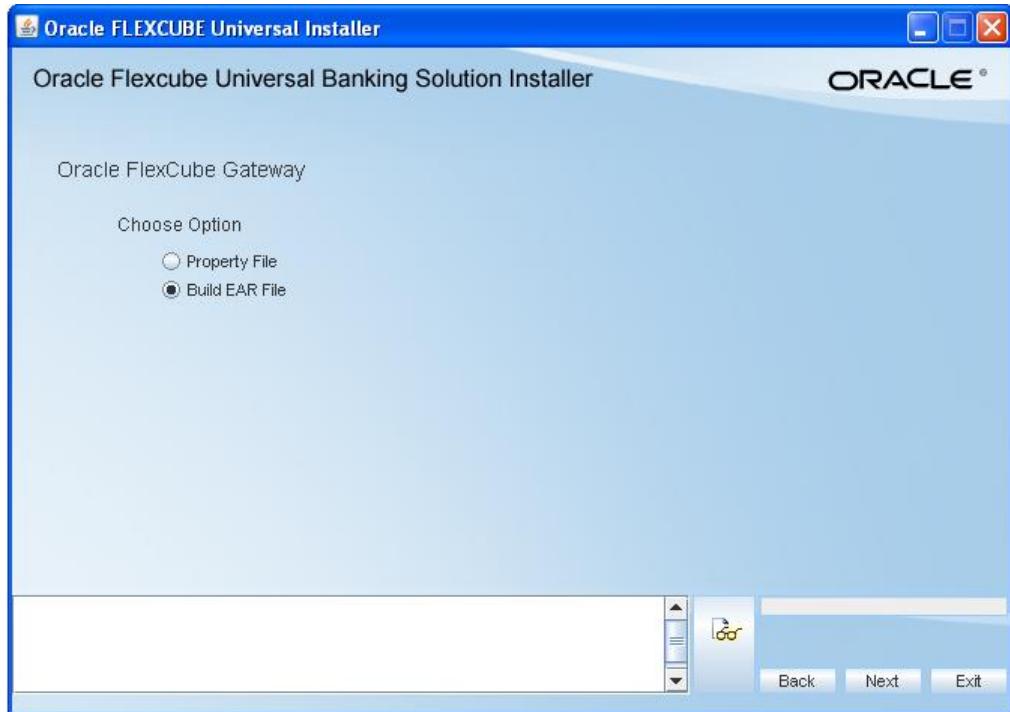

- Step-5- Click on Continue to generate Gateway EJB EAR file

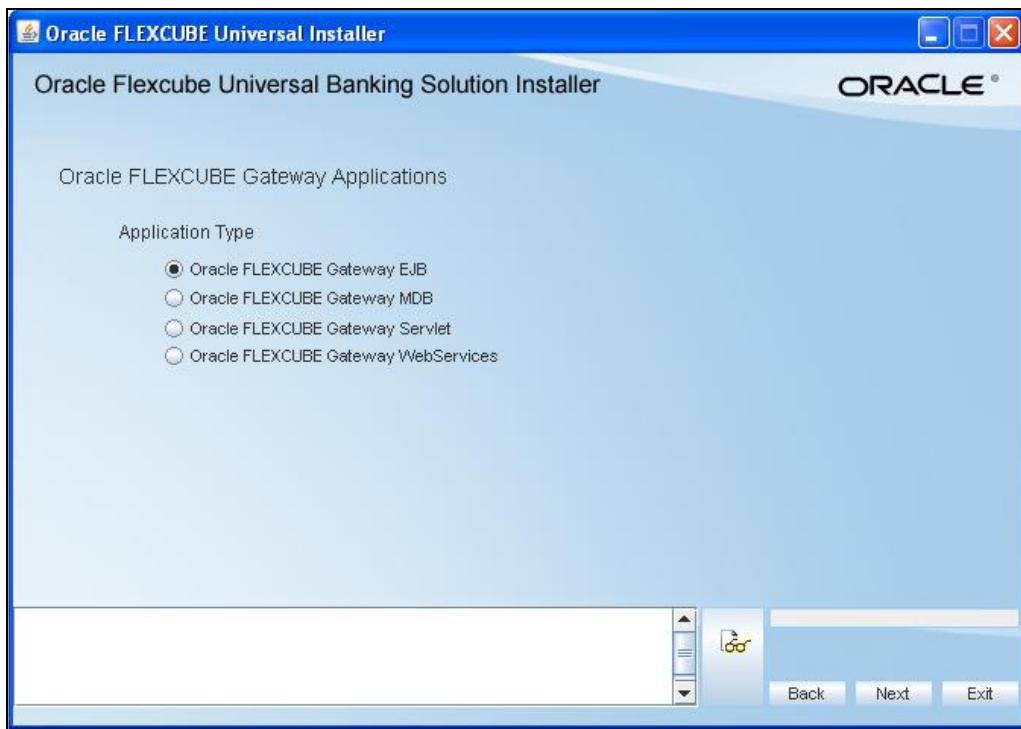

- Step-6.a –Select Oracle FLEXCUBE Gateway

- Step-6.b –Select Build EAR file

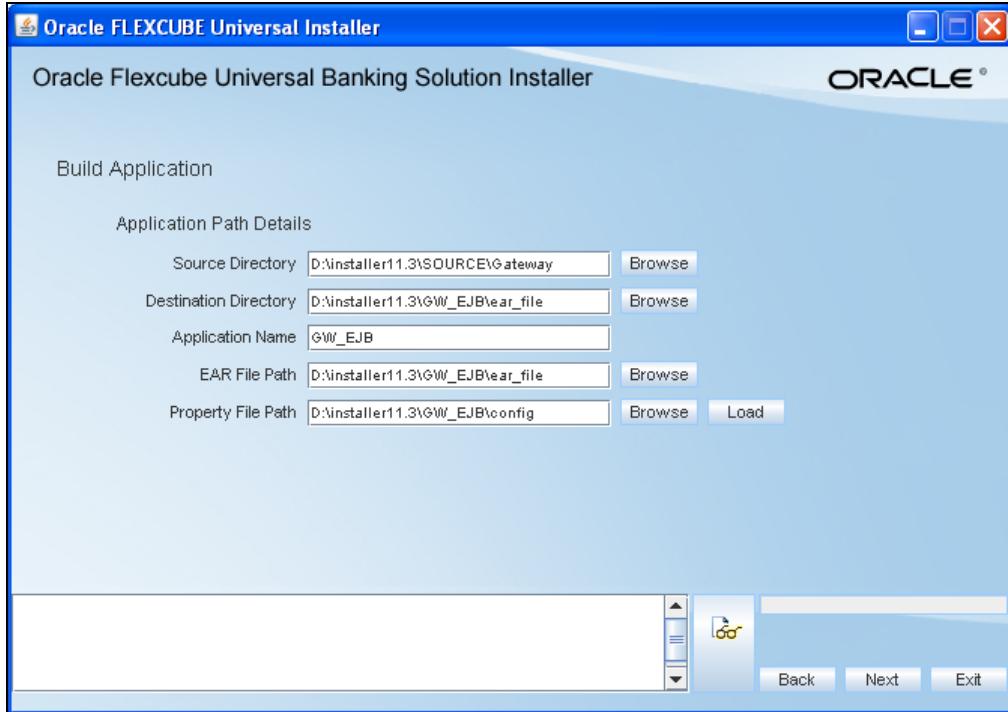

- Step-7 –Select Oracle FLEXCUBE Gateway EJB

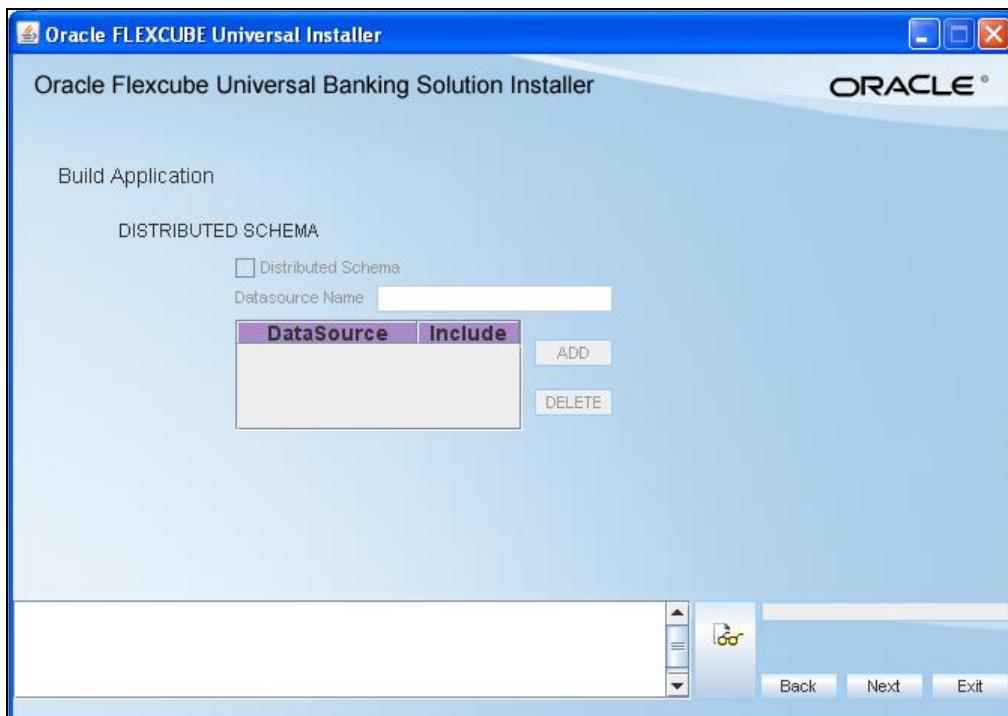

- Step-8 Provide Application build details

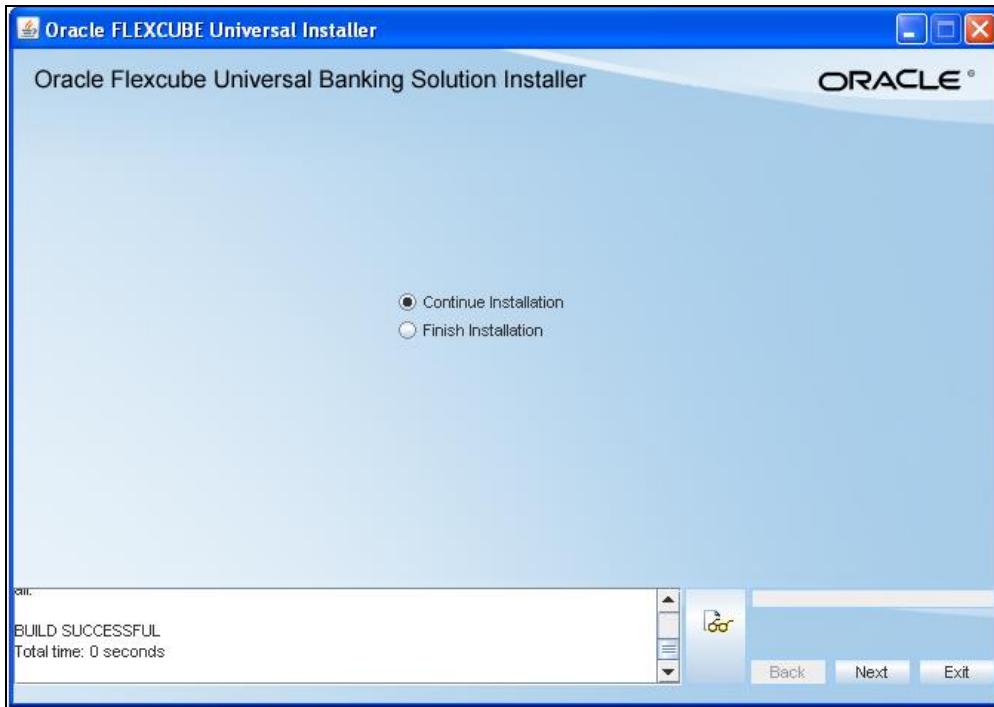

- Source directory: Source from which it will generate files.
- Destination directory: Location where the files will be generated.
- Application name: Name for the EJB application that is created.
- EAR file path: Location where the EAR file will be generated.
- Property file path: Location of Property file generated for EJB application.

