

Oracle Access Management Bundle Patch Readme

This document describes OAM BUNDLE PATCH 12.2.1.3.210701

For issues documented after the release of this OAM BUNDLE PATCH 12.2.1.3.210701, see My Oracle Support Document 2568304.1, Oracle Fusion Middleware 12.2.1.3.0 Known Issues (Doc ID 2568304.1)

This document requires a base installation of Oracle Access Management 12c Patch Set 3 (12.2.1.3.0). This supersedes the documentation that accompanies Oracle Access Management 12c Patch Set 3 (12.2.1.3.0), it contains the following sections:

- [New Features and Enhancements in OAM Bundle Patch 12.2.1.3.201201](#)
- [New Features and Enhancements in OAM Bundle Patch 12.2.1.3.200908](#)
- [New Features and Enhancements in OAM Bundle Patch 12.2.1.3.200629](#)
- [Understanding Bundle Patches](#)
- [Recommendations](#)
- [Bundle Patch Requirements](#)
- [Applying the Bundle Patch](#)
- [Removing the Bundle Patch](#)
- [Resolved Issues](#)
- [Known Issues and Workarounds](#)

New Features and Enhancements in OAM Bundle Patch 12.2.1.3.201201

Oracle Access Management 12.2.1.3.201201 BP includes the following new features and enhancements:

- **Keep the OAUTH_TOKEN Response Unset**

OAM provides an option to not set the `OAUTH_TOKEN` cookie or header when SSO Session Linking is enabled. You must set the challenge parameter `IS_OAUTH_TOKEN_RESPONSE_SET` to `false`.

 **Note:**

If `IS_OAUTH_TOKEN_RESPONSE_SET` is not configured, or set to `true` then the `OAUTH_TOKEN` cookie/header is set.

New Features and Enhancements in OAM Bundle Patch 12.2.1.3.200908

Oracle Access Management 12.2.1.3.200908 BP includes the following new features and enhancements:

- **Support for AWS Role Mapping Attribute in SAML Response**

Introduces a new function that can be configured in SP Attribute Profile for supporting the AWS role mapping attribute in SAML response.

For details, see [AWS Role Mapping Attribute in SAML Response](#) in *Administering Oracle Access Management*

- **Support for Attribute Value Mapping and Filters in OAM Federation**

OAM federation supported Attribute Name Mapping. It extends the support for Attribute Value Mapping and Attribute Filtering features.

For details, see [Using Attribute Value Mapping and Filtering](#) in *Administering Oracle Access Management*

New Features and Enhancements in OAM Bundle Patch 12.2.1.3.200629

Oracle Access Management 12.2.1.3.200629 BP includes the following new features and enhancements:

- **Support for SameSite=None Attribute in OAM Cookies**

OAM adds `SameSite=None` attribute to all the cookies set by WebGate and OAM Server.

 **Note:**

- You must also download and upgrade to the latest WebGate Patch for this feature to work. For details, see the note [Support for SameSite Attribute in Webgate \(Doc ID 2687940.1\)](https://support.oracle.com) at <https://support.oracle.com>.
- See also the note [Oracle Access Manager \(OAM\): Impact Of SameSite Attribute Semantics \(Doc ID 2634852.1\)](https://support.oracle.com) at <https://support.oracle.com>.

Optional Configurations on OAM Server

- If SSL/TLS is terminated on Load Balancer (LBR) and OAM server is not running in SSL/TLS mode, set the following system property in **setDomainEnv.sh**: `-Doam.samesite.flag.value=None;secure`
Alternatively, you can propagate SSL/TLS context from the LBR or Web Tier to OAM Server. For details, see Doc ID 1569732.1 at <https://support.oracle.com>.
- To disable the inclusion of SameSite=None by OAM Server, set the following system property in **setDomainEnv.sh**: `-Doam.samesite.flag.enable=false`
- To set SameSite=None for non-SSL/TLS HTTP connections, set the following system property in **setDomainEnv.sh**: `-Doam.samesite.flag.enableNoneWithoutSecure=true`

Example - To add the system properties to setDomainEnv.sh:

1. Stop all the Administration and Managed Servers.
2. Edit the `$OAM_DOMAIN_HOME/bin/setDomainEnv.sh`, and add the properties as shown:

```
EXTRA_JAVA_PROPERTIES="-Doam.samesite.flag.enable=false $  
{EXTRA_JAVA_PROPERTIES}"  
export EXTRA_JAVA_PROPERTIES
```

