1. **Preface**

1.1 **Intended Audience**

This document is intended for the following audience:
- Customers
- Partners

1.2 **Documentation Accessibility**

1.3 **Access to Oracle Support**

1.4 **Structure**

This manual is organized into the following categories:

Preface gives information on the intended audience. It also describes the overall structure of the User Manual.

The subsequent chapters cover following:
- Introduction
- Prerequisites
- Installation
- Post Installation Steps
- Product Verification
- Multi-Entity Installation and configuration
- Best Practice
- Troubleshoot Overview

1.5 **Related Information Sources**

For more information on Oracle Banking APIs Release 19.1.0.0.0, refer to the following documents:
- Oracle Banking APIs Licensing Guide
- Oracle Banking APIs Installer Pre-Requisite Setup Manual
- Oracle Banking APIs Origination Social Media Integration
- Oracle Banking APIs OHS User Interface Configuration
- Oracle Banking APIs Security Guide
- Oracle Banking APIs System Configuration
- Oracle Banking APIs Core
2. **Introduction**

2.1 **Purpose of the Document**

The purpose of the OBAPI Installation Manual is to provide a step by step overview on the installation process of the solution.

It includes:

- Reference to prerequisites software installation required for OBAPI & OBAPI installer
- Setup of OBAPI with Oracle’s own Core Banking and Origination Products along with Third-party HOST system.
- Running the installation in silent mode
- Advanced Configurations (Post installation)
- Installation Verification
- Multi-Entity Installation and configuration
- Best Practice
- Troubleshoot Overview
3. **Prerequisites**

OBAPI pre-requisite software should be installed and available before proceeding.

For OBAPI pre-requisite software setup refers document “Oracle Banking APIs Installer Pre-Requisite Setup Manual” mentioned in section 1.5 Related Information Sources.

**Installer Pre-requisite verification**

Post installation of OBAPI Installer prerequisite software’s, verification can be done using below steps.

**Note:** Verification should be performed on Server where Oracle Weblogic is locally installed and by OS user (which is owner for Oracle Weblogic home directory) for non-root steps. The same user will be used to execute installer.

**Oracle Instant client**

**Step 1:** Login using root user.

**Step 2:** Run below command to verify if Oracle Instant client is installed.

```
rpm -qa | grep oracle
```

![Oracle Instant client verification](image)

**Note:** Above package verification command is specific to Oracle Linux and RHEL distributions only. For other Linux distributions or OS please refer to OS specific package manager documentation.

**Python:**

**Step 1:** Execute python –V command

```
python -V
```

![Python version](image)

**Note:** Ensure Python 2.7.5 supported version is installed. Above command should reflect the same.
Prerequisites

**cx_Oracle & Urwid:**

**Step 1:** Execute python command
```
python
```
**Note:** Ensure Python 2.7.5 version should be available in PATH variable. Above execution should be done using Python 2.7.5.

**Step 2:** Import Urwid and check version
```
import urwid

urwid.__version__
```

If version is displayed, then Urwid is installed and available for use.

**Note:** Ensure Urwid 1.3.1 supported version is installed. Above command should reflect the same.

**Step 3:** Similarly import cx_Oracle and check version
```
import cx_Oracle

cx_Oracle.version
```

If version is displayed, then cx_Oracle is installed and available for use.

**Note:** Ensure cx_Oracle 5.2.1 supported version is installed. Above command should reflect the same.
4. **Installation**

**Pre-Installation**
- Install all the prerequisite software and packages mentioned above

**Steps of Installation**
- Download and extract the installer zip file (Base).
- Navigate to “<OBAPI INSTALLER DIR>/core/config”
- Open the “installer.properties” file to maintain key configurations for BASE ENTITY (OBDX_BU)

**IMPORTANT:**
- Enter the values right after the “=” sign
- DO NOT change anything to the left of the “=”
- DO NOT change any of the flag values or pre-filled values (such as `WLS_JDBC_DIGX_NAME`, `WLS_JDBC_DIGX_JNDI`, Flag values etc) available in “Factory Shipped” section.
- Ensure there is no blank space after “=” sign, except specific flavor specific configuration
Only below parameters should be set in installer.properties file.

<table>
<thead>
<tr>
<th>Component</th>
<th>Parameter</th>
<th>Description</th>

<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>OBAPI_ADMIN_USER_NAME</td>
<td>Set username for OBAPI application Admin user. <strong>USERNAME IS CASE SENSITIVE.</strong> In-case of OUD as provider username should be the User ID mentioned during user creation steps mentioned in pre-requisite document (refer To create User and mapping it to the Group section) superadmin</td>
</tr>
<tr>
<td>OBAPI_ADMIN_EMAIL</td>
<td>Enter the Email ID for OBAPI application admin user. <a href="mailto:superadmin@oracle.com">superadmin@oracle.com</a></td>
</tr>
<tr>
<td>OBAPI_ADMINCONTACT_NO</td>
<td>Enter the mobile number for OBAPI application admin user. <strong>COUNTRY CODE IS MUST.</strong> +911234567890</td>
</tr>
</tbody>
</table>

**Note:** Apart from above any other property values should not be modified

Ensure ORACLE_HOME, JAVA_HOME variable are set and their binaries are available in PATH variable before proceeding.

Login with OS user which was used to perform OBAPI pre-requisite software installation (or has ownership on Oracle Weblogic home directory)

Ensure OBAPI Installation home and filestore path’s maintained in installer.properties exists and user running the installer has read-write permissions.
Installation Steps:

- From your terminal navigate to `<OBAPI INSTALLER DIR>/`

![Terminal output]

- Enter the following command

```bash
python runInstaller.py
```

Select the appropriate type of Installation

![Installation selection]

- OBAPI Installation: This option should be used for first-time installation or for first entity only. Existing installation should not utilize this option unless performing “Reinstall” on already installed environment.
• New Entity Creation: This option should be used for multi-entity installation only.
Post selection of installation type.
Select the appropriate host system for Installation

Please select the host system from the options listed below:

- Oracle FLEXCUBE Universal Banking
- Third Party System
- Oracle FLEXCUBE Core Banking
- Oracle FLEXCUBE Universal Banking with Oracle Banking Payments

Use (↑/↓) to select between options

Oracle FLEXCUBE Universal Banking (OBAPI with UBS)

Select the version of UBS HOST system from available options

Please select the version number of Oracle FLEXCUBE Universal Banking:

- 14.3.0.0.0
- 14.2.0.0.0

Use (↑/↓) to select between options
Post UBS HOST version selection, Select Installation mode

Mode of Installation - New Installation

- New installation

In-case of a fresh installation of OBAPI with appropriate host system for the first run on server.