- Step-9 – Select Next

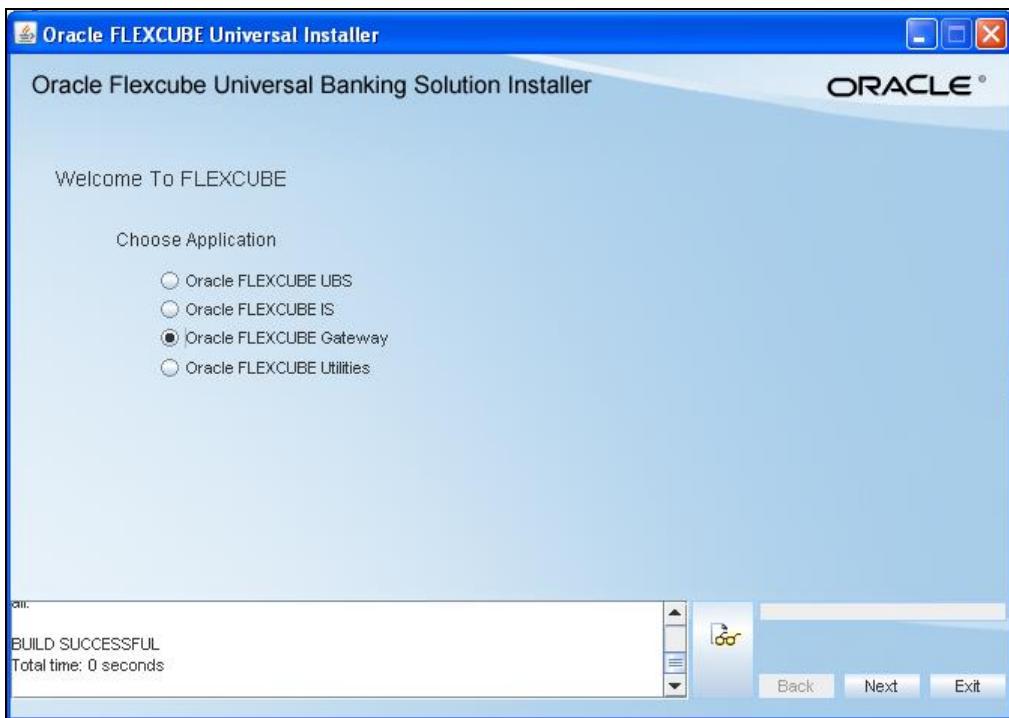

- Step-10 – Ensure message. BUILD SUCCESSFUL

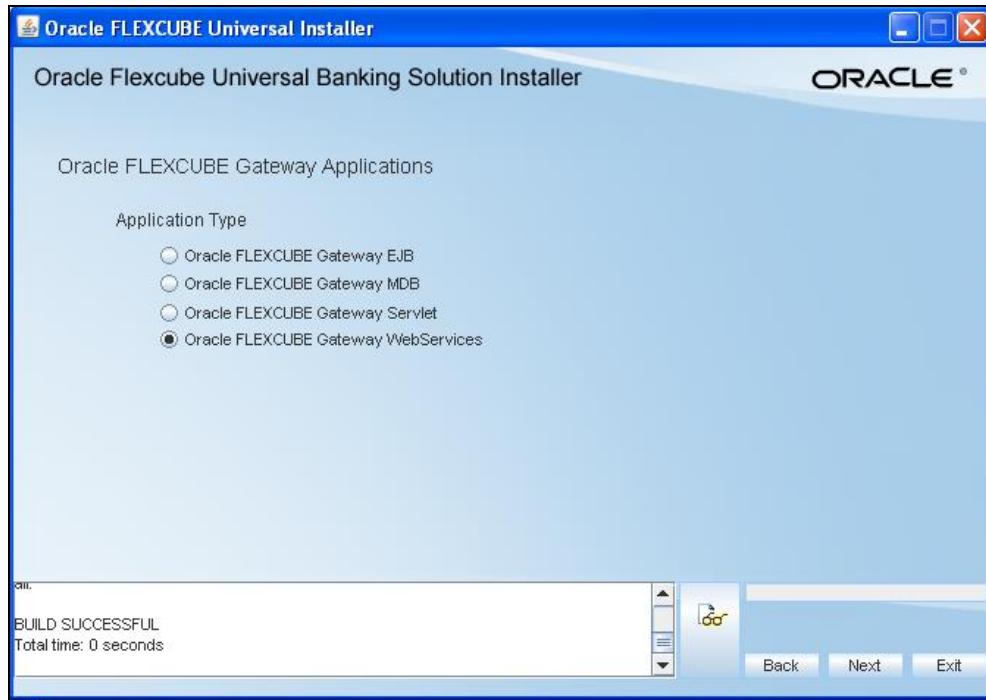

5.4.5 Creation of Web Service property file

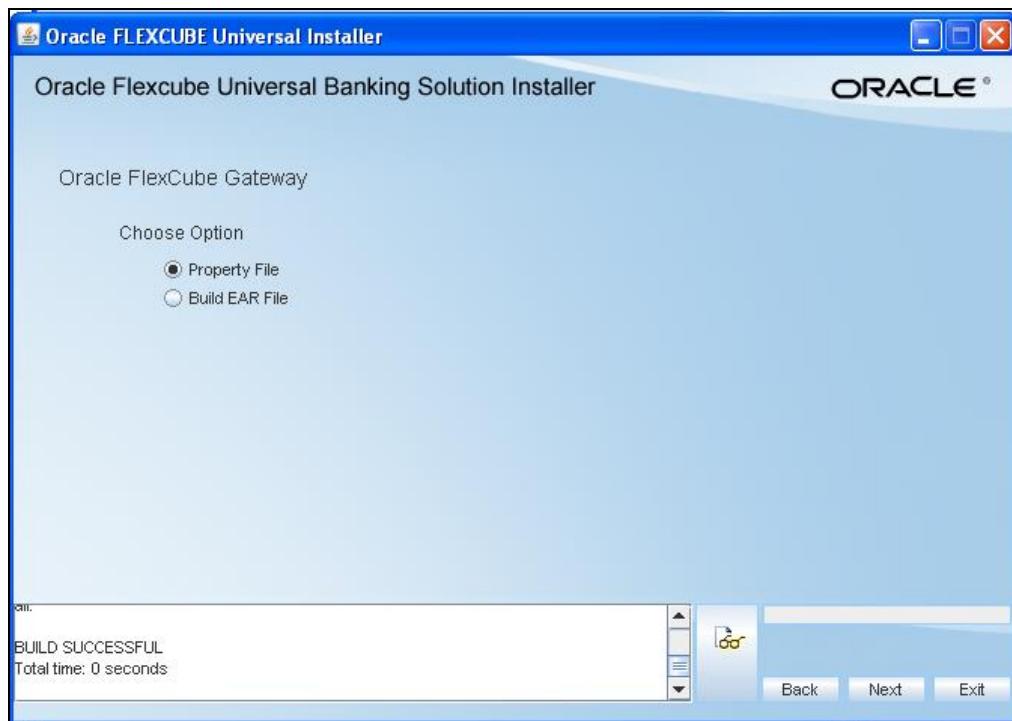

Step-a.1) Select Oracle FLEXCUBE Gateway

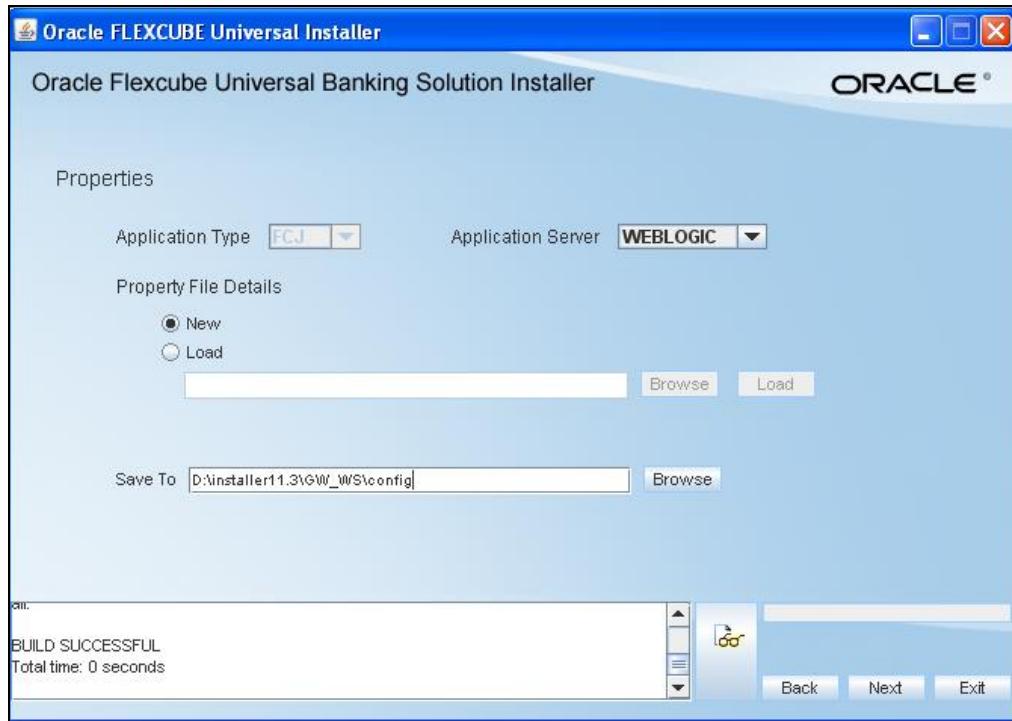

Step-a.2) Select Oracle FLEXCUBE Gateway Web Services