3. Start the Administration and Managed Servers.

Optional Configurations for WebGate

- If SSL/TLS is terminated on LBR and OAM Webgate WebServer is not running in SSL/TLS mode, set the **ProxySSLHeaderVar** in the **User Defined Parameters** configuration to ensure that WebGate treats the requests as SSL/TLS. For details, see [User-Defined WebGate Parameters](#).
- To disable inclusion of SameSite=None by OAM WebGate, set `SameSite=disabled` in the **User Defined Parameters** configuration on the console. This is a per-agent configuration.
- To set SameSite=None for non-SSL HTTP connections, set `EnableSameSiteNoneWithoutSecure=true` in the **User Defined Parameters** configuration on the console. This is a per-agent configuration.

 **Note:**

In deployments using mixed SSL/TLS and non-SSL/TLS components: For non-SSL/TLS access, OAM Server and Webgate do not set `SameSite=None` on cookies. Some browsers (for example, Google Chrome) do not allow `SameSite=None` setting on non-secure (non-SSL/TLS access) cookies, and therefore, may not set cookies if a mismatch is found.

Therefore, it is recommended that such mixed SSL/TLS and non-SSL/TLS deployments are moved to SSL/TLS Only deployments to strengthen the overall security.

Understanding Bundle Patches

Describes Bundle Patches and explains differences between Bundle Patches, interim patches, and patch sets.

- [Bundle Patch](#)
- [Patch Set](#)

Bundle Patch

A bundle patch is an official Oracle patch for Oracle Fusion Middleware components on baseline platforms. In a bundle patch release string, the fifth digit indicated the bundle patch number. Effective November 2015, the version numbering format has changed. The new format replaces the numeric fifth digit of the bundle version with a release date in the form "YYMMDD" where:

- YY is the last 2 digits of the year
- MM is the numeric month (2 digits)
- DD is the numeric day of the month (2 digits)

Each bundle patch includes the libraries and files that have been rebuilt to implement one or more fixes. All of the fixes in the bundle patch have been tested and are certified to work with one another.

Each Bundle Patch is cumulative: the latest Bundle Patch includes all fixes in earlier Bundle Patches for the same release and platform. Fixes delivered in Bundle Patches are rolled into the next release.

Patch Set

A patch set is a mechanism for delivering fully tested and integrated product fixes that can be applied to installed components of the same release. Patch sets include all of the fixes available in previous Bundle Patches for the release. A patch set can also include new functionality.

Each patch set includes the libraries and files that have been rebuilt to implement bug fixes (and new functions, if any). However, a patch set might not be a complete software distribution and might not include packages for every component on every platform.

All of the fixes in the patch set have been tested and are certified to work with one another on the specified platforms.

Recommendations

Oracle has certified the dependent Middleware component patches for Identity Management products and recommends that Customers apply these certified patches.

For more information on these patches, see the note *Certification of Underlying or Shared Component Patches for Identity Management Products* (Doc ID 2627261.1) at <https://support.oracle.com>.

Bundle Patch Requirements

To remain in an Oracle-supported state, apply the Bundle Patch to all installed components for which packages are provided. Oracle recommends that you:

1. Apply the latest Bundle Patch to all installed components in the bundle.
2. Keep OAM Server components at the same (or higher) Bundle Patch level as installed WebGates of the same release.

Applying the Bundle Patch

The following topics help you, as you prepare and install the Bundle Patch files (or as you remove a Bundle Patch should you need to revert to your original installation):

- [Using the Oracle Patch Mechanism \(Opatch\)](#)
- [Applying the OAM Bundle Patch](#)
- [Recovering From a Failed Bundle Patch Application](#)

Note:

Oracle recommends that you always install the latest Bundle Patch.

Using the Oracle Patch Mechanism (Opatch)

The Oracle patch mechanism (Opatch) is a Java-based utility that runs on all supported operating systems. Opatch requires installation of the Oracle Universal Installer.

 **Note:**

Oracle recommends that you have the latest version of Opatch (version 13.9.4.2.5 or higher) from My Oracle Support. Opatch requires access to a valid Oracle Universal Installer (OUI) Inventory to apply patches.