Below screens would appear to taken end-user input
Valid.
Enter password for the OBDX schema 'OBDX_191INS' :

Valid.
Enter password for the STB schema 'STB_191INS_STB' :

Valid.
Enter password for the weblogic domain user id 'weblogic' :

Valid.
Enter the password for the user with sys privileges of UBS database 'sys' :

Valid.
Enter password for the UBS schema 'CU1106DC' (Existing) :

Valid.
Enter password for the UBS schema 'Blal_UBS(e1)_191INS' (new) :

Use [↑/↓] keys to navigate between questions and press 'Enter' after editing them.
Enter below passwords:

- SYS privilege user password where OBAPI schema would be created
- OBAPI schema password
- OBAPI STB schema password
- Weblogic console administrator user password
- SYS privilege user password where UBS host schema exists
- Existing UBS HOST schema password
- New OBAPI EHMS schema password
- Password for OBAPI application administrative user (In-case of OUD as provider, password should be similar to one used while user creation in OUD (or User Password field))

Third Party System (OBAPI with THP)

Post Third Party System selection, enter the required credentials details
Enter below passwords:

- SYS privilege user password where OBAPI schema would be created
- OBAPI schema password
- OBAPI STB schema password
- Weblogic console administrator user password
  - OBAPI application admin user password (In-case of OUD as provider, password should similar to one used while user creation in OUD (or User Password field))

Oracle FLEXCUBE Core Banking (OBAPI with FCORE)

Post Oracle FLEXCUBE Core Banking, enter the required credentials details

![Password Entry Example]

Enter below passwords:

- SYS privilege user password where OBAPI schema would be created
- OBAPI schema password
- OBAPI STB schema password
- Weblogic console administrator user password
- SYS privilege user password where FCORE host schema exists
- New OBAPI EHMS schema password
- Password for OBAPI application administrative user (In-case of OUD as provider, password should be similar to one used while user creation in OUD (or User Password field))
Oracle FLEXCUBE Universal Banking with Oracle Banking Payments (OBAPI with OBPM)

Select the version of UBS HOST system from available options

Post selection of Oracle FLEXCUBE Universal Banking with Oracle Banking Payments version, enter the required credentials details
Enter below passwords:

- SYS privilege user password where OBAPI schema would be created
- OBAPI schema password
- OBAPI STB schema password
- Weblogic console administrator user password
- SYS privilege user password where OBPM host schema exists
- Existing OBPM HOST schema password
- New OBAPI EHMS schema password
- Password for OBAPI application administrative user (In-case of OUD as provider, password should be similar to one used while user creation in OUD (or User Password field))

**Mode of Installation – Reinstall**

In-case of an existing OBAPI installation that you want to overwrite OR in case of a previously failed installation user can opt for this option.

**Pre-requisites**

- Weblogic domain processes should be down (i.e. AdminServer, NodeManager, Managed Servers, Derby etc)
- No open session (user should not be logged-in) with OBAPI database schema (and OBAPI EHMS schema in-case of OBAPI UBS;OBPM and FCORE flavor) and RCU schema.
Key pointers

- OBAPI schema (and OBAPI EHMS schema in-case of OBAPI UBS flavor) and RCU schema would be dropped and recreated (as per installer.properties). Tablespace would be re-used.
- Weblogic domain (as per installer.properties) would be deleted and created again.
- Installation Home would be cleaned up (all files/ sub-directories would be deleted) and re-created again.

**Note:** All input screens are similar to new installation option and as per the host system opted.

Installation Status

After selecting the mode and entering all required details, the status is displayed (as shown below) on the terminal to indicate the progress of the installation.
When the installation completes, the below message is displayed:

```
AdminServer started
Successfully created and configured OX Server domain
AdminServer was created in a different thread than the one in which it was created.
Successfully configured ejb-jar.xml.
Successfully setup and configured Weblogic...

>>> OX PRODUCT INSTALLATION COMPLETED SUCCESSFULLY <<<
```
5. **Installation using Silent Mode**

This chapter describes how to run the OBAPI installer in silent mode.

**What is silent-mode installation?**

During installation in silent mode, the installation program reads the details for your configuration parameters (flavor; mode; passwords etc) from the environment variables (same session in which installer is executed) and installer.properties that you set before beginning the installation. The installation program does not display any configuration options during the installation process.

**Steps for Silent-Mode Installation**

- Download and extract the installer zip file (Base – non localization version).
- Navigate to "<OBAPI INSTALLER DIR>/core/config"
- Open the "installer.properties" file to maintain key configurations for BASE ENTITY (OBDX_BU)
  
  **Refer to page 9 to 14 (step 4) for filling up installer.properties.**
- Set the environment variables, as shown below

```bash
OBXK_Installer]$ export FLAVOUR=UBS
OBXK_Installer]$ export MODE=New
OBXK_Installer]$ export DB_SYS_PASSWORD=welcome1
OBXK_Installer]$ export SCHEMA_PASS=welcome1
OBXK_Installer]$ export STBPass=welcome1
OBXK_Installer]$ export DomainPassword=welcome1
OBXK_Installer]$ export EMIS_DATABASE_SYS_PASS=devopshst
OBXK_Installer]$ export EMDS_HOST_SCHEMA_NAME_PASS=FC140UBS
OBXK_Installer]$ export EMDS_SCHEMA_PASS=welcome1
```
Below parameters should be set as environment variables, depending on the Host system the installer should be executed.

<table>
<thead>
<tr>
<th>Host</th>
<th>Parameter</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><strong>FLAVOUR</strong></td>
<td>Flavour for installation</td>
<td><code>export FLAVOUR=UBS</code> or <code>export FLAVOUR=UBS143</code> or <code>export FLAVOUR=OBPM</code> or <code>export FLAVOUR=OBPM143</code> or <code>export FLAVOUR=FCORE</code></td>
</tr>
<tr>
<td></td>
<td><strong>MODE</strong></td>
<td>Mode of installation. 'New' in-case of a fresh installation of OBAPI for the first run on server 'Clean' in-case of an existing OBAPI installation that you</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td><code>export MODE=New</code> or <code>export MODE=Clean</code></td>
</tr>
<tr>
<td></td>
<td><strong>UBS</strong></td>
<td>for Oracle FLEXCUBE Universal Banking 14.2.0.0.0 (OBAPI with UBS)</td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>UBS143</strong></td>
<td>for Oracle FLEXCUBE Universal Banking 14.3.0.0.0 (OBAPI with UBS)</td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>OBPM</strong></td>
<td>for Oracle FLEXCUBE Universal Banking with Oracle Banking Payments 14.2.0.0.0 (OBAPI with OBPM)</td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>OBPM143</strong></td>
<td>for Oracle FLEXCUBE Universal Banking with Oracle Banking Payments 14.3.0.0.0 (OBAPI with OBPM)</td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>FCORE</strong></td>
<td>for Oracle FLEXCUBE Core Banking 11.7.0.0.0 (OBAPI with FCORE)</td>
<td></td>
</tr>
</tbody>
</table>

Environment variables to set for flavor:
- FCORE;
- UBS (14.3.0.0.0 and 14.2.0.0.0 release)
- OBPM(14.3.0.0 .0 and 14.2.0.0.0)
### Installation using Silent Mode:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>DB_SYS_PASSWORD</td>
<td>Sys user password of OB API database (Existing)</td>
<td>export DB_SYS_PASSWORD=obapi182sys</td>
</tr>
<tr>
<td>SCHEMA_PASS</td>
<td>Password for new schema on OB API database</td>
<td>export SCHEMA_PASS=obapi182</td>
</tr>
<tr>
<td>STBPassword</td>
<td>Password for RCU STB schema</td>
<td>export STBPassword=obapi182#stb</td>
</tr>
<tr>
<td>DomainPassword</td>
<td>Password for Weblogic Administrator console</td>
<td>export DomainPassword=wlsadmn</td>
</tr>
<tr>
<td>EHMS_DATABASE_SYS_PASS</td>
<td>Sys user password of EHMS HOST database (Existing)</td>
<td>export EHMS_DATABASE_SYS_PASS=obapi182ehms</td>
</tr>
<tr>
<td>EHMS_HOST_SCHEMA_NAME_PASS</td>
<td>Password of existing EHMS HOST schema (Existing)</td>
<td>export EHMS_HOST_SCHEMA_NAME_PASS=obapi182ehms</td>
</tr>
<tr>
<td>EHMS_SCHEMA_PASS</td>
<td>Password for new OB API EHMS schema on EHMS HOST database</td>
<td>export EHMS_SCHEMA_PASS=obapi182ehms</td>
</tr>
<tr>
<td>DBAuthPassword</td>
<td>Password for new OB API Administrator user of OB API application</td>
<td>export DBAuthPassword=obapiadmn</td>
</tr>
<tr>
<td>FLAVOUR</td>
<td>Flavour for installation</td>
<td>export FLAVOUR=OBAPI</td>
</tr>
</tbody>
</table>