Step-b - Select Property file

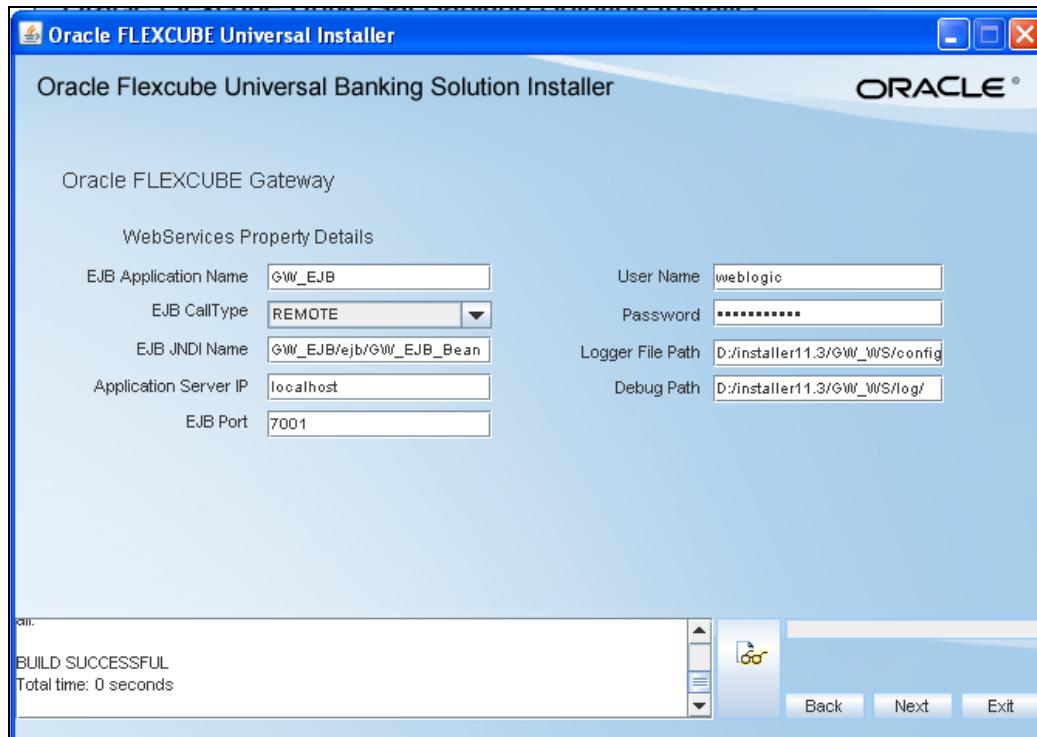

Step-c - Specify the location for property file generation

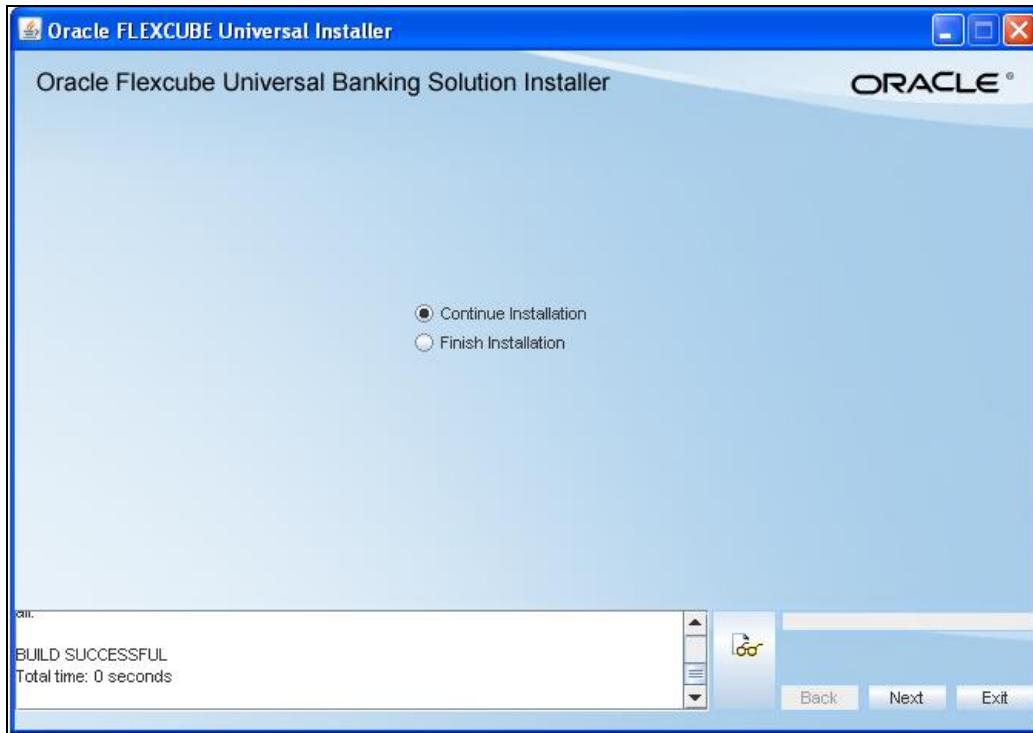

Step-d - Mention Gateway EJB Name and details

Application sever name needs to be mentioned along with the path where the log and debug file for the WebServices needs to be stored