Patching process uses both unzip and Opatch executables. After sourcing the ORACLE_HOME environment, Oracle recommends that you confirm that both of these exist before patching. Opatch is accessible at: \$ORACLE_HOME/OPatch/opatch

When Opatch starts, it validates the patch to ensure there are no conflicts with the software already installed in your \$ORACLE_HOME:

- If you find conflicts with a patch already applied to the \$ORACLE_HOME, stop the patch installation and contact Oracle Support Services.
- If you find conflicts with a subset patch already applied to the \$ORACLE_HOME, continue Bundle Patch application. The subset patch is automatically rolled back before installation of the new patch begins. The latest Bundle Patch contains all fixes from the previous Bundle Patch in \$ORACLE_HOME.

This Bundle Patch is not -auto flag enabled. Without the -auto flag, no servers needs to be running. The Machine Name & Listen Address can be blank on a default install.

 **See Also:**

[Patching Your Environment Using OPatch](#)

Perform the steps in the following procedure to prepare your environment and download Opatch:

- Log in to My Oracle Support: <https://support.oracle.com/>
- Download the required Opatch version.
- Use `opatch -version` to check if your Opatch version is earlier than 13.9.4.2.5. If so, download the latest 13.9.4.2.5 version.
- Confirm if the required executables `opatch` and `unzip` are available in your system by running the following commands:

Run `which opatch` — to get path of `opatch`

Run `which unzip` — to get path of `unzip`

Check if the path of executables is in the environment variable "PATH" , if not add the paths to the system PATH.

- Verify the OUI Inventory using the following command:

```
opatch lsinventory
```

```
Windows 64-bit: opatch lsinventory -jdk c:\jdk180
```

If an error occurs, contact Oracle Support to validate and verify the inventory setup before proceeding. If the `ORACLE_HOME` does not appear, it might be missing from the Central Inventory, or the Central Inventory itself could be missing or corrupted.

- Review information in the next topic [Applying the OAM Bundle Patch](#)

Applying the OAM Bundle Patch

Use information and steps here to apply the Bundle Patch from any platform using Oracle patch (Opatch). While individual command syntax might differ depending on your platform, the overall procedure is platform agnostic.

The files in each Bundle Patch are installed into the destination `$ORACLE_HOME`. This enables you to remove (roll back) the Bundle Patch even if you have deleted the original Bundle Patch files from the temporary directory you created.

Note:

Oracle recommends that you back up the `$ORACLE_HOME` using your preferred method before any patch operation. You can use any method (zip, cp -r, tar, and cpio) to compress the `$ORACLE_HOME`.

Formatting constraints in this document might force some sample text lines to wrap around. These line wraps should be ignored.

To apply the OAM Bundle Patch

Opatch is accessible at `$ORACLE_HOME/OPatch/opatch`. Before beginning the procedure to apply the Bundle Patch be sure to:

- Set `ORACLE_HOME`

For example:

```
export ORACLE_HOME=/opt/oracle/mwhome
```

- Run `export PATH=<<Path of Opatch directory>>:$PATH` to ensure that the Opatch executables appear in the system PATH. For example:

```
export PATH=$Oracle_HOME/OPatch:$PATH
```

1. Download the OAM patch `p33068703_122130_Generic.zip`
2. Unzip the patch zip file into the `PATCH_TOP`.

```
$ unzip -d PATCH_TOP p33068703_122130_Generic.zip
```

 **Note:**

On Windows, the unzip command has a limitation of 256 characters in the path name. If you encounter this, use an alternate ZIP utility such as 7-Zip to unzip the patch.

For example: To unzip using 7-Zip, run the following command.

```
"c:\Program Files\7-Zip\7z.exe" x p33068703_122130_Generic.zip
```

3. Set your current directory to the directory where the patch is located.

```
$ cd PATCH_TOP/ 33068703
```

4. Log in as the same user who installed the base product and:

- Stop the AdminServer and all OAM Servers to which you will apply this Bundle Patch.

Any application that uses this OAM Server and any OAM-protected servers will not be accessible during this period.

- Back up your \$ORACLE_HOME: MW_HOME.
 - Move the backup directory to another location and record this so you can locate it later, if needed.
5. Run the appropriate Opatch command as an administrator to ensure the required permissions are granted to update the central inventory and apply the patch to your \$ORACLE_HOME. For example:

```
opatch apply
```

Windows 64-bit: `opatch apply -jdk c:\path\to\jdk180`

 **Note:**

Opatch operates on one instance at a time. If you have multiple instances, you must repeat these steps for each instance.

