1. Welcome to Oracle Banking Credit Facilities Process Management

This document helps you get acquainted with the information on inter-connecting Oracle Banking Credit Facilities Process Management to Core Banking and Enterprise Limits and Collateral Management System.

This document is intended for Back Office Data Entry Clerk (input functions for maintenance related to the interface) and Implementation teams for setting up integration.

1. Introduction

Oracle Banking Credit Facilities Process Management supports integration with Core Banking and Enterprise Limits and Collateral Management System for various use cases. Also, provides interfaces for self-service portal.

This section contains the following topics:

Data Migration and Replication	Service Dependency
---	-------------------------------

Data Migration and Replication

OBCFPM system captures more detailed information on credit and party details for a customer, however not all the data that are captured in OBCFPM are needed to be handed off to Back office system. The data that are not supported by back office system will be retained in OBCFPM and used during the life cycle event transactions.

Data is classified in OBCFPM into two categories:

1. Replicated Data
2. OBCFPM owned Data

Replicated Data

Replication data are data which are handed off to back office system and owned by back office. Post hand off, back office system will be the owner and hence it needs to be replicated back to OBCFPM on a pre-defined frequency as required by the bank

OBCFPM owned Data

OBCFPM is the owner of these data and hence classified as OBCFPM Owned. During the course of the life cycle events OBCFPM, as part of handoff OBCFPM will push the data into these tables. However as part of migration, implementation teams needs to ensure that these tables are populated with data for enabling the data to be available for the life cycle event transactions.

During an implementation phase, it is required to migrate data into both these categories of tables from the back office/legacy system.

Service Dependency

OBCFPM exposes various services for external systems consumption and likewise OBCFPM is also dependent on services exposed by various external system. More information on the dependency are covered in detail in this document.

1.1 Mapping of ELCM/FCUBS Table with OBCFPM Replication Table

Below table provides a mapping between the Replication tables in OBCFPM and its base table in FCUBS/ELCM. These replication tables are further discussed in detail in subsequent sections.

OBCFPM Table Name	FCUBS /ELCM Table name	Mandatory for Credit Amendment
COPM_TX_PARTY_DEMOGRAPHICS	STTM_CUSTOMER	Yes
COPM_TX_PARTY_LIMITS	GETM_LIAB	Yes
CFPM_TX_FACILITY_DETAILS	GETM_FACILITY	Yes
CFPM_TX_COLLATERAL_DETAILS	GETM_COLLAT	Optional
CFPM_TX_CVNT_LINKAGE, CFPM_TX_CVNT_LINKAGE_MASTER	GETM_FACILITY_COVERNANT, GETM_COLL_COVERNANT	Optional
CFPM_TX_CLASS	GETM_CLASS	Yes*
CFPM_TX_CLASS_RULE_PREF	GETM_CLASS_RULE_PREF	Yes*
CFPM_TX_FEE_RULE	GETM_RULE	Yes*

* Fee class maintenance in ELCM should be replicated into OBCFPM. During a new Facility creation or modification of an existing facility, the fee rules that are defined will be defaulted in the Fee section of Facility screen. User will be able to make changes to fee conditions. During hand off, fee configuration for the facility are handed off to ELCM along with facility details. The Mapping of Fee Class is done in OBCFPM in the table, CFPM_TM_FCLTY_CLS_MAPPING. In this table, static data to be populated based on the Facility Type and Category, the Fee Class to be linked.