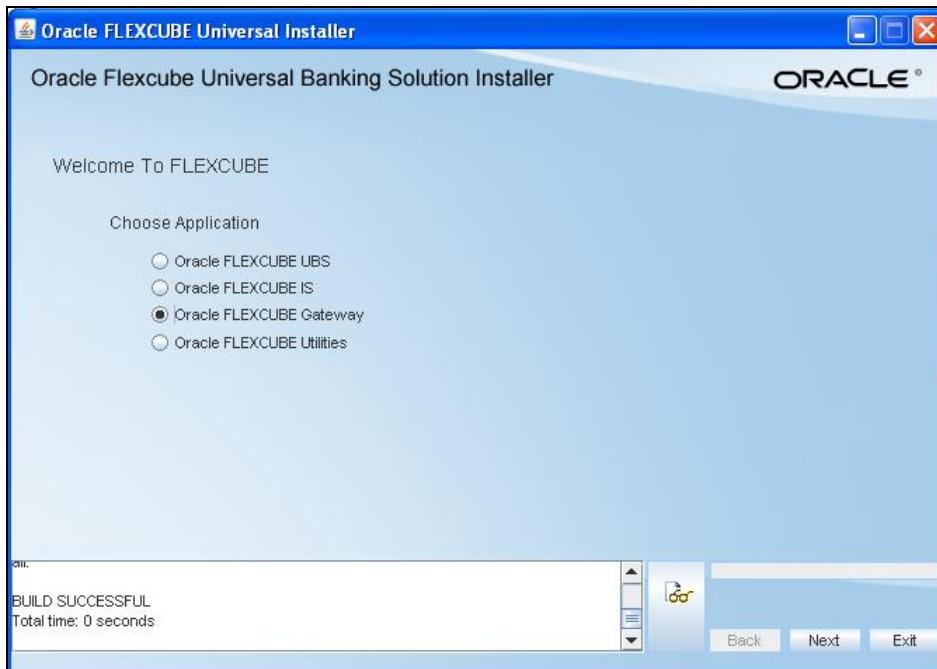

Step-e – select continue to build EAR file for web service

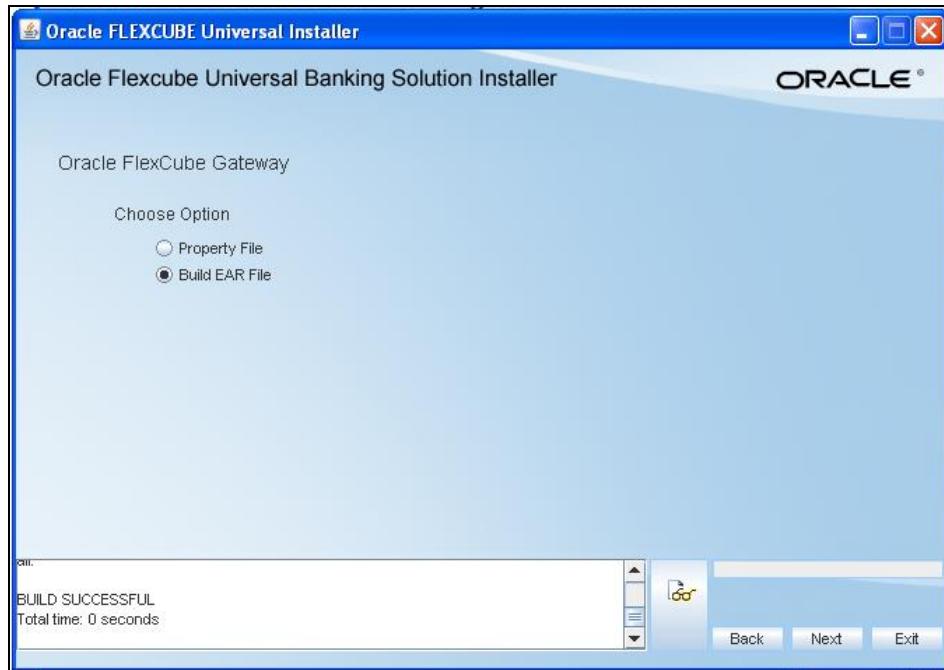

5.4.6 Creation of Web Service EAR file

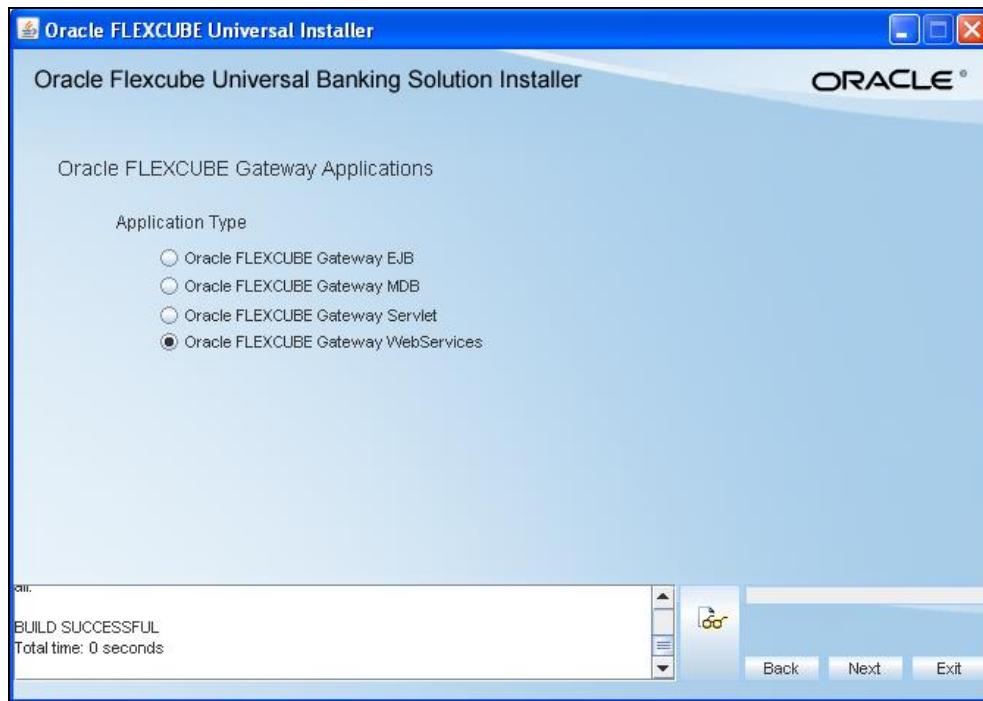

Step-f -Select Oracle FLEXCUBE Gateway

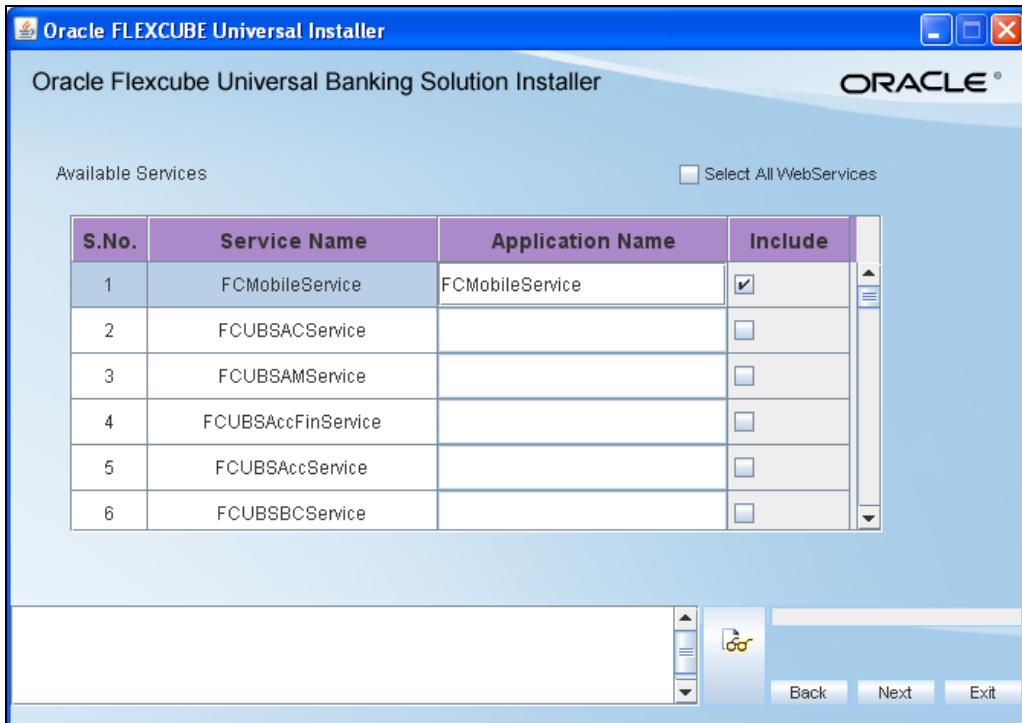

Step-g – Select Build EAR file.

Step-h –Select Gateway WebServices

Step-I – Select the Web service name.

5.4.7 Adding New Service to the List

To add a new service to the pick list, change the Services.xml which present in the installer sources. This file can be found at "<Installer Source Area>\InstallOptions\GateWay\Services\Services.xml"

Add your new service to the existing list by using <**Service-Name**> tag.

Example:

<SERVICE-NAME

path="/MAIN/CORE/GATEWAY/SERVICES/">FCMobileService</SERVICE-NAME>

```

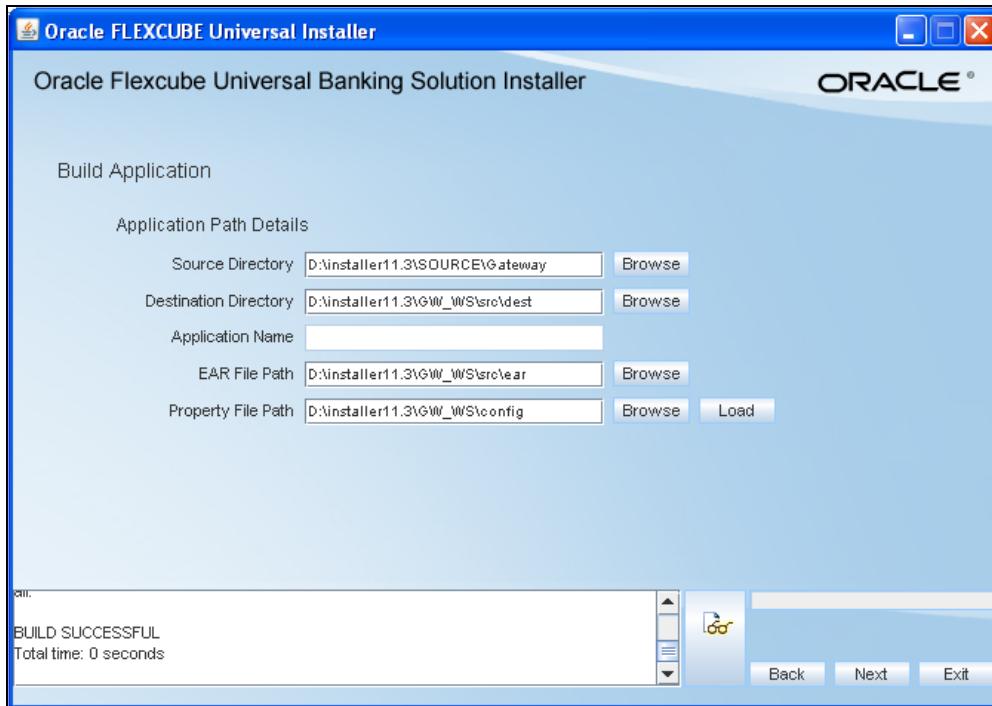

1 <?xml version="1.0" encoding="UTF-8"?>
2 <SERVICES>
3   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSAccService</SERVICE-NAME>
4   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSCustomerService</SERVICE-NAME>
5   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSMessagingService</SERVICE-NAME>
6   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSMSService</SERVICE-NAME>
7   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSSTService</SERVICE-NAME>
8   <SERVICE-NAME path="/MAIN/Core/Gateway/Services/">FCUBSTDService</SERVICE-NAME>
9   <SERVICE-NAME path="/MAIN/SE/Gateway/Services/">FCUBSSecuritiesService</SERVICE-NAME>
10  <SERVICE-NAME path="/MAIN/AC/Gateway/Services/">FCUBSTxnService</SERVICE-NAME>
11 </SERVICES>