**Environment**

- **'OBAPI'** for Third Party System 1.0 (OBAPI with THP)
## Installation using Silent Mode

### variables to set for flavor:

**OBAPI (Third-party HOST)**

<table>
<thead>
<tr>
<th>Mode</th>
<th>Mode of installation.</th>
</tr>
</thead>
<tbody>
<tr>
<td>'New'</td>
<td>in-case of a fresh installation of OBAPI for the first run on server</td>
</tr>
<tr>
<td>'Clean'</td>
<td>in-case of an existing OBAPI installation that you want to overwrite OR in case of a previously failed installation or re-installation</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Variable</th>
<th>Description</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>DB_SYS_PASSWORD</code></td>
<td>Sys user password of OBAPI database (Existing)</td>
<td>export DB_SYS_PASSWORD=obapi182sys</td>
</tr>
<tr>
<td><code>SCHEMA_PASS</code></td>
<td>Password for new schema on OBAPI database</td>
<td>export SCHEMA_PASS=obapi#182</td>
</tr>
<tr>
<td><code>STBPassword</code></td>
<td>Password for RCU STB schema</td>
<td>export STBPassword=obapi#stb</td>
</tr>
<tr>
<td><code>DomainPassword</code></td>
<td>Password for Weblogic Administrator console</td>
<td>export DomainPassword=wlsadmin</td>
</tr>
<tr>
<td><code>DBAuthPassword</code></td>
<td>Password for new OBAPI Administrator user of OBAPI application (In-case of OUD as provider, password should similar to one used while user creation in OUD(or User Password field))</td>
<td>export DBAuthPassword=obapiadmn</td>
</tr>
</tbody>
</table>

Run the `runInstaller.py` file with `--silent` argument along with `--base` option

```
OBDX_Installer$ python runInstaller.py --silent --base
```
**Installation Status**

The status is displayed on the terminal to indicate the progress of the installation.

```

When the installation completes, the below message is displayed.
## 6. Installer Verification

Each execution creates a new directory as `<DDMonthHHMM>` under `<OBAPI INSTALLER DIR>/ExecInstances` directory where installer execution logs as described below are stored.

<table>
<thead>
<tr>
<th>Log Description</th>
<th>PATH</th>
</tr>
</thead>
<tbody>
<tr>
<td>Summarized Installer Activity Log</td>
<td><code>&lt;OBAPI INSTALLER DIR&gt;/ExecInstances/&lt;DDMonthHHMM&gt;/logs/obapi_installer.log</code></td>
</tr>
<tr>
<td>Summarized Database Logs</td>
<td><code>&lt;OBAPI INSTALLER DIR&gt;/ExecInstances/&lt;DDMonthHHMM&gt;/logs/db/DB_installation.log</code></td>
</tr>
<tr>
<td>Detailed OBAPI DB Logs per SQL file</td>
<td><code>&lt;OBAPI INSTALLER DIR&gt;/ExecInstances/&lt;DDMonthHHMM&gt;/logs/db/OBAPI/*</code></td>
</tr>
<tr>
<td>Detailed EHMS schema Logs per SQL file (specific to EHMS host system only)</td>
<td><code>&lt;OBAPI INSTALLER DIR&gt;/ExecInstances/&lt;DDMonthHHMM&gt;/logs/db/&lt;EHMSHOST&gt;/*</code></td>
</tr>
<tr>
<td>RCU Logs</td>
<td><code>&lt;OBAPI INSTALLER DIR&gt;/ExecInstances/&lt;DDMonthHHMM&gt;/logs/app/obapi_stb_rcu_1600.log</code></td>
</tr>
<tr>
<td>Weblogic Configuration Logs</td>
<td><code>&lt;OBAPI INSTALLER DIR&gt;/ExecInstances/&lt;DDMonthHHMM&gt;/logs/app/obapi_wls_post.log</code></td>
</tr>
</tbody>
</table>
| Detailed OBAPI policy seeding logs                   | `<OBAPI INSTALLER DIR>/ExecInstances/<DDMonthHHMM>/logs/db/Entitlement.log`  
|                                                      | `<OBAPI INSTALLER DIR>/ExecInstances/<DDMonthHHMM>/logs/db/Task.log`     
|                                                      | `<OBAPI INSTALLER DIR>/ExecInstances/<DDMonthHHMM>/logs/db/Dashboard_seed.log` |
| Policy seeding execution Log                          | `<OBAPI INSTALLER DIR>/ExecInstances/<DDMonthHHMM>/logs/db/seedPolicies.log`  
|                                                      | **Note:** Check for SEVERE keyword; If found refer to Troubleshooting section to re-run the policy. |

Check all the logs for any errors.
7. **Installer Scope**

OBAPI Installer currently covers below activities:

**Flavor: Third Party system (OBAPI with THP)**

<table>
<thead>
<tr>

Home
8. **Post Installation Steps**

Once Installation is successful and no errors are observed, proceed with below set of steps.

Login Weblogic Admin console.

In the left panel of the Console, Click on **Deployments**, A table in the right pane displays all deployed Enterprise Applications and Application Modules.
In the table, locate the `oracle.wsm.idmrest.sharedlib(1.0,12.2.1.3)` library to re-target and click on its name.

Click on **Lock & Edit**
Click on **Targets Tab**

In the **Servers** box, select **Cluster** if it is not already selected and click **Save**.
Click on **Activate Changes.**

Click on **Home Tab**
In the left panel of the Console, Click on Services.

Click on Data Sources
Locate **WLSSchemaDataSource** to change target, click on its name

Click on **Targets Tab**
Click on **Lock & Edit**

In the Servers Box, select **AdminServer & OBAPI Cluster** and Click on **Save**
Click on **Activate Changes**

**Outbound credential mappings**

Login Weblogic Admin Console. Click on Deployments.
Click on com.ofss.digx.app.connector > com.ofss.digx.connector.rar

Click on **Security** Tab > **Outbound Credential Mappings**
Click on **New**

Select **ra/DIGXConnectorAES > Next**
Select “Default User” > Next

Enter “EIS User Name” should be set to AES_KEY
Enter “EIS Password” . Password should be any 16 characters.
Click 'Finish'

Check AES_KEY mapping is created successfully.
Apply JRF Template

To apply JRF template follow below steps.

- To do this, ensure that the Admin Server is running. Login to the EM (Enterprise Manager) Console using the following URL:

  `http://<hostname>:<admin_port>/em`

**Note:** EM console would be available on same hostname and port which was used for Weblogic Admin Console for OBAPI domain (created via installer), just replace the “/console” with “/em”.

- Enter Weblogic administrator username and password (same used for Weblogic administrator console login)
- Click on Sign In

Note: Depending on installer.properties, Managed server will differ from above screenshot.
- Click on “Lock and Edit” option (as shown in screenshot).

You will see below screen stating the edit session confirmation.
Post Installation Steps

- Click on “Apply JRF Template” option (as shown in screenshot).

Is JRF successfully applied, you will get below Confirmation.
Post Installation Steps

- Click on “Activates Changes” option (as shown in screenshot).

Post activation you will receive below Confirmation.

Configuring the Connector Credential Store

This step is required to setup the encryption key required for encryption of certain sensitive data within the OBAPI application.
For more information, refer the Oracle Banking APIs Connector Credential Store Guide.pdf

<table>
<thead>
<tr>
<th>Functionality / Module</th>
<th>OutBound Connection Pool Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>VAM</td>
<td>ra/DIGXConnectorOBVAM</td>
</tr>
</tbody>
</table>

**Configure User Lockout attributes in Weblogic**

The User Lockout attributes in Weblogic under Home>Security Realms>myrealm need to be in sync with the Password Policy Maintained in LDAP or DBAuthenticator. In case of DBAuthenticator it has to be in sync with Password Policy Maintenance in OBAPI.

Check for below values & change accordingly.

1) Lockout Threshold : It should be equal to Invalid attempts of Password Policy Maintenance.
2) Lockout Duration : It should be equal to property under prop_id "USER_LOCK_PERIOD" maintained in DIGX_FW_CONFIG_ALL_B table.

In case of OUD or other LDAP it needs to be sync with the Password Policy configured in LDAP. For e.g.: Refer to below values configured in OUD.

Once the values are available, make appropriate change in respective highlighted configuration.
Save and Activate Changes
Restart AdminServer

OBAPI Application logging

To enable OBAPI activation logging make below change to logging.xml present at $(domain.home)/config/fmwconfig/servers/$ManagedServer.

Open logging.xml and make a new entry under <log_handlers> tag using below code template:

```xml
<log_handler name='obapi-handler' level='<LOGLEVEL>' class='oracle.core.ojdl.logging.ODLHandlerFactory'>
  <property name='path' value='<path for OBAPI log>/OBAPI log filename'/>'
  <property name='maxFileSize' value='The maximum size in bytes for each log file'/>'
  <property name='maxLogSize' value='The maximum size in bytes for the entire log'/>'
  <property name='encoding' value='encoding'/>
  <property name='useThreadName' value='true'/>
  <property name='supplementalAttributes' value='<supplementalAttributes'/>'
</log_handler>

Below is a sample implementation for log_handlers file.

```xml
<log_handler name='obapi-handler' level='ERROR' class='oracle.core.ojdl.logging.ODLHandlerFactory'>
  <property name='path' value='${domain.home}/servers/${weblogic.Name}/logs/obapi.log'/>
  <property name='maxFileSize' value='10485760'/>
  <property name='maxLogSize' value='104857600'/>
  <property name='encoding' value='UTF-8'/>
  <property name='useThreadName' value='true'/>
  <property name='supplementalAttributes' value='J2EE_APP.name,J2EE_MODULE.name,WEBSERVICE.name,WEBSERVICE_PORT.name,composite_instance_id,component_instance_id,composite_name,component_name'/>
</log_handler>
```
Add loggers under `<loggers>` tag using below template:

```xml
<logger name='com.ofss' level='ERROR' useParentHandlers='false'>
    <handler name='obapi-handler' />
</logger>

<logger name='#{BANKCODE#}.com.ofss' level='ERROR' useParentHandlers='false'>
    <handler name='obapi-handler' />
</logger>
```

Note: Replace the `#{BANKCODE#}` with bank code.

Below is a sample implementation for loggers file

```xml
<logger name='com.ofss' level='ERROR' useParentHandlers='false'>
    <handler name='obapi-handler' />
</logger>

<logger name='000.com.ofss' level='ERROR' useParentHandlers='false'>
    <handler name='obapi-handler' />
</logger>
```
Eclipselink logging

To modify eclipselink logging make changes in `<INSTALLATION_HOME>\config\META-INF\persistence.xml` using below link:

https://wiki.eclipse.org/EclipseLink/Examples/JPA/Logging
Change logging level during runtime

To change OBAPI application logging level at runtime (when OBAPI application is up and running) do following steps.

To do this, ensure that the Admin Server is running. Login to the EM (Enterprise Manager) Console using the following URL:

```
http://<hostname>:<admin_port>/em
```

**Note:** EM console would be available on same hostname and port which was used for Weblogic Admin Console for OBAPI domain (created via installer), just replace the “/console” with “/em”.

- Click on obapi-server

**Note:** Depending on installer.properties, Managed server will differ from above screenshot.
Post Installation Steps

- In Weblogic Domain menu click on Logs -> Logs Configurations
Select the logger and change the logging level and then click on apply.

**Note:** Logger name should be defined in logging.xml.
**Oracle FLEXCUBE Universal Banking (OBAPI with UBS)**

If during installer execution Oracle FLEXCUBE Universal Banking (OBAPI with UBS) is selected, then below steps needs to be done manually.

**Foreign Server**
- Login into Weblogic Admin console (OBAPI domain created using installer) and Browse to Summary of JMS Modules > UBSSystemModule (as shown below)
- Click on UBSForeignServer

- Click on Lock & Edit
Set below configurations with:

**JNDI Connection URL** – Replace `<EHMS_WLS_SERVER>` with hostname or IP address of UBS HOST Weblogic server and `<EHMS_WLS_SERVER_PORT>` with port number of UBS HOST Weblogic Managed server (where NOTIFY_DEST_QUEUE and NOTIFY_DEST_QUEUE_FCDB are mapped).

**JNDI Properties Credential** – Password for username set in JNDI properties

**Confirm JNDI Properties Credential** – Confirm password for username set in JNDI properties

**JNDI Properties** – Value to be set as “java.naming.security.principal=<EHMS_WLS_USERNAME>“, where username is the login user of UBS Weblogic Admin Console (user which created the primary local queues for UBS).

- Click on Save
- Click on Activate Changes
Deployment of notification MDB application

Before deployment of obapi.externalsystem.ubs.notification.mdb.ear application, kindly perform below steps:

- Open the obapi.externalsystem.ubs.notification.mdb.ear (EAR file is available <OBAPI INSTALLER DIR>/installables/app/components/ubs/deploy/obapi.externalsystem.ubs.notification.mdb.ear) using any archiving tools (i.e.: 7-zip)
• Double click on com.ofss.extsystem.ubs.notification.jar

• Open the wsconfig.properties to edit
Post Installation Steps

- Change the URL for AlertProcessorService.url, FileProcessedNotifProcessorService.url and AlertProcessorService.targetUnit (Note the hostname and port should be of OBAPI managed server created by installer. Entity ID should be OBDX_BU for Base entity).

- Save changes.
- Click OK.
- Navigate back to `obapi.externalsystem.ubs.notification.mdb.ear`

- Click OK
Deploy the updated obapi.externalsystem.ubs.notification.mdb.ear using below steps.

- Login into Weblogic Admin Console (OBAPI domain created using installer) and navigate to Deployments

- Click Lock & Edit
• Click on Install

• Click on Upload your file(s)

• Click on Choose File under Deployment Archive
• Navigate to customized `obapi.externalsystem.ubs.notification.mdb.ear` and click Open

- Click Next

- Click Next
- Select “Install this deployment as an application” and click Next

- Select Cluster as target and click Next
• Click Next

• Click Finish.
• Click Save.