6. Start all Servers (AdminServer and all OAM Servers).

Recovering From a Failed Bundle Patch Application

If the AdminServer does not start successfully, the Bundle Patch application has failed.

To recover from a failed Bundle Patch application

1. Confirm that there are no configuration issues with your patch application.
2. Confirm that you can start the AdminServer successfully.
3. Shut down the AdminServer and roll back the patch as described in [Removing the Bundle Patch](#) then perform patch application again.

Removing the Bundle Patch

If you want to rollback a Bundle Patch after it has been applied, perform the following steps. While individual command syntax might differ depending on your platform, the overall procedure is the same. After the Bundle Patch is removed, the system is restored to the state it was in immediately before patching.

Note:

- Removing a Bundle Patch overrides any manual configuration changes that were made after applying the Bundle Patch. These changes must be re-applied manually after removing the patch.
- Use `opatch 13.9.4.2.5` for rollback. If older versions of the `Opatch` is used for rollback, the following fail message is displayed:

```
C:\Users\\Downloads\p33068703_122130_Generic\  
33068703  
>c:\Oracle\oam12213\OPatch\opatch rollback -id 33068703  
Oracle Interim Patch Installer version 13.9.2.0.0  
Copyright (c) 2020, Oracle Corporation. All rights reserved.  
.....  
The following actions have failed:  
Malformed \uxxxx encoding.  
Malformed \uxxxx encoding.
```

Follow these instructions to remove the Bundle Patch on any system.

To remove a Bundle Patch on any system

1. Perform steps in [Applying the OAM Bundle Patch](#) to set environment variables, verify the inventory, and shut down any services running from the `ORACLE_HOME` or host machine.
2. Change to the directory where the patch was unzipped. For example:
`cd PATCH_TOP/ 33068703`
3. Back up the `ORACLE_HOME` directory that includes the Bundle Patch and move the backup to another location so you can locate it later.
4. Run `Opatch` to roll back the patch. For example:

```
opatch rollback -id 33068703
```

 **Note:**

- To rollback the patch completely, remove the below two entries from oam-config.xml file using the config-utility tool (Doc : 2310234.1):

```
– <Setting Name="PolicyCacheComponent"  
  Type="htf:map"> ..... </Setting>  
  
– <Setting Name="PolicyCacheManagementAPI"  
  Type="htf:map"> ..... </Setting>
```

5. Start the servers (AdminServer and all OAM Servers) based on the mode you are using.
6. Re-apply the Bundle Patch, if needed, as described in [Applying the Bundle Patch](#).

Resolved Issues

This chapter describes resolved issues in this Bundle Patch.

This Bundle Patch provides the fixes described in the below section:

- [Resolved Issues in OAM BUNDLE PATCH 12.2.1.3.210701](#)
- [Resolved Issues in OAM BUNDLE PATCH 12.2.1.3.210324](#)
- [Resolved Issues in OAM BUNDLE PATCH 12.2.1.3.201201](#)
- [Resolved Issues in OAM BUNDLE PATCH 12.2.1.3.200908](#)
- [Resolved Issues in OAM BUNDLE PATCH 12.2.1.3.200629](#)
- [Resolved Issues in OAM BUNDLE PATCH 12.2.1.3.0 \(ID:191201.0123.S\)](#)
- [Resolved Issues in 12.2.1.3.190609](#)
- [Resolved Issues in 12.2.1.3.181213](#)
- [Resolved Issues in 12.2.1.3.180904](#)
- [Resolved Issues in 12.2.1.3.180706](#)

Known Issues and Workarounds

Known issues and their workarounds in Oracle Access Management Release 12.2.1.3 are described in the Oracle Access Management chapter of the *Release Notes for Oracle Identity Management* document. You can access the Release Notes document in the Oracle Identity Management Documentation library at the following URL:

<https://docs.oracle.com/middleware/12213/idmsuite/IDMRN/toc.htm>

Note:

Some known issues listed in the Release Notes for Oracle Identity Management may have been resolved by this Bundle Patch (Oracle Access Management 12.2.1.3.0). Compare the issues listed in [Resolved Issues](#) of this document when reviewing the *Release Notes for Oracle Identity Management*.

Bundle Patch Number	Base Bug Number/Doc ID	Bug Number/Doc ID	Description of the Problem
OAM BUNDLE PATCH 12.2.1.3.210701	32625905	33074398	When using the adaptive authentication module to send push notifications to iOS devices, the mobile device does not play the notification sound when the push notification arrives.