```

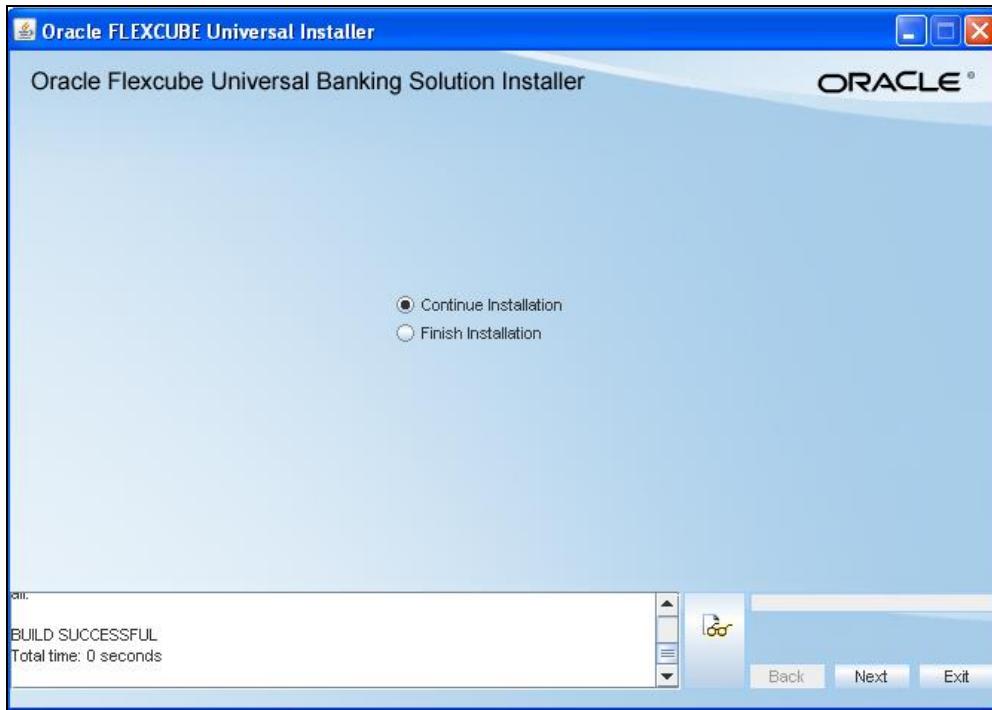

Step-j – Provide path details

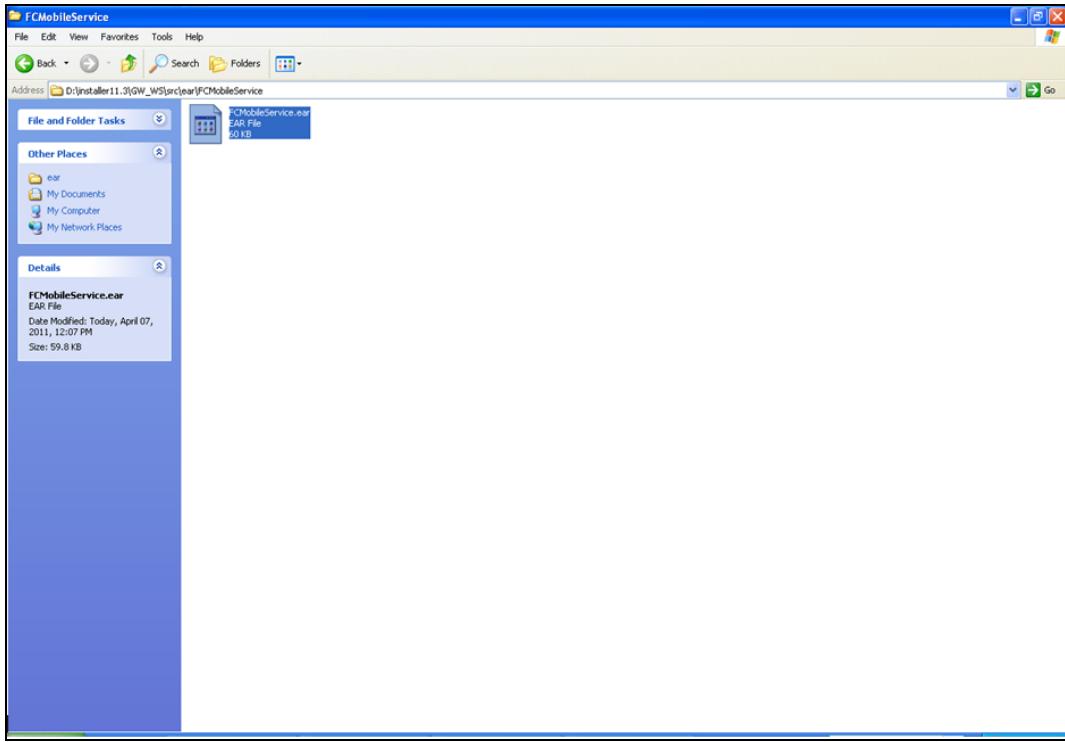

- Source directory: Source from which it will generate files.

- Destination directory: Location where the files will be generated.
- EAR file path: Location where the EAR file will be generated.
- Property file path: Location of Property file that available

Step-k – Ensure build successful and EAR file generated

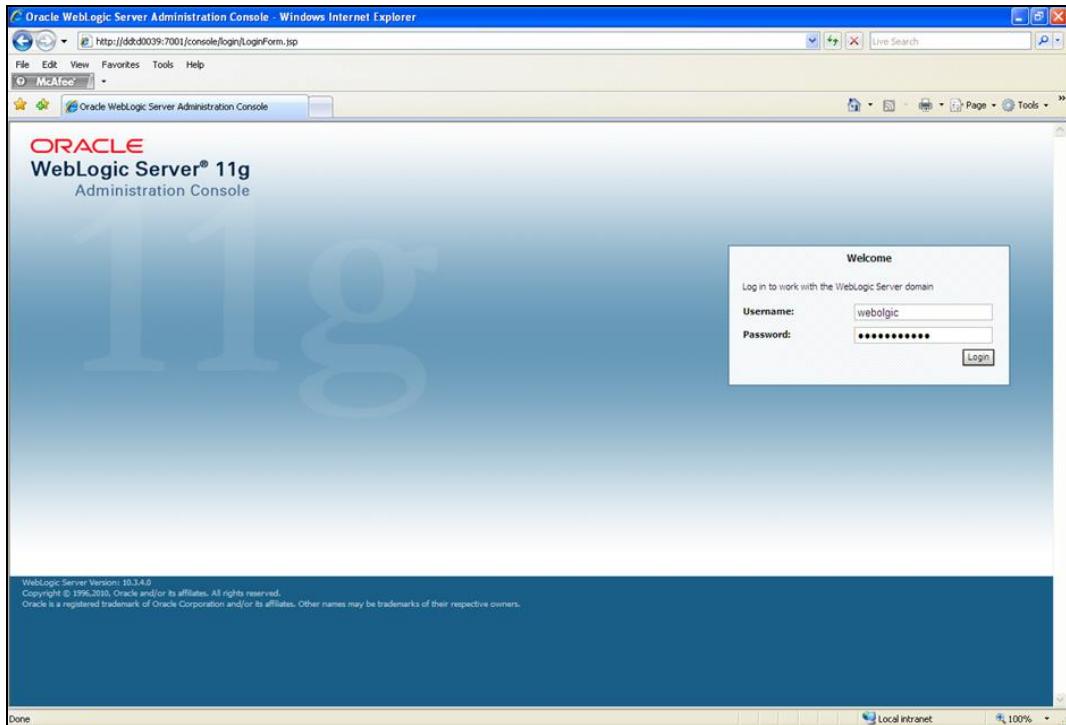

5.5 Deploying of EAR file

This section explains the steps to deploy the Web service EAR files on Oracle Weblogic Application server 11g

5.5.1 Deploying of Gateway EJB EAR file

This section discusses the deployment steps of Gateway EJB file. Skip this section if the Gateway EJB is already deployed in Target FLEXCUBE environment.

Step-1 – Login to Web logic application server

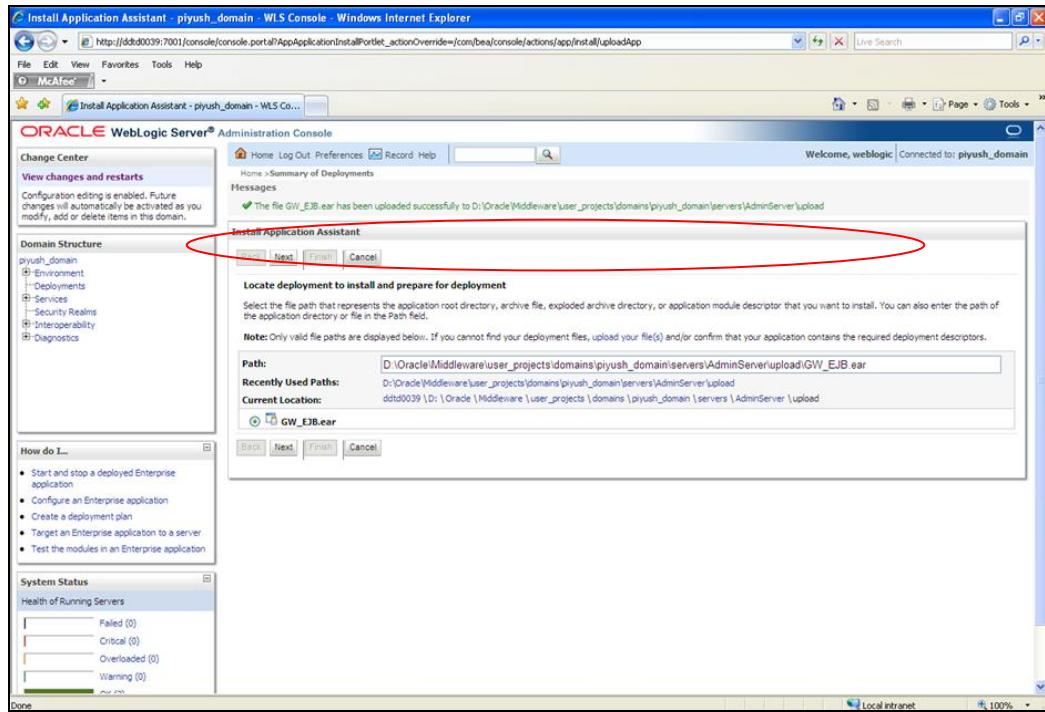

Step-2 – Select Deployments and Install

A screenshot of the Oracle WebLogic Server Administration Console showing the "Summary of Deployments" page for the "piyush_domain". The title bar reads "Summary of Deployments - piyush_domain - WLS Console - Windows Internet Explorer". The main content area shows a table titled "Deployments" with columns: Name, State, Health, Type, and Deployment Order. A message at the top states: "All changes have been activated. No restarts are necessary." and "Selected Deployments were deleted." Below the table, a message says: "This page displays a list of Java EE applications and stand-alone application modules that have been installed to this domain. Installed applications and modules can be started, stopped, updated (redeployed), or deleted from the domain by first selecting the application name and using the controls on this page." To the left, there is a "Change Center" sidebar with sections for "View changes and restarts" and "Domain Structure". The "Domain Structure" section shows the "piyush_domain" with its sub-components: Environment, Deployments, Services, Security Realms, Interoperability, and Diagnostics. A "How do..." list provides links for installing enterprise applications, monitoring modules, deploying EJB modules, and installing web applications. The status bar at the bottom indicates "Local intranet" and "100%".