• Click Activate Changes
Oracle FLEXCUBE Universal Banking with Oracle Banking Payments (OBAPI with OBPM)

If during installer execution Oracle FLEXCUBE Universal Banking with Oracle Banking Payments (OBAPI with OBPM) is selected, then below steps needs to be done manually.

Foreign Server

- Login into Weblogic Admin console (OBAPI domain created using installer) and Browse to Summary of JMS Modules > OBPMSystemModule > OBPMForeignServer (as shown below)

Refer to earlier steps mentioned for UBS HOST UBSForeignServer and make similar changes in OBPMForeignServer.
Deployment of notification MDB application

Before deployment of obapi.externalsystem.obpm.notification.mdb.ear application, make changes similar to obapi.externalsystem.ubs.notification.mdb.ear before deployment.

Fileupload with UBS
Refer below document for File upload configuration with UBS
- Oracle Banking APIs File Upload Report Configuration

Origination with UBS
Refer below document (section 5 and 6) for enabling Origination with UBS
- Oracle Banking APIs UBS Origination Setup and Configuration

Trade Finance (LC and BG) with OBTFPM
Refer below document for enabling ‘Letter Of Credit’ issuance and ‘Bank Guarantee’ issuance with Oracle Banking Trade Finance Management.
Oracle Banking Mid-Office Product Setup and Configuration Guide

OHS
OHS server needs to be configured for all FLAVOR’s as a mandatory activity.
To configure OHS server follow steps mentioned in below document before proceeding further.
- Oracle Banking APIs OHS User Interface Configuration
9. OBAPI Product Verification

Start managed server and verify all deployed applications are in Active state (as shown below).

To login into application, new user needs to be created (if not already done) in OUD refer section Creating Groups and System Admin User on LDAP Server of document “Oracle Banking APIs Installer Pre-Requisite Setup Manual” mentioned in section 8.5 Related Information Sources.

To verify the installation, launch below URL

http://<OHS server ip or hostname>:<OHS port>

Check if the page loads successfully.
Day 1 Configuration

Universal Banking Solution (OBAPI with UBS)

Refer below document (Section 3. System Configuration) for Day 1 configuration required for integration with UBS

Oracle Banking APIs System Configuration

Once day 1 is completed, application is available for end-user transactions.

Note: Post Day 1 restart of Managed server is mandatory

Third Party System (OBAPI with THP)

Refer below document (Section 5. System Configuration – Host System as Third Party) for Day 1 configuration required for integration with Third-party System

Oracle Banking APIs System Configuration

Once day 1 is completed, application is available for end-user transactions.

Note: Post Day 1 restart of Managed server is mandatory

Chat Bot Configuration:

Refer below document for Chat Bot configuration.

Oracle Banking APIs Chatbot Configuration
Mobile Application Builder:

Refer below documents for Mobile Applications build and setup.
Oracle Banking APIs Mobile Application Builder-Android
Oracle Banking APIs Mobile Application Builder-iOS

Mid Office Configuration:

Refer below document for Mid Office Configurations i.e. Trade Finance, Corporate Lending.
Oracle Banking Mid-Office Product Setup and Configuration Guide.

Account Uniqueness Configuration:

Some core banking systems support same account number in multiple branches within the entity. OBAPI has support for such core banking systems. However, the configuration is not enabled by default. In case the Bank has core banking system which supports and provides same account numbers across multiple branches, the following scripts should be executed per entity for enabling the support.

```sql
Insert into DIGX_FW_CONFIG_ALL_O (PROP_ID, PREFERENCE_NAME, PROP_VALUE, DETERMINANT_VALUE, CREATED_BY, CREATION_DATE, LAST_UPDATED_BY, LAST_UPDATED_DATE)
values
('obapi.host.account.uniqueness','ExtSystemsConfig','BRANCH','<ENTITY_ID>','ofssuser',sysdate,'ofssuser',sysdate);

Insert into DIGX_FW_CONFIG_ALL_O (PROP_ID, PREFERENCE_NAME, PROP_VALUE, DETERMINANT_VALUE, CREATED_BY, CREATION_DATE, LAST_UPDATED_BY, LAST_UPDATED_DATE)
values
('obapi.host.accountbranch.delimiter','ExtSystemsConfig','@~','<ENTITY_ID>','ofssuser',sysdate,'ofssuser',sysdate);
```

Note: Please ensure that `<ENTITY_ID>` has been replaced with correct Entity ID for the corresponding entity.
10. Configuration for OUD/OAM

In-case installation needs to be done using OUD/OAM provider, below steps needs to be performed manually.

**Weblogic configuration/ deployment**

- **REST EAR deployment:**
  Undeploy obapi.app.rest.idm from deployments.
  Deploy obapi.app.rest from Installer zip (<OBAPI INSTALLER DIR> \installables\app\components\obapi\deploy\obapi.app.rest.ear).
  Refer to manual deployment steps provided for obapi.externalsystem.ubs.notification.mdb.ear application

- **Security Realms**

To configure your own Oracle LDAP to use instead of the default embedded LDAP, which comes with Oracle Weblogic Server.

- To do this, ensure that the Admin Server is running. Login to the Weblogic Console for OBAPI domain (created by Installer) using the following URL:
  
  \text{http://<hostname>:<admin_port>/console}

- Now, go to Security Realms > myrealm > Providers

- Now click on **"Lock & Edit"** in order to edit the details.
- Delete the following Authenticators under providers-> **Authentication**:
Click on "DefaultAuthenticator" provider and change the Control Flag to SUFFICIENT
- Click on Save button to save the changes
- Navigate Back to Security Realms > myrealm > Providers

- Now, click on New and enter the below details and click Save.
  - Name: OUDAuthenticator
  - Type: OracleUnifiedDirectoryAuthenticator
• Click on OK Button.

Now Click on OUDAuthenticator and select Control Flag as “SUFFICIENT”
• Click on Save Button.

• Now under Provider Specific tab set the details of LDAP where the server should point. Refer to the following table for more information:

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Host</td>
<td>This is the LDAP Server (OUD) Hostname</td>
</tr>
<tr>
<td>Port</td>
<td>This is the LDAP Server (OUD) Port. E.g. 1389</td>
</tr>
<tr>
<td>Principal</td>
<td>This is the Administrator Account name. E.g. cn=orcladmin</td>
</tr>
<tr>
<td>Credential</td>
<td>This is the Administrator Account password.</td>
</tr>
<tr>
<td>Confirm Credential</td>
<td>Confirm the Administrator Account password.</td>
</tr>
<tr>
<td>UserBase DN</td>
<td>This is the OUD user search base</td>
</tr>
<tr>
<td>GroupBase DN</td>
<td>This is the OUD group search base</td>
</tr>
</tbody>
</table>
- Click on Save to update the changes.
- Navigate Back to Security Realms > myrealm > Providers
Now, click on New and enter the below details and click Save.

- **Name**: OAMIdentityAsserter
- **Type**: OAMIdentityAsserter
• Click on OK Button.

• Click on Reorder Button.
- Reorder the providers so that LDAP Provider (OUDAuthenticator) gets highest priority followed by OAMIdentityAsserter, OBAPIJWT, DefaultAuthenticator, DefaultIdentityAsserter.