Bundle Patch Number	Base Bug Number/Doc ID	Bug Number/Doc ID	Description of the Problem
OAM BUNDLE PATCH 12.2.1.3.200629	31338274	2670747.1	<p data-bbox="1214 317 1455 600">After upgrade from 11.1.2.3.0 to 12.2.1.3.0, and applying the OAM 12.2.1.3.181213 BP configured with Oracle Database version 19.x.x, Admin Server startup fails with the following error:</p> <pre data-bbox="1214 642 1455 1083"> Internal Exception: java.sql.SQLRecoverableException : IO Error: Broken pipe Error Code: 17002 Call: SELECT FILE_CONTENT FROM OAM_FILE_ARTIFACTS WHERE (ID = ?) FOR UPDATE </pre> <p data-bbox="1214 1136 1455 1274">For details and workaround, see Doc ID 2670747.1 at https://support.oracle.com</p>

Bundle Patch Number	Base Bug Number/Doc ID	Bug Number/Doc ID	Description of the Problem
OAM BUNDLE PATCH 12.2.1.3.0 (ID:191201.0123.S)	N/A	2622132.1	<p>When using a <code>failure_url</code> in one of the following scenarios, it causes an OAM system error instead of being redirected to the expected or defined failure URL:</p> <ul style="list-style-type: none"> Using the OAM impersonation feature and calling the following URL that includes a <code>failure_url</code> parameter: <pre> http:// <OAMHOST>:<O AMPORT>/oam/ server/ impersonate/ start? userid=<USER NAME>&succes s_url=<SUCCE SS_URL>&fail ure_url=<FAI LURE_URL> </pre> Using a federation flow for CUSTOM nameid format that includes any failure URL.

Bundle Patch Number	Base Bug Number/Doc ID	Bug Number/Doc ID	Description of the Problem
12.2.1.3.190609	N/A	29940526	<p>When you create the identity provider (IdP) or Service Provider (SP) partners using the Oracle Access Management Console, the following error message appears:</p> <p>"An internal error occurred while creating Identity Provider Partner. Check the logs for additional details."</p> <p>There is no impact to functionality, and no user action is needed.</p>
12.2.1.3.190609	N/A	N/A	<p>WebGate 12c is using the underscore (_) for host and port separator in Authentication cookie names. For example, the OAMAuthnCookie name format OAMAuthnCookie_example.com:443 is now replaced as OAMAuthnCookie_example.com_443. This leads to SSO failure between the Detached Credential Collector (DCC) and DCC Tunneled resources as the server continues to use the older cookie name format. To resolve this issue, add UniqueCookieNames=legacy to the to the User-defined parameters of the DCC WebGate profile. This will allow Webgate to use older cookie name format.</p>

Bundle Patch Number	Base Bug Number/Doc ID	Bug Number/Doc ID	Description of the Problem
12.2.1.3.180904	MOS Note ID: 2460270.1	28277233	There is a policy corruption issue which occurs when there are multiple webgates with multiple resources. The end user will not be allowed to access the application. Customers encountering this issue should request a one-off patch.
12.2.1.3.180706	N/A	N/A	The only supported response_type for / authorize endpoint to OIDC Server is code i.e.response_type=code .
12.2.1.3.180414	27068410	27606513	disable10gPlainTextReqResparameter is case sensitive Workaround is to use disable10gPlainTextReqRes parameter as it is. Do not change the case.
	27068410	27606466	The functionality does not work when Agent and Preferred Host are different for the registered 10g Webgate Agent Profiles. Workaround is that the Agent Name and Preferred Host has to be same for the registered 10g Webgate Agent Profiles.

Bundle Patch Number	Base Bug Number/Doc ID	Bug Number/Doc ID	Description of the Problem
	27068410	27626433	Functionality does not work when bulk updates are done for updating the userdefinedparam of 10g agent profiles. Workaround is to update the userdefinedparam of all the 10g agent profiles manually using the oamconsole.
	27582324		POST data restoration will not work with ChallengeRedirect Method=GET Workaround is to set, ChallengeRedirect Method=post in the Authentication scheme.
12.2.1.3.171121	27292760		There are cases when AdaptiveAuthenticationPlugin does not contain the required fields to enable the OTP. The Workaround is to add the required fields to update the properties in oam-config.xml file by adding them to the ConfigParams section of the OAMMFAOTP definition.