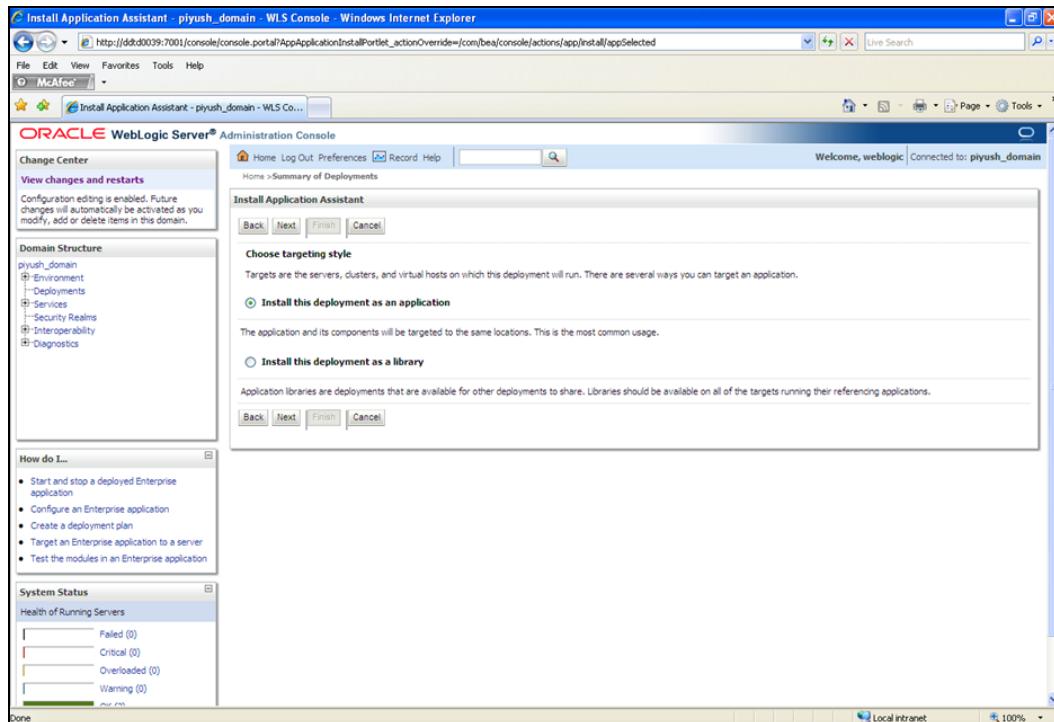

Step-3 –Select Upload your file

Step-4 – Select the path where Gateway EJB EAR generated

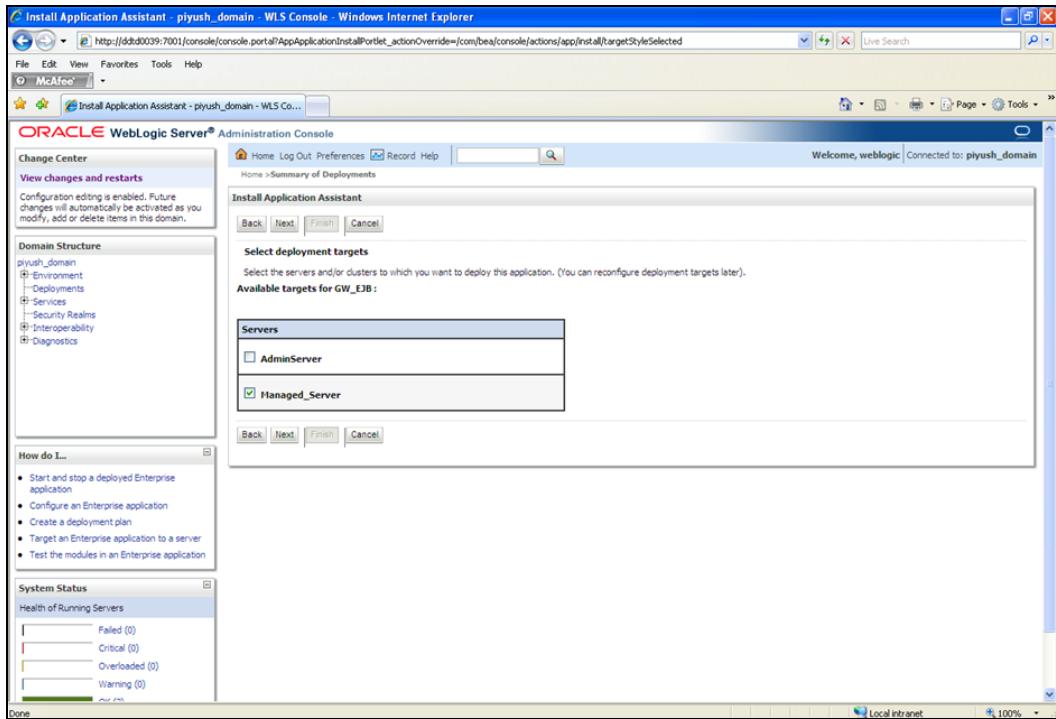

Step-5 – Ensure upload success and select Next

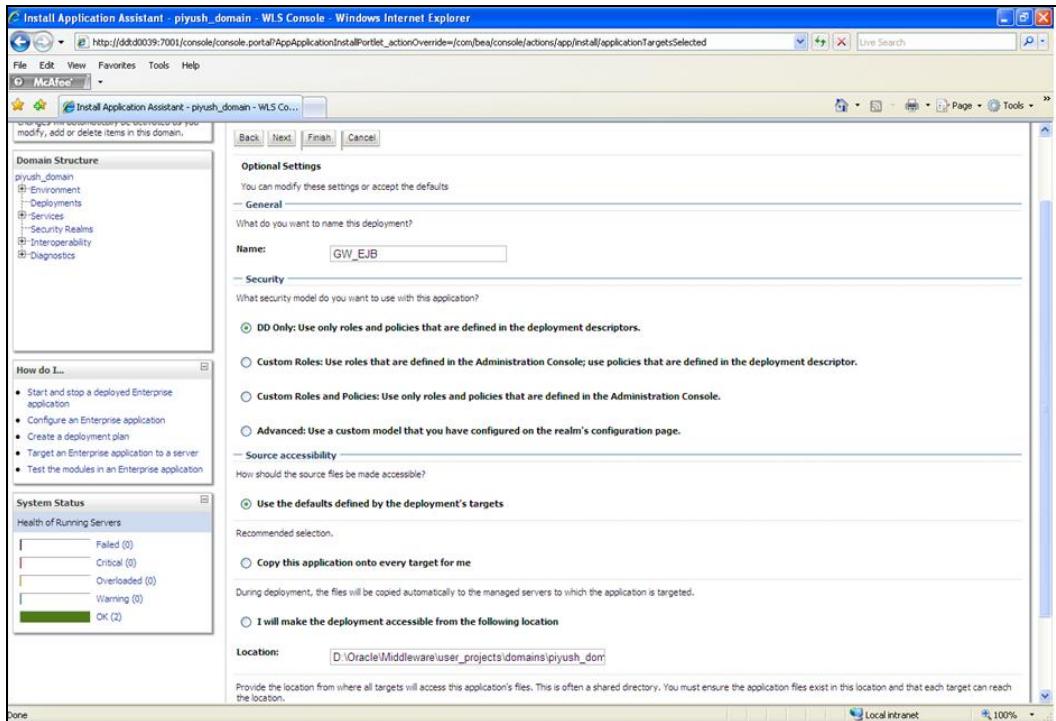

Step-6 – Select Install the deployment as an application

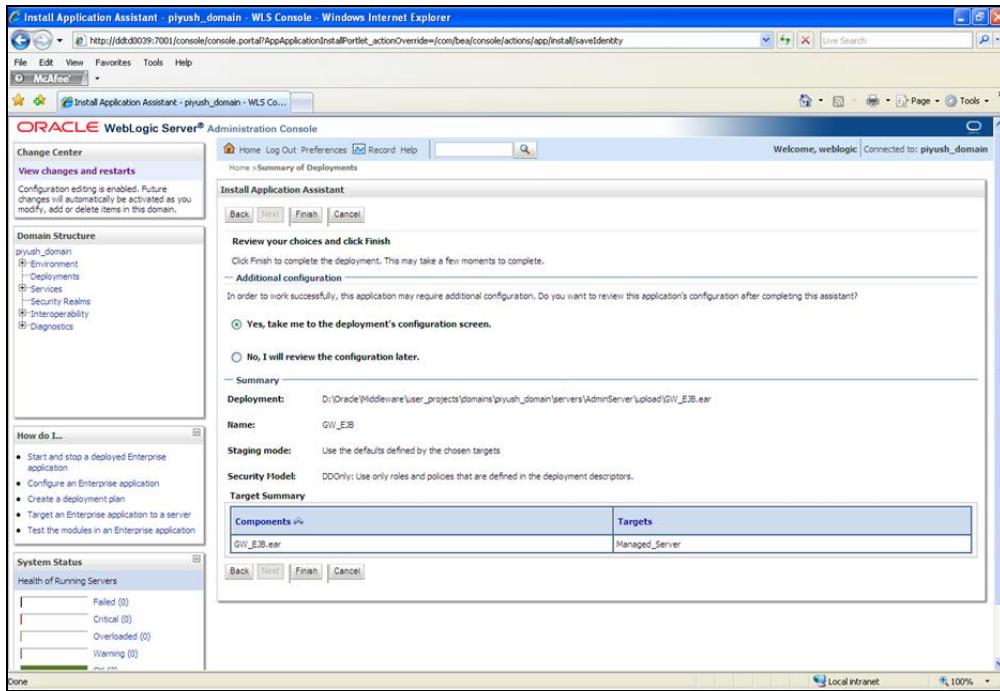

Step-7 – Select the appropriate Server where application need to be deployed

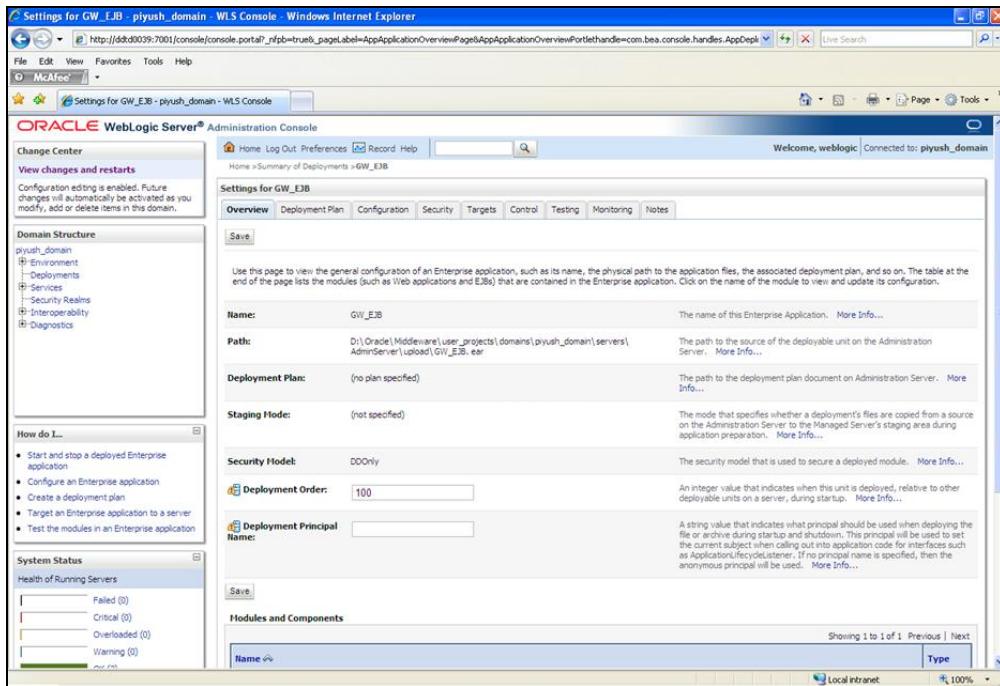

Step-8 – Select Next

Step-9 - Select Finish

Step-10 – Select Save

Step-11 – Ensure the GW_EJB application is Active and health OK

The screenshot shows the Oracle WebLogic Server Administration Console. The main window displays the 'Summary of Deployments' for the 'pyush_domain'. A single deployment entry is listed:

Name	State	Health	Type	Deployment Order
GW_EJB	Active	OK	Enterprise Application	100

The left sidebar shows the 'Domain Structure' with 'Deployments' selected. The 'How do I...' section provides links for various administration tasks.