- Click on OK Button.
• Set the OAuth URL for OBAPIJWT

Sample OAuth URL: [http://<hostname>:<port>/oauth2/rest/token/info](http://<hostname>:<port>/oauth2/rest/token/info) (hostname and port should be replaced with OAM Server setup).

• Click on Activate Changes to apply the changes.

• Now go to the `<DOMAIN_PATH>/DOMAIN_NAME/config/fmwconfig/`
• Open `jps-config.xml`

Replace the line: `<serviceInstanceRef ref="idstore.custom"/>

With `<serviceInstanceRef ref="idstore.ldap"/>`
• Now Shutdown the Admin server.
• Now, again start the Admin Server using the command,
  `<DOMAIN_PATH>/<DOMAIN_NAME>/bin/startWeblogic.sh`

➢ Run the following script into OBAPI Schema:

```sql
update DIGX_FW_CONFIG_ALL_B set prop_value = 'ipm1.0,ORACLEBI12.2.1.2,GENERIC1.0,OAM122130,OUD1.0' where prop_id = '01' and category_id = 'extxfaceadapterconfig';
```
commit;

- Restart Managed Server

**Verification**

Post Admin and Managed Servers restart, login into Admin Console and browse to Security Realms > myrealm > Users and Groups.

Under Users tab additional LDAP users would be populated and additional LDAP groups can be seen under Groups tab.
11. Multi Entity

To add entity to existing OBAPI with supported host system follow below steps.

- Add entity through OBAPI Web application, using
- In case of OBTFPM integration, following document should be referred.
- Oracle Banking Mid-Office Product Setup and Configuration Guide Running OBAPI installer
  
  Ensure that Managed server should be down and Admin server should be running state.

  Ensure ORACLE_HOME, JAVA_HOME variable are set and their binaries are available in PATH variable before proceeding.

  Login with OS user which was used to perform OBAPI software installation (or has ownership on Oracle Weblogic home directory)

  Ensure OBAPI installation details (OBAPI DB; WLS etc) are maintained in installer.properties and user running the installer has read-write permissions.

  - From your terminal navigate to <OBAPI_INSTALLER_DIR>
  - Enter the following command

    python runInstaller.py

Select installation type as ‘New Entity Creation’
Please select the installation type from the options below:

- ORDN Installation
- New Entity Creation

Use (r/v) to select between options.
Below screen will appear after selecting add entity

Enter below information:

- Entity code which has been added from screen
- OBAPI schema password

If an entity code belongs to UBS / OBPM host following screen (below screenshot are for OBPM ; for UBS same input are required) will appear:
Enter the OBDM143 DB hostname:

```
>>
```

Enter the OBDM143 DB port:

```
>>
```

Enter the OBDM143 SID:

```
>>
```

Enter the Directory name for Tablespace creation (DBA_DIRECTORIES):

```
>>
```

Enter the username with 'sys' privileges:

```
>>
```

Enter password for the user with sys privileges:

```
>>
```

Enter existing weblogic admin password:

```
>>
```

Use (1/1) keys to navigate between questions and press 'enter' after editing them.

Enter the OBDM143 DB hostname:

```
>>numeval1.in.oracle.com
Valid.
```

Enter the OBDM143 DB port:

```
>>32768
Valid.
```

Enter the OBDM143 SID:

```
>>obdebat.in.oracle.com
Valid.
```

Enter the Directory name for Tablespace creation (DBA_DIRECTORIES):

```
>>DEF_DIR
Valid.
```

Enter the username with 'sys' privileges:

```
>>sys
Valid.
```

Enter password for the user with sys privileges:

```
>>password
Valid.
```

Enter existing weblogic admin password:

```
>>password
Valid.
```

Use (1/1) keys to navigate between questions and press 'enter' after editing them.
Enter below details:

- Hostname of the database host server
- Port of the database host server
- Host database Service Name
- Oracle directory name in which you want the database datafile (dbf) to be created. Enter only the name NOT the path.
- Username with 'sys' privileges
- SYS privilege user password where UBS schema would be created
- Weblogic console administrator user password

Enter below details:

- EXISTING Host schema name
- Password for EXISTING schema
- Complete EHMS (HostInterface) schema name you want installer to create as new schema
- Password for New schema
- Country Code of entity branch
Installation Status in case of UBS / OBPM

After entering all required details, the status is displayed (as shown below) on the terminal to indicate the progress of the installation.

When the installation completes, the below message is displayed
Post successful installation refer to “Section 8: Post Installation steps” for manual steps to be performed for UBS additional entity (sub-section : Oracle FLEXCUBE Universal Banking (OBAPI with UBS)).

**If an entity code belongs to Third-party host following screen will appear:**
No additional steps/configuration are required.

If an entity code belongs to Oracle FLEXCUBE Core Banking host following screen will appear:

Enter the FLEXCUBE DB hostname:

Valid.
Enter the FLEXCUBE DB port:

Valid.
Enter the FLEXCUBE SID:

Valid.
Enter the Directory name for Tablespace creation (DBA_DIRECTORIES):

Valid.
Enter the username with 'sys' privileges:

Valid.
Enter password for the user with sys privileges:

Valid.
Enter existing weblogic admin password:

Valid.
Use (i/j) keys to navigate between questions and press 'enter' after editing them.
Enter below details:

- Hostname of the FCORE database host server
- Port of the FCORE database host server
- FCORE Host database Service Name
- Oracle directory name in which you want the database datafile (dbf) to be created. Enter only the name NOT the path.
- Username with 'sys' privileges
- SYS privilege user password where FCORE schema would be created
- Weblogic console administrator user password
Enter below details:

- EXISTING FCORE HOST schema name
- EXISTING FCORE FCUBS schema name
- Complete EHMS (HostInterface) schema name you want installer to create as new schema
- Password for New EHMS schema

**Installation status for FCORE Add entity**

After entering all required details, the status is displayed (as shown below) on the terminal to indicate the progress of the installation.
No additional steps/configuration are required.
Post successful installation refer to “Section 8: Post Installation steps” for manual steps to be performed for OBPM additional entity (sub-section: Oracle FLEXCUBE Universal Banking with Oracle Banking Payments (OBAPI with OBPM)).
12. Multi-entity installation using Silent Mode

This chapter describes how to run the OBAPI installer for add entity in silent mode.

Ensure that Managed server should be down and Admin server should be running.

Ensure ORACLE_HOME, JAVA_HOME variable are set and their binaries are available in PATH variable before proceeding.