5.5.2 Deploying of Web Service EAR file

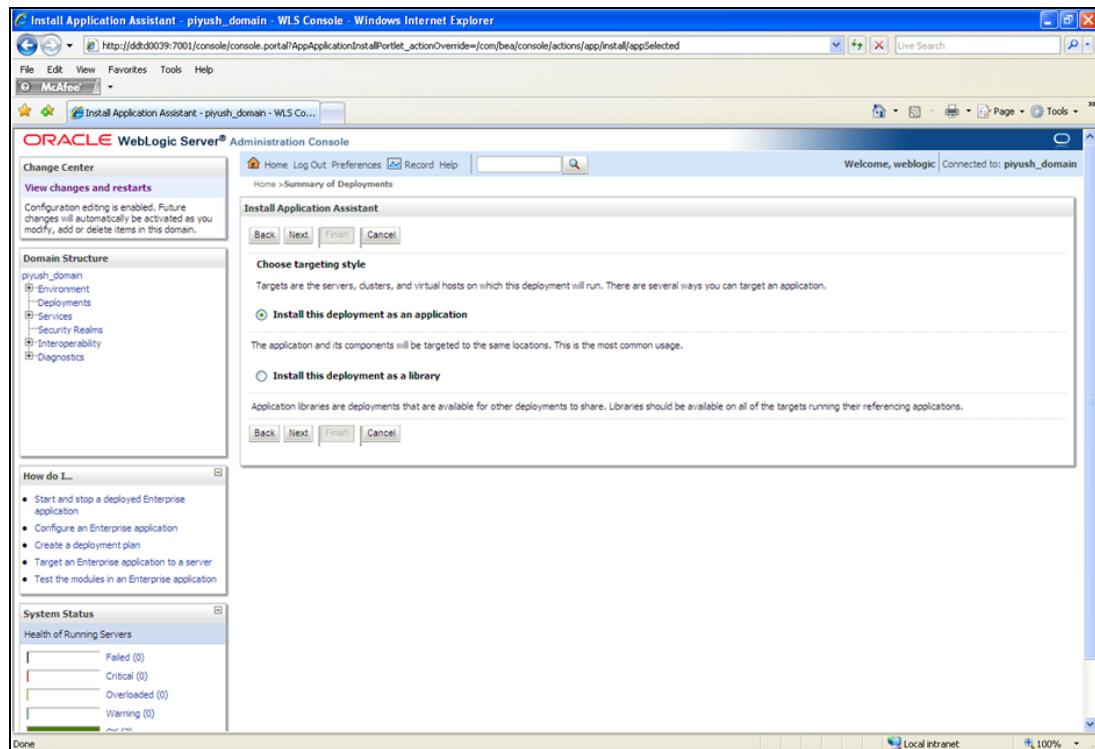

This section describes the steps to deploy the Web service EAR file.

Step-a – Select upload your file and pick the web service EAR file

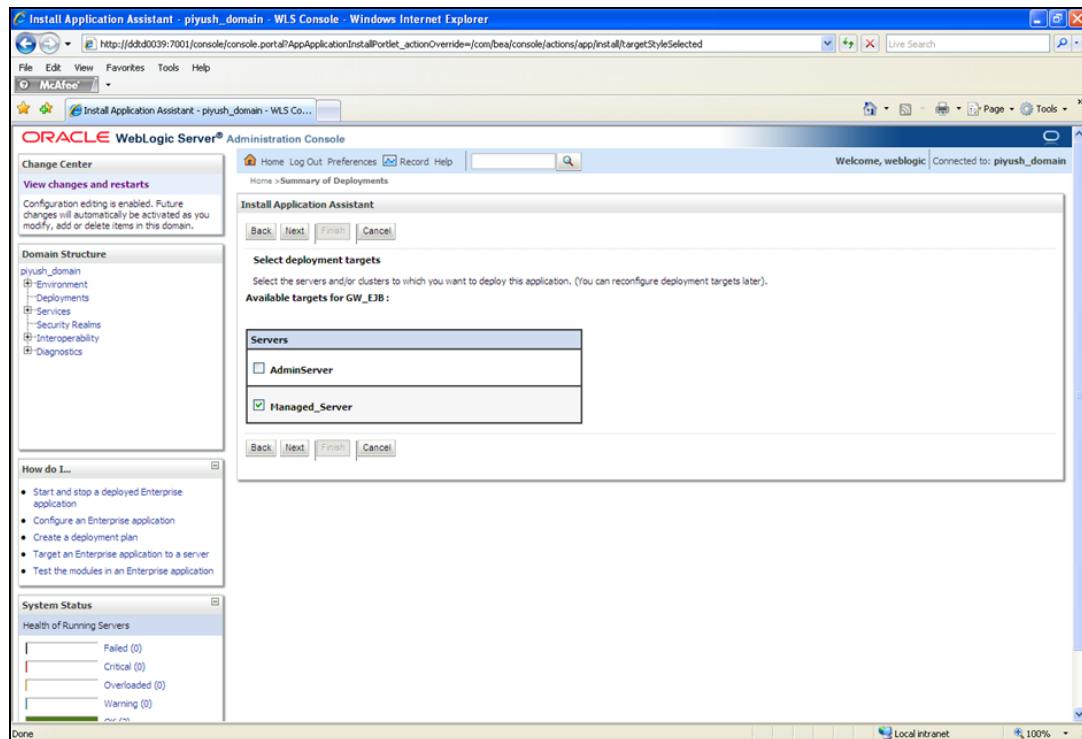

The screenshot shows the 'Install Application Assistant' page in the Oracle WebLogic Server Administration Console. The page is titled 'Upload a Deployment to the admin server'. It includes fields for 'Deployment Archive' (containing 'D:\installer113\GW_WS\src\clearFCMobileService\FCMobileService') and 'Deployment Plan Archive'. Navigation buttons include Back, Next, Finish, and Cancel.

The left sidebar shows the 'Domain Structure' with 'Deployments' selected. The 'How do I...' section provides links for various administration tasks.