Login with OS user which was used to perform OBAPI software installation (or has ownership on Oracle Weblogic home directory)

Steps for Silent-Mode Installation

- Set the environment variables, as shown below.

```bash
OBXInstaller]$ export Entity_Code=OBDX_BU7
OBXInstaller]$ export SCHEMA_PASS=welcome
OBXInstaller]$ export ENTITY_EHMS_DATABASE_HOSTNAME=hostanme.in.oracle.com
OBXInstaller]$ export ENTITY_EHMS_DATABASE_PORT=1520
OBXInstaller]$ export ENTITY_EHMS_DATABASE_SID=obdxh_in_oracle.com
OBXInstaller]$ export ENTITY_EHMS_DGA_DIRECTORY_NAME=TBS_DIR
OBXInstaller]$ export ENTITY_EHMS_DATABASE_SYS_USER=sys
OBXInstaller]$ export ENTITY_EHMS_DATABASE_SYS_PASS=welcome1
OBXInstaller]$ export ENTITY_EHMS_SCHEMA_NAME=welcome1
OBXInstaller]$ export ENTITY_EHMS_SCHEMA_PASS=welcome1
OBXInstaller]$ export ENTITY_EHMS_HOST_SCHEMA_NAME=FCUBS140
OBXInstaller]$ export ENTITY_EHMS_HOST_SCHEMA_NAME_PASSWORD=welcome1
OBXInstaller]$ export WI5_DOMIN_PASS=welcome1
OBXInstaller]$ export ENTITY_EHMS_HOST_SCHEMA_NAME_PASS=FCUBS140
OBXInstaller]$ export ENTITY_EHMS_CCCY=gb
OBXInstaller]$ python runInstaller.py --silent --addEntity
```

Below parameters should be set in environment variables

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Entity_Code</td>
<td>Entity code which has been entered from screen</td>
<td>export Entity_Code=OBDX_BU7</td>
</tr>
<tr>
<td>SCHEMA_PASS</td>
<td>Password for existing OBAPI schema</td>
<td>export SCHEMA_PASS=devops#obapi182</td>
</tr>
<tr>
<td>ENTITY_EHMS_DATABASE_HOSTNAME</td>
<td>Hostname of the EHMS HOST database host server</td>
<td>export ENTITY_EHMS_DATABASE_HOSTNAME=mumaa012.in.oracle.com</td>
</tr>
<tr>
<td>ENTITY_EHMS_DATABASE_PORT</td>
<td>Port of the EHMS HOST database host server</td>
<td>export ENTITY_EHMS_DATABASE_PORT=1521</td>
</tr>
<tr>
<td>ENTITY_EHMS_DATABASE_SID</td>
<td>EHMS Host database</td>
<td>export ENTITY_EHMS_DATABASE_SID=obd</td>
</tr>
<tr>
<td>Service Name</td>
<td>Description</td>
<td>Value</td>
</tr>
<tr>
<td>--------------</td>
<td>-------------</td>
<td>-------</td>
</tr>
<tr>
<td>ENTITY_EHMS_DBA_DIRECTORY_NAME</td>
<td>Oracle Directory name in which you want the EHMS (HostInterface) schema datafile (dbf). Enter only the name and NOT the path.</td>
<td>export ENTITY_EHMS_DBA_DIRECTORY_NAME=TBS_DIR</td>
</tr>
<tr>
<td>ENTITY_EHMS_DATABASE_SYS_USER</td>
<td>Username with 'sys' privileges</td>
<td>export ENTITY_EHMS_DATABASE_SYS_USER=sys</td>
</tr>
<tr>
<td>ENTITY_EHMS_DATABASE_SYS_PASS</td>
<td>Password for EHMS sys user</td>
<td>export ENTITY_EHMS_DATABASE_SYS_PASS=devops@sys</td>
</tr>
<tr>
<td>ENTITY_EHMS_SCHEMA_NAME</td>
<td>Complete EHMS (HostInterface) schema name you want installer to create as new schema.</td>
<td>API</td>
</tr>
<tr>
<td>ENTITY_EHMS_SCHEMA_PASS</td>
<td>Password for new EHMS schema on EHMS HOST database</td>
<td>export ENTITY_EHMS_SCHEMA_PASS=devops#ehms</td>
</tr>
<tr>
<td>ENTITY_EHMS_HOST_SCHEMA_NAME</td>
<td>EXISTING EHMS Host schema name</td>
<td>export ENTITY_EHMS_HOST_SCHEMA_NAME=EHMSHOST</td>
</tr>
<tr>
<td>ENTITY_EHMS_HOST_SCHEMA_NAME_PASS</td>
<td>Password of existing HOST EHMS schema (Existing)</td>
<td>export ENTITY_EHMS_HOST_SCHEMA_NAME_PASS=ehmshst</td>
</tr>
<tr>
<td>WLS_DOMAIN_PASS</td>
<td>Password for Weblogic admin console</td>
<td>export WLS_DOMAIN_PASS=weblogic182</td>
</tr>
<tr>
<td>ENTITY_EHMS_CCY</td>
<td>Country Code for</td>
<td>export ENTITY_EHMS_CCY=GB</td>
</tr>
</tbody>
</table>
**Multi-entity installation using Silent Mode**

<table>
<thead>
<tr>
<th><strong>This parameter is only required for UBS &amp; OBPM Host</strong></th>
<th>new or additional entity home branch</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENTITY_EHMS_FCORE_FCUBS_SCHEMA_NAME</td>
<td>FCORE-FCUBS HOST schema name</td>
</tr>
<tr>
<td><strong>This parameter is only required for FCORE</strong></td>
<td></td>
</tr>
<tr>
<td>Environmen*t variables to set for flavor:</td>
<td></td>
</tr>
<tr>
<td>OBAPI (Third-party HOST)</td>
<td></td>
</tr>
<tr>
<td>Entity_Code</td>
<td>Entity code which has been entered from screen</td>
</tr>
<tr>
<td>SCHEMA_PASS</td>
<td>Password for existing OBAPI schema</td>
</tr>
</tbody>
</table>

**Environment variables to set for flavor:**

- **OBAPI (Third-party HOST)**
- Entity Code
- SCHEMA_PASS

**Run the runInstaller.py file with '--silent' argument along with '--addEntity'**

```bash
[devops@]
> export Entity_Code=OBDX_BU1
[devops@]
> export SCHEMA_PASS=welcome1
```

- Run the `runInstaller.py` file with `--silent` argument along with `--addEntity`
Installation Status in case of Oracle FLEXCUBE Core Banking, Oracle FLEXCUBE Universal Banking, Oracle FLEXCUBE Universal Banking with Oracle Banking Payments

After entering all required details, the status is displayed (as shown below) on the terminal to indicate the progress of the installation.

When the installation completes, the below message is displayed

Post successful installation refer to "Section 8: Post Installation steps" for manual steps to be performed for
- UBS additional entity (sub-section : Oracle FLEXCUBE Universal Banking Solution (OBAPI with UBS))
- OBPM additional entity (sub-section: Oracle FLEXCUBE Universal Banking with Oracle Banking Payments (OBAPI with OBPM))
Installation Status in case of other hosts as Add Entity

After entering all required details, the status is displayed (as shown below) on the terminal to indicate the progress of the installation.

- THP (third party as entity)

```bash
/devops(OBEX_Installer]$ python runInstaller.py --silent --addEntity
Password validated for OBEX_183INS
Execution of DB script for OBEX_BU1 started
Executed DIGX_FW_CONFIG_ALL_0.sql successfully
Execution completed.
```
13. **OBAPI Product Security**

Refer below document for OBAPI product security configuration

Oracle Banking APIs Security Guide
14. OBAPI Product – Best Practice

14.1 Tablespace for AUDIT INDEX

The index’s used by AUDIT table should be moved into new tablespace from current AUDIT tablespace. Follow below steps

➢ Create a new tablespace
➢ Give quota to OBAPI schema

    alter user <OBAPI_SCHEMA> quota unlimited on <OBAPI_AUDIT_INDEX_TABLESPACE>;