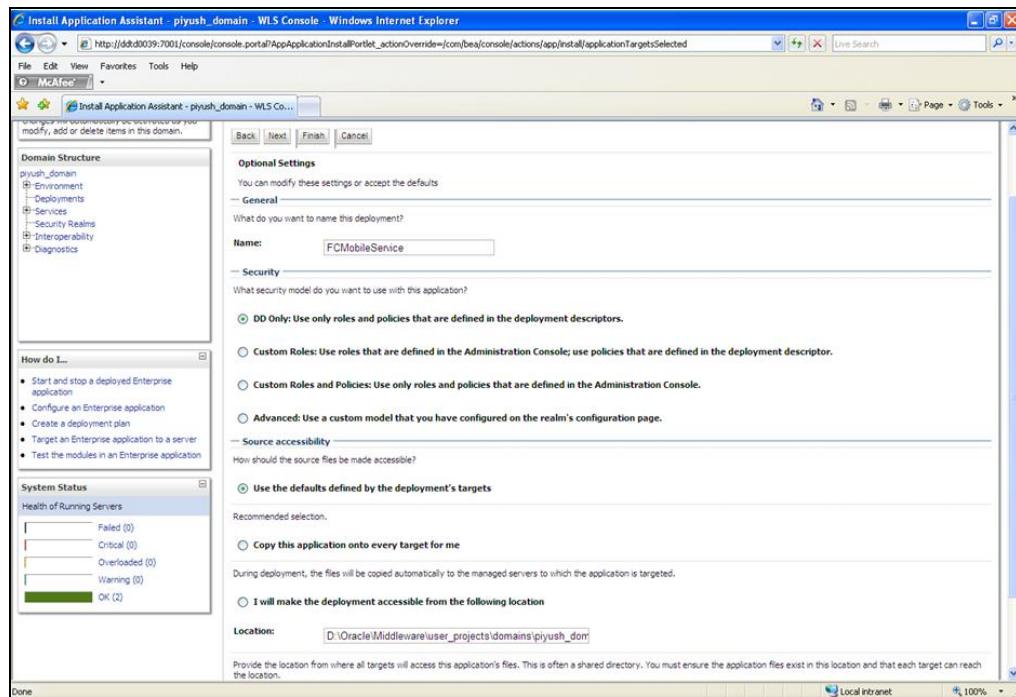

Step-b – Select Install the deployment as an application

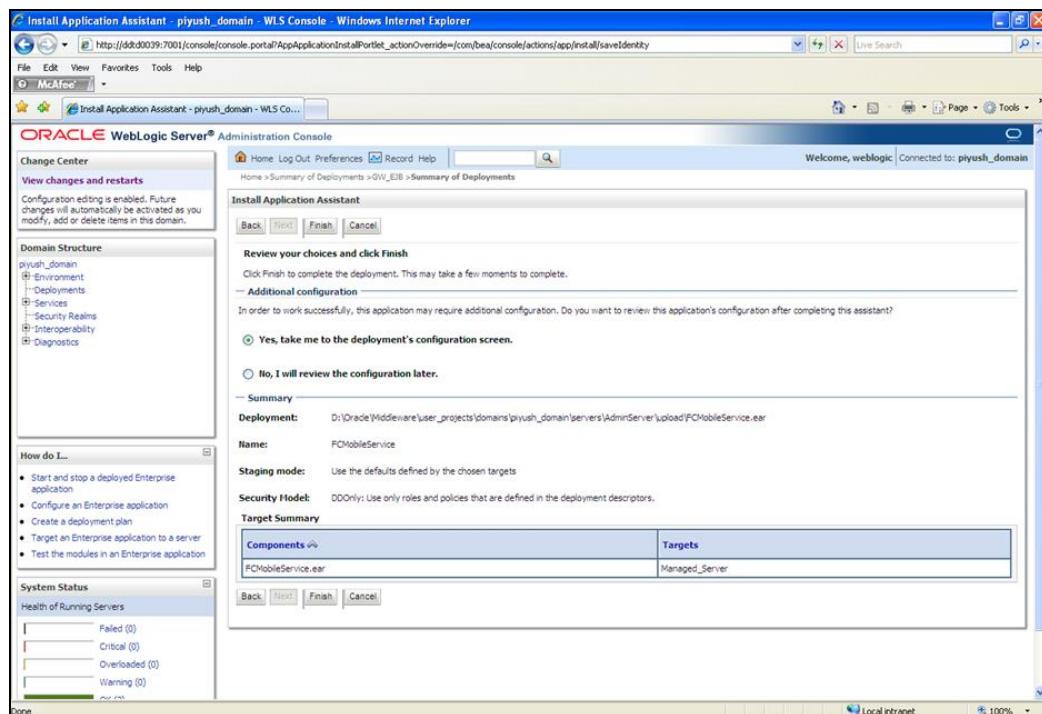

Step-c – Select the Server appropriately

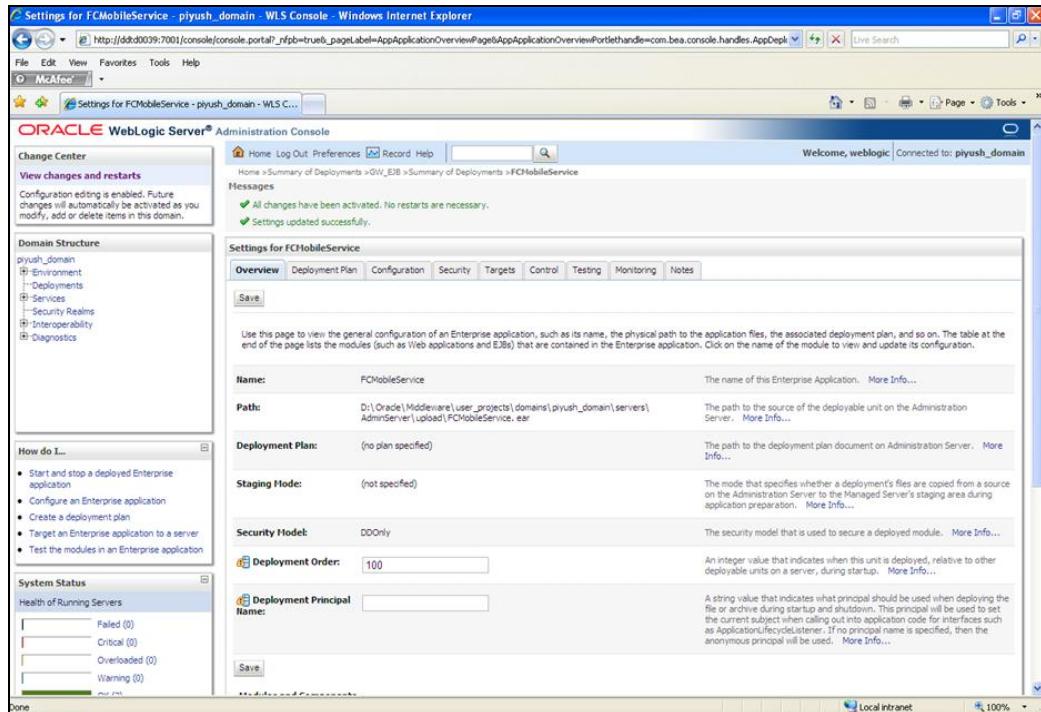

Step-d – Select Next

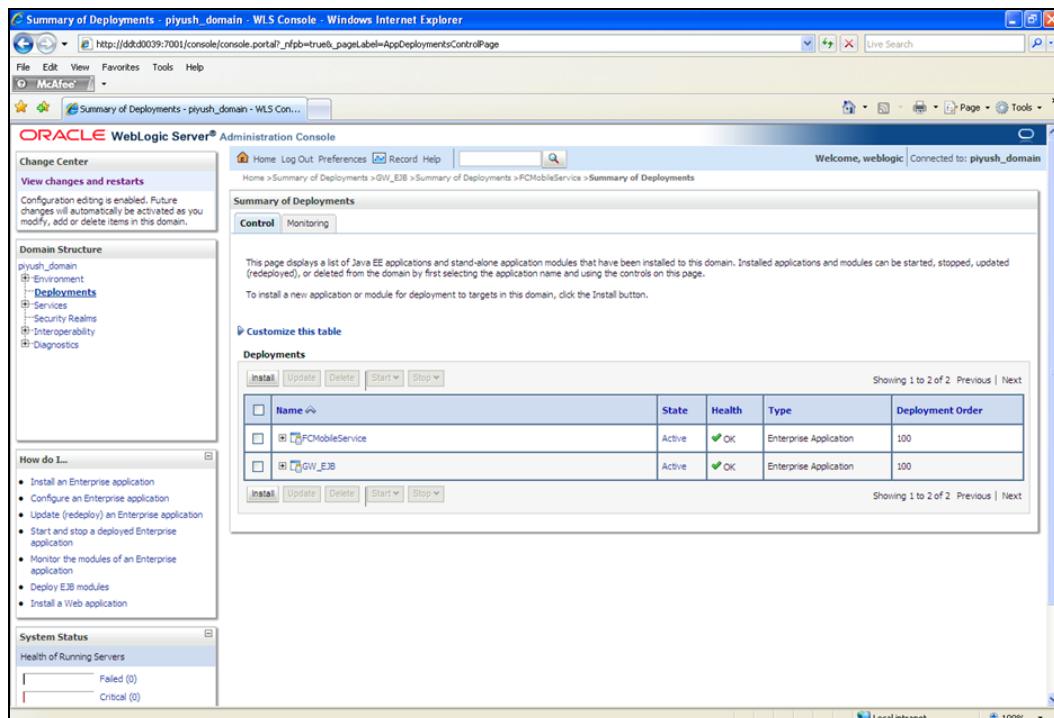

Step-e – Select Finish

Step-f – Ensure successful messages shown

Step-g – Save the deployment and ensure it started OK

5.6 Testing the Web Service

This section describes the steps to test the web service in Web logic application server.

Step-1 – expand Web service and select Web service that need to be tested

Settings for FCMobileService

Overview Configuration Security Testing Monitoring

Use this page to test that your Web service is deployed and that it is working as expected. In the table, expand the name of the Web service to see a list of its test points. Click ?WSDL to view its dynamic WSDL in a separate browser window. Click Test Client to invoke a new browser window where you can test each operation individually by entering parameter values, executing the operation, and viewing the results.

Deployment Tests

Name	Test Point	Comments
FCMobileService		Test points for this WebService module.

Showing 1 to 1 of 1 Previous | Next

Step-3 – Select Test Client

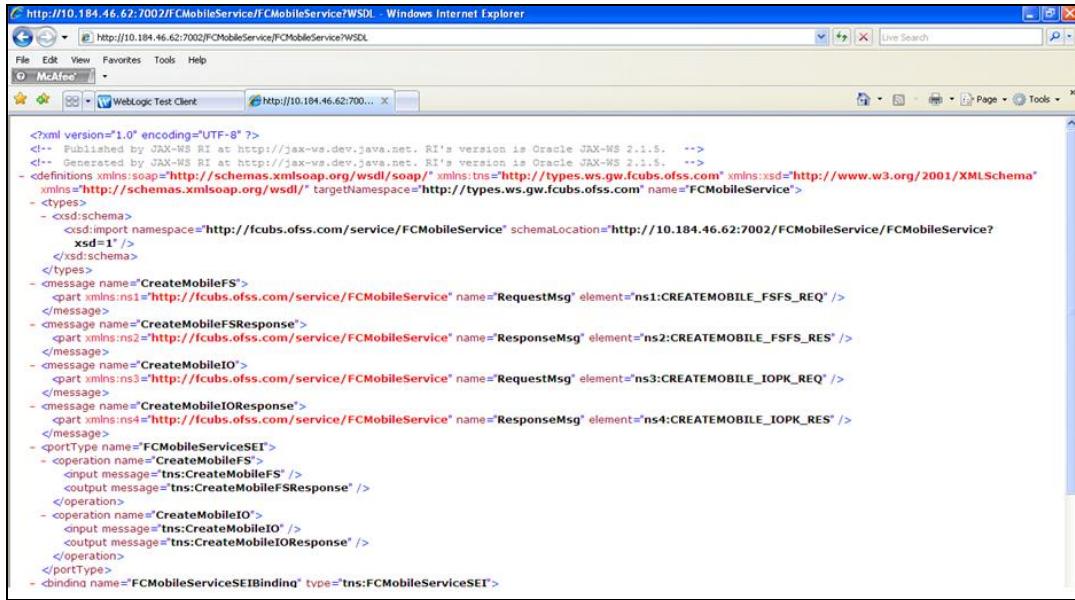

Step-4 – Populate the request XML message with business data and select Operation. Check the response XML thrown.

Also Copy & paste the WSDL Url onto a browser to check whether the Web service is running.

WSDL Url: http://<IP address>:<Port>/<Service_Name>/<Service_Name>?WSDL

Example: <http://10.184.46.62:7002/FCMobileService/FCMobileService?WSDL>

On pasting the WSDL URL, the WSDL should be displayed in the browser, which confirms the status of Web service to be running.

The screenshot shows a Windows Internet Explorer window displaying the WSDL XML for the FCMobileService. The URL in the address bar is <http://10.184.46.62:7002/FCMobileService/FCMobileService?WSDL>. The page content is the raw XML definition of the web service, which includes definitions for types, messages, operations, and port types. The XML is color-coded for readability, with tags in blue and attributes in red.