➢ Drop and create below index by mapping the newly created tablespace

- OBAPI_Installer\installables\db\OBAPI\ddl\oracle\audit\IDX_DIGX_AL_API_AUDIT_LOGGING.sql
- OBAPI_Installer\installables\db\OBAPI\ddl\oracle\audit\IDX_DIGX_AL_API_AUDIT_LOG_HIST.sql
- OBAPI_Installer\installables\db\OBAPI\ddl\oracle\audit\IDX_DIGX_AL_AUDIT_LOGGING.sql
- OBAPI_Installer\installables\db\OBAPI\ddl\oracle\audit\IDX_DIGX_AL_AUDIT_LOGGING_1.sql
- OBAPI_Installer\installables\db\OBAPI\ddl\oracle\audit\IDX_DIGX_AL_AUDIT_LOGGING_2.sql
- OBAPI_Installer\installables\db\OBAPI\ddl\oracle\audit\IDX_DIGX_AL_AUDIT_LOGGING_3.sql
- OBAPI_Installer\installables\db\OBAPI\ddl\oracle\audit\IDX_DIGX_AL_AUDIT_LOGGING_4.sql
15. **JPA and OBAPI multi-cluster**

In a multi-cluster environment, below JPA related changes should be implemented

- Go to Weblogic server
- Open config\META-INF\persistence.xml
- Append below configuration for all data-source

  ```xml
  <property name="eclipselink.cache.coordination.jms.host" value="t3://<WEBLOGIC-HOST-NAME OR IP>:<MANAGED-SERVER-PORT>" />
  ```

  Replace with respective hostname or IP and Port no (this should be the managed server port number which hosts the JPA queues in the cluster)

**Key pointers;**

- Multi-cluster here refer’s to:
  - Single cluster with multiple nodes (2 or more physical servers hosting the OBAPI product)
  - 2 or more Weblogic cluster’s
- Ensure these (persistence.xml) changes are available to all Managed server by maintaining appropriate classpath
16. Troubleshoot Overview

This section describes how to troubleshoot OBAPI setup.

**Invalid database password**

This topic contains troubleshooting information if you receive an error when attempting to connect to the database server.

If you get the following error:

```
Enter the password for the user with sys privileges 'sys' :
>******
Invalid input. Please enter a valid password.
```

Try one of the following:

- Verify that the database is running.
- Check Network connectivity between Weblogic Server and Database server.
- Check the database configuration in installer.properties file
- Verify that the entered password is correct.

**cx_oracle module**

This topic contains troubleshooting information about problems with cx_Oracle python module.

If you get the following error:

```
opt]$ python
Python 2.7.5 (default, Sep  5 2016, 02:30:35)
[GCC 4.8.5 20150623 (Red Hat 4.8.5-9) on linux]
Type "help", "copyright", "credits" or "license" for more information.
>>> import cxOracle
Traceback (most recent call last):
  File "<stdin>", line 1, in <module>
ImportError: libclntsh.so.12.1: cannot open shared object file: No such file or directory
>>> exit()
```

```
Execute the below command:

```bash
export LD_LIBRARY_PATH=/usr/lib/oracle/12.2/client64/lib:$LD_LIBRARY_PATH
python
import cx_Orace
cx_Oracle.__version__
```

**Failed Database Scripts**

This topic contains troubleshooting information in case of database script failures.

If you get the following error in DB_installation.log:
Check the detailed log of the failed SQL file at `<OBAPI INSTALLER DIR>/ExecInstances/<DDMonthHHMM>/logs/db` folder.

### Failure of Policy Seeding

This topic contains troubleshooting information if policy seeding fails during installation.

If you get the following error:

```
Policy seeding failed. Please see logs for more details
Creating STB Schema ...
Running RCU
STB Schema Creation Successful.
See logfile ./app/obdx_stb_rcu_1600
Calling WLST
creating domain named OBDX_INS_DEV6 .
OBDX_INS_DEV6 created.
```

Try one of the following:

- Check if `Entitlement.log` is created on following path `<OBAPI INSTALLER DIR>/ExecInstances/<DDMonthHHMM>/logs/db/` and contains any SEVERE errors for Entitlement policy seeding.
- Check if `Task.log` is created on following path `<OBAPI INSTALLER DIR>/ExecInstances/<DDMonthHHMM>/logs/db/` and contains any SEVERE errors for Task policy seeding.
- Check if `Dashboard_seed.log` is created on following path `<OBAPI INSTALLER DIR>/ExecInstances/<DDMonthHHMM>/logs/db/` and contains any SEVERE errors for Dashboard policy seeding.

- Check the `seedPolicies.log` in `<OBAPI INSTALLER DIR>/ExecInstances/<DDMonthHHMM>/logs/db/` directory if it contains any runtime errors generated during execution of the policies Seeding in OBAPI schema.

Fix the problem by following below steps:

- Login to OBAPI installer server
- Browse to `<OBAPI INSTALLER DIR>\installables\policies`
- Edit `Entitlement_log4j.properties`, `Task_log4j.properties` & `Dashboard_seed_log4j.properties`.
  Replace `<logs_path>` with directory where policy seeding logs will be generated
Run below command manually if “SEVERE” error logs are found in Task.log

```
java -jar -Djava.util.logging.config.file='\<logs.properties\>' com.ofss.digx.utils.feed.data.task.jar "Task.csv" "oracle.jdbc.OracleDriver,\<OBAPI Schema name\>,\<OBAPI Schema password\>,jdbc:oracle:thin:@\<OBAPI DB hostname or IP\>:\<OBAPI DB listener port\>/\<OBAPI Service Name\>"

for e.g.:
java -jar -Djava.util.logging.config.file='\Task_log4j.properties\' com.ofss.digx.utils.feed.data.task.jar 'Task.csv' "oracle.jdbc.OracleDriver,OBAPI_THP181,Welcome#1,jdbc:oracle:thin:@10.44.169.255:1521/OBAPI"
```

Run below command manually if “SEVERE” error logs are found in Entitlement.log

```
java -jar -Djava.util.logging.config.file='\<logs.properties\>' com.ofss.digx.utils.entitlement.feed.data.jar 'Resources.csv', Entitlement.csv, Day0Policy.csv 'KERNEL' "oracle.jdbc.OracleDriver,\<OBAPI Schema name\>,\<OBAPI Schema password\>,jdbc:oracle:thin:@\<OBAPI DB hostname or IP\>:\<OBAPI DB listener port\>/\<OBAPI Service Name\>"

for e.g.:
java -jar -Djava.util.logging.config.file='\Entitlement_log4j.properties\' com.ofss.digx.utils.entitlement.feed.data.jar 'Resources.csv', Entitlement.csv, Day0Policy.csv 'KERNEL' "oracle.jdbc.OracleDriver,OBAPI_THP181,Welcome#1,jdbc:oracle:thin:@10.44.169.255:1521/OBAPI"
```
Run below command manually if “SEVERE” error logs are found in Dashboard_seed.log

```
java -jar -Djava.util.logging.config.file='<logs.properties>' com.ofss.digx.utils.dashboard.jar '<path>/dashboard_json' 'oracle.jdbc.OracleDriver,' '<OBAPI Schema name>,' '<OBAPI Schema password>' jdbc:oracle:thin:@<OBAPI DB hostname or IP>:<OBAPI DB listener port>/' '<OBAPI Service Name>''
```

for e.g.: 

```
java -jar -Djava.util.logging.config.file=Dashboard_seed_log4j.properties' com.ofss.digx.utils.dashboard.jar '/installables/policies/dashboard_json' 'oracle.jdbc.OracleDriver,OBAPI_THP181,Welcome#1,jdbc:oracle:thin:@10.44.169.255:1521/OBAPI'
```

Post successfully execution, restart Managed server.
